*Social aspects of industrial problems*, pp. 52, 59-63.—The "Chester Concession" approved by the Angora government of Turkey on Apr. 10, 1923, provided for the construction of more than 1,000 miles of railways and for the development of the Mosul oil region, and was the successful termination of negotiations by an American syndicate to obtain the right to develop these rich regions. The origin of the Chester grant goes back to President Roosevelt's administration, when in 1908, negotiations were initiated through the agency of Rear Admiral Colby M. Chester, and were opposed by British, French and Russian interests in the field. Political events prevented the furtherance of the American plan until the 1923 grant authorized the Ottoman-American Development Company to carry on the proposed work. (See **TURKEY**: 1922-1923.) General George W. Goethals was named president of the company. "For the time being the worldwide struggle for oil concessions has come to a close. It has been solved by agreements between different national groups. In February, 1922, the Dutch-Shell and the Union Oil incorporated a company in the State of Delaware. French and American interests have formed a joint company in Czechoslovakia. The Anglo-Persian and Standard Oil Companies have formed a similar organization in Persia. And now the Turkish Petroleum and American interests are apparently to co-operate in Mesopotamia. But these private combinations are not extensive enough. They are still based on the principle of a trust, and one which is subject to no international control."—R. L. Buell, *Oil interests in the fight for Mosul* (*New York Times Current History*, Mar., 1923, p. 938).—"The Sinclair interests, which, through the International Barnsdall Corporation, already are participating in oil developments on the Russian side of the Caucasus, have made a bid for the northern Persian fields, according to a dispatch from Teheran, Persia. The Standard Oil Company is also said to have approached the Teheran Government for the same concession. The dispatch describes the bids as another skirmish in the persistent struggle which is proceeding between these two American groups on the one hand and several foreign groups on the other for the present and potential fields, which would give control of the Levantine oil market. The struggle centres in Russia, as the north Persian fields always have been considered in the sphere of Russian influence, and the Soviet Government, following the Czarist precedent, is taking considerable interest into which hands they pass. Soviet oil syndicates have showed a deficit in operating in Russian fields for the year ending in October, and in consequence the foreign interests consider the present time ripe to bid for their control on a mixed company or contracting basis. It is understood that no definite decision has been reached as yet, although proposals have been submitted directly or indirectly by five groups—the Stinnes group, a French combination, the Sinclair and Standard Oil interests, and the English-Dutch combination."—*New York Evening Post*, Oct. 27, 1923.—See also U.S.A.: 1913-1914; 1920 (November): Note; 1921 (April-July).

**Rubber industry.**—**Predicament of the United States.**—"Rubber is the latest commodity to disturb international relations. The automotive and rubber industries of the United States, representing an investment of over \$10,000,000,000 and dependent entirely upon rubber produced in the British and Dutch equatorial possessions, are facing a critical situation, due to the drastic restrictions placed by the British Government upon the pro-

duction and export of crude rubber. The international aspect is further complicated by the fact that the British Rubber Commission, which recommended these restrictions, has also advised that the Dutch Government be asked to adopt similar measures so as to insure bringing to terms the American rubber consumers, who consume about 72 per cent. of the total world production, though producing none at all and controlling only less than 3 per cent. of the world's rubber-producing area. . . . That the seriousness of the situation is now realized was shown when, in Washington on Feb. 27, a movement was launched at a meeting of several hundred American rubber, automobile and accessories manufacturers to protest against the British rubber monopoly and consider how American manufacturers could develop their own sources of crude rubber. Secretary Wallace, who was present, outlined the plans of the Department of Agriculture for experimentation with rubber-producing plants in the United States, which, he predicted, would come. He thought there was as much prospect of developing an American rubber industry as there was of the sugar-beet industry a hundred years ago. That is encouraging, but the immediate problem remains for the time being unsolved."—H. Woodhouse, *America at the mercy of British rubber monopoly* (*New York Times Current History*, Apr., 1923, pp. 134, 149).

**TSAR**, title of the former sovereigns of Russia. "Peter the Great, after consolidating Russia, abolished the title of Tsar of Muscovy, and proclaimed himself Emperor of all the Russias; purposely using the same term 'Imperator' as that employed by the Roman Emperor, and thus putting himself on an equality with him. I know by experience that it is impossible to din into the heads of those unfamiliar with Russia that since Peter the Great's time there has never been a Tsar. The words 'Tsar,' 'Tsarina,' 'Cesarevitch,' beloved of journalists, exist only in their imagination; they are never heard in Russia. The Russians termed their Emperor 'Gosudar Imperator,' using either or both of the words. Empress is 'Imperatritza'; Her Apparent 'Nadslyednik.' If you mentioned the words 'Tsar' or 'Tsarina' to any ordinary Russian peasant, I doubt if he would understand you, but I am well aware that it is no use repeating this, the other idea is too firmly ingrained."—Lord F. **TUILERIES.**—The palace of the Tuileries is said to have taken its name from the tile-making which had been carried on formerly in the vicinity of the ground on which it was built. "The history of it begins in the year 1564, when Catherine de Medicis conceived the idea of having a palace to herself near the Louvre, yet independent, in which she might be near enough to her son Charles IX. to have influence over him. . . . The palace was never very long or very closely connected with the history of the monarchy. It is not at all comparable to Windsor in that respect. Henry IV. liked it, Louis XIV. preferred Versailles, Louis XV. lived at the Tuileries in his minority. The chosen association of the palace with the sovereigns of France is very recent. Louis XVI. lived in it, and so did Charles X. and Louis-Philippe. The two Napoleons were fond of it. . . . The last inhabitant was the Empress Eugénie, as Regent. . . . The parliamentary history of the Tuileries is important, as it has been not only a palace but a parliament house. . . . The destruction of the Tuileries by the Communards [1871] was a lamentable event from the point of view of the historian and the archaeologist, but artistically the loss is not great."—P. G. Hamerton, *Paris in old and present times*, ch. 5.

**TUNIS**: Geography. — Population. — “The coast-line of Northern Africa runs almost due east as far as Cape Bon, the Mercurii Promontorium of the Romans, at which point it takes an abrupt turn southwards till it reaches the island of Jerba, famous in history as the fabled abode of the lotus-eaters, and close to the lower extremity of the Gulf of Gabes, once known as the Lesser Syrtis. From this point the shore of the Mediterranean again resumes its easterly course towards Alexandria and the Nile. The tract of country which occupies the angle thus formed is the Regency of Tunis. As its very name denotes, the *Regency* of Tunis never had any pretensions to be more than a quasi-independent state. The dominion of Tunis is or rather was a Regency or sief of the Turkish Empire, and the Beys of Tunis were both politically and religiously vassals of the Sublime Porte. . . . The most northerly part of Tunis is only divided by some eighty miles from the sea of Sicily. Indeed, a line of rocks beneath the waves, known as the Ferki reefs, forms a junction between the island and the Atlas mountains of the African mainland. It is this strait or channel which separates the eastern and western basins of the Mediterranean. ‘This Tunis,’ as Shakespeare says, ‘was Carthage.’ It afterwards became in turn Africa Propria, Zeugitania and Byzacium. Numerous authors have handed down to posterity the history of its remote antiquity, but the Tunis of to-day was little better than a *terra incognita* when the events of the French invasion forced the fact of its existence on the attention of Europe and England. The Gulf of Tunis and the now land-locked harbour of Bizerta command the passage of the narrow sea before them, and hence arises the maritime importance of Tunis in the past, the present and the future. . . . The Regency of Tunis is bounded on both the north and the east by the Mediterranean, on the west by Algeria, on the south by the Sahara of the Touaregs, and on the southeast by Tripoli. [See AFRICA: Map.] It has an area of about sixty thousand square miles, and a sea-coast 550 miles in length.”—A. M. Broadley, *Tunis, past and present*, pp. 1-6.—The population, according to the 1921 census, was 1,037,824 natives, chiefly Arab or Bedouin, and 156,115 Europeans, of whom 54,476 were French and 84,799 were Italian (see COLONIZATION: French). Among Europeans in Tunis the Italians outnumbered the

French, showing, according to Sir Charles Lucas “that there was some substantial ground for Italian resentment when France forestalled Italy in Tunis.”—C. Lucas, *Partition and colonization of Africa*.—In 1916 Hubert Adams Gibbons wrote: “Tunis contains two hundred thousand Europeans of whom less than fifty thousand are French. With all the increase of wealth of these two possessions, the French element has not greatly increased since 1900. . . . It is in vain that the French flag flies over Tunis. Its European civilian element is distinctively Italian. Every Frenchman who visits Tunis sees this with a sinking of the heart.”—H. A. Gibbons, *New map of Africa, 1900-1916*, p. 145.—The 1921 census, however, showed an increase of 8,000 in the French inhabitants since the census of 1911.

1860-1881.—Steps leading to French occupation.—Rivalry of several powers.—Relation to later history.—“When the French conquered Algeria [1830] they looked upon the occupation of Tunisia as a logical sequel. But after the Crimean War Turkey revived her claim of suzerainty. Napoleon III was busy with other affairs, and the British began to get control. They loaned money to the bey and built the first railroad, waterworks, and warehouses. Owing to the proximity of Malta, a British protectorate was talked about. The Italians, however, immediately after their unification, decided that Tunisia must be theirs. [See ITALY: 1870-1901.] They competed with the British and in 1880 bought the railroad from them. From 1860 to 1880 tens of thousands of Italian colonists went to the coveted land. In 1878 at the Congress of Berlin, unknown to Italy, Salisbury, with the consent of Bismark, assured France that there would be no opposition to intervention by her in Tunisia. The French invaded the country from Algeria in 1881, occupied Tunisia, and forced the bey to sign a treaty putting himself under French protection. [See FRANCE: 1875-1889.] After two years of fighting the French were in full control. Great Britain, followed by the other powers, accepted the *fait accompli* of the protectorate. Only the Italians, heartbroken but unable to fight the French, refused to recognize the occupation. They thereupon entered the Triple Alliance with Germany and their traditional enemy Austria and only in 1866 was their attitude of protest abandoned. On the ground that the regency of Tunisia was a part of the Ottoman dominions, the Porte objected to the French invasion and to the proclamation of the protectorate. Turkey had no power to back her remonstrances but she continued to make frontier troubles for the French until the Italian occupation of Tripoli thirty years later.”—H. A. Gibbons, *Introduction to world politics*, pp. 55-56.

1881-1898.—Establishment of complete French rule.—Achievements.—“Already, on November 20, 1881, Gambetta, then French Premier, and Jules Ferry, influenced by the opinions of Baron de Courcel and Saint-Hilaire, had determined upon the establishment of a thorough-going French rule in Tunisia, the first move toward which was the appointment of Paul Cambon. On March 27, 1883, a law was authorized by Ali Bey establishing a system of French courts in the leading cities, the details of which were provided in the later decrees of April 14, 1883, and July 6, 1884. This was followed by an ordinance dated May 5, giving these courts jurisdiction over all foreigners who gave up their extraterritoriality. Thereupon, Great Britain in December, 1883, and Italy, Austria-Hungary, Germany, and the Netherlands in 1884, issued orders abolishing, respectively, their consular jurisdictions in Tunisia. Conditions remained far from satisfactory; and it was evident that the proper adjustments would not take place or the introduction of reforms essential to the development and progress of the country be possible under the existing régime. The French, therefore, decided to strengthen their position and secure the necessary powers to inaugurate a comprehensive reform plan. On June 8, 1883, Paul Cambon secured a new treaty from the Bey, known as the Convention of Marsa, in which Ali agreed to permit such administrative, judicial, and financial reforms as the French deemed advisable, and the French promised to guarantee loans of 120,000,000 francs on the Consolidated Debt and 17,550,000 francs on the Floating Debt of Tunisia. The interest charge on these loans was to be a first lien on the revenues of the regency, and the expenses of the Tunisian administration and of the protectorate. Thus was accomplished the final step in the creation of a French protectorate over the dominions of the Bey of Tunis. . . . The lines of French expansion in North Africa had been definitely determined, and the security of the French position in Algeria assured by the acquisition of Tunisia. It was a costly affair, however, the French exchequer being drawn upon for over \$12,600,000 in the years 1881 and 1882 alone. . . . Instead of attempting to impose any French system of law or government upon the country, the French authorities worked out the necessary reforms in finance, justice, and administration with the local customs, methods, and institutions as a basis. A system of French supervision, similar in theory to that of the British in Egypt, was imposed quietly but effectively upon every branch of the state and local public service. . . . By the decrees of April 22, 1882, November 10, 1884, and June 23, 1885, the position and powers of the Resident-General were definitely determined. While responsible directly to the French Minister of Foreign Affairs, he was entrusted with an extensive discretionary authority and a wide freedom of action. He has command of all the naval and military forces of Tunisia, approves all general legislation and that affecting French colonists, and presides over the cabinet of the Bey, whom he serves as Minister of Foreign Affairs and whom he counsels on all financial, administrative, or other reforms. . . . Public order and security were established throughout the land. . . . Over a hundred thousand people fled into Tripoli at the time of the French invasion, but within a few years all except some three hundred had returned. Numerous public improvements have been introduced, including telegraphs, telephones, posts, government buildings, schools, hospitals, over

2500 miles of splendid national roads and 949 miles of railway. The substantial progress of Tunisia is shown nowhere better than in the development of its trade. In 1885, the total of its exports and imports amounted only to about \$9,200,000; but twenty-five years later—in 1910—this total had multiplied approximately fivefold, reaching \$45,170,000. About one half of the imports in this year came from France, one eighth from Algeria and Great Britain, and one twentieth from Italy. Of the exports, France again received about one half, but Italy was favored with nearly one fifth, while one tenth went to England and one twentieth to Algeria. The chief exports are grain, phosphates, and a goodly product of cattle, esparto grass, olive oil, and lead, iron, and zinc ore. The leading imports include cotton goods, iron, hardware, flour, and machinery. While the French attempts at colonization and irrigation have not yielded as yet any noteworthy results [see CONSERVATION OF NATURAL RESOURCES: France: 1910-1917]—only about 1,000,000 hectares being cultivated at present out of a possible 12,000,000,—a good deal of French and Italian capital has been invested in the country to the great improvement of trade and other conditions generally.”—N. D. Harris, *Intervention and colonization in Africa*, pp. 236-239, 241.—In 1898, the general results produced in Tunis by seventeen years of French control were described in an elaborate report to the British government by its representative in the protectorate, or regency, Sir H. Johnston. The following is quoted from that report: “The protectorate of Tunis is nominally an Arab Kingdom, ruled by a prince of Turkish descent under the guidance and control of a French Minister Resident-General and a staff of French officials. . . . The personal staff of the Resident-General consists of about nine members. In addition, the French Government is more or less directly represented throughout the Regency by officials corresponding almost exactly to our vice-consuls, collectors and assistant-collectors in our African Protectorates, with this difference, that the collectors are called ‘contrôleurs.’ . . . The whole of Tunisia is now under civil administration, except the Sahara district to the south of Gabes, which still remains under military control. . . . In the districts which I visited, the natives, talking to me freely, said that they would sooner be under the rule of any Frenchman than under that of their own kaid. The French are face to face here with the same problem that we find so difficult in other oriental countries—that of creating amongst the natives a body of public officials who will keep their hands from picking and stealing, and their tongues from evil speaking, lying and slandering. No tyrant is so cruel to an Arab as an Arab; no one is harder on Muhammadans than their co-religionists. Justice is administered to Europeans, and to the protected subjects of European powers, by French tribunals, which equally deal with cases arising between Europeans and Tunisians. . . . Justice is administered to natives, in cases where natives alone are concerned, by Arab courts depending directly on the Tunisian Government, but with a Frenchman at the head of each principal department. At all the centres of population there are Arab courts of justice. The Court of Appeal for the French courts in Tunis is the Supreme Court of Algiers; the appeal from the Arab courts is to the Bey. . . . Public works are entirely under French control, though Tunisians are employed in minor posts. . . . Public education is under French and Arab direction. . . . In ad-

dition to Government-supported schools, a large number of private establishments have sprung up at Tunis and at Sfax. . . . In 1880 life and property were thoroughly insecure. The property of Europeans, perhaps, was safe, provided they were the subjects of a Power able to coerce the Government of Tunis, and their lives were not in any great danger in the principal towns; but it would have been impossible for any European to have travelled about many parts of the Regency without a considerable escort; impossible, indeed, to penetrate some parts of the Regency at all unless at the head of an army. . . . The whole Regency of Tunis is now as safe for tourists as France."—Great Britain, *Parliamentary Publications (Papers by command)*, 1898, C. 8649-18, pp. 10-15, 2-3).

1919.—French plans for development of country.—After the World War France declared her policy of a more intensive cultivation of her colonies. On behalf of plans for the further development of Tunis, Étienne Flandin, French resident-general in 1919, advocated the consolidating of French control in the interior by a systematic filling up of the depleted ranks of colonists. This was to be through an employment agency which would especially attract war veterans and orphans. On the other hand, native interests received consideration when Flandin insisted "on the necessity of safeguarding, from the point of view of Muhammadan Arabian France, their moral and political preponderance in the eastern basin of the Mediterranean. He had recalled on frequent occasions that the French pacification in Tunisia, as in the remainder of northern Africa, could not present durable guarantees if it did not extend to Syria, to Aleppo, and above all to Damascus, that great center of Arab Islam. He was confident that such a religious and political solidarity would be consecrated by the peace. Their work in Tunisia had been sufficiently splendid and the Regency had too well proved its loyalty for the circumstances of its future with regard to the Mediterranean to be allowed to drop out."—*Christian Science Monitor*, Apr. 24, 1919.—See also AFRICA: Modern European occupation; 1914-1920: Climatic conditions; Lack of railway and industrial development.

1920.—French protectorate recognized by Treaty of Sèvres. See SÈVRES, TREATY OF (1920): Part III: Political clauses: Morocco, Tunis.

1922.—"Reform" party and the government.—"The 'Young Tunisian' or 'Reform' party, created about 1907 under the leadership of the gifted and ill-fated Ali Bach Hamba [included in 1922], seven-eighths of the educated natives. Many of the present leaders have been graduated, like him, from the best universities and law schools—or even military schools—of France. A hundred thousand natives of Tunisia served gallantly in the World War, of whom only half came home. . . . Among those now agitating for a written constitution, and an assembly at least half composed of Mussulman natives, with control of taxation and appropriations, there are on the one hand some leaders with liberal French education, sincerely loyal to the Republic; and at the other extreme at least one fanatical adherent to Mohammedan dress, language and manners, who raises openly the cry of 'Martyred Tunisia,' and laments the Golden Age when the Bey was real master in Tunis. Persecution may serve only to drive these coreligionists into political unity also. . . . The malcontents imagine that the mere grant of the 'Destour' (Constitution) would suffice to make life easy. The French of Tunis see in this Bolshevistic agitation,

or even the hand of Germany! In general the French press of the colony demands the sternest measures of repression."—*French in Tunis (American Review of Reviews, Dec., 1922, p. 659)*.—Late in 1922 the government's experiment of regional councils for native participation in ruling the country went into effect. The five council centers are Tunis, Bizerta, Susa, Keï and Sfax.

TUPAC AMARU (José Gabriel Condorcanqui) (1742-1781), Peruvian revolutionist. Led a revolt against the Spaniards in Peru, 1780. See PERU: 1550-1810.

TUPAMBAY, Battle of (1832). See URUGUAY: 1821-1905.

TUPI, GUARANI, TUPUYAS.—"The first Indians with whom the Portuguese came in contact, on the discovery of Brazil, called themselves Tupinama, a term derived by Barnhagen from Tupi and Mba, something like warrior or nobleman; by Martius from Tupi and Anamba (relative) with the signification 'belonging to the Tupi tribe.' These Tupi dwell on the east coast of Brazil, and with their language the Portuguese were soon familiar. It was found especially serviceable as a means of communication with other tribes, and this led the Jesuits later to develop it as much as possible, and introduce it as a universal language of intercourse with the Savages. Thus the 'lingua geral Brasílica' arose, which must be regarded as a Tupi with a Portuguese pronunciation. The result was a surprising one, for it really succeeded in forming, for the tribes of Brazil, divided in language, a universal means of communication. Without doubt the wide extent of the Tupi was very favorable, especially since on this side of the Andes, as far as the Caribbean Sea, the continent of South America was overrun with Tupi hordes. . . . Von Martius has endeavored to trace their various migrations and abodes, by which they have acquired a sort of ubiquity in tropical South America. . . . This history . . . leads to the supposition that, had the discovery been delayed a few centuries, the Tupi might have become the lords of eastern South America, and have spread a higher culture over that region. The Tupi family may be divided, according to their fixed abodes, into the southern, northern, eastern, western, and central Tupi; all these are again divided into a number of smaller tribes. The southern Tupi are usually called Guarani (warriors), a name which the Jesuits first introduced. It cannot be determined from which direction they came. The greatest number are in Paraguay and the Argentine province of Corrientes. The Jesuits brought them to a very high degree of civilization. The eastern Tupi, the real Tupinamba, are scattered along the Atlantic coast from St. Catherina Island to the mouth of the Amazon. They are a very weak tribe. They say they came from the south and west. The northern Tupi are a weak and widely scattered remnant of a large tribe, and are now in the province of Para. on the island of Marajo, and along both banks of the Amazon. . . . It is somewhat doubtful if this peaceable tribe are really Tupi. . . . The central Tupi live in several free hordes between the Tocantins and Madeira. . . . Cutting off the heads of enemies is in vogue among them. . . . The Mundrucu are especially the head-hunting tribe. The western Tupi all live in Bolivia. They are the only ones who came in contact with the Inca empire, and their character and manners show the

influence of this. Some are a picture of idyllic gayety and patriarchal mildness."—*Standard natural history* (J. S. Kingsley, ed., v. 6, pp. 248-249).—"In frequent contiguity with the Tupis was another stock, also widely dispersed through Brazil, called the Tupuyas, of whom the Botocudos in eastern Brazil are the most prominent tribe. To them also belong the Gés nations, south of the lower Amazon, and others. They are on a low grade of culture, going quite naked, not cultivating the soil, ignorant of pottery, and with poorly made canoes. They are dolichocephalic, and must have inhabited the country a long time."—D. G. Brinton, *Races and peoples*, pp. 260-270.—See also INDIANS, AMERICAN: Cultural areas in South America; Amazon area.

**TUPPER**, Sir Charles (1821-1915), Canadian statesman. Prime minister of Nova Scotia, 1864-1867; president of the privy council of Canada, 1870-1872; high commissioner for Canada at London, 1884-1887; 1888-1896; premier of Canada, 1896. See NOVA SCOTIA: 1782-1860; 1867; HIGH COMMISSIONER.

**TUPUYAS**, South American Indian tribe. See TUPI.

**TURAN**.—"The old Persians, who spoke an Aryan tongue, called their own land Iran, and the barbarous land to the north of it they called Turan. In their eyes, Iran was the land of light, and Turan was the land of darkness. From this Turan, the land of Central Asia, came the many Turkish settlements which made their way, first into Western Asia and then into Europe."—E. A. Freeman, *Ottoman power in Europe*, ch. 2.—See also IRAN; TURANIAN RACES AND LANGUAGES.

**TURANIAN RACES AND LANGUAGES**.—The name Turanian has been given to a large group of peoples, mostly Asiatic, whose languages are all in the agglutinative stage and bear evident marks of a family relationship. "This race, one of the largest, both numerically and with regard to the extent of territory which it occupies, is divided into two great branches, the Ugro-finnish and the Dravidian. The first must be again subdivided into the Turkish, including the populations of Turkestan and of the Steppes of Central Asia, as well as the Hungarians who have been for a long time settled in Europe; and the Uralo-finnish group, comprising the Finns, the Estonians, the Tchouides, and, in general, nearly all the tribes of the north of Europe and Asia. The country of the Dravidian branch is, on the contrary, to the south. This branch is in fact composed of the indigenous people of the Peninsula of Hindustan; Tamuls, Telingas, Carnates, who were subjugated by the Arian race, and who appear to have originally driven before them the negroes of the Australian group, the original inhabitants of the soil, who are now represented by the almost savage tribe of the Khonds. The Turanian race is one of the oldest in the world. . . . The skulls discovered in France, England and Belgium, in caves of the close of the quaternary epoch, appear from their characteristics to belong to a Turanian race, to the Uralo-finnish group, and particularly resemble those of the Estonians. Wherever the Japhetic or pure Indo-European race extended, it seems to have encountered a Turanian population which it conquered and finally amalgamated with itself."—F. Lenormant, *Manual of ancient history of the East*, bk. 1, ch. 4.—"Not only were distant stocks like Finns and Manchus quite unaware of any common Turanian bond, but even obvious kindred like Ottoman Turks and Central Asian Turkomans regarded

one another with indifference or contempt. . . . Arminius Vambéry tells how, when he first visited Constantinople in 1856, 'the word *Turkluk* (i. e., "Turk") was considered an opprobrious synonym of grossness and savagery, and when I used to call people's attention to the racial importance of the Turkish stock (stretching from Adrianople to the Pacific) they answered: "But you are surely not classing us with Kirghiz and with the gross nomads of Tartary." . . . It was, in fact, the labors of Western ethnologists like the Hungarian Vambéry and the Frenchman Léon Cahun that first cleared away the mists which enshrouded Turan. These labors disclosed the unexpected vastness of the Turanian world. And this presently acquired a most unacademic significance. The writings of Vambéry and his colleagues spread far and wide through Turan and were there devoured by receptive minds already stirring to the obscure promptings of a new time. . . . Of course one may query whether these diverse peoples actually do form one genuine race. But, as we have already seen, so far as practical politics go, that makes no difference."—L. Stoddard, *New world of Islam*, pp. 193-194, 193.—See also ETRUSCANS; PACIFIC OCEAN: B. C. 2500-A. D. 1500; PAN-TURANISM; PHILOLOGY: 20.

**TURBINES**. See STEAM AND GAS ENGINES: Steam Turbine engines; ELECTRICAL DISCOVERY: Survey of late inventions; INVENTIONS: 19th century: Power.

\* **TURCOMANS**. See TURKOMANS.

**TURDETANI**.—"There is a tradition that the Turdetani (round Seville) possessed lays from very ancient times, a metrical book of laws, of 6,000 verses, and even historical records. At any rate, this tribe is described as the most civilized of all the Spanish tribes, and at the same time the least warlike."—T. Mommsen, *History of Rome*, bk. 3, ch. 7.—"The most mixed portion of the Peninsular population . . . is that of the water-system of the Guadalquivir and the parts immediately south and east of it, . . . the country of the Turdetani and Bastitani, if we look to the ancient populations—Bætica, if we adopt the general name of the Romans, Andalusia in modern geography; . . . it was the Iberians of these parts who were the first to receive foreign intermixture, and the last to lose it."—R. G. Latham, *Ethnology of Europe*, ch. 2.

**TURDETANIA**, ancient name of modern Andalusia, in Spain, known still more anciently as Tartessus. See TARTIUS.

**TURENNE**, Henri de Latour d'Auvergne, Vicomte de (1611-1675), marshal of France. Served in the Dutch War of Independence, 1625; left Holland and entered the service of France, 1630.

1706.—Siege by the French and rout of the besiegers. See ITALY: 1701-1713.

1861-1865.—Capital of new kingdom of Italy. See ITALY: 1859-1861; 1862-1866.

1915-1918.—Base in the World War.—During the World War, Turin was an important base for military operations on the north Italian front.

1917-1920.—Riots.—In August, 1917, and at various times during the three following years, riots broke out, involving the Communists or Socialists and the Fascisti, as the militant nationalists were called.

**TURIN PAPYRUS**, Egyptian papyrus preserved in the Turin museum, for which it was purchased from M. Drovetti, consul-general of France. "If this papyrus were entire, the science of Egyptian antiquities could not possess a more valuable document. It contains a list of all the mythical or historical personages who were believed to have reigned in Egypt, from fabulous times down to a period we cannot ascertain, because the end of the papyrus is wanting. Compiled under Ramses II. (19th dynasty), that is, in the most flourishing epoch of the history of Egypt, this list has all the characteristics of an official document, and gives us the more valuable assistance, as the name of each king is followed by the duration of his reign, and each dynasty by the total number of years during which it governed Egypt. Unfortunately this inestimable treasure exists only in very small pieces (164 in num-

ber), which it is often impossible to join correctly." —F. Lenormant, *Manual of ancient history of the East*, bk. 3, ch. 1, sect. 2.—See also HISTORY: 14.

**TURKESTAN**, name given to regions of central Asia, encompassed by Siberia on the north, the Caspian sea on the west, Afghanistan and India on the south, and Mongolia on the east. (See ASIA: Map.) A part of Afghanistan including Badakshan has been referred to as included in Turkestan in the broadest meaning of the term. Turkestan, however, is generally considered as applying to either that division of Russia in Central Asia, comprising the provinces of Samarkand, Ferghana, Syr-Darya and Semirychensk called Western or Russian Turkestan; or to a dependency of China, sometimes called Kashgaria which lies to the north of Tibet and forms part of the province called by the Chinese, Sin-Kiang. This country is known as Eastern or Chinese Turkestan. (See CHINESE TURKESTAN.)

The region which is commonly designated as Chinese or Eastern Turkestan is watered by the Yarkand and Khotan rivers, which unite to form the Tarim. The elliptical Tarim basin is separated by the Tian-Shan mountains from Dzungaria (see ZUNGARIA) lying to the north, and by the Kuen-Lun mountains from Tibet on the south. It extends over an area of 354,000 square miles, of which over half is desert land. The hold of Chinese authority is of the very slightest degree, particularly since the revolution of 1911, over the inhabitants of this region. (See TURANIAN RACES AND LANGUAGES.) In fact all the Chinese territory between Mongolia on the north and Tibet on the south is regarded as a separate province with its civil governor residing in the north at Ili, the capital. Its neighbor, Outer Mongolia, is even more independent. Nominally, under Chinese officials, each is autonomous at the present time. The total population is estimated at about 2,000,000. Mohammedanism is the prevailing religion.—See also YAKUB. BEG, DOMINION OF.

Russian or Western Turkestan is a government of the Soviet republic of Russia, consisting of the provinces of Ferghana, Samarkand, Syr-Darya and Semirychensk in Central Asia, having together a population of approximately 7,000,000 and covering an area of 57,700 square miles. Tashkent is the capital, with 300,000 inhabitants, and Kokand and Samarkand, each having a population of over 100,000, are important cities. Turkestan also originally included the Transcaspian province, the Bokhara amirate and the khanate of Khiva. Physically, western Turkestan, besides the Syr-Darya, has the lower Ili, flowing through Semirychensk into Lake Balkhash, and the Zerafshan, along which the Transcaspian railroad runs to the city of Andijan. In the past, however, the passes of the lofty mountain systems have determined the great caravan routes of this historic region, some of which, like the rivers, are now lost in the desert. Irrigation in Russian Turkestan extends to 4,000,000 acres and is particularly advantageous to the orchards and gardens, the water being distributed according to each family's needs under Moslem law. The agricultural class is industrious, honest and sober. Cotton is one of the principal crops in the Ferghana province.

1895.—Anglo-Russian agreement concerning "spheres of influence" in the Pamirs. See AFGHANISTAN: 1895.

1916.—Condition of Turkestan under Russian tsarist rule.—Mobilization in World War.—Revolt.—"In 1916 the natives revolted when the news that the Moslem races were called up to serve in the Russian army, reached the bazars of Central Asia and the remote Kirghiz nomad villages. They had long had grievances against Russian rule. Requisition of their land and their rights and every form of oppression became worse under the Russian czars than it had been under the despotic khans. There was neither justice nor freedom for the sons of the steppes and the mountains. The mobilization to serve in the army of their oppressors was the last drop that overflowed the cup of resentment. The Kirghiz, Sarts and other tribes of Semirychensk attacked the principal town of the region, Verny, and annihilated the Cossacks to the last man, capturing 5,000 Russian officials and civilians and carrying them off as hostages into the mountains. The mutiny, of course, was suppressed by a merciless punitive expedition, but the suppression was only temporary."—B. L. T. Roustam Bek, *First Mohammedan republic (Asia, May, 1920, p. 388)*.

1917-1920.—Bolshevist activities.—Ataman Dutov's resistance.—Destruction of Kokand.—"The Red Terror, nourished by German trade agencies, had laid hold of Tashkent and spread over all the Russian dominion in Turkestan, where 180,000 Germans, Austrians, and Magyars had been confined in their prison camps. Amongst these were the men that had been the garrison of Przemyśl. In October 1917 all were 'comrades,' so of course there could be no prisoners, and the kindly Soviet opened the gates in the barbed wire and discontinued the ration issue. Ninety thousand ex-prisoners of war died during that winter. Many of the survivors joined the Red Army, some fled to Afghanistan, and some worked for, or starved with, the easy-going Kirghiz and Sarts. . . . In Turkistan, missions, under various cloaks, organized the surviving prisoners into battalions and brigades, gave them good new uniforms and boots, and tried to smuggle trained specialists to Afghanistan. . . . The three years' cotton crop of Ferghana and Sir Daria, many thousands of tons . . . lay rotting in the warehouses of Turkistan, or served as bullet-proof protection on Bolshevik armoured trains. . . . The Orenburg Cossacks, under Ataman Dutov, had achieved much success against the Red Army in 1918 in the steppes north of Tashkent. . . . [But] they lost the city, though they retained a hold of the Orenburg Railway that connects Moscow with Tashkent. This circumstance was of no little value to the Allies, since it prevented the Turkistan cotton crop from being sent to Germany by that route. In fact, the operations of this loyalist army of Orenburg Cossacks form a fine chapter in the story of the war, and one that has not come into the limelight. For three years this

force of Ataman Dutov's, averaging some seven thousand strong, often without ammunition, fighting with swords and lances, held its own against the Red forces all round them. They were quite isolated from Allied help, and in fact from any other loyal force, except for the brief period when they were in touch with the army of Admiral Kolchak, himself a Cossack. Meanwhile the Musalman of Tashkent, Kokand, and Bukhara revolted against the Soviet. In all three cities the rising was suppressed with great slaughter. Kokand was razed to the ground by high explosive shell-fire, and thirty thousand souls were reported massacred: it had been one of the greatest commercial cities in Asia. In Bukhara one Kolesov used armoured cars in the crowded streets, which ran with blood. Although the Reds gained control over the city, to this day they have little or no hold over the country districts, where large bands of Uzbeks and Kipchaks roam the valleys, maintaining a guerilla warfare against any Bolshevik force that leaves the railway and the guns of its armoured trains."—L. V. S. Blacker, *Travels in Turkistan, 1918-1920 (Geographical Journal, Sept., 1921, pp. 178-181)*.—See also WORLD WAR: 1918: VI. Turkish theater: b, 5.

1922-1923.—Mohammedan revolt.—Reorganization of Soviet rule in Bokhara.—"Young Bokhara" party.—Economic conditions in Ferghana province.—Radium discovery.—Early in 1922, Enver Pasha, a former Turkish military leader, joined the revolting emir of Bokhara against the Bolsheviks, captured Bokhara and other cities in quick succession and was proclaimed emir of Turkestan by the victorious Mohammedans. Peace terms between Enver Pasha and the Bolsheviks on the basis of recognition of the Turkish leader's authority over Turkestan were reported to be in negotiation late in the year. The insurgent forces were, however, apparently routed and scattered and the republican government in Bokhara was reorganized under soviet control. In the meantime the nationalist propaganda seems to have been more or less active. "A mission representing the 'Young Bokhara' Party . . . [went to] Afghanistan early in June with the object of enlisting sympathy and material support for its plan of a Turkestan National Republic. The mission claimed that a widespread movement was afoot for the establishment of a Federation of Central Asian Moslem States."—*New York Times Current History, Oct., 1923, p. 175*.—"The Deputy President of the Central Executive Committee, who arrived in Moscow on Aug. 13, informed the Soviet Government that 387,000 of the population of Ferghana were doomed this year to starvation, and that malaria was increasing so rapidly in Daghestan that whole villages had been wiped out. Last year's 170,000 head of cattle in Ferghana had already dwindled to 37,000. Before the war the province had 170,000 horses, but now only 27,000. On Sept. 6 the Radium Institute in Petrograd announced that the expedition it had sent into Ferghana had discovered what was probably the world's largest deposit of radium."—*Ibid, Oct., 1923, p. 175*.

## TURKEY

(Formerly Ottoman empire)

**Land.—Geographic description.—Extent of territory.**—"Turkey" is, in a way, a misnomer. Turkey is not a country inhabited mainly by Turks, as Italy is inhabited by Italians, England by Englishmen, Spain by Spaniards, &c. . . . The Turkish language has no word for 'Turkey,' which would properly be Turkestan, as Arabistan stands for Arabia. Under the old regime the official title of Turkey was 'the exalted State,' while the Arabic expression for 'Ottoman lands' was used to connote the Ottoman Empire. The Young Turks have endeavoured to popularize the Levantine form, i. e., 'Turkia.'—*Turkey in Europe (Handbook of the Historical Section of the British Foreign Office, no. 16, p. 13).*—"Turkey lies at the junction of three continents. . . . [With its former possessions of Syria, Palestine and Arabia it was] thrust in between the Mediterranean and the Persian Gulf, between the Black Sea and the Red . . . [bridging] the space between the Balkan Peninsula and Persia, between Persia and Egypt, . . . a great isthmian region, dominating the chief intercontinental trade routes of the eastern hemisphere [and flanking] for a thousand miles the steamer highway of the Suez Canal and Red Sea. It controls the Dardanelles and the Bosphorus leading to the Black Sea lands. It is crossed by old caravan tracks and the future railroad routes connecting the Mediterranean and Black Sea ports with the Persian Gulf coast. It therefore holds a highly strategic position. By reason of its location, Turkey has drawn the elements of its population from the grasslands of Semitic Arabia, from the highlands of Aryan Persia, from the Caspian plains of Mongolian Asia, from the multifarious race stocks of the Russian Caucasus, from the Greek coasts of the Balkan Peninsula and Ægean Isles. These it has assimilated more or less to the indigenous Hittite or Alarodian race. The peoples comprised within the borders of Turkey differ in racial and geographic origin, in language and religion, in social and economic development. On the other hand they are united by certain common bonds found in the semiarid climate of Turkey, the prevailing steppe vegetation with its concomitant, pastoral-nomadic life, the patchy distribution of the arable land, the sparsity of the population, and finally the deep underlying community of ideals molded by this environment through a process of social development unfolded from within through the ages. To these may be added the religion of Islam and the fanatical devotion of its adherents, who here number five-sixths of the people. The Anatolian Peninsula stretches like a bridge between southwestern Asia and southeastern Europe. It consists of a high plateau, increasing in altitude towards the east, and rimmed on its three seaward sides by young mountains rising boldly from the coast. Structurally and racially it is part of Asia. Its wide steppe interior has been a passway for Asiatic migrations, but the massive mountain barriers which trace the northern and southern coasts have excluded oversea immigrants from Europe and thus maintained the Asiatic solidarity of the peninsula. Only the Ægean front, with its deeply embayed coast and its structural valleys opening westward, has been hospitable to Hellenic colonization and European influences. The rain-bearing winds from

the neighboring seas expend their moisture on the outer slopes of the coast ranges (rainfall 600 to 1,000 mm.) and reach the interior impoverished. Hence the plateau core has an arid climate, extensive steppes or saline wastes where nomads pasture their herds, mountains bare or thinly covered by a scrubby growth of trees on the high inland slopes, and shallow U-shaped valleys drained by meager streams which serve to irrigate strips of tillage lands along the interior piedmont. The coast ranges get ample precipitation for winter grain crops along their lower slopes, where the typical Mediterranean vegetation prevails, and they have abundant water to irrigate in summer the orchards and gardens of the deltaic plains or valley lowlands at their base. On their upper slopes they support a magnificent belt of forests, which averages 60 miles in breadth and comprises one-third of Anatolia's area. . . . Armenia is a high plateau (5,200 to 6,000 feet) located behind the lofty Lazistan ranges and almost barred alike from the rains and the cultural influences emanating from the Black Sea. It is bordered on the south by the Armenian Taurus, which greatly impedes communication with the Mesopotamian plains. It is crossed, east and west, by folds of the Anti-Taurus and Zagros Mountains, which have been disturbed by recent volcanic upheavals and overlaid by vast lava flows, so that the relief of the country is extremely complex. Its valleys are blocked on the east by lofty ranges, whose passes are snow-bound eight months in the year, and they open westward upon high and arid plateaus which form an inhospitable transit land to Anatolia. Armenia is a natural stronghold, giving its possessor a grip upon the surrounding countries. It has always been an object of conquest for neighboring states who wanted it for a border fortress against aggression."—E. C. Semple, *Regional geography of Turkey: Review of Banse's work (Geographical Review, July, 1921, pp. 338-339, 342).*—"The size of Turkey has steadily diminished since the times of Suleiman the Magnificent, but the 20th century has been particularly disastrous to Turkey. During the Balkan Wars, 1912-1914, she lost all her possessions in Europe except Thrace (see BALKAN STATES: Map). "By the terms of the Treaty of Sèvres, Turkey was all but eliminated from Europe, since she would have retained besides the city of Constantinople only a small tract of land immediately adjacent thereto. [Her territories in Asia Minor were also lessened and Armenia taken away.] The Lausanne terms restore to Turkey the Thracian boundary of 1914 in all but a few minor details. . . . The Maritza now forms a boundary from a point near Adrianople southward to the Ægean. Opposite Adrianople is the important railway station of Karagach. It becomes Turkish and thus gives Turkey immediate access upon her own territory to a section of railway that connects this important city (and former Turkish capital) with the present railway line between Bulgaria and Constantinople. Greece is excluded from Eastern Thrace and from the coast of the sea of Marmora after three years' occupation. Bulgaria's boundary stands as defined in the treaty of Neuilly. An important feature of the Thracian boundary is the establishment on either side of it of a demilitarized

zone. A similar demilitarized zone is established on either side of the Bosphorus and Dardanelles."—*Geographical Review*, Oct., 1923, pp. 627-628.—Under the Lausanne Treaty, Armenia and the whole of Anatolia is restored to Turkey. This comprises an area of 282,144 square miles. The World War was particularly disastrous to the Asiatic possessions of Turkey. She lost the following states: (1) Syria given under mandate to France; (2) Palestine given under mandate to Great Britain; (3) Trans Jordan, the political status of which is to be determined by the League of Nations; (4) Mesopotamia given under mandate to Great Britain, now the Kingdom of Iraq under King Feisel; (5) Hedjaz proclaimed a kingdom in 1916 under the protection and subsidy of Great Britain. In 1913 the emir of Nejd and Hassa drove out the Turks and proclaimed himself an independent emir. The emirate of Jebel Shammar which lies to the north of Nejd proclaimed its independence in the middle of the nineteenth century so that none of the Arabian provinces of Turkey remained to her. (See ARABIA: Map.) Before its dismemberment (after the World War) Turkey was called the Ottoman empire and embraced some of the most diverse climates and soils of any country. "No formula can embrace the variety of the countries marked 'Ottoman' on the map: the High Yemen, with its monsoons and tropical cultivation; the tilted rim of the Hedjaz, one desert in a desert zone that stretches from the Sahara to Mongolia; the Mesopotamian rivers, breaking the desert with a strip of green; the pine-covered mountains terraces of Kurdistan, which gird in Mesopotamia as the hills of the North-West Frontier of India gird the plains; the Armenian Highlands, bleak as the Pamirs, which feed Mesopotamia with their snows and send it the soil they cannot keep themselves; the Anatolian peninsula—an offshoot of Central Europe with its rocks and fine timber and mountain streams, but nursing a steppe in its heart more intractable than the Puzeta of Hungary; the coast-lands—Trebizond and Ismid and Smyrna clinging to the Anatolian mainland and Syria interposing itself between the desert and the sea, but, with their vines and olives and sharp contours, keeping true to the Mediterranean; and then the waterway of narrows and landlocked sea and narrows again which links the Mediterranean with the Black Sea and Russian hinterland, and which has not its like in the world."—A. J. Toynbee, *Turkey: A past and a future*, pp. 1-2.

Diverse peoples of the country.—"There were less than twenty million people in Turkey before the [World] War, and during it the Government has caused a million or so to perish by massacre, starvation, or disease. Yet, in spite of this dæmonic effort after uniformity, they are still the strangest congeries of racial and social types that has ever been placed at a single Government's mercy. The Ottoman Empire is named after the Osmanli, but you might search long before you found one among its inhabitants. These Osmanlis are a governing class, indigenious only in Constantinople and a few neighbouring towns, but planted here and there, as officers and officials, over the Ottoman territories. They come of a clan of Turkish nomads, recruited since the thirteenth century by converts, forced or voluntary, from most of Christendom, and crossed with the blood of slave-women from all the world. They are hardly a race. Tradition fortified by inertia makes them what they are, and also their Turkish language, which serves them for business of state

and for a literature, though not without an infusion of Persian and Arabic idioms said to amount to 95 per cent. of the vocabulary. This artificial language is hardly a link between Osmanli officialdom and the Turkish peasantry of Anatolia, which speaks Turkish dialects derived from tribes that drifted in, some as late as the Osmanlis, some two centuries before. Nor has this Turkish-speaking peasantry much in common with the Turkish nomads who still wander over the central Anatolian steppe and have kept their blood pure; for the peasantry has reverted physically to the native stock, which held Anatolia from time immemorial and absorbs all newcomers that mingle with it on its soil. Thus there are three distinct 'Turkish' elements in Turkey, divided by blood and vocation and social type; and even if we reckon all who speak some form of Turkish as one group, they only amount to 30 or 40 per cent. of the whole population of the Empire. The rest are alien to the Turks and to one another. Those who speak Arabic are as strong numerically as the Turks, or stronger, but they too are divided, and their unity is a problem of the future. There are pure-bred Arab nomads of the desert; there are Arabs who have settled in towns or on the land, some within the last generation, like the Muntefik in Mesopotamia, some a millennium or two ago, like the Meccan Koreish, but who still retain their tribal consciousness of race; there are Arabs in name who have nothing Arabic about them but their language—most of the peasantry of Syria are such, and the inhabitants of ancient centres of population like Damascus or Bagdad; in Syria many of these 'Arabs' are Christians, and some Christians, though they speak Arabic, have retained their separate sense of nationality—notably the Roman Catholic Maronites of the Lebanon—and would hardly be considered as Arabs either by themselves or by their neighbors. The same is true of the Druses, another remnant of an earlier stock, which has preserved its identity under the guise of Islam so heretically conceived as to rank as an independent religion. As for the Yemenis—they will resent the imputation, for no Arabs count up their genealogies so zealously as they, but there is more East African than Semitic blood in their veins. They are men of the moist, fertile tropics, brown of skin, and working half-naked in their fields, like the peoples of Southern India and Bengal. And on the opposite fringes of the Arabic-speaking area there are fragments of population whose language is Semitic but pre-Arabic—the Jacobite Christians of the Tor-Abdin, and the Nestorians of the Upper Zab, who once, under the Caliphs, were the industrious Christian peasantry of Mesopotamia, but now are shepherds and hillmen among the Kurds. The Kurds themselves are more scattered than any other stock in Turkey, and divided tribe against tribe, but taken together they rank third in numerical strength, after the Arabs and Turks. There are mountain Kurds and Kurds of the plain, husbandmen and herdsmen, Kurds who have kept to their original homes along the eastern frontier, and Kurds who, under Ottoman auspices, have spread themselves over the Armenian plateau, the North Mesopotamian steppes, the Taurus valleys, and the hinterland of the Black Sea. The chief thing the Kurds have in common is the Persian dialect they speak, but it is usual to class as Kurds any and every community in the Kurdish area which is not Turkish or Arab and can by courtesy be called Moslem (the Kurds, for that matter, are only Moslems skin-deep). Such communities

abound: the Dersim highlands, in particular, are an ethnographical museum; 'Kizil-Bashi' is a general name for their kind; only the Yezidis, though they speak good Kurdish, are distinguished from the rest for their idiosyncrasy of worshipping Satan under the form of a peacock (Allah, they argue, is good-natured and does not need to be propitiated) and they are repudiated with one accord by Moslem and Christian. But not all the scattered races in Turkey are isolated or primitive. The Greeks and Armenians, for instance, are, or were, the most energetic, intellectual, liberal elements in Turkey, the natural intermediaries between the other races and western civilization—'were' rather than 'are,' because the Ottoman government has taken ruthless steps to eliminate just these two most valuable elements among its subjects. The urban Greeks survive in centres like Smyrna and Constantinople, but the Greek peasantry of Thrace and Anatolia has mostly been driven over the frontier since the Second Balkan War. As for the Armenians, the Government has been destroying them by massacre and deportation since April, 1915—business and professional men, peasants and shepherds, women and children—without discrimination or pity. A third of the Ottoman Armenians may still survive. . . . To compensate for its depopulation of the countries under its dominion, the Ottoman Government, during the last fifty years, has been settling them with Moslem immigrants from its own lost provinces or from other Moslem lands that have changed their rulers. These 'Mouhadjirs' are reckoned, from first to last, at three-quarters of a million, drawn from the most diverse stocks—Bosniaks and Pomaks and Albanians, Algerines and Tripolitans, Tchetchens and Circassians. Numbers have been planted recently on the lands of dispossessed Armenians and Greeks. They add many more elements to the confusion of tongues, but they are probably destined to be absorbed or to die out. The Circassians, in particular, who are the most industrious (though most unruly) and preserve their nationality best, also succumb most easily to transplantation, through refusal to adapt their Caucasian clothes and habits to Anatolian or Mesopotamian conditions of life. All this is Turkey, and we come back to our original question: What common factor accounts for the name? What has stained this coat of many colours to one political hue? The answer is simple: Blood. Turkey, the Ottoman state, is not a unity, climatic, geographical, racial, or economic; it is a pretension, enforced by bloodshed and violence whenever and wherever the Osmanli Government has power."

**Resources.**—“On the big broad uplands the prime staple produce is winter wheat with barley second in the farmer's estimation. The native strains of wheat in Turkey are first class; it is the home of 'Turkey Red' wheat. . . . Rye is cultivated to a considerable extent, also millet in some places, and oats are raised, but in comparatively small quantities. Corn is a second rate article in the common estimation, but a good deal of corn with small cobs and hard kernels is grown on the mountains similar in kind to the flint corn of New England. The introduction of potatoes is attributed to missionaries; they are easily raised and people like them, but have not become habitu-

ated to their extensive use. Tobacco of Smyrna, Bafra and Samsoun is famous in the American and European market, and American representatives are heavy purchasers at these and other points. Fields gay with poppies are a common sight in the spring, and there is an active trade in opium, almost entirely for export. White rice at Tosia and elsewhere, and red rice at Niksar are cultivated in quantity, and rice is one of the most important articles of commerce and of food. Licorice, gum tragacanth and valonia grow without cultivation and are important articles in the export trade of the country. . . . It is generally believed that the mineral resources of Asia Minor are varied and rich, though some of the best authorities are rather sceptical except as regards coal. Copper has been mined in different sections from time immemorial. The mines at Tocat have been worked until within the memory of living men they have fallen into disuse. Rich copper deposits are reported along the Halys River, and water transportation might be an advantage in shipping the ore. Arghuni Maden is famous; the deposits are rich and extensive. Three out of six known mines are now in operation and the ore contains 70% of copper. Publications of 'The Mineral Industry' report the copper production of Turkey at less than one thousand tons per year. Greek miners have always found more or less silver. Gumush Hane above Trebizond means 'Silverton' and is named from the extensive mines in that region. . . . Some traces of gold are found in the silver of Bulgar Maden, and grains occasionally appear after torrential floods in the Mamouret ul-Aziz province, but the mines of Cræsus seem to have been lost to sight. Lead is produced in the Konia province. . . . Coal is the one mineral undoubtedly found in Turkey. The atlas published in connection with the 'Coal Resources of the World' locates known deposits at about four score points. The coal basin of prime importance is that of Eregli or Heraklia, Cozlu, and Zoungoultag on the coast of the Black Sea 140 miles east of Constantinople. The reserves here are extensive and have been exploited with growing returns by a French company. . . . It is not certain how far the rich oil deposits, which reach all the way from Baku on the Caspian Sea through Persia and Mesopotamia to the Persian Gulf, extend to the west, but it is almost certain that further exploration will discover great stores that have not yet been brought to light. Oil is found occasionally on the surface of some rivers, also in the region of the Dead Sea, and shale has been picked up in various places bearing a combustible oily substance. The oil areas await adequate exploration.”—G. E. White, *Agriculture and Industries* (W. H. Hall, ed., *Reconstruction in Turkey*, pp. 135, 147-149).

**Languages of the people.**—“The languages of Turkey are Turkish, Kurdish, Arabic, Syriac, and Bulgarian. Turkish is the official language of the entire empire and is used to a greater or less extent everywhere except in the remote villages of Kurdistan, Mesopotamia, and Syria, and throughout Arabia. Arabic is spoken everywhere south of the Taurus Mountains, with the exception of a few cities in the vicinity of Aintab and Marash. Kurdish is used in the mountains of Eastern Turkey and to a limited extent in the mountainous sections of Asia Minor. Armenian is spoken over the entire empire wherever there are Armenians. Greek is used along the borders of the Black Sea, the Archipelago and the Mediterranean and to a very limited degree inland. Syriac

is used among the Nestorians and Jacobites, chiefly the former, in the mountains of Eastern Turkey. The use of Bulgarian is confined to Bulgaria, Eastern Rumelia, and Macedonia. Constantinople itself is a babel, all the different Oriental and many of the European languages being found there in everyday use. Turkish is spoken by the Turks and Circassians and the various Moslem tribes, also to a considerable degree by the Kurds, Armenians, and Greeks, and by government officials everywhere. Certain . . . of the Armenians, especially those in Central Asia Minor, from Sivas west to Angora and Cesarea, and those south of the Taurus in the vicinity of Marash and Aintab, have in years past used Turkish almost entirely, preserving their ancestral language only in the church services. The same is true of the Greeks in Central Asia Minor. Arabic is used by Moslems and Christians alike in the sections where it is the vernacular. Kurdish is spoken both by Moslems and Christians. Bulgarian is used only by Bulgarians. All of these languages vary somewhat in their characteristics, according to the section where they are used and the class of people by which they are spoken. Thus the Arabic of the plains and of Egypt is much milder in its form than that found in the mountains. The same thing is true of the Turkish and the Armenian of Bitlis, and the people of that section are almost unintelligible to those farther west. The Greek of the Turkish Empire is also quite different in many respects from that of Greece proper. The Arabic and Greek languages are so well known as not to need any particular description. . . . The Turkish language is peculiar in many respects. Originally a Tartar dialect, it has many of the characteristics of the Saxon. It is terse and strong in its form of expression, and to a considerable degree monosyllabic. The Turks, however, passing through Persia, came very much under the influence of . . . its language and felt the softening influences of it. The Persian, as spoken by the Persians, is smooth and flowing, liquid as any of the Pacific Island languages, and even more so than the Italian. The way in which an educated Persian uses his own language is unsurpassed for delicacy of expression or sound. Passing from Persia and accepting the Koran, the Turks came under the influence of the Arabic language, and the Turkish of to-day is the result of the commingling of the three elements. As a consequence it is an exceedingly rich language. As it is ordinarily spoken it is not at all difficult to learn, but to use it in literature correctly and with the appropriate adaptation of the forms derived from the Arabic and Persian, requires an amount of study and skill such as comparatively few have been able to bring to it. The character used is the Arabic, which, however, is not entirely adapted to the simpler Tartar forms, and as a result there is more or less of reduplication of letters. While the lettering of the three languages, Turkish, Arabic, and Persian, is the same, each language has its own distinct form, so that a book printed in the type favored by the Turks will not be acceptable either to the Persians or the Arabs, and the same is true of the others. The tendency of education with Turkish, as with Arabic, is to soften the gutturals, of which there are several harsh ones, and Turkish as spoken in Constantinople by the educated is a smooth and flowing language."—E. M. Bliss, *Turkey and the Armenian atrocities*, pp. 45-48.—See also PHILology: 20; 23.

Influence of Saracens, Moslems and Byzan-

—Importance of the "ruling institution."—"The Saracens gave the Ottomans a complete religious and social system, united under a Sacred Law which professed to provide for all relations of life, and which became more and more rigid as time went on. Into this had been wrought slowly by generations of learned men most of the Persian governmental ideas . . . together with others from Arabian and Byzantine sources, such as a species of laws of inheritance and a system of juristic responses. The Saracens gave also their alphabet and a large stock of Arabic words. All that the Moslems gave the Ottomans was embodied in one great, complex institution, which was founded upon an elaborate system of education and supported by the revenues from a large part of the land of the empire, and which possessed great solidity and an almost changeless permanence. In the Ottoman Empire, as in all other Moslem lands, the influence of this completed institution was ultimately very injurious; when added to the Tatar love of custom, it laid a heavy hand on all movements toward improvement and progress. . . . What was left for the Byzantines to contribute to the Ottoman? He had received already the main features of his national character,—language, literary influences, law, and religion. One of his two leading institutions was already almost fully developed in Moslem lands, and required only transplantation. The other, however, the institution of war and government, could still be modified considerably; and this was to incorporate much from the Byzantines. Many details of governmental organization, both imperial and local, a supplementary system of taxation, a greatly elaborated taste for court ceremonial and splendor, a plan of organizing foreign residents under a special law, and a host of lesser usages and customs were to be taken over by the Ottomans. The Ottoman feudal system also probably owed its final form to the Byzantines; and perhaps it was from them that the Ottomans learned their abnormal love for fees and gifts. The matchless structure of Saint Sophia served as a model for the superb mosques that lift the shapely masses of their great gray domes, supported by clusters of demidomes and lesser domes, above the cypress trees and gardens of the rounded hills which in Constantine's city slope down to the blue waters of the Sea of Marmora, the Bosphorus, and the Golden Horn."—A. H. Lybyer, *Government of the Ottoman empire in the time of Suleiman the Magnificent*, pp. 21, 23-24.—One of the most important factors in the history of the Ottoman empire was the "ruling institution," a method of training the finest children of both their own and conquered races for important positions in the army and state. Thus, however insipid and degenerate the court officials became, the empire had capable men who were able to carry on the government efficiently. The Phanariots and Janissaries were late developments of this system. "The Ottoman Ruling Institution included the sultan and his family, the officers of his household, the executive officers of the government, the standing army composed of cavalry and infantry, and a large body of young men who were being educated for service in the standing army, the court, and the government. These men wielded the sword, the pen, and the scepter. They conducted the whole of the government except the mere rendering of justice in matters that were controlled by the Sacred Law, and those limited functions that were left in the hands of subject and foreign groups of non-Moslems. . . . Every one

who belonged to the Ruling Institution in any capacity from gardener to grand vizier, save only the members of the royal family, bore the title of *kud*, or slave, of the sultan. . . . Parents [of conquered races] who wished to keep their sons would sometimes marry them in tender years, since married boys were ineligible; those who had means bought exemption for their sons from the recruit-officers, who thus reaped great rewards. On the contrary, many parents were glad to have their sons chosen, knowing that they would thus escape from grinding poverty, receive a first-rate training suited to their abilities, and enter upon the possibility of a great career. Some parents, in fact, came to regard the process as a privilege rather than a burden; and they had reason to do so, since Turkish parents envied them the opportunity, and sometimes tried to evade the regulations by paying Christians to take their Moslem sons, and declare them as Christian children, so that they might be enrolled as the sultan's slaves. Apart, then, from political theory and religious prepossession, the levying of tribute children was by no means a mere evil to the parents. The situation of the boys themselves, considered under the same reservations, was almost wholly favorable. . . . In this system of the training of slaves for war and government lay the nucleus of the fundamental institution of the Ottoman state, which, together with the institution based on the Sacred Law, was to sum up practically the entire organized life of the Ottoman nation. Under the Samanids it was Turkish boys who were thus educated by Arabs and Persians, but the Ottomans were later to apply the same principle to the education of Christian youth."—A. H. Lybyer, *Government of the Ottoman empire in the time of Suleiman the Magnificent*, pp. 36, 47, 54, 23.—See also MILITARY ORGANIZATION: 42.

**B. C. 323.**—Beginning of Turkish domination in the Caucasus. See CAUCASUS: B. C. 323-18th century.

**A. D. 6th century.**—Empire in Tatory.—“At the equal distance of 2,000 miles from the Caspian, the Icy, the Chinese, and the Bengal seas, a ridge of mountains is conspicuous, the centre, and perhaps the summit, of Asia, which, in the language of different nations has been styled Imaus, and Caf, and Altai, and the Golden Mountains, and the Girdle of the Earth. The sides of the hills were productive of minerals; and the iron-forges, for the purpose of war, were exercised by the Turks, the most despised portion of the slaves of the great khan of the Geougen. But their servitude could only last till a leader, bold and eloquent, should arise to persuade his countrymen that the same arms which they forged for their masters might become in their own hands the instruments of freedom and victory. They sallied from the mountain; a sceptre was the reward of his advice. . . . The decisive battle which almost extirpated the nation of the Geougen established in Tartary the new and more powerful empire of the Turks. . . . The royal encampment seldom lost sight of Mount Altai, from whence the river Irtysh descends to water the rich pastures of the Calmucks, which nourish the largest sheep and oxen in the world. . . . As the subject nations marched under the standard of the Turks, their cavalry, both men and horses, were proudly computed by millions; one of their effective armies consisted of 400,000 soldiers, and in less than fifty years they were connected in peace and war with the Romans, the Persians, and the Chinese. . . . Among their southern conquests the most splendid was that of

the Nephthalites, or White Huns, a polite and warlike people, who possessed the commercial cities of Bochara and Samarcand, who had vanquished the Persian monarch, and carried their victorious arms along the banks and perhaps to the mouth of the Indus. On the side of the west the Turkish cavalry advanced to the lake Maotus [Sea of Azov]. They passed that lake on the ice. The khan, who dwelt at the foot of Mount Altai, issued his commands for the siege of Bosphorus, a city the voluntary subject of Rome and whose princes had formerly been the friends of Athens.”—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 42.—“Although the name of the Turks first became known to the western nations in the sixth century, the people had appeared in the west a century earlier, for there is every reason to believe that the Huns belonged to the Turkish stock. The Turks of Mount Altai are called Thù-kiù by the Chinese writers and are regarded as the same people as the Hiong-nù of earlier times. . . . The Chinese name . . . appears to be a corruption of the Turkish word ‘terk’ . . . a ‘helmet.’ The Thù-kiù became very powerful under their leader Tumere, who conquered the Jéujen (the Geougen of Gibbon), united under his sway all the Turkish tribes . . . and assumed the title of Chagan or Khan, 546.”—W. Smith, *Note to above*.—See also TATARS; MONGOLIA: Country and people; BALKAN STATES: Races existing.

**710.**—Subjugation by Saracens. See CALIPHATE: 710.

**815-945.**—Slaves and masters of the caliphate. See CALIPHATE: 815-945.

**999-1183.**—Gaznevide empire.—The decline of the caliphate at Bagdad in the ninth century was signalized by the rise to practically independent power of several dynasties in its Persian and Central Asian dominions. Among these was the dynasty of the Samanides who ruled, for a hundred and twenty-five years, an extensive dominion in northern Persia and modern Afghanistan and in the Turkoman regions to the Oxus and beyond. In this dominion of the Samanides was included the Turkish tribes which had submitted to Islam and which were presently to become the master champions of the faith. Their first attainment of actual empire in the Moslem world was accomplished by the overthrow of the Samanide princes, and the chief instruments of that revolution were two Turks of humble origin—Sebectagi, or Sabek-tekín, and his son Mahmud. Sebectagi had been a slave (in the service of a high official under the Samanides) who gained the favor of his masters and acquired command of the city and province of Gazna; whence his famous son Mahmud was called the Gaznevide, and the wide conquests which the latter made are sometimes distinguished as the Gaznevide empire. “For him the title of Sultan was first invented [see SULTAN]; and his kingdom was enlarged from Transoxiana to the neighbourhood of Ispahan, from the shores of the Caspian to the mouth of the Indus. But the principal source of his fame and riches was the holy war which he waged against the Gentoos of Hindostan. . . . The Sultan of Gazna surpassed the limits of the conquests of Alexander; after a march of three months, over the hills of Cashmir and Thibet, he reached the famous city of Kinoge, on the Upper Ganges, and, in a naval combat on one of the branches of the Indus, he fought and vanquished

4,000 boats of the natives. Delhi, Lahor, and Multan were compelled to open their gates; the fertile kingdom of Guzarat attracted his ambition and tempted his stay. [The throne of Mahmud scarcely outlasted himself. In the reign of his son Masoud, it was nearly overturned by another Turkish horde—later comers into the region of Bokhara from the steppes beyond. In a great battle fought at Zendecan, in Khorasan, 1038, Massoud was defeated and driven from Persia to a narrowed kingdom in Cabul and the Punjab, which survived for more than a century longer and then disappeared.]—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 57.—See also INDIA: 977-1290.

ALSO IN: J. H. Newman, *Lectures on the history of the Turks (Historical sketches, v. 1, lecture 4)*.

1004-1063.—Conquests of Seljuk and Togrul Beg.—“The history of the origin of the Seldjukides is obscured by numerous myths, but it appears from it that Seldjuk, or more correctly Seldjik, the son of Tokmak, and Subash, commander of the army of a prince named Pigu or Bogu, were expelled from their native steppes for some crime, and forced to seek their fortunes in strange countries. Seldjuk, with 100 horsemen, 1,000 camels, and 50,000 sheep, migrated to a place on the southern confines of the desert, in the neighbourhood of Djend [described as distant twenty fersakhs from Bokhara]. He settled there and, with all his followers, embraced Islamism.” Under Seljuk and his two grandsons, Togrul and Tchakar, the Seljuks grew formidable in numbers and power, on the border of the empire of Mahmud the Ghaznevide, then rising on the ruins of the principality of the Samanides. Thinking to control these turbulent kinsmen of his race, Mahmud unwisely proposed to them to quit the country they occupied, between the Oxus and the Jaxartes, and to settle themselves in Khorasan. “In the year . . . (1030), that is, within a year of the death of Sultan Mahmud, we find the Seldjukides west of Merv, on the ground now occupied by the Tekke-Turkomans, in the neighbourhood of the southern cities of Nisa and Abiverd, from which point they molested the rich province of Khorasan by constant raids, as grievously as is done by the Turkomans to this very day.” When it was too late, the Ghaznevide sultan attempted to expel the marauders. His armies were routed, and the grandsons of Seljuk were soon (1039) in undisputed possession of the whole of Khorasan, with the rich and flourishing cities of Merv, Balkh, and Nishapur. A few years later they had pushed forward “over the ruins of the former power of the Buyyides [or Bouides, of Persia] to Azerbaïdjan, and, in the year 446 (1054) the skirmishers of the Turkish army, led by Togrul Beg, penetrated into the interior of the eastern Roman Empire [that is, into Asia Minor]; and although the bold inhabitants of the desert in their raid on the land of the Cæsars were bent rather on plunder than on actual conquest, yet even their temporary success against the great name of Rome—so long one of awe to the ancient Asiatic—increased enormously the prestige and reputation of the Seldjukides.”—A. Vámbéry, *History of Bokhara*, ch. 6.—“Togrul Beg, under pretence of a pilgrimage to Mekka had entered Irak at the head of a strong army, and sought to obtain admission into Baghdad. The khalif, in opposition to the advice of his vizier and the officers of the Turkish militia, consented; on the 22nd Ramadan, 447 (December, 1050), the name of Togrul was inserted in the public prayer; and three days after he made his

entry into the city. He had taken an oath, before entering, to be the faithful and obedient servant of the khalif; but it is needless to add that he broke this immediately afterwards, and occupied the city in force.”—The caliph was forced, nevertheless, to crown Sultan Togrul with two crowns, one to represent the sovereignty of Persia and the other the sovereignty of Arabia, and to confer on him the title of “The Sultan of the Court, the Right Hand of the Chief of Believers, the King of the East and of the West. [The Seljuk sultan was now master of the Asiatic Mohammedan empire. But civil war was still protracted for a period, by struggles of the partisans of the Bouides, assisted by the Fatimite caliph of Egypt, and the unfortunate city of Bagdad suffered terribly at the hands of each party in turn. Togrul Beg, in the end, destroyed the opposition to his rule, and was at the point of marrying one of the caliph’s daughters, when a sudden illness ended his life, 1063. He was succeeded by his nephew, Alp Arslan, who extended the empire of the Seljuks in Asia Minor and Armenia.]”—R. D. Osborn, *Islam under the khalifs of Baghdad*, pt. 3, ch. 2.

1063-1073.—Conquests of Alp Arslan.—Military tactics of Romanus Diogenes.—“Alp Arslan, the nephew and successor of Togrul Beg, carried on the havoc and devastation which had marked the career through life of his uncle. Togrul Beg had on two or three occasions invaded the Asiatic territories of the Byzantine Empire; Alp Arslan carried these partial conquests to completion. He invaded in person the northern parts of Armenia and Iberia. He laid waste the country in the cruellest manner, for it was the notion of these barbarians that a country was not really conquered unless it was also depopulated. Iberia had been long celebrated for the industry of its inhabitants, the wealth of its numerous towns, and the valour of its people. There is no doubt they could have flung back the invaders had the Byzantine Empire come to their aid. But avarice was the dominant passion of the Emperor, Constantine X., and rather than disburse his loved hoards, he preferred to look idly on, while his fairest provinces were laid waste and overrun. The country was, in consequence, compelled to submit to the Seljuk Turks, and the invaders settling upon it, like a swarm of locusts, swiftly converted the happiest and most flourishing portion of Asia into a scene of poverty and desolation. From Iberia, Alp Arslan passed into Armenia. Ani, the capital, was stormed and taken, after a gallant defence, on the 6th June, 1064. . . . So great was the carnage that the streets were literally choked up with dead bodies; and the waters of the river were reddened from the quantity of bloody corpses.”—*Ibid.*—“So far as one can judge from the evidence of modern and mediæval travellers and of Byzantine historians, Asia Minor, at the time of the Seljuk invasion of Alparslan, was thickly occupied by races who were industrious, intelligent, and civilised—races with a certain mixture of Greek blood and mostly Greek as to language. The numerous provincial cities were the centres of civilisation. Their walls and amphitheatres, their works of art, aqueducts, and other public buildings, give evidence of a long-continued sense of security, of peaceful and progressive peoples, and of a healthy municipal life. Wealth was widely diffused. . . . It was against this prosperous portion of the Empire, which had contributed largely to the wealth of the capital, that Alparslan turned his attention when the border states were no longer

able to resist his progress. . . . The Strong Lion of the Seljuks devoured many cities and devastated the fairest provinces. Cappadocia was laid waste; the inhabitants of its capital, Cæsarea, were massacred. . . . Mesopotamia, Mitylene, Syria, and Cilicia were plundered."—E. Pears, *Fall of Constantinople*, ch. 2.—"Though the internal condition and administration of the [Byzantine] empire had been steadily deteriorating since the death of Basil II (1024), it cannot be said that its army showed any decline till the very day of Manzikert. . . . The Seljuks of Alp Arslan were in tactics just like the Turks whom Leo the Wise had described a century and a half before. . . . In the spring of 1071 Romanus [Diogenes] collected a very large army, at least sixty thousand strong, and betook himself to the extreme eastern corner of his dominions, with the intention of meeting the Turks at the very frontier, and recovering the fortresses of Akhlat and Manzikert. . . . He had retaken the latter place, and the former was being besieged by a detached division of his army, when the main host of the Seljuks came upon the scene. It was a great horde of horse-archers, more than a hundred thousand strong, and full of confidence in its victorious Sultan. The tactics which Romanus should have employed were those laid down in Leo's manual—to beware of ambushes and surprises, never to fight with uncovered flanks or rear, to use infantry as much as possible, and never to allow the army to get separated or broken up. Romanus violated all these precepts. His first brush with the enemy was a disaster on a small scale, caused by pure heedlessness. When a small body of Turkish cavalry came forward to reconnoitre the Imperial camp, it was furiously charged by a rash officer named Basilakes, who commanded the theme of Theodosiopolis: he drove it before him till he lost sight of his master, and fell into an ambush, where he and all his men were killed or captured. A division which Romanus sent to support them found nothing but the bodies of the slain. With this warning before him, the emperor should have acted with all caution: perhaps, indeed, he intended to do so till his rashness ran away with him. He drew up his host in front of his camp with great care. The right wing was composed of the cavalry from the easternmost themes—Cappadocia, Armeniacon, Charsiana, and the rest, under Alyattes, strategos of the Cappadocian theme. The left wing, under Nicephorus Bryennius, was formed of the drafts of the European themes. In the centre was the emperor, with his guards and the regiments of the metropolitan provinces. A very strong rear line, composed of mercenary cavalry (which included a regiment of Germans and also some Normans from Italy) and the levies of the nobles of the eastern frontier, was placed under Andronicus Ducas, a kinsman of the late Emperor Constantine. He was unfortunately, though a good officer, a secret enemy of Romanus. Alp Arslan had been so moved by the news of the size and splendour of the army which was moving against him, that on the morning after the skirmish in which Basilakes had been captured, he sent an embassy offering peace on the terms of *uti possidetis*. He would withdraw and undertake to make no further invasions of the empire. Romanus was probably right in refusing to negotiate, for Turkish promises could not be trusted. He told the ambassadors that the first condition of peace must be that the Sultan should evacuate his camp, retire, and allow it to be occupied by the Imperial forces. Alp Arslan would not consent to sacrifice his prestige, and the

armies were soon in collision. . . . The empire had suffered other defeats as bloody as that of Manzikert, but none had such disastrous results. The captivity of Romanus Diogenes threw the nominal control of the realm into the hands of his ward, Michael Ducas, who, though he was only just reaching manhood, displayed the character of a pedant and a miser. His reign of seven years was one chaotic series of civil wars; half a dozen generals in corners of the empire assumed the purple; and Romanus, after his delivery from prison, tried to reclaim his crown. Meanwhile, the Seljuks flooded the plateau of Asia Minor, almost unopposed by the remnants of the Imperial army, who were wholly taken up in the civil strife. No man of commanding talents arose to stem the tide, and ere long the horse-bowmen of Malekshah, the son of Alp Arslan, were seen by the Aegean and even by the Propontis. The Turkish invasion was a scourge far heavier than that of the Saracens. While the latter, when bent on permanent conquest, offered the tribute as alternative to the 'Koran or the sword,' the Seljuks were mere savages who slew for the pleasure of slaying. They were barbarous nomads, who had no use for towns or vineyards or arable land. They preferred a desert in which they could wander at large with their flocks and herds. Never, probably, even in the thick of the Teutonic invasions of the fifth century, was so much harm done in ten short years as in Asia Minor during the period 1071-1081. By the end of the latter year the flourishing themes which had been for so long the score of the East-Roman realm had been reduced to mere wastes. Thirty years after Manzikert, when the armies of the Crusaders marched from Nicaea to Tarsus, right across the ancient heart of the empire, they nearly perished of starvation in a land of briars and ruins."—C. Oman, *History of the art of war*, pp. 216-220.—See also ARMENIA: 008-1085.

1054.—Attacks on Christian pilgrims. See CRUSADES: CAUSES, etc.

1073-1092.—Empire of Malek Shah and its subordinate sultans.—Alp Arslan, assassinated in 1073, "was succeeded by his son, Malek Shah, in whose reign the power of the Seljukian Turks attained its greatest height. . . . Turkestan, the home of his race, including Bokhara and Samarcand, was annexed by Malek, and the rule of the shepherd Sultan was admitted at Cashgar. In addition to Persia and the countries just mentioned, his territory included at one time nearly the whole of what is now Turkey in Asia. . . . The Seljukian empire, however, broke up on the death of Malek, which took place in 1002, and, after a period of civil war, was divided into four parts. . . . One of the divisions . . . was carved out of the dominions of the Roman empire, and the capital was, for the most part, at Iconium, a city which to-day, under the name of Konieh, retains somewhat of a sacred character among the Turks, because of its connection with the first Sultans who obtained the right to be Caliphs. Sultan Malek, eighteen years before his death, had prevented a quarrel with Suliman, his cousin, by consenting to allow him to be Sultan of the Seljuks in the lands of the Christian empire. With Suliman there begins the famous line of robber chiefs who are known as Seljukian Sultans of Rome or Roum, or as Sultans of Iconium."—E. Pears, *Fall of Constantinople*, ch. 2.—"The dominion of Suleiman over the greater part of Asia Minor was recognised by a treaty with the Byzantine empire in 1074, when Michael VII. purchased the assistance of a Turkish auxiliary force against the rebellion of

Oursel and his own-uncle John Dukas. Nicephorus III. ratified the treaty concluded with Michael VII., augmented the power of the Turks, and abandoned additional numbers of Christians to their domination, to gain their aid in dethroning his lawful prince; and Nicephorus Melissenos, when he rebelled against Nicephorus III., repeated a similar treason against the traitor, and, in hopes of gaining possession of Constantinople, yielded up the possession of Nicæa to Suleiman, which that chief immediately made the capital of his dominions. . . . When Alexius ascended the throne [Alexius I. (1081)], the Seljouk conquests in Asia Minor were still considered as a portion of the dominions of the Grand Sultair Malekshah, the son of Alp Arslan, and Suleiman, the sultan of Nicæa, was only his lieutenant, though as a member of the house of Seljouk, and as cousin of Malekshah, he was honoured with the title of Sultan. The prominent position which his posterity occupied in the wars of the Crusaders, their long relations with the Byzantine empire, and the independent position they held as sultans of Iconium, have secured to them a far more lasting place in history than has been obtained by the superior but less durable dynasty of the grand sultans. . . . Toutoush, the brother of Malekshah, who acted as his governor at Damascus at the same time, became the founder of the Syrian dynasty of Seljouk sultans."—G. Finlay, *History of the Byzantine and Greek empires, from 716 to 1453, bk. 3, ch. 2, sect. 1*.—The empire of Malek Shah "was as vast as that of the Sassanian kings in the height of their glory. He encouraged the cultivation of science and literature, and his reign is famous for the reformation of the Calendar [in which work Omar el-Khayyam, the poet, was one of the astronomers employed]. An assembly of all the astronomers of Persia adopted a system of computing time which Gibbon says 'surpasses the Julian and approaches the accuracy of the Gregorian era.' It was called the Jalalæan era, from Jalalu-'d-Din, 'Glory of the Faith,' one of the titles of Malik-Shah, and commenced on March 15, 1079."—C. R. Markham, *History of Persia, ch. 6*.

1092-1160.—Dissolution of the empire of Malek Shah.—"Melikshah's reign was certainly the culminating point of the glory of the Seldjukides. . . . Mindful of the oriental adage, 'Perfection and decay go hand in hand,' he determined as far as possible to provide, during his own lifetime, against discord breaking out amongst those who should come after him, by dividing the empire between his different relations. Anatolia was given to Suleiman Shah, whose family had hitherto governed Gazan; Syria fell to his brother Tutush, the adversary of the Crusaders; Nushtekin Gartcha, who had raised himself from slavery to the rank of generalissimo, and who became later the founder of the dynasty of the Khahrezmides, was invested with Khahrezm; Aksonghar got Aleppo; Tchekermish Mosul, Kobulmish Damascus, Khomartekin Fars, and his son Sandjar was entrusted with the administration of Khorasan and Transoxania. These precautions proved, however, ineffectual to preserve the dynasty of the Seljukides from the common fate of oriental sovereign races, for after the death of Melikshah, which took place in 485 (1092), his son Berkyaruk (the Very Brilliant One) had scarcely ascended the throne before the flames of discord were kindled amongst the numerous members of the family." Sandjar, who died in 1160, "was almost the only one of all his race who took to heart the decay of their power in their old hereditary dominions, or made any earn-

est endeavour to arrest it."—A. Vámbéry, *History of Bokhara, ch. 6*.

(Ottoman): 1240-1326.—Origin and rise of the modern Turkish power.—On the final defeat and death, in Kurdistan, of the last Khuarezmian or Carizmian prince, who was pursued relentlessly by the Mongols of Jenghiz Khan and his successors, there was dissolved an army which included various Turkish hordes. The fragments of this Khuarezmian force were scattered and played several important parts in the history of the troubled time. "The bolder and more powerful chiefs invaded Syria, and violated the holy sepulchre of Jerusalem; the more humble engaged in the service of Aladin, Sultan of Iconium [last surviving remnant of the great empire of the Seljukian Turks], and among these were the obscure fathers of the Ottoman line. They had formerly pitched their tents near the southern bank of the Oxus, in the plains of Mahan and Nesa; and it is somewhat remarkable that the same spot should have produced the first authors of the Parthian and Turkish empires. At the head or in rear of a Carizmian army, Soliman Shah was drowned in the passage of the Euphrates. His son Orthogrul or [Ertogrul] became the soldier and subject of Aladin, and established at Surgut, on the banks of the Sangar, a camp of four hundred families or tents, whom he governed fifty-two years both in peace and war. He was the father of Thaman, or Athman, whose Turkish name has been melted into the appellation of the Caliph Othman. . . . Othman possessed, and perhaps surpassed, the ordinary virtues of a soldier, and the circumstances of time and place were propitious to his independence and success. The Seljukian dynasty was no more. [A remnant called the Seljukian Sultanate of Rum existed until the thirteenth century] and the distance and decline of the Mogul Khans soon enfranchised him from the control of a superior. He was situated on the verge of the Greek empire. The Koran sanctified his 'gazi,' or holy war, against the infidels; and their political errors unlocked the passes of Mount Olympus, and invited him to descend into the plains of Bithynia. . . . It was on the 27th of July, in the year 1299 of the Christian era, that Othman first invaded the territory of Nicomedia. . . . The annals of the twenty-seven years of his reign would exhibit a repetition of the same inroads. It was not till Othman was oppressed by age and infirmities that he received the welcome news of the conquest of Prusa [or Brusa], which had been surrendered by famine or treachery to the arms of his son Orchan [or Orkhan]. . . . From the conquest of Prusa we may date the true era of the Ottoman empire. The lives and possessions of the Christian subjects were redeemed by a tribute or ransom of thirty thousand crowns of gold; and the city, by the labors of Orchan, assumed the aspect of a Mahometan capital."—E. Gibbon, *History of the decline and fall of the Roman empire, ch. 64*.—"Osman is the real Turkish

name, which has been corrupted into Othman. The descendants of his subjects style themselves Osmanlis, which has in like manner been corrupted into Ottoman."—W. Smith, *Note to above*.

1270-1271.—Repulse of Crusaders. See CRUSADES: 1270-1271.

1326-1359.—Progress of conquests in Asia Minor.—Janissaries.—"Orchan [the son and successor of Othman] had captured the city of Nicomedia in the first year of his reign (1326); and with the new resources for warfare which the administrative genius of his brother [Alaeddin] placed at his command, he speedily signalled his reign by conquests still more important. The great city of Nice [Nicaea] (second to Constantinople only in the Greek Empire) surrendered to him in 1330. . . . Numerous other advantages were gained over the Greeks: and the Turkish prince of Karasi (the ancient Mysia), who had taken up arms against the Ottomans, was defeated; and his capital city, Berghama (the ancient Pergamus), and his territory, annexed to Orchan's dominions. On the conquest of Karasi, in the year 1336 of our era, nearly the whole of the north-west of Asia Minor was included in the Ottoman Empire; and the four great cities of Brusa, Nicomedia, Nice, and Pergamus had become strongholds of its power. A period of twenty years, without further conquests, and without war, followed the acquisition of Karasi. During this time the Ottoman sovereign was actively occupied in perfecting the civil and military institutions which his brother had introduced; in securing internal order, in founding and endowing mosques and schools, and in the construction of vast public edifices. . . . Orchan died in the year 1359 of our era, at the age of seventy-five, after a reign of thirty-three years, during which the most important civil and military institutions of his nation were founded, and the Crescent was not only advanced over many of the fairest provinces of Asia, but was also planted on the European continent."—E. S. Creasy, *History of the Ottoman Turks*, ch. 2.—"It is with Othman's son Orkhan that the Ottoman Empire really begins. He threw off his nominal allegiance to the Sultan [of Iconium], though he still bore only the title of Emir. And in his time the Ottomans first made good their footing in Europe. But while his dominion was still only Asiatic, Orkhan began one institution which did more than anything else firmly to establish the Ottoman power. This was the institution of the tribute children. By the law of Mahomet . . . the unbeliever is allowed to purchase life, property, and the exercise of his religion, by the payment of tribute. Earlier Mahometan rulers had been satisfied with tribute in the ordinary sense. Orkhan first demanded a tribute of children. The deepest of wrongs, that which other tyrants did as an occasional outrage, thus became under the Ottomans a settled law. A fixed proportion of the strongest and most promising boys among the conquered Christian nations were carried off for the service of the Ottoman princes. They were brought up in the Mahometan faith, and were employed in civil or military functions, according to their capacity. Out of them was formed the famous force of the Janissaries, the new soldiers who, for three centuries, as long as they were levied in this way, formed the strength of the Ottoman armies. These children . . . formed a body of troupes such as no other power, Christian or Mahometan, could command. . . . While the force founded by Orkhan lasted in its first shape,

the Ottoman armies were irresistible. But all this shews how far the Ottomans were from being a national power. Their victories were won by soldiers who were really of the blood of the Greeks, Slaves, and other conquered nations. In the same way, while the Ottoman power was strongest, the chief posts of the Empire, civil and military, were constantly held, not by native Turks, but by Christian renegades of all nations. The Ottoman power in short was the power, not of a nation, but simply of an army."—E. A. Freeman, *Ottoman power in Europe*, ch. 4.—"The name of Yeni Tscheri, which means 'new troops,' and which European writers have turned into Janissaries, was given to Orchan's young corps by the Dervish Hadji Beytarch."—E. S. Creasy, *History of the Ottoman Turks*, ch. 2.

1360-1389.—Conquests in Europe of Murad I.—Battle of Kossovo.—"The dissensions of the elder and younger Andronicus [emperors at Constantinople, the younger—a grandson—in revolt and the elder finally deposed, 1320-1328], and the mistaken policy of Cantacuzene [Great Domestic of the empire, regent, after the death of Andronicus the younger, 1341, and then usurper of the throne from 1341 until 1355], first led to the introduction of the Turks into Europe; and the subsequent marriage of Orchan with a Grecian princess was acceded to by the Byzantine court as a faint bond of peace between a dreaded conqueror and a crouching state. The expectation of tranquillity was, however, fatally blasted; and, in the last quarrel of Cantacuzene with his pupil [John Palæologus, the youthful son of Andronicus the younger, who was deprived of his crown for fourteen years by Cantacuzene], the disastrous ambition of the former opened the path of Solyman [or Suleiman Pasha], the son of the Orchan, across the Hellespont [1356], and laid the northern provinces of the kingdom open to the temporary ravages of the barbarians, thus inflicting a lasting and irremediable injury on the liberties of Christendom. The exploits of Solyman, however, led to no other permanent results than the example which they left to the ambition of Amurath I. [or Murad, younger son of Orkhan], who, amongst his earliest achievements, led his victorious army across the Hellespont [1360], ravaged the extended district from Mount Hamus to the Straits, and, taking possession of Adrianople [1361], made it the first seat of his royalty, and the first shrine of Mahomedanism in Europe. His conquests had now drawn a circle round the enfeebled dominions of the Emperor; and the submission of John Palæologus, together with his political views in more distant quarters, alone prevented Amurath from contracting the circumference to the centre, and annihilating the empire of the East, by seating himself on the throne of Byzantium. For the present, he turned his back upon the city, and pursued his course towards the wilds of Bulgaria and Servia."—J. E. Tennent, *History of modern Greece*, v. 1, ch. 4.—"Hitherto the Turkish victories in Europe had been won over the feeble Greeks; but the Ottomans now came in contact with the far more warlike Slavonic tribes, which had founded kingdoms and principalities in Servia and Bosnia. Amurath also menaced the frontiers of Wallachia and Hungary. The Roman See, once so energetic in exciting the early crusades, had disregarded the progress of the new Mahometan power, so long as the heretical Greeks were the only sufferers beneath its arms. But Hungary, a country that professed spiritual obedience to the Pope, a branch of Latin Christendom, was now in peril; and Pope

Urban V. preached up a crusade against the infidel Turks. The King of Hungary, the princes of Servia, of Bosnia and Wallachia, leagued together to drive the Ottomans out of Europe; and their forces marched towards Adrianople until they crossed the river Marizza at a point not more than two days' journey from that city. [A single battle, fought on the Marizza, in 1363, broke this first Slavonic league against the Turks, and Murad proceeded in his acquisition of towns and territory from the Serbians and Bulgarians until 1376, when both people purchased a short peace, the former by paying a heavy annual tribute of money and soldiers, the latter by giving their king's daughter to the Turk. The peace thus secured only gave an opportunity to the Slavic nations to organize one more great attempt to cast out their aggressive and dangerous neighbor Serbia led the movement, and was joined in it by the Bulgarians, the Bosnians, and the Skipetars of Albania, with aid likewise promised and rendered from Hungary, Wallachia, and Poland. But nothing prospered in the undertaking; it served the ambition of the Turks and quickened their conquest of south-eastern Europe. Murad fell upon Bulgaria first (1389), broke down all resistance, dethroned the king and annexed his state to the Ottoman dominions. A few weeks later in the same year, on August 27, 1389, the great and famous battle of Kossovo was fought, which laid the heavy yoke of Turkish tyranny upon the necks of the Serbian people, and the memory of which has been embalmed in their literature. Murad was assassinated in the hour of victory by a despairing Serbian nobleman, but lived long enough to command the execution of the captive Serbian king].—E. S. Creasy, *History of the Ottoman Turks*, ch. 3.—See also BALKAN STATES: Races existing; BULGARIA: 1258-1372; HUNGARY: 1301-1442; RUMANIA: 13th-18th centuries; SERBIA: 14th-18th centuries.

1389-1403.—Conquests of Bayezid I.—Emir becomes sultan.—His overthrow and capture by Timur.—“The character of Bajazet [or Bayezid], the son and successor of Amurath, is strongly expressed in his surname of Ilderim, or the Lightning; and he might glory in an epithet which was drawn from the fiery energy of his soul and the rapidity of his destructive march. In the fourteen years of his reign he incessantly moved at the head of his armies, from Bursa to Adrianople, from the Danube to the Euphrates. . . . No sooner had he imposed a regular form of servitude on the Servians and Bulgarians than he passed the Danube to seek new enemies and new subjects in the heart of Moldavia. Whatever yet adhered to the Greek empire in Thrace, Macedonia, and Thessaly, acknowledged a Turkish master. . . . The humble title of emir was no longer suitable to the Ottoman greatness; and Bajazet condescended to accept a patent of sultan from the caliphs who served in Egypt under the yoke of the Mamelukes—a last and frivolous homage that was yielded by force to opinion, by the Turkish conquerors to the House of Abbas and the successors of the Arabian prophet. The ambition of the sultan was inflamed by the obligation of deserving this august title; and he turned his arms against the kingdom of Hungary, the perpetual theatre of the Turkish victories and defeats. Sigismund, the Hungarian king, was the son and brother of the emperors of the West; his cause was that of Europe and the Church; and

on the report of his danger, the bravest knights of France and Germany were eager to march under his standard and that of the cross. In the battle of Nicopolis [Sept. 28, 1396], Bajazet defeated a confederate army of 100,000 Christians, who had proudly boasted that if the sky should fall they could uphold it on their lances. The far greater part were slain or driven into the Danube; and Sigismund, escaping to Constantinople by the river and the Black Sea, returned, after a long circuit, to his exhausted kingdom. In the pride of victory, Bajazet threatened that he would besiege Buda; that he would subdue the adjacent countries of Germany and Italy; and that he would feed his horse with a bushel of oats on the altar of St. Peter at Rome. His progress was checked, not by the miraculous interposition of the apostle, not by a crusade of the Christian powers, but by a long and painful fit of the gout. . . . At length the ambition of the victorious sultan pointed to the conquest of Constantinople; but he listened to the advice of his vizir, who represented that such an enterprise might unite the powers of Christendom in a second and more formidable crusade. His epistle to the emperor was conceived in these words: ‘By the divine clemency, our invincible scimitar has reduced to our obedience almost all Asia, with many and large countries in Europe, excepting only the city of Constantinople; for beyond the walls thou hast nothing left. Resign that city; stipulate thy reward; or tremble for thyself and thy unhappy people at the consequences of a rash refusal.’ But his ambassadors were instructed to soften their tone, and to propose a treaty, which was subscribed with submission and gratitude. A truce of ten years was purchased by an annual tribute of thirty thousand crowns of gold. [The truce was soon broken by Bayezid, who found a pretext for again demanding the surrender of Constantinople. He had established his blockade of the city and would surely have won it by famine or assault if Timur's invasion of Asia Minor (1402) had not summarily interrupted his plans and ended his career. Defeated at the battle of Angora and taken prisoner by the Tatar conqueror, he died a few months later—whether caged like a beast or held in more honorable captivity is a question in some dispute].—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 64-65.—See also TIMUR.

1402-1451.—Prostration and recovery.—Conquests of Mohammed I and Murad II.—It is one of the marvels of history that the Ottoman empire, broken and dismembered by Timur, recovered its vigor and reëntered upon a long career. After the fall of Bayezid, three fragments of his dominions were held by three of his surviving sons, while other portions were transferred by Timur to princes of the old Seljuk house. Civil war broke out between the brothers of the Ottoman race; it resulted in the triumph of Mohammed, the youngest (1413), who reunited a large part of the dominions of his father. He reigned but eight years, which were years of peace for the Greeks, with whom Mohammed maintained a friendly intercourse. His son, Murad II (or Amurath), was provoked to renew the state of war, and a formidable attack upon Constantinople

was made in August, 1422. The first assault failed, and disturbances at home recalled Murad before he could repeat it. The Roman capital was reprieved for thirty years; but its trembling emperor paid tribute to the sultan and yielded most of the few cities that remained to him outside of his capital. The Ottoman power had become threatening again in Europe, and Serbians, Bosnians, Albanians, Wallachians, Hungarians, and Poles now struck hands together in a combination, once more, to oppose it. "A severe struggle followed, which, after threatening the utter expulsion of the house of Othman from Europe, confirmed for centuries its dominion in that continent, and wrought the heavier subjugation of those who were then seeking to release themselves from its superiority. In 1442 Amurath was repulsed from Belgrade; and his generals, who were besieging Hermanstadt, in Transylvania, met with a still more disastrous reverse. It was at Hermanstadt that the renowned Hunyades [or Hunyadi] first appeared in the wars between the Hungarians and the Turks. He was the illegitimate son of Sigismund, King of Hungary, and the fair Elizabeth Morsiney. In his early youth he gained distinction in the wars of Italy; and Comines, in his memoirs, celebrates him under the name of the White Knight of Wallachia. After some campaigns in Western Christendom, Hunyades returned to protect his native country against the Ottomans." At Hermanstadt, and again at Vasag, Hunyadi defeated the Turks with great slaughter and rivalled them in the ferocity with which his prisoners were treated. His fame now gave a great impulse to the Crusade against the Turks which Pope Eugenius had preached, and drew volunteers to his standard from all the nations of the West. In 1443, Hunyadi led a splendid and powerful army across the Danube near Semendra, drove the Turks beyond the Balkans, forced the passage of the mountains with a boldness and a skill that is compared with the exploits of Hannibal and Napoleon, and extorted from the sultan a treaty (of Szegeddin, July 12, 1444) which rescued a large Christian territory from the Moslem yoke. "The Sultan resigned all claims upon Serbia and recognised George Brankovich as its independent sovereign. Wallachia was given up to Hungary." But the peace which this treaty secured was brief; Christian perfidy destroyed it, and the penalty was paid by whole centuries of suffering and shame for the Christians of the Danubian states. "Within a month from the signature of the treaty of Szegeddin the Pope and the Greek Emperor had persuaded the King of Hungary and his councillors to take an oath to break the oath which had been pledged to the Sultan. They represented that the confessed weakness of the Ottomans and the retirement of Amurath [who had placed his fourteen year old son, Mohammed on the throne and withdrawn from the cares of sovereignty] to Asia, gave an opportunity for eradicating the Turks from Europe which ought to be fully employed. The Cardinal Julian [legate of the pope] pacified the conscientious misgivings which young King Ladislaus expressed, by his spiritual authority in giving dispensation and absolution in the Pope's name. . . . On the 1st of Sept., the King, the legate, and Hunyades, marched against the surprised and unprepared Turks with an army of 10,000 Poles and Hungarians. The temerity which made them expect to destroy the Turkish power in Europe with so slight a force was equal to the dishonesty of their enterprise."

They advanced through Bulgaria to the Black sea, and southward along its coast as far as Varna, which they took. There they were called to account. Murad had resumed the sceptre, put himself at the head of 40,000 of the best warriors of Islam and on November 10 he dashed them upon the Christian forces at Varna, with the broken treaty borne like a banner at their head. His victory was overwhelming. Cardinal Julian and the king of Hungary were both among the slain. Hunyadi fled with a little remnant of followers and escaped to try fortune in other fields. "This overthrow did not bring immediate ruin upon Hungary, but it was fatal to the Slavonic neighbours of the Ottomans, who had joined the Hungarian King against them. Serbia and Bosnia were thoroughly reconquered by the Mahometans; and the ruin of these Christian nations, which adhered to the Greek Church, was accelerated by the religious intolerance with which they were treated by their fellow Christians of Hungary and Poland, who obeyed the Pope and hated the Greek Church as heretical. . . . The bigotry of the Church of Rome in preaching up a crusade against the sect of the Patarenes, which was extensively spread in that country [Bosnia], caused the speedy and complete annexation of an important frontier province to the Ottoman Empire. Seventy Bosnian fortresses are said to have opened their gates to the Turks within eight days. The royal house of Bosnia was annihilated, and many of her chief nobles embraced Mahometanism to avoid a similar doom. [After once more attempting to escape from the throne, and being recalled by domestic disturbances, Murad reigned yet six years, extending his dominions in the Peloponnesus, defeating once more his old antagonist, Hunyadi, who invaded Serbia (1448), but being successfully defied in Albania by the heroic Scanderbeg. He died in 1451]."—E. S. Creasy, *History of the Ottoman Turks*, ch. 4.

1451-1481.—Conquest of Constantinople.—Empire organized and perfected by Mohammed II.—Mohammed II, son of Murad II, "finished the work of his predecessors; he made the Ottoman power in Europe what it has been ever since. He gave a systematic form to the customs of his house and to the dominion which he had won. His first act was the murder of his infant brother, and he made the murder of brothers a standing law of his Empire. He overthrew the last remnants of independent Roman rule, of independent Greek nationality, and he fixed the relations which the Greek part of his subjects were to bear both towards their Turkish masters and towards their Christian fellow-subjects. He made the northern and western frontiers of his Empire nearly what they still remain. The Ottoman Empire, in short, as our age has to deal with it, is, before all things, the work of Mahomet the Conqueror. The prince whose throne was fixed in the New Rome held altogether another place from even the mightiest of his predecessors. Mahomet had reigned two years, he had lived twenty-three, on the memorable day, May 20th 1453, when the Turks entered the city of Cæsars and when the last Emperor, Con-

stantine, died in the breach [see CONSTANTINOPLE: 1453; PHANARIOTS]. . . . And now that the Imperial city was at last taken, Mahomet seemed to make it his policy both to gather in whatever remained unconquered, and to bring most of the states which had hitherto been tributary under his direct rule. Greece itself, though it had been often ravaged by the Turks, had not been added to their dominions. The Emperors had, in the very last days of the Empire before the fall of Constantinople, recovered all Peloponnesos, except some points which were held by Venice. Frank Dukes also reigned at Athens [see ATHENS: 1456], and another small duchy lingered on the islands of Leukas and Kephallenia and on the coasts of Akarnania. The Turkish conquest of the mainland, again saving the Venetian points, was completed by the year 1460, but the two western islands were not taken until 1479. Euboa was

SULTAN MOHAMMED II

(After the painting of Gentile Bellini in the Layard collection, Venice)

conquered in 1471. . . . The Empire of Trebizond was conquered in 1461 [see ARMENIA: 1453-1878; TREBIZOND: 1204-1401], and the island of Lesbos or Mitylene in 1462. There was now no independent Greek state left. Crete, Corfu, and some smaller islands and points of coast, were held by Venice, and some of the islands of the Ægean were still ruled by Frank princes and by the Knights of Saint John. But, after the fall of Trebizond, there was no longer any independent Greek state anywhere, and the part of the Greek nation which was under Christian rulers of any kind was now far smaller than the part which was under the Turk. While the Greeks were thus wholly subdued, the Slaves fared no better. In 1450 Serbia was reduced from a tributary principality to an Ottoman province, and six years later Bosnia was annexed also. [See BOSNIA: 1453-1528.] . . . One little fragment of the great Slavonic power in those lands alone remained. The little district of Zeta, a part of the Servian kingdom, was never fully conquered by the Turks. One part of it, the mountain district called Tsernagora or Mon-

tenegro, has kept its independence to our times. Standing as an outpost of freedom and Christendom amid surrounding bondage, the Black Mountain has been often attacked, it has been several times overrun, but it has never been conquered. . . . To the south of them, the Christian Albanians held out for a long time under their famous chief George Castriot or Scanderbeg. After his death in 1459, they also came under the yoke. These conquests of Mahomet gave the Ottoman dominion in Europe nearly the same extent which it has now. His victories had been great, but they were balanced by some defeats. The conquest of Serbia and Bosnia opened the way to endless inroads into Hungary, South-eastern Germany and North-eastern Italy. But as yet these lands were merely ravaged, and the Turkish power met with some reverses. In 1456 Belgrade was saved by the last victory of Huniades [see HUNGARY: 1442-1458], and this time Mahomet the Conqueror had to flee. In another part of Europe, if in those days it is to be counted for Europe, Mahomet won the Genoese possessions in the peninsula of Crimea [1475], and the Tartar Khans who ruled in that peninsula and the neighbouring lands became vassals of the Sultan. . . . The last years of Mahomet's reign were marked by a great failure and a great success. He failed to take Rhodes [1480], which belonged to the Knights of Saint John; but his troops suddenly seized on Otranto in Southern Italy. Had this post been kept, Italy might have fallen as well as Greece; but the Conqueror died the next year, and Otranto was won back."—E. A. Freeman, *Ottoman power in Europe*, ch. 4.—See also CONSTANTINOPLE: 1453-1481; ITALY: 1447-1480; SERBIA: 14th-18th centuries.

1481-1520.—Captivity of Prince Jem.—Massacre of the Shiites.—Selim's conquests in Persia, Syria and Egypt.—Sultan becomes the successor of the caliphs, the chief of Islam.—"The long reign of Bayezid II (1481-1512) which surpassed that of his father and grandfather, so that the three together nearly completed a century, was marked by a general lethargy and incapacity on the part of the Turkish Government. . . . Family dissensions were indeed the leading incidents of Bayezid's reign, and for many years he was kept in a state of anxious uncertainty by the ingenious intrigues of the Christian Powers concerning the custody of his brother, the unfortunate Prince Jem. The adventures of Prince Jem (the name is short for Jemshid, but in Europe it has been written Zizim) cast a very unpleasant light upon the honour of the Christians of his time, and especially upon the Knights of Rhodes. Of the two sons of Mohammed II Jem was undoubtedly the one who was by nature fitted to be his successor. . . . Jem, however, was not the first to hear of his father's death, and a year's warfare against his brother ended in his own defeat. The younger prince then sought refuge with the Knights of Rhodes, who promised to receive him hospitably, and to find him a way to Europe, where he intended to renew his opposition to his brother's au-

thority. D'Aubusson, the Grand Master of Rhodes, was too astute a diplomatist to sacrifice the solid gains that he perceived would accrue to his Order for the sake of a few paltry twinges of conscience; and he had no sooner made sure of Prince Jem's person, and induced him to sign a treaty, by which, in the event of his coming to the throne, the Order was to reap many sterling advantages, than he ingeniously opened negotiations with Sultan Bayezid, with a view to ascertain how much gold that sovereign was willing to pay for the safe custody of his refractory brother. It is only fair to say that Bayezid, who had no particle of cruelty in his nature, did all he could to come to terms with Jem. . . . All negotiations and compromise having proved ineffectual, he listened to the proposals of the crafty Grand Master, and finally agreed to pay him 45,000 ducats a year, so long as he kept Jem under his surveillance,

was interrupted by Charles VIII of France, who invaded Italy at this juncture, passed through Rome, and took the captive prince in his train when he went on to Naples. Jem died on the way, and few have doubted that Pope Alexander poisoned him, as he had poisoned many before. "The curious conclusion one draws from the whole melancholy tale is, that there was not apparently a single honest prince in Christendom to take compassion upon the captive." In 1512 Bayezid was deposed by his son Selim, and did not long survive the humiliation. To avoid troubles of the Prince Jem character, Selim slew all his brothers and nephews, eleven in number, making a family solitude around the throne. Then he prepared himself for foreign conquest by exterminating the sometimes troublesome sect of the Shias, or Shiites, in his dominions. "A carefully organized system of detectives, whom Selim distributed throughout

MOSQUE OF SULTAN BAYEZID II AT CONSTANTINOPLE

. . . . Meanwhile Grand Master D'Aubusson was driving a handsome trade in his capacity of jailor. All the potentates of Europe were anxious to obtain possession of the claimant to the Ottoman throne, and were ready to pay large sums in hard cash to enjoy the privilege of using this specially dangerous instrument against the Sultan's peace. . . . Charles VIII of France considered that the Grand Master had made enough profit out of the unlucky prince, and the king resolved to work the oracle himself. His plan was to restore Jem to a nominal sultanate by the aid of Matthias Corvinus, Ferdinand of Naples, and the Pope. He took Jem out of the hands of the knights, and transferred him to the custody of Innocent VIII, who kindly consented to take care of the prince for the sum of 40,000 ducats a year, to be paid by his grateful brother at Constantinople." Innocent's successor, the terrible Borgia, Alexander VI, unsatisfied with this liberal allowance, opened negotiations with Constantinople looking to the payment of some heavy lump sum for summary riddance of poor Jem. But the sinister bargain

his Asiatic provinces, revealed the fact that the number of the heretical sect reached the alarming total of 70,000. Selim . . . secretly massed his troops at spots where the heretics chiefly congregated, and at a given signal 40,000 of them were massacred or imprisoned. . . . Having got rid of the enemy within his gates, Selim now proceeded to attack the head of the Shias, the great Shah Ismail himself [the founder of the Sufi line of Persian sovereigns, who had lately established his authority over the provinces of Persia]. . . . Selim set forth with an army estimated at over 140,000 men, 80,000 of which were cavalry. . . . After weary and painful marching, the Ottomans forced Ismail to give battle at Chaldiran [or Tabriz (see PERSIA: 1499-1887)], and defeated him. "The victory of Chaldiran (1514) might have been followed by the conquest of Persia, but the privations which the soldiery had undergone had rendered them unmanageable, and Selim was forced to content himself with the annexation of the important provinces of Kurdistan and Dyarbekr, which are still part of the Turkish Empire; and then turned

homewards, to prosecute other schemes of conquest. No peace, however, was concluded between him and the Shah, and a frontier war continued to be waged for many years. During the campaign against Persia, the Turks had been kept in anxiety by the presence on their flanks of the

[Tuman Bey, however, was captured and executed and Selim returned to Constantinople in 1518.] By the conquest of the Mamluk kingdom he had also succeeded to their authority over the sacred cities of Arabia, Mekka and Medina, and in recognition of this position, as well as of his undoubted supremacy among Mohammedan monarchs, he received from the last Abbaside Khalif, who kept a shadowy court at Cairo, the inheritance of the great pontiffs of Baghdad. The 'fainéant' Khalif was induced to make over to the real sovereign the spiritual authority which he still affected to exercise, and with it the symbols of his office, the standard and cloak of the Prophet Mohammed. Selim now became not only the visible chief of the Mohammedan State throughout the wide dominions subdued to his sway, but also the revered head of the religion of Islam, wheresoever it was practised in its orthodox form. The heretical Shias of Persia might reject his claim, but in India, in all parts of Asia and Africa, where the traditional Khalifate was recognized, the Ottoman Sultan henceforth was the supreme head of the church, the successor to the spiritual prestige of the long line of the Khalifs. [Selim died in 1520, and was succeeded by his son Suleiman, or Solymán, who acquired the name of 'the Magnificent.']\*—S. 1498-1502.—War with Venetians.—“During the first 17 years of Bajazet's reign, the peace between the Venetians and the Porte, though occasionally menaced, remained on the whole undisturbed. The Venetians complained of the Turkish incursions, and the definitive occupation of Montenegro, while the Porte, on its side, was jealous because the Republic had reduced the Duke of Naxos to dependence, and obtained possession of Cyprus (1489). At last, in 1498, the Turks, after making great naval preparations, suddenly arrested all the Venetian residents at Constantinople, and in the following year seized Lepanto, which surrendered without striking a blow (August 1499). Soon after, a body of 10,000 Turks crossed the Isonzo, carrying fire and desolation almost to the lagoons of Venice. In August 1500, Modon was taken by assault. . . . Navarino and Koron surrendered soon after, but towards the close of the year the Venetians were more successful. They captured Ægina, devastated and partly occupied Mytilene, Tenedos, and Samothrace, and with the help of a Spanish squadron, and 7,000 troops, under Gonsalvo de Cordova, reduced the island of Cephalonia. For this service the grateful Venetians rewarded Gonsalvo with a present of 500 tuns of Cretan wine, 60,000 pounds of cheese, 266 pounds of wrought silver, and the honorary freedom of their Republic. In 1501 the Venetian fleet was joined by a French, a Papal, and a Spanish squadron, but, through a want of cordiality among the commanders, little was effected. . . . The war . . . continued through 1502, and the Venetians were tolerably successful, having captured many Turkish ships, and, with the assistance of the French, taken the island of Sta. Maura. But at length a treaty was signed, Dec. 14th, by which Venice was allowed to hold Cephalonia, but restored Sta. Maura, and permitted the Porte to retain its conquests, including the three important fortresses of Modon, Koron, and Navarino.”—T. H. Dyer, *History of modern Europe*, v. 1, bk. 1, ch. 6.

HOLY CARPET

Sent each year by the Egyptian government with the pilgrim caravan from Cairo to Mecca

forces of the Mamluk Sultans of Egypt and Syria, whose frontiers now marched with the territory of the Ottomans.” Turning his arms against the Mamelukes, “Selim set out in 1516 for Syria, and meeting the Mamluk army on the field of Marj Dabik near Aleppo, administered a terrible defeat, in which the aged Sultan El-Ghuri was trampled to death. He found a brave successor in Tuman Bey, but in the interval the Turks had mastered Syria and were advancing to Gaza.

1519.—Sultan acquires sovereignty of Algiers and Tunis. See BARBARY STATES: 1516-1535.

1520-1566.—Accession and reign of Suleiman I.—Caliphate.—Extent of territories.—Reasons for his conquests.—“Suleiman, called by foreigners ‘the Magnificent’ and by his own people Kanuni or ‘the Law-Giver’ [came to the throne in 1520, at the age of twenty-six years]. He was a man more moderate and less licentious than his predecessors, a lover of literature and the arts and a tolerable poet, yet a brave soldier and a clever strategist. He had that greatest of all gifts in rulers—the instinct to choose the right man for the right place. His viziers were often Greek and Italian renegades, eunuchs, and Jews, but they successfully governed one of the greatest empires the world has ever seen—so successfully that in forty years not one of the twenty subject races revolted. His admirals were seldom Turks—Kheir-ed-din Barbarossa was a renegade Greek from Mytilene; Dragut and Piale were Croats—yet by utilizing the services of these Moslem corsairs, in conjunction with his own fleet, he obtained the command of the Mediterranean and the allegiance of the Arab states along the northern coasts of Africa. The Turks are not a seafaring people; but the naval warfare of the day rather called forth the qualities of the soldier than of the mariner. The galleys generally hugged the coast; the working crew were Greeks from the Ægean sea-board and the oarsmen Christian slaves; the only duty of the complement of Turks and Janissaries was to fight. From their bases in the Mediterranean—including for a time Toulon, in accordance with the terms of Suleiman’s alliance with Francis I.—Suleiman’s corsair-admirals carried their devastating raids, not only along the coasts of Spain, France, and Italy, but even as far as those of England and Ireland. His military organisation was such that every year great armies could be collected at the capital and sent, with abundance of equipment and provisions, to the frontier of Austria or Persia—as the Sultan might choose. During thirteen campaigns the Turkish armies were only once short of supplies—in the retreat from Vienna in 1529; and so great was their strength that, with the exception of the disastrous battle of Mohacz, the enemies of Islam—even Charles himself—never risked a pitched battle. Suleiman’s opponents were forced to rely on the defence of walled towns to break the force of the Turkish invasions—and these towns generally fell. Suleiman never left victory to chance—he always employed overwhelming forces. Yet, like Philip II., he never found it necessary to increase taxation in order to support his armies; they always lived on the invaded country. The young Sultan, signalled his succession by the capture of Belgrad, the key to Hungary, where such a disastrous defeat had been inflicted on Mahommed II. [See HUNGARY: 1487-1526.] Next year he attacked Rhodes, and after a siege of nine months, during which bombs were used for the first time, the Knights were forced to capitulate and transferred their headquarters to Malta. [See HOSPITALIERS OF ST. JOHN OF JERUSALEM: 1522.] Suleiman then turned definitely against Hungary, weakened at that time by a peasants’ rebellion and a civil war. Even the loss of Belgrad had not aroused the Magyar nobles to a sense of the national danger. In 1526 Louis II., the weak young King of Bohemia and Hungary, was defeated and killed at the battle of Mohacz and Suleiman entered Buda. Next year, however, he was called to the Persian frontier, and dissension broke out

among the Hungarian nobles. One party, anxious to secure the assistance of the Empire, elected the Emperor’s brother, the Archduke Ferdinand, as king, while the extreme national party chose John Zapolya, a conscientious, unimagi-native man. Zapolya was defeated and asked the support of the Sultan. A long and costly war ensued. The struggle on the Danube was changed in character: Hungary and Turkey were no longer the combatants; it was a contest between the Habsburgs and the Turks for the possession of Hungary. In 1529 Suleiman, encouraged by the French king, again invaded Hungary, professedly to reinstate Zapolya, and with 250,000 men and hordes of irregular cavalry moved on Vienna. Then took place the memorable defence by Count Salm, a defence which resulted in the repulse of the Turks—the first serious set-back which they received. The war dragged on until 1538, when a truce for five years was concluded, leaving the Sultan in possession of Eastern Hungary, while Ferdinand kept the western portion in payment of an annual tribute of 30,000 ducats. At sea, Suleiman’s arms were crowned with success. The story of the rise of Turkish sea-power is one of the most amazing chapters of history. The huge red-bearded Kheir-ed-din [Barbarossa] beginning with a single pirate galley, created in a few years a fleet which dominated the Mediterranean. [See BARBARY STATES: 1516-1535.] He was in reality independent, but he chose to recognize the authority of the sublime Porte, and to confine his activities to the enemies of the Osmanli. After plundering the coasts of Naples (1533), Kheir-ed-din suddenly descended on Tunis and ousted its degenerate ruler, the Mulai Hassan. Charles V. himself, with a huge armament, undertook to recapture the city, and the corsair was forced to abandon it. In 1538, however, he avenged himself by defeating the fleets of Spain, Venice, and the Papacy at the famous battle of Prevesa. In 1541 the Emperor failed in an attack on Algiers, and two years later Kheir-ed-din participated with the Duc d’Enghien in the capture of Nice. The savage old corsair died in his bed at Constantinople (1546), and strange to say, his vast wealth was bequeathed to found a college. Another of these corsairs, Dragut Reis, conquered Tripoli, and a third, Piale, captured Oran, and in 1560 defeated the combined fleets of the Knights of St. John, Genoa, and other Italian cities, under Andrea Doria, at the Island of Djerbe, off the coast of Tripoli. [See BARBARY STATES: 1543-1560.] Two other admirals of Suleiman, Piri Reis and Sidi Ali, the one a geographer of note, the other a poet, defeated the Portuguese in the Red Sea, and captured Aden and several places on the north-west coast of Hindustan. . . . In 1565 the old Sultan determined to utilise his powerful fleets to oust the Knights of St. John from their stronghold at Malta, and to signalise the end of his reign by their extinction, as he had signalled the beginning by their expulsion from Rhodes. But after a desperate siege of four months, during which Dragut lost his life, the Turks were forced to retire with a loss of 25,000 dead. Suleiman, now an old man in weak health, was childishly anxious to retrieve his honour, and determined to take personal command of a great army which was preparing to enter Hungary, where war had broken out again. In May 1566 he left Constantinople, carried in a litter at the head of his army. The Turkish army invaded Hungary, but was checked by the heroic defence of Sziget. Before this fortress fell, the old Sultan died suddenly of apop-

lexy (that bane of so many of his hard-living ancestors), with the complaint on his lips that 'the drums of victory had not yet beat.' Thus passed 'the Star of his Age.' Throughout his life he had been the arbiter of Europe. Although he never came to conclusions with Charles V., and although the successful defence of Vienna saved Germany from invasion, it may be claimed that Suleiman maintained the balance of power in Europe, at a time when the Habsburgs designed to bring the united strength of Germany and Spain against France, and to re-establish under Charles V. the Empire of Charles the Great. Suleiman ruled with an enlightenment and toleration, with which the bigoted policies of Henry VIII., of Francis I., and of Charles V. cannot be compared, an Empire which included not only Sunnis and Shiis but large populations of Roman Catholics, Orthodox Greeks, Jews, and Armenians, and numerous lesser denominations. He earned the honorary sobriquet of the 'Lawgiver,' by a series of moderate enactments which provided for the reform of the Turkish feudal system, the regulation of wages, prices, and tariffs, and the mitigation of the existing severe punishments for criminal offences. Under his benignant rule, the condition of the Rayahs (Christian peasants) was far happier than that of the miserable serfs of France, Germany, and Russia, who were subject to every caprice of their lords."—W. E. D. Allen, *Turks in Europe*, pp. 34-40.—"Turkish power reached its zenith during the reign of Suleiman 'the magnificent' (1520-66). The Turkish 'Emirs' had long ago exchanged the title for that of Sultan [see SULTAN], and to the Sultanate Suleiman's predecessor had added the Caliphate. Successor to the Prophet; spiritual father of the whole Moslem world; Suleiman ruled as temporal lord from Buda to Basra, from the Danube to the Persian Gulf. 'On the north [says Finlay] their frontiers were guarded against the Poles by the fortress of Kamenietz, and against the Russians by the walls of Azof; while to the south the rock of Aden secured their authority over the southern coast of Arabia, invested them with power in the Indian Ocean, and gave them the complete command of the Red Sea. To the east, the Sultan ruled the shores of the Caspian, from the Kour to the Tenek; and his dominions stretched westward along the southern coast of the Mediterranean, where the farthest limits of the regency of Algiers, beyond Oran, meet the frontiers of the empire of Morocco. By rapid steps the Ottomans completed the conquest of the Seljouk sultans in Asia Minor, of the Mamlouk sultans of Syria and Egypt, of the fierce corsairs of Northern Africa, expelled the Venetians from Cyprus, Crete, and the Archipelago; and drove the knights of St. John of Jerusalem from the Levant, to find a shelter at Malta. It was no vain boast of the Ottoman Sultan that he was the master of many kingdoms, the ruler of three continents and the lord of two seas.' The achievement was indeed stupendous, but its brilliance was evanescent. The seeds of decay were already germinating even amid the splendours of the reign of Suleiman. The astonishing success of the Ottoman invaders is due partly to conditions external to themselves, partly to their own characteristics and institutions. The irrecoverable decrepitude of the Greek Empire; the proverbial lack of political cohesion among the Slav peoples; the jealousy and antagonism of the Christian Powers."—J. A. R. Marriott, *European Commonwealth*, p. 258.

1566-1571.—Reign of Selim II.—War with the Holy League of Spain, Venice and the pope.—Conquest of Cyprus.—Great defeat at Lepanto.—"In 1566, Solyman the Magnificent closed his long and prosperous reign. His son and successor, Selim II, possessed few of the qualities of his great father. Bred in the Seraglio, he showed the fruits of his education in his indolent way of life, and in the free indulgence of the most licentious appetites. With these effeminate tastes, he inherited the passion for conquest which belonged, not only to his father, but to the whole of his warlike dynasty. . . . The scheme which most occupied the thoughts of Selim was the conquest of Cyprus. . . . Selim, resolved on the acquisition of Cyprus, was not slow in devising a pretext for claiming it from Venice as a part of the Ottoman empire. The republic . . . was not prepared to surrender without a struggle the richest gem in her colonial diadem. War was accordingly declared against her by the Porte, and vast preparations were made for fitting out an armament against Cyprus. Venice, in her turn, showed her usual alacrity in providing for the encounter. . . . But Venice no longer boasted a navy such as in earlier days had enabled her to humble the pride of Genoa, and to ride the unquestioned mistress of the Mediterranean. . . . In her extremity, she turned to the Christian powers of Europe, and besought them to make common cause with her against the enemy of Christendom." The only responses to her appeal came, first, from Pope Pius V., and finally, through his urgency, from Philip II of Spain. After much deliberation, Philip agreed, in the spring of 1570, to enter into an alliance with Venice and the pope against the Ottoman Porte. "The ensuing summer, the royal admiral, the famous John Andrew Doria, who was lying with a strong squadron off Sicily, put to sea, by the king's orders. He was soon after reinforced by a few galleys which were furnished by his holiness, and placed under the command of Mark Antonio Colonna. . . . On the last

of August, 1570, the combined fleet effected its junction with the Venetians at Candia, and a plan of operations was immediately arranged. It was not long before the startling intelligence arrived that Nicosia, the capital of Cyprus, had been taken and sacked by the Turks, with all the circumstances of cruelty which distinguish wars in which the feeling of national hostility is embittered by religious hatred. The plan was now to be changed. A dispute arose among the commanders as to the course to be pursued. No one had authority enough to enforce compliance with his own opinion. The dispute ended in a rupture. The expedition was abandoned. . . . Still the stout-hearted pontiff was not discouraged"; nor did the king of Spain draw back. "Venice, on the other hand, soon showed that the Catholic king had good reason for distrusting her fidelity. Appalled by the loss of Nicosia, with her usual inconstancy, she despatched a secret agent to Constantinople, to see if some terms might not yet be made with the sultan." Her overtures, however, were coldly received by the sultan, and she was won back to the alliance. "Towards the close of 1570, the deputies from the three powers met in Rome to arrange the terms of the league." With much difficulty, a treaty (the Holy League) was concluded, and ratified in May, 1571, to the effect that the operations of the league "should be directed against the Moors of Tunis, Tripoli, and Algiers, as well as against the Turks." The sultan was not dismayed. "He soon got together a powerful fleet, partly drawn from his own dominions, and in part from those of the Moslem powers on the Mediterranean, who acknowledged allegiance to the Porte. The armada was placed under the command of Selim's brother-in-law, the Pacha Piali. . . . Early in the season [of 1571] the combined fleets sailed for the Adriatic, and Piali, after landing and laying waste the territory belonging to the republic, detached Uluch [dey of Algiers] with his squadron to penetrate higher up the gulf. The Algerine, in executing these orders, advanced so near to Venice as to throw the inhabitants of that capital into . . . consternation. . . . Meanwhile the Venetians were pushing forward their own preparations with their wonted alacrity,—indeed with more alacrity than thoroughness. . . . The fleet was placed under the command of Sebastian Veniero," and sailed before midsummer, "or as much of it as was then ready, for the port of Messina, appointed as the place of rendezvous for the allies. Here he was soon joined by Colonna, the papal commander, with the little squadron furnished by his holiness; and the two fleets lay at anchor . . . waiting the arrival of the rest of the confederates and of Don John of Austria." The latter reached Messina on August 25. "On the 16th of September the magnificent armament . . . stood out to sea." Before encountering the Turkish fleet, the allies received tidings "that Famagosta, the second city of Cyprus, had fallen into the hands of the enemy, and this under circumstances of unparalleled perfidy and cruelty. . . . The fall of Famagosta secured the fall of Cyprus, which thus became permanently incorporated in the Ottoman empire." On Sunday, October 7, the armada of the Turks was found and attacked in the gulf of Lepanto. The terrific fight which ensued lasted only four hours, but those were hours of indescribable destruction and carnage. As to the armada of the Turks, "it may almost be said to have been annihilated." Not more than 40 galleys escaped out of near 250 which entered into the action. . . . The news of the victory of

Lepanto caused a profound sensation throughout Christendom. . . . In Venice, which might be said to have gained a new lease of existence from the result of the battle, . . . the 7th of October was set apart to be observed for ever as a national anniversary. . . . It is a great error to speak of the victory of Lepanto as a barren victory, which yielded no fruits to those who gained it. True, it did not strip the Turks of an inch of territory. . . . But the loss of reputation—that tower of strength to the conqueror—was not to be estimated."—W. H. Prescott, *History of Philip II*, bk. 5, ch. 9-11.

1569-1571.—First collision with Russians.—Peace with the tsar. See RUSSIA; 1569-1571.

1572-1573.—Withdrawal of Venice from the Holy League.—Conquest of Tunis by Don John of Austria and its recovery, with Goletta.—"Uluciali, whom Selim . . . made commander-in-chief of all his naval forces, exerted himself with extraordinary vigour and activity in fitting out a new fleet, to supply the place of that which had been ruined in the battle of Lepanto; and such at this time were the resources of the Turkish empire, that he was ready by the month of April [1572] to leave Constantinople, with more than 200 galleys, besides a great number of other ships. With this fleet he coasted along Negropont, the Morea, and Epirus; put the maritime towns into a posture of defence; chastised with great severity many of those Christians who had been concerned in the invitation given to Don John [who had just been offered the sovereignty of Albania and Macedonia by the Christians of those countries]; and afterwards took his station at Modon in the Morea, with an intention to watch there the motions of the enemy. He had full leisure to finish all the preparations which he judged to be necessary. The allies disputed long with one another concerning the plan of their future operations," and were also held inactive by the Spanish king's fear of an attack from France. "It was the last day of August before the allies could effectuate a junction of their forces; and it was the middle of September before they came in sight of the enemy. . . . Uluciali drew out his fleet, as if he intended to offer battle; but no sooner had he made a single discharge of his artillery . . . than he retired under the fortifications of Modon." The allies thought first of besieging Modon, but gave up the project. They then sent Alexander Farnese, prince of Parma—afterwards so famous in the Netherlands—to reduce Navarino; but he had no success and abandoned the siege. The expedition then returned to Messina. The Venetians, dissatisfied with the conduct of the war, now faithlessly negotiated a separate peace with the Turks; but Philip II of Spain maintained his alliance with the pope (now Gregory XIII), and ordered his brother, Don John, to proceed the next spring to Africa and undertake the reduction of Tunis. Don John obeyed the order and "took possession of the place without meeting with the smallest opposition. Philip had instructed his brother, when he sent him on this expedition, to destroy Tunis, and to strengthen the fortifications of the isle and fortress of Goletta. But instead of complying with these instructions, Don John resolved to fortify the town more strongly than ever; and having laid the foundations of a new fort, or citadel, he treated all the inhabitants who remained with lenity and indulgence; and engaged

many of those who had fled to return and submit to the Spanish government; after which he carried back his fleet to Sicily." It is believed that Don John had conceived ambitious hopes of a kingdom on the African border of the Mediterranean. "In the summer following [1573], Selim sent Uluciali against Tunis, with a fleet consisting of 300 ships, having about 40,000 troops on board, under the command of his son-in-law, Sinan Basha. The new fort which Don John had begun to build was not yet complete. Nor was the garrison which he had left strong enough to hold out long enough against so great a force. [Before Don John could reassemble a fleet with which to make his way to the protection of his African conquest, both Tunis and Goletta were carried by assault, and passed again into the possession of the Turks and their Moorish vassals.]"—R. Watson, *History of Philip II*, bk. 9.

1572-1623.—Beginning of the decline of Ottoman power.—"The conquest of Cyprus was the last great exploit which ever added materially to the dominions of the Porte; the battle of Lepanto was the final blow which destroyed its naval superiority. The days of greatness had gone by. The kingdoms of the West were developing their strength, and had learnt the policy of union and of peace among themselves. Their armies had acquired the discipline and had learnt the lessons in which the Ottomans had shown so formidable an example; and their navy rode triumphant on the seas. The Empire, no longer in the hands of Charles V. with foreign interests to absorb its power, could bestow an undivided strength upon its own affairs; and the Emperor Ferdinand was looking forward with some hope to an incorporation of Hungary, which should end the weakness, and ensure the safety, of his eastern frontier. As the pre-eminence of the Porte, however, and the dread of it declined, a wider intercourse for her with Europe began. . . . Slowly the Sultans were beginning to take part in the schemes and combinations of the Christian Powers, from which they had hitherto so contemptuously stood aloof. Five reigns succeeded to that of Selim [the "Sot," son of Suleiman the Magnificent], during which the progress of decline continued marked. The indolence of Amurath III [1574-1595], the incapacity of Mahomet III [1595-1603], the inexperience of Achmet [or Ahmed, (1603-1617)], the imprudence of Othman II [or Osman, (1618-1622)], and the imbecility of Mustapha [or Mustafa I, (1617-1618, and 1622-1623)], contributed to bring the Ottoman Empire into a condition of anarchy and weakness. During the reign of Amurath hostilities with Austria were renewed, and successive losses testified to the enfeebled state of the Ottoman arms."—C. F. Johnstone, *Historical abstracts*, ch. 3.

17th century.—European diplomacy after Suleiman.—Beginning of Eastern Question.—"After Suleiman there was hardly one man of mark among the Sultans until the accession of Mahmud the Second in 1808. When absolutism ceases to be efficient, decadence is necessarily rapid. In the case of the Turks it was temporarily arrested by the emergence of a remarkable Albanian family, the Kiuprili, who supplied the Porte with a succession of Viziers during the latter half of the seventeenth century. In the first half of the cen-

tury the Thirty Years' War had given the Ottomans a magnificent chance of destroying the last bulwark of Western Christendom. The earlier Sultans would never have missed it; but Othman the Second, Mustapha the First, and Ibrahim were not the men to seize it, and Amurath the Fourth was otherwise occupied. Such a chance never recurs. In 1683 the Vizier Kara Mustapha carried the victorious arms of Turkey to the very gates of Vienna; but the Habsburgs were saved by John Sobieski of Poland, and in the last year of the century they inflicted a series of crushing defeats upon the Turk. The tide had clearly turned. The naval defeat at Lepanto (1571) was, perhaps, a premature indication; after Montecuculi's victory at St. Gothard (1664), and Prince Eugene's at Zenta (1697), men could no longer doubt it. The diplomatic system was also crumbling. Louis the Fourteenth followed as best he could the evil example of Francis the First [who had made the first European alliance with the Turks against Charles V]; but alliance with Kiuprili was not the same thing as friendship with Suleiman; the Turk was too hopelessly decadent to be an effective factor in French diplomacy. The Venetian conquest of the Morea, the resounding victories of the Habsburgs, above all the entrance of Russia on the stage of European politics, announced the opening of a new chapter in the history of the Eastern Question."—J. A. R. Marriott, *European commonwealth*, pp. 259-260.

1621-1622.—War with Poland.—Victory at Cecora and defeat at Khotin. See POLAND: 1590-1648.

1623-1640.—War with Persia.—Siege and capture of Bagdad.—Horrible massacre of inhabitants.—"During the first twelve years of the reign of Amurath IV [1623-1635], the Ottoman Empire had been occupied with active hostilities in different parts of Europe, and especially with Poland, Germany, and the maritime powers of the Mediterranean. . . . In the east, however, great losses had been sustained. Shah Abbas, a sovereign well entitled to the epithet 'Great,' had repossessed himself of Diarbekr, Bagdad [1623], the district of the Euphrates, with Kourdistan; and, on the north, he had regained Armenia, and a considerable part of Anatolia. The Sultan therefore resolved to undertake an expedition to recover the territories thus taken from him, and to this he was encouraged by the death of his formidable foe the Persian monarch. Amurath marched from his capital early in 1635, to superintend the operations of the campaign. . . . In passing through Asia, he took care personally to examine into the conduct of his various Pashas, and wherever it was requisite he subjected them to a severe punishment. One of them, the Pasha of Erzeroum, was put to death. Having at that city reviewed his army, he found them to amount to 200,000 men, and as his first object was the seizure of Armenia, the key of the Persian provinces, he besieged Erivan, and notwithstanding a vigorous defence, the fortress in a few days surrendered. Tauris and the surrounding provinces speedily fell into his hands, and Amurath returned in the winter to Constantinople, entering the city in great triumph. The affairs of Europe were in such a state of confusion, that it was several years ere he again appeared in the east, the scene of so many of his victories. The Khan of Tartary threw off his allegiance, the Polish serfs appeared suddenly on the Caspian shores, and, joining a body of Russians, attacked and carried the fortress of Azof. . . . The European war, which at this time

occurred, rendered it unnecessary for the Sultan to entertain any serious apprehension from his enemies in the west, who were sufficiently occupied with their own affairs. He therefore directed his attention to Persia, resolved to subjugate that country, and to seize upon Baghdad. To this end his preparations were proportionally great. An immense army was collected on the Asiatic side of the Bosphorus. . . . After a successful march, this immense army arrived at Baghdad. The city was strongly fortified, and defended by a resolute army of 80,000 men. The Shah, however, was absent in the northern part of his dominions, which had been threatened by an invasion from India, under Shah Jehan, father of the celebrated Aurungzebe. Baghdad, therefore, was left to its own resources. The operations of the siege began in October 1638. . . . The besieged made repeated sallies, with a force of five or six thousand men at a time, who, on retiring, were succeeded by a similar number, and thus the losses of the Ottoman army were sometimes very great. The 200 great guns, however which played upon the ramparts, at length made a wide opening in the walls, and after five days' fighting in the breach thus made, where 'the slain lay in immense multitudes, and the blood was stagnated like a pool to wade through,' the city was taken. . . . In the morning of the 23d of December the Sultan marched into the city, passing with his army over the innumerable bodies of the unfortunate Persians, whose gallant defence merited a better fate. Some 15,000 women, children and old men were all that remained of the inhabitants, who, but a day or two before, filled every part of the magnificent capital. . . . The capture of Baghdad closed the military career of the Sultan."—R. W. Fraser, *Turkey, ancient and modern*, ch. 17.—"A peace with Persia, on the basis of that which Solymn the Great had granted in 1555, was the speedy result of Amurath's victories (15th September, 1630). Eriwan was restored by the Porte; but the possession of Bagdad and the adjacent territory by the Ottomans was solemnly sanctioned and confirmed. Eighty years passed away before Turkey was again obliged to struggle against her old and obstinate enemy on the line of the Euphrates. . . . Amurath died at the age of 28, on the 6th of February, 1640."—E. S. Creasy, *History of the Ottoman Turks*, ch. 13.—See also BAGDAD: 1393-1638.

1640.—Accession of Ibrahim.

1645-1669.—War of Candia.—Conquest of Crete.—"The Turks attacked the island [of Crete] in 1645, and the war went on till 1669, when Crete was lost. This is called the war of Candia, from the long siege of the town of Candia, which was most gallantly defended by the Venetians, with the help of many volunteers from Western Europe."—E. A. Freeman, *Ottoman power in Europe*, p. 145.—"The war which cost the republic of Venice the island of Crete owed its origin to the incessant irritation caused by the Western corsairs in the Archipelago. Some strong measures adopted by the Venetians to suppress the piracies committed by Turkish and Barbary corsairs in the Adriatic, created much dissatisfaction on the part of the Othoman government, which looked chiefly to the Mohammedan corsairs as a protection against the Christian corsairs in the Levant, and considered it the duty of the Venetians to suppress the piracies of these Christians. The Porte at last resolved to seek a profitable revenge, and

a pretext soon presented itself. In 1644 some Maltese galleys made a prize which offended the personal feelings of the reigning sultan, Ibrahim. . . . As he feared to attack Malta, he resolved to make the Venetians responsible for the shelter which Crete had afforded to the corsairs. The Porte affected to consider Venice as a tributary State, which was bound to keep the Archipelago free from Christian corsairs, in return for the great commercial privileges it enjoyed in the Othoman empire. Immediate preparations were made for attacking Crete, but the project was concealed from the Venetian senate, under the pretence of directing the expedition against Malta. . . . In the month of June 1645, the Othoman army landed before Canea, which capitulated on the 17th of August. This treacherous commencement of the war authorised the Christian powers to dispense with all the formalities of international law in lending assistance to the Venetians during the celebrated War of Candia, which lasted nearly 25 years. During this long struggle the Venetians generally maintained the superiority at sea, but they were unable to prevent the Othoman navy, whenever it exerted its full force, from throwing in supplies of fresh troops and ample stores, by which the Othoman army was enabled to command the whole island, and kept Candia, and the other fortresses in the hands of the republic, either blockaded or besieged. The Greeks generally favoured the Turks, who encouraged them to cultivate their lands by purchasing the produce at a liberal price, for the use of the army. . . . The squadrons of the republic often ravaged the coasts of the Othoman empire, and on one occasion they carried off about 5,000 slaves from the coast of the Morea, between Patras and Coron. In the year 1656, after Mocenigo's great victory at the Dardanelles, they took possession of the islands of Tenedos and Lemnos, but they were driven from these conquests by the Othoman fleet in the following year. At the end of the year 1666, the grand vizier, Achmet Kueprily [or Ahmed Kuprili], one of the greatest ministers of the Othoman empire, took the command of the siege of Candia. The whole naval force of Venice, and numerous bands of French and Italian volunteers, attempted to force the grand vizier to raise the siege; but the skill of the Italian engineers, the valour of the French nobles, and the determined perseverance of Morosini, were vain against the strict discipline and steady valour of the Othoman troops. The works of the besiegers were pushed forward by the labours of a numerous body of Greek pioneers, and the fire of the powerful batteries at last rendered the place untenable. At this crisis Morosini proved himself a daring statesman and a sincere patriot. When he found that he must surrender the city, he resolved to make his capitulation the means of purchasing peace for the republic. . . . On the 27th September 1669, Achmet Kueprily received the keys of Candia, and the republic of Venice resigned all right to the island of Crete, but retained possession of the three insular fortresses of Karabusa, Suda, and Spinalonga, with their valuable ports. No fortress is said to have cost so much blood and treasure, both to the besiegers and the defenders, as Candia; yet the Greeks, in whose territory it was situated, and who could have furnished an army from the inhabitants of Crete sufficiently numerous to have decided the issue of the contest, were the people on the shores of the Mediterranean who took least part in this memorable war. So utterly destitute of all national feeling was the Hellenic race at this period."—G. Fin-

lay, *History of Greece under Othoman and Venetian domination*, ch. 2.

1684-1696.—War with the Holy League.—Expulsion from Hungary.—Venetian conquests in Greece.—Revolution at Constantinople.—Accession of Suleiman II.—Tsar Peter's capture of Azov.—First Russian acquisition on the Black sea.—In 1684, "a league against the Turks, under the protection of the Pope, and thence called the Holy League, was formed by the Emperor, the King of Poland, and the Republic of Venice; and it was resolved to procure, if possible, the accession to it of the Czar of Muscovy. The Venetians were induced to join the league by the hope of recovering their former possessions, and declared war against the Sultan, Mahomet IV, July 15th. The war which ensued, now called the Holy War, lasted till the Peace of Carlowitz in 1699. Venice in this war put forth a strength that was little expected from that declining state. Many thousand Germans were enrolled in her army, commanded by Morosini, and by Count Königsmark, a Swede. The Austrians pursued the campaign in Hungary with success [steadily expelling the Turks. (See HUNGARY: 1683-1699.) . . . While the war in Hungary had been conducted by the Emperor with such eminent success, the King of Poland had made only some fruitless attempts upon Moldavia. The Czar of Muscovy, Ivan Alexiowitsch, who, after settling some disputes about boundaries with the King of Poland, had joined the Holy League in 1686, did not fare much better. All the attempts of the Russians to penetrate into the Crimea were frustrated by the Tartars. The Venetians, on the other hand, had made some splendid conquests. St. Maura, Koron, the mountain tract of Maina, Navarino, Modon, Argos, Napoli di Romana, fell successively into their hands. The year 1687 especially was almost as fatal to the Turks in their war with Venice as in that with Hungary. In this year the Venetians took Patras, the castles at the entrance of the bay of Lepanto, Lepanto itself, all the northern coast of the Morea, Corinth, and Athens. Athens had been abandoned with the exception of the acropolis or citadel; and it was in this siege that one of the Venetian bombs fell into the Parthenon, which had been converted by the Turks into a powder magazine, and destroyed the greater part of those magnificent remains of classical antiquity. The acropolis surrendered September 20th. The fall of Athens [see ATHENS: 1687-1688], added to the disastrous news from Hungary, excited the greatest consternation and discontent at Constantinople," and brought about a revolution which deposed the sultan, raising his brother Suleiman (II) to the throne (1687) in his place. "By the capture of Malvasia in 1600, the Venetians completed the conquest of the

Morea. The Isle of Chios, taken in 1694, was again lost the following year; but in Dalmatia and Albania the Venetian Republic made many permanent conquests, from the mountains of Montenegro to the borders of Croatia and the banks of the Unna. The operations of the Poles in the Turkish war were insignificant; but in July 1696, the Russians, under the Czar Peter, after many long and fruitless attempts, at length succeeded in taking Azov, at the mouth of the Don; a most important conquest as securing for them the entry into the Black Sea. It was the fall of this place, combined with the defeat at Zenta [in Hungary], that chiefly induced the Porte to enter into negotiation for a peace."—T. H. Dyer, *History of modern Europe*, v. 3, bk. 5, ch. 4.

SULTAN SULEIMAN II, THE GREAT

1691.—Accession of Ahmed II.

1695.—Accession of Mustafa II.

1703.—Accession of Ahmed III.

1709-1714.—Refuge given to Charles XII of Sweden.—His intrigues.—Unlucky invasion of Moldavia by Peter the Great.—Treaty of the Pruth. See SWEDEN: 1707-1718.

1714-1718.—War with Venice and Austria.—Recovery of the Morea and disasters in Hungary.—Peace of Passarowitz.—"By the treaty of the Pruth the Russian conquest of Azof had been recovered. This success encouraged the hope of repairing the other losses that had been incurred in the former war. There were two states which had aggrandised themselves at Turkish expense, Austria and Venice. Of these the republic was far the less formidable and was naturally chosen as the first object of attack. A pretext was found in the protection which Venice had given to some Montenegrin fugitives, and in December, 1714, the Porte declared war. Venice was entirely unprepared, and moreover had failed to acquire popularity amongst her Greek subjects. In 1715, the grand vizier, Ali Cumurgi, landed in the Morea,

and by the end of the year was master of the whole peninsula. . . . The intervention of Austria saved Venice from ruin. The grand vizier and the main body of the Turkish army had to be employed in Hungary. Still a considerable army and fleet was sent to attack Corfu. The Venetian troops were commanded by count Schulenburg, who had won a great reputation in the northern war, and whose services had been procured for the republic by Eugene [prince of Savoy]. A heroic defence ended successfully, and in August, 1716, the Turks were compelled to raise the siege. 'It was the last glorious military exploit in the annals of the republic, and it was achieved by a German mercenary soldier.' Meanwhile the vizier, with an army of 150,000 men, had laid siege to Peterwardein, the most important of the Austrian border-fortresses in Hungary," and suffered death there, in a great defeat which Prince Eugene inflicted upon his army, Aug. 5, 1716. The same year, Eugene took Temesvar, and in August, 1717, he annihilated the Turkish army before Belgrade, capturing the town. (See HUNGARY: 1699-1718.) The result was the Treaty of Passarowitz, signed in July, 1718. "Austria retained all its conquests, thus completing its possession of Hungary by acquiring the Banat of Temesvar, and adding to it Belgrad and a strip of Servia. The Turks, on their side, kept the Morea, while Venice was confirmed in its possession of Corfu and Santa Maura, together with the conquests which it had made in 1717 in Albania and Dalmatia."—R. Lodge, *History of modern Europe*, ch. 16.

1735-1739.—War with Russia and Austria.—Favorable treaty of Belgrade.—Important acquisitions of territory from Austria. See RUSSIA: 1734-1740.

1754.—Accession of Osman III.

1757.—Accession of Mustafa III.

1768-1774.—War with Russia on behalf of Poland.—Treaty of Kuchuk-Kainarji.—Concession of independence to the Crim Tatars.—The Poles, in their struggle with Catherine II of Russia found a strange champion in the Turk. (See POLAND: 1763-1790.) "The Sultan, Mustafa III, was opposed to intervention in Poland; but his hand was forced by a rising in Constantinople, and he declared war against Russia in October, 1768. Hostilities were not commenced till the next year, and they never assumed considerable proportions. The Turkish army was in the last stage of inefficiency, and the Russians, who were wholly unprepared for war, were little better. Galitzin, an incompetent commander, defeated the grand vizier, and took Khoczim [Khotin] after his first attack had been repulsed. His successor, Romanzow, 'the Russian Turenne,' acted with greater energy. He drove the Turks from Moldavia, and in 1770 he occupied Wallachia, won a great victory over vastly superior numbers at Kaghul [August 1, 1770], and advanced into the Crimea. At the same time a Russian fleet appeared in the Mediterranean with the avowed intention of restoring Greece to independence. But the admiral, Alexis Orloff, mismanaged the expedition. After encouraging the Greeks to rebel, he left them to the horrors of a Turkish revenge, and sailed towards Constantinople. A victory over the Turkish fleet gave him possession of Chios and other islands of the Archipelago, but he refused, in spite of his English officers, to attempt the passage of the Dardanelles." In May, 1772, a truce was arranged and a congress assembled to settle the terms of peace. "But the Russian demands were too ex-

cessive for the Porte to accept, and the Turks resumed hostilities in 1773. They attempted to recover Moldavia and Wallachia, and for a time they succeeded in forcing the Russians to retreat. Mustafa III died in December, and was succeeded by his brother Abdul Hamid. In the next year Romanzow won a complete victory, and compelled the grand vizier to accept the terms dictated to him at Kutschuk Kainardji [July 16, 1774]. The Russians restored the conquered provinces except Azof and Kinburn, only stipulating for toleration for the Christian population. The Tartars of the Crimea and Kuban were declared independent of the Porte, and authorised to elect their own Khan. Russian ships were allowed free passage through the Dardanelles, and the right of sailing in the Turkish seas and on the Danube. Poland, for which the Turks had undertaken the war, was not even mentioned in the treaty."—R. Lodge, *History of modern Europe*, ch. 20, sect. 11-12.—See also below: 18th century; BOSPORUS: 1774-1807; RUSSIA: 1768-1796.

1776-1792.—Acquisition of the Crimea by the Russians.—War with Russia and Austria.—Treaties of Sistova and Jassy.—Territorial concessions.—"A peace of some years followed the treaty of Kainarji. . . . On that treaty Catharine [II of Russia] put what interpretation she pleased. . . . She offered her protection to the voivods of Wallachia and Moldavia, who, in consequence, were her vassals rather than those of the Porte. The Christians on the opposite bank of the Danube were in correspondence with Russia; they were encouraged to revolt, to claim her protection, to oppose the Turkish government in every way. . . . More than once . . . the Russian troops appeared in . . . [the Crimean] peninsula. In 1776 they deposed the reigning khan and elected in his stead another, who was easily induced to solicit the protection of the empress. Turkey threatened to resume the war. . . . At length . . . a new treaty, or rather a modification of the former, was signed at Constantinople in 1779. In it Russia promised to desist from some of her obnoxious pretensions in regard both to the two principalities and the Crimea; but promises cost little. . . . Almost every year brought new complaints and evasions. The foundation of that city of Cherson, about ten leagues from Otkakof [Ochakov, or Otchakov], gave peculiar umbrage to the Porte. This place had now a population of 40,000; and the number of warlike vessels constructed in its arsenal were evidently intended to overawe Constantinople. In 1783 another insulting message was sent to the Turkish ministers—that, let the conduct of the empress in regard to the Crimea be whatever it might, they should not interfere. At the same time she prevailed on the khan whom she had supported, Sahim Gherei, to make the most outrageous demands from the Porte. . . . A manifesto declared that the Crimea, Kuban, and Taman, were for ever incorporated with the empire. In a document of some length, and of great force, the Turkish ministry exposed to the world the unprincipled encroachments of their neighbours." But Russia responded to it by marshalling three great armies on the frontiers, with an exhibition of formidable fleets in the Euxine and the Baltic. "The Porte, terrified at this menacing dis-

play, listened to the advice of France and Austria; and, by another treaty (signed at Constantinople early in 1784) recognised the sovereignty of the empress over the Crimea, Taman, and a great part of Kuban. To the first and last of these places she restored their ancient classical names, Taurida and Caucasus." The treaty of Constantinople did not put an end to Russian aggressions, and in August, 1787, the sultan declared war. "The campaign was opened with ardour. Knowing that Otzakof would be the earliest object of hostility, the Sultan sent a considerable force to cover it. Another army marched to the Danube, and the vizier in person took the field. . . . On the other hand, Potemkin, the commander-in-chief, having under his orders some of the best generals in the service, hastened to the frontiers, which were soon covered by Russian troops. At the same time the emperor Joseph [according to a prior agreement with Catherine] sent 80,000 Austrians into Moldavia; while a powerful fleet in the Euxine prepared to co-operate with the allies, and another in the Baltic was ready to sail for the Mediterranean. It seemed, indeed, as if Catherine's favourite dream, the elevation of her grandson Constantine to the throne of the Greek empire, was about to be realised. Yet these mighty preparations had no commensurate effect. An attack on Kinburn by 5,000 Turks from the garrison of Otzakof was repulsed [by Suvarov] with heavy loss. But this advantage was counterbalanced by the dispersion of the Euxine fleet in a storm, with the loss of some vessels. These were the chief events of the first campaign. The second, of 1788, was more decisive. Otzakof was taken by assault, and the garrison [with nearly all the inhabitants] put to the sword. At the same time Joseph took Sobach; and his generals captured Soubitza [Dubitza?]. On the deep, too, fortune was equally adverse to the Turks. Their fleet was defeated in the Euxine. . . . In the following campaigns the superiority of the Russians was maintained. . . . The death of Abdul Hamet, and the accession of Selim III., made no difference in the character of the war; it was still adverse to the Turks. Fortress after fortress [including Belgrade, taken by General Loudon for the Austrians] was reduced by the enemy; and, though no general engagement was risked, the loss of men was not the less felt. Suvarof saved the Austrians [in Moldavia, defeating the Turks, who had nearly overwhelmed them, at Fockshani, July 30, and again at Rimmik, Sept. 10, 1780]; Repnin forced the Seraskier, Hussein Pasha, to seek refuge in Ismail; Komenski reduced Galatza; Ackerman fell into the power of the Christians; Bender was forced to capitulate. In the following campaign, the important fortress of Ismail was assailed: the siege was conducted by Suvarof, the most dreaded of all the Russian generals. . . . It was taken . . . though the loss was most severe; and, in revenge, the garrison, with the greater part of the population [nearly 40,000 in all], was put to the sword. Other successes followed, both on the banks of the Caspian, and on those of the Danube. Bohada was stormed; at Kotzim 100,000 Turks were defeated by Repnin; Varna was menaced; and the road to Adrianople lay open. The grand vizier now sued for peace, which Catherine was ready to grant, on conditions much less onerous than might have been expected." Austria had already made peace with the sultan and withdrawn from the war. By the treaty of Sistova, which the new emperor, Leopold, signed on Aug. 4, 1791, the Austrians relinquished all their conquests except the town of Old Orsova and

a small district in Croatia along the left bank of the river Unna. With these slight variations the same boundary between Austria and Turkey was reconstituted in 1791 that had been defined by the Treaty of Belgrade in 1739. The treaty of the Turks with Russia was signed at Jassy on Jan. 9, 1792. "By that treaty, Catherine retained the whole country between the Bog and the Dniester, but restored all the other conquests which she had made since 1787. This was the last of the hostilities between Russia and the Porte during the reign of this empress; and the peace of Jassy enabled her to carry into effect her designs on Poland."—R. Bell, *History of Russia*, v. 2, ch. 11.—See also RUSSIA: 1768-1796.

1789-1812.—Attempted reforms of Selim III.—Their fate and his.—Palace revolutions.—Reign of Mahmud II.—War with Russia.—"Abd-ullamid died on the 7th April, 1789, and was succeeded by his nephew, Selim III (1789-1807). . . . [He] commenced a correspondence with Choiseuil, the French envoy at Constantinople in 1786, and also had sent his intimate friend Isaac Bey to France, to enquire into the state measures and administrative organization of that country. Selim had also entered into correspondence with Louis XVI, and this lasted till 1780, when the French Revolution broke out simultaneously with Selim's ascension of the throne. All this throws a clear light upon Selim's eventual exertions to cause reforms, which at last cost him both his throne and his life. His thirst for knowledge leads us to presume that he was not deficient in natural and sound talent. . . . His chief care was to form an army after the European fashion, in order by their assistance to gain the mastery over the Janissaries, in whom old customs and traditions found their most zealous guardians. He took several steps, therefore, to call into life the new military organization, called the Nizam Djedid; and as money was required for the purpose, he laid a tax on articles of consumption. This was quite sufficient to cause the popular discontent to burst into a flame. The Ulema declared themselves hostile to the Nizam Djedid, and Pashwan Oglu, Pacha of Widdin, who placed himself at the head of the Janissaries, openly rebelled against the Porte, which could not effect anything to check him, but acquiesced in all that was demanded. The extraordinary conquests of Napoleon diverted attention from Turkey, and instead of seeking to divide the dominions of a weak neighbour, the Great Powers of the Continent were trembling for their own safety. Egypt became the battlefield between England and France [see FRANCE: 1798-1800 (August-August)]; 1801-1802], and its invasion by Napoleon obliged the Turks to unite with the Allied Powers against France. When the French were expelled from Egypt, that province was restored to Turkey, and peace concluded between the two Powers. Selim, under the influence of General Sebastiani who was then French ambassador at Constantinople, signed [seized?] what was considered by him a favourable opportunity for renewing the war with Russia, in which, however, the Turks were defeated both by land and sea. These misfortunes the Janissaries attributed to the new troops or Seymens. . . . At the end of May, 1807, the chiefs of the Janissaries and the Ulema

had already formed their plans for the overthrow of the Sultan, when Selim accelerated the outbreak by going to the mosque on Friday, accompanied by a body of Seymens and the French ambassador, Sebastiani. The Janissaries, aroused by this, broke out in open revolt [and] . . . demanded the abdication of the Sultan, whom the Mufti declared unworthy to be a successor of Muhammad, through his partiality for foreigners, and marched to the Seraglio, to carry their designs into effect. But when the Mufti and the Ulema entered it, they found a new Sultan. Selim, under the conviction that he could not resist the storm his attempts at reform had created, had retired to the Harem, where his nephew, Mustapha, was confined, and led him to the throne: he had then attempted to destroy his own life by a cup of poisoned sherbet, but had been prevented by Mustapha, and was led into the apartments of the Royal Princes, with a promise that he should ever be treated as a friend and an uncle. On the same afternoon, Sultan Mustapha III [IV] (who reigned from 31st May, 1807, to 28th July, 1808 . . . did away with the Nizam Djedid, and restored the old customs. . . . Mahmud II, the second son of Abd-ul-Hamid, was born on the 2nd July, 1785, and was consequently twenty-three years of age when he ascended the throne. . . . Mahmud appointed Mustapha Bairaktar [who had deposed Mustapha III] his Grand Vizier, and, regardless of the fate of his predecessor, restored all the measures of reform which Selim had undertaken. Within three months the Janissaries were again in open rebellion, and on the night of the 14th November, 1808, attacked the Seymen, destroyed a great number of them, and, after storming the new barracks, forced their way into the Grand Vizier's palace. He fled and appealed to the people for help, but the greater portion abused him as a renegade and joined the rebels. . . . [He] sent a deputation to the insurgents and [gave] . . . an unconditional assent to their demands. . . . As an additional guarantee for his own safety on the throne, ensanguined with the blood of his uncle and his brother, Mahmud ordered his brother's son, a child of three months old, to be strangled, and four of the Sultanas to be thrown into the Bosphorus. The reign of Mahmud is one of the longest and most important in the whole of Turkish history. It commenced with war. The Emperor Alexander menaced him on the Danube: the Hospodar of Servia, Czerny George, had rebelled against him. The campaign of the Turks in 1809, was, consequently, not a prosperous one. The contest lasted till 1812, when it was ended by the treaty of Bucharest, which surrendered the whole of Bessarabia, as far as the Pruth, to Russia. At the same time the Russian protectorate of the Greek Christian subjects of the Porte, which had been stipulated in the treaty of Kudjuk Kainardji, was again confirmed."—J. Porter, *Turkey*, v. 1, pp. 104-204.

18th century.—Summary of European diplomacy.—"In the 18th century it was France who undertook to save [the peoples of eastern Europe] from the Russian danger, and, in the person of the Marquis de Villeneuve, Louis XV's ambassador, and the Comte de Bonneval, who had become a Mussulman, breathed a new life into the Sublime Porte, and helped it to cripple the action of Tsar-

ism. Nevertheless the French were never influenced, as European politics subsequently were, by the idea of admitting Turkey into the family of nations. Such an idea could never have occurred to His Most Christian Majesty, or to the Cardinals who directed his policy. For . . . this policy was purely selfish, and was only concerned with creating diversions against the enemies of France, and of accruing to the benefit of French trade in the Levant. But this does not alter the fact that in the eyes of the historian, the Turk, thanks to French policy, became from time to time the custodian and protector of the liberties of those nations which were threatened by the Tsars; while the *ancien régime*, in its own way, adopted the rôle of permanent mediator between Christianity and Islam, and was amply rewarded by the Capitulations. [See CAPITULATIONS.] . . . Bonneval asserted that Russia was not only compassing the humiliation, but the total ruin, of the States immediately beyond her frontiers. He was the first to point out the connection between the Polish and the Turkish problem—an historical connection which only manifested itself very much later, when in the Treaty of Kainardji, Catherine, by insisting that the Turks should refrain from defending Polish independence, established the right of Russia to interfere in the domestic affairs of the Porte. Nevertheless, the prophetic vision of Bonneval was nowhere reflected in international politics in the 18th century. Prussia and Austria, the two Powers most interested in keeping Russia out of Europe, actually beckoned her in; Prussia opening her way to Warsaw, and Austria preparing her path to Constantinople. It has now become obvious that these two roads have led to ruin."—F. Valji, *Europe in Asia Minor*, pp. 12-13.—"In its second phase (1702-1820) the Eastern Question might indeed be defined as the Relations of Russia and Turkey. The Habsburgs were frequently on the stage, but rarely in the leading rôle, and the part they played became more and more definitely subsidiary as the eighteenth century advanced. From the days of Peter the Great to those of Alexander I Europe, not indeed without spasmodic protests from France, acquiesced in the assumption that Russia might fairly claim a preponderant interest in the settlement of the Eastern Question. This acquiescence seems to a later generation the more remarkable in view of the fact that Russia herself had so lately made her entrance upon the stage of European politics. Perhaps, however, this fact in itself explains the acquiescence. Russia was already pushing towards the Black Sea before Western Europe recognized her existence. By the conquest of Azov (1696) Peter the Great 'opened a window to the South.' It was closed again as a result of the capitulation of the Pruth (1711); but the set-back was temporary, and by the Treaty of Belgrade (1739) Azov was restored in permanence to Russia. [See RUSSIA: 1734-1740.] The occupation of Azov was the first breach in the continuity of Ottoman territory round the shores of the Black Sea. Hitherto that sea had been a Turkish lake. But though Russia now touched its shores, no firm grip upon it was obtained until the war which was ended by the Treaty of Kutchuck-Kainardji (1774). Of all the many treaties concluded between Russia and Turkey that was the most momentous. The Turkish frontier on the north-east was driven back to the Boug; the Tartars to the east of that river were declared independent of the Porte, except in ecclesiastical affairs; important points on the seaboard passed to Russia, and the latter obtained the right

of free commercial navigation in the Black Sea. More than this: the Danubian principalities and the islands of the Aegean Archipelago were restored to the Porte, only on condition of better government, and Russia reserved to herself the right of remonstrance if that condition was not observed. Most significant of all: Russia stipulated for certain privileges to be accorded to the Christian subjects of the Porte. To say that thenceforward Russia was the 'protector' of the Greek Christians in the Balkan Peninsula would be technically unwarrantable; but certain it is that the ground was prepared for the assertion of claims which in 1854 occasioned the Crimean War. The Treaty of Kainardji was the first of many milestones marking the journey of the Romanoffs towards the Bosphorus. Jassy (1792) was the next [see RUSSIA: 1768-1796]; Bucharest followed (1812), and then came (1829) the famous Treaty of Adrianople. But before that milestone was reached new factors in the problem were beginning to make their presence felt. France had never been unmindful of her interests in the Eastern Mediterranean. By the capitulations of 1535 Francis I had obtained from Suleiman the Magnificent considerable trading privileges in Egypt. D'Argenson, in 1738, published an elaborate plan for the construction of a canal through the Isthmus of Suez, and for restoring, by the enterprise of French traders and the efforts of French administrators, political order and commercial prosperity in Egypt. In the negotiations between Catherine II and the Emperor Joseph for the partition of the Ottoman dominions the interests of France were recognized by the assignment of Egypt and Syria to the French monarch. But it was Napoleon who first directed the attention of the French people to the high significance of the problems of the Near East. The acquisition of the Ionian Isles; the expedition to Egypt and Syria; the grandiose schemes for an attack on British India; the agreement with the Tsar Alexander for a partition of the Ottoman Empire—all combined to stir the imagination alike of traders and diplomatists in France. And not in France only. If Napoleon was a great educator of the French, hardly less was he an educator of the English. For some two hundred years English merchants had been keenly alive to the commercial value of the Levant. The politicians, however, were curiously but characteristically tardy in awakening to the fact that the development of events in the Ottoman Empire possessed any political significance for England. The statesmen of the eighteenth century observed with equal unconcern the decrepitude of the Turks and the advance of the Russians. The younger Pitt was the first and only one among them who displayed any interest in what, to his successors in Downing Street, became known as the *Eastern Question*. With a prescience peculiar to himself he perceived that England was supremely concerned in the ultimate solution of that problem. His earliest diplomatic achievement, the Triple Alliance of 1788, was designed largely, though not exclusively, to circumscribe Russian ambitions in the Near East. But his apprehensions were not shared by his contemporaries. Few English statesmen have commanded the confidence and the ear of the House of Commons as Pitt commanded them. Yet even Pitt failed to arouse attention to this subject, and when in 1790 he proposed a naval demonstration against Russia he suffered one of the few checks in his triumphant parliamentary career. The enemies of England were less slow to perceive where her vital interests lay.

'Really to conquer England,' said Napoleon, 'we must make ourselves masters of Egypt.' Hence the importance attached by General Bonaparte, at the very outset of his political career, to the acquisition of the Ionian Isles. Corfu, Zante, and Cephalonia were, he declared in 1797, more important for France than the whole of Italy. They were the stepping-stones to Egypt; Egypt was a stage on the high road to India. Hardly a generation had elapsed since Clive, strenuously seconded by the elder Pitt, had turned the French out of India. To Egypt, therefore, the thoughts of Frenchmen naturally turned, not only as affording a guarantee for the maintenance of French commercial interests in the Near East, but as a means of threatening the position so recently acquired by England in the Farther East. These ideas constantly recur in the reports of French ambassadors, and Talleyrand, on taking office, found, as he tells us, his official portfolio bulging with schemes for the conquest of Egypt. Napoleon, therefore, in this as in other things, was merely the heir and executor of the traditions of the *ancien régime*. He brought, however, to the execution of these schemes a vigour which, of late years, the old monarchy had conspicuously lacked. But even Napoleon was only partially successful in arousing the attention of English people to the importance of the Eastern Mediterranean. The decrepitude of the Turks, the advance of Russia, the ambitions of France were regarded as the accentuation of a problem that was local rather than European. Not until the events which followed upon the insurrection of the Greeks in 1821 did the English Foreign Office, still less did the English public, begin to take a sustained interest in the development of events in South-Eastern Europe."—J. A. R. Marriott, *European commonwealth*, pp. 260-264.

1806-1807.—Alliance with Napoleon, and hostilities with Russia and England.—British fleet before Constantinople.—Its humiliating retreat.—English again in Egypt.—Disastrous failure of their expedition.—"Before the end of 1806, Russia had driven Selim into the arms of France; and war was declared at the Porte just after Napoleon's victories in Prussia had filled Alexander with alarm. His troops had overrun some Turkish territory before war was declared; but just at this juncture he wanted all his forces for the defence of his own frontier. He dreaded the effects of withdrawing them from the Turkish provinces, which would immediately fight for France; but he must do it. He besought the British to undertake another of those 'diversions' which began to sound so disagreeably to the ears of Englishmen. . . . The Grenville Cabinet . . . gave orders to Sir John Duckworth, then cruising off Ferrol, to join Admiral Louis at the mouth of the Dardanelles. . . . Neither the efforts of Sebastiani [French representative at Constantinople] . . . nor any other warning that the English were coming, had roused the Turks to make the slightest preparation. The ships sailed proudly up the strait [February, 1807], undelayed by the fire of the forts at the narrowest part of the channel, and belching out flames and cannonballs as they went. They took and burned some Turkish ships, and appeared before Constantinople. . . . The Divan would have yielded at once; but Sebastiani prevented it, and instigated a negotiation which proved a fatal snare to Sir John Duckworth, notwithstanding express warnings and instructions,

strong and clear, from Lord Collingwood. He was unwilling to destroy the city, and shoot down the defenceless inhabitants; and he allowed himself to be drawn on, from day to day, exchanging notes and receiving promises. . . . Meantime, not a moment was lost by Sebastiani and the Turks, whom he was instructing in Napoleon's methods of warfare. Women and children, Christians and Mohammedans, worked day and night at the defences; and in a few days the whole coast was bristling with artillery, and the chance was over. . . . There was nothing to be done but to get away as safely as they yet might. . . . For thirty miles (reckoning the windings of the channel) the ships ran the gauntlet of an incessant fire. . . . So ended the second of the 'diversions' proposed under the Grenville Ministry. The third legacy of this kind that they left was a diversion on the side of Egypt. For some time, a notion had been gaining ground, in the minds of English politicians, that the Sultan would, some day soon, be giving Egypt to Napoleon, in return for the aid afforded to Constantinople, on the Danube, and elsewhere. Egypt was in an unhappy state. Mohammed Alee, the Viceroy, was at feud with the Memlooks; and the Arab inhabitants were made a prey of by both. The Grenville Ministry thought that a diversion in that direction would be of great service to Russia, and great injury to Napoleon; and they confidently reckoned on being enthusiastically received by the Arab inhabitants, and probably by the Memlooks also. In laying their plans, however, they strangely underrated the forces and the ability of Mohammed Alee. . . . The small British force was drafted from the troops in Sicily. It landed without opposition on the 17th of March, supposing that Sir John Duckworth must by this time have conquered the Sultan, and that his province of Egypt would come very easily into our hands. No opposition was made to the landing of the troops, and Alexandria capitulated immediately. Only seven lives were lost on the British side. Within the city, however, no provisions were found." A detachment of 1,200 men sent to Rosetta for supplies were trapped in the city by Mohammed Alee's Albanians, and 400 of them, with their general, were shot down in the streets. Then Rosetta was besieged, with results of disastrous failure and the loss of 1,000 or 1,200 more men. General Fraser, the commander, "was discouraged from home, and hourly harassed by the enemy. . . . More and more of the enemy came up as his little force dwindled away; and at last, on the appearance of a column which he was unable to encounter, he sent out a flag of truce, with an offer to evacuate Egypt on the restoration of the prisoners taken since the invasion. This was in August, 1807; and in September the last English soldier left the mouth of the Nile. By this time, the Sultan had declared war against England, and had caused a seizure of all the British property in his dominions."—H. Martineau, *History of England, 1800-1815*, bk. 2, ch. 1. —See also BOSPORUS: 1774-1807; EGYPT: 1803-1811.

1821-1840.—Eastern Question becomes im-

portant to Great Britain.—Castlereagh and Canning.—Effects of treaties of Adrianople, London and Unkiar-Skelessi.—"The Greek rising is, for three reasons, profoundly significant. [See GREECE: 1821-1829.] It marks, in the first place, the real beginning of the new 'nationality' movement in the Ottoman Empire; secondly, it evoked enthusiastic sympathy in Europe, and particularly in Western Europe; and, thirdly, it revealed for the first time a feeling of rivalry, if not of antagonism, between Russia and Great Britain in Eastern Europe. As far as England is concerned, the Greek insurrection inaugurated an 'Eastern Question.' [See also EASTERN QUESTION.] Hitherto, the Eastern Question had meant the growth or decline of Ottoman power; a struggle between Turks on the one hand and Austrians or Venetians on the other. More lately it had centred in the rivalry between the Sultan and the Tsar. Henceforward it was recognized, primarily through the action of Russia and the newly aroused sympathies of England, as an international question. The more cautious and the more disinterested of European statesmen have persistently sought to 'isolate' the politics of the Near East. They have almost consistently failed. The Greek insurrection struck a new note. If refused to be isolated. The Tsar Alexander, though deaf to Hypsilanti's appeal, had his own quarrel with Sultan Mahmud. There was therefore an obvious probability that two quarrels, distinct in their origin, would be confused, and that the Tsar would take advantage of the Greek insurrection to settle his own account with the Sultan. To avoid this confusion of issues was the primary object of English diplomacy. Castlereagh and Canning were fully alive to the significance of the Hellenic movement, alike in its primary aspect and in its secondary reaction upon the general diplomatic situation. And behind the statesmen there was for the first time in England a strong public opinion in favour of determined action in the Near East. The sentiment to which Byron and other Phil-Hellenist enthusiasts appealed with such effect was a curious compound of classicism, liberalism, and nationalism. A people who claimed affinity with the citizens of the States of ancient Hellas; a people who were struggling for political freedom; who relied upon the inspiring though elusive sentiment of nationality, made an irresistible appeal to the educated classes in England. Canning was in complete accord with the feelings of his countrymen. But he perceived, as few of them could, that the situation, unless dexterously handled, might open out new and dangerous developments. Consequently, he spared no efforts to induce the Sultan to come to terms with the insurgent Greeks lest a worse thing should befall him at the hands of Russia. The Porte was, as usual, deaf to good advice, and Canning then endeavoured, not without success, to secure an understanding with Russia, and to co-operate cordially with her and with France in a settlement of the affairs of South-Eastern Europe. That co-operation, in itself a phenomenon of high diplomatic significance, was in a fair way of achieving its object when Canning's premature death (1827) deprived the new and promising machinery of its mainspring. Owing to untimely scruples of the Duke of Wellington England lost all the fruits of the astute and far-seeing diplomacy of Canning; the effectiveness of the Concert of Europe was destroyed, and Russia was left free to deal as she would with the Porte and to dictate the terms of a Treaty, which, by the Duke's own admission, 'sounded the death-knell of

the Ottoman Empire in Europe.' But although the Treaty of Adrianople [see ADRIANOPLE, TREATY OF] represented a brilliant success for Russian policy at Constantinople, Great Britain was able to exercise a decisive influence on the settlement of the Hellenic question. By the Treaty of London (1832) Greece was established as an independent kingdom [see GREECE: 1830-1802], under the protection of Great Britain, Russia, and France. . . . To save himself from Mehemet Ali, the Sultan appealed to the Powers. Russia alone responded to the appeal, and as a reward for her services imposed upon the Porte the humiliating Treaty of Unkiar-Skelessi (1833). [See DARDANELLES: 1833-1914.] By the terms of the Treaty Russia became virtually mistress of the Bosphorus [see BOSPORUS: 1832-1878] and the Dardanelles. The Tsar bound himself to render unlimited assistance to the Porte by land and sea, and in return the Sultan undertook to close the Straits to the ships of war of all nations, while permitting free egress to the Russian fleet. To all intents and purposes the Sultan had become the vassal of the Tsar. Thus far England, as a whole, had betrayed little or no jealousy of Russian advance towards the Mediterranean. Canning, though not unfriendly to Russia, had indeed repudiated, and with success, her claim to an exclusive or even a preponderant influence over Turkey. By the Treaty of Unkiar-Skelessi that claim was virtually admitted. Russia had established a military protectorate over the European dominions of the Sultan. The Treaty of Unkiar-Skelessi inaugurates yet another phase in the evolution of the Eastern Question. From that time down to the Treaty of Berlin (1878), the primary factor in the problem is found in the increasing mistrust and antagonism between Great Britain and Russia. Lord Palmerston, inheriting the diplomatic traditions of Pitt and Canning, deeply resented the establishment of a Russian protectorate over Turkey, and determined that, at the first opportunity, the Treaty in which it was embodied should be torn up. Torn up it was by the Treaties of London (1840 and 1841), under which the collective protectorate of the Western Powers was substituted for the exclusive protectorate of Russia. After 1841 the Russian claim was never successfully reasserted. That Great Britain had a vital interest in the development of events in South-Eastern Europe was frankly acknowledged by Russia, and the Tsar Nicholas I made two distinct efforts to come to terms with Great Britain. The first was made in the course of the Tsar's visit to the Court of St. James's in 1844; the second occurred on the eve of the Crimean War, when the Tsar made specific though informal proposals to Sir Hamilton Seymour, then British Ambassador at St. Petersburg. Neither attempt bore fruit. The overtures were based upon the assumption that the dissolution of the Ottoman Empire was imminent, and that it was the duty, as well as the obvious interest, of the Powers most closely concerned to come to an understanding as to the disposition of the estate. British statesmen refused to admit the accuracy of the Tsar's diagnosis, and questioned the propriety of the treatment prescribed. The 'sick man' had still, in their opinion, a fair chance of recovery, and to arrange, before his demise, for a partition of his inheritance seemed to them beyond the bounds of diplomatic decency."—J. A. R. Marriott, *European commonwealth*, pp. 266-269.—See also CRETE: 1800-1913.

1822-1823.—Congress of Verona. See VERONA, CONGRESS OF.

1826.—Reforms of Mahmud II.—Insurrection

of the Janissaries.—Their subjugation and destruction.—"While the struggle in Greece was proceeding, Mahmud had been busily engaged with his internal reforms, many of which were of a nature to offend the prejudices of his subjects. His great object was to give a European character to the institutions and the manners of his country. . . . He resolved also to recommence the military reforms of his uncle Selim, and again to establish the Nizam Jedid, or body of troops organized after European models. This last design roused once more the savage fanaticism of the Janizaries. On the 15th of June, 1826, when the Sultan and the Grand Vizier were in the country, the dissatisfied troops rose in insurrection, and committed great excesses. The Grand Vizier, hastily recalled to the metropolis, took measures for vindicating his master's authority, and . . . before the day was over 6,000 Janizaries had perished at the hands of their fellow-troops. Fifteen thousand who had not taken part in the movement were exiled to different places in Asia Minor, and on the following day a Hatti-Sherif pronounced the abolition of a corps which had contributed so much to the military predominance of Turkey, but which had at length become a source of internal danger too great to be suffered."—E. Ollier, *Cassell's illustrated history of the Russo-Turkish War*, v. 1, ch. 23.

1826-1829.—Convention of Akkerman.—War with Russia.—Surrender of Varna and Silistria.—Disastrous battle of Koulevscha.—Treaty of Adrianople.—Cessions of territory.—"It was not to be expected that an event so remarkable as the destruction of the Janizaries would fail to be taken advantage of by the court of St. Petersburg. The Emperor Nicholas had brought with him to the Russian throne a thorough determination to carry out the aggressive policy of the Empress Catherine, of which the terms of the celebrated treaty of Kutschouk-Kainardji [see above: 1768-1774] afforded so striking an illustration, and the annihilation of the Ottoman army, as well as the distracted condition of many of the provinces of that empire, afforded an opportunity too tempting to be neglected. The Czar, therefore, demanded that the Sultan should conclude with him a treaty, the provisions of which were made the subject of discussion at Ackerman, a town in Bessarabia; and Mahmoud, pressed by the necessity of his condition, . . . had found it requisite to conclude the arrangement, and the celebrated convention of Ackerman was ratified in October 1826. . . . Russia accused the Porte of an endeavour to cause a revolution in the Caucasus, and of a violation of treaties by closing the Bosphorus against Russian ships, and by its conduct towards its Christian subjects. There was no inconsiderable foundation for such a complaint, and especially for the latter part of it. . . . Both sides immediately prepared for the struggle, which a variety of circumstances have proved that the Czar had long contemplated, and only waited for a suitable opportunity of entering upon. . . . In the month of May [1828] the [Russian] force began to assemble on the banks of the Pruth, and crossed that river at three different points. Being unopposed by the Ottomans, the Russian forces almost immediately entered Jassy and Bucharest, took possession of Galatz, and in a few weeks had occupied the whole of the left bank of the Danube. To accomplish, as rapidly as possible the objects of the campaign, as well as to avoid having their very widely extended line exposed to the enemy, it was resolved by the leaders of the Russian forces to cross the Danube at Brahilow, and thence to ad-

vance with rapidity upon Silistria, Varna, and Schumla. This resolution they immediately proceeded to carry into effect. . . . The fall of Brailow and Varna were the only important events of the campaign of 1828 in Europe, and even these successes had been attained at a vast expense of human life. Out of nearly 100,000 men who had crossed the Danube at the beginning of the campaign, only about one-half remained. . . . In Asia operations were carried on by the Russians with equal vigour and much more success, in consequence, in a great measure, of the military genius and experience of General Paskewitch, who commanded the troops on the east of the Black Sea. . . . The first attack of the Russians in Asia was made upon the fortress of Anapa. . . . After a siege of about a month, the place was taken, with 85 guns and 3,000 prisoners, and the fleet sailed immediately to Varna. . . . After some other successes, General Paskewitch resolved upon attacking the town and fortress of Akhalkikh, a very important place in the pashalik of that name. . . . The surrender of Akhalkikh was followed by that of other important places of strength, which closed the campaign of 1828 in Asia. . . . After the fatal battle of Koulevscha, the siege of Silistria was carried on with redoubled vigour, and on the 30th of June the fortress surrendered, when the whole garrison were made prisoners of war, and to the number of 8,000, and the Russians found on the ramparts 238 cannon, in addition to those on board the vessels in the harbour. The fall of Silistria now determined the Russian commander-in-chief to push across the Balkans. . . . After defeating with great facility such troops as opposed their advance, the Russian army pressed on with the utmost activity towards Hadrianople [Adrianople], and entered the city not only unopposed, but amidst the rejoicings of a multitude of the Greek population. . . . The celebrated treaty of Hadrianople [see also ADRIANOPLE, TREATY OF], which concluded the war of 1828-29, . . . contained sixteen distinct articles, by which, among other matters, the following conditions were agreed upon:—The principalities of Wallachia and Moldavia, and all the conquered places in Bulgaria and Roumelia, were restored to the Porte, with the exception of the islands at the mouth of the Danube, which were to remain the possession of Russia. In Asia all the recent conquests were to revert to the Porte, with the exception of Anapa, on the north-eastern shore of the Black Sea, several important fortresses, together with an extensive district situated to the north and east of a line of demarcation supposed to be drawn from the then existing boundary of the province of Gouriel, and thence by that of Imeritia direct to the point where the frontiers of Kars unite with those of Georgia. The conditions of the treaties of Kainardji, Bucharest, and Ackerman were confirmed; . . . the passage of the Dardanelles was declared open to all Russian merchant ships, as well as the undisputed navigation of the Black Sea; an indemnity for losses by Russian subjects was fixed at £750,000, to be paid in eighteen months; and the expenses of the war were to be paid to the Russian Government, amounting to 10,000,000 ducats, about £5,000,000. . . . To this treaty two separate acts were annexed, the provisions of which are of scarcely less importance than the treaty itself. By these acts it was arranged that the Hospodars of Moldavia and Wallachia should be elected for life instead of for seven years; that no interference in the affairs of these provinces by any of the officers of the Porte should take place; that no fortified towns,

nor any establishment of Muslims, should be retained by the Porte on the left bank of the Danube; that the Turkish towns on that bank of the river should belong to Wallachia; and that the Mussulmans who possessed property in such places should be required to sell it in the space of eighteen months. . . . The conclusion of these treaties, on the 14th September 1829, terminated the war between Russia and the Ottoman Empire.”—R. W. Fraser, *Turkey, ancient and modern*, ch. 30-31.—See also RUSSIA: 1825-1855.

1826-1856.—European powers and disintegration of Turkey.—Congresses of Vienna and Paris.—“At the Congress of Vienna the Eastern question was ignored, and with good reason. The allies were sufficiently occupied in restoring the balance of power in Western Europe, and were by no means anxious to encourage any movement on the part of discontented nationalities. The Emperor Alexander was perhaps additionally averse to any discussion which might interfere with the long cherished designs of Russia upon Constantinople. A similar policy guided the subsequent congresses of the Holy Alliance. Disturbances in Greece or Wallachia found as little favour as insurrections in Spain or at Naples. When Ypsilanti appealed to Alexander at Laibach, the Emperor replied that the aspirations of the Greeks, though natural, could never be realised by revolt and warfare. But the policy of the Holy Alliance fell into discredit, and the Western Powers had leisure during the long peace both to extend their sympathy to the subject races of the Ottoman Empire, and to watch with jealousy the encroachments made upon that Empire by Russia. . . . The assumption of a collective authority on the part of the powers to supervise the solution of the Eastern question—in other words, to regulate the disintegration of Turkey—has been gradual. Such an authority has been exercised tentatively since 1826, systematically since 1856. It has been applied successively to Greece, to Egypt, to Syria, to the Danubian principalities and the Balkan peninsula generally, to certain other of the European provinces of Turkey, to the Asiatic boundaries of Turkey and Russia, and to the treatment of the Armenians. . . . At the Congress of Paris, Russia had to renounce the pretensions which she had gone to war to maintain. At the Congress of Berlin she had to submit to the re-settlement of her contract with Turkey from the point of the general interest of Europe. The treaties of Paris and of Berlin thus resemble one another, in that both alike are a negation of the right of any one Power, and an assertion of the right of the Powers collectively, to regulate the solution of the Eastern question. But these two great treaties differ considerably from one another in several important particulars. The Treaty of Paris was primarily a treaty of peace, and contains therefore a number of articles which answer the merely temporary purpose of putting an end to a state of war. The Treaty of Berlin is primarily a political settlement, supervening upon a peace, the terms of which had been previously agreed upon, as between the belligerents, by the treaty of San Stefano. [See below: 1878.] Again, in 1856, Turkey and her allies were victorious, and the object of the arrangement was the maintenance of the Ottoman Empire, which was to be left to perform its promises of well-doing without external interference.”—T. E. Holland, *European concert in the Eastern Question*, pp. 1-2, 221.—See also BERLIN, CONGRESS OF; EASTERN

QUESTION; JERUSALEM: 16th-20th centuries; PARIS, DECLARATION OF; RUSSIA: 1854-1856.

1830.—Recognition of autonomy of Serbia. See SERBIA: 1817-1875.

1831-1840.—Rebellion of Mehemet Ali, pasha of Egypt.—Intervention of Russia and the western powers.—Egypt made an hereditary pashalik.—“The peace of Adrianople (1829) had greatly discredited the authority of the Porte; insurrections multiplied, and Turkish armies had to enter Bosnia and Albania. In these and all other matters by which the embarrassment of the Porte was increased, the ambitious Mehemet Ali, Pasha of Egypt, had a hand. As payment for his services against the Greeks, he had demanded the pashalik of Damascus. Sultan Mahmoud II. had refused the demand, and only given him the promised Candia. Hence, while the Western powers were occupied with the consequences of the July revolution [in France], and all Europe appeared to be on the verge of a new upheaval, he undertook to seize his booty for himself. In consequence of a quarrel with Abdallah, Pasha of Acre, Ibrahim Pasha [son of Mehemet Ali], notorious for his barbarous conduct of the war in Peloponnesus, crossed the Egyptian frontier, October 20th, 1831, with an army organized on the European system, took Gaza, Jaffa and Jerusalem without resistance, and besieged Acre, which was resolutely defended by Abdallah. Mehemet Ali now demanded both pashaliks—Damascus and Acre. The sultan commanded him to evacuate Syria. The demand was naturally refused; so Mehemet and his son Ibrahim were outlawed. But the latter proceeded with his operations, took Acre by storm May 25th, 1832, and entered Damascus. In the mean time, a Turkish army, under Hussein Pasha, had advanced into Syria. Mehemet Pasha, Hussein's lieutenant, was defeated at Homs, July 9th. Hussein himself, attempting to retrieve this loss, was defeated at Beylan July 27th, and his army scattered. The sultan sent a new army against Ibrahim, under Reshid Pasha, the Grand Vizier, who had displayed great efficiency in the reduction of the Albanians and Bosnians. Reshid . . . was utterly defeated at Konieh December 20th, and was himself taken prisoner. The sultan was in a critical situation. He could not at the moment bring together another considerable army, while Ibrahim had 100,000 well-trained troops, and the road to Constantinople lay open before him.” Russia, having no wish to see the energetic pasha of Egypt in possession of that coveted capital, offered her help to the sultan and he was driven to accept it. “A Russian fleet appeared in the Bosphorus, and landed troops at Scutari, while a Russian army was on the march from the Danube to cover Constantinople. . . . At length England and France perceived how dangerous it was to forget the East in their study of the Dutch-Belgian question. Their ambassadors had enough to do, by a hasty peace, to make Russia's help unnecessary. As their threats made no impression on the victorious Mehemet Ali, they filled the sultan with distrust of Russia, and by representing a cession of territory to his vassal as the lesser of the two evils, persuaded him into the peace of Kutayah (May 6th, 1833), by which Mehemet Ali received the whole of Syria and the territory of Adana, in south-eastern Asia Minor. Russia had to retire with her object unattained, but had no sooner been thrown out at the front door than she came in at the back. She called the sultan's attention to the favor shown to the insatiable pasha by England and France in the peace of Kutayah, and con-

cluded with him, July 8th, 1833, the treaty of Unkiar-Skelessi, by which he entered into a defensive alliance with Russia for eight years, and pledged himself to permit no foreign vessel of war to pass through the Dardanelles. The Western powers took this outwitting very ill, and from that time on kept a sharp eye on Constantinople.” Mehemet Ali was meantime giving another direction to his ambition. “The west coast of Arabia, as far as the English post at Aden, had been in his possession since 1829. He now sought to extend his sway over the eastern coast, and subdue the sultan of Muscat. . . . If this were to continue, the two most important roads to the East Indies, by Suez and by the Persian Gulf, would be in the hands of Mehemet Ali. . . . With Egypt, Syria, and Arabia in his hands, England's position in the East would receive a blow that must be felt. So it was a foregone conclusion which side England would take. In 1838 she concluded with the Porte a commercial treaty by which the abolition of all monopolies, as well as free exportation from all parts of the Turkish empire, including Egypt and Syria, was secured to her. Mehemet Ali hesitated about accepting this treaty; and Mahmoud, full of hate against a vassal who threatened ultimately to devour him, declared him a traitor, deprived him of all his dignities, and caused an army to advance into Syria under Hasiz Pasha. But again fortune was not favorable to the Turks. In their camp, as military adviser of the commander-in-chief, was a Prussian captain, Hellmuth von Moltke. For two years he had been assisting the sultan in planning and putting into execution military reforms. Recognizing the weakness and unreliable character of the Turkish army, he advised Hasiz Pasha to fall back on the strong camp at Birdshik, bring up the re-enforcements which were under way, and then risk a battle. But the Pasha would not listen to Moltke's advice, pronouncing retreat a disgrace. He was completely routed at Nisib, on the Euphrates, June 24th, 1839, and his army scattered. For the second time the road to Constantinople lay open to Ibrahim. Misfortunes fell thick and fast upon the Turks. Sultan Mahmoud died June 30th, and the empire fell to a sixteen-year old youth, his son Abdul Medhid. Five days later, Capudan Pasha, with the Turkish fleet, sailed out of the Dardanelles under orders to attack the Egyptians. Instead of this he went over to Mehemet Ali with his whole fleet—in consequence of French bribery, it was said. . . . In order to prevent Turkey from casting herself a second time into Russia's arms, four great powers—England, France, Austria, and Prussia—declared, July 27th, 1839, that they would themselves take the Eastern question in hand. To save herself from being wholly left out, Russia had to give her consent, and become a party to the treaty. But there were very different views as to the way in which the question was to be settled. France, which was striving after the control of the Mediterranean, and which, since Napoleon's campaign, had turned its eyes toward Egypt, wished to leave its friend Mehemet Ali in full possession. England saw her interests endangered by the pasha, thought France's occupation of Algiers quite enough, and was afraid that if Turkey were too weak she might become the defenceless prey of Russia. The latter wished at no price to allow the energetic pasha to enter upon the inheritance of Turkey, or even of a part of it, and was pleased at seeing the cordial understanding between France and England destroyed. Austria and Prussia supported England and Russia, and so France was left alone. The

Anglo-Prussian view found expression in the quadruple alliance which the great powers, with the exception of France, concluded in London, July 15th, 1840. By this the hereditary possession of the pashalik of Egypt, and the possession for life of a part of Syria, were secured to Mehemed Ali, in case he submitted to the conclusions of the conference within ten days. . . . The allied powers began hostilities against Mehemed Ali, who, relying on French assistance, refused to submit. The Anglo-Austrian fleet sailed to the Syrian coast, and took Beirut and Acre; and Alexandria was bombarded by Commodore Napier. This and the fall of the Thiers ministry brought Mehemed Ali to a full realization of his mistake. He might consider himself lucky in being allowed to hold Egypt as hereditary pashalik upon evacuating Syria, Arabia, and Candia, and restoring the Turkish fleet. For this favor he had to thank England, which sought by this means to secure

SILVER COINS IN CIRCULATION SINCE  
THE TIME OF ABDUL MEJID

his friendship and the Suez road to India. The catastrophe of the 'sick man' [the Turk] was again put off for a few years."—W. Müller, *Political history of recent times*, sect. 11.—See also EASTERN QUESTION.

1839.—Accession of Abdul Mejid.—Proclamation of Tanzimat.—Abdul Mejid came to the throne in 1839. "Fortunately he possessed in Reshid Pasha a great Minister, who shared and seconded, and perhaps prompted, the reforming ardour of his master; and on the 3rd November 1839 an Imperial Rescript, the famous Hatti Humayoun of Gulhane [or Tanzimat, was proclaimed]."—A. H. Midhat, *Life of Midhat Pasha*, p. 20.—The following is the text of this document:

"All the world knows that in the first days of the Ottoman Monarchy, the glorious precepts of the Koran and the Laws of the Empire were always honoured. The Empire in consequence increased

in strength and greatness, and all her subjects, without exception, had risen in the highest degree to ease and prosperity. In the last 150 years a succession of accidents and divers causes have arisen which have brought about a disregard for the sacred code of Laws, and the Regulations flowing therefrom, and the former strength and prosperity have changed into weakness and poverty: an Empire in fact loses all its stability so soon as it ceases to observe its Laws. These considerations are ever present to our mind, and, ever since the day of our advent to the Throne, the thought of the public weal, of the improvement of the state of the Provinces, and of relief to the peoples, has not ceased to engage it. If, therefore, the geographical position of the Ottoman Provinces, the fertility of the soil, the aptitude and intelligence of the inhabitants are considered, the conviction will remain that, by striving to find efficacious means, the result, which by the help of God we hope to attain, can be obtained within a few years. Full of confidence, therefore, in the help of the Most High, assisted by the intercession of our Prophet, we deem it right to seek by new institutions to give to the Provinces composing the Ottoman Empire the benefit of a good Administration. These institutions must be principally carried out under 3 heads, which are:—

1. The guarantees insuring to our subjects perfect security for life, honour, and fortune.
2. A regular system of assessing and levying Taxes.
3. An equally regular system for the levy of Troops and the duration of their service.

And, in fact, are not life and honour the most precious gifts in existence? What man, however much his character may be against violence, can prevent his having recourse to it, and thereby injure the Government and the country, if his life and honour are endangered? If, on the contrary, he enjoys in that respect perfect security, he will not depart from the ways of loyalty, and all his actions will contribute to the good of the Government and of his brothers. If there is an absence of security on the score of fortune, every one remains insensible to the voice of the Prince and the country; no one interests himself in the progress of public good, absorbed as he is with his own troubles. If, on the contrary, the citizen keeps possession, in all confidence, of all his goods, then, full of ardour in his affairs, which he seeks to enlarge in order to increase his comforts, daily renewing in his heart his love for the Prince and the country, and his devotion to his native land. These feelings create in him the most praiseworthy actions. As to the regular and fixed assessment of the Taxes, it is very important to settle that matter, for the State which is forced to incur many expenses for the defence of its Territory cannot obtain the money necessary for its Armies and other services except by means of contributions levied on its subjects. Although, thanks be to God, our Empire has for some time past been delivered from the scourge of Monopolies, falsely considered in times of war as a source of revenue, a fatal custom still exists, although it can only have disastrous consequences; it is that of vena concessions, known under the name of 'Iltizam.' Under that name the civil and financial administration of a locality is delivered over to the passions of a single man, that is to say, sometimes to the iron grasp of the most violent and avaricious passions, for if that Contractor is not a good man, he will only look to his own advantage. It is therefore necessary that henceforth each member of the Ottoman Society should be taxed for a quota of a fixed Tax, ac-

ording to his fortune and of his means, and that it should be impossible that anything more could be exacted from him. It is also necessary that special laws should fix and limit the expenses of our Land and Sea Forces. Although, as we have said, the defence of the country is an important matter, and that it is the duty of all the inhabitants to furnish soldiers for that object, it has become necessary to establish Laws to regulate the contingent to be furnished by each locality, according to the necessity of the time, and to reduce the term of Military Service to 4 or 5 years. For it is at the same time doing an injustice, and giving a mortal blow to agriculture and to industry to rake, without consideration to the respective population of the localities, in the one more, in the other less men than they can furnish, it is also reducing the soldiers to despair, and contributing to the depopulation of the country, by keeping them all their lives in the service. In short, without the several Laws, the necessity for which has just been described, there can be neither strength, nor riches, nor happiness, nor tranquillity for the Empire; it must, on the contrary, look for them in the existence of these new Laws. From henceforth, therefore, the cause of every accused person shall be publicly judged in accordance with our Divine Law, after enquiry and examination, and so long as a regular judgment shall not have been pronounced, no one can, secretly or publicly, put another to death by poison or in any other manner. No one shall be allowed to attack the honour of any other person whatever. Each one shall possess his Property of every kind, and shall dispose of it in all freedom, without let or hindrance from any person whatever; thus, for example, the innocent Heirs of a Criminal shall not be deprived of their legal rights, and the Property of the Criminal shall not be confiscated. These Imperial concessions shall extend to all our subjects, of whatever Religion or sect they may be; they shall enjoy them without exception. We therefore grant perfect security to the inhabitants of our Empire, in their lives, their honour, and their fortunes, as they are secured to them by the sacred text of our Law. As for the other points, as they must be settled with the assistance of enlightened opinions, our Council of Justice (increased by new members, as shall be found necessary), to whom shall be joined, on certain days which we shall determine, our Ministers and the Notabilities of the Empire, shall assemble, in order to frame Laws regulating the Security of Life and Fortune, and the Assessment of the Taxes. Each one in those assemblies shall freely deliver his ideas and give his advice. The Laws regulating the Military Service shall be discussed by a Military Council, holding its sittings at the Palace of the Seraskier. As soon as a Law shall be passed, in order to be for ever valid, it shall be presented to us; we shall give it our approval, which we will write with our Imperial sign manual. As the object of these Institutions is solely for the purpose of reviving Religion, Government, the Nation, and the Empire, we engage not to do anything which is contrary thereto. In testimony of our promise, we will, after having deposited them in the Hall containing the glorious mantle of the Prophet, in the presence of all the Ulemas, and the Grandees of the Empire make Oath in the name of God, and shall afterwards cause the Oath to be taken by the Ulemas and the Grandees of the Empire. After that, those from among the Ulemas or the Grandees of the Empire, or any other persons whatsoever, who shall infringe these Institutions, shall undergo,

without respect of rank, position, and influence, the punishment corresponding to his crime, after having been well authenticated. A Penal Code shall be compiled to that effect. As all the Public Servants of the Empire receive a suitable salary, and that the salaries of those whose duties have not, up to the present time, been sufficiently remunerated, are to be fixed, a rigorous Law shall be passed against the traffic of favouritism and of appointments (*richvet*), which the Divine Law reprobates, and which is one of the principal causes of the decay of the Empire. The above dispositions, being an alteration and a complete renewal of ancient customs, this Imperial Rescript shall be published at Constantinople, and in all places of our Empire, and shall be officially communicated to all the Ambassadors of the friendly Powers resident at Constantinople, that they may be witnesses to the granting of these Institutions, which, should it please God, shall last for ever. Wherein, may the Most High have us in His holy keeping. May

MIDHAT PASHA

those who shall pass an Act contrary to the present Regulations be the object of Divine malediction, and deprived for ever of every kind of happiness. Read at Gulhané, 3rd November, 1830."—E. Hertlet, *Map of Europe by treaty*, v. 2, 1828-1863, pp. 1002-1005.—"The two moving spirits in the deposition of Sultan Abdul Aziz were undoubtedly Midhat Pasha and Hussein Avni Pasha, the Minister of War. . . . As soon as the final resolution of Ministers was arrived at, and before any commencement of execution could be given to it, it was indispensable to obtain a *Fetva* (authoritative decree) of the Sheik-ul-Islam, Hassan Hairullah, the highest authority and mouthpiece of the Sacred Law, in order to give legal validity to the act of deposition. . . . These stipulations were the following:—1. To promulgate without delay the new Constitution. 2. To act in matters of State only with the advice of his responsible advisers. 3. To appoint Zia Bey and Kemal Bey his private secretaries, and to make Sadullah Bey the head of the Palace Secretariat. The importance attached by Midhat and Rushdi to this last condition was very great. It afforded a guarantee against those intrigues of the Palace which had ship-wrecked

so many schemes of reform, and prevented, so far as was possible, a renewal of that mute opposition between the Palace and the Porte which had existed for centuries, and had paralysed the efforts of so many Ministers. At this historical interview at Muslou-Oglou Prince Hamid evidently 'played a deep game' with Midhat Pasha. He promised all and more than all that was asked of him. He pretended to opinions more advanced than the most advanced of his Ministers, and in favour of even a more democratic Constitution than the one elaborated. The other condition he accepted without demur [without the least intention of keeping his promise]. . . . It was reserved for [Abdul Hamid II (1876-1908)], . . . after he had suppressed a Constitution that he had sworn to observe as the very condition of his mounting to the throne, to brush all checks and counterpoises of every kind aside, and to set up a pure, unmixed despotism, based on caprice and corruption alone. Such a system of government had been hitherto unknown to the Ottoman Constitution, was emphatically denounced by the prophets, was contrary to the express provisions of the Sacred Law, was repudiated by Mehemet II. and all the early Sultans as well as Caliphs of Islam, and ran counter to all the traditions of the Ottoman people."—A. H. Midhat, *Life of Midhat Pasha*, pp. 82, 97-98, 13.—"A series of revolts which soon broke out in the Lebanon, Crete, and Montenegro, and a massacre at Kerbela soon proved that the promises of Abdul Medjid were as empty and as incapable of fulfilment as those of his predecessors. In fact the very publication of the *Tanzimat* caused a dangerous reaction at Constantinople, as a result of which the moderate Grand Vizier Reshid gave place to the corrupt and fanatical Riza."—W. E. D. Allen, *Turks in Europe*, p. 131.

1861-1876.—Reign of Abdul Aziz, and accession of Abdul Hamid.—"Troubles broke out in the Lebanon in 1860 and a French army was dispatched to restore order. . . . In 1861 the Sultan Abdul Mejid died, and with him passed away the hope of regenerating Turkey. His brother and successor Abdul Aziz was an ignorant bigot, whose extravagance brought his country to avowed insolvency (1875). . . . In 1876 he was deposed, and—found dead. How he came by his death is a matter of doubt, but his end is said to have turned the brain of his successor, Murad V., a son of Abdul Mejid, who after three months was removed as an imbecile, and succeeded by his brother, . . . Abdul Hamid."—S. Lane-Poole, *Story of Turkey*, ch. 17.

1861-1877.—Union of Wallachia and Moldavia.—Revolt in Bosnia and Herzegovina.—Reforms demanded by the great powers.—War with Serbia.—Conference at Constantinople.—Abdul Hamid and the constitution of 1876.—"Before four years were over [after the termination of the Crimean War by the Treaty of Paris], one of the chief stipulations of the treaty was set aside. Wallachia and Moldavia, which it had been the policy of the Powers to separate, displayed a constant desire to join. Two of the great Continental

Powers—France and Russia—favoured the junction. England, Austria, and Turkey, thinking that the union would ultimately lead to their independence, opposed their fusion under one prince. . . . [In 1858, the two provinces chose the same prince, or hospodar, in the person of Prince John Couza, who took the title of prince of Rumania. The Porte protested, but was induced, in 1861, to recognize this union of the coronets. Prince Couza aspired to absolutism, and was forced to abdicate in 1866. Then a German, Prince Charles of Hohenzollern, was chosen by the two provinces to be his successor.] Thus, five days after the Peace of Paris, one of the stipulations on which England had insisted was surrendered. In 1870 the Franco-German War led to the obliteration of another of them. In November, when the armies of France were either beaten or besieged, Russia repudiated the clause of the Treaty of Paris which had limited the forces of Russia and Turkey in the Black Sea. The declaration of the Russian Government came as a painful shock to the British people. The determination of a great European state to tear up the clause of a treaty excited indignation. It was recollected, moreover, that it was for the sake of this clause that the Crimean War had been prolonged after the Vienna negotiations; and that all the blood which had been shed, and all the money which had been spent, after the spring of 1855, were wasted in its abandonment. . . . In the spring of 1875 an insurrection broke out in Bosnia and Herzegovina, two of the northern provinces of European Turkey. [See also BOSNIA: 1849-1875.] The Porte failed to quench the disturbance; and, its efforts to do so increasing its pecuniary embarrassments, was forced in the autumn to repudiate the claims of its many creditors. . . . In the meanwhile the insurrection continued to spread, and attracted the attention of the great European Powers. At the instigation of Austria a note was drawn up [by Count Andrassy, and known, therefore, as the Andrassy Note], which was at once signed by all the European Powers except England, and which was ultimately accepted by England also, declaring that 'the promises of reform made by the Porte had not been carried into effect, and that some combined action by the Powers of Europe was necessary to insist on the fulfilment of the many engagements which Turkey had made and broken.' As the note failed to effect its object, the representatives of the Northern Powers—Germany, Austria, and Russia—met at Berlin, proposed a suspension of arms for two months, and intimated that if Turkey in the two months failed to fulfil her broken promises, 'force would be used to compel her' to do so. The British Government, unwilling to join in a threat, refused to sign this new note. The insurrection went on; Servia, sympathising with the insurgents, declared war against Turkey; Russian officers and Russian troops fought in the Servian battalions; and Russia herself, setting her legions in motion, evidently prepared for hostilities. When these events occurred, large numbers of the English people were prepared to support the Turk. Though they had been partially estranged from the cause of Turkey by the repudiation of the Ottoman debt in the previous autumn, they recollected the sacrifices of the Crimean War; they were irritated with the manner in which one part of the Treaty of Paris had been torn up in 1870; and they were consequently prepared to resist any further movement on the part of Russia. The Porte, however, dreading the extension of revolt, allowed its officers to anticipate dis-

order by massacre. The atrocious cruelty with which this policy was executed [especially in Bulgaria (see BULGARIA: 1875-1878)] excited a general outburst of indignation in this country [England]; and the British Ministry, whose leader had hitherto displayed much sympathy with the Turks, found himself forced to observe a strict neutrality. In the short war which ensued in the autumn of 1876, the Servian troops proved no match for the Turkish battalions. At the request or command of Russia the Porte was forced to grant an armistice to the belligerents; and, on the suggestion of the British Ministry, a Conference of the Great Powers was held at Constantinople to provide for the better government of the Turkish provinces. The Constantinople Conference, held at the beginning of 1877,

Turkish empire in 1877, and the effort was abandoned. When Hamid saw that the Constitution would avail nothing in averting war, and that Russia would not tolerate any constitutional government in Turkey, he prorogued the Legislature and bundled up the Constitution and pigeonholed it with the understanding that Parliament would be convoked anew after peace with Russia. In spite of that promise the Constitution remained for thirty years where he filed it."—A. W. Hidden, *Ottoman dynasty*, pp. 390-391.

SULTAN ABDUL HAMID II IN THE EARLY YEARS OF HIS REIGN

(After a contemporary pen drawing by Q. May)

formed in many respects an exact parallel to the Vienna Conference held in the summer of 1855. . . . The Porte rejected all the proposals on which the other Powers were agreed. . . . In each case the failure of the Conference was followed by war. But the parallel ends at this point. . . . In the Russo-Turkish war of 1877-8, Turkey was left to fight her own battle alone."—S. Walpole, *Foreign relations*, ch. 3.—"In December, 1876, a conference of the powers met at Constantinople for the purpose of giving Abdul-Hamid II sage advice. Even as their excellencies the ambassadors were in session, sudden salvos of artillery distracted their august deliberations."—W. S. Davis, *Roots of the war*, pp. 82-83.—"To strengthen himself, to disarm his critics and enemies, Abdul Hamid determined to declare a Constitution, which was proclaimed on December 23, 1876. Midhat Pasha and his associates drew up the Constitution. The carrying out of this project of reform, however, was impossible under conditions prevailing throughout the

1877-1878.—War with Russia.—Heroic defense of Plevna.—Defeat and surrender.—In 1877 the Eastern Question was still unsettled. "The Turks used their new constitution with some adroitness as a scheme for further delay. How could the powers continue to demand reforms when all possible reforms were going to be voted and put into effect—just as soon, of course, as the new parliament could be convened and pass the necessary measures? And, in the meantime, how could the *Padishah*, as a 'constitutional sovereign,' enact legislation by his mere fiat? As for other matters, the Turks proved themselves to the ambassadors

to be incorrigible. When the question of Bulgaria was raised, the sultan's ministers at first solemnly averred 'they did not know what the word meant.' They permitted themselves to remember that it might be a 'geographical term for the region north of the Balkans,' but that was all. In short, these slippery barbarians, 'who wore tight clothes and chattered French,' but who seemed to have neither honesty nor intelligence under their red fezzes, alienated their last friends and drove even England to wash her hands of them. Lord Salisbury, going home in despair, declared that 'all had tried to save Turkey, but she would not allow them to save her.' Thus the year 1877 opened with war between the czar and sultan all but certain, and England looking on as a neutral. Czar Alexander II was probably an honest lover of peace but despotic as were the institutions of Russia, he could not be indifferent to public opinion. The

delusion that England would somehow fight for them. Lord Salisbury had vainly telegraphed to London from the Constantinople conference, 'The grand vizier believes that he can count on the assistance of Lord Derby and Lord Beaconsfield.' Yet the British cabinet had nevertheless failed to make it plain to Abdul-Hamid that it could never stand between him and the wrath of Russia, as he had now provoked it. The Turkish 'free parliament,' although duly 'elected' and opened with some pomp in March, 1877, had instantly exhibited itself as nothing but a comically useless tool for the purpose of despotism. Its members were mere dummies for the government, and were speedily nicknamed the 'Yes, Sirs' (*Evet Eflendim*), from their willingness to ratify every suggestion from above. On April 24 the czar took the long expected action and declared war. . . . The Russians had entered into the war with enthusiasm

MEETING OF GRAND DUKE NICHOLAS WITH OSMAN PASHA AT THE SURRENDER OF PLEVNA, 1878

(After a contemporary drawing by Durand)

Muscovite empire had lately been stirred by a strong Pan-Slavic movement, an agitation for the union of all Slavdom in one confederacy, of course under the hegemony of Russia. The outraged Bulgars were counted Slavs, too; and their woes had produced a great impression at St. Petersburg and Moscow. . . . Finally, and of still keener national interest, was the fact that in marching as the champion of Christian civilization against the sultan, Russia was also taking another step toward that outlet upon warm, blue water which was a necessity for her empire. All in all, Alexander II drew the sword in 1877 with a great national enthusiasm impelling him forward. The war was popular for the time in Russia. A private understanding with Austria had assured the czar against interference from Franz-Joseph, and the military course therefore seemed very plain. On April 10, 1877, the Turks in a spirit of incredible folly rejected the London Protocol, a last despairing proposal for reform which had been flung at them by the concert of the powers. Down to the last the sultan and his grand vizier had hugged the

and confidence that the odds were so entirely on their side that, if Western Europe would but give them fair play, they could easily crush the infidel. Their difficulties, however, were great. The Turkish navy prevented the use of transports on the Black Sea and the railroads through Southern Russia were few and in Rumania still fewer. The hindrances to moving huge armies at a vast distance from their base thus proved almost unsurmountable. The czar's forces also suffered, as in the Great War some four decades later, from rascally contractors and grievously imperfect munitions and supplies. Alexander, too, at first had trouble in finding highly competent generals. Nevertheless, the incapacity of the Turkish commanders was, on the whole, so great that only the offsetting excellence of the Turkish infantrymen seemed likely to make the war at all equal. In the summer of 1877 the Russians forced their way over the Danube, penetrated Bulgaria, took Tirnova, the old capital of that afflicted country, and, to crown all, seized Shipka Pass, the best defile over the Balkan Mountains. There was

panic in Constantinople, and a hasty shifting of posts took place among the excited pashas. Then came a long respite. The Turks had found a really able general—one of those admirable fighters who often come out of the Orient—Osman Pasha, who was able to inflict on the czar and his grand dukes anxious nights, heavy losses, and a humiliating delay. In their sudden advance through Bulgaria the Russians had neglected to occupy the small town of Plevna, located most strategically at the intersection of the main roads along which the invaders must pass. With some forty-five thousand men Osman Pasha flung himself into Plevna, and suddenly the Russians found their whole line of advance menaced. On July 20, not realizing the strength of their enemies, they assaulted with inadequate forces and met a bloody repulse. Ten days later a more powerful attack met a still greater disaster. There was nothing for it but the Grand Duke Nicholas must needs telegraph to Prince Carol to bring up his despised Rumanian allies to aid in the siege. The prince proudly required (and obtained) that he should be appointed commander-in-chief of the entire besieging force. On September 11 there was a third and still more desperate assault. The Rumanians covered themselves with glory before the bloody Turkish breastworks, but the pasha's inner lines could not be carried. The only option was to bring up reinforcements, hem Osman Pasha in, and slowly starve him out. This last stage of the siege lasted till December 10. In the meantime the whole Russian plan of campaign lagged, and if there had been real capacity at Constantinople, something might have been done to save the Ottoman Empire from overthrow. But Osman was unique in his tenacity and skill among the Turkish commanders. In Asia, in the Caucasus region, where, of course, an independent campaign could be conducted, the Turks had been driven [from the Little Yahni hills. On November 4 Erzeroum fell] and on November 18 they lost the great fortress of Kars. At last, in December, the stout Osman was at the end of his resources. He served out his last biscuits and ammunition to his men and made a despairing attempt to cut his way through the besiegers. The effort failed, and he surrendered with forty thousand half-starved troops. The Russians treated him honorably as a doughty foe, and well they might. He had cost them twenty-one thousand men (sixteen thousand Russians and five thousand Rumanians) and five months of valuable time. But the roads through Bulgaria had been opened at last: The surrender of Osman was followed by the speedy rout of the remaining Turkish armies. The czar's service had now developed two redoubtable generals, Gurko and Skobelev. The first of these took Sofia and utterly defeated the army of Sulciman Pasha near Philippopolis; the second reopened Shipka Pass, which had been almost rewon by the Turks during the siege of Plevna. Serbia, too was again in arms [see SERBIA: 1875-1885]; likewise little Montenegro [see MONTENEGRO: 1874-1880]; while from every other quarter messengers of calamity hastened in toward Abdul-Hamid's palace. The Cossacks raged and raided through the Mohammedan regions around Adrianople in a manner that indicated that Christians also understand the arts of massacre. Adrianople itself fell in January, 1878, and so far as the sultan's own strength was concerned, the Turkish power was at an end. There was nothing for it but negotiate. With a noose about their necks the Ottomans accepted an

armistice on January 31, to be followed by the more definitive Treaty of San Stefano, signed on March 3, 1878."—W. S. Davis, *Roots of the war*, pp. 83-87.—See also RUSSIA: 1875-1877; RUMANIA: 1875-1881; BULGARIA: 1875-1878; EUROPE: Modern: Wars of the great powers; RED CROSS: 1864-1914.

1878.—Excitement in England over Russian advance.—British fleet sent through the Dardanelles.—Arrangement of the Berlin Congress.—Treaties of San Stefano and Berlin.—Effects of Sultan's Asiatic possessions.—"At the opening of 1878 the Turks were completely prostrate. The road to Constantinople was clear. Before the English public had time to recover their breath and to observe what was taking place, the victorious armies of Russia were almost within sight of the minarets of Stamboul. Meanwhile the English Government were taking momentous action. . . . Parliament was called together at least a fortnight before the time usual during recent years. The Speech from the Throne announced that her Majesty could not conceal from herself that, should the hostilities between Russia and Turkey unfortunately be prolonged, 'some unexpected occurrence may render it incumbent on me to adopt measures of precaution.' This looked ominous to those who wished for peace, and it raised the spirits of the war party. There was a very large and very noisy war party already in existence. It was particularly strong in London. It embraced some Liberals as well as nearly all Tories. It was popular in the music-halls and the public-houses of London. . . . The men of action got a nickname. They were dubbed the Jingo Party. . . . The Government ordered the Mediterranean fleet to pass the Dardanelles and go up to Constantinople. The Chancellor of the Exchequer announced that he would ask for a supplementary estimate of six millions for naval and military purposes. Thereupon Lord Carnarvon, the Colonial Secretary, at once resigned. . . . Lord Derby was also anxious to resign, and indeed tendered his resignation, but he was prevailed upon to withdraw it. The fleet meanwhile was ordered back from the Dardanelles to Besika Bay. It had got as far as the opening of the Straits when it was recalled. The Liberal Opposition in the House of Commons kept on protesting against the various war measures of the Government, but with little effect. . . . While all this agitation in and out of Parliament was going on . . . the news came that the Turks, utterly broken down, had been compelled to sign an armistice, and an agreement containing a basis of peace, at Adrianople. Then, following quickly on the heels of this announcement, came a report that the Russians, notwithstanding the armistice, were pushing on towards Constantinople with the intention of occupying the Turkish capital. A cry of alarm and indignation broke out in London. . . . The fleet was now sent in good earnest through the Dardanelles, and anchored a few miles below Constantinople. Russia at first protested that if the English fleet passed the Straits Russian troops ought to occupy the city. Lord Derby was firm, and terms of arrangement were found—English troops were not to be disembarked, and the Russians were not to advance. Russia was still open to negotiation. Probably Russia had no idea of taking on herself the tremendous responsibility of an occupation of Constantinople. She had entered

into a treaty with Turkey, the famous Treaty of San Stefano, by which she secured for the populations of the Christian provinces almost complete independence of Turkey, and was to create a great new Bulgarian State with a seaport on the Ægean Sea. The English Government refused to recognise this Treaty. Lord Derby contended that it involved an entire readjustment of the Treaty of Paris, and that that could only be done with the sanction of the Great Powers assembled in Congress. Lord Beaconsfield openly declared that the Treaty of San Stefano would put the whole south-east of Europe directly under Russian influence. Russia offered to submit the Treaty to the perusal, if we may use the expression, of a Congress; but argued that the stipulations which merely concerned Turkey and herself were for Turkey and herself to settle between them. This was obviously an untenable position. . . . Turkey meanwhile kept feebly moaning that she had been coerced into signing the Treaty. The Government determined to call out the Reserves, to summon a contingent of Indian troops to Europe, to occupy Cyprus, and to make an armed landing on the coast of Syria. . . . The last hope of the Peace Party seemed to have vanished. . . . Prince Bismarck had often during these events shown an inclination to exhibit himself in the new attitude of a peaceful mediator. He now interposed again and issued invitations for a congress to be held in Berlin to discuss the whole contents of the Treaty of San Stefano. After some delay, discussion, and altercation, Russia agreed to accept the invitation on the conditions proposed, and it was finally resolved that a Congress should assemble in Berlin on the approaching June 13. . . . Much to the surprise of the public, Lord Beaconsfield announced that he himself would attend, accompanied by Lord Salisbury, and conduct the negotiations in Berlin. . . . The great object of most of the statesmen who were concerned in the preparation of the Treaty which came to the Congress, was to open for the Christian populations of the south-east of Europe a way into gradual self-development and independence. But on the other hand it must be owned that the object of some of the Powers, and especially, we are afraid, of the English Government, was rather to maintain the Ottoman Government than to care for the future of the Christian races. These two influences, acting and counteracting on each other, produced the Treaty of Berlin."—J. McCarthy, *History of our own time*, v. 4, ch. 65.—"San Stefano [where the Treaty of San Stefano was negotiated in 1878] is a small village on the outskirts of Constantinople. . . . The Muscovites were in great anxiety to tie their defeated foes by a hard and fast treaty and confront Europe with an 'accomplished deed' before the other great powers, and especially England, could intervene. The czar's ministers knew that not merely England, but Austria would fight to the death rather than see them occupy Constantinople, and they did not attempt it; but otherwise the changes they dictated were sweeping enough. Montenegro and Serbia were to receive appreciable increases of territory. Bosnia was to be 'reformed' not by promises only, but under the joint control of Austria and Russia. Other reforms were to be granted the oppressed Armenians in Asia Minor, in which region a considerable strip of territory (including Kars) was to be ceded outright to Russia. As for Rumania, she was to be set up as a strictly independent nation, but she was to cede Bessarabia

to Russia and receive in return (at the expense of Turkey) the Dobrudja, the miasmatic marshy delta of the Danube. But the most striking clause was that relating to the creation of an entirely new unit in modern Europe—Bulgaria. According to the terms of this treaty a huge Bulgaria would have sprung into existence. Constantinople had its hinterland back to Adrianople, Saloniki and the territory around it, and part of Albania would have been left to the sultan; otherwise he would have been expelled from Europe. The lost dominions were to be formed into 'an autonomous tributary principality, with a Christian governor and a national militia.' Abdul-Hamid's pride might be salved a little by saying that the new country was merely to be a vassal-region of the Ottoman Empire. The fact, of course, was evident to all men that practically the vassalage consisted in a certain amount of tribute money, likely to cease some fine day. By their own sins and follies the Ottomans had had themselves pushed to the outermost corner of Europe. As the Russians advanced, and, still more, as the full tenor of their demands became evident, a large percentage of the English public took ever-increasing alarm. The memory of the Bulgarian massacres was already fading; the fear of the Muscovites advancing along the road to India by way of Constantinople began again to grip the British heart. It was claimed, with some show of justice, that the czar was anxious to impose a peace, as if the quarrel were between him and the sultan alone, to the total ignoring of legitimate British interests. . . . Under these circumstances war would surely have followed, had not Russia been willing to consider the question of the revision of the Treaty of San Stefano. There were plenty of hot-headed officers around the czar and plenty of ardent Pan-Slavists in the rear quite ready to urge flinging defiance at Disraeli and tempting his government to do its worst. But Russia's hand was forced by the threatening attitude of Austria. Despite the fact that Franz-Joseph had given some kind of assurances of neutrality when the attack on Turkey began, Austrian troops now began to mobilize in the Carpathians in a position to make a deadly flank attack upon the Russians, strung out as they were in a long line of communication through Rumania and Bulgaria to the gates of Constantinople. The fear lest the proposed Bulgarian state would be a satrapy of Russia in all but name had entered the hearts of the leaders at Vienna no less than at London. It would have been tempting destruction to have fought both England and Austria simultaneously, and, as a consequence, even before the final signing of the Treaty of San Stefano, the czar began giving tokens of a willingness to compromise. Nevertheless, ere Alexander II could be induced to lay the settlement of the Balkans before a general congress of the powers, there were tense moments and renewed threats of war. . . . On April 1, 1878, Disraeli gave notice that the reserves of the British army and navy would be called out. Fifteen days later, to advertise to the world the solidarity of the queen's empire, he ordered eight regiments of Indian Sepoy troops to Malta. This sign of resolution brought the czar's ministers to a more tractable mood, and they agreed to such concessions concerning the boundaries of Bulgaria, etc., as to make it likely that peace could be maintained. But meantime Disraeli was proving to the Turks that he was not championing their integrity out of pure disinterested friendship. By letting them believe that Russia

was likely to renew the war, and that English aid would be indispensable, the sultan was induced to promise that if Russia retained her conquests in Asia Minor (as it was perfectly certain she would do) and was likely to push her conquests further, England would give armed aid to the sultan, but to enable England to defend these territories the Ottomans gave her the occupation and administration of Cyprus. The sultan also promised to introduce the 'necessary reforms' for the protection of the Armenian Christians. The peculiar execution of these reforms and England's part therein were destined to play a very ignoble part in later history. Russia was thus forced to submit her entire scheme for the reconstruction of the Balkans to a congress of the powers. This congress presently assembled (June 13 to July 13, 1878) at Berlin, and was undoubtedly the most distinguished diplomatic gathering since the Congress of Vienna (1814-15).—W. S. Davis, *Roots of the war*, pp. 88-91.—“The Treaty of Berlin, signed by the Plenipotentiaries on the 13th of July, 1878, and of which the ratifications were exchanged on the 3rd of August, was the Treaty of San Stefano, with additions, subtractions, and amendments. . . . Speaking generally, it may be said that the objects of the Treaty of Berlin, as distinguished from its predecessor, were to place the Turkish Empire in a position of independence, and to protect the jeopardised rights of Europe. These ends it accomplished, or partially accomplished, by several important provisions. It divided the so-called Bulgaria into two provinces, of which the one to the north of the Balkans was formed into a tributary Principality, while the one to the south, which was to be designated Eastern Roumelia, was to remain under the direct authority of the Sultan, with administrative autonomy and a Christian Governor-General. It left to the Sultan the passes of the mountains, and the right of sending troops into the interior of Eastern Roumelia whenever there might be occasion. It reduced the stay of the Russian army in European Turkey. . . . It secured to Roumania, as compensation for the loss of that portion of Bessarabia which had been annexed to Moldavia by the Treaty of Paris (1856), a larger amount of territory, south of the Danube, than had been granted at San Stefano. It restored to Turkey the whole of the northern shores of the Ægean, a wide extent of country in Europe, and in Asia, the valley of Alashgerd and the town of Bayazid. . . . It gave far ampler guarantees for religious liberty than had entered into the projects of the Czar.”—E. Ollier, *Cassell's illustrated history of the Russo-Turkish War*, v. 2, ch. 9, 21.—“In her private agreement with Russia, England had consented to the cession of Batoum, but she now sought to diminish the value of that post by stipulating that the fortifications should be demolished and the port declared free. The dispute, which at one time assumed a serious character, was finally settled by a declaration on the part of the Czar that Batoum should be a free port. Kars, Ardahan, and Batoum were ceded to Russia, the district of Khotur to Persia, and the Sultan pledged himself to carry out the requisite reforms in Armenia without loss of time, and to protect the inhabitants against the Kurds and Circassians. At the same time a secret treaty was made known which had been contracted between England and Turkey on the 4th of June. By this treaty the Porte pledged itself to carry out reforms in Asia Minor, and England, on her part, guaranteed the integrity of the Sultan's Asiatic posses-

sions. To put England in a position to fulfil her part of the treaty, and as a pledge for the execution of the promised reforms, the Porte surrendered Cyprus to England as a naval and military station, the latter agreeing to regard the island as an integral part of the Turkish empire, and to make over the surplus revenue to the Sultan. This treaty, which had received the consent of Germany and Russia at the time of its execution, aroused great indignation in France and Italy. . . . To pacify the former state, Beaconsfield and Salisbury entered into a secret arrangement with Waddington, in accordance with which England was to put no obstacles in the way of a French occupation of Tunis—an arrangement of which the French government finally took advantage in the year 1881. The English representatives had also entered into an arrangement with Austria in reference to Bosnia and Herzegovina. In the sitting of June 29th Andrassy read a memorandum in which he set forth that Austria had been disturbed for a whole year by the insurrection in those provinces, and had been compelled to receive and provide for over 150,000 Bosnian fugitives, who positively refused again to submit to the hardships of Turkish misrule; that Turkey was not in a position to restore order in the disturbed districts. . . . Thereupon the Marquis of Salisbury moved that Austria be charged with the occupation and administration of Bosnia and Herzegovina, and . . . the congress . . . decided to hand over those two provinces to Austro-Hungary. . . . The independence of Servia and Montenegro was recognized on condition that full freedom and political equality were accorded to the members of all religions. Servia received an addition to her population of 280,000 souls, her most important acquisition being the city and fortress of Nish. She also assumed a part of the Turkish debt. The recognition of Roumanian independence was conditioned on the cession of Bessarabia to Russia, and the admission to political equality of the members of all religions—a condition which had special reference to the Jews. In compensation for Bessarabia Roumania was to receive the Dobrudsha and the islands at the mouth of the Danube. [See also RUMANIA: 1866-1914.] . . . Austria took possession of her share of the booty at once, but not without the most obstinate resistance.”—W. Müller, *Political history of recent times*, sect. 30.—“In Europe the Treaty of Berlin left the sultan the mere shadow of his former dominions,—some 65,000 square miles, divided with rough equality between Thrace (or Roumelia proper), Macedonia and Albania. About 6,000,000 people lived in this long, narrow, ill-compacted 'Turkey in Europe,' and outside of Constantinople and the Albanian uplands the majority of them were Christians. 'Turkey in Asia,' however, was still a truly huge empire, embracing some 700,000 square miles, without reckoning uncertain claims to suzerainty over the tribes of Arabia and of Tripoli in Africa. These Asiatic dominions possessed little unity save that of a common oppression. It was utterly beyond the ability of the Ottomans, although they had been in Asia Minor since well before 1300, to weld even the Mohammedan portion of their subjects into a single nation. The population of Asiatic Turkey was about 17,000,000. Of this possibly 6,000,000 were actual Turks. The remainder was rather equally divided between non-Ottoman Mohammedans, Arabs and Kurds (the latter mainly in the Caucasus Mountains), and various kinds of Christians.—Greeks, Armenians and

Syrians. The Christians were the leaders of the merchant and artisan classes and probably represented at least ninety per cent. of the intelligence and hope of progress in the entire empire. The Turks were settled pretty solidly in Asia Minor and their lower elements were hard working though very unprogressive peasants; of course they also furnished most of the civil officials and the officers for the army. The Arabs in Syria and Mesopotamia were on very cold terms with their Ottoman fellow believers. They represented another and worthier type of Moslem civilization, and regarded the Turks as oppressive interlopers. As for the Kurds, they were such crude, unruly mountaineers that the sultans counted themselves lucky if they were not in constant uproar and rebellion. On the whole, the Asiatic Christians and Mohammedans lived together in tolerable harmony, but the least unlucky incident would touch off the Moslem fanatics to go on a Jihad—a 'holy war' to kill infidels—and then massacre would become the order of the day. It is needless to remark that in 1878 Asia Minor, Syria and Mesopotamia had practically no railroads and very few decent highroads, and that a great part of the sultan's Asiatic dominions represented the true unspoiled Orient,—a certain amount of tawdry luxury and glitter almost hidden under a much vaster amount of squalor, sordidness, primitiveness in all economic and cultural conditions, with here and there black patches of even grosser barbarism. If the conditions in Turkey in Europe were bad, conditions in Turkey in Asia were still worse. And Europe had hardly given them the slightest serious attention."—W. S. Davis, *Roots of the war*, pp. 268-269.—See also BERLIN, CONGRESS OF; BALKAN STATES: 1878; 1878-1891; BOSNIA-HERZEGOVINA: 1878; BOSPORUS: 1878-1914; BULGARIA: 1878; WORLD WAR: Causes: Indirect: d, 2.

1890-1893.—**Beginning of Armenian troubles.**—**Attitude of Russia.**—"Travellers have recognised for centuries that the Armenian population of Turkey, numbering about 2 millions [in 1915] is a most valuable element in the country. . . . A community with the desire for education is not likely to sit quietly under Turkish or other misrule, and in a very real sense it may be said that the fomentors of political agitation in Armenia, as in Bulgaria, were the schoolmasters and the missions, Catholic or Protestant. The Turks, amongst whom the Armenians are generally dispersed, resented this desire for instruction and closed the schools. . . . The Armenian question had already become a European one when the Congress of Berlin met in 1878. An effort was there made

to improve the conditions of the Armenians. The Treaty provided for the drafting of reforms to be submitted by the Porte to the Powers, who were to be notified also of their execution. . . . The condition of disorder in Armenia had gradually become worse instead of better. Then Abdul Hamid seems to have determined to try his own hand at statesmanship. Men were arrested on the slightest pretext and thrown into prison. . . . Readers will recognise that with such a spirit of hostility towards everything Christian the Armenians continued to have a bad time. The inevitable result followed. The ardent spirits among them joined their brethren the Russian Armenians across the border and made futile attempts to raise a rebellion. Such attempts were repeated and invariably led to the slaughter of innocent persons. Some Armenians had reached Paris and England and naturally endeavoured to arouse sympathy with those who were in open rebellion against Turks."—E. Pears, *Forty years in Constantinople*, pp. 151-153, 155.—Early in 1890, the churches of Erzerum were broken into and profaned while a score of Armenians were killed and wounded. The Armenians then decided that their only hope of salvation was, at any cost, to bring about European intervention and Russian revolutionaries instituted a system of anarchism, bombs and dynamite by which they counted on provoking the sultan to such massacres as should force the intervention of Europe. So far as the massacres went, their calculations were correct; but Russia was opposed to an autonomous or independent Armenia and invariably prevented any active coercion being put upon the Sultan. In 1893 all the Greek orthodox churches were closed as a protest and the Armenian Question became severe.

1894-1895.—**Revolt and massacres in Armenia.**—**Atrocities on both sides.**—"Under such circumstances the revolt of a handful of Armenians had not a chance of success and was therefore unjustifiable. . . . The result of the failure of these attempts of revolt was that Abdul Hamid determined once and for all to make revolt impossible. It was commonly said that he had made up his mind to exterminate the Armenian population. It may well be doubted whether he deliberately contemplated a step so difficult. But he and some of his creatures organised a series of massacres such as had not been in any European country for upwards of a century. . . . When all arrangements had been made for preventing news coming from Armenia, Abdul Hamid set about the task which he called giving the Armenians a lesson. Emisaries were sent into the provinces. The Moslems were invited to assemble in the mosques, were informed of the Sultan's plan, and told that they were at liberty to take their neighbours' goods and to kill them if any resistance was made."—E. Pears, *Forty years in Constantinople*, pp. 156-157.—"In 1894 a massacre took place in Turkish Armenia, caused by a Kurdish raid in which two Kurds were killed. Their corpses were conveyed by friends to Moush, who declared that the Armenians had revolted and killed some of the Sultan's troops. This report was telegraphed to Constantinople, and served as a pretext for an order from the Sultan to massacre the defenseless people, upon whom his troops committed the most indescribable outrages with the least regard of age or sex. . . . Many of the wives and female relatives of Christians were taken from the Kharput vilayet into the Turkish harem; at another time, twenty

Armenian women were dragged into the harem of Hussein Pasha of the Van district; also several into that of the Commissaire of Police; while many others, singly and in couples were taken into other houses or sent to different parts of the country. A Turkish Agha at Tadem exchanged Christian women and girls for horses and donkeys; the same Agha also distributed women and girls for zabtiehs or policemen, and soldiers . . . quartered at Vertmenik for the protection of the village."—A. W. Hidden, *Ottoman dynasty*, p. 409.—Further massacres of Armenians were reported to Lord Salisbury by Sir Philip Currie in December, 1895. The loss of life was estimated at 30,000.

1896.—Conflict in Crete between Christians and Mussulmans, and its causes.—In 1868, the Cretans, for the second time, were thrust under the Turkish yoke. "By way of solace the Powers exerted themselves feebly in inducing the Porte to concede the so-called 'Organic Statute' [or 'Organic Regulation' (see GREECE: 1862-1881)]. . . . As the Charter remained a dead letter, the Cretans seized the next favourable opportunity to rise in 1877. Their case was brought before the Congress of Berlin. . . . Ultimately, through the mediation of England, the Porte was induced, in November of that year, to concede the Pact of Halepa, so named after the village near Canea where it was negotiated, and signed under the supervision of the British Consul, Mr. T. B. Sandwith. . . . The arrangement was accepted by the Cretans as a compromise, in spite of its many and manifest drawbacks. Nevertheless, it brought about, at the outset, certain beneficial results. Political parties were formed in which the Mohammedan Cretans blended, irrespective of religious differences, with their Christian countrymen; and unprecedented phenomenon of a Christian Vali completing his four years' tenure of governorship was witnessed in the person of Photiades Pasha. . . . True to its traditional tactics, the Porte took with one hand what it had given with the other. The Mussulman Deputy Governor and the military commander frustrated every effort of the Vali, the very funds necessary for the maintenance of the gendarmerie being denied him. Karatheodory was consequently forced to resign. Complete anarchy now reigned in the island"—Ypsilioritis, *Situation in Crete (Contemporary Review, Sept., 1896)*.—"Occasional skirmishes between the Christian inhabitants and the soldiers kept the excitement simmering and ushered in the sanguinary scenes that finally followed. Turkhan Pasha, taking time by the forelock, armed the Cretan Moslems for the combat with the approval of the commander of the troops, and the city of Canea prepared for a blood bath. The Mohammedan Lent (Ramazan) was drawing to a close, and the three days of rejoicing which invariably follow (Bairam) were supposed to be fixed for the attack on the Christians. These anticipations were duly realised, and on the 24th May, 1896, at 1 o'clock P. M., the Turks fired the first shots, blowing out the brains of several Christians to make that Moslem holiday. Forewarned, however, is forearmed, and the Christians defended themselves to the best of their ability on that day and the 25th and 26th, during which every house in Canea was barricaded, and neighbours living on opposite sides of the absurdly narrow streets fired at each other from behind stone heaps piled up in the windows of their bedrooms. The streets were deserted, all traffic suspended, and it was not until the 27th that the thirty Christian corpses (including two women and

four children) and the twenty lifeless Turks were removed for burial. These events provoked a new administrative change of scene: Turkhan Pasha was recalled, and Abdullah Pasha, at the head of four battalions from Salonica, came to take his place. These troops laid waste the villages and fields of the provinces of Apokorona, Cydonia, and Kissamo, burning houses, huts, and churches on the way. The best soldiers in the world, however, run terrible risks in the interior of Crete, and Abdullah was repulsed with the loss of two hundred men at the town of Vamos. The foreign consuls at Canea, having verified these facts, strongly blamed his conduct in a joint verbal note, and the Porte shortly afterwards recalled him, and appointed Berovitch Pasha [prince of Samos] in his place. This was the beginning of the end. The Christians of the island meanwhile met, and through their delegates formulated certain demands, which the foreign consuls referred to their ambassadors at Constantinople, and the famous 'Modifications of the Convention of Halepa' were framed in consequence. The sultan, too, yielding to tardy pressure, graciously conceded the nomination of a Christian governor-general in the person of Berovitch, the summoning of the National Assembly, and other demands. . . . The questions of the tribunals and the gendarmerie [for the enforcement of peace and order in the island] were to be arranged by international commissions; but weeks and months passed away before they were even appointed. . . . At last the commissions arrived and began their work in December [1896]."—E. J. Dillon, *Crete and the Cretans (Fortnightly Review, May, 1897)*.

1896 (January-March).—Turkish opposition to English and American measures for relief to Armenian sufferers.—Work of Clara Barton and the Red Cross Society.—"With the greater massacres that followed the disturbance in Constantinople and Trebizond, there broke upon the Christian world a revelation of horror and of terror that was even greater than any previous. From every side came the most piteous appeals to the Christian world. Language itself seemed to fail in telling of the situation, and many a sturdy man and high-hearted woman felt absolutely helpless as they looked out over the plains, into the villages and along the streets of the most prosperous cities, and saw starvation and death staring hundreds of thousands of men, women, and children in the face. . . . It is sufficient here to say that everywhere throughout England and America there was a prompt and cordial response. . . . Committees were formed in a great many cities and Armenian relief associations . . . were organized. Most naturally . . . the great Red Cross Society furnished its aid. . . . The appeal came first from the field and from those who, ready and willing to do all they could, felt that the burden was heavier than they could bear. The appeal met with a cordial response and Clara Barton, notwithstanding her advanced years, rose immediately to the emergency and gathered her forces to join those already on the field for the relief of the thousands of suffering ones. . . . For a time it seemed as if everything was going favorably and Miss Barton was on the point of starting. Then came the well-known objection of the Turkish Government. Word was sent that the Sultan absolutely refused to allow the Red Cross to do the work. In the first place he denied that there was any work needed; affirmed that the stories of suffering were false, gotten up

purely for political effect; and that whatever work was needed was already being done through Turkish officials and could be carried out by the corresponding organization in his own empire called the Red Crescent. Miss Barton, however, and those in charge of the committees, were not discouraged. Appeals were sent through Congress and the President and in an unofficial way pressure was brought to bear by Minister Terrell in Constantinople. The result was that at last objections were overborne and Clara Barton and her associates reached Constantinople. From there they have spread throughout the empire using the means already at hand of assisting those who are overborne, and are bringing relief to the sufferers in all the empire."—E. M. Bliss, *Turkey and the Armenian atrocities*, pp. 510, 512.

1896 (August).—Attack of Armenian revolutionists on Ottoman bank at Galata.—Turkish massacre of Armenians in the city and in the provinces.—"The Armenian revolutionists, encouraged by the outbreak in Crete, Syria and Macedonia, warned the embassies at Constantinople that the nonfulfillment of these promises for reform would force them again to make demonstrations against the Turkish Government. The embassies treated the threats with contempt. They planned outbreaks at Adana, Angora and Van. The last came to a head, but without any result; the majority of the revolutionists, with thousands of innocent Armenians, were slaughtered in cold blood. Through spies the Turkish Government was fully informed as to the plan of seizing the Ottoman Bank, but nothing was done to prevent it. It was quietly preparing for the following massacre. On the 26th of August, 1896, at 12.30 twenty-seven armed Armenians seized the Ottoman Bank at Perchembeh Bazar, Galata. They began firing and throwing bombs at the gathered crowds made up of low-class Turks and Kurds, who were organized previously for the occasion; they were armed with clubs and firearms. Turkish troops and police arrived at the spot and surrounded the bank; they had orders to assist the mob if necessary. The revolutionists, seeing that by holding the bank they would not accomplish anything, thought it advisable to come to some terms for their own safety. They demanded their liberty without conditions, and to be pardoned by the Sultan. If these claims were not granted they threatened to blow up the bank and all in it. The demand was communicated to and accepted by the Sultan; and the next day they were escorted by the director of the bank and the dragomans of the foreign embassies on board the steamer of the French line 'Messagerie Maritime.'"—A. W. Hidden, *Ottoman dynasty*, pp. 412-413.—After the revolutionists had capitulated, a terrible massacre of Armenians began. "There were from 150,000 to 200,000 Armenians in Constantinople. They were merchants, shopkeepers, confidential clerks, employés in banks and offices of every kind—the chief business men of the city. They were the bakers of the city, they had charge of the khans and bazaars and the wealth of the city; they were the porters, house-servants, and navvies. . . . Now the Government has undertaken to ruin this whole population. They are hunted about the city and over the hills, like wild beasts. . . . Thousands have been sent off at once to the Balkan Sea ports, to find their way as best they can without money or food to their desolated villages in the interior. . . . Thousands have fled to foreign countries."—*Constantinople massacre (Contemporary Review, Oct., 1896)*.

1897.—Fresh conflicts in Crete.—Massacre at Canea.—Greek interference.—War with Greece.—Turkish victories.—Intervention of the powers.—Terms of peace.—Cession of Thessaly to Greece.—"The customary delay in beginning the work of organising the police made the Christians suspicious; and a Mussulman outbreak at Canea [in Crete] on February 4, 1897, followed by the burning of a large part of the Christian quarter, renewed the civil war. The Christians occupied Akroteri, the 'peninsula' between Canea and Suda bay, and proclaimed union with Greece. Meanwhile, the news of a massacre at Canea had caused immense excitement at Athens. . . . Trikoupes, who had counselled quiet at the time of the last insurrection, was now dead; and Deligiannes, the bellicose Minister of 1885, was once more in power. . . . On February 15 a Greek force under Col. Vassos, with orders to occupy Crete in the name of King George, to restore order and to drive the Turks from the forts, landed a little to the west of Canea. [See also CRETE: 1800-1913.] The same day the admirals of the five European Powers, whose ships were then in Cretan waters, occupied the town, whence the last Turkish governor of the island had fled for ever. The insurgents on Akroteri then attacked the Turkish troops, until the admirals forced them to desist by a bombardment, which caused intense indignation at Athens and some disgust in London among those who remembered Navarino. A note of the Powers promising autonomy on condition of the withdrawal of the Greek ships and troops met with an unfavourable reply. . . . Among the Greeks, who had had no war with Turkey since that of Independence, but who had wished to fight in 1854, in 1878, and in 1886, there was intense enthusiasm, unfortunately as yet unaccompanied by organisation. The contest was unequal, even though a band of red-shirted 'Garibaldians' of various nations, under a son of the great captain, came to the aid of the Greeks and money poured into the war fund from abroad. On April 9 armed bands of the 'National Society' crossed into Macedonia; further conflicts occurred on the Thessalian frontier; and on April 17 Turkey declared war. True to his traditional policy of dividing the Christian races of the near east against each other, the Sultan secured the neutrality of Bulgaria and Serbia by an opportune grant of bishoprics, commercial agents, and schools in Macedonia. An Austro-Russian note to the Balkan courts warned them not to interfere in the struggle. Thus any hopes of common action by the Christians were dissipated, and the ring was confined to the two combatants. The 'Thirty Days' War' was an almost unbroken series of Greek disasters. The Turkish advance across the Thessalian plain aroused a reaction at Athens. The indignant crowd marched on the unprotected palace; and the King owed the preservation of his throne to the prompt intervention of M. Demetrios Rhalles, a democratic politician, who had formed a party of his own in Attica and had become the most influential leader of the Opposition, and the idol of the Athenians. M. Rhalles for forthwith appointed Prime Minister on April 29. Next day Col. Smolenski, 'the hero of Reveni,' who had fought in Crete as a volunteer in 1868, and was the one officer who had distinguished himself in the war, repulsed the Turks in a first attack on Velesino, the site of the legend of Alkestis, but had to yield in a second battle; the classic field of Pharsalos was the scene of one Greek defeat, and the unknown village of Gribovo in Epirus that of another; and the climax was

reached when, on May 17, the battle of Domokos, in which the Italian Fratti renewed the heroic tradition of Santa Rosa, as Harris had that of Byron, opened to the Turks the Phourka pass which leads down to Lamia. A panic seized the Athenians at the news; the royal family durst not show itself in the streets; the royal liveries were changed; pictures of Smolenski replaced the royal portraits in the shop windows. Then the Powers intervened; an armistice was signed on May 19 and 20 in Epirus and Thessaly; and Col. Vassos, who had already left Crete, was followed by the rest of his men. A treaty of peace was concluded at Constantinople on December 4, which provided for the evacuation of Thessaly by the Ottoman troops, and the cession for the second time of that province to Greece, except one village and certain strategic positions, which brought the Turkish frontier very near Lárisa. Greece was ordered to pay a war indemnity of £14,000,000, and submitted to an International Commission of Control over 'the collection and employment of revenues sufficient for the service of the war indemnity loan and the other national debts.'—W. Miller, *Ottoman empire, 1801-1913*, pp. 434-438.

1897-1899.—Prolonged anarchy in Crete.—Inharmonious "Concert of Europe."—Final departure of Turkish troops and officials from the island.—Organization of government under Prince George of Greece.—The autonomous régime promised to this unfortunate island—the Cuba of Europe—was at the end of 1897 apparently far from realization. In the meantime a most distressing condition, amounting to practical anarchy, prevailed everywhere except at some ports where the international gendarmerie maintained a fair semblance of order. Presently, a new attempt was made to select a Christian governor-general. France and Russia proposed Prince George of Greece, but Austria and Turkey opposed. In April, Austria and Germany withdrew from the blockade and from the "Concert," leaving Great Britain, Russia, France and Italy to deal with Cretan affairs alone. The admirals of these powers, acting under instructions, then divided the Cretan coast among themselves, each directing the administration of such government as could be conducted in his own part. The British admiral had Candia, the capital town, and there trouble arose which brought the whole Cretan business to a crisis. He attempted to take possession of the customs house (September 6), and landed for that purpose a small force of 60 men. They were attacked by a Turkish mob, with which they fought desperately for four hours, losing 12 killed and some 40 wounded, before they could make their retreat to the shore and regain their ship. At the same time a general massacre of Christians in the town was begun and some 800 perished before it was stopped. Edhem Pasha, with about 4,000 Turkish troops at his command, waited long for the mob to do its work before he interfered. This outbreak brought the four powers to a decisive agreement. They joined in imperatively demanding the withdrawal of Turkish troops and officials from the island, and enforced the demand. Guarantees for the safety of the Mohammedan population in life and property were given; it was conceded that the sultan's suzerainty over Crete should be maintained, and he was allowed to hold one military post in the island for a sign of the fact. On those terms the Turkish evacuation of Crete was carried out in November, and Prince George of Greece was appointed not governor-

general, but high commissioner of the four powers, to organize an autonomous government in the island and administer it for a period of three years. The appointment was accepted, and Prince George was received with rejoicing in Crete on December 21. The blockade had been raised on the 5th, and on the 26th the admirals departed. During the following two years (1899-1900) there seems to have been a generally good condition of order restored and preserved. A constitution was framed by a national assembly, which conferred the executive authority on Prince George, as high commissioner, with responsible councillors, and created a Chamber of Deputies, elected for the most part by the people, but containing ten members appointed by the high commissioner. Equal rights for all religious beliefs was made a principle of the constitution.—See also CRETE: 1800-1913

1899 (May-July).—Representation in the peace conference at The Hague. See HAGUE CONFERENCES: 1899: Constitution.

1899 (October).—Concessions to the Armenians.—In October an irade was published by the sultan which withdrew restrictions on the movements of Armenians in the provinces, except in the case of suspects; granted pardon or commutation of sentence to a number of Armenian prisoners; ordered payment of sums due to Armenian government officials who had been killed or expelled at the time of the massacres; directed assistance to be given in the repairing and rebuilding of churches, schools, and monasteries which had been injured or destroyed, and also gave direction for the building of an orphanage near Constantinople.

1899-1908.—Concession to Germany for Bagdad railway.—Alarm at German aggressions in the East. See RAILROADS: 1899-1910, BAGDAD RAILWAY: The plan.

19th century.—Summary of British diplomacy.—Pitt, Urquhart, Beaconsfield and Gladstone.—"It was William Pitt who created what Sorel calls 'the grand diplomatic charter of England in the 19th century' by refusing in a speech, now famous, to enter into any discussions whatsoever with anyone who proposed to put an end to the Ottoman Empire. The attitude of his great adversary, Fox, was more favourable to Catherine II; for, being in need of the English, the Tsarina lavished her compliments and her caresses both liberally and skilfully upon this statesman. Thus it came about that, on March 20th, 1791, he boasted in the Commons of having helped Russia in her march towards the East, and scoffed at the idea, already formulated by the new school of diplomacy, of admitting Turkey into the family of nations and of making her part of the European system. . . . [The leader of this new school was David Urquhart (1805-1877).] This Scotsman, who had been entirely forgotten, though his ideas in his own day reverberated throughout Europe, was the real originator of British intervention in favour of Turkey, and it was his policy that triumphed at the Paris Congress of 1850. As a young man he, like all the men of his generation, was much impressed by the ideas of Bentham. He began his career in foreign politics, as so many did at that time, as a Philhellene, but, as a result of a visit to the Near East in 1827 in the company of Lord Cochrane, he came back very strongly in sympathy with Islam, and inaugurated the pro-Turk campaign in England, which ultimately compelled Lord Palmerston to be more cautious in his relations with Russia. . . . The appearance on the

scene of a man of this stamp resulted in the complete overthrow of Russian designs during the first half of the 19th century. . . . He insisted on admitting the Turkish nation into the international system, because he was convinced that if only we could succeed in preventing the eternal interferences with the domestic affairs of the Turks, the latter might, with the help of Western nations, raise themselves from the slough into which they had fallen precisely owing to these repeated interferences. The idea that the Sick Man was irretrievably condemned to an early death was, according to Urquhart, the principle source of all the complications. Moreover, this idea was not based upon an examination of the real facts, but upon the diagnosis of a doctor interested in the inheritance. In the end Turkey was persuaded that it was necessary for her to submit to a European treatment that did not suit her, and thus she came to be inoculated with the poison which finally made her really ill. Urquhart firmly believed in the vitality of the Turkish race. He made a close study of the political institutions and the spiritual traditions of Islam, and in them he discovered the outlines of an organisation so healthy that he preferred it before a lifeless imitation of European institutions. He insisted upon the Western Powers of Europe, abstaining from any interference whatsoever in Turkish affairs in order that the historical process of transforming the Moslem people into modern nations, might be accomplished on natural lines with the collaboration of enlightened Europeans familiar with the problems of the East, and free from all diplomatic interference and international intrigue. Urquhart did not hesitate to declare that the Turkish problem, in the form in which it had been raised before Europe by Muscovite diplomacy, was a piece of mystification destined only to keep alive the troubles in the Near-East, for which one day the world would have to pay very dearly. Urquhart was not alone in propagating these ideas. Among the Europeans at Constantinople was a well-intentioned Frenchman named Blacque, Director of the Ottoman Monitor, who did his utmost to convince the public opinion of his country of the intrinsic vitality of the Turkish race. In France, however, the diplomatic tradition of the Marquis de Villeneuve was completely dead, and the somewhat belated opinions of Napoleon on the value of Islam had never been accepted. France dreamed only of the left bank of the Rhine, and the last Government of Charles X—the Polignac Cabinet—declared itself ready to sacrifice Constantinople to the Russians in exchange for a similar reward in Europe. . . . From this time forward the keys of the Turkish problem lay in the hands of England. Lord Beaconsfield had a lofty conception of the task of the Anglo-Saxon in the East. He dreamed of the moral protectorate of Great Britain over Islam; and, on his journeys in the Near East, he studied the spirit of the Moslem people, which he thought worthy of participating in the work of modern civilisation as it had participated in the civilisations that have preceded our own. He wished his country to preside, in brotherly collaboration, over the political education of the Moslem peoples, and over the vast reform movements which have been agitating the minds of Mussulmans for the last hundred years. His point of view, which was inspired by the ideas identified with Urquhart, might possibly have been able to save Europe from a general conflagration by promoting a spirit of confidence between Christianity and Islam, and

preventing Pan-Slavism and Pan-Germanism from fishing in the troubled waters of the political and social reforms, which must of necessity herald the birth of a new order in the Near East. The defensive alliance which he made the English Ambassador at Constantinople sign with Turkey on June 4th, 1878, guaranteed to the Porte the help of England against the covetousness of Russia in regard to Asia Minor. Unfortunately England, which was soon to be absorbed in domestic troubles in which Gladstone was to play a high-handed part, did not understand Beaconsfield. Hatred of Islam was, as everybody knows, one of the strongest actuating motives of the former statesman, deeply impregnated as he was by Christian theology. Under his influence the Oriental policy of Great Britain changed completely, and she became in fact, if not in theory, the unconscious ally of Tsarism against Islam."—F. Valji, *Europe in Asia Minor (pamphlet)*, pp. 14, 16-17, 19-20, 23-24.

20th century.—Status of women. See WOMAN'S RIGHTS: 1900-1921.

1901-1902.—Abduction of Ellen M. Stone by brigands.—Ransom paid for her release.—"In a communication to the president of the United States, Mar. 24, 1908, the secretary of state, Elihu Root, recited the circumstances which attended the abduction by brigands, in 1901, of Ellen M. Stone, an American missionary to Turkey, as she traveled the highway between Bansko and Djumia, Macedonia, in the Turkish empire, and the necessary payment of a ransom to her captors, to secure her release. In the judgment of Secretary Root the government should refund the ransom money to the citizens from whom it was obtained by subscription at the time [and this was done]."—60th Congress, 1st Session, Senate Document, no. 408.

1902-1903.—Conventions for building the Baghdad railway. See BAGDAD RAILWAY: The plan.

1902-1903.—Insurgent operations in Macedonia.—Turkish misrule.—Rejection of reform plans.—Insurgent operations in Macedonia were opened in the fall of 1902 and continued the following year, and into 1904. Besides an activity of insurgent bands and collisions with Turkish soldiery, there were many dynamite explosions, wrecking a bank at Salonica, blowing up a railway train, a passenger steamer, and other outrages of that kind. Then came confused and revolting accounts of a terrible retaliation by the Turks. "Abdul Hamid's want of statesmanship was nowhere more conspicuous than in his treatment of Macedonia. He had witnessed the loss of Serbia and Bulgaria. In Macedonia, adjoining Greece and these liberated States, the people were mostly of the same race, religion, and language as those of these adjacent countries, and a ruler might have been expected to examine the circumstances under which they had been detached from the Empire, and to ask himself how far similar circumstances were likely to produce a similar result. . . . The Province had suffered previous to his accession from the same kind of mis-government which had led to aspirations in Bosnia, Herzegovina, Serbia, and Bulgaria, and then to the Russo-Turkish war. In the Treaties both of San Stefano and Berlin suggestions had been made for bettering the lot of Moslem and Christian inhabitants in order to remove legitimate discontent. While the usual evils attendant upon Turkish rule prevailed in Macedonia, such as the non-payment of the troops quartered upon the population, the lawless exactions of Moslems from the Christians, the

want of protection for life, woman's honour, and property, Macedonia had its own special grievances. Non-government was a not less fertile ground of complaint than mis-government. The traditionally hostile elements of the population. Greeks, Bulgarians, and Albanians, were left to fight out their own quarrels. Redress in the law courts could not be had. Corrupt as they were throughout the Empire, they were probably worse in Macedonia than elsewhere. Already a large portion of the country had been unjustly acquired by Moslems from the Christian peasants, and the disputes between the legal Moslem owners themselves as well as between them and the peasants, had brought about something like anarchy. Abdul Hamid in the early years of his reign let things drift. He did nothing. . . . Bulgaria, especially, desiring a peaceful neighbour and wishing to stop immigration, presented projects for its reform to the Porte. She did not ask for or desire its annexation, because, though the population of Southern Macedonia was largely Bulgarian, the people of the Principality did not wish their influence to be swamped by the union with the people of that Province. There was, indeed, considerable jealousy between the two populations, but Bulgaria suggested the establishment of an autonomous Government in Macedonia under the suzerainty of the Sultan. Thereupon the Albanians, probably at the instigation of the Sultan, put forth another project on different lines. Neither project was accepted by the Porte."—E. Pears, *Life of Abdul Hamid*, pp. 269-272.—See also MACEDONIA: 20th century.

1903-1904.—Inursions of Armenian revolutionists from Russia and Persia into Asiatic Turkey.—Exaggerated accounts of retaliatory massacre.—Many bands of revolutionary Armenians who crossed the frontiers from Russia and Persia during 1903 and 1904, making incursions into Armenian Turkey, and bringing upon the inhabitants there the tender mercies of Turkish troops, appear to have been acting generally in coöperation with the Bulgarian revolutionists in Macedonia. The consequent barbarities were dreadful enough, no doubt, but were found to be greatly exaggerated in the reports current at the time. This was the conclusion of the British ambassador to Turkey, derived from investigations made on the ground by a consular officer who traversed it with care.

1903-1907.—Revolutionary plans of Young Turks.—Coöperation of Armenian and other revolutionary elements secured.—Program adopted.—"There were few political difficulties in the way of an understanding between the Young Turks and the Armenian revolutionaries. The problem was not like that of the Greeks and Slavs in Macedonia, who had on the frontier independent nations of people of their own kin on whom to lean and to whom to look for protection and perchance annexation. For Armenia is now but a geographical expression, and ancient Armenia has been partitioned between Turkey, Russia, and Persia. The Armenians in Turkish Armenia are vastly outnumbered by the Moslem population; and the creation of an independent Armenian principality, desired by a section of the revolutionists, was obviously an impracticable scheme. The more sensible Armenians realised that the only alternative for the rule of Turkey was that of Russia, and the experience of their brethren across the border had proved to them that, of the two, the rule of Turkey was to be preferred; for under it they enjoyed a measure of racial autonomy and various

privileges—much restricted, it is true, under Abdul Hamid's despotism—which the Russian Government, ever bent on the Russianisation of the nationalities subject to it, would certainly have denied to them. It was, therefore, the aim of the moderates among the Armenian malcontents, while remaining under Ottoman rule, to secure the civil liberties and institutions calculated to guarantee their personal safety, the security of their property, and the honour of their wives and daughters. Now the Young Turk programme promised them these things and more; so, realising that this great Mussulman movement was likely to meet with success, they decided to throw in their lot with Ahmed Riza and his brother revolutionaries. But this union could not be accomplished until the Armenians had consented to abandon the methods of their propaganda. They had for years been appealing to the European Powers, through their Committees, to compel the Sultan to grant good government to his Christian subjects in Armenia in accordance with the solemn pledges which he had given to the signatories of the Treaty of Berlin. But the Young Turks insisted that there must be no appealing to foreign Powers for assistance. . . . The Young Turks thus came to an understanding with the Armenians, and later on it was arranged between them that when the time was ripe, and the Committee gave the word for the Mussulman revolt in Turkey, the Armenians should also rise; for it was realised that the Sultan would yield to nothing but force, and that only by means of an armed rebellion. . . . And now the Young Turks set themselves to win over to their cause the other non-Mussulman revolutionary Committees. With the Jews, as with the Armenians, they had relatively little difficulty, for the Jews were a people without a land, and therefore could entertain no schemes of national independence; their hope and interests lay in the good government of the Ottoman Empire. But with the Bulgarians, Greeks, and Serbs of Macedonia, whose very last idea it was to become patriotic Ottomans, the Young Turks found the work of persuasion attended with almost insuperable difficulties. . . . [It was pointed out to them] that it would be to the advantage of the Macedonian Christians to abandon their ideas of separation from the Ottoman Empire and to join cause with the Young Turks, whose aim it was to hold the Empire together and to give equal rights to all its peoples. Wonderful to say, the Macedonian Committees in Paris at last allowed themselves to be persuaded, and threw in their lot with the Young Turks, halfheartedly, perhaps, at first, and with mental reservations. They realised that they could hope for little help from Europe, and were willing to work with the Young Turks in upsetting the Hamidian régime. After a successful revolution something might turn up that would enable them to gain the national independence that they still had at heart; and even if that hope was destroyed, they would be able, having supported the Young Turks, to claim the equal rights which these had promised to them. But the conflict of interests that severed the various groups, and the anarchical principles that some of the revolutionary leaders professed, made the reconciliation of all these discordant elements a matter of great difficulty. The Congress held in Paris, in 1902, had for its chief result the accentuation of schism; it was not till 1907 that the various Committees were able at last to arrange a programme that was acceptable to all; and by that time the Young Turks had established their secret society in Macedonia and had gained

the allegiance of a considerable portion of that formidable Turkish army without whose cooperation, as the Christians in Macedonia knew well, no revolution had a chance of success. So in December, 1907, a Congress of the Turkish revolutionaries met in Paris, at which were represented the Ottoman Committee of Union and Progress, the Armenian, Bulgarian, Jewish, Arab, Albanian, and other Committees; and the delegates all agreed to accept the following principles: The deposition of the Sultan Abdul Hamid. The maintenance of the integrity of the Ottoman Empire. Absolute equality in the eyes of the law of the various races and religions. The establishment of Parliamentary institutions on the lines of Midhat Pasha's Constitution. The 'Ottoman Committee of Union and Progress,' as representing the dominant race and the fighting forces of the revolution, naturally now took the lead, and its members, of whom but a few were non-Musulmans, became the organisers of the revolt and mandatories of the other Committees. It may be pointed out here that the resolutions of the Congress had no effect in pacifying Macedonia, where, indeed, the condition of affairs was ever becoming worse; for Greece and Bulgaria, still looking forward to the disruption of Turkey, were pouring into Macedonia their armed bands to 'peg out claims' in the Greek and Bulgarian interest; and throughout all that region violence, murder, and rapine prevailed. Of no more effect were the efforts of the Great Powers, which, in 1907, issued a categorical declaration that no Macedonian race would be permitted to draw any territorial advantage from the action of its hands."—E. F. Knight, *Turkey*, pp. 80-86.

1903-1908.—Attempts to relieve the Macedonian situation.—Mürzsteg programme and its failure.—Financial control by the powers.—Continued disorders.—In 1903 "Revolutionary Committees . . . began to appear in various towns in Macedonia. They urged Sofia and the Powers to demand Macedonian autonomy from the Porte. . . . Indeed, the Powers had never ceased to press for reforms. As a result of negotiations between the Porte and the Powers, an Inspector-General of the gendarmery had been named, but with insufficient powers. The appointment itself, only accepted after long negotiations, marked the limit of the success of Europe. The condition of the country became so serious that Austria and Russia, the two Powers after Turkey most interested in the pacification, took the matter in hand. A meeting between the Austrian Emperor and the Czar was held at Mürzsteg in the summer of 1903. It resulted in the drawing up of a programme of reforms which was presented to the Porte in October of that year. . . . In September Abdul Hamid expressed his regret to the two Powers that such demands were considered necessary, but, of course, left a further answer to be given by his Sublime Porte. . . . The negotiations were long and ended in an unsatisfactory compromise. Austria, either because she was afraid that disorder in Macedonia might be too completely suppressed or was influenced by Germany not to push the Sultan too far, ceased to take an energetic part in pressing on the reforms. She and Germany now acted together, and it soon became the popular and not unfounded opinion that the districts for which they had the appointment of gendarmery officers saw little of the keen activity which those under British and French officers witnessed in the desire of the officers placed in charge to secure effective police. The stipulations which had been weakly

accepted that the inspectors whose duty *inter alia* it was to report on murders or other outrages should only act on orders from Turkish officials proved useless. It was soon found that the great object of such officials was to conceal crime when committed by Turkish and other favoured bands, and their visits came to be regarded as worse than farce. Abdul Hamid was curiously persistent in his determination not to tolerate any reform initiated by the European Powers. He was equally minded not to allow any suggested by his own people. During the years between 1904 and 1908, the Moslem population of Macedonia, as well as Bulgars and Greeks, again pressed Abdul Hamid to take measures to provide for the safety of life and property. The Mürzsteg programme of the two Emperors had failed in producing useful results. Lord Lansdowne in February, 1905, informed the Balkan Committee that the British Government was 'pressing the Porte for permanent and effective reforms.' In November, 1905, England, France, and Italy sought to compel Abdul Hamid to carry financial reforms into execution. They asked that a budget of income and expenditure should be submitted to the two Civil Agents appointed under the Mürzsteg programme. The Porte agreed, but objected to control by the Civil Agents, and asked to increase custom duties from 8 to 11 per cent. The Powers refused, but England proposed that the control should be international, and that a Council should be appointed. On July 11, the Porte refused, pleading the Sultan's sovereign rights. The Powers stuck to their proposal, and a fleet consisting of British, French, Russian, Italian, and Austrian ships made a demonstration. They seized the Custom houses of Mitylene and Lemnos, and held them until Abdul Hamid yielded (November, 1905). Germany had already begun to pose as the Sultan's friend, and would not name foreign gendarmery officers, or take any part in the naval demonstration. She was now the only great Power which declined to co-operate in securing order in Macedonia. No proposal for even the most limited form of autonomy was listened to. Every year saw a larger amount of emigration from Macedonia to America, and other foreign countries. The best of the Moslem population, as well as the Christians, recognised that with an unpaid soldiery, disorder was certain to continue. Moslems and Christians came to believe that Abdul Hamid was the great hinderer of the execution of reform. He had refused to consider even the proposals made by his own subjects, just as he had cut out of the project presented by Austria and Russia the provisions which would have guaranteed the proposed reforms and would have contented the bulk of the inhabitants. All Europe insisted that reform was necessary; for during the years 1905 and 1906 the condition of Macedonia had become worse than ever. Greek and Bulgarian bands waged civil war against each other. Murders, theft, attacks upon villages by men of a hostile race; sometimes upon no pretext whatever, except, if by Greeks, that the village was Bulgarian, or *vice versa*; at other times on the pretext that the villagers had given aid to rival bands; Turkish troops now joining one side, now another. Farms were deserted. Mines were abandoned. People of all races were seeking the means of getting out of the country."—E. Pears, *Life of Abdul Hamid*, pp. 275-276, 278-280.—See also MACEDONIA: 20th century.

1906.—Troublesome punctilio removed.—United States represented at Constantinople by an ambassador.—The diplomatic rank of the United States representative at Constantinople was, until 1906, an obstacle to American influence with the Turkish government. The following quotation explains the condition that prevailed previous to that year, when the rank of the American representative was raised to that of ambassador. "According to usage in Constantinople, an Ambassador may obtain an audience at any time with the Sultan, and force many items through even against the influence of both the Palace and the Porte. But every representative lower than an Ambassador can never appear before the Sultan except when called for by his High Gracious Majesty. This invitation can be secured sometimes by indirect means; but when, for any reason, the Sultan does not wish to see a Minister of any foreign Power, the Palace officials can baffle him, if necessary, for years. Now, the American representative is called 'Envoy Extraordinary and Minister Plenipotentiary,' and is outranked by every Ambassador to Turkey. Hence, he lacks the all-important privilege of approaching the Sultan uninvited."—*Americus. Some phases of the issues between the United States and Turkey (North American Review, May, 1906).*

1908.—Young Turk party and the Committee of Union and Progress.—Revolutionary plans hastened by fear of foreign intervention.—Albanian incident.—Beginning and rapid spread of revolt.—Proclamation of Constitution of 1876.—Yielding of the sultan.—Summoning of Chamber of Deputies.—Administrative reforms.—The Young Turks had, in building up their cause, abstained from violence, and labored with secret propaganda to gain the support of the army. In 1908 the headquarters of the party were transferred from Paris to Salonica. Most of the members of the Committee of Union and Progress were military officers, among whom were Major Enver Bey and Major Niazi Bey. "It was the intention of the Committee to begin the revolution on the anniversary of the Sultan's accession, August 31; but events caused it to hasten its action. The meeting between Edward VII and the Tsar at Reval made it fear foreign intervention; Abdul Hamid, informed by his spies of the agitation among his Macedonian troops, had made preparations to crush it; and an incident, which in any other country would have had no political importance, secured for the conspirators the co-operation of the Albanians, whom of all his subjects the Sultan had humoured, feared, and trusted most. [However, the Albanians had become irritated by unpopular taxes and edicts which closed their schools and forbade printing presses.] This incident was nothing more alarming than an excursion, organized for the benefit of the Austrian school at Üskub, to a wood near Ferisovich on the line of Mitrovitza. But the Albanians of that district considered the proposed entertainment, of which dancing was to have been an item, as bad for public morals, already contaminated by the

music-halls of Üskub; while the rumoured display of Austrian flags aroused their political suspicions. Accordingly, they burnt the platform erected for the dancers, and threatened to fire upon the excursion-train if it attempted to traverse the cut-throat gorge of Katchanik. This threat alarmed the Committee of Union and Progress, which feared that an Albanian attack upon Austrian subjects would be made the pretext for an Austrian invasion of the country, and that consequently its own scheme would be frustrated. Some of its members parleyed with the Albanians of Ferisovich to such purpose that the latter threw in their lot with the revolutionary movement, and telegraphed to the Sultan demanding the revival of the constitution of 1876. Meanwhile, several occurrences had shown the spread of the agitation among the officers of the 3rd army corps. At Resnja, near the lake of Prespa, on July 3, Major Niazi, after seizing the military chest and a number of rifles, took to the mountains as the chief of a 'Young' Turkish band; and the Shemshi Pasha, who was sent to suppress him, was killed at Monastir. Other assassinations of reactionary officers followed in quick succession; the Sultan, realising that he could rely upon neither the Albanians nor the army, on July 22 appointed as Grand Vizier 'little' Said Pasha, the Liberal statesman who had once fled for refuge to the British Embassy. It was too late, however, for half-measures; on the morrow Major Enver Bey and the Committee proclaimed the constitution at various places in Macedonia, and the 2nd and 3rd army corps threatened to march upon Constantinople. On the 24th a decree of the Sultan announced the restoration of the constitution, which had been suspended since 1878. The censorship of the press and the spy system were abolished, and a Chamber of 280 deputies, elected by grand electors, themselves chosen by every group of from 250 to 750 adult males above 25 years of age, was summoned to meet. Great was the enthusiasm of the people, when they found that the news was true. For some days Macedonia seemed to have become Utopia. Enver Bey exclaimed that 'arbitrary government' had 'disappeared.' 'Henceforth,' cried this enthusiastic leader of the revolution, 'we are all brothers. There are no longer Bulgars, Greeks, Roumans, Jews, Mussulmans; under the same blue sky we are all equal, we glory in being Ottomans.' At Serres the president of the Bulgarian Committee embraced the Greek Archbishop; at Drama the revolutionary officers imprisoned a Turk for insulting a Christian; in an Armenian cemetery a procession of Turks and Armenians listened to prayers, offered up by their respective priests, for the victims of Armenian massacres; at Samsun the Turks saluted the beard of a Greek prelate; at Tripoli Turks and Arabs joined in thanksgiving services. The Bulgarian bands surrendered, and the brigand Sandanski was received like the prodigal son. Even the cautious British government, which might have been expected to regard with scepticism the results of this sudden conversion of an Oriental autocracy into a constitutional monarchy, hastened to prophesy, through the medium of Sir Edward Grey, that 'the Macedonian question and others of a similar character will entirely disappear.' The magic word 'Constitution' had, indeed, an extraordinary effect upon British Liberals. Without pausing to consider whether the 'Young' Turk would not prove to be merely the 'Old' Turk with a varnish of Parisian culture and without a belief in religion, they welcomed enthusiastically the Committee of

Union and Progress. Pro-Bulgarians became in a moment pro-Turks; an Ottoman deputation met the British ambassador on his arrival at Constantinople; and the popularity of Great Britain rose in Turkey to a point which it had not attained since the time of Beaconsfield. There were, however, some persons who foresaw that the position of the Christians of Turkey would be worse, instead of better, under the new system, which would inevitably aim at reducing them all to one dead level. The Greeks were suspicious from the outset, while here and there, in Arabia and Armenia, reactionary pashas struggled, but in vain, against the new order. On the other side, the triumphant revolutionaries naturally increased their demands. They insisted on the removal of the Sultan's favourite, Izzet, and accused Said of having violated the constitution by reserving to his master the nomination of the Ministers of War and Marine. Accordingly, Said made way for Kiamil, likewise an Anglophil but of a more advanced Liberalism, who included both a Greek and an Armenian in his Cabinet. Sweeping changes were made in the administration; and several of those who had battened on the Hamidian misgovernment were made to disgorge. In the house of one ex-Minister, who had been in office for no more than 18 months, £170,000 were found and appropriated to the public service! The new men and the new methods inspired such confidence in the Powers, that they decided to remove the vestiges of foreign control, as the Committee of Union and Progress desired, from Macedonia. The foreign officers were recalled; the International Commission of Finance ceased to exist; 'Young' Turkey was to act by herself."—W. Miller, *Ottoman empire, 1801-1913*, pp. 474-477.—See also ALBANIA: 1908-1914.—The idea of a strong Ottoman empire was looked upon with little relish by Austria-Hungary and Bulgaria, both of whom took steps to extend their power over former Turkish dominions. October 5, 1908, Bulgaria declared its independence (see BULGARIA: 1908-1909) and on October 7, Francis Joseph definitely annexed Bosnia and Herzegovina by an imperial rescript.—See also BOSNIA-HERZEGOVINA: 1908.

1909.—Represented at International Opium Commission. See OPIUM PROBLEM: 1909 (February): International Opium Commission.

1909.—Rejoicing over constitution.—Counterplots and disturbances.—Massacre of Armenians in Adana.—Attempt of Abdul Hamid to regain power.—His deposition and seating of Mohammed V on the throne.—Failure of Young Turks to punish Adana murderers.—"There were everywhere great rejoicings over the new Constitution, though very few people beyond Constantinople and Salonika had any conception of what it meant. There was for a time great enthusiasm for England, and the new ambassador, Sir Gerard Lowther, on arriving at Constantinople to take up the post received a great ovation. On December 10th the new Parliament met, and was opened by the Sultan with a speech, in which he promised to safeguard the Constitution and to protect the sacred rights of the nation. The various Christian and other subject races were well represented in the Chamber of Deputies. Its members showed an unexpected ability in the conduct of its proceedings and in their speeches. It was not long, however, before difficulties began to arise, and reaction reared its head again at the secret instigation of the Sultan. There was an outbreak in Albania against the Committee of Union and Progress. The bodyguard of Albanians was won

back to the support of Abdul Hamid by profuse bribery. Disorder broke out in many parts of the Empire. It was at Constantinople, however, that the gravest dangers to the new order of things arose. The first act of the new Government was to dismiss the host of spies, who had been maintained at a cost of £1,200,000 a year. . . . The new ministers also cleared the public departments of a vast body of superfluous and useless employés, most of them hangers-on of the palace. These two classes of people made a formidable body of malcontents, who conceived that their fortunes depended on the restoration to the Sultan of his old powers of corruption. They were supported by a small body of fanatical mollahs, who believed, or pretended to believe, that the new Constitution was in opposition to the sacred law. But more important than these agencies of reaction were the personal efforts made by Abdul Hamid to tamper with the fidelity to the new Government of the troops at Constantinople by the profuse distribution of money from his private stores. The new ministers had also made the mistake of releasing from prison, not merely great numbers of persons imprisoned at the will of the Sultan for political reasons, but also all the prisoners convicted of serious crimes. These formed an element of disorder in the city and caused alarm and distrust among the well-disposed citizens."—Lord Eversley, *Turkish empire*, pp. 348-349.—"Although the composition of the new Parliament chosen in October, 1908, and of the first constitutional Cabinet, was a prophecy of how they were to be left out in the cold, the Armenians were throughout that winter, when the constitution was new, firm and loyal, as well as intelligent, supporters of regenerated Turkey. . . . On April 14, 1909, on a morning when the sun had risen upon the peaceful and happy city of Adana, . . . without provocation, the Moslem population began to attack and kill the Christians. The Governor of the province and his military officials not only did nothing whatever to stop the bloodshed, but they actually handed out arms and munitions to the blood-frenzied mob of peasants, who were pouring into the city. For three days, killing, looting, and burning of houses were aided by the authorities. The massacres spread west through the great Cilician plain to Tarsus, and east over the Amanus Range into northern Syria, as far as Antioch. . . . The world, horrified by the stories which soon made their way to the newspapers, realized that the 'bloodless revolution' had not regenerated Turkey. . . . The Great Powers sent their warships to Mersina, the port of Tarsus and Adana. Even from the distant United States came two cruisers, under pressure, over six thousand miles. . . . In the meantime, events of great importance, but not of equal significance in the future of Turkey, were taking place at Constantinople. On the eve of the first Adana Massacre, Abdul Hamid, having corrupted the soldiers of the Constantinople garrison, set in motion a demonstration against the constitution. The soldiers shot down their officers in cold blood, marched to Yildiz Kiosk, and demanded of the Sultan the abolition of the constitution, which they declared was at variance with the Sheriat, the sacred law of Islam. Abdul Hamid gladly consented. Popular sympathy in Constantinople and through the Empire was with the Sultan, as far as the object of the revolution went. But the way in which it was brought about made it impossible for the Sultan to remain within the pale of civilization. Of all nations, none relied on its army more than

Turkey. Were the assassination of the officers to go unpunished, the disintegration of the Empire necessarily followed. So the military hierarchy, 'Old' Turks as well as 'Young,' rose against the Sultan. The army corps in Salonika under the command of Mahmud Shevket pasha, marched against the capital and with very little resistance mastered the mutiny of the Constantinople garrison. Abdul Hamid was deposed [Apr. 27, 1909], and sent into exile at the Villa Alatini at Salonika. His brother, Reshid Mohammed, came to the throne, under the title of Mohammed V. As soon as the Young Turks found themselves again in control of the situation, even before the proclamation of the new Sultan, they sent from Beirut to Adana a division of infantry to 're-establish order.' These regiments disembarked at Mersina on the day Mohammed V ascended the throne, April 25th. Immediately upon their arrival in Adana they began a second massacre which was more horrible than the first. Thousands were shot and burned,

though shaken, in the intentions of the Young Turks to grant to the Christians of Turkey the regime of equality and security of life and property which the constitution guaranteed. Even the Armenians, terrible as this blow had been, were also willing to forgive and forget. But the condition of forgiveness, and the proof of sincerity of the declarations of the Young Turks, both to the outside world and to the Armenians would be the punishment of those who had been guilty of this most horrible blot upon the civilization of the twentieth century. This was to be the test. The Court-Martial, sent to Adana from Constantinople after the new Sultan was established upon the throne and the Young Turks were certain of their position, had every guarantee to enable it to do its work thoroughly and justly. It was not influenced or threatened. There was, however, no honest intention to give decisions impartially and in accordance with the facts that the investigation would bring forth. The methods and find-

ENTRY OF THE YOUNG TURKS INTO CONSTANTINOPLE

and more than half of the city was in ruins. This second massacre occurred in spite of the fact that a dozen foreign warships were by this time anchored in the harbour of Mersina. It is impossible to estimate the losses of life and property in the vilayets of Cilicia and northern Syria during the last two weeks of April, 1908. Not less than thirty thousand Armenians were massacred. . . . From the very beginning, the Young Turks, now re-established in Constantinople with a Sultan of their own creation, and having nothing more to fear from the genius and bad will of Abdul Hamid, protested before Europe that the massacres were due to the old régime and that they had been arranged by Abdul Hamid, whose deposition cleared them of responsibility. But the revelations of the *New York Herald*, the *Tribuna of Rome*, and the *Berliner Tageblatt*, translated and reprinted in the British, French, and Russian press, were so moving that it was necessary for the Young Turks to send special commissions to the capitals of Europe to counteract the impression of these articles. Europe was willing to accept the explanation of the Constantinople Cabinet, and to continue its faith,

ings of the Court-Martial were a travesty of justice. Its members refused absolutely to go to the bottom of the massacre, and to punish those who had been guilty."—H. A. Gibbons, *New map of Europe*, pp. 189-194.

1909 (May-December).—Hilmi Pasha, grand vizier.—Parliament opened by the new sultan.—Constitutional amendments on religion and education.—Committee of Union and Progress.—Change of ministry.—When the counter revolution, which ended in the deposition of Abdul Hamid II began in Constantinople the grand vizier, Kiamil Pasha, was forced to resign Feb. 14, 1909, by the Committee of Union and Progress. His successor was Hilmi Pasha. Strife over the assassination of Hassan Fehmi Effendi, editor of a paper representing the Christian electorate, caused the resignation of Hilmi Pasha who was succeeded April 14, by Tewfik Pasha. Upon the downfall of the sultan, he was reappointed by the new rule and remained in office from May 1 to May 5, when Hilmi Pasha was returned to the grand vizierate. On the 20th of the month the sultan in person opened the session of Parliament. On the 24th

the grand vizier announced the program of measures and general policy to be undertaken by his ministry, and received, after debate, a vote of confidence by 190 to 5. The reconstituted government was now a fully organized fact. Questions concerning the attitude of the state towards religion and education, as it should be defined in the Constitution, were among the earliest of high importance to be brought before the Parliament. On June 8 it adopted an amendment to the article in the constitution of 1876, reading as follows:

"Islam is the State religion. The State, while safeguarding this principle, guarantees the free exercise of all cults recognized in the Empire, and maintains the religious privileges granted to divers communities, provided public order and morality be not infringed." On the subject of education the constitution was amended to read: "Education is free. All schools are placed under the control of the Government. The necessary measures shall be taken to assure to every Ottoman subject a uniform system of education. There shall be no interference with the religious education of the different communities." The Christian communities, especially the Greek, objected strenuously to this, fearing that governmental control would be found to mean the imposition of the Turkish language in all schools, as an instrument of nationalization. Another proposed amendment, making members of the Chamber of Deputies eligible for the posts of parliamentary under-secretaries of state, failed to secure the requisite two-thirds majority, and this was regarded as a defeat of the civilian leaders of the "Young Turk" Committee of Union and Progress, who were supposed to be desirous of holding the posts in question, while sitting also in the Chamber. The second session of Parliament was opened by the sultan, on November 14 with a speech of roseate contentedness in its contemplation of Turkish affairs. Late in December a change of ministry occurred. The high office of grand vizier was then conferred on Hakki Bey, Turkish ambassador at Rome, and Mahmud Shevket Pasha accepted office in his cabinet as minister of war. The Young Turkish régime proceeded to make the Turkish language official, to plant Mohammedan colonies in Macedonia, to practise violence and bribery at elections, to forbid public meetings, to repress all anti-Turk propaganda, to disarm Christians and completely to "Ottomanize" the empire.

1909 (October).—*Railway and irrigation projects in the Tigris-Euphrates delta.*—Sir William Willocks, the British engineer who was engaged for some time in surveys for the Turkish government, having reference to irrigation and railway improvements for the reclamation of the great Mesopotamian region, made a report to the ministry of public works at Constantinople in October, 1900, in which he advocated the construction of a railway from Bagdad to the Mediterranean, and the reclamation of one million hectares of land in the Tigris-Euphrates delta.

1909-1911.—*Influence in Egypt.* See EGYPT: 1907-1911.

1910-1911.—*Albanian insurrection.*—Difficulties with Arab and Greek subjects.—"During 1910 and 1911 the Committee [of Union and Progress] continued its work, but made a series of grave blunders. . . . The extreme members of the Committee were still engaged upon their work of Turkifying everything, and this led them into many blunders, two of which had serious consequences. The Albanians were not allowed to receive instruction in their own language, but only in

Turkish. Even in respect to the Arabs the proposal was made to forbid the teaching of that language. The struggle ended in permission being given to teach it, but the medium of instruction was to be Turkish. Now, as completely as Hebrew is the sacred language of the Jews, so is Arabic of Moslems. Nothing gave greater offence to the Moslem party than the giving of second place to Arabic in Moslem schools. The result was that there arose two serious questions, one with the Albanians and the other with the Arabs. The latter question soon became the more pressing. A project for the government of Yemen, which had been for years in a state of revolt, and where tens of thousands of Turkish soldiers had perished from the heat and malaria of the country, had been carefully prepared and finally approved by the Government, with the consent of the Arab deputies. Kiamil Pasha, when Grand Vizier, had taken great interest in it. His successor, Hilmi Pasha, had also examined it and approved. The Committee, however, now rejected it, always acting upon their determination to bring about a unification of language. Another of their blunders during this time was to quarrel with the Greek subjects of the empire. A boycott of Greek ships, shops, and merchandise was preached, and with great success. The object, however, was not so much to injure the Greeks of the kingdom as the Greek subjects of Turkey. General discontent was also increasing in the army, produced by the unification idea. Troops were sent to fight Albanians. . . . A certain Colonel Sadyk was the organiser of discontent. Hakki, the Grand Vizier, took sides with those who wished to arrest Sadyk and put him on his trial for treason, but Shevket, who knew the temper of the troops better than Hakki, recognised that it would be dangerous to do so, the troops being unwilling to fire on their Moslem brethren in Albania, just as they were to fire on the dissatisfied Arabs. The struggle became so severe that Hakki threatened to take over the office of Minister of War himself, and to place Sadyk under a court-martial. Finally the matter was arranged by a compromise, and Sadyk was sent to Salonica. . . . By the middle of May all Albania was ablaze. The Governor of Scutari had proclaimed a Holy War against the Albanians, but Moslem opinion forced him to back down two or three days afterwards. Then, on the suggestion of the Commission, the Sultan went on a royal progress into Macedonia to meet the Albanians, and a remarkable religious service took place, at which 80,000 Albanians were present on the Plain of Kossovo Pol, before the famous tomb of Murad I, who had been assassinated on the battlefield in 1389."—E. Pears, *Forty years in Constantinople*, pp. 306-308.—See also ALBANIA: 1908-1914.

1911-1912.—*War with Italy over Tripoli.*—*Peace of Lausanne.*—"The vital significance of the Italian declaration of war upon Turkey, September 27, 1911, was not generally realized at the time. None of the Powers approved Italy's aggressive action, but apparently they failed to perceive the far-reaching consequences that might result from it. France and Great Britain feared that it would lead to a disturbance of the Mediterranean balance, and although they had consented to Italy's occupation of Tripoli when it was put before them in the light of a rather indefinite possibility, they were obviously troubled by the active steps taken by Signor Giolitti. Germany and Austria were naturally displeased by this attack made by their ally upon Turkey, with whom they themselves

were anxious to remain on terms of close friendship. But all the Powers trusted that the conflict would be confined to Tripoli and that it would not reopen the Eastern Question. Italy herself desired sincerely to avoid any disturbance of Turkey's position in the Near East; she hoped that the war would be brief, and even that the result of her declaration of war would be the peaceable surrender of Tripoli by the Turks. Hence she confined her first military actions to the African seaboard. Tripoli was bombarded on September 30, and a week later surrendered. An expeditionary corps disembarked early in October and succeeded in foiling all attempts made at counter-attacks by the Turks. On November 5, the Italian Parliament approved the decree that declared the annexation of the Turkish provinces in North Africa. The following months were spent in merely securing the foothold that had been won on the coast. The Government continually made clear its unwillingness to prosecute an aggressive war against the Porte, provided Tripoli were surrendered. But the Turkish Government refused to take advantage of the opportunity offered her of escaping from further attack, and the position of Italy, both from the military and diplomatic point of view, was difficult. Turkey was, it is true, incapable of winning back the military positions that she had lost, or of driving out the invaders. But the Arabs continued a vexatious and at times effective resistance under Turkish leadership, and in February, 1912, it became clear that if Turkey refused to acknowledge the Italian conquest, it would be years before Italy could hope to pacify and control her new possessions. The sole way of striking Turkey and forcing her to admit defeat was to shift the war to the Adriatic or the Ægean. Action in the Adriatic was not possible because of the interests of Austria, Italy's ally. An attack upon the Dardanelles threatened the position of Turkey so vitally that it might reopen the whole Eastern Question; and . . . the ambitions of Italy's other ally, Germany, demanded that the status of the Eastern Question remain unchanged. Turkey's position as guardian of the Straits was essential to the German policy in Mesopotamia. Italy had promised at the beginning of that war that she would not under any circumstances disturb the status quo in the Balkan Peninsula. But by April, 1912, as the deadlock in North Africa was becoming more and more apparent, it was obvious that a direct attack upon Turkey must be undertaken. Only thus could Turkey be forced to recognize the Italian conquest of Tripoli. On April 18th the forts of Kum Kalé at the mouth of the Dardanelles were bombarded, and early in May, Rhodes was invaded. Other islands in the Ægean were also occupied. Turkey's answer was the closing of the Dardanelles. Had the hands of Turkey been absolutely free, Italy would have found difficulty in wringing acceptance of her conditions from the Porte, even after the direct attack upon the Ottoman Empire. The Dardanelles were impenetrable and Turkey might well have prolonged the deadlock. But revolution had broken out in Albania and taxed the military resources of the Young Turks to their fullest extent. Furthermore, the Balkan States were assuming a hostile attitude and an outbreak in that quarter began to appear imminent. The result was that in June, 1912, Turkish representatives met the Italians to discuss bases for a settlement of the conflict. Oriental methods prolonged the negotiations until October, when Italian patience was finally exhausted and a distinct threat conveyed to Turkey

that in case of war in the Balkans, Italy might be found in alliance with the Balkan States. Turkey yielded and the preliminaries of peace were signed on October 15, 1912. The Treaty of Lausanne provided for the withdrawal of the Turkish army from Tripoli and of the Italian army from the islands of the Ægean; nothing was said about the cession of Tripoli to Italy for the sake of Turkish pride, but the recognition of the conquest was absolute, although merely tacit. Italy's restoration of the islands, provided for in the treaty, has never taken place. Nor has Turkey complained, inasmuch as they must later have fallen into the hands of Greece had they not been held by Italy. The real significance of Italy's war with Turkey is not to be found in the conquest of Tripoli. That was an eventuality already foreseen by the Powers, and before 1911 Italy had taken long steps towards its accomplishment. The importance of the war lies rather in the example of direct attack upon Turkey that had been set by Italy. It was too much to expect that the Balkan States would not follow the lead thus given, and take advantage of the favorable opportunity offered in 1912.—C. Seymour, *Diplomatic background of the war, 1870-1914*, pp. 221-224.—See also ITALY: 1911-1913; TRIPOLI: 1911-1913; PAN-ISLAMISM; RHODES, ISLAND OF: 1911-1913.

1912-1913.—Dissatisfaction of Balkan states.—Coalition against Turkey.—Reverses of Turkey in war.—Peace with large cessions of Turkish territory.—“A secret clause [in the Lausanne Peace Treaty of 1912] provided that in the event of any portion of Macedonia being conquered the parts respectively nearest to the two States should be annexed to them, and that the intervening territory should be divided between them by the arbitration of Russia. This clearly showed that the intervention aimed at territorial conquest. Two months later another treaty was signed between Greece and Bulgaria, binding the two States to aid one another if attacked by Turkey, or in the event of systematic violation of rights by that Power. Nothing was said in this as to the division of spoil after the war. Montenegro later came into the chain of alliances, and, in fact, was always eager for war with Turkey. When it became known to the Great Powers that these alliances were formed, and that war was imminent, they made every effort to allay the storm and to maintain peace. A strong protest was addressed, on September 25th, by Russia and Austria on behalf of all the Powers. They endeavoured to resuscitate the treaty of Berlin, which had so signally failed, to secure order and good government in the remaining Christian provinces of Turkey. They undertook, by virtue of the twenty-third article of that treaty, to insist on the realization of the promised reforms in the administration of these provinces, but with the reservation which made the promise futile in the eyes of all concerned, that the reforms should not in any way diminish the sovereignty of the Sultan or impair the integrity of the Ottoman Empire. The allied Balkan States, in a very dignified despatch of October 15th, declined to act on the advice of the Powers. . . . Early in 1912 negotiations for armed intervention in Macedonia took place between the Governments of Greece, Bulgaria, and Serbia, at the instance mainly of the . . . Premier of Greece, M. Venezelos. For the first and only time in their history a combination was effected between these three States against the Turkish Empire. It will be seen that, though it was most effective for its immediate purpose

of defeating the Turks and expelling them from nearly the whole of their European possessions, it broke down, with most unfortunate results, almost immediately after this great success. On March 18, 1912, a treaty was signed between Bulgaria and Serbia for mutual military aid to one another in war with Turkey. . . . [On the same day] they enclosed a copy of an ultimatum which . . . they addressed to the Porte, insisting on the carrying out of a series of reforms specially detailed. . . . Among the list of reforms insisted on was the ceding and confirmation of the ethnical autonomy of provinces of the Empire, with all its consequences. . . . [The Porte] treated it as a declaration of war. Its first and most important act was to come to terms with Italy in order to free its hands for the more important war at its very portals. . . . [The Treaty of Lausanne] was signed on October 15th. . . . Meanwhile hostilities had already commenced in the Balkans. Montenegro declared war on October 8th. The three other States followed suit on October 18th, and each of them sent its army on the same day, or nearly so, across its frontiers to invade Turkey. Beyond the desire for the better government of the Christian provinces of Turkey, there were doubtless *arrière pensées* on the part of all the allied States. Greece coveted Crete and other islands in the Ægean Sea, and hoped to extend its frontiers on the mainland. Bulgaria yearned for the big Bulgaria as defined by the treaty of San Stefano. Serbia had ambitions for a revival of its wide boundaries under Stephen Dushan, and aimed at access both to the Ægean Sea and the Adriatic. Montenegro wished for a part of Albania and for extensions in the Adriatic. Each State had large populations of a kindred race beyond its frontier suffering from cruel misgovernment and tyranny and crying for help. But it seems improbable that they could have expected to realize their full hopes, or to achieve such a *dénouement* as actually occurred. The allies between them had seven hundred thousand men under arms. Turkey had no more than four hundred thousand in Europe. It had, however, great reserves in Asia, and its aggregate force largely exceeded that of the allies. It was to be expected that the Turkish armies in Europe would make a good fight, and would at least afford time for these reserves to come up. The Greek army, under the command of the Crown Prince Constantine, . . . who had received a military education in Germany, crossed the northern frontier and, in four days, on October 22nd, encountered a Turkish army, under Hassan Pasha, at Sarandoporos. The Turks held a very strong position and were little inferior in numbers. In spite of this, they were worsted, and were compelled to retreat in the following night. The next day the Greeks renewed their attack. The unfortunate Turks, disheartened by their defeat at Sarandoporos and wearied by the long night march, were caught unawares in a ravine which offered no possibility of defence. Terror-stricken and demoralized, they fled before their foe. They left behind them the whole of their artillery and transport. The retreating Turks, despite their panic, found time to wreak their vengeance on the unfortunate Christian inhabitants on their route and mercilessly butchered them. What remained of their army retired on Veria, where it was reinforced by fourteen fresh battalions. On the 28th the Greek army resumed its march. In front of Veria it again came in contact with the Turks, who were posted in a very strong position. The

issue was not long in doubt. The unhappy Turks were mown down by the Greek guns. Officers and men again fled like a beaten rabble. After these signal defeats the remainder of the Ottoman army crossed the River Vardar on November 3rd, within a few miles of Salonika. On the 8th that city capitulated to the Greeks, not without suspicion of treachery. Hassan Pasha and twenty-five thousand men, the remains of his army, were made prisoners. On the next day a division of the Bulgarians, detached from their main army in Thraee, appeared on the scene at Salonika, after a forced march, in the hope of being able to claim a share in the capture of that important city. At the request of its generals, the Greeks gave permission to two regiments of Bulgarians to enter the city. In spite of this limitation, ten regiments were sent there, and were the cause of much subsequent trouble. While these great and unexpected successes were being achieved by the Greeks, the Serbians were advancing from the north. A Turkish army of a hundred thousand men, under Zeki Pasha, had marched up the valley of the Vardar River to meet them. The two armies, about equal in numbers, met at Koumanovo on October 23rd, the day after the victory of the Greeks at Sarandoporos. The Turks were well supported with all modern implements of war, with machine guns, aeroplanes, and wireless telephone apparatus, but they had not a staff competent to make use of them. Their artillery was the best which Krupp's celebrated German works could turn out, and was superior in number to that of the Serbians. The French Creüset guns, however, of the latter proved to be the better in action. But, worst of all, the commissariat arrangements of the Turks were of a most primitive character. They relied mainly on their men feeding themselves at the expense of the peasantry on their route, with the result that they were underfed. The weather was most inclement and the troops were only provided with light summer clothing. The best of soldiers cannot fight with empty stomachs and scanty clothing. As a result, in spite of a vigorous resistance in the great battle, the Turkish lines were broken by the splendid infantry of the Serbians. There resulted a rout and the precipitate retreat of the Turkish army. It lost the whole of its artillery—a hundred and twenty guns. Of the hundred thousand men, only forty thousand survived as a military force. Uskub, the ancient capital of Serbia, was captured. Another Serbian army advanced towards the Adriatic and captured Durazzo. After the fierce and decisive battle at Koumanovo, what remained of the Turkish army retreated down the Vardar Valley to Veles, and thence, instead of marching to Salonika, where it might have been in time to save that city from the Greeks, it marched westward to Prilip, on the route to Monastir. The Serbians, after a brief delay, followed it up and came in contact again at Prilip, where the Turks held an immensely strong position. It was taken at the point of the bayonet, a striking proof of the superb quality of the Serbian infantry. The Turks retreated thence to Monastir, where they found reinforcements. On November 17th and 18th, another great battle was fought in front of Monastir, in which the Turks were again defeated, with the loss of ten thousand prisoners. The remains of the army retreated into Albania, where it was too late in the season for the Serbians to follow them. They were ultimately, in the following spring, brought back to Constantinople by sea from the Adriatic. There could not have been

a more completely victorious campaign for the Serbians. Zeki's army was virtually extinguished. While these critical events were pending in Macedonia the Bulgarians were equally successful in the east. They invaded Thrace on October 18th in great force, and on the 22nd encountered a Turkish army at Kirk Killisse and, after a two days' battle, defeated it. On the 28th they fought the main Turkish army, under Nazim Pasha, which was drawn up in a line from Lulu Burgas to Visa. The Turks made an obstinate resistance, but after forty-eight hours of fierce assaults by the Bulgarians they gave way and retreated in terrible disorder, till they found themselves behind the lines of Tchatalja, the celebrated fortifications which protect Constantinople at a distance of nineteen miles on a line from the Black Sea to the Marmora. On their advance through Thrace the Bulgarian soldiers, assisted by irregulars of Bulgarian race, committed atrocities and cruelties on the Turkish population which rivalled all that the Turks in the past had perpetrated. On November 17th the Bulgarians attacked these lines of Tchatalja with great vigour. But the Turks had brought up fresh troops from Asia. The lines were well defended with Krupp guns, and several successive assaults were repelled. On December 3rd, at the instance of the Great Powers, an armistice was agreed upon between Turkey and Bulgaria and Serbia. War, however, was continued with Greece and Montenegro. As a result of the campaign the Turks had been defeated in every engagement by Greeks, Serbs, Bulgars, and Montenegrins. They were driven from Macedonia and from nearly the whole of Thrace and Epirus. They still, however, retained Adrianople, Janina, and Scutari. It was only when in defence of such cities, or behind such lines as those of Tchatalja that the Turkish soldiers showed the tenacity and courage for which they had been famous. Whenever they met the enemy in the open field they were always defeated. . . . The winter of 1912-13, after the conclusion of the armistice, was spent in futile negotiations for peace at a Conference in London. The main cause of failure was Adrianople. The Bulgarians insisted on its cession to them as a condition of permanent peace. The Porte, in the first instance, was not unwilling to give way on this. But a military *émeute* occurred at Constantinople. A deputation from the army, headed by Enver Bey, insisted on entering the chamber where the Council of Ministers were deliberating on the question, with the object of protesting against the surrender of the stronghold. Nazim Pasha, the Minister of War, and his aide-de-camp were killed in the endeavour to resist this inroad. The Grand Vizier was thereupon terrorized into resignation. In his place Mahmoud Shefket, who had proved to be so loyal to the Young Turks at the early stage of their movement, was appointed. He refused to surrender Adrianople. The negotiations in London were broken off. Early in 1913, on January 4th, the Bulgarians gave notice of the termination of the armistice. War was renewed. On February 4th the Bulgarian army commenced an attack on Adrianople, supported on this occasion by fifty thousand Serbians. On the same day they fought a battle near Bulair, defeated the Turks, and captured that important fortress, threatening the command of the Dardanelles. The Greeks also renewed the war. They sent an army into Epirus and, on March 6th, captured Janina, making prisoners thirty-three thousand Turks and seizing immense stores of guns and ammunition. On the 10th of the same month their fleet captured the

island of Samos. On March 28th the Bulgarians captured Adrianople and its garrison of twenty thousand Ottomans, and on April 21st the Montenegrins succeeded in getting possession of Scutari, which they claimed as the capital of their State. After these serious reverses the Porte was desirous of coming to terms, and was willing even to cede Adrianople and almost the whole of Thrace. It invited the mediation of the Great Powers. The allied States agreed to this. A second Conference was held in London on the basis that the Porte was to give up all its possessions in Europe, save the small part of Thrace south of a line drawn from Enos, in the Ægean Sea, to Media, in the Black Sea, a few miles north of the Tchatalja lines. Crete was to be ceded to Greece (see CRETE: 1800-1913), and the destination of the islands in the Ægean Sea lately in the possession of Turkey, and some of which were necessary for its defence, was to be left to the decision of the Powers. [See ÆGEAN.] A treaty was effected between the Porte and the Powers to this effect. But there was far greater difficulty in determining how the ceded districts were to be divided between the victorious Balkan States. The position was aggravated by Roumania coming into the field and claiming compensation in territory, in consideration of the important changes impending in the balance of power in the Balkans.—Lord Eversley, *Turkish empire*, pp. 357-364.—See also BALKAN STATES: 1912: War opened by Montenegro; 1912-1913; 1913; 1913-1914; GREECE: 1912; 1913: Second Balkan War; SERBIA: 1909-1913.

1914.—In the control of Germany.—William II's visit in 1888.—Spread of German interests in Turkey.—Berlin-Bagdad railroad.—“Peaceful penetration” pushed in every direction.—“Within a year of his accession [1888], William II decided, against Bismarck's advice, to pay a State visit to Constantinople. It was a remarkable and a fateful visit, for it gave rise to one of the first serious differences of opinion between the old Chancellor and his young sovereign, and it brought him into immediate contact with an Oriental ruler whose singular personality exerted a lasting influence upon him. We are apt to remember only Abdul Hamid's inglorious downfall and to forget the remarkable part he played during a reign of over thirty-two years. . . . The old Chancellor did not approve of the visit before the Emperor started. He approved of it still less when the Emperor returned full of the visions he had seen on the Bosphorus. Bismarck looked upon Constantinople as a profitable field for German statesmanship, in the service of a policy which was confined, on the principle of ‘*beati possidentes*,’ to a maintenance of Germany's hegemony in Europe. For William II Constantinople was already the bridge over which Germany was to pass out of Europe into Asia and enter upon a vast field of splendid adventure. In the following year Bismarck was dismissed [1890], and the Emperor was free to steer his own course. The famous ‘Reinsurance’ Treaty with Russia was dropped; and, though various circumstances delayed for a good many years the outbreak of acute antagonism between Austria and Russia and at times even produced a temporary *rapprochement* between them, Austrian ascendancy in the Balkan peninsula and an ultimate advance upon Salonica became part and parcel of William II's great scheme for the creation of a Germanic wedge reaching from Hamburg to the Persian Gulf.’ Combining with a vein of almost medieval mysticism a thorough appreciation of modern business practices, William

It realised from the outset that the transformation of Germany into a World Empire, which he had set before himself as his life-work, could only be effected if economic expansion went hand in hand with political expansion. In order to bring Turkey permanently within the orbit of German world-policy, the first thing to do was to peg out Germany's claims in the domain of commerce, industry and finance. German manufacturers, German engineers, German capitalists overran Turkey. Already in 1888 the Deutsche Bank had obtained the right of working a short railway from the Bosphorus along a strip of the Asiatic shore of the Sea of Marmora, which had originally been given to an English Company; and to this was added a concession for an extension to Angora, which, after the Emperor's visit, was pushed on with the

ENVER PASHA

utmost energy, and soon developed into a claim for German monopoly of railway enterprise throughout Asiatic Turkey. . . . At Constantinople German influence was paramount, for it stuck scrupulously to its bargain never to worry the Sultan about administrative reforms or about the wrongs of his Christian subjects. On the contrary, when other Powers, and notably England, tried to curb Turkish misrule, Germany was always ready with the effective sovereignty of the Sultan. . . . In the autumn of 1898, while Abdul Hamid's hands were still dripping with the blood of his Armenian subjects and the laurels of his victories over Greece were still fresh on his brow, William II, accompanied by the Empress, proceeded on a second pilgrimage to Turkey; and on this occasion a State visit to Constantinople was followed by a sensational progress through Palestine and Syria. The German Emperor entered Jerusalem as a Knight Templar, and masqueraded at the Holy

Shrines of the Christian faith as the protector of Christendom. But a week later, at Damascus, he proclaimed himself with still greater emphasis the protector of Pan-Islamism, and, to quote Prince Bülow again, defined what was to be henceforth the position of Germany not merely towards Turkey, but 'towards Turkey and Islam.' . . . Within the next twelve months the first convention was signed between Dr. Seimens, Director of the Deutsche Bank, and the Sublime Porte, conceding in principle to the German Anatolian Railway Company the right to extend down to the Persian Gulf. A commission of German engineers, headed by the German Consul-General Stemrich, and including the German Military Attaché at Constantinople, was immediately sent to report upon the land *tracé*, while a German cruiser visited the Persian Gulf in order to discover the most suitable point for a terminus in its waters. The railways of European Turkey had already passed under the control of the Deutsche Bank group, which had its satellites in South Germany, Austria and Switzerland; and the new concession promised the early fulfilment of the great Pan-Germanic scheme, already known in Berlin as the B. B. B. (Berlin-Byzantium-Baghdad). [See BAGDAD RAILWAY.] . . . When wireless telegraphy began to take practical form, the Germans were the first in the field with concessions for wireless lines between Constantinople and Syria, and between the Turkish islands in the Mediterranean and the main land. German schools, German scientific expeditions, German missions contributed at the same time to the diffusion of German culture, while German control of the Turkish military administration was so tightened up, after its value had been proved in the campaign against Greece, that William II was already learning to rely upon the Turkish army as a subordinate wing of the German army in the event of a great European conflict.—V. Chirol, *Turkey in the grip of Germany* (*Quarterly Review*, Dec., 1914, pp. 235, 239-240, 243-244).—"For the first twenty years of his reign all went well with the policy of the Kaiser in the Near East. But everything depended upon the personal friendship of the Sultan Abdul Hamid, and upon the stability of his throne. In 1908 his throne was threatened; in 1909 it was overturned. The triumph of the Young Turk revolution imposed a serious check upon German policy; but, to the amazement of European diplomacy, the check proved to be only temporary. Enver Pasha quickly succeeded to the place in the circle of imperial friendship vacated by his deposed master. Bulgaria finally declared her independence. Bosnia and the Herzegovina were definitely annexed by Austria. Russia, as the patron of the Southern Slavs, naturally protested; but Russia was not at the moment prepared to accept the challenge of the 'knight in shining armour' at Berlin, and so *Mittleuropa* took a very important step towards the Aegean. Few Englishmen were at the time sufficiently alive to the significance of the events of 1908-9. But we have recently learnt from the *Memories* of Lord Redesdale that their significance did not escape the vigilant notice of King Edward. Lord Redesdale happened to be at Balmoral when the news of the Austrian annexations in the Balkans reached the King. 'No one who was there can forget,' he says, 'how terribly he was upset. Never did I see him so moved. . . . Every word that he uttered that day has come true.' It is not too much to say that the Great War of 1914 was implicit in the events of 1908. It now seemed as if one thing and one thing only could interpose a final

and effective barrier between the Central Empires and their ambitions in the Near East—a real union between the Balkan States. In the autumn of 1912 that miracle was temporarily achieved and the first Balkan War ensued (October-December 1912). The Allied arms achieved a remarkable triumph. 'Within the brief space of one month,' writes M. Gueshoff, 'the Balkan League demolished the Ottoman Empire, four tiny countries with a population of some 10,000,000 souls defeating a great Power whose inhabitants numbered 25,000,000.' But the victory was too rapid and too complete. Not even the statesmanship of M. Venizelos, backed by that of M. Gueshoff, could, in the face of jarring interests in Macedonia, hold the Balkan League together. The collapse of the Turk was from that point of view inconveniently and indeed disastrously rapid. The union of the Balkan States might have been less transitory if victory over the Turk had been more difficult to achieve. As it was, Greece, Serbia, and Bulgaria, having humbled the Ottoman Empire to the dust, took to quarrelling among themselves over spoils which were unexpectedly large. This was Germany's opportunity and she used it with singular adroitness. The first step was, in the name of an autonomous Albania, to prohibit Serbia's access to the Adriatic.—J. A. R. Marriott, *European commonwealth*, pp. 280-291.—See also GERMANY: 1890-1914: Alteration of foreign policy; 1912: Balkan and Asia Minor interests.

1914.—Turkey at the outbreak of the World War.—Repeated violations of neutrality by her.—Attack on Odessa.—Action by Russia and England.—Turkey's entrance into World War as ally of Germany and Austria.—'The declaration by Austria against Serbia and the events which followed in quick succession came as a surprise to everybody, except perhaps the German authorities in Constantinople and Enver Pasha. But there is evidence from Turkey, as well as from other parts of Europe, that not only was the outbreak of war expected about this period, but that Germany had made her preparations before it broke out for forcing Turkey to take part in it. Munitions had been landed in Syria. . . . When on August 11 the *Goeben* and the *Breslau* entered Turkish waters, Admiral Suchon, who was in command, shewed much of the same determined character. When these ships had passed the Dardanelles they should, in conformity with international law, have been disarmed. From the first the behaviour of the officers in command was one of insolence and defiance of international usages and even of the amenities of civilised life. . . . Flagrant violations of international law went on daily, and the Porte had not the courage or perhaps the wish to do more than feebly remonstrate. German soldiers and sailors were coming to the Bosphorus by every boat from Constanza. Munitions of war were being poured into Turkey and were being sent for use, some to the Dardanelles, where the captain of a British merchant ship and his wife counted the mines intended to be laid in the Dardanelles as they were arranged in long lines on the Turkish transports. . . . Others were intended for the coasts of Syria, of the Red Sea and the Persian Gulf.'—E. Pears, *Forty years in Constantinople*, pp. 341-342.—'The war party proceeded to mobilize troops, to prepare for the invasion of Egypt, to bribe the Bedawin to warlike action, and to demand the departure of British ships from Mohammerah, a Persian port over which the Turks had no authority. All the time the Grand Vizier protested that he desired peace

and made many excuses about the delay in dismissing the officers and crews of the German ships. Then followed the detention of British merchant ships in Turkish waters, attempts to stir up disaffection in Persia, India, Egypt, and amongst the Sanûsis in Africa, violent attacks in Turkish newspapers, now subsidized by German gold, against England declaring that she was the enemy of Islam; the abolition of the capitulations and the closing of foreign post offices, and numberless other acts of a highly provocative character. The British Government was most patient and waited week after week for the dismissal of the Germans. . . . Then, on October 29, 1914, Turkish torpedo-boats raided Odessa, sank a Russian gunboat and damaged French and Russian ships. The response to this unwarranted act of hostility was the withdrawal of the Russian Ambassador from Constantinople and the despatch of Sir Edward Grey, British Foreign Minister, to the British Ambassador at Constantinople. . . . [to the effect that] unless. . . the Turkish Government will divest themselves of all responsibility for these unprovoked acts of hostility by dismissing the German military and naval missions, and fulfilling their often repeated promises about the German crews of the *Goeben* and *Breslau*, and will give you a satisfactory reply to this effect within twelve hours from the date of the delivery of the note, you should ask for your passports and leave Constantinople with the staff of the embassy. On November 4, Tewfik Pasha, the Turkish Ambassador in London, applied for his passports and a state of war commenced.'—E. Sell, *Ottoman Turks*, pp. 118-120.—See also ITALY: 1912-1914; BAGDAD RAILWAY: The plan; MILITARY ORGANIZATION: 42; WORLD WAR: Diplomatic background: 71, v; 1914: IV. 1915.—France and Great Britain agree to Russian annexation of Constantinople.—Plans for the partition of Turkey devised by Allies during World War.—When the Bolshevik régime established itself upon the ruins of the Kerensky administration in October, 1917, Leon Trotzky, became foreign minister. One of his earliest activities was to publish a number of secret documents then reposing in the archives of the Russian Foreign Office. Not the least interesting of these papers were copies of some memoranda and telegrams of Sazonov, who had been foreign minister from 1910 until January, 1917. "On the 10th of February (March 4th, 1915) the [Russian] Minister of Foreign Affairs handed a memorandum to the French and British ambassadors in which was defined the position as to annexation to Russia of the follow-

ing territories, as the result of the present war; the city of Constantinople the western shores of the Bosphorus, Marmora Sea, and the Dardanelles; Southern Frigia, to the line of Enos-Media; the shores of Asia Minor, between Bosphorus, the River Samarra, and a point of Ismid Gulf to be subsequently defined; the islands of Marmora Sea and the islands of Imbros and Tenedos. The special rights of England and France within the limits of aforesaid territories to remain undisturbed. The French as well as the English Governments expressed their assent to the fulfilment of our desires in the event of a successful termination of the war and the satisfaction of a series of demands of France and England within the limits of the Ottoman Empire as well as in other places. These demands in so far as they refer to Turkey are substantially as follows: The recognition of Constantinople as a free port for transit of merchandise not coming from or going to Russia, and the freedom of passage through the Straits of merchant ships. The recognition of English and French rights in Asiatic Turkey subject to specific definition in a special agreement between France, England, and Russia. The preservation of sacred Mohammedan places and of Arabia, under an independent Mohammedan rule. The inclusion within the English sphere of influence of the Persian neutral zone created by the treaty of 1907 between England and Russia. In recognizing these claims as in general subject to satisfaction the Russian Government nevertheless made certain reservations: With respect to formulation of our wishes in connection with sacred Mohammedan places it is necessary to define now whether these places will remain under the administration of Turkey, with the retention by the Sultan of the title of Caliph, or is it the intention to create new and independent Governments. In our opinion it would be desirable to separate the Caliphate from Turkey. At all events, the freedom of pilgrimage is to be insured. In agreeing to the inclusion of the neutral zone of Persia within the English sphere of influence the Russian Government considers it only just to state that the region of the cities Ispahan, Yezd shall be confirmed to Russia, as well as a strip of the neutral zone which cuts in the shape of a wedge between Russian and Afghan boundaries and reaching the boundary itself at Zulphogar, shall be included within the Russian sphere of influence. The Russian Government also considers desirable at the same time to reach the solution of the question as to the territory of northern Afghanistan contiguous to Russia, in line with its wishes expressed in the negotiations of 1914. After the entrance of Italy into the war our wishes were communicated to the Italian Government which expressed its assent on its own behalf on condition that, in the event of successful termination of the war, the Italian claims in general, and specifically in the East, be satisfied, and on recognition by Italy within the limits of territories ceded by us of identical rights as possessed by England and France." The following is a copy of a telegram despatched by Sazonov to the Russian ambassador at Paris on March 18, 1915: "On the 23d of February (March 8) the French Ambassador, in the name of his Government, stated to me that France is ready to take the most friendly attitude towards the realization of our desires . . . in connection with the Straits and Constantinople, for which I have instructed you to express to Delcassé my appreciation. In his conversation with you, Delcassé, even before, repeatedly expressed his assurances that he may depend on the sympathy of

France, and only referred to the necessity of clarifying England's attitude, from which side he feared objections, before giving us more concrete assurances to the aforesaid effect. Lately the British Government expressed in writing its complete agreement to the annexation of Constantinople and the Straits to Russia, within limitations indicated by us, reserving therein only for itself a guarantee of her own economic interests, and also a similar benevolent attitude on our side to the political aims of England in other spheres. For me personally the assurance of Delcassé, in whom I have the deepest confidence, is quite sufficient, but for the Imperial Government more specific declarations are desirable as to the agreement of France to the complete fulfilment of our desires, similar to that made by the Government of Great Britain.—(Signed) Sazonov."—O Ferrara, *Lessons of the war and the peace conference*, pp. 220-231.

"Information with regard to the division of Turkish territory in Asia Minor is contained in the following memorandum of an agreement entered into in the spring of 1916 as result of negotiations taking place in London and Petrograd between the British, French, and Russian Governments. The document has no signature, but is certified as being true to the original. . . . "As a result of negotiations taking place in the Spring of 1916 in London and Petrograd, the British, French, and Russian governments came to an agreement with regard to future distribution of their zones of influence and territorial acquisitions in Asiatic Turkey, and also with regard to organization within the limits of Arabia of an independent Arabian government or Confederation of Arabian governments. In general this agreement is substantially as follows: Russia acquires regions of Erzerum, Trebizond, Van, Bitlis, and also the territory of South Kurdistan, along the line of the Muscha Sert Lbn Omar—Amali Amalia, Persian boundary. The furthest point of Russian acquisition on the shore of the Black Sea is to be a point west of Trebizond, subject to future determination. France is to receive the coast strip of Syria, Addansk District and territory bounded on the south by a line running, Ajutab-Mardin to the future Russian boundary and on the north by a line Ala-Daga—Kosanya-ak-Daga—Ildiz-Daga—Zara—Ogim—Kharput. Great Britain acquires southern part of Mesopotamia with Bagdad and reserves for herself in Syria the ports of Harpha and Akka. By agreement between France and England the territory in the zones between French and English territories shall be formed into a confederation of Arabian governments, or an independent Arabian government, the zones of influence over which are herewith defined. Alexandro [Alexandretta] is declared a free port. With the aim of conserving the religious interest of the allied powers, Palestine with the sacred places is to be separated from Turkish territory and is to be subject to a special régime by agreement between Russia, France, and England. As a general condition, the contracting powers mutually obligate themselves to recognize the respective concessions and prerogatives existing prior to the war in the territories acquired by them. They agree to assume a proportionate share of the Ottoman debt equivalent to their respective acquisitions. True to Original."—*Ibid.*, pp. 220-221.

1915-1916.—Growth of nationalism.—Abolition of capitulations.—Language regulations.—New interest in Anatolia.—"All New-Turkish Nationalistic efforts at emancipation had as first principle the abolition of Capitulations [see CAPITULA-

TIONS]. As early as summer 1915 there were clear outward indications in the streets of Constantinople of a smouldering Nationalism ready to break out at any moment. Turkey, under the leadership of Talaat Bey, pursued her course along the well-trodden paths, and the first sphere in which there was evidence of an attempt at forcible Turkification was the language. Somewhere toward the end of 1915 Talaat suddenly ordered the removal of all French and English inscriptions, shop signs, etc., even in the middle of European Pera. In tram-cars and at stopping-places the French text was blocked out; boards with public police warnings in French were either removed altogether or replaced by unreadable Turkish scrawls; the street indications were simply abolished. . . . [The removal of German notices] was provided by a second decree of Talaat's some weeks later. . . . A few, who would not believe the order, held out obstinately, and the signs remained in German till they were either supplemented in 1916, on a very clear hint from Stamboul, by the obligatory Turkish language or later quite supplanted. It was not till some time after the German had disappeared—and this is worthy of note—that the Greek signs ceased to exist. Greek had been up to that time the most used tongue and was the commercial language of the Armenians. Then came the famous language regulations, which even went so far—with a year of grace granted owing to the extraordinary difficulties of the Turkish script—as to decree that in the offices of all trade undertakings of any public interest whatsoever, such as banks, newspapers, transport agencies, etc., the Turkish language should be used exclusively for book-keeping and any written communication with customers. One can imagine the 'Osmanic Lloyd' and the 'German Bank' with Turkish book-keeping and Turkish letters written to an exclusively European clientele! Old and trusty employees suddenly found themselves faced with the choice of learning the difficult Turkish script or being turned out in a year's time. The possibility—indeed, the necessity—of employing Turkish hands in European business suddenly came within the range of practical politics—and that was exactly what the Turkish Government wanted. . . . Anatolia was suddenly 'discovered.' At long length the Young Turkish Government, roused intellectually and patriotically by the war and brought to their senses by the terrible loss of human life entailed, suddenly realised the enormous national importance of Anatolia, that hitherto much-neglected nucleus of the Ottoman Empire."—H. Sturmer, *Two years in Constantinople*, pp. 153-157, 171.

1919 (March).—Reactionary coup anticipated.—New cabinet and steps toward reform.—"Mohammed VI. rid himself of Enver Pasha and Talaat Bey, placing the aged Tewfik Pasha back in power as Grand Vizier and by a coup d'état backed up by French and English bayonets dissolved Parliament on the eve of a reactionary coup projected by the Young Turks, whose political organization is better known as the Committee of Union and Progress. On March 7 a third stroke swept away from the responsible Government all old men, all old influences, whether progressive or reactionary, and established a new Cabinet with Damad Pasha as Grand Vizier and Foreign Secretary. . . . The dissolution of Parliament was made necessary by the fact that the Entente had refused to have any dealings with its representatives, and the new election which then became necessary must be conducted by a Government which had the approval of the Entente, even though its claim to popular representation still had to be decided at the polls. The new Government at once set to work and both General Allenby, the conqueror of Palestine, and General Franchet d'Esperey, the conqueror of Bulgaria and the Commander in Chief of the allied forces in European Turkey, were present at the inauguration on March 5. The first work that Damad Pasha, through Djemed Bey, set out to accomplish was to remove over 500 officials which Tewfik Pasha had inherited from the old régime and which continued to be the chief vehicle of

reactionary propaganda under the new."—*New York Times Current History*, Apr., 1919, pp. 37-38.

1919 (April-May).—Turkish delegation to peace conference.—Revelations of German intrigue and treaties with the Ottoman empire.—Treaty with Turkey deferred.—The Ottoman delegation to the Paris Peace Conference "departed from Constantinople on April 28. It remained incognito at Berne until officially called to Paris. It is headed by Damad Ferid Pasha, the Grand Vizier, whose departure gave rise to the story that he had resigned. . . . Up to May 3,300 prisoners had been arrested in Constantinople or brought there on the evidence furnished by the Interallied Mission. The charges against them range from treason to murder and the instigation of massacres.

MUSTAFA KEMAL

The execution of Kiamil Mahmud Pasha, charged with massacres of Armenians at Yozghad, where he was Governor [had already] taken place on April 12, in Bayazed Square, Stamboul. By May 3, Fethi Bey, ex-Minister of the Interior, and nineteen others had been released with the suspended verdict of 'not yet proven.' The case of the ex-Grand Vizier, Said Halim Pasha, was then taken up for examination. It is said that he has made statements of the highest political importance, revealing that Germany began as early as July 10, 1914, five days after the famous Potsdam conclave, to win Turkey to the side of the Central Empires, and that a treaty was signed on Aug. 1 by himself, Baron von Wangenheim for Germany, and Count Pallavicini for Austria-Hungary. In this treaty the participation of Great Britain in the war was ignored and Turkey was guaranteed against attack by any two powers. A second treaty was signed by the same parties on Aug. 10, taking

the hostility of Great Britain into account. In the middle of November a third treaty was signed to which Austria-Hungary was not a party. It dealt with the disposition of British interests in the Near East."—*Ibid.*, June, 1919, pp. 435-436.—Owing to President Wilson's stand at the Paris conference, the peace terms with Turkey were delayed pending the report of a Near East inquiry.—See also PARIS, CONFERENCE OF: Question of Turkey; VERSAILLES, TREATY OF: Part IV: Section VII.

1919-1920.—Turkish dissatisfaction with peace conference.—Appearance of Mustafa Kemal Pasha as head of insurgent Nationalist government at Angora.—Rise and fall of successive ministries.—Rebel control of Anatolia.—Armenian massacres and other disorders.—"Late in July [1919] rumors of the proposed partition of Thrace [see THRACE: 1918-1921] and the creation of a free state of Constantinople [by the Allies at the Paris peace conference] led to a demand by the Young Turks that Damad Pasha, Grand Vizier, be ousted on account of his alleged failure at Paris; the Sultan declined to remove him. Finally, the landing of additional Greek and Italian troops at Smyrna and Adalia, together with the seizure of Konieh, an important railroad center in Asia Minor, by the Nationalist insurgent, Mustapha Kemal Pasha, early in October [1919], caused the downfall of the pro-Entente ministry. This was succeeded by a Nationalist cabinet led by General Ali Rıza Pasba as Grand Vizier. The new government at once made preparations for the holding of parliamentary elections, but the Nationalists immediately set up a rival government at Angora and issued a proclamation demanding application of President Wilson's fourteen points to the settlement of the Turkish problem. . . . The rebels soon had control of the greater part of Anatolia and by January 1 [1920] were reported to have an army of 300,000. . . . On March 2 the ministry signed, and a government somewhat more favorable to the Allies was constructed under Salih Pasha as Grand Vizier, but this proved as helpless as its predecessor; Armenian massacres [see ARMENIA: 1919-1920], attacks on foreign troops and activity by the Nationalists continued. In the hope that conditions might be stabilized an Anglo-Franco-Italian army occupied Constantinople on March 16, and the Turkish government was informed that such occupation would continue until the terms of the Peace Treaty had been accepted and executed; at the same time many Nationalist leaders were placed under arrest. After holding office one month the Salih Pasha cabinet fell, and a new one, headed by Damad Pasha, succeeded it on April 6. This cabinet . . . accomplished little. [It sat for the last time on April 11. After that, it was realized that the Angora government was the only one acceptable to the Turks.]—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, Supplement, pp. 145-146.—See also CALIPHATE: 1919-1920.

1919-1921.—Causes leading to alliance of France and Italy with Turkey.—In 1919 Turkey was a beaten foe with no friends. By 1921 she had allied with both France and Italy against Greece and indirectly Great Britain. This is difficult to understand till it is realized that it was a retaliatory measure by France and Italy against Great Britain's foreign policy not only in the Near East but in Europe. "After 1919 came the swift and embittering break between the French and the British. British statesmanship opposed French occupation of Syria because this occupation carried a fatal blow to the British conception of an Arab

state, which would replace the Osmanli in the world of Islam. The British had promised the Arabs all of the Arab regions, including Syria, which they had also agreed should be French. If they now turned over Syria, which they had conquered in conjunction with the Arabs, to the French, then Arab hostility would be engendered. But if the Syrian dispute poisoned Paris sessions and awakened French distrust, the real trouble was in Europe and the true cause of the Anglo-French trouble to be found in German matters. America failed to ratify the treaty guaranteeing with Britain the security of France against a new German attack. Britain refused to give the guarantee alone, furthermore British policy seemed to the French increasingly to favor Germany. When the Russian Reds invaded Poland in 1920 and approached Warsaw, British statesmanship backed the Russians and practically ordered the Poles to accept a frontier settlement which meant the negation of historical and racial claims as good and founded upon an occupation much more recent than the claim of the Greeks of Smyrna. But the Poles were the allies of the French. For France they represented the assurance of assistance on a new eastern front, if Germany should attack again. British policy revealed itself again when the question of Upper Silesia came up and the Polish and German claims clashed. Then as before Britain frankly opposed the Poles because of their dependence upon the French and because Polish military reinforcement contributed to establishing French military supremacy on the Continent. It was natural, it was inevitable, then, that the British attitude toward Poland, the soldier and ally of France in the northeast, should lead to French reprisals directed against the Greek ally and sentinel of Britain in the Aegean. In a word, just as soon as Anglo-French rivalries began to crop up, then the smaller powers allied to either state were bound to be involved. . . . French policy showed its hand . . . [in 1921] when France, through M. Franklin Bouillon, a French parliamentarian of distinction, negotiated a separate treaty with the Angora government. Nominally this treaty only adjusted disputes between France and Turkey growing out of the French mandate in Syria. Actually it constituted a French recognition of Kemal Pasha, who had raised the standard of Turkish revolt against the Treaty of Sèvres and was preparing to challenge Greek possession of Turkish territory. But in reality this separate treaty assured the Turks that France would not join Britain in backing the Greek. On the contrary, it gave the Turk the tacit assurance of French support which would be translated into the despatch of military supplies. In addition France resigned Cilicia to the Turk and agreed to accept a frontier of the Bagdad railway for the Syrian mandate, while the Turk, who had been engaged in a small campaign against the French to turn the army of occupation out of Cilicia, agreed to respect Syria as newly delimited in the Angora compact. Thus France got out of an imminent war with Turkey and put a spoke in the British-Greek wheel. Italy promptly followed suit, evacuated Adalia as France had quit Cilicia, gave full assurance that she would not support the Greek, who had actually been sent to Smyrna by the British with French consent to forestall the Italian, promised to furnish arms to the Turk, and, like the French, secured the promise of many rich concessions in Turkish territories. Of course the Italian theory was that if the Turk came back to Smyrna he could not hold it permanently and

the Italian claim would have a chance of realization, while if Greece remained, then there was an end of Italian hopes and eastern Asia Minor was certain to be re-Hellenized and Greece to become a considerable power, thus preventing Italy from repeating the achievements of Rome and Venice which she desired to follow. Moreover, Italy had no desire to see Britain supreme in the Mediterranean. She had followed Britain in opposing French policy on the Continent, both in Poland and elsewhere, because she objected to French supremacy on the Continent. She now followed the French example in opposing Britain in the Near East, because she was equally hostile to British hegemony on the inland sea. If one is to grasp the meaning of recent events, these cross currents have to be studied carefully. Still another circumstance had added to the discomfiture of the Anglo-Greek policy. Venizelos had been overthrown [November, 1920]. His King, young Alexander, had died and Constantine had returned. But Constantine had been pro-German and was responsible for the murder of many French sailors in Athens. It was one thing to give Smyrna to the Greece of Venizelos, another to Constantine, brother-in-law of the Kaiser."—F. H. Simonds, *Return of the Turk* (*American Review of Reviews*, Nov., 1922, pp. 483-484).—See also SYRIA: 1908-1921.

1920 (April).—National Pact.—On Jan. 30, 1920, "the Turkish Nationalists severed their allegiance to the Constantinople Government and held elections for a National Assembly. This body met at Angora [Apr. 23, 1920], formally denounced the Treaty of Versailles, and set forth their program in a National Pact, for the realization of which they swore solemnly to fight, and, if necessary, to die. Because this document has been the 'irreducible minimum' in the negotiations with the powers at Lausanne, it is important to have a clear knowledge of its terms. The Pact contains six articles:

"1. The fate of the portion of the Ottoman territory which was under enemy occupation at the time of the conclusion of the armistice in October, 1919, will inevitably be regulated by plebiscite, the territory in question being inhabited by an Arab majority. These portions of the Ottoman territory within as well as outside the armistice line which are inhabited by Ottoman Mussulman majorities, united among themselves by religion and racial ties and by a common ideal as well as by sentiments of mutual respect, constitute an indivisible whole, division whereof is impossible, either in theory or in practice.

"2. We accept a new plebiscite, if necessary, for the three districts, Kars, Ardahan and Batum, which joined themselves to the mother-country by vote of their inhabitants just as soon as they recovered their liberty.

"3. The adjustment of the question of Western Thrace, which has been disputed with Turkey up until the conclusion of peace, will be made the subject of plebiscite executed with the fullest liberty to its inhabitants.

"4. The safety of Constantinople, headquarters of the Mussulman caliphate and capital of the Ottoman Empire, as well as that of the Sea of Marmora, must be assured. This condition once complied with Turkey must then treat with the Allied authorities the subject of opening the Straits to world commerce.

"5. The rights of minorities will be guaranteed by us in the hope that the same rights will be

granted to the Mussulman populations in contiguous territories. The question of guarantees will be subject to the same laws and principles which have been established between the Entente and its enemies and between the Entente and some of its allies.

"6. Our highest and most vital principle is to have entire independence, with which, as in the case of all other countries, we shall be able to develop ourselves both socially and economically. We are opposed to all restrictions which are but obstacles to our political, judicial, and economic development. The terms of the payment of our debts, which will certainly be settled, must not be contrary to the spirit of this principle.

"The terms of the Pact are in essence a declaration of independence from foreign control. They ignore the fact that Turkey lost the war, and should therefore expect to share the humiliations of her allies by being subjected to penalties and indemnities. As the Entente Powers have discovered at Lausanne, the Angora Government repudiates responsibility for the World War, and the logical consequences of defeat."—H. A. Gibbons, *Europe since 1918*, pp. 446-448.

1920 (May).—Territorial extent of Turkey according to Treaty of Sèvres.—Failure of treaty.—By the Treaty of Sèvres with Turkey (May 11, 1920) the empire was considerably reduced. (1) Thrace as far as Chatalja together with several islands of the Ægean was ceded to Greece. (See GREECE: 1920.) Smyrna with some surrounding territory was administered by Greece under the sovereignty of Turkey. (3) Mesopotamia, Palestine, Syria, Armenia, and Hejas became independent, the first three under mandatories. (4) Kurdistan was autonomous. (5) Castellorizo and Dodecanese were ceded to Italy. Turkey held Constantinople (see CONSTANTINOPLE: 1920), but the Dardanelles (see DARDANELLES: 1920), the shores of Marmora and the coasts of the Bosphorus were put under a "Commission of Straits" formed by the League of Nations. (See also BOSPORUS: 1920.) The area of Turkey was thus about 175,000 square miles with a population of 8,000,000, while the area of old Turkey had about 6,000,000 square miles and the population over 20,000,000. "The Entente Powers, after ignoring Russia in drawing up the treaties that were to make the new map of Europe, believed that it was in their power to settle the devolution of the Ottoman Empire. Rid, as they thought, of the embarrassment of Russian claims to Constantinople and to a sphere of influence in Asia Minor, they acted on the assumption that the interests of three powers alone needed to be considered when, at San Remo, they decided upon the terms of the Treaty of Sèvres. Even if they had preserved a united front, it would have been difficult to ignore Russia. With the divergence of interests among them, the San Remo compromise, leaving out Russia, was as absurd as it was futile. This was soon discovered. The Turkish Nationalists at Angora naturally appealed to Moscow for aid to prevent the dismemberment of their country. A Russo-Turkish treaty was concluded in the autumn of 1920, which was revised and strengthened in 1921 and 1922. Artillery, airplanes, motor-lorries, gasoline, timber, and ammunition were given to the Angora Government, which enabled Mustafa Kemal Pasha to drive the French out of Cilicia and to check the advance of the Greeks in Asia Minor. The Nationalists were thus enabled to become much stronger than the intrigues of France and Italy had planned that they should become."

H. A. Gibbons, *Europe since 1918*, pp. 187-188.— See also SÈVRES, TREATY OF (1920): Part II; Part III: Political clauses: Greece; Morocco, Tunis; Armenia; Libya; Egypt, Sudan and Cyprus; Hedjaz; Kurdistan; Part V: Military clauses: Naval provisions; Part VIII; BALKAN STATES: 1921: Greece.

1920 (June).—Beginning of Greco-Turkish War.—Operations in Asia Minor and Thrace. See GREECE: 1920.

1920 (November-December).—Bolshevist agreement with Mustafa Kemal.—Armistice with Armenia.—Soviet government at Erivan.—"What is deemed the most authentic report of the Kemal-Bolshevist pact was published by the British and French Governments on Nov. 23. It reads as follows: '1. To insure the territorial integrity of Turkey and restore Turkish administration in the regions inhabited by Turks. 2. Turkish control is to be established in the new States of Arabia and Syria. 3. Facilities are to be accorded Russian delegates with a view to the development of communism in Turkey. 4. Russia and Turkey agree to "liberate Moslem countries, such as India, Algeria, Egypt, Morocco and Tunisia, from the foreign yoke" and grant them independence. 5. Russia recognizes the independence of Moslem States in her territory, and guarantees their integrity. 6. Russia agrees to grant financial and material aid to Turkey. 7. Russia agrees to dispatch two army corps, followed by more if necessary. 8. Hostilities may be continued against the Entente without previous reference to the National Councils of both countries.' Kemal thereupon began to extend his lines, covering the territory given to Turkey by the Treaty of Brest-Litovsk, until George Tchitcherin, the Soviet Foreign Minister, informed him that this treaty was invalid. Then Kemal opened negotiations directly with the new Armenian Government at Erivan—a coalition Government formed by Katchaznoui—before it had become entirely dominated by the Bolsheviki. These negotiations resulted in an armistice, which was signed by Armenian and Nationalist delegates at Alexandropol on the night of Dec. 2-3. The terms of this armistice, as reported to the Near East Relief Organization in New York on Dec. 4, were as follows: 'A neutral zone, about sixty-eight miles long, had been provided for between Sanain and Alaguez, the second highest mountain in Armenia, and thirty-four miles northwest of Erivan, the Armenian capital. Other boundaries were unknown to Sanain. A commission of three Turks and three Armenians, to control the neutral area, was to arrive Dec. 6. The territory in the neutral zone includes the important Armenian city of Alexandropol, and Karakliss, Delijan, Habamloo, Bash-Abaran, Akhta, Khoroum, Bandamal and a score of other towns. Under the armistice terms, all troops except officers and six soldiers in Karakliss were to withdraw eleven miles from the zone. Refugees are permitted to return into the area, but it was not known whether any guarantee of their safety had been provided. The Armenians were to deliver to the Turks 2,000 rifles, sixty machine guns, two locomotives and 560 cars. The report had been confirmed, it was added, that the Turks were massacring the inhabitants of two villages near Habamloo in alleged reprisal for the killing of two Turkish soldiers by civilians. President Abrounian of Armenia was at Geneva, striving to have the League do something to prevent Armenia from being crushed by the Bolsheviki on one side and the Turkish Nationalists on the other. Armenian societies in the United States and abroad

Maps prepared specially for the NEW LARNED  
under direction of the editors and publishers.

have long pointed out that with proper arms the Armenian army of 17,500 could have given a good account of itself, if the smuggled supplies to the Bolsheviki and the Nationalists could be cut off. Now, however, it is too late. All arms have been surrendered. A Soviet Government has been established at Erivan under Katchaznoui as Prime Minister, replacing Chanjanian, and complete accord has been reached between Erivan and Soviet Russia, Azerbaijan, and the Turkish Nationalists. Armenia as a country has been reduced to less than 500 square miles area, confined entirely to the region of Erivan and Lake Gokcha."—*New York Times Current History, Jan., 1921, pp. 67-68.*—See also ARMENIA: 1920: Turk and Bolshevik attacks.

1921 (January).—Law of Fundamental Organization.—On Jan. 20, 1921, "Mustafa Kemal issued the constitution of his new state, the so-called *Law of Fundamental Organization*. This was as bold a challenge to the Sultan and his government as the National Pact had been to the Allies, for by omission of any mention of the Sultanate and by implication, at least, it proclaimed a republican form of government of an ultra-democratic nature, in which the final authority in all matters was vested in the Grand National Assembly, and a large degree of autonomy localized in the province (*vilayet*) and in the township (*nahieh*)."—B. Miller, *New Turkey (Annals of the American Academy of Political and Social Science, July, 1923, pp. 136-137)*.

1921 (January-February). — Invitation to Turkish Nationalists to participate in London Near East conference for revision of treaty.—Their hostile attitude.—Proclamation of Nationalist government.—Pan-Islamic conference.—It was officially announced in Constantinople on Jan. 27 that the Supreme Council's invitation for the Sultan's Government to send a delegation to the Near East Conference at London, beginning Feb. 21, at which a revision of the Sèvres Treaty would be considered, had been accepted, and that his Majesty's Government, by promise to the Council, had transmitted a most urgent invitation to Angora, asking Mustapha Kemal Pasha, or a representative of the Nationalist Government there, to participate in the Conference. . . . One party at Angora insisted that the invitation to the conference should come direct from the Supreme Council or one of the Entente Powers, and not through the intermediary of Stamboul; while another party, led by Kemal, insisted that at least Anatolia must be evacuated by the Allies before the invitation to the conference could even be considered. It was stated that the Sultan's delegation had also been instructed to make the following demands: First—Abrogation of the privileges of Greece in the Smyrna region under the Treaty of Sèvres; Second—Autonomy for Thrace; Third—Maintenance of Turkish sovereignty over the Turkish territory awarded to Armenia; Fourth—Modification of the economic clauses of the treaty which infringe upon Turkish sovereignty and independence; Fifth—Modification of the military clauses so that Turkey will be enabled to retain a 'defensive army.' On Feb. 5 the Nationalist Government proclaimed the assertion that it, and it alone, was the true Government of Turkey, and it required the Porte to publish an edict recognizing that fact. France was said to be in favor of recognizing the demand; Great Britain was known to be against it, as the . . . Government at Constantinople . . . [was] Great Britain's creation. Should Kemal's demands be conceded, the Sultan,

it was thought, might be permitted to remain in Constantinople as Caliph, but the Government would be transferred to Angora with the abolition of the Cabinet of Stamboul and its replacement by a commission from Angora. But the Emir of Afghanistan was also a candidate for the Caliphate. On Jan. 19 he sent the following message to Kemal Pasha: 'I should like to have a permanent mission to reorganize my army, which is ready to take the field for the emancipation of our brothers.' . . . In the religious sphere of the situation there were movements and counter-movements. The Stamboul Government submitted a project for the Sultan's approval converting the Ministry of Evkaf, or Pious Foundations, into a department of the Sheik-ul-Islamat, providing for the formation of a council which should organize Moslem communities after the fashion of Christian communities existing in the Ottoman Empire for centuries. This would turn the Caliphate into a hierarchy with authority over its priests and preachers which it does not now possess. On the other hand, there was a Pan-Islamic conference held at Sivas under the Presidency of El Seyid Ahmed, the former Sheik of the Senussi, with the object of drawing up a scheme for the co-ordination of Moslem communities all over the world, with the idea of placing Islam above the States to which the communities in question were subject. There were at the conference Emir Abdulla, Feisal's brother, an Emir of Kerbela, and a representative of the Iman Yehia, and Zaidi Emir of Sanaa in the Yemen, which is part of the domain of Feisal's father, King of Hedjaz, former Sheriff of Mecca."—*New York Times Current History, Mar., 1921, pp. 508-509.*

1921 (February).—Invasion of Georgian republic. See GEORGIA, REPUBLIC OF: 1921.

1921 (March-April).—Greek attempts to impose the Sèvres Treaty by war.—Secret treaties.—"On March 24, 1921, the Greek Army in Asia Minor began its campaign to execute single-handed the Treaty of Sèvres. It did this under the most trying moral and material handicaps. The country's repudiation of Venizelos and its restoration of King Constantine in November had seriously injured its moral status. Both France and Italy entered into separate engagements with the Kemalists which would prevent Greece, even if victorious over Kemal, from enjoying the fruits of that victory, even though they were limited to the original terms of the Treaty. According to the official statement, these proposals are to the following effect:

"The Allies would be prepared to facilitate the admission of Turkey to the League of Nations on condition that they have proof of Turkey's readiness to execute the Treaty as now modified. They would be prepared to withdraw from the treaty the menace at present suspended over Turkey of expulsion from Constantinople in certain contingencies: They would be prepared to concede to Turkey the Chairmanship of the Straits Commission, on which Turkey should, moreover, have two votes instead of one as hitherto proposed. The Allies would admit Turkish membership of the commission to prepare the scheme of judicial reform to replace the Capitulations. . . .

"THE DARDANELLES AND BOSPORUS.—Further, in regard to the Straits, the Allies have in mind considerably to reduce the demilitarized zone. . . .

"CONSTANTINOPLE.—The Allies might also consent to the rapid evacuation of Constantinople, of the Ismid Peninsula, and to limit the allied occupation to Gallipoli and Chanak. . . .

"KURDISTAN.—In regard to Kurdistan, the Allies would be prepared to consider a modification of the Treaty in a sense in conformity with the existing facts of the situation, on condition of facilities for local autonomies and the adequate protection of Kurdish and Assyro-Chaldean interests.

"ARMENIA.—In regard to Armenia, the present stipulations might be adapted on condition of Turkey recognizing the rights of Turkish Armenians to a national home on the eastern frontiers of Turkey in Asia and agreeing to accept the decision of a commission, appointed by the Council of the League of Nations, to examine on the spot the question of the territory equitably to be transferred for this purpose to Armenia.

"SMYRNA.—In regard to Smyrna, the Allies would be ready to propose an equitable compromise with a view to ending the present unhappy state of hostilities and ensuring the return of peace. The region called the Vilayet of Smyrna would remain under Turkish sovereignty."—*New York Times Current History, May, 1921, pp. 347-348.*

"Instead of standing by her fellow-signatories to the Treaty of Sèvres, France has agreed to other changes in that treaty, and has proceeded to carry out certain parts of it without waiting for the Turks to carry out their part, or even to reply to the joint proposals. . . . The separate treaty with France, printed below, surrenders to Turkey portions of Northern Syria which the Treaty of Sèvres set apart as Arab territory, and establishes a boundary entirely different from that previously determined.

"The French agreement is signed by Briand, the French Premier, and by Bekir Samy, delegate of the Grand National Assembly at Angora, acting in the name of the National Turkish Government. There are twelve points in the agreement, lettered from A to L, as follows:

"A.—Cessation of hostilities and exchange of prisoners, according to the terms of the attached annex.

"B.—Disarmament of the populations and of the armed bands in accordance with regulations to be made by the French and Turkish military authorities.

"C.—Establishment of a constabulary (making use of the gendarmerie already formed) under Turkish command, assisted by French officers, who will be placed at the disposition of the Turkish government.

"D.—In accordance with measures to be agreed upon by the French and Turkish military authorities, there will be evacuation at the expiration of one month (after the cessation of the hostilities) of the territories occupied by the armed troops north of the frontiers established by the Treaty of Sèvres. The Turkish troops are first to retire and then eight day after the evacuation will occupy the localities evacuated by the French troops. Provisional measures will be taken with respect to the evacuation of territories assigned to Syria by the Treaty of Sèvres and reincorporated in the Turkish State by the present agreement, on account of ethnic considerations. Because of the condition of protracted war, and of the deep-rooted confusion which has resulted from it, the French troops will withdraw gradually, according to stipulations to be determined by the French and Turkish authorities, in a joint commission, on the following general basis: Effective pacification, guarantee of safe communication by railway between the Euphrates River and the Gulf of Alexandretta,

the restoration of construction in the Amanus Mountains and at the Bridge of Djerablous, the right of military pursuit in case of attack by bands, the punishment of those guilty of the ambush at Urfa.

"E.—Complete political amnesty and maintenance in their activities of the administrative personnel in Cilicia.

"F.—Pledge to protect the ethnic minorities, to guarantee to them absolute equality of rights in every respect and to have regard in an equitable way to the proportions of the populations for the purpose of establishing an equilibrium in the districts where the populations are mixed when the establishment of the constabulary is undertaken and when the municipal administrations are formed.

"G.—Economic collaboration between the French and Turks, with the right of priority in respect to concessions to be granted for the exploitation and for the economic development of Cilicia in the districts evacuated by the French troops, as well as in the vilayets of Mamurt-el-Aziz, Diarbekr and Sivas, in so far as such exploitation shall not be carried out directly by the Ottoman Government or by Ottoman subjects with the assistance of national funds. Concession to a French group in the Argana copper mines. Concessions which involve monopolies or privileges shall be exploited by companies that are established under the Ottoman law. The widest possible association of Ottoman and French capital (extending to 50 per cent. of Ottoman capital).

"H.—Establishment of proper customs regulations between the Turkish and Syrian territories.

"I.—Maintenance of French educational institutions and hospitals and of philanthropic organizations.

"J.—The French Government will establish a special administration for the District of Alexandretta where the populations are mixed, and agrees to give the inhabitants who are of the Turkish race every facility for the development of their culture and for the employment of the Turkish language, which will have an official character on a parity with the Arabic and French languages.

"K.—Transfer to a French group of the section of the Bagdad Railroad which extends from the Cilician Gates to the Syrian frontier. Every effort will be made to facilitate in every respect the use of the railroad by both Turks and French for economic and military purposes.

"L.—The frontier between Turkey and Syria will start from a point to be chosen on the Gulf of Alexandretta, immediately south of Payas, and will extend in a straight line toward Meidan Ekbes, the railroad station and the town being assigned to Syria. Thence the boundary will turn southeast in such a way as to leave to Syria the town of Marsova, and to Turkey the town of Karnaba, as well as the City of Killis. Thence the frontier meets the railroad at the station of Chotenbeg. From there the frontier will follow the Bagdad Railroad, whose roadbed will remain in Ottoman territory as far as Nissibin. Thence the frontier will go to the bend of the Euphrates north of Azekh and will follow the Euphrates as far as Djeziret-Ibin-Omar. The Turkish line of custom houses will be established north of the railway and the French line of custom houses to the south. . . .

"Done at London in duplicate, March 9, 1921."

"Not only France, but also Italy, it was revealed early in April, had concluded a secret pact with the Turkish Nationalists while Greece was fighting

in Anatolia to enforce the terms of the Sèvres Treaty signed by all the Allies in common. This agreement between Rome and Angora, it now appears, was arranged between Count Sforza and Bekir Samy Bey, representing Kemal, during the London conference in March. The pact itself was signed on March 12. Count Sforza on April 2 officially informed the Italian Chamber of the signing of this treaty, and explained the objects sought to be attained. The following week the British Government instructed its Minister at Rome to ascertain what the provisions of this secretly concluded compact were. The salient points of the treaty, finally published in Rome on April 7, and summarized in Paris on April 12, were as follows:

"1. The two Governments at Angora and Rome have in view Italian-Turkish economic collaboration with the right of priority for concessions of an economic character to be accorded in the Sandjaks of Adalia, Meugia, Bourdour and Sparta and in part of the Sandjaks of Afium, Karahissar and Kutahia, which will be determined when the accord becomes definite, as well as in the coal basin of Heraclea, so far as the above-mentioned should not be directly given by the Ottoman Government to Ottoman subjects with Ottoman capital.

"2. When the concessions contain privileges or monopoly they shall be exploited by societies formed according to Ottoman law.

"3. Ottoman capital shall be assisted as largely as possible with Italian capital. Ottoman participation may reach 50 per cent. of the total.

"4. The Royal Government of Italy pledges itself to support effectively in relations to its allies all demands of the Turkish delegation relative to the Peace Treaty, and especially restitution to Turkey of Smyrna and Thrace.

"5. This part of the agreement involves the withdrawal of Italian troops which still remain in Ottoman territory.

"6. The foregoing disposition will come into effect as a result of a convention to be concluded between the two contracting parties immediately after the conclusion of peace assuring Turkey a free and independent existence."

"On April 2, Count Sforza, the Italian Foreign Minister, gave in the Rome Chamber a comprehensive account of the Near East Conference and of the German Conference which followed. In regard to the former he said—and this is most important, as it has not been imparted by any other statesman of the Entente:

"The first proposal for a Commission of Inquiry in Thrace and Smyrna, conditionally accepted by the Turks and rejected emphatically by the Greeks, could not be imposed with force, and therefore another solution was required. It consists of fresh proposals made on March 12 concerning which the Turks showed themselves well disposed, and the Angora delegates promised to refer the matter to their National Assembly. The Greeks will refer the matter to Athens. The proposal is for a partial revision of the Treaty of Sèvres. [Here the Count paraphrased the proposals of the Allies.] I desired to reach an agreement with the Turkish delegates on our own economic action in Anatolia and the Heraclea mining basin, and it was understood that the policy of the Italian Government was to proceed in perfect harmony and co-operation with the Turkish authorities. I was able, happily, to conclude an agreement, signed on the evening of March 12, by which a vast zone in Asia Minor is open specially to Italian economic penetration

without any political aims, and I have secured the sincere and cordial co-operation of Turkey, which is convinced of the honest and loyal intentions of Italy."

—G. R. Montgomery, *Secret pacts of France and Italy with Turkey* (*New York Times Current History*, May, 1921, pp. 203-205).—See also GREECE: 1920-1921; 1921.

1921 (October).—**Franco-Turkish Treaty.**—"It is a sad commentary upon the fundamental heartlessness and cynicism of international politics that France, who profited greatly in Syria by the Greek victories of the summer of 1921, should have used the advantage they gave her to help her enemies against her ally. On October 20, 1921, Mustafa Kemal Pasha and M. Franklin Bouillon signed a treaty, which was ratified by the French Government ten days later. The convention was elaborate. France not only gave back to the Nationalists Cilicia (which she had received from Great Britain) without any stipulation for the protection of the unfortunate Armenians to whom the French authorities in Cilicia had appealed three years earlier to help France against the Turks, but returned to Turkish rule a strip of northern Syria that had been included in the mandate entrusted to France by the League of Nations. The section of the Bagdad Railway up to the Tigris was restored to Turkey. In return for extensive and exclusive economic concessions and preferential commercial treatment, France agreed to make the same promise that Italy had made, i. e., to support the Angora Government in ousting Greece from Smyrna and Thrace. The news of the treaty, leaking out almost immediately, caused a great outcry against France in Great Britain. Parliament and press united in denouncing the French act as a blow to the Entente alliance, a disloyal and underhand proceeding, and the betrayal of France's glorious and traditional rôle as protector of the Christians in the Levant."—H. A. Gibbons, *Europe since 1918*, pp. 454-455.—See also SYRIA: 1921.

1921 (November).—**Secret Pact of Sèvres published.**—"A considerable stir in world politics was occasioned on November 5, 1921 by the publication of the terms of the Italo-Franco-British agreement for maintaining respective spheres of influence in Asiatic Turkey. This pact, secretly signed at Sèvres on August 10, 1920, the date of the Turkish peace treaty, defined the areas of special interest to France and Italy. . . . This treaty however was not ratified."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1921, *Supplement*, p. 7.

1922.—**Deportation of Greeks.**—Turkish atrocities.—Activities of the Greek fleet.—Defeat of Greek army in Asia Minor.—Burning of Smyrna. See GREECE: 1922 (January-March); 1922 (April-July); 1922 (August-September).

1922.—**Republican Turkey.**—**Caliphate.**—The Nationalist party had proclaimed Turkey a republic in 1920 by the Law of Fundamental Organization, but they were not strong enough to depose the sultan till 1922. "The National Assembly on Nov. 16 [1922], accused . . . Mohammed VI., of treason, and ordered him and his Cabinet Ministers to be placed on trial. The . . . Sultan, who had so far remained in his palace in Constantinople, refusing to abdicate, now believed that his life was in danger and applied to the British authorities for protection. Lieut. Gen. Harrington thereupon communicated with the Government in London, and arrangements were made for Mohammed VI [to escape to Malta]. Great Britain's defense for giving refuge to the ex-Sultan was that he formally

asked as Caliph of the Mussulmans for protection from what he considered a personal danger, and that Great Britain could do nothing else but comply. It was pointed out that Great Britain had traditionally been the refuge of deposed sovereigns, and that even Napoleon had been removed to safety on a British ship."—*New York Times Current History, Jan., 1923, pp. 699-700.*—Abdul Medjid Effendi, son of Abdul Aziz "was selected as the best qualified among the members of the Osman royal family in accordance with the decision passed in the Great National Assembly of Turkey on Nov. 1, 1922, which provided that the Caliphate should continue to be exercised by the royal family, and that he should be chosen by the National Assembly. The election of the Caliph without political power is not only an epoch making event in Islam, but has a vital importance to the whole world. About 3,000,000 Mohammedans are scattered over the globe. Half of them are under British rule, and at least 30,000,000 are subjects of France. There is no power today, including the United States, which does not number some Mohammedans among its subjects. . . . So far no objection has been raised in the Moslem world against the decision of the National Assembly. On the contrary, there are many evidences of approval from the different parts of the world of Islam. The Indian Caliphate Committee, which represents 75,000,000 Mohammedans of India, immediately cabled its approval to the Turkish delegation at the Lausanne Peace Conference. The Egyptian Nationalist delegation at Lausanne declared in a public interview that 'the Turks have a right to overthrow the Sultan and Caliph and select a new Caliph for the place.' The hundreds of millions of Mohammedans living in Russia, in Turkestan, in Afghanistan and in the others parts of Asia have already declared that they recognize the new Caliph elected by Angora as the legitimate spiritual head of the world of Islam. Only the attitude of the Arabs remains to be seen."—M. Zekeria, *New Turkish Calif (New York Times Current History, Jan., 1923).*

1922.—Expedition of Enver Pasha to Bokhara. See TURKESTAN: 1922-1923.

1922.—Represented at Genoa Congress of Oriental Peoples. See GENOA CONGRESS OF ORIENTAL PEOPLES.

1922-1923.—First and second conferences at Lausanne.—End of Greek War.—Armistice of Mudania.—Chester concession.—Republic established.—"Owing to Russian support, the Turks at the [first] Lausanne Conference [see NEAR EAST CONFERENCE], at the end of 1922 were defiant and refused to accept modification of the Treaty of Sèvres which would safeguard Entente economic interests in the Ottoman Empire. . . . Great Britain and France stood together in deciding to exclude Russia from active participation in the Lausanne Conference with the approval of the new government in Italy. The Fascisti had always been anti-bolshevist, and Mussolini reversed the policy of his predecessors. Tchitcherin was told that Russia would be allowed to sign the convention concerning the Straits, to be embodied in the new treaty with Turkey, but could have no part in drafting the convention or in discussing other provisions of the treaty. Since Russia was more interested in the Lausanne decisions than any other great power, the policy of refusing her active participation in making the treaty, especially the clauses relating to the Straits, angered the Russians. They became a powerful factor in encourag-

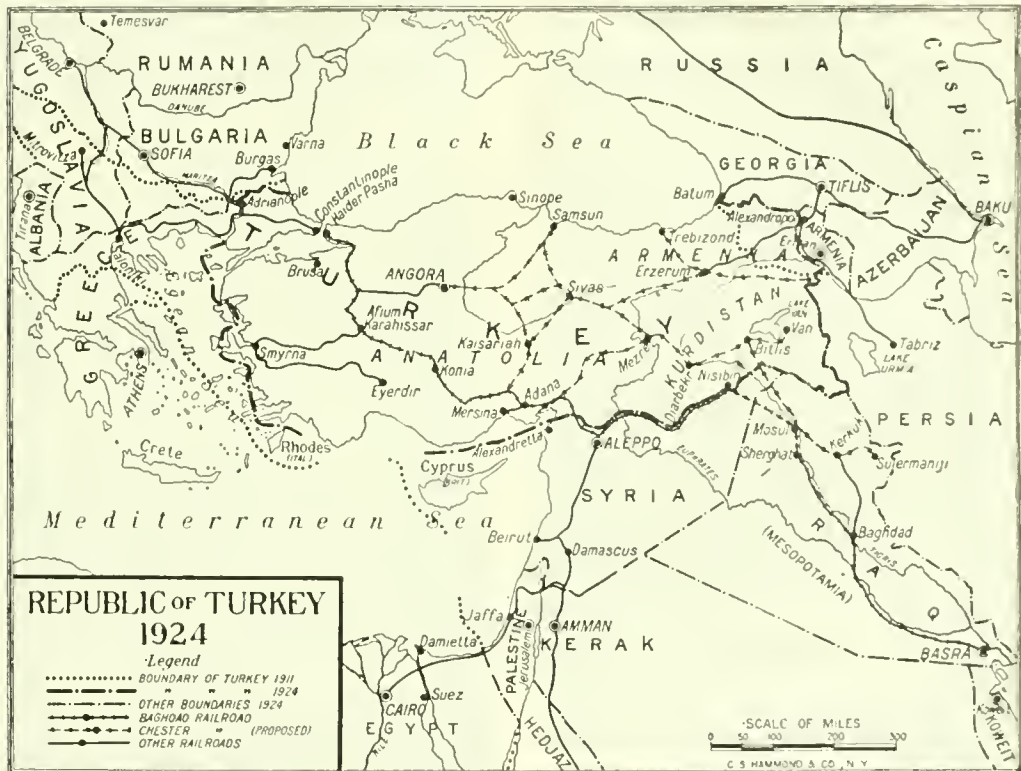

ing Ismet Pasha. The conference broke up. The Entente Powers were incensed, and did not invite Russia to send a delegation when the conference met again in April, 1923. Notwithstanding this the Soviet minister at Rome was ordered to Lausanne, where he was assassinated in a restaurant. This tragedy led to a renewed declaration that whatever agreement was reached at Lausanne would be considered null and void by Russia. . . . [In the meantime] the Turks agreed to meet the Entente Powers and the Greeks in an armistice conference at Mudania, on the Sea of Marmora. The Turks wanted to reoccupy Constantinople and Thrace immediately. The British refused. After long discussion a compromise was made. The Greeks should evacuate Eastern Thrace; and Turkish gendarmes, with civilian functionaries, should be allowed to take over the administration of Thrace, pending the decision of the Peace Conference. [See THRACE: 1922.] The Nationalists might also send functionaries to Constantinople. But the Entente Powers should remain in control of the Straits, and the garrisons at Constantinople should not be withdrawn until after peace was signed. This was the situation when the delegates of the Entente Powers, the Little Entente, Greece, and Turkey—all of whom had signed the defunct Treaty of Sèvres—met at Lausanne on November 20, 1922, to try again to establish peace in the Near East. . . . The movement for the revision of the Treaty of Sèvres, which was begun before the treaty was signed, had its origin in the economic rivalry and the mutual suspicions of the visitors. Had not this conflict of interests . . . become acute enough for Italy and France to decide to give encouragement and aid to the Turkish Nationalist movement, there need not have been a Lausanne Conference. The sentimentalists, who see in Mustafa Kemal Pasha 'the George Washington of his country,' have not studied the Young Turk movement of a decade ago and experienced its bitter disillusionment. . . . The conference resumed its sessions at Lausanne on April 22 [1923], in an atmosphere that had not changed during the recess. Quite the contrary! During the fortnight preceding the reopening, several events had complicated the diplomatic situation in the Near East. The Greeks had seemingly been able to reconstitute an army of 100,000 mobilized on the Thracian frontier. On April 15 the deposed sultan, who, through British aid, had gone to the Hedjaz, issued a proclamation from Mecca, declaring null and void the decree of the Angora Assembly, deposing him from the double office of sultan and khalif and naming a new khalif. On April 10 the Turkish Government announced that it had granted a sweeping concession in Asia Minor to a supposedly American group, headed by Admiral Chester, U.S. Navy, retired. [See also TRUSTS: International: Struggle for oil concessions.] More than a thousand miles of railways, with ports, and a modern city at Angora, were to be built by the Chester group at an estimated cost of \$300,000,000 in return for which the right to minerals and oil was granted the Americans from Mosul to Samsun, a country believed to be abounding in undeveloped wealth. Although the Chester group did not seem to have financial backing to cope with a concession of this magnitude, and was not taken seriously by financiers in New York, London, and Paris, the French Government made a vigorous protest, through General Pellé at Constantinople, refusing to recognize the validity of the part of the concession relating to the railway outlet to the Black

Sea. The French claimed that the Samsun Railway concession had already been granted to a French group in 1914, before the outbreak of the war, in return for a loan on which heavy instalments had been paid by Paris to Constantinople. The British Government declared that Turkey had no authority to grant a concession involving the oil and minerals and projected railways of the Mosul region. The feeling aroused over the Chester concession, and the subsequent attempt of British and French bankers to have it set aside and a trade monopoly in Asia Minor granted to them, indicated that the negotiators of the Entente Powers at Lausanne were primarily representing the commercial interests of their countries."—H. A. Gibbons, *Europe since 1918*, pp. 198-199, 460-462,

fault was a lack of energy in production; that before the war (1911) imports had amounted to nearly £T 54 millions, while exports had scarcely totalled £T 30 millions. He further declared that the decline of the country in the past had been caused not so much by the 'economic subjection' in which it had been held—the reference is of course to the foreign concessions and to the tariff clauses of the capitulations—as by a complete ignorance on the part of the Turks of the most elementary laws of economics."—B. Miller, *New Turkey (Annals of the American Academy of Political and Social Science, July, 1923, pp. 136-137, 139).*

502-503.—See also NEAR EAST CONFERENCE; GREECE: 1922 (September-October).

1923.—Prohibition movement. See LIQUOR PROBLEM: Turkey.

1923 (February).—Economic pact.—“As the result of inquiries made by Mustafa Kemal on a tour of inspection through Asia Minor, a great economic congress was held at Smyrna in the latter half of February . . . at which 1,135 delegates are said to have been present. This congress presented the nation with a new pact, the *Economic Pact*, the twelve articles of which constitute a confession of sins, negligences, and ignorances in the past, and affirmation of good resolutions for the future. They assert that lack of thrift, laziness, and dishonesty are the deadly enemies of all progress; they advocate the conservation of natural resources, increase of population, physical and technical education, and scientific innovations. Mustafa Kemal Pasha, in his address to the congress, declared that the chief national

ish city.—Dardanelles and straits.—Capitulations.—“Turkey has gained most all her points at the conference because she has been strong enough to insist on them and would have yielded only to military pressure so hazardous, costly, and extensive that none of the allied powers would for a moment have attempted to have exerted it. This situation has been equally patent to the Turkish and allied plenipotentiaries and the results of the struggle have been predestined by it. . . . Greece's prospect of acquiring anything west of the Maritza or on the mainland of Anatolia has dwindled into the remote distance, if it has not altogether disappeared; while Turkey has ceased to aim at anything beyond a zone sufficiently deep to cover the straits of Constantinople.”—A. J. Toynbee, *East after Lausanne (Foreign Affairs, Sept., 1923)*.—The treaty of the allied powers and Turkey, the official text of which is published herewith, was signed in the Palais de Lumière at Lausanne, Switzerland, on July 24, 1923. Jugo-

slavia refused to sign because of dissatisfaction with the provisions for the apportionment of the Ottoman debt. Russia's signature confirming her acceptance of the convention referring to the Straits was added subsequently. . . . The treaty was ratified by the Grand National Assembly of Turkey at Angora, the present capital in Asia Minor, on Aug. 23. The Greek Government on Aug. 20 issued two decrees, one ratifying the treaty and the other declaring the cessation of the war with Turkey. A subsidiary treaty between Turkey and Poland was signed shortly before the signing of the Turco-allied agreement. Two treaties, one general and the other relating to extradition, were signed between Turkey and the United States on Aug. 6. . . .

### Part I.—Political Clauses

[The first clauses are those dealing with territorial questions, the more important being:]

Art. 2. From the Black Sea to the Ægean the frontier of Turkey is laid as follows:

(1) *With Bulgaria:* From the mouth of the River Rezvaya, to the River Maritza, the point of junction of the three frontiers of Turkey, Bulgaria and Greece: the southern frontier of Bulgaria as at present demarkated;

(2) *With Greece:* Thence to the confluence of the Arda and the Maritza: the course of the Maritza; then upstream along the Arda, up to a point on that river to be determined on the spot in the immediate neighborhood of the village of Tchörek-Keuy: the course of the Arda; thence in a southeasterly direction up to a point on the Maritza, 1 kilometer below Bosna-Keuy: a roughly straight line leaving in Turkish territory the village of Bosna-Keuy. The village of Tchörek-Keuy shall be assigned to Greece or to Turkey according as the majority of the population shall be found to be Greek or Turkish by the Commission for which provision is made in Article 5, the population which has migrated into this village after the 11th October, 1922, not being taken into account; thence to the Ægean Sea: the course of the Maritza.

Art. 3. From the Mediterranean to the frontier of Persia, the frontier of Turkey is laid down as follows:

(1) *With Syria:* The frontier described in Article 8 of the Franco-Turkish Agreement of the 20th October, 1921;

(2) *With Iraq:* The frontier between Turkey and Iraq shall be laid down in friendly arrangement to be concluded between Turkey and Great Britain within nine months. In the event of no agreement being reached between the two Governments within the time mentioned, the dispute shall be referred to the Council of the League of Nations. The Turkish and British Governments reciprocally undertake that, pending the decision to be reached on the subject of the frontier, no military or other movement shall take place which might modify in any way the present state of the territories of which the final fate will depend upon that decision.

[Then follow articles dealing with the methods by which the Boundary Commission shall carry out the work of tracing the frontier defined in Article 2. (2) Article 12 confirms previous treaties regarding the sovereignty of Greece over the islands of the Eastern Mediterranean, other than the islands of Imbros, Tenedos and Rabbit Islands, particularly the Islands of Lemnos, Samothrace,

Mytilene, Chios, Samos and Nikaria, subject to the provision made by Article 15, quoted below. Except where provided for to the contrary in this treaty, the islands less than three miles from the Asiatic Coast remain under Turkish sovereignty. Article 13 lays down restrictions to prevent the islands of Mytilene, Chios, Samos and Nikaria being used for warlike purposes. Article 14 provides that the islands of Imbros and Tenedos shall have a special local administration and that the native non-Moslem population shall be guaranteed protection and further that the agreement for the exchange of Greek and Turkish populations shall not apply to the inhabitants of these islands. Next come these clauses:]

Art. 15. Turkey renounces in favor of Italy all rights and title over the following islands: Stampalia (Astrapalia), Rhodes (Rhodos), Calki (Kharki), Scarpanto, Cases (Casso), Piscopis (Tilos), Misiros (Nisvros), Calimnos (Kalymnos), Leros, Patmos, Lipsos (Lipso), Simi (Symi) and Cos (Kos), which are now occupied by Italy, and the islets dependent thereon, and also over the island of Castellorizzo.

Art. 16. Turkey hereby renounced all rights and title whatsoever over or respecting the territories situated outside the frontiers laid down in the present Treaty and the islands other than those over which her sovereignty is recognized by the said Treaty, the future of these territories and islands being settled or to be settled by the parties concerned. The provisions of the present Article do not prejudice any special arrangements arising from neighbourly relations which have been or may be concluded between Turkey and any limitrophe countries.

Art. 17. The renunciation by Turkey of all rights and titles over Egypt and over the Soudan will take effect as from the 5th November, 1914.

Art. 18. Turkey is released from all undertakings and obligations in regard to the Ottoman loans guaranteed on the Egyptian tribute, that is to say, the loans of 1855, 1891 and 1894. The annual payments made by Egypt for the service of these loans now forming part of the service of the Egyptian Public Debt. Egypt is freed from all other obligations relating to the Ottoman Public Debt.

Art. 19. Any questions arising from the recognition of the State of Egypt shall be settled by agreements to be negotiated subsequently in a manner to be determined later between the Powers concerned. The provisions of the present Treaty relating to territories detached from Turkey under the said Treaty will not apply to Egypt.

Art. 20. Turkey hereby recognizes the annexation of Cyprus proclaimed by the British Government on the 5th November, 1914.

[Article 21 deals with the acquisition of British nationality by Turkish nationals in Cyprus. Under Article 22 Turkey recognizes, subject to certain provisions, the definite abolition of all rights and privileges which she enjoyed in Libya. The separate conventions relating to the Straits and the Thracian frontier are declared by Articles 23 and 24 to have the same force as the main treaty, while under Articles 25 and 26 Turkey recognizes the treaties with Germany, Austria, Hungary and Bulgaria and the frontiers laid down as a result of the general settlement after the war. The next two clauses read:]

Art. 27. No power or jurisdiction in political, legislative or administrative matters shall be exercised outside Turkish territory by the Turkish

Government or authorities, for any reason whatsoever, over the nationals of a territory placed under the sovereignty or protectorate of the other Powers signatory of the present Treaty, or over the nationals of a territory detached from Turkey. It is understood that the spiritual attributions of the Moslem religious authorities are in no way infringed.

Art. 28. Each of the High Contracting Parties hereby accepts, in so far as it is concerned the complete abolition of the Capitulations in Turkey in every respect.

[The treatment of Moroccans, Tunisians and natives of Libya in Turkey are dealt with in Article 29. The subject of nationality is covered by Articles 30-36, the main provision being that Turkish subjects habitually resident in territory which under this treaty is detached from Turkey are to become nationals of the State to which such territory is transferred. The clauses (Section III, of Part I.) relating to the protection of minorities are the following:]

#### PROTECTION OF MINORITIES

[Articles 37 to 45 deal with the protection of minorities.]

Art. 38. The Turkish Government undertakes to assure full and complete protection of life and liberty to all inhabitants of Turkey without distinction of birth, nationality, language, race or religion. All inhabitants of Turkey shall be entitled to free exercise, whether in public or private, of any creed, religion or belief, the observance of which shall not be incompatible with public order and good morals. Non-Moslem minorities will enjoy full freedom of movement and of emigration, subject to the measures applied, on the whole or on part of the territory, to all Turkish nationals, and which may be taken by the Turkish Government for national defense, or for the maintenance of public order. . . .

Art. 44. Turkey agrees that, in so far as the preceding Articles of this Section affect non-Moslem nationals of Turkey, these provisions constitute obligations of international concern and shall be placed under the guarantee of the League of Nations. They shall not be modified without the assent of the majority of the Council of the League of Nations. The British Empire, France, Italy and Japan hereby agree not to withhold their assent to any modification in these Articles which is in due form assented to by a majority of the Council of the League of Nations. Turkey agrees that any Member of the Council of the League of Nations shall have the right to bring to the attention of the Council any infraction or danger of infraction of any of these obligations, and that the Council may thereupon take such action and give such directions as it may deem proper and effective in the circumstances. Turkey further agrees that any difference of opinion as to questions of law or of fact arising out of these Articles between the Turkish Government and any one of the other Signatory Powers or any other Power, a member of the Council of the League of Nations, shall be held to be a dispute of an international character under Article 14 of the Covenant of the League of Nations. The Turkish Government hereby consents that any such dispute shall, if the other party thereto demands, be referred to the Permanent Court of International Justice. The decision of the Permanent Court

shall be final and shall have the same force and effect as an award under Article 13 of the Covenant.

Art. 45. The rights conferred by the provisions of the present Section on the non-Moslem minorities of Turkey will be similarly conferred by Greece on the Moslem minority in her territory. . . .

[Parts II-V contain clauses relating to financial, economic, communications and sanitary questions, and miscellaneous provisions.]—*New York Times Current History, October, 1923, pp. 89-92.*

The Straits convention signed on the same day as the Treaty of Lausanne guaranteed freedom of transit without tax through the Straits to ships of all nations. A straits commission was inaugurated which has to submit annually to the League of Nations an account of its activities as well as a report of all information likely to be of use to commerce and navigation. The Capitulations were abolished, but Turkey undertook to put European legal advisers into her judiciary system for a while.—See also NEAR EAST CONFERENCE; CAPITULATIONS.

1923 (October).—Mustafa Kemal president.—“The National Assembly at Angora has voted the establishment of the Turkish Republic. Mustapha Kemal Pasha has been unanimously elected President. The Turkish Constitution . . . provided that Turkey should be proclaimed a republic, with a President elected for a period of four or five years. The title of President of the Grand National Assembly has been held by Mustapha Kemal, who also holds the post of Commander-in-Chief of the army.”—*New York World, Oct. 30, 1923.*

**TURKEY, Constitution of.**—Turkey at present is under the rule of the Grand National Assembly, which came into power in January, 1920. Early in 1921 the Law of Fundamental Organization, passed by the Grand National Assembly proclaimed Turkey a republic and deposed the sultan in 1922. [See **TURKEY: 1921 (January).**] Members are elected to the Grand National Assembly for a period of two years. The president is elected by the Assembly for two years. There is no senate, but members of the Assembly are chosen by the president to form the executive body. The first attempt of the Turks at constitutional government was by means of the *Tanzimat* or *Halli Hamayouna* in 1839. [See **TURKEY: 1839.**] The *Mihlat* constitution with a senate and chamber of deputies was proclaimed by Abdul Hamid II in 1876, but he ruled as an absolute monarch until his deposition in 1908, when the constitution was restored. [See **TURKEY: 1861-1877; 1908.**] The chamber of deputies last sat April 11, 1920. "An official statement from Angora announced that 'the Grand National Assembly of Turkey [see **TURKEY: 1922; 1922-1923**], in its session the afternoon of October 27, 1923, made the following decisions by unanimous vote. (1) The form of the Turkish State is Republican, its religion Moslem and its official language Turkish. The President of the republic, who is the Chief of State, is elected by the Grand National Assembly from among its members for the period for which the members of the Assembly are elected; and in this quality he presides whenever he judges it necessary over the Assembly and the Council of Ministers. The Prime Minister is chosen from among the members of the Grand National Assembly by the President of the republic, who chooses as well the other Ministers from among the members of the same Assembly. The Council of Ministers thus constituted is presented by the President of the republic for the approval of the Assembly. This approval is postponed until a meeting of the Grand National Assembly, if the latter is not in session. (2) His Excellency Gazi Mustapha Kemal Pasha was in the same session unanimously elected President of the Republic.' . . . Important steps were thus taken in the evolution of a form of government for New Turkey. The 'Organic Statute' of November, 1922, continued the extraordinary condition of the previous three years by confirming the National Assembly as the only seat of sovereignty and authority. Under the plan Ministers of State were elected separately and entrusted with very limited powers, being constantly responsible to the Assembly. Serious defects arose in practice and a commission of twelve, composed mostly of lawyers, but having Mustapha Kemal Pasha among its members, was chosen to elaborate the Constitution. After differences and delays, the new scheme was adopted which transfers the executive powers of the Assembly to the President during its four years term. The 'Chief of State' is assisted by a Cabinet or 'Council of Ministers' (like himself chosen from the membership of the Assembly), to which is added during recesses the chairman of standing committees. . . . The distinctive and essential feature of the present Turkish Constitution, novel for Turkey, Islam, and Asia, is the express location of sovereign power in an Assembly elected by all males of voting age."—A. H. Lybyer, *Turkey and the Near East (New York Times Current History, Dec., 1923).*

**TURKS AND CAICOS ISLANDS.**—"Turks and Caicos Islands . . . form a part of the Bahamas, which may be considered to extend from off the Florida coast to Navidad Bank, north of the eastern end of Haiti. The Turks and Caicos Islands owe their existence as a British colony to the salt ponds that are found upon the two principal keys of the group. . . . In 1848, the Turks and Caicos Islands—the Caicos Islands by this time being a recognized part of the colony—were authorized to govern themselves under the supervision of the Governor of Jamaica. From 1848 until 1874 the islands were controlled in this manner. The local method of governing did not prove a success, however, for the little colony was unable to support itself from the revenues derived from export taxes on salt. In consequence, on January 1, 1874, the Turks and Caicos Islands were formally declared to be a Crown Colony and a dependency of Jamaica, which status they have retained until the present day."—T. de Booy, *Turks and Caicos Islands (Geographical Review, July, 1918).*—See also **BAHAMA ISLANDS; BRITISH EMPIRE: Extent.**

**TURLUPINS.** See **BEGUINES.**

**TURNACUM,** early name of Tournay. See **TOURNAI.**

**TUSCANY,** district on the west coast of Italy, bounded on the northwest by Liguria and Emilia, on the east by the Marches and Umbria, on the southwest by the province of Rome and on the west by the Mediterranean. The population was 2,830,747 in 1921.

685-1115.—**Founding of the duchy.**—**Reign of Countess Matilda.**—**Rise of free cities.**—"The first Lombard duke of whom any sure record remains is a certain 'Alovisino' who flourished about the year 685; and the last, though of more doubtful existence, is 'Tachiputo,' in the 8th century, when Lucca was the principal seat of government, with the privilege of coining, although her Counts were not always Dukes and Marquises of Tuscany. About the year 800, the title of Duke seems to have changed to that of Count, and although both are afterwards used the latter is most common: Muratori says, that this dignity was in 813 enjoyed by a certain Boniface whom Sismondi believes to be the ancestor of Countess Matilda; but her father, the son of Tedaldo, belonged to another race: he was the grandson to Attone, Azzo, or Adelberto, Count of Cannosa. . . . The line of Boniface I finished in 1001 by the death of Hugo the Great. . . . After him, on account of the civil wars between Ardoino and Henry, there was no

permanent Duke until 1014, when the latter appointed Ranieri, whom Conrad the Salique deposed in 1027, making room for Boniface the father of Countess Matilda. This heroine died in 1115 after a reign of active exertion for herself and the Church against the Emperors [in the "War of Investitures" (see PAPACY: 1056-1122)], which generated the infant and as yet nameless factions of Guelph and Ghibeline. . . . The fearless assertion of her own independence by successful struggles with the Emperor was an example not overlooked by the young Italian communities under Matilda's rule. . . . These seeds of liberty began first to germinate amongst the Lombard plains, but quickly spreading over the Apennines were welcomed throughout Tuscany [see ITALY: 1056-1152]. . . . It seems probable that in Tuscany, towards the commencement of the 12th century, the Count's authority had passed entirely into the principal communities, leaving that of the Marquis as yet untouched; but there are reasons for believing that the Countess Matilda in some of her difficulties was induced to sell or cede a portion of her power, and probably all that of the Count's. . . . Altogether, there appears little reason to doubt the internal freedom of most Tuscan cities very early in the 11th century."—H. E. Napier, *Florentine history*, v. 1, bk. 1, ch. 4.

TUSCARORAS, North American Indian tribe. See IROQUOIS CONFEDERACY: Iroquoian family; Tribes of the south.

TUSCULAN VILLAS.—"In Cicero's time the number of country-houses which a wealthy Roman considered it necessary to possess had evidently become considerable, and the amount spent upon them very great. The orator himself had villas at Tusculum, Antium, Formiæ, Baiæ, and Pompeii, besides his town-house on the Palatine, and his family seat at Arpinum. . . . The Tusculanum of Cicero had formerly been in the possession of Sylla. . . . Close to the Villa of Cicero, and so near that he could go across to fetch books from the library, was the Villa of Lucullus. . . . Many other Roman villas lay on the Tusculan hills."—R. Burn, *Rome and the Campagna*, ch. 14, pt. 3.

TUSCULUM.—"In the times of the Latin League, from the fall of Alba to the battle of Lake Regillus, Tusculum was the most prominent town in Latium. It suffered like the other towns in Latium, a complete eclipse during the later Republic and the Imperial times; but in the ninth, tenth, eleventh and twelfth centuries, under the Counts of Tusculum, it became again a place of great importance and power. [The ruins of Tus-

culum, about fifteen miles from Rome, on the Alban hills, have been considerably explored.]"—R. Burn, *Rome and the Campagna*, ch. 14, pt. 2.—See also ALBA.

**TUSUYANS**, North American Indian tribe. See SHOSHONEAN FAMILY.

**TUT-ANKH-AMEN** (fl. 14th century B. C.), Egyptian king. His tomb was excavated in 1922. See EGYPT: 1922-1923.

**TWIGHTWEES**. See ILLINOIS AND MIAMIS.

**TWO SICILIES**, Kingdom of the.—The kingdom, founded in southern Italy and Sicily by the Norman conquest in the eleventh century (see ITALY [Southern]: 1000-1090; 1081-1194), maintained its existence until recent times, sometimes as a unit, and sometimes divided into the two dominions, insular and peninsular, of Sicily and Apulia, or Naples. (See ITALY [Southern]: 1250-1268). The division occurred first after the rising against the French and the massacre known as "the Sicilian Vespers" (see ITALY [Southern]: 1282-1300). The crown of Sicily was then acquired by Peter, king of Aragon, succeeded by his son Frederick. Charles

of Anjou and his successors were left in possession of the kingdom of Naples, alone, although still claiming Sicily in union with it. "As the king who reigned at Naples would not give up his right to Sicily, . . . his kingdom is often called Sicily as well as the Island Kingdom; and so when at last the two kingdoms became one [again (see ITALY: 1412-1447)], the strange name of the Kingdom of the Two Sicilies arose."—W. Hunt, *History of Italy*, p. 93.—See also NAPLES; SICILY; MEDICAL SCIENCE: Medieval: 10th-12th centuries.

**TYPEWRITER**. See INVENTIONS: 19th century: Typewriter.

**TYPHOID FEVER**. See MEDICAL SCIENCE: Modern: 1014-1018.

**TYRANTS**, Greek.—"A 'tyranny,' in the Greek sense of the word, was the irresponsible dominion of a single person, not founded on hereditary right, like the monarchies of the heroic ages and of many barbarian nations, nor on a free election, like that of a dictator or æsymnete, but on force. . . . Aristotle makes it an element in the definition of tyranny, that it is exercised for selfish ends. But, according to the ordinary Greek notions, and the usage of the Greek historians, a mild and hen-

efficient tyranny is an expression which involves no contradiction."—C. Thirlwall, *History of Greece*, ch. 10.—"In spite of the worst which has been said against them, the tyrants hold a legitimate place in the progress of Greek constitutional history. They were the means of breaking down the oligarchies in the interests of the people. . . . It was at Sicyon that the first tyrannis arose. . . . About the year 670 B. C. a certain Orthagoras, who is said to have been a cook, succeeded in establishing himself as tyrant in Sicyon. (See SICYON.) Of his reign no incident is recorded. He was succeeded by his son Myron."—E. Abbott, *History of Greece*, pt. 1, ch. 12.—See also ATHENS: B. C. 560-510; B. C. 404-403.

ALSO IN: J. P. Mahaffy, *Problems in Greek history*, ch. 4.

TYRAS, ancient name of the river Dniester.

TYRCONNELL, Richard Talbot, Earl (Titular Duke) of (1630-1691), Irish Jacobite. Appointed lord deputy and military governor of Ireland, 1687. See IRELAND: 1685-1688; ULSTER: 1687-1689.

TYRCONNELL, ancient kingdom of Ireland in northwestern Ulster. See ULSTER: 1199-1260.

TYRE.—Tyre is the ancient name of the coastal town of Sur, or Es Sur, in Syria. It is situated about forty-six miles south of Beirut and its population is about 6,000. "Tyre consisted of two parts, an island about three-quarters of a mile in length, separated from the mainland by a strait four stadia, about half a mile, in width at its northern end, and a town on the shore. The latter was distinguished as Palæ-Tyrus, or Ancient Tyre, and was the chief seat of the population, till the wars of the Assyrian monarchs against Phœnicia. It extended along the shore from the river Leontes in the north to the fountain of Ras-el-Ain in the south, a distance of seven miles, great part of which would be suburb rather than city. Pliny, who wrote when its boundaries could still be traced, computes the circuit of Palæ-Tyrus and the island together at nineteen Roman miles, that of the island town being 22 stadia. . . . Whatever may have been the relative importance of Palæ-Tyrus and the island, previous to the great migration from Sidon [see SIDON], occasioned by the victory of the Ascalonites, there can be no doubt that from this time the population of the island greatly increased. The colonization of Gades took place about a century later. But we have no connected history of Tyre till near the age of Solomon."—J. Kenrick, *Phœnicia: History*, ch. 1.—See also PHœNICIANS: Origin; B. C. 604-500; CANAAN; COMMERCE: Ancient; B. C. 1000-200; B. C. 1000-600; CHRISTIANITY: Map.

Founding of the colony of Carthage. See CARTHAGE: Founding.

B. C. 598-585.—Siege by Nebuchadrezzar. See PHœNICIANS: B. C. 850-538; BABYLONIA: Nebuchadrezzar.

B. C. 332.—Siege and capture by Alexander the Great.—After defeating the Persians at Issus (see MACEDONIA: B. C. 334-330), Alexander turned his attention to the tributary Phœnician cities, whose fleets gave to the great king a naval power more formidable than the hosts of the nations which marched at his command. Sidon, Byblus, and other towns submitted promptly to the conqueror. Tyre offered a qualified surrender, which did not satisfy the haughty Macedonian, and he instantly laid siege to the city. Having no adequate fleet with which to reach the island-town, he resolved to carry a causeway across the channel which separated the island from old Tyre, on

the mainland, and he demolished the buildings of the latter to provide materials for the work. It was an undertaking of immense magnitude and difficulty, and the ingenious Tyrians found many modes of interfering with it. They succeeded in destroying the mole when half of it had been built; but Alexander, with obstinate perseverance, began his work anew, on a larger scale than before. He also collected a strong fleet of war-galleys, from Cyprus and from the Phœnicians who had submitted to him, with which the opposition of the enemy was checked and his own operations advanced. After seven months of prodigious labor and incessant battle, the strong walls of Tyre were beaten down and the city taken. "It soon became a scene of unresisted carnage and plunder. The Macedonians, exasperated by the length and labour of the siege, which had lasted seven months, and by the execution of their comrades [Greek prisoners, whom the Tyrians had put to death on the walls before the eyes of the besiegers, and cast into the sea], spared none that fell into their hands."—C. Thirlwall, *History of Greece*, ch. 50.

ALSO IN: Arrian, *Anabasis of Alexander*, bk. 2, ch. 15-24.

B. C. 332-A. D. 638.—Under Greek and Roman domination.—"The Carians, with whom Alexander re-peopled the city [of Tyre] fell into the habits of the former population, and both Tyre and Sidon recovered much of their commercial greatness. After a long struggle between the kingdoms of Egypt and Syria, Phœnicia was finally secured to the latter by Antiochus the Great (B. C. 198). But the commercial rivalry of Egypt proved more serious even than political subjection; and the foundation of Berenice on the Red Sea diverted to Alexander much of the oriental commerce that had previously flowed through Tyre and Sidon. But still they did not succumb to their younger rival. Under the Romans, to whom Phœnicia was subjected with Syria [by Pompey the Great B. C. 64], Tyre was still the first commercial city of the world."—P. Smith, *History of the world: Ancient*, ch. 24.

B. C. 322.—Absorbed in Egypt by Ptolemy Lagus. See EGYPT: B. C. 323-30.

A. D. 638.—Capture by Moslems.—After the taking of Jerusalem by the Caliph Omar, the Moslems made themselves masters of the remainder of Palestine very quickly. Tripoli was first won by treachery, and then the same traitor who had delivered it, making his way to Tyre, succeeded in bringing about the betrayal of that place.—Based on S. Ockley, *History of the Saracens*, pp. 251-253 (*Bohn ed.*).

1124.—Siege and conquest by the Venetians and Crusaders.—The Venetians took little or no part in the First Crusade, being largely engaged in commerce with the Saracens. But in 1124—a full quarter of a century after the taking of Jerusalem—they found it wise to obtain an interest in the Christian conquests that were spreading along the Levantine coasts. They accordingly sent their doge, with a formidable fleet, to offer aid to the Latin king of Jerusalem—then Baldwin II—for the reduction of either Ascalon or Tyre, both of which cities were still held by the Moslems. Finding it difficult to make choice between the two places, a solemn drawing of lots took place, at the altar of the holy sepulcher, as a means of ascertaining the will of God. The lot decided that Tyre should be attacked, and operations were accordingly begun. But "the Venetians, more devoted to the interests of their commerce and of their nation than to those of a Christian kingdom,

demanded, before beginning the siege of Tyre, that they should enjoy a church, a street, a common oven, and a national tribunal in every city in Palestine. They further demanded other privileges and the possession of a third of the conquered city. [The demands of the Venetians were complied with, and Tyre, after a siege of over five months, beleaguered by land and sea, was taken. The capitulation was an honorable one and honorably respected. The Moslem inhabitants were permitted to leave the city; the Christians entered it triumphally, and the day on which the news reached Jerusalem was made a festival.]—J. F. Michaud, *History of the Crusades*, bk. 5.

**TYROL**, or Tirol, one of the eight provinces of the republic of Austria, situated in the valley of Inn and the central zone of the eastern Alps. Its natural mountain barriers have made it of strategic importance. This territory has an area of 4,787 square miles, and a population in 1920 of 306,156. See ALPS: As barriers; BRENNER PASS; BALKAN STATES: Map.

**Origin of the county and its name.**—"Tyrol freed herself from the suzerainty of Bavaria in very early times. She was divided among a number of princes, lay and ecclesiastical. The principal of these were the counts of the Adige or of the Tyrol, and the counts of Andechs, who obtained the title of duke from Frederick I [1152-1100], and called themselves dukes of Meran. Their race came to an end in 1248, and their domains were united to those of the counts of Tyrol who thus became possessed of the larger part of the lands between the Inn and the Adige. Tyrol takes its name from the castle of Tirol, which was built on the site of the Roman station Teriolis, not far from Meran, on the upper waters of the Adige."

—L. Leger, *History of Austro-Hungary*, p. 144, *footnote*.—"After the dissolution of the classic Roman Empire, the Province of Rætia split up into parcels. . . . Tirol . . . [was] detached from Rætia Prima, and . . . began to form a separate entity. Meanwhile a power of first rate importance in the future history of Graubünden [the Grisons] had arisen: namely the Bishopric of Chur. . . . The Bishops of Chur took rank as feudal lords of the first class. . . . Originally an insignificant house, exercising . . . the functions of Bailies to the See of Chur, the Counts of Tirol acquired influence and territory under the shadow of distant ecclesiastical superiors."—J. A. Symonds, *History of Graubünden* (in Strickland's "*The Engadine*," pp. 23-27).

**TYRRELL**, Father George (1861-1909), Irish ecclesiastic. He was the writer of a letter which gave a notable impulse to the movement of thought in the Roman Catholic Church known as "Modernism," which Pope Pius X condemned as heretical in his encyclical of 1907. (See PAPACY: 1907 [September].) The letter was addressed to an English man of science (supposed to have been Professor Mivart) who, being a Roman Catholic, found difficulty in reconciling his scientific convictions with the tenets of his church. Parts of the letter obtained publication in Italy, and led to the expulsion of Father Tyrrell from the Society of Jesus. He then gave publication to the full text of the letter, under the title of "A Much Abused Letter." On the appearance of the encyclical against Modernism he criticised it with keenness, and was virtually excommunicated from the church. The fact that on his death-bed, when stricken with speechlessness, he received the sacraments of the church, gave rise to much controversy, as to his volition in the matter and as to the justification of the priest who ministered to him. Father Tyrrell had entered the Roman church in 1870, under the influence of the writings of Cardinal Newman.

**TYRRHENIANS, TYRRHENIAN SEA.**—The ancient race of people in western Italy whom the Romans called Etrusci, and who called themselves the Rasenna, were known to the Greeks as the Turrhenoi, or Tyrrhenians. They were an enterprising maritime people, and hence the Greeks called that part of the Mediterranean which washes the Western Italian coast the Tyrrhenian sea. See ETRUSCANS; COMMERCE: Ancient; B. C. 1000-200.

**UGANDA**, British protectorate lying between Lake Victoria, Lake Albert and Lake Rudolph in eastern equatorial Africa. (See **AFRICA**: Map.) It has an area of about 110,000 square miles. In 1918 the population was 3,354,314, of which 3,350,000 were native, 847 European, and 3,467 Asiatics (chiefly Indians. [See also **BRITISH EMPIRE**: Extent.]). For conveniences of administration the protectorate is divided into five provinces—Buganda, Western, Eastern, Northern and Rudolph. Four native kingdoms under native rulers are included—Buganda, the most important, which forms the province of that name, Toro and Ankole in the Western Province, and Bunyoro in the Northern province. Three or four thousand years ago the country was invaded by Hamitic races who introduced a certain amount of Egyptian civilization. Strong native states with an aristocracy of Hamitic (or Galla) descent, developed in Buganda, Bunyoro and Ankole. In the nineteenth century when these kingdoms first came into contact with Europe, that of Buganda was the most powerful. "It

was in 1858 that the travellers Burton and Speke, starting from Zanzibar, first made Europe acquainted with the existence of that vast inland sea, the Victoria Lake, of which Rebmann and Erhardt had already heard native reports. Four years later Speke and Grant, passing round the western shore, reached Uganda; and they found here, if I may employ the paradox, a singular, barbaric civilisation. Combined with the most barbarous usages and the grossest superstition were many of those advances in the scale of humanity which we are wont to accept as indications of civilisation. There was an appeal to law, and cases were decided after a formal hearing. The administration was vested in the king,—an absolute despot,—and from him downwards there existed a regular chain of delegated power and control. Well-made roads, kept constantly in repair, intersected the country in all directions. Rough bridges were constructed across river swamps. An army was maintained, and also a fleet of canoes on the waters of the lake. The arts of building, smith-work, &c., were very far in advance of anything to be found between Uganda and the coast. The ideas of decency, the use of clothing, and the planting of trees, were indications of long years of development, of which the intricate customs and etiquettes surrounding the Court were an additional proof. Speke traces the earliest developments of this civilisation to Unyoro and its shepherd kings, descendants of a nomadic, pastoral race—the Wahuma—whom he supposes to be an offshoot from the Abyssinians or Gallas. . . . Speke was enthusiastic about the fertility of Uganda, and the development of its people as compared with the savage tribes of Africa. The next European to visit the country was Colonel Chaillé Long, who was sent by [General] Gordon [from the Egyptian Sudan] in the summer of 1874. Stanley followed in 1875. . . . In 1876 Gordon sent . . . [his lieutenant, Emin Bey (afterwards pasha)] with a party of soldiers to Mtesa's capital. They were for some time quartered there, and Gordon had views of annexing Uganda to the Egyptian Sudan. . . . Stanley was even louder in his praises of Uganda than Speke had been, and described it as the 'Pearl of Africa.' In consequence of his appeal on behalf of the people, a fund was started, and missionaries were despatched to Uganda. These arrived in June 1877. . . . Some two years later—February 1879—the French (R. Catholic) Algerian Mission despatched a party of 'White Fathers' to begin mission-work in Uganda. . . . The Arabs from the coast had already settled in Uganda, and brought with them the religion of Islam. [From this time on the history of Uganda was a violent struggle between religious factions.] . . . Mtesa showed great toleration to all creeds, though at one time he had leaned to Mohammedanism, and had ordered all Uganda to embrace that creed. Shortly after, however, as the followers of Islam refused to eat the king's meat because it was not killed in the orthodox way according to the Koran, he ordered the massacre of all Mohammedans. . . . Mtesa died in the autumn of 1884, and Mwanga, then about eighteen years old, succeeded him. . . . At this time the three religions had made great progress, and their disintegrating influences on the old customs began to be more and more apparent. This was especially the case with regard to the Christians, who no longer regarded the king as divine, nor his acts, however gross and cruel, as having a divine sanction. They owned a Higher allegiance, though they remained obedient subjects, and distinguished themselves by bravery in war. Such an

attitude was, of course, intolerable to a cruel despot like Mwanga. . . . There was still a further reason for suspicion and fear of the white men. . . . The Egyptian flag had been hoisted at Mruli and Fauvera in Unyoro, only just beyond the borders of Uganda, and Gordon's envoys—Colonel Long and Emin—and his troops had penetrated to Mtesa's capital. The Arabs also told of the doings of the Belgians on the Congo. At a later period reports reached Mwanga of German annexations in Usagara on the East Coast. Last, and most disturbing of all, was the news of Mr. Thomson's arrival near Usoga in the East—the route from the coast by which native tradition said that the conquerors of Uganda would come. Mwanga had succeeded his father in November 1884. Early in 1885 he determined to stamp out those dangerous religions, Mohammedan and Christian alike, which were disintegrating his country. The missionaries Mackay and Ashe, were seized, and their followers persecuted. . . . After this the position of the Europeans was very precarious, but not till the following May (1886) did the storm burst. Mwanga then threw aside all restraint, and butchered the Christian converts wholesale."—F. D. Lugard, *Rise of our East African empire*.—Mwanga also broke openly with the Mohammedan faction and entered into a plot to put both Christians and Mohammedans on an island and leave them there to starve. The plot failed. At length, in 1888, there was a revolt, in which Christians and Mohammedans seem to have combined, and Mwanga fled to an island at the south of the lake. His brother Kiwewa was made king (1888), and for a time, the Christians were in control of affairs. But the Mohammedans grew jealous, and by a sudden rising drove the Christians out. Kiwewa refusing to accept the creed of Islam, was deposed, and another brother, Karema, was raised to the throne. The exiled Christians now made overtures to Mwanga, and an alliance was concluded, which resulted in the overthrow of the Mohammedan or Arab party, and the restoration of Mwanga to the throne in October, 1889. At this time an appeal for help was sent to the newly organized British East Africa Company. The two Christian factions, Catholic and Protestant, or French and English, divided the country and all the offices of government between them, but were bitterly jealous of each other and perpetually quarreled, while the defeated Mohammedans were still strong and unsubdued. Affairs were in this state when Dr. Karl Peters, the explorer in command of the German "Emin Relief Expedition," came to Uganda, ostensibly to rescue Emin Pasha but in reality to annex territories behind the British sphere, having learned of the rescue of Emin Pasha by Stanley. Dr. Peters, with the aid of the French party, succeeded in arranging some kind of treaty with Mwanga, and this alarmed the Imperial British East Africa Company when news of it had been received. These and other circumstances led to the despatching of Captain Lugard with a small force to Uganda to represent the British East Africa Company and establish its influence there. Captain Lugard arrived at Mengo, the capital of Uganda, on December 18, 1890. Meantime Great Britain and Germany, by the Anglo-German Agreement of July 1, 1890 (see AFRICA: Modern European occupation; 1884-1890) had settled all questions between them as to their respective "spheres of influence," and Uganda had been definitely placed within the British "sphere." (See AFRICA: Modern European occupation; Later 19th century.) This enabled Captain Lugard to

secure the signing of a treaty which recognized the suzerainty of the company, established its protectorate over Uganda, and conceded to it many important commercial and political powers. He remained in the country until June, 1892, during which time he was driven to take part in a furious war that broke out between the Catholic (or French) and Protestant (or English) parties. The war ended in a partition of territory between the factions, and three small provinces were, at the same time, assigned to the Mohammedans. After maintaining Captain Lugard and his force in the country for eighteen months, the company found the cost so heavy and the prospect of returns so distant, that it came to a resolution to withdraw; but was induced by a subscription of £16,000 from the Church Missionary Society to remain for another year in the exercise of the control which it had acquired. At the end of 1892 the company renewed its resolution to evacuate the region west of Lake Victoria, and the British government was urgently pressed to take upon itself the administration of the country. It was only persuaded, however, to assume the cost of a further occupation of Uganda for three months by the Company's officers, in order to give more time for ensuring the safety of missionaries and other Europeans. It consented, moreover, to despatch a commissioner to investigate the situation and report upon it. The official selected for that duty was Sir Gerald Porter, consul-general at Zanzibar. His report in December, 1893, urged the maintenance of an effective control over the government of Uganda, to be exercised directly by the British government, in the form of a protectorate, keeping the king on his throne, with a commissioner at his side to direct his action in all important particulars. After much discussion, the decision of the government was announced at the beginning of June, 1894. It determined to establish the proposed protectorate in Uganda, not extending to Unyoro, and to place a sub-commissioner on duty between Lake Victoria and the sea, for the purpose of watching over communications, and apparently without political powers.—Based on F. D. Lugard, *Rise of our East African empire*.—See also BRITISH EMPIRE: Expansion; 19th century; Africa: East Africa: 1893; BRITISH EAST AFRICA.

1894.—Creation of the protectorate. See BRITISH EAST AFRICA: 1895-1897.

1897-1898.—Native insurrection and mutiny of Sudanese troops.—A train of serious troubles in the Uganda protectorate began in May, 1897, with an insurrection of some of the chiefs, instigated by the king, Mwanga, who was restive under British control. The revolt was suppressed after some sharp fighting, especially at Kiango, on July 24, and King Mwanga escaped into German territory. In August he was formally deposed by a council of chiefs, and his infant son, Chua, was elected king in his place, under a regency of three of the chiefs. But a more serious trouble followed, from the mutiny of a part of the Sudanese troops which had been serving in Uganda. These troops (which had been recruited by Captain Lugard and had borne the brunt of the fighting in Uganda) were being sent to join an expedition, under Major Macdonald, for the exploration of the districts adjacent to the Italian sphere of influence, and were not permitted to take their women with them.

This seems to have been their chief grievance. They also complained of being overworked, underpaid, insufficiently fed, and commanded by young officers who would not listen to their complaints. They seized Fort Lubas, on the frontier between Uganda and Usoga, made prisoners of several of their officers, whom they finally murdered, and held the fort against repeated attacks until early in January, 1898, when they made their escape. They were pursued and attacked (February 24) at Kabagambe, on Lake Kioja, where they had built a fort. Many were killed, the remainder much scattered. A considerable party got away to the eastern side of the Nile and continued to give trouble there throughout the year. Meantime, the deposed king, Mwanga, had escaped from the Germans and effected a new rising among his late subjects; and another deposed king, Kabarega, of Unyoro, had also reappeared, to make trouble in that region. After the suppression of the Sudanese mutiny these risings were overcome, with the help of some 1,100 troops brought from India for the emergency. In March, there was news of Kabarega's death, and the British acting commissioner and consul-general issued the following proclamation: "Whereas Kabarega, the deposed King of Unyoro, is reported to have deceased, and whereas the present disordered state of affairs in that country has proved that, for the maintenance of good government and good-will, it is expedient to provide for the succession to the kingdom of a member of the Royal House, it is hereby publicly proclaimed that Karukala, son of Kabarega, is now appointed King of Unyoro, under the protection of Her Britannic Majesty. The Kingdom of Unyoro comprises the provinces of—Busindi, Shifalu, Magungu, Kibero, Bugoma, Bugahiaobeire. This appointment is in accordance with the general conditions by which countries in British African Protectorates are guided and regulated, and it secures to the Kingdom of Unyoro all the advantages which accrue from its being an integral part of such a Protectorate. The local government of the country will be administered, under the guidance of Her Majesty's Representative, by a Council of Regency of either two or three Chiefs, to be appointed by Her Majesty's Commissioner. This Council of Regency will, subject to the approval of Her Majesty's Commissioner, select and appoint the Katikiro and the other Chiefs of the first rank required in accordance with local custom. These Chiefs, on their appointment being confirmed, will select and appoint in full Council the lesser grade Chiefs, until the system of local administration is complete."—Great Britain, *Parliamentary Publications (Papers by Command: Africa, no. 7, 1898, p. 42)*.

**1898-1920.—Administrative and economic development.**—Ernest J. L. Berkeley (Sir Ernest) "who as the first regular commissioner had arrived in June 1895, left the country towards the end of 1898, and in December 1899 Sir H. H. Johnston arrived at the head of a special commission. The purposes of this commission were to investigate the resources of the Protectorate, to evolve a permanent system of administration, and to report as to what extent the cost of administration could be met by the local revenue. . . . With the *Kobaka* and chiefs of Buganda was made the Uganda Agreement of March 10, 1900, in which were provisions relating to native administration, taxation, and ownership of land. . . . Treaties on similar lines were made with Ankole and Toro. . . . The results of Sir H. H. Johnston's special commission were embodied in the Uganda Order

in Council 1902 which laid down the basis of the Protectorate's constitution. This enactment set up legislative, administrative, and judicial machinery, and applied to Uganda certain bodies of law and special enactments. It enumerated also the administrative divisions of the Uganda Protectorate. . . . In April 1907 by a proclamation of Sir H. H. Bell the administrative divisions were reorganized . . . [into] five provinces. . . . [In 1903 a small part of the Uganda territory was transferred to British East Africa and in 1914 another portion became part of the Sudan with a view to more convenient administration. In] the period from 1902 onward to the present time [written in 1920] the history of the Protectorate has been chiefly remarkable for rapid administrative and economic development. The most serious problem has been that of disease, namely sleeping-sickness, which broke out in 1901 and is said to have carried off 200,000 persons. . . . The old sources of political disturbance disappeared, and no new ones of any importance have opened up. . . . Agreements providing for new regulations as to taxation and justice were made with Toro in 1910, 1912, and 1914. . . . The extension of British administration to the outlying districts has not met with any serious resistance on the part of the natives. . . . In the Bukedi district, which was first opened up during the Sudanese Mutiny, punitive expeditions against various clans, the Bagishu, chiefly, were necessary in 1904, 1907, 1909, and 1911. . . . That part of the Kigezi district which had originally formed part of the Belgian Congo was handed over to the British authorities in May 1911 and in January of the following year a tract of country south of 1° south latitude was officially handed over by the Germans. . . . [During the World War, trouble of a more serious nature was given] by the tribes in the Turkana country, which extends roughly from the Sudan frontier southwards along the west side of Lake Rudolf into British East Africa."—Geographical section of the Great Britain Naval Intelligence Division, Naval Staff, Admiralty, I. D. 1217, *Handbook of the Uganda protectorate*, pp. 364, 369-374.—See also *WORLD WAR: 1914: VI. Africa: c, 2*.

**1911-1914.—Population.—Official capital.**—The population of the country, according to the census of 1911, was 2,840,469, of whom only about 1,000 were Europeans; there were 3,000 Indians and the remainder were various native tribes. Of the latter the Buganda, numbering over 700,000, were the most intelligent and civilized, owing doubtless to the fact that many of them were converted to Christianity through the efforts of French and English missionaries. Entebbe, situated on the northwestern shore of Lake Victoria, was the official capital and headquarters of the administration. It was chiefly a residential center and is beautifully laid out on a high hill overlooking the lake. The native capital and most important trading center, Kampala, is about twenty-five miles north of Entebbe.—Based on *United States Consular Report, 1914*.

**1921.—Creation of legislative council.**—On March 23, 1921, was held the first session of a legislative council, to which various sections of the community nominated members. Because of the new policy of differential treatment of Indians, which had occasioned some dissatisfaction, the Indian community refused to send representatives, but the council was otherwise a success.

rate.—H. Colville, *Uganda (British Africa, British Empire Series, v. 2)*.

**UGANDA RAILWAY**, railroad lying wholly in British East Africa (now called Kenya Colony). It was finished in 1902 at a total cost of £5,300,000. The main line does not enter Uganda, but by the introduction of motor vehicles a road service has been established in Buganda, Eastern and Northern Provinces. Steamship service is maintained on Lakes Victoria, Albert, and Kioga. "The earliest of the great continental lines [in British Africa], the Uganda railway, has abundantly justified the faith of its promoters. This railway, 584 miles in length, starting from Mombasa and ending at Kisumu (Port Florence) on the Victoria Nyanza, provides [written in 1917] the main avenue for traffic from Uganda to the eastern littoral. With the construction of a line from Namasagali, on Lake Choga, a little below Kikindu, along the right bank of the river Nile to Jinga, known as the Busoga railway (61 miles), an enormous impetus was given to the growing of cotton in this district of Central Africa, and direct communication was established with the coast by means of the steamers across the Victoria Nyanza. The Uganda railway, which until recently was a trunk line without feeders, has now been provided with three branches. The first of these has been constructed to the great soda deposits around Lake Magadi, near the Anglo-German boundary; the second has been built from Nairobi, the capital, to Thika, and will eventually be constructed to Fort Hall and the Mount Kenia districts; whilst the third has been built during the War for military reasons from Voi to Moschi, the northern terminus of the German Usambara railway to Tanga, and thus, like the Uppington-Kalkfontein line in the Cape Province, links up the British and German railway systems."—E. Lewin, *Railways in Africa (United Empire, Mar., 1917)*.

**UI**, Irish prefix to names. See under *o'*.

**UIRINA**, South American Indian tribe. See **GUCK**, or **COCO**, **GROUP**.

**UITLANDERS**, Dutch word used in South Africa, meaning outlander or foreigner. They were given the vote in 1897. See **SOUTH AFRICA**, **UNION OF**: 1885-1890; 1895 (November); 1895-1896; 1897 (February): Franchise.

**UJIJI**, or Kavele, town in former German East Africa, now under British administration, on Lake Tanganyika. It was occupied by the British in 1916. See **WORLD WAR**: 1916: VII. African theater: a, 14.

**UKASE**, edict of the imperial Russian government which derived the force of law from the absolute authority of the tsar.

**UKERWE ISLAND**, in Lake Victoria Nyanza, former German East Africa. The island was taken by the British in 1916. See **WORLD WAR**: 1916: VII. African theater: a, 12.

**UKIO-YE**, school of Japanese art. See **PAINTING**: Japanese.

**UKRAINE**, soviet republic of southeastern Europe including parts of southern Russia and former Austria-Hungary. (See **RUSSIA**: Map of Russia and the new border states.) It is divided into nine provinces with an area of 174,510 square miles and a population of 26,001,802. Ukraine is one of the principal soviet republics of Greater Russia. Before the World War and consequent formation of the republic, the country was divided into Russian Ukraine, often known as Little Russia, and Austrian Ukraine which included parts of Galicia, Bukovia and the Sub-Carpathian districts of Hungary. The Ukrainian people are also known as South Russians, Little Russians, Ruthenes, and Ruthenians. The Ukraine is very rich in fertile soil and of great strategic and political importance due to its free access to the Black sea and Central Europe. "The country known as the Ukraine, where the characteristic Cossack civilization arose and developed, is, as the name indicates, a continental 'border land,' neither European nor Asiatic. [See **RUSSIA**: Great, Little, etc.] . . . It was upon the shores of the great river Dnieper, known to the Ancients as the Borysthenes, that the first permanent Cossack communities established had their settlements. . . . By slow degrees, under the increasing influence of peasant immigration from the North (bringing with it the religion of Russia and such rude civilization as the northern woods had developed) the Asiatic and 'tribal' features of Cossack life began to disappear. During the early days of the XVIIth century they had so strengthened their hold upon the broad lands lying between the Dnieper and the Don, that we find the terms 'Free Cossacks of the Ukraine' and even 'The Republic of the Don' used to describe their settlements."—W. P. Cresson, *Cossacks*, pp. 11-13.

**Origin of the people.**—"Before Russia was Russia, so to speak, when the little kingdom of Muscovy stood alone in the midst of powerful neighbours, there was at first a kingdom, then an independent State, called Ukraine. Its kernel was the kingdom of Kiev, the origin of which, says Professor Hrushevsky in his 'History of the Ukrainian People,' is one of the most difficult problems in the history of the world. The oldest Kiev chronicle, the 'Povisty Vremennykh Lit,' cannot be counted on as accurate when it asserts that the kingdom was founded in the middle of the ninth century. Its origin is [probably] of much earlier date. . . . The kingdom of Kiev is called 'realm of Rusj' in native and foreign sources. . . . 'Rusj' was first used especially for the country of the Poliani tribe, which occupied the immediate environs of Kiev, being bounded by the Dnieper and its tributaries, the Irpen and the Ros, and formed the nucleus of the Ukrainian people, and the name gradually spread over the whole country. Be that as it may, the capital of the Ukraine, Kiev, early became the most important town of the kingdom. The period of Slavonic colonization in the sixth and seventh centuries was followed by quieter times and the beginnings of trade. The so-called decimal organization of troops would probably have started not later than the eighth century, for Kiev, being a centre of commerce, would have needed to organize an army and a strong central power for the protection of trade. The people of Kiev were accustomed to make expeditions for levying tribute, and thus made new commercial roads. From the first part of the ninth century the military power of the kingdom was augmented by a fighting con-

tingent of the wandering Scandinavian tribes, the Varangians. Without keeping altogether to the 'Povisty' account of the Varangian origin of the . . . Ukraine [which attributes its origin to Scandinavian invasions] great importance, says Professor Hrushevsky, may nevertheless be attached to the part played by these troops in the building-up process of the kingdom during the ninth and tenth centuries. Varangians were often chosen as Stadtholders of subject provinces, and Varangian troops were employed down to the time of King Yaroslav (d. 1054). . . . [The state was ruled over by a line of Scandinavian kings, the princes of Kiev, of whom Sojatoslav (d. 792) was the first of any note.] By the end of the tenth century the monarchs of Kiev were fairly absolute, partly owing to the help of their Varangian troops. As early as the ninth century we hear of treaties with Byzantium. The Ukrainians were mentioned in Byzantium documents, even as early as the fourth century, under the name of Antes. The kingdom reached the zenith of its prosperity under Vladimir the Great, who succeeded to the throne in or about 980. This King brought the lands belonging to his realm into closer connection with Kiev by giving them as governors his own sons instead of other princes. The countries governed by his sons occupied all the territory of present-day Ukraine as well as the outlying provinces of Novgorod, Pskov, Polozk, and Smolensk. The Ukraine of those days comprised the provinces of Vladimir—*i.e.*, Volhynia and the Carpathian country and boundaries of Poland—Tmutorokañ (the Don region, Crimea, and parts of Caucasus), and Rostov, the middle region of the Dnieper being in Vladimir's own immediate government."—G. Raffalovich, *Ukraine*, pp. 22-24.—During this period Kiev maintained its superiority over Novgorod, its strongest political and commercial rival. In the twelfth century the Great Russians to the north, under a younger branch of the Kiev dynasty, built up the state of Muscovy, which gradually out-rivalled the state of Kiev in power. "The decadence of the State of Kiev does not by any means coincide with the ruin of the life of the Ukraine. . . . The princes of Tchernicov . . . were the first to take up the part that the House of Kiev had played in the political life of the Ukraine. But these attempts were not successful, for the Mongolian invasion of 1239 . . . soon deprived the principality of Tchernicov of its remaining independence. On the other hand the principality of Halitch-Volhynia which had sprung up at the end of the twelfth century (1190) through the reunion of the principality of Vladimir of Volhynia with the principality of Halitch, showed, in the hands of a descendant of the eldest branch of the House of Kiev, Prince Roman, a much greater . . . political importance. . . . The State of Halitch-Volhynia lasted nearly another century and became the centre of the intellectual and political life of the Ukraine, with the exception of Eastern Ukraine, which remained untouched by its influence. This period of Ukrainian history is one of immense importance, for it was at this time that the Byzantine ideas (till now predominant) were neutralized by fresh influences coming from the west, especially from Germany. These influences gave birth to the system of . . . communes, modelled on German Law which sprang up in Halitch-Volhynia at the beginning of the thirteenth century. . . . [For a time] circumstances became more favourable for the development of Ukrainian culture. But the alliance between Poland and Hungary, through the treaty of 1336, was

soon to put an end to the West Ukrainian State."—M. Hrushevsky, *Historical evolution of the Ukrainian problem (pamphlet)*, pp. 11-12.

**Military organization of Cossacks.** See MILITARY ORGANIZATION: 38.

1340-1654.—Under Lithuania and Poland.—**Struggle for independence.—Annexation to Russia.**—"The Tartar invasions from the East drove many Little Russians westward, and they settled in Western Bukovina, Eastern Galicia and the surrounding territory. It was here that the Little Russians became known as Ruthenes in later years. This dispersal of the race weakened it, while to the northwest two great powers were developing, Lithuania and Poland. The latter obtained control over Galicia in 1340, when the Polish king, Casimir the Great, established himself in Little Russia upon the death of its duke, in 1339. Lithuania also coveted part of that southern land and the two kingdoms finally divided it among themselves, Lithuania taking the eastern regions of Little Russia. But Lithuania later became united with Poland so that Little Russia, from the Carpathians to the Don, was incorporated with Greater Poland. Under the rule of Poland Ukraine was subjected to considerable oppression. The Poles sought to impose their Catholic faith upon the Orthodox Little Russians. The Polish gentry succeeded in Polonizing the Little Russian gentry by barring the latter from their diets unless they became Roman Catholics. The Little Russians were originally peasants. But the introduction of the institution of serfdom in the northern countries sent a whole stream of freemen and criminals to the southern steppes of the borderland—Ukraine. These adventurers formed the nucleus for the Cossacks, who were freelances banded together by the Polish government to combat the Tartar and Turkish invaders. The Cossacks loved freedom, and when the Polish and Lithuanian nobles extended their grip over Ukraine and sought to impose serfdom on its inhabitants, a feeling of bitter enmity developed between the Ukrainians and their masters. As in many a similar case, religious persecution and economic oppression helped to mold a national consciousness in the Little Russians, fostering first of all a spirit of revolt. . . . [Constant fighting ensued between the Poles and the Ukrainian Cossacks. In the early years of the seventeenth century under the hetman Konashevick Sahaidachnyi the Cossacks gained considerable power.] A climax was reached in 1648, when the Cossacks, led by their great hetman, Bogdan Khmel'nitsky, raised the banner of insurrection. . . . The battle that ensued was a decisive victory for the Cossacks. The Poles then offered terms to the Cossacks, but they were rejected by Khmel'nitsky. Under the personal leadership of the king, the Poles continued desperately their efforts to subdue the rising. . . . After many battles the latter were defeated and peace was concluded, but not of long duration. Hostilities were renewed and the Cossacks found it necessary to transfer their allegiance to the Muscovite Tsar. Khmel'nitsky sent an envoy to the northern ruler offering Little Russia to him, as an autonomous unit. The treaty of Pereyaslav, concluded between Ukraine and Russia in 1654, stipulated that the former retain its separate organization under the aegis of Moscow. The Ukrainian governmental system, if it may be described thus, was crudely republican. The hetman was elected by a general assembly of the Cossacks. This democratic institution was to be perpetrated even under the Tsar's suzerainty, according to the treaty."—I. D. Levine,

*Resurrected nations*, pp. 85-88.—See also POLAND: 1648-1654.

1700-1721.—Wars between Russia and Sweden.—Attempted rebellion of the Ukraine.—Suppression of books and schools.—Soon after the treaty of Pereyaslav, Khmel'nitsky died. Russia immediately began to disregard the provisions of the treaty and Ukraine rapidly lost the freedom that had been guaranteed to her. By 1700 when Peter the Great entered into his long conflict with Charles XII, king of Sweden (Northern War, 1700-1721), the Ukrainians were eager to free themselves from Russian dominion. They had risen in revolt in 1658, 1659, and 1668 without success. In 1667 a part of the Ukraine had been given to Poland by a treaty between Poland and Russia. The Ukrainians now resolved to take advantage of the situation and ally themselves with Sweden against Russia. "With the approach of the invading Swedish armies twenty thousand Cossacks were summoned by Peter to join in the defense of the Ukraine. His emissaries found the Cossack settlements in a state of almost open rebellion. A tax of seventy kopecks (no small sum of money in that day) had recently been placed upon every Cossack, not excepting those who were performing military service—an act bitterly resented as an infringement of the rights they had been assured at the time of their voluntary subjection to Russia. In Peter's plans for an accurate census of the Ukraine the Cossacks saw only a plan for fresh taxations and even more onerous terms of military service. By thus overriding privileges of the Ukraine, Peter had aroused the resentment of both Cossack and non-Cossack inhabitants. . . . Both classes felt themselves subjected for the first time to the treatment as the despised *moujik* population of Great Russia—the serfs of the great administrative class favored by Peter's 'reforms.' . . . Mazeppa as hetman of the Cossacks of the Ukraine . . . [then offered his aid to Sweden]. As the Cossack *polii* were needed as auxiliaries, Mazeppa was instructed to maintain his fellow countrymen in a state of "discontent"—a none too difficult task—without definitely engaging himself until the last moment."—W. P. Cresson, *Cossacks*, pp. 26-29.—"The renowned Ivan Mazeppa . . . the old Hetman hesitated, fearing to take a false step and he only took his place at the side of Charles XII when this latter entered Ukrainian territory (1708). It was too late; the Muscovite army had also invaded the country to such purpose that the hetman did not even manage to join the Swedish army with all his regiments. The population, held back by the strict measures taken against all those who had in any way participated in the rising, adopted an entirely passive attitude. It was soon apparent that the movement stood no chance of success, and many dignitaries returned to offer their allegiance to Peter the Great. After the defeat of the Poltava [1709, which crushed the power of Sweden], Mazeppa fled with Charles XII to Turkish territory, accompanied by the dignitaries and Cossacks who remained faithful to his flag. . . . This nationalist movement was construed by the adversaries of Ukrainian autonomy into something extraordinary and dangerous, and gave Peter the Great and his partisans the necessary pretext for abandoning the system of progressive restrictions taken up till then by the Muscovite government. From then on, there was a rapid and sudden disappearance of Ukrainian institutions. . . . After Mazeppa was deposed, the Tsar Peter instituted a supervision over the autonomous administration

which was exercised first through Russian residents, and then by a college of Muscovite officers through whose hands passed everything that came in or out of the hetman's chancellery."—M. Hrushevsky, *Historical evolution of the Ukrainian problem (pamphlet)*, pp. 26-28.—"At the same time as Ukraine's political institution was being demolished, Russia initiated measures of repression against the Ukrainian language. In 1680 it . . . [had been] banned from ecclesiastical literature. In 1720 the printing of Ukrainian books was prohibited, followed by the suppression of Ukrainian schools. According to one authority, there were in the eighteenth century in the province of Tchernigov alone 866 schools, while sixty years later none of them remained in existence."—I. D. Levine, *Resurrected nations*, p. 89.

1722-1795.—Suppression of the office of hetman.—Partition of Poland.—"On the death of the hetman Skoropadsky in 1722 the Tsar completely suppressed the power of the hetmans. . . . The considerable period during which the last hetman, Cyril Razumovsky, ruled, brought a little peace to the country and left the officials to govern in comparative freedom, thanks to the exceptional position which the hetman occupied with the Moscow authorities. . . . From the moment the Empress Catherine came to the throne the days of the Ukrainian autonomy were, however, over. Using as a pretext the first suitable occasion—which was in fact a petition to confirm the hetmanship upon the Razumovskys in a hereditary character—Catherine caused Razumovsky to be deposed (1764), abolished the post of hetman and appointed a governor-General assisted by a college composed partly of Muscovite and partly of Ukrainian members. This reform aroused a widespread discontent in the Ukraine. . . . In 1775 the 'Zaporogues of the Sich' [the Cossack military post], the last representatives of the ancient democratic traditions of the Cossacks, were taken by surprise and totally defeated. In 1780 the old administrative traditions of the time of the hetmans were replaced by those of the Russian Empire. This brought about at the same time the disappearance of the military organization of the Cossacks on all the territory under the jurisdiction of the hetmans."—M. Hrushevsky, *Historical evolution of the Ukrainian problem (pamphlet)*, pp. 28-30.—"In 1772 and 1793-5, when Poland was partitioned [see POLAND: 1763-1790; 1793-1796] those parts of Ukraine which belonged to it were taken over by Russia, except Eastern Galicia and part of Bukovina. These latter, known as Ruthenia, went to Austria, disguised as Polish territory. The modern Ukrainian problem dates from this division and is really a double problem, that of the Ukrainians in Russia and of the Ukrainians in Galicia. In the first they were subjected to an intense campaign of Russification, while in the second they were controlled by the Poles who desired to have them Polonized."—I. D. Levine, *Resurrected nations*, p. 90.

1727.—Immigrant Jews to Russia expelled. See JEWS: Russia; 1727-1800.

1795-1860.—Russian rule.—After the partition of Poland in 1795 "for a while it looked as though the old institution of the hetman period were about to be re-established: the Tsar Paul [1796-1801] who strongly opposed the policy of his mother, gave evidence of a wish from the beginning of his reign to give new life to some of the old political liberties. It is said that it was the minister Bezborodko, an Ukrainian patriot, who inspired

his master with these designs. The reign of Paul was a short one, however, and his successor Alexander returned to the principles of Catherine and set up again in the Ukraine the organization established there by the Empress. Nothing remained to remind the people of the time of the hetmans save the civil law, applicable to this day in the governments of Tchernicov and Poltava, the country of the hetmans of old. The longing to see the old constitution restored made itself manifest from time to time, especially on such occasions as the Russian government sought to recruit the Cossack militia in the Ukraine. This happened in 1812 and again during the Polish rising in 1831, on both of which occasions the authorities sought to blind the eyes of the people with various promises of ameliorative measures. During the Crimean War especially the enrolling of volunteers aroused intense excitement among the peasantry, in whom national aspirations were still vigorous. All expectations of this kind met only with disappointment, but they helped to keep alive the nationalist feeling among the Ukrainian people. . . . [About the middle of the nineteenth century under the influence of] ideals imported from Western Europe, Ukrainian political thought abandoned its aspirations towards an independence that was no longer feasible, as well as to the establishment of a Cossack State, in order to replace them by a realizable political programme adapted to the existing circumstances. The oldest of these programmes that was in any way realized, dates from 1846. It was started by the Ukrainian organization of Kiev, known as the guild of Cyril and Methodius, which played an important part in the course of later events. This body was organized at the beginning of the year 1846. It included the most eminent representatives of Ukrainian learning (the poet Shevchenko, the ethnographer Kulich, the historian Kostomarov, the lawyer Hulak, etc.) and soon found many partisans. . . . The number of members of the guild was raised to a hundred in the space of a year in the different towns of the Ukraine, and this in spite of the secret nature of the body. The guild aspired to a Slav Federation, an alliance between the 'Slav Republics' of which that of the Ukraine would be a member. They desired a democratic and liberal constitution which would abolish privileges and classes and everything in fact of a nature to debase the people. Absolute freedom of speech, of thought, and of religion was to be guaranteed. Measures were to be taken to educate the people and to enlighten their political conscience. They counted on the creation of a popular literature to attain this end, on the bringing together of the upper classes and the people, and of working on the minds of the youth of the lycées and high schools so as to instil into them the ideas of confederation. Actually all this practical activity was killed at birth. For in the year 1847 one of the students informed on the leaders and denounced them, with the result that they were arrested and condemned. This repression put a stop to any development of political thought in the Ukraine, now that the most talented and active leaders were reduced to silence. When they returned from their exile and assumed their patriotic task, circumstances, such as the suppression of serfdom in Russia and the amelioration of the lot of the peasantry, compelled them to labour chiefly for the comfort of the peasants. They were occupied in teaching the agricultural classes and in educational work of various kinds as well as in creating

a popular literature, etc. Yet this activity, though it was purely of an educational nature, was suppressed by the government, in conformity with the principle proclaimed by the Minister of the Interior Valujev in 1863: 'The Ukrainian language,' he said, 'never has existed, does not exist, and must not exist.' As soon as the reprisals became less severe, about 1870, the work began again. It was directed in particular by an organization established at Kiev and known by the name of 'Hromada' containing the best representatives of the new government in the Ukraine. . . . [But], in spite of . . . [its] moderation . . . the Russian government regarded this activity with an unfavourable eye. . . . Any establishments or organizations where Ukrainian scientific workers congregated were forbidden and in the spring of 1876 the celebrated Ukase appeared determining the fate of the movement for many years. This Ukase forbade the publishing in Ukrainian of any work other than those of an historical or literary nature. It also required that Russian spelling should be used while every work was to be censored. Conferences, theatrical representations of Ukrainian concerts were absolutely forbidden. . . . [When the movement became no longer possible in Russia, it sought an outlet beyond the frontier in the territory of Austrian Ukraine.] The exodus of the Ukrainians or the divergence of the national activity towards Austrian Ukraine, towards Lemberg, which became a centre for the national life, was weighty with results not only for the Ukrainian movement in Russia, but also for the development of Austrian Ukraine itself. Already, about the year 1860, after the first prohibition of the Ukrainian language in Russia, this event had contributed to the sustenance of the Ukrainian national life in Austria at a very critical moment in the development of this section of the subject peoples. . . . The Austrian government sought in the Ukrainian population something to set off against the Polish revolutionary movement [which had found vent in the revolution of Poles and Hungarians in 1848]. The final liberation of the serfs, the admission of the moral and political rights of the Ukrainian people (or Ruthenians) the creation of the first institution of any importance in the domain of culture and politics, the nationalization of the schools, the formal promise of a university for Lemberg, the administrative separation of the two Galicias (Ukrainian and Polish) which had been artificially united in 1772; all these influences assisted the birth of a new era in the life of the Austrian Ukraine. But these years that were so full of hope soon passed, to be followed in their turn by the reaction . . . [by which] the Ukrainians of Galicia . . . were left to the unscrupulous rule of . . . [the Polish] nobles, into whose hands the whole administration of Galicia [had] passed once again in the year 1850. The Polish aristocracy and bureaucracy utilized the growing influence which they possessed for the purpose of insinuating to the Austrian rulers that the Ukrainian population of Galicia was an uncertain element, devoted to Russia and the orthodox faith. . . . [Under the] Polish predominancy in Galicia, . . . the Ukrainians suffered horribly."—M. Hrushevsky, *Historical evolution of the Ukrainian problem (pamphlet)*, pp. 35-36, 39-42, 44-45.

1840-1914.—Ukrainian movement in Galicia.—Revolutionary parties.—Affairs in Russia.—In Galicia the Polish revolutionary movement which had so disturbed the Austrian government during the years following 1840 had a permanent influence

on the development of the Ukrainian cause. Austria had granted many privileges to the Ukrainians, and even after decided reaction on the part of the government had set in, the movement gained ground. "From about 1880 this 'popular' Ukrainian movement, as it was called, took a firm hold of the people in Galicia, nor did it fail to keep in touch with the Ukrainian movement in Russia as well. It acquired considerable influence over the masses. This was especially so with the left wing of the movement which was the more radical part and originated in 1890. . . . From 1880 to 1905, that is to say for a quarter of a century, Galicia was, so to speak, a kind of intellectual Piedmont for the Ukrainian movement. . . . This movement, almost entirely banished from Russia, took up an irreconcilable attitude in regard to the centralizing policy of the Russian government. It was further equally intransigent in its hostility to the Polish oppression in Galicia."—M. Hrushevsky, *Historical evolution of the Ukrainian problem (pamphlet)*, pp. 45-46.—"The conditions under which the Ukrainians lived in Galicia finally culminated in a general strike, in 1902, and which extended over all of Eastern Galicia. This was preceded, in 1897, by a conflict with the Poles which resulted in the murder of eight Ukrainians and many wounded. In 1900 two political parties were organized by the Ukrainians in Galicia. They demanded the division of Galicia into two parts, Eastern and Western, the former to be constituted as a separate Ukrainian province. It was these parties who were responsible for the strike of 1902 and for the numerous subsequent demonstrations. The revolutionary outbreaks in Russia in 1905 reverberated in Eastern Galicia and the Ukrainian movement there gained in intensity just as the Polish policy of suppression grew in severity. The dramatic climax of the contest occurred in 1908 when the Polish governor of Galicia, Count Potocki, was shot by Miroslav Sichinsky, a Ukrainian student. The indictment of the assassin recognized the fact that the shooting was the outcome of the struggle of the Ukrainian peasants against the Polish nobility, admitting that the slain governor supported the Russian policy in Galicia. In 1913 a semi-official Russian statement said that a secret pact between the Polish leaders in Galicia and the Russian Prime Minister Stolypin was in existence. This agreement apparently was the result of the menace which the Ukrainian democratic movement constituted to both the Russian autocracy and Polish aristocracy. Sichinsky later escaped and made his way to the United States, where he was admitted after the United States government held his offense to have been a political act."—I. D. Levine, *Resurrected nations*, pp. 94-95.—During the early years of the twentieth century Ukrainian revolutionary parties took definite shape. The National Democrats were founded in 1900 to fight for rights similar to those of the Poles in Galicia and for the autonomy of Russian Ukraine as a federated state. The Revolutionary Ukrainian party was organized in Lemberg in 1900 and in 1905 changed its title to that of the Ukrainian Social Democratic Workingmen's party. "In 1906 . . . the law concerning newspapers was repealed. This law did away with all restrictions in respect of special idioms, under which term the Ukrainian language was included. From this time on the Ukraine was freed of its shackles and was enabled to found papers, associations and all kinds of organizations with a certain amount of freedom. The constitution of 1906, although it left many

restrictions still in existence, enabled the Ukrainians to choose their representatives. As a consequence the first and even the second Duma contained an important fraction of deputies elected by Ukrainian peasantry; yet the short duration of these assemblies prevented the representatives from accomplishing anything of importance. . . . These hopes, however, were not realized. A new reactionary movement [set in and the Ukrainians] . . . suffered from the modifications introduced in the election laws, modifications which revoked the suffrage of the peasantry. At the same time the Ukraine lost its representation in the Duma. The promised liberties—freedom for the Press and for associations . . . [never came] into force, and a strict censor . . . [was] kept over printed works, newspapers and associations in the country. . . . The Ukrainian movement in Russia was forced back to its old position."—M. Hrushevsky, *Historical evolution of the Ukrainian problem (pamphlet)*, pp. 48-49.

1907-1908.—Anti-Russian sentiment. See POLAND: 1867-1910.

1914-1921.—Effects of the World War.—Suppression of newspapers.—Early results of the Russian Revolution.—General Secretariat of the Ukraine.—People's republic.—Treaty of Brest-Litovsk.—War with Poland.—Territorial claims.—"The Great War brought Galicia into the international arena. The Russian armies occupied Galicia in 1914 and immediately the Tsar's government instituted a campaign of Russification there. . . . The Russian language was immediately introduced and the Ukrainian prohibited. Russian officials were appointed and the Ruthenian Uniate Church subjected to persecution. The Ukrainian deputy Levitsky protested in the Austrian parliament against the Russian activities, while in the Russian Duma the same methods were denounced by the radical members. When the Russians were driven out of Galicia and Russian Poland was occupied by the Central Powers, the latter sought to win the support of the Poles by setting up a reunited Poland under their protection. The Ukrainians in Galicia were alarmed at the prospect of being incorporated in Poland and again raised their voices for autonomy."—I. D. Levine, *Resurrected nations*, pp. 94-96.—See also AUSTRIA-HUNGARY: 1914-1915.—"In Russian Ukraine the Nationalist papers, which had sprung up in Kiev, Kharkov, and elsewhere since 1905, had all been suppressed on the day after the outbreak of the War: and the reversion to the *status quo ante* 1905 in regard to the Ukrainian Movement was complete. . . . Attempts to revive the Ukrainian newspapers were suppressed one after the other, in Kiev, in Kharkov, in Odessa, at different times in 1915 and 1916. The Cadets at one time took up the Ukrainian Nationalists in connection with their campaign against the Government: but even the very cautious, general terms in which, after their manner—there was no Party in Russia which the subject nationalist so deeply distrusted—they declared for 'cultural autonomy' for the Ukraine produced a split in the Party, and the well-known Deputy Struve resigned from the Central Committee (1915). On this silence in Little Russia fell the crash of Revolution. At the outset the Nationalist *intelligentsia* took control. Early in April 1917 they collected a Ukrainian National Congress at Kiev, which pronounced for autonomy within the Russian Republic. Separatist tendencies were not strong at this Congress. The Congress further elected a Council or Rada, so named after the

ancient Assembly of the Ukrainian Cossacks; and Prof. Hrushevsky was acclaimed its President. The Rada demanded recognition by the Provisional Government of Ukrainian autonomy, immediate and complete local control, and the formation of a separate Ukrainian Army. The Cadet attitude in reply to these demands was to refer the question to the Russian Constituent Assembly, in which (as both parties very well knew) the Ukrainians would be completely outnumbered. . . . Failing to obtain any satisfaction of their demands, the Rada set up an independent Government."—R. Butler, *New Eastern Europe*, pp. 148-150.—"Taking advantage of the weakness of the provisional government the Rada issued on June 26, 1917, a Manifesto announcing that the Ukrainian people would henceforth manage their own affairs. The Provisional government had to give way; it recognized the General Secretariat of Ukraine as the highest administrative power of Southern Russia; the future constitution of the country was left to the decision of the Constituent Assembly which was expected soon to convene. With the overthrow of the Provisional government by the Bolsheviks [in November, 1917], the conflict between the North and the South of Russia became most bitter. . . . Threatened by the Bolsheviks on the one side and by the Russian nationalists on the other, the Ukrainian Council decided that it had nothing to gain and perhaps everything to lose by delaying radical action; and accordingly, on November 20, 1917, it proclaimed the establishment of the Ukrainian People's Republic. [See RUSSIA: 1917 (November-December).] In a manifesto issued at that time the Rada stated that it took this step in order to spare the country the horrors of a civil strife; it disclaimed any desire to bring about the disintegration of Russia, the establishment of the Ukrainian Republic being, according to the statement, merely a stepping stone towards the formation of a federation of free and equal peoples of Russia. On February 9, 1918, the Ukrainian Republic, whose representatives sat at Brest-Litovsk, alongside the delegates of the Bolshevik government, concluded a separate peace with the Central Powers."—S. Litman, *Republic of Ukraine (University of Illinois Bulletin, Jan. 20, 1919)*.—See also BREST-LITOVSK: Treaties, 1918.—"As a result of the separate peace the Teutons extended their influence in Ukraine and finally dissolved the Ukrainian national Rada and [in April 1918] set up in its stead a dictatorship headed by Hetman Skoropadsky. [See below: 1917-1921.] The downfall of the Central Powers naturally led to the downfall of their puppet. The breakup of Austria liberated the Austrian Ukrainians, or Ruthenians, and there was no apparent obstacle toward their union with Russian Ukraine. [See also AUSTRIA-HUNGARY: 1917-1918.] But such an obstacle did arise as soon as the Poles learned that the Ukrainian National Council took over the administration of Eastern Galicia. The former would not admit the national claims of the Ruthenians, and war between the two races opened when Lemberg was occupied by the Ukrainians. Polish troops reconquered the city, but the Ukrainians besieged it again in January, 1919. [See also POLAND: 1919-1920: War with Russia.] . . . The Ukrainian national council claimed in Russia for Ukraine the provinces of Kiev, Podolia, Volhynia, Chernigov, Poltava, Kharkov, Yekaterinoslav, Kherson and Tauris (less the Crimea). In addition, it claimed some districts of other adjoining provinces, including that of Kholm, which the Poles also claimed

for Poland, thus creating another Polish-Ukrainian quarrel. The main dispute . . . [was] of course, in Galicia. The Poles . . . [claimed] Lemberg, the capital of Eastern Galicia, on the ground that a majority of its inhabitants . . . [were] Poles."—I. D. Levine, *Resurrected nations*, pp. 98-99.

1916-1918.—Abolition of private property by Rada decree.—German occupation.—Re-establishment of private ownership by Skoropadski.—From 1916 on, events moved rapidly in the Ukraine, until the convention of the first Rada in April 1917. "The Petrograd government refused to recognize [the autonomous republic declared by the Rada], and by doing so strengthened the Separatist Group. As a result of negotiations, Kerenski conceded most of the Ukrainian demands, but opposed their demand for a Ukrainian army on the ground that it would break up the Russian army. The favorable attitude of Kerenski caused a split in the Provisional Government at Petrograd, and the Cadets left the Cabinet on this question. Kerenski's attitude towards the Ukraine was equally displeasing to the old Imperialists and the Bolsheviks. Between July and November, 1917, public opinion in the Ukraine went through many transformations; it exhibited in varying degrees a marked tendency for closer understanding with Moscow on the one hand, or with Germany on the other. These movements resulted in November in the proclamation of the Ukrainian People's Republic. . . . [See above: 1914-1921] which, by a *universale*, or decree] abolished private ownership of land, introduced State control of production, an eight-hour day, did away with the death penalty, and expressed the hope that the Ukrainian National Republic would be federated with the Russian Soviet Government. From this moment . . . acute differences with the Soviet Authorities [appeared]. In December the Ukrainian Central Rada, which had been negotiating with Germany, sent to Brest-Litovsk a delegation of which Petlura was a member. In January, 1918, this delegation secured a formal recognition of the Ukrainian Republic by the Central Powers. Petlura and his associates had high hopes of recognition by the Western Powers—hopes strongly fortified by the Allied Mission to the Ukraine sent out in December, 1917. At the end of January the Petrograd Government broke off connection with the Rada, and the latter declared by 508 votes to 4 for the complete independence of the Ukraine. Meanwhile, inspired by Moscow, a Soviet Government was established in the Eastern Ukraine, and matters became so threatening that the Rada appealed to the Central Powers for support. As a result, the Germans occupied the North Eastern and the Austrians the Southern Ukraine. It can hardly be doubted that this fact went far to discredit the Rada with that large proportion of the Ukrainian people who were genuinely out for an independent Ukrainian Republic. The Rada, trying to retrieve its mistake, was overthrown in April by the German armies of occupation, which set up General Skoropadski, a Russian of Ukrainian descent, at the head of affairs. The German Commander-in-Chief, published a decree re-establishing private ownership of land on a large scale, disarmed the Ukrainians, and organized an army in the German interests."—D. Mountjoy, *Ukraine politics (New Europe, June 24, 1920)*.

1917-1921.—Civil wars.—Recognition by Poland and Russia.—The Germans "came ostensibly to drive away the Bolsheviks. . . . [In reality] they exploited Ukraine economically, by requisition-

ing bread, cattle and grain from the farmers. [See also RUSSIA: 1918 (March).] . . . [General Skoropadski, to whom was given the old Ukrainian title of hetman], was acceptable to the Teutons because he was a militarist, a large landholder, a conservative, and a willing tool in the German scheme, which was to make Ukraine the centre and nucleus in a reconstruction of the old centralized Russian empire, every part of which the Germans intended to control, both politically and economically. The result was foreseeable."—E. Revyuk, *Ukraine and the Ukrainians* (pamphlet), p. 15.—"The Soviet Government and the Ukrainian Rada now came to terms; Moscow recognized the Ukraine as an independent State and in June [1917] the Russo-Ukrainian Armistice was formally signed. On 24 May a peasants' rising had broken out all over the Ukraine, directed against the big landowners and the Germans. The objects of the rising were set forth in the Manifesto of the Peasants' Congress at Kiev on 7 June, which demanded: (a) That the Hetman chosen by the great landowners and the Germans should be deposed; (b) that the Ukraine should be a 'Peoples' Republic'; (c) that no land should be returned to the proprietors; (d) that a Legislative Assembly should be convoked. However, the Germans continued forcibly to suppress strike and requisition food, and as a result, Von Eichhorn was assassinated on 30 July at Kiev. The Ukraine now became the battle-ground of at least five different parties: pro-German, pro-Allies, pro-Russian, Federalist, Bolshevik, and Separatist-Nationalist. Skoropadski's Government only lasted a short time after the signing of the Armistice. The Conservative elements in the Ukraine, whether Ukrainians, Poles, or Russians, desired the Allies to support him and to send a fresh army of occupation to replace the Germans and Austrians. However, the more democratic elements in the country triumphed; the old Rada organised itself into a Directorate with Villenchenko and Petlura at its head, and, with the Allies' approval, replaced Skoropadski's Government in December, 1918. . . . It will thus be seen that Petlura and his associates had taken up a definitely anti-German attitude, had got rid of the German reactionary Government, set up a really democratic Government based on the ascertained will of the peasants, and had established and developed relationships with the Allies to the extent of drafting an agreement which was to be fully considered by a special Commission representative of both parties. These were no mean achievements. From Brest-Litovsk to the Armistice Petlura had steered a very difficult and necessarily somewhat chequered course. In the New Year of 1919 he seemed to be on the verge of consummating his desire to see his country a free and independent nation, actively allied with the more progressive Western Powers. As far as could be seen he had no feelings of enmity towards the Soviet Russians and was willing to come to terms with the Soviet Government on the basis of their recognition of an independent Ukraine, with full use by them of Ukrainian railways, waterways and ports. . . . The draft agreement made by the Ukraine Directorate and the Allies came to nothing, and in the early part of 1919 the offensives of Denikin [with his 'White' volunteers] and Kolčak, were launched with the full support of the Allies. The Ukraine was thus, single-handed, fighting the Allies, Soviet Russia and Poland. General Petlura has been blamed, more particularly in Labour circles in England and France, for not

having come to terms with Soviet Russia. There is clear evidence that, from 1917 onwards, the Ukrainians were quite willing to come to terms with Russia, provided their autonomy and freedom was left to them and that they were not forced to adopt a Soviet form of Government, which does not suit their character or temperament. It is obvious that they required all their energies to fight Denikin and Kolčak, whom they regarded as being the champions of the old Tsarist régime, and that they would have been glad to establish amity and cooperation with the democratic elements of the new Russia."—D. Mountjoy, *Ukraine politics* (New Europe, June 24, 1920).—The directorate "was recognized by the National Congress held at Kiev at the end of January, 1919, and also by that part of Ukraine which, up to the Teutonic defeat, had remained under Austrian control, but immediately after the Austrian breakdown, had organized itself into an independent nation called the Western Ukrainian Republic."—E. Revyuk, *Ukraine and the Ukrainians* (pamphlet), p. 16.—In 1921 both Poland and Russia agreed to recognize the Ukrainian republic.—See also POLAND: 1921: Peace treaty with Russia.

1918.—Property loss due to World War. See WORLD WAR: Miscellaneous auxiliary services: XIV. Cost of war: b, 4.

1919.—Union of Eastern and Western Ukraine.—Award of East Galicia to Poland.—"At the height of its success, the White Army had defeated the remnants of Petlura's force and compelled him to seek refuge behind the Polish front. Thus the Ukrainian Government lost its last bit of Ukrainian territory. But this was Denikin's last success. . . . But a new factor of importance was now introduced in the political configuration—Poland. Immediately after the Austrian Revolution, the Ruthenians of Eastern Galicia had proclaimed their autonomy and their adherence to the Ukrainian State. A treaty was concluded between the Ruthenian leaders and the Directory (November 1918), by the terms of which Galicia was incorporated in Ukraina. On principle the two were to be united for ever and without conditions, but the great differences in political circumstances and traditions compelled the Ruthenians to retain their virtual independence. Galicia received the official appellation of 'Ukraina across the Dniestr' (Naddnistrova Ukrayina). As Galicia was far better organized and prepared for political self-help than Russian Ukraina, the Galicians naturally acquired a great importance in the new State, and they pledged themselves to uphold the Directory against all their enemies. This was a rash promise, for Galicia had an enemy of its own, and one far more formidable than the Bolsheviks. The Poles immediately proved themselves aggressive and insatiable. They were far stronger than the Ruthenians, having behind them not only the three armies of Haller, Pilsudski, and Dowbor-Musnicki, but, what was more, the support of the Allies. They lost no time in representing the Ukrainian Ruthenians as dangerous pro-Germans. The result of the struggle, in which the Directory could not help the Galicians (who on their side had squandered their forces to help the Directory), was what might have been expected. By March 1919 the whole of Galicia had become a Polish province; the remains of the Galician army had joined Petlura in Podolia. The Poles then crossed the frontier and occupied portions of Volynia and Podolia."—D. Mirsky, *Ukraine*, pp. 333-334.—On January 3, 1919, the union of "Eastern" (Rus-

sian) Ukraine and "Western" (Austrian) Ukraine was proclaimed. On December 28, 1919, East Galicia was awarded to Poland by the supreme council at Paris under a mandate for twenty-five years.—See also POLAND: 1919 (September).

1919.—Republic of Western Ukraine set up by Ruthenians.—Struggle with Poles.—Collapse of the republic. See POLAND: 1919 (September).

1919.—Massacres of Jews. See JEWS: Russia: Ukraine.

1920.—Struggles with Bolsheviks.—The war with Wrangel affected the territory of Ukraine but slightly, and so far as Denikin's army was concerned, not a single "White" soldier remained in Ukraine by January 1920. "So long as a victory of Denikin was within the limits of probability, the Poles did not budge against the Bolsheviks. But no sooner had the Bolsheviks triumphed over the White Army, than the Poles entered into negotiations with Petlura with a view to conquering Ukraina for him. The new Petlurian Ukraina was to stand in the same relations to Poland as that in which the Ukraina of Skoropadsky had stood to Germany. In the end of April 1920, an offensive, under the personal supervision of the head of the State, was launched, and on May 2 Kiev was taken, . . . [but] was lost in a few weeks. . . . The net result of the whole Petlura-Pilsudski adventure for Ukraina was: (1) the recognition by Poland of Soviet rule in Ukraina; (2) the cession to Poland of eight districts of Volynia and Podolia, together with Brest, Kholm, and Galicia; (3) a complete rupture between Petlura and the Galicians. . . . Henceforward the Galicians have had no other name for Petlura but 'zradnyk'—traitor."—D. S. Mirsky, *Ukraine (Quarterly Review, April, 1923)*.—See also RUSSIA: 1920 (October-November); GALICIA: 1914-1920.

1921-1923.—Union with Russia.—On Dec. 30, 1922 delegates from the Ukraine together with delegates from the other principal soviet republics met at Moscow and concluded a Treaty of Union which set up a Union of Socialist Soviet Republics. Ukraine thus became one of the federated states of Greater Russia. "The peace of Riga (March 1921) is the last event in the history of Ukraina. Since that date it has been a province—an autonomous republic, officially—of the Soviet Federation. Its capital is Kharkov. . . . Its constitution is identical with that of Moscow. It is nominally independent, and . . . a treaty was even signed between Soviet Ukraina and Kemal Turkey. But to all intents and purposes it is a province of Bolshevik Russia. The net result of the Revolutionary years for the Ukrainian idea may be summed up as follows. The people of Ukraina have become accustomed to what some may call anarchy and others freedom. But this freedom is a purely local freedom, the largest unit of independence being in many cases the village, sometimes the district. . . . In this sense Ukraina has asserted its right to self-determination. But it has failed to prove itself a national and exclusive unit."—D. S. Mirsky, *Ukraine (Quarterly Review, April, 1923)*.

ULEMA, collective name of the body of theologians and mystics in Mohammedan countries. They are the recognized interpreters of the Koran and of the laws based upon it. "Islam has developed a clergy, with gradations and ranks. These vary in different countries. . . . In Constantinople the mosque schools have from ten thousand to twenty thousand students [written in 1916], half of whom are studying Sacred Law. Grades whose duties are almost wholly religious are the Imam, the leader of prayers, and the Khatib or mudarris, the mosque preacher. Four degrees higher than the Khatib is the Mufti, who resembles the lawyer among the Jews in New Testament times. From this grade are appointed the Kadis; seven ranks higher is the Grand Mufti, Chief Judge according to Canon Law; and five grades higher yet is the Sheikh-ul-Islam, the head of the religious clergy and of the religio-civil judges. The Sheikh-ul-Islam is ex-officio Minister of Public Worship and does not change with the other ministers of the Sultan. He is also official Interpreter of the Shariat [Mohammedan law]. His decision for the time is effective, even if it be a fatwa [legal decision] deposing a Sultan. But decisions by him have no binding force on others of the Ulema. He continues to wear a long white robe and a yellow turban with a grey *aba*, cloak, though the viziers have changed to European dress. All these higher grades are called Ulema, Doctors, the *alim* or learned. There is in Turkey no ordination. The diploma is the authorization and prepares one for appointment, but in Central Asia the binding of the turban on the head is a sign of authorization. In Turkey the duties of many of the Ulema are both religious and civil, but in Persia as well as in countries like Russia, where their civil duties are more restricted, it is more easily realized that their prime function is religious. In the thought of the people they are the clergy. Dr. Dwight facetiously refers to them as 'the Ulema who deny that they are priests, yet act like them.'"—S. G. Wilson, *Modern movements among Moslems*, pp. 29, 31.—See also SUBLIME PORTE; TURKEY: 1789-1812.

ULFILAS (c. 311-383), bishop of the Goths and translator of the Bible into Gothic. See MISSIONS, CHRISTIAN: 4th-7th centuries; CHRISTIANITY: 238-400; GOTHIS: 341-381; GERMAN LITERATURE: 350-9th century.

ULSTER: Location, divisions, area and population.—Ulster, the northern province of Ireland, comprises the counties of Donegal (Tyrconnell), Londonderry, Antrim, Fermanagh, Tyrone, Cavan, Monaghan, Armagh, and Down. (See IRELAND: Map.) Six counties, Antrim, Armagh, Down, Fermanagh, Londonderry, Tyrone, are officially entitled Northern Ireland, with a separate government set up under the Government of Ireland Act, 1920. (See IRELAND: 1920.) The area of Ulster is 8,613 square miles, including Northern Ireland. In 1911 the population of the total area was 1,581,696. In 1922 the population of Northern Ireland was estimated at 1,284,000. Aside from agriculture the chief industries are the manufacture of linen and cotton, ropes, and shipbuilding. The ship yards of Harland, Wolff & Co. are among the greatest in the world, and there is also a large shipbuilding company in Larne.

Legendary history.—Ancient civilization.—Origin of name.—Ancient divisions.—At the time of the Milesian conquest in the tenth century B. C., the province of Ulster with Emain Macha as its capital was given it is said, to Eber, son of Ir and grandson of Mileadh. Little is known of this early period. With the reign of the powerful Niall Noigiallach, or "Niall of the nine hostages" (379-405), history becomes more authentic, but until the eleventh century it is marked chiefly by tribal wars. (See IRELAND: From Tuathal to Cormac, to 1014.)—"It would seem that from early Neolithic times, Ulster has been inhabited by a thriving population. In the Irish Heroic period (which corresponds with La Tène, or second Iron-Age), Ulster, as portrayed by the Irish Sagas, played a prominent part. The relations, hostile or friendly, between Ulster and Connaught, lie at the base of the prose epics belonging to the Cuchulainn cycle."—E. G. R. Armstrong, *Antiquities* (G. Fletcher, ed., *Ulster [Provinces of Ireland]*, p. 101.)—A number of articles made of gold, which were discovered in 1896 in the county Londonderry, are said to be of late Celtic production, and of "exquisite fineness and workmanship." These objects which are believed to date to the first century B. C. seem to prove that a comparatively high state of civilization must have existed at that time. The modern name Ulster comes from the old name Ulaidh, to which the suffix ster (a steading) was added. "Like most of the ancient territorial names in Ireland, this was originally the name of a population, not of a tract of land. Originally the *Ulaidh* occupied the whole of what is now called Ulster—that is, the part of Ireland cut off by a line joining the mouth of the *Droghas* . . . [the Drowse, in Donegal], with *Inbher Colptha*, the mouth of the Boyne. After A. D. 332, however, the name lost its extended application, and the Ulidians proper were restricted to . . . the modern counties of Antrim and Down. A very mixed population inhabited this region, with a large infusion of the aboriginal element, called *Criúthne* in Irish history [the Picts]. . . . The district was further subdivided among a number of ancient septa, as the *Dal Riada* in North Antrim, the *Dál n-Araide* in South and North Down, and the *Dal Fiatach* in South Down. It appears that the kings of Ulidia (in this restricted sense) were

selected alternately from the Dal n-Araide and the Dal Fiatach. The remainder of the modern province of Ulster was divided as follows. In the central portion was the great territory of *Tír Eoghain*, the Land of Eoghan—the territory of the tribe claiming descent from Eoghan (died A. D. 465) son of Niall of the Nine Hostages. . . . The western part of Donegal bore the name *Tír Chonail*, the land of Conail—the territory of the reputed descendants of Conail Guibán, another son of Niall, died A. D. 464. The remnant of the *Airghialla* occupied the south of the province—in Louth, Armagh, Monaghan, and Fermanagh."—R. A. S. Macalister, *Ancient geography* (G. Fletcher, ed., *Ulster [Provinces of Ireland]*, pp. 2-3).

1022-1166.—Struggle of Irish High Kings to subdue Ulster.—"Ireland . . . [in the eleventh century was] divided into five provinces or provincial kingdoms, with the kingdom of Meath in the centre. In Ulster, the descendants of Niall of the Nine Hostages still ruled, their tribal name being 'Sons of Niall,' Hy Neill, or O'Neill. A branch of the Hy Neill, the Hy Lochlain, or O'Loughlins, at this time held the dominant power among the Sons of Niall. . . . The O'Loughlins of Ulster, the O'Conors of Connaught, and the O'Briens of Munster all equally desired the title of Ard-Rig, or High King, which carried with it the overlordship of Ireland and the possession of the central kingdom of Meath. The period after Malachi the Great, who died in 1022, is filled with the struggles of these families to wrest the overlordship from each other. . . . Meanwhile Ulster had remained practically independent of the High Kings. Turlogh O'Brien made a vigorous effort to assert his power over the northern kingdom, but was defeated by the men of Ulster at the old frontier ford at At-Ferdiad, or Ardee, where Cuculaind, the champion of Ulster, had long centuries before defeated Ferdiad, the champion of the armies of the south and west. The feud passed on to Turlogh's son, Murkertagh O'Brien, who became king of Leinster in 1086. . . . The kingdoms of Ulster and Munster, headed by Donall O'Loughlin, and Murkertagh O'Brien, fought steadily for the overlordship of Ireland for more than thirty years [at the beginning of the twelfth century]. Wearied of strife, these two kings finally left their thrones and entered monasteries, the king of Ulster taking refuge in a religious house at Derry. . . . The strife between these two kingdoms weakened them both, and advantage was taken by Turlogh O'Conor, king of Connaught, who claimed the title of High King, and fought for it against Murkertagh O'Loughlin, king of Ulster, until his death in 1156. . . . Turlogh O'Conor was succeeded by his son, Boderick O'Conor, who carried on the fight against Ulster. . . . In 1162, an army was assembled by the king of Ulster, Murkertagh O'Loughlin, to march against At-Cliait, that is, Dublin, and attack the Norsemen and Leinstermen there. Roderick O'Conor joined the expedition, bringing an army of his own Connaught-men and the men of Meath. The foray was successful, and 'a peace was concluded between the Foreigners [Norsemen] and the Gaels; and six score ounces of gold were given by the Foreigners to O'Loughlin, and five score ounces of gold were paid by Dermot O'Melaghlin to Roderick O'Conor, for West Meath.' . . . Murkertagh O'Loughlin died in 1166, and the claim of Roderick O'Conor to the overlordship was admitted without dispute."—C. Johnston and C. Spencer, *Ireland's story*, pp. 87-89, 92-94.

1171-1186.—Rise of de Courcy.—In 1171, when Henry II crossed over to Ireland, modern Ulster was represented by the kingdoms of Ailech (Tír Eoghain [Owen]), Oriel and Ulida. Of these the Uí Neill or Cenel Eoghain (race of Owen) who of right ruled over Ailech, were the strongest. As the sequel showed, it was from these northern men that the Anglo-Norman invaders had most to fear. "Hugh de Lacy was appointed 'Procurator general and Custos of Ireland' in May 1177, and so held till 1181. . . . The danger from the North, which bred soldiers in abundance, was now the serious question for the colonists. It came home to them especially when at the end of 1176, Melachlin MacLochlain with Cenel Eoghain and the men of Oriel marched against De Lacy's castle at Slane, destroyed it, and slew Richard Fleming, its warder, and the garrison of five hundred. In the next year Melachlin, by slaying his rival of the O'Neills, Aedh, became all-powerful, and held single sway till 1185. So in Tír Conaill, Flahertach O'Maeldory, beginning to reign in 1167, . . . [later slew his rival, Rury O'Canannain (in 1188)], and ruled triumphantly till 1197. The feuds of the northern kings, and the imminent need of striking in before the Ulster menace should culminate, suggested the most epical exploit of the whole Invasion. John de Courcy, a Somersetshire knight, collecting a number of the discontented and restless of the Dublin English, set out to conquer Ulster . . . without royal permission. . . . With some three hundred colonists and some native troops De Courcy set off for the North early in 1177, and on February 1 carried Downpatrick, the capital of Ulidia, and a city as sacred as Armagh itself, by a brilliant *coup-de-main*. But its king, Rury MacDonlevy, soon returned with a great array, and Cardinal Vivian, Papal Legate, who was then at Down, blessed the native cause. MacDonlevy, however, was again defeated. . . . The king of Ulidia then went to Melachlin MacLoughlain, his over-lord, got help from him, and returned with O'Carain, Archbishop of Armagh, the bishop of Down, many clergy, and the most sacred relics of Armagh, to face De Courcy once more. But the great rally of the North was totally defeated, the English slaughtered the clergy indiscriminately with the lay combatants, and the archbishop and bishop were taken, along with the relics, on June 24, 1177. . . . De Courcy's first aim had been to conquer Ulidia (Ulaidh), and the title '*Princeps Ulidiae*,' which he apparently assumed, would make him the successor of MacDonlevy. But earlier, as there were native scholars to tell him, Ulidia had stretched west of the Bann and Loch Neagh, and these old claims became his. Further, he aimed at subjecting Oriel and then of overthrowing MacLochlain himself with his over-kingdom: thus would the Norman become what the kings of Ailech had been, supreme king over the whole North. Hence the later confusion as to what the earldom of Ulster meant—was it merely Ulidia east of the Bann and Newry, or was it the whole province, the Ultonia, 'Ulveste,' and Ulster of later usage? . . . The Cenel Eoghain for twenty years made no attempt to save Ulidia. . . . Irish Ulidia and Irish Oriel were doomed to disappear before the conquerors . . . and in the portion of Oriel which survived, namely, Monaghan, or 'Irish Oriel,' the MacMahons took chief place. . . . Carrickfergus, with its castle and the Premonstrant abbey which De Courcy founded, became an English town, and the Benedictines and the Cistercians whom he brought, . . . [introduced a new Anglo-

French civilization into the North]. It was the first Plantation of the North, but a French, not an Anglo-Saxon one, for De Courcy neither expelled the Irish nor planted English plebeians. It was, and remained, the thinnest of the English colonies. If De Courcy was not entirely after the Irish heart, as little was he an Englishman. He rendered no homage for Ulidia to Henry or John, though his charters recognize them as liege lords. [He married a sister of the king of Man, and dreamed of founding a kingdom with its base on Ulster and Man.]—E. Curtis, *History of medieval Ireland from 1110 to 1513*, pp. 85-89.—In 1186 de Courcy was created justiciar of Ireland by John.

1188-1230.—Advance by de Courcy.—Rise of the O'Neills and O'Donnells.—De Courcy, though no longer justiciar, was commissioned in 1192 to make peace with Cathal Crovderg (the "Red hand") brother of Rury or Rory O'Connell, and a claimant to the kingdom of Connaught. De Courcy recognized Crovderg as king of Connaught but de Burgh, (or de Burgo) took up the cause of Cathal Carrach, the other claimant, "brought in an army from Munster and drove Crovderg into exile in Ulster. De Courcy, though near his tragic fall, was still advancing in Ulidia. In 1188 his new fort at Moy Cova, north of Newry, gave him the command of the passes of the North, and the castle that he built at Kinsantail, near Coleraine, threatened Inishowen. Part of the coast here he granted to Duncan, son of Gilbert, Lord of Galloway. A great leader now arose among the Cenel Eoghain. [On the death in 1196 of] Murchertach MacLochlain, . . . Aedh O'Neill became king of Tír Eoghain till his death in 1230. Flahertach of Tír Conaill died in February 1197, and an O'Hegnigh ruled Fermanach and the Cenel Conaill for a time. Cathal Crovderg enlisted these new kings, and the three invaded Connaught in 1200, but were cut off at Esdara (Ballysodare) by De Burgo's forces and O'Hegnigh slain. Thereupon Conor Beg MacLochlain claimed the kingship of Cenel Eoghain, but Egnechan O'Donnell saved Aedh O'Neill his throne by sailing with a large force to Gaeth-an-Chairrgin, near Portrush, where in battle MacLochlain was slain (1201). Egnechan, who ruled Tír Conaill till 1208, established the primacy of the O'Donnells. Bound in a common alliance, the O'Neills and O'Donnells swept every rival out of their path, and thus the two great families of the North rose together amid the wreckage of the Norman Conquest, to fall together four centuries later at Kinsale. The MacLochlains still survived, but in 1241 at Cameirgi Brian O'Neill slew Donal and ten of the MacLochlain 'derbfine' and practically extinguished the race."—E. Curtis, *History of medieval Ireland, from 1110 to 1513*, pp. 105-106.

1199-1260.—Fall of de Courcy.—Attempt to encircle Ulster.—"The policy of John was to remove the early conquerors, men of true feudal type, and promote men familiar with new Monarchy. Hence his veto on De Burgo's designs upon Connacht, and the overthrow of De Courcy. De Courcy's northern kingdom, of whose patent from an English prince no trace could be found, was of the sort to alarm an overlord so jealous of overmighty subjects. Yet no proof exists of De Courcy's intention to shake off the English yoke. His land grants are made '*vice Regis Anglie*.' In reality his fall was due to John's inherent suspicion of 'dangerous men,' to De Courcy's generous outburst against the King for the murder of Prince Arthur, and to the intrigues of Hugh de Lacy,

anxious to be an Earl. Sure of royal approval, the Lacys picked a border quarrel, and when de Courcy refused to go to the King's court in 1202, though summoned, Hugh marched into Ulster and defeated him at Down. . . . [John created Hugh de Lacy earl of Ulster, in 1205, and de Courcy's last effort to overthrow his rivals was defeated by Walter de Lacy at Rath Castle. No attempt was made] to conquer Ulster west of the Bann and Aedh O'Neill held his own against the new Earl. . . . [In the settlement with the chiefs, which followed John's visit to Ireland in 1210] no terms were made with the Northern kings. O'Neill and O'Donnell had declined to come in to John in 1210, and in any case the Dublin government was determined to seize the frontiers of Connacht and Ulster, in readiness for a further advance West and North, and especially to control the Northern coasts. . . . This encircling policy menaced the independence of the Northern Irish. In 1212 Gilbert de Angulo . . . began to build a castle at Cael-uisee, to command the narrow gateway from Connacht to Tir Conaill. The Cenel Eoghaim were similarly to be hemmed in from the sea; and at Carrickfergus, John de Gray granted to Alan FitzRoland, Earl of Galloway, in the King's name, no less than one hundred and forty knights' fees. . . . Thus was threatened a Scottish plantation of Ulster [which was however unsuccessful. In 1243 Hugh de Lacy died, and in 1245 the earldom of Ulster was bestowed by Henry III on his son Edward. In 1255 Edward conferred the "county of Ulster" on Walter de Burgh, who was created earl.] Meantime Maurice FitzGerald, as Justiciar had utilized the State revenues, the feudal levies, and the royal castles for a war upon the unconquered Irish. . . . [In 1245 he was succeeded by John FitzGeogrey who held office until 1256. Maurice induced FitzGeogrey to continue the same policy, and a double campaign] was planned by which O'Donnell and O'Neill were assailed from the Erne, the North Sea, and the South Ulster frontier. A line of fortresses at Sligo, Donagh-moyne, Moycova, Coleraine and Cael-uisee supported the attack [and in January 1247, Melachlin O'Donnell was defeated and slain in battle with Fitzgerald]. The death of Maurice FitzGerald in the spring of 1257 emboldened the chiefs of North and West to appear in arms. Goffraidh O'Donnell [successor of Melachlin] marched south, and defeated the English at Credran [near Sligo; but was badly wounded. Before he could recover, Brian O'Neill appeared in Tir Conaill demanding homage. Borne in a litter, O'Donnell took the field and defeated the O'Neill, but died of his wounds after the battle (1258). At this time the northern chiefs chafed under the feudal exactions of the seneschal of Prince Edward in Ulster.] The time for revolt seemed come; now that FitzGerald's encircling campaign had failed, and there was no more a Lacy Earl of Ulster, Brian O'Neill therefore brought together a great Irish confederacy. . . . [At the battle of Drumderg (Downpatrick), which followed (May 14, 1260) the English were victorious and Brian O'Neill was slain.] Thus ended in apparent failure the first attempt since the Conquest to restore the Ard Ri-ship. . . . [But in the upshot not only did Donal Og O'Donnell] secure Tir Conaill to his race, but ultimately FitzGerald's own fiefs of Fermanagh and Sligo passed under the O'Donnells. The successful, if selfish hostings of the O'Donnells had lasting results. In one corner of Ireland the forward movement had been that of the Irish."—E. Curtis, *History of medieval*

1333.—Murder of earl of Ulster. See IRELAND: 1327-1367.

1367.—Irish county under Irish control. See IRELAND: 1327-1367.

1422-1461.—Raids on Louth and Meath by Irish of Ulster.—Talbot's subjection of Ulster leaders. See IRELAND: 1413-1467.

1540-1567.—O'Neills and O'Donnells.—Rise and fall of Shane O'Neill.—In 1540, when Henry VIII was proclaimed king of Ireland, "except for some English and recent Scotch settlements on the coast of Down and Antrim, the population of Ulster was entirely Irish. The two most important tribes were those of the O'Neills and the O'Donnells. The former occupied what is now Armagh, Tyrone, and part of Londonderry; the rule of the latter extended over Donegal. These two tribes . . . were [now] the most powerful in Ireland. They both claimed to be of Royal descent, and . . . had always been foes. Con O'Neill was one of the chiefs who were won over by Henry VIII. In 1542, in return for acknowledging the King's supremacy, he was created Earl of Tyrone, and the succession to the lands of the O'Neill was secured to his eldest (but illegitimate) son, Mathew, who was at the same time created Baron of Dungannon. Shane O'Neill, however, a younger and legitimate son who had made a name for himself in raids against the Ulster Scots, and in feuds with the O'Donnells, was selected as 'Tantist' by the tribe, and soon a struggle began for the succession to the chieftaincy. Con was chased from Ulster and Mathew was murdered. Shane thereupon received the title of 'The O'Neill' from his people, thus rejecting the Earldom conferred upon his father, and so defying the power of the English Government. . . . Shane . . . was full of ambition, and he determined to make himself lord over Ulster. He gained a great deal of power, and adopted such a menacing attitude that in 1561 the Earl of Sussex proceeded against him. Shane could not be forced to any definite engagement, wore out Sussex's army, and captured the chief of the O'Donnells, who had allied himself with the English. At length he was persuaded to come to terms. . . . He arrived in London with his Celtic train in January, 1562, made his submission, and . . . was allowed to return with a promise to reduce the Scots and keep the O'Donnells in check. Once again in Ireland he took no trouble to conceal his ambition. He subdued the Maguires and O'Reillys, attacked the O'Donnells, and began to threaten the English settlements. In view of the danger from Scotland another truce was patched up with him in 1563, and his title of 'The O'Neill' was formally acknowledged. Up to this Shane had shown intelligence and some prudence, but [now] instead of joining with the O'Donnells and the Scots, who had lately settled in Antrim, in a solid alliance against the English, he turned against both and tried to crush them. . . . [In consequence] Elizabeth resolved to crush him as her father had crushed Kildare. He was proclaimed a traitor in August, 1566, and Sir Henry Sydney, with a large force, invaded Tyrone. Many of the Northern chiefs were gained over by the English, with the result that Shane was defeated by the O'Donnells in May, 1567."—C. Maxwell, *Short history of Ireland*, pp. 34-37.

1570-1603.—Elizabethan grants.—Scottish settlements.—"There were two or three small [unsuccessful] attempts made to colonise the east-

ern portion of Ulster in Elizabeth's reign. . . . About 1570 a grant of part of Armagh was made to Thomas Chatterton, but the O'Neills sent an expedition against the settlers, and drove them out. Again, about the end of 1571, the district of Ards in County Down [a possession of the O'Neills] was granted to Sir Thomas Smith of Essex. . . . [Smith, who was not supported by the Deputy], was defeated in battle and slain in October 1573, but a few of his followers still remained on in that district. Another attempt on a much larger scale was made in 1573, when the Earl of Essex received from Elizabeth half of the County of Antrim and the Barony of Farney in County Monaghan. Essex came with twelve hundred soldiers to Belfast Lough, to find that the Scots of the Glynnes of Antrim, under Sorley Boy had joined with the O'Neills against him. . . . [After two years of fighting he was compelled to return to England. (See IRELAND: 1559-1603).] In 1603 Sir Arthur Chichester for his services in the war with O'Neill obtained a grant of . . . [the east coast of Antrim] and also of the land for some distance up the valley of the Lagan. . . . [He settled the districts around Belfast and Carrickfergus with English from Devon, Lancashire and Cheshire.]—J. B. Woodburn, *Ulster Scot*, pp. 44-45.—Immigrants from Scotland had already settled in North Antrim. Both Mary and Elizabeth objected to their presence and tried to eject them. Their efforts, however, were without avail and in the sixteenth century the Scots advanced steadily westward. "In the end the Government thought it better to accept the inevitable, and to gain the loyalty of the predominant clan of the MacDonnells, the Queen granted Sorley Boy, their most formidable leader, a large slice of Antrim in return for submission and acknowledgement of the supremacy of the Crown (1586). Sir Randal MacDonnell, who, as a Scotsman, stood high in the favour of James I, received in 1603 the entire region known as the Glynnes and the Route. The unsettled condition of Ireland at this time drew . . . many enterprising persons who wished to lay the foundations of their fortunes [to Ulster where the merciless wars had left large portions almost uninhabited]. Sir Hugh Montgomery, the Laird of Braidstane in Ayrshire, secured [from Con O'Neill] a large grant in the district known as Claneboy and the Great Ards; he brought over with him many substantial farmers from the Scottish Lowlands, and owing to their industry a flourishing colony was soon in existence."—C. E. Maxwell, *Irish history from the contemporary sources*, pp. 56-57.—Thus the way was paved for the great confiscation known as the Plantation of Ulster.

1584.—Division into counties.—"In 1584, Sir John Perrott [lord lieutenant] divided the province of Ulster into seven counties, Armagh, Monaghan, Tyrone, Coleraine (which was later changed to Derry), Donegal, Fermanagh, and Cavan. The two counties of Antrim and Down in Ulster had been formed some years before."—C. Johnston and C. Spencer, *Ireland's story*, p. 165.—"Ulster was the last of Irish districts to be reduced to shire ground, and here as elsewhere the English authority was for a long time only nominal. It was not till James I's reign that county administration became really effective throughout Ireland."—C. E. Maxwell, *Irish history from contemporary sources*, p. 38.

1585-1608.—Hugh O'Neill's alliances and growing power.—"Flight of the earls."—"Shane

O'Neill was succeeded as head of his clan by his cousin Turlough. Hugh O'Neill, the second son of Mathew, Baron of Dungannon [the elder son was dead] was thus disregarded, but . . . he was taken under the protection of the state, and sent to be educated at the court of Elizabeth. . . . In 1585 Hugh was made Earl of Tyrone, and on the death of Turlough the tribesmen elected him as chief, giving him the title of 'The O'Neill.' This changed the attitude of the Government towards him. By accepting the old tribal title he might, it was felt, lay claim at any time to the Lordship of Ulster and follow in Shane's footsteps. . . . He was a far better statesman than Shane. He saw that the Irish must be united to make a successful war upon the English, and that foreign aid was also necessary. He allied with the O'Donnells, and instead of crushing the other Ulster tribes, he won over the chiefs [who had been offended and alarmed by the proceedings of Sir William Fitz-William the lord deputy], and built up a great League of the North. . . . He drilled and disciplined his soldiers in the English fashion, and bought arms and ammunition from Spain. In the summer of 1598 he laid siege to a fort named Portmore, near Armagh, and when Bagenal [the lord-marshal] marched to its relief with 5,000 men, he entrenched himself at a place called the Yellow Ford, on the river Callan, about two miles from the town. . . . On the 14th August Bagenal's forces . . . [were] completely routed . . . [and Bagenal himself was killed]. Portmore, Monaghan, and Armagh then surrendered to O'Neill, which left all Ulster in his hands with the exception of Carrickfergus. . . . In the spring . . . of 1599 Elizabeth sent over the Earl of Essex. . . . [Essex should have struck first at Ulster and the power of O'Neill, but he was foolishly persuaded to march into Munster, where] his army melted away in the guerrilla warfare carried on by the natives and was defeated. . . . The Queen, enraged at his failure, commanded Essex to march north without further delay. In August, 1599, he, therefore, proceeded to Ulster. With his sadly diminished army he did not dare to attack O'Neill, now at the height of his power, and so arranged a meeting with him. At this conference a truce was arranged, in which the Irishman got the better terms. In February, 1600, the young but experienced soldier, Charles Blount, Lord Mountjoy, was sent over. . . . The long-expected aid from Spain . . . [for which O'Neill had asked] at last arrived. On the 23rd September, 1601, a Spanish fleet, under the command of Don Juan de Aguila, reached Kinsale with 3,400 troops . . . [and O'Neill marched south to meet them. Against his counsel] on the 24th December, 1601, a night attack was made, but as the English had been forewarned, and as the Spaniards failed to co-operate, the Irish were completely routed. . . . The chiefs hastened back to the north. . . . O'Neill was gradually hemmed in, and as the chiefs deserted him, one after the other, . . . [he made his submission in 1603]. He was allowed to retain his lands and his earldom, but not the coveted title of 'The O'Neill.' He had also to promise to introduce English laws and customs into Tyrone, and to abandon all intrigues with foreign powers. Thus the great rebel, Hugh O'Neill, had once more become a servant of the Crown. His position in Ireland as such soon became impossible. . . . Rory O'Donnell, who had also submitted and been created the Earl of Tirconnell, was in a similar position. In 1607 matters were brought to a crisis by a report in-

vented by their enemies of a conspiracy in which the two Earls were supposed to have taken part. They decided to leave the country, and on the 14th September embarked with their families from the shore of Lough Swilly. . . . After the 'Flight of the Earls' their estates were confiscated, and when the short-lived rising in the north of Sir Cahir O'Dogherty had been put down in July, 1608, the English crown was absolutely supreme in Ireland."—C. Maxwell, *Short history of Ireland*, pp. 40-44.—See also IRELAND: 1559-1603.

1609-1611.—Plantation of Ulster.—The "flight of the earls" opened the way for a larger plantation than had yet been attempted in Ulster. Their estates were declared forfeited to the crown and "the other chieftains of Ulster, O'Caahan of Londonderry, Maguire of Fermanagh, and O'Reilly of Cavan were compelled to resign all or most of their lands, which were also confiscated. According to English law all that should have fallen to the Crown was the freehold estate of those who were attained, but the theory was put forth that the right of the chieftains extended to the soil of six entire counties, Donegal, Londonderry, Tyrone, Armagh, Cavan, and Fermanagh, and that the sub-chiefs who had been created freeholders in 1604 were no better than tenants-at-will. It was resolved to plant the confiscated lands with English and Scottish settlers and to eject the natives from all the most valuable portions."—J. B. Woodburn, *Ulster Scot*, pp. 64-65.—See also SCOTCH-IRISH.—Monaghan, after the execution of Hugh "Roe" Macmahon, had been divided amongst eight of the principal chieftains and the clansmen at large, and was not included in the settlement. "In accordance with Tudor practice, the Crown took up a legal position, and proceeded to prove that the minor clansmen, who were now at the mercy of the government, had no right to their lands. After the fall of Shane O'Neill, by the 11 Eliz. c. 1. his lands in Ulster were declared forfeited. This Act was taken as the foundation for Government action. As a result of the flight of the Earls, their supposed treason and the suppression of their allies, lands which included the six counties of Donegal, Tyrone, Armagh, Coleraine, Fermanagh and Cavan, were confiscated. Further, Sir John Davies, the Attorney-General, ignoring the fact that the King had promised . . . [protection to all vassals], stated that practically the whole of Ulster was absolutely at the disposal of the Crown. Certain moderate statesmen . . . held that better results would be obtained by some consideration for the rights of the Irish. Future events were to prove the wisdom of their opinions, but . . . [Davies's policy prevailed]. The plantation was carried through by a series of three Commissions [1609-1611], the most important of which was appointed in the summer of 1609 to make an exact survey of the escheated counties, to hold inquisitions and to mark out the proportions of the undertakers. In the 'Orders and Conditions,' . . . [issued in January 1609], the scheme of the plantation was set forth. The lands were divided into three proportions of 1,000, 1,500 and 2,000 acres, and were offered to English and Scottish planters on . . . [certain conditions]. Market towns and free schools were to be founded, and individual settlers were to build strong castles, or brick houses, with 'bawns' or courtyards about them, take the Oath of Supremacy and pay a fixed rent. . . . Servitors, or military men, for a higher rent might have Irish tenants upon their lands. The other planters, supposed to be without military

experience, were forbidden to have them, but were to import a competent number of English and Scotch to reside on their estates. The Irish, besides being admitted to the lands of the servitors, were to receive small proportions in certain districts, not always in the worst or poorer districts as is sometimes supposed, so that they were not entirely excluded from the settlement though they lost the bulk of their lands. To put heart into the enterprise, the Government approached the wealthy city of London with a view to plantation. . . . The City secured excellent terms, a company was formed to represent the Corporation of the City of London, later known as 'The Irish Society,' for the plantation of the modern county of Londonderry, which included the City of Derry [which they rebuilt] and the County of Coleraine, besides part of Tyrone and adjoining districts in Donegal and Antrim. . . . The Londoners looked upon the settlement as a commercial speculation, and had an eye to immediate profits. Like the rest of the settlers they obtained more land than was originally intended, and by selling the timber of the woods and retaining the cheap labour of the Irish upon their lands . . . [against the terms of their agreement], ensured the success of their undertaking."—C. E. Maxwell, *Irish history from contemporary sources*, pp. 52-55.—See also IRELAND: 1607-1611.

ALSO IN: H. O'Grady, *Strafford and Ireland*, pp. 822-833.

1609-1641.—Results of the Plantation.—"Of the various surveys of the plantation made during the next fifteen years, that by Captain Nicholas Pynnar is the best known. He states that in 1619 there were two thousand British families in the six counties, and notes that 126 castles had been built, but remarks upon a general want of buildings, and the large numbers of Irish that had remained. [There were actually more Irish than colonists within the plantation.] The planters from Scotland seem to have been the mainstay of the plantation. They were more industrious than the English and made more of their Irish tenants. They brought with them the organisation of their national Church, and so gave to the settlement the distinctly Puritan character which it still retains. The discontent displayed by the Irish over the settlement is the best evidence of the success of English policy. The clan system was broken. The people had to give up their pastoral habits and submit themselves to English landlords, some hundreds were transported to fight in the Swedish wars, some went into Connacht, and some remained in their native bogs and forests as woodkerne or outlaws, to prey on the settlers and watch for an opportunity to regain their lands. As long as the colonists had the support of the home Government all went well with them, but upon the development of Covenanting principles in the North, Laud wrote to Strafford of the 'great inconvenience,' of the strength of the Scots in Ulster, and the latter aroused the hostility of the Crown. This put heart into the Irish, and they determined to revenge their wrongs. In more ways than one the great rebellion of 1641 was the outcome of the plantation of James I. . . . The plantation policy and the colonisation of Ulster mark an important era in Anglo-Irish relations. Ireland was no longer a mere feudal dependency as she had been during the Middle Ages, but was definitely becoming a colony. During the next two hundred years English policy in Ireland was a colonial policy conducted in accordance with

the views of the period."—C. E. Maxwell, *Irish history from contemporary sources*, pp. 55-57.

1635.—Establishment of linen industry.—"One benefit conferred on Ireland [about 1635] by [Sir Thomas Wentworth] was the establishment in Ulster of the linen trade, which has proved so great a boon. Finding that the soil of Ireland was suitable to the growth of flax, he purchased in Holland a thousands pounds' worth of seed, and, obtaining workmen from Flanders and from France, he set up six or seven looms as a beginning. At the same time he discouraged the woollen manufactures, for which certain districts in Ireland had become celebrated, lest they should compete with those of England. [The important cotton manufacturing industry of present-day Ulster was not introduced until 1777.]"—W. F. Collier, *History of Ireland for schools*, pp. 137-138.

1687-1689.—Opposition to James II.—Siege of Londonderry.—Events in Ireland, were even more fevered than in England toward the close of James II's short reign. Tyrconnell was appointed lord-deputy in 1686, and the year 1687 had scarcely arrived before Ulster had taken fright at his Jacobite activities. He was planning to make Ireland into a refuge for James, and a foothold for an invasion of England in case of need. The actual fall of James created a still greater panic, and the Protestant inhabitants began to gather behind the walls of Londonderry and Enniskillen. And now in answer to James's call for military aid "Tyrconnell denuded Londonderry of its garrison; but speedily recognizing the risk he was thereby running he ordered the Marquis of Antrim to proceed thither with his regiment. . . . As the citizens of Londonderry watched the approach of the soldiers with heavy hearts the apprentices of the city, seized 'by a strange impulse,' closed the gates in their face. The attitude of Derry was immediately imitated by Enniskillen and Sligo, and Tyrconnell, seeing the necessity for prompt action, sent Richard Hamilton with a strong force into Ulster to restore order there early in 1689. At Dromore Hamilton came up with a considerable body of Protestants under the command of Sir Arthur Rawdon and Major Baker, but after a short resistance the Protestants broke and fled, some to Coleraine, others to Enniskillen and Derry. Two days before the 'Break of Dromore,' as this incident is called, James landed at Kinsale, accompanied by a number of French and English officers. . . . Full of his intention to get to Scotland as soon as possible, James, after issuing writs for a meeting of Parliament in May, proceeded in person at the head of his army against Derry. It was hoped that his presence and the overwhelming force with which he was attended would bring the recalcitrant citizens to their senses. The opinion was shared by Colonel Lundy, to whom the defence of Derry had been entrusted, and James, having reached the outskirts of the city on 18 April, was negotiating for a surrender when a cannon ball, fired either accidentally or of set purpose, came dangerously near to cutting his career short. Apologies followed, but that same night Lundy, finding himself suspected of treason, fled, and the defence of the city being placed in more determined hands, Londonderry entered on her famous . . . siege."—R. Dunlop, *History of Ireland from*

*earliest times to present day*, pp. 123-124.—James returned to Dublin, and the siege was left to Richard Hamilton, who was succeeded by De Rosen.—See also LONDONDERRY: 1689.

1704.—Test oath imposed. See SCOTCH-IRISH.

1791-1797.—Wolfe Tone and the Society of United Irishmen.—Peep o' Day Boys and Defenders.—"In October, 1791, Wolfe Tone, a young Dublin barrister, founded the Society of the United Irishmen at Belfast. The Society at first sought to unite Irishmen of all religions in order to gain Catholic Emancipation and parliamentary reform, but as time went on it became revolutionary, and desired complete separation from England. . . . [About this time the "Defenders" and "Peep o' Day Boys" (see IRELAND: 1795-1796), came into being, and] in 1795, after serious rioting near Armagh, the Orange Society was formed among the Protestant peasantry of Ulster as a league of defence."—C. Maxwell, *Short history of Ireland*, pp. 107-108.—"The great majority of the leaders of the United Irishmen were Protestants, who were all of course for Catholic emancipation. But, in Ulster especially, there was, all along, bitter strife between the Catholics and Protestants. Tone, himself a Protestant, had done all in his power to bring them to friendly union and co-operation, but in vain: religious animosity was too strong for him. At last the Peep-o'-day boys and the Defenders fought a regular battle on the 21st September 1795, at a village called The Diamond in Armagh: the Protestants, though inferior in number, were better armed, and the Defenders were defeated with a loss of 48 killed. The Protestants next banded themselves in a new society called 'Orangemen,' with the openly expressed intention to expel all the Catholics from Ulster. . . . General Craddock was sent with the military to restore order, but so close a watch was kept on his movements that he found it almost impossible to arrest the bands of armed Orangemen; and outrages still went on. General Henry Luttrell Lord Carhampton was sent to Connaught to repress the Defenders. . . . Meantime the society of United Irishmen spread, until finally it numbered 500,000. There were now many Catholics, but to the last the confederacy was mainly Protestant; and the members were more numerous and active in Ulster than elsewhere. . . . A stringent Insurrection act [was passed] in 1796. The *Habeas Corpus* act was suspended, which suspension gave the magistrates the power to arrest any one they pleased. General Lake got command of the army in Ulster, and [early in 1797] he proclaimed martial law in Down, Antrim, Tyrone, Derry, and Donegal, which placed the people entirely at the mercy of the military. He arrested two committees of United Irishmen sitting in Belfast, seized their papers, and suppressed their journal, the *Northern Star*. He disarmed Ulster, seizing vast numbers of muskets, cannons, and pikes. For publishing a violent address Arthur O'Connor was arrested and imprisoned in Dublin castle."—P. W. Joyce, *Concise history of Ireland*, p. 277.—See also IRELAND: 1793-1798; 1795-1796.

1820-1870.—Rise of the Ribbon Society. See IRELAND: 1820-1870.

1845-1860.—Tenant right.—Ulster custom. See IRELAND: 1845-1847; 1847-1860.

1885-1891.—First Home Rule Bill.—Opposition in Ulster.—In 1885 Gladstone adopted "the Home Rule programme of Parnell. . . . In 1886 there was another election on this issue. Nine-tenths of the old Liberal party in Ulster seceded from Mr. Glad-

stone on this question. . . . Faced with a common foe in 1886, the Protestant forces in Ulster . . . laid aside their difficulties and put up a fight for the Union. [There were riots in Belfast in June, July and August of 1886. In October a royal commission with Justice Day at its head made an official inquiry into the matter of the riots, and when the report was published in January 1887, fresh riots resulted. The Home Rule Bill was defeated.]—H. S. Morrison, *Modern Ulster*, pp. 88, 90.—See also IRELAND: 1885-1891.

1892.—**Ulster convention.**—In June 1892, when the second Home Rule Bill was being agitated, a large number of delegates from the different parts of the province met at Belfast. Resolutions in opposition to home rule and in favor of maintaining the Union of Great Britain and Ireland were passed, and a petition against home rule was drawn up.

1912-1914.—**Opposition to home rule.** See IRELAND: 1912-1914; IRELAND: 1912-1914; 1913-1916.

1914.—**Curragh incident.** See CURRAGH INCIDENT.

1919.—**Opposition to the Irish republic.** See IRELAND: 1919.

1921.—**Opening of Ulster Parliament.**—King's speech.—Under the Government of Ireland Act, 1920, a separate parliament and executive government were established for Ulster or Northern Ireland. At the royal opening of the Ulster Parliament on June 22, 1921, King George addressed the speaker of the new Northern Parliament and representatives of Ulster men and appealed to them to make the grant of self-government to the six counties the stepping stones to a settlement of "the age-long Irish problems affecting the whole English-speaking world. . . . In his speech from the throne the King made it clear that it was not for Belfast or Northern Ireland only that his visit was intended. 'This is a great and critical occasion for the Six Counties,' he said, 'but not for the Six Counties alone, for everything which interests them touches Ireland, and everything which touches Ireland finds an echo in the remotest corners of the Empire. . . . I appeal to all Irishmen to pause, to stretch out the hand of forbearance and conciliation, to forgive and forget, and to join in making for the land they love a new era of peace, contentment, and good will.'—W. A. Philips, *Revolution in Ireland*, p. 211.

1921.—**Attempt to exclude Ulster from Irish Free State.** See IRELAND: 1921.

1922.—**Withdrawal from terms of Free State constitution.**—"Under the terms of the Act establishing the Free State the Constitution was to apply to the whole of Ireland, subject, however, to the right of Northern Ireland to withdraw under Article XI of the Treaty. If there was any hope that this right would not be exercised it was rapidly belied. On the day following the signing of the Act, 7 December, the Northern House of Commons, on the motion of Sir James Craig, decided unanimously to present the following address to the King:

'Most Gracious Sovereign, We, your Majesty's most dutiful and loyal subjects, the Commons of Northern Ireland in Parliament assembled, having learnt of the passing of the Free State Constitution Act, 1922, being the Act of Parliament for the ratification of the Articles of Agreement for a Treaty between Great Britain and Ireland, do, by this humble address, pray your Majesty that the powers of the Parliament and Government of the Irish Free State shall no longer extend to Northern Ireland. On the same day an address in similar

terms was adopted by the Senate on the motion of the Marquess of Londonderry. Thus it was decided that Ireland was to remain 'partitioned.'—W. A. Philips, *Revolution in Ireland*, pp. 309-310.

ULTRAMONTANE, ULTRAMONTANISM.

—The term ultramontane (beyond the mountain) has been used for so long a time in France and Germany to indicate the extreme doctrines of papal supremacy maintained beyond the Alps—that is, in Italy, and especially at Rome—that it has come to have no other meaning. The ultramontanists in each country are those who make themselves partisans of these doctrines, in opposition to the more independent division of the Roman Catholic church. "Roman development during the nineteenth century has been in the direction of the assertion of papal supremacy, that called Ultramontanism—i. e., beyond the mountains from the point of view of northern and western Europe—that is Italian. To this Ultramontane tendency to exalt the papacy above all national or local ecclesiasticism the Jesuits have powerfully contributed. Pius VII's successor, Leo XII (1823-1829), was reactionary, condemning, like his predecessor, the work of Bible societies. Gregory XVI (1831-1846) was a patron of learning, but reactionary toward modern social and political ideals. This essentially mediæval outlook and refusal to make terms with the modern world led to the formation, in the first half of the nineteenth century, of clerical and anticlerical parties in Catholic countries, whose contests have largely determined the politics of those lands to the present [written in 1918]. The Ultramontane tendencies found their conspicuous illustration in the papacy of Pius IX (1846-1878). . . . In religion he was sincerely convinced that in the papacy is a divinely appointed institution to which the modern world can appeal for the decision of its vexed religious problems. . . . In 1864 a Syllabus of Errors, prepared under papal auspices, condemned many things which most Christians oppose; but also repudiated much which is the foundation of modern states, like the separation of church and state, non-sectarian schools, toleration of varieties in religion, and concluded by condemning the claim that

'the Roman Pontiff can and ought to reconcile himself to, and agree with, progress, liberalism, and civilization as lately introduced.' The crowning event of Pius IX's pontificate was the Vatican Council. Opened on December 8, 1869, with a remarkably large attendance from all over the Roman world, its most important result was the affirmation, on July 18, 1870, of the doctrine of papal infallibility by a vote of five hundred and thirty-three to two. . . . Thus the Vatican Council sealed the triumph of Ultramontanism. . . . Though undoubtedly the logical outcome of centuries of papal development, this doctrinal definition encountered considerable opposition, especially in Germany. The most eminent refuser of conformity was the distinguished Munich historian, Johann Joseph Ignaz von Döllinger (1790-1890), but though excommunicated, he declined to initiate a schism. What he refused, others achieved, and the result was the organization of the Old Catholics. . . . In spite of growing Ultramontanism, modern historical criticism, Biblical investigation, and scientific conceptions of growth through development, have found a foothold, though scanty, in the Roman communion. . . . Against this movement Pius X set his face. By a 'syllabus,' and an 'encyclical,' in 1907, Modernism was condemned, and stringent measures taken for its repression."—W. Walker, *History of the Christian church*, pp. 560-561, 564.—See also GERMANY: 1873-1887; 1887-1893; PAPACY: 1864; 1860-1870; 1907 (September).

**ULTRAMONTANE UNIVERSITY.** See UNIVERSITIES AND COLLEGES: 1231-1339.

**ULUNDI**, district in Zululand, South Africa, formerly the royal kraal. It was occupied by the British in 1879. See SOUTH AFRICA, UNION OF: 1877-1879.

**UMANITARIA SOCIETY.** See EDUCATION: Modern developments: 20th century: Workers' education: Italy.

**UMBERT I.** See HUMBERT I.

**UMBRIA**, district in central Italy comprising the province of Perugia. Until 1860 it was part of the Papal States. In ancient times the name applied to a larger region in the central and northern part of Italy. See ROME: Map of ancient Italy.

**UMBRIAN SCHOOL OF LITERATURE.** See ITALIAN LITERATURE: 12th-14th centuries.

**UMBRIANS**, race of ancient Italy. "The Umbrians at one time possessed dominion over a great part of central Italy. Inscriptions in their language also remain, and manifestly show that they spoke a tongue not alien to the Latin. (See PHIL- OLOGY: 9.) The irruption of the Sabellian and of the Etruscan nations was probably the cause which broke the power of the Umbrians, and drove them back to a scanty territory between the Æsis, the Rubicon, and the Tiber."—H. G. Liddell, *History of Rome, introduction, sect. 2.*—See also ITALY: Ancient; ROME: Ancient kingdom: Genesis of the people of Rome.

**UMBRO-SABELLIANS.** See ROME: Ancient kingdom: Genesis of the people of Rome.

**UMMAYYADS.** See OMMAYYADS.

**UMRA KHAN** (c. 1860-1903), Indian mountain chieftain. Fought against the British at Chitral, 1895. See INDIA: 1895 (March-September).

**UNALACHTIGOS**, North American Indian tribe. See DELAWARES.

**UNAMIS**, North American Indian tribe. See DELAWARES.

**UNCIA**, Roman unit of measurement of one thumb-joint length, corresponding to the inch. See FOOT, ROMAN.

**UNCIAL MANUSCRIPT.** See BIBLE, ENGLISH: Sources.

**UNCLE SAM**, name given to a figure used in cartoons to represent the United States. According to the legend concerning the origin of the name, during the war of 1812, Samuel Wilson, a government inspector, when asked the meaning of the initials U. S. with which he stamped barrels and boxes, replied, "Uncle Sam," the name by which he was himself known. Uncle Sam is usually represented as an old man, tall and thin, with a long goatee beard, dressed in an exaggeration of the style of the early nineteenth century, his vest and trousers forming the flag, and wearing a tall white beaver hat.

**UNCOMPAHGRE**, river and valley in the southwestern part of Colorado. The valley has been irrigated and reclaimed for agriculture. See CONSERVATION OF NATURAL RESOURCES: United States: 1902-1910.

**UNCONSTITUTIONAL CONVENTION.** See BLACK AND TAN CONVENTION.

**UNCPAPAS**, North American Indian tribe. See SIOUAN FAMILY.

**UNCTION**, Royal. See CORONATION.

**UNDERGROUND RAILROAD**, route by which fugitive slaves were aided in their escape to Canada. See SLAVERY: 1840-1860.

**"UNDERTAKERS,"** Irish.—The settlement of Ulster was accomplished by grants of land by the crown to "undertakers," who rented the land to tenants. See ULSTER: 1609-1611; IRELAND: 1760-1798.

**UNDERWOOD**, Oscar Wilder (1862- ), American legislator. Member of the House of Representatives, 1895-1915; took a leading part in framing the tariff bill of 1913, which bears his name; United States senator, 1915-1921; chosen Democratic leader, 1920. See U. S. A.: 1912; Woodrow Wilson and the election; 1913 (April-December); TARIFF: 1913.

**UNDERWOOD TARIFF BILL.** See TARIFF: 1913; U. S. A.: 1913 (April-December).

**UNDERWRITER:** Origin of the term. See INSURANCE: Marine insurance: Ancient.

**UNDESET**, Sigrid (1882- ), Norwegian novelist. See SCANDINAVIAN LITERATURE: 1888-1920.

**UNELLI**, one of the Armorican tribes of ancient Gaul. Their country was the present department of Manche.

**UNEMPLOYMENT:** Insurance against. See SOCIAL INSURANCE.

**UNEMPLOYMENT CONFERENCE:** United States. See U. S. A.: 1921 (July-December).

**UNGAVA**, or New Quebec, district in Canada, north of the province of Quebec. In May, 1912, it was annexed to Quebec, and later in the same year was erected into the territory of New Quebec. It has an area of 351,780 square miles. See CANADA: 1895; also Map of Dominion of Canada and Newfoundland.

**UNGERN-STERNBERG**, Michael, Baron von (1870-1921), anti-Bolshevik general. See SIBERIA: 1920-1922.

**UNIATE**, or **UNIAT**, **CHURCHES**, religious bodies that have separated from the Eastern churches and submitted to the pope, and at the same time have retained their ancient rites. "A Uniate is a Christian of any Eastern rite in union with the Pope; namely a Catholic who belongs not to the Roman but to an Eastern rite. They differ from other (schismatic) Eastern Christians in that they are in communion with Rome and from Latins in that they have other rites. . . . The history of some of . . . [these] venerable sees begins

with the Apostolic age. . . Negotiations under Coerularius [which culminated in the open schism of 1054] were the first instance of Rome's treating with the Orthodox with a view of reunion. The second council of Lyons (1274) and the council of Ferrara-Florence (1438-1439) were the first efforts on a large scale. . . In the sixteenth century, . . . [due] to the unceasing labors of the Latin missionaries, the number of Orientals entering into Union with Rome became so great that Uniate churches were formed. . . Historically . . . the oldest of these Uniate patriarchates is that of the Maronites. In 680 the patriarch of Antioch, Marcarius, was deposed by the general council for Monothelism. The Monothelites then grouped themselves round the *hegumenos* of the Maronite monastery, John (707). Thus begins the separated Maronite . . . church. . . At the time of the Crusades the Maronites united with Rome (1162 and again in 1216) . . . and finally during the sixteenth century they became Catholics. . . The next oldest Uniate patriarchate is that of Babylon for the Chaldeans (converted Nestorians). It began with the submission of the Nestorian Patriarch John Sulaga (d. 1555); the title of Babylon was not used until Pope Innocent XI conferred it in 1681. . . The Melchite patriarchate dates from 1724. . . This also began with a disputed succession, namely that of the old patriarchal see of Antioch. The Uniate Byzantine (Melchite) sees of Alexandria and Jerusalem are, since the time of Pope Gregory XVI, considered as united to that of Antioch, i. e. the Patriarch is administrator, his titles thus being Patriarch of Antioch, of Alexandria, of Jerusalem and of all the East. . . The Uniate Armenians have a patriarch who resides at Constantinople but does not take his title from that city. His line began in 1739 with a disputed election to Ctesiphon, one of the several Armenian exarchates. He is called Patriarch of Cilicia of the Armenians. The history of the Syrian patriarchate is as follows: In 1737 Ignatius Giarve, Jacobite bishop of Aleppo, was canonically elected patriarch of Antioch. He then made his submission to Rome and the . . . bishops deposed him and chose a Monophysite as patriarch. It is from Giarve that the line of Uniate Syrian patriarchs of Antioch descends. Finally in 1895 Pope Leo XIII erected a Uniate Coptic patriarchate of Alexandria, thus replacing the Coptic vicar apostolic by a patriarch and two bishops. . . The Oriental rites are divided into sections or branches [as follows:] (1) Byzantine Branch. These form a branch in which the same liturgy, the Byzantine (so-called on account of having its origin in Constantinople) is used, each group having with few exceptions its own liturgical language. These groups are [written in 1918], (a) the Uniate Melchites in Syria and Egypt, about 165,000, . . . (b) one Georgian congregation in Constantinople, last remnant of old Georgian church, . . . (c) Uniate Greeks [about 1000 in Thrace], . . . (d) Uniate Ruthenians, . . . nearly four millions in Austria Hungary [and Russian Ukraine], . . . (e) Bulgarian Uniates, about 15,000, . . . (f) Roumanian Uniates, about a million and a half, chiefly in Transylvania, . . . (g) Italo-Greeks, about 60,000; (2) Armenian branch, about 90,000; . . . (3) Antiochian Syrian branch, (a) United Syrians, 35,000, . . . (b) Chaldeans, 70,000, . . . (c) Chaldeans from Malabar, about 320,000, . . . (d) Maronites, about 350,000; . . . (4) Alexandrian branch, (a) Copts, about 15,000, . . . (b) Abyssinians, about 15,000. [By the bulls Reversurus, 1861, and Cum Ecclesiastica, 1869, Pius

IX attempted to Romanize the rites of the Armenian and Chaldean Uniate churches and as a result brought about a schism. Leo XIII (1878-1903) adopted a policy of conciliation and even continued to recognize bishops of different rites in the same see, as for instance the three Uniate patriarchs of Antioch, representing the Græco-Melchite, Maronite and Syrian rites respectively.]—P. J. Sandalgi, *Uniate oriental churches* (*Ecclesiastical Review*, Feb., 1918).—See also RUSSIA: 1881-1894; UKRAINE: 1914-1921.

**UNICAMERAL SYSTEM.** See BICAMERAL SYSTEM.

**UNIFORMITY, Acts of.**—Two Acts of Uniformity were passed by the English Parliament in the reign of Edward VI (1548 and 1552), both of which were repealed under Mary. In 1559, the second year of Elizabeth, a more thorough-going law of the same nature was enacted, by the Provisions of which, "(1) the revised Book of Common Prayer as established by Edward VI in 1552, was, with a few alterations and additions, revised and confirmed. (2) Any person, vicar, or other minister, whether beneficed or not, wilfully using any but the established liturgy, was to suffer, for the first offence, six months' imprisonment, and, if beneficed, forfeit the profits of his benefice for a year; for the second offence, a year's imprisonment; for the third, imprisonment for life. (3) All persons absenting themselves, without lawful or reasonable excuse, from the service at their parish church on Sundays and holydays, were to be punished by ecclesiastical censures and a fine of one shilling for the use of the poor."—T. P. Taswell-Langmead, *English constitutional history*, ch. 12.—See also ENGLAND: 1559.—In 1662, soon after the Restoration, another Act of Uniformity was passed, the immediate effect of which was to eject about 2,000 ministers from the Established church.—See also ENGLAND: 1662-1665; ACADEMIC FREEDOM; CHURCH OF ENGLAND: 17th century.

**UNITED STATES BOYS' WORKING RESERVE**, organization of boys mobilized to work on the farms in the United States during the World War, some times called "farm cadets." "The United States Boys' Working Reserve . . . [was] a registered army of patriotic youths, organized under the Department of Labor, with branches in every State in the Union and the Territory of Hawaii. Its purpose . . . [was] to mobilize for productive service, chiefly upon American farms, all physically fit boys in the United States between the ages of 16 and 20, and to maintain their education and prevent their exploitation while so mobilized. Enrollment in the Boys' Working Reserve . . . [was] entirely voluntary. . . . Upon the satisfactory completion of the period of service for which . . . [the boy] enrolled, the minimum limit of which is six weeks of six days a week, of eight hours a day, he received the Federal Bronze Badge, bearing the Great Seal of the United States. . . . The Boys' Working Reserve was organized in May, 1917. In that year it carried its organization into forty-odd States, brought its program to the attention of the State Councils of Defense in every State in the Union; secured the indorsement of the Governors in all States, and mobilized about 100,000 boys and placed them upon the farms of America. In 1918 the Boys' Working Reserve completed its organization in every State in the Union, in the District of Columbia, and the Territory of Hawaii; had enrolled and placed upon the farms of the United States about 210,000 boys; had trained intensively, through its Farm-Craft Lessons and its Central Farm Training Camps, about 30,000 high-school boys; and had been indirectly the means of sending thousands of younger boys into the food production under State auspices. In 1918 boys in the Boys' Working Reserve raised enough food to feed a million soldiers for a year. The value of this food, which, except through their efforts, would not have been produced, . . . [was] conservatively estimated at \$75,000,000."—*United States Boys' Working Reserve (Bulletin of the United States Employment Service, Department of Labor)*.

## UNITED STATES OF AMERICA

**Geographical description.—Resources.—Population.**—“The United States, constituting a Federal Republic, occupy the central part of North America from the Atlantic to the Pacific Oceans, and are bounded on the north by Canada, and on the south by Mexico and the Gulf of Mexico. They lie between 25° and 49° north latitude and 67° and 124 30' west longitude. The area, exclusive of Alaska, is 3,025,600 square miles, of which 38,400 square miles are estimated to be covered by lakes and rivers. Including Alaska, the area is 3,602,990 square miles. The coast-line on the two oceans extends 13,200 miles, exclusive of the many bays and sounds, and there are 3,620 miles of water along the Great Lakes bordering upon Canada. . . . No country in the world has a more varied or a more abundant and valuable mineral supply.”—*Library Atlas of Modern Geography, Map no. 53, pp. 1-2.*—“In the territory now included in the United States, a virile, energetic people found extraordinary opportunities for industrial development, and devoted themselves to the exploitation of the natural resources with wonderful success. The keynote of the national history of the United States is to be found in this work of winning a continent from Nature and subduing it to the uses of man. A truly gigantic task, it has absorbed the main energies of the American people from the beginning, and has been approached in significance only by the struggle to preserve the Union. Inevitably it has left its impress on the character and ambitions of the people. . . . The second great factor in the development of the country has been its wealth of natural resources. Of these we must consider first the extent of territory. By the treaty of Paris, Sept. 3, 1783, the United States came into possession of an immense domain of 827,844 square miles. Since that time the area of the United States has been vastly increased, by purchase, by conquest, and by cession, until, in 1900, the United States consisted of 3,726,500 square miles or about one fourteenth of the entire land surface of the earth. Continental United States, exclusive of Alaska or our island possessions, contains 2,972,584 square miles of land surface, or somewhat less than Europe, which has an area of some 3,700,000 square miles. . . . [One of the most valuable resources of the country is its almost unrivalled water power.] In colonial days this was of chief importance and determined the location of many a town. With the invention of the steam engine and the use of coal as a motive power, industry became less dependent upon water power, but with the rise of electrical appliances and the harnessing of our streams and falls for their service, we [have learned] to value this item in our national wealth more highly. ‘It is probable,’ says Shaler, ‘that, measured in horse power or by manufactured products, the energy derived from the streams of this country is already more valuable than those of all other lands put together.’ The most valuable water powers are found east of the Mississippi River and west of the Cordilleran chain. Even in the case of the best water power there are, however, in spite of its cheapness, certain drawbacks: it must be applied where it is found, except as it is used to develop electric power, and is subject often to serious seasonal limitations. The energy which is obtained from coal, on the

other hand, may be developed where it is needed, at any time and to any amount. On this account the presence of coal has proved a more important factor than water power in determining the concentration of the population and the regional distribution of industries. . . . According to the United States Geological Survey there are 335,000 square miles of coal-burning strata in this country, but much of it is too thin or impure to be available for industrial use. It serves, however, in many localities as domestic fuel, and few places in the United States are far removed from burnable coal. By far the greatest part of our available supply is bituminous, the area which is underlaid with anthracite being not more than 484 square miles. . . . Next in importance to the fuel supplies of the United States rank its stores of iron ore. These exist in large quantity and are widely disseminated, though in the main they occupy three great fields. . . . [the Appalachian field in the east, the Lake Superior region, and the Cordilleran district in the west]. Iron and coal, more than any other mineral substances, form the material basis of our industrial prosperity, and in the possession of large supplies of both, the United States is greatly blessed. Next after iron, copper ranks as the most necessary in the industrial arts. In primitive civilizations, as among the Indians, it was especially valuable because easily worked. With the discovery of processes for smelting iron, copper lost its earlier importance, which it has regained only . . . as the result of a rapid extension in the use of electricity. . . . [Large quantities of lead and zinc, some aluminum, and immense deposits of gold and silver are found in the United States. Building stones, salt, phosphates, cements, clays, graphites and other mineral resources are also valuable.] The forests of the United States cover an area of about 700 million acres, or more than 35 per cent. of the area of the country. Of these by far the greater part is found in the section east of the Mississippi, which originally was a vast continuous forest. In the northern States there stretched the great white pine forest, from which most of our lumber has come, from colonial days to the present; south of this in a broad belt lies the southern pine forest, whose most important tree is the yellow pine. In the Mississippi valley are found the hardwood forests of oaks, hickories, ashes, gums, etc. West of the Mississippi stretches a forestless, often treeless, area of millions of acres; with the Rocky Mountains begins again the coniferous interior forest, and still farther west the Pacific coast forest. In . . . [the] interior section the chief lack has always been water rather than wood. . . . The early settlers drew upon the forests for food, fuel, and shelter. And yet the dense woods of the Atlantic coast, which had to be cleared before crops could be raised, and which often concealed hostile Indians and animals, came to be regarded rather as an obstacle than a blessing. Vast areas were ruthlessly burned down and the land denuded of its forest growth. This lavish waste of one of our most important natural resources has persisted almost down to the present time, and we are only now beginning to realize the necessity and possibility of preserving and increasing this source of wealth. Among the valuable resources of a country should be included a good climate and a fertile soil: together, these are of

great importance in promoting the welfare, prosperity, and material comfort of the people. Considered as a whole, the fertility of the soil of the United States is remarkably great."—E. L. Bogart, *Economic history of the United States*, pp. 1-3, 5-7, 9.—"The United States has incomparable natural advantages in that it stretches across the whole breadth of a continent, thus commanding two oceans, and enjoying the products of both east and west marginal types of climate; it opens to the great Gulf of Mexico in the south, thus receiving tropical warmth and moisture without the disadvantages of a tropical latitude; it lies wholly within the temperate and warm temperate belts, thus having neither frozen wastes such as those of Canada nor tropical territory such as presents so great a problem to Australia. The eastern United States bears some resemblance to northern and central China, having a plentiful rainfall, and as regards the northern section a brief but severe winter followed by a hot summer, but, as regards the southern section, a mild or warm winter, followed by a very hot summer. On the whole, however, the presence of the Gulf of Mexico and of the Great Lakes as additional sources of atmospheric humidity gives to the eastern States a rainfall that is less markedly seasonal than that of China, and extends farther into the interior. The total rainfall diminishes with increasing distance from the sea-board, and at the same time becomes more definitely confined to the summer months. . . . The main physical units comprised within the United States are three in number. The great mountain belt of the west is the first. It includes two distinct chains parallel to the coast between which lie the head of Puget Sound, the fertile Willamette Valley, and the larger and still more important Californian Valley. The coast is naturally smooth and unbroken, and the three gaps in its 1,500 miles are consequently important. They are the outlet of Puget Sound, south of Vancouver Island, the estuary of the Columbia River (of which the Willamette is a tributary), and the mouth of the joint Sacramento and San Joaquin rivers (the famous San Francisco harbour) which drain the Californian valley. Beyond these parallel coastal chains lies the mountain belt proper, a series of plateaus and basins, large and small, of varying elevations, separated by subsidiary chains, and stretching to the Rocky Mountains, which form the eastern limit of the belt. Over the northern portion of this elevated region the Snake River follows a winding course until it joins the Columbia, passing through a lava plateau of great fertility. The southern portion is drained by the Colorado River, which crosses the Sage Plains, and the Painted Desert, passes through the famous Cañon, and finally enters the Gulf of California in Mexican territory. Between these two drainage areas is the Great Basin, where the rivers terminate in saline lakes of which Great Salt Lake in Utah is the chief. The most striking resources of the States of this mountain belt are the deposits of base and precious metals, the great grazing lands, and the mountain forests. Sloping away from the foothills of the Rockies [eastward] towards the Mississippi valley are the Great Plains (the second unit), drained by the Missouri, Platte, Arkansas and Red Rivers, all tributary to the Mississippi, which flows from a point barely 100 miles from the Canadian frontier to the Gulf of Mexico, and is navigable almost throughout its length. North-eastward of the main valley the plains rise gradually, and form the

high shores of the Great Lakes, the premier inland waterway of the world. Eastwards (drained by the Ohio and Tennessee rivers [also tributary to the Mississippi]) they rise to the edge of the Appalachian system. . . . The great central Plains are built mainly of sedimentary rocks, smoothly outspread, so that each formation covers a wide area. Among these formations are carboniferous rocks, and hence there are coalfields of vast extent, while beneath certain beds are great stores of mineral oil and here and there reservoirs of natural gas. The land immediately around the shores of Lakes Superior and Huron . . . is part of the great wedge of extreme ancient rocks and forms the core of Canada. . . . The Appalachian System . . . [which, with the eastern coastal region comprises the third unit], stretches from the north-east frontier to the Gulf Plains, and presents a varied surface of ridge and valley and low undulating plateau. The debris worn from this secondary mountain belt has been deposited along the Atlantic margin, but whereas in the south these sediments form a broad and sometimes swampy coastal plain, in the north the sea has encroached over them, so that they are transformed into fishing banks, while the valleys are also drowned, and therefore form a series of safe and valuable harbours (Hudson Valley, Delaware Bay, Chesapeake River). The Appalachian belt, because of its ridge and valley character, is more difficult to cross than its height would suggest, hence the extraordinary value, as an entry into the interior plains, of the Hudson River, which with its tributary the Mohawk cuts a gap, with easy gradients throughout, right across the mountains. . . . Along the margins, and especially the inner margin of the Appalachian belt, there are coal-measures, besides valuable beds of iron ore and reservoirs of oil. Nearly the whole of the eastern United States as far as the 95th meridian was, owing to the abundant rainfall, originally forested, and large and valuable forest reserves still remain. . . . In the area immediately north of the Ohio and Lower Missouri valleys . . . woods are less abundant, and here occur the rich prairie lands, . . . which proved so easy to bring under the plough. Further west, the increasing lack of rainfall gives grasses the advantage over trees, and most of the country is open prairie. . . . The western mountains are clothed with coniferous forests and mountain pastures, the ranges facing the Pacific having enormous forests of conifers, including the giant Big Trees (sequoia) of California, and the Douglas Pine."—E. G. R. Taylor, *Business man's geography*, pp. 468-471.—The population which in 1790 was less than four millions (3,029,214), scattered through the Atlantic States, had by 1890 increased approximately to sixty-three millions (62,947,714). These figures meant that in the thirty years which had elapsed from 1860 (when it numbered 31,443,321) the population had doubled. During the next three decades the increase was almost as phenomenal. The census of the year 1920 showed that the population was then 105,710,620, exclusive of Alaska and the island dependencies.

Historical geography.—Growth of national domain.—Acquisition of Alaska and of island possessions.—Political influence of position on

the Pacific.—Between the exterior and the interior historical geography of the United States the relation differs from that in most other countries. The internal historical geography of the Old World nations, barring the feudal period, involves so largely questions concerning mere provincial administration that it has no claim, from a geographical standpoint, to an importance equal to the shifting of the great national frontiers. Examples of this are found in the Roman and Byzantine empires, and in the majority of the modern states. In our own case however the order of interest is reversed. Our internal geography has attracted the chief attention of the student, not so much from the greater difficulty of the subject as from its vast importance in the early history of our government. It is not, indeed, too much to say that the organization of the present government under the constitution is an event of scarcely greater importance than the determination of the final policy of the states and the nation concerning the unoccupied western lands. It is this fact alone which gives the higher degree of relative importance to our internal historical geography. The general facts concerning our external geography are quickly told. The outlines of the entire subject are contained in the enumeration of cessions, as follows: the original territory ceded by Great Britain at the peace of Paris in 1783; the Louisiana Purchase from France in 1803; the acquisition of Florida from Spain by the treaty of 1819; the admission of Texas in 1845; the undisputed acquisition of the Oregon country by treaty with Great Britain in 1846; the first Mexican cession by the Peace of Guadalupe Hidalgo in 1848; the second Mexican cession, known as the Gadsden Purchase, in 1853; the purchase of Alaska from Russia in 1867. The enumeration of these eight acquisitions, all of which, save the final one, are shown on the first United States map, affords a complete picture of the successive stages of our territorial growth. The occasion of these different annexations, as well as their exact territorial extent, would involve us in a series of details which are beyond the purpose of the present article. It should be observed, however, that in several cases the map shows the territories in question as finally determined by treaty or survey, rather than their actual extent as understood at the time the annexations were made. This is one of the inevitable disadvantages in the purely cartographic treatment of such a subject. The historical map is compelled from its nature to give a tangible appearance to matters which are often very intangible in fact. In the case, for example, of what we may call the first United States, the country as recognized by the treaty of Paris, the western line of the Mississippi was the only boundary which was not the subject of future discussion. The southern frontier as arranged at Paris was affirmed by treaty with Spain in 1795. On the other side, however, Great Britain retained a number of posts in the Old Northwest up to the Jay treaty of 1794; the boundary between the upper Mississippi and the Lake of the Woods, imperfectly described in the Paris treaty, was not settled until 1818; the line from the intersection of the St. Lawrence to the Sault Ste. Marie was established in 1822 by joint commission under the treaty of Ghent; while the Maine frontier question, the most difficult and obstinate of all our boundary disputes, was not finally settled until the year 1842. The Louisiana Purchase of 1803 brought in fresh questions concerning our territorial limits. On three sides, the north, west and southwest the frontiers of this

vast area were undefined. On the northern side the boundary was settled with Great Britain by the treaty of 1818 which carried the line along the forty-ninth parallel to the Rocky mountains, while the treaty of 1819 with Spain, which ceded Florida to the United States, also defined the limits of Louisiana on the southwest. This line of 1819 has an additional importance, in that it drew the frontier between Spain and the United States along the forty-second parallel to the Pacific coast. The importance of this lay in the fact that it gave us a clear title on the Spanish side to the so-called Oregon country. The exact connection, real or supposed, between this territory and the Louisiana country was for many years one of the disputed points in American historical geography. The belief in this connection, at one time general, undoubtedly had its origin in the undefined character of Louisiana at the time of the purchase, and the fact that our government turned this indefiniteness to its own purpose in advancing its Oregon claims. It is now clear, however, from the evidence of the old maps, the official statement of the limits of the region, of which there is but one in existence (the Crozat grant of 1712) and lastly the understanding of France herself at the time of the cession, that Louisiana did not include in its limits any part of the Pacific watershed. A map published in a subsequent work of the French plenipotentiary placed the western boundary of Louisiana at the one hundred and tenth meridian. A line drawn in this arbitrary fashion and unsanctioned by the terms of the treaty itself may be regarded merely as one of convenience. If this view is correct it is certainly more convenient and, at the same time, more logical, to consider the western boundary as extending to the Rocky mountain watershed,—a line which would not deviate to any radical extent from the meridian in question. The historical connection however between the Louisiana purchase and our subsequent acquisition of the Oregon country is perfectly clear. The exploration of the latter followed almost immediately but its final annexation was delayed by the opposing claim of Great Britain. In this controversy the claim of the United States was merely relative as opposed to that of England. The just claimant was undoubtedly the king of Spain, whose rights, based on discovery, antedated those of either of the contesting powers. The Spanish title, however, having, as we have seen, been relinquished by the treaty of 1819, the issue between Great Britain and the United States became clearly defined. A joint occupation of the disputed territory by the two powers ensued from 1818 to 1846. In the latter year was negotiated the compromise treaty, which continued our northern line of 1818 on the forty-ninth parallel from the Rocky mountains to the Pacific coast. From the treaty of 1846 we may date the completion of our northern frontier, although the ownership of certain islands between Vancouver and the mainland was not settled until 1872. A few more years witnessed the completion of our southern frontier, as well. In 1845 Texas was admitted to the Union. The western boundary of the Rio Grande, claimed by the new state under her constitution of 1836, led directly to the war with Mexico, and by that war to the great additional cession at Guadalupe Hidalgo in 1848. The southern boundary was finally completed by the Gadsden purchase of 1853. Coming now to the study of our internal geography, we find ourselves in contact with what is practically a distinct subject. Here we encounter a whole series of those weighty questions,

the solution of which figures so prominently in the early history of the American government. We have already noted that the first western boundary of the United States was placed by the treaty of 1783 at the Mississippi river. But during the Paris negotiations our ally France and quasi ally Spain both opposed this westward extension of our territory and it was long an open question, even after our independence itself was assured, whether we should not be compelled to accept a western boundary on the Appalachian range. Years before the final settlement of the question at Paris, the expectancy of the Mississippi boundary had given rise to questions which caused an undercurrent of dissension between the states during the entire period of the Revolutionary War. In their relation to the western land question, the thirteen original states divide themselves into two classes, the claimant and non-claimant states. In the first class were Massachusetts, Connecticut, New York, Virginia, the two Carolinas and Georgia; in the second, New Hampshire, Rhode Island, New Jersey, Pennsylvania, Delaware and Maryland. The claims of the seven first named states covered every inch of our prospective western domain and in the country north of the Ohio, known as the Old Northwest, there were opposing claims of two and in some districts of even three states to the same territory. The extent of these claims is indicated on the map of the Federated states in 1783. They rested for the most part upon the royal grants and charters to the colonies, and, in the case of New York, upon the treaties with the Iroquois. Their relative merits were conflicting, or their collective merit as a whole, are questions which we will not attempt to discuss. It is sufficient to observe that if insisted upon in their entirety they would have presented an insuperable obstacle to the formation of an American federate government. In the proceedings of the Continental Congress, as well as in the state legislative bodies, touching this western domain, we may find the germs of nearly all the political and constitutional questions which have made the greater part of our subsequent history. The relative rank and power of the states, the obligation of one state towards another, the individual rights of states as opposed to the collective rights of the Union; all of these questions entered into the great problem which the nation was now called upon to solve. The objections to the western claims by the non-claimant states, though urged with varying degrees of vehemence and accompanied with many widely differing alternatives, may be fairly resolved into the two following contentions: that it was unjust that so vast a domain, whose acquisition at the peace could only be insured through the joint labor of all the states, should thereafter become the property of a certain favored few, and also that the claims if allowed would in the end give the claimant states a preponderating power which would be extremely prejudicial if not dangerous to the others. Of all the non-claimant states, Maryland was the most determined in her opposition, and it is to her that Professor Herbert B. Adams in his monograph on "Maryland's Influence upon Land Cessions to the United States," assigns the chief credit for the final creation of the first national domain. The claim though a just one cannot be asserted without an important qualification. The proposition advanced by Maryland, that a national title to the western lands be asserted by a clause in the Articles of Confederation, was manifestly one to which the claimant states would never give their consent. It

was due, however, to the action of Maryland,—which refused for more than three years, from November 1777 to March 1781, to ratify the articles,—that the question was kept open until the claimant states, in order to complete the circle of the Union, found it necessary to adopt the policy of voluntary cessions, suggested by Congress. The history in detail of the several state cessions involves many questions concerning the distribution and sale of public lands which need not concern us. Some of the offers of cession, at first conditional and partial, were made absolute and final, as, one by one, the besetting difficulties were cleared away. The dates of the final cessions by the seven claimant states in order were as follows: New York 1781, Virginia 1783, Massachusetts 1785, Connecticut 1786, South Carolina 1787, North Carolina 1790, Georgia 1802. Certain land reservations north of the Ohio, as shown on the map of the United States in 1790, were made by both Virginia and Connecticut; but Virginia renounced jurisdiction over these lands in the cession, and Connecticut did likewise in 1800, the two states reserving merely the property rights. The territory south of the Ohio was not included in the Virginia cession of 1783 but the district of Kentucky was made the subject of a second cession in 1789. The completion of this list closed the interesting chapter in our history covered by the state cessions and gave to the United States the sovereignty over its first great western public domain. Before pursuing this subject further, let us see in what relation the cessions stand to the present form of the thirteen original states. Some boundary contentions still remained, but these are not of historic importance. The claim of Massachusetts in what is now western New York was settled by joint commission in 1786, while Pennsylvania purchased a tract of land on lake Erie from the general government in 1792. At the present day sixteen states stand upon the territory which remained to the original thirteen, the three additional ones each springing from the partition of one of the older states. In 1790 New York assented to the independence of Vermont, which was admitted to the Union in the following year; in 1820 Maine was separated from Massachusetts and admitted; and finally, in 1862, West Virginia was set off from Virginia and became a state in 1863. We will now resume the subject of the disposition of the western lands. We have already noted the termination of that stage of their history which involves the territorial claims of individual states. The second stage concerns itself with the evolution of what may be called the American system of territorial government. The first, indeed, had not reached its completion before the second began to receive the greater measure of public attention. The western land cessions to the government were made with the general understanding, tacit in most cases, but in that of Virginia explicitly stated, that the ceded territory should eventually be formed into additional states. The first national domain may therefore be regarded as a district held in trust by the government for a special purpose. This view, which was not only required by the terms of the Virginia cession, but also represented the general sentiment of the time, has formed the basis of our entire subsequent policy in dealing with the national domain,—a policy which has remained unaltered even in the case of the immense territories that afterwards came into the direct possession of the government by treaty with foreign powers. The one question remaining was the erection of the legislative ma-

chinery which should provide for the government of the territories during their preparation for statehood. The problem was finally solved by the Ordinance of 1787 for the government of the Northwest territory. This famous ordinance, the first of the long series of acts concerning territorial government, was the last noteworthy piece of legislation under the old Articles of Confederation, and the year which witnessed both the successful inauguration of our territorial policy and the adoption of the new constitution is the most memorable in the entire history of American institutions. Of this ordinance Daniel Webster said in the Senate, forty years later "I doubt whether any single law of any lawgiver ancient or modern has produced effects of more distinct and lasting character." (See *NORTHWEST TERRITORY OF THE UNITED STATES; 1787.*) Many of its provisions, suited only for the special occasion of their use, are now antiquated and obsolete, and neither their letter nor spirit find a place in subsequent territorial legislation. But the fact remains that this act was in a certain sense the great prototype; it was the first to organize and set in motion the machinery of our territorial policy. A policy that has provided without friction for the tremendous national expansion which has ensued during the nineteenth century may justly be regarded as one of the greatest achievements in the political history of the American government. In our own day, when the admission of a new state or the erection of a new territory is regarded as hardly more than a routine event in the working of our political system, it is easy for us to underestimate the vital importance of the first steps which were taken concerning the regulation of the national domain. It was because those steps were to determine in a measure our entire future policy, that the history of the old Continental Congress should form an absorbing theme for every student of our internal geography. It is unnecessary to follow this subject in detail through its later history, which is simply a monotonous record of legislative enactments for the organization of new territories or the admission of new states. The principle had been fully established; the history of the next century, followed step by step, can show very little beyond its consistent application. Political considerations have, it is true, often delayed or prematurely hastened the admission of new states, but there has been one case only where we have been called upon again to face a question similar to that which was solved by the old congress. The circumstances of the admission of the republic of Texas bear no analogy to that of any other state received into the Union since the formation of the government. Here was, not a state created by mere legislative enactment, but an independent foreign sovereignty, admitted to the Union at its own solicitation, bringing with it as a dower a territory immeasurably greater than the national policy had ever before assigned to a single state. Once more therefore we have the old question of a troublesome state sovereignty in immense unoccupied lands. The comparative absence of friction in the solution of this new problem proves again the efficiency of the old policy in dealing with all such questions. No cession of territory was wrung from Texas or in this case even solicited. The state was admitted to the Union in 1845 claiming a continuous western boundary on the Rio Grande. In 1850, after the peace of Guadalupe Hidalgo had determined our boundary on the Mexican side, Texas sold to the general government, for the sum of \$10,000,000, all of her territorial claims

north and west of her present boundaries. With some modifications the history of the original cessions repeats itself in this transaction, which was the last occasion of a great transfer of territory to the Union by one of its members.—Alan C. Reiley.

"The first weak foothold of the young Republic in the faraway station of Astoria at the mouth of the Columbia River, and . . . [the] early trade in furs with China, seemed prophetic of the destiny of the nation. The never abandoned purpose to widen the frontage on the western ocean, the obstinate debate of the 'Oregon Question,' and the conquest of California, committed the United States to the career of a Pacific power. Wide though the ocean is . . . and sparse though the islands are for a belt of two thousand miles off its American shores, the mere presence of the United States on the Pacific has been a sufficient reason for concern in all matters pertaining to this ocean. This was the ground on which Russia in 1867 pressed Alaska upon us, strengthening our base on the Pacific and weakening that of her hereditary enemy in British Columbia by placing this English colony between the fires of American enterprise on both its northern and southern borders. The 'ten marine leagues,' moreover, which fix the width of the long 'panhandle' of southern Alaska, cut off a thousand miles of the natural Pacific frontage of British Columbia; while the possession of the peninsula and the Aleutian Islands gives our Pacific base a reach of over four thousand miles from San Diego to Attu, three hundred miles beyond the international date-line of the one hundred and eightieth meridian, and only six hundred miles from the nearest Japanese islands. The acquisition of Alaska gave us Russia for a near neighbor in Bering Strait. The ownership of the Pribilof Islands in Bering Sea, which the seals have adopted as their breeding-grounds, made us the most interested party in the controversy of the seal fisheries, and involved us in negotiations with Russia, Japan, and England, which resulted in the Paris Commission of 1895. The vast importance of our Alaskan territory is developed, however, only with our advance as an acknowledged world power in the domain of the Pacific by the acquisition of the Philippines. The cause lies in our increasing need of coal. This Alaska can furnish in abundance and of an excellent quality. . . . The possession of the Philippines . . . was the signal for us to profit by certain other advantages which lay at our door within our hands and had been ignored. Dewey's victory in Manila Bay made imperative the annexation of Hawaii, Wake Island, and the retention of Guam, the southernmost isle of the Ladrone group, so that a direct mid-ocean line of communication between the home shore and our oriental colony might be assured. . . . Far back, between 1841 and 1867, she claimed Wake, Christmas, and Midway islands by right of discovery, but entered into active possession of the first only, . . . when its geographical location between Guam and Hawaii indicated its natural province as a Pacific cable-station. Since 1889 the position of the United States as a Pacific power had been attested by its share in the tripartite government of the Samoan Islands. This share was converted into the absolute ownership of Tutuila and Manua in 1899 by the acquiescence of England and Germany. The fact that the superior harbor of Pango-pango on Tutuila was ceded to the United States as a coaling-station as early as 1872, but was not actively occupied till 1898, bears witness

to the American change of policy. The whole Samoan group is of great strategic value. It is situated at about 14° south latitude and 170° west longitude, on the direct path from Puget Sound to Sydney, Australia, and on a line from the Isthmus of Panama to east Australian ports. Herein lies its significance for the United States. . . . The Hawaiian group, the only place in the whole Pacific north of the Equator and east of the continental islands festooning the coast of Asia where the nebula has condensed into a constellation, by their location, their magnitude, and their isolation become the paramount strategic position west of the American shores. They afford the first ocean-station on a trans-Pacific line of communication. Political gravitation has drawn the Hawaiian Islands to the dominion of the United States. . . . In 1851 a strong effort, emanating from the Islands themselves, was made for annexation; but the United States Senate refused to ratify the treaty offered by the Hawaiian Parliament, and instead promised protection. Meanwhile trade between the two countries was growing and with it the sentiment of annexation in Hawaii, while the big Republic held to its continental policy. Sugar became the chief interest of the Islands; it was almost wholly in the hands of Americans, who formed the monied and the ruling class, but who found a naturally remunerative industry almost hopelessly crippled by the heavy duties on their products at the port of San Francisco. Annexation would make them rich, so the agitation was kept up. Here again that extra-territorial expansion which had fixed the destiny of West Florida and Texas was doing its work. In 1876 a compromise was effected. The chief Hawaiian products were admitted to the United States free of duty, and the United States was given a naval station in the vicinity of Honolulu. The barrier was beginning to fall. The Islands were commercially within the sphere of the United States, and the United States had advanced to the strategic outpost on the Hawaiian shores. This status of overlapping boundary was maintained until 1898. . . . Prior to our acquisition of the Philippines, Hawaii possessed far greater political utility for British Columbia than for us, because it was the one East Pacific station on the long intercontinental sea route between Vancouver and Sydney. From a military standpoint, however, it was quite as important to us; because Hawaii as a coaling and naval station, two thousand and eighty miles from San Francisco and not more than twenty-five hundred from any point on our western coast, in the hands of any foreign power would have been a standing threat. . . . The Hawaiian Islands, Wake Island, and Guam form to Manila a line of communication lying between the narrow limits of the thirteenth and twenty-first parallels. . . . A chain of historical events, largely geographical in their causes, determined that the Philippines should be the channel of American influence in the East. The detachable character, inner weakness, and protected isolation of every island group maintained Spain in her insular possessions here, as in the Antilles; so that the blow which despoiled her of one took all. Now this same protection against international entanglements which is yielded by an insular position accrues to the United States, makes her situation in the Orient analogous to her continental location at home, and gives her the best possible base from which to protect her interests."—E. C. Semple, *American history and its geographic conditions*, pp. 425-434.—"On March 31, 1917, the United

States took formal possession of the Danish West Indies, by far the larger portion of the Virgin Islands. The history of the sale and the transfer of these islands is somewhat involved. [The first effort to obtain them was made by Secretary Seward in 1866. The Senate, however, pigeonholed the treaty. In 1902 another treaty was negotiated and this time the Danish Upper House failed to ratify.] Not until the latter part of 1916 was another determined effort made to induce the Danes to cede the islands. For the three principal islands and their outlying cays \$25,000,000 was offered. . . . The islands finally came into the possession of the United States on January 17, 1917, when Secretary of State Lansing and Minister Bruun of Denmark signed the ratification of the treaty of cession."—T. de Booy and J. T. Faris, *Virgin islands*, pp. 16, 23-24.—See also WEST INDIES; VIRGIN ISLANDS.—There are many other features in our internal geography, among the most notable the institution of slavery, which would be worthy of attention were the space to permit. In view of this limitation, however, we cannot pursue the subject beyond this general review of its main outlines. There is a dearth of works on American historical geography subsequent to the Declaration of Independence. It is a subject, indeed, which cannot be very satisfactorily studied simply through the literature dealing exclusively with the topic. For a more careful study there is of course no substitute for the texts of the grants, charters, treaties and legislative acts of Congress, and the more important of these are freely quoted from in Mr. Gannett's work.—Alan C. Reiley.—See also HISTORY: 28; 29; 30; 32.

Historical influence of the frontier.—"Up to our own day American history has been in a large degree the history of the colonization of the Great West. The existence of an area of free land, its continuous recession, and the advance of American settlement westward, explain American development. . . . Behind institutions, behind constitutional forms and modifications, lie the vital forces that call these organs into life and shape them to meet changing conditions. The peculiarity of American institutions is the fact that they have been compelled to adapt themselves to the changes of an expanding people—to the changes involved in crossing a continent, in winning a wilderness, and in developing at each area of this progress out of the primitive economic and political conditions of the frontier into the complexity of city life. . . . All peoples show development; the germ theory of politics has been sufficiently emphasized. In the case of most nations, how-

ever, the development has occurred in a limited area; and if the nation has expanded, it has met other growing peoples whom it has conquered. But in the case of the United States we have a different phenomenon. Limiting our attention to the Atlantic coast, we have the familiar phenomenon of the evolution of institutions in a limited area, such as the rise of representative government; the differentiation of simple colonial governments into complex organs; the progress from primitive industrial society, without division of labor, up to manufacturing civilization. But we have in addition to this a recurrence of the process of evolution in each western area reached in the process of expansion. Thus American development has exhibited not merely advance along a single line, but a return to primitive conditions on a continually advancing frontier line [on the edge of free land], and a new development for that area. American social development has been continually beginning over again on the frontier. This perennial rebirth, this fluidity of American life, this expansion westward with its new opportunities, its continuous touch with the simplicity of primitive society, furnish the forces dominating American character. The true point of view in the history of this nation is not the Atlantic coast, it is the Great West. Even the slavery struggle, . . . occupies its important place in American history because of its relation to westward expansion. . . . In the settlement of America we have to observe how European life entered the continent, and reacted on Europe. Our early history is the study of European germs developing in an American environment. Too exclusive attention has been paid by institutional students to the Germanic origins, too little to the American factors. The frontier is the line of most rapid and effective Americanization. The wilderness masters the colonist. It finds him a European in dress, industries, tools, modes of travel, and thought. . . . It strips off the garments of civilization and arrays him in the hunting shirt and the moccasin. It puts him in the log cabin of the Cherokee and Iroquois and runs an Indian palisade around him. . . . In short, at the frontier the environment is at first too strong for the man. He must accept the conditions which it furnishes, or perish, and so he fits himself into the Indian clearings and follows the Indian trails. Little by little he transforms the wilderness, but the outcome is not the old Europe, nor simply the development of Germanic germs, any more than the first phenomenon was a case of reversion to the Germanic mark. The fact is, that here is a new product that is American. At first, the frontier was the Atlantic coast. It was the frontier of Europe in a very real sense. Moving westward, the frontier became more and more American. . . . Each frontier leaves its traces behind it, and when it becomes a settled area the region still partakes of the frontier characteristics. Thus the advance of the frontier has meant a steady movement away from the influence of Europe, a steady growth of independence on American lines. And to study this advance, the men who grew up under these conditions, and the political, economic, and social results of it, is to study the really American part of our history. In the course of the seventeenth century the frontier was advanced up the Atlantic river courses, just beyond the 'fall line,' and the tidewater region became the settled area. In the first half of the eighteenth century another advance occurred. Traders followed the Delaware and Shawnee Indians to the Ohio as early as the end of the first

quarter of the century. Gov. Spotswood, of Virginia, made an expedition in 1714 across the Blue Ridge. The end of the first quarter of the century saw the advance of the Scotch-Irish and the Palatine Germans up the Shenandoah Valley into the western part of Virginia, and the Piedmont region of the Carolinas. The Germans in New York pushed the frontier of settlement up the Mohawk up to German Flats. In Pennsylvania, the town of Bedford indicates the line of settlement. Settlements had begun on New River, and branch of the Kanawha, and on the sources of the Yadkin and French Broad. The King attempted to arrest the advance by his proclamation of 1763, forbidding settlements beyond the sources of the rivers flowing into the Atlantic; but in vain. . . . In . . . successive frontiers we find natural boundary lines which have served to mark and to affect the characteristics of the frontiers, namely: the 'fall line'; the Alleghany Mountains; the Mississippi; the Missouri where its direction approximates north and south; the line of the arid lands, approximately the ninety-ninth meridian; and the Rocky Mountains. The fall line marked the frontier of the seventeenth century; the Alleghanies that of the eighteenth; the Mississippi that of the first quarter of the nineteenth; the Missouri that of the middle of [the nineteenth] century (omitting the California movement); and the belt of the Rocky Mountains and the arid tract. . . . Each was won by a series of Indian wars. At the Atlantic frontier one can study the germs of processes repeated at each successive frontier. We have the complex European life sharply precipitated by the wilderness into the simplicity of primitive conditions. The first frontier had to meet its Indian question, its question of the disposition of the public domain, of the means of intercourse with older settlements, of the extension of political organization, of religious and educational activity. And the settlement of these and similar questions for one frontier served as a guide for the next. The American student needs not to go to the 'prim little townships of Sleswick' for illustrations of the law of continuity and development. For example, he may study the origin of our land policies in the colonial land policy; he may see how the system grew by adapting the statutes to the customs of the successive frontiers. He may see how the mining experience in the lead regions of Wisconsin, Illinois, and Iowa was applied to the mining laws of the Sierras, and how our Indian policy has been a series of experiments on successive frontiers. Each tier of new States has found in the older ones material for its constitutions. Each frontier has made similar contributions to American character. . . . The United States lies like a huge page in the history of society. Line by line as we read this continental page from West to East we find the record of social evolution. It begins with the Indian and the hunter; it goes on to tell of the disintegration of savagery by the entrance of the trader, the pathfinder of civilization; we read the annals of the pastoral stage in ranch life; the exploitation of the soil by the raising of unrotated crops of corn and wheat in sparsely settled farming communities; the intensive culture of the denser farm settlement; and finally the manufacturing organization with city and factory system. . . . Particularly in eastern States this page is a palimpsest. What is now a manufacturing State was in an earlier decade an area of intensive farming. Earlier yet it had been a wheat area, and still earlier the 'range' had attracted the cattle-herder. . . .

Maps prepared specially for the **NEW LARNED** under direction of the editors and publishers.

French colonization was dominated by its trading frontier; English colonization by its farming frontier. There was an antagonism between the two frontiers as between the two nations. . . . And yet, in spite of this opposition of the interests of the trader and the farmer, the Indian trade pioneered the way for civilization. The buffalo trail became the Indian trail, and this became the trader's 'trace'; the trails widened into roads, and the roads into turnpikes, and these in turn were transformed into railroads. The same origin can be shown for the railroads of the South, the Far West, and the Dominion of Canada. The trading posts . . . situated so as to command the water systems of the country, have grown into such cities as Albany, Pittsburgh, Detroit, Chicago, St. Louis, Council Bluffs, and Kansas City. Thus civilization in America has followed the arteries made by geology . . . until at last the slender paths of aboriginal intercourse have been broadened and interwoven into the complex mazes of modern commercial lines. . . . It is like the steady growth of a complex nervous system for the originally simple, inert continent. If one would understand why . . . [the United States is] to-day one nation, rather than a collection of isolated states, he must study this economic and social consolidation of the country. . . . The effect of the Indian frontier as a consolidating agent in . . . [its] history is important. From the close of the seventeenth century various intercolonial congresses have been called to treat with Indians and establish common measures of defense. Particularism was strongest in colonies with no Indian frontier. This frontier stretched along the western border like a cord of union. . . . Most celebrated of these conferences was the Albany congress of 1754, called to treat with the Six Nations, and to consider plans of union. Even a cursory reading of the plan proposed by the congress reveals the importance of the frontier. . . . It is evident that the unifying tendencies of the Revolutionary period were facilitated by the previous coöperating in the regulation of the frontier. . . . From the time the mountains rose between the pioneer and the seaboard, a new order of Americanism arose. The West and the East began to get out of touch of each other. The settlements from the sea to the mountains kept connection with the rear and had a certain solidarity. But the over-mountain men grew more and more independent. The East took a narrow view of American advance, and nearly lost these men. Kentucky and Tennessee history bears abundant witness to the truth of this statement. The East began to try to hedge and limit westward expansion. Though Webster could declare that there were no Alleghanies in his politics, yet in politics in general they were a very solid factor. The exploitation of the beasts took hunter and trader to the west, the exploitation of the grasses took the rancher west, and the exploitation of the virgin soil of the river valleys and prairies attracted the farmer. Good soils have been the most continuous attraction to the farmer's frontier. The land hunger of the Virginians drew them down the rivers into Carolina, in early colonial days; the search for soils took the Massachusetts men to Pennsylvania and to New York. As the eastern lands were taken up migration flowed across them to the west. . . . Thus the census of 1890 shows, in the Northwest, many counties in which there is an absolute or a relative decrease of population. These States . . . [had] been sending farmers to advance the frontier on the plains, and . . . [had] themselves begun

to turn to intensive farming and to manufacture. A decade before this, Ohio had shown the same transition stage. Thus the demand for land and the love of wilderness freedom drew the frontier ever onward. . . . We may next inquire what were the influences on the East and on the Old World. . . . First, we note that the frontier promoted the formation of a composite nationality for the American people. The coast was preponderantly English, but the later tides of continental immigration flowed across to the free lands. This was the case from the early colonial days. The Scotch-Irish and the Palatine Germans, or 'Pennsylvania Dutch,' furnished the dominant element in the stock of the colonial frontier. With these peoples were also the freed indentured servants, or redemptioners, who at the expiration of their time of service passed to the frontier. . . . In the crucible of the frontier the immigrants were Americanized, liberated, and fused into a mixed race, English in neither nationality nor characteristics. The process has gone on from the early days to our own. Burke and other writers in the middle of the eighteenth century believed that Pennsylvania was 'threatened with the danger of being wholly foreign in language, manners, and perhaps even inclinations.' . . . In another way the advance of the frontier decreased . . . [colonial] dependence on England. The coast, particularly of the South, lacked diversified industries, and was dependent on England for the bulk of its supplies. In the South there was even a dependence on the North colonies for articles of food . . . [but] before long the frontier created a demand for merchants. As it retreated from the coast it became less and less possible for England to bring her supplies directly to the consumer's wharfs, and carry away staple crops, and staple crops began to give way to diversified agriculture for a time. The effect of this phase of the frontier action upon the northern section is perceived when we realize how the advance of the frontier aroused seaboard cities like Boston, New York, and Baltimore, to engage in rivalry for what Washington called 'the extensive and valuable trade of a rising empire.' The legislation which most developed the powers of the national government, and played the largest part in its activity, was conditioned on the frontier. . . .

"The growth of nationalism and the evolution of American political institutions were dependent on the advance of the frontier. . . . The pioneer needed the goods of the coast, and so the grand series of internal improvements and railroad legislation began, with potent nationalizing effects. Over internal improvements occurred great debates, in which grave constitutional questions were discussed. Sectional groupings appear in the votes, profoundly significant for the historian. Loose construction increased as the nation marched westward. But the West was not content with bringing the farm to the factory. Under the lead of Clay . . . protective tariffs were passed, with the cry of bringing the factory to the farm. . . . The public domain [also] has been a force of profound importance in the nationalization and development of the government. . . . Administratively the frontier called out some of the highest and most vitalizing activities of the general government. The purchase of Louisiana was perhaps the constitutional turning point in the history of the Republic, inasmuch as it afforded both a new area for national legislation and the occasion of the downfall of the policy of strict construction. But the purchase of Louisiana was called out

by frontier needs and demands. As frontier States accrued to the Union the national power grew. . . . When we consider the public domain from the point of view of the sale and disposal of the public lands we are again brought face to face with the frontier. The policy of the United States in dealing with its lands is in sharp contrast with the European system of scientific administration. Efforts to make this domain a source of revenue, and to withhold it from emigrants in order that settlement might be compact, were in vain. The jealousy and the fears of the East were powerless in the face of the demands of the frontiersmen. . . . The reason is obvious; a system of administration was not what the West demanded; it wanted land. . . . 'No subject,' said Henry Clay, 'which has presented itself to the present, or perhaps any preceding, Congress, is of greater magnitude than that of the public lands.' When we consider the far-reaching effects of the government's land policy upon political, economic, and social aspects of American life, we are disposed to agree with him. But this legislation was framed under frontier influences, and under the lead of Western statesmen like Benton and Jackson. . . . It was this nationalizing tendency of the West that transformed the democracy of Jefferson into the national republicanism of Monroe and the democracy of Andrew Jackson. The West of the War of 1812, the West of Clay, and Benton and Harrison, and Andrew Jackson, shut off by the Middle States and the mountains from the coast sections, had a solidarity of its own with national tendencies. On the tide of the Father of Waters, North and South met and mingled into a nation. Interstate migration went steadily on—a process of cross-fertilization of ideas and institutions. The fierce struggle of the sections over slavery on the western frontier does not diminish the truth of this statement; it proves the truth of it. . . . But the most important effect of the frontier has been in the promotion of democracy [in the United States] and in Europe. As has been indicated, the frontier is productive of individualism. . . . It produces antipathy to control, and particularly to any direct control. The tax-gatherer is viewed as a representative of oppression. Prof. Osgood, in an able article, has pointed out that the frontier conditions prevalent in the colonies are important factors in the explanation of the American Revolution, where individual liberty was sometimes confused with absence of all effective government. . . . The same conditions aid in explaining the difficulty of instituting a strong government in the period of the confederacy. The frontier individualism has from the beginning promoted democracy. The frontier States that came into the Union in the first quarter of a century of its existence came in with democratic suffrage provisions, and had reactive effects of the highest importance upon the older States whose peoples were being attracted there. . . . From the conditions of frontier life came intellectual traits of profound importance. The works of travelers along each frontier from colonial days onward describe certain common traits, and these traits have, while softening down, still persisted as survivals in the place of their origin, even when a higher social organization succeeded. The result is that to the frontier the American intellect owes its striking characteristics. That coarseness and strength combined with acuteness and inquisitiveness; that practical, inventive turn of mind, quick to find expedients; that masterful grasp of material things, lacking in the artistic but powerful to effect great

ends; that restless, nervous energy; that dominant individualism, working for good and for evil, and withal that buoyancy and exuberance which comes with freedom—these are traits of the frontier, or traits called out elsewhere because of the existence of the frontier. . . . What the Mediterranean Sea was to the Greeks, breaking the bond of custom, offering new experiences, calling out new institutions and activities, that, and more, the ever retreating frontier has been to the United States directly, and to the nations of Europe more remotely. And now, four centuries from the discovery of America, at the end of a hundred years of life under the Constitution, the frontier has gone, and with its going has closed the first period of American history."—F. J. Turner, *Frontier in American history*, pp. 1-4, 9-11, 13-15, 18, 22-27, 29-30, 37-38.

1497-1615.—Discovery and exploration of the Atlantic coast of North America. See AMERICA.  
1607-1752.—Early unsuccessful attempts at settlement.—First settlement and organization of the Thirteen Original English Colonies.—The earliest attempts at European settlement (as distinct from exploration) within the present limits of the United States were made by French Huguenots, under the patronage of Admiral Coligny; first at Port Royal, on Beaufort river, Florida, where Jean Ribaut, in 1562, placed a few colonists who soon abandoned the spot, and, two years later, at Fort Caroline, on St. John's river, in the same peninsula. The second colony, commanded by René de Laudonnière, was considerable in numbers but unpromising in character, and not likely to gain a footing in the country, even if it had been left in peace. It was tragically extinguished, however, by the Spaniards in September, 1565. (See FLORIDA: 1565.) The first undertakings at colonization from England were inspired and led by Sir Walter Raleigh. After unsuccessful attempts, in conjunction with his elder half-brother, Sir Humphrey Gilbert, to establish settlements in Newfoundland, Raleigh obtained a grant from Queen Elizabeth, in 1584, under which he planted a colony of 108 settlers, commanded by Ralph Lane, on Roanoke island, within the boundaries of the present State of North Carolina. In honor of the virgin queen of England, the name Virginia was given to the region at large. Lane's colonists had expected to find gold, silver and pearls, and lost interest in the country when none could be discovered. In June, 1586, they persuaded Sir Francis Drake, who had touched at Roanoke with his fleet, to carry them home. Soon afterwards, several ships, sent out by Raleigh with reinforcements and supplies, arrived at the island, to find it deserted. They left fifteen men to hold the ground; but a year passed before another expedition reached the place. The fort was then found in ruins; the fifteen men had disappeared, and nothing of their fate could be learned. The new colony perished in the same way—its fate an impenetrable secret of the savage land. Sir Walter assigned his rights and interests in Virginia to a company of merchant adventurers, which accomplished nothing permanently. Twenty years passed before another vigorous effort of English colonization was made. In 1606 King James issued a royal charter to a company singularly formed in two branches or divisions, one having its headquarters at London, and known as the London Company, the other established at Plymouth and known as the Plymouth Company. Between them they were given authority to occupy territory in America from the 34th to the 45th degree of latitude; but the two grants

overlapped in the middle, with the intention of giving the greater domain to the company which secured it by the earliest actual occupation. The London Company, holding the southward grant, despatched to Virginia a company of 105 emigrants, who established at Jamestown, on the northerly bank of James river (May 13, 1607), the first permanent English settlement in America, and founded there the colony and the subsequent state of Virginia. In 1619, negro slavery was introduced; and by that time the white inhabitants of Virginia had increased to nearly 4,000 in number, divided between eleven settlements. (See VIRGINIA: 1619.) Meantime, the Plymouth Company had done nothing effectively in the northward region assigned to it. Bartholomew Gosnold, in 1602, had examined the coast from Maine to Cape Cod, and built a lonely house on the island of Cuttyhunk; Martin Pring, in 1603, had loaded two ships with sassafras in Massachusetts bay; a colony named in honor of the chief justice of England, Sir John Popham, had shivered through the winter of 1607-1608 near the mouth of Kennebec river and then gone home (see MAINE: 1607-1608); Captain John Smith, in 1614, had made a voyage to the country, in the interest of London merchants, and had named it New England; but no lasting English settlement had been made anywhere within the bounds of King James's grant to the Plymouth Company, at the waning of the year 1620, when Virginia was well grown. It was then by chance, rather than by design, that the small ship *Mayflower* landed a little company of religious exiles on the Massachusetts coast, at Plymouth (Dec. 21, 1620), instead of bearing them farther south. They came with a patent from the London, or South Virginia Company, and expected to plant their settlement within that company's territorial bounds. But circumstances which seemed adverse at the time bent their course to the New England shore, and they accepted it for a home, not doubting that the proprietors of the land, who desired colonists, would permit them to stay. The next year they received a patent from the Council for New England, which had succeeded to the rights of the Plymouth Company. For eight years they remained the only successful colony in New England. Then came the memorable movement of Puritans out of Old England into New England, beginning with the little settlement at Salem, under John Endicott; expanding next year into the "Governor and Company of Massachusetts Bay" founding Dorchester, Roxbury, Charlestown, Watertown, and Boston, in 1630. (See MASSACHUSETTS: 1620, to 1630.) In the Puritan colony of Massachusetts Bay a cleavage soon occurred, and democratic seceders pushed southwestwards into the Connecticut valley, where Dutch and English were disputing possession of the country. There they settled the question decisively, in 1635 and 1636, by founding the towns of Hartford, Windsor, Wethersfield and Springfield. Three years later the three towns first named confederated themselves in a little republic, with a frame of government which is the first known written constitution, and so gave birth to the future state of Connecticut. In 1638 New Haven was founded by a company of wealthy nonconformists from England, under the lead of their minister, John Davenport, and was a distinct colony until 1662, when it was annexed to Connecticut by a royal charter. (See CONNECTICUT: 1634-1637, to 1662-1664.) Another state, the smallest of the New England commonwealths, was taking form at this same time, in a little wedge of territory

on Narragansett bay, between Connecticut and Massachusetts. Roger Williams, the great apostle of a tolerant Christianity, driven from Salem by the intolerant Puritanism of the bay, went forth with a few followers into the wilderness, bought land from the Narragansett Indians, and laid the foundations (1636) of the town of Providence. In that same year another small company of people, banished from Boston for receiving the teachings of Mrs. Anne Hutchinson, bought the island of Aquidneck or Aquetnet from the Indians and settled at its northern end. This community was soon divided, and part of it removed to the southern end of the island, beginning a settlement which grew to be the town of Newport. The island as a whole received the name of the Isle of Rhodes, or Rhode Island (see RHODE ISLAND: 1631-1636, to 1641-1643); and in 1644 its two settlements were united with Providence, under a charter procured in England by Roger Williams, forming the colony of Providence Plantations. In 1643 the colonies of Massachusetts, Plymouth, Connecticut and New Haven, entered into a confederation, from which Rhode Island was excluded, calling themselves "The United Colonies of New England." The object of the confederation was common action in defence against the Indians and the Dutch on the Hudson. It was the beginning of the cementing of New England (see NEW ENGLAND: 1643). Before this time, small settlements had been planted here and there in northern New England, within territory covered by grants made to Sir Ferdinando Gorges and Captain John Mason. The province claimed by Gorges was subsequently called Maine, and that of Mason, New Hampshire; but Maine never rose to an independent colonial existence. It remained the "District of Maine" until 1820, when Massachusetts yielded the separation which made it a sovereign state in the American Union. The New Hampshire settlements were also annexed to Massachusetts, in 1641, but finally parted from Massachusetts in 1692, from which time until the Revolution they remained a distinct colony. (See NEW HAMPSHIRE: 1622-1679, to 1681-1692.) While the English were thus colonizing New England at the north and Virginia at the south, the Dutch had taken possession of the important valley of the Hudson river and the region around its mouth, and had named the country "New Netherland," but no real colonization was undertaken until 1623. The New Netherland Company had then been superseded by the Dutch West India Company, with rights and powers extending to Africa as well as the West Indies and the North American coasts. It bought Manhattan island and large tracts of land from the Indians (see IROQUOIS CONFEDERACY: Their conquests and wide dominions), but had little success for several years in settling them. In 1629 it introduced a strange experiment, creating a kind of feudal system in the New World, by conveying great estates to individuals, called Patroons, or Patrons. Several Patroon colonies were established on a baronial scale; but, generally, the system did not produce satisfactory results, and in 1640 the company tried the better experiment of making the trade of New Netherland free to all comers. The company government, however, as administered by the directors or governors whom it sent out, was too arbitrary to permit a colonial growth at all comparable with that of New England. Southward, on the Delaware, the Swedes made a settlement where the city of Wilmington now stands. This Swedish colony prospered and enlarged itself during six-

teen years, but was overcome by Director Stuyvesant of New Netherland in 1654. In 1664 the whole situation in this middle region was changed by the English conquest of New Netherland. The territory so acquired—or regained, if the original English claim had been good—passed then, by royal grant, to the Duke of York (afterwards King James II), and became the proprietary province of New York. (See NEW YORK: 1664; 1664-1674.) The duke of York, in turn, the same year, transferred to Lord John Berkeley and Sir George Carteret the part of his domain which lay between the Hudson and the Delaware, and it received the name of New Cæsarea, or New Jersey. Under encouragement from Berkeley and Carteret the New Haven colonization was resumed. Ten years later Berkeley sold his rights to a party of Quakers who were seeking a refuge for their persecuted sect in the New World. A division of the province was made and the Quaker proprietors received West Jersey, while East Jersey remained to Carteret. (See NEW JERSEY: 1664-1667; 1673-1682.) Before this time, William Penn had become the principal owner of the West Jersey interest. Not long afterwards (1681), Penn procured from King Charles II a much greater proprietary domain, on the western side of the Delaware, 40,000 square miles in extent, which received the name of Pennsylvania. To his title from the king he added a deed of purchase from the Indians. Penn's scheme of colonization was very liberally framed, and it was conducted with marked success. Philadelphia, first laid out in 1683, had 2,000 inhabitants in 1685, and Pennsylvania at large had 8,000. (See PENNSYLVANIA: 1681; 1681-1682.) In order to possess one bank of the Delaware river and bay to the sea, William Penn, after securing his grant from the king, bought additionally from the duke of York the claims of the latter to that strip of territory which the Swedes had settled on and struggled for with the Dutch, and which took an independent political form in later days as the state of Delaware. (See DELAWARE: 1691-1702.) Adjoining Penn's province on the south was the domain of another great proprietor, Lord Baltimore, whose title deed, from the same royal source as that of Penn, but prior in time by half a century, gave rise to conflicts which troubled the whole life of the Peaceful Friend. The first Lord Baltimore (George Calvert) received from James I in 1632 a patent which gave him territory on the northerly side of the Potomac river, stretching to the Delaware bay and river and to the 40th parallel of north latitude. By its terms it did undoubtedly take in Delaware and part of Pennsylvania; but the intervening occupation by the Swedes and Dutch, the English conquest, and the royal grant to the duke of York, confused the title. The controversy was not settled until 1761-1767, when "Mason and Dixon's line" was run as the accepted boundary between Maryland and Pennsylvania. The lords proprietary of Maryland had been in conflict long before Penn's time with their neighbors at the south, in Virginia, and had many difficulties to encounter and many troubles in their undertaking to found a state. (See MARYLAND: 1632, to 1751-1775.) Beyond the Virginia plantations, in the South, the coasts to which Raleigh had sent his first colonists, and to which the virgin queen had intended to give her name, waited long for settlement. The first durable colony within that territory which took its name in time from a less worthy sovereign was planted in 1653, at Albemarle, on the Chowan river, by a small company of dissenters from Virginia. In

1665 a considerable party of emigrants from the Barbadoes, headed by a wealthy planter of that island, Sir John Yeamans, established themselves on Cape Fear river, near its mouth, in the district which was afterwards called Clarendon. Two years before this time, in 1663, King Charles II had discharged some part of his heavy obligations to his loyal supporters by granting that whole section of the American continent which lies between the 31st and 36th parallels of latitude to a company of courtiers, including Clarendon, Monk, Shaftsbury, and others, and the province was named Carolina. It was divided into two great counties, Albemarle and Clarendon, and these corresponded somewhat nearly to the North Carolina and South Carolina of the present day. In 1670 the lords proprietors sent out a colony under William Sayle, which settled first at Port Royal; but Sayle died soon after landing, and the colonists were induced to migrate northwards to the Ashley river, where Sir John Yeamans met them with a considerable part of his Clarendon colony, and became the head of the united settlements. There they founded "Old Charleston," and, after a few years, shifting the site to the confluence of the Ashley and the Cooper, they began the building of the present city of Charleston. This became the nucleus of the subsequently distinct colony of South Carolina, as Albemarle did of that of North Carolina. The division was made in 1729, when the rights of the proprietors were bought by the crown, and the Carolinas became crown colonies. (See NORTH CAROLINA: 1639-1663, to 1688-1729; SOUTH CAROLINA: 1670-1696, to 1712-1732.) The last of the "Thirteen Colonies" to come into existence was the colony of Georgia, founded so late as 1733 by General James Oglethorpe. It occupied territory too close in neighborhood to the Spaniards of Florida to be attractive to settlers in the seventeenth century. The first emigrants left England in the fall of 1732, and early in the next year Savannah was laid out by Oglethorpe in person. (See GEORGIA: 1732-1739.)—J. N. Larned.—In Georgia the prohibition of slavery was removed in 1749. Other restrictive regulations were also abandoned. In 1750 the restrictions on the tenure and alienation of land were removed. (See GEORGIA: 1735-1749; 1735-1750; 1743-1764.) "After the removal of these restrictions . . . [the colony] developed much more rapidly, and a considerable movement of planters from South Carolina began into the so-called Midway District between the Ogeechee and South Newport rivers. These planters brought their slaves with them in such large numbers that a contemporary writer estimated the negroes brought into the colony during the years 1751 and 1752 at nearly a thousand. Thus the low country of Georgia began, in spite of the theories of the trustees, to reproduce in its essential features the social system of South Carolina. The political experience of Georgia was in many respects unlike that of any other English colony. No provision was made in the charter for a representative legislature and none was established under the proprietary government. An assembly which met in 1751 was not authorized to make laws, but only 'to propose, debate, and represent to the trustees.'"—E. B. Greene, *Provincial America, 1690-1740*, pp. 267-268.

1620-1776.—Constitutional relations of colonies to English crown and Parliament.—Working of the leaven of independence in New England Puritanism.—The history of the development of the question between England and her colonies, as to their constitutional relations to one another, "falls naturally into two periods: first, from the beginning of English colonization in America to the Revolution of 1688; second, from 1688 to the Declaration of Independence. . . . Passing now to the history of the first period, it is to be observed that the leading institution in the English government at that time was the King in Council. . . . But in the 17th century, owing to a combination of very strong political and religious forces, the struggle between the King in Parliament and the King in Council was . . . opened and pushed with vigor. It continued with alternations of success, but on the whole with results favorable to Parliament, till 1688. Then the King in Parliament finally gained the ascendancy, and this result was so secured by statute as never afterwards to be seriously called in question. The supremacy of Parliament was established by a series of royal concessions. The parliamentary party viewed these as compromises between Parliament and king. This gave color to the theory of social contract, which was now given new impulse and form by the parliamentary writers of the 16th and 17th centuries. . . . It naturally follows from what has been said that the administration of colonial affairs previous to 1688 was in the hands of the King in Council. Such was the fact. The enterprises of discovery were fitted out under the patronage of the crown; the territories discovered or visited were taken possession of in its name; and grants of land, of rights of government and trade, were made to actual settlers by the kings. Every colonial charter is a proof of this. As the king was by the theory of English law feudal proprietor of England, so he became proprietor of colonial territory, though that territory was granted out in socage, one of the freest forms of English tenure. Certain superficial distinctions were introduced in the form of colonial governments as royal, proprietary, and charter; but they all emanated from the crown. Its supremacy extended around and beneath them all. The fact that they were established by grant is proof of this, even though there had been no subsequent acts to enforce the control. They were colonies of the English crown; their inhabitants were its subjects. The true doctrine of sovereignty and allegiance necessitates this conclusion. . . . Parliament passed a few statutes affecting the colonies. Yet, not to mention others,

there were five such of very great importance which fall within this period: the Act of Supremacy (1 Eliz. cap. 1), and the four Navigation acts. In all these the colonies were expressly mentioned. But the relative position of crown and Parliament is illustrated by the fact that when in 1624 the Council was proceeding to annul the third Virginia charter, the House tried to interfere but was warned off—because the business concerned only the king and his advisers. Moreover there was no lack of precedents for the extension not only of common law but of royal ordinances and statute law outside of the original realm of England. . . . Such in outline was the status of English colonial law previous to 1688. It was in the process of formation and adaptation to the new empire. There were ample precedents for the exercise of the rights of British sovereignty in America, but those rights had not yet been called into the fullest operation. Their legitimacy however was in general fully acknowledged by the colonies. They had been allowed great liberty in establishing their governments, erecting courts, levying taxes, organizing and calling out their militia for defence against the Indians. Colonial society had been allowed to develop freely in all lines and the product was far different from anything which existed in the mother country. It was democratic rather than aristocratic; it was also extremely particularistic, and too remote from England to feel much interest in the general concerns of the empire. In this divergence of social organization and interests, as between the colonies and the mother country, lay the germ which might develop into resistance on the part of the plantations, if at any time England should attempt to enforce her rightful supremacy over them. But as yet there was too little of the spirit of union among the colonists to make possible any combined action. Also those dynasties whose government had been most arbitrary in England, the Tudors and Stuarts, had, till the reign of James II. treated the colonies with great leniency. But the statements just made do not cover the whole ground. They describe the attitude of the colonies in general toward the mother country, but they do not describe the special conditions which prevailed in New England. If we wish to know how the theory of colonial independence originated, we must look in that direction. The American revolution cannot be explained without reference to the political character and tendencies of Puritanism. . . . Puritanism then was a political as well as a religious movement. On the one hand its doctrines contained a strong democratic leaven; on the other they contained principles which might lead to the separation of church and state. How the former tendency worked itself out in New England is familiar; how the latter failed of accomplishment there is equally well known. The Puritans of Massachusetts were not opposed to the union of church and state or to the employment of the secular power to enforce religious conformity. . . . What they were opposed to was every other form of state church except their own. . . . In order to maintain her peculiar system, Massachusetts had to be on her guard against all interference from outside. . . .

"The Massachusetts charter was brought over to this country. [See MASSACHUSETTS: 1620-1630.] A few years later the Plymouth company was dissolved, and representation of the colony in England, except by such agents as she might send, ceased. The terms of the charter were very lib-

eral; but like all the others it was a royal grant, and expressly stated that the inhabitants of the colony were to be subjects of England and were to enjoy all the liberties and immunities of such, as if they were in the realm of England. The oaths of supremacy and allegiance were to be administered to all who should go to the colony. The company was made a 'body corporate and politic' and was given ample powers of government; but its laws, statutes, and ordinances were not to be contrary to the laws of England. The admission of freemen was left in the hands of the corporation. How did the Puritan oligarchy make use of this charter for serving the purposes of their government? In a word, they interpreted the expression 'body corporate and politic' to mean an independent state, and virtually abandoned all legal connection with England except an empty acknowledgment of allegiance. The oath of allegiance was not administered, but instead an oath of fidelity to the government of Massachusetts. An ecclesiastical system wholly different from that of England was established. Only those were admitted to political rights, made freemen, who were members of a Congregational church. . . . The colony also exercised full legislative and judicial powers, and denied the right of appeal both practically and theoretically. The proof of this is most direct and convincing. To illustrate: in 1646 the General Court refused to permit the appeal of Dr. Child and others who, as Presbyterians, desired to lay before Parliament the wrongs they suffered in Massachusetts. Not only was the right denied, but the petitioners were prevented by force from carrying their case to England. The same course was pursued in reference to appeals in ordinary judicial cases. During the discussion of the affair just mentioned it was boldly affirmed in the General Court that subjects were bound by English laws only so long as they lived in England; that neither statutes nor royal ordinances were in force beyond the seas. A little later than this both the magistrates and the elders were called upon to give their views on the legal relations between the colony and England. Both agreed that by their charter they 'had absolute power of government'; that their government was perfect and sufficient in all its parts, not needing the help of any superior to make it complete. They acknowledged that they had received the charter from England, and 'depended upon that state for protection and immunities as freeborn Englishmen'; but the duties which were correlative to those immunities, and which are necessary to a true conception of allegiance, were not mentioned. This position was consistently maintained by the Puritans of Massachusetts as long as they remained in power. In their correspondence with the home government and its officials between 1664 and 1684 the right of appeal was always denied. Its exercise was never allowed. If we add to this the further statements that Massachusetts coined money; strove to enlarge the bounds of her patent, not only without consulting the king, but in defiance of his absolute prohibition; taxed English imports; and, without the consent of the home government, entered the New England confederation, some notion can be formed of the degree of independence claimed and exercised by that colony. The exercise of this independence however did not make it legal. It only illustrates the fact that the roots of the American revolution extend back into the times of which we are speaking. . . . It was to be expected that England would

interfere to bring Massachusetts within the bounds of constitutional dependence. Complaints against the colony, on the part of Gorges and of those who had been banished by the Puritans, began very early. These led to 'quo warranto' proceedings for the recall of the charter in 1635. But civil strife at home compelled the government of Charles I to abandon the project. Then came the period of the Commonwealth, when the views of the English government were so fully in harmony with those of the New England leaders that the practical independence of the colony was ignored. . . . From the restoration dates the beginning of a more comprehensive colonial policy." With the fall of the Massachusetts charter, in 1684, "closes the first stage in the development of the idea of colonial independence. [See MASSACHUSETTS: 1671-1686.] The struggle between the Puritans of Massachusetts and the crown is the most significant fact in American history previous to 1760. The Puritans were defeated; the authority of England was reasserted. . . . But for our purpose the important result is that the Puritans left behind them an armory full of precedents and arguments in favor of colonial independence. They had constructed the American theory on that subject. That was the chief permanent result of their experiment. They had from first to last adhered to the theory which expediency taught them to adopt. They taught the colonists how to resist the exercise of the ecclesiastical and judicial supremacy of the crown. If now at any time in the future the Americans should consider themselves aggrieved by the acts of the English government, the Puritan spirit and theory would be likely to appear. Such was the aspect of affairs at the close of the first period of colonial history. After the revolution of 1688, Parliament assumes more and more the control of American concerns. Statutes on those subjects multiply. The administration of the colonies becomes a branch of the ministerial government of Great Britain. The development of an imperial as distinguished from an insular policy is begun. The interference of England in colonial affairs became more frequent and the control asserted more extensive than heretofore. . . . The attitude of the colonists during this period was one of passive rather than active resistance. Parliamentary restrictions were so far evaded as not to be burdensome. . . . The records show that the burden of opinion in the colonies was jealousy of all government, so far as it operated as a restraint. The interference of government, whether colonial or imperial, was welcomed by the colonists, when it could be used for the advancement of their private or local interests; when larger objects were aimed at, it was if possible ignored or resisted. . . . The political condition of the colonies was for the first time clearly revealed during the French and Indian war. This history of Germany can furnish no more vivid spectacle of the evils of particularism than does that struggle. . . . The condition of anarchy and helplessness revealed by the war was such as to convince all the servants of the crown in America that active parliamentary interference was necessary, if the colonies were to be defended and retained as an integral part of the British empire. The fact that the British government, within a reasonable time after the close of the war, proceeded to put this suggestion into execution, implies nothing arbitrary or unreasonable. It had the undoubted constitutional right to do so; and so far as could be seen at the time, expediency prompted in the same

direction. But during the century since the Puritan oligarchy of Massachusetts yielded to the supremacy of the crown, the theory of social contract had been fully developed. It had formulated the needs of the opposition in all the European countries to the system of absolutism. It was the theory of government very generally held by the Puritans in both England and America. . . . This theory, as soon as it was understood, would naturally find general acceptance in the colonies. . . . The American revolution, as truly as the French, was the outgrowth of the doctrine of natural rights and social contract. By this I mean simply that the doctrine in question formed the theoretical basis of both movements. So far as the American revolution is concerned the proof of this statement is contained in the writings of the patriot leaders at the time, the various state papers that were issued, and the doctrine that was held respecting the right of imperial taxation. No man contributed so much to bringing about the revolution as Samuel Adams; and his mind was saturated with the theory of social contract. He made it the basis of all his reasonings. . . . The reason why New England became the leader of the movement clearly appears. The process of development through which the colonies passed was a natural, and therefore a necessary one. It was slow and obscure, and therefore could not be clearly recognized at the time. But that it was nevertheless revolutionary becomes evident when we compare the views and aims of the colonists with the constitution of the British empire. When the two systems came into collision the colonists adopted a theory which was 'in the air' at the time, but one under which no government can be successfully carried on. When they came to erect a government of their own, they had to abandon it. It is not claimed that the doctrine of natural rights ever found such general acceptance in America as in France. The character of the people and the absence of a despotic government prevented that. But that the American revolution cannot be explained without assigning it a prominent place is evident. It is not intended to convey the impression that the colonists had no grievances. There were causes for complaint, but they were doubtless greatly exaggerated. A mind filled with the democratic theories of the times, and with the loose notions concerning sovereignty and allegiance which then prevailed, could easily imagine that Parliament, unless resisted, would establish a despotic government in America."—H. L. Osgood, *England and the colonies (Political Science Quarterly, Sept., 1887)*.—"Institutionally considered, the history of the American colonies falls into two phases or periods. The two phases appear in the system of chartered colonies and the system of royal provinces, with the transition from one to the other. This comprises all there is in the constitutional history of that period. The meaning of the period, its unity and diversity, the character of the colonies as special jurisdictions, as well as their relations with the sovereign imperial power, will become sufficiently clear if these subjects are properly treated. The fundamental trend of events during the period will also become evident. By the chartered colonies is meant the corporate colonies of New England and the proprietary provinces. The term 'chartered' signifies nothing as to the internal organization of the dependencies to which it is applied, but relates only to the method of their origin. They all originated in grants from the English crown, the privileges being conveyed

through royal charters. Permissions to undertake voyages of discovery were issued in this form. All the colonies were founded under grants of this nature, and their development embodied the results contributed by private and local enterprises to the general movement. Their founders and settlers bore the risks, hardships, and losses which were incident to the beginnings of colonization. Their efforts, under authority from the English government, gave rise to a group of colonies which possessed variety of internal organization and enjoyed a large degree of independence. They were emphatically special jurisdictions, and their founders and inhabitants exhibited all the love for corporate liberty which characterizes the history of such jurisdictions. The corporate colonies of New England were practically commonwealths and developed with scarcely any recognition of the sovereignty of England. Their ecclesiastical polity differed from that of England. Their land system and the relations between their executives and legislatures were peculiar to themselves. They founded a confederation without the consent of the home government, taking advantage of the civil troubles in England for the purpose. Of the proprietary provinces, the earliest were founded by trading companies resident in England, and at the outset joint management of land and trade were prominent characteristics of their policy. This, however, soon passed away and left a body of free tenants. The later proprietary provinces were founded by individuals or boards of proprietors, through whom political rights passed to the inhabitants. In some of these provinces the proprietors and their appointees retained at the beginning large powers in their own hands, and only gradually did these come to be shared by the people through their representatives in the lower house of the legislature. In others the proprietors at the beginning admitted the representatives of the colonists to a large, or even the largest, share of power. Thus varieties of a common type appear prominently in this class of provinces; institutions shade off into one another."—H. L. Osgood, *American colonies in the seventeenth century, v. 1, pp. xxviii-xxix*.

1621.—Indian money made legal tender. See MONEY AND BANKING: Modern: 17th century: Indian money used in American colonies.

1621-1776.—Manhood suffrage. See SUFFRAGE, MANHOOD: United States: 1621-1776.

1624-1776.—Colonial administration.—Constitutional results of trade legislation.—Colonial governors.—Colonial legislation.—"The governments of the American colonies were, at the close of the Stuart period, in a state of decidedly unstable equilibrium, due to the adoption by the English crown of a new and aggressive colonial policy. These new measures, however, cannot be appreciated without recalling certain leading principles of English colonial policy in its earlier phases. The first is the leaving of responsibility, not merely for the economic development but for the government of new colonies, to private individuals, private associations, or corporations, acting either under the authority of royal charters, or, as sometimes happened in New England, simply by the sufferance of the crown. No one of the mainland colonies began its career under a royal or provincial government, and until 1684 only two were definitely so organized: Virginia, which became a royal government in 1624, after the charter of the Virginia Company had been annulled; and New Hampshire, which, after a varied experience

at first under the nominal rule of a proprietor, and then as a part of Massachusetts, was finally, in 1697, organized as a separate royal province. Secondly, the tendency was, instead of concentrating governmental responsibility in a few hands, to authorize, or to permit, a large number of small governments. By 1684 there were on the mainland twelve distinct colonial governments: New Hampshire, Massachusetts, Plymouth, Rhode Island, Connecticut, New York, East New Jersey, West New Jersey, Pennsylvania with the 'lower counties,' Virginia, Maryland, and Carolina, having, for the most part, no political connection with each other except their common subjection, slight and intangible as that often was, to the English crown and Parliament. The greatest variety appeared in the character of these governments, both as to the nature of their relations with the home government and as to their internal organization. In Virginia the constitution was in the main embodied in the royal commission and instructions issued to each succeeding governor. In the more recently organized proprietary governments the proprietor, though given considerable freedom of action, was held in check by such requirements as the allowing of appeals to the Privy Council or the submission of colonial laws for the approval of the crown. There were also quasi-independent governments like those of Maryland, Massachusetts, and Connecticut, where the crown had no effective check on colonial law and administration. Under the royal charters, New England had become the home of practically republican governments, where judges and executive officers as well as law-makers were chosen by the people or their representatives. The Maryland proprietary government may be described as a constitutional monarchy of the conservative type, while Penn's constitution was much more liberal. These governments, however, had one thing in common: the principle of popular representation had in some form or other been conceded in all of them, sometimes freely, as in Pennsylvania, and sometimes tardily, or only temporarily, as in New York. Often, however, the privileges of these representative bodies were imperfectly defined and held on a somewhat precarious tenure. A third striking characteristic of early colonial policy was the almost entire absence of parliamentary control. The English territories in America, whether acquired by discovery or by conquest, were the domains of the crown. The king determined the conditions under which they should be occupied, their trade carried on, and their governments organized. Not until the period of the Commonwealth . . . [had Parliament begun] to concern itself actively in the affairs of the colonies; and at first its work was mainly confined to the assertion of principles, without providing adequate machinery for their enforcement. During the second half of the seventeenth century there was in England greater interest in the problem of colonial government. The material resources and the industry of the colonies were to be exploited and made factors in the development of national power. By the navigation acts of the Commonwealth and Restoration governments, Parliament undertook to regulate the course of colonial enterprise. . . . The primary motive of . . . [trade] legislation was financial or economic, but it had also important constitutional results. Since the existing colonial governments could not be relied upon to enforce thoroughly the requirements of the navigation acts, a special official service was organized in the colonies, charged with this specific

duty. Consequently, there soon appeared side by side with the local governments of individual colonies, whether provincial, proprietary, or republican, the surveyor-general and the collectors of customs, as the representatives of a new imperial control. These new officials in turn were supervised and controlled by the Privy Council with its Committee of Trade and Plantations. Even these measures, however, were inadequate. The thorough enforcement of the law required the cordial co-operation of the colonial governor with the royal agent, but instead of this there was mutual suspicion and dislike. The governor was influenced by the local sentiment of the colony or the personal interests of the proprietor, which were often at variance with those of the crown. It was natural enough, therefore, that such men as Edward Randolph, who looked at the problem from the point of view of a royal official, should demand a reorganization of the colonial governments themselves, in order to make them more effective agents of imperial control. These general considerations, with others of a more local character, gradually led the English government to adopt new principles of colonial administration. The changed attitude of the crown towards the proprietary governments was illustrated in the New York patent of 1664 [see NEW YORK: 1664], and still more in Penn's charter of 1681. [See PENNSYLVANIA: 1681; 1681-1682.] In both these provinces the right of appeal to the Privy Council was expressly reserved by the crown, and in Pennsylvania this check upon provincial independence was reinforced by a number of new provisions, including a royal veto on colonial laws. . . . [Beginning with 1684 came the policy of amalgamation of provinces in the north and annulment of proprietary grants.] It seems probable that if this policy had not been interrupted by the revolution of 1689, direct control by the crown would have been secured in all, or nearly all, of the colonies. Thus the later policy of the Stuarts embodied these two leading principles: the substitution of royal for proprietary or elective governments; and the consolidation of numerous petty jurisdictions into a small number of strong provinces. Such a policy would probably in any case have provoked sharp antagonism from the colonists, and from the various proprietary interests which were thus assailed. It was still further weakened by being associated with another form of restriction with which it had no necessary connection: the colonies which were successively incorporated in the 'greater New England' of 1688 were left without any general representative assembly to take the place of the various local bodies which had been superseded. The extension of imperial control and the consolidation of governments may be regarded in some aspects at least as measures of progress; the denial of popular representation was distinctly reactionary."—E. B. Greene, *Provincial America, 1690-1740*, pp. 10-16.—"No colony was allowed to make laws contrary to those of England, though at first no colony was required to transmit its acts to England for acceptance or rejection. Not until the issue of the charter to Penn was such requirement made, and then the colony was called upon to transmit its laws to England within five years after their passage, and the council was to act upon them within six months after their receipt. A similar clause was inserted in the Massachusetts charter of 1691 when the period was limited to three years and no restriction was imposed upon the action of the council. The charter corporations

always denied the validity of the acts of Parliament in America unless re-enacted by their own assemblies; and Massachusetts refused to acknowledge the right of the council to invalidate her laws even when contrary to those of England. The idea of creating a uniform system of administration in the colonies, of bringing all to conform to a common type, and of rendering them more dependent on the home government by union under the crown, developed very slowly. The charter of the Virginia company was dissolved in 1624, and that of Massachusetts threatened in 1635-1637; but these annullments were no part of a common plan. The Council for Foreign Plantations, desiring to administer the navigation acts more efficiently, proposed to Charles II. in 1661 that he take all the existing proprietary colonies into his own hands and create no new ones in the future; but, though this plan for a uniform and centralized colonial organization was emphasized in Noell and Povey's 'Overtures,' the king allowed his personal inclinations to override the suggestions of the committee. Between 1660 and 1670 six new charters were issued; the four new colonies of the Carolinas, New York, the Jerseys, and Bahamas were founded; and Connecticut and Rhode Island received new charters. Even as late as 1676 the council committee could say that 'to consider New England so as to bring them under taxes and impositions or to send thither a governor to raise fortune from them cannot be of any use or service to his Majesty.' When, however, the reports of illegal trading and of quarrels between the collectors and the colonies began to come in, the Lords of Trade viewed the matter differently. Breaches of the acts of trade affected the king's income, a matter of great concern to the committee, which existed for the very purpose of safeguarding and increasing the customs revenues of the crown. The committee had already declared that the plantations could enact no laws touching the king's revenue without the king's 'particular knowledge'; and had already studied how best the colonies might be brought to a closer dependency on the crown in matters of trade. After 1680 complaints came in rapidly: Maryland, the Bermudas, and Massachusetts were the first colonies to give offence in the eyes of the board: the proprietary of Maryland and the companies in Bermuda and in Massachusetts were warned that continued violations of the acts would lead to the forfeiture of their charters."—C. M. Andrews, *Colonial self-government, 1652-1689*, v. 5, pp. 37-39.—"By 1700 the groundwork of government in every colony was the charter or the royal grant or concession. This was regarded as a pledge of good faith on the part of the home government and it was the doctrine in the colonies that neither the king nor his officers could rightfully violate the provisions of the charter. Even a law of the colonial legislature was regarded as void if it was contrary to the charter. In all the colonies government was organized on the principle that power should flow in three streams, and in every colony there were three great departments, the legislative, the executive, and the judicial. The legislative branch in nearly all the colonies consisted of the lower house elected by the voters, and of a small upper house—usually known as the council—appointed by the governor. The legislature could pass any law that was not contrary to the law of England and its statutes related to almost every subject of governmental concern. The lower house had full control in respect of the

raising and spending of money. The head of the executive department was the governor, a most important political personage in colonial life. In Connecticut and Rhode Island the governor was elected by the people; in the other colonies he was appointed either by the proprietor or by the king. The council, besides acting as one of the branches of the legislature, assisted the governor in the discharge of his duties. In every colony there was a judicial system, the judges of which were appointed by the governor, or by the king through the governor. In all the colonies the right of suffrage was made dependent upon the ownership of a certain amount of property and only the male adults could vote. In all the colonies there were counties and county officers. In the southern colonies, the county was the only local government. The Virginia county, modeled after the English shire, was for a long time a close corporation and was virtually an aristocracy of large landholders. But the English shire did not suit the conditions which prevailed in New England. Here, since the tillable land was divided by nature into small areas marked off by bold hills and troublesome streams, the settlers found it convenient to build their houses as close together as possible, and settle in compact villages rather than to spread out on large plantations. The form of local government adopted for these thickly settled communities was one that had almost perished from the earth. The ancient town or village meeting that the Anglo-Saxons had brought with them to England a thousand years before was revived in its ancient form and vigor and made to do duty in the Puritan communities. The town was a pure democracy in which all the adult inhabitants who were church-members had a voice. The New England town was chosen as an agency of local government throughout all New England, and under its stimulating and healthful influence there was developed a citizenship that has received the admiration of the world. The powers exercised by the colonial governments were very large. The colonial legislature could legislate on all matters pertaining to the welfare of the colony, but it could not infringe upon the laws of England. If a colonial law was contrary to the law of England it could be vetoed by the king. The royal veto was sometimes brought into use, but in most things each colony was a self-governing community left to manage its own affairs in its own way. It was a recognized principle that the colonies might legislate for themselves as they pleased, provided their laws were consistent with allegiance to the crown and were not contrary to those acts of Parliament in which the colonies were expressly mentioned. The independence enjoyed by the colony in matters of legislation is the cardinal fact of our colonial political history."—S. E. Forman, *Our republic*, pp. 37-38.

Thwaites, *Colonies, 1492-1750* (*Epochs of American History*).

1628-1776.—Industries in the colonies.—Social life.—"The economic life of the colonies was extremely simple, the main energies of the people being directed to the extractive industries. In ad-

dition to agriculture, which naturally in a new country claimed the first attention of the colonists, other industries soon sprang up as needs and opportunities directed. In New England, where agriculture by reason of the unfertile soil was least profitable, the chief occupations were lumbering, ship-building, trading, and fishing. The people of the middle States engaged in the fur trade, and, as did those of New England, in the manufacture of a wide range of household supplies; carpentry, black-smithing, and tanning were generally carried on in every community, while the spinning-wheel, the loom, and the hand card were to be found in almost every house. In the South, on the contrary, there were few industries outside the plantations of sugar, tobacco, rice, and indigo; some naval stores were produced, chiefly in North Carolina, but the varied household manufactures of the North were entirely lacking, even the most necessary supplies being procured from the northern colonies or from England. From the very beginning the efforts of the colonists were directed to the utilization of the almost exhaustless resources of the forests which surrounded them. Although in the southern colonies the magnificent forests were regarded rather as an encumbrance and recklessly cleared off to make room for the all-consuming tobacco, in the North they were early utilized as a cheap and quick export. Even by hand a man could make 15,000 clapboards or pipe-staves in a year, which, according to Wright, were worth in the colonies £4 per thousand, and in the Canaries £20. Owing to the scarcity of labor, however, it was exceedingly desirable to have machinery to do the work. Artisans were sent as early as 1620 to Virginia to set up a sawmill, but none seems to have been erected until 1652, when one was built at a cost of forty-eight beaver skins. The first mill in the colonies is stated by Bishop to have existed in Dorchester, New England, as early as 1628, which was thirty-five years before they were introduced into England. The Dutch built many mills along the Hudson to run by wind or water. The New Hampshire and Maine settlements were at first composed almost entirely of timber cutters, and here there was a sawmill as early as 1635. . . . One of the most important industries in the colonies, particularly in New England, was ship-building. The industry was begun within three years after the establishment of Plymouth Colony, and by 1631 had already grown to such proportions as to require official regulation. In 1676 Massachusetts had a total of 730 vessels. Owing to the large supplies of splendid timber at the water's very edge, cheaper and better vessels could be built in the American colonies than anywhere in Europe. Toward the end of this period an oak vessel could be built in Massachusetts for \$24 a ton, while neither in England nor on the continent could a similar vessel be built for less than \$50 a ton. American ships soon began not merely to carry on a vigorous trade at home, but to crowd out English shipping in the home ports. About fifty New England built vessels were annually sold abroad, and by 1775 about 398,000 tons or nearly one third of the tonnage afloat under the British flag had been built in American dock-yards. . . . It was in the fisheries in truth that New England gained her greatest wealth. The industry was developed early and throughout the whole of the colonial period remained a lucrative one. The cod fishery began about 1670, and developed so rapidly that within five years 665 vessels were employed in this in-

dustry, which required the services of over four thousand seamen. About 1700 the whale fishery was begun and prosecuted with such success that by 1721 two hundred and sixty vessels were employed. Within fifty years the whales deserted the American coast, but were followed to the Arctic and Antarctic Oceans by the whalers. In 1771 this business employed 304 vessels, with 4059 seamen. The fishing industry was confined exclusively to New England, and was estimated to bring in about £255,000 a year; during the colonial period not a vessel engaged in either the cod or whale fisheries was owned south of Connecticut. For that section it possessed great economic significance. . . . Although the commerce and trade of the colonies kept expanding, by the end of the colonial period the total exports from all the colonies amounted to only \$20,000,000. But so insignificant was the world's trade at that time that this comprised one seventh of the total commerce of England, and was considered sufficiently important for England to reserve it to herself."—E. L. Bogart, *Economic history of the United States*, pp. 49-53.—"The tilling of the soil absorbed the energies of not less than nine-tenths of the colonial population. Even those who by occupation were sailors, fishermen, fur traders, or merchants often gave a part of their time to the cultivation of farms or plantations. Land hunger was the master passion which brought the men of the seventeenth and eighteenth centuries across the sea and lured them on to the frontier. Where hundreds sought for freedom of worship and release from political oppression, thousands saw in the great unoccupied lands of the New World a chance to make a living and to escape from their landlords at home. To obtain a freehold in America was, as Thomas Hutchinson once wrote of New England, the 'ruling purpose' which sent colonial sons with their cattle and belongings to some distant frontier township, where they would thrust back the wilderness and create a new community. Throughout the whole of the colonial period this migration westward in quest of land, whether overseas or through the wilderness, whether from New England or Old England or the Continent, continued at an accelerating pace. The Revolutionary troubles, of course, brought it temporarily to a standstill. . . . The towns of New England were compact little communities, favorably situated by sea or river, and their inhabitants were given over in the main to the pursuit of agriculture. Even many of the seaports and fishing villages were occupied by a folk as familiar with the plow as with the warehouse, the wharf, or the fishing smack, and accustomed to supply their sloops and schooners with the produce of their own and their neighbors' acres. Life in the towns was one of the incessant activity. The New Englander's house, with its barns, outbuildings, kitchen garden, and back lot, fronted the village street, while near at hand were the meetinghouse and schoolhouse, pillories, stocks, and signpost, all objects of constant interest and frequent concern. Beyond this clustered group of houses stretched the outlying arable land, meadows, pastures, and woodland, the scene of the villager's industry and the source of his livelihood. Thence came wheat and corn for his gristmill, hay and oats for his horses and cattle, timber for his sawmill, and wood for the huge fireplace which warmed his home. The lots of an individual owner would be scattered in several divisions, some near at hand, to be reached easily on foot, others

two or more miles distant, involving a ride on horseback or by wagon. While most of the New Englanders preferred to live in neighborly fashion near together, some built their houses on a convenient hillside or fertile upland away from the center. Here they set up 'quarters' or 'corners' which were often destined to become in time little villages by themselves, each the seat of a cow pound, a chapel, and a school. Sometimes these little centers developed into separate ecclesiastical societies and even into independent towns; but frequently they remained legally a part of the original church and township, and the residents often journeyed many miles to take part in town meeting or to join in the social and religious life of the older community. . . . Outside New England there was greater variety of landholding and cultivation. The Puritan traveler journeying southward through the Middle Colonies must have seen many new and unfamiliar sights as he looked over the country through which he passed. He would have found himself entirely at home among the towns of Long Island, Westchester County, and northern New Jersey, and would have discovered much in the Dutch villages about New York and up the Hudson that reminded him of the closely grouped houses and small allotments of his native heath. But had he stopped to investigate such large estates as the Scarsdale, Pelham, Fordham, and Morrisania manors on his way to New York, or turned aside to inspect the great Philipse and Cortlandt manors along the lower Hudson, or the still greater Livingston, Claverack, and Rensselaer manors farther north, he would have seen wide acres under cultivation, with tenants and rent rolls and other aspects of a proprietary and aristocratic order. Had he made further inquiries or extended his observations to the west and north of the Hudson, he would have come upon grants of thousands of acres lavishly allotted by governors to favored individuals. He would then have realized that the division of land in New York, instead of being fairly equal as in New England, was grossly unequal. . . . [The same conditions obtained in New Jersey and Pennsylvania where large estates were also to be found.] But there were also thousands of small fields belonging to the Puritan and Dutch settlers at Newark, Elizabeth, Middletown, Bergen, and other towns in northern New Jersey, and a constantly increasing number of somewhat larger farms in the hands of the Germans and Scotch-Irish in the back counties of Pennsylvania. . . . Unlike the Puritans, to whom country seats and summer resorts were unknown and trips to mountain and seashore were strictly matters of necessity or business, the town-folk of the Middle Colonies residing in New York, Burlington, and Philadelphia had country residences, not mere cottages for makeshift house-keeping but substantial structures, often of brick, well furnished within and surrounded by grounds neatly kept and carefully cultivated. . . . [The southerner] was unacquainted . . . with the self-centered activity of those busy northern communities or the narrow range of petty duties and interests that filled the day of the Puritan farmer and tradesman. Were he a landed aristocrat of Anne Arundel or Talbot county in Maryland, he would himself have possessed an enormous amount of property consisting of scattered tracts in all parts of the province, sometimes fifteen or thirty thousand acres in all. Many of these estates he was accustomed to speak of as manors, though the peculiar rights which distinguished a

manor from any other tract of land early disappeared, and the manor in Maryland and Virginia, as elsewhere, meant merely a landed estate. . . . It would be a mistake, however, to think of Maryland and Virginia as covered only by great plantations with swarms of slaves and lordly mansions. In both these Southern Colonies there were hundreds of small farmers possessing single grants of land upon which they had erected modest houses. Many of these farmers rented lands of the planter under limited leases and paid their rents in money, or probably more often in produce, labor, and money. . . . The only really important towns in these colonies during the colonial period were Annapolis and Williamsburg. In these towns many of the planters had houses which they occupied during the greater part of the year or at any rate when the Assembly was in session and life was gay and festive. . . . In all the cities of the North and South stores and shops were to be found, occupying the first floor, while the family lived in the rooms above. . . . [In the eighteenth century] a thousand and one articles from the great manufacturing towns of England—London, Bristol, Birmingham, Sheffield, Nottingham, Liverpool, Manchester, Torrington, and other centers—were brought in almost every ship that set sail for America. Scarcely a letter went from a Virginia planter or a Boston, New York, or Philadelphia merchant which did not contain a personal order for articles of clothing for himself or his family, and scarcely a captain sailed for England who did not carry commissions of one kind or another. The very names of the fabric which the colonists bought show the extent of this early trade: Holland lawn, linen, duck, and blankets, German serge, Osnaburg linen, Mecklenburg silk, Barcelona silk handkerchiefs, Flanders thread, Spanish poplin, Russian lawn and sheeting, Hungarian stuff, Romal or Bombay handkerchiefs, Scottish tartans and cloths, and Irish linen."—C. M. Andrews, *Colonial folkways* (A. J. Johnson, ed., *Chronicles of America*, v. 9, pp. 23-26, 28-31, 33-35, 37, 62, 76-77).—See also VIRGINIA: 1700: Contrast, etc.

1651-1672.—Navigation Acts and the colonies.—English restrictive commercial system.—"While England was yielding to her colonies a great deal of freedom in the matter of local government, she was passing many and minute regulations affecting the commerce and internal industrial development of those same colonies; and in this she was carrying out a fairly consistent policy and had done so from early times. When the struggle with Spain in the sixteenth century . . . was succeeded in the seventeenth century by a commercial rivalry with the Dutch, the control of the carrying trade became all-important. The famous series of Navigation Acts, beginning in 1651, unfolded a policy that was frankly intended to develop English shipping as the best support of the navy. Another closely related feature of the commercial

policy . . . was to promote in the colonies the production of naval stores for which England was dangerously dependent upon foreign countries with whom she might at any moment go to war. The colonies were also to provide raw materials which were not procurable at home, and they were to furnish a market for English manufactures, the exchange of commodities to be so regulated that the balance of trade would be in favor of the mother country."—M. Farrand, *Development of the United States*, p. 22.—"The tobacco trade began the shaping of English policy [often spoken of as the Old Colonial system] and determined the direction that her interests should take. Before parliament had placed the subject on the broader foundation of a statute, the Privy Council, as early as 1621, had issued its orders compelling the colonists of Virginia to send all their tobacco to England and forbidding all foreigners to trade with the colonies. In the commercial rivalry with the Dutch that followed, the Rump Parliament under the Commonwealth passed an ordinance in 1651, requiring that such trade should not only be confined to England but should be carried only in ships owned by English people or by the colonists, and manned by English masters with a crew, three quarters of which at least should be English. [See NAVIGATION LAWS: 1651.] The act was not thoroughly enforced and the Dutch continued to trade with the colonies in spite of it, until, after the Restoration, the feeling in England became so strong as to demand the embodiment of these principles in acts of parliament. Consequently, three great acts were passed in 1660, 1663, 1672, which repeated the former commands and added to them. England's commerce must be carried in England's ships, though foreign built ships might be used. Even this exception was withdrawn in 1662, and Ireland, which was included at first within the privileges of the act, was debarred in 1670. In the act of 1660 the former orders of the Privy Council regarding the bringing of tobacco to England only were given a wide extension, and sugar, cotton, indigo, ginger, and dyewoods, and later rice, molasses, beaver skins, cocoa, copper, and naval stores, were barred entirely from the foreign market. When in the operation of the act it was found that the colonists were carrying these commodities from one colonial port to another and then, deeming the law fulfilled, were sailing with them directly to Europe, the act of 1672 was passed. This act required that a duty, apparently equal to that imposed at the time in England, should be paid at the colonial port of entry, in case the ship captain would not bind himself by certificate to carry the commodities to England. . . . The acts thus far defined favored New England as against the other colonies, because the enumerated commodities were nearly all of exclusive southern or West Indian growth. But in 1663 an act was passed touching a new aspect of the case and affecting New England as well as the others. This act declared that all commodities imported into the colonies from the Continent should be brought to England before shipment to America. This meant that all imported articles which the colonies used must come from England, even though such articles might be of foreign manufacture. A few exceptions were allowed, such as salt and 'victual,' and wines from Madeira and the Azores, which were used in the colonies before they were used in England, but the exceptions were comparatively trifling. The ships were, of course, to be English built, and

three-fourths of the mariners English subjects. The captain on arriving in a colonial port must register his name, the ship's cargo, tonnage, and other details, with a person properly appointed to receive them. . . . By these acts the commercial policy of England was formally defined by statute, but for the first thirty years the laws were not strictly obeyed. Licenses were issued, particularly to the ships of Scotland, which kingdom, with Ireland and the Isle of Man, lay outside the privileged area and was forbidden to trade directly with the colonies. In 1665 an order in council allowed the use of foreign built ships manned by seamen of any nation in amity with England, and this order remained in force until 1668. The law was entirely dispensed with during the war with the Dutch in 1672. At other times, however, it was ordered to be strictly enforced, and in consequence complaints poured in, particularly from Barbadoes, Virginia, and New England, and the general charge was made that the acts of trade were seriously injuring the commerce of the plantations. Breaches of the acts were committed in the West Indies, New York, and New England, particularly in connection with the Irish and Scottish trade."—C. M. Andrews, *Colonial period*, pp. 114-118.

The Act of 1672 "was well entitled 'an Act for the encouragement of the Greenland and Eastland fisheries, and for the better securing of the plantation trade.' History is silent respecting the fisheries, but it has been very outspoken concerning its effect on the plantations. The effect was this: if Rhode Island wished to be supplied by Massachusetts with one of the enumerated commodities, and Massachusetts desired to furnish Rhode Island with that commodity, the delivery of the goods could not be made by the producer to the consumer, but the article would have to be sent to England first, and landed there, and then be sent back from England to Rhode Island before the consumer could touch it. A line drawn from Boston, in Massachusetts, to Bristol, in England, and thence back to Newport, in Rhode Island, will show the course which such article must take, if sold by Massachusetts to Rhode Island, before the demands of English commerce were satisfied; it will in all probability likewise show the least angle with the longest sides ever subtended on the chart of trade. Should, however, the parties to the transaction desire to avoid the risk and delay incident to this phenomenal voyage, they could do so by paying the certain rates and duties prescribed by this statute."—E. G. Scott, *Development of constitutional liberty in the English colonies of America*, ch. 8.

1663-1745.—Colonial immigration.—Nationality of immigrants.—Causes of migration.—Redemptioners.—"Almost the entire population of New England was English; and in most of the other colonies they outnumbered, or at least equaled, the settlers of any other single nationality. Next to the English the Germans were probably the most numerous. They first began to immigrate to the colonies, in appreciable numbers, during the closing years of the 17th century. About 1664 the troops of Louis XIV overran that part of Germany called the Palatinate, a country lying on both sides of the Rhine. Religious persecution followed and thousands of Germans were practically driven from their homes. . . . England cham-

pioned the Protestant cause, and extended a general invitation to the persecuted Protestants of all Europe to find homes for themselves in her American colonies. . . . [A] well-intentioned but disastrous attempt to settle a colony of Germans in New York, and various plans to divert them to Virginia and the Carolinas [were made]; . . . but Pennsylvania was the central point of settlement for the Germans. [See PALATINES.] A few of that nationality were among the Quaker colonists who founded Philadelphia; and these, from time to time, were joined by others."—E. E. Proper, *Colonial immigration laws* (Columbia University studies in history, economics and public law, 1900, v. 12, no. 2, pp. 77-78).—"Of the serving class, of the English, only a few came willingly. These were the 'free-willers' or 'redemptioners,' who sold their services usually for a term of five years to pay for their passage money. But the great mass of unskilled labor necessary to clear the forests and do the other hard work so plentiful in a pioneer land came to America under duress. Kidnaping or 'spiriting' achieved the perfection of a fine art under the second Charles. Boys and girls of the poorer classes, those wretched waifs who thronged the streets of London and other towns, were hustled on board ships and virtually sold into slavery for a term of years. It is said that in 1670 alone ten thousand persons were thus kidnaped; and one kidnaper testified in 1671 that he had sent five hundred persons a year to the colonies for twelve years and another that he had sent 840 in one year. Transportation of the idle poor was another common source for providing servants. In 1663 an act was passed by Parliament empowering Justices of the Peace to send rogues, vagrants, and 'sturdy beggars' to the colonies. . . . Servants who had worked out their time usually became tenants or freeholders, often moving to other colonies and later to the interior beyond the 'fall line,' where they became pioneers in their turn."—S. P. Orth, *Our foreigners*, pp. 8-10.—"Next to the Germans the Scotch, Scotch-Irish and Irish contributed the largest number of immigrants to the American colonies. [See PENNSYLVANIA: 1710-1740.] After the execution of Charles I., the Scots took up the cause of his son, with the understanding that, if successful, he would protect them in their religious worship. Cromwell's victories soon put an end to their hopes, and several hundred Scottish prisoners were shipped to the colonies. A ship load of them were transported to Boston and became worthy citizens of the Puritan colony. . . . The restoration of Charles II. failed to improve the condition of the Scotch. . . . [Severe laws and treatment] drove thousands from their native country into Ireland; many emigrated to America, and years later a large proportion of the descendants of the former sought homes in the colonies, being known as the Scotch-Irish. . . . Penn and eleven other Quakers, several of whom were Scotch, purchased East Jersey, with the view of securing as extensive an immigration from Scotland as possible. Nor were they disappointed; many from that country and from the north of Ireland were induced to immigrate and settle in that section. In point of virtue, education and piety the Jersey settlers were the equal of any that sought these shores. . . . Princeton University is a monument to their intellectual capacity. But, as in case of the Germans, Pennsylvania received the bulk of the Scotch and Irish immigration."—E. E. Proper, *Colonial immigration laws* (Columbia University studies in history, economics and

public law, 1900, v. 12, no. 2, p. 79).—"The most important and influential influx of non-English stock into the colonies was the copious stream of Scotch-Irish. . . . England, in her mercantilist blindness, began to pass legislation that aimed to cut off these fabrics from English competition. Soon thousands of Ulster artisans were out of work. Nor was their religion immune from English attack, for these Ulstermen were Presbyterians. These civil, religious, and economic persecutions thereupon drove to America an ethnic strain that has had an influence upon the character of the nation far out of proportion to its relative numbers. . . . There has been some trade between Ulster and the colonies, and a few Ulstermen had settled on the eastern shore of Maryland and in Virginia before the close of the seventeenth century. Between 1714 and 1720, fifty-four ships arrived in Boston with immigrants from Ireland. They were carefully scrutinized by the Puritan exclusionists. Cotton Mather wrote in his diary on August 7, 1718: 'But what shall be done for the great number of people that are transporting themselves thither from ye North of Ireland?' . . . The great mass of Scotch-Irish, however, came to Pennsylvania, and in such large numbers that James Logan, the Secretary of the Province, wrote to the Proprietors in 1729: 'It looks as if Ireland is to send all its inhabitants hither, for last week not less than six ships arrived, and every day two or three arrive also.' These colonists did not remain in the towns but, true to their traditions, pushed on to the frontier. . . . The rebellions of the Pretenders in Scotland in 1715 and 1745 and the subsequent break-up of the clan system produced a considerable migration to the colonies from both the Highlands and the Lowlands. These new colonists settled largely in the Carolinas and in Maryland. The political prisoners, of whom there were many in consequence of the rebellions, were sold into servitude, usually for a term of fourteen years. In Pennsylvania the Welsh founded a number of settlements in the neighborhood of Philadelphia."—S. P. Orth, *Our foreigners*, pp. 10, 12-13.—"The records show that nearly 6,000 Irish servants arrived in that colony in 1729, and that up to the middle of the century the arrival of settlers from these countries was in the thousands each year. The provincial historian Proud writes, 'They have flowed in from the north of Ireland in very large numbers.' They settled chiefly in the eastern and middle parts of the colony. Cumberland county was almost wholly peopled with these emigrants. But they or their descendants also migrated in large numbers, the western parts of Maryland, Virginia and the Carolinas receiving the principal share. Besides these migrations, many Scotch and Irish settlers removed to the Southern colonies directly from their native countries. . . . As early as 1684 a small company of Scotch settled in South Carolina. About 1737 multitudes of husbandmen and laborers from Ireland embarked for that Province. Indeed, Ramsay is authority for the statement that of all European countries Ireland furnished South Carolina with the greatest number of her inhabitants. Georgia, too, was partially colonized by the Scotch and Irish, some of whom emigrated from Pennsylvania, although a shipload of Scotch Highlanders went directly there soon after the settlement of the colony. [See also SCOTCH-IRISH.] . . . The immigration of the French Huguenots to America is an exceedingly interesting event in the history of the colonies. Their name is associated with many romantic efforts to plant

settlements on their own account during the sixteenth century; and their arrival in the English colonies began much earlier than is generally supposed. [See FLORIDA: 1562-1563; 1567-1568.] Massachusetts passed an act in 1662 permitting a company of French Huguenots to reside in that colony; and later a considerable number of them were granted lands and made a settlement at Oxford in that Province. Rhode Island also received a company of these exiles. New York at an early date became an asylum for the French Protestants. Even before the English conquests of New Netherland its population contained a considerable number of Huguenot refugees who had fled to Holland and thence made their way to the Dutch colony. New Rochelle [above New York] on the East River was settled almost wholly by these immigrants; and Gov Dongan, writing about 1687, mentions the arrival of Huguenot families in considerable numbers. Wm. Penn had agents in London for the purpose of inducing some of these desirable settlers to locate in his province; but not many availed themselves of his offer. Every great European event affected the fortunes of the colonies. Especially is this observable in the case of the Revocation of the Edict of Nantes. Thousands of Huguenots left France for Holland and England. Collections were taken up for them in the latter country, and Parliament assisted in their transportation to America by a generous grant of money. In 1670 Charles II. sent two shiploads of them to South Carolina, in order to introduce the cultivation of grapes, olives and the silkworm. This was only the beginning of a considerable stream of French Huguenots who continued to pour into the Carolinas down to the time of the Seven Years' War. . . . About 1715 the larger German immigration set in, and for the next forty years a constant stream of Germans landed at the ports of Pennsylvania. [See PENNSYLVANIA: 1710-1740.] The bulk of this comparatively enormous immigration . . . settled in the Quaker colony, but many of the original immigrants and thousands of their children migrated to Maryland and Virginia. The Carolinas also attracted large numbers of these settlers; and about the middle of the century, when these colonies began to offer generous inducements in granting lands, large bodies of settlers gave up their homes in Pennsylvania, and, driving their flocks and herds before them, made their way overland to the Southern colonies. The only considerable settlement of Germans in New England was made at Waldoborough, in Maine, about 1739. . . . The foregoing nationalities constituted the important foreign elements that entered into the colonial immigration. There were, however, other nations represented in lesser degrees. The Dutch were numerous enough in eastern New York to give that region a characteristic social atmosphere. The Swedes once had a flourishing settlement on the Delaware [see DELAWARE: 1638-1640]; but their numbers were too small to make any impression on the colonial population. A small colony of Polish Protestants during the early years of the eighteenth century made their way to New Jersey and settled in the valleys of the Passaic and Raritan. A few Jews found homes in some of the larger cities [see JEWS: United States: 17th-18th centuries], and in Newport were numerous enough to support a synagogue. [In 1691 they had a synagogue in Manhattan. No civil disabilities were imposed against them, except that they could not vote for members of the legislature.] Briefly summarizing the distribution of these nationalities, we

observe that the Germans as a rule settled along the headwaters of the rivers flowing into the Chesapeake and Delaware Bays, and along the eastern slope of the Appalachian mountains, as far south as Georgia. The bulk of the Scotch-Irish entered the colonies at the same ports as the Germans, namely, those on the Delaware and Chesapeake Bays and their tributaries, and located in about the same sections and their future migrations took practically the same direction. The French Huguenots made the seaboard districts of the Carolinas their main point of immigration, though they have left their impress on the other colonies in which they settled."—E. E. Proper, *Colonial immigration laws* (Columbia University studies in history, economics and public law, 1900, v. 12, no. 2, pp. 80-81, 78, 81-82).—See also GEORGIA: 1734.

1678-1680.—Transition from Dutch to English government in New York.—Visits of Andros to England.—Controversy of Lewin and Andros.—"The treaty [of Westminster] did not restore New York to the Duke whose name it bore but handed it over directly to Charles II, who, however, again granted it to his brother James. [See NETHERLANDS: 1674.] Edmund Andros, a major in Prince Rupert's regiment of dragoons, was sent out to take control of the province, which had now changed hands for the last time. His character was probably neither so white nor so black as it has been painted; but it is certain that he lacked the tact of Nicolls [the first English governor of the colony] and he brought to his task the habits of a soldier rather than an administrator. He never succeeded in winning the complete confidence of the people."—M. W. Goodwin, *Dutch and English on the Hudson* (A. J. Johnson, ed., *Chronicles of America*, v. 7, p. 144).—"During his administration of seven years as proprietary governor Andros visited England twice, and reported upon the condition of New York. His report on the first occasion—in 1678—was made to the committee of Trade and Plantations, and was occasioned by the charges made by Massachusetts that, during the recent Indian war, the people in the neighborhood of Albany had furnished ammunition and other material for war to Philip and his men. Upon petition of Andros, Stoughton and Bulkley, the agents of Massachusetts, were called upon to justify the charge, but were unable to do so. Thereupon an order in council was issued declaring that none of the inhabitants about Albany should lie under such an imputation unless Massachusetts should prosecute them thereon to a legal conviction within one year, and that the government of Massachusetts should be immediately informed to that effect. The Puritan colonies never responded to the challenge. The relations between them and Andros had never been cordial, and, in fact, could not be so with any governor of New York, so long as by charter its northeast boundary line was the Connecticut river. In the testimony, moreover, which Andros gave before the English authorities concerning the colonies in general, he urged the importance from the military standpoint of the crown regulating the militia of the colonies in such a way as to secure united action. This foreshadowed the course which was later to be taken, and this, with other free criticisms, still

further prejudiced New Englanders against Andros. The confidence of the crown in his ability and fidelity was, however, shown by the bestowment on him at this time of the honor of knighthood. The second visit of Andros to England, and the one which closed his administration, was caused, in 1680, by a direct summons from the duke. . . . At the same time John Lewin, supposed to have been a London attorney, was commissioned as the special agent of the duke, to go to New York and thoroughly inform himself concerning the administration of the revenue of the province and its amount. . . . Lewin submitted a long report, in which he treated several of the charges as substantiated. Andros presented a reply, denying the charges seriatim, and shifting the responsibility on other officials and their conduct after he had left the province. William Dyer, the collector of the customs at New York, having meanwhile been sent to London under a charge arising from illegal collection of the revenue, he, with Andros, Lewin, and others, was examined by John Churchill on behalf of the commissioners of the duke's revenue. Churchill could not find that Lewin and his friends were able to sustain any of their charges against either Andros or Dyer, and both were discharged. But, though the fidelity of Andros to the proprietor was proven, Colonel Thomas Dongan was selected to carry on the government of the province, and to finally quench the hostility of the English merchants to the customs regulations of the duke, from which Andros had suffered, by calling a representative assembly."—H. L. Osgood, *American colonies in the seventeenth century*, pp. 129-131.

1680.—First conquest of New Mexico. See NEW MEXICO: 1678-1800.

1681-1750.—Westward expansion.—Immigration.—French in Mississippi valley.—Spanish influence.—"After the founding of Pennsylvania [under the grant made in 1681 by Charles II to William Penn (see PENNSYLVANIA: 1681; 1681-1682; 1682)], a half-century passed before another colony was planted. During this interval it was more desirable to develop the existing colonies than to organize new ones. The development consisted mainly in pushing back the frontier line—the line which divided the settled country from the wilderness, civilization from savagery—and bringing vacant lands under cultivation. In New England and New York the rapid settlement of the back country was for many years rendered impossible by unfavorable conditions arising out of conflicts on the frontier between the English and the French. In Virginia, Maryland, and Pennsylvania, however, settlements were carried westward in energetic fashion. In 1716 Alexander Spotswood, the governor of Virginia, took with him a party of fifty men and pushed out into the Shenandoah Valley. [See VIRGINIA: 1710-1716; 1744.] Soon English settlements began to appear in the valley, and by 1750 the frontier line in Virginia had moved westward as far as the Blue Ridge Mountains. The expedition of Spotswood was the first step in the mighty westward movement. The rapid development of western Virginia and western Pennsylvania was due largely to the industry and enterprise of German and Scotch-Irish immigrants who at the close of the seventeenth and the opening of the eighteenth century began to come to America in large numbers. . . . As they were excellent pioneers, the great forests of Pennsylvania fell rapidly before the heavy strokes of their axes. . . . Hand in hand with the Germans in the settlement of western Pennsylvania went the Scotch-Irish . . .

[who] settled in all parts of British America but most of . . . whom found homes in Pennsylvania. Like the Pennsylvania Dutch, the Scotch were good pioneers. They made settlements wherever they could find unoccupied lands. They paid little attention to the claims of the Indians, as they said 'it was against the laws of God and nature that so much good land should be idle while so many Christians wanted it to work on and raise their bread.' Thus through the industry and enterprise of pioneers the strip of English civilization on the American coast rapidly grew wider. Between 1700 and 1750 the frontier line in some places was carried westward over the Blue Ridge Mountains even to the crest of the Alleghenies. . . . By the time the English were ready to carry their settlements westward beyond the Alleghenies the French had established their power in the Mississippi Valley. The movement which carried the French into the valley began in the reign of Louis XIV, who desired to build up in America an empire which would redound 'to the glory of God' and to his own honor. In accordance with his wishes exploration in America was carried forward in every direction and with renewed zeal. In 1670 at the Sault Sainte Marie, Saint Lussou took possession in the name of Louis XIV of all the territory from the North to the South Sea extending to the ocean in the west. Three years later Joliet and Marquette by the route of the Fox-Wisconsin waterway reached the Mississippi and in their light canoes paddled down the stream as far as the mouth of the Arkansas. After Joliet and Marquette came Robert La Salle, who explored the Mississippi to its mouth and, landing on one of the banks of the great stream, took possession in 1682 of the surrounding country in the name of the king of France, calling it Louisiana in honor of the king. [See CANADA: 1660-1687.] France was now in possession of the St. Lawrence Valley, the Great Lakes region, and the Mississippi Valley. [See below: 1748-1754.] The English by this time were the masters of only a narrow strip of coast land; the French had gained possession of the heart of the American continent. But England and France were jealous rivals for power both in the Old World and in the New, and it was only a matter of time when the ancient enmity of these two nations would show itself in American affairs."—S. E. Forman, *Our republic*, pp. 38-40.—See also LOUISIANA: 1698-1712, and after; MISSOURI: 1762-1803; OHIO: 1748-1754.—"In the sixteenth century Spain . . . had thrust up into the North the two outposts of Florida and New Mexico. In time foreign intrusion made it necessary to occupy the intervening region called Texas, which embraced a goodly slice of what is now Louisiana. While Spain was busy farther south, other nations were encroaching on her northern claims. By 1670 England had planted strong centers of colonization all the way from Jamaica to New England, and had erected trading posts on Hudson Bay. French traders from Canada, meanwhile, had been pushing up the St. Lawrence to the Great Lakes and branching north and south through the wilderness. At the same time French and English buccaneers from the West Indies were marauding the Florida settlements and the coast towns of Mexico. English, French, and Spanish territorial claims and frontier settlements clashed. The lines of competition, imperial and commercial, were drawing tighter with every passing year. On the Atlantic coast the Anglo-Spanish frontiers clashed with resounding echo from the very moment of the founding of

Charleston (1670), just across from the Spanish outpost Santa Elena, on Port Royal Sound. If Plymouth Rock and Hudson Bay were too remote to have a direct influence on Spanish claims, nevertheless their indirect influence—through the acceleration they gave to French activities—was to be potent. France's opportunity, indeed, seemed golden. And it was in the West. In Europe France was rapidly taking the position of supremacy which had been Spain's; and New France promised to become not only a valuable source of revenue through the fur trade—if the wide beaver lands 'beyond' could be secured—but also the point of control over the Strait of Anian for which French explorers as well as Spanish sought. The French had heard also of a great river flowing through the continent; they hoped to discover that river and thus control the best trade route to China. When Joliet and Marquette descended the Mississippi to the Arkansas in 1673 and returned to publish their news in Quebec, some of their hearers at least believed that the river had been found. . . . For several years after 1776 the

Crown, and its possessors were soon given to understand that they must bargain for the ownership of it by paying quit-rents. Andros assumed the government on December 20, 1686. Plymouth and the portion of Maine called the County of Cornwall, which had belonged to the Duke of York before his succession to the crown, were included under the jurisdiction of the new Governor. The only limit on his power of making laws was the necessity for the concurrence of a Council whose members he had the authority to displace, and the requirement of the royal sanction. The Governor could impose taxes with the Council's consent. The severe punishment which followed upon instances of resistance was useless. Andros could institute courts of justice, and no appeal could be taken from their decisions except to the King. Dudley was appointed censor of the press. Without his leave nothing could be printed. . . . The levying of taxes by the fiat of the Governor, the enforced renewal of land-titles, and the exaction of excessive fees, filled the minds of a liberty-loving people with indignation. The

1686-1689.—Tyranny of Andros as governor of New England.—In 1683 the charter of the Massachusetts colony was annulled. "For a time, however, the old charter government was allowed to go on, until the new king, James II., by his commission to Joseph Dudley, organized the first royal government in Massachusetts. . . . The commission included New Hampshire, Maine, and the King's Province; and in the following year, 1686, Sir Edmund Andros received a new commission, which included also the colony of Plymouth."—E. B. Greene, *Provincial governor in the English colonies of North America* (*Harvard Historical Studies*, v. 7, p. 16).—"When the charter of Massachusetts was annulled, the colony was left absolutely subject to the King. Its inhabitants were not only stripped of political rights; it was even held that all the land was the property of the

same measures were carried out in Maine, and, to some extent, in New Hampshire. In December, 1686, Rhode Island was joined, without any resistance on her part, to the dominion of Andros. At the same time he entered on the task, which it took nearly a year to accomplish, of annexing Connecticut to his dominion. In October, he visited Hartford. There is a tradition that while the discussion was proceeding with the magistrates, in the presence of a numerous company, the lights were suddenly extinguished, and the charter taken from the table and hidden in the hollow trunk of an oak tree, which was known in later times as the 'Charter Oak.' Some occurrence of interest at the time, perhaps the hiding of a duplicate copy of the charter, is the ground of this legend. . . . In June, 1687, New York and the Jerseys were added to the territories subject to him. While Boston was to be the capital of the extensive 'Dominion,' which was to have the name New England, a Deputy-Governor was to reside in New York. A military expedition, which Andros led into Maine against the Indians, brought great sufferings upon those who took part in it. This increased the unpopularity of the Governor, who was unjustly suspected of sinister designs in con-

INTERIOR OF A COLONIAL HOME

Reconstruction

nection with the enterprise—with nothing less than a secret purpose to destroy the Massachusetts troops. He had previously captured Castine from the French. . . . [When news of the Revolution (1688) reached the colonies in April, 1689, the objectionable government was overthrown in Massachusetts, Andros was taken prisoner, and sent back to England.] In Plymouth, the old government was likewise reinstated. The same thing was done in Connecticut. In Rhode Island, the old officers were restored, but the Governor declined to serve. When James fell from power, the machinery of tyrannical government which he had erected in New England fell with him. Andros, its agent, was hated in New England, but he had simply carried out the will of the government of which he was the agent. As regards his personal character, apart from his sympathy and official connection with an odious system, there is no ground for serious reproach."—G. P. Fisher, *Colonial era*, pp. 160-164.—See also MASSACHUSETTS: 1686-1689; NEW ENGLAND: 1686.

1689-1691.—Committee on Trade and Plantations.—Policy of William III.—Return of the charters.—"One of the first acts of William III. was the appointment, in February, 1689, of a new Committee of the Privy Council on Trade and Plantations, including the leading ministers of state, both Whig and Tory. In the early months of 1689 the general principles of colonial policy were discussed with some care, and the new committee accepted, in large measure, the policy of its predecessors. . . . In the mean time the colonists were taking matters into their own hands. Revolutionary movements in Massachusetts and New York overthrew the Andros administration; the New England colonies resumed their chartered constitutions, and in New York Leisler set up his revolutionary government. In Maryland the agitators of the Protestant Association took advantage of religious prejudices against the Catholic proprietor to overthrow his authority and organize a new government in the name of William and Mary. . . . The confusion was seriously increased in many colonies by the outbreak of war with France and by Indian incursions on the northern frontiers. With these various and perplexing problems to be dealt with, it is not surprising that the king and his ministers were not able at once to restore order and carry out a consistent policy; and it is a mark of statesmanship that during the next two years a fair solution of the problem was worked out in most of the colonies. . . . The question still remained of restoring the old charters, especially in New England. The colonists . . . claimed to stand in defence of ancient privileges arbitrarily taken from them by the now discredited government of James II. . . . Against these claims, however, were enlisted some powerful influences. . . . The revolution also strengthened rather than weakened the influence of the merchants in the government; desiring, as they did, a strict observance of the navigation acts [see NAVIGATION LAWS], and a steady assertion of British as against distinctively colonial interests, it was clearly their interest to extend the administrative control of the mother-country. Lastly the outbreak of war both in Europe and America served to emphasize the military point of view. It was urged again and again in the colonial correspondence that . . . so long as the colonies were divided into petty independent jurisdictions the adjustment of colonial governments from 1689 to 1691 was a fair compromise between the antagonistic views which have just been described.

The idea of a consolidated New England was abandoned: Connecticut and Rhode Island were allowed to resume their rights of government under the old charters which had never been definitely surrendered; and New Hampshire was to be governed, as before, as a separate royal province, though the proprietor of the soil, Samuel Allen, was given a governor's commission. The tendency towards consolidation appears, however, in the new charter of Massachusetts, which organized under a single royal government of Massachusetts, Maine, and the old colony of Plymouth. The charter also included Acadia, recently conquered by Sir William Phips; but this clause was deprived of importance through the French reconquest of Port Royal in 1691."—E. B. Greene, *Provincial America, 1690-1740*, pp. 17-21.—See also NEW ENGLAND: 1686.

1690.—King William's War.—First American congress.—"After the accession [in England, 1689] of William and Mary, hostilities were declared between France and England, which extended to America; and thus began the first inter-colonial war [commonly known in American history as King William's War]. The French soon planned an invasion of Boston and New York. . . . On the 8th of February, 1690, a war-party, who had come stealthily from Canada, entered the open gates of the town of Schenectady, when it was snowing, and broke the stillness of midnight with the terrible yell and whoop of the savages. Men, women, and children, for two hours, were mercilessly butchered. Their dwellings were burned. The whole town was sacked. . . . The intelligence flew through the colonies. . . . Schenectady was the Fort Sumter of that day. The event had a political effect. It shamed the factions in New York at least into a truce. It roused a spirit of patriotism. The governor of Massachusetts urged, in letters to other colonies, the necessity for immediate action to provide for the common defence. . . . The General Court [of Massachusetts], in view of organizing a joint effort of the colonies, proposed to hold a congress. The call for a meeting is dated the 10th of March, 1690. . . . It proposed, as a measure of prevention, that the neighboring colonies, and Virginia, Maryland, and the parts adjacent, should be invited to meet at New York, and conclude on suitable methods for assisting each other for the safety of the whole land. The governor of New York was desired to transmit this invitation to the southern colonies. Such was the first call for a general congress in America. It is free from a narrowness. It is liberal in its spirit, simple in its terms, and comprehensive in its object. . . . The call elicited from several colonies interesting replies. Governor Hinckley, of Plymouth, entered with zeal into the measure, and, though the General Court was not in session, appointed a commissioner. The Quaker-governor of Rhode Island, Henry Bull, replied in an excellent spirit. . . . Though the time was too short to convene the assembly for the appointment of commissioners, he promised the aid of that colony to the utmost of its ability to resist the French and Indians. The head of the convention of Maryland wrote, that it was the design of the assembly to send arms and men to aid in the general defence. . . . President Bacon, of Virginia, replied, that the proposition would require the action of the assembly, and that nothing would be done until the arrival of the daily expected governor. The replies to the invitation were cordial. The commissioners of four colonies [Massachusetts, Plymouth, Connecticut, and New

York] met at New York. . . . The deliberations led to a unanimous result. On the 1st of May, an agreement was signed by the delegates, in behalf of the five colonies [including Maryland under its promise], to raise a force of 855 men for the strengthening of Albany, and, 'by the help of Almighty God, subduing the French and Indian enemies.' It was agreed, that the lieutenant-governor of New York should name the commander of this force; that it should not be employed on any other service without the consent of the five colonies; and that the officers should be required to preserve among their men good order, punish vice, keep the Sabbath, and maintain the worship of God. No proposition appears to have been entertained for a permanent organization. . . . Efforts were made to obtain additional aid from New Jersey, Pennsylvania, and Rhode Island. . . . As the result of this congress, that it was resolved to attempt the reduction of Canada by two lines of attack,—one to conquer Acadia, and then to move on Quebec; and the other, by the route of Lake Champlain, to assault Montreal. The New England forces under Sir William Phips, assigned to the first route, captured Acadia and Port Royal, and sailed for Quebec, in the expectation of being aided by the other forces who marched by the Champlain route. But they, under Fitz-John Winthrop, with the title of major, were not successful. . . . The failure of Winthrop occasioned the retreat of Phips."—R. Frothingham, *Rise of the republic of the United States*, ch. 3.—See also CANADA: 1689-1690; 1692-1697.

1690-1748.—Treaty of Ryswick.—Queen Anne's War (Spanish Succession).—Treaty of Utrecht.—King George's War.—Treaty of Aix-la-Chapelle.—"King William's (or Frontenac's) War was costly to the colonists, and resulted in no material advantage to either side. The French, under Governor Frontenac, conducted their operations with vigor. . . . Acadia was retaken by the French . . . [in 1691 and] during the five ensuing years fighting was confined to bushranging along the New York and New England border. The struggle was without further incident until Newfoundland yielded to the French (1696), and a party of French and Indians sacked the little village of Andover, Mass. (1697), but twenty-five miles out of Boston. Later in the year came the treaty of Ryswick, under which each belligerent recovered what he possessed at the outset of the war."—R. G. T. Thwaites, *Colonies, 1492-1750 (Epochs of American History)*, p. 254.—"The Treaty of Ryswick settled nothing of real importance, and within five years England and France were again at war. In 1702 the king of France, Louis XIV, placed his grandson on the throne of Spain. This extension of French influence was resented by England, and there followed a war which spread to America, where it was known as Queen Anne's War. This war was simply King William's War over again, except that in Queen Anne's War the border warfare was confined to the frontier communities of New England. In 1710 an expedition from New England attacked Acadia (Nova Scotia) and gained possession of the peninsula. In 1713 the war was brought to a close by the Treaty of Utrecht. Under the terms of this treaty Nova Scotia and Newfoundland were given to England. In Queen

Anne's War, accordingly, France received a real blow, for she lost to England a valuable portion of her American possessions. For thirty years after the Treaty of Utrecht the French and English in America lived in peace. In 1744 there was a third clash, known as King George's War. This war had little significance, for when it was brought to an end in 1748 by the Treaty of Aix-la-Chapelle it was agreed that all conquests made during the war should be mutually restored."—S. E. Forman, *Our republic*, p. 41.—See also CANADA: 1602-1697; NEW ENGLAND: 1702-1710, to 1745-1748; AIX-LA-CHAPELLE: Congresses: 2; UTRECHT: 1712-1714.

1696-1697.—Board of trade for supervision of the colonies.—Plans of colonial union by Penn and others.—"The king attempted a more efficient method of administering the colonies; and, in May 1696, a Board of Commissioners for Trade and Plantations, consisting of the chancellor, the president of the privy council, the keeper of the privy seal, the two secretaries of state, and eight special commissioners, was called into being. To William Blathwayte, who had drafted the new charter of Massachusetts, John Locke, and the rest of the commission, instructions were given by the crown 'to inquire into the means of making the colonies most useful and beneficial to England; into the staples and manufactures which may be encouraged there, and the means of diverting them from trades which may prove prejudicial to England; to examine into and weigh the acts of the assemblies; to set down the usefulness or mischief of them to the crown, the kingdom, or the plantations themselves; to require an account of all the moneys given for public uses by the assemblies of the plantations, and how the same are employed.' The administration of the several provinces had their unity in the person of the king, whose duties with regard to them were transacted through one of the secretaries of state; but the Board of Trade was the organ of inquiries and the centre of colonial information. Every law of a provincial legislature, except in some of the charter governments, if it escaped the veto of the royal governor, might be arrested by the unfavorable opinion of the law officer of the crown, or by the adverse report of the Board of Trade. Its rejection could come only from the king in council. . . . The Board of Trade was hardly constituted before it was summoned to plan unity in the military efforts of the provinces; and Locke with his associates despaired, on beholding them 'crumbled into little governments, disunited in interests, in an ill posture and much worse disposition to afford assistance to each other for the future.' The Board, in 1697, 'after considering with their utmost care,' could only recommend the appointment of 'a captain-general of all the forces and all the militia of all the provinces on the continent of North America, with power to levy and command them for their defence, under such limitations and instructions as to his majesty should seem best.' . . . With excellent sagacity—for true humanity perfects the judgment—William Penn matured a plan of a permanent union, by a national representation of the American States. On the 8th day of February 1697, he delivered his project for an annual 'congress,' as he termed it, of two delegates from each province. . . . But the ministry adopted neither the military dictatorship of Locke and his associates, nor the peaceful congress of William Penn."—G. Bancroft, *History of the United States (Author's last revision)*, v. 2, pt. 3, ch. 4.—The fol-

lowing is the Plan of Union drafted by Penn: "A Briefe and Plaine Schem how the English Colonists in the North parts of America, viz.: Boston, Connecticut, Road Island, New York, New Jerseys, Pensilvania, Maryland, Virginia, and Carolina may be made more usefull to the Crowne, and one another's peace and safty with an universall concurrence. 1st. That the severall Colonies before mentioned do meet once a year, and oftener if need be, during the war, and at least once in two years in times of peace by their stated and appointed Deputies, to debate and resolve of such measures as are most adviseable for their better understanding, and the public tranquillity and safety. 2d. That in order to it two persons well qualified for sence, sobriety and substance be appointed by each Province, as their Representatives or Deputies, which in the whole make the Congress to consist of twenty persons. 3d. That the King's Commissioner for that purpose specially appointed shall have the chaire and preside in the said Congress. 4th. That they shall meet as near as conveniently may be to the most centrall Colony for use of the Deputies. 5th. Since that may in all probability, be New York both because it is near the Center of the Colonies and for that it is a Frontier and in the King's nomination, the Govr. of that Colony may therefore also be the King's High Commissioner during the Session after the manner of Scotland. 6th. That their business shall be to hear and adjust all matters of Complaint or difference between Province and Province. As, 1st, where persons quit their own Province and goe to another, that they may avoid their just debts, tho they be able to pay them, 2nd, where offenders fly Justice, or Justice cannot well be had upon such offenders in the Provinces that entertaine them, 3dly, to prevent or cure injuries in point of Commerce, 4th, to consider of ways and means to support the union and safety of these Provinces against the public enemies. In which Congress the Quotas of men and charges will be much easier, and more equally sett, then it is possible for any establishment made here to do; for the Provinces, knowing their own condition and one another's, can debate that matter with more freedome and satisfaction and better adjust and ballance their affairs in all respects for their common safty. 7ly. That in times of war the King's High Commissioner shall be generall or chief Commander of the severall Quotas upon service against a common enemy as he shall be advised, for the good and benefit of the whole."—H. W. Preston, *Documents illustrative of American history*, p. 146.

1696-1749.—Growing despotism of English mercantile policy.—Systematic suppression of colonial manufactures.—"Between 1689 and 1714 colonial administration [by the home government] underwent fundamental changes both in theory and organization. By the end of the reign of Anne it had become largely departmental and official rather than personal, and Parliament had begun to take a somewhat larger hand in running affairs than during the former period. The Board of Trade, a body independent of the Privy Council, which replaced the Lords of Trade in 1696 . . . for a time was the chief agency in the direction of colonial affairs. It lacked executive authority but conducted routine business and gathered information on which the Privy Council, Parliament, and the departments of the treasury, admiralty, and war acted."—H. E. Bolton and T. M. Marshall, *Colonization of North America*,

p. 343.—"Yearly reports of the state of the Provinces were required from the governors, in answer to queries addressed to them by the Board. An Act of Parliament of the same year still further restricted commercial intercourse, by limiting trade between England and her Colonies to English, Irish and Colonial built vessels, and by prohibiting Colonial produce from going to the ports of Ireland or Scotland. . . . The feeble attempts of the Colonists to make a portion of their own clothing from their abundant materials had not been unnoticed in England. Three years after—the Board of Trade having received complaints from English merchants and manufacturers, that the wool and woollen manufactures of Ireland and the North American plantations began to be exported to foreign markets formerly supplied by England—an Act passed the British Parliament, . . . dictated by that sleepless vigilance which guarded the staple manufacture of England. It prohibited the exportation of any wool or woollen manufacture from Ireland, except to certain ports in England; but, by way of compensation, virtually surrendered to Ireland the linen manufacture, then little regarded in comparison with the woollen interests. In reference to the Colonies, it was enacted that 'After the first day of December, 1699, no wool, woollens, yarn, cloth, or woollen manufactures of the English plantations in America shall be shipped in any of the said English plantations, or otherwise laden, in order to be transported thence to any place whatsoever, under the penalty of forfeiting ship and cargo, and £500 for each offence.' . . . A letter from New England to the Board of Trade [in 1715] . . . reiterates the necessity of employing the New England people in producing naval stores, to turn them from manufactures. . . . The discouragement of American manufactures, from this time, became the settled and avowed policy of the government, and, three years later, the Bill prohibiting the erection of forges and iron mills was introduced, and declared that the erecting of Manufactories in the Colonies 'tends to lessen their dependence upon Great Britain.' . . . The company of Felt-makers, in London, petitioned Parliament, in Feb., 1731, to prohibit the exportation of hats from the American Colonies, representing that foreign markets were almost altogether supplied from thence, and not a few sent to Great Britain. The petition was referred to a special committee, who reported that, in New York and New England, beaver hats were manufactured to the number, it was estimated, of 10,000 yearly. . . . The exports were to the Southern plantations, the West Indies, and Ireland. In consequence of this evidence, and that furnished by the Board of Trade in the same session, an act was passed (5 George II. c. 22) that 'no hats or felts, dyed or undyed, finished or unfinished, shall be put on board any vessel in any place within any of the British plantations; nor be laden upon any horse or other carriage to the intent to be expected from thence to any other plantation, or to any other place whatever, upon forfeiture thereof, and the offender shall likewise pay £500 for every such offence.' . . . This severe and stringent law continued in force in the Colonies until the Revolution. It aimed at the prostration of one of the oldest and, on account of the abundance and cheapness of beavers and other furs, one of the most profitable branches of industry."—J. L. Bishop, *History of American manufactures*, v. 1, ch. 14.—"The restrictions upon manufacturing so far were indirect: no colony had been forbidden to make any article for its

own consumption. But in 1750 (almost at the close of the period) the erection or use of iron mills was prohibited altogether. Unlike the unpleasant features of the earlier commercial restrictions, too, this law could not be evaded. The half dozen iron mills that had appeared in the northern colonies were closed, and all manufacture of iron ceased, except for nails, bolts, and the simpler household and farm implements, such as in that day were turned out at the village smithy. [At the same time the Act of 1710 was modified to permit the importation of American pig and bar iron, duty free, into England.] These English laws of 1696, 1732, and 1750 were selfish and sinister,—the most ominous feature in all American colonial history. They must have become bitterly oppressive ere long, had the colonists continued under English rule; and at the time they fully deserved the condemnation visited upon them by the English economist, Adam Smith: "Those prohibitions are only impertinent badges of slavery, imposed upon [the colonies] without sufficient reason by the groundless jealousy of the manufacturers of mother country." Unhappily the colonists seem to have felt aggrieved quite as much by the well-intended, if not always tactful, efforts of England to preserve American forests from careless and greedy destruction, and to prevent the issue of dishonest colonial paper money."—W. M. West, *Story of American democracy, political and industrial*, pp. 138-139.—"The English mercantile interest was becoming of increasing importance, and what it demanded Parliament had to grant. . . . Nor was it merely in the interests of English manufacturers that Parliament interfered. The American Colonies had been in the habit of carrying on a profitable export trade to the French West Indies, and of bringing back, in return, rum, sugar, and molasses. A Bill was introduced into the House of Commons, directed against this trade, and, after much dispute, and the defeat of the Bill in its original shape, it was enacted in 1733, that a duty of ninepence per gallon should be paid upon all rum and spirits made in the plantations not subject to Great Britain, on their importation into any of the British plantations: that sixpence a gallon should be paid on all foreign molasses and syrups imported, and five shillings on every hundredweight of sugar. As a matter of fact, it was found impossible to enforce this law, and therefore the practical grievance of the colonists was slight, but it was none the less a sign of the spirit in which colonial affairs were considered. About the same time permission was given first to Carolina and then to Georgia to ship rice to any port south of Cape Finisterre, and a few years later the same privilege was conferred on West India sugar, provided that it carried in British-built ships navigated according to law. It will be seen from the foregoing summary that, so far from the period in question being one of peace and goodwill towards the Colonies, it was a time wherein fresh links were being continually added to that chain of commercial legislation which did so much to alienate and disgust the American Colonies. Mr. Lecky himself observes that 'to a sagacious observer of colonial politics two facts were becoming evident. The one was that the deliberate selfishness of English commercial legislation was digging a chasm between the Mother country and the Colonies, which must inevitably, when the latter had become sufficiently strong, lead to separation. The other was that the presence of the French in Canada was an essential condition of the maintenance of the British empire

in America.' He then goes on to quote the famous passage, wherein the Swedish traveller Kalm, writing, it must be remembered, many years before George Grenville's Stamp Act, declared 'these (commercial) oppressions have made the inhabitants of the English Colonies less tender towards their mother land. This coldness is increased by the many foreigners who are settled among them. For Dutch, Germans and French are here blended with English, and have no special love for Old England. Besides, some people are always discontented and love change, and exceeding freedom and prosperity nurse an untameable spirit. I have been told, not only by native Americans but by English emigrants, publicly, that within thirty or fifty years the English Colonies in America may constitute a separate State entirely independent of England. But as this whole country towards the sea is unguarded, and on the frontier is kept uneasy by the French, these dangerous neighbours are the reason why the love of these Colonies for their metropolis does not utterly decline. The English Government has therefore reason to regard the French in North America as the chief power which urges their Colonies to submission.'"—H. E. Egerton, *Short history of British colonial policy*, pp. 141-143.

1748-1754.—First collisions with the French in the Ohio valley.—"As the year 1750 approached, there came upon the colonies two changes, destined to lead to a new political life. In the first place, the colonies at last began to overrun the mountain barrier which had hemmed them in on the west, and thus to invite another and more desperate struggle with the French. The first settlement made west of the mountains was on a branch of the Kanawha (1748); in the same season several adventurous Virginians hunted and made land-claims in Kentucky and Tennessee. Before the close of the following year (1749) there had been formed the Ohio Company, composed of wealthy Virginians, among whom were two brothers of Washington. King George granted them 500,000 acres, on which they were to plant 100 families and build and maintain a fort. The first attempt to explore the region of the Ohio brought the English and the French traders into conflict; and troops were not long in following, on both sides. At the same time the home government was awakening to the fact that the colonies were not under strict control. In 1750 the Administration began

to consider means of stopping unlawful trade."—R. G. Thwaites, *Colonies, 1492-1750 (Epochs of American History)*, ch. 14, sect. 130.—"All the time the border wars were in progress the French were busy in the Mississippi Valley making settlements, building forts, and in many ways making a great show of strength in the New World. In 1716 Natchez was founded and two years later the streets of New Orleans were laid out. Forts were built on the Mississippi, the Illinois, and the Wabash and on the shores of the Great Lakes. But the power of France in America was by no means so great as it seemed to be. The things done by the French were insignificant when compared with the things done by the English. In 1750 there was more real civilization, more 'seeds of things,' in the town of Boston than in all New France. France was left behind because she had a bad colonial system, while England had a good one. . . . The French in America neglected the occupation of farming while the English colonists made agriculture their basic industry. There were other important differences between the French and the English colonial systems. In New France the colonists were treated as underlings; they were allowed no voice in government and were compelled to obey officers sent out by the French king. In British America the colonists were thrown upon their own resources and could do what in their judgment ought to be done. As a result of these differences in colonial policy British America ran ahead of New France in industry, in trade, in education, in wealth, in population. In 1750 the French in America numbered only about 80,000 while the English numbered more than a million. In the entire Mississippi Valley there were at this time probably fewer than 5,000 Frenchmen. Still, the power of the French in America by 1750 was becoming a menace to the British. England was now seeing clearly that if the great Mississippi Valley should fill up with Frenchmen a tide of French power and French civilization would sweep eastward over the Alleghanies, subjugate the English colonies along the coast, and at last drive the English from the face of the American continent. England accordingly determined to check the growing power of France in the valley. . . . [The grant made to the Ohio company] was regarded by the French as an encroachment. Soldiers were at once sent down from Canada to take formal possession of the Ohio Valley and drive away all English intruders. The French also began to prepare for a conflict. In order to strengthen their position at the entrance of the Ohio region they built in 1752 a chain of three forts, one at Presqu'isle (Erie), one twenty miles away at Le Bœuf, and one at Venango (Franklin, Pennsylvania)."—S. E. Forman, *Our republic*, pp. 41-42.—See also OHIO: 1748-1754.

1749-1774.—Boundary dispute between New York and New Hampshire. See VERMONT: 1749-1774.

1750-1753.—Eve of the great French war.—Attitude of the colonies.—Upon receipt of the news that the French were fortifying on the Ohio "Robert Dinwiddie, the governor of Virginia, promptly sent George Washington, the young adjutant-general of the Virginia militia, to remonstrate with the French against occupying territory which was 'so notoriously known to be the prop-

erty of the crown of Great Britain,' but the governor was given to understand that the French would not budge an inch from their position. The governor now determined to force the issue. He made an attempt to build a fort at the forks of the Ohio—the junction of the Allegheny and Monongahela—and thus command the gateway of the Ohio Valley. But Dinwiddie's men were driven from the forts by the French, who themselves built a fort upon the spot, calling it Fort Duquesne. In the first movement, accordingly, the French won their point; New France was now in complete possession of the West. The expulsion of the French would have been the easiest of tasks had there been united action on the part of the colonies, for the English colonists in America at this time outnumbered French thirteen to one. But the spirit of union was lacking. Only in Virginia and New England were the people really eager to help in beating back the French power. In most of the other colonies petty jealousies and local interests arose to prevent union and co-operation."—S. E. Forman, *Our republic*, p. 44.—"The merchants and planters of the Atlantic coast, far from the scene of frontier massacres and absorbed in their trade with Europe and the Indies, were indifferent to their governors' pleas for defense. They even spoke of the regiments which England sent over to protect them as 'alien garrisons.' Although the English outnumbered the French in America . . . they had not, after two generations of covert or open hostility, gained a single point of vantage. Intercolonial conferences were called, but not attended. Plans of union were proposed, but not accepted. It would be impossible to imagine a more dilapidated state of public opinion than that in which the English colonies faced what proved to be their final struggle with France."—D. S. Muzzey, *United States of America*, v. 1, pp. 46-47.—"The attitude of these various colonies towards each other is hardly conceivable to an American of the present time. They had no political tie except a common allegiance to the British Crown. Communication between them was difficult and slow, by rough roads traced often through primeval forests. Between some of them there was less of sympathy than of jealousy kindled by conflicting interests or perpetual disputes concerning boundaries. The patriotism of the colonist was bounded by the lines of his government, except in the compact and kindred colonies of New England, which were socially united, though politically distinct. The country of the New Yorker was New York, and the country of the Virginian was Virginia. The New England colonies had once confederated; but, kindred as they were, they had long ago dropped apart. . . . Nor was it this segregation only that unfitted them for war. They were all subject to popular legislatures, through whom alone money and men could be raised; and these elective bodies were sometimes factious and selfish, and not always either far-sighted or reasonable. Moreover, they were in a state of ceaseless friction with their governors, who represented the king, or, what was worse, the feudal proprietary. These disputes, though varying in intensity, were found everywhere except in the two small colonies which chose their own governors; and they were premonitions of the movement towards independence which ended in the war of Revolution. The occasion of difference mattered little. Active or latent, the quarrel was always present. . . . Divided in government; divided in origin, feelings, and principles; jealous of each other, jealous of the Crown;

the people at war with the executive, and, by the fermentation of internal politics, blinded to an outward danger that seemed remote and vague,—such were the conditions under which the British colonies drifted into a war that was to decide the fate of the continent.”—F. Parkman, *Montcalm and Wolfe*, v. 1, ch. 1.

ALSO IN: R. G. Thwaites, *France in America*, ch. 9-10.

1754.—Congress at Albany and its plans of union.—Franklin's account.—“In 1754, war with France being again apprehended, a congress of commissioners from the different colonies was, by an order of the Lords of Trade, to be assembled at Albany, there to confer with the chiefs of the Six Nations concerning the means of defending both their country and ours. Governor Hamilton [of Pennsylvania], having receiv'd this order, acquainted the House with it, requesting they would furnish proper presents for the Indians, to be given on this occasion; and naming the speaker (Mr. Norris) and myself to join Mr. Thomas Penn and Mr. Secretary Peters as commissioners to act for Pennsylvania. (The House approv'd the nomination, and provided the goods for the present, and tho' they did not much like treating out of the provinces;) and we met the other commissioners at Albany about the middle of June. In our way thither, I projected and drew a plan for the union of all the colonies under one government, so far as might be necessary for defense, and other important general purposes. As we pass'd thro' New York, I had there shown my project to Mr. James Alexander and M. Kennedy, two gentlemen of great knowledge in public affairs, and, being fortified by their approbation, I ventur'd to lay it before the Congress. It then appeared that several of the commissioners had form'd plans of the same kind. A previous question was first taken, whether a union should be established, which pass'd in the affirmative unanimously. A committee was then appointed, one member from each colony, to consider the several plans and report. Mine happen'd to be preferr'd, and, with a few amendments, was accordingly reported. . . . The debates upon it in Congress went on daily, hand in hand with the Indian business. Many objections and difficulties were started, but at length they were all overcome, and the plan was unanimously agreed to, and copies ordered to be transmitted to the Board of Trade and to the assemblies of the several provinces. Its fate was singular: the assemblies did not adopt it, as they all thought there was too much 'prerogative' in it, and in England it was judg'd to have too much of the 'democratic.' The Board of Trade therefore did not approve of it, nor recommend it for the approbation of his majesty; but another scheme was form'd, supposed to answer the same purpose better, whereby the governors of the provinces, with some members of their respective councils, were to meet and order the raising of troops, building of forts, etc., and to draw on the treasury of Great Britain for the expense, which was afterwards to be refunded by an act of Parliament laying a tax on America. . . . The different and contrary reasons of dislike to my plan makes me suspect that it was really the true medium; and I am still of opinion it would have been happy for both sides the water if it had been adopted. The colonies, so united, would have been sufficiently strong to have defended themselves; there would then have been no need of troops from England; of course, the subsequent pretence for taxing America, and

the bloody contest it occasioned, would have been avoided.”—Benjamin Franklin, *Autobiography* (John Bigelow, ed., v. 1, pp. 308-310).—“When the members assembled at the Court House in Albany on the 19th of June, it was found that Pennsylvania was not alone in appointing a distinguished citizen to represent her. On the roll of the congress were the names of Lieutenant-governor De Lancey, of New York, who presided; and from the same province William Smith, the historian, and the future Sir William Johnson, not yet made a baronet. From the proprietary provinces of Pennsylvania and Maryland were the well known officials, John Penn, grandson of the founder; Richard Peters; and Benjamin Tasker. From the province of New Hampshire were her future governor, Meshech Weare, and Theodore Atkinson; and from the province of Massachusetts Bay, the late Lieutenant-governor, Thomas Hutchinson, Colonel John Chandler, of Worcester, and Oliver Partridge, a man of commanding influence in western Massachusetts. Lastly, the two colonies which had so tenaciously preserved their charter governments through the vicissitudes of more than a century,—Connecticut and Rhode Island,—had acceded to the repeated solicitations of the home government, and with unfeigned reluctance, we may be sure, had sent as representatives men of such wide experience in their colonial concerns as Roger Wolcott, Jr., and Stephen Hopkins. 'America,' says Mr. Bancroft, 'had never seen an assembly so venerable for the states that were represented, or for the great and able men who composed it.' They were detained in this hospitable old Dutch town for more than three weeks. . . . Franklin's plan . . . was not approved by a single one of the colonial assemblies before which it was brought; and . . . no action was ever taken on it in England. Yet there is no contribution to constructive statesmanship preceding the year 1776, which had a profounder effect on the subsequent growth and development of the idea of American nationality. Even in the amended form in which it was 'approved' by the congress, it was, says a recent writer, 'in advance of the Articles [of Confederation] in its national spirit, and served as the prototype of the constitution itself.'”—W. E. Foster, *Stephen Hopkins: A Rhode Island statesman*, pt. 1, ch. 6.

The Plan of Union (Franklin's), as adopted by the Congress at Albany, was accompanied by a “Representation of the Present State of the Colonies.” The following is the full text of the Representation, followed by that of the Plan of Union: “That His Majesty's Title to the Northern Continent of America, appears to be founded on the Discovery thereof first made, and the Possession thereof first taken in 1497, under a Commission from Henry the VIIth, of England, to Sebastian Cabot. That the French have possessed themselves of several Parts of this Continent, which by Treaties, have been ceded and confirmed to them: That the Rights of the English to the whole Sea Coast, from Georgia, on the South, to the River St. Lawrence, on the North, excepting the island of Cape-Breton, in the Bay of St. Lawrence, remains plain and indisputable. That all the Lands or Countries Westward from the Atlantic Ocean to the South Sea, between 48 and 34 Degrees of North Latitude, were expressly included in the Grant of King James the First, to divers of his Subjects, so long, as the Year 1606, and afterwards confirmed in 1620; and under this Grant, the Colony of Virginia claims an Extent as far West as to the South Sea; and the

antient Colonies of the Massachusetts-Bay and Connecticut, were by their respective Charters, made to extend to the said South Sea; so that not only the Right to the Sea Coast, but to all the Inland Countries, from Sea to Sea, have at all Times been asserted by the Crown of England. That the Province of Nova Scotia or Accadia, hath known and determinate Bounds, by the original Grant from King James the First; and that there is abundant Evidence of the same, [and of the Knowledge] which the French had of these Bounds, while they were in Possession of it; and that these Bounds being thus known, the said Province by the Treaty of Utrecht, according to its antient Limits, was ceded to Great-Britain, and remained in Possession thereof, until the Treaty of Aix la Chapelle, by which it was confirmed; but by said Treaty it is stipulated, That the Bounds of the said Province shall be determined by Commissioners, &c. That by the Treaty of Utrecht, the Country of the Five Cantons of the Iroquoise, is expressly acknowledged to be under the Dominion of the Crown of Great-Britain. That the Lake Champlain, formerly called Lake Iroquoise, and the Country Southward of it, as far as the Dutch or English Settlements, the Lake Ontario, Erie, and all the Countries adjacent, have by all antient Authors, French and English, been allowed to belong to the Five Cantons or Nations; and the whole of those Countries, long before the said Treaty of Utrecht, were by the said Nations, put under the Protection of the Crown of Great-Britain. That by the Treaty of Utrecht, there is a Reserve to the French, a Liberty of frequenting the Countries of the Five Nations, and other Indians in Friendship with Great Britain, for the Sake of Commerce; as there is also to the English, a Liberty of frequenting the Countries of those in Friendship with France, for the same Purpose. That after the Treaty of Utrecht, the French built several Fortresses in the Country of the Five Nations, and a very strong one at a Place called Crown-Point, to the South of the Lake Champlain. That the French Court have evidently, since the Treaty of Aix la Chapelle, made this Northern Continent more than ever, the Object of its Attention. That the French have most unjustly taken Possession of a Part of the Province of Nova-Scotia; and in the River St. John's, and other Parts of said Province, they have built strong Fortresses; and from this River they will have, during the Winter and Spring Season, a much easier Communication between France and Canada, than they have heretofore had, and will be furnished with a Harbour more commodiously situated for the Annoying the British Colonies by Privateers and Men of War, than Louisbourg itself. That they have taken Possession of, and begun a Settlement at the Head of the River Kennebeck, within the Bounds of the Province of Main, the most convenient Situation for affording Support, and a safe Retreat, to the Eastern Indians, in any of their Attempts upon the Governments of New-England. That it appears by the Information of the Natives, the French have been making Preparations for another Settlement, at a Place called Cohass, on Connecticut River, near the Head thereof, where 'tis but about ten Miles distant from a Branch of Merrimack River; and from whence, there is a very near and easy Communication with the Abnekais Indians, who are settled on the River St. Francois, about forty Miles from the River St. Lawrence; and it is certain, the Inhabitants of New-Hampshire, in which Province this Cohass is supposed to lie, have been interrupted and im-

peded by the French Indians, from making any Settlement there. That since the Treaty of Aix la Chapelle, the French have increased the Number of their Forts in the Country of the great Lakes, and on the Rivers which run into the Mississippi, and are securing a Communication between the two Colonies of Louisiana and Canada, and at the same Time, putting themselves into a Capacity of annoying the Southern British Colonies, and preventing any further Settlements of His Majesty's Dominions. That they have been gradually increasing their Troops in America, transporting them in their Ships of War, which return to France with a bare Complement of Men, leaving the rest in their Colonies; and by this Means, they are less observed by the Powers of Europe, than they would be, if Transports as usual heretofore, were provided for this Purpose. That they have taken Prisoners diverse of His Majesty's Subjects, trading in the Country of the Iroquoise, and other inland Parts, and plundered such Prisoners of several Thousand Pounds Sterling; and they are continually exciting the Indians to destroy or make Prisoners the Inhabitants of the Frontiers of the British Colonies; which Prisoners are carried to Canada, and a Price equal to what Slaves are sold in the Plantations, is demanded for their Redemption and Release. That they are continually drawing off the Indians from the British Interest, and have lately perswaded one Half of the Onondago Tribe, with many from the other Nations along with them, to remove to a Place called Oswegachie, on the River Cadaracqui, where they have built them a Church and Fort; and many of the Senecas, the most numerous Nation, appear to be wavering, and rather inclined to the French. And it is a melancholy Consideration, that not more than 150 Men of all the several Nations, have attended this Treaty, altho' they had Notice, that all the Governments would be here by their Commissioners, and that a large Present would be given. That it is the evident Design of the French to surround the British Colonies, to fortify themselves on the Back thereof, to take and keep Possession of the Heads of all the important Rivers, to draw over the Indians to their Interest, and with the Help of such Indians, added to such Forces as are already arrived, and may be hereafter sent from Europe, to be in a Capacity of making a general Attack upon the several Governments; and if at the same Time, a strong Naval Force be sent from France, there is the utmost Danger, that the whole Continent will be subjected to that Crown: And that the Danger of such a Naval Force is not merely imaginary, may be argued from past Experience. For had it not been by the most extraordinary Interposition of Heaven, every Sea Port Town on the Continent, in the Year 1746, might have been ravaged and destroyed, by the Squadron under the Command of the Duke D'Anville, notwithstanding the then declining State of the French, and the very flourishing State of the British Navy, and the further Advantage accruing to the English, from the Possession of Cape-Breton. That the French find by Experience, they are able to make greater and more secure Advantages upon their Neighbours, in Peace than in War. What they unjustly possessed themselves of, after the Peace of Utrecht, they now pretend they have a Right to hold, by Virtue of the Treaty of Aix la Chapelle, until the true Boundary between the English and French be settled by Commissioners; but their Conquests made during War, they have been obliged to restore. That the French Affairs relative to

this Continent, are under one Direction, and constantly regarded by the Crown and Ministry, who are not insensible how great a Stride they would make towards an Universal Monarchy, if the British Colonies were added to their Dominions, and consequently the whole Trade of North-America engrossed by them. That the said Colonies being in a divided, disunited State, there has never been any joint Exertion of their Force, or Council, to repel or defeat the Measures of the French; and particular Colonies are unable and unwilling to maintain the Cause of the whole. That there has been a very great Neglect of the Affairs of the Iroquoise, as they are commonly called, the Indians of the Six Nations, and their Friendship and Alliance has been improved to private Purposes, for the Sake of the Trade with them, and the Purchase or Acquisition of their Lands, more than the Public Services. That they are supplied with Rum by the Traders, in vast and almost incredible Quantities; the Laws of the Colonies now in Force, being insufficient to restrain the Supply. And the Indians of every Nation, are frequently drunk, and abused in their Trade, and their Affections thereby alienated from the English; they often wound and murder one another in their Liquor, and to avoid Revenge, fly to the French; and perhaps more have been lost by these Means than by the French Artifice. That Purchases of Land from the Indians by private Persons, for small trifling Considerations, have been the Cause of great Uneasiness and Discontents; and if the Indians are not in fact imposed on and injured, yet they are apt to think they have been; and indeed, they appear not fit to be entrusted at Large, with the Sale of their own Lands: And the Laws of some of the Colonies, which make such Sales void, unless the Allowance of the Government be first obtained, seem to be well founded. That the Granting or Patenting vast Tracts of Land to private Persons or Companies, without Conditions of speedy Settlements, has tended to prevent the Strengthening the Frontiers of the particular Colony where such Tracts lie, and been Prejudicial to the rest. That it seems absolutely necessary, that speedy and effectual Measures be taken, to secure the Colonies from the Slavery they are threatened with: that any farther Advances of the French should be prevented; and the Encroachments already made, removed. That the Indians in Alliance or Friendship with the English, be constantly regarded under some wise Direction or Superintendency. That Endeavours be used for the Recovery of those Indians who are lately gone over to the French, and for securing those that remain. That some discreet Person or Persons be appointed to reside constantly among each Nation of Indians; such Person to have no Concern in Trade, and duly to communicate all Advices to the Superintendents. That the Trade with the said Indians be well regulated, and made subservient to the Public Interest, more than to private Gain. That there be Forts built for the Security of each Nation, and the better carrying on the Trade with them. That warlike Vessels be provided, sufficient to maintain His Majesty's Right to a free Navigation on the several Lakes. That all future Purchases of Lands from the Indians be void, unless made by the Government where such Lands lie, and from the Indians in a Body, in their public Councils. That the Patentees or Possessors of large unsettled Territories, be enjoined to cause them to be settled in a reasonable Time, on Pain of Forfeiture. That the Complaints of the Indians, relative

to any Grants or Possessions of their Lands, fraudulently obtained, be inquired into, and all Injuries redressed. That the Bounds of those Colonies which extend to the South Seas, to be contracted and limited by the Allegheny or Apalachian Mountains; and that Measures be taken, for settling from time to time, Colonies of His Majesty's Protestant Subjects, Westward of said Mountains, in convenient Cantons, to be assigned for that Purpose. And finally, that there be an Union of His Majesty's several Governments on the Continent, that so their Councils, Treasure, and Strength, may be employed in due Proportion, against their common Enemy."

The Plan of Union, adopted on July 10, was as follows: "Plan of a proposed Union of the several Colonies of Massachusetts-Bay, New-Hampshire, Connecticut, Rhode-Island, New-York, New-Jersey, Pennsylvania, Maryland, Virginia, North-Carolina, and South Carolina, for their mutual Defence and Security, and for the Extending the British Settlements in North-America. That humble Application be made for an Act of the Parliament of Great-Britain, by Virtue of which One General Government may be formed in America, including all the said Colonies; within and under which Government, each Colony may retain its present Constitution, except in the Particulars wherein a Change may be directed by the said Act, as hereafter follows. That the said General Government be administered by a President General, to be appointed and supported by the Crown; and a Grand Council, to be chosen by the Representatives of the People of the several Colonies, met in their respective Assemblies. That within Months after the Passing of such Act, the House of Representatives in the several Assemblies, that happen to be sitting within that Time, or that shall be especially for that Purpose convened, may and shall chuse Members for the Grand Council, in the following Proportions; that is to say: Massachusetts-Bay, 7; New-Hampshire, 2; Connecticut, 5; Rhode-Island, 2; New-York, 4; New-Jersey, 3; Pennsylvania, 6; Maryland, 4; Virginia, 7; North-Carolina, 4; South Carolina, 4: = 48. Who shall meet for the first Time at the City of Philadelphia in Pennsylvania, being called by the President General, as soon as conveniently may be, after his Appointment. That there shall be a new Election of Members for the Grand Council every three Years; and on the Death or Resignation of any Member, his Place shall be supplied by a new Choice, at the next Sitting of the Assembly of the Colony he represented. That after the first three Years, when the proportion of Money arising out of each Colony to the General Treasury, can be known, the Number of Members to be chosen for each Colony, shall from time to time, in all ensuing Elections, be regulated by that Proportion (yet so as that the Number to be chosen by any one Province, be not more than seven, nor less than two). That the Grand Council shall meet once in every Year, and oftener if Occasion require, at such Time and Place as they shall adjourn to at the last preceding Meeting, or as they shall be called to meet at by the President General on any Emergency; he having first obtained in writing, the Consent of seven of the Members to such Call, and sent due and timely Notice to the whole. That the Grand Council have Power to chuse their Speaker, and shall neither be dissolved, prorogued, nor continue sitting longer than six Weeks at one Time, without their own Consent, or the special Command of the Crown. That the Members of the Grand Council

shall be allowed for their Service, Ten Shillings Sterling per Diem, during their Session and Journey to and from the Place of Meeting, twenty Miles to be reckoned a Day's Journey. That the Assent of the President General be requisite to all Acts of the Grand Council; and that it be his Office and Duty to cause them to be carried into Execution. That the President General, with the Advice of the Grand Council, hold or direct all Indian Treaties, in which the general Interest or Welfare of the Colonies may be concerned; and to make Peace or declare War with Indian Nations. That they make such Laws as they judge necessary for regulating all Indian Trade. That they make all Purchases from Indians for the Crown, of the Lands now not within the Bounds of particular Colonies, or that shall not be within their Bounds, when some of them are reduced to more convenient Dimensions. That they make new Settlements on such Purchases, by granting Lands in the King's Name, reserving a Quit-Rent to the Crown for the Use of the General Treasury. That they make Laws for regulating and governing such new Settlements, 'till the Crown shall think fit to form them into particular Governments. That they may raise and pay Soldiers, and build Forts for the Defence of any of the Colonies, and equip Vessels of Force to guard the Coast, and protect the Trade on the Ocean, Lakes, or great Rivers; but they shall not impress Men in any Colony, without the consent of its Legislature. That for those Purposes, they have power to make Laws, and lay and levy such general Duties, Imposts, or Taxes, as to themselves appear most equal and just, considering the Ability and other Circumstances of the Inhabitants in the several Colonies, and such as may be collected with the least Inconvenience to the People; rather discouraging Luxury, than loading Industry with unnecessary Burthens. That they may appoint a general Treasurer and a particular Treasurer in each Government, when necessary; and from time to time, may order the Sums in the Treasuries of each Government, into the General Treasury, or draw on them for special Payments, as they find most convenient; yet no Money to issue, but by joint Orders of the President General and Grand Council, except where Sums have been appropriated to particular Purposes, and the President General is previously empowered by an Act, to draw for such Sums. That the general Accounts shall be yearly settled, and reported to the several Assemblies. That a Quorum of the Grand Council, empowered to act with the President General, do consist of Twenty-five Members; among whom there shall be one or more from a Majority of the Colonies. That the Laws made by them for the Purposes aforesaid, shall not be repugnant, but as near as may be agreeable, to the Laws of England, and shall be transmitted to the King in Council, for Approbation, as soon as may be, after their passing; and if not disapproved within three Years after Presentation, to remain in Force. That in Case of the Death of the President General, the Speaker of the Grand Council for the Time being, shall succeed, and be vested with the same Power and Authorities, and continue 'till the King's Pleasure be known. That all Military Commission Officers, whether for Land or Sea Service, to act under this General Constitution, be nominated by the President General, but the Approbation of the Grand Council is to be obtained, before they receive their Commissions. And all Civil Officers are to be nominated by the Grand Council, and to receive the President General's Approbation, before they officiate. But in Case of Vacancy, by Death

or Removal of any Officer, Civil or Military, under this Constitution, the Governor of the Provinces in which such Vacancy happens, may appoint, 'till the Pleasure of the President General and Grand Council can be known. That the particular Military as well as Civil Establishments in each Colony, remain in their present State, this General Constitution notwithstanding; and that on sudden Emergencies, any Colony may defend itself, and lay the Accounts of Expence thence arisen, before the President General and Grand Council, who may allow and order Payment of the same, as far as they judge such Accounts just and reasonable."—S. Hopkins, *True representation of the plan formed at Albany in 1754, for uniting all the British northern colonies, with introduction and notes by S. S. Rider (Rhode Island Historical Tracts, no. 9).*

1755.—Demand by royal governors in America for taxation of colonies by act of Parliament.—After the failure to adopt Franklin's Plan of Union "the Board of Trade . . . formulated a plan of union for military purposes only, but events were occurring which made it necessary to take immediate action. The plan was laid aside, and the board suggested the appointment of a commander-in-chief over all the forces in America, a suggestion which was eventually put into effect. . . . Major-General Edward Braddock, a former governor of Gibraltar, stubborn, irascible, and little given to taking advice, was sent to Virginia with two regiments. . . . Braddock summoned the governors for a consultation and they met in April, 1755, at Alexandria in Virginia."—H. E. Bolton and T. M. Marshall, *Colonization of North America, 1492-1783, p. 371.*—At this congress of governors, "Braddock directed their attention first of all, to the subject of a colonial revenue, on which his instructions commanded him to insist, and his anger kindled 'that no such fund was already established.' The governors present, recapitulating their strifes with their assemblies, made answer: 'Such a fund can never be established in the colonies without the aid of parliament. Having found it impracticable to obtain in their respective governments the proportion expected by his majesty toward defraying the expense of his service in North America, they are unanimously of opinion that it should be proposed to his majesty's ministers to find out some method of compelling them to do it, and of assessing the several governments in proportion to their respective abilities.' This imposing document Braddock sent forthwith to the ministry, himself urging the necessity of laying some tax throughout his majesty's dominions in North America. . . . I have had in my hands vast masses of correspondence, including letters from servants of the crown in every royal colony in America; from civilians, as well as from Braddock and Dunbar and Gage; from Delancey and Sharpe, as well as from Dinwiddie and Shirley; and all were of the same tenor. The British ministry heard one general clamor from men in office for taxation by act of parliament. . . . In England, the government was more and more inclined to enforce the per-

manent authority of Great Britain."—G. Bancroft, *History of the United States* (Author's last revision), v. 2, pp. 416-417.

1755-1760.—French and Indian War, known in Europe as the Seven Years' War.—English conquest of Canada. See CANADA: 1750-1753, to 1759; NOVA SCOTIA: 1749-1755; 1755; OHIO: 1748-1754, to 1755; CAPE BRETON ISLAND: 1758-1760; also, for an account of the accompanying Cherokee War, see SOUTH CAROLINA: 1759-1761.

1760-1775.—Crown, Parliament and colonies.—English theory and American theory of their relations.—"The people of every colony were subject to two jurisdictions one local and one general, that must be adjusted to each other. To effect such adjustment caused no little friction; and the Colonies and the Mother Country got on peaceably as long as they did, only because neither one pushed its theory of colonial relations to an extreme, each yielding something to the other and thus effecting a compromise. The Colonies held that the dominion which the Cabots discovered in America belonged to the King, rather than to the Kingdom, of England. Englishmen adventuring into this dominion to plant colonies were entitled to all the privileges of free-born Englishmen at home; trial by jury, habeas corpus, and exemption from taxes that their own representatives had not voted. The British Empire was not one dominion, but several dominions. Every one of these dominions had, or should have, its own legislature to enact laws for its government. The Colonies were not one dominion, but 13 dominions; and in every one the legislature was as supreme as Parliament was in England. Parliament, therefore, had nothing more to do with Massachusetts or Virginia than the legislatures of those colonies had to do with England. The King, who alone had a voice in the matter, had, in their charters, guaranteed to the Colonies the common law so far as this was applicable to their condition, and he was now powerless to withdraw what he had thus conceded. Such, in outline, was the American theory of colonial relations. Still, no one pretended that this theory had ever been fully carried out in practice. It must also be said that it did not appear fully formed at once, but grew up gradually. The British theory was that Englishmen continued Englishmen when they emigrated to the American dominions of the King; that the power of Parliament, to which they were subject in the old home, followed them to the new one; and that Parliament could yield them more or fewer powers of self-government for a time, and then withdraw them. It was also claimed that the Colonies were already represented in the House of Commons; since the several members of that body did not represent particular districts or constituencies, but the whole British Empire. Besides, it was asserted that the Colonies themselves had repeatedly acknowledged the authority of Parliament by submitting to its legislation. Still no one pretended that this theory had ever been fully carried out."—B. A. Hinsdale, *American government*, sect. 92-93.

1761.—Enforcement of revenue laws in Massachusetts.—Writs of Assistance and Otis's speech.—"Immediately after the conquest of Canada was completed, rumors were widely circulated . . . that the charters would be taken away, and

the colonies reduced to royal governments. The officers of the customs began at once to enforce with strictness all the acts of parliament regulating the trade of the colonies, several of which had been suspended, or become obsolete, and thus had never been executed at all. The good will of the colonists or their legislatures, was no longer wanted in the prosecution of the war; and the commissioners of the customs were permitted and directed to enforce the obnoxious acts. Governor Bernard [of Massachusetts], who was always a supporter of the royal prerogative, entered fully into these views, and shewed by his opinion, his appointments and his confidential advisers, that his object would be, to extend the power of the government to any limits, which the ministry might authorize. The first demonstration of the new course intended to be pursued, was the arrival of an order in Council to carry into effect the Acts of trade, and to apply to the supreme judicature of the Province [Massachusetts], for Writs of Assistance, to be granted to the officers of the customs. In a case of this importance there can be no doubt, that Mr. Paxton, who was at the head of the customs in Boston, consulted with the Government and all the crown officers, as to the best course to be taken. The result was, that he directed his deputy at Salem, Mr. Cockle, in November, 1760, to petition the Superior Court, then sitting in that town, for 'writs of assistance.' Stephen Sewall who was the Chief Justice, expressed great doubt of the legality of such a writ, and of the authority of the Court to grant it. None of the other judges said a word in favour of it; but as the application was on the part of the Crown, it could not be dismissed without a hearing, which after consultation was fixed for the next term of the Court, to be held in February, 1761, at Boston, when the question was ordered to be argued. In the interval, Chief Justice Sewall died, and Lieutenant Governor Hutchinson was made his successor, thereby uniting in his person, the office of Lieutenant Governor with the emoluments of the commander of the castle, a member of the Council, Judge of Probate and Chief Justice of the Supreme Court! . . . The mercantile part of the community was in a state of great anxiety as to the result of this question. The officers of the Customs called upon Otis for his official assistance, as Advocate General, to argue their cause. But, as he believed these writs to be illegal and tyrannical, he refused. He would not prostitute his office to the support of an oppressive act; and with true delicacy and dignity, being unwilling to retain a station, in which he might be expected or called upon to argue in support of such odious measures, he resigned it though the situation was very lucrative, and if filled by an incumbent with a compliant spirit, led to the highest favours of government. The merchants of Salem and Boston, applied to Mr. Pratt to undertake their cause, who was also solicited to engage on the other side; but he declined taking any part, being about to leave Boston for New York, of which province he had been appointed Chief Justice. They also applied to Otis and Thacher, who engaged to make their defence, and probably both of them without fees, though very great ones were offered. The language of Otis was, 'in such a cause, I despise all fees.' . . . The trial took place in the Council Chamber of the Old Town House, in Boston. . . . The judges were five in number, including Lieutenant Governor Hutchinson, who presided as Chief Justice. The room was filled with all the officers of government, and the principal citizens, to hear the arguments in a cause that inspired the

deepest solicitude. The case was opened by Mr. Gridley, who argued it with much learning, ingenuity, and dignity, urging every point and authority, that could be found after the most diligent search, in favour of the Custom house petition; making all his reasoning depend on this consideration—"if the parliament of Great Britain is the sovereign legislator of the British Empire." He was followed by Mr. Thacher on the opposite side whose reasoning was ingenious and able, delivered in a tone of great mildness and moderation. 'But,' in the language of President Adams, 'Otis was a flame of fire.' . . . American Independence was then and there born. The seeds of patriots and heroes, to defend the 'Non sine Diis animosus infans'; to defend the vigorous youth, were then and there sown. Every man of an immense crowded audience appeared to me to go away as I did, ready to take arms against Writs of Assistance. Then and there, was the first scene of the first act of opposition, to the arbitrary claims of Great Britain. Then and there, the child Independence was born. In fifteen years, i. e. in 1776, he grew up to manhood and declared himself free."—W. Tudor, *Life of James Otis*, ch. 5-7.—Otis "called the general warrants 'the worst instrument of arbitrary power, the most destructive of English liberty and the fundamental principles of law, that ever was found in an English law book.' He contended he said, against 'a kind of power, the exercise of which had cost one king of England his crown, and another his head. . . . No Act of Parliament can establish such a writ. . . . An act against the constitution is void.' This final argument is natural to Americans to-day, familiar as we are with the idea of a written constitution as a fundamental law, to which all other law must conform. In England to-day such an argument would be almost impossible, since there Parliament has become so supreme that it can change the law and the 'constitution' at will. In older English history, however, the Common Law and the great charters (especially in so far as they protected the rights of the individual) had been regarded somewhat as we regard our constitutions; and in the time of Otis that view had not been wholly lost. It is in this old English sense that he uses the word 'constitution.' It is interesting to note that a few years later, the Court of the King's Bench adopted this view and declared general warrants in England unconstitutional. Otis lost the cast, but his fiery eloquence roused the people to open the whole question of parliamentary control. Soon afterward, he published his views in two pamphlets which were widely read. 'God made all men naturally equal,' he affirmed. 'Government is instituted for the benefit of the governed,' and harmful government should be destroyed. Parliament he recognized (so long as it governed fitly), but he urged that the colonists, besides keeping their local legislatures, 'should also be represented, in some proportion to their number and estates, in the grand legislature of the nation.'"—W. M. West, *Story of American democracy, political and industrial*, pp. 171-172.—The quotations from Otis's speech are taken from notes made by John Adams, then a law student. "No cause in the annals of colonial jurisprudence had hitherto excited more public interest; and none had given rise to such powerful argument. . . . An epoch in public affairs may be dated from this trial. Political parties became more distinctly formed, and their several adherents were more marked and decided. The nature of ultra-marine jurisdiction began to be closely examined; the question respecting raising a revenue

fully discussed. The right of the British parliament to impose taxes was openly denied. 'Taxation without representation is tyranny,' was the maxim, that was the guide and watch word of all the friends of liberty."—W. Tudor, *Life of James Otis*, ch. 5-7.—See also MASSACHUSETTS: 1761.

1763.—Treaty of Paris.—Social and political effects.—"With the surrender of Quebec the French and Indian War, as the struggle was called, virtually came to an end. The results of this war were seen in the Treaty of Paris which was concluded in 1763. By this treaty it was agreed that all French possessions east of the Mississippi except the town of New Orleans and the island on which it stood should be given to England. Thus the French and Indian War gave England not only Canada but also the eastern portion of the Mississippi Valley. In 1759 England, waging war with Spain as well as with France, had taken possession of the island of Cuba. By the Treaty of Paris she agreed to give Cuba back to Spain and in return to receive Florida. On the same day that the treaty was signed the French king secretly ceded to Spain the city of New Orleans and the country known as Louisiana [see LOUISIANA: 1762-1766], spreading westward from the Mississippi toward the Pacific [that is toward the Spanish possessions in the west]. Thus France lost every foot of land she had in North America except only two little islands—Miquelon and St. Pierre—in the Gulf of St. Lawrence."—S. E. Forman, *Our republic*, p. 45.—See also SEVEN YEARS' WAR: Treaties, etc.—"In a very real sense the year 1763 may be taken as marking the beginning of the American Revolution. The causes of that event are indeed far-reaching. They are as old as the colonial system itself. In many ways for more than a century, although they knew it not, the people of the thirteen provinces were being schooled and disciplined for their part in it. Almost in spite of themselves they were becoming moulded into one social body, and American society, which with the attainment of self-consciousness must inevitably demand a larger and freer, if not an entirely independent life. Their social consciousness was, in fact, stirred by the experiences of the war; and thereafter it was swiftly quickened and nourished by the blunders of the imperial administration. . . . [At the close of the Seven Years' War, the vision of empire which on the one hand was limited by the sea and little ships, on the other was opened to the boundless territory over which the feet of intrepid settlers could carry them without hindrance.] Moreover, their imaginations were quickened and their mental horizon was expanded by the geographical results. For now, with the exception of the island of New Orleans, an imperial domain stretching from the Arctic to the Gulf, and from the Atlantic to the Mississippi, concealing illimitable riches within its mountains and its plains, was thrown open to the industrial conquest of the English race. The enlarged view caused by this new environment is a fact of vast significance in estimating the forces underlying the contest for American independence. The colonist had grown in self-reliance, in mental stature. A greater destiny seemed to await him, and the friends of provincial subjection were already jealous of the possible consequences of his wider ambition. . . . In another way the war had prepared the colonists for the approaching con-

test. They had gained military experience and become aware of their own military strength. Battling side by side with the British regulars against the veterans of France, they had won confidence in themselves. They had tested their own fighting capacity, and had learned the need of modifying European tactics and European methods to suit the exigencies of frontier warfare. . . . Most significant of all the results of the war was its influence in forcing out the already nascent sentiment of social unity. Founded at different times, under separate charters, and for diverse motives, the American provinces were in fact thirteen distinct societies. Except for their allegiance to a common sovereign, they were in theory as independent as if they had been foreign states. They waged commercial and even physical war upon each other. Political, economic, and religious antagonisms hindered their healthier growth. . . . During the century preceding the accession of George III the colonists had generally accepted the imperial theory without serious protest, and exhibited a steadfast loyalty to Great Britain. They had yielded to the king's prerogative, accepted his protection when granted, and freely admitted the right of Parliament to regulate their trade and manufactures. They had prospered amazingly. Under the stimulus of local self-government they had become the freest people in the world, and therefore the most sensitive to the encroachments of the central power. Of a truth, in the quality of their civilization they had in some vital respects far outstripped the mother-country. In political ideals the contrast between Great Britain and her colonies was very great. Unquestionably in the finer sense the political education of the American people was far superior to that of their brethren in the old home. The standard of political morality was much higher. In place of the moral torpor which prevailed in England and Scotland, there had been developed in the colonies an extreme sensitiveness in regard to personal and constitutional rights. Through active participation in the town-meeting, the county court, and the assembly, a fierce spirit of liberty had been fostered which could not be subdued through appeal to worn-out precedents born of lower ideals."—G. E. Howard, *Preliminaries of the Revolution*, pp. 3-4, 6-7, 10, 44.

1763.—General effects, economic and political, of English trade regulations.—“The peace of Paris . . . marked a great turning point in the position of the colonies and of their relations with the mother country. The French were removed from America on the north and west and the Spanish from the Floridas on the south. With the single exception of the city of New Orleans, the frontier lay open to the Mississippi and the Gulf of Mexico. Danger from outside attack was averted and expansion toward the west and south was unobstructed by any foreign power. No less important was the effect of the peace upon the imperial ambitions of Great Britain. . . . To protect and preserve the new continental territories became from this time the dominant purpose of the British ministry, and inevitably demanded the recasting of the imperial policy to meet the new situation. But in satisfying the demands of the new imperialism no change was made in the fundamental principles of the commercial policy. The object was the readjustment of the old, not the adoption of a new attitude toward the colonies. The latter must still remain in dependence on the mother country and obedient to her authority. No recognition could be given to the independence

already won; on the contrary every effort must be made to restore the full strength of the royal prerogative. More important still, the trade laws must be enforced, and if necessary supplemented by additional legislation; and so heavy had become the debt to the British tax payer, and so untrustworthy the system of quotas and requisitions employed in the colonies during the recent war, that new measures must be taken by the British government itself to meet the expenses for protection in the future.”—C. M. Andrews, *Colonial period*, pp. 237-239.—“Economically the general results of the trade regulations were important. Robert Giffen has repeatedly pointed out how difficult it is, even with modern comparatively accurate methods, to obtain reliable results from the use of export and import statistics. This difficulty is immeasurably enhanced when we have to rely on the meagre figures of a century and a half ago. For we neither know how these statistics were taken, nor at all how accurate they are; while their inadequacy becomes clearly evident when we consider the large amount of smuggling carried on both in England and the colonies. One general proposition, however, can be formulated from the examination of these statistics, and that is the balance of trade between England and the colonies was unfavorable to the latter. And this was an inherent consequence of the mercantile system, by which England regulated these commercial relations. The colonies were unable to pay England for her manufactures entirely in raw materials, and the residue was paid in coin obtained from the favorable trade with Spain, Portugal, and the West Indies. All metal had to be sent to England; it was, as De Foe says, ‘snatched up for returns to England in specie.’ An important consequence followed from this continuous drain of specie. The colonies could with difficulty retain coin, and hence were forced either to fall back on barter, or to issue paper money. . . . [but] while, on the one hand, the acts of trade and navigation are partially responsible for many sad passages in the fiscal history of the colonies, on the other hand they conduced to the development of a most important colonial industry. This industry was ship-building, for which the colonies were especially adapted on account of the cheapness of lumber. In developing this natural fitness, the protection afforded to English and colonial shipping by the Navigation Acts was an important factor. As a rule England did not discriminate against colonial and in favor of English ships, although the colonies frequently attempted by legislation to secure advantages for their own shipping. As a result of this policy ship building and the carrying trade increased rapidly, especially in the New England colonies. . . . So important did this industry become that in 1724 the ship carpenters of the Thames complained to the King, ‘that their trade was hurt and their workmen emigrated since so many vessels were built in New England.’ Massachusetts built ships not only for England, but also for European countries, and for the West Indies. . . . Politically the commercial regulations were not so important. Up to 1763 only slight political importance attaches to the system, for only in a negative way did it affect the political ideas of the colonists. The colonies were peopled by men of varied race and religion, who had little common consciousness of rights and wrongs and few common political ideals. The centrifugal forces among them were strong. Among centripetal forces, such as a common sovereign and a common system of private law, must be reckoned the fact that their

commerce was regulated by a system which, as a rule, was uniform for all the colonies. When the acts of trade worked to their advantage, the colonists reaped common benefits; when they inflicted hardships, the colonists made common complaint. Moreover, the fact that England was unable to enforce certain of her acts, especially the Molasses Act [see below: 1763-1764], caused contempt for parliamentary authority. The continued and, by the very nature of things, the necessary violation of this law led to a questioning of its sanction, while the open favoritism shown in it towards the West India colonies naturally aroused disaffection in those of the continent. The colonial system, as it was administered before 1763, contributed but slightly in bringing about the revolution of 1776. As Mr. Ramsay has said, 'if no other grievances had been superadded to what existed in 1763, they would have been soon forgotten, for their pressure was neither great, nor universal. It was only when the fundamental basis of the acts was changed from one of commercial monopoly to one of revenue, that the acts became of vital political importance.'—G. L. Beer, *Commercial policy of England toward the American colonies* (Columbia University studies in history, economics and public law, v. 3, no. 2, ch. 8, sect. 2).

1763-1764.—Determination in England to tax the colonies.—Sugar or Molasses Act.—"It did not take four years after the peace of 1763 to show how rapidly the new situation of affairs was bearing fruit in America. . . . The overthrow of their ancient enemy [the French in Canada], while further increasing the self-confidence of the Americans, at the same time removed the principal check which had hitherto kept their differences with the British government from coming to an open rupture. Formerly the dread of French attack had tended to make the Americans complaisant toward the king's ministers, while at the same time it made the king's ministers unwilling to lose the good will of the Americans. Now that the check was removed, the continuance or revival of the old disputes at once foreboded trouble; and the old occasions for dispute were far from having ceased. On the contrary the war itself had given them fresh vitality. If money had been needed before, it was still more needed now. The war had entailed a heavy burden of expense upon the British government as well as upon the colonies. The national debt of Great Britain was much increased and there were many who thought that, since the Americans shared in the benefits of the war, they ought also to share in the burden which it left behind it. People in England who used this argument did not realize that the Americans had really contributed as much as could reasonably be expected to the support of the war, and that it had left behind it debts to be paid in America as well as in England. But there was another argument which made it seem reasonable to many Englishmen that the colonists should be taxed. It seemed right that a small military force should be kept up in America, for defence of the frontiers against the Indians, even if there were no other enemies to be dreaded. The events of Pontiac's war now showed that there was clearly need of such a force;

and the experience of the royal governors for half a century had shown that it was very difficult to get the colonial legislatures to vote money for any such purpose. Hence there grew up in England a feeling that taxes ought to be raised in America as a contribution to the war debt and to the military defence of the colonies; and in order that such taxes should be fairly distributed and promptly collected, it was felt that the whole business ought to be placed under the direct supervision and control of parliament. . . . It was in 1763 that George Grenville became prime minister, a man of whom Macaulay says that he knew of 'no national interests except those which are expressed by pounds, shillings, and pence.' Grenville proceeded to introduce into Parliament two measures which had consequences of which he little dreamed. The first of these measures was the Molasses Act [often called the Sugar Act], the second was the Stamp Act. Properly speaking, the Molasses Act was an old law which Grenville now made up his mind to revive and enforce. The commercial wealth of the New England colonies depended largely upon their trade with the fish which their fishermen caught along the coast and as far out as the banks of Newfoundland. The finest fish could be sold in Europe, but the poorer sort found their chief market in the French West Indies. The French government, in order to ensure a market for the molasses raised in these islands, would not allow the planters to give anything else in exchange for fish. Great quantities of molasses were therefore carried to New England, and what was not needed there for domestic use was distilled into rum, part of which was consumed at home, and the rest carried chiefly to Africa wherewith to buy slaves to be sold to the southern colonies. All this trade required many ships, and thus kept up a lively demand for New England lumber, besides finding employment for thousands of sailors and shipwrights. Now in 1733 the British government took it into its head to 'protect' its sugar planters in the English West Indies by compelling the New England merchants to buy all their molasses from them; and with this end in view it forthwith laid upon all sugar and molasses imported into North America from the French islands a duty so heavy that, if it had been enforced, it would have stopped all such importation. . . . It proved to be impossible to enforce the act without causing more disturbance than the government felt prepared to encounter. Now in 1764 Grenville announced that the act was to be enforced, and of course the machinery of writs of assistance was to be employed for that purpose. Henceforth all molasses from the French islands must either pay the prohibitory duty or be seized without ceremony. Loud and fierce was the indignation of New England over this revival of the Molasses Act. Even without the Stamp Act, it might very likely have led that part of the country to make armed resistance, but in such case it is not so sure that the southern and middle colonies would have come to the aid of New England. But in the Stamp Act, Grenville provided the colonies with an issue which concerned one as much as another."—J. Fiske, *War of Independence*, ch. 4.

1764.—Climax of mercantile colonial policy of

England, and its consequences.—“Historians, in treating of the American rebellion, have confined their arguments too exclusively to the question of internal taxation, and the right or policy of exercising this prerogative. The true source of the rebellion lay deeper, in . . . [the traditional English] colonial policy. Just as the Spaniards had been excited to the discovery of America by the hope of obtaining gold and silver, the English merchants utilized the discovery by the same fallacious method, and with the same fallacious aspirations. . . . A hundred years ago the commercial classes believed that the prime object of their pursuits was to get as much gold and silver into England as they could. They sought, therefore, to make their country, as nearly as they might, a solitary centre of the exportation of non-metallic commodities, that so she might be also the great reservoir into which the precious metals would flow in a return stream. On this base their colonial policy was erected. . . . So long as the colonies remained in their infancy the mercantile policy was less prejudicial to their interests. The monopoly of their commerce, the limitation of their markets, the discouragement of their manufactures, in some cases amounting to absolute prohibition, were all less fatal in a country where labour was dear, than they would be in a state where population was more fully developed and land had become scarcer. . . . A contraband trade sprung up between them and the colonies of Spain. . . . [The] settlers imported goods from England, and re-exported them to the Spanish colonies, in return for bullion and other commodities. The result of this was that the Spanish colonists had access to useful commodities from which they would otherwise have been debarred, that the American colonists could without distress remit the specie which was required by the nature of their dealings with England, and that a large market was opened for English products. [See also COMMERCE: Era of geographical expansion: 17th-18th centuries: North American colonies.] This widely beneficial trade was incontinently suppressed in 1764, by one of those efforts of short-sighted rigour which might be expected from any government where George Grenville’s influence was prominent. All smuggling was to be put down, and as this trade was contraband, it must be put down like the rest. The Government probably acted as they did in answer to the prayers of the mercantile classes, who could not see that they were cutting off the streams that fed their own prosperity. They only saw that a colonial trade had sprung up, and their jealousy blinded them to the benefits that accrued to themselves as a consequence of it. Their folly found them out. The suppression of the colonial trade was entrusted to the commanders of men-of-war. . . . We may be sure that the original grievance of the colonists was not softened by the manners of the officers who had to put the law into execution. The result of the whole transaction was the birth of a very strong sense in the minds of the colonists that the mother country looked upon them as a sponge to be squeezed. This conviction took more than a passing hold upon them. It was speedily inflamed into inextinguishable heat, first by the news that they were to be taxed without their own consent, and next by the tyrannical and atrocious measures by which it was proposed to crush their resistance. The rebellion may be characterised as having first originated in the blind greediness of the English merchants, and as having then been precipitated by the arbitrary ideas of the patricians in the first instance, and afterwards of the King and the

least educated of the common people. If the severe pressure of the mercantile policy, unflinchingly carried out, had not first filled the colonists with resentment and robbed them of their prosperity, the imperial claim to impose taxes would probably have been submitted to without much ado. And if the suppression of their trade in 1764 had not been instantly followed by Grenville’s plan for extorting revenue from them, they would probably in time have been reconciled to the blow which had been dealt to their commerce. It was the conjunction of two highly oppressive pieces of policy which taught them that they would certainly lose more by tame compliance than they could possibly lose by an active resistance.”—J. Morley, *Edmund Burke*, ch. 4.—“For the merchants the unfolding of the new imperial program involved a very serious interference with their customary trading operations; and during the decade from 1764 to 1774 their constant aim was to effect a restoration of the commercial conditions of 1763. As a class they entertained neither earlier nor later the idea of independence, for withdrawal from the British empire meant for them the loss of vital business advantages without corresponding benefits in a world organized on a basis of imperial trading systems. They strove to obtain the most favorable terms possible within the empire but not to leave it. Indeed they viewed with no small concern the growth of republican feeling and leveling sentiment which the controversy occasioned. The great ports of the north—Boston, New York, Philadelphia, Newport—bore eloquent testimony to the prosperity of the mercantile class; and on the continuance of this prosperity depended the livelihood of the mechanics and petty shopkeepers of the towns and, to a lesser degree, the well-being of the farmers whose cereals and meats were exported to the West Indies. This proletarian element was not inclined by temperament to that self-restraint in movements of popular protest which was ever the *arrière pensée* of the merchant class; and being for the most part unfranchised, they expressed their sentiments most naturally through boisterous mass meetings and mob demonstrations. In the southern coastal area colonial capital was invested almost exclusively in plantation production; and commerce was carried on chiefly by British mercantile houses and their American agents, the factors. The only town in the plantation provinces that could compare with the teeming ports of the north was Charleston; and political life was focused in the periodical meetings of the great landed proprietors in the assemblies. Under the wasteful system of marketing, which the apparent plenty of plantation life made possible, the planters found themselves treading a morass of indebtedness to British merchants from which it seemed that nothing less than virtual repudiation could extricate them. In the last twenty-five years of colonial dependence the assemblies passed a succession of lax bankruptcy acts and other legislation prejudicial to non-resident creditors; but these laws nearly always ran afoul the royal veto. This fact, together with the sturdy sense of self-determination which the peculiar social system fostered, made the plantation provinces ready to resent any new exercise of parliamentary authority over the colonies, such as the new imperial policy involved. Georgia, as the youngest colony, not yet self-sustaining, and dependent on the home government for protection against a serious Indian menace, was less a part of this picture than the other provinces of the group. On the western fringe of the coastal communities lay an irregular

belt of back-country settlements whose economy and modes of thought were almost as distinctive as those of the two tidewater regions. Certainly the western sections of many of the provinces had grievances in common and resembled each other more than they did the older sections with which they were associated by provincial boundaries. These pioneer settlements extended north and south, up and down the valleys between the fall line of the rivers and mountains, from New England to Georgia. Outside of New England the majority of the settlers were of non-English strains, mostly German and Scotch-Irish; but throughout the long frontier the people cultivated small isolated farms and entertained democratic ideas commensurate with the equalitarian conditions to which their manner of living accustomed them. In many of the provinces they had long been discriminated against by the older settlements in the matter of representation in the assemblies, the administration of justice and the incidence of taxation; and they were thus familiar, of their own experience, with all the arguments which the Revolution was to make popular against non-representative government and unjust taxation. Being self-sustaining communities economically, their zeal for popular rights was in no wise alloyed by the embarrassment of their pocketbooks. Although out of harmony with the popular leaders of the seaboard in both the commercial and plantation provinces on many matters of intracolony policy, they could join forces with them against the new imperial policy; and they brought to the controversy a moral conviction and bold philosophy which gave great impetus to the agitation for independence. The history of the American Revolution is the story of the reaction of these three sections to the successive acts of the British government and of their interaction upon each other. The merchants of the commercial colonies were the most seriously affected by the new imperial policy and at the outset assumed the leadership of the colonial movement of protest. They were closely seconded by the planters of the south as soon as enough time had elapsed to make clear to the latter the implications of the issue of home rule for which the merchants stood. The democratic farmers of the interior, more or less out of contact with the political currents of the seaboard, were slower to take part; and it is largely true that their measure of participation varied inversely according to the degree of their isolation.—A. M. Schlesinger, *American Revolution reconsidered (Political Science Quarterly, Mar., 1919, pp. 66-69)*.—"The laws of trade bore hardly upon New England; but they were so generally evaded and disregarded, either by the venality of the collectors, a post highly valued on this account, or by open and unpunished violation, that in practice they were not felt. When the British ministry began to enforce them, the first sense of oppression was given to the New England people. The genuine loyalty of the people was unquestioned. All the best evidence of the time concurs on this point, and we have the direct opinion of such a man as John Adams as to its truth. The deepest interest was felt in every public event in England, and the Protestant succession was very dear to the descendants of the Puritans. They rejoiced publicly on every victory of the English arms; they celebrated royal births, marriages, and coronations with all the pomp they could muster. They mourned formally and carefully on the occasion of every death in the royal family, and these outward manifestations were not tainted with hypocrisy. They still looked back to

England as the home of their race, and her glory was theirs. But everybody in New England was a politician. 'They are all politicians down to the house-maids,' says Rochefoucauld, 'and read two newspapers a day.' Politics always ran high, and parties were strong and active. There was no need of an elaborate warning to such people that their rights were invaded. They all knew it by instinct, and once aroused, the old spirit of independent government and the hatred of outside interference broke out and could not be quenched. . . . There were no special grievances, there was no peculiar disloyalty; but there was a thoroughly homogeneous people, pure of race, wedded to independence, all educated, all keen politicians, hating external power, and still imbued with the traditions of their fathers, who had fought the great Rebellion [in England], and brought a king to execution. Such a people could not be governed except as seemed right in their own eyes; and when an attempt was made to rule them in other ways the war for independence began."—H. C. Lodge, *Short history of the English colonies in America, pp. 473-474*.—"As early as 1711, Le Ronde Denys warned the New Englanders that the expulsion of the French from North America would leave England free to suppress colonial liberties, while another French writer predicted that it would rather enable the colonies to 'unite, shake off the yoke of the English monarchy, and erect themselves into a democracy.' The prediction was often repeated. Between 1730 and 1763, many men, among them Montesquieu, Peter Kalm, and Turgot, asserted that colonial dependence upon England would not long outlast the French occupation of Canada. The opposition to Grenville's colonial legislation, which gathered force with every additional measure, seemed now about to confirm these predictions. No single law of these early years would have caused its proper part of the resistance which all of them in fact brought about. A measure of oppression could be attributed to each of them, but the pressure of any one was not felt by all classes or all colonies alike. The Proclamation of 1763 was an offense chiefly to speculators in land, and to those border communities that had fought to open free passage to the West only to find the fertile Ohio valleys 'reserved to the Indians'—the very tribes which had brought death and desolation to the frontier. The Sugar Act was a greater grievance to the New England distiller of rum and the exporters of fish and lumber than it was to the rice and tobacco planters of the South. New York merchants were seriously affected by the Currency Act, which scarcely touched Massachusetts, and which, in Virginia, meant money in the pockets of creditors, but bore hardly on debtors and the speculators who bought silver at Williamsburg in depreciated paper in order to sell it at par in Philadelphia. The famous Stamp Act itself chiefly concerned the printers, lawyers, officeholders, the users of the custom-house, and the litigious class that employed the courts to enforce or resist the payment of debt. Only when regarded as a whole was the policy of Grenville seen to spell disaster. Each new law seemed carefully designed to increase the burdens imposed by every other. The Sugar Act, for example, taken by itself, was perhaps the most grievous of all."—C. L. Becker, *Beginnings of the American people (Riverside history of the United States, pp. 214-216)*.—"It was estimated that the new taxes of 1764, with the saving of the drawbacks, would net about £45,000 a year to the British exchequer. But the cost of the military and fiscal machinery

in America would amount to some £360,000, of which the colonies were to be asked to pay about a third. Grenville decided that the most effective method for raising the major part of the colonial revenue was the imposition of a stamp tax. . . . Still, he was willing to try any other method which the colonies had to suggest. He therefore only announced his intention of imposing a stamp tax and waited a full year for the proposition of a substitute tax by the colonies. Protests from colonial agents against any kind of tax at all were ruled out of order. . . . Samuel Adams in a Boston town meeting (May, 1764), instructed the delegates to the Massachusetts general Court to rebuke that assembly for not taking notice of 'the intention of the British ministry to burden us with new

some of the council, and representatives, and by great numbers of people in the town of Boston, and the disuse of mourning soon became general. This was intended to alarm the manufacturers in England. And now [in 1765], an agreement was made, and signed by a great proportion of the inhabitants of Boston, to eat no lamb during the year. This was in order to increase the growth, and, of course, the manufacture of wool in the province. Neither of these measures much served the purpose for which they were professedly intended, but they served to unite the people in an unfavourable opinion of parliament."—T. Hutchinson, *History of the Province of Massachusetts Bay, 1740-1774*, pp. 116-117.—The movement thus started in Boston before the passage of the Stamp

BRITISH STAMPS, ISSUED UNDER THE STAMP ACT

taxes.' Two months later, James Otis, in his 'Rights of the British Colonies Asserted and Proved,' invoked 'the united application of all who feel aggrieved' to seek redress. That sentiment of common interest among the colonies which the French war had not been able to stir was roused by the Grenville policy."—D. S. Muzzey, *United States of America*, p. 62.

1764-1767.—Patriotic self-denials.—"Upon the news of the intention to lay [the Stamp tax] . . . on the colonies, many people, the last year, had associated, and engaged to forbear the importation, or consumption, of English goods; and particularly to break off from the custom of wearing black clothes, or other mourning (it being generally of British manufacture), upon the death of relations. This agreement was then signed by

Act spread rapidly through the other provinces after the act had been passed and continued to be for several years a very serious expression of colonial patriotism and opposition to the oppressive policy of the mother country. See below: 1765.

1765.—Stamp Act.—Currency Act.—"The scheme of the imposition by Parliament of a tax on the American colonists to be collected by stamps was not a new one. Nearly forty years before this time, 'Sir William Keith, the late Governor of Pennsylvania, presented an elaborate disquisition to the King . . . proposing the extension of the stamp duties to the Colonies by Act of Parliament.' It had been one of the projects of the factious Dunbar, during his short career of turbulence and intrigue in New Hampshire. Governor Sharpe of Maryland and Governor Dinwiddie of Virginia had recommended a resort to it at the time of the abortive movement for a union of the Colonies.

Its renewal at this time has been said to have been especially due to Charles Jenkinson, then only private secretary to Lord Bute, but who rose afterwards to be Earl of Liverpool. The project, as now resolved upon, was pursued with inconsiderate obstinacy, though it encountered a spirited debate when it was brought into the House of Commons [February, 1765]. . . . The bill was pending in the House between three and four weeks, at the end of which time it was passed, the largest number of votes which had been given against it in any stage of its progress not having amounted to fifty. It was concurred in by the House of Lords, where it appears to have met no resistance, and in due course [March 22] received the royal assent. No apprehension of consequences counselled a pause. The Stamp Act—as it has ever since been called by eminence—provided . . . for the payment, by British subjects in America to the English Exchequer, of specified sums, greater or less, in consideration of obtaining validity for each of the common transactions of business.”—J. G. Palfrey, *History of New England*, v. 5, bk. 6, ch. 3.

The following is the text of the Stamp Act:

Whereas, by an act made in the last session of parliament, several duties were granted, continued, and appropriated, towards defraying the expenses of defending, protecting, and securing the British colonies and plantations in America: and whereas, it is first necessary, that provision be made for raising a further revenue within your majesty's dominions in America, towards defraying the said expenses; we, your majesty's most dutiful and loyal subjects, the commons of Great Britain, in parliament assembled, have therefore resolved, to give and grant unto your majesty the several rites and duties hereinafter mentioned; and do most humbly beseech your majesty that it may be enacted, And be it enacted, by the king's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons in this present parliament assembled, and by the authority of the same, That from and after the first day of November, one thousand seven hundred and sixty five, there shall be raised, levied, collected and paid, unto his majesty, his heirs and successors, throughout the colonies and plantations in America, which now are, or hereafter may be, under the dominion of his majesty, his heirs and successors,

1. For every skin of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any declaration, plea, replication, rejoinder, demurrer, or other pleading, or any copy thereof, in any court of law within the British colonies and plantations in America, a stamp duty of three pence.

2. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any special bail, and appearance upon such bail in any such court. a stamp duty of two shillings.

3. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which may be engrossed, written or printed, any petition, bill, or answer, claim, plea, replication, rejoinder, demurrer, or other pleading, in any court of chancery or equity, within the said colonies and plantations, a stamp duty of one shilling and six pence.

4. For every skin or piece of vellum, or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any copy of any

petition, bill, answer, claim, plea, replication, rejoinder, demurrer, or other pleading, in any such court, a stamp duty of three pence.

5. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any monition, libel, answer, allegation, inventory, or renunciation, in ecclesiastical matters, in any court of probate, court of the ordinary, or other court exercising ecclesiastical jurisdiction within the said colonies and plantations, a stamp duty of one shilling.

6. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any copy of any will, (other than the probate thereof,) monition, libel, answer, allegation, inventory, or renunciation, in ecclesiastical matters, in any such court, a stamp duty of six pence.

7. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any donation, presentation, collation or institution, of or to any benefice, or any writ or instrument for the like purpose, or any register, entry, testimonial or certificate of any degree taken in any university, academy, college, or seminary of learning, within the said colonies and plantations, a stamp duty of two pounds.

8. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any monition, libel, claim, answer, allegation, information, letter of request, execution, renunciation, inventory, or other pleading, in any admiralty court within the said colonies and plantations a stamp duty of one shilling.

9. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any copy of any such monition, libel, claim, answer, allegation, information, letter of request, execution, renunciation, inventory or other pleading, shall be engrossed, written or printed, a stamp duty of six pence.

10. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any appeal, writ of error, writ of dower, 'ad quod damnum,' certiorari, statute merchant, statute staple, attestation, or certificate, by any officer, or exemplification of any record or proceeding, in any court whatsoever within the said colonies and plantations, (except appeals, writs of error, certiorari, attestations, certificates, and exemplifications, for, or relating to the removal of any proceedings from before a single justice of the peace,) a stamp duty of ten shillings.

11. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any writ of covenant for levying fines, writ of entry for suffering a common recovery, or attachment issuing out of, or returnable into any court within the said colonies and plantations, a stamp duty of five shillings.

12. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any judgment, decree, or sentence, or dismissal, or any record of nisi prius or postea, in any court within the said colonies or plantations, a stamp duty of four shillings.

13. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any affidavit, com-

mon bail, or appearance, interrogatory, deposition, rule, order or warrant of any court, or any 'dedimus potestatem,' *capias*, subpoena, summons, compulsory citation, commission, recognisance, or any other writ, process, or mandate, issuing out of, or returnable into, any court, or any office belonging thereto, or any other proceeding therein whatsoever, or any copy thereof, or of any record not herein before charged, within the said colonies and plantations, (except warrants relating to criminal matters, and proceedings thereon, or relation thereto,) a stamp duty of one shilling.

14. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any note or bill of lading, which shall be signed for any kind of goods, wares, or merchandise, to be exported from, or any docket or clearance granted within the said colonies and plantations, a stamp duty of four pence.

15. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, letters of mart or commission for private ships of war, within the said colonies and plantations, a stamp duty of twenty shillings.

16. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any grant, appointment, or admission of or to any public beneficial office or employment, for the space of one year, or any lesser time, of or above twenty pounds per annum, sterling money, in salary, fees, and perquisites, within the said colonies and plantations, (except commissions and appointments of officers of the army, navy, ordnance, or militia, of judges, and of justices of the peace,) a stamp duty of ten shillings.

17. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any grant of any liberty, privilege, or franchise, under the seal or sign manual, of any governor, proprietor, or public officer, alone, or in conjunction with any other person or persons, or with any council, or any council and assembly, or any exemplification of the same, shall be engrossed, written, or printed, within the said colonies and plantations, a stamp duty of six pounds.

18. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any license for retailing of spirituous liquors, to be granted to any person who shall take out the same, within the said colonies and plantations, a stamp duty of twenty shillings.

19. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any license for retailing of wine, to be granted to any person who shall not take out a license for retailing of spirituous liquors, within the said colonies and plantations, a stamp duty of four pounds.

20. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any license for retailing of wine, to be granted to any person who shall take out a license for retailing of spirituous liquors, within the said colonies and plantations, a stamp duty of three pounds.

21. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any probate of wills, letters of administration, or of guardianship for any estate above the value of twenty

pounds sterling money, within the British colonies [and] plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands, a stamp duty of five shillings.

22. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such probate, letters of administration or of guardianship, within all other parts of the British dominions in America, a stamp duty of ten shillings.

23. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any bond for securing the payment of any sum of money, not exceeding the sum of ten pounds sterling money, within the British colonies and plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands, a stamp duty of six pence.

24. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any bond for securing the payment of any sum of money above ten pounds, and not exceeding twenty pounds sterling money, within such colonies, plantations and islands, a stamp duty of one shilling.

25. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any bond for securing the payment of any sum of money above twenty pounds, and not exceeding forty pounds sterling money, within such colonies, plantations and islands, a stamp duty of one shilling and six pence.

26. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any order or warrant for surveying or setting out any quantity of land, not exceeding one hundred acres, issued by any governor, proprietor, or any public officer, alone, or in conjunction with any other person or persons, or with any council, or any council and assembly, within the British colonies and plantations in America, a stamp duty of six pence.

27. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such order or warrant for surveying or setting out any quantity of land above one hundred and not exceeding two hundred acres, within the said colonies and plantations, a stamp duty of one shilling.

28. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such order or warrant for surveying or setting out any quantity of land above two hundred and not exceeding three hundred and twenty acres, and in proportion for every such order or warrant for surveying or setting out every other three hundred and twenty acres, within the said colonies and plantations, a stamp duty of one shilling and six pence.

29. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any original grant or deed, mesne conveyance, or other instrument whatever, by which any quantity of land, not exceeding one hundred acres, shall be granted, conveyed, or assigned, within the British colonies and plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands (except leases for any term not exceeding the term of twenty-one years) a stamp duty of one shilling and six pence.

30. For every skin or piece of vellum or parch-

ment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above one hundred and not exceeding two hundred acres, shall be granted, conveyed, or assigned, within such colonies, plantations and islands, a stamp duty of two shillings.

31. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above two hundred, and not exceeding three hundred and twenty acres, shall be granted, conveyed, or assigned, and in proportion for every such grant, deed, mesne conveyance, or other instrument, granting, conveying or assigning every other three hundred and twenty acres, within such colonies, plantations and islands, a stamp duty of two shillings and six pence.

32. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written or printed, any such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, not exceeding one hundred acres, shall be granted, conveyed, or assigned, within all other parts of the British dominions in America, a stamp duty of three shillings.

33. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, and such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above one hundred and not exceeding two hundred acres, shall be granted, conveyed, or assigned, within the same parts of the said dominions, a stamp duty of four shillings.

34. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, and such original grant, or any such deed, mesne conveyance, or other instrument whatsoever, by which any quantity of land, above two hundred and not exceeding three hundred and twenty acres, shall be granted, conveyed, or assigned, and in proportion for every such grant, deed, mesne conveyance, or other instrument, granting, conveying, or assigning every other three hundred and twenty acres, within the same parts of the said dominions, a stamp duty of five shillings.

35. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any grant, appointment, or admission, of or to any beneficial office or employment, not hereinbefore charged, above the value of twenty pounds per annum sterling money, in salary, fees, or perquisites, or any exemplification of the same, within the British colonies and plantations upon the continent of America, the islands belonging thereto, and the Bermuda and Bahama islands, (except commissions of officers of the army, navy, ordnance, or militia, and of justices of the peace,) a stamp duty of four pounds.

36. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any such grant, appointment, or admission, of or to any such public beneficial office or employment, or any exemplification of the same, within all other parts of the British dominions in America, a stamp duty of six pounds.

37. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any indenture, lease, conveyance, contract, stipulation, bill of sale, charter party, protest, articles of apprenticeship or covenant, (except for the hire of servants not apprentices, and also except such other matters as hereinbefore charged,) within the British colonies and plantations in America, a stamp duty of two shillings and six pence.

38. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any warrant or order for auditing any public accounts, beneficial warrant, order, grant, or certificate, under any public seal, or under the seal or sign manual of any governor, proprietor, or public officer, alone, or in conjunction with any other person or persons, or with any council, or any council and assembly, not herein before charged, or any passport or letpass, surrender of office, or policy of assurance, shall be engrossed, written, or printed, within the said colonies and plantations, (except warrants or orders for the service of the army, navy, ordnance, or militia, and grants of offices under twenty pounds per annum, in salary, fees, and perquisites,) a stamp duty of five shillings.

39. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any notarial act, bond, deed, letter of attorney, procuracy, mortgage release or other obligatory instrument not herein before charged, within the said colonies and plantations, a stamp duty of two shillings and three pence.

40. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any register, entry, or enrolment of any grant, deed, or other instrument whatsoever, herein before charged, within the said colonies and plantations, a stamp duty of three pence.

41. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be engrossed, written, or printed, any register, entry, or enrolment of any grant, deed, or other instrument whatsoever not herein before charged, within the said colonies and plantations, a stamp duty of two shillings.

42. And for and upon every pack of playing cards, and all dice, which shall be sold or used within the said colonies and plantations, the several stamp duties following: (that is to say.)

43. For every pack of such cards, one shilling.

44. And for every pair of such dice, ten shillings.

45. And for and upon every paper called a pamphlet, and upon every newspaper, containing public news, or occurrences, which shall be printed, dispersed, and made public, within any of the said colonies and plantations, and for and upon such advertisements as are hereinafter mentioned, the respective duties following; (that is to say.)

46. For every such pamphlet and paper, contained in a half sheet, or any lesser piece of paper, which shall be so printed, a stamp duty of one half penny for every printed copy thereof.

47. For every such pamphlet and paper, (being larger than half a sheet, and not exceeding one whole sheet,) which shall be so printed, a stamp duty of one penny for every printed copy thereof.

48. For every pamphlet and paper, being larger than one whole sheet, and not exceeding six sheets in octavo, or in a lesser page, or not exceeding twelve sheets in quarto, or twenty sheets in folio,

which shall be so printed, a duty after the rate of one shilling for every sheet of any kind of paper which shall be contained in one printed copy thereof.

49. For every advertisement to be contained in any gazette, newspaper, or other paper, or any pamphlet which shall be so printed, a duty of two shillings.

50. For every almanac or calendar, or any one particular year, or for any time less than a year, which shall be written or printed on one side only of any one sheet, skin, or piece of paper, parchment, or vellum, within the said colonies and plantations, a stamp duty of two pence.

51. For every other almanac, or calendar, for any one particular year, which shall be written or printed within the said colonies and plantations, a stamp duty of four pence.

52. And for every almanac or calendar, written or printed in the said colonies and plantations, to serve for several years, duties to the same amount respectively shall be paid for every such year.

53. For every skin or piece of vellum or parchment, or sheet or piece of paper, on which any instrument, proceeding, or other matter or thing aforesaid, shall be engrossed, written, or printed, within the said colonies and plantations, in any other than the English language, a stamp duty of double the amount of the respective duties before charged thereon.

54. And there shall be also paid, in the said colonies and plantations, a duty of six pence for every twenty shillings, in any sum not exceeding fifty pounds sterling money, which shall be given, paid, contracted, or agreed for, with or in relation to any clerk or apprentice, which shall be put or placed to or with any master or mistress, to learn any profession, trade, or employment. 2. And also a duty of one shilling for every twenty shillings, in any sum exceeding fifty pounds, which shall be given, paid, contracted, or agreed for, with, or in relation to, any such clerk or apprentice.

55. Finally, the produce of all the aforementioned duties shall be paid into his majesty's treasury; and there held in reserve, to be used, from time to time, by the parliament, for the purpose of defraying the expenses necessary for the defense, protection, and security of the said colonies and plantations.

"Less noticed at the time, but scarcely less important in its effects upon trade and industry, was the law passed by Parliament in the same year for regulating colonial currency. With the rapid development of commerce in the eighteenth century, and on account of the steady flow of specie to London, the colonies had commonly resorted to the use of paper money as a legal tender in the payment of local debts. Such men as Franklin and Colden defended the practice on the ground of necessity, and it was undoubtedly true that without the issue of new bills of credit the colonies could not have given the military assistance required of them for the conquest of Canada. But it was equally true that in most colonies, except Massachusetts where the issues had been retired in 1749, and New York where their par value had been consistently maintained, the evils of depreciated currency had long existed and still went unremedied. Debtors profited at the expense of creditors, while colonial assemblies often took advantage of the situation to pass laws enabling the American trader to avoid meeting his just obligations to English merchants. In response

to the loud complaints of the latter, and without adequately discriminating between the uses and abuses of a colonial paper currency, Parliament passed the act 'to prevent paper bills of credit hereafter issued in any of his Majesty's colonies, from being declared to be a legal tender in payment of money, and to prevent the legal tender of such bills as are now subsisting, from being prolonged beyond the periods limited for calling in and sinking the same.'—C. L. Becker, *Beginning of the American people*, pp. 208-209.—"Massachusetts was the first of the colonies to issue paper money. This was in 1690, to aid in fitting out an expedition against Canada. The other provinces followed at intervals. Affairs had come to such a pass by 1748 that the price in paper of £100 in coin ranged all the way from £100 in New England to £180 in Pennsylvania. The royal governors in all the colonies, acting under instructions from home, were generally persistent opponents of this financial expedient. Governor Belcher of Massachusetts, in a proclamation against the practice (1740) said it gave 'great interruption and brought confusion into trade business,' and 'reflected great dishonor on his Majesty's government here.' In 1720, Parliament passed what is known as 'the Bubble Act,' designed to break up all private banking companies in the United Kingdom chartered for the issue of circulating notes; this Act was made applicable to the colonies in 1740, and reinforced in 1751, the last-named Act forbidding the further issue of colonial paper money except in cases of invasion or for the annual current expenses of the government, these exceptional cases to be under control of the Crown. In 1763 all issues to date were declared void; although ten years later (1773), provincial bills of credit were made receivable as legal tender at the treasuries of the colonies emitting them. The controversy between the colonies and the home government over these issues of a cheap circulating medium, developed much bitterness on the part of the former, who deemed the practice essential to their prosperity; and it was one of the many causes of the Revolution."—R. G. Thwaites, *Colonies, 1492-1750 (Epochs of American History, pp. 278-279)*.—See also MONEY AND BANKING: Modern: 17th-18th centuries: Early paper issues, etc.

1765.—News of the Stamp Act in the colonies.—Colonel Barré's speech and the Sons of Liberty.—Patrick Henry's speech in the Virginia assembly.—Formal protests and informal mob-doings in Philadelphia, New York and Boston.—In the course of the debate in the British House of Commons, on the Stamp Act, February 6, 1765, Charles Townsend, after discussing the advantages which the American colonies had derived from the late war, asked the question: "And now will these American children, planted by our care, nourished up to strength and opulence by our indulgence, and protected by our arms, grudge to contribute their mite to relieve us from the heavy burden under which we lie?" This called to his feet Colonel Isaac Barré who had served in America with Wolfe, and who had a knowledge of the country and people which most members of Parliament lacked. "They planted by your care!" exclaimed Barré. "No: your oppressions planted them in America. They fled from your tyranny to a then uncultivated, inhospitable country, where they exposed themselves to almost all the hardships to which human nature is liable: and, among others, to the cruelties of a savage foe, the most subtle, and, I will take upon me to say, the most formidable of any people upon the face of God's

earth; and yet, actuated by principles of true English liberty, they met all hardships with pleasure, compared with those they suffered in their own country from the hands of those who should have been their friends. They nourished up by your indulgence! They grew by your neglect of them. As soon as you began to care about them, that care was exercised in sending persons to rule them in one department and another, who were, perhaps, the deputies of deputies to some members of this house, sent to spy out their liberties, to misrepresent their actions, and to prey upon them; men whose behavior on many occasions has caused the blood of those sons of Liberty to recoil within them; men promoted to the highest seats of justice, some who, by my knowledge, were glad, by going to a foreign country, to escape being brought to the bar of a court of justice in their own. They protected by your arms! They have nobly taken up arms in your defence; have exerted a valor amidst their constant and laborious industry, for the defence of a country whose frontier was drenched in blood, while its interior parts yielded all its little savings to your

means, the execution of the Stamp Act. They were long kept secret, which occasioned loyalists to say that there was a private union among a certain sect of republican principles from one end of the continent to the other. As they increased in numbers, they grew in boldness and publicity, announcing in the newspapers their committees of correspondence, and interchanging solemn pledges of support."—R. Frothingham, *Rise of the republic of the United States*, p. 183.—See also LIBERTY BOYS.—"In February 1765, a listless and half-empty House of Commons, by a vote of 205 to 49, and a still more listless and empty House of Lords, without division or debate, passed the Stamp Act, which, says Lecky, 'If judged by consequences, must be deemed one of the most momentous legislative Acts in the history of mankind.' To the astonishment of the king and ministry the passage of the Stamp Act aroused a storm of opposition in America. Its enforcement would have meant the thrusting of the hand of the tax gatherer into all the transactions of colonial business; for by the terms of its sixty printed pages all pamphlets and newspapers, all legal and

emolument. And believe me—remember I this day told you so—the same spirit of freedom which actuated that people at first will accompany them still. But prudence forbids me to explain myself further. God knows I do not at this time speak from motives of party heat; what I deliver are the genuine sentiments of my heart. However superior to me in general knowledge and experience the responsible body of this house may be, yet I claim to know more of America than most of you, having seen and been conversant in that country. The people, I believe, are as truly loyal as any subjects the king has; but a people jealous of their liberties, and who will vindicate them, if ever they should be violated. But the subject is too delicate; I will say no more." Notes of Colonel Barré's speech were taken by a Mr. Ingersoll, one of the agents for Connecticut, who sat in the gallery. He sent home a report of it, which was published in the newspapers at New London, and soon the name of the "Sons of Liberty," which the eloquent defender of the resisting colonists had given to them, was on every lip.—G. Bancroft, *History of the United States* (Author's last revision), v. 3, ch. 8.—"Meantime [in 1765], 'The Sons of Liberty'—a term that grew into use soon after the publication of Barré's speech—were entering into associations to resist, by all lawful

commercial paper . . . must bear the stamp which certified that duties had been paid thereon."—D. S. Muzzey, *United States of America*, p. 63.—"A copy of . . . [the act] was printed in the 'Pennsylvania Gazette' on April 18th, but this must necessarily have been in advance of news of its passage. The people of Philadelphia began at once to show their determination to make it [the Stamp Act] a nullity so far as revenue was concerned. An enforced frugality was the first step. . . . In the 'Pennsylvania Gazette' of April 18th there was an article against expensive and ostentatious funerals, the writer saying that often £70 or £100 were squandered on such occasions. August 15th, when Alderman William Plumsted was buried at St. Peter's Church, the funeral, by his own wish, was conducted in the plainest way, no pall, no mourning worn by relatives. In March, the Hibernia Fire Company resolved, 'from motives of economy, and to reduce the present high price of mutton and encourage the breweries of Pennsylvania, not to purchase any lamb this season, nor to drink any foreign beer.' Other fire companies and many citizens copied this example. . . . On October 25th the merchants and traders of Philadelphia subscribed to a non-importation agreement, such as were then being signed all over the country. In this article the subscribers agreed

that, in consequence of the late acts of Parliament, and the injurious regulations accompanying them, and of the Stamp Act, etc., in justice to themselves and in hopes of benefit from their example (1) to countermand all orders for English goods until the Stamp Act should be repealed; (2) a few necessary articles, or shipped under peculiar circumstances, are excepted; (3) no goods received for sale on commission to be disposed of until the Stamp Act should be repealed; and this agreement to be binding on each and all, as a pledge of word of honor."—J. T. Scharf and T. Westcott, *History of Philadelphia*, v. 1, ch. 16.—The first stern note of defiance came from Virginia. Patrick Henry had lately been elected to the colonial assembly. Having waited in vain for the older leaders of the house to move in the matter of expressing the feeling of the colony on the subject, on May 29, when the session was within three days of its expected close, "Mr. Henry introduced his celebrated resolutions on the stamp act. I will not withhold from the reader a note of this transaction from the pen of Mr. Henry himself. It is a curiosity, and highly worthy of preservation. After his death, there was found among his papers one sealed, and thus endorsed: 'Enclosed are the resolutions of the Virginia Assembly in 1765, concerning the stamp act. Let my executors open this paper.' Within was found the following copy of the resolutions in Mr. Henry's handwriting:—'Resolved, That the first adventurers and settlers of this, his majesty's colony and dominion, brought with them, and transmitted to their posterity, and all other his majesty's subjects since inhabiting in this, his majesty's said colony, all the privileges, franchises, and immunities, that have at any time been held, enjoyed, and possessed by the people of Great Britain. Resolved, That by two royal charters, granted by King James I., the colonists, aforesaid, are declared entitled to all the privileges, liberties, and immunities of denizens and natural-born subjects, to all intents and purposes, as if they had been abiding and born within the realm of England. Resolved, That the taxation of the people by themselves, or by persons chosen by themselves to represent them, who can only know what taxes the people are able to bear, and the easiest mode of raising them, and are equally affected by such taxes themselves, is the distinguishing characteristic of British freedom, and without which the ancient constitution cannot subsist. Resolved, That his majesty's liege people of this most ancient colony, have uninterruptedly enjoyed the right of being thus governed by their own assembly, in the article of their taxes and internal police, and that the same hath never been forfeited, or any other way given up, but hath been constantly recognised by the king and people of Great Britain. Resolved, therefore, That the general assembly of this colony have the sole right and power to lay taxes and impositions upon the inhabitants of this colony; and that every attempt to vest such power in any person or persons whatsoever, other than the general assembly aforesaid, has a manifest tendency to destroy British as well as American freedom.' On the back of the paper containing these resolutions, is the following endorsement, which is also in the handwriting of Mr. Henry himself:—'The within resolutions passed the house of burgesses in May, 1765. They formed the first opposition to the stamp act, and the scheme of taxing America by the British parliament. All the colonies, either through fear, or want of opportunity to form an opposition, or

from influence of some kind or other, had remained silent. I had been for the first time elected a burgess, a few days before, was young, inexperienced, unacquainted with the forms of the house, and the members that composed it. Finding the men of weight averse to opposition, and the commencement of the tax at hand, and that no person was likely to step forth, I determined to venture, and alone, unadvised, and unassisted, on a blank leaf of an old law-book wrote the within. Upon offering them to the house, violent debates ensued. Many threats were uttered, and much abuse cast on me, by the party for submission. After a long and warm contest, the resolutions passed by a very small majority, perhaps of one or two only. The alarm spread throughout America with astonishing quickness, and the ministerial party were overwhelmed. The great point of resistance to British taxation was universally established in the colonies. This brought on the war, which finally separated the two countries, and gave independence to ours. Whether this will prove a blessing or a curse will depend upon the use our people make of the blessings which a gracious God hath bestowed on us. If they are wise, they will be great and happy. If they are of a contrary character, they will be miserable. Righteousness alone can exalt them as a nation. Reader! whoever thou art, remember this; and in thy sphere, practise virtue thyself, and encourage it in others.—P. Henry.' Such is the short, plain, and modest account which Mr. Henry has left of this transaction. . . . It is not wonderful that even the friends of colonial rights who knew the feeble and defenceless situation of this country should be startled at a step so bold and daring. That effect was produced; and the resolutions were resisted, not only by the aristocracy of the house, but by many of those who were afterward distinguished among the brightest champions of American liberty. The following is Mr. Jefferson's account of this transaction: 'Mr. Henry moved and Mr. Johnston seconded these resolutions successively. They were opposed by Messrs. Randolph, Bland, Pendleton, Wythe, and all the old members, whose influence in the house had, till then, been unbroken. They did it, not from any question of our rights, but on the ground that the same sentiments had been, at their preceding session, expressed in a more conciliatory form, to which the answers were not yet received. But torrents of sublime eloquence from Henry, backed by the solid reasoning of Johnston, prevailed. The last, however, and strongest resolution was carried but by a single vote. The debate on it was most bloody. I was then but a student, and stood at the door of communication between the house and the lobby (for as yet there was no gallery) during the whole debate and vote; and I will remember that, after the numbers on the division were told and declared from the chair, Peyton Randolph (the attorney-general) came out at the door where I was standing, and said, as he entered the lobby: "By God, I would have given 500 guineas for a single vote"; for one would have divided the house, and Robinson was in the chair, who he knew would have negated the resolution. Mr. Henry left town that evening; and the next morning, before the meeting of the house, Col. Peter Randolph, then of the council, came to the hall of burgesses, and sat at the clerk's table till the house-bell rang, thumbing over the volumes of journals, to find a precedent for expunging a vote of the house. . . . Some of the timid members, who had voted for the strongest resolution, had become alarmed; and as soon as the house

met, a motion was made and carried to expunge it from the journals.' . . . The manuscript journal of the day is not to be found; whether it was suppressed, or casually lost, must remain a matter of uncertainty; it disappeared, however, shortly after the session. . . . In the interesting fact of the erasure of the fifth resolution, Mr. Jefferson is supported by the distinct recollection of Mr. Paul Carrington, late a judge of the court of appeals of Virginia, and the only surviving member, it is believed, of the house of burgesses of 1765. The statement is also confirmed, if indeed further confirmation were necessary, by the circumstance that instead of the five resolutions, so solemnly recorded by Mr. Henry, as having passed the house, the journal of the day exhibits only . . . four. . . . 'By these resolutions,' says Mr. Jefferson, 'and his manner of supporting them, Mr. Henry took the lead out of the hands of those who

one of the most perfectly and uniformly decorous speakers that ever took the floor of the house. . . . From the period of which we have been speaking, Mr. Henry became the idol of the people of Virginia; nor was his name confined to his native state. His light and heat were seen and felt throughout the continent; and he was everywhere regarded as the great champion of colonial liberty."—W. Wirt, *Sketches of the life and character of Patrick Henry*, sect. 2.—"The prohibition or colonial legal tender added to their woes and indeed made the hard-pressed planters of the south sharers in the general distress. The Stamp Act, with its far-reaching taxes burdensome alike to merchant and farmer, sealed the union of commercial and plantation provinces at the same time that it afforded an opportunity for placing the colonial argument on constitutional grounds; and because of the character of the taxation, it rallied to the

had, theretofore, guided the proceedings of the house; that is to say, of Pendleton, Wythe, Bland, Randolph.' It was, indeed, the measure which raised him to the zenith of his glory. He had never before had a subject which entirely matched his genius, and was capable of drawing out all the powers of his mind. . . . It was in the midst of this magnificent debate, while he was descanting on the tyranny of the obnoxious act, that he exclaimed in a voice of thunder, and with the look of a god: 'Cæsar had his Brutus—Charles the First, his Cromwell—and George the Third—("Treason!" cried the speaker—"Treason, treason!" echoed from every part of the house. It was one of those trying moments which is decisive of character. Henry faltered not for an instant; but rising to a loftier attitude, and fixing on the speaker an eye of the most determined fire, he finished his sentence with the firmest emphasis)—may profit by their example. If this be treason, make the most of it.' This was the only expression of defiance which escaped him during the debate. He was, throughout life,

colonial position the powerful support of the lawyers and newspaper proprietors. The plan of the British to garrison their new acquisitions in America and to station a few detachments of troops in the older colonies was, in the feverish state of the public mind, envisaged as a brazen attempt to intimidate the colonists into submission. The merchants of some of the ports, intent on restoring the conditions of their former prosperity, adopted resolutions of non-importation; and little recking the future, they aroused the populace to a sense of British injustice, even to the extent of countenancing and instigating mob excesses and the destruction of property."—A. M. Schlesinger, *American Revolution reconsidered* (*Political Science Quarterly*, June, 1919).—"The publication of Mr. Henry's resolutions against the Stamp Act created a widespread and intense excitement. They were hailed as the action of the oldest, and hitherto the most loyal of the colonies; and as raising a standard of resistance to the detested Act. Mr. Otis pronounced them trea-

sonable, and this was the verdict of the Government party. But, treasonable or not, they struck a chord which vibrated throughout America. Hutchinson declared that, 'nothing extravagant appeared in the papers till an account was received of the Virginia resolves.' Soon the bold exclamation of Mr. Henry in moving them was published, and he was hailed as the leader raised up by Providence for the occasion. The 'Boston Gazette' declared: 'The people of Virginia have spoken very sensibly, and the frozen politicians of a more northern government say they have spoken treason.' But the people were no longer to be held down by 'the frozen politicians,' north or south. They commenced to form secret societies pledged to the resistance of the Act by all lawful means, which we called 'The Sons of Liberty.'—W. W. Henry, *Patrick Henry: Life, correspondence and speeches*, v. 1, pp. 93-94.—At New York, "in May articles began to appear in the papers congratulating the public on the patriotic and frugal spirit that was beginning to reign in the Province of New York. The principal gentlemen of the city clad themselves in country manufactures or 'turned clothes.' Weyman printed in large type in his paper, the N. Y. Gazette, the patriotic motto 'It is better to wear a homespun coat than lose our liberty.' Spinning was daily in vogue; materials being more wanting than industrial hands; a need the farmers were endeavoring to remedy by sewing more flax seed and keeping more sheep, and finally we notice the odd statement 'that little lamb came to market as no true lovers of their country or whose sympathetic breasts feel for its distresses will buy it, and that sassafras, balm and sage were greatly in use instead of tea and allowed to be more wholesome.' Funerals and mourning, which were then expensive luxuries, were modified and their extravagance curtailed. The Society for promoting Arts and Manufactures resolved to establish a bleaching field and to erect a flax spinning school where the poor children of the city should be taught the art. They also ordered large numbers of spinning wheels to be made and loaned to all who would use them. In September we find it announced that women's shoes were made 'cheaper and better than the renowned Hoses,' by Wells, Lasher, Bolton, and Davis, and that there was a good assortment on hand; that boots and men's shoes were made, in every quarter of the city, better than the English made for foreign sale; wove thread stockings in sundry places; the making of linen, woolen, and cotton stuffs was fast increasing; gloves, hats, carriages, harness and cabinet work were plenty. The people were now self dependent; cards now appeared recommending that no true friend of his country should buy or import English goods, and the dry goods men were warned that their importations would lie on hand to their cost and ruin. There being now a sufficiency of home made goods it was proposed on the 19th October to establish a market for all kinds of Home Manufactures; and a market was opened under the Exchange in Broad Street on the 23d. From the shortness of the notice the design was not sufficiently known in the country and there was neither plenty nor variety; but numbers of buyers appeared and everything went off readily at good prices. The gentlemen merchants of the city, as they were styled, were not behind any class in patriotism or sacrifice. A meeting was called for Monday 28th October at Jones' house in the Fields, 'The Freemasons Arms,' but the attendance, owing to the short notice, not being sufficient to enter upon business, they were

again summoned on the 30th October to meet the next day at four o'clock at Mr. Burns' long room at the City Arms to fall upon such methods as they shall then think most advisable for their reciprocal interest. On the 31st there was a general meeting of the principal merchants at this tavern, which was known under the various names of the City Arms, the Province Arms, the New York Arms, and stood on the upper corner of Broadway and Stone, now Thames street, on the site later occupied by the City Hotel. Resolutions were adopted and subscribed by upwards of two hundred of the principal merchants; 1st, to accompany all orders to Great Britain for goods or merchandize of any nature kind or quality whatever with instructions that they be not shipped unless the Stamp Act be repealed; 2nd, to countermand all outstanding orders unless on the conditions mentioned in the foregoing resolution; 3rd, not to vend any goods sent on commission, shipped after the 1st January succeeding, unless upon the same condition. In consequence of these resolutions the retailers of goods subscribed a paper obliging themselves not to buy any goods, wares or merchandize after the 1st January unless the Stamp Act was repealed. This was the first of the famous Non Importation Agreement, the great commercial measure of offense and defense against Great Britain. It punished friends and foes alike and plunged a large portion of the English people into the deepest distress; at the same time it taught the Colonies the value and extent of their own resources."—J. A. Stevens, *Stamp Act in New York (Magazine of American History, June, 1877)*.—The Stamp Act was reprinted in New York "with a death's-head upon it in place of the royal arms, and it was hawked about the streets under the title of 'The Folly of England and the Ruin of America.' In Boston, the church-bells were tolled, and the flags on the shipping put at half-mast. . . . Meanwhile, the Massachusetts legislature, at the suggestion of Otis, had issued a circular letter to all the colonies, calling for a general congress, in order to concert measures of resistance to the Stamp Act. The first cordial response came from South Carolina, at the instance of Christopher Gadsden, a wealthy merchant of Charleston and a scholar learned in Oriental languages, a man of rare sagacity and most liberal spirit. . . . On the 14th of August, the quiet town of Boston witnessed some extraordinary proceedings. [See LIBERTY TREE.] . . . Twelve days after, a mob sacked the splendid house of Chief Justice Hutchinson, threw his plate into the street, and destroyed the valuable library which he had been thirty years in collecting, and which contained many manuscripts, the loss of which was quite irreparable. As usual with mobs, the vengeance fell in the wrong place, for Hutchinson had done his best to prevent the passage of the Stamp Act. In most of the colonies, the stamp officers were compelled to resign their posts. Boxes of stamps arriving by ship were burned or thrown into the sea. . . . In New York, the presence of the troops for a moment encouraged the lieutenant-governor, Colden, to take a bold stand in behalf of the law. He talked of firing upon the people, but was warned that if he did so he would be speedily hanged on a lamp-post, like Captain Porteous of Edinburgh. A torchlight procession, carrying images of Colden and of the devil, broke into the governor's coach-house, and, seizing his best chariot, paraded it about town with the images upon it, and finally burned up chariot and images on the Bowling Green, in full sight of Colden and the garrison,

who looked on from the Battery, speechless with rage, but afraid to interfere. Gage [who was in command] did not dare to have the troops used, for fear of bringing on a civil war; and the next day the discomfited Colden was obliged to surrender all the stamps to the common council of New York, by whom they were at once locked up in the City Hall. Nothing more was needed to prove the impossibility of carrying the Stamp Act into effect."—J. Fiske, *American Revolution*, v. 1, ch. 1.—In Connecticut the stamp agent, Jared Ingersoll, was compelled by a body of armed citizens to resign. See CONNECTICUT: 1765.

1765.—Stamp Act Congress.—The delegates chosen, on the invitation of Massachusetts, to attend a congress for consultation on the circumstances of the colonies, met, Oct. 7, 1765, in the City Hall at New York. "In no place were the Sons of Liberty more determined, or were their opponents more influential. It was the headquarters of the British force in America, the commander of which, General Gage, wielded the powers of a viceroy. A fort within the city was heavily mounted with cannon. Ships of war were moored near the wharves. The executive Lieutenant-governor Colden, was resolved to execute the law. When the Massachusetts delegates called on him, he remarked that the proposed congress would be unconstitutional, and unprecedented, and he should give it no countenance. The congress consisted of twenty-eight delegates from nine of the colonies; four, though sympathizing with the movement, not choosing representatives. Here several of the patriots, who had discussed the American question in their localities, met for the first time. James Otis stood in this body the foremost speaker. His pen, with the pens of the brothers Robert and Phillip Livingston, of New York, were summoned to service in a wider field. John Dickinson, of Pennsylvania, was soon to be known through the colonies by 'The Farmer's Letters.' Thomas McKean and Cæsar Rodney were pillars of the cause in Delaware. Edward Tilghman was an honored name in Maryland. South Carolina, in addition to the intrepid Gadsden, had, in Thomas Lynch and John Rutledge, two patriots who appear prominently in the subsequent career of that colony. Thus this body was graced by large ability, genius, learning, and common sense. It was calm in its deliberations, seeming unmoved by the whirl of the political waters. The congress organized by the choice, by one vote, of Timothy Ruggles, a Tory,—as the chairman,—and John Cotton, clerk. The second day of its session, it took into consideration the rights, privileges, and grievances of 'the British American colonists.' After eleven days' debate, it agreed—each colony having one vote—upon a declaration of rights and grievances and ordered it to be inserted in the journal. [The following is the 'Declaration': 'The members of this congress, sincerely devoted, with the warmest sentiments of affection and duty, to his maj-

esty's person and government, inviolably attached to the present happy establishment of the protestant succession, and with minds deeply impressed by a sense of the present and impending misfortunes of the British colonies on this continent; having considered, as maturely as time will permit, the circumstances of the said colonies, esteem it our indispensable duty to make the following declarations of our humble opinion, respecting the most essential rights and liberties of the colonists, and of the grievances under which they labor by reason of several late acts of parliament. 1. That his majesty's subjects in these colonies owe the same allegiance to the crown of Great Britain that is owing from his subjects born within the realm, and all due subordination to that august body the parliament of Great Britain. 2. That his majesty's liege subjects in these colonies are entitled to all the inherent rights and liberties of his natural born subjects within the kingdom of Great Britain. 3. That it is inseparably essential to the freedom of a people, and the undoubted right of Englishmen, that no taxes be imposed on them, but with their own consent, given personally, or by their representatives. 4. That the people of these colonies are not, and from their local circumstances cannot be, represented in the house of commons of Great Britain. 5. That the only representatives of these colonies are persons chosen therein by themselves, and that no taxes ever have been or can be constitutionally imposed upon them, but by their respective legislatures. 6. That all supplies to the crown being free gifts from the people, it is unreasonable and inconsistent with the principles and spirit of the British constitution for the people of Great Britain to grant to his majesty the property of the colonists. 7. That trial by jury is the inherent and invaluable right of every British subject in these colonies. 8. That the late act of parliament entitled 'an act for granting and applying certain stamp duties, and other duties in the British colonies and plantations in America,' &c., by imposing taxes on the inhabitants of these colonies: and the said act, and several other acts, by extending the jurisdiction of the court of admiralty beyond its ancient limits, have a manifest tendency to subvert the rights and liberties of the colonists. 9. That the duties imposed by several late acts of parliament, from the peculiar circumstances of these colonies, will be extremely burdensome and grievous; and from the scarcity of specie, the payment of them absolutely impracticable. 10. That as the profits of the trade of these colonies ultimately center in Great Britain, to pay for the manufactures which they are obliged to take from thence, they eventually contribute very largely to all supplies granted to the crown. 11. That the restrictions imposed by several late acts of parliament on the trade of these colonies, will render them unable to purchase the manufactures of Great Britain. 12. That the increase, prosperity, and happiness of these colonies depend on the full and free enjoyment of their rights and liberties, and an intercourse with Great Britain mutually affectionate and advantageous. 13. That it is the right of the British subjects in these colonies to petition the king, or either house of parliament. 14. That it is the indispensable duty of these colonies, to the best of sovereigns, to the mother country, and to themselves, to endeavor, by a loyal and dutiful address to his majesty, and humble application to both houses of parliament, to procure the repeal of the act for granting and applying certain stamp duties, of all clauses of any other acts of parliament whereby the juris-

diction of the admiralty is extended as aforesaid, and of the other late acts for the restriction of American commerce.] . . . The delegates present from only six of the colonies—except Ruggles and Ogden—signed the petition; those from New York, Connecticut, and South Carolina not being authorized to sign. On the 25th of October, the congress adjourned. Special measures were taken to transmit the proceedings to the unrepresented colonies. The several assemblies, on meeting, heartily approved of the course of their delegates who concurred in the action of congress; but Ruggles, of Massachusetts, was reprimanded by the speaker, in the name of the House, and Ogden, of New Jersey, was hung in effigy by the people. The action of the assemblies was announced in the press. Meanwhile the Sons of Liberty, through their committees of correspondence, urged a continental Union; pledged a mutual support in case of danger; in some instances stated the number of armed men that might be relied on; and thus

SIR WILLIAM JOHNSON

evinced a common determination to resist the execution of the Stamp Act."—R. Frothingham, *Rise of the republic of the United States*, ch. 5.—See also ENGLAND: 1765-1768.

1765-1768.—Treaties with Indians at German Flats and Fort Stanwix.—Cession of Iroquois claims to western Pennsylvania, West Virginia and Kentucky.—Boone in Kentucky.—Drawing of the Indian boundary line.—"After the success of Bradstreet and Bouquet [see PONTIAC'S WAR], there was no difficulty in concluding a treaty with all the Western Indians; and late in April, 1765, Sir William Johnson, at the German Flats, held a conference with the various nations, and settled a definite peace. At this meeting two propositions were made; the one to fix some boundary line, west of which the Europeans should not go; and the savages named, as this line, the Ohio or

Alleghany and Susquehannah; but no definite agreement was made, Johnson not being empowered to act. The other proposal was, that the Indians should grant to the traders, who had suffered in 1763, a tract of land in compensation for the injuries then done them, and to this the red men agreed. . . . During the very year that succeeded the treaty of German Flats, settlers crossed the mountains and took possession of lands in western Virginia and along the Monongahela. The Indians, having received no pay for these lands, murmured, and once more a border war was feared. . . . And not only were frontier men thus passing the line tacitly agreed on, but Sir William himself was even then meditating a step which would have produced, had it been taken, a general Indian war again. This was the purchase and settlement of an immense tract south of the Ohio River, where an independent colony was to be formed. How early this plan was conceived we do not learn, but, from Franklin's letters, we find that it was in contemplation in the spring of 1766. At that time Franklin was in London, and was written to by his son, Governor Franklin of New Jersey, with regard to the proposed colony. The plan seems to have been to buy of the Six Nations the lands south of the Ohio, a purchase which it was not doubted Sir William might make, and then to procure from the King a grant of as much territory as the Company which it was intended to form would require. Governor Franklin, accordingly, forwarded to his father an application for a grant, together with a letter from Sir William, recommending the plan to the ministry; all of which was duly communicated to the proper department. But at that time there were various interests bearing upon this plan of Franklin. The old Ohio Company [see OHIO: 1748-1754] was still suing, through its agent, Colonel George Mercer, for a perfection of the original grant. . . . General Lyman, from Connecticut we believe, was soliciting a new grant similar to that now asked by Franklin; and the ministers themselves were divided as to the policy and propriety of establishing any settlements so far in the interior,—Shelburne being in favor of the new colony, Hillsborough opposed to it. The Company was organized, however, and the nominally leading man therein being Mr. Thomas Walpole, a London banker of eminence, it was known as the Walpole Company. . . . Before any conclusion was come to, it was necessary to arrange definitely that boundary line which had been vaguely talked of in 1765, and with respect to which Sir William Johnson had written to the ministry, who had mislaid his letters and given him no instructions. The necessity of arranging this boundary was also kept in mind by the continued and growing irritation of the Indians, who found themselves invaded from every side. . . . Franklin, the father, all this time, was urging the same necessity upon the ministers in England; and about Christmas of 1767, Sir William's letters on the subject having been found, orders were sent him to complete the proposed purchase from the Six Nations, and settle all differences. But the project for a colony was for the time dropped, a new administration coming in which was not that way disposed. Sir William Johnson having received, early in the spring, the orders from England relative to a new treaty with the Indians, at once took steps to secure a full attendance. Notice was given to the various colonial governments, to the Six Nations, the Delawares, and the Shawnese, and a Congress was

appointed to meet at Fort Stanwix during the following October. It met upon the 24th of that month, and was attended by representatives from New Jersey, Virginia, and Pennsylvania; by Sir William and his deputies; by the agents of those traders who had suffered in the war of 1763; and by deputies from all of the Six Nations, the Delawares, and the Shawnese. The first point to be settled was the boundary line which was to determine the Indian lands of the West from that time forward; and this line the Indians, upon the 1st of November, stated should begin on the Ohio at the mouth of the Cherockee (or Tennessee) river; thence go up the Ohio and Alleghany to Kittaning; thence across to the Susquehannah, &c.; whereby the whole country south of the Ohio and Alleghany, to which the Six Nations had any claim, was transferred to the British. One deed, for a part of this land, was made on the 3d of November to William Trent, attorney for twenty-two traders, whose goods had been destroyed by the Indians in 1763. The tract conveyed by this was between the Kenhawa and Monongahela, and was by the traders named 'Indiana.' Two days afterward, a deed for the remaining western lands was made to the King, and the price agreed on paid down. These deeds were made upon the express agreement, that no claim should ever be based upon previous treaties, those of Lancaster, Logstown, &c.; and they were signed by the chiefs of the Six Nations, for themselves, their allies and dependents, the Shawnese, Delawares, Mingoes of Ohio, and others; but the Shawnese and Delaware deputies present did not sign them. Such was the treaty of Stanwix, whereon rests the title by purchase to Kentucky, western Virginia, and Pennsylvania. It was a better foundation, perhaps, than that given by previous treaties, but was essentially worthless; for the lands conveyed were not occupied or hunted on by those conveying them. . . . Meantime more than one bold man had ventured for a little while into the beautiful valleys of Kentucky, and, on the 1st of May, 1769, there was one going forth from his 'peaceable habitation on the Yaddin river in North Carolina,' whose name has since gone far and wide over this little planet of ours, he having become the type of his class. This was Daniel Boone. [See KENTUCKY: 1765-1778.] He crossed the mountains, and spent that summer and the next winter in the West. But, while he was rejoicing in the abundance of buffalo, deer, and turkeys among the cane-brakes, longer heads were meditating still that new colony; the plan of which had been lying in silence for two years and more. The Board of Trade was again called on to report upon the application, and Lord Hillsborough, the President, reported against it. This called out Franklin's celebrated 'Ohio Settlement,' a paper written with so much ability, that the King's Council put by the official report, and granted the petition, a step which mortified the noble lord so much that he resigned his official station. The petition now needed only the royal sanction, which was not given until August 14th, 1772; but in 1770, the Ohio Company was merged in Walpole's, and, the claims of the soldiers of 1756 being acknowledged both by the new Company and by government, all claims were quieted. Nothing was ever done, however, under the grant to Walpole, the Revolution soon coming upon America. After the Revolution, Mr. Walpole and his associates petitioned Congress respecting their lands called by them 'Vandalia,' but could get no help from that body."—J. H. Perkins, *English*

1766.—Examination of Benjamin Franklin before Parliament.—On Jan. 28, 1766, while the bill for the repeal of the Stamp Act was pending in Parliament, Benjamin Franklin was examined before the House of Commons, in committee. The questions and answers of this very interesting examination, as reported in the Parliamentary history, were as follows:

Q. What is your name, and place of abode?—A. Franklin, of Philadelphia.

Do the Americans pay any considerable taxes among themselves?—Certainly many, and very heavy taxes.

What are the present taxes in Pennsylvania, laid by the laws of the colony?—There are taxes on all estates real and personal, a poll-tax, a tax on all offices, professions, trades, and businesses, according to their profits; an excise on all wine, rum, and other spirit; and a duty of ten pounds per head on all negroes imported, with some other duties.

For what purposes are those taxes laid?—For the support of the civil and military establishments of the country, and to discharge the heavy debt contracted in the last war.

How long are those taxes to continue?—Those for discharging the debt are to continue till 1772, and longer, if the debt should not be then all discharged. The others must always continue.

Was it not expected that the debt would have been sooner discharged?—It was, when the peace was made with France and Spain; but a fresh war breaking out with the Indians, a fresh load of debt was incurred, and the taxes, of course, continued longer by a new law.

Are not all the people very able to pay those taxes?—No. The frontier counties, all along the continent, having been frequently ravaged by the enemy and greatly impoverished, are able to pay very little tax. And therefore, in consideration of their distresses, our late tax laws do expressly favour those counties, excusing the sufferers; and I suppose the same is done in other governments.

Are not you concerned in the management of the post office in America?—Yes; I am deputy post-master general of North America.

Don't you think the distribution of stamps, by post, to all the inhabitants, very practicable, if there was no opposition?—The posts only go along the sea coasts; they do not, except in a few instances, go back into the country; and if they did, sending for stamps by post would occasion an expence of postage, amounting, in many cases, to much more than that of the stamps themselves.

Are you acquainted with Newfoundland?—I never was there.

Do you know whether there are any post-roads on that island?—I have heard that there are no roads at all; but that the communication between one settlement and another is by sea only.

Can you disperse the stamps by post in Canada?—There is only a post between Montreal and Quebec. The inhabitants live so scattered and remote from each other, in that vast country, that

posts cannot be supported among them, and therefore they cannot get stamps per post. The English colonies too, along the frontiers, are very thinly settled.

From the thinness of the back settlements, would not the Stamp Act be extremely inconvenient to the inhabitants if executed?—To be sure it would; as many of the inhabitants could not get stamps when they had occasion for them, without taking long journeys, and spending, perhaps three or four pounds, that the crown might get sixpence.

Are not the colonies, from their circumstances, very able to pay the stamp duty?—In my opinion there is not gold and silver enough in the colonies to pay the stamp duty for one year.

Don't you know that the money arising from the stamps was all to be laid out in America?—I know it is appropriated by the act to the American service; but it will be spent in the conquered colonies, where the soldiers are, not in the colonies that pay it.

Is there not a balance of trade due from the colonies where the troops are posted, that will bring back the money to the old colonies?—I think not. I believe very little would come back. I know of no trade likely to bring it back. I think it would come from the colonies where it was spent directly to England; for I have always observed, that in every colony the more plenty of means of remittance to England, the more goods are sent for, and the more trade with England carried on.

What number of white inhabitants do you think there are in Pennsylvania?—I suppose there may be about 160,000.

What number of them are Quakers?—Perhaps a third.

What number of Germans?—Perhaps another third; but I cannot speak with certainty.

Have any number of the Germans seen service, as soldiers, in Europe?—Yes, many of them, both in Europe and America.

Are they as much dissatisfied with the stamp duty as the English?—Yes, and more; and with reason, as their stamps are, in many cases, to be double.

How many white men do you suppose there are in North America?—About 300,000, from 16 to 60 years of age.

What may be the amount of one year's imports into Pennsylvania from Britain?—I have been informed that our merchants compute the imports from Britain to be above 500,000*l*.

What may be the amount of the produce of your province exported to Britain?—It must be small, as we produce little that is wanted in Britain. I suppose it cannot exceed 40,000*l*.

How then do you pay the balance?—The balance is paid by our produce carried to the West Indies, and sold in our own islands, or to the French, Spaniards, Danes, and Dutch; by the same carried to other colonies in North America, as to New England, Nova Scotia, Newfoundland, Carolina, and Georgia; by the same carried to different parts of Europe, as Spain, Portugal and Italy. In all which places we receive either money, bills of exchange, or commodities that suit for remittance to Britain; which, together with all the profits on the industry of our merchants and mariners, arising in those circuitous voyages, and the freights made by their ships, centre finally in Britain to discharge the balance, and pay for British manufactures continually used in the province, or sold to foreigners by our traders.

Have you heard of any difficulties lately laid

on the Spanish trade?—Yes, I have heard that it has been greatly obstructed by some new regulations, and by the English men of war and cutters stationed all along the coast in America.

Do you think it right, that America should be protected by this country, and pay no part of the expence?—That is not the case. The colonies raised, clothed and paid, during the last war nearly 25,000 men, and spent many millions.

Were you not reimbursed by parliament?—We were only reimbursed what, in your opinion, we had advanced beyond our proportion, or beyond what might reasonably be expected from us; and it was a very small part of what we spent. Pennsylvania, in particular, disbursed about 500,000*l*., and the reimbursements, in the whole, did not exceed 60,000*l*.

You have said that you pay heavy taxes in Pennsylvania; what do they amount to in the pound?—The tax on all estates, real and personal, is eighteen pence in the pound, fully rated; and the tax on the profits of trades and professions, with other taxes, do, I suppose, make full half a crown in the pound.

Do you know anything of the rate of exchange in Pennsylvania, and whether it has fallen lately?—It is commonly from 170 to 175. I have heard that it has fallen lately from 175 to 162 and a half, owing, I suppose to their lessening their orders for goods; and when their debts to this country are paid I think the exchange will probably be at par.

Do not you think people of America would submit to pay the stamp duty, if it was moderated?—No, never, unless compelled by force of arms.

Are not the taxes in Pennsylvania, laid on unequally, in order to burden the English trade, particularly the tax on professions and business?—It is not more burdensome in proportion than the tax on lands. It is intended, and supposed to take an equal proportion of profits.

How is the assembly composed? Of what kinds of people are the members, landholders or traders?—It is composed of landholders, merchants, and artificers.

Are not the majority landholders?—I believe they are.

Do not they, as much as possible, shift the tax off from the land, to ease that, and lay the burthen heavier on trade?—I have never understood it so. I never heard such a thing suggested. And indeed an attempt of that kind could answer no purpose. The merchant or trader is always skilled in figures, and ready with his pen and ink. If unequal burdens are laid on his trade, he puts an additional price on his goods; and the consumers, who are chiefly landholders, finally pay the greatest part, if not the whole.

What was the temper of America towards Great Britain before the year 1763?—The best in the world. They submitted willingly to the government of the crown, and paid, in all their courts, obedience to acts of parliament. Numerous as the people are in the several old provinces, they cost you nothing in forts, citadels, garrisons or armies, to keep them in subjection. They were governed by this country at the expence only of a little pen, ink, and paper. They were led by a thread. They had not only a respect, but an affection for Great Britain, for its laws, its customs and manners, and even a fondness for its fashions, that greatly increased the commerce. Natives of Britain were always treated with particular regard; to be an Old England man was, of itself, a character

of some respect, and gave a kind of rank among us.

And what is their temper now?—O, very much altered.

Did you ever hear the authority of parliament to make laws for America questioned till lately?—The authority of Parliament was allowed to be valid in all laws, except such as should lay internal taxes. It was never disputed in laying duties to regulate commerce.

In what proportion hath population increased in America?—I think the inhabitants of all the provinces together, taken at a medium, double in about 25 years. But their demand for British manufactures increases much faster, as the consumption is not merely in proportion to their numbers, but grows with the growing abilities of the same numbers to pay for them. In 1723, the whole importation from Britain to Pennsylvania, was but about 15,000*l.* sterling; it is now near half a million.

In what light did the people of America use to consider the parliament of Great Britain?—They considered the parliament as the great bulwark and security of their liberties and privileges, and always spoke of it with the utmost respect and veneration. Arbitrary ministers, they thought, might possibly, at times, attempt to oppress them; but they relied on it, that the parliament, on application, would always give redress. They remembered, with gratitude, a strong instance of this, when a bill was brought into parliament, with a clause to make royal instructions laws in the colonies, which the House of Commons would not pass, and it was thrown out.

And have they not still the same respect for parliament?—No; it is greatly lessened.

To what causes is that owing?—To a concurrence of causes; the restraints lately laid on their trade, by which the bringing of foreign gold and silver into the colonies was prevented; the prohibition of making paper money among themselves; and then demand a new and heavy tax by stamps; taking away at the same time, trials by juries, and refusing to receive and hear their humble petitions.

Don't you think they would submit to the Stamp Act, if it was modified, the obnoxious parts taken out, and the duty reduced to some particulars, of small moment?—No; they will never submit to it.

What do you think is the reason that the people of America increase faster than in England?—Because they marry younger, and more generally.

Why so?—Because any young couple that are industrious, may easily obtain land of their own, on which they can raise a family.

Are not the lower rank of people more at their ease in America than in England?—They may be so, if they are sober and diligent, as they are better paid for their labour.

What is your opinion of a future tax, imposed on the same principle with that of the Stamp Act, how would the Americans receive it?—Just as they do this. They would not pay it.

Have not you heard of the resolution of this House, and of the House of Lords, asserting the right of parliament relating to America, including a power to tax the people there?—Yes, I have heard of such resolutions.

What will be the opinion of the Americans on those resolutions?—They will think them unconstitutional and unjust.

Was it an opinion in America before 1763, that the parliament had no right to lay taxes and duties there?—I never heard any objection to the right

of laying duties to regulate commerce; but a right to lay internal taxes was never supposed to be in parliament, as we are not represented there.

On what do you found your opinion, that the people in America made any such distinction?—I know that whenever the subject has occurred in conversation where I have been present, it has appeared to be the opinion of every one, that we could not be taxed in a parliament where we were not represented. But the payment of duties laid by act of parliament, as regulations of commerce, was never disputed.

But can you name any act of assembly, or public act of any of your governments, that made such distinction?—I do not know that there was any; I think there was never an occasion to make any such act, till now that you have attempted to tax us; that has occasioned resolutions of assembly, declaring the distinction, in which I think every assembly on the continent, and every member in every assembly, have been unanimous.

What then could occasion conversations on that subject before that time?—There was, in 1754, a proposition made (I think it came from hence) that in case of a war, which was then apprehended, the governors of the colonies should meet, and order the levying of troops, building of forts, and taking every other necessary measure for the general defence; and should draw on the treasury here, for the sums expended, which were afterwards to be raised in the colonies by a general tax, to be laid on them by act of parliament. This occasioned a good deal of conversation on the subject, and the general opinion was, that the parliament neither would, nor could lay any tax on us, till we were duly represented in parliament, because it was not just, nor agreeable to the nature of an English constitution.

Don't you know there was a time in New York, when it was under consideration to make an application to parliament, to lay taxes on that colony, upon a deficiency arising from the assembly's refusing or neglecting to raise the necessary supplies for the support of the civil government?—I never heard of it.

There was such an application under consideration in New York; and do you apprehend they could suppose the right of parliament to lay a tax in America was only local, and confined to the case of a deficiency in a particular colony, by a refusal of its assembly to raise the necessary supplies?—They could not suppose such a case, as that the assembly would not raise the necessary supplies to support its own government. An assembly that would refuse it, must want common sense, which cannot be supposed. I think there was never any such case at New York, and that it must be a misrepresentation, or the fact must be misunderstood. I know there have been some attempts, by ministerial instructions from hence, to oblige the assemblies to settle permanent salaries on governors, which they wisely refused to do; but I believe no assembly of New York, or any other colony, ever refused duly to support government, by proper allowances, from time to time, to public officers.

But in case a governor, acting by instruction, should call on an assembly to raise the necessary supplies, and the assembly should refuse to do it, do you not think it would then be for the good of the people of the colony, as well as necessary to government, that the parliament should tax them?—I do not think it would be necessary. If an assembly could possibly be so absurd as to refuse raising the supplies requisite for the

maintenance of government among them, they could not long remain in such a situation; the disorders and confusion occasioned by it, must soon bring them to reason.

If it should not, ought not the right to be in Great Britain of applying a remedy?—A right only to be used in such a case, I should have no objection to, supposing it to be used merely for the good of the people of the colony.

But who is to judge of that, Britain or the colony?—Those that feel can best judge.

You say the colonies have always submitted to external taxes, and object to the right of parliament only in laying internal taxes; now can you shew that there is any kind of difference between the two taxes to the colony on which they may be laid?—I think the difference is very great. An external tax is a duty laid on commodities imported; that duty is added to the first cost, and other charges on the commodity, and when it is offered to sale, makes a part of the price. If the people do not like it at that price, they refuse it; they are not obliged to pay it. But an internal tax is forced from the people without their consent, if not laid by their own representatives. The Stamp Act says, we shall have no commerce, make no exchange of property with each other, neither purchase nor grant, nor recover debts; we shall neither marry nor make our wills, unless we pay such sums, and thus it is intended to extort our money from us, or ruin us by the consequences of refusing to pay it.

But supposing the internal tax or duty to be laid on the necessaries of life imported into your colony, will not that be the same thing in its effects as an internal tax?—I do not know a single article imported into the northern colonies, but what they can either do without or make themselves.

Don't you think cloth from England absolutely necessary to them?—No, by no means absolutely necessary; with industry and good management, they may very well supply themselves with all they want.

Will it not take a long time to establish that manufacture among them; and must they not in the mean while suffer greatly?—I think not. They have made a surprising progress already. And I am of opinion, that before their old clothes are worn out, they will have new ones of their own making.

Can they possibly find wool enough in North America?—They have taken steps to increase the wool. They entered into general combination to eat no more lamb, and very few lambs were killed last year. This course persisted in, will soon make a prodigious difference in the quantity of wool. And the establishing of great manufactories, like those in the clothing towns here, is not necessary, as it is where the business is to be carried on for the purposes of trade. The people will all spin and work for themselves, in their own houses.

Can there be wool and manufacture enough in one or two years?—In three years, I think, there may.

Does not the severity of the winter, in the northern colonies, occasion the wool to be of bad quality?—No, the wool is very fine and good.

In the more southern colonies, as in Virginia, don't you know that the wool is coarse, and only a kind of hair?—I don't know it. I never heard it. Yet I have been sometimes in Virginia. I cannot say I ever took particular notice of the wool there, but I believe it is good, though I cannot speak positively of it; but Virginia, and

the colonies south of it, have less occasion for wool; their winters are short, and not very severe, and they can very well clothe themselves with linen and cotton of their own raising for the rest of the year.

Are not the people in the more northern colonies obliged to fodder their sheep all the winter?—In some of the most northern colonies they may be obliged to do it some part of the winter.

Considering the resolutions of parliament as to the right, do you think, if the Stamp Act is repealed, that the North Americans will be satisfied?—I believe they will.

Why do you think so?—I think the resolutions of right will give them very little concern, if they are never attempted to be carried into practice. The colonies will probably consider themselves in the same situation, in that respect, with Ireland; they know you claim the same right with regard to Ireland, but you never exercise it. And they may believe you never will exercise it in the colonies, any more than in Ireland, unless on some very extraordinary occasion.

But who are to be the judges of that extraordinary occasion? Is not the parliament?—Though the parliament may judge of the occasion, the people will think it can never exercise such right, till representatives from the colonies are admitted into parliament, and that whenever the occasion arises, representatives will be ordered.

Did you never hear that Maryland, during the last war, had refused to furnish a quota towards the common defence?—Maryland has been much misrepresented in that matter. Maryland, to my knowledge, never refused to contribute, or grant aids to the crown. The assemblies every year during the war, voted considerable sums, and formed bills to raise them. The bills were, according to the constitution of that province, sent up to the council, or upper house, for concurrence, that they might be presented to the governor, in order to be enacted into laws. Unhappy disputes between the two houses, arising from the defects of that constitution principally, rendered all the bills but one or two abortive. The proprietary's council rejected them. It is true, Maryland did not contribute its proportion, but it was, in my opinion, the fault of the government, not of the people.

Was it not talked of in the other provinces as a proper measure to apply to parliament to compel them?—I have heard such discourse; but as it was well known that the people were not to blame, no such application was ever made, or any step taken towards it.

Was it not proposed at a public meeting?—Not that I know of.

Do you remember the abolishing of the paper currency in New England, by act of assembly?—I do remember its being abolished in the Massachusetts Bay.

Was not lieutenant governor Hutchinson principally concerned in that transaction?—I have heard so.

Was it not at that time a very unpopular law?—I believe it might, though I can say little about it, as I lived at a distance from that province.

Was not the scarcity of gold and silver an argument used against abolishing the paper?—I suppose it was.

What is the present opinion there of that law? Is it as unpopular as it was at first?—I think it is not.

Have not instructions from hence been sometimes sent over to governors, highly oppressive and unpolitical?—Yes.

Have not some governors dispensed with them for that reason?—Yes, I have heard so.

Did the Americans ever dispute the controlling power of parliament to regulate the commerce?—No.

Can any thing less than a military force carry the Stamp Act into execution?—I do not see how a military force can be applied to that purpose.

Why may it not?—Suppose a military force sent into America, they will find nobody in arms; what are they then to do? They cannot force a man to take stamps who chuses to do without them. They will not find rebellion; they may indeed make one.

If the act is not repealed, what do you think will be the consequences?—A total loss of the respect and affection the people of America bear to this country, and of all the commerce that depends on that respect and affection.

How can the commerce be affected?—You will find, that if the act is not repealed, they will take very little of your manufactures in a short time.

Is it in their power to do without them?—I think they may very well do without them.

Is it their interest not to take them?—The goods they take from Britain are either necessities, mere conveniences, or superfluities. The first, as cloth, &c. with a little industry they can make at home: the second they can do without, till they are able to provide them among themselves; and the last, which are much the greatest part, they will strike off immediately. They are mere articles of fashion, purchased and consumed, because the fashion in a respected country, but will now be detested and rejected. The people have already struck off, by general agreement, the use of all goods fashionable in mournings, and many thousand pounds are sent back as unsaleable.

Is it their interest to make cloth at home?—I think they may at present get it cheaper from Britain, I mean of the same fineness and neatness of workmanship; but when one considers other circumstances, the restraints on their trade, and the difficulty of making remittances, it is their interest to make every thing.

Suppose an act of internal regulations connected with the tax, how would they receive it?—I think it would be objected to.

Then no regulation with a tax would be submitted to?—Their opinion is, that when aids to the crown are wanted, they are to be asked of the several assemblies according to the old established usage, who will, as they have always done, grant them freely. And that their money ought not to be given away, without their consent, by persons at a distance, unacquainted with their circumstances and abilities. The granting aids to the crown, is the only means they have of recommending themselves to their sovereign, and they think it extremely hard and unjust, that a body of men, in which they have no representatives, should make a merit to itself of giving and granting what is not its own, but theirs, and deprives them of a right they esteem of the utmost value and importance, as it is the security of all their other rights.

But is not the post office, which they have long received, a tax as well as a regulation?—No; the money paid for the postage of a letter is not of the nature of a tax; it is merely a quantum meruit for a service done; no person is compellable to pay the money, if he does not chuse to receive the service. A man may still, as before act, send his letter by a servant, a special messenger, or a friend, if he thinks it cheaper and safer.

But do they not consider the regulations of the

post-office, by the act of last year, as a tax?—By the regulations of last year the rate of postage was generally abated near thirty per cent. through all America; they certainly cannot consider such abatement as a tax.

If an excise was laid by parliament, which they might likewise avoid paying, by not consuming the articles excised, would they then not object to it?—They would certainly object to it, as an excise is unconnected with any service done, and is merely an aid which they think ought to be asked of them, and granted by them if they are to pay it, and can be granted for them, by no others whatsoever, whom they have not impowered for that purpose.

You say they do not object to the right of parliament, in laying duties on goods to be paid on their importation; now, is there any kind of difference between a duty on the importation of goods and an excise on their consumption?—Yes; a very material one; an excise, for the reasons I have just mentioned, they think you can have no right to lay within their country. But the sea is yours; you maintain, by your fleets, the safety of navigation in it, and keep it clear of pirates; you may have therefore a natural and equitable right to some toll or duty on merchandizes carried through that part of your dominions, towards defraying the expence you are at in ships to maintain the safety of that carriage.

Does this reasoning hold in the case of a duty laid on the produce of their lands exported? And would they not then object to such a duty?—If it tended to make the produce so much dearer abroad as to lessen the demand for it, to be sure they would object to such a duty; not to your right of laying it, but they would complain of it as a burden, and petition you to lighten it.

Is not the duty paid on the tobacco exported a duty of that kind?—That, I think, is only on tobacco carried coastwise from one colony to another, and appropriated as a fund for supporting the college at Williamsburg, in Virginia.

Have not the assemblies in the West Indies the same natural rights with those in North America?—Undoubtedly.

And is there not a tax laid there on their sugars exported?—I am not much acquainted with the West Indies, but the duty of four and a half per cent., on sugars exported, was, I believe, granted by their own assemblies.

How much is the poll tax in your province laid on unmarried men?—It is, I think, fifteen shillings, to be paid by every single freeman, upwards of twenty-one years old.

What is the annual amount of all the taxes in Pennsylvania?—I suppose about 20,000*l.* sterling.

Supposing the Stamp Act continued, and enforced, do you imagine that ill humour will induce the Americans to give as much for worse manufactures of their own and use them, preferably to better of ours?—Yes, I think so. People will pay as freely to gratify one passion as another, their resentment as their pride.

Would the people at Boston discontinue their trade?—The merchants are a very small number compared with the body of the people, and must discontinue their trade, if nobody will buy their goods.

What are the body of the people in the colonies?—They are farmers, husbandmen or planters.

Would they suffer the produce of their lands to rot?—No; but they would not raise so much. They would manufacture more, and plough less.

Would they live without the administration of justice in civil matters, and suffer all the inconveni-

ences of such a situation for any considerable time, rather than take the stamps, supposing the stamps were protected by a sufficient force, where every one might have them?—I think the supposition impracticable, that the stamps should be so protected as that every one might have them. The Act requires sub-distributors to be appointed in every county town, district, and village, and they would be necessary. But the principal distributors, who were to have had a considerable profit on the whole, have not thought it worth while to continue in the office, and I think it impossible to find sub-distributors fit to be trusted, who, for the trifling profit that must come to their share, would incur the odium, and run the hazard that would attend it; and if they could be found, I think it impracticable to protect the stamps in so many distant and remote places.

But in places where they could be protected, would not the people use them rather than remain in such a situation, unable to obtain any right, or recover, by law, any debt?—It is hard to say what they would do. I can only judge what other people will think, and how they will act, by what I feel within myself. I have a great many debts due to me in America, and I had rather they should remain unrecoverable by any law than submit to the Stamp Act. They will be debts of honour. It is my opinion the people will either continue in that situation, or find some way to extricate themselves, perhaps by generally agreeing to proceed in the courts without stamps.

What do you think a sufficient military force to protect the distribution of the stamps in every part of America?—A very great force; I cannot say what, if the disposition of America is for a general resistance.

What is the number of men in America able to bear arms, or of disciplined militia?—There are, I suppose, at least— [Question objected to. He withdrew. Called in again.]

Is the American Stamp Act an equal tax on that country?—I think not.

Why so?—The greatest part of the money must arise from lawsuits for the recovery of debts, and be paid by the lower sort of people, who were too poor easily to pay their debts. It is therefore a heavy tax on the poor, and a tax upon them for being poor.

But will not this increase of expence be a means of lessening the number of lawsuits?—I think not; for as the costs all fall upon the debtor, and are to be paid by him, they would be no discouragement to the creditor to bring his action.

Would it not have the effect of excessive usury?—Yes, as an oppression of the debtor.

How many ships are there laden annually in North America with flax seed for Ireland?—I cannot speak to the number of ships, but I know that in 1752, 10,000 hogsheads of flax seed, each containing seven bushels, were exported from Philadelphia to Ireland. I suppose the quantity is greatly increased since that time; and it is understood that the exportation from New York is equal to that from Philadelphia.

What becomes of the flax that grows with that flax seed?—They manufacture some into coarse, and some into a middling kind of linen.

Are there any slitting mills in America?—I think there are three, but I believe only one at present employed. I suppose they will all be set to work, if the interruption of the trade continues.

Are there any fulling mills there?—A great many.

Did you never hear that a great quantity of stockings were contracted for, for the army, dur-

ing the war, and manufactured in Philadelphia?—I have heard so.

If the Stamp Act should be repealed, would not the Americans think they could oblige the parliament to repeal every external tax law now in force?—It is hard to answer questions what people at such a distance will think.

But what do you imagine they will think were the motives of repealing the Act?—I suppose they will think that it was repealed from a conviction, of its inexpediency; and they will rely upon it, that while the same inexpediency subsists, you will never attempt to make such another.

What do you mean by its inexpediency?—I mean its inexpediency on several accounts; the poverty and inability of those who were to pay the tax; the general discontent it has occasioned; and the impracticability of enforcing it.

If the Act should be repealed, and the legislature should shew its resentment to the opposers of the Stamp Act, would the colonies acquiesce in the authority of the legislature? What is your opinion they would do?—I don't doubt at all, that if the legislature repeal the Stamp Act, the colonies will acquiesce in the authority.

But if the legislature should think fit to ascertain its right to lay taxes, by any act laying a small tax, contrary to their opinion, would they submit to pay the tax?—The proceedings of the people in America have been considered too much together. The proceedings of the assemblies have been very different from those of the mobs, and should be distinguished, as having no connection with each other. The assemblies have only peaceably resolved what they take to be their rights; they have not built a fort, raised a man, or provided a grain of ammunition, in order to such opposition. The ringleaders of riot they think ought to be punished; they would punish them themselves, if they could. Every sober, sensible man would wish to see rioters punished, as otherwise peaceable people have no security of person or estate. But as to an internal tax, how small soever, laid by the legislature here on the people there, while they have no representatives in this legislature, I think it will never be submitted to.—They will oppose it to the last.—They do not consider it as at all necessary for you to raise money on them by your taxes, because they are, and always have been, ready to raise money by taxes among themselves, and to grant large sums, equal to their abilities, upon requisition from the crown.—They have not only granted equal to their abilities, but, during all the last war, they granted far beyond their abilities, and beyond their proportion with this country, you yourselves being judges, to the amount of many hundred thousand pounds, and this they did freely and readily, only on a sort of promise from the secretary of state, that it should be recommended to parliament to make them compensation. It was accordingly recommended to parliament, in the most honourable manner, for them. America has been greatly misrepresented and abused here, in papers, and pamphlets, and speeches, as ungrateful, and unreasonable, and unjust, in having put this nation to immense expence for their defence, and refusing to bear any part of that expence. The colonies raised, paid, and clothed, near 25,000 men during the last war, a number equal to those sent from Britain, and far beyond their proportion; they went deeply into debt in doing this, and all their taxes and estates are mortgaged, for many years to come, for discharging that debt. Government here was at that time very sensible of this. The colonies were recommended to parlia-

ment. Every year the King sent down to the House a written message to this purpose, That his Majesty, being highly sensible of the zeal and vigour with which his faithful subjects in North America had exerted themselves, in defence of his Majesty's just rights and possessions, recommended it to the House to take the same into consideration, and enable him to give them a proper compensation. You will find those messages on your own journals every year of the war to the very last, and you did accordingly give 200,000*l.* annually to the crown, to be distributed in such compensation to the colonies. This is the strongest of all proofs that the colonies, far from being unwilling to bear a share of the burden, did exceed their proportion; for if they had done less, or had only equalled their proportion, there would have been no room or reason for compensation. Indeed the sums reimbursed them, were by no means adequate to the expence they incurred beyond their proportion; but they never murmured at that; they esteemed their sovereign's approbation of their zeal and fidelity, and the approbation of this House, far beyond any other kind of compensation; therefore there was no occasion for this act, to force money from a willing people; they had not refused giving money for the purposes of the act; no requisition had been made; they were always willing and ready to do what could reasonably be expected from them, and in this light they wish to be considered.

But suppose Great Britain should be engaged in a war in Europe, would North America contribute to the support of it?—I do think they would, as far as their circumstances would permit. They consider themselves as a part of the British empire, and as having one common interest with it; they may be looked on here as foreigners, but they do not consider themselves as such. They are zealous for the honour and prosperity of this nation, and while they are well used, will always be ready to support it, as far as their little power goes. In 1739 they were called upon to assist in the expedition against Carthagena, and they sent 3,000 men to join your army. It is true Carthagena is in America, but as remote from the northern colonies as if it had been in Europe. They make no distinction of wars, as to their duty of assisting in them. I know the last war is commonly spoke of here as entered into for the defence, or for the sake of the people of America. I think it is quite misunderstood. It began about the limits between Canada and Nova Scotia, about territories to which the crown indeed laid claim, but were not claimed by any British colony; none of the lands had been granted to any colonist; we had therefore no particular concern or interest in that dispute. As to the Ohio, the contest there began about your right of trading in the country, a right you had by the treaty of Utrecht, which the French infringed; they seized the traders and their goods, which were your manufactures; they took a fort which a company of your merchants, and their factors and correspondents, had erected there to secure that trade. Braddock was sent with an army to re-take that fort (which was looked on here as another incroachment on the King's territory) and to protect your trade. It was not till after his defeat that the colonies were attacked. They were before in perfect peace with both French and Indians; the troops were not therefore sent for their defence. The trade with the Indians, though carried on in America, is not an American interest. The people of America are chiefly farmers and planters; scarce any thing that they raise or produce is an article of commerce with the Indians. The Indian

trade is a British interest; it is carried on with British manufactures, for the profit of British merchants and manufacturers; therefore the war, as it commenced for the defence of territories of the crown, the property of no American, and for the defence of a trade purely British, was really a British war—and yet the people of America made no scruple of contributing their utmost towards carrying it on, and bringing it to a happy conclusion.

Do you think then that the taking possession of the King's territorial rights, and strengthening the frontiers, is not an American interest?—Not particularly, but conjointly a British and an American interest.

You will not deny that the preceding war, the war with Spain, was entered into for the sake of America; was it not occasioned by captures made in the American seas?—Yes; captures of ships carrying on the British trade there, with British manufactures.

Was not the late war with the Indians, since the peace with France, a war for America only?—Yes; it was more particularly for America than the former, but it was rather a consequence or remains of the former war, the Indians not having been thoroughly pacified, and the Americans bore by much the greatest share of the expence. It was put an end to by the army under general Bouquet; there were not above 300 regulars in that army, and above 1,000 Pennsylvanians.

Is it not necessary to send troops to America, to defend the Americans against the Indians?—No, by no means; it never was necessary. They defended themselves when they were but a handful, and the Indians much more numerous. They continually gained ground, and have driven the Indians over the mountains, without any troops sent to their assistance from this country. And can it be thought necessary now to send troops for their defence from those diminished Indian tribes, when the colonies are become so populous and so strong? There is not the least occasion for it; they are very able to defend themselves.

Do you say there were no more than 300 regular troops employed in the late Indian war?—Not on the Ohio, or the frontiers of Pennsylvania, which was the chief part of the war that affected the colonies. There were garrisons at Niagara, Fort Detroit, and those remote posts kept for the sake of your trade; I did not reckon them, but I believe that on the whole the number of Americans, or provincial troops, employed in the war, was greater than that of the regulars. I am not certain, but I think so.

Do you think the assemblies have a right to levy money on the subject there, to grant to the crown?—I certainly think so; they have always done it.

Are they acquainted with the Declaration of Rights; and do they know that by that statute, money is not to be raised on the subject but by consent of parliament?—They are very well acquainted with it.

How then can they think they have a right to levy money for the crown, or for any other than local purposes?—They understand that clause to relate to subjects only within the realm; that no money can be levied on them for the crown, but by consent of parliament. The colonies are not supposed to be within the realm; they have assemblies of their own, which are their parliaments, and they are, in that respect, in the same situation with Ireland. When money is to be raised for the crown upon the subject in Ireland, or in the colonies, the consent is given in the parliament of

Ireland, or in the assemblies of the colonies. They think the parliament of Great Britain cannot properly give that consent till it has representatives from America; for the Petition of Right expressly says, it is to be by common consent in parliament, and the people of America have no representatives in parliament, to make a part of that common consent.

If the Stamp Act should be repealed, and an act should pass, ordering the assemblies of the colonies to indemnify the sufferers by the riots, would they obey it?—That is a question I cannot answer.

Suppose the King should require the colonies to grant a revenue, and the parliament should be against their doing it, do they think they can grant a revenue to the King, without the consent of the parliament of Great Britain?—That is a deep question. As to my own opinion I should think myself at liberty to do it, and should do it, if I liked the occasion.

When money has been raised in the colonies, upon requisitions, has it not been granted to the King?—Yes, always; but the requisitions have generally been for some service expressed, as to raise, clothe, and pay troops, and not for money only.

If the act should pass, requiring the American Assemblies to make compensation to the sufferers, and they should disobey it, and then the parliament should, by another act, lay an internal tax, would they then obey it?—The people will pay no internal tax: and I think an act to oblige the assemblies to make compensation is unnecessary, for I am of opinion, that as soon as the present heats are abated, they will take the matter into consideration, and if it is right to be done, they will do it of themselves.

Do not letters often come into the post offices in America, directed into some inland town where no post goes?—Yes.

Can any private person take up those letters, and carry them as directed?—Yes; any friend of the person may do it, paying the postage that has accrued.

But must not he pay an additional postage for the distance to such an inland town?—No.

Can the post-master answer delivering the letter, without being paid such additional postage?—Certainly he can demand nothing, where he does no service.

Suppose a person, being far from home, finds a letter in a post office directed to him, and he lives in a place to which the post generally goes, and the letter is directed to that place, will the post-master deliver him the letter, without his paying the postage received at the place to which the letter is directed?—Yes; the office cannot demand postage for a letter that it does not carry, or farther than it does carry it.

Are not ferrymen in America obliged, by act of parliament, to carry over the posts without pay?—Yes.

Is not this a tax on the ferrymen?—They do not consider it as such, as they have an advantage from persons travelling with the post.

If the Stamp Act should be repealed, and the crown should make a requisition to the colonies for a sum of money, would they grant it?—I believe they would.

Why do you think so?—I can speak for the colony I live in; I had it in instruction from the assembly to assure the ministry, that as they always had done, so they should always think it their duty to grant such aids to the crown as were suit-

able to their circumstances and abilities, whenever called upon for the purpose, in the usual constitutional manner; and I had the honour of communicating this instruction to that hon. gentleman then minister.

Would they do this for a British concern; as suppose a war in some part of Europe, that did not affect them?—Yes, for any thing that concerned the general interest. They consider themselves as a part of the whole.

What is the usual constitutional manner of calling on the colonies for aids?—A letter from the secretary of state.

Is this all you mean, a letter from the secretary of state?—I mean the usual way of requisition, in a circular letter from the secretary of state, by his Majesty's command, reciting the occasion, and recommending it to the colonies to grant such aids as became their loyalty, and were suitable to their abilities.

Did the secretary of state ever write for money for the crown?—The requisitions have been to raise, clothe, and pay men, which cannot be done without money.

Would they grant money alone, if called on?—In my opinion they would, money as well as men, when they have money, or can procure it.

If the parliament should repeal the Stamp Act, will the assembly of Pennsylvania rescind their resolutions?—I think not.

Before there was any thought of the Stamp Act, did they wish for a representation in parliament?—No.

Don't you know that there is, in the Pennsylvania charter, an express reservation of the right of parliament to lay taxes there?—I know there is a clause in the charter, by which the King grants that he will levy no taxes on the inhabitants, unless it be with the consent of the assembly, or by an act of parliament.

How then could the assembly of Pennsylvania assert, that laying a tax on them by the Stamp Act was an infringement of their rights?—They understand it thus: by the same charter, and otherwise, they are entitled to all the privileges and liberties of Englishmen; they find in the Great Charters, and the Petition and Declaration of Rights, that one of the privileges of English subjects is, that they are not to be taxed but by their common consent; they have therefore relied upon it, from the first settlement of the province, that the parliament never would, nor could, by colour of that clause in the charter, assume a right of taxing them, till it had qualified itself to exercise such right, by admitting representatives from the people to be taxed, who ought to make a part of that common consent.

Are there any words in the charter that justify that construction?—The common rights of Englishmen, as declared by Magna Charta, and the Petition of Right, all justify it.

Does the distinction between internal and external taxes exist in the words of the charter?—No, I believe not.

Then may they not, by the same interpretation, object to the parliament's right of external taxation?—They never have hitherto. Many arguments have been lately used here to shew them that there is no difference, and that if you have no right to tax them internally, you have none to tax them externally, or make any other law to bind them. At present they do not reason so, but in time they may possibly be convinced by these arguments.

Do not the resolutions of the Pennsylvania as-

semblies say, all taxes?—If they do, they mean only internal taxes; the same words have not always the same meaning here and in the colonies. By taxes they mean internal taxes; by duties they mean customs; these are the ideas of the language.

Have you not seen the resolutions of the Massachusetts's Bay assembly?—I have.

Do they not say, that neither external nor internal taxes can be laid on them by parliament?—I don't know that they do; I believe not.

If the same tax should say neither tax nor imposition could be laid, does not that province hold the power of parliament can lay neither?—I suppose that by the word imposition, they do not intend to express duties to be laid on goods imported, as regulations of commerce.

What can the colonies mean then by imposition as distinct from taxes?—They may mean many things, as impressing of men, or of carriages, quartering troops on private houses, and the like; there may be great impositions that are not properly taxes.

Is not the post-office rate an internal tax laid by act of parliament?—I have answered that.

Are all parts of the colonies equally able to pay taxes?—No, certainly; the frontier parts, which have been ravaged by the enemy, are greatly disabled by that means, and therefore, in such cases, are usually favoured in our tax laws.

Can we, at this distance, be competent judges of what favours are necessary?—The parliament have supposed it, by claiming a right to make tax laws for America; I think it impossible.

Would the repeal of the Stamp Act be any discouragement of your manufactures? Will the people that have begun to manufacture decline it?—Yes, I think they will; especially if, at the same time, the trade is opened again, so that remittances can be easily made. I have known several instances that make it probable. In the war before last, tobacco being low, and making little remittance, the people of Virginia went generally into family manufactures. Afterwards, when tobacco bore a better price, they returned to the use of British manufactures. So fulling mills were very much disused in the last war in Pennsylvania, because bills were then plenty, and remittances could easily be made to Britain for English cloth and other goods.

If the Stamp Act should be repealed, would it induce the assemblies of America to acknowledge the right of parliament to tax them, and would they erase their resolutions?—No, never.

Is there no means of obliging them to erase those resolutions?—None, that I know of; they will never do it, unless compelled by force of arms. . . .

What used to be the pride of the Americans?—To indulge in the fashions and manufactures of Great Britain.

What is now their pride?—To wear their old clothes over again, till they can make new ones.—Withdraw.

—*Parliamentary history of England, v. 16, pp. 138-160.*

"Mr. Sparks very justly says that there was no event in Franklin's life more creditable to his talents and character, or which gave him so much celebrity, as this examination before the House of Commons. His further statement, however, that Franklin's answers were given without premeditation and without knowing beforehand the nature or form of the question that was to be put, is a little too sweeping. In a memorandum which Franklin gave to a friend

who wished to know by whom the several questions were put, he admitted that many were put by friends to draw out in answer the substance of what he had before said upon the subject."—J. Bigelow, *Life of Benjamin Franklin, v. 1, p. 507, footnote.*

1766.—Speech of Pitt in defense of American colonies.—Repeal of the Stamp Act and passage of the Declaratory Act.—"The Grenville Ministry had fallen in July [1765], and had been succeeded by that of Rockingham; and Conway, who had been one of the few opponents of the Stamp Act, was now Secretary of State for the Colonies. . . . The Stamp Act had contributed nothing to the downfall of Grenville; it attracted so little attention that it was only in the last days of 1765 or the first days of 1766 that the new ministers learnt the views of Pitt upon the subject; it was probably a complete surprise to them to learn that it had brought the colonies to the verge of rebellion, and in the first months of their power they appear to have been quite uncertain what policy they would pursue. . . . Parliament met on December 17, 1765, and the attitude of the different parties was speedily disclosed. A powerful Opposition, led by Grenville and Bedford, strenuously urged that no relaxation or indulgence should be granted to the colonists. . . . Pitt, on the other hand, rose from his sick-bed, and in speeches of extraordinary eloquence, and which produced an amazing effect on both sides of the Atlantic, he justified the resistance of the colonists."—W. E. H. Lecky, *History of England in the eighteenth century, v. 3, ch. 12.*—The following is the main part of the speech delivered by Pitt (not yet made Lord Chatham) on Jan. 14, 1766, as imperfectly reported: "It is my opinion, that this kingdom has no right to lay a tax upon the colonies. At the same time, I assert the authority of this kingdom over the colonies to be sovereign and supreme, in every circumstance of government and legislation whatsoever. They are the subjects of this kingdom; equally entitled with yourselves to all the natural rights of mankind and the peculiar privileges of Englishmen; equally bound by its laws, and equally participating in the constitution of this free country. The Americans are the sons, not the bastards of England! Taxation is no part of the governing or legislative power. The taxes are a voluntary gift and grant of the Commons alone. In legislation the three estates of the realm are alike concerned; but the concurrence of the peers and the Crown to a tax is only necessary to clothe it with the form of a law. The gift and grant is of the Commons alone. . . . When . . . in this House, we give and grant, we give and grant what is our own. But in an American tax, what do we do? 'We, your Majesty's Commons for Great Britain, give and grant to your Majesty'—what? Our own property! No! 'We give and grant to your Majesty' the property of your Majesty's Commons of America! It is an absurdity in terms. . . . There is an idea in some that the colonies are virtually represented in the House. I would fain know by whom an American is represented here. Is he represented by any knight of the shire, in any county in this kingdom? Would to God that respectable representation was augmented to a greater number! Or will you tell him that he is represented by any representative of a borough? a borough which, perhaps, its own representatives never saw! This is what is called the rotten part of the Constitution. It cannot continue a century.

If it does not drop, it must be amputated. The idea of a virtual representation of America in this House is the most contemptible idea that ever entered the head of a man. It does not deserve a serious refutation. The Commons of America represented in their several assemblies, have ever been in the possession of this, their constitutional right, of giving and granting their own money. They would have been slaves if they had not enjoyed it! At the same time, this kingdom, as the supreme governing and legislative power, has always bound the colonies by her laws, by her regulations, and restrictions in trade, in navigation, in manufactures, in every thing, except that of taking their money out of their pockets without their consent. Here I would draw the line. . . . Gentlemen, sir, have been charged with giving birth to sedition in America. They have spoken their sentiments with freedom against this unhappy act, and that freedom has become their crime. Sorry I am to hear the liberty of speech in this House imputed as a crime. But the imputation shall not discourage me. It is a liberty I mean to exercise. No gentleman ought to be afraid to exercise it. It is a liberty by which the gentleman who calumniates it might have profited. He ought to have desisted from his project. The gentleman tells us America is obstinate; America almost in open rebellion. I rejoice that America has resisted. Three millions of people, so dead to all the feelings of liberty as voluntarily to submit to be slaves, would have been fit instruments to make slaves of the rest. . . . Since the accession of King William, many ministers, some of great, others of more moderate abilities, have taken the lead of government. . . . None of these thought or even dreamed, of robbing the colonies of their constitutional rights. That was reserved to mark the era of the late administration. Not that there were wanting some, when I had the honor to serve his Majesty, to propose to me to burn my fingers with an American stamp act. With the enemy at their back, with our bayonets at their breasts, in the day of their distress, perhaps the Americans would have submitted to the imposition; but it would have been taking an ungenerous, an unjust advantage. The gentleman boasts of his bounties to America! Are not these bounties intended finally for the benefit of this kingdom? If they are not, he has misapplied the national treasures! I am no courtier of America. I stand up for this kingdom. I maintain that the Parliament has a right to bind, to restrain America. Our legislative power over the colonies is sovereign and supreme. I would advise every gentleman to sell his lands, if he can, and embark for that country. When two countries are connected together like England and her colonies, without being incorporated, the one must necessarily govern. The greater must rule the less. But she must so rule it as not to contradict the fundamental principles that are common to both. . . . The gentleman asks, When were the colonies emancipated? I desire to know, when were they made slaves? But I dwell not upon words. When I had the honor of serving his Majesty, I availed myself of the means of information which I derived from my office. I speak, therefore, from knowledge. My materials were good. I was at pains to collect, to digest, to consider them; and I will be bold to affirm, that the profits to Great Britain from the trade of the colonies through all its branches, is two millions a year. This is the fund that carried you triumphantly through the last war. The estates that were rented at

two thousand pounds a year, three-score years ago, are at three thousand at present. Those estates sold then from fifteen to eighteen years purchase; the same may now be sold for thirty. You owe this to America. This is the price America pays you for her protection. And shall a miserable financier come with a boast, that he can bring 'a pepper-corn' into the exchequer by the loss of millions to the nation? I dare not say how much higher these profits may be augmented. . . . I am convinced on other grounds that the commercial system of America may be altered to advantage. You have prohibited where you ought to have encouraged. You have encouraged where you ought to have prohibited. Improper restraints have been laid on the continent in favor of the islands. You have but two nations to trade with in America. Would you had twenty! Let acts of Parliament in consequence of treaties remain; but let not an English minister become a custom-house officer for Spain, or for any foreign power. Much is wrong! Much may be amended for the general good of the whole! . . . A great deal has been said without doors of the power, of the strength of America. It is a topic that ought to be cautiously meddled with. In a good cause, on a sound bottom, the force of this country can crush America to atoms. I know the valor of your troops. I know the skill of your officers. There is not a company of foot that has served in America, out of which you may not pick a man of sufficient knowledge and experience to make a governor of a colony there. But on this ground, on the Stamp Act, which so many here will think a crying injustice, I am one who will lift up my hands against it. In such a cause your success would be hazardous. America, if she fell, would fall like the strong man; she would embrace the pillars of the State, and pull down the Constitution along with her. Is this your boasted peace—not to sheathe the sword in its scabbard, but to sheathe it in the bowels of your countrymen? . . . The Americans have not acted in all things with prudence and temper: they have been wronged; they have been driven to madness by injustice. Will you punish them for the madness you have occasioned? Rather let prudence and temper come first from this side. I will undertake for America that she will follow the example. . . . Upon the whole I will beg leave to tell the House what is my opinion. It is that the Stamp Act be repealed absolutely, totally and immediately. That the reason for the repeal be assigned, viz., because it was founded on an erroneous principle. At the same time, let the sovereign authority of this country over the colonies be asserted in as strong terms as can be devised, and be made to extend to every point of legislation whatsoever; that we may bind their trade, confine their manufactures, and exercise every power whatsoever except that of taking their money out of their pockets without their consent."—C. K. Adams, ed., *Representative British orations*, pp. 98-119.—The views of Pitt "were defended in the strongest terms by Lord Camden, who pledged his great legal reputation to the doctrine that taxation is not included under the general right of legislation, and that taxation and representation are morally inseparable. . . . The task of the ministers in dealing with this question was extremely difficult. The great majority of them desired ardently the repeal of the Stamp Act; but the wishes of the King, the abstention of Pitt, and the divided condition of parties had compelled Rockingham to include in his Government Charles

Townshend, Barrington, and Northington, who were all strong advocates of the taxation of America. . . . In addition to all these difficulties the ministers had to deal with the exasperation which was produced in Parliament by the continual outrages and insults to which all who represented the English Government in America were exposed. Their policy consisted of two parts. They asserted in the strongest and most unrestricted form the sovereignty of the British Legislature, first of all by resolutions and then by a Declaratory Act affirming the right of Parliament to make laws binding the British colonies 'in all cases whatsoever,' and condemning as unlawful the votes of the colonial Assemblies which had denied to Parliament the right of taxing them. Side by side with this measure they brought in a bill repealing the Stamp Act. . . . The great and manifest desire of the commercial classes throughout England had much weight; the repeal was carried [March, 1766] through the House of Commons, brought up by no less than 200 members of the Lords, and finally carried amid the strongest expressions of public joy. Burke described it as 'an event that caused more universal joy throughout the British dominions than perhaps any other that can be remembered.'"—W. E. H. Lecky, *History of England in the eighteenth century*, v. 3, ch. 12.—"In the end parliament resolved upon the passage of certain remedial laws (1766), an outcome which, from the standpoint of the more radical colonists, can be regarded as little more than a compromise. The Stamp Act was indeed repealed and important alterations were made in the trade regulations; but the Currency Act, the regulations against smuggling and the provisions for a standing army remained unchanged. In addition the Declaratory Act was passed; and the new molasses duty was an unvarnished application of the principle of 'taxation without representation' announced in the Declaratory Act [which declared that "Parliament has power to bind the colonies in all cases whatsoever"]. The rejoicing of the colonists can be explained only on the ground that the merchants of the north dominated colonial opinion."—A. M. Schlesinger, *American Revolution reconsidered* (*Political Science Quarterly*, June, 1919).—See also ENGLAND: 1765-1768.

1766-1767.—Townshend measures.—"The liberal Rockingham administration, after a few months of power, disappeared [July, 1766]. . . . Of the new ministry the leading spirit was Charles Townshend, a brilliant statesman, but unscrupulous and unwise. His inclinations were arbitrary; he regretted the repeal of the Stamp Act, as did also the king and Parliament in general, who felt themselves to have been humiliated. Pitt, indeed, now Earl of Chatham, was a member of the government; but, oppressed by illness, he could exercise no restraint upon his colleague, and the other members were either in sympathy with Townshend's views, or unable to oppose him. Townshend's three measures affecting America, introduced on the 13th of May, 1767, were: a suspension of the functions of the legislature of New York for contumacy in the treatment of the royal

troops; the establishment of commissioners of the customs, appointed with large powers to superintend laws relating to trade; and lastly an impost duty upon glass, red and white lead, painters' colors, paper, and tea. [See ENGLAND: 1765-1768.] This was an 'external' duty to which the colonists had heretofore expressed a willingness to submit; but the grounds of the dispute were shifting. Townshend had declared that he held in contempt the distinction sought to be drawn between external and internal taxes, but that he would so far humor the colonists in their quibble as to make his tax of that kind of which the right was admitted. A revenue of £40,000 a year was expected from the tax, which was to be applied to the support of a 'civil list,' namely, the paying the salaries of the new commissioners of customs, and of the judges and governors, who were to be relieved wholly or in part from their dependence upon the annual grants of the Assemblies; then, if a surplus remained, it was to go to the payment of troops for protecting the colonies. To make more efficient, moreover, the enforcement of the revenue laws, the writs of assistance, the denunciation of which by James Otis had formed so memorable a crisis, were formally legalized. The popular discontent, appeased by the repeal of the Stamp Act, was at once awake again, and henceforth in the denial of the right of Parliament to tax, we hear no more of acquiescence in commercial restrictions and in the general legislative authority of Parliament. . . . The plan for resistance adopted by the cooler heads was that of Samuel Adams, namely, the non-importation and the non-consumption of British products. From Boston out, through an impulse proceeding from him, town-meetings were everywhere held to encourage the manufactures of the Province and reduce the use of superfluities, long lists of which were enumerated. Committees were appointed everywhere to procure subscriptions to agreements looking to the furtherance of home industries and the disuse of foreign products. . . . Before the full effects of the new legislation could be seen, Townshend suddenly died; but in the new ministry that was presently formed Lord North came to the front, and adopted the policy of his predecessor, receiving in this course the firm support of the king, whose activity and interest were so great in public affairs that he 'became his own minister.'"—J. K. Hosmer, *Samuel Adams*, ch. 7.

1767-1768.—Farmer's Letters of John Dickinson.—Circular Letter of Massachusetts, and the "Unrescinding Ninety-two."—"The English ministry was probably misled by the strong emphasis which had been laid here during the controversies concerning the Stamp Act upon the alleged distinction between external and internal taxation. We had refused to submit to the latter, but admitted that the former might be binding upon the whole empire as a commercial regulation. In form the

duties levied on paints, glass, tea, etc., were undoubtedly such a regulation, but it was at once contended here that, in point of fact and of principle, this was as much an exercise of the alleged right of Parliamentary taxation for the purpose of raising a revenue for imperial purposes as the Stamp Act itself. Although it was passed by the opponents of the Stamp Act, and by the Rockingham ministry, who professed to be our friends, the act met at once with opposition here. Late in October, 1767, it was denounced by a public meeting in Boston, which suggested a non-importation agreement as the best means of rendering its operations ineffective. These agreements were favorite expedients for manifesting political discontent in those days, but, as they were voluntary, their obligation sat somewhat loosely upon those who signed them. The truth is, that those who were most decided in opposition to the course of the ministry were somewhat puzzled as to the

JOHN DICKINSON

plan they should adopt to exhibit the earnestness of their discontent. . . . While the leaders of the opposition throughout the country were doubtful and hesitating, there appeared in the *Pennsylvania Chronicle* for the 2d of December, 1767, the first of a series of letters on the political situation, afterwards known as the 'Farmer's Letters.' . . . The letters, fourteen in number, followed one another in quick succession, and they were read by men of all classes and opinions throughout the continent as no other work of a political kind had been hitherto read in America. It was, of course, soon known that John Dickinson was their author, and people remembered that he was the person who had formulated what was a genuine Bill of Rights in the Stamp Act Congress. The more these letters were read, the more convinced people became that in the comprehensive survey they took of our political relations with the mother-country, especially as these were affected by the last obnoxious act of Parliament, and in the plans which were proposed to remedy the evil, Mr. Dickinson had struck the true key-note of the opposition to the ministerial measures. He

appeared at this crisis, as he did in the Stamp Act Congress, as the leader and guide in the controversy. From this time until the Declaration of Independence the Pennsylvania idea, which was embodied by Mr. Dickinson in these *Farmer's Letters*, 'controlled the destinies of the country'; and Mr. Bancroft only does justice to Mr. Dickinson's position when he recognizes fully his commanding influence during that period. We may say with pardonable pride . . . that, in the leading spirit in the Stamp Act Congress, Dickinson gave form and color to the agitation in this country which brought about the repeal of that act, and that the arguments by which the claim of the ministry to tax us for revenue by such an act of Parliament as that levying duties on glass, paints, etc., was answered in the 'Farmer's Letters' first convinced the whole body of our countrymen, groping blindly for a cure for their grievances, that there was a legal remedy, and then forced the ministry to consent in a measure to the demand for a repeal of some of its most obnoxious provisions. It is worth remarking that when the ministry yielded at all it yielded to argument, and not to the boastful threats which were so common. The 'Farmer's Letters' gave courage and force to those who in February denounced the law in Pennsylvania; they formed the mainspring of the movement which resulted in the circular letter sent by the legislature of Massachusetts on the 17th of that month to the Assemblies of the other Colonies; in short, they had the rare good fortune not only of convincing those who suffered that the remedy was in their own hands, but also of persuading those who had the power to abandon, or at least to modify their arbitrary measures. . . . Mr. Dickinson begins these grave essays with an air of simplicity as charming as it is calculated to attract the attention of the reader. 'I am a farmer,' he says, 'settled, after a variety of fortunes, near the banks of the river Delaware, in the Province of Pennsylvania. I received a liberal education, and have been engaged in the busy scenes of life, but am now convinced that a man may be as happy without bustle as with it. Being generally master of my time, I spend a good deal of it in my library, which I think the most valuable part of my small estate. I have acquired, I believe, a greater knowledge of history and of the laws and constitution of my country than is generally attained by men of my class,' etc. He then explains the nature of the controversy with the mother-country, making it so clear that the points in dispute are comprehensible by a child. . . . As to our method of asserting our rights, he says, with an elevation of sentiment which reminds one of Edmund Burke more than of any other political writer, 'The cause of liberty is a cause of too much dignity to be sullied by turbulence and tumult. It ought to be maintained in a manner suitable to her nature. Those who engage in it should breathe a sedate yet fervent spirit, animating them to actions of prudence, justice, modesty, bravery, humanity, and magnanimity.' He shrinks, evidently with terror, from speaking of what may be the consequences of the persistent refusal of England to change her oppressive measures. . . . After showing in the most striking manner the nature of our wrongs, the letters turn gladly to the remedy that lies open to us. That remedy is based upon a cultivation of the spirit of conciliation on both sides, and Mr. Dickinson urges again and again upon his English readers the folly of their policy, by showing them the value of the American Colonies to them, and especially

how the trade and wealth of the English merchants are bound up in the adoption of a liberal policy towards us. This is one of the most interesting and important topics discussed in these letters, and the subject is treated with elaborate skill, leading to convincing conclusions drawn from our history. It must not be forgotten that prior to the Revolution an impression widely prevailed among the most thoughtful of our own people, as well as among our friends in England, that if the English people could be made to understand the frightful losses they would suffer in case of a war in which we should be fighting for our independence, or even during a short interruption of the trade between the two countries, they would force the government to yield rather than run the risk of the consequences. . . . Even Dr. Franklin in London, who had had so many proofs of the indifference and contempt with which the representations of the Colonies in England were regarded. . . . thought the appeal of the Farmer to Englishmen so irresistible that, although no friend of Dickinson's, he arranged that these letters should be reprinted in London."—C. J. Stillé, *Life and times of John Dickinson*, ch. 4.—In February, 1768, "the Legislature of Massachusetts sent a Circular Letter [ascribed to Samuel Adams] to the Assemblies of the other colonies, in which was set forth the necessity of all acting together harmoniously, and of freely communicating the mind of each to the others. The course Massachusetts had pursued was described, with the contents of the petition and letters which had been written, and with the hope expressed that she would have their cordial co-operation in resistance to the ministerial measures. The notion that political independence was aimed at was strenuously denied, and the trust was entertained that what had been done would meet the approval of their 'common head and father,' and that the liberties of the colonies would be confirmed. This letter elicited response from some, others returned none officially, but all who answered replied favorably. It gave, however, the greatest offence to the ministry, and particularly to Lord Hillsborough, the Secretary of State, for the Colonies. It seems that he read it entirely by the light which a letter from Governor Bernard to Lord Barrington had shed upon it. This epistle declared the real motive of the colonies to be a determination to be independent. Hillsborough, filled with this idea, communicated it to the other members of the cabinet, and thus the Circular Letter was laid before them, pre-judged. It was determined that it merited consideration, but that the only notice to be given it should be one of censure, and, on the spur of the moment, they resolved upon two things: to require the Massachusetts Assembly to rescind the Letter, and to require the other legislatures before whom it had been laid to reject it. This was done, and the consequences were, that the General Court, or Legislature, of Massachusetts voted, by ninety-two to seventeen, that they would do nothing of the kind, and that the other legislatures gave the outcast a hearty welcome. As for the people, they showed their approval of their representatives by toasting, from one end of the country to the other, 'The unrescinding Ninety-two,' with whom was coupled the number Forty-five, or that of the famous 'North Briton'; while the Bostonians added fuel to the flame by a riot on the score of the sloop Liberty, in which they attacked the houses of the Commissioners of the Customs, and made a bonfire of the Collector's boat. Shortly afterward, (but not by reason of the riot), four

ships of war anchored in Boston harbor, and two regiments of soldiers were quartered on the town."—E. G. Scott, *Development of constitutional liberty*, ch. 10.

1769.—Massachusetts threatened, and Virginia roused to her support.—"The proceedings in Massachusetts attracted in England the greatest attention, elicited the severest comment, and, because a military force had been ordered to Boston to support the stand of the administration, created the greatest solicitude. . . . The king, on opening parliament, characterized the action of Boston as a subversion of the Constitution and evincing a disposition to throw off dependence on Great Britain. The indictment against the colonies was presented in sixty papers laid before parliament. Both Houses declared that the proceedings of the Massachusetts assembly in opposition to the revenue acts were unconstitutional, and derogatory to the rights of the crown and the parliament; that the Circular Letter tended to create unlawful combinations; that the call of a convention by the selectmen of Boston was proof of a design of setting up an independent authority; and both Houses proposed to transport the originators of the obnoxious proceedings in England for trial and condign punishment, under the cover of an obsolete act of Henry VIII. . . . The administration determined to make an example of Massachusetts, as the ring-leading province in political mischief, by transporting its popular leaders to England to be tried for their lives in the king's bench. Such was the purport of an elaborate despatch which Lord Hillsborough sent to Governor Bernard, directing an inquiry to be instituted into the conduct of any persons who had committed any overt act of resistance to the laws. . . . Thus a great issue was created that affected all the colonies. . . . There was no adequate step taken to meet the threatened aggression until the House of Burgesses of Virginia convened in May."—R. Frothingham, *Rise of the republic of the United States*, ch. 6.—"On the day of the prorogation of parliament [May 9, 1769] the legislature of Virginia assembled at Williamsburg. Great men were there; some who were among the greatest—Washington, Patrick Henry, and, for the first time, Jefferson. Botetourt [the governor], who opened the session in state, was in perfect harmony with the council, received from the house of burgesses a most dutiful address, and entertained fifty-two guests at his table on the first day, and as many more on the second. . . . But the assembly did not forget its duty, and devised a measure which became the example for the continent. It claimed the sole right of imposing taxes on the inhabitants of Virginia. With equal unanimity, it asserted the lawfulness and expediency of a concert of the colonies in defence of the violated rights of America. It laid bare the flagrant tyranny of applying to America the obsolete statute of Henry VIII.; and it warned the king of 'the dangers that would ensue' if any person in any part of America should be seized and carried beyond sea for trial. It consummated its work by communicating its resolutions to every legislature in America, and asking their concur-

rence. The resolves were concise, simple, and effective; so calm in manner and so perfect in substance that time finds no omission to regret, no improvement to suggest. The menace of ardent patriots lost its terrors; and Virginia's declaration and action consolidated union. . . . The next morning, the assembly had just time to adopt an address to the king, when the governor summoned them, and said: 'I have heard of your resolves, and augur ill of their effects; you have made it my duty to dissolve you, and you are dissolved accordingly.' Upon this, the burgesses met together as patriots and friends, with their speaker as moderator. They adopted the resolves which Washington had brought with him from Mount Vernon, and which formed a well-digested, stringent, and practicable scheme of non-importation, until all the 'unconstitutional' revenue acts should be repealed. . . . The voice of the Old Dominion roused the merchants of Pennsylvania to approve what had been done. The assembly of Delaware adopted the Virginia resolves word for word; and every colony south of Virginia followed the example."—G. Bancroft, *History of the United States* (Author's last revision), pp. 347-348.

1770.—**Repeal of Townshend duties except on tea.**—On Mar. 5, 1770—the same day on which the tragical encounter of the king's troops with citizens of Boston occurred—Lord North introduced a motion in Parliament for the partial repeal of Townshend's revenue act; "not on the petitions of America, because they were marked by a denial of the right, but on one from merchants and traders of London. 'The subject,' said he, 'is of the highest importance. The combinations and associations of the Americans for the temporary interruption of trade have already been called unwarrantable in an address of this house; I will call them insolent and illegal. The duties upon paper, glass, and painters' colors bear upon the manufacturers of this country, and ought to be taken off. It was my intention to have extended the proposal to the removal of the other duties; but the Americans have not deserved indulgence. The preamble to the act and the duty on tea must be retained, as a mark of the supremacy of parliament and the efficient declaration of its right to govern the colonies.' . . . Thomas Pownall moved the repeal of the duty on tea. The house of commons, like Lord North in his heart, was disposed to do the work of conciliation thoroughly. . . . Had the king's friends remained neutral, the duty on tea would have been repealed; with all their exertions, in a full house, the majority for retaining it was but 62. Lord North seemed hardly satisfied with his success; and reserved to himself liberty to accede to the repeal, on some agreement with the East India Company. The decision came from the king."—G. Bancroft, *History of the United States* (Author's last revision), v. 3, pp. 381-382.

1772.—**Burning of the Gaspé.**—"One of the first overt acts of resistance that took place in this celebrated struggle [in the War of Independence] occurred in 1772, in the waters of Rhode Island. A vessel of war had been stationed on the coast to enforce the laws, and a small schooner, with a light armament of twenty-seven men, called the

Gaspé, was employed as a tender, to run into the shallow waters of that coast. On the 17th of June, 1772, a Providence packet, that plied between New York and Rhode Island, named the Hannah, and commanded by a Captain Linzee, hove in sight of the man-of-war, on her passage up the bay. The Hannah was ordered to heave-to, in order to be examined; but her master refused to comply; and being favoured by a fresh southerly breeze, that was fast sweeping him out of gunshot, the Gaspé was signalled to follow. The chase continued for five-and-twenty miles, under a press of sail, when the Hannah coming up with a bar, with which her master was familiar, and drawing less water than the schooner, Captain Linzee led the latter on a shoal, where she struck. The tide falling, the Gaspé . . . was not in a condition to be removed for several hours. The news of the chase was circulated on the arrival of the Hannah at Providence. A strong feeling was excited among the population, and towards evening the town drummer appeared in the streets, assembling the people in the ordinary manner. As soon as a crowd was collected, the drummer led his followers in front of a shed that stood near one of the stores, when a man disguised as an Indian suddenly appeared on the roof, and proclaimed a secret expedition for that night, inviting all of 'stout hearts' to assemble on the wharf, precisely at nine, disguised like himself. At the appointed hour, most of the men in the place collected at the spot designated, when sixty-four were selected for the bold undertaking that was in view. This party embarked in eight of the launches of the different vessels lying at the wharves, and taking with them a quantity of paving stones, they pulled down the river in a body. . . . On nearing the Gaspé, about two in the morning, the boats were hailed by a sentinel on deck. This man was driven below by a volley of the stones. The commander of the Gaspé now appeared, and ordering the boats off, he fired a pistol at them. This discharge was returned from a musket, and the officer was shot through the thigh. By this time, the crew of the Gaspé had assembled, and the party from Providence boarded. The conflict was short, the schooner's people being soon knocked down and secured. All on board were put into the boats, and the Gaspé was set on fire. Towards morning she blew up."—J. F. Cooper, *Naval history of the United States*, v. 1, ch. 3.

1772-1773.—**Instituting of Committees of Correspondence.**—**Tea ships and the Boston Tea Party.**—"The surest way to renew and cement the union [of the colonies] was to show that the ministry had not relaxed in its determination to enforce the principal of the Townshend acts. This was made clear in August, 1772, when it was ordered that in Massachusetts the judges should henceforth be paid by the crown. Popular excitement rose to fever heat, and the judges were threatened with impeachment should they dare accept a penny from the royal treasury. The turmoil was increased next year by the discovery in London of the package of letters which were made to support the unjust charge against Hutchinson and some of his friends that they had instigated and aided the most extreme measures of the ministry. In the autumn of 1772 Hutchinson refused to call an extra session of the assembly to consider what should be done about the judges. Samuel Adams then devised a scheme by which the towns

of Massachusetts could consult with each other and agree upon some common course of action in case of emergencies. For this purpose each town was to appoint a standing committee, and as a great part of their work was necessarily done by letter they were called 'committees of correspondence.' This was the step that fairly organized the Revolution."—J. Fiske, *War of Independence*, ch. 5.—"The town records of Boston [November 2, 1772] say:—"It was then moved by Mr. Samuel Adams that a Committee of Correspondence be appointed, to consist of twenty-one persons, to state the rights of the colonists and of this Province in particular as men and Christians and as subjects; and to communicate and publish the same to the several towns and to the world as the sense of this town, with the infringements and violations thereof that have been or from time to time may be made.' The motion occasioned some debate and seems to have been carried late at night; the vote in its favor, at last, was nearly unanimous. The colleagues of Adams, who had left him almost alone thus far, now declined to become members of the committee, regarding the scheme as useless or trifling. The committee was at last constituted without them; it was made up of men of little prominence but of thorough respectability. James Otis, in another interval of sanity was made chairman, a position purely honorary, the town in this way showing its respect for the leader whose misfortunes they so sincerely mourned. The Committee of Correspondence held its first meeting in the representatives' chamber at the town-house, November 3, 1772, where at the outset each member pledged himself to observe secrecy as to their transactions, except those which, as a committee, they should think it proper to divulge. According to the motion by which the committee was constituted, three duties were to be performed: 1st, the preparation of a statement of the rights of the colonists, as men, as Christians, and as subjects; 2d, a declaration of the infringement and violation of those rights; 3d, a letter to be sent to the several towns of the Province and to the world, giving the sense of the town. The drafting of the first was assigned to Samuel Adams, of the second to Joseph Warren, of the third to Benjamin Church. In a few days tidings came from the important towns of Marblehead, Roxbury, Cambridge, and Plymouth, indicating that the example of Boston was making impression and was likely to be followed. On November 20, at a town-meeting in Faneuil Hall, the different papers were presented: Otis sat as moderator, appearing for the last time in a sphere where his career had been so magnificent. The report was in three divisions, according to the motion. . . . In the last days of 1772, the document, having been printed, was transmitted to those for whom it had been intended, producing at once an immense effect. The towns almost unanimously appointed similar committees; from every quarter came replies in which the sentiments of Samuel Adams were echoed. In the library of Bancroft is a volume of manuscripts, worn and stained by time, which have an interest scarcely inferior to that possessed by the Declaration of Independence itself. . . . They are the original replies sent by the Massachusetts towns to Samuel Adams's committee sitting in Faneuil Hall, during those first months of 1773. One may well read them with bated breath, for it is the touch of the elbow as the stout little democracies dress up into line, just before they plunge into actual fight at Concord and Bunker Hill.

There is sometimes a noble scorn of the restraints of orthography, as of the despotism of Great Britain, in the work of the old town clerks. . . . Yet the documents ought to inspire the deepest reverence. They constitute the highest mark the town-meeting has ever touched. Never before and never since have Anglo-Saxon men, in lawful folk-note assembled, given utterance to thoughts and feelings so fine in themselves and so pregnant with great events. To each letter stand affixed the names of the committee in autograph. This awkward scrawl was made by the rough fist of a Cape Ann fisherman, on shore for the day to do at town-meeting the duty his fellows had laid upon him; the hand that wrote this other was cramped from the scythe-handle, as its possessor mowed an interval on the Connecticut; this blotted signature, where smutted fingers have left a black stain, was written by a blacksmith of Middlesex, turning aside a moment from forging a barrel that was to do duty at Lexington. They were men of the plainest; but as the documents containing statements of the most generous principles and the most courageous determination, were read in the town-houses, the committees who produced them, and the constituents for whom the committees stood, were lifted above the ordinary level. Their horizon expanded to the broadest; they had in view not simply themselves, but the welfare of the continent; not solely their own generation, but remote posterity. It was Samuel Adams's own plan, the consequences of which no one foresaw, neither friend nor foe. Even Hutchinson, who was scarcely less keen than Samuel Adams himself, was completely at fault. 'Such a foolish scheme,' he called it, 'that the faction must necessarily make themselves ridiculous.' But in January the eyes of men were opening. One of the obtest of the Tories, Daniel Leonard, wrote:—"This is the foulest, subtlest, and most venomous serpent ever issued from the egg of sedition. I saw the small seed when it was implanted; it was a grain of mustard. I have watched the plant until it has become a great tree.' It was the transformation into a strong cord of what had been a rope of sand."—J. K. Hosmer, *Samuel Adams*, ch. 13.—"In the spring of 1773, Virginia carried this work of organization a long step further, when Dabney Carr suggested and carried a motion calling for committees of correspondence between the several colonies. From this point it was a comparatively short step to a permanent Continental Congress. It happened that these preparations were made just in time to meet the final act of aggression which brought on the Revolutionary War. The Americans had thus far successfully resisted the Townshend acts and secured the repeal of all the duties except on tea. As for tea they had plenty, but not from England; they smuggled it from Holland in spite of custom-houses and search-warrants."—J. Fiske, *War of Independence*, ch. 5.—"A placard was posted everywhere on the 3d of November, inviting the people of Boston and the neighboring towns to be present at Liberty Tree that day at noon, to witness the resignation of the consignees of the tea, and hear them swear to re-ship to London what teas should arrive. The placard closed,—'Show me the man that dares take this town.' At the time appointed, representatives Adams, Hancock, and Phillips, the selectmen and town clerk, with about five hundred more, were present at the Liberty Tree. But no consignees arrived, whereupon Molineux and Warren headed a party who waited upon them. . . . A town-meet-

ing on November 5, in which an effort of the Tories to make head against the popular feeling came to naught, showed how overwhelming was the determination to oppose the introduction of the tea. . . . When news arrived on the 17th that three tea-ships were on the way to Boston, for a second time a town-meeting demanded through a committee, of which Samuel Adams was a member, the resignation of the consignees. They evaded the demand; the town-meeting voted their answer not satisfactory, and at once adjourned without debate or comment. The silence was mysterious; what was impending none could tell. . . . [On the 28th the *Dartmouth*, the first tea-ship, came into the harbor. Feeling grew rapidly upon its appearance. The determination not to allow the tea to be entered was made, and on December 16, it was destroyed at the Boston tea-party].”—J. K. Hosmer, *Samuel Adams*, ch. 16.

“In Massachusetts Samuel Adams had already become the centre of political agitation. He possessed precisely the qualities which belong to a consummate revolutionary leader. . . . From the first menace of the stamp tax Adams taught the necessity of union. For some time he held under consideration a scheme for party organization through committees of correspondence. The instructions of the ministry requiring the judges to receive their salaries from the crown gave him opportunity to carry out his project. . . . He appealed to the town-meeting; but the other leaders were lukewarm, and his first efforts were not successful. . . . In Massachusetts, Samuel Adams was urging the call of a general congress, and through the Boston committee of correspondence he was zealously stirring up hostility to the ministerial policy. He was perhaps the first American to foresee independence. Apparently he now earnestly desired it; and . . . the Boston tea-party and its immediate results were followed by a continental congress and the appeal to arms. The king and his ministers had committed a serious blunder in retaining the tax on tea in order to assert the parliamentary right; for the colonies determined to resist the tax in order to deny that right. Indirectly the same revenue might have been derived from America by levying in England a duty of threepence a pound; in other words, by reducing by that amount the drawback allowed the East India Company. Indeed, Hutchinson believed that if all the duties laid by Townshend in 1767 ‘had been paid upon exportation from England, and applied to the purpose proposed, there would not have been any opposition made to the act. It would have been a favor to the colonies. The saving upon tea would have been more than the whole paid upon the other articles. The consumer in America would have paid the duty, just as much as if it had been charged upon importation.’ The Townshend revenue act laid an import duty of threepence a pound on tea shipped to America. By the supplementary statute of the same year, on such shipments was allowed a drawback of the whole import duty paid in England, amounting at the time to about twenty-four per cent. of the gross price; but on the express condition that the East India Company, in whose interest the arrangement was made, should make good any loss of revenue by reason of such drawback. As a result, in 1769 tea was actually sold in Boston at ninepence a pound less than before the acts. Moreover, an earlier statute allowed tea to be exported to America without paying any of the inland duties still charged in England, amounting to twenty-five per cent. of the

gross price. Therefore, according to Hutchinson, the accuracy of whose statement is sustained by . . . research, tea ‘was cheaper than it had ever been sold by the illicit traders; and the poor people in America drank the same tea in quality at three shillings the pound, which the people in England drank at six shillings.’ The business of the company did not prosper as well as expected. During the first four years the sales nearly doubled; but to make up the loss of revenue the company was obliged to pay over £115,000. A further concession was therefore sought; and in 1772, on exportation to America, a rebate of three-fifths of the import duty was granted; while the company was no longer required to make up the loss of revenue. But the non-importation agreements now stood in the way: the colonists would not drink the taxed tea at any price. In 1773 ‘about seventeen million pounds of tea lay unsold in the warehouses’ of the company. It had to face impending bankruptcy, and the government must lose its annual payment of £400,000. Again Parliament came to the company’s aid. The whole of the import duty was now remitted on exportation to America. At the same time, by obtaining a license from the treasury, the company was permitted to send the tea directly from its warehouses to its own agents or consignees in America. The middlemen’s profit would thus be saved. For hitherto it had been necessary to ship the tea to England and to sell it at public auction to the merchants, who then exported it to the colonies. Under the new concession the company could have afforded to sell the tea, not merely at ninepence a pound less than in England, but at a small ‘fraction of the price’ obtained there. However, against the advice of Trecothick for the company, the tax of threepence a pound was still exacted; and this effort to force the tea on the colonists was largely due to the king. It is ‘to no purpose making objections,’ said Lord North, ‘for the king would have it so. The king meant to try the question with America.’ He seems to have fancied that the Americans would take the bait and forget the principle. If so he was soon undeceived. The company selected its agents, among whom were the two sons of Hutchinson, and in the autumn of 1773 sent a number of ships laden with tea to Boston, New York, Philadelphia, and Charleston. The people were determined to prevent the landing of the tea, and, by persuasion or menace, to cause the agents to resign their commissions. In Charleston a cargo of two hundred and fifty-seven chests arrived December 2. The agents resigned; and after the twentieth day, the duty being unpaid, the tea was seized by the collector and stored in vaults under the exchange. A meeting of the inhabitants of Philadelphia resolved that the duty on tea was illegal, and that every person who ‘countenanced the unloading, vending, or receiving the tea, was an enemy to his country.’ In both Philadelphia and New York the consignees were induced to resign, and the tea was sent back to London. More serious events were taking place in Boston, where, under authority of the town-meeting, organized resistance was guided by Samuel Adams and the Boston committee of correspondence, with which the committees of four or five neighboring places sometimes sat in Faneuil Hall as a sort of representative senate. An immense mass-meeting of the inhabitants of six towns held in the Old South Church, resolved that ‘at all events’ the tea should be sent back without payment of duty. When the sheriff of Suffolk read the gover-

nor's proclamation warning the people 'unlawfully assembled, forthwith to disperse, and to surcease all further unlawful proceedings, at their utmost peril,' he was greeted with insults and derision. The agents refused to resign their commissions, and took shelter in the castle. Neither clearance papers from the collector nor a pass from the governor could be obtained by the owners to allow them to carry their cargoes back to the Thames. A popular guard was placed over the tea ships to prevent the tea from being landed; and the meetings of various towns in the province promised aid to Boston, even at the hazard of life and property. Finally, on the evening of December 16, 1773, the last day before the tea, for non-payment of duty, might be legally seized by the collector and stored at the castle—a party of fifty or sixty men, dressed as Mohawk Indians, and directed by Adams, boarded the three tea ships at Griffin's wharf, broke open the three hundred and forty-two chests of tea, and cast their contents into the bay. . . . There were not wanting other indications of an impending crisis, which only the highest wisdom could avert. 'The inhabitants, in many parts of the province,' says Hutchinson, 'were learning the use of fire-arms, but not under the officers of the regiment to which they belonged. They were forming themselves into companies for military exercise, under officers of their own choosing; hinting the occasion there might soon be for employing their arms in defense of their liberties.' Throughout the country the exultation over the course taken by Boston was very ominous; party organization was rapidly developed; the assemblies which had not yet responded to the Virginia call now appointed inter-colonial committees of correspondence; and local committees, hitherto confined to Massachusetts, began to be formed in other provinces."—G. E. Howard, *Preliminaries of the Revolution*, pp. 253, 255, 265-271.—See also BOSTON: 1773; NEW YORK: 1773-1774.

1774 (March-April).—Boston Port Bill.—Massachusetts Act and Quebec Act.—"The spoken defiance of the other colonies had been quite as efficient as the combination of threats and force to which Boston was compelled to resort, but Lord North launched the first retaliatory and punitive measure against that city [and procured the passage of the series of acts known as the "Intolerable Acts"]. . . . The first of Lord North's bills was the Boston Port Act, which closed the harbor until indemnity for the tea there destroyed should be paid and the king be satisfied that thereafter the city would obey the laws. The demand for indemnity was fair but the indefinite claim of obedience was not only infamous in itself but, as Burke said, punished the innocent with the guilty. . . . North's second bill [the "Regulating Act"] was a virtual abrogation of the Massachusetts charter. The council of twenty-eight had been hitherto elected every year in joint session of the assembly. The king might now appoint the whole body to any number, from twelve to thirty-six, and remove them at pleasure. The men so appointed were designated mandamus councillors. Thereafter, town-meetings could be held only by permission of the governor and for the sole pur-

pose of electing officers [General Gage was made governor under this act, and four regiments were placed in Boston for his support]. Sheriffs were to return all juries, and were to be named by the governor and hold office during his pleasure. The third bill was really a device of the king's, and it is said that the ministry was confused and shamefaced in presenting it. It ordained that magistrates, revenue officers, or other officials indicted in Massachusetts for capital offences were to be tried either in Nova Scotia or Great Britain. Another measure made legal the billeting of troops, against which Boston had hitherto striven with success, and a fifth, known as the Quebec Act, though depriving that province of the right of habeas corpus, restored the French customary law ('coutume de Paris'), established Roman Catholicism as the state religion, and by extending its boundaries to the Ohio and Mississippi, shut off the Northern English Colonies from westward extension. This was intended as an arbitrary settlement of a vexed question. The Puritans, however, . . . exclaimed that the next step would be the establishment among them of English episcopacy."—W. M. Sloane, *French War and the Revolution*, ch. 14.—The point to which feeling rose, in Massachusetts over these acts, is shown by the attitude toward the new councillors twenty-five of whom accepted office. "Popular feeling ran high and fierce; and their countrymen were determined that they should not serve, to whatever lengths it might be necessary to go in order to prevent them. Two thousand men marched in companies on to the common at Worcester, escorting one of their townsmen whose abilities and personal popularity had recommended him to the notice of the Government, and formed a hollow square around him while, with uncovered head, he read the resignation of his seat at the council board. George Watson of Plymouth who, in the stately language of the day, 'possessed almost every virtue that can adorn and dignify the human character,' made known his intention of assuming the proffered dignity. On the next Sunday forenoon, when he took his accustomed place in the meeting-house, his friends and familiar associates put on their hats and walked out beneath the eyes of the congregation. As they passed him he bent his head over the handle of his cane; and, when the time arrived, he declined the oath of qualification. . . . When the day came round for the Courts of Justice to sit in their remodelled shape, the Judges were treated more tenderly as regarded their persons than the mandamus councillors, but with quite as little reverence for their office. They took their seats at Boston only to learn that those citizens who had been returned as jurors one and all refused the oath. A great multitude marched into Springfield, with drums and trumpets, and hoisted a black flag over the Court-house, as a sign of what any one might expect who entered it in an official capacity. . . . Wherever the Judges went, if once they were fairly inside a town, they were not allowed to leave it until they had plighted their honour that they would depart without transacting any legal business. After a succession of such experiences the Chief Justice and his colleagues waited upon the Governor, and represented to him that they must abandon the pretence of exercising their functions in a Province where there were no jurymen to listen to their charges, and where they could not even sit in court to do nothing unless the approaches were guarded by the best part of a brigade of British infantry."—G. O. Trevelyan, *American Revolution*, v. 1, pt. 1,

1774 (April-October).—Lord Dunmore's War with the Indians.—Western territorial claims of Virginia. See OHIO: 1774.

1774 (May-June).—Effects of the Boston Port Bill.—Call for a continental congress.—Eve of the Revolution.—“The Boston Port Bill was received in America with honors not accorded even to the Stamp Act. It was cried through the streets as ‘A barbarous, cruel, bloody, and inhuman murder,’ and was burnt by the common hangman on a scaffold forty-five feet high. The people of Boston gathered together in town-meeting at Faneuil Hall, and expresses were sent off with an appeal to all Americans throughout America. The responses from the neighborhood came like snow-flakes. Marblehead offered the use of its wharves to the Boston merchants; Salem averred that it would be lost to all feelings of humanity were it to raise its fortunes on the ruins of its neighbor. Newburyport voted to break off trade with Great Britain, and to lay up its ships. Connecticut, as her wont is, when moved by any vital occurrence, betook herself to prayer and humiliation, first, however, ordering an inventory to be taken of her cannon and military stores. Virginia, likewise, resolved to invoke the divine interposition, but, before another resolution which called for a Congress could be introduced, her House was precipitately dissolved; whereupon the resolution was brought up and passed at a meeting called in ‘the Apollo,’ where it was further declared that an attack on one colony was an attack upon all. Two days later the Massachusetts letter itself was received, upon which the Virginians called a convention. From all parts contributions in money poured into Boston, and resolutions were everywhere passed, declaring that no obedience was due the late acts of Parliament; that the right of imperial taxation did not exist; that those who had accepted office under pay of the king had violated their public duty; that the Quebec act establishing Roman Catholicism in Canada was hostile to the Protestant religion, and that the inhabitants of the colonies should use their utmost diligence to acquaint themselves with the art of war, and for that purpose should turn out under arms at least once a week. In the fulness of time, a cordon of ships was drawn around Boston, and six regiments and a train of artillery were encamped on the Common—the only spot in the thirteen colonies where the government could enforce an order. The conflict between constitutional liberty and absolutism had now reached that dangerous point where physical force became one of its elements. . . . The situation was at once recognized throughout the colonies, and the knowledge that in union there is strength, manifested itself in one general impulse toward a Colonial Congress. Committees of Correspondence were organized in every county, and throngs attended the public meetings. ‘One great, wise, and noble spirit; one masterly soul animating one vigorous body,’ was the way John Adams described this impulse. The Canadas alone remained inani-

mate. . . . But not so those to whom constitutional liberty was as the breath of life. On the 17th of June (1774) the Massachusetts Assembly, which had been removed by a royal order to Salem, answered Virginia by resolving on a call for a Continental Congress at Philadelphia. The governor, hearing of what was going on, sent the secretary of the colony to dissolve the Assembly, but, finding the doors shut upon him, he had to content himself with reading the message to the crowd outside. The House went on with its work, while, at the same time, a great meeting, with John Adams in the chair, was being held at Boston in Faneuil Hall. Twelve colonies agreed to send delegates to a Continental Congress to be held at Philadelphia in September.”—E. G. Scott, *Development of constitutional liberty in the English colonies of America*, ch. 11.—See also BOSTON: 1774.

1774 (May-July).—Governor Hutchinson's departure for England.—His conversation with King George.—In May, 1774, Governor Hutchinson, of Massachusetts, who had applied some months before for leave of absence to visit England, was relieved by General Gage and took his departure. General Gage was temporarily commissioned to be “Captain-General and Governor-in-Chief” of the Province of Massachusetts, and “Vice-Admiral of the same,” combining the civil and military powers in himself. It was then supposed that Hutchinson's absence would be brief; but, to his endless grief, he never saw the country again. Soon after his arrival in England he had an interview with the king, which is reported at length in his diary. The conversation is one of great historical interest, exhibiting King George's knowledge and ideas of American affairs, and representing the opinions of a high-minded American loyalist. It is reprinted here exactly as given in Governor Hutchinson's diary, published by his great-grandson in 1883:

July 1st.—Received a card from Lord Dartmouth desiring to see me at his house before one o'clock. I went soon after 12, and after near an hour's conversation, his Lordship proposed introducing me immediately to the King. . . . The *Lévée* was over; but his Lordship going in to the King, I was admitted, contrary, as L<sup>d</sup> Pomfret observed to me, to custom, to kiss His Majesty's hand in his closet: after which, as near as I can recollect, the following conversation passed. . . .

K.—How did you leave your Government, and how did the people receive the news of the late measures in Parliament?

H.—When I left Boston we had no news of any Act of Parliament, except the one for shutting up the port, which was extremely alarming to the people.

(Lord D. said, Mr. H. came from Boston the day that Act was to take place, the first of June. I hear the people of Virginia have refused to comply with the request to shut up their ports, from the people of Boston, and M<sup>r</sup> H. seems to be of opinion that no colony will comply with that request.)

K.—Do you believe, M<sup>r</sup> H., that the account from Virginia is true?

H.—I have no other reason to doubt it, except that the authority for it seems to be only a newspaper; and it is very common for articles to be inserted in newspapers without any foundation. I have no doubt that when the people of Rhode Island received the like request, they gave this answer—that if Boston would stop all the vessels

they then had in port, which they were hurrying away before the Act commenced, the people of R. Island would then consider of the proposal.

The King smiled.

Lord D.—M<sup>r</sup> H., may it please y<sup>r</sup> Majesty, has shewn me a newspaper with an address from a great number of Merchants, another from the Episcopal Clergy, another from the Lawyers, all expressing their sense of his conduct in the most favourable terms. Lord Dartmouth thereupon took the paper out of his pocket and shewed it.

K.—I do not see how it could be otherwise. I am sure his conduct has been universally approved of here by people of all parties.

H.—I am very happy in your Majesty's favourable opinion of my administration.

K.—I am entirely satisfied with it. I am well acquainted with the difficulties you have encountered, and with the abuse & injury offered you. Nothing could be more cruel than the treatment you met with in betraying your private letters.

The K., turning to Lord D.—My Lord, I remember nothing in them to which the least exception could be taken.

Lord D.—That appears, Sir, from the report of the Committee of Council, and from your Majesty's orders thereon. . . .

K.—Could you ever find M<sup>r</sup> H. how those letters came to New England?

H.—Doctor F., may it please your Majesty, has made a publick declaration that he sent them, and the Speaker has acknowledged to me that he rec<sup>d</sup> them: I do not remember that he said directly from Doctor F., but it was understood between us that they came from him. . . . I sent for the Speaker and let him know what I had heard, which came from one of the six to a friend, and so to me. The Speaker said they were sent to him, and that he was at first restrained from shewing them to any more than six persons.

K.—Did he tell you who were the persons?

H.—Yes, sir. There was M<sup>r</sup> Bowdoin, M<sup>r</sup> Pitts, Doctor Winthrop, D<sup>r</sup> Chauncy, D<sup>r</sup> Cooper, and himself. They are not all the same which had been mentioned before. The two Mr. Adamses had been named to me in the room of M<sup>r</sup> Pitts and D<sup>r</sup> Winthrop. . . .

K.—I have heard of one M<sup>r</sup> Adams, but who is the other?

H.—He is a Lawyer, Sir.

K.—Brother to the other?

H.—No, Sir, a relation. He has been of the House, but is not now. He was elected by the two Houses to be of the Council, but negatived. The speaker further acquainted me that, after the first letter, he received another, allowing him to shew the Letters to the Committee of Correspondence; and afterwards a third, which allowed him to shew them to such persons as he could confide in, but always enjoined to send them back without taking copies. I asked him how he could be guilty of such a breach of trust as to suffer them to be made publick? He excused it by saying that he was against their being brought before the House, but was overruled; and when they had been read there, the people abroad compelled their publication, or would not be satisfied without it. . . .

K.—In such abuse, M<sup>r</sup> H., as you met with, I suppose there must have been personal malvolence as well as party rage?

H.—It has been my good fortune, Sir, to escape any charge against me in my private char-

acter. The attacks have been upon my publick conduct, and for such things as my duty to your Majesty required me to do, and which you have been pleased to approve of. I don't know that any of my enemies have complained of a personal injury.

K.—I see they threatened to pitch and feather you.

H.—Tarr & feather, may it please your Majesty; but I don't remember that ever I was threatened with it.

Lord D.—Oh! yes, when Malcolm was tarred and feathered [Almanac for 1770, May, MS. Note], the committee for tarring and feathering blamed the people for doing it, that being a punishment res<sup>d</sup> for a higher person, and we suppose you was intended. . . .

K.—I think you generally live in the country, M<sup>r</sup> H.; what distance are you from town?

H.—I have lived in the country, Sir, in the summer for 20 years; but, except the winter after my house was pulled down, I have never lived in the country in winter until the last. My house is 7 or 8 miles from the Town, a pleasant situation. . . .

K.—Pray, what does Hancock do now? How will the late affair affect him?

H.—I don't know to what particular affair your Majesty refers.

K.—Oh, a late affair in the city, his bills being refused. . . .

H.—I have heard, Sir, that M<sup>r</sup> Haley, a merchant in the city, is M<sup>r</sup> Hancock's principal correspondent.

K.—Ay, that's the name.

H.—I heard, may it please your Majesty, before I came from N. England, that some small sums were returned, but none of consequence.

K.—Oh, no, I mean within this month, large sums.

Lord D.—I have heard such rumours, but don't know the certainty.

H.—M<sup>r</sup> Hancock, Sir, had a very large fortune left him by his uncle, and I believe his political engagements have taken off his attention from his private affairs. He was sensible not long ago of the damage it was to him, and told me he was determined to quit all publick business, but soon altered his mind.

K.—Then there's M<sup>r</sup> Cushing: I remember his name a long time: is not he a great man of the party?

H.—He has been many years Speaker, but a Speaker, Sir, is not always the person of the greatest influence. A M<sup>r</sup> Adams is rather considered as the opposer of Government, and a sort of Wilkes in New England.

K.—What gave him his importance?

H.—A great pretended zeal for liberty, and a most inflexible natural temper. He was the first that publickly asserted the Independency of the colonies upon the Kingdom, or the supreme Authority of it.

K.—I have heard, M<sup>r</sup> H., that your ministers preach that, for the sake of promoting liberty or the publick good, any immorality or less evil may be tolerated?

H.—I don't know, Sir, that such doctrine has ever been preached from the pulpit; but I have no doubt that it has been publickly asserted by some of the heads of the party who call themselves sober men, and the good of the publick is above all other considerations, and that truth may be dispensed with, and immorality is excusable,

when this great good can be obtained by such means.

K.—That's a strange doctrine, indeed. Pray, M<sup>r</sup> H., what is your opinion of the effect from the new regulation of the Council? Will it be agreeable to the people, and will the new appointed Councillors take the trust upon them?

H.—I have not, may it please y<sup>r</sup> Majesty, been able to inform myself who they are. I came to Town late last evening, and have seen nobody. I think much will depend upon the choice that has been made.

K.—Enquiry was made and pains taken that the most suitable persons should be appointed.

H.—The body of the people are Dissenters from the Church of England; what are called Congregationalists. If the Council shall have been generally selected from the Episcopalians, it will make the change more disagreeable.

K.—Why are they not Presbyterians?

H.—There are very few Churches which call themselves Presbyterians, and form themselves voluntarily into a Presbytery without any aid from the civil government, which the Presbyterian Church of Scotland enjoys. . . .

K.—Pray, M<sup>r</sup> H., does population greatly increase in your Province?

H.—Very rapidly, Sir. I used to think that Doctor F., who has taken such pains in his calculations, carried it too far when he supposed the inhabitants of America, from their natural increase, doubled their number in 25 years; but I rather think now that he did not; and I believe it will appear from the last return I made to the Secretary of State, that the Massachusetts has increased in that proportion. And the increase is supposed, including the importation of foreigners, to be, upon the whole, greater in most of the Southern Colonies than in the Massachusetts. We import no settlers from Europe, so as to make any sensible increase.

K.—Why do not foreigners come to y<sup>r</sup> Province as well as to the Southern Governments?

H.—I take it, Sir, that our long cold winters discourage them. Before they can bring the land to such a state as to be able in summer to provide for their support in winter, what little substance they can bring with them is expended, and many of them have greatly suffered. The Southern colonies are more temperate. . . .

K.—To what produce is your climate best adapted?

H.—To grazing, Sir; your Majesty has not a finer Colony for grass in all your dominions: and nothing is more profitable in America than pasture, because labour is very dear.

K.—Then you import all your bread corn from the other Colonies?

H.—No, Sir, scarce any, except for the use of the maritime towns. In the country towns the people raise grain enough for their own expending, and sometimes for exportation. They live upon coarse bread made of rye and corn mixed, and by long use they learn to prefer this to flour or wheat bread. . . .

K.—New York, I think, comes the next to Boston in their opposition to Government?

H.—Does your Majesty think nearer than Pennsylvania?

K.—Why, I can't say that they do of late. Rhode Island, M<sup>r</sup> H., is a strange form of Government.

H.—They approach, Sir, the nearest to a Democracy of any of your Colonies. Once a year all

power returns to the people, and all their Officers are new elected. By this means the Governor has no judgment of his own, and must comply with every popular prejudice.

K.—Who is their Governor now?

H.—His name, Sir, is Wanton, a Gentleman who I have reason to think wishes to see Government maintained as much as any they could find in the Colonies.

K.—How is it with Connecticut? are they much better?

H.—The constitutions, Sir, are much the same; but Connecticut are a more cautious people; strive to make as little noise as may be, and have in general retained a good share of that virtue which is peculiarly necessary in such a form of Government. . . .

K.—What number of Indians had you in your Government?

H.—They are almost extinct. Perhaps there are 50 or 60 families at most upon the Eastern Frontier, where there is a small fort maintained; tho' I conceive the inhabitants would not be in the least danger. It looks, Sir, as if in a few years the Indians would be extinct in all parts of the Continent.

K.—To what is that owing?

H.—I have thought, Sir, in part to their being dispirited at their low despicable condition among the Europeans, who have taken possession of their country, and treat them as an inferior race of beings; but more to the immoderate use of spirituous liquors. There are near 100 families, perhaps more, of Indians who are domiciliated, and live, some in other towns, but most of them at a place called Mashpee, where they have a church, and a Missionary, to preach to them, and also an Indian Minister who has been ordained, and preaches sometimes in their own language.

K.—What, an Episcopal Minister?

H.—No, Sir, of the Congregational persuasion or form of worship.

The King was particularly in many other enquiries relative to my Administration, to the state of the Province, and the other Colonies. I have minutely what remained the clearest upon my mind, and as near the order which they passed as I am able.

—*Diary and letters of Thomas Hutchinson, ch. 5.*

1774 (September).—Meeting of First Continental Congress.—On the call of the Massachusetts Assembly (see above: 1774 [May-June]), one after another all the colonies, except Georgia, chose members for the proposed congress. The delegates for Massachusetts and Pennsylvania were elected by the colonial assemblies. Those from the other colonies were the choice of committees of correspondence, committees of safety, or provincial mass meetings. "On the 5th day of September most of the delegates elected to the congress were in Philadelphia. They were invited by the speaker of the Pennsylvania assembly to hold their sessions in the State House, but decided to meet in the hall owned by the carpenters,—a fine brick building, having commodious rooms for the use of the committees, and an excellent library in the chambers. . . . At ten o'clock in the morning the delegates met at the City Tavern, walked to Carpenters' Hall, and began the sessions of the Continental Congress. This assembly, when all the members had taken their seats, consisted of fifty-five delegates, chosen by twelve colonies. They represented a population of 2,200,000, pay-

ing a revenue of £80,000 sterling. Georgia, which did not elect delegates, gave a promise to concur with her 'sister colonies' in the effort to maintain their right to the British Constitution. . . . In general, the delegates elect were men of uncommon ability, who had taken a prominent part in the political action of their several localities. . . . New England presented, in John Sullivan, vigor; in Roger Sherman, sterling sense and integrity; in Thomas Cushing, commercial knowledge; in John Adams, large capacity for public affairs; in Samuel Adams, a great character, with influence and power to organize. The Middle colonies presented, in Philip Livingston, the merchant prince of enterprise and liberality; in John Jay, rare public virtue, juridical learning, and classic taste; in William Livingston, progressive ideas tempered by conservatism; in John Dickinson, 'The Immortal Farmer,' erudition and literary ability; in Cæsar Rodney and Thomas McKean, working power; in James Duane, timid Whiggism, halting, but keeping true to the cause; in Joseph Galloway, downright Toryism, seeking control, and at length going to the enemy. The Southern colonies presented, in Thomas Johnson, the grasp of a statesman; in Samuel Chase, activity and boldness; in the Rutledges, wealth and accomplishment; in Christopher Gadsden, the genuine American; and in the Virginia delegation, an illustrious group,—in Richard Bland, wisdom; in Edmund Pendleton, practical talent; in Peyton Randolph, experience in legislation; in Richard Henry Lee, statesmanship in union with high culture; in Patrick Henry, genius and eloquence; in Washington, justice and patriotism. 'If,' said Patrick Henry, 'you speak of solid information and sound judgment, Washington unquestionably is the greatest man of them all.' . . . The congress was organized by the choice of Peyton Randolph of Virginia for President, and Charles Thomson of Philadelphia, not a member, for Secretary. . . . A discussion . . . arose on the rules to be observed in determining questions, . . . which was renewed the next day, when it was agreed that each colony should have one vote."—R. Frothingham, *Rise of the republic of the United States*, ch. 9.

Gay, *Popular history of the United States*, v. 3, ch. 13.—G. O. Trevelyan, *American Revolution*, pt. 1, ch. 5.—J. Ramsay, *History of the United States*, v. 3, pp. 380-394.

1774 (September-October).—Action of the Congress.—"The Congress first resolved 'to state the rights of the colonies in general, the several instances in which those rights were violated or infringed, and the means most proper for a restoration of them.' Next, 'to examine and report the several statutes which affect the trade and manufactures of the colonies,' not earlier than the last nine years. While these subjects were under consideration, resolutions of Boston and its neighbors [Middlesex and Suffolk counties] were laid before them, stating their wrongs and merely defensive measures to which they would adhere, 'as long as such conduct may be vindicated by reason and the principles of self-preservation, but no longer.' . . . Congress unanimously approved and recommended 'a perseverance in this firm and temperate conduct,' trusting a change in the councils of the British nation. The merchants were urged not to order goods, and to suspend those ordered; and it was resolved, that after the

first of next December there should be no importation of British goods, and no consumption of, or traffic in them. A loyal petition to the king [the Declaration of Rights and Grievances] was ordered, assuring him that by abolishing the system of laws and regulations of which the colonies complained, enumerating them, the jealousies they had caused would be removed, and harmony restored. 'We ask but for peace, liberty and safety. We wish not a diminution of the prerogative, nor do we solicit the grant of any new right in our favor. Your royal authority over us, and our connection with Great Britain, we shall always carefully and zealously endeavor to support and maintain.' General Gage was entreated to discontinue the erection of the fortifications on Boston Neck, and to prevent all injuries on the part of the troops; and Massachusetts was asked 'temporarily to submit to a suspension of the administration of justice where it could not be procured in a legal and peaceable manner.' Persons accepting office under the recent act, changing the form of her government, were denounced, 'as the wicked tools of that despotism which is preparing to destroy those rights which God, nature, and compact have given to America.' A memorial was next ordered to the inhabitants of the British colonies there represented, exposing their common wrongs and urging a united 'commercial opposition,' warning them to extend their views 'to mournful events,' to be 'in all respects prepared for every contingency, and to implore the favor of Almighty God.' An appeal was made to the enlightened sympathies of the British people. . . . Finally, an address was made to the inhabitants of the Province of Quebec, inviting their co-operation. In the meantime, the form of a non-exportation, non-consumption association was adopted, and signed by each of the delegates. . . . A declaration of the rights and injuries of the colonies was made, in which the most difficult question was disposed of. The right to participate in the legislative council of their common country, was declared to be the foundation of English liberty and of all free government. . . . Of all these proceedings the language was that of peace, except where other language was demanded. For they approved the opposition of the inhabitants of Massachusetts Bay to the execution of the late acts of Parliament, and declared, 'If these acts shall be attempted to be carried into execution by force, in such case all America ought to support them in their opposition,' and 'that seizing or attempting to seize any person in America, in order to transport such person beyond the sea for trial of offences committed within the body of a county in America, being against law, will justify, and ought to meet with, resistance and reprisal.' These were the essential resolutions. They bound the colonies to a common resistance to acts of force against all, or any one of them. They also declared their opinion of the necessity that another Congress should be held in the ensuing month of May, unless the redress of grievances which they had desired was obtained before that time, and that all the colonies in North America choose deputies, as soon as possible, to attend such Congress. On the twenty-sixth of October, after a secret session of fifty-one days, this body adjourned. The recommendations of this Congress were received with marked respect among the patriots of the colonies."—J. C. Hamilton, *History of the United States as traced in the writings of Alexander Hamilton*, v. 1, ch. 3.—

"Trained in all the theories of the mercantile system, America had been taught to believe (1) that two countries could continue to trade, though one of necessity did so at a loss; (2) that in the trade between England and the colonies, the former both through natural advantages and through law was the party to which the profit accrued; (3) that England was 'a shop-keeping nation,' whose very existence depended on her trade and manufactures. A suspension of trade between England and America therefore would mean misery, if not ruin, to the mother country, while the colonies would 'both save and gain.' With measures of non-importation, non-exportation and non-consumption, accordingly, did this otherwise powerless body hope to coerce the English people and government. Though founded on an economic fallacy, this method of action was certain to have a great effect in England. Twice already had it been employed on a limited scale—against the Stamp Act and against the revenue acts,—and each time with sufficient success to warrant the belief that its wider application would result in victory. Now the agents of the colonies in London were writing home: 'If you have virtue enough to resolve to stop, and to execute the resolution of stopping, your exports and imports for one year, this country must do you justice.' . . . In both England and America the temporary destruction of British trade was viewed not merely as an effective weapon, but as the only peaceful one which the colonies possessed. A failure to unite in a non-importation agreement against England would, according to a prominent English politician, leave nothing for the colonies 'but to decide between ruin and submission.' The question for the Congress was not, therefore, a choice of remedies, but merely whether, and to how great an extent, the delegates could be brought to agree to the only one within their reach. For even while accepting the system as effective against Great Britain, the delegates and their constituents had so far progressed as to realize that it bore with uneven force on the different colonies. The southern colonies were really no more diversified in their industries than the West India islands. South Carolina grew rice and indigo; North Carolina depended largely on tar, pitch and turpentine; Virginia raised tobacco. Unless these products could be exported to Europe, those colonies might suffer for the necessaries of life. . . . The first consideration of the subject in the Congress revealed serious difficulties. The Virginia delegation, 'to avoid the heavy injury that would arise,' were prevented by their instructions from agreeing to an immediate cessation of trade relations. Imports would cease on November 1, 1774, but exports must continue till August 10, 1775. It was in vain they were told 'that a non-exportation at a future day cannot avail,' and that at the Virginia date non-exportation would not operate before the fall of 1776. The Virginians had determined to cure and sell their tobacco crop of 1774 before 'consideration of interest and of equality of sacrifice should be laid aside.' So vital, however, did most of the delegates consider the immediate enforcement, that it was proposed to act without Virginia; for Boston and New England, it was said, would need active support before that date. This proposition was defeated by the refusal of the delegates of North Carolina and Maryland to join unless Virginia should also make the sacrifice. With sorry grace the Congress had to accept the dictation of Virginia. But the trouble did not end here. Vir-

ginia's selfish interest having been triumphant, the South Carolina delegation sought for an equal advantage, and demanded that the two great products of that colony should be especially reserved from the non-exportation clause. . . . Rather than yield, the Congress preferred a cessation of business for several days, in order 'to give our [South Carolina] deputies time to recollect themselves.' But when the Association [the agreement not to carry on either import or export trade with England] was ready for signing, the South Carolina delegates, with but one exception, seceded from the Congress, and their assent was only secured eventually through a compromise, by virtue of which rice alone was excluded from the agreement, while indigo was brought under its terms. Such were the secret deliberations of the Congress, in endeavoring to unite the colonies in the use of their only weapon. The first public results appeared in the form of a unanimous resolution, passed and published on September 22, requesting 'the merchants and others in the several colonies not to send to Great Britain any orders for goods,' and to delay or suspend orders already sent. Five days later it was unanimously resolved that after December 1, 1774, 'there should be no importation into British America from Great Britain or Ireland, or from any other place,' of any goods, wares or merchandise exported from Great Britain or Ireland. Three days later, with no assertion of unanimity, a resolution was announced to the effect 'that from and after the 10th day of September, 1775, the exportation of all merchandise and every commodity whatsoever to Great Britain, Ireland and the West Indies ought to cease, unless the grievances of America are redressed before that time,' and a committee was appointed to draft a plan for carrying into effect these resolves. On October 12 this committee brought in a report, which, after consideration and amendment, was on the 18th of October agreed to and ordered signed. On October 20 it was signed and ordered to be printed. Possessed of no real power, the Congress relied on the people to enforce this agreement. It was recommended that in every county, city and town a committee be chosen 'whose business it shall be attentively to observe the conduct of all persons touching this Association.' With hardly an exception, this recommendation was adopted. As America had refused to trade with Great Britain and her colonies, the government replied by acts prohibiting any such trade. The policy of 'exhausting its opponent by injuring itself' was at last to have a fair trial, but through British, not American action. The colonies were by law interdicted from all commerce, trade and fishing. But before the legislation went into effect blood had been shed at Lexington. The contest could no longer be fought with acts of Parliament and resolves of Congress; 'blows must decide.' The Association was distinctively a peace weapon. Had the Congress really expected war, no action could have been more foolish. A garrison soon to be beleaguered virtually shut its ports to supplies. No better proof is needed of how little the delegates wished or worked for separation."—P. L. Ford, *Association of the First Congress (Political Science Quarterly, Dec., 1891)*.—"It is only after a careful study of the proceedings of this Congress, and the subsequent history of some of its members, that we come at its real character. It was a Peace Congress. Some of the colonies had been compromised by their attitude in respect to the East India Company's teas; and the extreme

measures of the British government in closing the port of Boston, and altering the charter of the contumacious people of Massachusetts, excited the apprehension of other colonies as to the ulterior purposes of the ministry. While it was the patriotic desire of the Congress to express their sympathies and to stand by the people of Boston in the hour of their sufferings, it was hoped and expected that some conciliatory course would be followed which would allow the ministry and the Massachusetts people to extricate themselves from their difficulties without recourse to war. John Adams had no faith in the efficacy of the petition to the king, nor in the addresses to the people of Great Britain and the Canadas. Matters had gone so far in New England that they would be satisfied with no terms short of the withdrawal of the royal troops, the re-opening of the port of Boston, and the total repeal of all measures designed to reduce them to obedience. At the same time, not only the British ministry, but the British people also, were demanding the complete submission of the Bostonians, or the infliction of condign punishment. So far as Massachusetts was concerned, the war was inevitable. John Adams saw it to be so, and prepared himself for it. He endeavored to prepare the Congress for it, and not without valuable results. The great work effected by this Congress was the bringing the colonies on to common ground by a declaration of their rights. Opinions were divided. A compromise ensued, and the famous fourth article was the result. It was drawn by John Adams, and carried mainly by his influence, and reads as follows:—"That the foundation of English liberty, and of all free government, is a right in the people to participate in their legislative council; and as the English colonists are not represented, and from their local and other circumstances cannot be properly represented in the British Parliament, they are entitled to a free and exclusive power of legislation in their several provincial legislatures, where their rights of representation can alone be preserved, in all cases of taxation and internal polity, subject only to the negative of their sovereign, in such manner as has been heretofore used and accustomed. But from the necessity of the case, and a regard to the mutual interest of both countries, we cheerfully consent to the operation of such acts of the British Parliament as are bona fide restrained to the regulation of our external commerce, for the purpose of securing the commercial advantages of the whole empire to the mother country; and the commercial benefits of its respective members; excluding every idea of taxation, internal or external, for raising a revenue on the subjects in America, without their consent." This was not precisely what John Adams wanted, but it was much. When this declaration went forth, the cause of Massachusetts, in whatever it might eventuate, was the cause of the colonies. It was nationalized. This was John Adams's greatest feat of statesmanship. On it the success of the impending war, and the Declaration of Independence rested."—M. Chamberlain, *John Adams, the statesman of the American Revolution*, pp. 78-80.—"How far the authority of this first congress extended, according to the instructions of the delegates, it is impossible to determine with certainty as this distance of time. But it is probable that the original intention was that it should consult as to the ways and means best calculated to remove the grievances and to guaranty the rights and liberties of the colonies, and should propose

to the latter a series of resolutions, furthering these objects. But the force of circumstances at the time compelled it to act and order immediately, and the people, by a consistent following of its orders, approved this transcending of their written instructions. The congress was therefore not only a revolutionary body from its origin, but its acts assumed a thoroughly revolutionary character. The people, also, by recognizing its authority, placed themselves on a revolutionary footing, and did so not as belonging to the several colonies, but as a moral person; for to the extent that congress assumed power to itself and made bold to adopt measures national in their nature, to that extent the colonists declared themselves henceforth to constitute one people, inasmuch as the measures taken by congress could be translated from words into deeds only with the consent of the people. This state of affairs essentially continued up to March 1, 1781. Until that time, that is, until the adoption of the articles of confederation by all the states, congress continued a revolutionary body, which was recognized by all the colonies as 'de jure' and 'de facto' the national government, and which as such came in contact with foreign powers and entered into engagements, the binding force of which on the whole people has never been called in question. The individual colonies, on the other hand, considered themselves, up to the time of the Declaration of Independence, as legally dependent upon England and did not take a single step which could have placed them before the mother country or the world in the light of 'de facto' sovereign states. They remained colonies until the 'representatives of the United States' 'in the name of the good people of these colonies' solemnly declared 'these united colonies' to be 'free and independent states.' The transformation of the colonies into 'states' was, therefore, not the result of the independent action of the individual colonies. It was accomplished through the 'representatives of the United States'; that is, through the revolutionary congress, in the name of the whole people. Each individual colony became a state only in so far as it belonged to the United States and in so far as its population constituted a part of the people."—H. von Holst, *Constitutional and political history of the United States*, v. 1, ch. 1.

1774-1775.—Provincial Congress of Massachusetts and Committee of Safety.—Military preparations.—Opposition to parliamentary control.—In the fall of 1774 Massachusetts organized a Provincial Congress and a Committee of Safety. (See MASSACHUSETTS; 1774.) On October 27, Jedediah Preble (who did not accept), Artemas Ward, and Seth Pomeroy, were chosen general officers of the committee; and on the 28th, Henry Gardner was chosen treasurer of the colony, under the title of Receiver-General. "Among the energetic acts of this memorable Congress, was one authorizing the collection of military stores. It dissolved December 10. The committee of safety, as early as November, authorized the purchase of materials for an army, and ordered them to be deposited at Concord and Worcester. These proceedings were denounced by General Gage, in a

proclamation dated November 10, as treasonable, and a compliance with them was forbidden. In a short time the king's speech and the action of Parliament were received, which manifested a firm determination to produce submission to the late acts, and to maintain 'the supreme authority' of Great Britain over the colonies. General Gage regarded this intelligence as having 'cast a damp upon the faction,' and as having produced a happy effect upon the royalist cause. However, a second Provincial Congress (February 1 to 16, 1775) renewed the measures of its predecessor; and gave definiteness to the duties of the committee of safety, by 'empowering and directing' them (on the 9th of February) to assemble the militia whenever it was required to resist the execution of the two acts, for altering the government and the administration of justice. At the same time it appointed two additional generals, John Thomas, and William Heath, and made it the duty of the five general officers to take charge of the militia when called out by the committee of safety, and to effectually oppose and resist such attempt or attempts as shall be made for carrying into execution by force' the two acts. . . . The conviction was fast becoming general that force only could decide the contest. Stimulated and sustained by such a public opinion, the committees of safety and supplies were diligent, through the gloomy months of winter, in collecting and storing at Concord and Worcester materials for the maintenance of an army."—R. Frothingham, *History of the siege of Boston*, ch. 1.—"By the first day of January, 1775, the garrison of Boston had been increased to thirty-five hundred men, and mounted three hundred and seventy men as a daily guard-detail, besides a field officers' guard of one hundred and fifty men on Boston Neck. Three brigades were organized and were officered, respectively by Generals Lord Percy, Pigott and Jones. In November of 1774, General Gage had advised the British government, that he, 'was confident, that to begin with an army twenty thousand strong, would in the end save Great Britain blood and treasure.' Meanwhile, the militia drilled openly, rapidly completed company organizations, and made many sacrifices to procure arms, powder and other materials of war. The Home government, in view of the serious aspect of affairs, ordered Generals Howe, Clinton, and Burgoyne to join General Gage, and announced that 'ample reinforcements would be sent out, and the most speedy and effectual measures would be taken to put down the rebellion,' then pronounced to already exist. On the eighth of April, the Provincial Congress resolved to take effectual measures to raise an army, and requested the coöperation of Rhode Island, New Hampshire and Connecticut. On the thirteenth, it voted to raise six companies of artillery, to pay them and keep them at drill. On the fourteenth it advised citizens to leave Boston and to remove to the country. On the fifteenth, it solemnly appointed a day for 'Public Fasting and Prayer,' and adjourned to the tenth of May. The Committee of Public Safety at once undertook the task of securing powder, cannon and small arms. A practical embargo was laid upon all trade with Boston. The garrison could obtain supplies only with great difficulty, and, as stated by Gordon, 'nothing was wanting, but a spark to set the whole continent in a flame.'"—H. B. Carrington, *Battles of the American Revolution*, ch. 2.—The spark flew from Gage's attempt in April, 1775, to secure the continental stores at Concord.

"Students of the Revolution that believe the movement was economic in origin, character and purpose, may not deny that, after 1768, Parliament had no express hope or intention of obtaining revenue from America. From that time on, British interest was largely, if not wholly, confined to asserting parliamentary omnipotence, or, if this seems too strong, confined to an insistence upon the supreme power of Parliament and to resisting what they believed, under the tutelage of American governors, was a conscious tendency toward independence. Indeed, especially after 1768, but to a considerable extent from 1766, the question was not so much whether the colonies would pay taxes as whether they would acknowledge the legal obligation; and to an amazing extent the conflict was over the existence or non-existence of an abstract right. . . . Much of the colonial argument was in defense of individual liberty, not of states rights; but the center of the controversy was whether or not Parliament was possessed of limitless authority. The colonists at least claimed to be satisfied with the old régime, in which power had been divided, and in which Parliament had chiefly shown its power by the regulation of trade. The parliamentarians insisted that in the law of the empire the will of Parliament was nothing more nor less than supreme and all-inclusive. The colonists insisted, though they did not use this phraseology, that old practises of the empire were the law of the empire and thus, in modern phraseology, they demanded the recognition of a composite empire based on law. Even if we admit the presence of many economic and social forces, we find in actual conflict two theories of imperial order; and in this discussion after 1768, if not before, the English parliamentarians and pamphleteers were victims of certain dogmas of political science curiously similar to the doctrine of indivisible sovereignty. How often did Burke deprecate the continual harping on Parliament's authority, on the necessity of acknowledging the theoretical supremacy of Parliament. He deplored the common talk about the legal rights. Beyond Burke's speeches little needs be cited to show the essentially legalistic character of the whole discussion. It may be rash to assert that the colonists were less insistent upon knowing what the constitution of the empire was than were the Englishmen, though there seems no reason to doubt that the colonists would have willingly accepted the old practise as sufficient, if it were not threatened. Still, the colonists desired to know precisely what were American rights; and in this respect possibly America was more legalistic than Britain, because Parliament insisted on the existence of unlimited power—asserted, one might not unjustly say, that Parliament was above the law—while the colonists asserted that Parliament was bound by rigid law. 'The patchwork government of America,' wrote Bernard in 1765, 'will last no longer; the necessity of a parliamentary establishment of the governments of America upon fixed constitutional principles, is brought out with a precipitation which could not have been foreseen but a year ago; and is become more urgent, by the very incidents which make it more difficult.' At this time, it will be remembered, he proposed an extraordinary Parliament, in which there were to be American representatives, which

should form and establish 'a general and uniform system of American government'; 'and let the relation of America be determined and ascertained by a solemn Recognition; so that the rights of the American governments, and their subordination to that of Great Britain, may no longer be a subject of doubt and disputation.' In 1766 he declares that 'the Stamp Act is become in itself a matter of indifference; it is swallowed up in the importance of the effects of which it has been the cause. . . . And as the relation between Great Britain and the colonies has not only been never settled, but scarce even formally canvassed, it is the less surprising, that the ideas of it on one side of the water and on the other are so widely different, to reconcile these, and to ascertain the nature of the subjection of the colonies to the crown of Great Britain, will be a work of time and difficulty.' There can be little doubt that Bernard was right; the problem of the day was the problem of imperial organization; were Englishmen or Americans capable of finding a law of the empire? If so, that law must be consonant with practical realities; it must be a formulation of the principles of relationship which recognized not centralization but distribution. As an indication of the fact that men were discussing legal rights, and losing sight of financial returns, it may be sufficient for the earlier days to refer to the comments in the *Parliamentary History* on the debate about the Circular Letter. It was insisted by opponents of the ministry in debate on the Massachusetts Circular Letter and in respect to the revenue laws 'that the inutility of these laws was so evident, that the ministers did not even pretend to support them upon that ground, but rested their defense upon the expediency of establishing the right of taxation.' And if we turn again to Dickinson, we find the same thing in a different guise—the necessity of law in the empire—not a law securing centralized authority but freedom. There could be no freedom without legal restriction: 'For who are a free people? Not those, over whom government is reasonably and equitably exercised, but those, who live under a government so constitutionally checked and controlled that proper provision is made against its being otherwise exercised.' We might wisely spend much time in considering the dispute in 1770 already referred to—the dispute as to whether instructions could *ipso facto* dispose of all matters of constitutional right of the colonies, or whether even the crown was limited in imperial authority, by the fact of the existence of competent and legally recognized colonial legislatures. But passing over those three years or so of legalistic dispute, let us come to 'the great controversy' of 1773. In considering this we can echo John Adams' expression of amazement at Hutchinson's audacity in throwing down the gauntlet. The truth probably is that Hutchinson had been previously tried for years, not alone by what he considered the unmannerly conduct of the rabble, but by the doctrines which he heard in the market place and perhaps in legislative halls. He believed that the theories of the malcontents were unsound and that he in the plenitude of his wisdom could establish their invalidity; and he prepared therefore to bring his heaviest artillery to bear upon the unreasoning followers of Samuel Adams and against the arch agitator himself. What he wished to do, be it noticed, was to demolish a false theory of the empire and bring every one to acknowledge, not the wisdom of obnoxious legislation, but the legal authority of Parliament. By this time doubtless there was much talk about complete freedom

from parliamentary control, but there had been little if any formal public announcement by the radicals of anything more than a freedom from taxation. Hutchinson, it must be said, had considerable reason for having confidence in his massed attack; for his argument was able and compelling, serving by its weight to bring into play all the open and masked batteries of the opposition. He finally reached in his first paper a position from which he believed he could discharge one final and conclusive volley; he was prepared to use an undeniable principle of political science; he believed he could silence his enemies with its mere pronouncement: 'It is impossible there should be two independent Legislatures in the one and the same state.' Despite all the discussion that had gone on, despite the fact that Britain had been practising federalism, Hutchinson could see nothing but the theory of centralized legislative omnipotence and could not conceive of distribution of power between mutually independent legislative bodies. And yet this undeniable axiom of political science was to be proved untrue in the course of fifteen years by the establishment of fourteen independent legislatures in the single federal state, the United States of America. The two branches of the legislature met Hutchinson's general argument somewhat differently. The house argued valiantly for complete freedom from parliamentary control; in facing the alternative of complete freedom from Parliament and complete subservience, they unhesitatingly chose the former, though they did seem to recognize the possibility of drawing a line between the supreme authority of Parliament and total independence. The council, wiser and more conservative than the house, announced federalism; they contended that the colony had 'property in the privileges granted to it,' i.e., an indefeasible legal title: 'But, as in fact, the two powers are not incompatible, and do subsist together, each restraining its acts to their constitutional objects, can we not from hence, see how the supreme power may supervise, regulate, and make general laws for the kingdom, without interfering with the privileges of the subordinate powers within it?' This is a clear, precise and thorough description of federalism. It is plain enough, then, that there were some clear-headed men, who, in the years just before the final break with England, were not silenced by the fulminations of British pamphleteers or the dogmatic assertions of Hutchinson into a belief that the empire was simple and unitary; nor were they as yet ready to accept the learned and technical argument of John Adams, though buttressed by pedantic reference to Calvin's case, that the empire was held together by the King, a personal union only.—A. C. McLaughlin, *Background of American federalism (America and Britain, pp. 203-213)*.—See also ENGLAND: 1776-1778.—'In a reminiscent letter, written in his declining years [John Adams] declares that the history of the American Revolution ought to be divided into four periods ranging from 1620 to 1781. 'The Revolution,' he asserted, 'was effected before the war commenced. The Revolution was in the minds and hearts of the people.' . . . Everything in their new environment tended to make the settlers forget the power or even the need of the British Government. The fundamentals of political organization remained the same, but a thousand laws, needed to keep order in the highly complex English society, became irrelevant and useless in the sparsely settled forest. New laws of the colonists' own making took the place of those discarded. . . . [From the first, colonists

brought with them 'all the first great privileges of Englishmen on their backs,' and consistently claimed the right to elect their own assemblies, to legislate for them in accordance with the requirements of their new circumstances and surroundings.] Sometimes these enactments were quite contrary to the English laws, even violating the terms of the charter under which the legislators held their hands. The methods of administration also wandered from the ways that custom had established in the homeland. It was not unusual for Winthrop and his fellow magistrates . . . to detain or even set behind the bars men who disputed their methods of rule, and who wished to appeal to the tribunals of England. . . . Divergence was beginning and would go on until, all unaware of the widening breach, Englishmen and Americans would discover, in the latter half of the eighteenth century, that they differed irreconcilably in certain basic political principles. As new colonies one after another were founded in America, there evolved in various ways similar institutions, given to like divergences from the English legal and constitutional development. . . . The whole colonial history abounds in struggles between the assemblies elected by the people and the governors, the appointed agents of King or Parliament. . . . A few men of ability were made governors, but they seem to have been little more successful from the British Government point of view than those who were inefficient or lacking in experience. The colonists opposed them whether good or bad. . . . Things the monarch could no longer do in England his representative in the colony could do. A governor could summon, prorogue, and dissolve a colonial assembly, but the King, at least in practice, dared not so treat Parliament. The colonists naturally strove to reduce the governor's power with reference to their assemblies within the same limits as the King's power with reference to Parliament. . . . Even his sectarian preferences usually made him odious. All governors, lieutenant-governors, secretaries, councillors, attorneys-generals, chief justices, customs officers—all colonial officers, in fact, who were appointed by the British Government—were 'ruffe-shirted Episcopalians,' and attended the Anglican Church. This fact, especially in the northern colonies where an opposing sect was established, served to keep the British officials aloof religiously and to make the Dissenters less willing to yield obedience to them. Moreover, these officers, thus isolated at this important point of social contact, lost that opportunity of understanding and sympathizing with the people. If they took religion at all seriously, they were sure to give offense by merely encouraging Anglican Church practices. . . . [Meanwhile, little by little the imperial power of Britain had been waxing greater, and had drawn the jealous anger of the surrounding nations.] Yet had her enemies realized the magnitude of the problems of organization which accompanied that growth, all emotions of envy would have died within them. At the dawn of the era of expansion the problems of empire had seemed easy of solution. All were answered by the simple formula of the mercantile theory as to colonies. Every governmental act which concerned the American colonies was determined by the political and economic theory that colonies were not worth while unless they could be so managed as to bring gold into the home country. No other motive was thinkable in that age. . . . The natural sequence of such ideas was that in the seventeenth century British statesmen

had an attitude of positive dislike toward New England. These northern colonies were not servicable as were the West Indies to the commercial system. Sandwich told Charles II to 'hinder their growth' as much as possible. The goods they produced too nearly resembled those of England. . . . [The New England pine forests were indeed judged useful for their masts, and the colonists of the North were required to provide tar, pitch and turpentine for the royal navy.] But the colonists preferred the West Indian Trade in builders' supplies, and drove off or sued the government agents who were sent to mark timber suitable for masts. New England maintained its economic independence for a generation before it ventured to assert political independence."—C. H. Van Tyne, *Causes of the War of Independence*, pp. 17-18, 28-29, 33, 37-38, 44-45, 59-61.—See also BOSTON: 1774.

1775 (January-March).—Vain efforts toward pacific statesmanship in British Parliament, by Chatham, Burke, and others.—A newly elected British Parliament "met on November 30, 1774; but no serious measure relating to America was taken till January 1775, when the House reassembled after the Christmas vacation. The Ministers had a large majority, and even apart from party interest the genuine feeling of both Houses ran strongly against the Americans. Yet at no previous period were they more powerfully defended. . . . Chatham, having returned to active politics after his long illness in 1774, had completely identified himself with the American cause, and had advocated with all his eloquence measures of conciliation. He . . . moved an address to the King praying that he would as soon as possible, 'in order to open the way towards a happy settlement of the dangerous troubles in America,' withdraw the British troops stationed in Boston. In the course of his speech he represented the question of American taxation as the root-cause of the whole division, and maintained that the only real basis of conciliation was to be found in a distinct recognition of the principle that 'taxation is theirs, and commercial regulation ours'; that England has a supreme right of regulating the commerce and navigation of America, and that the Americans have an inalienable right to their own property. He fully justified their resistance, predicted that all attempts to coerce them would fail, and eulogised the Congress at Philadelphia as worthy of the greatest periods of antiquity. Only eighteen peers voted for the address, while sixty-eight opposed it. On February 1 he reappeared with an elaborate Bill for settling the troubles in America. It asserted in strong terms the right of Parliament to bind the colonies in all matters of imperial concern, and especially in all matters of commerce and navigation. It pronounced the new colonial doctrine that the Crown had no right to send British soldiers to the colonies without the assent of the Provincial Assemblies, dangerous and unconstitutional in the highest degree, but at the same time it recognised the sole right of the colonists to tax themselves, guaranteed the inviolability of their charters, and made the tenure of their judges the same as in England. It proposed to make the Congress which had met at Philadelphia an official and permanent body, and asked it to make a free grant for

imperial purposes. England, in return, was to reduce the Admiralty Courts to their ancient limits, and to suspend for the present the different Acts complained of by the colonists. The Bill was not even admitted to a second reading. Several other propositions tending towards conciliation were made in this session. On March 22, 1775, Burke, in one of his greatest speeches, moved a series of resolutions recommending a repeal of the recent Acts complained of in America, reforming the Admiralty Court and the position of the judges, and leaving American taxation to the American Assemblies, without touching upon any question of abstract right. A few days later, Hartley moved a resolution calling upon the Government to make requisitions to the colonial Assemblies to provide of their own authority for their own defence; and Lord Camden in the House of Lords and Sir G. Savile in the House of Commons endeavoured to obtain a repeal of the Quebec Act. All these attempts, however, were defeated by enormous majorities. The petition of Congress to the King was referred to Parliament, which refused to receive it, and Franklin, after vain efforts to effect a reconciliation, returned from England to America."—W. E. H. Lecky, *History of England in the eighteenth century*, v. 3, ch. 12.

The following are the more important passages of the speech of Burke, on moving the resolutions which he introduced in the House of Commons, March 22, 1775:

"The proposition is peace. Not peace through the medium of war; not peace to be hunted through the labyrinth of intricate and endless negotiations; not peace to arise out of universal discord, fomented from principle, in all parts of the empire; not peace to depend on the juridical determination of perplexing questions, or the precise marking the shadowy boundaries of a complex government. It is simple peace, sought in its natural course and in its ordinary haunts. It is peace sought in the spirit of peace, and laid in principles purely pacific. I propose, by removing the ground of the difference, and by restoring the former unsuspecting confidence of the colonies in the mother country, to give permanent satisfaction to your people,—and (far from a scheme of ruling by discord) to reconcile them to each other in the same act and by the bond of the very same interest which reconciles them to British government. My idea is nothing more. Refined policy ever has been the parent of confusion,—and ever will be so, as long as the world endures. Plain good intention, which is as easily discovered at the first view as fraud is surely detected at last, is, let me say, of no mean force in the government of mankind. Genuine simplicity of heart is an healing and cementing principle. . . . The capital leading questions on which you must this day decide are these two: First, whether you ought to concede; and secondly, what your concession ought to be. On the first of these questions we have gained . . . some ground. But I am sensible that a good deal more is still to be done. Indeed, Sir, to enable us to determine both on the one and the other of these great questions with a firm and precise judgment, I think it may be necessary to consider distinctly the true nature and the peculiar circumstances of the object which we have before us: because, after all our struggle, whether we will or not, we must govern America according to that nature and to those circumstances, and not according to our own imaginations, not according to abstract ideas of right, by no means according to mere general theories of government, the resort to which appears

to me, in our present situation, no better than arrant trifling. . . . The first thing that we have to consider with regard to the nature of the object is the number of people in the colonies. I have taken for some years a good deal of pains on that point. I can by no calculation justify myself in placing the number below two millions of inhabitants of our own European blood and color,—besides at least 500,000 others, who form no inconsiderable part of the strength and opulence of the whole. This, Sir, I believe, is about the true number. There is no occasion to exaggerate, where plain truth is of so much weight and importance. But whether I put the present numbers too high or too low is a matter of little moment. Such is the strength with which population shoots in that part of the world, that, state the numbers as high as we will, whilst the dispute continues, the exaggeration ends. Whilst we are discussing any given magnitude, they are grown to it. Whilst we spend our time in deliberating on the mode of governing two millions, we shall find we have millions more to manage. Your children do not grow faster from infancy to manhood than they spread from families to communities, and from villages to nations. . . . But the population of this country, the great and growing population, though a very important consideration, will lose much of its weight, if not combined with other circumstances. The commerce of your colonies is out of all proportion beyond the numbers of the people. . . . The trade with America alone is now within less than £500,000 of being equal to what this great commercial nation, England, carried on at the beginning of this century with the whole world! . . . But, it will be said, is not this American trade an unnatural protuberance, that has drawn the juices from the rest of the body? The reverse. It is the very food that has nourished every other part into its present magnitude. Our general trade has been greatly augmented, and augmented more or less in almost every part to which it ever extended, but with this material difference: that of the six millions which in the beginning of the century constituted the whole mass of our export commerce the colony trade was but one twelfth part; it is now (as a part of sixteen millions) considerably more than a third of the whole. . . . I choose, Sir, to enter into these minute and particular details; because generalities, which in all other cases are apt to heighten and raise the subject, have here a tendency to sink it. When we speak of the commerce of our colonies, fiction lags after truth, invention is unfruitful, and imagination cold and barren. . . . I pass . . . to the colonies in another point of view,—their agriculture. This they have prosecuted with such a spirit, that, besides feeling plentifully their own growing multitude, their annual export of grain, comprehending rice, has some years ago exceeded a million in value. Of their last harvest, I am persuaded, they will export much more. At the beginning of the century some of these colonies imported corn from the mother country. For some time past the Old World has been fed from the New. The scarcity which you have felt would have been a desolating famine, if this child of your old age, with a true filial piety, with a Roman charity, had not put the full breast of its youthful exuberance to the mouth of its exhausted parent. As to the wealth which the colonies have drawn from the sea by their fisheries, you had all that matter fully opened at your bar. You surely thought those acquisitions of value, for they seemed even to excite your envy; and yet

the spirit by which that enterprising employment has been exercised ought rather, in my opinion, to have raised your esteem and admiration. And pray, Sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the people of New England have of late carried on the whale fishery. Whilst we follow them among the tumbling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis's Straits, whilst we are looking for them beneath the arctic circle, we hear that they have pierced into the opposite region of polar cold, that they are at the antipodes, and engaged under the frozen serpent of the South. Falkland Island, which seemed too remote and romantic an object for the grasp of national ambition, is but a stage and resting-place in the progress of their victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both the poles. . . . I am sensible, Sir, that all which I have asserted in my detail is admitted in the gross, but that quite a different conclusion is drawn from it. America, gentlemen say, is a noble object,—it is an object well worth fighting for. Certainly it is, if fighting a people be the best way of gaining them. Gentlemen in this respect will be led to their choice of means by their complexions and their habits. Those who understand the military art will of course have some predilection for it. Those who wield the thunder of the state may have more confidence in the efficacy of arms. But I confess, possibly for want of this knowledge, my opinion is much more in favor of prudent management than of force,—considering force not as an odious, but a feeble instrument, for preserving a people so numerous, so active, so growing, so spirited as this, in a profitable and subordinate connection with us. First, Sir, permit me to observe, that the use of force alone is but temporary. It may subdue for a moment; but it does not remove the necessity of subduing again: and a nation is not governed which is perpetually to be conquered. My next objection is its uncertainty. Terror is not always the effect of force, and an armament is not a victory. If you do not succeed, you are without resource: for, conciliation failing, force remains; but, force failing, no further hope of reconciliation is left. Power and authority are sometimes bought by kindness; but they can never be begged as alms by an impoverished and defeated violence. A further objection to force is, that you impair the object by your very endeavors to preserve it. The thing you fought for is not the thing which you recover, but depreciated, sunk, wasted, and consumed in the contest. Nothing less will content me than whole America. I do not choose to consume its strength along with our own; because in all parts it is the British strength that I consume. I do not choose to be caught by a foreign enemy at the end of this exhausting conflict, and still less in the midst of it. I may escape, but I can make no insurance against such an event. Let me add, that I do not choose wholly to break the American spirit; because it is the spirit that has made the country. Lastly, we have no sort of experience in favor of force as an instrument in the rule of our colonies. Their growth and their utility has been owing to methods altogether different. Our ancient indulgence has been said to be pursued to a fault. It may be so; but we know, if feeling is evidence, that our fault was more tolerable than our attempt to mend it, and our sin far more salutary than

our penitence. These, Sir, are my reasons for not entertaining that high opinion of untried force by which many gentlemen, for whose sentiments in other particulars I have great respect, seem to be greatly captivated. But there is still behind a third consideration concerning this object, which serves to determine my opinion on the sort of policy which ought to be pursued in the management of America, even more than its population and its commerce: I mean its temper and character. In this character of the Americans a love of freedom is the predominating feature which marks and distinguishes the whole. . . . This fierce spirit of liberty is stronger in the English colonies, probably, than in any other people of the earth, and this from a great variety of powerful causes; which, to understand the true temper of their minds, and the direction which this spirit takes, it will not be amiss to lay open somewhat more largely. First, the people of the colonies are descendants of Englishmen. England, Sir, is a nation which still, I hope, respects, and formerly adored, her freedom. The colonists emigrated from you when this part of your character was most predominant; and they took this bias and direction the moment they parted from your hands. They are therefore not only devoted to liberty, but to liberty according to English ideas and on English principles. . . . Your mode of governing them, whether through lenity or indolence, through wisdom or mistake, confirmed them in the imagination, that they, as well as you, had an interest in these common principles. They were further confirmed in this pleasing error by the form of their provincial legislative assemblies. Their governments are popular in an high degree: some are merely popular; in all, the popular representative is the most weighty; and this share of the people in their ordinary government never fails to inspire them with lofty sentiments, and with a strong aversion from whatever tends to deprive them of their chief importance. If anything were wanting to this necessary operation of the form of government, religion would have given it a complete effect. Religion, always a principle of energy, in this new people is no way worn out or impaired; and their mode of professing it is also one main cause of this free spirit. The people are Protestants, and of that kind which is the most adverse to all implicit submission of mind and opinion. . . . All Protestantism, even the most cold and passive, is a sort of dissent. But the religion most prevalent in our northern colonies is a refinement on the principle of resistance: it is the dissidence of dissent, and the protestantism of the Protestant religion. . . . Permit me, Sir, to add another circumstance in our colonies, which contributes no mean part towards the growth and effect of this untractable spirit: I mean their education. In no country, perhaps, in the world is the law so general a study. The profession itself is numerous and powerful, and in most provinces it takes the lead. The greater number of the deputies sent to the Congress were lawyers. But all who read, and most do read, endeavour to obtain some smattering in that science. I have been told by an eminent bookseller, that in no branch of his business, after tracts of popular devotion, were so many books as those on the law exported to the plantations. The colonists have now fallen into the way of printing them for their own use. I hear that they have sold nearly as many of Blackstone's 'Commentaries' in America as in England. General Gage marks out this disposition very par-

ticularly in a letter on your table. He states, that all the people in his government are lawyers, or smatterers in law,—and that in Boston they have been enabled, by successful chicanery, wholly to evade many parts of one of your capital penal constitutions. . . . The last cause of this disobedient spirit in the colonies is hardly less powerful than the rest, as it is not merely moral, but laid deep in the natural constitution of things. Three thousand miles of ocean lie between you and them. No contrivance can prevent the effect of this distance in weakening government. Seas roll, and months pass, between the order and the execution; and the want of a speedy explanation of a single point is enough to defeat an whole system. . . . Then, Sir, from these six capital sources, of descent, of form of government, of religion in the northern provinces, of manners in the southern, of education, of the remoteness of situation from the first mover of government,—from all these causes a fierce spirit of liberty has grown up. It has grown with the growth of the people in your colonies, and increased with the increase of their wealth; a spirit, that, unhappily meeting with an exercise of power in England, which, however lawful, is not reconcilable to any ideas of liberty, much less with theirs, has kindled this flame that is ready to consume us. . . . The question is not, whether their spirit deserves praise or blame,—what, in the name of God, shall we do with it? You have before you the object, such as it is,—with all its glories, with all its imperfections on its head. You see the magnitude, the importance, the temper, the habits, the disorders. By all these considerations we are strongly urged to determine something concerning it. We are called upon to fix some rule and line for our future conduct, which may give a little stability to our politics, and prevent the return of such unhappy deliberations as the present. . . . It should seem, to my way of conceiving such matters, that there is a very wide difference, in reason and policy, between the mode of proceeding on the irregular conduct of scattered individuals, or even of bands of men, who disturb order within the state, and the civil dissensions which may, from time to time, on great questions, agitate the several communities which compose a great empire. It looks to me to be narrow and pedantic to apply the ordinary ideas of criminal justice to this great public contest. I do not know the method of drawing up an indictment against an whole people. . . . I am not ripe to pass sentence on the gravest public bodies, intrusted with magistracies of great authority and dignity, and charged with the safety of their fellow-citizens, upon the very same title that I am. I really think that for wise men this is not judicious, for sober men not decent, for minds tinctured with humanity not mild and merciful.”

In the closing part of his speech, Burke introduced successively and commented upon the following propositions, or resolutions, which formed in their entirety his plan of conciliation. At the end of his speaking they were rejected by a vote of 270 against 78:

“That the colonies and plantations of Great Britain in North America, consisting of 14 separate governments, and containing two millions and upwards of free inhabitants, have not had the liberty and privilege of electing and sending any knights and burgesses, or others, to represent them in the high court of Parliament. That the said colonies and plantations have been made liable to, and bounden by, several subsidies, payments, rates,

and taxes, given and granted by Parliament, though the said colonies and plantations have not their knights and burgesses in the said high court of Parliament, of their own election, to represent the condition of their country; by lack whereof they have been oftentimes touched and grieved by subsidies, given, granted, and assented to, in the said court, in a manner prejudicial to the common wealth, quietness, rest, and peace of the subjects inhabiting within the same. That, from the distance of the said colonies, and from other circumstances, no method hath hitherto been devised for procuring a representation in Parliament for the said colonies. That each of the said colonies hath within itself a body, chosen, in part or in the whole, by the freemen, freeholders, or other free inhabitants thereof, commonly called the General Assembly, or General Court, with powers legally to raise, levy, and assess, according to the several usages of such colonies, duties and taxes towards defraying all sorts of public services. That the said general assemblies, general courts, or other bodies legally qualified as aforesaid, have at sundry times freely granted several large subsidies and public aids for his Majesty's service, according to their abilities, when required thereto by letter from one of his Majesty's principal Secretaries of State; and that their right to grant the same, and their cheerfulness and sufficiency in the said grants, have been at sundry times acknowledged by Parliament. That it hath been found by experience, that the manner of granting the said supplies and aids by the said general assemblies hath been more agreeable to the inhabitants of said colonies, and more beneficial and conducive to the public service, than the mode of giving and granting aids and subsidies in Parliament, to be raised and paid in the said colonies. That it may be proper to repeal an act, made in the 7th year of the reign of his present Majesty, intituled, ‘An act for granting certain duties in the British colonies and plantations in America; for allowing a drawback of the duties of customs, upon the exportation from this kingdom, of coffee and cocoa-nuts, of the produce of the said colonies or plantations; for discontinuing the drawbacks payable on China earthen ware exported to America; and for more effectually preventing the clandestine running of goods in the said colonies and plantations.’ That it may be proper to repeal an act, made in the 14th year of the reign of his present Majesty, intituled, ‘An act to discontinue, in such manner and for such time as are therein mentioned, the landing and discharging, lading or shipping, of goods, wares, and merchandise, at the town and within the harbor of Boston, in the province of Massachusetts Bay, in North America.’ That it may be proper to repeal an act, made in the 14th year of the reign of his present Majesty, intituled, ‘An act for the impartial administration of justice, in the cases of persons questioned for any acts done by them, in the execution of the law, or for the suppression of riots and tumults, in the province of the Massachusetts Bay, in New England.’ That it may be proper to repeal an act, made in the 14th year of the reign of his present Majesty, intituled, ‘An act for the better regulating the government of the province of the Massachusetts Bay, in New England.’ That it may be proper to explain and amend an act, made in the 35th year of the reign of King Henry VIII., intituled, ‘An act for the trial of treasons committed out of the king's dominions.’ That, from the time when the general assembly, or general court, of any colony or plan-

tation in North America, shall have appointed, by act of assembly duly confirmed, a settled salary to the officers of the chief justice and other judges of the superior courts, it may be proper that the said chief justice and other judges of the superior courts of such colony shall hold his and their office and offices during their good behaviour, and shall not be removed therefrom, but when the said removal shall be adjudged by his Majesty in council, upon a hearing on complaint from the general assembly, or on a complaint from the governor, or the council, or the house of representatives, severally, of the colony in which the said chief justice and other judges have exercised the said offices. That it may be proper to regulate the courts of admiralty or vice-admiralty, authorized by the 15th chapter of the 4th George III., in such a manner as to make the same more commodious to those who sue or are sued in the said courts; and to provide for the more decent maintenance of the judges of the same."—Edmund Burke, *Works*, v. 2.

1775 (January-April).—Aims at independence disclaimed.—"The denial that independence was the final object, was constant and general. To obtain concessions and to preserve the connection with England was affirmed everywhere; and John Adams, after the peace, went farther than this, for he said:—'There was not a moment during the Revolution, when I would not have given everything I possessed for a restoration to the state of things before the contest began, provided we could have had a sufficient security for its continuance.' If Mr. Adams be regarded as expressing the sentiments of the Whigs, they were willing to remain Colonists, provided they could have had their rights secured to them; while the Tories were contented thus to continue, without such security. Such, as it appears to me, was the only difference between the two parties prior to hostilities. . . . Franklin's testimony, a few days before the affair at Lexington, was, that he had 'more than once travelled almost from one end of the continent to the other, and kept a variety of company, eating, drinking, and conversing with them freely [and] never had heard from any person, drunk or sober, the least expression of a wish for a separation, or a hint that such a thing would be advantageous to America.' Mr. Jay is quite as explicit. 'During the course of my life,' said he, 'and until the second petition of Congress in 1775, I never did hear an American of any class, or of any description, express a wish for the independence of the Colonies.' 'It has always been, and still is, my opinion and belief, that our country was prompted and impelled to independence by necessity, and not by choice.' Mr. Jefferson affirmed, 'What, eastward of New York, might have been the dispositions towards England before the commencement of hostilities, I know not; but before that I never heard a whisper of a disposition to separate from Great Britain; and after that its possibility was contemplated with affliction by all.' Washington, in 1774, fully sustains these declarations, and, in the 'Fairfax County Resolves,' it was complained that 'malevolent falsehoods' were propagated by the ministry to prejudice the mind of the king: 'particularly that there is an intention in the American Colonies

to set up for independent States.' Mr. Madison was not in public life until May, 1776, but he says, 'It has always been my impression, that a reëstablishment of the Colonial relations to the parent country, as they were previous to the controversy, was the real object of every class of the people, till the despair of obtaining it,' &c. . . . The only way to dispose of testimony like this, is to impeach the persons who have given it."—L. Sabine, *Biographical sketches of loyalists of the American Revolution*, v. 1, pp. 64-66.

1775 (January-September).—Revolution in South Carolina. See SOUTH CAROLINA: 1775.

1775 (April).—Beginning of the War of the American Revolution.—Lexington.—Concord.—"In spite of the failure, late in February, of an effort to seize brass cannon at Salem, Gage resolved to destroy the stores at Concord, and on the evening of April 18th, troops for that mission gathered at the waterside. The Committee of Safety was alert, and Joseph Warren dispatched Joseph Dawes, and later Paul Revere, to warn the town people and farmers on the route. Pre-arranged signals in the tower of the Old North Church gave the alarm to many, and the riders reached the rest. As the British force marched up into the country, the ringing of bells and firing of signal guns and the boom of cannon made it clear that the expedition was no secret. As they neared the green at Lexington in the early dawn, they saw 'a body of country people drawn up in military order, with arms and accoutrements.' A shot was fired, but by which side or by whose order is one of the unsolved questions of history."—C. H. Van Tyne, *Causes of the War of Independence*, pp. 453-454.—"On April 19, 1775, the committees of safety could only count up twelve field-pieces in Massachusetts; and there had been collected in that colony 21,540 fire-arms, 17,441 pounds of powder, 22,191 pounds of ball, 144,690 flints, 10,108 bayonets, 17,079 pouches, 15,000 canteens. There were also 17,000 pounds of salt fish, 35,000 pounds of rice, with large quantities of beef and pork. Viewed as an evidence of the forethought of the colonists, these statistics are remarkable; but there was something heroic and indeed almost pathetic in the project of going to war with the British government on the strength of twelve field-pieces and seventeen thousand pounds of salt fish. Yet when, on the night of the 18th of April, 1775, Paul Revere rode beneath the bright moonlight through Lexington to Concord, with Dawes and Prescott for comrades, he was carrying the signal for the independence of a nation. He had seen across the Charles River the two lights from the church-steeple in Boston which were to show that a British force was going out to seize the patriotic supplies at Concord; he had warned Hancock and Adams at Rev. Jonas Clark's parsonage in Lexington, and had rejected Sergeant Monroe's caution against unnecessary noise, with the rejoinder, 'You'll have noise enough here before long—the regulars are coming out.' As he galloped on his way the regulars were advancing with steady step behind him, soon warned of their own danger by alarm-bells and signal-guns. When Revere was captured by some British officers who happened to be near Concord, Colonel Smith, the commander of the expedition, had already halted, ordered Pitcairn forward, and sent back prudently for reinforcements. It was a night of terror to all the neighboring Middlesex towns, for no one knew what excesses the angry British troops might commit on their return march. The

best picture we have of this alarm is in the narrative of a Cambridge woman, Mrs. Hannah Winthrop, describing 'the horrors of that midnight cry,' as she calls it. The women of that town were roused by the beat of drums and ringing of bells; they hastily gathered their children together and fled to the outlying farm-houses; seventy or eighty of them were at Fresh Pond, within hearing of the guns at Menotomy, now Arlington. The next day their husbands bade them flee to Andover, whither the college property had been sent, and thither they went, alternately walking and riding, over fields where the bodies of the slain lay unburied. Before 5 A.M. on April 19, 1775, the British troops had reached Lexington Green, where thirty-eight men, under Captain Parker, stood up before six hundred or eight hundred to be shot at, their cap-

their main body was too strong to be attacked, so they disabled a few cannon, destroyed some barrels of flour, cut down the liberty-pole, set fire to the court-house and then began their return march. It ended in a flight; they were exposed to a constant guerilla fire; minute-men flocked behind every tree and house; and only the foresight of Colonel Smith in sending for reinforcements had averted a surrender. At 2 P. M., near Lexington, Percy with his troops met the returning fugitives, and formed a hollow square, into which they ran and threw themselves on the ground exhausted. Then Percy in turn fell back. Militia still came pouring in from Dorchester, Milton, Dedham, as well as the nearer towns. A company from Danvers marched sixteen miles in four hours. The Americans lost ninety-three in killed, wounded

(After painting by J. W. Dunsmore)

tain saying, 'Don't fire unless you are fired on; but if they want a war let it begin here.' It began there; they were fired upon; they fired rather ineffectually in return, while seven were killed and nine wounded. The rest, after retreating, reformed and pursued the British towards Concord, capturing seven stragglers—the first prisoners taken in the war. Then followed the fight at Concord, where four hundred and fifty Americans, instead of thirty-eight, were rallied to meet the British. The fighting took place between two detachments at the North Bridge, where 'once the embattled farmers stood, And fired the shot heard round the world.' There the American captain, Isaac Davis, was killed at the first shot—he who had said, when his company was placed at the head of the little column, 'I haven't a man that is afraid to go.' He fell and Major Buttrick gave the order 'Fire! for God's sake fire!' in return. The British detachment retreated in disorder, but

and missing that day; the British, two hundred and seventy-three. But the important result was that every American colony now recognized that war had begun."—T. W. Higginson, *History of the United States of America*, ch. 10.

1775 (April).—First Provincial Convention in New York. See NEW YORK: 1775.

1775 (April-May).—Siege of Boston begun.—"Reinforcements of foreign troops and supplies were constantly arriving in Boston. Howe, Clinton, and Burgoyne came, as generals, on the 25th of May. Bitterness, ridicule, and boasting, with

all the irritating taunts of a mercenary soldiery, were freely poured on the patriots and on the 'mixed multitude' which composed the germ of their army yet to be. The British forces had cooped themselves up in Boston, and the provincials determined that they should remain there, with no mode of exit save by the sea. The pear-shaped peninsula, hung to the mainland only by the stem called the 'Neck,' over which the tide-waters sometimes washed, was equally an inconvenient position for crowding regiments in war-like array, and a convenient one for the extemporized army which was about to beleague them there. . . . The town of Charlestown, which lay under the enemy's guns, had contained a population of between two and three thousand. The interruption of all the employments of peace, and the proximity of danger, had brought poverty and suffering upon the people. They had been steadily leaving the town, with such of their effects as they could carry with them. It proved to be well for them that they had acted upon the warning. It would seem that there were less than 200 of its inhabitants remaining in it at the time of the battle, when the flames kindled by the enemy and bombs from a battery on Copp's Hill laid it in ashes. On the third day after the affair at Concord, the Provincial Congress again assembled, voted to raise at once 13,000 men, to rally at Cambridge and the neighborhood, and asked aid from the other provinces, to which Connecticut, Rhode Island, and New Hampshire responded. The forts, magazines, and arsenals, such as they then were, were secured for the country. . . . Of the 15,000 men then gathered, by the cry of war, at Cambridge and Roxbury, all virtually, but not by formal investment, under the command of General Ward, nearly 10,000 belonged to Massachusetts, and the remainder to New Hampshire, Rhode Island, and Connecticut. They have been designated since, at various times and by different writers, under the extreme contrast of terms, as an 'organized army,' and a 'mob.' Either of these terms would be equally inappropriate. . . . Our troops were 'minute-men' extemporized into fragmentary companies and skeleton regiments. The officers, chosen on the village-green or in its public-house, paying for the honor by a treat, or perhaps because they kept the premises where the treat could be most conveniently furnished, were not commissioned or ranked as the leaders of an army for campaign service. The yeomen of town and village had not come together at the summons of a commander-in-chief through adjutant, herald, or advertisement. They came unbidden, at an alarm from the bell on their meeting-house, or from a post-rider, or from the telegrams transmitted by tongue and ear. . . . And for the most part they were as free to go away as they had been to come. They were enlisted after a fashion, some prime conditions of which were their own convenience or pleasure. . . . Such of them as came from the seaboard might bring with them old sails for tents, while the midsummer days made it scarcely a hardship to many to have only the heavens for a roof. Generally their towns were expected to keep them supplied with food. . . . The forces then mustered at Cambridge as a central camp, and, stretching from the left at Chelsea almost round to Dorchester on the right, for nearly three quarters of a circle, were indeed not organized, nor yet had they any characteristic of a mere mob. They combined in fact four independent armies, united in resistance to a foreign

enemy. . . . Each of the Provinces had raised, commissioned, and assumed the supply of its respective forces, holding them subject to their several orders. After the battle in Charlestown, the Committee of War in Connecticut ordered their generals, Spencer and Putnam, while they were in the territory of this Province, to regard General Ward as the commander-in-chief, and suggested to Rhode Island and New Hampshire to issue the same instructions to their soldiers. . . . General Artemas Ward was a conscientious and judicious patriot. In the French war he had earned some military experience and fame. . . . On October 27, 1774, the Provincial Congress, in which he was a delegate, appointed him a general officer, and on May 19 following, Commander-in-chief. As such he served at Cambridge till the arrival of Washington. On the very day of the battle in Charlestown, when the great chieftain was selected for his high service, Ward was chosen by the Continental Congress as its first major-general. Though he was only in his 48th year when he was burdened with the responsibility of the opening warfare, his body was infirm from disease and exposure. Lieutenant-General Thomas, two years the senior of Ward, was second in command. . . . General Israel Putnam preceded his Connecticut troops in hurrying to the scene of war on the news of the affair at Lexington and Concord. His men soon followed him, with like enthusiasm. The New Hampshire troops, on their arrival at Medford, made choice of Colonel John Stark as their leader. Colonel Nathaniel Greene commanded a regiment from Rhode Island. . . . A few days after the affair at Lexington, when virtually the siege began, General Gage, the British Commander, at the solicitation of some of the leading citizens assembled in Faneuil Hall, had, by a mutual understanding, entered into an agreement that such of the inhabitants as wished to depart from the town should be at liberty to do so, if they would leave their arms behind them and covenant not to engage in any hostility against his army. The agreement was availed of by many of the suffering and frightened people. . . . But the original freedom and fulness of this understanding, on the part of General Gage, were soon reduced by a very strict examination of those who sought to go out of the town, and by a rigid search of the effects which they wished to take with them. . . . Several of the inhabitants remained in it from different motives: some as devoted loyalists; some as timid neutrals; some as spies, to watch each hostile movement and to communicate it to their friends outside. . . . After hostilities commenced, General Gage, of course, regarded the citizens as alike prisoners, either in the same sense in which he was himself under restraint, or as abettors of those who were his enemies. . . . The population of the town, independent of the military, was then about 18,000. To all those who were not in sympathy with them the British behaved in an insulting and exasperating manner. . . . To show, as members of the English Church establishment, their contempt of congregational places of worship, they removed the pews and pulpit from the Old South meeting-house, and, covering the floor with earth, they converted it into a riding-school for Burgoyne's squadron of cavalry. The two eastern galleries were allowed to remain, one for spectators, the other for a liquor-shop, while the fire in the stove was occasionally kindled by books and pamphlets from the library of a former pastor, Dr. Prince, which were in a room in the

tower. . . . At the time of the skirmishes at Lexington and Concord there were about 4,000 British troops in Boston and at the Castle. The number, was increased to more than 10,000 before the action in Charlestown."—G. E. Ellis, *History of the Battle of Bunker's Hill*, pp. 4-26.

1775 (April-June).—Spreading of revolt.—All colonies in line with New England.—"On the 23d of April, the day after the dissolution of the provincial Congress of New York, the news from Lexington burst upon the city. Though it was Sunday, the inhabitants speedily unloaded two sloops which lay at the wharfs, laden with flour and supplies for the British at Boston, of the value of £80,000. . . . The royal government lay hopelessly prostrate. Isaac Sears concerted with John Lamb to stop all vessels going to Quebec, Newfoundland, Georgia, or Boston, where British authority was still supreme. The people shut up the customhouse, and the merchants whose vessels were cleared out dared not let them sail. In the following days the military stores of the city of New York were secured, and volunteer companies paraded in the streets. . . . On the 1st of May the people, at the usual places of election, chose for the city and county a new general committee of one hundred, who 'resolved in the most explicit manner to stand or fall with the liberty of the continent.' All parts of the colony were summoned to send delegates to a provincial convention, to which the city and county of New York deputed one-and-twenty as their representatives. . . . On the 2d of May the New Jersey committee of correspondence called a provincial congress for the 23d at Trenton. To anticipate its influence, the governor convened the regular assembly eight days earlier at Burlington, and laid before them the project of Lord North [adopted by the British parliament in February, offering to each colony freedom from taxation on its making satisfactory provision for the general defense and for support of government]. The assembly could see in the proposition no avenue to reconciliation, and declared their intention to 'abide by the united voice of the continental congress.' Such, too, was the spirit of Pennsylvania. 'Let us not have it said of Philadelphia that she passed noble resolutions and neglected them,' were the words of Mifflin, youngest of the orators who on the 25th of April addressed the town-meeting called in that city on receiving the news from Lexington. Thousands were present, and agreed 'to associate for the purpose of defending with arms their lives, their property, and liberty.' Thomas Paine from that day 'rejected the sullen Pharaoh of the British throne forever.' . . . In Philadelphia, thirty companies, with 50 to 100 in each, daily practiced the manual exercise of the musket. One of them was raised from the Quakers. . . . The Pennsylvania assembly, which met on the first day of May, rejecting the overtures of the governor, 'could form no prospect of lasting advantages for Pennsylvania but from a communication of rights and property with the other colonies.' . . . On the 5th Franklin arrived, after a voyage over the smoothest seas, and the next morning was unanimously elected a deputy to the congress. . . . In Maryland, at the request of the colonels of militia, Eden, at Annapolis, gave up the arms and ammunition of

the province to the freemen of the county. Pleased with his concession, the provincial convention distinguished itself by its moderation; and its delegates to congress determined to labor for a reconciliation. In Virginia [where, in the night of April 20th, Governor Dunmore had carried off the gunpowder stored in the colony's magazine at Williamsburg, and where, as a consequence, the excited people were already in arms, though no further action had yet been taken], on the 2d of May, at the cry from Lexington, the independent company of Hanover and its county committee were called together by Patrick Henry. The soldiers, most of them young men, elected him their chief, and marched for Williamsburg, on the way greatly increasing in numbers. Alarmed by the 'insurrections,' Dunmore convened the council, and in a proclamation of the 3d pretended that he had removed the ammunition lest it should be seized by slaves. Message after message could not arrest the march or change the purpose of Henry. . . . At sunrise on the 4th the governor's messenger met Henry at New Kent, and, as a compensation for the gunpowder taken out of the magazine, paid him £330, for which he was to account to the convention of Virginia. The sum was found to be more than the value of the powder, and the next Virginia convention directed the excess to be paid back. . . . In twelve or thirteen days the message from Lexington was borne to Newbern, in North Carolina, where it 'wrought a great change.' The governor, in his panic, ordered the cannon in the town to be dismounted; and, after a remonstrance made in the name of the inhabitants by Abner Nash, 'the oracle of their committee and a principal promoter of sedition,' he shipped his wife to New York and fled to Fort Johnston, where a sloop-of-war had its station. In South Carolina, Charles Pinckney, on learning the inflexibility of parliament, using power intrusted to him by the provincial congress, appointed a committee of five to place the colony in a state of defence; on the 21st of April, the very night after their organization, men of Charleston, without disguise, under their direction, seized all the powder in the public magazines, and removed 800 stand of arms and other military stores from the royal arsenal. The tidings from Lexington induced the general committee to hasten the meeting of the provincial congress, whose members, on the 2d of June, Henry Laurens being their president, associated themselves for defence against every foe; 'ready to sacrifice their lives and fortunes to secure her freedom and safety.' They resolved to raise two regiments of infantry and a regiment of rangers. . . . 'The people of Charleston are as mad as they are here in Boston,' was the testimony of Gage. The skirmish at Lexington became known in Savannah on the 10th of May, and added Georgia to the union. At that time she had about 17,000 white inhabitants and 15,000 Africans. Her militia was not less than 3,000. Her frontier, which extended from Augusta to St. Mary's, was threatened by the Creeks, with 4,000 warriors; the Chickasas, with 450; the Cherokees, with 3,000; the Choctas, with 2,500. But danger could not make her people hesitate. On the night of the 11th, Noble Wimberley Jones, Joseph Habersham, Edward Telfair, and others, broke open the king's magazine in the eastern part of the city, and took from it over 500 pounds of powder. To the Boston wanderers they sent 63 barrels of rice and £122 in specie; and they kept the king's birthday by raising a liberty-pole."—G. Bancroft, *His-*

tory of the *United States* (Author's last revision), v. 4, ch. 11.

1775 (May).—**Surprise of Ticonderoga and Crown Point.**—"Early in the year 1775, as soon as it was made manifest by the attitude assumed on the part of the British government against the colonies, and by the conduct of General Gage in Boston, that open hostilities must inevitably commence in a short time, it began to be secretly whispered among the principal politicians in New England that the capture of Ticonderoga was an object demanding the first attention. In the month of March, Samuel Adams and Dr. Joseph Warren, as members of the Committee of Correspondence in Boston, sent an agent privately into Canada, on a political mission, with instructions to ascertain the feelings of the people there in regard to the approaching contest, and to make such reports as his observations should warrant. . . . This agent sent back intelligence from Montreal, and among other things advised, that by all means the garrison at Ticonderoga should be seized as quickly as possible after the breaking out of hostilities, adding that the people of the New Hampshire Grants had already agreed to undertake the task, and that they were the most proper persons to be employed in it. This hint was given three weeks anterior to the battle of Lexington, and how far it influenced future designs may not be known; but it is certain that, eight days after that event, several gentlemen at that time attending the Assembly in Hartford, Connecticut, concerted a plan for surprising Ticonderoga and seizing the cannon in that fortress, for the use of the army then marching from all quarters to the environs of Boston."—J. Sparks, *Life of Ethan Allen* (*Library of American Biography*, v. 1, p. 270).—"The forts at Ticonderoga and Crown Point, which had performed such great services to the French and the English in preceding campaigns, had been used as storehouses and magazines after the conclusion of the Peace of Paris in 1763. In order to keep a proper force at Quebec and to provide even the weak detachment that was sent to Boston, the interior garrisons and posts had been denuded. Possibly Gage, from his knowledge of the weakness of the radicals in New York, had not felt apprehensive for these magazines. They were guarded by very small forces; a few officers and about forty men at Ticonderoga, and even smaller numbers at Crown Point, Fort George, and St. Johns. It occurred to Benedict Arnold, an enterprising Connecticut militia officer, who was hastening to Boston on the first alarm, and also to Ethan Allen, one of the most outstanding of the settlers in the New Hampshire Grants, that the seizure of these posts was entirely feasible, if undertaken immediately without apprising the garrisons of their danger. Arnold asked the Committee of Safety for a commission and authority to recruit a force for this purpose. Both were given him, and he started for western New England; but found that Ethan Allen [leading the "Green Mountain Boys"] had already embodied his expedition. Without recruiting his men, therefore, Arnold joined as a volunteer. Ethan Allen and his followers lived in what is now southern Ver-

mont, on lands which had been granted to them by New Hampshire authorities. . . . They now marched to Lake Champlain, where as many as possible embarked on whatever boats could be seized, crossed the lake to Ticonderoga, entered the fort at night without opposition, and captured it with its startled garrison. Two days later, Crown Point likewise succumbed to their vigorous rapidity of movement. Soon Arnold was joined by fifty recruits. These he placed on a schooner, and, sailing to the outlet of the lake, captured Fort St. John and an armed sloop that lay anchored near by. More recruits joining him, he assumed command of the forces on the lake. This arrogation of authority aroused so much resentment that Arnold returned to Cambridge; but his ardent spirit was not daunted, and he soon joined with others in suggesting the feasibility of surprising Quebec by a rapid march through the wilderness of Maine."—E. Channing, *History of the United States*, v. 3, pp. 173-175.

1775 (May-August).—**Mecklenburg Declaration.**—Provincial conventions.—Election of Second Continental Congress and its work.—Its powers, theoretical and actual.—Its opportunity.—Its influence.—New England Army adopted as the "Continental Army," and Washington made commander-in-chief.—"In the winter and spring of 1775, regular legal government broke down. In colony after colony, the governors refused to let the legislature meet, and the people refused to let the governors' courts or other officials act. Then in many places, to prevent absolute lawlessness, county meetings or local committees set up some sort of provisional government, to last until 'the restoration of harmony with Great Britain.' Action of this kind in Mecklenburg County, North Carolina, on May 30, 1775, through distorted recollections, gave rise years later to the legend of a Mecklenburg 'Declaration of Independence' on May 20. [See NORTH CAROLINA: 1775 (May).] During this turbulent disorder, second provincial conventions were held in several colonies, to act upon the recommendations of the First Continental Congress. Of course the 'Tories' had refused to pay any attention to the 'illegal' elections, and in some cases, indeed, they were excluded from voting by test oaths. Some of these conventions now became de facto governments. They organized troops, raised money, and assumed civil powers far enough to alleviate the existing anarchy. In form, their acts were still recommendations; but the local committees enforced them as law. These second conventions in most of the colonies appointed delegates to the Second Continental Congress. Between the election of that body and its meeting, . . . [General Gage's attempt] to seize Massachusetts military stores at Concord . . . called from 'embattled farmers' 'the shot heard round the world' (April 19, 1775). Gage had sown dragon's teeth. From New England's soil twenty thousand volunteers sprang up to besiege him in Boston. In consequence, the Second Continental Congress swiftly became a government, to manage the continental revolution; and, during the summer, a third lot of provincial conventions openly avowed themselves governments for their respective colonies,—appointing committees of safety (in place of the royal governors, who had

been set aside or driven out), and themselves assuming even the forms of legislative bodies. The members of the Second Continental Congress, like those of the First, had been elected, not as a legislature, but to formulate opinion, and to report their recommendations back to their colonies for approval. The war changed all that. A central government was imperative; and the patriotic party everywhere recognized the Congress as the only agent to fill that place."—W. M. West, *Story of American democracy, political and industrial*, pp. 207-209.—"The second General Congress assembled at Philadelphia on the 10th of May. Peyton Randolph was again elected as president; but being obliged to return, and occupy his place as speaker of the Virginia Assembly, John Hancock, of Massachusetts, was elevated to the chair. . . . Many of those most active in vindicating colonial rights, and Washington among the number, still indulged the hope of an eventual reconciliation, while few entertained, or, at least, avowed the idea of complete independence. A second 'humble and dutiful' petition to the king was moved, but met with strong opposition. John Adams condemned it as an imbecile measure, calculated to embarrass the proceedings of Congress. He was for prompt and vigorous action. Other members concurred with him. Indeed, the measure itself seemed but a mere form, intended to reconcile the half-scrupulous; for subsequently, when it was carried, Congress, in face of it, went on to assume and exercise the powers of a sovereign authority. A federal union was formed, leaving to each colony the right of regulating its internal affairs according to its own individual constitution, but vesting in Congress the power of making peace or war; of entering into treaties and alliances; of regulating general commerce; in a word, of legislating on all such matters as regarded the security and welfare of the whole community. The executive power was to be vested in a council of twelve, chosen by Congress from among its own members, and to hold office for a limited time. Such colonies as had not sent delegates to Congress might yet become members of the confederacy by agreeing to its conditions. Georgia, which had hitherto hesitated, soon joined the league, which thus extended from Nova Scotia to Florida. Congress lost no time in exercising their federated powers. In virtue of them, they ordered the enlistment of troops, the construction of forts in various parts of the colonies, the provision of armies, ammunition, and military stores; while, to defray the expense of these, and other measures, avowedly of self-defence, they authorized the emission of notes to the amount of \$3,000,000, bearing the inscription of 'The United Colonies'; the faith of the confederacy being pledged for their redemption. A retaliating decree was passed, prohibiting all supplies of provisions to the British fisheries; and another, declaring the province of Massachusetts Bay absolved from its compact with the crown, by the violation of its charter; and recommending it to form an internal government for itself. . . . The situation of the New England army, actually besieging Boston, became an early and absorbing consideration. It was without munitions of war, without arms, clothing, or pay; in fact, without legislative countenance or encouragement. Unless sanctioned and assisted by Congress, there was danger of its dissolution. . . . The disposition to uphold the army was general; but the difficult question was, who should be commander-in-chief? . . . The opinion evidently inclined in favor of Washington; yet it

was promoted by no clique of partisans or admirers. More than one of the Virginia delegates, says Adams, were cool on the subject of this appointment. . . . Adams, in his diary, claims the credit of bringing the members of Congress to a decision. . . . On the 15th of June, the army was regularly adopted by Congress, and the pay of the commander-in-chief fixed at \$500 a month. Many still clung to the idea, that in all these proceedings they were merely opposing the measures of the ministry, and not the authority of the crown, and thus the army before Boston was designated as the Continental Army, in contradistinction to that under General Gage, which was called the Ministerial Army. In this stage of the business, Mr. Johnson, of Maryland, rose, and nominated Washington for the station of commander-in-chief. The election was by ballot, and was unanimous. It was formally announced to him by the president, on the following day, when he had taken his seat in Congress. Rising in his place, he briefly expressed his high and grateful sense of the honor conferred on him, and his sincere devotion to the cause. 'But,' added he, 'lest some unlucky event should happen unfavorable to my reputation, I beg it may be remembered by every gentleman in the room, that I this day declare, with the utmost sincerity, I do not think myself equal to the command I am honored with. As to pay, I beg leave to assure the Congress that, as no pecuniary consideration could have tempted me to accept this arduous employment, at the expense of my domestic ease and happiness, I do not wish to make any profit on it. I will keep an exact account of my expenses. Those, I doubt not, they will discharge, and that is all I desire.'" Four major-generals,—Artemas Ward, Charles Lee, Philip Schuyler and Israel Putnam,—and eight brigadier-generals—Seth Pomeroy, Richard Montgomery, David Wooster, William Heath, Joseph Spencer, John Thomas, John Sullivan and Nathaniel Greenc—were appointed. "At Washington's express request, his old friend, Major Horatio Gates, then absent at his estate in Virginia, was appointed adjutant-general, with the rank of brigadier."—W. Irving, *Life of Washington*, v. 1, ch. 39.—"The Congress of 1775 was not content with mere expression of opinions. It took a large view of its powers. It realized that its efficiency depended wholly upon the acceptance of its acts by the principals of the different delegations; but, following its judgment as to what the patriotism of the colonies would approve and sustain, it initiated action of various kinds, which, from the beginning, assumed the certainty of adoption by the colonies, and derived all its energy from the probability of such ratification. The Congress doubtless exceeded the letter of the instructions received by a portion of its members; but this was not from any misconception of those instructions. . . . In pointing out to the colonies the direction which their preparations for resistance ought to take, the Congress no more acted upon an imagined authority to command the colonies than does the lookout at the bow of the ship, when he reports the direction of danger to the officer of the deck. The Congress unquestionably enjoyed a prestige at this juncture which it subsequently lost. The people, and even the provincial conventions, occasionally addressed it in a tone which indicated that they unconsciously attributed to it power which it plainly did not possess."—A. W. Small, *Beginnings of American nationality (Johns Hopkins University Studies, Series S, no. 1-2, p. 73)*.—"With the energy and recklessness of

a French revolutionary body it might have blotted out the distinctions between colonies, and established a centralized government, to be modified in time by circumstances. In fact, it took no such direction. It began its course by recommendations to the new colonial governments; it relied on them for executive acts; and, as soon as the new colonies were fairly under way, they seized on the power of naming and recalling the delegates to the Congress. From that time the decadence of the Congress was rapid; the national idea became dimmer; and the assertions of complete sovereignty by the political units became more pronounced."—A. Johnston, *United States: Its history and constitution*, ch. 3, sect. 63-66.

1775 (June).—Battle of Bunker Hill.—"British reinforcements, under three generals, Howe, Clinton, and Burgoyne, arrived at Boston soon after the fight at Lexington. Gage had now about 10,000 men. These occupied the town of Boston, which lay on a peninsula covering the middle of the harbor. Around them, on the hills of the mainland, there were about twice their number of undisciplined and poorly-armed Americans, without cannon and almost without food. Just north of Boston, another peninsula ran out into the harbor. On it there were several hills, and the Americans determined to seize and fortify one of them, called Bunker Hill. About 1,000 men, under Colonel Prescott, were sent into the peninsula for this on a suitable night. For some reason, they passed beyond Bunker Hill, and seized Breed's Hill, much closer to Boston. Breed's Hill is now usually called Bunker Hill, and the Bunker Hill monument is erected upon it. The American fortification was continued silently and swiftly through the night. In the morning of June 17, 1775, the British in Boston woke to see a long line of intrenchments running across the hill above them, and an American working-party busily strengthening it. For a time, the British frigates in the harbor kept up a slow and distant fire, to which the working-party paid no attention; but at noon the work was stopped, for the British troops were coming across the harbor in boats. Three thousand well armed, uniformed, and drilled soldiers, who had never known defeat in equal fight, landed near Charlestown, under General Howe. Here they formed at the water-side, and in a long, steady line began to move upward to scatter the 1,500 farmers who were watching them from the top of the hill. From the roofs of the houses in Boston, the rest of the British army and the townspeople were watching, anxious to see 'whether the Yankees would fight.' Most of the watchers expected to see the untrained soldiers in the fort fire a few hasty shots at a safe distance and run. The fort held a threatening silence until the attacking column was within 150 feet. Then, at the word, came a sheet of fire from the marksmen within; and, when the smoke lifted, part of the British line was lying dead or wounded, and the rest were retreating hastily down the hill. The British were not cowards: the officers re-formed the line at the bottom of the hill, and, after setting fire

to Charlestown, again advanced to the attack. Again there was a steady silence in the fort, a close and deadly fire, and the British line was driven down the hill again. The British then moved up the hill for the third time. The powder in the fort was now gone, and the garrison fought for a few minutes with gunstocks and stones against the British bayonets. But such a struggle was hopeless, and the British gained the fort. They were too tired to pursue the garrison, who escaped to the mainland."—A. Johnston, *History of the United States for schools*, sect. 195-197.—"As soon as Prescott saw the defence was hopeless, he ordered a retreat, and friend and foe mingled together as they surged out of the sally-port amid the clouds of dust which the trampling raised, for a scorching sun had baked the new-turned soil. It was now, while the confused mass of beings rocked along down the near slope of the hill, that Warren [who had joined the defending force that morning as a volunteer] fell, shot through the head. No one among the Americans knew certainly that he was dead, as they left him. . . . Prescott did not conceal his indignation at not having been better supported, when he made his report at Ward's headquarters. He knew he had fought well; but neither he nor his contemporaries understood at the time how a physical defeat might be a moral victory. Not knowing this, there was little else than mortification over the result,—indeed, on both sides. . . . The general opinion seems to be that the Americans had about 1,500 men engaged at one time, and that from 3,000 to 4,000 at different times took some part in it. The British had probably about the same numbers in all, but were in excess of the Americans at all times while engaged. The conflict with small arms lasted about ninety minutes."—J. Winsor, *Conflict precipitated (Narrative and critical history of America*, v. 6, ch. 2).—"How can we exaggerate the relative importance of this day's action? Did it not, in fact, not only open, but make the contest, dividing into two parties not only those determined for the ministry or for enfranchisement, but also all timid, hesitating, reluctant neutrals? It was impossible after this to avoid taking a side. It rendered all reconciliation impossible, till it should offer itself in the shape of independence. It echoed the gathering cry that brought together our people from their farms and workshops, to learn the terrible art which grows more merciful only as it is more ferociously, that is, skilfully, pursued. The day needs no rhetoric to magnify it in our revolutionary annals. When its sun went down, the provincials had parted with all fear, hesitation, and reluctance. They found that it was easy to fight. . . . General Gage's account of the battle, acknowledging the loss of 226 killed and 828 wounded, was received in London, July 25th. While the ministry received with dismay this official intelligence, and kept it back from publication, many private letters accompanying it in its transit anticipated with exaggerations its humiliating details."—G. E. Ellis, *History of the Battle of Bunker's Hill*, pp. 102-105.—"Bunker's Hill had exhibited the Americans to all the world as a people to be courted by allies, and counted with by foes; and it had done them the yet more notable service of teaching them some home-truths. It was a marvel that so many armed citizens had been got together so quickly, and a still greater marvel that they had stayed together so long. Even a Cabinet Minister could not now deny that as individuals they possessed the old courage of their race. They had displayed,

moreover, certain military qualities of a new and special type, such as were naturally developed by the local and historical conditions under which they had been born and bred. But no one who passed the early hours of that summer afternoon on the hill over Charlestown, and still more no one who witnessed the state of things in rear of the position and among the headquarters staff at Cambridge, could be blind to the conviction that a great deal would have to be done, and undone, before the colonies were able to hold the field throughout the protracted struggle which was now inevitable. The material was there,—excellent, abundant, and ductile,—of a national army with features of its own deeply marked; but to mould that material into shape was a task which would have to be pursued under difficulties of unusual complexity. The artificer was already found. A second Continental Congress had assembled at Philadelphia on the tenth of May; and Colonel Washington, who from that day forward attended the sittings in his uniform, was Chairman of all the Committees appointed to deal with military questions. Just before the battle took place, John Adams . . . proposed that the assemblage of troops then besieging Boston should be adopted by Congress as a Continental Army, and indicated Colonel Washington as the officer best fitted to command it. The suggestion was very generally approved, and in the end unanimously accepted. Washington was nominated as chief 'of all the forces then raised, or that should be raised thereafter, in the United Colonies, or that should voluntarily offer their service for the defence of American liberty.' There was no stint in the terms of his commission; and he assumed the trust in a spirit that was a pledge of the manner in which he would fulfil it."—G. O. Trevelyan, *American Revolution*, v. 1, pt. 1, pp. 370-371.

1775 (August-December).—Unsuccessful expedition to Canada.—"The exploits of Allen and Arnold at Ticonderoga . . . had invited further conquests; but the Continental Congress hesitated to take any steps which might seem to carry war across the line till the Canadians had the opportunity of casting in their lot with their neighbors. On the 1st of June, 1775, Congress had distinctly avowed this purpose of restraint; and they well needed to be cautious, for the Canadian French had not forgotten the bitter aspersions on their religion which Congress had, with little compunction, launched upon its professors, under the irritation of the Quebec Act. Still their rulers were aliens, and the traditional hatred of centuries between races is not easily kept in abeyance. Ethan Allen was more eager to avail himself of this than Congress was to have him; but the march of events converted the legislators, and the opportunity which Allen grieved to see lost was not so easily regained when Congress at last authorized the northern invasion. Arnold and Allen had each aimed to secure the command of such an expedition, the one by appealing to the Continental Congress, the other by representations to that of

New York. Allen had also gone in person to Philadelphia, and he and his Green Mountain Boys were not without influence upon Congress, in their quaint and somewhat rough ways, as their exuberant patriotism later made the New York authorities forget their riotous opposition to the policy which that province had been endeavoring to enforce in the New Hampshire Grants. Connecticut had already sent forward troops to Ticonderoga to hold that post till Congress should decide upon some definite action; and at the end of June, 1775, orders reached Schuyler which he might readily interpret as authorizing him, if the Canadians did not object, to advance upon Canada. He soon started to assume command, but speedily found matters unpromising. The Johnsons were arming the Indians up the Mohawk and beyond in a way that boded no good, and they had entered into compacts with the British commanders in Canada. Arnold had been at Ticonderoga, and had quarrelled with Hinman, the commander of Connecticut troops. Schuyler heard much of the Green Mountain Boys, but he only knew them as the lawless people of the Grants, and soon learned that Allen and Warner had themselves set to quarrelling. . . . In August the news from Canada began to be alarming. Richard Montgomery, an Irish officer who had some years before left the army to settle on the Hudson and marry, was now one of the new brigadiers. He urged Schuyler to advance and anticipate the movement now said to be intended by Carleton, the English general commanding in Canada. At this juncture Schuyler got word from Washington that a cooperating expedition would be dispatched by way of the Kennebec, which, if everything went well, might unite with Schuyler's before Quebec."—J. Winsor, *Conflict precipitated* (*Narrative and critical history of America*, v. 6).—The two movements were made, from Ticonderoga and from the Kennebec, with results which will be found related under CANADA: 1775-1776. "No expedition during the American Revolution had less elements of permanent value than those which were undertaken against Canada during the year 1775. Great results were anticipated, but none were realized. The obstacles were too substantial, and failure was inevitable. Wonderful endurance and great physical courage were manifested, and these were accompanied by a prodigious amount of faith, but there was neither ability nor opportunity for works commensurate with the faith. . . . As a base of operations for a British army moving upon the colonies, Canada had the single advantage of being less distant from England than an Atlantic base, and many supplies could be procured without the expense and delay of their transportation across the Atlantic; but between Canada and the American colonies there was an actual wilderness. Hence a British offensive movement from Canada involved constant waste of men and materials, a deep line through an uninhabited or hostile region, and such a constant backing, as was both inconsistent with the resources of the base, and with a corresponding support of armies resting upon the sea coast. The British government was not ready for operations so extensive and so exhaustive of men and treasure; neither did it realize the necessity for that expenditure. There were two alternatives, one illustrated by General Carleton's plan, viz., to hold the forts of Lake Champlain, as advanced, defensive positions; and the other, that of Burgoyne, to strike through the country and depend upon support from the opposite base. The true defense of the

colonies from such expeditions depended upon the prompt seizure and occupation of the frontier posts. An American advance upon Canada was not only through a country strategically bad, but the diversion of forces for that purpose endangered the general issue, and entrusted its interests to the guardianship of an army already insufficient to meet the pressing demands of the crisis. The occupation of New York in 1775, by an adequate British force, would have infinitely outweighed all possible benefit from the complete conquest of Canada. At the very time when Washington could hardly hold the British garrison of Boston in check,—when he had an average of but nine rounds of ammunition per man, he was required to spare companies, ammunition, and supplies for a venture, profitless at best,—with the certainty that reinforcements could not be supplied as fast as the enemy could draw veteran regiments from Great Britain and Ireland, to defend or recover Canadian soil. . . . It should be noticed that the initiative had been taken before General Washington had been elected commander-in-chief, and that Congress itself precipitated the final movement."—H. B. Carrington, *Battles of the American Revolution*, ch. 19.

Henry, *Account of Arnold's campaign against Quebec, by one of the survivors*.—I. N. Arnold, *Life of Benedict Arnold*, ch. 3-5.—W. Irving, *Life of Washington*, v. 2, ch. 4-5, 8-9, 12, 15-16, 19-20.

1775-1776.—Effect of "Association."—Prohibitory Act.—"Through long debates Congress puzzled itself over the difficult task of maintaining the Association and of obtaining the means for carrying on the war. Doubtless a simple way out would be for Congress to allow so much exportation only as might be necessary to pay for arms and ammunition; and still not so simple either, since it would at once excite many jealousies. 'To get powder,' Mr. Jay observed, 'we keep a secret law that produce may be exported.' . . . So the Congress authorized the several colonies to export as much 'produce, except horned cattle, sheep, hogs, and poultry, as they may deem necessary for the importation of arms, ammunition, sulphur, and saltpetre.' Thus powder might be obtained. . . . For the moment all this was no more than a confession that the Association, originally designed as a finely chiseled stepping-stone to reconciliation, was likely to prove a stumbling-block unless the King graciously extended his royal hand to give a hearty lift. It presently appeared that the King refused to extend his hand. October 31, 1775, information reached America that Richard Penn and Arthur Lee, having presented the petition to Lord Dartmouth, were informed that the King would not receive them, and furthermore that no answer would be returned to the Congress. Ignoring the petition was to exhibit only one degree more of contempt for that carefully prepared document than the Congress had shown for Lord North's Resolution on Conciliation; and now that the olive branch had been spurned on both sides, it was a little difficult to see how either side could possibly refuse the sword. That the colonies would refuse the sword was not very likely; but, as if to make a refusal impossible, the British Government, on December 22, 1775, decided to thrust the sword into their hands. This at all events was thought by many men to be the effect of the Pro-

hibitory Act, which declared the colonies outside the protection of the Crown, and which, for the purpose of reducing them to submission, laid an embargo upon all their trade and proclaimed their ports in a state of blockade. I know not [John Adams wrote] whether you have seen the Act of Parliament called the Restraining Act or Prohibitory Act, or Piratical Act, or Act of Independency—for by all these titles is it called. I think the most apposite is the Act of Independency; the King, Lords, and Commons have united in surrendering this country from that, I think, forever. It is a complete dismemberment of the British Empire. It throws thirteen colonies out of the royal protection, and makes us independent in spite of supplications and entreaties. It may be fortunate that the act of Independency should come from the British Parliament rather than from the American Congress; but it is very odd that Americans should hesitate at accepting such a gift from them. The majority of those who refused to accept it—and the number was large—retired, with saddened hearts for the most part, into the ranks of the British Loyalists; only a few, with John Dickinson at their head, could still visualize the vanishing image of reconciliation. . . . On February 16, 1776, Congress . . . took into 'consideration the propriety of opening the ports. . . . The sword, as an instrument for maintaining rights, could after all not be effectively wielded by America so long as her hand was shackled by even the half-broken ties of a professed allegiance to Britain. Therefore, when the Congress, on the 6th of April, opened the ports of the colonies to the world, the Declaration of Independence was a foregone conclusion."—C. L. Becker, *Eve of the Revolution*, pp. 239-245.

1775-1776.—Washington in command at Cambridge.—British forced out of Boston.—Washington "arrived in Cambridge, Massachusetts, on the 2d of July [1775], and on the following day presented himself at the head of the army. His head-quarters remained at Cambridge, till the evacuation of Boston by the royal forces on the 17th of March, 1776. The position of affairs was one of vast responsibility and peril. The country at large was highly excited, and expected that a bold stroke would be struck and decisive successes obtained. But the army was without organization and discipline; the troops unused to obey, the officers for the most part unaccustomed, some of them incompetent, to command. A few of them only had had a limited experience in the Seven Years' War. Most of the men had rushed to the field on the first alarm of hostilities, without any enlistment; and when they were enlisted, it was only till the end of the year. There was no military chest; scarce anything that could be called a commissariat. The artillery consisted of a few old field-pieces of various sizes, served with a very few exceptions by persons wholly untrained in gunnery. There was no siege train, and an almost total want of every description of ordnance stores. Barrels of sand, represented as powder, were from time to time brought into the camp, to prevent the American army itself from being aware of its deficiency in that respect. In the autumn of 1775, an alarm of small-pox was brought from Boston, and the troops were subjected to inoculation. There was no efficient power, either in the Provincial Assembly or the Congress at Philadelphia, by which these wants could be supplied and these evils remedied. Such were the circumstances under which General Washington

GEORGE WASHINGTON

(From the painting by Gilbert Stuart, in the Corcoran Gallery, Washington)

took the field, at the head of a force greatly superior in numbers to the royal army, but in all other respects a very unequal match. Meantime the British were undisputed masters of the approaches to Boston by water. Washington's letters disclose extreme impatience under the inaction to which he was condemned; but the gravest difficulties attended the expulsion of the royal forces from Boston. It could only be effected by the bombardment and assault of that place; an attempt which must in any event have been destructive to the large noncombatant population, that had been unable to remove into the country, and which would have been of doubtful success, for the want of a siege train, and with troops wholly unused to such an undertaking. Having in the course of the year received some captured ordnance from Canada [from Fort Ticonderoga], and a supply of ammunition taken by privateers at sea, Washington was strongly disposed to assault the town, as soon as the freezing of the bay on the western side of the peninsula would allow the troops to pass on the ice. The winter, however, remained open longer than usual, and a council of war dissuaded this attempt. He then determined to occupy Nook's Hill (an eminence at the extremity of Dorchester Neck, as it was called, separated from Boston by a narrow arm of the harbor), and Dorchester Heights, which commanded Nook's Hill and the town itself. In this way the royal forces would be compelled to take the risk of a general action, for the purpose of dislodging the Americans, or else to evacuate the town. The requisite preparations having been made with secrecy, energy, and despatch, the heights were covered with breastworks on the night of the 4th of March, 1776, as 'by enchantment.' A partial movement, undertaken by the royal army to dislodge the Americans, was frustrated by stress of weather; and on the 17th of March, in virtue of an agreement to that effect with the municipal government, the town and harbor of Boston were evacuated by the British army and navy without firing a gun. Thus, without a battle and without the destruction of a building in Boston, the first year of the war was brought to a successful and an auspicious close."—E. Everett, *Life of Washington*, ch. 5.—"In the autumn, General Gage was replaced, as British Commander-in-chief, by Sir William Howe, whose brother Richard, Lord Howe, became Admiral of the Fleet. But the Howes knew no way to break the strangle hold of the Americans. How Washington contrived to create the impression that he was master of the situation is one of the mysteries of his campaigning, because, although he had succeeded in making soldiers of his raw recruits and in enforcing subordination, they were still a very skittish body. . . . Still, Washington pushed steadily on, and in March, 1776, by a brilliant manœuvre at Dorchester Heights, he secured a position from which he could bombard every ship in Boston harbor. On the 17th of March all those ships, together with the garrison of eight thousand, and with two thousand fugitive loyalists, sailed off to Halifax. Boston has been free from foreign enemies from that day to this."—W. R. Thayer, *George Washington*, p. 73.—"Bunker's Hill had been a soldier's battle; but the responsibility for the campaign of which it formed an episode lay with the placemen and their Royal master. They had contrived among them to bring about the discomfiture of a valiant army, responsive to discipline, and containing more than a due proportion of distinguished

or promising officers. They had involved it in almost every calamity which could befall a military force, except disgrace. They had so managed matters that, in a region overflowing with plenty, their troops had been fed from Leadenhall Market, as an orator of the Opposition cleverly and not untruly put it. . . . And yet, much as the English had suffered during the course of the siege from the scarcity and badness of their food, in the last resort they were refused the comparative satisfaction of having yielded to famine, and not to force. The Government deprived Howe of two thousand infantry, at the moment when he most needed to be strong. The reinforcements which were sent from home to fill the void arrived two months too late; and so it came to pass that the ill-used General was in the end not starved but manœuvred out of his positions. The acts of aggressive warfare sanctioned or condoned by the Ministers were as futile as their defensive arrangements, and had consequences most disastrous to the national interests. They had not occupied a single square furlong of soil, fortified or open, in any of the colonies; but they had shelled three towns, had sent into the Gazette a score of loyal merchants, and had rendered a few hundred families homeless. They had alienated all the neutral opinion in America, and had lighted a flame of resentment against Great Britain which they continued to feed with fresh fuel until it grew so hot that it did not burn itself out for a couple of lifetimes."—G. O. Trevelyan, *American Revolution*, v. 1, pp. 444-445.

1775-1776.—Lord Dunmore's war against Virginia. See VIRGINIA: 1775-1776.

1775-1776.—Beginning of American navy, and early fitting out of privateers.—"Before the end of 1775 the Continental Congress ordered that five ships of 32 guns should be built, five of 28, and three of 24. This order was carried out, and these vessels are the proper beginning of the navy of the United States. Almost every one of them, before the war was over, had been captured, or burned to avoid capture. But the names of the little fleet will always be of interest to Americans, and some of those names have always been preserved on the calendar of the navy. They are the 'Washington,' 'Raleigh,' 'Hancock,' 'Randolph,' 'Warren,' 'Virginia,' 'Trumbull,' 'Evingham,' 'Congress,' 'Providence,' 'Boston,' 'Delaware,' 'Montgomery.' The State of Rhode Island, at the very outbreak of hostilities, commissioned Abraham Whipple, who went with his little vessel as far as Bermuda, and, from his experience in naval warfare earned in the French War, he was recognized as commodore of the little fleet of American cruisers. . . . Meanwhile, every maritime State issued commissions to privateers, and established admiralty or prize courts, with power to condemn prizes when brought in. Legitimate commerce had been largely checked, and . . . the seamen of the country, who had formerly been employed in the fisheries, or in our large foreign trade with the West India Islands and with Europe, gladly volunteered in the private service. Till the end of the war the seamen preferred the privateer service to that of the government. . . . The larger maritime States had in commission one or more vessels from the beginning, but they found the same difficulty which the Congress found in enlisting seamen, when any bold privateer captain

came into rivalry with them. . . . As early as the 22d of December, in 1775, Congress had appointed Esek Hopkins, of Rhode Island, commander-in-chief of its navy, and had named four captains besides, with several lieutenants, the first of whom was John Paul Jones. . . . On the 10th of October [1776] a resolution of Congress fixed the rank of captains in the navy, . . . Paul Jones eighteenth on a list of twenty-four. Jones was not pleased that his rank was not higher, but eventually his achievements were such that his reputation probably now stands higher as a successful officer than that of any of the number."—E. E. Hale, *Naval history of the American Revolution (Narrative and critical history of America, v. 6, ch. 7)*.

1775-1783.—Loyalists in the Revolution.—“The loyalists were many—perhaps nearly, if not quite, a third of the population. Many of them were, moreover, or had been when the war began men of substance and of position. On the whole, they came from the conservative classes, who disliked rebellion for itself and because they had something to lose. Men that were looking for a chance to wipe out their old debts and had hopes of get-

ting something ahead in the general overturning were not apt to be Tories. The people that were banished from Boston were members of the old families of the commonwealth. Greene reported to Washington that two-thirds of the property in New York City and its suburbs belonged to Tories.”—A. C. McLaughlin, *Confederation and the constitution, p. 37*.—“After hostilities began and the Revolution was well under way, the loyalists were probably a majority in New York, in South Carolina, and in Georgia. In Pennsylvania, Maryland, and New Jersey they are supposed to have been more evenly balanced, each side claiming the majority. Even in New England and Virginia the loyalists were more numerous than is generally supposed.”—S. G. Fisher, *True history of the American Revolution, p. 233*.—See also TORIES OF THE AMERICAN REVOLUTION.

1776 (January-June).—King George's war measures and Paine's "Common Sense."—Setting of the tide of opinion toward national independence.—“Disastrous news arrived from England before the close of the winter of 1775-6. The King had opened Parliament with a speech in which he had denounced the Colonists as rebels, seeking, with deceitful pretences, to establish an independent empire; and his Majesty recommended decisive, coercive measures against them. . . . The answer to the Royal Address (adopted by a vote of seventy-six to thirty-three in the Lords, and two hundred and seventy-eight to one hundred and eight in the Commons) gave assurances of the firm support of Parliament to the proposed measures. The very moderately conciliatory propositions made by the Duke of Richmond, Mr. Burke, and the Duke of Grafton, were summarily voted down, and not far from the middle of December the atrocious 'Prohibitory Act,' as it was generally designated, passed. It was, in effect, a declaration of war, and a war unrestrained by the customs, and unmitigated by the decencies of civilization. It authorized the confiscation of American vessels and cargoes, and those of all nations found trading in American ports. It authorized British commanders to impress American crews into the British Navy, and to place them on the same footing with voluntarily enlisted seamen; that is, to give them a choice between parricide and being hung at a yardarm! Finally, it referred all future negotiations to two Commissioners, to be sent out along with a conquering armament, who were allowed to grant pardons to individuals and Colonies, on submission, thus leaving no future alternative opposed to the latter but the sword, and indicating that henceforth all appeals to King or Parliament were cut off. . . . Concurrently with these legislative steps, the practical ones for carrying on the war, with a large army, were entered upon. Finding it difficult or impossible to obtain the necessary recruits at home, and that the existing English and Irish regiments embarked with such reluctance that it was necessary to keep a guard upon the transports 'to keep them from deserting by wholesale,' the Ministry successively applied to Russia, the States-General, and finally, several of the German States for mercenaries. . . . The infamy of filling up the British armament was reserved for the Princes of three or four petty German States. . . . As the news of these events successively reached the American Congress and people, in the

winter and spring of 1775-6, the contest took a new coloring. Not only the bold, but the moderate began now to see the real alternative before them. And at a critical moment the remedy, and the path to it, were pointed out by a master hand. 'Common Sense' was published by Thomas Paine, and a more effective popular appeal never went to the bosoms of a nation. Its tone, its manner, its biblical illusions, its avoidance of all openly impassioned appeals to feeling, and its unanswerable common sense were exquisitely adapted to the great audience to which it was addressed; and calm investigation will satisfy the historical student that its effect in preparing the popular mind for the Declaration of Independence, exceeded that of any other paper, speech, or document made to favor it, and it would scarcely be exaggeration to add, than all other such means put together. . . . Independence would have been declared, and, perhaps, nearly as early, had Paine never written. But he did, at a propitious moment, and with consummate adaptation, write a paper which went like the arrow which pierces the centre of the target. Its effect was instantaneous and tremendous. . . . The work ran through innumerable editions in America and France. The world rung with it. . . . It admits of no doubt that pretty early in 1776, all the true Whigs in Congress, moderates as well as ultras, became satisfied of the necessity and expediency of separation, and that henceforth it was only a question of time with them. Enactments placing the struggle on the footing of open war, instead of mere insurrection—issuing letters of marque and reprisal against the enemies of our commerce—advising the local authorities to disarm the disaffected—opening the ports of the country to all nations but Great Britain—directing negotiations for foreign alliances to be undertaken—were successively made. Finally, on the 10th of May, a resolution, prepared by John Adams and R. H. Lee, passed the House, advising all the Colonies to form governments for themselves; and in this, unlike preceding instances of giving advice on the same subject, no limitation of the duration of the governments to be formed 'to the continuance of the present dispute' was inserted. This, with a befitting preamble, written by John Adams, was adopted on the 15th, . . . and was, obviously, a long and bold stride in the direction of independence, and must have been understood by all as its signal and precursor. . . . Congress cheered on those whom peculiar circumstances had rendered more backward, and it tarried for them a little by the way; on the other hand, it prudently waited for the prompting of the more forward. Thus it avoided the appearance of dominating over public opinion—thus it 'kept front and rear together.' Early in April (12th), North Carolina [see NORTH CAROLINA: 1775-1776] 'empowered' her delegates 'to concur with the delegates of other Colonies in declaring independency.' At its 'May session' (the day of the month not appearing in the record under our eye), the General Assembly of Rhode Island abolished its act of allegiance, and directed all commissions and legal processes henceforth to issue in the name and under the authority of the 'Governor and Company.' The Connecticut General Assembly, which met on the 9th of May, before its adjournment (date not before us), repealed its act against high treason, and made the same order with Rhode Island in regard to legal processes. On the 15th of May, Virginia took a still more decisive step, by instructing its dele-

gates in Congress to move for a Declaration of Independence. [See VIRGINIA: 1776.] . . . The Virginia delegates in Congress made choice of Richard H. Lee to move the resolutions contained in their instructions of May 15th; and he did so on Friday, the 7th day of June, John Adams seconding them. Their consideration was postponed until the next day, when they were referred to a committee of the whole, and debated throughout Saturday and the succeeding Monday. On the latter day (10th) Congress resolved: 'That the consideration of the first resolution be postponed to Monday, the first day of July next; and in the meanwhile, that no time be lost, in case the Congress agree thereto, that a committee be appointed to prepare a declaration to the effect of the said first resolution, which is in these words: That these Colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British Crown; and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved.'—H. S. Randall, *Life of Jefferson*, v. 1, ch. 4.

1776 (January-June).—Engagement of hiring Hessians to reinforce British arms.—'Early in the year treaties were signed with the Landgrave of Hesse for taking into British pay 12,000 of his men; with the Duke of Brunswick and other petty potentates of Germany for 5,000 more. These little princes, seeing the need of England, which did not choose to lean, as she might and should have done, on her own right arm, insisted on obtaining, and did obtain, most usurious terms. Under the name of levy-money, there was to be paid to them the price of 30 crowns for every foot-soldier. Under the name of subsidy, each of their Serene Highnesses was moreover to be indulged with a yearly sum, irrespective of the pay and subsistence of the troops; and on the plea that in this case no certain number of years was stipulated as the term of service, the Landgrave of Hesse claimed and was promised a double subsidy, namely 450,000 crowns a year. The men were to enter into pay before they began to march! The subsidies were to be continued for one full year at least after the war was over and the troops had returned to their respective homes. Never yet, in short, was the blood of brave men sold on harder terms. The disgrace of this transaction to the German Princes who engaged in it requires little comment. . . . The ablest by far of the German Princes at that time, Frederick of Prussia, was not in general a man of compassionate feelings. He had no especial love or care for the North American cause. [See GERMANY: 1761-1779.] . . . Yet even Frederick expressed in strong terms his contempt for the scandalous man-traffic of his neighbours. It is said that whenever any of the newly hired Brunswickers or Hessians had to pass through any portion of his territory he

claimed to levy on them the usual toll as for so many head of cattle, since he said they had been sold as such! Nor can the British ministry in this transaction be considered free from blame. Certain it is that among the various causes which at this period wrought upon our trans-Atlantic brethren to renounce their connection with us, there was none more cogent in their minds than the news that German mercenaries had been hired and were coming to fight against them."—Lord Mahon (Earl Stanhope), *History of England, 1713-1783*, v. 6, ch. 53.—"The first German troops to start for America were the Brunswickers. These marched from Brunswick on February 22d, 1776, 2,282 strong, and were embarked at Stade, near the mouth of the Elbe. The second division of Brunswickers embarked at the end of May—about 2,000 men. The first Hessians set out from Cassel early in March, and were shipped at Bremerlehe, near the mouth of the Weser. The second division was embarked in June. Together they numbered between 12,000 and 13,000 men. They were for the most part excellent troops and well equipped, for the Landgrave's little army was one of the best in Germany. . . . The Prince of Waldeck sent his regiment through Cassel without trouble. The Prince of Hesse-Hanau, the Margrave of Anspach-Bayreuth, and the Prince of Anhalt-Zerbst had a longer road."—E. J. Lowell, *Hessians in the Revolutionary War*, ch. 5.

1776 (June).—British repulsed at Charleston.—"Early in 1776 the task was assigned to Clinton, who had in January departed from Boston, . . . to force and hold the Southern colonies to their allegiance [see NORTH CAROLINA: 1775-1776], and Cornwallis, with troops, was sent over under convoy of Sir Peter Parker's fleet, to give Clinton the army he needed. The fleet did not reach North Carolina till May. In March, [Charles] Lee, while in New York, had wished to be ordered to the command in Canada, as 'he was the only general officer on the continent who could speak and think in French.' He was disappointed, and ordered farther south. By May he was in Virginia, ridding the country of Tories, and trying to find out where Parker intended to land. It was expected that Clinton would return north to New York in season to operate with Howe, when he opened the campaign there in the early summer, as that general expected to do, and the interval for a diversion farther south was not long. Lee had now gone as far as Charleston (S. C.), and taken command in that neighborhood, while in charge of the little fort at the entrance of the harbor was William Moultrie, upon whom Lee was inculcating the necessity of a slow and sure fire, in case it should prove that Parker's destination, as it might well be, was to get a foothold in the Southern provinces, and break up the commerce which fed the rebellion through that harbor. The people of Charleston had been for some time engaged on their defences, and 'seem to wish a trial of their mettle,' wrote a looker-on. The fort in question was built of palmetto logs,

and was unfinished on the land side. Its defenders had four days' warning, and the neighboring militia were summoned. On the 4th of June the hostile fleet appeared, and having landed troops on an adjacent island, it was not till the 27th that their dispositions were made for an attack. Their ships threw shot at the fort all day, which did very little damage, while the return fire was rendered with precision surprising in untried artillerymen, and seriously damaged the fleet, of which one ship was grounded and abandoned. The expected land attack from Clinton's troops, already ashore on Long Island, was not made. A strong wind had raised the waters of the channel between that island and Sullivan's Island so high that it could not be forded, and suitable boats for the passage were not at hand. A few days later the shattered vessels and the troops left the neighborhood, and Colonel Moultrie had leisure to count the cost of his victory, which was twelve killed and twice as many wounded. The courage of Sergeant Jasper, in replacing on the bastion a flag which had been shot away, became at once a household anecdote."—J. Winsor, *Conflict precipitated (Narrative and critical history of America, v. 6, ch. 2)*.

1776 (June).—Resolutions for independence.—Making ready for the Declaration.—"Things were now verging on every side to the same point. North Carolina had conferred the necessary powers to vote for independence and foreign alliances as early as the 12th of April. And now came the news from Richard Lee, to Mr. Adams, that on the very day of the passage of the significant preamble in congress, the 15th of May, the convention of Virginia had gone a step further, and had instructed their delegates to propose independence. Authority to assent to its natural consequences, a confederation and foreign alliances, followed as a matter of course. On the other hand, the convention of Massachusetts had referred the subject back to the people, to be considered and acted upon at their primary town meetings, and the responses had been for some time coming in unequivocally enough. So decided was the feeling that Joseph Hawley, impatient of the delay, was stimulating the nowise reluctant Gerry to greater exertions. Perceiving these encouraging indications in opposite quarters, the friends of independence now consulted together, and made up their minds that the moment had come for a final demonstration. Resolutions, embracing the three great points, were carefully matured, which it was arranged that Richard Henry Lee, on behalf of the delegates of Virginia, should present, and John Adams should second, for Massachusetts. The movement took place, accordingly, on the 7th of June. It appears on the journal, recorded with the customary caution, as follows: 'Certain resolutions respecting independency being moved and seconded,—Resolved, that the consideration of them be referred till tomorrow morning; and that the members be enjoined to attend punctually at ten o'clock, in order to take the same into their consideration.' It was well that a measure of so momentous a character should be accompanied with as much of the forms of notice and special assignment as the body could properly give it. The record of what passed

SIGNING OF THE DECLARATION OF INDEPENDENCE  
July 4, 1776

(From the painting by John Trumbull, in the Capitol at Washington)

at the appointed time has come down to us very barren of details. We only know that the resolutions were referred to the committee of the whole, where they were debated with great spirit during that day, Saturday, and again on Monday, the 10th, by which time it had become quite clear that a majority of the colonies were prepared to adopt the first and leading resolution. This majority was composed of the four New England, and three out of the four southern colonies. But it being deemed unadvisable to place this great act upon so narrow a basis, and a prospect being held out of securing a more general concurrence by delaying the decision, a postponement until the 1st of July was effected by a change of the votes of two colonies. In the mean while, however, as it was thought suitable to accompany the act with an elaborate exposition of the causes which were held to justify it, a committee was ordered to have in charge the preparation of such a paper in season for the adjourned debate. . . . At the same time that Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R. Livingston, all but the last named being of the movement, were appointed the committee to prepare a declaration, as mentioned, the congress formally voted a second committee, with powers to prepare and digest a form of confederation to be entered into between the colonies; and yet a third, to mature a plan of treaties to be proposed to foreign powers. In this compass were included all the elements of national sovereignty abroad and at home. . . . The bulk of opposition now centred in the five middle colonies, and the pillar upon which it leaned was John Dickinson. But under the combined assaults conducted by the leading colonies of Virginia and Massachusetts, it was plain that victory was become a mere question of time. Jonathan D. Sergeant, who had left congress to hasten a change in the counsels of New Jersey, had been so successful in spiriting up the assembly as to be able to write, on the 15th of June, to Mr. Adams, that the delegates about to be elected would be on the spot by the 1st of July, the day to which the question had been assigned, and that they would 'vote plump.' Equally favorable news soon came from Maryland. . . . Thus were two States secured. But Pennsylvania, Delaware, and New York yet remained to move. In the first of these, recourse was had once more to the so-called committees of conference. . . . And here, on the 23d of June, Dr. Benjamin Rush, then a young man, but acting entirely in sympathy and co-operation with the leaders in congress, moved and carried the appointment of a committee to declare the sense of the conference with respect to an independence of the province on the crown of Great Britain. He and James Smith were then joined with Thomas McKean, the chairman of the conference, in a committee, which was ready the next day with a report affirming the willingness of the deputies of the conference to concur in a vote declaring the United Colonies free and independent States. The report was adopted unanimously, was presented to congress on the 25th, and, doubtless had its effect in determining those delegates of the colony to absent themselves on the final vote, upon whose resistance its adverse decision depended. As the hesitation of Delaware was chiefly owing to the feeling that pervaded the county of Sussex, Mr. Rodney had repaired thither for the purpose of bringing about a favorable change, in which errand the news came that he was laboring with success

The delegates from New York, no longer interposing any active opposition, yet unwilling to assume a responsibility which their constituents had not authorized, preferred to withdraw from participation in the decision. Such was the state of affairs on the 1st of July, to which day the discussion had been adjourned. There was then little doubt of an affirmative vote on the part of all but four colonies."—J. Q. Adams and C. F. Adams, *Life of John Adams*, v. 1, pp. 308-318.

**1776 (July).—Authorship, adoption and signing of Declaration of Independence.**—"One of the first facts taught to any child of American birth is, that Jefferson wrote the Declaration of Independence. The original draft in his handwriting was afterward deposited in the State Department. It shows two or three trifling alterations, interlined in the handwritings of Franklin and Adams. Otherwise it came before Congress precisely as Jefferson wrote it. Many years afterward John Adams gave an account of the way in which Jefferson came to be the composer of this momentous document, differing slightly from the story told by Jefferson. But the variance is immaterial. . . . Jefferson's statement seems the better entitled to credit, and what little corroboration is to be obtained for either narrator is wholly in his favor. He says simply that when the Committee came together he was pressed by his colleagues unanimously to undertake the draft; that he did so; that, when he had prepared it, he submitted it to Dr. Franklin and Mr. Adams, separately, requesting their corrections, 'which were two or three only and merely verbal,' 'interlined in their own handwritings'; that the report in this shape was adopted by the committee, and a 'fair copy,' written out by Mr. Jefferson, was then laid before Congress. A somewhat more interesting discussion concerns the question, how Jefferson came to be named first on the committee, to the entire exclusion of Lee, to whom, as mover of the resolution, parliamentary etiquette would have assigned the chairmanship. Many explanations have been given, of which some at least appear the outgrowth of personal likings and dislikings. It is certain that Jefferson was not only preëminently fitted for the very difficult task of this peculiar composition, but also that he was a man without an enemy. His abstinence from any active share in debate had saved him from giving irritation; and it is a truth not to be concealed, that there were cabals, bickerings, heart-burnings, perhaps actual enmities among the members of that famous body, which, grandly as it looms up, and rightly too, in the mind's eye, was after all composed of jarring human ingredients. It was well believed that there was a faction opposed to Washington, and it was generally suspected that irascible, vain, and jealous John Adams, then just rising from the ranks of the people, made in this matter common cause with the aristocratic Virginian Lees against their fellow-countrymen. . . . So it is likely enough that a timely illness of Lee's wife was a fortunate excuse for passing him by, and that partly by reason of admitted aptitude, partly because no risk could be run of any interference of personal feelings in so weighty a matter, Jefferson was placed first on the committee, with the natural result of doing the bulk of its labor. On July 1, pursuant to assignment, Congress, in committee of the whole, resumed consideration of Mr. Lee's resolution, and carried it by the votes of nine colonies. South Carolina and Pennsylvania voted against it. The two delegates from Delaware voted

divided. Those from New York said that personally they were in favor of it and believed their constituents to be so, but they were hampered by instructions drawn a twelvemonth since and strictly forbidding any action obstructive of reconciliation, which was then still desired. The committee reported, and then Edward Rutledge moved an adjournment to the next day, when his colleagues, though disapproving the resolution, would probably join in it for the sake of unanimity. This motion was carried, and on the day following the South Carolinians were found to be converted; also a third member had come post from the Delaware counties, and caused the vote of that colony to be given with the rest; Pennsylvania changed her vote; and a few days later the Convention of New York approved the resolution, 'thus supplying the void occasioned by the withdrawing of her delegates from the vote.' On the same day, July 2, the House took up Mr. Jefferson's draft of the Declaration, and debated it during that and the following day and until a late hour on July 4. Many verbal changes were made, most of which were conducive to closer accuracy of statement, and were improvements. Two or three substantial amendments were made by the omission of passages; notably there was stricken out a passage in which George III was denounced for encouraging the slave-trade. . . . No interpolation of any consequence was made. Jefferson had ample cause to congratulate himself upon this event of the discussion. . . . He himself spoke not a word in the debate. . . . The burden of argument, from which Jefferson wisely shrank, was gallantly borne by John Adams, whom Jefferson gratefully called 'the colossus of that debate.' Jefferson used afterward to take pleasure in tingeing the real solemnity of the occasion with a coloring of the ludicrous. The debate, he said, seemed as though it might run on interminably, and probably would have done so at a different season of the year. But the weather was oppressively warm, and the room occupied by the deputies was hard by a stable, whence the hungry flies swarmed thick and fierce, alighting on the legs of the delegates and biting hard through their thin silk stockings. Treason was preferable to discomfort, and the members voted for the Declaration and hastened to the table to sign it and escape from the horse-fly. John Hancock, making his great familiar signature, jestingly said that John Bull could read that without spectacles; then, becoming more serious, began to impress on his comrades the necessity of their 'all hanging together in this matter.' 'Yes, indeed,' interrupted Franklin, 'we must all hang together, or assuredly we shall all hang separately.' . . . Amid such trifling, concealing grave thoughts, Jefferson saw his momentous document signed at the close of that summer afternoon."—J. T. Morse, Jr., *Thomas Jefferson*, ch. 3.—"The statements relative to signing the Declaration are conflicting. Jefferson states that it was signed generally on the 4th (Memoirs i, 94), and he in other places reiterates this statement, but this manuscript is not known to be extant. . . . According to the journals, Congress, on the 10th of July, resolved that the 'declaration, passed on the 4th, be fairly engrossed on parchment, with the title and style of "The unanimous Declaration of the Thirteen United States of America," and that the same, when engrossed, be signed by every member of Congress.' On the 2d day of August, the journals say, 'The Declaration being engrossed, and compared at the table, was signed by the members.'"—R. Frothingham,

*Rise of the republic*, p. 545 and footnote.—"Because statesmen like Dickinson and communities like Maryland were slow in believing that the right moment for a declaration of independence had come, the preposterous theory has been suggested that the American Revolution was the work of an unscrupulous and desperate minority, which, through intrigue mingled with violence, succeeded in forcing the reluctant majority to sanction its measures. Such a misconception has its root in an utter failure to comprehend the peculiar character of American political life, like the kindred misconception which ascribes the rebellion of the colonies to a sordid unwillingness to bear their due share of the expenses of the British Empire. It is like the misunderstanding which saw an angry mob in every town-meeting of the people of Boston, and characterized as a 'riot' every deliberate expression of public opinion. No one who is familiar with the essential features of American political life can for a moment suppose that the Declaration of Independence was brought about by any less weighty force than the settled conviction of the people that the priceless treasure of self-government could be preserved by no other means. It was but slowly that this unwelcome conviction grew upon the people; and owing to local differences of circumstances it grew more slowly in some places than in others. Prescient leaders, too, like the Adamses and Franklin and Lee, made up their minds sooner than other people. Even those conservatives who resisted to the last, even such men as John Dickinson and Robert Morris, were fully agreed with their opponents as to the principle at issue between Great Britain and America, and nothing would have satisfied them short of the total abandonment by Great Britain of her pretensions to impose taxes and revoke charters. Upon this fundamental point there was very little difference of opinion in America. As to the related question of independence, the decision, when once reached, was everywhere alike the reasonable result of free and open discussion; and the best possible illustration of this is the fact that not even in the darkest days of the war already begun did any state deliberately propose to reconsider its action in the matter. The hand once put to the plough, there was no turning back."—J. Fiske, *American Revolution*, v. 1, ch. 4.—See also INDEPENDENCE HALL.

1776 (July).—Declaration of Independence.—"It is to be noted that, whatever authority the Declaration of Independence has acquired in the world, has been due to no lack of criticism, either at the time of its first appearance or since then,—a fact which seems to tell in favor of its essential worth and strength. From the date of its original publication . . . it has been attacked again and again, either in anger or in contempt, by friends as well as by enemies of the American Revolution, by liberals in politics as well as by conservatives. It has been censured for its substance, it has been censured for its form; for its misstatements of fact, for its fallacies in reasoning; for its audacious

novelties and paradoxes, for its total lack of all novelty, for its repetition of old and threadbare statements, even for its downright plagiarisms; finally, for its grandiose and vapid style. . . . Perhaps, however, the most frequent form of disparagement to which Jefferson's great state paper has been subjected among us, is that which would minimize his merit in composing it, by denying to it the merit of originality. . . . By no one, . . . has the charge of a lack of originality been pressed with so much decisiveness as by John Adams, who took evident pleasure in speaking of it as a document in which were merely 'recapitulated' previous and well-known statements of American rights and wrongs, and who, as late as in the year 1822, deliberately wrote that 'there is not an idea in it but what had been hackneyed in Congress for two years before. . . .' Perhaps nowhere in our literature would it be possible to find a criticism brought forward by a really able man against any piece of writing, less applicable to the case, and of less force or value, than is this particular criticism by John Adams and others, as to the lack of originality in the Declaration of Independence. Indeed, for such a paper as Jefferson was commissioned to write, the one quality which it could not properly have had—the one quality which would have been fatal to its acceptance either by the American Congress or by the American people—is originality. They were then at the culmination of a tremendous controversy over alleged grievances of the most serious kind—a controversy that had been fiercely raging for at least twelve years. In the course of that long dispute, every phase of it, whether as to abstract right or constitutional privilege or personal procedure, had been presented in almost every conceivable form of speech. At last, they had resolved, in view of all this experience, no longer to prosecute the controversy as members of the empire; they had resolved to revolt, and casting off forever their ancient fealty to the British crown, to separate from the empire, and to establish themselves as a new nation among the nations of the earth. In this emergency, as it happened, Jefferson was called upon to put into form a suitable statement of the chief considerations which prompted them to this great act of revolution, and which, as they believed, justified it. What, then, was Jefferson to do? . . . Was he not . . . to regard himself as, for the time being, the very mouthpiece and prophet of the people whom he represented, and as such required to bring together and to set in order, in their name, not what was new, but what was old; to gather up into his own soul, as much as possible, whatever was then also in their souls—their very thoughts and passions, their ideas of constitutional law, their interpretations of fact, their opinions as to men and as to events in all that ugly quarrel; their notions of justice, of civic dignity, of human rights; finally, their memories of wrongs inflicted upon them during those twelve years by the hands of insolent and brutal men, in the name of the king, and by his apparent command? Moreover, as the nature of the task laid upon him made it necessary that he should thus state, as the reasons for their intended act, those very considerations both as to fact and as to opinion which had actually operated upon their minds, so did it require him to do so, to some extent, in the very language which the people themselves, in their more formal and deliberate utterances, had all along been using. In the development of political life in England

and America, there had already been created a vast literature of constitutional progress—a literature common to both portions of the English race, pervaded by its own stately traditions, and reverberating certain great phrases which formed, as one may say, almost the vernacular of English justice, and of English aspiration for a free, manly, and orderly political life. In this vernacular the Declaration of Independence was written. The phraseology thus characteristic of it, is the very phraseology of the champions of constitutional expansion, of civic dignity and of progress, within the English freedom in the seventeenth century, particularly the Petition of Right in 1629, and the Bill of Rights in 1689; of the great English charters for colonization in America; of the great English exponents of legal and political progress,—Sir Edward Coke, John Milton, Algernon Sidney, John Locke; finally, of the great American exponents of political liberty and of the chief representative bodies, whether local or general, which had convened in America from the time of the Stamp Act Congress until that of the Congress which resolved upon our Independence. To say, therefore, that the official Declaration of that resolve is a paper made up of the very opinions, beliefs, unbeliefs, the very sentiments, prejudices, passions, even the errors in judgment and the personal misconstructions—if they were such—which then actually impelled the American people to that mighty act, and that all these are expressed in the very phrases which they had been accustomed to use, is to pay to that state paper the highest tribute as to its fitness for the purpose for which it was framed."—M. C. Tyler, *Literary history of the American Revolution, 1763-1783*, v. 1, pp. 499, 504-507.—The following is the text of the great manifesto:

When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the Powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed, That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.—Such has been the patient sufferance of these

Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world. He has refused his Assent to Laws, the most wholesome and necessary for the public good. He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them. He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only. He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their Public Records, for the sole purpose of fatiguing them into compliance with his measures. He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people. He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the legislative Powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the dangers of invasion from without, and convulsions within. He has endeavoured to prevent the population of these States; for that purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of the new Appropriations of Lands. He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary Powers. He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries. He has erected a multitude of New Offices, and sent hither swarms of Officers to harass our People, and eat out their substance. He has kept among us, in times of peace, Standing Armies without the Consent of our legislature. He has affected to render the Military independent of and superior to the Civil Power. He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation: For quartering large bodies of armed troops among us: For protecting them, by a mock Trial, from Punishment for any Murders which they should commit on the Inhabitants of these States: For cutting off our Trade with all parts of the world: For imposing taxes on us without our Consent: For depriving us in many cases, of the benefits of Trial by Jury: For transporting us beyond Seas to be tried for pretended offences: For abolishing the free System of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies: For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments: For suspending our own Legislatures, and declaring themselves invested with Power to legislate for us in all cases whatsoever. He has abdicated Government here, by declaring us out of his Protection and waging War against us. He has plundered our seas, rav-

aged our Coasts, burnt our towns, and destroyed the lives of our people. He is at this time transporting large armies of foreign mercenaries to compleat the works of death, desolation and tyranny, already begun with circumstances of Cruelty & perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation. He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands. He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes, and conditions. In every stage of these Oppressions We have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free People. Nor have We been wanting in attention to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which, would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends. We, therefore, the Representatives of the united States of America, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be Free and Independent States; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. And for the support of this Declaration, with a firm reliance on the Protection of Divine Providence, we mutually pledge to each other our Lives, our Fortunes and our sacred Honor.—John Hancock. *New Hampshire*—Josiah Bartlett, Wm. "The engrossed parchment with original signatures, preserved for many years in the building of the Department of State at Washington, was transferred in 1921 by an Executive order to the Library of Congress. Until 1894 it was on exhibition. But over a century's exposure to the light wrought such damage that the cracked and faded document had to be inclosed in a steel case."—D. S. Muzzey, *United States of America*, p. 80, footnote.

1776 (July).—**Constitutional effect of Declaration of Independence.**—"The Declaration of Independence did not create thirteen sovereign states, but the representatives of the people declared that the former English colonies, under the name which they had assumed of the United States of America, became, from the 4th day of July, 1776, a sovereign state and a member of the family of nations, recognized by the law of nations; and further, that the people would support their representatives with their blood and treasure, in their endeavor to make this declaration a universally recognized fact. Neither congress nor the people relied in this upon any positive right belonging either to the individual colonies or to the colonies as a whole. Rather did the Declaration of Independence and the war destroy all existing political jural relations, and seek their moral justification in the right of revolution inherent in every people in extreme emergencies. . . . Political theories had nothing to do with this development of things. It was the natural result of given circumstances and was an accomplished fact before anyone thought of the legal consequences which might subsequently be deduced from it"—H. von Holst, *Constitutional and political history of the United States*, v. 1, ch. 1.

1776 (August).—**Struggle for New York and the Hudson.—Battle of Long Island.**—"Washington had been informed, early in January that General Sir Henry Clinton had sailed from Boston, with a considerable body of troops, on a secret expedition. Apprehending that the city of New York was his destination, he immediately dispatched General Charles Lee to Connecticut to raise troops, and to proceed to that city to watch and oppose Clinton wherever he might attempt to land. Six weeks before the evacuation of Boston [March 17, 1776], Lee had encamped near New York with twelve hundred militia. Already the Sons of Liberty had been busy, and overt acts of rebellion had been committed by them. They had seized the cannons at Fort George, and driven Tryon, the royal governor, on board the *Asia*, a British armed vessel in the harbor. In March, Clinton arrived at Sandy Hook, just outside New York harbor, and on the same day, the watchful Lee providentially entered the city. The movement, although without a knowledge of Clinton's position, was timely, for it kept him at bay. Foiled in his attempt upon New York, that commander sailed southward. . . . The destination of Howe, when he left Boston, was also unknown to Washington. Supposing he, too, would proceed to New York, he put the main body of his army in motion toward that city, as soon as he

had placed Boston in a state of security. He arrived in New York about the middle of April [April 14], and proceeded at once to fortify the town and vicinity, and also the passes of the Hudson Highlands, fifty miles above. In the mean while, General Lee, who had been appointed to command the American forces in the South, had left his troops in the charge of General Lord Stirling [March 7], and was hastening toward the Carolinas to watch the movements of Clinton, arouse the Whigs, and gather an army there. . . . Pursuant to instructions, General Howe proceeded toward New York, to meet General Clinton and Parker's fleet. He left Halifax on the 11th of June, [1776], and arrived at Sandy Hook on the 29th. On the 2d day of July he took possession of Staten Island, where he was joined by Sir Henry Clinton [July 11], from the South, and his brother, Admiral Lord Howe [July 12], with a fleet and a large land force, from England. Before the first of August, other vessels arrived with a part of the Hessian troops, and on that day, almost 30,000 soldiers, many of them tried veterans, stood ready to fall upon the republican army of 17,000 men, mostly militia, which lay entrenched in New York and vicinity, less than a dozen miles distant. The grand object in view was the seizure of New York and the country along the Hudson, so as to keep open a communication with Canada, separate the patriots of New England from those of the other states, and to overrun the most populous portion of the revolted colonies. This was the military plan, arranged by ministers. They had also prepared instructions to their commanding generals, to be pacific, if the Americans appeared disposed to submit. Lord Howe and his brother, the general, were commissioned to 'grant pardon to all who deserved mercy,' and to treat for peace, but only on terms of absolute submission on the part of the colonies, to the will of the King and parliament. After making a foolish display of arrogance and weakness, in addressing General Washington as a private gentleman, and being assured that the Americans had been guilty of no offense requiring a 'pardon' at their hands, they prepared to strike an immediate and effective blow."—B. J. Lossing, *Family history of the United States*, period 5, ch. 3.—"Realizing that the weight of the British attack would fall on New York, Washington had detached Charles Lee to undertake its defense, and, upon the British evacuation of Boston, had himself repaired thither with the bulk of his army. The city of New York . . . was exceedingly difficult to defend, owing to its being commanded by the heights of Brooklyn on the western end of Long Island and being accessible on either side to the guns of ships of war. Military considerations, alone, would have dictated its abandonment, but other reasons demanded that the Americans should attempt to retain it. Washington, therefore, fortified Brooklyn Heights, and stationed a large portion of his small force on the hills in front of that position. The American army was decimated by sickness; among those in the hospital at the moment was Nathanael Greene, to whom the command of this important post had been given. It fell, therefore, to Israel Putnam and John Sullivan, neither of whom seems to have been fully aware of the precise part he was expected to play. Most skillfully Howe attacked (August 27, 1776) the outlying body of Americans, marched a formidable portion of his soldiers by night [in three divisions under Generals Grant, De Heister, and Clinton and Cornwallis] far to the right of the American

position, captured a mounted patrol that had been sent to watch the road, thrust his detachment between the two American forces, and captured nearly the whole of Sullivan's command with its leader. He stopped his soldiers in front of the heights. By a miracle of good fortune, Washington rescued the garrison and transported it across the East River to Manhattan Island. Then came delay after delay on the part of the British commander; but time did not strengthen Washington's hands. The British and Hessian army under Howe was the finest force that had yet appeared on one side in America, and in the open field could not be opposed by any troops that Washington could summon. It followed, therefore, that notwithstanding some brilliant strokes, as at Harlem Plains and Chatterton Hill the Americans were finally driven from Manhattan Island and the mainland immediately north of it. With the main body Washington retreated slowly across the Jerseys, and, finally, in December, passed the Delaware into Pennsylvania. The one serious disaster in this movement was the loss of Fort Washington at the northern end of Manhattan Island with its entire garrison and all its munitions of war."—E. Channing, *History of the United States*, v. 3, pp. 229-232.

1776 (September-November).—Struggle for New York and the Hudson.—Successes of the British.—Washington's retreat into New Jersey.—“At daybreak the British awoke, but it was too late. They had fought a successful battle, they had the American army in their grasp, and now all was over. The victory had melted away, and, as a grand result, they had a few hundred prisoners, a stray boat with three camp-followers, and the deserted works in which they stood. To make such a retreat as this was a feat of arms as great as most victories, and in it we see, perhaps as plainly as anywhere, the nerve and quickness of the man who conducted it. It is true it was the only chance of salvation, but the great man is he who is entirely master of his opportunity, even if he have but one. The outlook, nevertheless, was as Washington wrote, ‘truly distressing.’ The troops were dispirited, and the militia began to disappear, as they always did after a defeat. Congress would not permit the destruction of the city; different interests pulled in different directions, conflicting opinions distracted the councils of war, and, with utter inability to predict the enemy's movements, everything led to halfway measures and to intense anxiety, while Lord Howe tried to negotiate with Congress, and the Americans waited for events, Washington, looking beyond the confusion of the moment, saw that he had gained much by delay, and had his own plan well defined. . . . Every one else, however, saw only past defeat and present peril. The British ships gradually made their way up the river, until it became apparent that they intended to surround and cut off the American army. Washington made preparations to withdraw, but uncertainty of information came

near rendering his precautions futile. September 15th the men-of-war opened fire, and troops were landed near Kip's Bay. The militia in the breastworks at that point had been at Brooklyn and gave way at once, communicating their panic to two Connecticut regiments. Washington, galloping down to the scene of battle, came upon the disordered and flying troops. He dashed in among them, conjuring them to stop, but even while he was trying to rally them they broke again on the appearance of some sixty or seventy of the enemy, and ran in all directions. In a tempest of anger Washington drew his pistols, struck the fugitives with his sword, and was only forced from the field by one of his officers seizing the bridle of his horse and dragging him away from the British, now within a hundred yards of the spot. . . . The rout and panic over, Washington quickly turned to deal with the pressing danger. With coolness and quickness he issued his orders, and succeeded in getting his army off, Putnam's division escaping most narrowly. He then took post at King's Bridge, and began to strengthen and fortify his lines. While thus engaged, the enemy advanced, and on the 16th a sharp skirmish was fought, in which the British were repulsed, and great bravery was shown by the Connecticut and Virginia troops, the two commanding officers being killed. This affair, which was the first gleam of success, encouraged the troops, and was turned to the best account by the general. Still a successful skirmish did not touch the essential difficulties of the situation, which then as always came from within, rather than without. To face and check 25,000 well equipped and highly disciplined soldiers, Washington had now some 12,000 men, lacking in everything which goes to make an army, except mere individual courage and a high average of intelligence. Even this meagre force was an inconstant and diminishing quantity, shifting, uncertain, and always threatening dissolution. The task of facing and fighting the enemy was enough for the ablest of men; but Washington was obliged also to combat and overcome the inertness and dulness born of ignorance, and to teach Congress how to govern a nation at war. . . . Meanwhile the days slipped along, and Washington waited on the Harlem Plains, planning descents on Long Island, and determining to make a desperate stand where he was, unless the situation decidedly changed. Then the situation did change, as neither he nor any one else apparently had anticipated. The British warships came up the Hudson past the forts, brushing aside our boasted obstructions, destroying our little fleet, and getting command of the river. Then General Howe landed at Frog's Point, where he was checked for the moment by the good disposition of Health, under Washington's direction. These two events made it evident that the situation of the American army was full of peril, and that retreat was again necessary. Such certainly was the conclusion of the council of war, on the 16th, acting this time in agreement with their chief. Six days Howe lingered on Frog's Point, bringing up stores or artillery or something, . . . and gave six days to Washington. They were of little value to Howe, but they were of inestimable worth to Washington, who employed them in getting everything in readiness, in holding his council of war, and on the 17th in moving deliberately off to very strong ground at White Plains. . . . [It was at this time that Captain Nathan Hale, a native of Connecticut, was captured on Manhattan Island, while

seeking information within the British lines and executed as a spy. His last words: "I only regret I have but one life to lose for my country," flew through the army as if winged, and became the expression of patriotism throughout the country.] On the 28th, Howe came up to Washington's position, and found the Americans quite equal in numbers, strongly intrenched, and awaiting his attack with confidence. He hesitated, doubted, and finally feeling that he must do something, sent 4,000 men to storm Chatterton Hill, an outlying post, where some 1,400 Americans were stationed. There was a short, sharp action, and then the Americans retreated in good order to the main army, having lost less than half as many men as their opponents. With caution now much enlarged, Howe sent for reinforcements, and waited two days. The third day it rained, and on the

It was a serious and most depressing loss, and was felt throughout the continent. Meantime Washington had crossed into the Jerseys, and, after the loss of Fort Lee, began to retreat before the British, who, flushed with victory, now advanced rapidly under Lord Cornwallis."—H. C. Lodge, *George Washington*, v. 1, ch. 6.

fourth Howe found that Washington had withdrawn to a higher and quite impregnable line of hills, where he held all the passes in the rear and awaited a second attack. Howe contemplated the situation for two or three days longer, and then broke camp and withdrew to Dobbs Ferry. Such were the great results of the victory of Long Island, two wasted months, and the American army still untouched. Howe was resolved, however, that his campaign should not be utterly fruitless, and therefore directed his attention to the defences of the Hudson, Fort Lee, and Fort Mifflin, and here he met with better success. Congress, in its military wisdom, had insisted that these forts must and could be held. . . . An attempt was made to hold both forts, and both were lost, as he [Washington] had foreseen. From Fort Lee the garrison withdrew in safety. Fort Mifflin was carried by storm, after a severe struggle. Twenty-six hundred men and all the munitions of war fell into the hands of the enemy.

from the south, and who had command of 7,000 men at Northcastle] to come over and join him; but Lee disobeyed, and in spite of repeated orders from Washington he stayed at Northcastle till the 2d of December. General Ward had some time since resigned, so that Lee now ranked next to Washington. A good many people were finding fault with the latter for losing the 3,000 men at Fort Mifflin, although . . . that was not his fault but the fault of Congress. Lee now felt that if Washington were ruined, he would surely become his successor in the command of the army, and so, instead of obeying his orders, he spent his time in writing letters calculated to injure him. Lee's disobedience thus broke the army in two, and did more for the British than they had been able to do for themselves since they started from Staten Island. It was the cause of Washington's flight through New Jersey, ending on the 8th of December, when he put himself behind the Delaware river, with scarcely 3,000 men. Here was

another difficulty. The American soldiers were enlisted for short terms, and when they were discouraged, as at present, they were apt to insist upon going home as soon as their time had expired. It was generally believed that Washington's army would thus fall to pieces within a few days. Howe did not think it worth while to be at the trouble of collecting boats wherewith to follow him across the Delaware. Congress fled to Baltimore. People in New Jersey began taking the oath of allegiance to the crown. Howe received the news that he had been knighted for his victory on Long Island, and he returned to New York to celebrate the occasion. While the case looked so desperate for Washington, events at the north had taken a less unfavourable turn. Carleton [who began preparations to invade the province of New York as soon as Arnold retreated from Canada] had embarked on Lake Champlain early in the autumn with his fine army and fleet. Arnold had fitted up a small fleet to oppose his advance, and on the 11th of October there had been a fierce naval battle between the two near Valcour Island, in which Arnold was defeated, while Carleton suffered serious damage. The British general then advanced upon Ticonderoga, but suddenly made up his mind that the season was too late for operations in that latitude. The resistance he had encountered seems to have made him despair of achieving any speedy success in that quarter, and on the 3d of November he started back for Canada. This retreat relieved General Schuyler at Albany of immediate cause for anxiety, and presently he detached seven regiments to go southward to Washington's assistance. On the 2d of December Lee crossed the Hudson with 4,000 men, and proceeded slowly to Morristown. Just what he designed to do was never known, but clearly he had no intention of going beyond the Delaware to assist Washington, whom he believed to be ruined. Perhaps he thought Morristown a desirable position to hold, as it certainly was. Whatever his plans may have been, they were nipped in the bud. For some unknown reason he passed the night of the 12th at an unguarded tavern, about four miles from his army; and there he was captured next morning by a party of British dragoons, who carried him off to their camp at Princeton. The dragoons were very gleeful over this unexpected exploit, but really they could not have done the Americans a greater service than to rid them of such a worthless creature. The capture of Lee came in the nick of time, for it set free his men to go to the aid of Washington. Even after this force and that sent by Schuyler had reached the commander-in-chief, he found he had only 6,000 men fit for duty. With this little force Washington instantly took the offensive. It was the turning-point of his career and in the history of the Revolutionary War. On Christmas, 1776, and the following nine days, all Washington's most brilliant powers were displayed. The British centre, 10,000 strong, lay at Princeton. The principal generals, thinking the serious business of the war ended, had gone to New York. An advanced party of Hessians, 1,000 strong, were posted on the bank of the Delaware at Trenton, and another one lower down, at Burlington. Washington decided to attack both these outposts, and arranged his troops accordingly, but when Christmas night arrived, the river was filled with great blocks of floating ice, and the only division which succeeded in crossing was the one that Washington led in person. It was less than 2,500 in number, but the moment had come when

the boldest course was the safest. By daybreak Washington had surprised the Hessians at Trenton and captured them all. The outpost at Burlington, on hearing the news, retreated to Princeton. By the 31st Washington had got all his available force across to Trenton. Some of them were raw recruits just come in to replace others who had just gone home. At this critical moment the army was nearly helpless for want of money, and on New Year's morning Robert Morris was knocking at door after door in Philadelphia, waking up his friends to borrow the \$50,000, which he sent off to Trenton before noon. The next day Cornwallis arrived at Princeton, and taking with him all the army, except a rear-guard of 2,000 men left to protect his communications, came on toward Trenton. When he reached that town, late in the afternoon, he found Washington entrenched behind a small creek just south of the town, with his back toward the Delaware river. 'Oho!' said Cornwallis, 'at last we have run down the old fox, and we will bag him in the morning.' He sent back to Princeton, and ordered the rear-guard to come up. He expected next morning to cross the creek above Washington's right, and then press him back against the broad and deep river, and compel him to surrender. Cornwallis was by no means a careless general, but he seems to have gone to bed on that memorable night and slept the sleep of the just. Washington meanwhile was wide awake. He kept his front line noisily at work digging and entrenching, and made a fine show with his camp-fires. Then he marched his army to the right and across the creek, and got around Cornwallis's left wing and into his rear, and so went on gayly toward Princeton. At daybreak he encountered the British rear-guard, fought a sharp battle with it and sent it flying, with the loss of one-fourth of its number. The booming guns aroused Cornwallis too late. To preserve his communications with New York, he was obliged to retreat with all haste upon New Brunswick, while Washington's victorious army pushed on and occupied the strong position at Morristown. There was small hope of dislodging such a general from such a position. But to leave Washington in possession of Morristown was to resign to him the laurels of this half-year's work. For that position guarded the Highlands of the Hudson on the one hand, and the roads to Philadelphia on the other. Except that the British had taken the city of New York—which from the start was almost a foregone conclusion—they were no better off than in July when Lord Howe had landed on Staten Island. In nine days the tables had been completely turned. The attack upon an outpost had developed into a campaign which quite retrieved the situation. The illtimed interference of Congress, which had begun the series of disasters, was remedied; the treachery of Lee was checkmated; and the cause of American Independence, which on Christmas Eve had seemed hopeless, was now fairly set on its feet. Earlier successes had been local; this was continental. Seldom has so much been done with such slender means."—J. Fiske, *War of Independence*, ch. 6.—"The effect of these two unexpected strokes at Trenton and Princeton was to baffle Howe, and utterly disconcert his plans. Expecting to march upon Philadelphia at his leisure, he suddenly finds Washington turning about and literally cutting his way through the British posts, back to a point where he threatened Howe's flank and rear. The enemy were at once compelled to retire from all their positions below Brunswick,

give up the thought of wintering in Philadelphia, and fall back to the vicinity of New York. When Horace Walpole heard of these movements, he wrote to Sir Horace Mann: 'Washington has shown himself both a Fabius and a Camillus. His march through our lines is allowed to have been a prodigy of generalship. In one word, I look upon a great part of America as lost to this country.' Here the campaign closed. Washington could not be dislodged from his strong mountain position, and Howe was satisfied to rest his troops and postpone further operations until the next season. Meantime the country took heart, Congress voted troops and supplies, and the army was recruited and organized on a better basis. 'The business of war is the result of Experience,' wrote Wolcott from Congress with faith unshaken

Gay, *Popular history of the United States*, v. 3, ch. 21.

1776-1777.—Prisoners and exchanges.—British treatment of captives.—Jersey prison-ship and sugar-house prison.—In New York, during the British occupation of the city, "wretched indeed was the condition of the poor refugee, or the sick soldier, and, above all, the patriot prisoner. The newspapers are filled with calls for charitable contributions for women and children perishing with cold and hunger, for disabled soldiers and families without a shelter. . . . But if the favored Tories suffered, what must have been the condition of the patriot prisoners, confined by thousands in bleak barracks, churches, and prison-ships? . . . In the old Sugar-House were confined the prisoners of Long Island, the captives of sudden forays, the

BATTLE OF PRINCETON, JAN. 3, 1777

(After painting by J. W. Dunsmore)

during the darkest hours of the campaign; and experience was now put to good profit. The crisis was passed. Events proved decisive. Hardship and anxiety were yet to come during succeeding years of the war; but it was the result of this year's struggle that cleared away misgivings and confirmed the popular faith in final success. England could do no more than she had done to conquer America; while America was now more ready than ever to meet the issue. Independence was established in the present campaign—in the year of its declaration; and more than to any others we owe this political privilege to the men who fought from Long Island to Princeton."—H. P. Johnston, *Campaign of 1776* (*Memoirs of the Long Island Historical Society*, v. 3, pt. 1, ch. 8).

patriot citizen, and the heroes of the rebel army. Clothed in rags and scarcely covered from the winter air, crowded in narrow apartments and broken by hunger and disease, the prisoners died by thousands. The sick lay down on beds of snow to perish; the feeble wounded quivered in the February blast. Food of the coarsest kind was served out to them in scanty measure, and devoured with the eagerness of famine. . . . So wretched was their condition that Washington refused to consider them fit subjects for exchange. 'You give us only the dead or dying,' he wrote to Howe, 'for our well-fed and healthy prisoners.' Howe, as if in mockery, replied that they had been kept in 'airy, roomy buildings,' on the same fare as his own soldiers. Washington pointed to the condition in which they reached him—diseased, famished, emaciated, and dying, as they were conducted to his quarters. Across the river, in Wallabout Bay, lay the prison-ship 'Jersey.' She was the hulk of a 64 gun ship, long unseaworthy, her

masts and rigging gone, her figure-head broken off, and her whole appearance singularly repulsive. Yet on board of the Jersey were confined 1,200 captured seamen. She was never cleansed, and lay in that condition seven years. . . . The crowded city itself was never free from contagion. In winter the small-pox made fearful ravages."—E. Lawrence, *New York in the Revolution* (*Harper's Magazine*, July, 1868).

1776-1778.—Attitude in England toward American colonies. See ENGLAND: 1776-1778.

1776-1778.—Attitude and feeling of France.—Her disposition to aid the colonies and reasons for it.—American embassy to French court.—Silas Deane and Beaumarchais.—Benjamin Franklin.—"On March 17, 1776, Vergennes presented to his associates in the cabinet—Maurepas, Turgot (controller-general), Sartine (secretary of the navy), and St. Germain (secretary of war)—a paper entitled 'Considerations,' which, after for many years evading the search of historians, . . . was brought to light by De Witt and republished by Doniol. In this important paper Vergennes, after some general reflections on the advantages which the two crowns of France and Spain derived from the continuance of the civil war in America, and, on the other hand, on the inconveniences which might arise from the independence of the Colonies, and the probability that, in case of failure in North America, England would, to recover its credit, turn its arms against the French and Spanish possessions in America, proceeds to consider the course at once to be pursued. He bitterly attacks the English for their habitual breach of good faith, violation of treaties, and disregard of that observance of the sacred laws of morality which distinguish the French, and infers that they will take the first opportunity to declare war against France or invade Mexico. No doubt, if the kings of France and Spain had martial tendencies; if they obeyed the dictates of their own interests, and perhaps the justice of their cause, which was that of humanity, so often outraged by England; if their military resources were in a sufficiently good condition, they would feel that Providence had evidently chosen that very hour for humiliating England and revenging on her the wrongs she had inflicted on those who had the misfortune to be her neighbors and rivals, by rendering the resistance of the Americans as desperate as possible. The exhaustion produced by this internecine war would prostrate both England and her Colonies, and would afford an opportunity to reduce England to the condition of a second-rate power; to tear from her the empire she aimed at establishing in the four quarters of the world with so much pride and injustice, and relieve the universe of a tyranny which desires to swallow up both all the power and all the wealth of the world. But the two crowns not being able to act in this way, they must have recourse to a circum-spect policy." Vergennes "draws the following inferences: (1) That they should continue dexterously to keep the English ministry in a state of false security with respect to the intentions of France and Spain. (2) That it would be politic to give the insurgents secret assistance in military stores and money; that the admitted utility would justify this little sacrifice, and no loss of dignity or breach of equity would be involved in it. (3) That it would not be consistent with the king's

dignity or interest to make an open contract with the insurgents until their independence was achieved. (4) That in case France and Spain should furnish assistance, they should look for no other return than the success of the political object they had at that moment in view, leaving themselves at liberty to be guided by circumstances as to any future arrangements. (5) That perhaps a too-marked inactivity at the present crisis might be attributed by the English to fear, and might expose France to insults to which it might not be disposed to submit. The English, he adds, respect only those who can make themselves feared. (6) That the result to which all these considerations led was that the two crowns should actively prepare means to resist or punish England, more especially as, of all possible issues, the maintenance of peace with that power was the least probable. . . . It would be a mistake, however, to attribute the French support of America exclusively to a feeling of revenge for the humiliations of the prior war. Other motives came in and exercised a decisive influence. There was a conviction, and a right one, in France that for Britain to hold under control the whole of North America as well as of India would give her a maritime supremacy, as well as a superiority in wealth, which would constitute a standing menace to the rest of the civilized world. There was, again, an enthusiasm among the young nobility and among officers in the army for America, which, even aside from the bitterness towards Britain with which it was mingled, had great effect on people as well as on court; and to this was added the sympathy of doctrinaire political philosophers who then and for some time afterwards had great power in forming French public opinion. By the enthusiasm of the young nobility the queen—brilliant, bold, weary of the traditions of the old court, inconsiderate as to ultimate political results—was affected, and through her her husband was reached. But above this was the sense of right which was uppermost in the breast of the unfortunate sovereign who then, with little political experience but high notions of duty as well as of prerogative, occupied the throne."—F. Wharton, ed., *Revolutionary diplomatic correspondence of the United States*, v. 1, introduction, ch. 4.—"From the earliest moment France had been hopefully regarded by the colonists as probably their friend and possibly their ally. To France, therefore, the first American envoy was dispatched with promptitude [receiving his instructions in March and reaching Paris in the following June, 1776] even before there was a declaration of independence or an assumption of nationality. Silas Deane was the man selected. He was the true Yankee jack-at-all-trades; he had been graduated at Yale College, then taught school, then practiced law, then engaged in trade, had been all the while advancing in prosperity and reputation, had been a member of the first and second congresses, had failed of reelection to the third, and was now without employment. Mr. Parton describes him as 'of somewhat striking manners and good appearance, accustomed to live and entertain in liberal style and fond of showy equipage and appointment.' Perhaps his simple-minded fellow-countrymen of the provinces fancied that such a man would make an imposing figure at an European court. He developed no other peculiar fitness for his position; he could not even speak French; and it proved an ill hour for himself in which he received this trying and difficult honor.

. . . Deane arrived in France in June, 1776. He had with him a little ready money for his immediate personal expenses, and some letters of introduction from Franklin. It was intended to keep him supplied with money by sending cargoes of tobacco, rice, and indigo consigned to him, the proceeds of which would be at his disposal for the public service. He was instructed to seek an interview with de Vergennes, the French minister for foreign affairs, and to endeavor with all possible prudence and delicacy to find out what signs of promise the disposition of the French government really held for the insurgents. He was also to ask for equipment for 25,000 troops, ammunition, and 200 pieces of field artillery, all to be paid for—when Congress should be able! In France he was to keep his mission cloaked in conducting his own affairs. . . . Before the arrival of Deane the interests of the colonies had been already taken in hand and substantially advanced in France by one of the most extraordinary characters in history. Baron de Beaumarchais was a man whom no race save the French could produce, and whose traits, career, and success lie hopelessly beyond the comprehension of the Anglo-Saxon. Bred a watchmaker, he had the skill, when a mere youth, to invent a clever escapement balance for regulating watches; had he been able to insert it into his own brain he might have held more securely his elusive good fortunes. From being an ingenious inventor he became an adventurer general, watchmaker to the king, the king's mistresses, and the king's daughters, the lover, or rather the beloved, of the wife of controller of the king's kitchen, then himself the controller, thence a courtier, and a favorite of the royal princesses. Through a clever use of his opportunities he was able to do a great favor to a rich banker, who in return gave him chances to amass a fortune, and lent him money to buy a patent of nobility. This connection ended in litigation, which was near ruining him; but he discovered corruption on the part of the judge, and thereupon wrote his Memorials, of which the wit, keenness, and vivacity made him famous. He then rendered a private, personal, and important service to Louis XV., and soon afterwards another to the young Louis XVI. . . . He became frenzied in the American cause. In long and ardent letters he opened upon King Louis and his ministers a rattling fire of arguments sound and unsound, statements true and untrue, inducements reasonable and unreasonable, forecastings probable and improbable, politics wise and unwise, all designed to show that it was the bounden duty of France to adopt the colonial cause."—J. T. Morse, Jr., *Benjamin Franklin*, ch. 9.—Soon after the arrival of Deane in Paris, the American Congress, having determined to declare the independence of the states represented in it, appointed a committee "to prepare the plan of a treaty to be proposed to foreign powers, which, after a long discussion, was at length agreed to, and ministers were appointed to negotiate the treaties proposed. Mr. Franklin, Mr. Deane, and Mr. Jefferson, were elected; but, the last mentioned gentleman having declined accepting the appointment offered him, Mr. Arthur Lee, then in London, was chosen in his place. These transactions were placed on the secret journals, and no member was permitted to give any specific information concerning them, or to state more than, 'that congress had taken such steps as they judged necessary for obtaining foreign alliances.' The secret committee were directed to make an effectual lodgment in France of £10,000

sterling, subject to the order of these commissioners. They assembled in Paris early in the winter, and had an immediate interview with the count De Vergennes. It was perceived that the success of the American cruisers, whose captures had been so considerable as to raise the price of insurance higher than it had been at any time during the war with both France and Spain, had excited a very favourable opinion of the capacities and energies of the nation. They were assured that the ports of France would remain open to their ships, and that the American merchants might freely vend in them every article of commerce, and purchase whatever might be useful for their country. But it was apparent that the minister wished to avoid a rupture with England, and was, therefore, unwilling to receive them openly as the ministers of the United States, or to enter into any formal negotiation with them."—J. Marshall, *Life of Washington*, v. 3, ch. 7.—"It is . . . a settled rule of diplomacy that a minister should not be pressed upon a foreign-court by which it is understood that he will not be received. To this may be added the rule that applications for loans should, unless as part of a treaty alliance, be made through business channels. In disregard of these rules the majority of Congress, under the influence of Richard H. Lee and Samuel Adams, instituted a series of missions to European courts for the bare purpose of borrowing money, when the courts so addressed not only gave no intimation that they would receive these envoys, but when, from the nature of things, as well as from unofficial intimation, it should have been known that such reception would be refused. With France there was no difficulty, as France had intimated unofficially that such envoys would be received, at least in a private capacity, France being then ready to take the consequence of war with Britain. And this reception was accorded . . . first to Silas Deane, then to Franklin, and then to Arthur Lee. Here Franklin thought Congress should stop, saying that ministers should not be sent to sovereigns without first having some sort of assurance of recognition of the United States as an independent sovereignty, and that a 'virgin' republic, as he called it, should wait till there was some such recognition before thrusting embassies on foreign courts with demands for money. Congress thought differently. Arthur Lee was instructed to go to Madrid with an alternate commission to Berlin; William Lee was sent to Vienna, Dana to St. Petersburg, Adams to The Hague, Izard to Florence, and the instructions in each case were to demand not only recognition, but subsidy. . . . The policy of sending ministers to European courts where such ministers were not received worked injuriously to the United States from the mere fact of their non-reception. Another difficulty arose from the circumstance that several of these ministers took up their residence in Paris, and, without specific authority, considered it their duty to take part in the counsels of the American legation. Thus Ralph Izard, commissioned to Tuscany, never went there, but remained in Paris, claiming a right to be informed of all the details of the negotiations with France, and occupying no small share of the time and care of Franklin with discussions of this claim, which Franklin could not accede to, but on which Izard continued to insist. When the triple legation of Franklin, Deane, and Arthur Lee (and afterwards Franklin, Arthur Lee, and Adams), was commissioned, it was understood that its members were to divide,

so that one (Franklin) should remain in Paris, while the others should take charge of the missions to other capitals. But Arthur Lee, when he found that he could not be received in Madrid, or in Vienna, or in Berlin, made but brief excursions to Spain, to Austria, and to Berlin, reporting himself after each short trip promptly at Paris, there to differ from Franklin, not only as to important business details, but as to the whole policy of the mission. When Adams was in Paris, during their joint mission, he concurred with Arthur Lee in what turned out to be the disastrous measure of removing Williams as commercial agent and putting in his place William Lee, with a nephew of William and Arthur Lee as clerk; while on the whole question of sending legations to foreign courts which had not consented to receive them, and in the still more important question of the attitude to be assumed by the commissioners to the French court, Adams agreed with Lee. . . . It is due to Adams to say that he saw the inherent difficulties of permanent missions conducted by three joint commissioners; that he recommended that there should be but one permanent minister to France; and that he recognized Franklin's great influence with the French ministry as a strong reason for his retention though without colleagues. But there can be no doubt that down to the period when Franklin became sole minister, the American cause in Europe was much embarrassed by the fact that he had colleagues associated with him."—F. Wharton, *Introduction to Revolutionary diplomatic correspondence of the United States*, v. 1, ch. 1, sect. 16-17, ch. 9, sect. 106.—Before Franklin or Lee reached France, Silas Deane had already entered into negotiations with Beaumarchais and opened a train of dealings which proved unfortunate for both. Leaving aside "all the long controversy about the rights and wrongs of Beaumarchais, which have never been completely and satisfactorily solved, . . . it appears that a large part of the misunderstanding between him and Deane and Arthur Lee is attributed to a change of plan between April and July, 1776. Beaumarchais's scheme of operation, when he saw Lee in London, was to expend money which should, at least in pretence and form, be obtained from the voluntary contributions of wealthy Frenchmen in aid of the American cause; but in July, when he saw Deane, that scheme had been dropped, and the project was that he should appear as a merchant. . . . In May, there was a plan on the part of the French government to employ a real merchant. Now the plan was to employ a comedy merchant. This was exactly the rôle which Beaumarchais was qualified to fill, and he proceeded to establish and open a large house, with all the accessories of a house of business, as the same are understood and represented on the stage. At that time it was believed that the colonists had plenty of exportable products which they could and would contribute for the purpose [purchase?] of arms and ammunition. It was thought that their main difficulty would be to find any market in which they could purchase contraband of war. The chief assistance, therefore, which they would need from France would be secret permission to make this exchange in France. Beaumarchais's commercial operations would be real commercial operations, and at worst could only issue in some expenses and losses, on the balance of account, which the French government might have to make good. Beaumarchais approached Deane with all the forms and reality of a commercial proposition, and Deane assured him that he should have same returns in

six months, and full pay for everything which he supplied in a year. Two days later they made a contract by which Congress was to pay the current price of the goods in America when they should arrive, or take them at the cost price, with insurance, charges, and commission 'proportioned to the trouble and care, which cannot now be fixed.' . . . August 18, Beaumarchais writes to the Committee of Secret Correspondence that, led by esteem for a people struggling for liberty, he has established an extensive commercial house, solely for the purpose of supplying them with all things useful, even gold for the payment of troops; and that without waiting for their consent he has already procured 200 cannons, 200,000 pounds of powder, 20,000 guns, with balls, lead, clothing, etc. He wants the cargoes consigned to him in return, and promises that he has great power to use any consignments whatsoever; but he wants especially tobacco. He signs this letter Roderique Hortales & Co. . . . A million livres were advanced by Spain to Beaumarchais, August 11, 1776, and the Farmers-general of France advanced a million livres, but took advantage of the distress of the Americans to stipulate that it should be paid for in tobacco at half its then current price. Beaumarchais also advanced money to Deane for his personal expenses; and it has never been doubted that he exerted himself with the utmost energy, if not always with the greatest prudence, to expedite the shipment of the goods. Of the three ships which he despatched at the end of the year, two were captured by the English; but the one which arrived was of the greatest possible value to the cause. . . . When Arthur Lee received his appointment as Commissioner to France and entered upon the discharge of his duties, he found that the promises made to him by Beaumarchais . . . had not been kept. He reported to the Committee of Secret Correspondence that a change in the mode of sending had been settled between Deane and Hortales. . . . Arthur Lee always held the attitude of suspicion that Deane and Beaumarchais were in a conspiracy to levy contributions for themselves on the free gifts of France to the United States. Franklin always affected to ignore the dealings with Beaumarchais, and to treat them as exclusively in the hands of Deane; while Congress always showed themselves very careful not to pay for anything which possibly was intended as a gift. Therefore Deane and Beaumarchais were left for years to claim and protest that there had been genuine mercantile contracts which had not been fulfilled, and they could scarcely obtain attention. . . . September 8, 1777, Congress voted that Deane had no authority to make contracts with persons to come to America. November 21, they voted to recall him. Undoubtedly the vexation which Deane had caused them by sending over a great number of persons to serve in the army, under contracts which enabled them to demand large pay and high rank, was the chief cause of irritation against him; but Arthur Lee had also been poisoning the mind of his brother, and through him, of the whole Lee-Adams faction in Congress, with suspicions of Deane's honesty. Deane had found himself transferred, within a period of two or three years, from an utterly obscure existence at Wethersfield, Connecticut, to the position of a quasi-ambassador at the court of France. He adopted a large and expensive style of living, and kept open house for the Americans at Paris. It is very reasonable to suppose that this large expenditure on his part was one of the chief grounds of belief that he was

making great gain out of his position. . . . The affair of Silas Deane has importance far beyond the merits or the fate of that individual. The quarrel over him and his rights and wrongs, as will presently be seen, entered into the hottest party contests in Congress during the next two or three years, and it comes up again often subsequently. It has even been asserted that the intimacy into which John Adams was thrown with the Lees, in this connection, was what made him President of the United States, by winning him votes from Virginia in 1796. January 1, 1778, Beaumarchais, having heard that money had been given to the Americans through Grand, the banker, writes to Vergennes: 'So I have lost the fruit of the most noble and incredible labour by those very exertions which conduct others to glory.' . . . He is in terror of bankruptcy. Inasmuch as a treaty of alliance between France and the United States was now made, matters had entered upon a new stage. Beaumarchais, with his fictitious firm of Hortales, was no longer necessary or useful. The French government dealt directly with the American envoys in granting supplies and subsidies. April 7, Congress made a contract with Hortales that they should pay, for all the cargoes already shipped and those to be shipped, the first cost, charges, and freight, in France. The contract between Beaumarchais and Deane is recognized. Hortales is to pay bills drawn every two months at double usance for twenty-four million livres annually. This article, however, is subject to ratification by the house in Paris and the American Commissioners at Paris. American produce is to be exported and consigned to this house. Interest is to be paid on all sums due, with a commission of two and a half per cent. From this time Beaumarchais falls out of sight as an agent of aid and supplies to the American cause, and becomes a claimant, who considers that he has been treated with injustice and ingratitude by the United States."—W. G. Sumner, *Financier and the finances of the American Revolution*, v. 1, ch. 8.—"The episode of Beaumarchais . . . was a survival of the secret diplomacy of Louis XV for a short time exercising an extraordinary influence in the first period of the reign of Louis XVI. Louis XVI, on reaching the throne, found the machinery of secret diplomacy so ingeniously constructed by his predecessor in full operation; and, . . . for one or two delicate inquiries at the outset of the new reign, Beaumarchais, who of all the diplomatists of this peculiar breed was the most adroit and fertile in expedients, was well fitted. Hence came his employment, and from his employment came his suggestions, full of brilliant wit and effective reasoning, as to America. But the antagonism between him and Vergennes was too marked to permit sustained political relationship; and when Franklin entered into diplomatic life in Paris Beaumarchais ceased to take a prominent political position. And even during the period of Beaumarchais' greatest activity it must be remembered that he was not technically Vergennes' subordinate. It was one of the peculiarities of the secret diplomacy of Louis XIV and Louis XV, as depicted by Broglié in his admirable treatise on that topic, that even the existence of the secret agent was not to be supposed to be known to the king's ostensible ministers. This was not the case with Beaumarchais; but at the same time Beaumarchais' political influence ceased . . . when, on the arrival of Franklin, Vergennes, with Franklin's aid, took control of Anglo-American diplomacy."—F. Wharton, *Introduction to Revolutionary diplomatic*

1776-1779.—Thirteen Colonies become states.—Framing and adoption of state constitutions.—"The recommendations to form governments proceeded from the general congress; the work was done by the several states, in the full enjoyment of self-direction. Each of them claimed to be of right a free, sovereign, and independent state; each bound its officers to bear to it true allegiance, and to maintain its freedom and independence. Massachusetts [see MASSACHUSETTS: 1776], which was the first state to frame a government independent of the king, deviated as little as possible from the letter of its charter; and, assuming that the place of governor was vacant from the 19th of July 1775, it recognised the council as the legal successor to executive power. On the 1st day of May 1776, in all commissions and legal processes, it substituted the name of its 'government and people' for that of the king. In June 1777, its legislature assumed power to prepare a constitution; but, on a reference to the people, the act was disavowed. In September 1779, a convention, which the people themselves had specially authorized, framed a constitution. It was in a good measure the compilation of John Adams, who was guided by the English constitution, by the bill of rights of Virginia, and by the experience of Massachusetts herself; and this constitution, having been approved by the people, went into effect in 1780. On the 5th of January 1776, New Hampshire [see NEW HAMPSHIRE: 1775-1776] shaped its government with the fewest possible changes from its colonial forms, like Massachusetts merging the executive power in the council. Not till June 1783 did its convention agree upon a more perfect instrument, which was approved by the people, and established on the 31st of the following October. The provisional constitution of South Carolina dates from the 26th of March 1776. [See SOUTH CAROLINA: 1776.] In March 1778, a permanent constitution was introduced by an act of the legislature. Rhode Island enjoyed under its charter a form of government so thoroughly republican that the rejection of monarchy, in May 1776, required no change beyond a renunciation of the king's name in the style of its public acts. [See RHODE ISLAND: 1776.] A disfranchisement of Catholics had stolen into its book of laws; but, so soon as it was noticed, the clause was expunged. In like manner, Connecticut had only to substitute the people of the colony for the name of the king; this was done provisionally on the 14th of June 1776, and made perpetual on the 10th of the following October. [See CONNECTICUT: 1776.] Before the end of June of the same year Virginia, sixth in the series, first in the completeness of her work, by a legislative convention without any further consultation of the people, framed and adopted a bill of rights, a declaration of independence, and a constitution. [See VIRGINIA: 1776.] On the second of July 1776, New Jersey perfected its new, self-created charter. [See NEW JERSEY:

1774-1776.] Delaware next proclaimed its bill of rights, and, on the 20th of September 1776, the representatives in convention having been chosen by the freemen of the state for that very purpose, finished its constitution. The Pennsylvania convention adopted its constitution on the 28th of September 1776; but the opposition of the Quakers whom it indirectly disfranchised, and of a large body of patriots, delayed its thorough organization for more than five months. [See PENNSYLVANIA: 1776.] The delegates of Maryland, meeting on the 14th of August 1776, framed its constitution with great deliberation; it was established on the 9th of the following November. [See MARYLAND: 1776.] On the 18th of December 1776, the constitution of North Carolina was ratified in the congress which framed it. On the 5th of February 1777, Georgia perfected its organic law by the unanimous agreement of its convention. [See GEORGIA: 1775-1777.] Last of the thirteen came New York, whose empowered convention, on the 20th of April 1777, established a constitution that, in humane liberality, exceeded them all. [See NEW YORK: 1777.] The privilege of the suffrage had been far more widely extended in the colonies than in England; by general consent, the extension of the elective franchise was postponed. The age of twenty-one was a qualification universally required. So, too, was residence, except that in Virginia and South Carolina it was enough to own in the district or town a certain freehold or 'lot.' South Carolina required the electors to 'acknowledge the being of a God, and to believe in a future state of rewards and punishments.' White men alone could claim the franchise in Virginia, in South Carolina, and in Georgia; but in South Carolina a benign interpretation of the law classed the free octaroon as a white, even though descended through an unbroken line of mothers from an imported African slave; the other ten states raised no question of color. In Pennsylvania, in New Hampshire, and partially in North Carolina, the right to vote belonged to every resident taxpayer; Georgia extended it to any white inhabitant 'of any mechanic trade'; with this exception, Georgia and all the other colonies required the possession of a freehold, or of property variously valued, in Massachusetts at about \$200, in Georgia at £10. Similar conditions had always existed, with the concurrence or by the act of the colonists themselves. Maryland prescribed as its rule that votes should be given by word of mouth; Virginia and New Jersey made no change in their usage; in Rhode Island each freeman was in theory summoned to be present in the general court; he therefore gave his proxy to his representative by writing his own name on the back of his vote; all others adopted the ballot, New York at the end of the war, the other eight without delay."—G. Bancroft, *History of the United States* (Author's last revision), v. 5, ch. 9.—"Thanks to the political instinct of the people, the institution of the new [estate] governments, even in the midst of war and invasion, was accomplished quietly. As to Virginia, Jefferson wrote (August 13, '77).—"The people seem to have laid aside the monarchic, and taken up republican government, with as much ease as would have attended the throwing off an old and putting on a new suit of clothes.' No one of the first eleven constitutions was voted on by the people. In most cases the 'conventions' that adopted them had no express authority to do so; and some of those conventions had been elected months before there was any talk of independence. For the most part,

the constitutions were enacted precisely as ordinary laws were. In Virginia Jefferson urged a referendum on the constitution, arguing that otherwise it could be repealed by any legislature, like any other statute. But this doctrine was too advanced for his State. A 'union of mechanics' [mainly New Englanders] in New York, too, protested vigorously but vainly against the adoption of a constitution by a provincial convention without 'the inhabitants at large' being permitted to 'exercise the right God has given them . . . to approve or reject' it. In New England, on the other hand, thanks to the training of the town meeting, the sovereignty of the people was understood by every artisan and farmer, as elsewhere only by lonely thinkers. . . . The legislatures of Rhode Island and Connecticut did adopt the old charters as constitutions (without change), without reference to the people, because it was held that the people had already sanctioned them by long acquiescence. But in New Hampshire and Massachusetts, where new constitutions were to be adopted, there was no serious thought of acting without a popular referendum. Indeed, that was not enough. The people of these States demanded also a popular initiative in the matter. . . . The thirteen constitutions were strikingly alike. This was due mainly to the similarity between the preceding colonial governments, but in part to a remarkably active interchange of ideas among the leaders during the spring and summer of '76. Before the Fourth Virginia Convention Patrick Henry corresponded freely with the two Adamses. Members of Congress at Philadelphia constantly discussed forms of government at informal gatherings; and, on several occasions, delegates from distant colonies returned home to take part in constitution-making. All the constitutions were 'republican,' without a trace of hereditary privilege. Nearly all safeguarded the rights of the individual by a distinct bill of rights. Most of them formally adopted the English Common Law as part of the law of the land. Except in Pennsylvania and Georgia . . . the legislature had two Houses. Pennsylvania kept a plural executive,—a council with one member designated as 'president'; but elsewhere the revolutionary committees of safety gave way to a single 'governor' or 'president.' The governors, however, had less power than the old colonial governors. The people did not yet clearly see the difference between trusting an officer chosen by themselves and one appointed by a distant king. New York and Massachusetts, however, . . . had had time to learn the need of a firm executive, and strengthened that branch of government somewhat, though they left it weaker than is customary today. These two States also placed the election of the governor in the hands of the people directly. That was already the case in Connecticut and Rhode Island under the colonial charters. Everywhere else the executive was appointed by the legislature. Everywhere the legislature overshadowed the two other branches of government. The judiciary, . . . was usually chosen by the legislature and in many cases was removable by executive and legislature without formal trial. . . . The old executive check upon the legislature, the absolute veto, nowhere appeared. . . . New York gave [the qualified veto, now so common to] . . . the governor and judiciary acting together, in a 'revisionary council'; Massachusetts gave it to the governor alone. Religious discrimination was common. 'Freedom of worship' was generally asserted in the bills of rights; but this did not imply our

modern separation of church and state. Office-holding in several States was restricted to Protestant Christians, and some States kept a specially favored ('established') church. . . . Half these first constitutions had no amendment clause whatever. The omission was due partly to the political inexperience of that day; partly to the vague expectation that, on occasion, by a sort of peaceful revolution, the people would 'recur to fundamental principles. . . .' In South Carolina the legislature gave ninety days' notice (that public opinion might be known), and then acted as in passing any law. In Maryland, an amendment became part of the constitution if passed by two successive legislatures. In Delaware five sevenths of one house and seven ninths of the other were required to carry an

had only to be a taxpayer; but to vote for senator, he must own 50 acres of land; to sit as representative, he must have 100 acres; as senator, 300 acres; and as governor, £1000 of real estate. Here were four ingenious checks upon a dangerously encroaching democracy: (1) an upper House so chosen as to be a stronghold for the aristocracy; (2) indirect election of the executive and judiciary; (3) property qualifications, sometimes graded, for voting; and (4) higher qualifications for holding office. All these had been developed in the colonial period. On the whole the new States weakened the checks (and no State increased them); but every State retained some of them. . . . [In Virginia] According to Edmund Randolph, the phrase equally free was objected to as inconsistent with slavery. Such

amendment. . . . In Pennsylvania, amendments could be proposed only at intervals of seven years, and only in a . . . fashion—which eventually proved unworkable. Only Georgia and Massachusetts provided for calling constitutional conventions in modern fashion. . . . Commonly, a man had to have more property to vote for the upper than for the lower House of the legislature. . . . Commonly, too, there was a still higher qualification for sitting in the legislature,—often more for the upper House than for the lower,—and yet more for a governor. In several States, the upper House was chosen by the lower. In Massachusetts, all men who could vote for one House could vote for the other also, but in choosing the senate, the votes were so apportioned that a rich man counted for several poor men: the richer any part of the State, the more senatorial districts it had. North Carolina pretty well lost her democracy in these gradations: to vote for a representative, a man

objectors were quieted with the amazing assurance that 'slaves, not being constituent members of our society, could never pretend to any benefit from such a maxim.' In Massachusetts, similar words in her bill of rights of 1780 were held later by her courts to have abolished slavery within her limits, though that result was not thought of when the clause was adopted."—W. M. West, *Story of American democracy, political and industrial*, pp. 218, 220-223, 215.

1777 (January-December).—Campaign on the Delaware.—Lord Howe in possession of Philadelphia.—Battles on the Brandywine and at Germantown.—Winter of Washington's army at Valley Forge.—“Washington remained at Morristown from the 7th of January until the 28th of May, during which time no military movement of importance took place. His men left for their homes as soon as their terms of service expired, and as few militia entered the camp to take their places, at times it seemed as if the army would be so reduced as to be unworthy of the name. It was not until late in the spring that the new levies reached headquarters. On the 28th of May the Americans marched to Middlebrook and took position behind the Raritan. On the 13th of June Howe marched from Brunswick and . . . endeavored to bring on a general engagement, . . . but Washington refused to leave the strong position he occupied, and Howe retired to Amboy. Early in April Howe had settled upon a campaign having for its object the capture of Philadelphia. He determined to embark his troops and transport them to the banks of the Delaware or Chesapeake, and march directly on the city. . . . On the 23d of July, after Howe's troops had been three weeks on the vessels, the fleet sailed, shaping its course southwesterly. . . . Signal fires were lighted along the Jersey coast as it was seen from time to time by those who were watching for it, and messengers carried inland the news of its progress. At last, on the 30th, it was spoken off the capes of Delaware, but Lord Howe deemed it too hazardous to sail up that river, and after consulting with his brother, the general, continued on his course southward. On the 15th of August he entered Chesapeake Bay, and on the 25th the troops were landed at Elk Ferry.” Meantime, Washington had been in great uncertainty as to the destination and intentions of his antagonist, but had drawn his army near to Philadelphia. It had just been joined by several distinguished foreign officers, Lafayette, De Kalb and Pulaski in the number. At Philadelphia there was consternation on the approach of the enemy, but “the pacific influence which the presence of a large Quaker population exercised seemed to bear down all military efforts. . . . To impress the lukewarm with the strength of his forces, and to inspire hopes in the breasts of the patriotic, on the 24th of August Washington marched his army through the streets of Philadelphia. The men were poorly armed and clothed, and to give them some uniformity they wore sprigs of green in their hats.” The advance of Howe from Elk Ferry was slow, and it was not until September 11, that the Americans encountered him, at Chad's Ford, on the Brandywine, where they had taken position. In the battle which occurred that day the British gained a clear victory, by means of a successful flank movement which Cornwallis executed, crossing the river some miles above, while General Knyphausen made feigned attempts at Chad's Ford. “The American loss was about 1,000, killed, wounded, and prisoners; that of the British, 579. . . . The day after the battle Washington marched from Chester to Philadelphia. He rested his army two days at Germantown, and then recrossed the Schuylkill; public opinion demanding that another battle should be risked before the city should be given up. On the 16th the two armies met on the high ground south of Chester Valley and prepared for action. The skirmishing

had actually begun, when a violent storm stopped the engagement by ruining the ammunition of both armies. Washington withdrew to the hills north of the valley, and, finding it impossible to repair the damage done by the storm, retreated again over the Schuylkill, leaving Wayne behind him to watch the enemy and attack their rear should they attempt to follow.” But Wayne was surprised at Paoli, and Washington was deceived by a feigned movement, so that Howe succeeded in entering Philadelphia without another battle, on the 26th, having occupied Germantown the day before. “The main portion of Howe's army remained at Germantown, a village of a single street, two miles in length, and five from the city.” Here, on the morning of October 4, Washington attacked him, and, for a time, with great success; but confusion and misunderstandings on the part of the attacking columns arose, which turned the half-won victory into a defeat. “The Americans lost nearly 1,100 killed, wounded, and prisoners; the British 521. . . . While the Americans were defeated in their object, the moral results of the battle were in their favor. It inspired them with confidence, and showed the world that, though driven from the field of Brandywine, they were still aggressive.” The next few weeks were employed by Howe in reducing the forts which commanded the Delaware. Fort Mifflin was taken after a severe siege, and this compelled the abandonment of Fort Mercer, from which the British had been repulsed with heavy loss. Early in December Howe moved upon Washington's lines, at Whitemarsh, intending an attack; but found them so strong that he dared not venture the attempt, and returned to Philadelphia. “As the season was advancing, and the Americans were in no condition to keep the field, it was decided to go into winter-quarters at Valley Forge, on the west side of the Schuylkill, where the Valley Creek empties into the river. The surrounding hills were covered with woods and presented an inhospitable appearance. The choice was severely criticised, and De Kalb described it as a wilderness. But the position was central and easily defended. The army arrived there about the middle of December, and the erection of huts began. They were built of logs, and were 14 by 15 feet each. The windows were covered with oiled paper, and the openings between the logs were closed with clay. The huts were arranged in streets, giving the place the appearance of a city. It was the first of the year, however, before they were occupied, and previous to that the suffering of the army had become great. Although the weather was intensely cold the men were obliged to work at the buildings, with nothing to support life but flour mixed with water, which they baked into cakes at the open fires. . . . The horses died of starvation by hundreds, and the men were obliged to haul their own provisions and firewood. As straw could not be found to protect the men from the cold ground, sickness spread through their quarters with fearful rapidity. ‘The unfortunate soldiers,’ wrote Lafayette in after-years, ‘were in want of everything; they had neither coats, hats, shirts, nor shoes; their feet and their legs froze till they became black, and it was often necessary to amputate them. . . . The army frequently remained whole days without provisions, and the patient endurance of both soldiers and officers was a miracle which each moment served to renew.’ . . . While the country around Valley Forge was so impoverished by the military operations of the previous summer as to make it impossible for it to support the army, the sufferings of the latter

were chiefly owing to the inefficiency of Congress. That body met at Lancaster after leaving Philadelphia, and at once adjourned to York, where its sessions were continued. But it in no way equalled the congresses which had preceded it. 'The Continental Congress and the currency,' wrote Gouverneur Morris in 1778, 'have greatly depreciated.'—F. D. Stone, *Struggle for the Delaware (Narrative and critical history of America, v. 6, ch. 5)*.—The sufferings of the army at Valley Forge, and the shameful neglect which it experienced, were indignantly described by Washington, in a letter addressed to the president of Congress, Dec. 23, 1777: "Since the month of July," he wrote, "we have had no assistance from the quartermaster-general, and to want of assistance from this department the commissary-general charges great part of his deficiency. To this I am to add, that, notwithstanding it is a standing order, and often repeated, that the troops shall always have two days' provisions by them, that they might be ready at any sudden call; yet an opportunity has scarcely ever offered, of taking an advantage of the enemy, that has not been either totally obstructed, or greatly impeded on this account. And this, the great and crying evil, is not all. The soap, vinegar, and other articles allowed by Congress, we see none of, nor have we seen them, I believe, since the battle of Brandywine. The first, indeed, we have now little occasion for; few men having more than one shirt, many only the moiety of one, and some none at all. In addition to which, as a proof of the little benefit received from a clothier-general, and as a further proof of the inability of an army, under the circumstances of this, to perform the common duties of soldiers, (besides a number of men confined to hospitals for want of shoes, and others in farmers' houses on the same account,) we have, by a field-return this day made, no less than two thousand eight hundred and ninety-eight men now in camp unfit for duty, because they are barefoot and otherwise naked. By the same return it appears, that our whole strength in Continental troops, including the eastern brigades, which have joined us since the surrender of General Burgoyne, exclusive of the Maryland troops sent to Wilmington, amounts to more than eight thousand two hundred in camp fit for duty; notwithstanding which; and that since the 4th instant, our numbers fit for duty, from the hardships and exposures they have undergone, particularly on account of blankets (numbers having been obliged, and still are, to sit up all night by fires, instead of taking comfortable rest in a natural and common way), have decreased near two thousand men. We find gentlemen, without knowing whether the army was really going into winter-quarters or not (for I am sure no resolution of mine would warrant the Remonstrance), reprobating the measures as much as if they thought the soldiers were made of stocks or stones, and equally insensible of frost and snow; and moreover, as if they conceived it easily practicable for an inferior army, under the disadvantages I have described ours to be, which are by no means exaggerated, to confine a superior one, in all respects well-appointed and provided for a winter's campaign, within the city of Philadelphia, and to cover from depredation and waste the States of Pennsylvania and Jersey. But what makes this matter still more extraordinary in my eye is, that these very gentlemen,—who were well apprized of the nakedness of the troops from ocular demonstration, who thought their own soldiers worse clad than others, and who advised me near

a month ago to postpone the execution of a plan I was about to adopt, in consequence of a resolve of Congress for seizing clothes, under strong assurances that an ample supply would be collected in ten days agreeable to a decree of the State (not one article of which, by the by, is yet come to hand),—should think a winter's campaign, and the covering of these States from the invasion of an enemy, so easy and practicable a business. I can assure those gentlemen, that it is a much easier and less distressing thing to draw remonstrances in a comfortable room by a good fireside, than to occupy a cold, bleak hill, and sleep under frost and snow, without clothes or blankets. However, although they seem to have little feeling for the naked and distressed soldiers, I feel superabundantly for them, and, from my soul, I pity those miseries, which it is neither in my power to relieve or prevent. It is for these reasons, therefore, that I have dealt upon the subject; and it adds not a little to my other difficulties and distress to find, that much more is expected of me than is possible to be performed, and that upon the ground of safety and policy I am obliged to conceal the true state of the army from public view, and thereby expose myself to detraction and calumny."—George Washington, *Writings* (W. C. Ford, ed., v. 6, pp. 259-262).—It was during this trying winter, while the army suffered at Valley Forge, that it was joined by Baron Steuben, an accomplished Prussian officer, trained in the school of Frederick the Great, with a record of distinguished service in the Seven Years' War. He came as a volunteer, and was welcomed by Washington, who found in him the organizer, the disciplinarian, the instructor, which the rudely formed American army so greatly needed. The services rendered by Baron Steuben during that first winter of his stay in America were especially valuable, beyond measure. In his own account of the state of things which he found he says: "My determination must have been very firm that I did not abandon my design when I saw the troops. Matters had to be remedied, but where to commence was the great difficulty. In the first place, I informed myself relative to the military administration. I found that the different branches were divided into departments. There were those of the quartermaster general, war commissary, provisions commissary, commissary of the treasury, or paymaster of forage, etc., etc. But they were all bad copies of a bad original. That is to say, they had imitated the English administration, which is certainly the most imperfect in Europe. The general asked me to give him some statements concerning the arrangements of the departments, and their various branches in the European armies. I gave them to him, and, detailing therein the duties of each department and of its different branches, dilated upon the functions of the quarter-masters (*maréchaux généraux de logis*) in particular, in which branch I had served myself for a long time in the Seven Years' War. But the English system, bad as it is, had already taken root. Each company and quarter-master had a commission of so much per cent. on all the money he expended. It was natural, therefore, that expense was not spared—that wants were discovered where there were none; and it was also natural that the dearest articles were those that suited the commissioners best. Hence the depreciation of our currency—hence the expense of so many millions. I pointed out to General Washington and several members of Congress the advantages of the contract system. I even drew up a memorandum on the subject,

which Colonel Laurens translated into English, showing the way in which things were contracted for in the Prussian and French armies. But whether it was that they thought such a system impracticable in this country, or whether they were unable to check the torrent of expense, things remained as they were. I directed my attention to the condition of the troops, and I found an ample field, where disorder and confusion were supreme. . . . The number of men in a regiment was fixed by Congress, as well as in a company—so many infantry, cavalry, and artillery. But the eternal ebb and flow of men engaged for three, six, and nine months, who went and came every day, rendered it impossible to have either a regiment or a company complete; and the words company, regiment, brigade, and division, were so vague that they did not convey any idea upon which to form a calculation, either of a particular corps or of the army in general. They were so unequal in their number, that it would have been impossible to execute any maneuvers. Sometimes a regiment was stronger than a brigade. I have seen a regiment consisting of thirty men, and a company of one corporal! . . . The soldiers were scattered about in every direction. The army was looked upon as a nursery for servants, and every one deemed it his right to have a valet; several thousand soldiers were employed in this way. We had more commissaries and quarter-masters at the time than all the armies of Europe together; the most modest had only one servant, but others had two and even three. If the captains and colonels could give no account of their men, they could give still less an account of their arms, accouterments, clothing, ammunition, camp equipage, etc. Nobody kept an account but the commissaries, who furnished all the articles. A company, which consisted, in May, of fifty men, was armed, clothed and equipped in June. It then consisted of thirty men; in July it received thirty recruits, who were to be clothed, armed and equipped; and not only the clothes, but the arms were carried off by those who had completed their time of service. General Knox assured me that, previous to the establishment of my department, there never was a campaign in which the military magazines did not furnish from 5,000 to 8,000 muskets to replace those which were lost in the way I have described above. The loss of bayonets was still greater. The American soldier, never having used this arm, had no faith in it, and never used it but to roast his beefsteak, and indeed often left it at home. This is not astonishing when it is considered that the majority of the States engaged their soldiers for from six to nine month. Each man who went away took his musket with him, and his successor received another from the public store. No captain kept a book. Accounts were never furnished nor required. As our army is, thank God, little subject to desertion, I venture to say that during an entire campaign there have not been twenty muskets lost since my system came into force. . . . The men were literally naked, some of them in the fullest extent of the word. The officers who had coats had them of every color and make. I saw officers, at a grand parade at Valley Forge, mounting guard in a sort of dressing-gown, made of an old blanket or woolen bed-cover. With regard to their military discipline, I may safely say no such thing existed. . . . I commenced operations by drafting 120 men from the line, whom I formed into a guard for the general-in-chief. I made this guard my military school. I drilled them myself twice a day; and to remove that English prejudice

which some officers entertained, namely, that to drill a recruit was a sergeant's duty and beneath the station of an officer, I often took the musket myself to show the men the manual exercise which I wished to introduce. All my inspectors were present at each drill. We marched together, wheeled, etc., etc., and in a fortnight my company knew perfectly how to bear arms, had a military air, knew how to march, to form in column, deploy, and execute some little maneuvers with excellent precision. . . . I paraded them in presence of all the officers of the army, and gave them an opportunity of exhibiting all they knew. They formed in column; deployed; attacked with the bayonet; changed front, etc., etc. It afforded a new and agreeable sight for the young officers and soldiers. Having gained my point, I dispersed my apostles, the inspectors, and my new doctrine was eagerly embraced. I lost no time in extending my operations on a large scale. I applied my system to battalions, afterward to brigades, and in less than three weeks I executed maneuvers with an entire division in presence of the commander-in-chief. . . . The most interesting narrative of the energy employed by Steuben, and the success of his system, is given by his favorite aid-de-camp and intimate friend, William North, who was with him from the beginning. He says in his biographical sketch: 'Certainly it was a brave attempt! Without understanding a word of the English language, to think of bringing men, born free, and joined together to preserve their freedom, into strict subjection; to obey without a word, a look, the mandates of a master! that master once their equal, or possibly beneath them, in whatever might become a man! It was a brave attempt, which nothing but virtue, or high-raised hopes of glory, could have supported. At the first parade, the troops neither understanding the command, nor how to follow in a change ment to which they had not been accustomed, even with the instructor at their head, were getting fast into confusion. At this moment, Captain B. Walker, then of the second New York regiment, advanced from his platoon, and offered his assistance to translate the orders and interpret to the troops. "If," said the baron, "I had seen an angel from heaven, I should not have more rejoiced." . . . Walker became from that moment his aid-de-camp, and remained to the end of the baron's life his dear and most worthy friend. From the commencement of instruction, no time, no pains, no fatigue were thought too great, in pursuit of this great object.' . . . Steuben enjoyed the confidence of both officers and men, and every thing he proposed was executed with as much precision as if it were an order from the commander-in-chief. Although he was only a volunteer, without any specific rank in the army, he had greater power and authority than any general could boast of."—F. Kapp, *Life of Frederick William von Steuben*, ch. 6.

1777 (June).—Vermont denied admission to the Union. See VERMONT: 1777-1778.

1777 (July).—Coming of Lafayette.—"La Fayette, barely nineteen years old, was in garrison at

Metz, when he was invited to a dinner that his commander, the Count de Broglie, gave to the brother of the king of England, the Duke of Gloucester, then on his way through the city. News had just been received of the proclamation of the independence of the United States, and, the conversation having naturally fallen on this subject, La Fayette plied the duke with questions to acquaint himself with the events, entirely new to him, which were happening in America. Before the end of the dinner he had made his decision, and, from that moment, he no longer thought of anything else except setting out for the new world. He went to Paris and confided his project to his friends, the Count de Ségur and the Viscount de Noailles, who were to accompany him. The Count de Broglie, whom he also informed, tried to turn him from his design. 'I saw your uncle die in Italy,' he said to him, 'and your father at Minden, and I do not wish to contribute to the ruin of your family by allowing you to go.' Nevertheless, he put La Fayette in communication with the former agent of Choiseul in Canada, the Baron de Kalb, who became his friend. De Kalb presented him to Silas Deane, who, considering him too young, wished to dissuade him from his project. But the news of the disasters experienced by the Americans before New York, at White Plains and in New Jersey, confirmed La Fayette in his resolution. He bought and fitted out a vessel at his own expense, and disguised his preparation by making a journey to London. Nevertheless his design was disclosed at Court. His family became angry with him. He was forbidden to go to America, and, to render this order effective, a lettre de cachet was issued against him. Nevertheless he left Paris with an officer named Mauroy, disguised himself as a courier, went on board his ship at Passage in Spain, and set sail April the 26th, 1777. He had several officers on board. La Fayette successfully avoided the English cruisers and the French vessels sent in pursuit of him. Finally, after a hazardous passage of seven weeks, he reached Georgetown, and, furnished with letters of recommendation from Deane, he reported to Congress."—T. Balch, *French in America during the War of Independence*, ch. 7.—In consideration of the great personal sacrifice he had made in quitting France, and his offer to serve the American cause at his own expense and without pay, Congress, with hesitation, conferred on the young marquis the rank of major general, but without command. He succeeded, too, in procuring a like commission for Baron de Kalb, who had accompanied him. While La Fayette was still busy with these arrangements, Washington came to Philadelphia, and they met at a dinner party. They seem to have been drawn to one another at the first exchange of words, and a friendship began which lasted through their lives. La Fayette was soon invited to become a member of the military family of the commander-in-chief.—Based on B. Tuckerman, *Life of General Lafayette*, ch. 2.

1777 (July-October).—Struggle for the Hudson.—Burgoyne's expedition from Canada.—Surrender at Saratoga.—The futility of an attack, from Canada, through the northern wilderness, had not yet become apparent. Already, in 1776, after the failure of the expedition against Canada, an invasion had been attempted. "Sir Guy Carleton the efficient governor of Quebec, gradually pushed the Americans back from Canadian terri-

tory and organized a naval force for the control of Lake Champlain. Fortunately the Americans had in Benedict Arnold a resourceful leader who knew something about ships. During the summer he improvised an effective little fleet, which, though finally destroyed by the British, held them back so long that Carleton gave up his proposed attack on Ticonderoga and returned to Canada."—E. B. Greene, *Foundation of American nationality*, p. 478.—"Out of the ill-fated Canadian campaign grew foolish charges against Schuyler and Arnold, and though both stood an investigation and proved the charges to be unjust, yet there was left a cloud of prejudice and misunderstanding which, later, cost Schuyler his place and subjected Arnold to a series of slights and insults which finally undermined his patriotism. For the present, Arnold yielded to Washington's entreaty, and promised to serve with his old rank. Almost at once he became the hero of a brilliant exploit near his home at New Haven where he was visiting. Tyron with two thousand British troops destroyed the patriot stores at Danbury and fired the town. The local militia resisted, and Arnold with six hundred men engaged the British force at Ridgefield (April 27, 1777), defeating them and barely allowing the remnant to reach the sea and escape. . . . In the spring of 1777 the British government renewed the plan of campaign which had been partly executed in the preceding year. The city of New York was now in British hands, and Washington at Morristown with his remnant of an army was not a serious menace to its possession. At the north, though Carleton, in 1776, had failed to seize Ticonderoga, yet he had driven an entering wedge which would greatly aid an army starting south from that point. Lord George Germaine and General Burgoyne, taking this view of the field, and knowing that the valleys of the Mohawk and the Hudson, which were then the only inhabited parts of New York, were filled with Tories, determined to send three armies along these seeming paths of least resistance, severing the American confederacy at the Hudson, and ending the war by subduing rebellious New England, after it was thus isolated."—C. H. Van Tyne, *American Revolution, 1776-1783*, v. 9, pp. 157, 159, 161-162.—"It was an involved plan, complicated by a lively exchange of letters between the generals in America and the ministry in London. . . . The upshot of it was that General John Burgoyne with an army of 8,000 men should come down from Canada, via Lake Champlain and the upper Hudson Valley, while St. Leger, operating from Lake Ontario, via Fort Stanwix (Rome) and the Mohawk, should join him at Albany, and General Howe should proceed up the Hudson to receive these supporting armies. The British forces thus concentrated, and in possession of the entire Hudson-Champlain line, could turn east or south to crush the rebellion."—D. S. Muzzey, *United States of America*, v. 1, p. 90.—"Burgoyne started on this expedition [about June 1, 1777], with a brilliant army of 8,000 men, partly British and partly Germans, besides a large number of Canadian boatmen, laborers and skirmishers [about 4,000 British regulars, 3,000 German troops, and about 650 Canadians and Indians]. On the western shore of Lake Champlain, near Crown Point, he met the Six Nations in council, and after a feast and a speech, some 400 of their warriors joined this army. His next step was to issue a proclamation . . . threatening with all the extremities of war all who should presume to resist his arms. Two days after the issue of this proclamation, Burgoyne

WASHINGTON AND LAFAYETTE AT VALLEY FORGE

(From the painting by J. W. Dunsmore)

appeared [July 1] before Ticonderoga." The commander of that important fort, General St. Clair, found defense impracticable and evacuated the place. He was vigorously pursued in his retreat and only escaped with the loss of most of his baggage and stores, besides several hundred men, in killed, wounded, and prisoners. "After a seven days' march, he joined Schuyler [who had been placed in sole command of the American Northern Department], at Fort Edward, on the Hudson. Here was assembled the whole force of the northern army, amounting to about 5,000 men; but a considerable part were militia hastily called in; many were without arms; there was a great deficiency of ammunition and provisions; and the whole force was quite disorganized. The region between Skenesborough [now Whitehall, where Burgoyne had halted] and the Hudson was an almost unbroken wilderness. Wood Creek was navigable as far as Fort Anne [which the Americans had fired and abandoned]; from Fort Anne to the Hudson, over an exceedingly rough country, . . . extended a single military road. While Burgoyne halted a few days at Skenesborough to put his forces in order, and to bring up the necessary supplies, Schuyler hastened to destroy the navigation of Wood Creek," and to make the road from Fort Anne as nearly impassable as a wilderness road can be made. "All the stock in the neighborhood was driven off, and the militia of New England was summoned to the rescue."—R. Hildreth, *History of the United States*, v. 3, ch. 36.—Mean-time Howe, upon whom Burgoyne relied for assistance from the south, by way of the Hudson, set out to capture Philadelphia, leaving Clinton in command of New York, with 6,000 men, and freeing Washington from the necessity of watching the Hudson. "As Howe was about to set out upon the expedition [to Philadelphia], which the ministry had quite approved, he received (June 5) a copy of the plan of the northern campaign, but no word of instruction for himself. . . . Washington, expecting Howe to go by land, moved down from Morristown to Middlebrook, in the hope of preventing the passage of the British army. Howe saw his aggressive attitude, and with the idea of tempting him to a general engagement delayed and manoeuvred for three weeks. After this serious loss of time he embarked, early in July, some fourteen thousand men with whom to capture Philadelphia. Still he delayed until good news came from Burgoyne; then, after losing a week by foul winds, he got his fleet under way, July 23, just as Burgoyne in the north was pushing his way through the tangled forests from Ticonderoga to Fort Edward, and when Howe should have been going up the Hudson to meet him at Albany. Washington, who knew of Burgoyne's advance from the north, thought that, unless his movement was a mere feint, Howe must be about to move up the Hudson to his support. When, therefore, the news came (July 31) that Howe was off Delaware Bay, Washington was greatly puzzled; nor was the mystery cleared up then, for the naval officers who were with Howe gave him such weighty reasons for not disembarking in the Delaware that he yielded, and lost twenty-four precious days more, sailing around in Chesapeake Bay and up to Elkton, where the troops were landed on August 25, just thirteen miles from the point where they might have landed nearly a month earlier. Here Howe received a note from Germaine, hoping that he might finish this campaign in time to return to the aid of the northern army. That was now almost impossible,

as Washington clearly saw, and he wrote, exultingly, now let all New England 'turn out and entirely crush Genl. Burgoyne.' Already, in fact, Burgoyne had met such an accumulation of difficulties and disasters that relief must be speedy if it would save him. As his army drew near Fort Edward, General Schuyler sensibly withdrew to the south as far as Stillwater. Inadequate transportation facilities delayed the British, while their troubles increased daily."—C. H. Van Tyne, *American Revolution, 1776-1783*, v. 9, pp. 163-164.—"To feed and otherwise supply his army was the chief difficulty. He could bring enough of stores to the head of Lake George, by the water carriage which he commanded, from Canada; but to transport them thence to the Hudson, though the distance was only eighteen miles, proved nearly impracticable. 'The roads were so bad, and the supply of draft cattle so small, that, after a fortnight's hard labor, the British army had only four days' provision in advance.'"—R. Hildreth, *History of the United States*, v. 3, ch. 36.—"The patriot committees throughout the region had compelled everyone to remove cattle and stores from the path of the British army. There seemed nothing to do but to make an attempt to seize the American stores at Bennington [in the New Hampshire grants, now the state of Vermont]. A motley force of Germans, British, Canadians, and Indians, under Colonel Baum, was sent to unite in this attack with the many loyalists who swarmed in the country, longing, as Burgoyne was assured, to take up arms for the king. To help this attack, John Stark, acting under the sovereignty of New Hampshire, and on his own responsibility, raised eight hundred men and marched to meet the invader. When Stark met the British force (August 15, 1777), Baum quickly chose a strong position and threw up intrenchments. . . . On the morrow, August 16, the backwoodsmen's craft was shown in surrounding their unsuspecting victims, and the British forces were thrown into a panic by an encircling fire which compelled them to surrender within two hours. The tables were then nearly turned by the appearance of a relief party of five hundred Germans, but American reinforcements under Seth Warner saved the day, and the fresh British detachment was also defeated. The evil of this disaster to Burgoyne was not alone in the loss of men, but in the idea that was born in the minds of New England farmers that Burgoyne's whole army might be taken. The eager New England yeomanry began to pour in and to swell the patriot ranks, while Burgoyne's hopes for aid from St. Leger's force were dashed by the ill reports that came daily into his camp. St. Leger had landed at Oswego about the middle of July. He was there joined by Sir John Johnson and Colonel John Butler with their Tory followers. The Indians of western New York were divided in sympathy, but the Mohawks, under Joseph Brant, and part of the Iroquois, Cayugas, and Senecas joined St. Leger. With this ill-assorted force he advanced until, August 3, he appeared before Fort Stanwix. The German settlers in that neighborhood, led by General Herkimer, came to the rescue of the fort, and scouts from their force arranged for a combined attack on the invader—a sortie from the fort and an attack upon St. Leger's rear. The co-operation was not perfect, and, Herkimer's approach becoming known, Johnson's Tories and Brant's Mohawks prepared an ambuscade in a ravine near Oriskany through which the patriot force must pass. The Americans entered and were partly surrounded, but they

fought with such desperate valor that after a struggle with knife, hatchet, and bayonet, unrivalled in its savage horror, the Indians fled and the Tories retreated. Herkimer's force was too weak to advance, but the sortie from the fort was a success, and Johnson's Tories were driven across the Mohawk. Though St. Leger's force still threatened, yet his prestige had suffered and his Indian allies grew so refractory as to be a source of embarrassment. While St. Leger continued his siege of Fort Stanwix a patriot force of one thousand two hundred men were coming up the Mohawk under Benedict Arnold, who had been sent north by Washington, and who arrived in Schuyler's camp just in time to command this relief expedition. When within twenty miles of Fort Stanwix, and fearful lest he should arrive too late, Arnold sent ahead a half-witted Tory, who for his services escaped the death of a spy, and who rushed into St. Leger's camp with the report that Burgoyne was defeated and that an overwhelming force was coming to the relief of the fort. The disheartened Indians now refused to obey commands, stole the camp liquors, and rioted all night through the camp, assaulting the soldiers, and creating such a panic among the Tories that on the following day the whole army dispersed and fled, leaving the camp and stores in the patriot possession. A mere handful of St. Leger's troops reached Oswego and returned with him to Montreal. . . . Just after the battle of Bennington, and just before Burgoyne got the news of St. Leger's failure, the command of the American army of the north was transferred. Schuyler's enemies had so worked upon Congress that at a time when his laurels were almost gathered they were snatched away and given to Gates. Congress acted August 4, but Gates took command only after the middle of the month. For three weeks thereafter the two armies confronted each other on opposite banks of the Hudson. Then, while the Green Mountain militia hung 'like a gathering storm' upon Burgoyne's left, and retreat seemed wise, the British leader determined not to abandon Howe, who was then supposed to be coming up the Hudson. September 13, therefore, the whole British army crossed to the west bank of the river. Retreat was now impossible. . . . To prevent the British advance down the river, the American army had taken a fortified position on Bemis Heights, which commanded the Hudson and the roads leading to the south. Burgoyne hoped to carry this position [September 19] by an attack on the American left. As far as the timid Gates was concerned, success might have crowned the effort, but Arnold ruined the British plan by anticipating the attack. With a command of three thousand men he engaged a large part of Burgoyne's army while Gates held eleven thousand men idle on the heights. The British held the field, but abandoned their previous plan and delayed further assault for eighteen days. One reason for waiting was that Clinton was reported coming up the Hudson from New York; but while Burgoyne waited his supplies diminished and his line of communication was cut by a New England force of 2,000 under General Lincoln [who reached the American camp on September 29. Gates gave Lincoln command of the right wing, and took command in person of the left wing, composed of two brigades, under Poor and Leonard, Morgan's rifle corps, and some of the New England militia]. The American army constantly grew until more than sixteen thousand men confronted Burgoyne's five thousand. [The Amer-

ican lines had been strongly fortified by Kosciuszko, the famous Polish general, who was serving as a volunteer.] In desperation the British commander made another effort, October 7 [at Freeman's farm], to turn the American's left . . . [with a column of 1500 regular troops and field artillery. These troops he led in person, having Generals Phillips, Riedesel and D. Fraser under him.] Again it was Arnold who saw the opportunity for a crushing blow. Despite the fact that since the last engagement he had practically been deprived of his command by Gates, he rode into the midst of the battle and led the delighted soldiers in one charge after another until the field was won and Burgoyne retreated up the river to Saratoga, abandoning his sick and wounded. The Americans had already made the recrossing of the Hudson impossible, and their overwhelming numbers enabled them to so surround and harass the British army that its position became intolerable. Desertion began, the Germans coming over 'in shoals,' as Gates wrote. Burgoyne had no news of Clinton, who was in fact coming rapidly up the Hudson, quite outwitting Putnam. After taking two forts in the highlands he wrote Burgoyne, October 8, that there was nothing between him and Gates. [He had collected six months' stores for Burgoyne's army, and destroyed the American fleet which was being formed on the Hudson.] This cheering news never reached Burgoyne, who at last wearied of waiting, and on October 14 asked Gates for terms of surrender. Three days of negotiations resulted in the 'convention' of Saratoga, as the surrender was called. By this agreement the British army [now numbering 5,790 men of all ranks] was to march out with the honors of war, stack their arms, and go under guard to Boston, thence taking ship to England, after promising to serve no more in the American war. There was no attempt to humiliate the British troops as they laid down their arms, and every courtesy was shown them by the rank and file as well as by the officers of the American army. Congress, however, wrangled with Burgoyne over the carrying out of the terms of the convention, and ended by . . . [not] permitting the return of the British troops. Some of them escaped, while many were assimilated among the American people. The result in America of Burgoyne's surrender was, as a contemporary wrote, that 'Rebellion, which a twelvemonth ago was really a contemptible pygmy, is now in appearance become a giant more dreadful to the minds of men than Polyphemus of old or the sons of Anak.' The ultimate effect, however, was to set free forces that created changes of world-wide extent, bringing into the struggle first France and then other European countries, until the embattled nations confronted England and compelled her to yield. Before entering upon the history of this vast conflict we must turn to the political events that had been passing while Burgoyne was losing an army and Howe was paying dearly for the possession of the 'rebel capital.'—C. H. Van Tyne, *American Revolution, 1776-1783*, v. 9, pp. 163-167, 171-174.

1777-1778.—British in Philadelphia.—Their gay winter. See PHILADELPHIA: 1777-1778.

1777-1778.—Conway cabal.—The capitulation of Burgoyne at Saratoga "was an all-important event in its influence on the progress of the war; but its immediate effect was unpropitious to the reputation of the Commander-in-chief, who was compelled, at the close of the year, to place his army in a state of almost total destitution in winter-quarters at Valley Forge. The brilliant success of [the army commanded by] General Gates at Saratoga, in contrast with the reverses which had befallen the American Army under the immediate command of Washington, encouraged the operations of a cabal against him, which had been formed by certain disaffected officers of the army, and was countenanced by a party in Congress. The design was, by a succession of measures implying a want of confidence, to drive Washington to retire from the service in disgust; and, when this object was effected, to give the command of the army to General Gates, who lent a willing ear to these discreditable intrigues. A foreign officer in the American Army, of the name of Conway [Thomas Conway, an Irishman who had served in the French army], was the most active promoter of the project, which was discovered by the accidental disclosure of a part of his correspondence with Gates. Washington bore himself on this occasion with his usual dignity, and allowed the parties concerned, in the army and in Congress, to take refuge in explanations, disclaimers, and apologies, by which those who made them gained no credit, and those who accepted them were not deceived. A part of the machinery of this wretched cabal was the publication, in London, and the republication in New York of [a] collection of forged letters . . . bearing the name of Washington, and intended to prove his insincerity in the cause of the Revolution. Nothing perhaps more plainly illustrates his conscientious strength of character, than the disdainful silence with which he allowed this miserable fabrication to remain for twenty years without exposure. It was only in the year 1796, and when about to retire from the Presidency, that he filed, in the department of State, a denial of its authenticity."—E. Everett, *Life of Washington*, ch. 6.—In a letter written May 30, 1778, addressed to Landon Carter, from the camp at Valley Forge, Washington alluded to the subject of the cabal as follows: "With great truth I think I can assure you, that the information you received from a gentleman at Sabine Hall, respecting a disposition in the northern officers to see me superseded in my command by General G——s is without the least foundation. I have very sufficient reasons to think, that no officers in the army are more attached to me, than those from the northward, and of those, none more so than the gentlemen, who were under the immediate command of G——s last campaign. That there was a scheme of this sort on foot, last fall, admits of no doubt; but it originated in another quarter; with three men who wanted to aggrandize themselves; but finding no support, on the contrary, that their conduct and views, when seen into, were likely to undergo severe reprehension, they slunk back, disavowed the measure, and professed themselves my warmest admirers. Thus stands the matter at present. Whether any members of Congress were privy to this scheme, and inclined to aid and abet it, I shall not take upon me to say; but am well informed, that no whisper of the

kind was ever heard in Congress."—George Washington, *Writings* (W. C. Ford, ed., v. 7, p. 30).—"It is characteristic of Washington that he should tell Conway at once that he knew of the latter's machinations. Nevertheless Washington took no open step against him. The situation of the army at Valley Forge was then so desperately bad that he did not wish to make it worse, perhaps, by interjecting into it what might be considered a matter personal to himself. In the Congress also there were members who belonged to the Conway Cabal, and although it was generally known that Washington did not trust him, Congress raised his rank to that of Major-General and appointed him Inspector-General of the army. . . . In a few months he left for France. After his departure the cabal, of which he seemed to be the center, died."—W. R. Thayer, *George Washington*, pp. 112-113.

1777-1781.—Adoption and ratification of the Articles of Confederation.—"On the 11th of June, 1776, the same day on which the committee for preparing the declaration of independence was appointed, congress resolved, that 'a committee be appointed to prepare and digest the form of a confederation to be entered into between these colonies'; and on the next day a committee was accordingly appointed, consisting of a member from each colony. Nearly a year before this period (viz. on the 21st of July, 1775), Dr. Franklin had submitted to congress a sketch of articles of confederation, which does not, however, appear to have been acted on. . . . On the 12th of July, 1776, the committee appointed to prepare articles of confederation presented a draft, which was in the hand-writing of Mr. Dickinson, one of the committee, and a delegate from Pennsylvania. The draft, so reported, was debated from the 22d to the 31st of July, and on several days between the 5th and 20th of August, 1776. On this last day, congress, in committee of the whole, reported a new draft, which was ordered to be printed for the use of the members. The subject seems not not again to have been touched until the 8th of April, 1777, and the articles were debated at several times between that time and the 15th of November of the same year. On this last day the articles were reported with sundry amendments, and finally adopted by congress. A committee was then appointed to draft, and they accordingly drafted, a circular letter, requesting the states respectively to authorize their delegates in congress to subscribe the same in behalf of the state. . . . It carried, however, very slowly conviction to the minds of the local legislatures. Many objections were stated, and many amendments were proposed. All of them, however, were rejected by congress, not probably because they were all deemed inexpedient or improper in themselves; but from the danger of sending the instrument back again to all the states, for reconsideration. Accordingly, on the 26th of June, 1778, a copy, engrossed for ratification, was prepared, and the ratification begun on the 9th day of July following. It was ratified by all the states, except Delaware and Maryland in 1778; by Delaware in 1779, and by

Maryland on the 1st of March, 1781, from which last date its final ratification took effect, and was joyfully announced by congress. In reviewing the objections taken by the various states to the adoption of the confederation in the form in which it was presented to them, . . . that which seemed to be of paramount importance, and which, indeed, protracted the ratification of the confederation to so late a period, was the alarming controversy in respect to the boundaries of some of the states, and the public lands, held by the crown, within these reputed boundaries."—J. Story, *Commentaries on the constitution of the United States*, v. 1, bk. 2, ch. 2.

The following is the text of the Articles of Confederation:

ARTICLE I. The style of this Confederacy shall be, "The United States of America."

ART. II. Each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right, which is not by this Confederation expressly delegated to the United States in Congress assembled.

ART. III. The said States hereby severally enter into a firm league of friendship with each other, for their common defense, the security of their liberties, and their mutual and general welfare, binding themselves to assist each other against all force offered to, or attacks made upon them, or any of them, on account of religion, sovereignty, trade, or any other pretense whatever.

ART. IV. The better to secure and perpetuate mutual friendship and intercourse among the people of the different States in this Union, the free inhabitants of each of these States, paupers, vagabonds, and fugitives from justice excepted, shall be entitled to all privileges and immunities of free citizens in the several States; and the people of each State shall have free ingress and egress to and from any other State, and shall enjoy therein all the privileges of trade and commerce subject to the same duties, impositions, and restrictions as the inhabitants thereof respectively; provided that such restrictions shall not extend so far as to prevent the removal of property imported into any State to any other State of which the owner is an inhabitant; provided also, that no imposition, duties, or restriction shall be laid by any State on the property of the United States or either of them. If any person guilty of, or charged with, treason, felony, or other high misdemeanor in any State shall flee from justice and be found in any of the United States, he shall, upon demand of the governor or executive power of the State from which he fled, be delivered up and removed to the State having jurisdiction of his offense. Full faith and credit shall be given in each of these States to the records, acts, and judicial proceedings of the courts and magistrates of every other State.

ART. V. For the more convenient management of the general interests of the United States, delegates shall be annually appointed in such manner as the Legislature of each State shall direct, to meet in Congress on the first Monday in November, in every year, with a power reserved to each State to recall its delegates, or any of them, at any time within the year, and to send others in their stead for the remainder of the year. No State shall be represented in Congress by less than two, nor by more than seven members; and no person shall be capable of being a delegate for more than three years in any term of six years; nor shall any person, being a delegate, be capable of

holding any office under the United States for which he, or another for his benefit, receives any salary, fees, or emolument of any kind. Each State shall maintain its own delegates in any meeting of the States and while they act as members of the Committee of the States. In determining questions in the United States in Congress assembled, each State shall have one vote. Freedom of speech and debate in Congress shall not be impeached or questioned in any court or place out of Congress; and the members of Congress shall be protected in their persons from arrests and imprisonment during the time of their going to and from, and attendance on, Congress, except for treason, felony, or breach of the peace.

ART. VI. No State, without the consent of the United States, in Congress assembled, shall send any embassy to, or receive any embassy from, or enter into any conference, agreement, alliance, or treaty with any king, prince, or state; nor shall any person holding any office of profit or trust under the United States, or any of them, accept of any present, emolument, office, or title of any kind whatever from any king, prince, or foreign state; nor shall the United States, in Congress assembled, or any of them, grant any title of nobility. No two or more States shall enter into any treaty, confederation, or alliance whatever between them, without the consent of the United States, in Congress assembled, specifying, accurately the purposes for which the same is to be entered into, and how long it shall continue. No State shall lay any imposts or duties which may interfere with any stipulations in treaties entered into by the United States, in Congress assembled, with any king, prince, or state, in pursuance of any treaties already proposed by Congress to the courts of France and Spain. No vessel of war shall be kept up in time of peace by any State, except such number only as shall be deemed necessary by the United States, in Congress assembled, for the defense of such State or its trade, nor shall any body of forces be kept up by any State in time of peace, except such number only as, in the judgment of the United States, in Congress assembled, shall be deemed requisite to garrison the forts necessary for the defense of such State; but every State shall always keep up a well-regulated and disciplined militia, sufficiently armed and accoutred, and shall provide and constantly have ready for use in public stores a due number of field-pieces and tents, and a proper quantity of arms, ammunition, and camp equipage. No State shall engage in any war without the consent of the United States, in Congress assembled, unless such State be actually invaded by enemies, or shall have received certain advice of a resolution being formed by some nation of Indians to invade such State, and the danger is so imminent as not to admit of a delay till the United States, in Congress assembled, can be consulted; nor shall any State grant commissions to any ships or vessels of war, nor letters of marque or reprisal, except it be after a declaration of war by the United States, in Congress assembled, and then only against the kingdom or state, and the subjects thereof, against which war has been so declared, and under such regulations as shall be established by the United States, in Congress assembled, unless such State be infested by pirates, in which case vessels of war may be fitted out for that occasion, and kept so long as the danger shall continue, or until the United States, in Congress assembled, shall determine otherwise.

ART. VII. When land forces are raised by any

State for the common defense, all officers of or under the rank of Colonel shall be appointed by the Legislature of each State respectively by whom such forces shall be raised, or in such manner as such State shall direct, and all vacancies shall be filled up by the State which first made the appointment.

ART. VIII. All charges of war, and all other expenses that shall be incurred for the common defense, or general welfare, and allowed by the United States, in Congress assembled, shall be defrayed out of a common treasury, which shall be supplied by the several States in proportion to the value of all land within each State, granted to, or surveyed for, any person, as such land and the buildings and improvements thereon shall be estimated, according to such mode as the United States, in Congress assembled, shall, from time to time, direct and appoint. The taxes for paying that proportion shall be laid and levied by the authority and direction of the Legislatures of the several States, within the time agreed upon by the United States, in Congress assembled.

ART. IX. The United States, in Congress assembled, shall have the sole and exclusive right and power of determining on peace and war, except in the cases mentioned in the sixth Article; of sending and receiving ambassadors; entering into treaties and alliances, provided that no treaty of commerce shall be made, whereby the legislative power of the respective States shall be restrained from imposing such imposts and duties on foreigners as their own people are subjected to, or from prohibiting the exportation or importation of any species of goods or commodities whatever; of establishing rules for deciding, in all cases, what captures on land and water shall be legal, and in what manner prizes taken by land or naval forces in the service of the United States shall be divided or appropriated; of granting letters of marque and reprisal in times of peace; appointing courts for the trial of piracies and felonies committed on the high seas; and establishing courts for receiving and determining finally appeals in all cases of captures; provided that no member of Congress shall be appointed a judge of any of the said courts. The United States, in Congress assembled, shall also be the last resort on appeal in all disputes and differences now subsisting, or that hereafter may arise between two or more States concerning boundary, jurisdiction, or any other cause whatever; which authority shall always be exercised in the manner following: Whenever the legislative or executive authority, or lawful agent of any State in controversy with another, shall present a petition to Congress, stating the matter in question, and praying for a hearing, notice thereof shall be given by order of Congress to the legislative or executive authority of the other State in controversy, and a day assigned for the appearance of the parties by their lawful agents, who shall then be directed to appoint by joint consent, commissioners or judges to constitute a court for hearing and determining the matter in question; but if they cannot agree, Congress shall name three persons out of each of the United States, and from the list of such persons each party shall alternately strike out one, the petitioners beginning, until the number shall be reduced to thirteen; and from that number not less than seven nor more than nine names, as Congress shall direct, shall, in the presence of Congress, be drawn out by lot; and the persons whose names shall be so drawn, or any five of them, shall be commissioners or judges, to hear

and finally determine the controversy, so always as a major part of the judges who shall hear the cause shall agree in the determination; and if either party shall neglect to attend at the day appointed, without showing reasons which Congress shall judge sufficient, or being present, shall refuse to strike, the Congress shall proceed to nominate three persons out of each State, and the secretary of Congress shall strike in behalf of such party absent or refusing; and the judgment and sentence of the court, to be appointed in the manner before prescribed, shall be final and conclusive; and if any of the parties shall refuse to submit to the authority of such court, or to appear or defend their claim or cause, the court shall nevertheless proceed to pronounce sentence or judgment, which shall in like manner be final and decisive; the judgment or sentence and other proceedings being in either case transmitted to Congress, and lodged among the acts of Congress for the security of the parties concerned; provided, that every commissioner, before he sits in judgment, shall take an oath, to be administered by one of the judges of the supreme or superior court of the State where the cause shall be tried, "well and truly to hear and determine the matter in question, according to the best of his judgment, without favor, affection, or hope of reward." Provided, also, that no State shall be deprived of territory for the benefit of the United States. All controversies concerning the private right of soil claimed under different grants of two or more States, whose jurisdictions, as they may respect such lands, and the States which passed such grants are adjusted, the said grants or either of them being at the same time claimed to have originated antecedent to such settlement of jurisdiction, shall, on the petition of either party to the Congress of the United States, be finally determined, as near as may be, in the same manner as is before prescribed for deciding disputes respecting territorial jurisdiction between different States. The United States, in Congress assembled, shall also have the sole and exclusive right and power of regulating the alloy and value of coin struck by their own authority, or by that of the respective States; fixing the standard of weights and measures throughout the United States; regulating the trade and managing all affairs with the Indians, not members of any of the States; provided that the legislative right of any State, within its own limits, be not infringed or violated; establishing and regulating post-offices from one State to another, throughout all the United States, and exacting such postage on the papers passing through the same as may be requisite to defray the expenses of the said office; appointing all officers of the land forces in the service of the United States, excepting regimental officers; appointing all the officers of the naval forces, and commissioning all officers whatever in the service of the United States; making rules for the government and regulation of the said land and naval forces, and directing their operations. The United States, in Congress assembled, shall have authority to appoint a committee, to sit in the recess of Congress, to be denominated "A Committee of the States," and to consist of one delegate from each State, and to appoint such other committees and civil officers as may be necessary for managing the general affairs of the United States under their direction; to appoint one of their number to preside; provided that no person be allowed to serve in the office of president more than one year in any term of three years; to ascertain the necessary sums of money to be raised

for the service of the United States, and to appropriate and apply the same for defraying the public expenses; to borrow money or emit bills on the credit of the United States, transmitting every half year to the respective States an account of the sums of money so borrowed or emitted; to build and equip a navy; to agree upon the number of land forces, and to make requisitions from each State for its quota, in proportion to the number of white inhabitants in such State, which requisition shall be binding; and thereupon the Legislature of each State shall appoint the regimental officers, raise the men, and clothe, arm, and equip them in a soldier-like manner, at the expense of the United States; and the officers and men so clothed, armed, and equipped shall march to the place appointed, and within the time agreed on by the United States, in Congress assembled; but if the United States, in Congress assembled, shall, on consideration of circumstances, judge proper that any State should not raise men, or should raise a smaller number than its quota, and that any other State should raise a greater number of men than the quota thereof, such extra number shall be raised, officered, clothed, armed, and equipped in the same manner as the quota of such State, unless the Legislature of such State shall judge that such extra number can not be safely spared out of the same, in which case they shall raise, officer, clothe, arm, and equip as many of such extra number as they judge can be safely spared, and the officers and men so clothed, armed, and equipped shall march to the place appointed, and within the time agreed on by the United States, in Congress assembled. The United States, in Congress assembled, shall never engage in a war, nor grant letters of marque and reprisal in time of peace, nor enter into any treaties or alliances, nor coin money, nor regulate the value thereof, nor ascertain the sums and expenses necessary for the defense and welfare of the United States, or any of them, nor emit bills, nor borrow money on the credit of the United States, nor appropriate money, nor agree upon the number of vessels of war to be built or purchased, or the number of land or sea forces to be raised, nor appoint a commander-in-chief of the army or navy, unless nine States assent to the same, nor shall a question on any other point, except for adjourning from day to day, be determined, unless by the votes of a majority of the United States, in Congress assembled. The Congress of the United States shall have power to adjourn to any time within the year, and to any place within the United States, so that no period of adjournment be for a longer duration than the space of six months, and shall publish the journal of their proceedings monthly, except such parts thereof relating to treaties, alliances, or military operations as in their judgment require secrecy; and the yeas and nays of the delegates of each State, on any question, shall be entered on the journal when it is desired by any delegate; and the delegates of a State, or any of them, at his or their request, shall be furnished with a transcript of the said journal except such parts as are above excepted, to lay before the Legislatures of the several States.

ART. X. The Committee of the States, or any nine of them, shall be authorized to execute, in the recess of Congress, such of the powers of Congress as the United States, in Congress assembled, by the consent of nine States, shall, from time to time, think expedient to vest them with; provided that no power be delegated to the said Committee, for the exercise of which, by the Articles of Con-

federation, the voice of nine States in the Congress of the United States assembled is requisite.

ART. XI. Canada, acceding to this Confederation, and joining in the measures of the United States, shall be admitted into, and entitled to all the advantages of this Union; but no other colony shall be admitted into the same, unless such admission be agreed to by nine States.

ART. XII. All bills of credit emitted, moneys borrowed, and debts contracted by or under the authority of Congress, before the assembling of the United States, in pursuance of the present Confederation, shall be deemed and considered as a charge against the United States, for payment and satisfaction whereof the said United States and the public faith are hereby solemnly pledged.

ART. XIII. Every State shall abide by the determinations of the United States, in Congress assembled, on all questions which by this Confederation are submitted to them. And the Articles of this Confederation shall be inviolably observed by every State, and the Union shall be perpetual; nor shall any alteration at any time hereafter be made in any of them, unless such alteration be agreed to in a Congress of the United States, and be afterwards confirmed by the Legislatures of every State. AND WHEREAS it hath pleased the great Governor of the world to incline the hearts of the Legislatures we respectively represent in Congress to approve of, and to authorize us to ratify, the said Articles of Confederation and perpetual Union, know ye, that we, the undersigned delegates, by virtue of the power and authority to us given for that purpose, do, by these presents, in the name and in behalf of our respective constituents, fully and entirely ratify and confirm each and every of the said Articles of Confederation and perpetual Union, and all and singular the matters and things therein contained. And we do further solemnly plight and engage the faith of our respective constituents, that they shall abide by the determinations of the United States, in Congress assembled, on all questions which by the said Confederation are submitted to them; and that the Articles thereof shall be inviolably observed by the States we respectively represent, and that the Union shall be perpetual. In witness whereof we have hereunto set our hands in Congress. Done at Philadelphia in the State of Pennsylvania the ninth day of July in the year of our Lord one thousand seven hundred and seventy-eight, and in the third year of the independence of America.

“Under these Articles of Confederation the treaty of peace with England was concluded and the American nation was governed until the final adoption of the Constitution of the United States. The main defect of the Articles of Confederation was, that although powers sufficiently adequate to create a government were ceded, there was no power to raise revenue, to levy taxes, or to enforce the law, except with the consent of nine States; and although the government had power to contract debts, there were no means by which to discharge them. The government had power to raise armies and navies, but no means wherewith to pay them, unless the means were voted by the States themselves; they could make treaties with foreign powers, but had no means to coerce a State to obey such treaty. In short, it was a government which had the power to make laws, but no power to punish infractions thereof. Washington himself said: ‘The Confederation appears to me to be little more than the shadow without the sub-

stance, and Congress a nugatory body.' Chief Justice Story, in summing up the leading defects of the Articles of Confederation, says: 'There was an utter want of all coercive authority to carry into effect its own constitutional measures; this of itself was sufficient to destroy its whole efficiency as a superintendent government, if that may be called a government which possessed no one solid attribute of power. In truth, Congress possessed only the power of recommendation. Congress had no power to exact obedience or punish disobedience of its ordinances; they could neither impose fines nor direct imprisonments, nor divest privileges, nor declare forfeitures, nor suspend refractory officers. There was no power to exercise force.'—S. Sterne, *Constitutional history of the United States*, ch. 1.—'The individual states had attributed to themselves, in the Articles of Confederation, no powers which could place them in relation to foreign nations in the light of sovereign states. They felt that all such claims would be considered ridiculous, because back of these claims there was no real corresponding power. Congress therefore remained, as heretofore, the sole outward representative of sovereignty. But the power to exercise the prerogatives was taken from it, and this without placing it in any other hands. The changes effected by the Articles of Confederation were rather of a negative than of a positive nature. They did not give the State which was just coming into being a definite form, but they began the work of its dissolution. . . . The practical result . . . was that the United States tended more and more to split up into thirteen independent republics, and . . . virtually ceased to be a member of the family of nations bound together by the 'jus gentium.'—H. von Holst, *Constitutional and political history of the United States*, v. 1, ch. 1.—'The Articles . . . provided for no executive department. They did provide for the appointment of a member of Congress to preside over its sessions; but in fear of kingly authority, it was stipulated that no one person should serve as president more than one year in any term of three years. They also provided for the appointment of civil officers for managing the general affairs of the United States under the direction of Congress. And yet the course of the war had already proved how unfit for general administrative duties were the whole body of delegates or committees of members, and as a result a movement for the establishment of executive departments began even before the Articles went into effect. The office of postmaster-general, an inheritance from the colonial days, existed from the beginning of the war. In the early part of 1781 the offices of secretary for foreign affairs, superintendent of finance, secretary at war, and secretary of marine were created. To the second position Robert Morris, of Pennsylvania, whose knowledge of business and finance had already been of great service to the country, was appointed. After considerable delay, caused by the customary factional controversies between the cliques of Congress, General Benjamin Lincoln was made secretary at war. He did not take the office until January, 1782. Nothing of consequence was done with the department of marine, probably because of the old difficulty of selecting anybody that would suit the wrangling factions, and the whole department was turned over to the superintendent of finance, who already had more than any one could do in managing the distracted finances of the Confederation. Robert R. Livingston, of New York, was made foreign secretary.'—A. C. McLaughlin, *Confederation and the con-*

*stitution, 1783-1789*, pp. 51-52.—On the operation and failure of the Articles of Confederation, see below: 1783-1787.—On the question of the western territorial claims of several of the States, and the obstacle which it brought in the way of the ratification of the Articles of Confederation, see below: 1781-1786.

1778 (February).—Treaty with France.—Effect of treaty on Spanish relations.—'The account of Burgoyne's surrender, which was brought to France by a swift-sailing ship from Boston, threw Turgot and all Paris into transports of joy. None doubted the ability of the states to maintain their independence. On the 12th of December [1777], their commissioners [Benjamin Franklin and Silas Deane], had an interview with Vergennes. 'Nothing,' said he, 'has struck me so much as General Washington's attacking and giving battle to General Howe's army. To bring troops raised within the year to this, promises everything. The court of France, in the treaty which is to be entered into, intend to take no advantage of your present situation. Once made, it should be durable; and therefore it should contain no condition of which the Americans may afterward repent, but such only as will last as long as human institutions shall endure, so that mutual amity may subsist forever. Entering into a treaty will be an avowal of your independence. Spain must be consulted, and Spain will not be satisfied with an undetermined boundary on the west. Some of the states are supposed to run to the South Sea, which might interfere with her claim to California.' It was answered that the last treaty of peace adopted the Mississippi as a boundary. 'And what share do you intend to give us in the fisheries?' asked Vergennes; for in the original draft of a treaty the United States had proposed to take to themselves Cape Breton and the whole of the island of Newfoundland. Explanations were made by the American commissioners that their later instructions removed all chances of disagreement on that subject. . . . The question of a French alliance . . . was discussed by Vergennes with the Marquis d'Ossun, the late French ambassador in Madrid, as the best adviser with regard to Spain, and the plan of action was formed. Then these two met the king at the apartment of Maurepas, where the plan, after debate, was finally settled. Maurepas, at heart opposed to the war, loved ease and popularity too well to escape the sway of external opinion; and Louis XVI. sacrificed his own inclination and his own feeling of justice to policy of state and the opinion of his advisers.'—G. Bancroft, *History of the United States* (Author's last revision), v. 5, ch. 17.—'The news of Burgoyne's surrender reached France at the beginning of December, 1777. Vergennes was then employing as a spy the landlord of the house in which Franklin and Deane lived. That spy . . . was able to report that negotiations were in progress with England for an ending of the war. This information convinced Vergennes that further delay would be dangerous. So on December 6, two days after the arrival of the news of Burgoyne's surrender, he sent Gerard . . . to Franklin, to tell him that the French court was at last convinced that the colonies were in earnest and were

able to maintain their independence, and were worthy of recognition, and that it would therefore be glad to renew negotiations for a treaty of alliance. . . . The Americans paused in their negotiations with England, and . . . abandoned them altogether, when, on December 16, the French government announced to them that 'France would not only acknowledge but would support with all her forces the independence of the United States, and would conclude with them a treaty of amity and commerce.' With surprising and commendable frankness it added that 'His Most Christian Majesty desired no indemnification of the United States, nor pretended to act solely with a view to their particular interest, since, besides the benevolence he bore them, it was manifest that the power of England would be diminished by the dismemberment of her colonies.' It was further stated by the French government that this treaty would be made as soon as the assent of Spain

give only naval aid. Ten days later Gerard brought to the American commissioners tentative drafts of the treaties for consideration. . . . Franklin secured the insertion into the treaty of a recognition of the principle first set forth by Frederick the Great of Prussia, and warmly advocated by Franklin, that 'free ships make free goods,' a principle which afterward formed the basis of the Armed Neutrality. . . . There was much discussion, also, over the question of West India trade. . . . Finally, however, an agreement was reached. . . . [Each party reserved possession of its own fisheries: the United States acknowledged the right of the French to share in the Newfoundland fisheries, and to exclusive use of half the coast for drying-places, and the king of France promised to use his good offices with the Barbary States.] On February 6 [1778] the treaties were signed, under a strict pledge that they were to be kept secret until France was ready for their publication. [See

FIRST RECOGNITION OF THE AMERICAN FLAG BY A FOREIGN GOVERNMENT

In the harbor off Quiberon, France, Feb. 13, 1778

(After painting by Edward Moran)

could be got, that being necessary under the Bourbon Family Compact between France and Spain; and that all France would ask of America would be that, in case of war between France and England, which was likely to occur, America would not make peace with England until her own independence was fully secured, nor until France also made peace with England. . . . The French government . . . did not attempt to secure Spain's assent to the treaty, although Vergennes declared to the Americans that it was necessary to do so and that the treaty could not be made until it was done. On the contrary, it carefully concealed from Spain the fact that it was making such a treaty, and, even after the treaty was made and signed, denied that it had made it. The only recognition of the 'Bourbon Family Compact' in the treaty was in a private clause, which provided that Spain's assent should be secured before the treaty became valid. On January 8, 1778, further negotiations took place, the French stipulating that they were not to help America subdue Canada or the British West Indies, and were to

also "MOST FAVORED NATION" CLAUSE.] The news of them, however, leaked out; just how has not appeared. Deane and Lee each accused the other of betraying them, and Lee even went so far as to accuse Franklin. Presently Deane was recalled, and John Adams was appointed to fill his place. The plan of maintaining three co-equal representatives at the French court was an impractical one that was sure to cause trouble, and it was therefore a most auspicious thing for Congress, in October, 1778, to make Franklin sole minister to France. . . . The disclosure of the treaties had its natural effect in causing hostilities between France and England. On March 13, 1778, the Marquis de Noailles, the French ambassador in London, announced to the British government that France had made a treaty of friendship and commerce with the United States. He did not mention the treaty of alliance, nor was it necessary that he should do so. The other was sufficient to arouse England's resentment. Ten days later Lord Stormont, the British ambassador, abruptly left Paris without taking leave of the French gov-

ernment. A week later Gerard sailed for America, the first French minister to the United States. Within a month more French and British fleets sailed for American waters, and the war between France and England had begun. . . . Meantime, some interesting complications were in progress with Spain. . . . When at last the facts [of the treaty] came out, the Spanish government was indignant. Charles III of Spain [who] earnestly desired . . . peace in Europe, . . . distrusted France, and feared that Spain would be made her tool and would be sacrificed to her selfish interests. His chief minister, Florida Blanca, took even stronger ground. He aspired to be the dictator of American affairs, and to restore Spanish dominance upon this continent. His wrath at France's recognition of American independence was therefore great. . . . Vergennes, who . . . was almost desperately endeavoring to secure Spanish support in the war with England upon which he was entering, suggested that France had not committed herself to American sovereignty over the territory west of the Alleghenies, and might conspire and cooperate with Spain to rob her of it and keep the United States away from the Mississippi. . . . The Spanish ultimatum to France, therefore, was that the United States should be shut away from the Mississippi, and that peace should not be concluded until England had been compelled to surrender Florida, Jamaica, and Gibraltar. To these terms, Vergennes, in his desperation, agreed. The treaty of Aranjuez was accordingly signed between France and Spain, on April 12, 1779. . . . Spain did not by this treaty ally herself with America. . . . Indeed, it was stipulated that she should not do so, save with the express permission of France. . . . France kept the terms of this precious treaty secret from America. If they had not been kept thus secret the French minister, Gerard, would have had a still more difficult task on hand than he had when he came hither and tried to persuade the committee of Congress on foreign affairs to modify American demands and ambitions so as to meet the wishes of Spain; his argument being that if that was not done, Spain would not help France, and then France could not help America. He further intimated that if the United States would abandon its claims upon the territory between the Alleghenies and the Mississippi, and to a frontage upon the latter river, Spain would recognize American independence and make with the United States a treaty of commerce."—W. F. Johnson, *America's foreign relations*, v. 1, pp. 78-80, 84-87.—See also above: 1776-1778.

1778 (June).—Peace proposals from England.—British evacuation of Philadelphia and march to New York.—Battle of Monmouth.—"The winter of 1777 at Valley Forge was a time of terrible suffering for Washington's army. . . . Yet the great commander, amid his grave anxieties, not only struggled successfully against all the formidable difficulties of his situation, but with the valuable assistance of . . . Baron von Steuben, . . . took the work of training and disciplining his troops seriously in hand, with the result that by the early spring they were better organized and more efficient than they had ever been before. The British in Philadelphia, on the other hand, were gradually deteriorating. Instead of attacking Washington, only twenty-two miles away, Howe remained inactive, while his officers and their many loyalist friends indulged in gaieties and dissipations. [See

PHILADELPHIA: 1777-1778.] . . . The news of the French alliance put a sudden stop to these delightful proceedings. . . . [General Howe was recalled to England, and was succeeded in command by Sir Henry Clinton, who] received orders from England to abandon Philadelphia, which had proved to be useless as a basis for military operations."—W. H. Hudson, and I. S. Guernsey, *United States from the discovery of the American continent to the end of the World War*, pp. 217-218.—"On May 11th, Sir Henry Clinton relieved Sir William Howe at Philadelphia, and the latter took his departure in a blaze of mock glory. . . . The new commander was more active than his predecessor, but no cleverer, and no better fitted to cope with Washington. . . . Expecting a movement by the enemy, Washington sent Lafayette forward to watch Philadelphia. Clinton, fresh in office determined to cut him off and by a rapid movement nearly succeeded in so doing. Timely information, presence of mind, and quickness, alone enabled the young Frenchman to escape, narrowly but completely. Meantime, a cause for delay, that curse of the British throughout the war, supervened."—H. C. Lodge, *George Washington*, v. 1, ch. 7.—"Howe's successor, General Sir Henry Clinton, was about forty years old, with much less military experience than Howe, but of good ability. . . . If he had had Howe's large army and opportunities he would have undoubtedly altered the course of history. With France against him his task was very difficult and seemed almost impossible; but he came within an ace of succeeding. The alliance of France with the patriots had completely changed the situation. England could no longer concentrate large forces on the colonies, could no longer furnish the enormous army she had given Howe. . . . Clinton could undertake no extensive military operations or grand movements. The great strategic plan of controlling the whole line of the Hudson and cutting the colonies in twain must be abandoned. The two extreme ends of that line, Canada and the city of New York, could be easily held, and that was all that could be done. In short, so far as operations in the colonies were concerned, a totally new system must be adopted. . . . The plan adopted was to keep up the war at every point. The rebel colonists evidently could not take either New York or Canada. They could restrict the operations of the British army, but they could not drive it out of America; and it was doubtful if the French could do so much as that. New York and Canada must therefore be held, and from them predatory expeditions could be sent out to all parts of the rebel colonies. . . . Before this plan was put in operation and a new method of warfare adopted, the ministry resolved to make one supreme effort for conciliation and a peace which would preserve America as some sort of dependency of Great Britain, even if attached by a very slender thread. An act of Parliament was passed appointing commissioners, who spent the summer from June to October, 1778, in the colonies. By this same act the tea tax and the act changing the government of Massachusetts were repealed, the right of raising revenue from the colonies was renounced, and the commissioners were empowered to suspend the operation of any other act passed since 1763 and proclaim pardon and amnesty. . . . Charles Lee, Arnold, and other patriots tinged with loyalism were in favor of accepting this very liberal offer of peace; and Gates wished for a conference with the commissioners. But the majority of the patriot party rejected the offer with

derision. . . . The Congress were so confident of the temper of the patriot party that they freely circulated the printed peace proposals which were ridiculed and publicly burnt by the patriots."—S. G. Fisher, *True history of the American Revolution*, pp. 368-370, 372.—The peace commission consisted of the Earl of Carlisle, William Eden, and Governor Johnstone. "They were excellent men, but they came too late. Their propositions three years before would have been well enough, but as it was they were worse than nothing. Coolly received, they held a fruitless interview with a committee of Congress, tried to bribe and intrigue, found that their own army had been already ordered to evacuate Philadelphia [in apprehension of the arrival of the expected French fleet] without their knowledge, and finally gave up their task in angry despair, and returned to England to join in the chorus of fault-finding which was beginning to sound very loud in ministerial ears. Meanwhile, Washington waited and watched, puzzled by the delay, and hoping only to harass Sir Henry with militia on the march to New York. But, as the days slipped by, the Americans grew stronger, while Sir Henry weakened himself by sending 5,000 men to the West Indies, and 3,000 to Florida. When he finally started [evacuating Philadelphia June 17], he had with him less than 10,000 men, while the Americans had 13,000, nearly all continental troops. Under these circumstances, Washington determined to bring on a battle. He was thwarted at the outset by his officers, as was wont to be the case. Lee had returned more whimsical than ever, and at the moment was strongly adverse to an attack. . . . Washington was harassed of course by all this, but he did not stay his purpose, and as soon as he knew that Clinton actually had marched, he broke camp at Valley Forge and started in pursuit. There were more councils of an old-womanish character, but finally Washington took the matter into his own hands, and ordered forth a strong detachment to attack the British rear-guard. They set out on the 25th, and as Lee, to whom the command belonged, did not care to go, Lafayette [see above: 1777 (July)] was put in charge. As soon as Lafayette had departed, however, Lee changed his mind, and insisted that all the detachments in front, amounting to 6,000 men, formed a division so large that it was unjust not to give him the command. Washington, therefore, sent him forward next day with two additional brigades, and then Lee by seniority took command on the 27th of the entire advance. In the evening of that day, Washington came up, reconnoitred the enemy, and saw that, although their position was a strong one, another day's unmolested march would make it still stronger. He therefore resolved to attack the next morning, and gave Lee then and there explicit orders to that effect. In the early dawn he despatched similar orders, but Lee apparently did nothing except move feebly forward, saying to Lafayette, 'You don't know the British soldiers; we cannot stand against them.' He made a weak attempt to cut off a covering party, marched and counter-marched, ordered and countermanded, until Lafayette and Wayne, eager to fight, knew not what to do, and sent hot messages to Washington to come to them. Thus hesitating and confused, Lee permitted Clinton to get his baggage and train to the front, and to mass all his best troops in the rear under Cornwallis, who then advanced against the American lines. Now there were no orders at all, and the troops did not know what

to do, or where to go. They stood still, then began to fall back, and then to retreat. A very little more and there would have been a rout. As it was, Washington alone prevented disaster. . . . As the ill tidings grew thicker, Washington spurred sharper and rode faster through the deep sand and under the blazing mid-summer sun. At last he met Lee and the main body in full retreat. He rode straight at Lee, savage with anger, not pleasant to look at, one may guess, and asked fiercely and with a deep oath, tradition says, what it all meant. . . . Lee gathered himself and tried to excuse and palliate what had happened, but although the brief words that followed are variously reported to us across the century, we know that Washington rebuked him in such a way, and with such passion, that all was over between them. Lee . . . went to the rear, thence to a court-martial, thence to dismissal and to a solitary life. . . . Having put Lee aside, Washington rallied the broken troops, brought them into position, turned them back, and held the enemy in check. It was not an easy feat, but it was done, and when Lee's division again fell back in good order the main army was in position, and the action became general. The British were repulsed, and then Washington, taking the offensive, drove them back until he occupied the battlefield of the morning. Night came upon him still advancing. He halted his army, lay down under a tree, his soldiers lying on their arms about him, and planned a fresh attack, to be made at daylight. But when the dawn came it was seen that the British had crept off, and were far on their road. The heat prevented a rapid pursuit, and Clinton got into New York. Between there and Philadelphia he had lost 2,000 men, Washington said, and modern authorities put it at about 1,500, of whom nearly 500 fell at Monmouth. . . . Monmouth has never been one of the famous battles of the Revolution, and yet there is no other which can compare with it as an illustration of Washington's ability as a soldier. . . . Its importance lies in the evidence which it gives of the way in which Washington, after a series of defeats, during a winter of terrible suffering and privation, had yet developed his ragged volunteers into a well-disciplined and effective army. The battle was a victory, but the existence and the quality of the army that won it were a far greater triumph. The dreary winter at Valley Forge had indeed borne fruit."—H. C. Lodge, *George Washington*, v. 1, ch. 7.

1778 (June-November).—War on the border.—Activity of Tories and Indians.—Massacre at Cherry Valley.—"The Six Nations were stirred to hostility by Sir John Johnson and the Mohawk chief Joseph Brant, with Walter Butler, of infamous name. Their tory partisans were more cruel than the red men. At Cobleskill, Schoharie county, June 1, 1778, Brant won a savage triumph with a mixed force, and burned and plundered the settlement. Springfield was also destroyed, and the assailants retired. A month later the Indians were again at Cobleskill, and, burning where they went, beat off a force that attempted to check them. The valley of the Schohariekill was in the succeeding year subjected to invasions from the Senecas, and suffered severely. About Fort Stanwix the tories and red men were continually hovering, and more than once persons were pounced

upon and scalped in sight of the works. In 1778, in the early autumn, German Flats was visited by Brant and his followers, and was entirely destroyed, although all the inhabitants but two were warned in season to escape with their lives. An expedition was sent after the Indians, but failed to bring the warriors to battle, and was rewarded only by laying waste the Indian villages of Unadilla and Oquaga, and capturing a large supply of cattle and provisions. At Cherry Valley a fort had been built, and the village was occupied by a band of colonial troops under Colonel Ichabod Alden. He rested in security, and the settlers were scattered in their habitations, regardless of warnings of approaching foes. Under cover of a severe storm of snow and rain, November 11, Brant and Butler, with 800 Indians and Tories, swooped upon the homes, and 43 persons, including women and children, were butchered, 40 taken prisoners, all the buildings were burned, and the domestic animals seized. So brutal was the massacre that Brant charged Butler and the Tories with acting against his protests. Brant himself was content, July 10, 1779, with destroying the church, mills, houses, and barns at Minnisink, Orange county, without sacrificing lives, but turned upon a party sent in pursuit, and, after capturing a detachment, butchered the wounded, and slew 45 who tried to escape. Such deeds produced a terror in the colony. No one knew where the red men and Tories would strike next. To check and counteract them, excursions were made against the tribes in their homes. One of these was led by Colonels Van Schaick and Willet from Fort Stanwix in April, 1779. Proceeding by Wood Creek and Oneida Lake, they penetrated the villages of the Onondagas, which they destroyed, and seized the provisions and even the weapons of the red men, who fled into the wilderness."—E. H. Roberts, *New York*, v. 2, ch. 24.—The following account of the attack on Cherry Valley is from a pen friendly to Butler and from sources favorable to the Tory side: "After an exhausting march next day through a blinding snow-storm and over ground covered with deep wet snow and mud, Butler halted his men at dark in a pine wood which afforded them some shelter, six miles from Cherry Valley. He assembled the chiefs and proposed that as soon as the moon rose, they should resume their march and surround the house occupied by the officers, while he made a rush upon the fort with the rangers. They readily assented, but before the time appointed arrived it began to rain violently, and they obstinately refused to move until daybreak. It was then arranged that Capt. McDonnell with 50 picked rangers and some Indians should storm the house, while Butler with the remainder assailed the fort. Without tents, blankets or fires, they spent a sleepless night cowering beneath the pines, and were glad to move as soon as day appeared. They had approached unperceived within a mile of the fort by passing through a dense swamp, when the Indians in front fired at two men cutting wood. One fell dead; the other, though bleeding, ran for his life and the entire body of Indians set up a whoop and followed at full speed. Unhappily the rangers had just been halted to fix flints and load their rifles, and the Indians obtained a long start. The Continental officers attempted to escape to the fort but only two or three reached it. The colonel, five other officers and twenty soldiers were killed on the way and the lieutenant-colonel, three subalterns, and ten privates were taken. The colors of the regiment were abandoned in the house and

burnt in it. The garrison of the fort was fully alarmed, and opened a fierce fire of artillery and small arms. The rangers seized and burnt a detached block-house, and fired briskly at the loopholes in the palisades for ten minutes, when Butler saw with horror and consternation that the Indians had set their officers at defiance, and dispersed in every direction to kill and plunder. Their wretched misconduct forced him to collect all the rangers into a compact body on an eminence near the principal entrance to the fort, to oppose a sally by the garrison, which then undoubtedly outnumbered them considerably. There he was obliged to remain inactive all day under a ceaseless, chilling rain, while blazing houses and shrieks of agony told their pitiful tale in the settlement below. At nightfall he marched a mile down the valley and encamped. He then struggled with indifferent success to rescue the prisoners. Those surrendered were placed next the camp fires and protected by his whole force. Next morning most of the Indians and the feeblest men among the rangers were sent away with a huge drove of captured cattle for the supply of the garrison at Niagara, and McDonnell and Brant, with 60 rangers and 50 Indians, swept the valley from end to end, ruthlessly burning every building and stack in sight, while Butler, with the remainder, again stood guard at the gate of the fort. He hoped that this appalling spectacle would provoke the garrison to sally out and fight, but the lesson of Wyoming had not been lost on them, and they continued to look on from the walls in silent fury. Another great herd of cattle was collected, and Butler leisurely began his retreat, having had only two rangers and three Indians wounded during the expedition. He did not disguise the dark side of the story in his letter to Col. Bolton of the 17th November. 'I have much to lament,' he said, 'that notwithstanding my utmost precautions to save the women and children, I could not prevent some of them falling victims to the fury of the savages. They have carried off many of the inhabitants and killed more, among them Colin Cloyd, a very violent rebel. I could not prevail on the Indians to leave the women and children behind, though the second morning Captain Johnson (to whose knowledge of the Indians and address in managing them I am much indebted) and I got them to permit twelve, who were loyalists, and whom I concealed, with the humane assistance of Mr. Joseph Brant and Captain Jacobs of Ochquaga, to return. The death of the women and children on this occasion may, I believe, be truly ascribed to the rebels having falsely accused the Indians of cruelty at Wyoming. This has much exasperated them, and they are still more incensed at finding that the colonel and those who had then laid down their arms, soon after marching into their country intending to destroy their villages, and they declared that they would be no more accused falsely of fighting the enemy twice, meaning they would in future give no quarter.'"—E. Cruikshank, *Story of Butler's Rangers*, pp. 55-56.

1778 (July).—War on the border.—Bloody work of Tories and their Indian allies.—Massacre at Wyoming.—"In 1778, according to the plan of campaign as given by Guy Johnson in his correspondence, the English forces on the western borders of New York were divided into two

bodies: one, consisting of Indians under Brant, to operate in New York, while Deputy Superintendent Butler with the other should penetrate the settled district on the Susquehanna. Brant [Joseph Brant, the Mohawk chief], who, according to Colonel Claus, 'had shown himself to be the most faithful and zealous subject his majesty could have in America,' did his work unsparingly, and ruin marked his track. In the valley of the upper Mohawk and the Schoharie nothing but the garrison houses escaped, and labor was only possible in the field when muskets were within easy reach. Occasionally blows were struck at the larger settlements. . . . In July, 1778, the threatened attack on Wyoming took place. This region was at the time formally incorporated as the county of Westmoreland of the colony of Connecticut. . . . In the fall of 1776, two companies, on the Continental establishment, had been raised in the valley, in pursuance of a resolution of Congress, and were shortly thereafter ordered to join General Washington. Several stockaded forts had been built during the summer at different points. The withdrawal of so large a proportion of the able-bodied men as had been enlisted in the Continental service threw upon the old men who were left behind the duty of guarding the forts. . . . In March, 1778, another military company was organized, by authority of Congress, to be employed for home defence. In May, attacks were made upon the scouting parties by Indians, who were the forerunners of an invading army. The exposed situation of the settlement, the prosperity of the inhabitants, and the loyalty with which they had responded to the call for troops, demanded consideration from Connecticut, to whose quota the companies had been credited, and from Congress, in whose armies they had been incorporated; but no help came. On June 30th an armed labor party of eight men, which went out from the upper fort, was attacked by Major Butler, who, with a force estimated by the American commander in his report at 800 men, Tories and Indians in equal numbers, had arrived in the valley. This estimate was not far from correct; but if we may judge from other raiding forces during the war, the proportion of whites is too large, for only a few local Tories had joined Butler. The little forts at the upper end of the valley offered no resistance to the invaders. On July 3d, there were collected at 'Forty Fort,' on the banks of the river, about three miles above Wilkesbarré, 230 Americans, organized in six companies (one of them being the company authorized by Congress for home defence), and commanded by Colonel Zebulon Butler, a resident in the valley and an officer in the Continental army. It was determined, after deliberation, to give battle. In the afternoon of that day, this body of volunteers, their number being swelled to nearly 300 by the addition of old men and boys, marched up the valley. The invaders had set fire to the forts of which they were in possession. This perplexed the Americans, as was intended, and they pressed on towards the spot selected by the English officer for giving battle. This was reached about four in the afternoon, and the attack was at once made by the Americans, who fired rapidly in platoons. The British line wavered, but a flanking fire from a body of Indians concealed in the woods settled the fate of the day against the Americans. They were thrown into confusion. No efforts of their officers could rally them while exposed to a fire which in a short time brought down every captain in the band. The Indians now cut off

the retreat of the panic-stricken men, and pressed them towards the river. All who could saved their lives by flight. Of the 300 who went out that morning from Forty Fort, the names are recorded of 162 officers and men killed in the action or in the massacre which followed. Major Butler, the British officer in command, reported the taking of 'two hundred and twenty-seven scalps' and only five prisoners.' Such was the exasperation of the Indians, according to him, that it was with difficulty he saved these few. He gives the English loss at two whites killed and eight Indians wounded. During the night the worst passions of the Indians seem to have been aroused in revenge for Oriskany. Incredible tales are told of the inhumanity of the Tories. These measures of vengeance fell exclusively upon those who participated in the battle, for all women and children were spared. As soon as the extent of the disaster was made known, the inhabitants of the lower part of the valley deserted their homes, and fled in the direction of the nearest settlements. Few stayed behind who had strength and opportunity to escape. In their flight many of the fugitives neglected to provide themselves with provisions, and much suffering and some loss of life ensued. The fugitives from the field of battle took refuge in the forts lower down the valley. The next day, Colonel Zebulon Butler, with the remnants of the company for home defence, consisting of only fourteen men escaped from the valley. Colonel Denison, in charge of Forty Fort, negotiated with Major Butler the terms of capitulation which were ultimately signed. In these it was agreed that the inhabitants should occupy their farms peaceably, and their lives should be preserved 'intire and unhurt.' With the exception that Butler executed a British deserter whom he found among the prisoners, no lives were taken at that time. Shortly thereafter, the Indians began to plunder, and the English commander, to his chagrin, found himself unable to check them. Miner even goes so far as to say that he promised to pay for the property thus lost. Finding his commands disregarded, Butler mustered his forces and withdrew, without visiting the lower part of the valley. The greater part of the Indians went with him, but enough remained to continue the devastation, while a few murders committed by straggling parties of Indians ended the tragedy. The whole valley was left a scene of desolation."—A. McF. Davis, *Indians and the border warfare of the Revolution (Narrative and critical history of America, v. 6, ch. 8)*.—"Rarely, indeed, does it happen that history is more at fault in regard to facts than in the case of Wyoming. The remark may be applied to nearly every writer who has attempted to narrate the events connected with the invasion of Colonel John Butler. Ramsay, and Gordon, and Marshall—nay, the British historians themselves—have written gross exaggerations. Marshall, however, in his revised edition, has made corrections. . . . Other writers, of greater or less note, have gravely recorded the same fictions, adding, it is to be feared, enormities not even conveyed to them by tradition. The grossest of these exaggerations are contained in Thatcher's Military Journal and Drake's Book of the Indians. The account of the marching out of a large body of Americans from one of the forts, to hold a parley, by agreement, and then being drawn into an ambushade and all put to death, is false; the account of 70 Continental soldiers being butchered, after having surrendered, is also totally untrue. No regular troops surrendered, and all escaped who survived the battle of

the 3d. . . . There is still another important correction to be made. . . . This correction regards the name and the just fame of Joseph Brant, whose character has been blackened with all the infamy, both real and imaginary, connected with this bloody expedition. Whether Captain Brant was at any time in company with this expedition is doubtful; but it is certain, in the face of every historical authority, British and American, that, so far from being engaged in the battle, he was many miles distant at the time of its occurrence. . . . After the publication of Campbell's 'Gertrude of Wyoming,' in which poem the Mohawk chieftain was denounced as 'the Monster Brant,' his son repaired to England, and, in a correspondence with the poet, successfully vindicated his father's memory."—W. L. Stone, *Life of Joseph Brant*, v. 1, p. 339, footnote, 338 and footnote.—"No lives were taken by the Indians after the surrender; but numbers of women and children perished in the dismal swamp on the Pokono range of mountains, in the flight. . . . The whole number of people killed and missing was about 300. . . . The greatest barbarities of this celebrated massacre were committed by the Tories."—Idem, *Poetry and history of Wyoming*, ch. 6.

1778 (July-November).—French fleet and army and their undertakings.—Ill-fortune and ill-feeling between new allies.—Failure at Newport.—"The first minister of France to the United States, M. Gérard, came accompanied by a fleet and army, under D'Estaing (July). 'Unforeseen and unfavorable circumstances,' as Washington wrote, 'lessened the importance of the French services in a great degree.' In the first place, the arrival was just late enough to miss the opportunity of surprising the British fleet in the Delaware, not to mention the British army on its retreat to New York. In the next place, the French vessels proved to be of too great draught to penetrate the channel and cooperate in an attack upon New York. Thus disappointing and disappointed, D'Estaing engaged in an enterprise against Newport, still in British hands. It proved another failure. But not through the French alone; the American troops that were to enter the island at the north being greatly behindhand. The same day that they took their place, under Sullivan, Greene, and Lafayette, the French left theirs at the lower end of the island, in order to meet the British fleet arriving from New York (August 10). A severe storm prevented more than a partial engagement; but D'Estaing returned to Newport only to plead the injuries received in the gale as compelling his retirement to Boston for repairs. The orders of the French government had been peremptory, that in case of any damage to the fleet it should put into port at once. So far was D'Estaing from avoiding action on personal grounds, that when Lafayette hurried to Boston to persuade his countrymen to return, the commander offered to serve as a volunteer until the fleet should be refitted. The Americans, however, talked of desertion and of inefficiency,—so freely, indeed, as to affront their faithful Lafayette. At the same time, large numbers of them imitated the very course which they censured, by deserting their own army. The remaining forces retreated from their lines to the northern end of the island, and, after an engagement, withdrew to the mainland (August 30). It required all the good offices of Lafayette, of Washington, and of Congress, to keep the peace between the Americans and their allies. D'Estaing,

soothed by the language of those whom he most respected, was provoked, on the other hand, by the hostility of the masses, both in the army and amongst the people. Collisions between his men and the Bostonians kept up his disgust; and, when his fleet was repaired, he sailed for the West Indies (November). . . . On the part of the British, there was nothing attempted that would not have been far better unattempted. Marauding parties from Newport went against New Bedford and Fairhaven. Others from New York went against Little Egg Harbor. Tories and Indians—'a collection of banditti,' as they were rightly styled by Washington, descended from the northern country to wreak massacres at Wyoming and at Cherry Valley. The war seemed to be assuming a new character: it was one of ravages unworthy of any cause, and most unworthy of such a cause as the British professed to be. Affairs were at a low state amongst the Americans."—S. Eliot, *History of the United States*, pt. 3, ch. 5.

ALSO IN: S. G. Arnold, *History of Rhode Island*, v. 2, ch. 21-22.—O. W. B. Peabody, *Life of General John Sullivan* (*Library of American Biography*, series 2, v. 3).—J. Marshall, *Life of Washington*, v. 3, ch. 9.

1778 (December).—Anxieties of Washington.—His opinion of Congress.—Serious defects and errors of that body.—"Much of the winter [of 1778-1779] was passed by Washington in Philadelphia, occupied in devising and discussing plans for the campaign of 1779. It was an anxious moment with him. Circumstances which inspired others with confidence, filled him with solicitude. The alliance with France had produced a baneful feeling of security, which, it appeared to him, was paralyzing the energies of the country. England, it was thought, would now be too much occupied in securing her position in Europe, to increase her force or extend her operations in America. Many, therefore, considered the war as virtually at an end; and were unwilling to make the sacrifices, or supply the means necessary for important military undertakings. Dissensions, too, and party feuds were breaking out in Congress, owing to that relaxation of that external pressure of a common and imminent danger, which had heretofore produced a unity of sentiment and action. That august body had, in fact, greatly deteriorated since the commencement of the war. Many of those whose names had been as watchwords at the Declaration of Independence had withdrawn from the national councils; occupied either by their individual affairs, or by the affairs of their individual States. Washington, whose comprehensive patriotism embraced the whole Union, deprecated and deplored the dawning of this sectional spirit."—W. Irving, *Life of Washington*, v. 3, ch. 38.—The following, from a letter written by Washington in December, 1778, to Benjamin Harrison, speaker of the Virginia House of Delegates, intimates the grave anxieties which filled his mind, and the opinion of Congress with which he had returned from a visit to Philadelphia: "It appears as clear to me as ever the Sun did in its meridian brightness, that America never stood in more eminent need of the wise, patriotic, and spirited exertions of her Sons than at this period; and if it is not a sufficient cause for genl. lamentation, my misconception of the matter impresses it too strongly upon me, that the States, separately, are too much engaged in their local concerns, and have too many of their ablest men withdrawn from the general council, for the good of the common weal. . . . As there can be no harm in a pious wish for the good

of one's Country, I shall offer it as mine, that each State wd. not only choose, but absolutely compel their ablest men to attend Congress; and that they would instruct them to go into a thorough investigation of the causes, that have produced so many disagreeable effects in the army and Country; in a word, that public abuses should be corrected & an entire reformation worked. Without these, it does not in my Judgment require the spirit of divination to foretell the consequences of the present administration; nor to how little purpose the States individually are framing constitutions, providing laws, and filling offices with the abilities of their ablest men. These, if the great whole is mismanaged, must sink in the general wreck, and will carry with it the remorse of thinking, that we are lost by our own folly and negligence, or the desire perhaps of living in ease and tranquillity during the expected accomplishment of so great a revolution, in the effecting of which the greatest abilities, and the honestest men our (i.e. the American) world affords, ought to be employed. It is much to be feared, my dear Sir, that the States, in their separate capacities, have very inadequate ideas of the present danger. Removed (some of them) far distant from the scene of action, and seeing and hearing such publications only, as flatter their wishes, they conceive that the contest is at an end, and that to regulate the government and police of their own State is all that remains to be done; but it is devoutly to be wished, that a sad reverse of this may not fall upon them like a thunder-clap, that is little expected. I do not mean to designate particular States. I wish to cast no reflections upon any one. The Public believe (and, if they do believe it, the fact might almost as well be so), that the States at this time are badly represented, and that the great and important concerns of the nation are horribly conducted, for want either of abilities or application in the members, or through the discord & party views of some individuals. . . . P. S. Phila: 30th. This letter was to have gone by Post from Middlebrook but missed that conveyance, since which I have come to this place at the request of Congress whence I shall soon return. I have seen nothing since I came here (on the 22d Inst.) to change my opinion of Men or Measrs., but abundant reason to be convinced that our affairs are in a more distressed, ruinous and deplorable condition than they have been in since the commencement of the War.—By a faithful laborer then in the cause—By a man who is daily injuring his private Estate without even the smallest earthly advantage not common to all in case of a favorable Issue to the dispute—By one who wishes the prosperity of America most devoutly and sees or thinks he sees it, on the brink of ruin, you are beseeched most earnestly, my dear Colo. Harrison, to exert yourself in endeavoring to rescue your Country by (let me add) sending your ablest and best Men to Congress—these characters must not slumber nor sleep at home in such times of pressing danger—they must not content themselves in the enjoyment of places of honor or profit in their own Country while the common interests of America are mouldering and sinking into irretrievable (if a remedy is not soon applied) ruin in which theirs also must ultimately be involved. If I was to be called upon to draw a picture of the times and of Men, from what I have seen, and heard, and in part know, I should in one word say that idleness, dissipation & extravagance seems to have laid fast hold of most of them.—That speculation—peculation—and an

insatiable thirst for riches seems to have got the better of every other consideration and almost of every order of Men.—That party disputes and personal quarrels are the great business of the day whilst the momentous concerns of an empire—a great and accumulated debt—ruined finances—depreciated money—and want of credit (which in their consequences is the want of everything) are but secondary considerations and postponed from day to day—from week to week as it our affairs wear the most promising aspect—after drawing this picture, which from my Soul I believe to be a true one, I need not repeat to you that I am alarmed and wish to see my Countrymen roused.—I have no resentments, nor do I mean to point at any particular characters,—this I can declare upon my honor for I have every attention paid me by Congress that I can possibly expect and have reason to think that I stand well in their estimation, but in the present situation of things I cannot help asking—Where is Mason—Wythe—Jefferson—Nicholas—Pendleton—Nelson—and another I could name—and why, if you are sufficiently impressed with your danger do you not (as New Yk. has done in the case of Mr. Jay) send an extra member or two for at least a certain limited time till the great business of the Nation is put upon a more respectable and happy establishment.—Your Money is now sinking 5 pr. ct. a day in this city; and I shall not be surprized if in the course of a few months a total stop is put to the currency of it.—And yet an Assembly—a concert—a Dinner—or supper (that will cost three or four hundred pounds) will not only take Men off from acting in but even from thinking of this business while a great part of the Officers of ye Army from absolute necessity are quitting the service and ye more virtuous few rather than do this are sinking by sure degrees into beggary and want.—I again repeat to you that this is not an exaggerated acct.; that it is an alarming one I do not deny, and confess to you that I feel more real distress on acct. of the prest. appearances of things than I have done at any one time since the commencement of the dispute—but it is time to bid you once more adieu.—Providence has heretofore taken me up when all other means and hope seemed to be departing from me in this.”—George Washington, (W. C. Ford, ed., *Writings*, v. 7, pp. 297-303).—“The first Continental Congress enjoyed and deserved in a remarkable degree the respect and confidence of the country. The second Congress was composed of eminent men, and succeeded, for a time, to the honors and reputation of the first. But when it attempted to pass from discussion to organization, and to direct as well as to frame the machinery of administration, its delays and disputes and errors and contradictions and hesitations excited a well-founded distrust of its executive skill. Conscious of this distrust, it became jealous of its authority; and instead of endeavoring to regain, by correcting its errors, the ground which it had lost by committing them, it grew suspicious and exacting in proportion to the decay of its strength. And while this critical change in its relations to the country was taking place, important changes took place also in the materials of which it was composed,—some of its wisest members being removed by death, or imperative calls to other fields of duty, or by failing of re-election at the regular expiration of their terms of office. Among the first elements with which it was brought into collision were the newly organized governments of the States. The question of State rights, that unsolved problem of our history, be-

gins almost with the beginning of the war. How abundant and active the materials of disunion were, and how difficult it was even for leading men to rise above them might be proved by numerous passages in the letters of Washington and Greene, if it were not still more evident from the conduct of the local legislatures. How far this spirit might have been counteracted or controlled if the policy of the Congress had been that policy of prompt decision and energetic action which, commanding respect at all times, commands in times of general danger general and implicit obedience, it is impossible to say."—G. W. Greene, *Life of Nathanael Greene*, v. 1, bk. 2, ch. 18.—"Congress too often fell to the level of a wrangling body of mediocre men. After the first eight years the ability that might have given it dignity was largely employed in the army, on diplomatic missions, or in the establishment and administration of the new State Governments. The particularism of the time is revealed in the belief that a man's first allegiance was to his State; to construct a constitution for Massachusetts was thought to be a greater service than to draft the Articles of Confederation; to be Governor of Virginia a higher honor than to be President of Congress. The political wisdom of the decade is therefore chiefly embodied in the first state constitutions and the legislation of the new State Governments. . . . The erection of stable State Governments greatly diminished the power and prestige of federal authority. Insensibly the Congress and the Continental army found themselves dependent upon thirteen sovereign masters. The feebleness with which the war was supported sometimes strikes one as incredible; but the amazing difficulty of maintaining an army of ten thousand troops for the achievement of independence, in the very colonies which had raised twenty-five thousand for the conquest of Canada was due less to the lack of resources, or to indifference to the result, than to the uncertain authority of Congress, the republican fear of military power, and the jealous provincialism which had everywhere been greatly accentuated by the establishment of the new state constitutions. Washington's army naturally looked with contempt upon a Government that could not feed or clothe its own soldiers. Congress, jealous of its authority for the very reason that it had none, criticized the army in defeat and feared it in victory. The State Governments, refusing to conform to the recommendations of Congress, alternately complained of its weakness and denounced it for usurping unwarranted power. Each State wished to maintain control of its own troops, and was offended, if, in the Continental forces, its many military experts were not all major-generals. The very colony which gave little support to the army when war raged in another province, cried aloud for protection when the enemy crossed its own sacred boundaries; and, with perhaps one-eighth of its proper quota of men at the front, with its requisitions in taxes unpaid, wished to know whether it was because of incompetence or timidity that General Washington failed to win victories."—C. L. Becker, *Beginnings of the American people*, pp. 262-264.

1778-1779.—Clark's conquest of the Northwest for Virginia, and its annexation to the district of Kentucky.—"In 1770, while the States were wrangling over their Western lands, a little band of valiant backwoodsmen won a victory which gave substance to their claims and made their sessions something more than waste paper. Throughout the war the frontier communities were

most loyal supporters of the Revolution. Their expert riflemen, organized in companies, of which that of Daniel Morgan is perhaps the most famous, served in the army of Washington, helped Gates to win the battle of Saratoga, and were of indispensable service in driving Clinton out of North Carolina in 1780, and Cornwallis in 1781. The borderers of Pennsylvania and Virginia, and the little settlements at Watauga and Boonesboro, maintained a heroic defense against the Indians, who were paid by General Hamilton, the British commander at Detroit, to wage a war of massacre and pillage on the frontier. Against intermittent Indian raids the backwoodsmen could defend their homes; but so long as the British held Detroit and Vincennes and the Mississippi forts, there could be no peace in the interior, and even if the colonies won independence, it was likely that the Alleghanies would mark the boundary of the new State. Under these circumstances, George Rogers Clark, trapper and expert woodsman and Indian fighter, set himself, with the confident idealism of the frontiersman, to achieve an object which must have seemed to most men no more than a forlorn hope."—C. L. Becker, *Beginnings of the American people*, pp. 265-266.—"Virginia . . . had more western enterprise than any other colony. In 1774 Dunmore's war gave her the 'backlands,' into which her frontiersmen had been for some time pressing. Boone was a Carolinian, but Kentucky was a distinctively Virginia colony. In 1776 the Virginia legislature erected the County of Kentucky, and the next year a Virginia judge dispensed justice at Harrodsburg. Soon the colony was represented in the legislature of the parent state. While thus extending her jurisdiction over the region southwest of the Ohio, the Old Dominion did not forget the language, of [her charter] of 1609, 'up into the land throughout from sea to sea, west and northwest.' George Rogers Clark, a Virginian who had made Kentucky his home, was endowed with something of the general's and statesman's grasp. While floating down the Ohio in 1776, being then 24 years of age, he conceived the conquest of the country beyond the river. . . . Clark says he had since the beginning of the war taken pains to make himself acquainted with the true situation of the Northwestern posts; and in 1777 he sent two young hunters to spy out the country more thoroughly, and especially to ascertain the sentiments of the 'habitants.' On the return of these hunters with an encouraging report, he went to Williamsburg, then the capital of Virginia, where he enlisted Governor Patrick Henry and other leading minds in a secret expedition to the Illinois. Acting under a vaguely worded law, authorizing him to aid 'any expedition against their Western enemies,' Governor Henry gave Clark some vague public instructions, directing him to enlist, in any county of the commonwealth, seven companies of men who should act under his command as a militia, and also private instructions that were much more full and definite. . . . Both the public and private instructions are dated January 2, 1778. The governor also gave the young captain a small supply of money. Clark immediately re-crossed the mountains and began to recruit his command. . . . Overcoming as best he could the difficulties that environed him, he collected his feeble command at the Falls of the Ohio. On June 26, 1778, he began the descent of the river. Leaving the Ohio at Fort Massac, forty miles above its mouth, he began the march to Kaskaskia. This fell into his hands, July 5th, and Cahokia soon after, both

without the loss of a single life. Clark found few Englishmen in these villages, and the French, who were weary of British rule, he had little difficulty in attaching to the American interest. Vincennes, soon after, surrendered to a mere proclamation, when there was not an American soldier within one hundred miles of the place. . . . Clark prevailed upon 100 men to re-enlist for eight months; he then filled up his companies with recruits from the villages, and sent an urgent call to Virginia for re-enforcements. The salutary influence of the invasion upon the Indians was felt at once; it began to spread among the nations even to the border of the lakes'; and in five weeks Clark settled a peace with ten or twelve different tribes. . . . And now Clark began really to feel the difficulties of his situation. Destitute of money, poorly supplied, commanding a small and widely scattered force, he had to meet and circumvent an active enemy who was determined to regain what he had lost. Governor Hamilton [the British governor at Detroit] projected a grand campaign against the French towns that had been captured and the small force that held them. The feeble issue was the capture, in December, 1778, of Vincennes, which was occupied by but two Americans. Clark, who was in the Illinois at the time of this disaster, at once put his little force in motion for the Wabash, knowing, he says, that if he did not take Hamilton, Hamilton would take him; and, February 25, 1779, at the end of a march of 250 miles, that ranks in peril and hardship with Arnold's winter march to Canada, he again captured the town, the fort, the governor, and his whole command. Hamilton was sent to Virginia a prisoner of war, where he was found guilty of treating American prisoners with cruelty, and of offering the Indians premiums for scalps, but none for prisoners." Clark was ambitious to extend his march to Detroit, but could not compass the necessary means. "Detroit lost for a few hundred men," was his pathetic lament as he surrendered an enterprise that lay near his heart. Had he been able to achieve it, he would have won and held the whole Northwest. As it was he won and held the Illinois and the Wabash in the name of Virginia and of the United States. . . . The American Commissioners, in 1782, at Paris, could plead 'uti possidetis' in reference to much of the country beyond the Ohio, for the flag of the Republic, raised over it by George Rogers Clark, had never been lowered. It would not be easy to find in our history a case of an officer accomplishing results that were so great and far-reaching with so small a force. . . . All this time the British were not idle. War-party after war-party was sent against the American border. In 1780 a grand expedition was organized at Detroit and sent to Kentucky under the command of Captain Bird. But it accomplished nothing commensurate with its magnitude and cost. . . . The Northwest had been won by a Virginia army, commanded by a Virginia officer, put in the field at Virginia's expense. Governor Henry had promptly announced the conquest to the Virginia delegates in Congress. . . . But before Patrick Henry wrote this letter, Virginia had welded the last link in her chain of title to the country beyond the Ohio. In October, 1778, her Legislature declared: 'All the citizens of the commonwealth of Virginia, who are actually settlers there, or who shall hereafter be settled, on the west side of the Ohio, shall be included in the district of Kentucky which shall be called Illinois County.' Nor was this all. Soon after, Governor Henry appointed a lieutenant-commandant for the new

county, with full instructions for carrying on the government. The French settlements remained under Virginia jurisdiction until March, 1784."—B. A. Hinsdale, *Old Northwest*, ch. 9.—"It is difficult to overestimate the importance of Clark's conquest. Lord Dunmore's War was one step; it extended Virginia's 'sphere of influence' westward to the Muskingum. But Clark, of his own motion and largely at the expense of his private fortune, chiefly supporting his soldiers on the country and paying them from its plunder, in a series of brilliant achievements captured the Southern key-points of the great Northwest, and held them with military force and his strong personal influence until the treaty of peace with England in 1783. The English peace commissioners at first claimed the Northwest as a part of Canada; but throughout the protracted negotiations Jay and Franklin persisted in demanding the country which Clark had so gallantly won and was still holding. What appears to have had more effect upon the English treaty commissioners than the fact of military occupancy, was Franklin's argument that unless room for growth were given the United States, a permanent peace could not be expected between the two countries—that the tide of emigration westward over the Alleghenies could not be stemmed; that the rough, masterful borderers could not be restrained from intrenching on the English wilderness, and a never-ending frontier fight, disastrous to all concerned, would be inevitable. The situation was admitted. Later, Lord Shelburne, who was chiefly responsible for yielding this point, reinforced his position by maintaining in Parliament that after all the fur-trade of the Northwest was not worth fighting for, and the fur-trade was all that Englishmen wished of that vast area. Nevertheless, Jay and Franklin could have found no footing for their contention, had Clark not been in actual possession of the country. It certainly was a prime factor in the situation."—R. G. Thwaites, *How George Rogers Clark won the Northwest*. pp. 71-72.—See also VIRGINIA: 1770-1797.

1778-1779.—French alliance.—Peril of France.—Doubtful feeling in America.—Spanish mediation with England.—"From the third volume of Doniol's comprehensive work on the 'Participation de la France l'établissement des États Unis,' published in 1888, we are able to learn for the first time the extreme peril of France in 1778-'79. When Vergennes advised the recognition of the independence of the United States, it was on the same grounds that Canning advised the recognition of the independence of the Spanish South American States many years afterwards. The fair distribution of power in the civilized world, which was threatened in the latter period by the Holy Alliance, was threatened in the former period by the assumption of maritime supremacy by Britain. In each the object was to call up a new sovereignty in America, so as to check an undue concentration of sovereignty in Europe. Undoubtedly Vergennes was aided, as Canning was aided, by the enthusiasm felt by men of liberal views for a revolution that was expected to extend the domain of liberalism; but with Vergennes, as with Canning, the object was the establishing of a power abroad which could resist a dangerous aggression at home. GENERALS OF THE AMERICAN REVOLUTION

France acknowledged the independence of the United States, Vergennes had good reason to hold either that Britain would not resent the insult by war, or that she would find that in such a war the odds were against her. A British army had just capitulated at Saratoga. America, so it was reported to Vergennes and so he believed, was unanimous in determining to defend her liberties to the last. In Holland there was a strong party which was expected to force the States-General into a recognition of their sister republic. Spain had already secretly advanced a million of francs to the American commissioners. From Frederick the Great, delighted to see his British relatives, who had not always supported him in his troubles, annoyed by a revolt in their own domain, came words very encouraging to the American envoys. Catharine II listened with apparent satisfaction to a scheme which would relieve her infant shipping from British oppression. It looked as if, should Britain declare war against France, she would have against her the armies and navies of all continental Europe, aided by the people of her American Colonies in a compact mass. But in a few months there came a great change. The British army under Howe was so largely reinforced as for the immediate present to give it a great superiority over any army Congress could bring against it in open field. . . . It is true that the news in April of the French treaty revived the energies of the revolutionists; but this treaty had its drawbacks, as the old dislike of France, in part inherited from England, in part the product of the Seven-years war, intensified the yearning for the mother country which in many hearts still remained. French officers complained that on their first arrival in New England they were received with sullen aversion by the people, though welcomed by the revolutionary leaders. The French army and navy, for the first year in which they were engaged in America, did no good to the American cause; and so great was the popular irritation at their inactivity, so strong, it was said, continued to be the old race attachment to England, that intelligent French observers in America advised Vergennes that he must move warily, for at any moment America might make a separate peace with Britain and then join the British forces against France. No doubt these reports, so far as they pronounced this to be the drift of a large minority in Congress, were unfounded in fact. They were nevertheless communicated under high sanction to Vergennes, and produced in his mind the liveliest anxiety. . . . English influence had for a time regained its ascendancy in Holland. Prussia and Russia, having tasted the delights of neutral commerce, let it be plainly understood that they would not abandon a neutrality so profitable for the risks of belligerency. And Spain had taken alarm and was backing out not merely from the family compact, but from her recent promise to aid the insurgents. Aiding the insurgents, her minister declared, would be cutting her own throat, and no aid to the insurgents should be given except on a very heavy equivalent. If France was to meet the shock of the British navy alone she might be swept from the seas, and, aside from this danger, her finances were in such a ruinous condition that her bankruptcy was imminent. One of two courses must be adopted, not only to save France but to save the independence of the United States and the consequent equipoise of power for which France has gone to war. There must be either a general peace, which would include the independence of the United States, or there must be war, with

Spain joining the allies. . . . It was in this condition of affairs that the position of Spain in 1778-'79 became of commanding importance. She offered herself as mediator between the allies and their common enemy, and through her the terms of pacification were discussed. In the negotiations, protracted and on both sides largely insincere, between Spain and Britain relative to the proposed pacification, the winter of 1778-'79 was consumed."—F. Wharton, *Introduction to Revolutionary diplomatic correspondence of the United States*, v. 1, ch. 5, sect. 86.

1778-1779.—War carried into the South.—Savannah taken and Georgia subdued.—"After Burgoyne's defeat no important offensive operations were undertaken by the British in the northern states, though the coast towns suffered from naval and military raids. They kept their grip on the city of New York and the lower Hudson, but the significant movements of the later years were in the South. Here the British relied largely on the loyalists, who were especially strong in the Carolinas and Georgia, and hoped with their help to detach those states from the Union."—E. B. Greene, *Foundation of American nationality*, p. 493.—Towards the end of November, 1778, a "body of troops, under Lieutenant-colonel Campbell, sailed [from New York] for Georgia in the squadron of Commodore Hyde Parker; the British cabinet having determined to carry the war into the Southern States. At the same time General Prevost, who commanded in Florida, was ordered by Sir Henry Clinton to march to the banks of the Savannah River, and attack Georgia in flank, while the expedition under Campbell should attack it in front on the seaboard. . . . The squadron of Commodore Hyde Parker anchored in the Savannah River towards the end of December. An American force of about 600 regulars, and a few militia under General Robert Howe [a brother of the former commander-in-chief], were encamped near the town, being the remnant of an army with which that officer had invaded Florida, in the preceding summer, but had been obliged to evacuate it by a mortal malady which desolated his camp. Lieutenant-colonel Campbell landed his troops on the 29th of December, about three miles below the town. The whole country bordering the river is a deep morass, cut up by creeks, and only to be traversed by causeways. Over one of these, 600 yards in length, with a ditch on each side, Colonel Campbell advanced, putting to flight a small party stationed to guard it. General Howe had posted his little army on the main road, with the river on his left and a morass in front. A negro gave Campbell information of a path leading through the morass, by which troops might get unobserved to the rear of the Americans. Sir James Baird was detached with the light infantry by this path, while Colonel Campbell advanced in front. The Americans, thus suddenly attacked in front and rear, were completely routed; upwards of 100 were either killed on the spot, or perished in the morass; 38 officers and 415 privates were taken prisoners, the rest retreated up the Savannah River and crossed into South Carolina. Savannah, the capital of Georgia, was taken possession of by the victors, with cannon, military stores and provisions; their loss was only seven killed and nineteen wounded. Colonel Campbell conducted himself with great moderation; protecting the persons and property of the inhabitants, and proclaiming security and favor to all that should return to their allegiance. Numbers in consequence flocked to the British standard: the lower part of Georgia

was considered as subdued, and posts were established by the British to maintain possession. While Colonel Campbell had thus invaded Georgia in front, General Prevost "entered the State from Florida, "took Sunbury, the only remaining fort of importance, and marched to Savannah, where he assumed the general command, detaching Colonel Campbell against Augusta. By the middle of January (1779) all Georgia was reduced to submission. A more experienced American general than Howe had by this time arrived to take command of the Southern Department, Major-general Lincoln, who had gained such reputation in the campaign against Burgoyne, and whose appointment to this station had been solicited by the delegates from South Carolina and Georgia. He had received his orders from Washington in the beginning of October."—W. Irving, *Life of Washington*, v. 3, ch. 37.

1778-1779.—Washington guarding the Hudson.—Storming of Stony Point.—Marauding warfare of British.—"After Clinton slipped away from Monmouth and sought refuge in New York, Washington took post at convenient points and watched the movements of the enemy. In this way the summer passed. As always, Washington's first object was to guard the Hudson, and while he held this vital point firmly, he waited, ready to strike elsewhere if necessary. It looked for a time as if the British intended to descend on Boston, seize the town, and destroy the French fleet, which had gone there to refit. Such was the opinion of Gates, then commanding in that department, and as Washington inclined to the same belief, the fear of this event gave him many anxious moments. He even moved his troops so as to be in readiness to march eastward at short notice; but he gradually became convinced that the enemy had no such plan. . . . The main army, therefore, remained quiet, and when the autumn had passed went into winter-quarters in well-posted detachments about New York. In December Clinton made an ineffectual raid [in New Jersey], and then all was peaceful again, and Washington was able to go to Philadelphia and struggle with Congress, leaving his army more comfortable and secure than they had been in any previous winter. . . . He now hoped and believed that the moment would come when, by uniting his army with the French, he should be able to strike the decisive blow. Until that time came, however, he knew that he could do nothing on a great scale, and he felt that meantime the British, abandoning practically the eastern and middle States, would make one last desperate struggle for victory, and would make it in the south. Long before any one else, he appreciated this fact, and saw a peril looming large in that region. . . . All this, however, did not change his own plans one jot. He believed that the south must work out its own salvation, as New York and New England had done with Burgoyne, and he felt sure that in the end it would be successful. But he would not go south, nor take his army there. . . . The British might overrun the north or invade the south, but he would stay where he was, with his grip upon New York and the Hudson River. The tide of invasion might ebb and flow in this region or that, but the British were doomed if they could not divide the eastern colonies from the others. When the appointed hour came, he was ready to abandon everything and strike the final and fatal blow; but until then he waited and

stood fast with his army, holding the great river in his grasp. He felt much more anxiety about the south than he had felt about the north, and expected Congress to consult him as to a commander, having made up his mind that Greene was the man to send. But Congress still believed in Gates, who had been making trouble for Washington all winter; and so Gates was sent, and Congress in due time got their lesson, and found once more that Washington understood men better than they did. In the north the winter was comparatively uneventful. The spring passed, and in June Clinton came out and took possession of Stony Point and Verplanck's Point, and began to fortify them. It looked a little as if Clinton might intend to get control of the Hudson by slow approaches, fortifying, and then advancing until he reached West Point. With this in mind, Washington at once determined to check the British by striking sharply at one of their new posts. Having made up his mind, he sent for Wayne and asked him if he would storm Stony Point. Tradition says that Wayne replied, 'I will storm hell, if you will plan it.' A true tradition, probably, in keeping with Wayne's character, and pleasant to us to-day as showing with a vivid gleam of rough human speech the utter confidence of the army in their leader, that confidence which only a great soldier can inspire. So Washington planned, and Wayne stormed [July 15, 1779], and Stony Point fell. It was a gallant and brilliant feat of arms, one of the most brilliant of the war. Over 500 prisoners were taken, the guns were carried off, and the works destroyed, leaving the British to begin afresh with a good deal of increased caution and respect. Not long after, Harry Lee stormed Paulus Hook with equal success, and the British were checked and arrested, if they intended any extensive movement. On the frontier, Sullivan, after some delays, did his work effectively. . . . In these various ways Clinton's circle of activity was steadily narrowed, but it may be doubted whether he had any coherent plan. The principal occupation of the British was to send out marauding expeditions and cut off outlying parties. Tryon burned and pillaged in Connecticut [at New Haven, Fairfield and Norwalk], Matthews in Virginia [at Norfolk, Portsmouth and elsewhere], and others on a smaller scale elsewhere in New Jersey and New York. . . . It was enough for Washington to hold fast to the great objects he had in view, to check Clinton and circumscribe his movements. Steadfastly he did this through the summer and winter of 1779."—H. C. Lodge, *George Washington*, v. 1, ch. 8.—See also WEST POINT.

1778-1781.—Spanish campaign in the Mississippi valley.—Ultimate unifying effect of Northwest conquest.—"American activities in the Mississippi valley naturally brought out the complicated problem of relations with Spain. In 1778 the Spaniards held the west bank of the Mississippi from St. Louis to New Orleans. East of New Orleans along the Gulf were the British provinces of West and East Florida, acquired from France and Spain during the last war. Resenting this British occupation of the Gulf coast, the Spaniards were willing to help the rebellious colonies by shipping military supplies up the Mississippi, from

which they could go on up the Ohio as far as Fort Pitt."—E. B. Greene, *Foundation of American nationality*, pp. 499-500.—"Spain still had a covetous eye upon the domain between the Alleghanies and the 'Father of Waters.' When Spain was at last induced by France (1779) to unite in the war against England, she was allured by the hope of regaining Gibraltar and acquiring the region drained by the eastern branches of the Mississippi. She . . . [refused] to acknowledge America's independence, or make a treaty with her except on the condition of her yielding to Spain the possession of the east bank of the Mississippi and the exclusive navigation of the river. Upon declaring war against England, in May, 1779, Spain authorized her American governors to seize Natchez and the other British posts on the Mississippi. She did not mean to aid America in gaining the western country, but to wrest it from Great Britain for herself. Lord George Germaine foresaw the Spanish plan, and sent orders to General Haldimand, in Canada, to anticipate the hostilities of Spain by sending a force to reduce the Spanish posts on the Mississippi and to attack New Orleans. Thus a line of communication might be maintained between Canada and the British military posts in Florida. General Campbell, who was stationed at Pensacola, was to come with his fleet and army up the Mississippi to Natchez, there to meet the Indian bands sent from the north, and with them drive the Spaniards from the lower Mississippi. Clark meanwhile was to be 'amused' by an invasion of Kentucky. But for the energy and promptness of Galvez, the Spanish governor of New Orleans, success might have crowned this last concerted effort of the British to retain the West. Taking the offensive as soon as he learned that Spain and England were at war, he prepared to capture the British Mississippi posts. One after another he took (September, 1779) the forts at Manchaca, Baton Rouge, and Natchez, and then, in the spring of 1780, he took Mobile and Pensacola. He thus kept General Campbell too busy to give any aid to the party coming down from the north, and that expedition went to pieces before St. Louis, because of the unwillingness of the savages to attack a place that had been forewarned. The other force that was to create the diversion in Kentucky captured a few stations, and then retreated to Detroit just in time to escape Clark, who was in pursuit with a force which he had raised in Kentucky. Spain had rendered the Americans a great service by enabling Clark to hold what he had already conquered from the British but she acted with no friendly intent, as her later movements were to show. Though she did not dare, while an ally of France, to attack the territory in Kentucky and Tennessee, where the American settlers were actually in possession, yet she did send an expedition, January, 1781, to capture St. Joseph, a Michigan fort in British hands. The daring exploit was successful, and upon the temporary possession of this single post Spain was suspected of trying to build up a claim to the western territory north as well as south of the Ohio. The territory which Clark and his ill-disposed Spanish allies were conquering for the United States had both a beneficent and a malign effect upon the American union. The kindlier effect was the final one. At first, before the possession of the Northwest was even assured, there were bitter quarrels over its ownership. . . . [But after the cession of their western claims by the states] the members of the confederation felt a stronger bond of union because of their common

interest in common property. Unity in the revolutionary period had been greatly aided by the previous colonial co-operation in regulating the frontier, and now to common interest was added common ownership."—C. H. Van Tyne, *American Revolution, 1776-1783*, v. 9, pp. 284-288.

Also in: F. Edler, *Dutch Republic and the American Revolution*.

1778-1782.—*European complications*.—"For some time it had been plain that the future of America was in the hands of foreign diplomats, and must be secured in European courts rather than upon American battle-fields. Vergennes had no sooner made his treaty with America, in the spring of 1778, than he again set himself to secure the long-sought alliance with Spain, whose naval aid he felt to be absolutely essential to a successful issue of a war with England. . . . The one great temptation for Spain was the hope of regaining Gibraltar, and she first sought a cession of that from England as the price of peace. When that manœuvre failed, the Spanish minister, who had been greatly angered by France's treaty with America, turned again to Vergennes. . . . The wished-for treaty between France and Spain was concluded April 12, 1779, with the aim of invading England, and recovering Minorca and the Floridas. . . . Though America's friends were not increased by the alliance between France and Spain, yet England's enemies were multiplied and new dangers were looming up. . . . At the opening of the American Revolution, no authority on maritime law demanded more protection to neutral ships than that provided by the mediæval sea code, the *Consolato del Mare*, which recognized a belligerent's right to seize his enemy's goods but not the neutral vessel upon which they were carried. England as a great naval power was disposed to hold to the established rule; but since she could damage nations which had many merchantmen and few war-ships more than they could damage her, they now began to assert that neutral ships protected all goods on board—"free ships make free goods," as the phrase ran. The humanitarian spirit of the time accorded with this principle; the interests of peace were recognized as paramount and permanent; the area and influence of war must be limited. The benevolent despots Frederick the Great and Catharine II. became interested in this as well as the commercial phase of the issue. Since England was not only desirous but hopeful of an alliance with Russia, the attitude of Catharine had great weight. In 1781, England went so far as to offer Catharine the island of Minorca, which with Gibraltar had made Great Britain mistress of the Mediterranean. Against this consummation worked Frederick the Great who had been deserted by England in 1761, and who had never forgiven her 'duplicity.' Though he hated England he did not wish to become her open enemy. For the Americans he had no sentimental friendship. He was indifferent to their independence. He permitted them to buy arms in Prussia, but they only made a bargain greatly to their loss. He refused to allow the German mercenaries to cross his dominions, but not from any sympathy with America. When Lee sought to open Prussian ports to American vessels, Frederick merely instructed his minister to put Lee off 'with compliments.' A little good advice and information were drawn from the king, but his greatest aid was indirect and due to coincident interests. This came about through his relations with France and Russia. The European situation was such that he needed French friendship. He encouraged France's desire to hum-

ble England by assuring her of his neutrality. In Russia he opposed the English, and his friendship with Count Panin, to whom Catharine largely left her foreign affairs, gave him great influence. He as much as any one brought Catharine to head an armed neutrality, which was formed in 1780 to enforce the doctrine that free ships make free goods. . . . When Catharine proclaimed her new maritime code (March 8, 1780) Frederick influenced France and Spain to acquiesce. Denmark and Sweden arranged with Russia for mutual protection of their commerce and their agreement was known as the 'Armed Neutrality.' One after another the Netherlands, Prussia, the German Empire, and three minor powers entered the league, which the United States also accepted. Though England's navy was stronger than the combined navies, yet her desire to conciliate Russia made her wary of giving offence. . . . The quarrel began in treaty obligations violated by both powers, Holland refusing to aid England—as she was bound by treaty—in her war with France and Spain, and England refusing to allow Holland's commerce with the enemy, as had been provided by the treaty of 1674. This ill feeling was aggravated by the conduct of Holland in sheltering Paul Jones. . . . England was now at war with America and the three greatest naval powers, after herself, in the world. . . . As the number of England's enemies increased, so much of her military power was locked up in various parts of the world that the efficiency of the military force in America was greatly impaired. It was well for the cause of independence that this was true, for, besides the general dejection and apathy of the people, the American army was itself becoming mutinous. . . . The surrender of Cornwallis came at the right time to produce a great political effect in England. The war had assumed such tremendous proportions that accumulated disaster seemed to threaten the ruin of Great Britain. From India came news of Hyder Ali's temporary successes, and of the presence of a strong French armament which demanded that England yield every claim except to Bengal. That Warren Hastings and Sir Eyre Coote would yet save the British Empire there, the politicians could not foresee. Spain had already driven the British forces from Florida, and in the spring of 1782 Minorca fell before her repeated assaults and Gibraltar was fearfully beset. De Grasse's successes during the winter in the West Indies left only Jamaica, Barbadoes, and Antigua in British hands. St. Eustatius, too, was recaptured, and it was not until the middle of April that Rodney regained England's naval supremacy by a famous victory near Marie-Galante. England had not a friend in Europe, and was beset at home by violent agitation in Ireland, to which she was obliged to yield an independent Irish Parliament. Rodney's victory and the successful repulsion of the Spaniards from Gibraltar, in the summer of 1782, came too late to save the North ministry. North was thrown into despair at the news of Yorktown, but the king still refused to acknowledge American independence."—C. H. Van Tyne, *American Revolution*, pp. 309-311, 313-316, 319, 321, 328.—See also ARMED NEUTRALITY; ENGLAND: 1780-1782; GERMANY: 1761-1779.

1779 (August-September).—General Sullivan's expedition against the Senecas.—For the purpose of putting an end to the destructive and bloody incursions of Tories and Indians from western

New York, directed against the border settlements of that state and Pennsylvania—as at Cherry Valley and Wyoming—General Washington, in the early part of the year 1779, determined upon a measure for carrying the war into the home of the invaders. "The command was entrusted to Gen. Sullivan. The army organized for the expedition was in three divisions. That part of it under the immediate command of Gen. Sullivan, coming from Pennsylvania, ascended the Susquehannah to Tioga Point. Another division under the command of Gen. James Clinton, constructing batteaux at Schenectady, ascended the Mohawk and rendezvoused at Canajoharrie, opened a road to the head of Otsego Lake, and from thence proceeded in a formidable fleet of over 200 batteaux, to Tioga Point, forming a junction with the force under Gen. Sullivan, on the 22d of August. Previous to the arrival of Gen. Clinton, Sullivan had sent forward a detachment which fell in with a scouting party of Indians, and a skirmish ensued. The combined forces amounted to 5,000 men. The expedition had been so long preparing, and upon the march, that the enemy were well apprized of all that was going on. Their plan of defence contemplated a decisive engagement upon the Chemung river. For this purpose the Rangers and regular British troops, under the command of Col. John Butler, Cols. Guy and Sir John Johnson, Major Walter N. Butler and Capt. McDonald, and the Indians under Brant, had concentrated their forces upon a bend of the river, near the present village of Elmira [then called Newtown], where they had thrown up a long breast work of logs. The united forces of the British allies, as computed by Gen. Sullivan, was about 1,500. Having ascertained their position, Gen. Sullivan marched in full force and attacked them in the forenoon of the 29th of August. . . . The battle had been waged about two hours, when the British and Indians perceiving their forces inadequate, and that a maneuver to surround them was likely to be successful, broke and fled in great disorder. 'This,' says John Salmon, of Livingston county, . . . 'was the only regular stand made by the Indians. In their retreat they were pursued by our men to the Narrows, where they were attacked and killed in great numbers.' The details of all that transpired in this campaign are before the public in so many forms, that their repetition here is unnecessary. The route of the army was via 'French Catherine's Town,' head of Seneca Lake, down the east shore of the Lake to the Indian village of Kanadesaga (Old Castle), and from thence to Canandaigua, Honeoye, head of Conesus Lake, to Groveland. The villages destroyed (with the apple trees and growing crops of the Indians,) were at Catherinestown, Kendai, or 'Apple Town' on the east side of the Lake, eleven miles from its foot, Kanadesaga, Honeoye, Conesus, Canascraga, Little Beard's Town, Big Tree, Canawagus, and on the return of the army, Scawyace, a village between the Cayuga and Seneca Lakes, and several other Cayuga villages. . . . The march of Sullivan, the devastations committed by his army, would at this distant period seem like Vandalism, in the absence of the consideration that he was acting under strict orders; and that those orders were approved, if not dictated, by Washington. The campaign was a matter of necessity; to be effectual, it was not only necessary that its acts should be retaliatory and retributive, but that the haunts, the retreats, of a foe so ruthless, must be broken up. The object was to destroy all the means of subsistence of the Senecas, desolate their homes,

prevent their return to them, and if possible, induce their permanent retreat beyond the Niagara River. The imprudence, the want of sagacity, which Col. Stone has imputed to Gen. Sullivan in alarming every village he approached by the sound of his cannon, the author conceives a misapprehension of his motives. Stealthy, quiet approaches, would have found as victims, in every village, the old men, the women and children—the warriors away, banded with their British allies. Humanity dictated the forewarning, that those he did not come to war against could have time to flee. . . . The march of Gen. Sullivan, after leaving the Chemung, was bloodless, except in a small degree—just as it should have been, if he could not make victims of those he was sent to punish. The third expedition of this campaign, which has generally been lost sight of by historians, was that of Gen. Broadhead. He left Fort Pitt in August with 600 men, and destroyed several Mingo and Muncey tribes living on the Allegany, French Creek, and other tributaries of the Ohio. The heavy artillery that Gen. Sullivan brought as far as Newton, would indicate that Niagara was originally the destination. There the General and his officers, seeing how long it had taken to reach that point, in all probability determined that too much of the season had been wasted, to allow of executing their tasks in the Indian country, making their roads and moving the army and all its appointments to Niagara before the setting in of winter. Besides, before the army had reached the valley of the Chemung, the fact was ascertained that there would be a failure in a contemplated junction with the army under Gen. Broadhead. After the expedition of Gen. Sullivan, the Indians never had any considerable permanent re-occupation of their villages east of the Genesee river. They settled down after a brief flight, in their villages on the west side of the river in the neighborhood of Genesee, Mt. Morris and Avon, and at Gardeau, Canadea, Tonawanda, Tuscarora, Buffalo Creek, Cattaraugus and Allegany."—O. Turner, *History of the pioneer settlement of Phelps and Gorham's purchase*, pt. 1, ch. 4.—"The Iroquois tribes were so far advanced in the agricultural stage of development that they were much more dependent upon their crops than upon the chase for subsistence; and they had besides learned some of the arts of civilization from their white neighbours. Their long wigwams were beginning to give place to framed houses, with chimneys; their extensive fields were planted with corn and beans; and their orchards yielded apples, pears, and peaches in immense profusion. All this prosperity was now brought to an end. . . . The region thus devastated had come to be the most important domain of the [Iroquois] Confederacy, which never recovered from the blow thus inflicted. The winter of 1779-80 was one of the coldest ever known in America. . . . During this extreme season the houseless Cayugas and Senecas were overtaken by famine and pestilence, and the diminution in their numbers was never afterwards made good. The stronghold at Niagara, however, was not wrested from Thayendanagea. That part of Sullivan's expedition was a failure. From increasing sickness among the soldiers and want of proper food, he deemed it impracticable to take his large force beyond the Genesee river, and accordingly he turned back toward the seaboard, arriving in New Jersey at the end of October, after a total march of more than seven hundred miles."—J. Fiske, *American Revolution*, v. 2, pp. 91-93.—"In his general orders of the 17th of October, General

Washington announced to the army the result of the expedition, as follows: 'The Commander-in-chief has now the pleasure of congratulating the army on the complete and full success of Maj. Gen. Sullivan, and the troops under his command, against the Seneca and other tribes of the Six Nations, as a just and necessary punishment for their wanton depredations, their unparalleled and innumerable cruelties, their deafness to all remonstrances and entreaty, and their perseverance in the most horrid acts of barbarity. Forty of their towns have been reduced to ashes, some of them large and commodious; that of the Genesee alone containing one hundred and twenty-eight houses. Their crops of corn have been entirely destroyed, which, by estimation, it is said, would have provided 160,000 bushels, besides large quantities of vegetables of various kinds. Their whole country has been overrun and laid waste, and they themselves compelled to place their security in a precipitate flight to the British fortress at Niagara. And the whole of this has been done with the loss of less than forty men on our part, including the killed, wounded, captured, and those who died natural deaths. The troops employed in this expedition, both officers and men, throughout the whole of it, and in the action they had with the enemy, manifested a patience, perseverance and valor that do them the highest honor. In the course of it, when there still remained a large extent of the enemy's country to be prostrated, it became necessary to lessen the issues of provisions to half the usual allowance. In this the troops acquiesced with a most general and cheerful concurrence, being fully determined to surmount every obstacle, and to prosecute the enterprise to a complete and successful issue. Maj. Gen. Sullivan, for his great perseverance and activity, for his order of march and attack, and the whole of his dispositions; the Brigadiers and officers of all ranks, and the whole of the soldiers engaged in the expedition, merit and have the Commander-in-chief's warmest acknowledgements for their important services upon this occasion.' On the 9th of November, 1779, General Sullivan wrote to the President of Congress: 'It is with the deepest regret I find myself compelled to request from Congress liberty to retire from the army. My health is so much impaired, . . . that I have not the smallest hope of a perfect recovery.' . . . General Sullivan, in transmitting to Congress an official account of his operations, reported that . . . 'Every creek and river has been traced, and the whole country explored in search of Indian settlements, and I am well persuaded that, except one town situated near the Alleghany, about fifty-eight miles from Chinesee, there is not a single town left in the country of the Five Nations. . . . I flatter myself that the orders with which I was entrusted are fully executed, as we have not left a single settlement or field of corn in the country of the Five Nations, or is there even the appearance of an Indian on this side of Niagara. Messengers and small parties have been constantly passing, and some imprudent soldiers who straggled from the army mistook the route and went back almost to Chinesee without discovering even the track of an Indian.' Sullivan was mistaken in regard to the destruction of all the Indian towns as there were several small villages undiscovered by his troops. . . . While Sullivan fully accomplished the task given him to perform, the results expected were not fully realized. The power of the savages had been weakened, but they were not entirely subdued until years afterward, when

'Mad Anthony Wayne' defeated the confederated bands of the Indians of the west, in 1794, a measure which thoroughly humbled the Indians of Western New York, and gave to the settlers peace and security. Sullivan's expedition was fruitful of great results in other ways, however, than the temporary subjugation of the Indians. The fertile and beautiful country now forming the western part of the State of New York, was then an unknown wilderness, and its value and attractiveness were first made known to the white people through this expedition. . . . Soon after the close of the war the tide of emigration commenced to flow westward. From the New England States, Pennsylvania and New Jersey, came hardy pioneers, led on by the glowing accounts they had heard of the new country, and the vicinity of the inland lakes, the borders of the flowing streams, the forest-covered hills became the dwelling places of a rapidly growing band of settlers. The road which Sullivan had opened from the Susquebanna valley was followed by many of the settlers, even to the banks of the Genesee. Thus many of those who had shared the perils and privations of Sullivan's expedition against the Indian tribes of Western New York, afterward became settlers of the land they had aided to conquer."—A. T. Norton, *History of Sullivan's campaign against the Iroquois*, ch. 11.

1779 (September).—John Paul Jones's great sea-fight.—*Bon Homme Richard* and the *Serapis*.—"The enforcement of the new code [formulated by the League of Armed Neutrality] lessened England's power to damage her enemies, chiefly because of the protection afforded to the great carrying trade of the Netherlands, but England soon found a way to obviate that evil. If she could not attack the Dutch while they were neutral, she would make them vulnerable as open enemies. It would not do to declare war upon them because they had entered the league of the Armed Neutrality, but a well-developed quarrel already existed, so that a very slight incident made an excuse for war. The quarrel began in treaty obligations violated by both powers, Holland refusing to aid England—as she was bound by treaty—in her war with France and Spain, and England refusing to allow Holland's commerce with the enemy, as had been provided by the treaty of 1674. This ill feeling was aggravated by the conduct of Holland in sheltering Paul Jones [a Scot, in the service of the United States], the most daring and energetic of America's seamen. Jones had been the first to raise an American flag on an American man-of-war. In 1777 he was given command of the ship *Ranger*, and in the spring of 1778, off the Irish coast, took the *Drake*, a British man-of-war, making also . . . [an] attack upon the town of Whitehaven on the English coast. He took his capture into a French port, and began a most tedious negotiation with the French government to secure aid that would place under his command a squadron strong enough to do the enemy some serious damage."—C. H. Van Tyne, *American Revolution, 1776-1783*, pp. 316-317.—At last, in 1779, he was given five vessels; a French ship (his

flag ship) which he named the *Bon Homme Richard* "of 40 guns, many of them unserviceable; the *Alliance* of 36 guns, both American ships-of-war; the *Pallas*, a French frigate of 32; and the *Vengeance*, a French brig of 12 guns. They ranged the western coast of Ireland, turned Scotland, and, cruising off Flamborough Head, descried the British merchant fleet from the Baltic, under the convoy of the *Serapis* of 44 guns and the *Countess* of Scarborough of 20 guns. An hour after sunset, on the 23d of September, the *Serapis*, having a great superiority in strength, engaged the *Poor Richard*. Paul Jones, after suffering exceedingly in a contest of an hour and a half within musket-shot, bore down upon his adversary, whose anchor he hooked to his own quarter. The muzzles of their guns touched each other's sides. Jones could use only three nine-pounders beside muskets from the round-tops, but combustible matters were thrown into every part of the *Serapis*, which was on fire no less than ten or twelve times. There were moments when both ships were on fire. After a two-hours' conflict in the first watch of the night, the *Serapis* struck its flag. Jones raised his pendant on the captured frigate, and the next day had but time to transfer to it his wounded men and his crew before the *Poor Richard* went down. The French frigate engaged and captured the *Countess* of Scarborough. The *Alliance*, which from a distance had raked the *Serapis* during the action, not without injuring the *Poor Richard*, had not a man injured. On the fourth of October the squadron entered the Texel with its prizes. The British ambassador, of himself and again under instructions, reclaimed the captured British ships and their crews, 'who had been taken by the pirate Paul Jones of Scotland, a rebel and a traitor.' 'They,' he insisted, 'are to be treated as pirates whose letters of marque have not emanated from a sovereign power.' The grand pensionary would not apply the name of pirate to officers bearing the commissions of congress. In spite of the stadholder, the squadron enjoyed the protection of a neutral port."—G. Bancroft, *History of the United States* (Author's last revision), v. 5, p. 350.

1779 (September-October).—Unsuccessful attack on Savannah by Americans and French.—"The state of affairs in the South had called so imperatively for the attention of Congress that a portion of Washington's army had been detached to join General Lincoln. Washington solicited more powerful aid from D'Estaing, who then commanded in the West Indies an army sufficiently powerful to crush entirely the English in Georgia. The French admiral received this application just after having fought a hard battle against Commodore Byron without any decisive result, yet such as obliged the latter to go into port to refit. The former being thus for a time master of the sea, determined at once to comply with the request, took on board 6,000 land-troops, and steered direct for Savannah, where, arriving quite unexpectedly, he captured by surprise a fifty-gun ship and three frigates. Prevost, too, was very unprepared, having his force broken up into detachments distributed along the frontier; but these being instantly ordered in, obeyed with such promptitude that, before the French had landed and formed a

junction with Lincoln, nearly all had arrived. On the 16th of September, D'Estaing appeared before the place and summoned it to surrender. Prevost, under pretext of negotiation, obtained a suspension for twenty-four hours, during which Colonel Maitland entered with the last and largest detachment, eluding the Americans by a route supposed impassable; and the full determination to resist was then announced. . . . A regular siege was now commenced. Heavy ordnance and stores were brought up from the fleet, and the besieging army broke ground. . . . Several batteries were opened on the besieged, which played almost incessantly upon their works, but made no impression on them. The situation of D'Estaing was becoming critical. More time had already been consumed on the coast of Georgia than he had supposed would be necessary for the destruction of the British force in that State. He became uneasy for the possessions of France in the West Indies, and apprehensive for the safety of the ships under his command. The naval officers remonstrated strenuously against longer exposing his fleet on an insecure coast, at a tempestuous season of the year, and urged the danger of being overtaken by a British squadron when broken and scattered by a storm." D'Estaing accordingly decided that he must either raise the siege or attempt the enemy's works by storm. "The latter part of the alternative was adopted. . . . On the morning of the 9th of October, before day, . . . about 3,500 French and 1,000 Americans, of whom between 600 and 700 were regulars and the residue militia of Charleston, advanced in three columns, led by D'Estaing and Lincoln, aided by the principal officers of both nations, and made a furious assault on the British lines. Their reception was warmer than had been expected. . . . For about fifty minutes the contest was extremely obstinate." Then the assailants gave way and a retreat was ordered. "In this unsuccessful attempt the French lost in killed and wounded about 700 men. Among the latter were the Count D'Estaing himself, Major General De Fontanges, and several other officers of distinction. The continental troops lost 234 men, and the Charleston militia, who, though associated with them in danger, were more fortunate, had one captain killed and six privates wounded. Count Pulaski was among the slain. The loss of the garrison was astonishingly small. In killed and wounded it amounted only to 55. So great was the advantage of the cover afforded by their works. . . . [Count D'Estaing now] insisted on raising the siege, and both the French and American armies moved from their ground on the evening of the 18th of October. D'Estaing sailed for the West Indies; and Lincoln recrossed the Savannah at Zubly's Ferry and again encamped in South Carolina."—C. B. Hartley, *Life of General Marion (Heroes and patriots of the South, ch. 11)*.

1780 (January-April).—Gloomy winter at Morristown.—Depreciation to worthlessness of continental currency.—Consequent sufferings of army and country.—"The year 1780 opened upon a famishing camp [at Morristown, New Jersey]. 'For a fortnight past,' writes Washington, on the 8th of January, 'the troops, both officers and men, have been almost perishing with want. Yet,' adds he, feelingly, 'they have borne their sufferings with patience that merits the approbation, and ought to excite the sympathies, of their countrymen.' The severest trials of the Revolution, in fact, were not

in the field, where there were shouts to excite and laurels to be won; but in the squalid wretchedness of ill-provided camps, where there was nothing to cheer and everything to be endured. To suffer was the lot of the revolutionary soldier. A rigorous winter had much to do with the actual distresses of the army, but the root of the evil lay in the derangement of the currency. . . . The commissaries now found it difficult to purchase supplies for the immediate wants of the army, and impossible to provide any stores in advance. They were left destitute of funds, and the public credit was prostrated by the accumulating debts suffered to remain uncanceled. The changes which had taken place in the commissary department added to this confusion. The commissary-general, instead of receiving, as heretofore, a commission on expenditures, was to have a fixed salary in paper currency, and his deputies were to be compensated in like manner, without the usual allowance of rations and forage. No competent agents could be procured on such terms. . . . In the present emergency Washington was reluctantly compelled, by the distresses of the army, to call upon the counties of the State for supplies of grain and cattle, proportioned to their respective abilities. . . . Wherever a compliance with this call was refused, the articles required were to be impressed: it was a painful alternative, yet nothing else could save the army from dissolution or starving. . . . As the winter advanced, the cold increased in severity. It was the most intense ever remembered in the country. The great bay of New York was frozen over. . . . The insular security of the place was at an end. . . . Washington was aware of the opportunity which offered itself for a signal 'coup de main,' but was not in a condition to profit by it."—W. Irving, *Life of Washington, v. 4, ch. 1, 4*.—"There was always food and clothing in the country, but Congress had no money to buy it. Congress had no power to lay taxes, and the colonies, most of which were spending large sums on their own militia, were not disposed to supply the general treasury. The pay of the Continental troops of the general officers, the furnishing of equipments and stores, the support of foreign embassies, were burdens that must be borne, and Congress must find the means. The most successful and the most disastrous resource was the issue of paper-money. When, in June, 1775, it was proposed to meet the general expenses by putting forth two millions in Continental notes, there was but feeble objection. It was the only way of raising money which seemed to cost nobody anything. In the course of a year four millions more followed. Congress, with commendable foresight, called upon each colony to pay in a sum sufficient to retire its proportion of the issue. Nothing was paid, and the printing-press was again put in motion, until January, 1779, fifty millions were issued at a time. In November, 1779, the limit of two hundred millions was reached. In order to float these notes the States passed acts making them a legal tender; but at the same time they were themselves issuing large sums in a similar currency. Counterfeits abounded, but it soon became a matter of little difference whether a bill was good or bad, since the best were worth so little. From the time of the capture of New York by the British in 1776 the notes began to fall. In 1778 the news of the French alliance caused a little rise; but in 1781 the bills fell to a point where a thousand dollars exchanged for one dollar in specie, and a Philadelphia wag made out of the notes a blanket for his dog. The continental currency was

never redeemed, and was consequently a forced tax on those who were least able to pay, since every holder lost by its depreciation while in his

lion specie dollars each year. Of this the Continental bills furnished on an average some eight or ten millions. Another method of raising money

MONEY OF THE COLONIAL PERIOD

1. New York Province half-dollar, 1775. 2. Connecticut Colony, 5 shillings, 1776. 3. United States Continental currency, \$3, 1775. 4. Vermont state currency, 1 shilling, 1781. 5. New Jersey state currency, 1 shilling, sixpence, 1781. 6. North Carolina currency, \$6, 1776.

hands. The absolutely necessary expenditures, without which no army could make head against the British, were from twenty to twenty-five mil-

was that of borrowing on funded loans. Great schemes were put forth. The United States were to borrow at four per cent; they were to borrow

two millions; they were to borrow ten millions; they were to borrow twenty millions. The result was that in three years \$181,000 was thus loaned, and up to the end of the war but \$1,600,000,—hardly a hundredth part of the necessary means. Failing to raise money directly, recourse was had to the so-called loan-office certificates. These were issued to creditors of the government, and bore interest. The greater part of the military supplies were paid for in this extravagant and demoralizing fashion, and in 1789 they had to be settled, with accumulated interest amounting to nearly fifty per cent. Better success was had in Europe. No private banker would lend money to a set of rebels not recognized by any government as independent, but the French and Spanish governments were willing to advance both money and stores. In this way the United States received about three million dollars. When it was evident that the domestic loan had failed, Congress called upon the States to furnish five millions of dollars, apportioned among them according to their importance. These requisitions were repeated at intervals during the Revolution, but always with the same effect. Not a fourth part of the sums asked for was paid by the States. A system of 'specific supplies' was adopted in 1778, by which the State were allowed to pay their quotas in kind. It added a new source of confusion, and brought no more revenue. Every device that the government could put into operation for raising money was eventually tried. A lottery brought considerable sums into the treasury. The supplies for the army were seized at Valley Forge and elsewhere, and paid for in certificates. Bills were drawn on foreign ministers for funds which it was hoped they might have in hand by the time the bill reached them, and the government bought, and sent abroad to meet its indebtedness, cargoes of tobacco and other products."—A. B. Hart, *Formation of the Union, 1750-1829*, pp. 80-91.—"The troubles of Congress were not due wholly to the grudging attitude of the states. Few of its members had ever held any important executive office, and there were important principles of governmental efficiency which they had to learn by slow and painful experience. They did not realize, for example, the advantage of concentrating responsibility. On the contrary, their colonial experience had developed extreme jealousy of one-man power. So Congress tried to handle an impossible amount of detail in general meeting. When they could not do that, they organized numerous committees for administrative as well as legislative work. It was not until June, 1776, after nearly a year of fighting, that Congress organized a War Office, in the charge of a board of which John Adams was chairman. . . . In 1777 Congress appointed a new Board of War, with General Gates, then very popular on account of his victory at Saratoga, as one of its members; but this also proved disappointing. Not until 1781, when the war was nearly over, did Congress see the necessity of appointing a single executive head for this department. Other important departments were similarly managed by committees without sufficient power or responsibility, though they also were served by some able men. In finance the chief figure was Robert Morris, perhaps the ablest business man of his day. With great energy and public spirit, he gave to Congress at a critical time the advantage of his own prestige. When in 1781 Congress finally decided on a single head for this department, Morris was naturally chosen. Of those best qualified for handling foreign relations, sev-

eral were naturally drafted for service abroad,—Franklin, in 1776, and later John Adams and John Jay. The first Secretary of State for Foreign Affairs, also appointed in 1781, was Robert R. Livingston of New York, better known now for his part, thirty years later, in the Louisiana purchase. Poor organization and inefficiency were conspicuous not only in the federal government but also in the states, most of which had to go through the process of transformation from revolutionary conventions and committees to orderly constitutional governments. Only Connecticut and Rhode Island, with their exceptionally liberal charters, could continue the old machinery without material change. Massachusetts tried to keep up some features of its charter government without a royal governor; but elsewhere new governments had to be built up almost from the ground. . . . Meanwhile, the legal authority of these new organizations was disputed by the large part of the population which still professed allegiance to the King. Much of the ordinary business of government, including the admission of Justice, was performed with great difficulty and sometimes suspended altogether. . . . The states, which alone possessed the taxing power, were afraid to use it vigorously, partly because such action was bound to be unpopular. Whatever justification there may have been for this policy, it is certain that the Americans of 1776 did not throw their economic resources into the struggle to any such extent as, for instance, the Southern Confederates of 1861, or the belligerent nations in the recent World War."—E. B. Greene, *Foundations of American nationality*, pp. 461-464.—See also MONEY AND BANKING: Modern: 1775-1780.

1780 (February-August).—Siege and capture of Charleston by the British.—Defeat of Gates at Camden.—South Carolina subdued.—"After the failure of the attack on Savannah was learned by Sir Henry Clinton, he sent a large additional force to the South. Reinforcements were also sent on to Lincoln, while the main body of the American army went into winter quarters near Morristown, New Jersey. Sir Henry Clinton, as soon as his forces, which had been dispersed by a storm, had been collected at Savannah, proceeded to invest Charleston," landing his troops on St. John's Island in February. The blockading of the port and operations for the investment of the city were conducted cautiously and with success. On the 12th of May, the American commander, General Lincoln, "finding himself incapable of defending Charleston, decided on capitulating; and he acceded to the terms which the besiegers had first offered. The fortifications, shipping, artillery, and public stores were all surrendered. The garrison, and all who had borne arms, were prisoners of war. The militia were allowed to return home on parole. In the siege the British lost 76 killed, and 189 wounded. The Americans about an equal number. The prisoners, exclusive of sailors, amounted to 5,618, counting all the adult males of the town. To bring the country entirely under subjection, Clinton sent forth three detachments. The first and largest, in the northern part of the State, was under Lord Cornwallis. He detached Colonel Tarleton with his legion of cavalry and mounted infantry, to disperse Colonel Buford, then encamped near the North Carolina

line. [Buford] was overtaken at the Waxhaws, and on his refusal to surrender, Tarleton made a furious charge on Buford's men, when some, in dismay, threw down their arms and asked for quarter, and some fired on the enemy. After this partial resistance, no quarter was given. Colonel Buford, with a few of the horse, and about 100 infantry, escaped; 113 were killed on the spot; 150 so badly wounded as to be incapable of being moved; and 53 were brought away as prisoners. The American officers deny (what the British assert), that any who had laid down their arms had again taken them up. All further resistance to the enemy in South Carolina and Georgia seems then to have ceased. The two other detachments of the British army every where received the submission of the inhabitants, who either gave their parole not again to bear arms against the king, or took the oath of allegiance. In a proclamation for settling the government, Sir Henry Clinton required all to return to their allegiance on pain of being treated as rebels and enemies. He then returned to New York, leaving Lord Cornwallis in command, with 4,000 troops. . . . Lord Cornwallis, considering South Carolina as entirely re-annexed to Great Britain, would admit of no neutrality among the inhabitants; but insisted on their taking the oath of allegiance, which, however, was generally taken with reluctance by the people of the lower country. . . . A considerable force, under Baron de Kalb, had been ordered for the Southern army by Congress; but, for want of money, and a sufficient Commissary department, they were so delayed in their march, that it was late in July before they reached Cape Fear River. Here they were joined by General Gates, who had been appointed to the command of the Southern army. The men of this detachment, ill-fed, suffered greatly from dysentery. In South Carolina, Gates was joined by Porterfield's Virginia regiment, Rutherford's corps of North Carolina militia, and Arnaud's legion. . . . Gates having under him about 4,000 men, of whom the regulars were less than 1,000, took post at Clermont. As the force of the Americans was daily increasing, Cornwallis, having under him about 2,000 men, of whom 1,900 were regulars, decided on attacking the American army. It so happened, that the period chosen by Cornwallis to surprise Gates, was the very moment in which Gates proposed to surprise his adversary; and thus the advanced corps of both armies unexpectedly met at two o'clock in the morning [Aug. 6, near Camden]. After some skirmishing, in which the British seemed to have had a decided advantage, both parties suspended their operations till the morning. On the first onset of the British, the Virginia militia under General Stevens fled with precipitation, and were followed by the infantry of Armstrong; and, except Colonel Dixon's regiment, the whole South Carolina division followed the example. Very few of the militia of either State discharged a single musket. Gates was borne away by the torrent, and, with General Caswell, retreated to Clermont, in the hope of collecting a sufficient number of the fugitives to cover the retreat of the regulars; but the hope was vain. He was fain to proceed to Hillsborough, to concert the future plan of operations. Thus left with an inadequate force on the field, De Kalb made a stout resistance; but in an impetuous charge he fell, after having received twelve wounds. His troops were then unable to rally, and their discomfiture was complete. Their loss, in killed, wounded and prisoners, could not have been less than 1,000 men. The British lost 325 men. Just

before the action, Sumter had captured a convoy, and made 200 prisoners; but was subsequently surprised by Tarleton, who recaptured the stores, killed 150, and took 300 prisoners. Sumter escaped with difficulty. There was no longer any armed American force in South Carolina, and Cornwallis resorted to energetic means of preventing disaffection. All those who were found in arms after they had submitted to British protection were considered as having forfeited their lives, and several of them were hung on the spot. But these severities, instead of their intended effect, produced a strong reaction; and Sumter was able to collect a new force, with which he greatly annoyed the north-western parts of the State."—G. Tucker, *History of the United States*, v. 1, ch. 3.

1780 (July).—Fresh help from France.—Arrival of Rochambeau and his army, with a fleet.—"La Fayette's second visit to his native country [1779], was most opportune. He arrived in Paris at the moment when the war for the independence of America was in high popularity throughout France. He was put in arrest a week for his disobedience to the order not to leave France, but this was a mere formality. Vergennes received him in private. His example had roused the spirit of the French nobles. The stage resounded with his applauses. Crowds followed his steps. Marie Antoinette, with her quick, enthusiastic spirit, joyed at his distinction. The council of state, the Parliament, the towns, the corporations mingled in the noble excitement. The Royal Treasury was assured support by patriotic offers of contributions, and then was formed the auxiliary army that was to bear succor to America. This public enthusiasm triumphed over the hesitating reluctance of Maurepas, and the economical prudence of Necker. The army, placed under the command of the veteran Rochambeau, commended for his 'steadiness, wisdom, ability and prudence,' a pupil of the Marshal de Belle Isle, distinguished in frequent service, was to be composed of 6,000 troops. Among these shone forth the most brilliant of the nobility."—J. C. Hamilton, *History of the United States, as traced in the writings of Alexander Hamilton*, v. 2, ch. 20.—"General Heath, who commanded the militia in the State of Rhode Island, announced on the 11th of July, the arrival of the French squadron to General Washington, who was then with his staff at Bergen. La Fayette [who had already rejoined Washington] set out almost immediately, provided with instructions from the commander-in-chief, dated the 15th, to repair to the French general and admiral to confer with him. For some time Washington had been considering a plan of offensive operation for the capture of the city and the garrison of New York. This plan, which conformed with the wishes of the French government, was only to be carried out upon certain conditions. First, it was necessary that the French troops should unite with the American forces, and, secondly, that the French should have a naval superiority over the forces of Admirals Graves and Arbuthnot, who had effected their junction at New York the day after the arrival of the French at Newport. This last condition was far from being fulfilled. . . . It had been foreseen that the English, who had concentrated their land and naval forces at New York, would not give the French time to establish themselves on Rhode Island; and Washington informed

Rochambeau that Sir Henry Clinton was embarking his troops and would come shortly to attack the forces of the expedition with the squadrons assembled under the command of Admiral Arbuthnot, which were anchored at Sandy Hook, beyond New York, at the mouth of the Hudson River. . . . At the same time, Washington crossed the Hudson above West Point with the greater part of his troops, and proceeded to King's Bridge, at the northern end of the island, where he made some hostile demonstrations. This manœuvre detained General Clinton, who had already embarked eight thousand men upon the ships of Arbuthnot. He landed his troops and gave up his project. Nevertheless, the English admiral set sail and appeared before Rhode Island with eleven ships of the line and a few frigates, twelve days after the French had landed. . . . On August the 9th, when La Fayette had returned to the headquarters of Washington, which were at Dobb's Ferry, ten miles above King's Bridge, on the right bank of the North River, he wrote to Rochambeau and de Ternay an urgent dispatch, in which he finished, in the name of the American general, by proposing to the French generals to come at once to attempt an attack on New York. . . . On the other hand, the same courier brought a letter from Washington which made no mention of this project, but which only replied by a kind of refusal to the request of Rochambeau for a conference, 'wherein in an hour of conversation they could agree upon more things than in volumes of correspondence.' Washington said with truth that he did not dare to leave his army in front of New York, for it might be attacked at any moment, and that by his presence he prevented the departure of the large body of the English forces that might have been sent against Rhode Island. Indeed, it is certain that if some differences had not arisen between General Clinton and Admiral Arbuthnot, the French might have found themselves in a dangerous position at the beginning. From the earliest letters exchanged upon this occasion some discord resulted between La Fayette, Rochambeau and Washington, but, owing to the good sense of Rochambeau, matters were soon smoothed over. He wrote in English to the American general to ask him thereafter to address himself directly to him, and to explain the reasons that induced him to postpone assuming the offensive. At the same time he urgently requested a conference. From that moment the relations between the two leaders were excellent. The mere presence of the French squadron and army, though they were still paralyzed and really blockaded by Admiral Arbuthnot, had effected a useful diversion, since the English had not been able to profit by all the advantages resulting from the capture of Charleston, and, instead of carrying on operations in the Carolinas with superior forces, they had had to bring the greater part of them back to New York."—T. Balch, *French in America in the War of Independence*, ch. 10-11.

1780 (August-September).—**Treason of Benedict Arnold.**—"Washington contemplated the aspect of affairs with the greatest alarm. Doubtful if the army could be kept together for another campaign, he was exceedingly anxious to strike some decisive blow. He proposed to Rochambeau, commanding the French troops at Newport, an attack upon New York; but that was not thought feasible without a superior naval force. Letters were sent to the French admiral in the West Indies entreating assistance; and Washington presently proceeded to Hartford, there to meet Rochambeau,

to devise some definite plan of operations. During Washington's absence at Hartford, a plot came to light for betraying the important fortress of West Point and the other posts of the Highlands into the hands of the enemy, the traitor being no other than Arnold, the most brilliant officer and one of the most honored in the American army. The qualities of a brilliant soldier are unfortunately often quite distinct from those of a virtuous man and a good citizen. . . . Placed in command at Philadelphia, . . . he [Arnold] lived in a style of extravagance far beyond his means, and he endeavored to sustain it by entering into privateering and mercantile speculations, most of which proved unsuccessful. He was even accused of perverting his military authority to purposes of private gain. The complaints on this point, made to Congress by the authorities of Pennsylvania, had been at first unheeded; but, being presently brought forward in a solemn manner, and with some appearance of offended dignity on the part of the Pennsylvania council, an interview took place between a committee of that body and a committee of Congress, which had resulted in Arnold's trial by a court martial. Though acquitted of the more serious charges, on two points he had been found guilty, and had been sentenced to be reprimanded by the commander-in-chief. Arnold claimed against the United States a large balance, growing out of the unsettled accounts of his Canada expedition. This claim was greatly cut down by the treasury officers and when Arnold appealed to Congress, a committee reported that more had been allowed than was actually due. Mortified and soured, and complaining of public ingratitude, Arnold attempted, but without success, to get a loan from the French minister. Some months before, he had opened a correspondence with Sir Henry Clinton under a feigned name, carried on through Major André, adjutant general of the British army. Having at length made himself known to his correspondents, to give importance to his treachery, he solicited and obtained from Washington, who had every confidence in him, the command in the Highlands, with the very view of betraying that important position into the hands of the enemy. To arrange the terms of the bargain, an interview was necessary with some confidential British agent; and André, though not without reluctance, finally volunteered for that purpose. Several previous attempts having failed, the British sloop-of-war *Vulture*, with André on board, ascended the Hudson as far as the mouth of Croton River, some miles below King's Ferry. Information being sent to Arnold under a flag, the evening after Washington left West Point for Hartford he dispatched a boat to the *Vulture*, which took André on shore, for an interview on the west side of the river, just below the American lines. Morning appeared before the arrangements for the betrayal of the fortress could be definitely completed, and André was reluctantly persuaded to come within the American lines, and to remain till the next night at the house of one Smith, a dupe or tool of Arnold's, the same who had been employed to bring André from the ship. For some reason not very clearly explained, Smith declined to convey André back to the *Vulture*. . . . Driven thus to necessity of returning by land, André laid aside his uniform, assumed a citizen's dress, and, with a pass from Arnold in the name of John Anderson, . . . set off toward sunset on horseback, with Smith for a guide. They crossed King's Ferry, passed all the American guards in safety and spent the night near Crom Pond, with an acquaintance of Smith's.

The next morning, having passed Pine's Bridge, across Croton River, Smith left André to pursue his way alone. The road led through a district extending some thirty miles above the island of New York, not included in the lines of either army, and thence known as the 'Neutral Ground,' a populous and fertile region, but very much infested by bands of plunderers called 'Cow-Boys' and 'Skinners.' The 'Cow Boys' lived within the British lines, and stole or bought cattle for the supply of the British army. The rendezvous of the 'Skinners' was within the American lines. They professed to be great patriots, making it their ostensible business to plunder those who refused to take the oath of allegiance to the State of New York. [On the morning of André's journey, the road to Tarrytown, on which he rode, was being guarded by a small party of men, who watched for cattle thieves, and for suspicious travelers generally. Three of these intercepted the unfortunate young officer and discovered his character. Arnold received intelligence of what had happened in time to make his escape to the Vulture. André was examined before a board of which Lafayette, Steuben and Greene were members, and on his own statements was executed as a spy. The sympathy with him was very great, among Americans as well as among his own countrymen; but lenity in the case appeared too dangerous to Washington and his military advisers.]—R. 1780 (August-December).—Partisan warfare in South Carolina.—Sumter and Marion.—A name "which recalls thrilling tales of desperate enterprise, surprises at midnight, sudden attacks in the gray twilight of morning, lurking-places in the depths of forests, restless activity, and untiring perseverance, is the name of Thomas Sumter. He comes before us tall, vigorous, dauntless, with a bold bearing, and imperious brow, stern to look upon, fierce in his self-will, arrogant in his decisions, tenacious in his prejudices, resolute and vigorous in the execution of his own plans, remiss and almost lukewarm in carrying out the plans of others. Born in South Carolina just as that colony had passed from the control of the Proprietaries to the control of the King, he lived to see her take the first decided step towards passing out of the Union. Little has been preserved of his early life, although his subsequent career in the Senate of the United States proves that he was not deficient in education then, wherever or whenever acquired. In the Revolution he took an early part, and soon made himself conspicuous as a bold and enterprising officer. But it was not till after the siege of Charleston that his talents were brought fully into play. Then at the head of a body of volunteers he moved rapidly from point to point, keeping alive the hopes of the Whigs and the fears of the Tories in the regions watered by the Broad River, the Ennoree, and the Tiger. . . . The ancestors of Francis Marion were Huguenot exiles who took refuge in South Carolina, from the dragonnades of Louis XIV. His father was a planter near Georgetown, who, portioning out his

estate to his children as they came of age, had nothing left for Francis. . . . [When the Cherokee War of 1759 broke out he was engaged in farming.] He was then twenty-six, low in stature, but vigorous, active and healthy. . . . [During the Cherokee War he served as lieutenant in a company of volunteers of which he later became captain. When the War of Independence began, he joined the first South Carolina levies, and was quickly promoted to be lieutenant-colonel in command of a regiment.] During the siege of Charleston his leg was accidentally broken, a lucky accident, which left him free when the city fell, to engage in an adventurous system of warfare which was the only possible system in that low state of our fortunes. In the course of this he was promoted by Governor Rutledge to a brigadiership. . . . His force was constantly fluctuating between 20 men and 70. Up to the 18th of October he had never had over 70. They went and came as they chose, their number ever ebbing and flowing like the tide. Sometimes the very men who had fought with him were ranged in arms against him; a few only serving from honest zeal and true love of country. . . . As his slender form concealed a lion heart, so under his cold, impassive face, there was a perpetual glow of tender sympathies. . . . Without claiming for Marion those powers of combination which belong to the highest order of military genius, he must be allowed to have excelled in all the qualities which form the consummate partisan,—vigilance, promptitude, activity, dauntless courage, and unshaken self-control. . . . Two principles controlled all his actions, and shaped all his ends; the love of country, pure, earnest, and profound; and the love of right, sincere, undeviating, and incorruptible."—G. W. Greene, *Life of Nathanael Greene*, v. 3, bk. 4, ch. 7.—"The other partisans . . . had been compelled to take refuge in the mountains. Marion found his security in the swamps. This able partisan maintained his ground below and along the Santee river, and managed, among the defiles and swamps of that region, to elude all the activity of his enemies. His force had been collected chiefly among his own neighbors, were practised in the swamps, and familiar with the country. Like Sumter, utterly unfurnished with the means of war at first, he procured them by similar means. He took possession of the saws from the mills, and converted them into sabres. So much was he distressed for ammunition that he has engaged in battle when he had not three rounds of powder to each man of his party. . . . Various were the means employed to draw off or drive away his followers. The houses on the banks of the Pedee, Lynch's Creek, and Black river, from whence they were chiefly taken, were destroyed by fire, the plantations devastated, and the negroes carried away. But the effect of this wantonness was far other than had been intended. Revenue and despair confirmed the patriotism of these ruined men, and strengthened their resolution. . . . For months, their only shelter was the green wood and the swamp—their only cover the broad forest and the arch of heaven. . . . With a policy that nothing could distract—a caution that no artifice could mislead—Marion led his followers from thicket to thicket in safety, and was never more perfectly secure than when he was in the neighborhood of his foe. He hung upon his flanks along the march—he skirted his camp in the darkness of the night—he lay in wait for his foraging parties—he shot down his sentries, and, flying or advancing, he never failed to harass the invader, and extort from

him a bloody toll at every passage through swamp, thicket, or river, which his smaller parties made. In this sort of warfare—which is peculiarly adapted to the peculiarities of the country in Carolina, and consequently to the genius of her people—he contrived almost wholly to break up the British communications by one of the most eligible routes between the seaboard and the interior.”—W. G. Simms, *History of South Carolina*, bk. 5, ch. 6.

Also in: C. B. Hartley, *Life of General Francis Marion (Heroes and patriots of the South, ch. 14-15)*.—W. G. Simms, *Life of Francis Marion*.—Horry and Weems, *Life of Marion*.—E. McCrady, *History of the Revolution in South Carolina, 1775-1780*.

1780-1781.—Vermont as an independent state negotiating with the British. See VERMONT: 1781.

1780-1781.—Greene's campaign in the South.—King's Mountain.—Cowpens.—Guilford Court House.—Hobkirk's Hill.—Eutaw Springs.—British shut up in Charleston.—Cornwallis withdrawn to Virginia.—“After his victory at Camden [Aug. 6, 1780], Lord Cornwallis found it necessary to give his army some rest from the intense August heat. In September he advanced into North Carolina, boasting that he would soon conquer all the states south of the Susquehanna river. . . . In traversing Mecklenburg county Cornwallis soon found himself in a very hostile and dangerous region, where there were no Tories to befriend him. One of his best partisan commanders, Major Ferguson, penetrated too far into the mountains. The backwoodsmen of Tennessee and Kentucky, the Carolinas, and western Virginia were aroused; and under their superb partisan leaders—Shelby, Sevier, Cleaveland, McDowell, Campbell, and Williams—gave chase to Ferguson, who took refuge upon what he deemed an impregnable position on the top of King's Mountain. On the 7th of October the backwoodsmen stormed the mountain, Ferguson was shot through the heart, 400 of his men were killed and wounded, and all the rest, 700 in number, surrendered at discretion. The Americans lost 28 killed and 60 wounded. . . . In the series of events which led to the surrender of Cornwallis, the battle of King's Mountain played a part similar to that played by the battle of Bennington in the series of events which led to the surrender of Burgoyne. It was the enemy's first serious disaster, and its immediate result was to check his progress until the Americans could muster strength enough to overthrow him. The events, however, were much more complicated in Cornwallis's case, and took much longer to unfold themselves. . . . As soon as he heard the news of the disaster he fell back to Winstonsborough, in South Carolina, and called for reinforcements. While they were arriving, the American army, recruited and reorganized since its crushing defeat at Camden, advanced into Mecklenburg county. Gates was superseded by Greene, who arrived upon the scene on the 2d of December. Under Greene were three Virginians of remarkable ability,—Daniel Morgan; William Washington, who was a distant cousin of the commander-in-chief; and Henry Lee, familiarly known as ‘Light-horse Harry,’ father of the great general, Robert Edward Lee. The little army numbered only 2,000 men, but a considerable part of them were disciplined veterans, fully a match for the British infantry.” To increase this small force, Steuben (Baron Steuben, the military organizer and disciplinarian of the Revolutionary armies [see above: 1777 (January-December)], was sent down to Virginia, for the purpose of recruiting and organizing troops. There-

upon detachments from the British army at New York were dispatched by sea to Virginia, and Arnold, the traitor, was given command of them. “The presence of these subsidiary forces in Virginia was soon to influence in a decisive way the course of events. Greene, on reaching South Carolina, acted with boldness and originality. He divided his little army into two bodies, one of which cooperated with Marion's partisans in the northeastern part of the state, and threatened Cornwallis's communications with the coast. The other body he sent under Morgan to the southwestward, to threaten the inland posts and their garrisons. Thus worried on both flanks, Cornwallis presently divided his own force, sending Tarleton with 1,100 men to dispose of Morgan. Tarleton came up with Morgan on the 17th of January, 1781, at a grazing-ground known as the Cowpens, not far from King's Mountain. The battle which ensued was well fought, and on Morgan's part it was a wonderful piece of tactics. With only 900 men in open field he surrounded and nearly annihilated a superior force. The British lost 230 in killed and wounded, 600 prisoners, and all their guns. Tarleton escaped with 270 men. The Americans lost 12 killed and 61 wounded. The two battles, King's Mountain and the Cowpens, deprived Cornwallis of nearly all his lightarmed troops, and he was just entering upon a game where swiftness was especially required. It was his object to intercept Morgan and defeat him before he could effect a junction with the other part of the American army. It was Greene's object to march the two parts of his army in converging directions northwards across North Carolina and unite them in spite of Cornwallis. By moving in this direction Greene was always getting nearer to his reinforcements from Virginia, while Cornwallis was always getting further from his supports in South Carolina.”—J. Fiske, *War of Independence, ch. 7*.—“Having disposed of Tarleton, Morgan now fell back before Cornwallis's army to join General Greene; but their combined forces were insufficient to cope with the British and so they steadily retreated northward, drawing Cornwallis after them. By the middle of February this retreat had carried the two armies across North Carolina to the Virginia border, where Greene took up his position behind the Dan River and Cornwallis gave up the pursuit. Though Cornwallis had temporarily driven the Americans out of North Carolina and might claim in a sense to have conquered the state, his position was not at all satisfactory. By persistent running away, Greene had drawn the British far from their base and consolidated his own scattered forces. Now he was ready to change his tactics and take the offensive. Returning to North Carolina, he met Cornwallis at Guilford Courthouse.”—E. B. Greene, *Foundation of American nationality, p. 503*.—“The two wings of the American army came together and were joined by the reinforcements; so that at Guilford Court House, on the 15th of March, Cornwallis found himself obliged to fight against heavy odds, 200 miles from the coast and almost as far from the nearest point in South Carolina at which he could get support. The battle of Guilford was admirably managed by both commanders and stubbornly fought by the troops. At nightfall the British held the field, with the loss of nearly one third of their number, and the Americans were repulsed. But Cornwallis could not stay in such a place, and could not afford to risk another battle. There was nothing for him to do but retreat to Wilmington, the nearest point on the coast. There

he stopped and pondered. His own force was sadly depleted, but he knew that Arnold in Virginia was being heavily reinforced from New York. The only safe course seemed to march northward and join the operations in Virginia; then afterwards to return southward. This course Cornwallis pursued, arriving at Petersburg and taking command of the troops there on the 20th of May. Meanwhile Greene, after pursuing Cornwallis for about 50 miles from Guilford, faced about and marched with all speed upon Camden, 160 miles distant. . . . Lord Rawdon held Camden. Greene stopped at Hobkirk's Hill, two miles to the north, and sent Marion and Lee to take Fort Watson, and thus cut the enemy's communications with the coast. On April 23 [1781], Fort Watson surrendered; on the 25th Rawdon defeated Greene at Hobkirk's Hill, but as his communications were cut the victory did him no good. He was obliged to retreat toward the coast, and Greene took Camden on the 10th of May. Having thus obtained the commanding point, Greene went on until he had reduced every one of the inland posts. At last, on the 8th of September, he fought an obstinate battle at Eutaw Springs, in which both sides claimed the victory. . . . Here, however, as always after one of Greene's battles, it was the enemy who retreated and he who pursued. His strategy never failed. . . . Among all the campaigns in history that have been conducted with small armies, there have been few, if any, more brilliant than Greene's."—J. Fiske, *War of Independence*, ch. 7.—The net result was that the British left the upcountry loyalists to their fate and contented themselves with holding Charleston. Except for the Charleston garrison and that of Wilmington, the Carolinas were practically freed from British control. Considered in relation to the world war of which they formed a part, these encounters, in which the aggregate numbers engaged rarely exceeded five thousand men, seem petty enough; but they helped to cloud still further the gloomy prospect then unfolding before the British public."—E. B. Greene, *Foundation of American nationality*, p. 504.

1781 (January).—Mutiny of the Pennsylvania line.—"As the year 1781 opened and the prospect of a new year of struggle became certain, and the invasion of the Southern States began to indicate the prospect of a southern campaign, which was at all times unpopular with northern troops, a disaffection was developed which at last broke forth in open mutiny, and a peremptory demand for discharge. This irritation was aggravated by hunger, cold, and poverty. Marshall says: 'The winter brought not much relaxation from toil, and none from suffering. The soldiers were perpetually on the point of starvation, were often entirely without food, were exposed without proper clothing to the rigors of winter; and had now served almost twelve months without pay.' . . . On the 1st of

January the Pennsylvania line revolted [The soldiers believed they had been deceived about the length of their enlistments.] Captain Billings was killed in an attempt to suppress the mutiny; General Wayne was powerless to restore order, and 1,300 men, with six guns, started to Princeton, with the declared purpose to march to Philadelphia, and obtain redress. They demanded clothing, the residue of their bounty, and full arrears of pay. A committee from Congress and the State authorities of Pennsylvania at once entered into negotiations with the troops for terms of compromise. The American Commander-in-chief was then at New Windsor. A messenger from General Wayne informed him on the 3d of January of the revolt and the terms demanded. It appears from Washington's letters that it was his impulse, at the first intimation of the trouble, to go in person and attempt its control. His second impression was to reserve his influence and authority until all other means were exhausted. The complaint of the mutineers was but a statement of the condition of all the army, so far as the soldiers had served three years; and the suffering and failure to receive pay were absolutely universal. Leaving the preliminary discussion with the civil authorities who were responsible for much of the trouble, the Commander-in-chief appealed to the Governors of the northern States for a force of militia to meet any attacks from New York, and declined to interfere until he found that the passion had passed and he could find troops who would at all hazards execute his will. It was one of the most difficult passages in the war, and was so handled that the Commander-in-chief retained his prestige and regained control of the army. . . . General Clinton received information of the revolt as early as Washington, on the morning of the 23d, and sent messengers to the American army with propositions, looking to their return to British allegiance. He entirely misconceived the nature of the disaffection, and his agents were retained in custody. It is sufficient to say that a portion of the troops were discharged without critical examination of their enlistments, on their own oath; that many promptly reenlisted, that as soon as Washington found that he had troops who did not share in the open mutiny, he used force and suppressed the disaffection, and that the soldiers themselves hung several agents who brought propositions from General Clinton which invited them to abandon their flag and join his command. The mutiny of the American army at the opening of the campaign of 1781, was a natural outbreak which human nature could not resist, and whatever of discredit may attach to the revolt, it will never be unassociated with the fact that, while the emergency was one that overwhelmed every military obligation by its pressure, it did not affect the fealty of the soldiers to the cause for which they took up arms. . . . La Fayette thus wrote to his wife, 'Human patience has its limits. No European army would suffer the tenth part of what the Americans suffer. It takes citizens to support hunger, nakedness, toil, and the total want of pay, which constitute the condition of our soldiers, the hardiest and most patient that are to be found in the world.'"—H. B. Carrington, *Battles of the American Revolution*, ch. 67.

1781 (January-May).—Benedict Arnold and the British in Virginia.—Opening of Lafayette's campaign in that state.—"In January, 1781, the

news reached headquarters in the Highlands of New York that General [Benedict] Arnold had landed in Virginia with a considerable force [see above: 1780-1781], was laying waste the country, and had already destroyed the valuable stores collected at Richmond; opposed to him were only the small commands of Steuben and Muhlenberg. The situation was very alarming, and threatened to place all the Southern States in the hands of the British. If Arnold succeeded in destroying the few American troops in Virginia, he could then march to the assistance of Cornwallis, who [at this time], with a superior force, was pressing General Greene very hard in the Carolinas. To defeat or capture Arnold before he could further prosecute his designs was, therefore, of the utmost importance. For this purpose it was necessary to send a detachment from the main army against Arnold by land, and a naval force to Chesapeake Bay to prevent his escape by sea. Washington at once communicated the state of affairs to Rochambeau, who, with the French fleet, had long been blockaded at Newport. Taking advantage of the serious injuries lately suffered by the blockading English fleet in consequence of a storm, Admiral Destouches despatched M. de Tilly to the Chesapeake with a ship-of-the-line and two frigates. To cooperate with these French vessels, Washington detached 1,200 light infantry from the main army, and placed them under the command of Lafayette. That officer was particularly chosen for this important trust, because the confidence reposed in him by both the American and French troops made him, in Washington's opinion, the fittest person to conduct a combined expedition. Thus opened the only campaign in America which afforded Lafayette an opportunity to show what abilities he possessed as an independent commander, and on this campaign his military reputation must chiefly rest. Lafayette moved rapidly southward," to Annapolis; but, the cooperating movement of the French fleet having, meantime, been frustrated by an attack from the English squadron, his instructions required him to abandon the expedition and return. He had already set his troops in motion northward when different instructions reached him. Two more British regiments had been sent to Virginia, under General Philips, who now took command of all the forces there, and this had increased the anxiety of Washington. "The situation of the Southern States had become extremely perilous. General Greene had all he could do to fight Lord Cornwallis's superior force in North Carolina. Unless a vigorous opposition could be made to Philips, he would have no difficulty in dispersing the militia of Virginia, and in effecting a junction with Cornwallis. With their forces so combined, the British would be masters in the South. Washington at once determined to place the defence of Virginia in Lafayette's hands. . . . Lafayette marched with such rapidity . . . that he reached Richmond, where there were valuable stores to be protected, a day in advance of General Philips. From his post on the heights of the town he saw the British set fire to the tobacco warehouses at Manchester, just across the river, but there were neither men nor boats enough to make an attack possible. Philips, on his part, was too much impressed with the show of strength made by the Americans to prosecute his plans on Richmond, and retreating down the James river, burning and laying waste as he went, he camped at Hog Island. Lafayette followed, harassing the enemy's rear, as far as the Chickahominy. Here the situation underwent

a considerable change. Lord Cornwallis, after his long and unsuccessful campaign against Greene in North Carolina, made up his mind that his exhausting labors there would prove unprofitable until Virginia should be subjugated. His men were worn out with incessant marching and fighting, while no substantial advantage had been gained. Hearing that General Greene had marched to attack Lord Rawdon at Camden in South Carolina, he determined to join Philips. That officer, accordingly, received orders while at Hog Island to take possession of Petersburg and there await Cornwallis's arrival. . . . On the 13th of May, General Philips died at Petersburg of a fever. . . . Cornwallis arrived at Petersburg on the 20th of May. His forces now amounted to over 5,000 men, which number was soon increased to 8,000."—B. Tuckerman, *Life of Lafayette*, ch. 6.

1781 (May-October).—Cornwallis in Virginia and the trap into which he fell.—Siege of Yorktown by the French and Americans.—Surrender of the British army.—"On the 24th of May, Cornwallis, having rested his troops, marched from Petersburg, and endeavored to engage the American forces. But Lafayette, having removed the military stores from Richmond, retreated across the Chickahominy to Fredericksburg, where he expected to meet General Wayne and a battalion or Pennsylvania troops, without whose assistance he could not venture any fighting. . . . Cornwallis . . . moved between Lafayette and the town of Albemarle, where had been placed a great part of the military stores from Richmond, which now seemed doomed to destruction. But on the 10th of June Lafayette had received his expected reinforcement of Wayne's Pennsylvanians, and thus strengthened felt able to assume the offensive. Rapidly crossing the Rapidan he approached close to the British army which blocked the road to Albemarle. Nothing could have better suited Cornwallis, who prepared for a conflict in which he felt sure of a decisive victory. Lafayette, however, had not lost sight of the vital feature of his campaign,—to protect the property of the State without losing his army. Through his scouts he discovered an old unused road to Albemarle, unknown to the enemy. While Cornwallis was preparing for battle, he had the road cleared, and under cover of the night marched his men through it and took up a strong position before the town. There he was joined by militia from the neighboring mountains, and he showed so strong a front that the British commander did not venture an attack. . . . The British commander, so far foiled in his objects, had to march back to Richmond and thence to Williamsburg, near the coast, thus practically abandoning control over any part of Virginia except where naval forces gave possession. Lafayette effected a junction with Baron Steuben on the 18th of June, and thus increased his force to about four thousand men. The Americans had now become the pursuers instead of the pursued, and followed the British, harassing their rear and flanks."—B. Tuckerman, *Life of General Lafayette*, v. 1, ch. 6.—"There now came a pause in the Virginia Campaign, at least in daily operations and excitements. This State north of the James was relieved. Cornwallis crossed to the south side, at Cobham, on the 7th [July]; and Lafayette, retiring up the river, encamped, about the 20th, on the now historic Malvern Hill, then described as one of the healthiest and best watered spots in the State. . . . The entire British army was soon after concentrated at Portsmouth, and preparations made

to transport a considerable portion of it to New York. Lafayette, meanwhile, at Malvern Hill, could only await developments. He thought of sending re-enforcements to Greene, and asked Washington if, in case Cornwallis left Virginia, he might not return to the Northern army. . . . But while the marquis and Washington and Greene were speculating on the future movements of Cornwallis and were persuaded, from embarkations at Portsmouth, that he was to be deprived of a large part of his force by Clinton, unexpected intelligence came to hand. Instead of any part going to New York, the British force suddenly made its appearance, during the first days in August, at Yorktown, on the Virginia peninsula, which it had abandoned but three weeks before.

the better security of the Point, to occupy Yorktown also, that was to be done. Obeying these instructions, Cornwallis ordered a survey of Old Point Comfort; but, upon the report of his engineers, was obliged to represent to Clinton that it was wholly unfit and inadequate for a naval station, as it afforded little protection for ships, and could not command the channel, on account of its great width. Then, following what he believed to be the spirit of his orders, Cornwallis, before hearing from Clinton, moved up to Yorktown, and began to fortify it in connection with Gloucester, on the opposite shore, as the best available naval station. Clinton made no subsequent objections, and there Cornwallis remained until his surrender. His occupation of the place

GENERALS ROCHAMBEAU AND WASHINGTON ORDERING THE LAST ATTACK UPON YORKTOWN, 1781

(After painting by Auguste Couder)

Here again was a new situation. Cornwallis, at last, at Yorktown—the spot he was not to leave except as a prisoner of war. Why he went there is a simple explanation. Clinton decided, upon certain dissenting opinions expressed by Cornwallis respecting the situation in Virginia, not to withdraw the force in the Chesapeake which he had called for, and which was about to sail for New York, but permitted Cornwallis to retain the whole—all with which he had been pursuing Lafayette and the large garrison at Portsmouth, a total of about seven thousand, rank and file. His new instructions, conveyed at the same time, were to the effect that his Lordship should abandon Portsmouth, which both generals agreed was too unhealthy for the troops, and fortify Old Point Comfort, where Fort Monroe now stands, as a naval station for the protection of the British shipping. In addition, if it appeared necessary, for

was simply an incident of the campaign—a move taken for convenience and in the interests of the navy and the health of his command.”—H. P. Johnston, *Yorktown campaign*, ch. 3.—“The march of Lord Cornwallis into Virginia was the first emphatic fact which enabled General Washington to plan an efficient offensive. The repeated detachment of troops from New York so sensibly lessened the capacity of its garrison for extensive field service at the north, that the American Commander-in-chief determined to attack that post, and as a secondary purpose, thereby to divert General Clinton from giving further aid to troops in the Southern States. As a matter of fact, the prudent conduct of the Virginia campaign eventually rallied to the support of General La Fayette an army, including militia, nearly as large as that of Washington, and the nominal strength of the allied army near Yorktown, early in Septem-

ber, was nearly or quite as great as that of Lord Cornwallis. There were other elements which, as in previous campaigns, hampered operations at the north. The Indians were still troublesome in Western New York, and the Canadian frontier continued to demand attention. The American navy had practically disappeared. The scarcity of money and a powerless recruiting service, increased the difficulties of carrying on the war in a manner that would use to the best advantage the troops of France. . . . The position of the American Commander-in-chief at this time was one of peculiar personal mortification. Appeals to State authorities failed to fill up his army. Three thousand Hessian reinforcements had landed at New York, and the government as well as himself would be compromised before the whole world by failure to meet the just demands which the French auxiliaries had a right to press upon his attention. Relief came most opportunely. The frigate *Concorde* arrived at Newport, and a reiteration of the purpose of Count de Grasse to leave St. Domingo on the 3d of August, for the Chesapeake direct, was announced by a special messenger. The possibilities of the future at once quickened him to immediate action. With a reticence so close that the army could not fathom his plans, he re-organized his forces for a false demonstration against New York and a real movement upon Yorktown. . . . Letters to the Governors of northern States called for aid as if to capture New York. Letters to La Fayette and the Count de Grasse embodied such intimations of his plans as would induce proper caution to prevent the escape of Lord Cornwallis, and secure transportation at Head of Elk. Other letters to authorities in New Jersey and Philadelphia, expressly defining a plan of operations against New York via Staten Island, with the assurance of ample naval support, were exposed to interception and fell into the hands of General Clinton. As late as the 19th, the roads leading to King's Bridge were cleared of obstructions, and the army was put in readiness to advance against New York Island. On the same day the New Jersey regiment and that of Colonel Hazen crossed the Hudson at Dobb's Ferry, to threaten Staten Island, and ostensibly to cover some bake-houses which were being erected for the purpose of giving color to the show of operations against New York. The plan of a large encampment had been prepared, which embraced Springfield and the Chatham Pass to Morristown, and this was allowed to find its way to Clinton's headquarters. General Heath was assigned to command of the Hudson-river posts, with two regiments from New Hampshire, ten from Massachusetts, five from Connecticut, the Third artillery, Sheldon's dragoons, the invalid corps, all local companies, and the militia. The following forces were selected to accompany the Commander-in-chief, viz., the light infantry under Colonel Scammel, four light companies from New York and Connecticut, the Rhode Island regiment, under the new army establishment, two New York regiments, that of New Jersey and Hazen's regiment (the last two already across the Hudson) and Lamb's artillery, in all about 2,000 men. The American troops crossed on the 21st, at King's Ferry, and encamped near Haverstraw. The French army followed, and the army was united on the 25th. [Du Barras brought the train of siege artillery from Newport in another French fleet.] . . . General Washington and suite reached Philadelphia about noon, August 30th. The army had already realized the fact that they were destined southward. Some dis-

satisfaction was manifested; but Count de Rochambeau advanced \$20,000 in gold upon the pledge of Robert Morris that he would refund the sum by the 1st of October, and the effect upon the troops, who had long been without any pay, was inspiring."—H. B. Carrington, *Battles of the American Revolution*, ch. 74.—"Leaving Philadelphia, with the Army, on the 5th of September, Washington meets an express near Chester, announcing the arrival, in Chesapeake Bay, of the Count de Grasse, with a fleet of twenty-eight ships of the line, and with 3,500 additional French troops, under the command of the Marquis de St. Simon, who had already been landed at Jamestown, with orders to join the Marquis de La Fayette! 'The joy' says the Count William de Deux Ponts, in his previous journal, 'the joy which this welcome news produces among all the troops, and which penetrates General Washington and the Count de Rochambeau, is more easy to feel than to express.' But, in a foot-note to that passage, he does express and describe it, in terms which cannot be spared and could not be surpassed, and which add a new and charming illustration of the emotional side of Washington's nature. 'I have been equally surprised and touched,' says the gallant Deux-Ponts, 'at the true and pure joy of General Washington. . . . Everything now hurries, almost with the rush of a Niagara cataract, to the grand fall of Arbitrary Power in America. Lord Cornwallis had taken post here at Yorktown as early as the 4th of August, after being foiled so often by 'that boy' as he called La Fayette, whose Virginia campaign of four months was the most effective preparation for all that was to follow, and who, with singular foresight, perceived at once that his lordship was now fairly entrapped, and wrote to Washington, as early as the 21st of August, that 'the British army must be forced to surrender.' Day by day, night by night, that prediction presses forward to its fulfillment. [When the British fleet, under Admiral Graves, arrived from New York it was too weak to dislodge the French fleet already in possession, and the way of escape by sea was blocked.] The 1st of October finds our engineers reconnoitering the position and works of the enemy. The 2d witnesses the gallantry of the Duke de Lauzun and his legion in driving back Tarleton, whose raids had so long been the terror of Virginia and the Carolinas. On the 6th, the allied armies broke ground for their first parallel, and proceeded to mount their batteries on the 7th and 8th. On the 9th, two batteries were opened—Washington himself applying the torch to the first gun; and on the 10th three or four more were in play—'silencing the enemy's works, and making,' says the little diary of Colonel Cobb, 'most noble music.' On the 11th, the indefatigable Baron Steuben was breaking the ground for our second parallel, within less than four hundred yards of the enemy, which was finished the next morning, and more batteries mounted on the 13th and 14th. But the great achievement of the siege still awaits its accomplishment. Two formidable British advanced redoubts are blocking the way to any further approach, and they must be stormed. The allied troops divide the danger and the glory between them, and emulate each other in the assault. One of these redoubts is assigned to the French grenadiers and chasseurs, under the general command of the Baron de Viomesnil. The other is assigned to the American light infantry, under the general command of La Fayette. But the detail of special leaders to conduct the two assaults remains to be

arranged. Viomesnil readily designates the brave Count William to lead the French storming party, who, though he came off from his victory wounded, counts it 'the happiest day of his life.' A question arises as to the American party, which is soon solved by the impetuous but just demand of our young Alexander Hamilton to lead it. And lead it he did, with an intrepidity, a heroism, and a dash unsurpassed in the whole history of the war. . . . Both redoubts were soon captured; and these brilliant actions virtually sealed the fate of Cornwallis. 'A small and precipitate sortie,' as Washington calls it, was made by the British on the following evening, resulting in nothing; and the next day a vain attempt to evacuate their works, and to escape by crossing over to Gloucester, was defeated by a violent and, for us . . . most providential storm of rain and wind. . . . A suspension of hostilities, to arrange terms of capitulation, was

surrender of Yorktown Washington returned with his army to the vicinity of New York [see NEW-BURGH], but he felt himself far too weak to attempt its capture, and hostilities were restricted to a few indecisive skirmishes or predatory enterprises. It is curious to notice how far from sanguine Washington appeared even after the event which in the eyes of most men, outside America, had determined the contest without appeal. It was still impossible, he maintained, to do anything decisive unless the sea were commanded by a naval force hostile to England, and France alone could provide this force. The difficulties of maintaining the army were unabated. 'All my accounts,' he wrote in April 1782, 'respecting the recruiting service are unfavourable; indeed, not a single recruit has arrived to my knowledge from any State except Rhode Island, in consequence of the requisitions of Congress in December last.' He strongly

## SURRENDER OF LORD CORNWALLIS AT YORKTOWN, OCT. 19, 1781

(After painting by John Trumbull, in the Capitol at Washington)

proposed by Cornwallis on the 17th; the 18th was occupied at Moore's House in settling those terms; and on the 19th the articles were signed by which the garrison of York and Gloucester, together with all the officers and seamen of the British ships in the Chesapeake, 'surrender themselves Prisoners of War to the Combined Forces of America and France.'—R. C. Winthrop, *Address at the centennial celebration of the surrender of Lord Cornwallis at Yorktown, Oct. 19, 1881*.

ALSO IN: Marquis Cornwallis, *Correspondence*, v. 1, ch. 4-5.—Idem, *Answer to Sir H. Clinton*.—Count de Deux-Ponts, *My campaigns in America, 1781*.—T. Balch, *French in America during the War of Independence*, ch. 13-22.—W. Irving, *Life of Washington*, v. 4, ch. 25-26, 28.—George Washington (W. C. Ford, ed.), *Writings*, v. 9.—C. 1781-1782.—Practical suspension of hostilities.—Difficulty of maintaining the army.—Financial distress of the country.—'Immediately after the

urged the impossibility of recruiting the army by voluntary enlistment, and recommended that, in addition to the compulsory enrolment of Americans, German prisoners should be taken into the army. Silas Deane, in private letters, expressed at this time his belief that it would be utterly impossible to maintain the American army for another year; and even after the surrender of Cornwallis, no less a person than Sir Henry Clinton assured the Government that, with a reinforcement of only 10,000 men he would be responsible for the conquest of America. . . . Credit was gone, and the troops had long been unpaid. 'The long sufferance of the army,' wrote Washington in October 1782, 'is almost exhausted. It is high time for a peace.' Nothing, indeed, except the great influence, the admirable moderation and good sense, and the perfect integrity of Washington could have restrained the army from open revolt. . . . Holland, immediately after the surrender of Yorktown, had recognised the independence of America, which had as yet only been recognised by France.

John Adams was received as representative at the Hague, and after several abortive efforts he succeeded in raising a Dutch loan. France, as her ablest ministers well knew, was drifting rapidly towards bankruptcy, yet two American loans, amounting together to £600,000, were extorted in the last year of the war. Up to the very eve of the formal signature of peace, and long after the virtual termination of the war, the Americans found it necessary to besiege the French Court for money. As late as December 5, 1782, Franklin wrote from Paris to Livingston complaining of the humiliating duty which was imposed on him. . . . The reply of Livingston was dated January 6, 1783, and it paints vividly the extreme distress in America. 'I see the force,' he writes, 'of your objections to soliciting the additional twelve millions, and I feel very sensibly the weight of our obligations to France, but every sentiment of this kind must give way to our necessities. It is not for the interest of our allies to lose the benefit of all they have done by refusing to make a small addition to it. . . . The army demand with importunity their arrears of pay. The treasury is empty, and no adequate means of filling it presents itself. The people pant for peace; should contributions be exacted, as they have hitherto been, at the point of the sword, the consequences may be more dreadful than is at present apprehended. I do not pretend to justify the negligence of the States in not providing greater supplies. Some of them might do more than they have done; none of them all that is required. It is my duty to confide to you, that if the war is continued in this country, it must be in a great measure at the expense of France. If peace is made, a loan will be absolutely necessary to enable us to discharge the army, that will not easily separate without pay.' It was evident that the time for peace had come. The predatory expeditions which still continued in America could only exasperate still further both nations, and there were some signs—especially in the conflicts between loyalists and revolutionists—that they were having this effect. England had declared herself ready to concede the independence America demanded. Georgia and South Carolina, where the English had found so many faithful friends, were abandoned in the latter half of 1782, and the whole force of the Crown was now concentrated at New York and in Canada. France and Spain for a time wished to protract negotiations in hopes that Rodney might be crushed, that Jamaica and afterwards Gibraltar might be captured; but all these hopes had successively vanished. . . . If the war continued much longer America would almost certainly drop away, and France, and perhaps Spain, become bankrupt."—W. E. H. Lecky, *History of England in the eighteenth century*, v. 4, ch. 15.

1781-1786.—Cession of Western Territory by the states to the Federal Union.—Western Reserve of Connecticut.—Although the Articles of Confederation were adopted by Congress in 1777 and ratified immediately by most of the states, it was not until 1781 that they became operative by the assent of all. "New Jersey, Delaware and Maryland held out against ratifying them for from two to four years. The secret of their resistance was in the claims to the western territory. . . . The three recalcitrant States had always had fixed western boundaries, and had no legal claim to a share in the western territory. . . . New Jersey and Delaware gave up the struggle in 1778 and 1779; but Maryland would not and did not yield, until her claims were satisfied. Dr. H. B. Adams

has shown that the whole question of real nationality for the United States was bound up in this western territory; that even a 'league government' could not continue long to govern a great and growing territory like this without developing into a real national government, even without a change of strict law; and that the Maryland leaders were working under a complete consciousness of these facts."—A. Johnston, *United States: Its history and constitution*, sect. 89-90.—See also MARYLAND: 1776-1784.—The western claims of Virginia were the most sweeping and were founded upon the oldest historical document. "The charter granted by James I. to South Virginia, in 1609 [see VIRGINIA: 1609-1616], . . . embraced the entire north-west of North America, and, within certain limits, all the islands along the coast of the South Sea or Pacific Ocean. . . . The following is the grant: 'All those lands, countries and territories situate, lying and being in that part of America called Virginia, from the point of land called Cape or Point Comfort, all along the sea-coast to the northward 200 miles; and from the said Point or Cape Comfort, all along the sea-coast to the southward 200 miles; and all that space and circuit of land lying from the sea-coast of the precinct aforesaid, up into the land throughout, from sea to sea, west and north-west; and also all the islands lying within 100 miles along the coast of both seas of the precinct aforesaid.' The extraordinary ambiguity of this grant of 1609, which was always appealed to as a legal title by Virginia, was first shown by Thomas Paine. . . . The chief ambiguity . . . lay in the interpretation of the words 'up into the land throughout, from sea to sea, west and north-west.' From which point was the northwest line to be drawn, from the point on the seacoast 200 miles above, or from the point 200 miles below Cape Comfort? . . . The more favorable interpretation for Virginia and, perhaps, in view of the expression 'from sea to sea,' more natural interpretation, was to draw the northwestern line from the point on the sea-coast 200 miles above Point Comfort, and the western line from the southern limit below Point Comfort. This gave Virginia the greater part, at least, of the entire north-west, for the lines diverged continually. . . . At the outbreak of the Revolution, Virginia had annexed the 'County of Kentucky' to the Old Dominion, and, in 1778, after the capture of the military posts in the northwest by Colonel George Rogers Clarke. . . . that enterprising State proceeded to annex the lands beyond the Ohio, under the name of the County of Illinois [see above: 1778-1779: Clarke's conquest]. The military claims of Virginia were certainly very strong, but it was felt by the smaller States that an equitable consideration for the services of other colonies in defending the back country from the French, ought to induce Virginia to dispose of a portion of her western territory for the common good. It is easy now to conceive how royal grants to Massachusetts and Connecticut of lands stretching from ocean to ocean, must have conflicted with the charter claims and military title of Virginia to the great north-west. . . . The claims of Massachusetts were based upon the charter granted by William and Mary, in 1691, and those of Connecticut upon the charter granted by Charles II, in 1662. . . . The former's claim embraced the lands which now lie in southern Michigan and Wisconsin, or, in other words, the region comprehended by the extension westward of her present southern boundary and of her ancient northern limit, which was 'the latitude of a league north of the inflow of Lake Winnipiseogee in

New Hampshire. The western claims of Connecticut [the zone lying between her northern and southern boundaries— $41^{\circ}$  and  $42^{\circ} 2'$  north latitude—extended westward] covered portions of Ohio, Indiana, Illinois, and Michigan. . . . The extension of charter boundaries over the far west by Massachusetts and Connecticut led to no trespass on the intervening charter claims of New York. Connecticut fell into a serious controversy, however, with Pennsylvania, in regard to the possession of certain lands in the northern part of the latter State, but the dispute, when brought before a court appointed by Congress, was finally decided in favor of Pennsylvania. But in the western country, Massachusetts and Connecticut were determined to assert their chartered rights against Virginia and the treaty claims of New York; for, by virtue of various treaties with the Six Nations and allies, the latter State was asserting jurisdiction over the entire region between Lake Erie and the Cumberland mountains, or, in other words, Ohio and a portion of Kentucky. These claims were strengthened by the following facts: First, that the chartered rights of New York were merged in the Crown by the accession to the throne, in 1685, of the Duke of York as James II.; again, that the Six Nations and tributaries had put themselves under the protection of England, and that they had always been treated by the Crown as appendant to the government of New York; moreover, in the third place, the citizens of that State had borne the burden of protecting these Indians for over a hundred years. New York was the great rival of Virginia in the strength and magnitude of her western claims." In 1780, Maryland still insisting upon the surrender of these western land claims to the federal government, and refusing to ratify the Articles of Confederation until such cession was made, the claimant states began to yield to her firmness. On the 1st of March, 1781, the offer of New York to cede her claims, providing Congress would confirm her western boundary, was made in Congress. "On that very day, Maryland ratified the Articles and the first legal union of the United States was complete. The coincidence in dates is too striking to admit of any other explanation than that Maryland and New York were acting with a mutual understanding. . . . The offer of Virginia, reserving to herself jurisdiction over the County of Kentucky; the offer of Connecticut, withholding jurisdiction over all her back lands; and the offer of New York, untrammelled by burdensome conditions and conferring upon Congress complete jurisdiction over her entire western territory,—these three offers were now prominently before the country. . . . On the 20th of October, 1782, Mr. Daniel Carroll, of Maryland, moved that Congress accept the right, title, jurisdiction, and claim of New York, as ceded by the agents of that state on the first of March, 1781. . . . On the 13th day of September, 1783, it was voted by Congress to accept the cession offered by Virginia, of the territory north-west of the Ohio, provided that state would waive the obnoxious conditions concerning the guaranty of Virginia's boundary, and the annulling of all other titles to the north-west territory. Virginia modified her conditions as requested, and on the 20th of October, 1783, empowered her delegates in Congress to make the cession, which was done by Thomas Jefferson, and others, March 1, 1784."—H. B. Adams, *Maryland's influence upon land cessions to the United States* (Johns Hopkins University Studies, 3rd series, no. 1, pp. 9-11, 19-22, 36-39).—The Massachusetts deed of cession was

executed Apr. 19, 1785. It conveyed the right and title of the state to all lands "west of a meridian line drawn through the western bent or inclination of Lake Ontario, provided such line should fall 20 miles or more west of the western limit of the Niagara River"—that being the western boundary of New York, fixed four years before. In May, 1786, Connecticut authorized a cession which was not complete. Instead of beginning at the western boundary line of Pennsylvania, her conveyance was of lands beyond a line 120 miles west of the Pennsylvania line—thus retaining her claim to the large tract in Ohio known subsequently as the Western Reserve, or Connecticut Reserve. "The acceptance of this cession was strongly opposed in Congress. . . . After a severe struggle it was accepted, May 26, 1786, Maryland alone voting in the negative."—B. A. Hinsdale, *Old Northwest*, ch. 13.—South Carolina executed the cession of her western claims in 1787; North Carolina in 1790, and Georgia in 1802.—A. Johnston, *Connecticut*, ch. 15.—See also OHIO: 1786-1796.

1782 (February-May).—Peace resolutions in British House of Commons.—Retirement of Lord North.—Pacific overtures through General Carleton.—"In Europe and America the effect of the surrender at Yorktown was generally recognized as decisive; but the war was not yet over and there were many anxious months ahead. More than thirty thousand British soldiers still remained in the United States, chiefly at New York with smaller garrisons at Charleston and Savannah. Even in this hour of victory the American government seemed almost at the end of its resources. Although Washington urged the need of continued effort in order to secure a satisfactory peace, it was hard to overcome the general weariness and apathy. Notwithstanding the ratification of the Articles of Confederation, supplies of money and men still depended on the good will of individual states and only a fraction of the money called for was actually paid in. Fortunately, the English people also were tired of the war, and the disaster at Yorktown convinced nearly everyone that there was no chance of subduing the colonies. The King was stubborn and the North ministry was held together for a few months longer; but the logic of events was too much, even for George III. For six months after Yorktown the tide continued to run strongly against the British. In the West Indies they lost not only their recent conquest of St. Eustatius, but even some of their own islands. Across the Atlantic, British prestige in the Mediterranean was weakened by the loss of Minorca. Economic developments were also discouraging; shipping was still being destroyed on a large scale, expenditures were steadily rising, new loans were needed, and the public credit was shaken. All these things naturally strengthened the opposition party. Even former supporters of the ministry had been turned against it by increasing evidences of corrupt and inefficient administration. Long before Yorktown, the government majorities had begun to go down; as early as 1780 the House of Commons passed an often-quoted resolution, declaring that the power of the Crown had increased, was increasing, and ought to be diminished. After Yorktown the attack was pushed with new vigor, and by March, 1782, the House of Commons had committed itself squarely against the continuance of the war. Lord

North gave up the fight and the King had to accept his resignation. . . . [With the new] government Americans could negotiate with some chance of mutual understanding. It was also fortunate for the new ministry that the naval war began to turn in favor of the British. In April, 1782, a French fleet which was expected to combine with the Spaniards in an attack on Jamaica was beaten by Admiral Rodney, whose victory restored British superiority in the West Indies. The thirteen colonies were indeed lost; but so far as her European enemies were concerned, England could look forward to peace terms more favorable than had seemed probable only a few months before."—E. B. Greene, *Foundations of American nationality*, pp. 508-510.—"On the 27th of February [1782], General Conway [had] moved in the house of commons, 'that it is the opinion of this house that a further prosecution of offensive war against America, would, under present circumstances, be the means of weakening the efforts of this country against her European enemies, and tend to increase the mutual enmity so fatal to the interests both of Great Britain and America.' The whole force of administration was exerted to get rid of this question, but was exerted in vain; and the resolution was carried. An address to the king in the words of the motion was immediately voted, and was presented by the whole house. The answer of the crown being deemed inexplicit, it was on the 4th of March resolved by the commons, 'that the house will consider as enemies to his majesty and the country, all those who should advise or attempt a further prosecution of offensive war on the continent of North America.' These votes were soon followed by a change of administration [Lord North resigning and being succeeded by Lord Rockingham, with Fox, Shelburne, Burke and Sheridan for colleagues], and by instructions to the commanding officers of his Britannic majesty's forces in America which conformed to them. . . . Early in May, Sir Guy Carleton, who had succeeded Sir Henry Clinton in the command of all the British forces in the United States, arrived at New York. Having been also appointed in conjunction with Admiral Digby a commissioner to negotiate a peace, he lost no time in conveying to general Washington copies of the votes of the British parliament, and of a bill which had been introduced on the part of administration, authorizing his majesty to conclude a peace or truce with those who were still denominated the revolted colonies of North America. These papers he said would manifest the dispositions prevailing with the government and people of England towards those of America, and if the like pacific temper should prevail in this country, both inclination and duty would lead him to meet it with the most zealous concurrence. He had addressed to congress, he said, a letter containing the same communications, and he solicited from the American general a passport for the person who should convey it. At this time, the bill enabling the British monarch to conclude a peace or truce with America had not passed into a law; nor was any assurance given that the present commissioners possessed the power to offer other terms, than those which had formerly been rejected. General Carleton therefore could not hope that negotiations would commence on such a basis; nor be disappointed that the passports he requested were refused by congress, to whom the application was, of course, referred. . . . The several states passed resolutions expressing their objections to separate negotiations, and declaring those to be ene-

emies to America who should attempt to treat without the authority of congress. But the public votes which have been stated, and probably the private instructions given to the British general, restrained him from offensive war, and the state of the American army disabled General Washington from making any attempt on the posts held by the enemy. The campaign of 1782 consequently passed away without furnishing any military operations of moment between the armies under the immediate direction of the respective commanders in chief."—J. Marshall, *Life of Washington*, v. 4, ch. 11.—See also ENGLAND: 1782-1783.

1782 (April).—Recognition by the Dutch republic.—"Sympathy with America had been growing in the Netherlands. At the end of 1779 Holland opened her ports to American warships, particularly to Paul Jones. The thrifty burghers declined, it is true, to lend America money until France assured its repayment, because they were not yet sufficiently confident of our success. Nevertheless they were willing to go far in aiding us. In 1778 William Lee, the American commissioner, drew up with two prominent citizens of Amsterdam a draft of a treaty of friendship and commerce with the United States. It had no validity, as the government of Holland was not even cognizant of it, and it was kept secret for a time. But in October, 1780, the British captured an American ship bound for Holland, among whose passengers was Henry Laurens, and among his papers was a draft of this proposed treaty which Congress had approved and which he was taking back to Holland for final ratification. The British government was enraged. It peremptorily demanded of the Dutch government that it disavow the treaty and severely punish the chief magistrate of Amsterdam, who had signed it. The Dutch government did repudiate the treaty, but it could not constitutionally punish the magistrate. The incident was no adequate cause for war or even for offense. But the British government was angry with Holland for opening her ports to American ships [see above: 1779 (September)], and so early in 1781 declared war upon her. . . . [In 1781, John Adams who had been sent to Europe with a commission to negotiate peace with Great Britain, was created minister to the Netherlands, and authorized to negotiate a treaty.] So strong was French influence in Holland at that time that Adams was . . . held aloof for a considerable period. For eight months he waited in vain for recognition, but he knew the secret of the delay and was confident of overcoming it at last."—W. F. Johnson, *America's foreign relations*, v. 1, pp. 103, 117.—"Encouraged by the success at Yorktown, on the 9th of January, 1782, Adams presented himself to the president of the states-general, renewed his formal request for an opportunity of presenting his credentials, and 'demanded a categorical answer which he might transmit to his sovereign.' He next went in person to the deputies of the several cities of Holland, and, following the order of their rank in the confederation, repeated his demand to each one of them. The attention of Europe was drawn to the sturdy diplomatist, who dared, alone and unsupported, to initiate so novel and bold a procedure, but not one of the representatives of foreign powers at the Hague believed that it could succeed."—G. Bancroft, *History of the United States* (Author's last revision), v. 5, p. 527.—"On February 28, Friesland, the province most of all

devoted to the principles of liberty, declared in favor of receiving . . . [John Adams] as the envoy of a sovereign power. The other provinces followed the example, and on April 19, . . . the States General, in accordance with the unanimous wish of the provinces, resolved thus to receive him. Thus the Dutch republic was the second power in the world to recognize the independence of the United States. . . . On October 8, 1782, Adams concluded with the Netherlands a treaty of friendship and commerce—before the treaty of Paris was concluded.”—W. F. Johnson, *America's foreign relations*, v. 1, p. 117.

1782 (September).—Opening of negotiations for peace.—The Rockingham ministry, which succeeded Lord North's in the British government, in March, 1782 (see ENGLAND: 1782-1783), “though soon dissolved by the death of the Marquis of Rockingham, were early distracted by a want of unanimity, and early lost the confidence of the people. The negotiation with America during May and June made no progress. Mr. Oswald was the agent of Lord Shelburne, known to be opposed to the acknowledgment, and Mr. Grenville, of Mr. Fox. This ministry had been forced upon the king by a vote of the House of Commons. The hopes of regaining America were again excited by the decisive victory of Lord Rodney in the West Indies [see ENGLAND: 1780-1782], and the unexpected successes of Sir Eyre Coote against Hyder Ali in the East; and, if credit may be given to the reports of the day, the government looked forward with some confidence to the making a separate peace with Congress by means of Sir Guy Carleton, who had been appointed to the command of the forces in North America. . . . Mr. Adams, writing from the Hague, June 13, '82, observes, ‘I cannot see a probability that the English will ever make peace, until their finances are ruined, and such distress brought upon them, as will work up their parties into a civil war.’ It was not till September of the same year, under Lord Shelburne's administration, formed upon the dissolution of the Rockingham, that the British government took a decisive and sincere step to make peace, and authorized their commissioner, Mr. Oswald, at Paris, to acknowledge the independence of the colonies. . . . This is the first instruction given by the British Ministry in which it was proposed to recognize the celebrated act of July 4th, 1776. A great and immediate progress was now made in the preliminaries. . . . The commission, under which the preliminaries of the treaty were actually concluded, was issued by Congress in June '81. It empowered ‘John Adams, Benjamin Franklin, John Jay, Henry Laurens, and Thomas Jefferson, or the majority of them, or such of them as may assemble, or in case of the death, absence, indisposition, or other impediment of the others, to any one of them, full power and authority, general and special commission, . . . to sign, and thereupon make a treaty or treaties, and to transact every thing that may be necessary for completing, securing and strengthening the great work of pacification, in as ample form, and with the same effect, as if we were personally present and acted therein.’ All the commissioners, except Mr. Jefferson, were present during the discussions, being in Europe at the time the meeting was appointed. Mr. Jefferson was in America, and did

not leave it, as a report reached the government that the preliminaries were already signed. Mr. Oswald's commission in proper form was not issued till the 21st of September.”—*Diplomacy of the United States*, ch. 8.—“At the moment . . . that negotiations were set on foot, there seemed but little hope of finding the Court of France peaceably inclined. Fox alone among the Ministers, though strongly opposed to a French alliance, inclined to a contrary opinion, and imagined that the independence of America once recognized, no further demands would be made upon England. It was therefore his wish to recognize that independence immediately, and by a rapid negotiation to insure the conclusion of what he believed would prove a favourable peace. Shelburne on the contrary believed that further concessions would be asked by France, and that the best chance England possessed of obtaining honourable terms, was to reserve the recognition of independence as part of the valuable consideration to be offered to the Colonies for favourable terms, and to use the points where the interests of France, Spain, and the Colonies were inconsistent, to foment difficulties between them, and be the means of negotiating, if necessary, a separate peace with each of the belligerents, as opportunity might offer. The circumstances of the time favoured the design. Vergennes had not gone to war for the sake of American independence, but in order to humiliate England. He not only did not intend to continue the war a day longer than was necessary to establish a rival power on the other side of the Atlantic, but was desirous of framing the peace on conditions such as would leave England, Spain, and the United States to balance one another, and so make France paramount. He therefore intended to resist the claim which the Colonies had invariably advanced of pushing their frontiers as far west as the Mississippi, and proposed following the example of the Proclamation of 1763, to leave the country between Florida and the Cumberland to the Indians, who were to be placed under the protection of Spain and the United States, and the country north of the Ohio to England, as arranged by the Quebec Act of 1774. Nor was he prepared to support the claim of the New Englandmen to fish on the banks off Newfoundland, over a considerable portion of which he desired to establish an exclusive right for his own countrymen, in keeping with the French interpretation of the Treaties of Utrecht and Paris. Of a still more pronounced character were the views of Spain. Her troops had recently conquered West Florida and threatened East Florida as well. She had determined to obtain formal possession of these territories, and to claim that they ran into the interior till they reached the great lakes. The United States, according to both the French and Spanish idea, were therefore to be restricted to a strip of land on the coast of the Atlantic Ocean, bounded by almost the same line which France had contended for against England after the Treaty of Utrecht.”—E. Fitzmaurice, *Life of William, Earl of Shelburne*, v. 3, ch. 4.—Assured of ultimate success, as early as 1770, Congress had debated and decided upon terms of peace. “At the middle of February, 1770, a special committee of five was appointed to formulate the American demands. It consisted of Gouverneur Morris of New York, Thomas Burke of North Carolina, John Witherspoon of New Jersey, Samuel Adams of Massachusetts, and Meriwether Smith of Virginia. In a few days the committee reported in favor of demanding, as ulti-

mata, that the United States should have the Northwest territories clear to the Mississippi, and should have not only a frontage on but free navigation of that river from its source down to the Florida line, with further navigation through to the Gulf and the use of a port on Spanish soil near its mouth; but that the United States should never seek to extend its sovereignty beyond the Mississippi, or indeed to expand its territories in any direction beyond the limits which should be prescribed in the treaty of peace; and that the fishing rights in the waters and on the banks and shores of Newfoundland should belong equally to the United States, France, and Great Britain. Congress debated the matter for a month, and then, under French influence, struck out the clause relating to the navigation of the lower Mississippi. Next a long controversy ensued over the fisheries. The New York delegation, led by Gouverneur Morris and John Jay and forming a part of the French or 'pro-Gallican' faction, refused to insist upon demanding a treaty right to the fisheries, while the New Englanders, led by Elbridge Gerry [of Massachusetts], and forming the mass of the 'anti-Gallicans,' were as resolutely in favor of such a demand. In the end, largely through the intrigues and intervention of the French minister, Gerard, the former won. Congress refused to demand the right to the fisheries. That delighted Vergennes, who . . . [maintained that] 'the Americans have no pretension whatever to share in them.' Happily, Congress also set aside the astounding proposition of the committee, to bind the United States never to extend its domain beyond the Mississippi River, or beyond the limits fixed in the treaty of peace. So by the middle of June 1779 the terms were apparently settled. . . . But the matter was not settled. Two days later Gerry threw a bomb into Congress. He moved for a demand of the common right with Great Britain to fish on the banks of Newfoundland and the other banks and seas of North America, as a *sine qua non* of treaty-making. There followed a long and bitter debate. . . . New York, Maryland, Virginia, and North Carolina threatened to secede from the confederation if it should be adopted. New Hampshire, Massachusetts, Connecticut, Rhode Island, and Pennsylvania supported Gerry. New Jersey, Delaware, and South Carolina were divided. For a time the continued union of the States and the success of the American cause trembled in the balance. . . . [Finally] the whole question of the fisheries was remitted to some subsequent treaty to be made with Great Britain after peace had been established. Encouraged by this success, the French government . . . sought to persuade Congress to forego all demand for recognition of American independence by Great Britain, and to be content with a French guarantee of independence. . . . Thus the United States, instead of realizing the ideal set forth in the Declaration of Independence, to the attainment of which the signers had pledged their lives, their fortunes, and their sacred honor, would have been a dependency of France, and would have enjoyed self-government only under an alien guarantee. . . . The proposal was received with favor by some members of Congress. The majority of that body insisted, however, that Great Britain must recognize American independence. . . . Thus disappointed, Gerard . . . asked Congress to renounce the right to navigate the Mississippi, and to leave that matter entirely to the magnanimity of Spain. This Congress would not do. . . . [It decided to send] a min-

ister of its own to Spain to settle the matter by direct negotiation with that country. . . . After several indecisive ballots, John Adams was chosen as peace commissioner, and was instructed to negotiate a treaty with Great Britain on these terms: Great Britain was to treat with the United States as 'sovereign, free, and independent,' and independence was to be formally confirmed by the treaty; Nova Scotia was to be acquired if possible, but was not to be insisted upon; the fishery rights were to be sought but were not to be insisted upon in the commercial treaty which was to be subsequently negotiated. . . . Jay, was appointed minister to Spain, and was instructed to offer that country an American guarantee of the Floridas in return for a Spanish guarantee of free navigation of the Mississippi to and into the Gulf. He was also instructed to seek a loan of \$5,000,000. . . . He was not favorably received. Indeed he was not officially received at all, nor recognized. The Spanish government took the ground that it could not or would not recognize him as a minister, nor receive him as such, until a treaty was negotiated between the two countries. But it would make no treaty with America until the United States would renounce the right to navigate the Mississippi, which of course the United States would not do.'—W. F. Johnson, *America's foreign relations*, v. 1, pp. 107-111.—"On the 15th February, Congress . . . resolved to instruct Jay to abandon the claim to the navigation of the Mississippi. This practically implied the abandonment of the claim to that river as the western boundary. Shortly after, and again on the demand of Luzerne, the instructions to Adams, who had been appointed Commissioner for negotiating a peace, and was then in Europe, were altered. Independence was to be the sole ultimatum, and Adams was to undertake to submit to the guidance of the French Minister in every respect. 'You are to make the most candid and confidential communications,' so his amended instructions ran, 'upon all subjects to the Ministers of our generous ally the King of France; to undertake nothing in the negotiations for peace or truce without their knowledge or concurrence, and to make them sensible how much we rely upon his Majesty's influence for effectual support in everything that may be necessary to the present security or future prosperity of the United States of America.' As a climax Count Luzerne suggested and Congress agreed to make Jay, Franklin, Jefferson, and Laurens, joint Commissioners with Mr. Adams. Of the body thus appointed Jefferson refused to serve, while Laurens, as already seen [had been] . . . captured on his way to England. Of the remaining Commissioners, John Adams was doubly odious to the diplomatists of France and Spain, because of his fearless independence of character, and because of the tenacity with which as a New Englander he clung to the American rights in the Newfoundland fisheries; Jay had been an enthusiastic advocate for the Spanish alliance, but the cavalier treatment he had received at Madrid, and the abandonment of the Mississippi boundary by Congress, had forced upon him the conviction that his own country was being used as a tool by the European powers, for their own ulterior objects. The French he hated. He said 'they were not a moral people, and did not know what it was.' Not so Franklin, influenced partly by his long residence in the French capital, and by the idea that the Colonies were more likely to obtain their objects, by a firm reliance upon France than by confidence in the generosity

of England. He also pointed to the terms of the treaty he had negotiated with the former power, which forbade either party to conclude a separate peace without the leave previously obtained of the other, as imposing a moral and legal obligation on his countrymen to follow the policy which he believed their interests as a power required them to adopt. Meanwhile the King of France congratulated Congress on having entrusted to his care the interests of the United States, and warned them that if France was to be asked to continue hostilities for purely American objects it was impossible to say what the result might be, for the system of France depended not merely on America, but on the other powers at war."—E. Fitzmaurice, *Life of William, Earl of Shelburne*, v. 3, ch. 4.—"Benjamin Franklin, now venerable with years, had been doing at the court of Versailles a work hardly less important than that of Washington on the battle-fields of America. By the simple grace and dignity of his manners, by his large good sense and freedom of thought, by his fame as a scientific discoverer, above all by his consummate tact in the management of men, the willom printer, king's postmaster-general for America, discoverer, London colonial agent, delegate in the Continental Congress, and signer of the Declaration of Independence, had completely captivated elegant, free-thinking France. Learned and common folk, the sober and the frivolous alike swore by Franklin. Snuff-boxes, furniture, dishes, even stoves were gotten up 'à la Franklin.' The old man's portrait was in every house. That the French Government, in spite of a monarch who was half afraid of the rising nation beyond sea, had given America her hearty support, was in no small measure due to the influence of Franklin. And his skill in diplomacy was of the greatest value in the negotiations now pending."—E. B. Andrews, *History of the United States*, v. 1, pp. 208-209.

1782 (September-November).—Peace parleyings at Paris.—Distrust of French aims by Jay and Adams.—Secret and separate negotiation with England.—"The task of making a treaty of peace was simplified both by [the change of ministry which placed Lord Shelburne at the head of affairs in England] . . . and by the total defeat of the Spaniards and French at Gibraltar in September. [See ENGLAND: 1780-1782.] Six months before, England had seemed worsted in every quarter. Now England, though defeated in America, was victorious as regarded France and Spain. The avowed object for which France had entered into alliance with the Americans, was to secure the independence of the United States, and this point was now substantially gained. The chief object for which Spain had entered into alliance with France was to drive the English from Gibraltar, and this point was now decidedly lost. France had bound herself not to desist from the war until Spain should recover Gibraltar; but now there was little hope of accomplishing this, except by some fortunate bargain in the treaty, and Vergennes tried to persuade England to cede the great stronghold in exchange for West Florida, which Spain had lately conquered, or for Oran or Guadaloupe. Failing in this, he adopted a plan for satisfying Spain at the expense of the United States; and he did this the more willingly as he had no love for the Americans, and did not wish to see them become too powerful. France had strictly kept her pledges; she had given us valu-

able and timely aid in gaining our independence; and the sympathies of the French people were entirely with the American cause. But the object of the French government had been simply to humiliate England, and this end was sufficiently accomplished by depriving her of her thirteen colonies. The immense territory extending from the Alleghany Mountains to the Mississippi River, and from the border of West Florida to the Great Lakes, had passed from the hands of France into those of England at the peace of 1763; and by the Quebec Act of 1774 England had declared the southern boundary of Canada to be the Ohio River. . . . Vergennes maintained that the Americans ought to recognize the Quebec Act, and give up to England all the territory north of the Ohio River. The region south of this limit should, he thought, be made an Indian territory, and placed under the protection of Spain and the United States. . . . Upon another important point the views of the French government were directly opposed to American interests. The right to catch fish on the banks of Newfoundland had been shared by treaty between France and England; and the New England fishermen, as subjects of the king of Great Britain, had participated in this privilege. The matter was of very great importance, not only to New England, but to the United States in general. . . . The British government was not inclined to grant the privilege, and on this point Vergennes took sides with England, in order to establish a claim upon her for concessions advantageous to France in some other quarter. . . . Jay [who had lately arrived in Paris to take part in the negotiations] soon began to suspect the designs of the French minister. He found that he was sending M. de Rayneval as a secret emissary to Lord Shelburne under an assumed name; he ascertained that the right of the United States to the Mississippi valley was to be denied; and he got hold of a dispatch from Marbois, the French secretary of legation at Philadelphia, to Vergennes, opposing the American claim to the Newfoundland fisheries. As soon as Jay learned these facts, he sent his friend Dr. Benjamin Vaughan to Lord Shelburne to put him on his guard, and while reminding him that it was greatly for the interest of England to dissolve the alliance between America and France, he declared himself ready to begin the negotiations without waiting for the recognition of independence, provided that Oswald's commission should speak of the thirteen United States of America, instead of calling them colonies and naming them separately. This decisive step was taken by Jay on his own responsibility, and without the knowledge of Franklin, who had been averse to anything like a separate negotiation with England. It served to set the ball rolling at once. . . . Lord Shelburne at once perceived the antagonism that had arisen between the allies, and promptly took advantage of it. A new commission was made out for Oswald, in which the British government first described our country as the United States; and early in October negotiations were begun and proceeded rapidly. On the part of England the affair was conducted by Oswald, assisted by Strachey and Fitzherbert, who had succeeded Grenville. In the course of the month John Adams arrived in Paris, and a few weeks later Henry Laurens. . . . The arrival of Adams fully decided the matter as to a separate negotiation with England. He agreed with Jay that Vergennes should be kept as far as possible in the dark until everything was cut and dried, and Franklin was reluctantly obliged

to yield. The treaty of alliance between France and the United States had expressly stipulated that neither power should ever make peace without the consent of the other. . . . In justice to Vergennes, it should be borne in mind that he had kept strict faith with us in regard to every point that had been expressly stipulated. . . . At the same time, in regard to matters not expressly stipulated, Vergennes was clearly playing a sharp game against us; and it is undeniable that, without departing technically from the obligations of the alliance, Jay and Adams—two men as honourable as ever lived—played a very sharp defensive game against him. . . . The treaty with England was not concluded until the consent of France had been obtained, and thus the express stipulation was respected; but a thorough and detailed agreement was reached as to what the purport of the treaty should be, while our not too friendly ally was kept in the dark.”—J. Fiske, *Critical period of American history*, ch. 1.—“If his [Vergennes’] policy had been carried out, it seems clear that he would have established a claim for concessions from England by supporting her against America on the questions of Canada and the Canadian border and the Newfoundland fishery. . . . The success of such a policy would have been extremely displeasing to the Congress, and Jay and Adams defeated it. . . . The act was done, and if it can be justified by success, that justification, at least, is not wanting.”—W. E. H. Lecky, *History of England in the eighteenth century*, v. 4, ch. 15.—“The instructions of congress, given to the American commissioners under the instigation of the French court, were absolute and imperative, ‘to undertake nothing without the knowledge and concurrence of that court, and ultimately to govern themselves by their advice and opinion.’ These orders, transmitted at the time of the enlargement of the commission, had just been reinforced by assurances given to quiet the uneasiness created in France by the British overtures through Governor Carleton. Thus far, although the commissioners had felt them to be derogatory to the honor of their country, as well as to their own character as its representatives, there had been no necessity for action either under or against them. But now that matters were coming to the point of a serious negotiation, and the secondary questions of interest to America were to be determined, especially those to which France had shown herself indifferent, not to say adverse, it seemed as if no chance remained of escaping a decision. Mr. Jay, jealous of the mission of De Rayneval, of which not a hint had been dropped by the French court, suspicious of its good faith from the discourses of the remarkable dispatch of Marbois, and fearful of any advice like that of which he had received a foretaste through M. de Rayneval, at the same time provoked that the confidence expected should be all on one side, the Count communicating nothing of the separate French negotiation, came to the conclusion that the interests of America were safest when retained in American hands. He therefore declared himself in favor of going on to treat with Great Britain, without consulting the French court. Dr. Franklin, on the other hand, expressing his confidence in that court, secured by his sense of the steady reception of benefits by his country, signified his willingness to abide by the instructions he had received. Yet it is a singular fact, but lately disclosed, that, notwithstanding this general feeling, which was doubtless sincerely entertained, Dr. Franklin had been the first person to violate those instructions, at the very inception of the

negotiations, by proposing to Lord Shelburne the cession of Canada, and covering his proposal with an earnest injunction to keep it secret from France, because of his belief that she was adverse to the measure. . . . It may fairly be inferred that, whatever Franklin might have been disposed to believe of the French court, his instincts were too strong to enable him to trust them implicitly with the care of interests purely American. And, in this, there can be no reasonable cause for doubt that he was right. The more full the disclosures have been of the French policy from their confidential papers, the more do they show Count de Vergennes assailing England in America, with quite as fixed a purpose as ever Chatham had to conquer America in Germany. Mr. Adams had no doubt of it. He had never seen any signs of a disposition to aid the United States from affection or sympathy. On the contrary, he had perceived their cause everywhere made subordinate to the general considerations of continental politics. Perhaps his impressions at some moments carried him even further, and led him to suspect in the Count a positive desire to check and depress America. In this he fell into the natural mistake of exaggerating the importance of his own country. In the great game of nations which was now playing at Paris under the practised eye of France’s chief (for Count de Maurepas was no longer living), the United States probably held a relative position, in his mind, not higher than that of a pawn, or possibly a knight, on a chess-table. Whilst his attention was absorbed in arranging the combinations of several powers, it necessarily followed that he had not the time to devote that attention to any one, which its special representative might imagine to be its due. But even this hypothesis was to Mr. Adams justification quite sufficient for declining to submit the interests of his country implicitly to the Count’s control. If not so material in the Count’s eyes, the greater the necessity of keeping them in his own care. He therefore seized the first opportunity to announce to his colleagues his preference for the views of Mr. Jay. After some little reflection, Dr. Franklin signified his acquiescence in this decision. His objections to it had doubtless been increased by the peculiar relations he had previously sustained to the French court, and by a very proper desire to be released from the responsibility of what might from him be regarded as a discourteous act. No such delicacy was called for on the part of the other commissioners. Neither does it appear that Count de Vergennes manifested a sign of discontent with them at the time. He saw that little confidence was placed in him, but he does not seem to have made the slightest effort to change the decision or even to get an explanation of it. The truth is, that the course thus taken had its conveniences for him provided only that the good faith of the American negotiators, not to make a separate peace, could be depended upon. Neither did he ever affect to complain of it, excepting at one particular moment when he thought he had cause to fear that the support he relied on might fail.”—J. Q. and C. F. Adams, *Life of John Adams*, v. 2, ch. 7.—“The radical difference between Franklin and his colleagues was in the question of trust. Franklin saw no reason to distrust the fidelity of France at any time to her engagements to the United States during the revolutionary war. His colleagues did not share this confidence, and yet, while impressed by this distrust of their ally, they made no appeal for explanation. The weight of opinion, as will hereafter be more fully seen, is now that Franklin

was right, and they in this respect wrong. But whatever may have been the correctness of their view, it was proper that, before making it the basis of their throwing off the burden of treaty obligation and their own instructions, they should have first notified France of their complaint. Obligations cannot be repudiated by one party on the ground of the failure of the other party to perform some condition imposed on him, without giving him notice of the charge against him, so that he could have the opportunity of explanation. It may be added, on the merits, that the extenuation set up by Jay and Adams, that France was herself untrue to her obligations, however honestly they believed it, can not now be sustained. Livingston, who knew more of the attitude of France than any public man on the American side except Franklin, swept it aside as groundless. Edward Everett, one of the most accomplished historical writers and diplomatists the country has ever produced, speaks, as we shall see, to the same effect, and other historical critics of authority, to be also hereafter cited, give us the same conclusion. Yet there are other reasons which may excuse their course, and that of Franklin, who concurred with them rather than defeat a peace. In the first place, such was their isolation, that their means of communication with Congress was stopped; and they might well have argued that if Congress knew that the English envoys refused to treat with them except in secret conference their instructions would have been modified. In the second place we may accept Adams' statement that Vergennes was from time to time informally advised of the nature of the pending propositions. In the third place, the articles agreed on in 1782 were not to be a definite treaty except with the assent of France. . . . It now appears that the famous Marbois letter, handed to Jay by one of the British loyalists, and relied on by him as showing France's duplicity, was disavowed by Marbois; and there are, aside from this, very strong reasons to distrust its genuineness. In the second place, we have in the correspondence of George III a new light thrown on the action taken by Jay in consequence of this letter. . . . Benjamin Vaughan, while a gentleman of great amiability and personal worth, was, when Jay sent him without Franklin's knowledge on a confidential mission to the British ministry, in the employ of that ministry as secret agent at Paris. It is due to Jay to say that he was ignorant of this fact, though he would have been notified of it had he consulted Franklin. One of the most singular incidents of this transaction is that George III, seeking double treachery in thus sending back to him his own agent in the guise of an agent from the American legation, regarded it as a peculiarly subtle machination of Franklin, which it was his duty to baffle by utterly discrediting Benjamin Vaughan. It should be added that Franklin's affection for Benjamin Vaughan was in no wise diminished by Vaughan's assumption, with an honesty which no one who knew him would question, of this peculiar kind of mediatorship. And in Jay Franklin's confidence was unabated. He more than once said that no one could be found more suited than Jay to represent the United States abroad. And when, in view of death, he prepared to settle his estate, he selected Jay as his executor."—F. Wharton, *Revolutionary diplomatic correspondence of the United States*, v. 1, ch. 9, sect. 111, ch. 13, sect. 158.—Writing to de la Luzerne, the French minister in the United States, under date of Dec. 19, 1782, Count de Vergennes expressed himself on the conduct of the American Commissioners

as follows: "You will surely be gratified, as well as myself, with the very extensive advantages, which our allies, the Americans, are to receive from the peace; but you certainly will not be less surprised than I have been, at the conduct of the Commissioners. . . . Whenever I have had occasion to see any one of them, and inquire of them briefly respecting the progress of the negotiation, they have constantly clothed their speech in generalities, giving me to understand that it did not go forward, and that they had no confidence in the sincerity of the British ministry. Judge of my surprise, when, on the 30th of November, Dr. Franklin informed me that the articles were signed. The reservation retained on our account does not save the infraction of the promise, which we have mutually made, not to sign except conjointly. I owe Dr. Franklin the justice to state, however, that on the next day he sent me a copy of the articles. He will hardly complain that I received them without demonstrations of sensibility."—J. Bigelow, *Life of Benjamin Franklin*, v. 3, p. 207, note.—See also ENGLAND: 1782-1783.

1782-1783.—Grievances of the army.—Newburgh addresses.—"Nothing had been done by Congress for the claims of the army, and it seemed highly probable that it would be disbanded without even a settlement of the accounts of the officers, and if so, that they would never receive their dues. Alarmed and irritated by the neglect of Congress; destitute of money and credit and of the means of living from day to day; oppressed with debts; saddened by the distresses of their families at home, and by the prospect of misery before them,—they presented a memorial to Congress in December [1782], in which they urged the immediate adjustment of their dues, and offered to commute the half-pay for life, granted by the resolve of October, 1780, for full pay for a certain number of years, or for such a sum in gross as should be agreed on by their committee sent to Philadelphia to attend the progress of the memorial through the house. It is manifest from statements in this document, as well as from other evidence, that the officers were nearly driven to desperation, and that their offer of commutation was wrung from them by a state of public opinion little creditable to the country. . . . The committee of the officers were in attendance upon Congress during the whole winter, and early in March, 1783, they wrote to their constituents that nothing had been done. At this moment, the predicament in which Washington stood, in the double relation of citizen and soldier, was critical and delicate in the extreme. In the course of a few days, all his firmness and patriotism, all his sympathies as an officer, on the one side, and his fidelity to the government, on the other, were severely tried. On the 10th of March, an anonymous address was circulated among the officers at Newburgh, calling a meeting of the general and field officers, and of one officer from each company, and one from the medical staff, to consider the late letter from their representatives at Philadelphia, and to determine what measures should be adopted to obtain that redress of grievances which they seemed to have solicited in vain. It was written with great ability and skill

[by John Armstrong, afterwards General]. . . . Washington met the crisis with firmness, but also with conciliation. He issued orders forbidding an assemblage at the call of an anonymous paper, and directing the officers to assemble on Saturday, the 15th, to hear the report of their committee, and to deliberate what further measures ought to be adopted as most rational and best calculated to obtain the just and important object in view. The senior officer in rank present [General Gates] was directed to preside, and to report the result to the Commander-in-chief. On the next day after these orders were issued, a second anonymous address appeared from the same writer. In this paper he affected to consider the orders of General Washington, assuming the direction of the meeting, as a sanction of the whole proceeding which he had proposed. Washington saw, at once, that he must be present at the meeting himself, or that his name would be used to justify

1783 (September).—Definitive treaty of peace between Great Britain and the United States.—

The four difficult questions on which the British and American negotiators at Paris arrived, after much discussion and wise compromise, at a settlement of differences originally wide, were (1) boundaries; (2) fishing rights; (3) payment of debts from American to British merchants that were outstanding when the war began; (4) amnesty to American loyalists, or Tories, and restoration of their confiscated property. Within two months after the separate negotiations with England opened, an agreement had been reached, and preliminary or provisional articles were signed on Nov. 30, 1782. The treaty was not to take effect, otherwise than by the cessation of hostilities, until terms of peace should be agreed upon between England and France. This occurred in the fol-

WASHINGTON'S HEADQUARTERS AT NEWBURGH

measures which he intended to discountenance and prevent. He therefore attended the meeting, and under his influence, seconded by that of Putnam, Knox, Brooks, and Howard, the result was the adoption of certain resolutions, in which the officers, after reasserting their grievances, and rebuking all attempts to seduce them from their civil allegiance, referred the whole subject of their claims again to the consideration of Congress. Even at this distant day, the peril of that crisis can scarcely be contemplated without a shudder. Had the Commander-in-chief been other than Washington, had the leading officers by whom he was surrounded been less than the noblest of patriots, the land would have been deluged with the blood of a civil war."—G. T. Curtis, *History of the constitution of the United States*, v. 1, bk. 2, ch. 1.

lowing January, and on September 3, 1783, the definitive treaty of peace between Great Britain and the United States was signed at Paris. The essential provisions of this treaty were the following:

Article 1. His Britannic Majesty acknowledges the said United States, viz. New Hampshire, Massachusetts Bay, Rhode Island, and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina and Georgia, to be free, sovereign and independent States; that he treats with them as such, and for himself, his heirs and successors, relinquishes all claims to the Government, propriety and territorial rights of the same, and every part thereof.

Art. II. And that all disputes which might arise in future, on the subject of the boundaries of the United States may be prevented, it is hereby agreed and declared, that the following are, and shall be their boundaries, viz.: From the north-west angle of Nova Scotia, viz. that angle which is formed by a line drawn due north from the source of Saint

Croix River to the Highlands; along the said Highlands which divide those rivers that empty themselves into the river, St. Lawrence, from those which fall into the Atlantic Ocean, to the north-westernmost head of Connecticut River; thence down along the middle of that river, to the 45th degree of north latitude; from thence, by a line due west on the said latitude, until it strikes the river Iroquois or Cataquay; thence along the middle of said river into Lake Ontario, through the middle of said lake until it strikes the communication by water between that lake and Lake Erie; thence along the middle of said communication into Lake Erie, through the middle of said lake until it arrives at the water communication between that lake and Lake Huron; thence along the middle of said water communication into the Lake Huron; then through the middle of said lake to the water communication between that lake and Lake Superior; thence through Lake Superior northward to the Isles Royal and Philipeaux, to the Long Lake; thence through the middle of said Long Lake, and the water communication between it and the Lake of the Woods, to the said Lake of the Woods; thence through the said lake to the most northwestern point thereof, and from thence on a due west course to the river Mississippi; thence by a line to be drawn along the middle of the said river Mississippi until it shall intersect the northernmost part of the 31st degree of north latitude. South, by a line to be drawn due east from the determination of the line last mentioned, in the latitude of 31 degrees north of the Equator, to the middle of the river Apalachicola or Catahouche; thence along the middle thereof to its junction with the Flint River; thence strait to the head of St. Mary's River; and thence down along the middle of St. Mary's River to the Atlantic Ocean. East, by a line to be drawn along the middle of the river St. Croix, from its mouth in the Bay of Fundy to its source, and from its source directly north to the aforesaid Highlands, which divide the rivers that fall into the Atlantic Ocean from those which fall into the river St. Lawrence; comprehending all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries between Nova Scotia on the one part, and East Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean; excepting such islands as now are, or heretofore have been, within the limits of the said province of Nova Scotia.

Art. III. It is agreed that the people of the United States shall continue to enjoy unmolested the right to take fish of every kind on the Grand Bank, and on all the other banks of Newfoundland; also in the Gulph of Saint Lawrence, and at all other places in the sea where the inhabitants of both countries used at any time heretofore to fish. And also that the inhabitants of the United States shall have liberty to take fish of every kind on such part of the coast of Newfoundland as British fishermen shall use (but not to dry or cure the same on that island) and also on the coasts, bays, and creeks of all other of His Britannic Majesty's dominions in America; and that the American fishermen shall have liberty to dry and cure fish in any of the unsettled bays, harbours, and creeks of Nova Scotia, Magdalen Islands, and Labrador, so long as the same shall remain unsettled; but so soon as the same or either of them shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such settlement, without a previous

agreement for that purpose with the inhabitants, proprietors, or possessors of the ground.

Art. IV. It is agreed that creditors on either side shall meet with no lawful impediment to the recovery of the full value in sterling money, of all bona fide debts heretofore contracted.

Art. V. It is agreed that the Congress shall earnestly recommend it to the legislatures of the respective States, to provide for the restitution of all estates, rights, and properties which have been confiscated, belonging to real British subjects, and also of the estates, rights, and properties of persons resident in districts in the possession of His Majesty's arms, and who have not borne arms against the said United States. . . .

Art. VI. That there shall be no future confiscations made, nor any prosecutions commenc'd, against any person or persons for, or by reason of the part which he or they may have taken in the present war. . . .

Art. VII. There shall be a firm and perpetual peace between His Britannic Majesty and the said States, and between the subjects of the one and the citizens of the other, wherefore all hostilities, both by sea and land, shall from henceforth cease: All prisoners on both sides shall be set at liberty, and His Britannic Majesty shall, with all convenient speed, and without causing any destruction, or carrying away any negroes or other property of the American inhabitants, withdraw all his armies, garrisons, and fleets from the said United States. . . .

Art. VIII. The navigation of the river Mississippi, from its source to the ocean, shall forever remain free and open to the subjects of Great Britain, and the citizens of the United States.

1783 (November-December).—British evacuation of New York.—Dissolution of the continental army and Washington's farewell to it.—"The definitive treaty had been signed at Paris on the 3d of September, 1783 and was soon to be ratified by the United States in Congress assembled. The last remnant of the British army in the east had sailed down the Narrows on the 25th of November, a day which, under the appellation of Evacuation Day, was long held in grateful remembrance by the inhabitants of New York, and was, till a few years since, annually celebrated with fireworks and with military display. Of the continental army scarce a remnant was then [at the beginning of 1784] in the service of the States, and these few were under the command of General Knox. His great work of deliverance over, Washington had resigned his commission, had gone back to his estate on the banks of the Potomac, and was deeply engaged with plans for the improvement of his plantations. The retirement to private life of the American Fabius, as the newspapers delighted to call him, had been attended by many pleasing ceremonies, and had been made the occasion for new manifestations of affectionate regard by the people. The same day that witnessed the departure of Sir Guy Carleton from New York also witnessed the entry into that city of the army of the States. Nine days later Washington bid adieu to his officers. About noon on Thursday, the 4th of December, the chiefs of the

army assembled in the great room of Frances's Tavern, then the resort of merchants and men of fashion, and there Washington joined them. Rarely as he gave way to his emotions, he could not on that day get the mastery of them. . . . He filled a glass from a decanter that stood on the table, raised it with a trembling hand, and said: 'With a heart full of love and gratitude I now take leave of you, and most devoutly wish your latter days may be as prosperous and happy as your former ones have been glorious and honorable.' Then he drank to them, and, after a pause, said: 'I cannot come to each of you to take my leave, but shall be obliged if you will each come and shake me by the hand.' General Knox came forward first, and Washington embraced him. The other officers approached one by one, and silently took their leave. A line of infantry had been drawn up extending from the tavern to Whitehall ferry, where a barge was in waiting to carry the commander across the Hudson to Paulus Hook. Washington, with his officers following, walked down the line of soldiers to the water. The streets, the balconies, the windows, were crowded with gazers. All the churches in the city sent forth a joyous din. Arrived at the ferry, he entered the barge in silence, stood up, took off his hat and waved farewell. Then, as the boat moved slowly out into the stream amid the shouts of the citizens, his companions in arms stood bareheaded on the shore till the form of their illustrious commander was lost to view."—J. B. McMaster, *History of the people of the United States*, v. 1, ch. 2.—"As men looked back over the years of strife, they saw clearly that the chief reason why the American cause was not lost before France came to its aid was the personal leadership of Washington. If we seek to explain, it was not his great mind, for Franklin's was greater; not his force, energy, or ingenuity, for Benedict Arnold surpassed him in these qualities; not his military experience, for Charles Lee's was far more extensive; but it was the strength of character which day by day won the love of his soldiers and the perfect confidence of his countrymen. The absence of a mean ambition, the one desire of serving well his country and his fellow-men, the faithfulness that could not be driven from its task through jealousy or resentment, these were the traits that gave him a unique and solitary place among the world's heroes."—C. H. Van Tyne, *American Revolution, 1776-1783*, p. 328.

Also in: J. Fiske, *Critical period*, pp. 222-305.—W. Irving, *Life of Washington*, v. 4, ch. 33.—Mrs. M. J. Lamb, *History of the city of New York*, v. 2, ch. 6-7.

1783-1786.—Pioneers.—Westward to Kentucky, Ohio and Tennessee.—"It is natural for us to think of the years 1775-1783 as given wholly to patriotic war for political independence. But during just those years thousands of earnest Americans turned away from that contest to win industrial independence for themselves and their children beyond the mountains. While the old Atlantic sections were fighting England, a new section sprang into being, fighting Indians and the wilderness. Until the peace of 1783, settlement penetrated only into the 'dark and bloody ground' between the Ohio and its southern branches. This district had long been a famous hunting ground, where Indians of the north and of the south slew the bison and one another. Frequent war parties flitted along its trails, but no tribe claimed it for actual occupation. So here lay the line of least resistance to the on-pushing wave of settlement.

. . . [The settlement of Watauga (see TENNESSEE: 1769-1772) had been begun in 1769 by a few Virginia frontiersmen who moved into the valley with their families. By 1772 thirteen settlements had been made, and the men of the forts met together to organize a government.] The second group of Western settlements—almost as early as Watauga—was made in Kentucky. . . . Permanent settlement in central Kentucky began . . . [in the spring of 1775]. For a few months it had the form of a proprietary colony."—W. M. West, *Story of American democracy, political and industrial*, pp. 238, 241, 244.—"There were three routes that were taken by immigrants to Kentucky. One led by backwoods trails to the Greenbriar settlements, and thence down the Kanawha to the Ohio; but the travel over this was insignificant compared to that along the others. The two really important routes were the Wilderness Road, and that by water, from Fort Pitt down the Ohio River. Those who chose the latter way embarked in roughly built little flat-boats at Fort Pitt, if they came from Pennsylvania, or else at the old Redstone Fort on the Monongahela, if from Maryland or Virginia, and drifted down with the current. Though this was the easiest method, yet the danger from Indians was so very great that most immigrants, the Pennsylvanians as well as the Marylanders, Virginians, and North Carolinians, usually went overland by the Wilderness Road. This was the trace marked out by Boone, which to the present day remains a monument to his skill as a practical surveyor and engineer. Those going along it went on foot, driving their horses and cattle. At the last important frontier town they fitted themselves out with pack-saddles; for in such places two of the leading industries were always those of the pack-saddle maker and the artisan in deer leather. . . . If several families were together, they moved slowly in true patriarchal style. . . . The elder boys drove the cattle, which usually headed the caravan; while the younger children were packed in crates of hickory withes and slung across the backs of the old quiet horses, or else were seated safely between the great rolls of bedding that were carried in similar fashion. The women sometimes rode and sometimes walked, carrying the babies. The men, rifle on shoulder, drove the pack-train, while some of them walked spread out in front, flank, and rear, to guard against the savages. A tent or brush lean-to gave cover at night. . . . In winter the fords and mountains often became impassable, and trains were kept in one place for weeks at a time, escaping starvation only by killing the lean cattle; for few deer at that season remained in the mountains. Both the water route and the wilderness road were infested by the savages at all times, and whenever there was open war the sparsely settled regions from which they started were likewise harried. When the northwestern tribes threatened Fort Pitt and Fort Henry—or Pittsburg and Wheeling, as they were getting to be called,—they threatened one of the two localities which served to cover the communications with Kentucky; but it was far more serious when the Holston region was menaced, because the land travel was at first much the more important.

"The early settlers of course had to suffer great hardship even when they reached Kentucky. The only two implements the man invariably carried were the axe and rifle, for they were almost equally proud of their skill as warriors, hunters, and wood-choppers. Next in importance came

the sickle or scythe. The first three tasks of the pioneer farmer were to build a cabin, to make a clearing—burning the brush, cutting down the small trees, and girdling the large—and to plant corn. Until the crop ripened he hunted steadily, and his family lived on the abundant game, save for which it would have been wholly impossible to have settled Kentucky so early. . . . If the men were suddenly called away by an Indian inroad, their families sometimes had to live for days on boiled tops of green nettles. Naturally the children watched the growth of the tasselled corn with hungry eagerness until the milky ears were fit for roasting. When they hardened, the grains were pounded into hominy in the hominy-block, or else ground into meal in the rough hand-mill, made of two limestones in a hollow sycamore log. Until flax could be grown the women were obliged to be content with lint made from the bark of dead nettles. This was gathered in the spring-time by all the people of a station acting together, a portion of the men standing guard while the rest, with the women and children, plucked the dead stalks. The smart girls of Irish ancestry spun many dozen cuts of linen from this lint, which was as fine as flax but not so strong. Neither hardship nor danger could render the young people downhearted, especially when several families, each containing grown-up sons and daughters, were living together in almost every fort. The chief amusements were hunting and dancing. There being no permanent ministers, even the gloomy Calvinism of some of the pioneers was relaxed. Long afterwards one of them wrote, in a spirit of quaint apology, that 'dancing was not then considered criminal,' and that it kept up the spirits of the young people, and made them more healthy and happy; and recalling somewhat uneasily the merriment in the stations, in spite of the terrible and interminable Indian warfare, the old moralist felt obliged to condemn it, remarking that, owing to the lack of ministers of the gospel, the impressions made by misfortune were not improved. Though obliged to be very careful and to keep their families in forts, and in spite of a number of them being killed by the savages, the settlers in 1776 were able to wander about and explore the country thoroughly, making little clearings as the basis of 'cabin claims,' and now and then gathering into stations which were for the most part broken up by the Indians and abandoned. What was much more important, the permanent settlers in the well-established stations proceeded to organize a civil government."—T. Roosevelt, *Winning of the West*, v. 1, pp. 313-318.—The cruel border warfare which was "so damaging to the New York frontier settlements and so fatal to the Six Nations [see above: 1779 (August-September)], was really part of a desultory conflict which raged at intervals [during the war] from north to south along our whole western border, and resulted in the total overthrow of British authority beyond the Alleghanies. The vast region between these mountains and the Mississippi river—a territory more than twice as large as the German Empire—was at that time an almost unbroken wilderness. A few French towns garrisoned by British troops, as at Natchez, Kaskaskia, and Cahokia on the Mississippi river, at Vincennes, on the Wabash, and at Detroit, sufficed to represent the sovereignty of George III., and to exercise a very dubious control over the wild tribes that roamed through these primeval solitudes. When the thirteen colonies de-

clared themselves independent of the British Crown the ownership of this western territory was for the moment left undecided. [See above: 1781-1786.] . . . Little respect, however, was paid to the quaint terminology of charters framed in an age when almost nothing was known of American geography; and it was virtually left for circumstances to determine to whom the western country should belong. It was now very fortunate for the United States that the policy of Pitt had wrested this all-important territory from the French. For to conquer from the British enemy so remote a region was feasible; but to have sought to obtain it from a power with which we were forming an alliance would have been difficult indeed."—J. Fiske, *American Revolution*, v. 2, pp. 94-95.—"With the ending of the Revolutionary War the rush of settlers to these western lands assumed striking proportions. The peace relieved the pressure which had hitherto restrained this movement, on the one hand, while on the other it tended to divert into the new channel of pioneer work those bold spirits whose spare energies had thus far found an outlet on stricken fields. To push the frontier westward in the teeth of the forces of the wilderness, was fighting work, such as suited well enough many a stout soldier who had worn the blue and buff of the Continental line, or who, with his fellow rough-riders, had followed in the train of some grim partisan leader. The people of the New England States and of New York, for the most part, spread northward and westward within their own boundaries; and Georgia likewise had room for all her growth within her borders; but in the States between there was a stir of eager unrest over the tales told of the beautiful and fertile lands lying along the Ohio, the Cumberland, and the Tennessee. The days of the early pioneers, of the men who did the hardest and roughest work, were over; farms were being laid out and towns were growing up among the felled forests from which the game and the Indians had alike been driven. There was still plenty of room for the rude cabin and stumped clearing of the ordinary frontier settler, the wood-chopper and game hunter. Folk of the common backwoods type were as yet more numerous than any others among the settlers. In addition there were planters from among the gentry of the sea-coast; there were men of means who had brought great tracts of wild land; there were traders with more energy than capital; there were young lawyers; there were gentlemen with a taste for an unfettered life of great opportunity; in short there were adventures of every kind. All men who deemed that they could swim in troubled waters were drawn towards the new country. The more turbulent and ambitious spirits saw roads to distinction in frontier warfare, politics, and diplomacy. Merchants dreamed of many fortunate ventures, in connection with the river trade or the overland commerce by pack-train. Lawyers not only expected to make their living by their proper calling, but also to raise to the first places in the commonwealths, for in these new communities, as in the older States, the law was then the most honored of the professions, and that which most surely led to high social and political standing. But the one great attraction for all classes was the chance of procuring large quantities of fertile land at low prices. To the average settler the land was the prime source of livelihood. A man of hardihood, thrift, perseverance, and bodily strength could surely make a comfortable liv-

ing for himself and his family, if only he could settle on a good tract of rich soil; and this he could do if he went to the new country. As a matter of course, therefore, vigorous young frontiersmen swarmed into the region so recently won. These men merely wanted so much land as they could till. Others, however, looked at it from a very different standpoint. The land was the real treasury-chest of the country. It was the one commodity which appealed to the ambitious and adventurous side of the industrial character at that time and in that place. It was the one commodity the management of which opened chances of procuring vast wealth, and especially vast speculative wealth. To the American of the end of the eighteenth century the roads leading to great riches were as few as those leading to a competency were many. The two chief topics of thought and conversation, the two subjects which beyond all others engrossed and absorbed the minds of the settlers, were the land and the Indians. . . . Every hunter kept a sharp lookout for some fertile bottom on which to build a cabin. The volunteers who rode against the Indian towns also spied out the land and chose the best spots whereon to build their blockhouses and palisaded villages as soon as a truce might be made, of the foe driven for the moment farther from the border. Sometimes settlers squatted on land already held but not occupied under a good title; sometimes a man who claimed the land under a defective title, or under pretence of original occupation, attempted to oust or to blackmail him who had cleared and tilled the soil in good faith; and these were both fruitful causes not only of law suits but of bloody affrays. Among themselves, the settlers' talk ran ever on land titles and land litigation, and schemes for securing vast tracts of rich and well watered country. These were the subjects with which they filled their letters to one another and to their friends at home, and the subjects upon which these same friends chiefly dwelt when they sent letters in return. Often well-to-do men visited the new country by themselves first, chose good sites for their farms and plantations, surveyed and purchased them, and then returned to their old homes, whence they sent out their field hands to break the soil and put up buildings before bringing out their families. The westward movement of settlers took place along several different lines. The dwellers in what is now eastern Tennessee were in close touch with the old settled country; their farms and little towns formed part of the chain of forest clearings which stretched unbroken from the border of Virginia down the valleys of the Watauga and the Holston. . . . It grew rapidly, the population being composed chiefly of actual settlers who had taken boldings with the purpose of cultivating them, and of building homes thereon. The great growth of the west took place in Kentucky. The Kentucky country was by far the most widely renowned for its fertility; it was much more accessible and more firmly held, and its government was on a more permanent footing than was the case in the Wabash, Illinois, and Cumberland regions. In consequence the majority of the men who went west to build homes fixed their eyes on the vigorous young community which lay north of the Ohio, and which already aspired to the honors of statehood. The immigrants came into Kentucky in two streams, following two different routes—the Ohio River, and Boone's old Wilderness Trail. Those who came overland, along the latter road, were much fewer in number than those who came by water; and

yet they were so numerous that the trail at times was almost thronged, and much care had to be taken in order to find camping places where there was enough feed for the horses. . . . The time of the journey depended, of course, upon the composition of the traveling party, and upon the mishaps encountered; a party of young men on good horses might do it in three days, while a large band of immigrants, who were hampered by women, children, and cattle, and dogged by ill-luck, might take three weeks. Ordinarily six or eight days were sufficient. Before starting each man laid in a store of provisions for himself and his horse; perhaps thirty pounds of flour, half a bushel of corn meal, and three bushels of oats. . . . The chief highway was the Ohio River; for to drift down stream in a scow was easier and quicker, and no more dangerous, than to plod through thick mountain forests. Moreover, it was much easier for the settler who went by water to carry with him his household goods and implements of husbandry; and even such cumbersome articles as wagons, or, if he was rich and ambitious, the lumber wherewith to build a frame house. All kinds of craft were used, even bark canoes and pirogues, or dugouts; but the keel-boat, and especially the flat-bottomed scow with square ends, were the ordinary means of conveyance."—T. Roosevelt, *Winning of the West*, pp. 4-6, 9-10, 12-13.—See also KENTUCKY: 1765-1778, to 1775-1784; MARYLAND: 1776-1784; NORTHWEST TERRITORY OF THE UNITED STATES: 1784; 1786-1788; OHIO: 1774; TENNESSEE: 1785; 1785-1796; VIRGINIA: 1779-1797.

1783-1787.—After the war.—Resistance to the stipulations of the treaty of peace.—National feebleness and humiliation.—Failure of the Articles of Confederation.—Unifying influences of confederation.—Movements toward a firmer constitution.—"The revolution was at last accomplished. The evils it had removed, being no longer felt, were speedily forgotten. The evils it had brought pressed heavily upon them. They could devise no remedy. They saw no way of escape. They soon began to grumble, became sullen, hard to please, dissatisfied with themselves and with everything done for them. The States, differing in habits, in customs, in occupations, had been during a few years united by a common danger. But the danger was gone; old animosities and jealousies broke forth again with all their strength, and the union seemed likely to be dissolved. In this state of public discontent the House met at Philadelphia early in January, 1784. Some days were spent in examining credentials of new members, and in waiting for the delinquents to come in. It was not till the 14th of the month that the definitive treaty was taken under consideration and duly ratified. Nothing remained, therefore, but to carry out the stipulations with as much haste as possible. But there were some articles which the people had long before made up their minds never should be carried out. While the treaty was yet in course of preparation the royal commissioners had stoutly insisted on the introduction of articles providing for the return of the refugees and the payment of debts due to British subjects at the opening of the war. The commissioners on behalf of the United States, who well knew the tempers of their countrymen, had at first firmly stood out against any such articles. But some concessions were afterward made by each party, and certain stipulations touching the debts and the refugees inserted. Adams, who wrote in the name of his fellow-commissioners, . . . hoped that the middle line adopted would be approved. The middle line to

which Adams referred was that Congress should recommend the States to make no more seizures of the goods and property of men lately in arms against the Confederation, and to put no bar in the way of the recovery of such as had already been confiscated. It was distinctly understood by each side that these were recommendations, and nothing more than recommendations. Yet no sooner were they made known than a shout of indignation and abuse went up from all parts of the country. The community in a moment was divided between three parties. The smallest of the three was made up of the Tories, who still hoped for place and power, and still nursed the delusion that the past would be forgotten. Yet they daily contributed to keep the remembrance of it alive by a strong and avowed attachment to Great Britain. Opposed to these was the large and influential body of violent Whigs, who insisted vehemently that every loyalist should instantly be driven from the States. A less numerous and less violent body of Whigs constituted the third party." The fury of the violent Whigs proved generally irresistible and great numbers of the obnoxious Tories fled (see *TORIES OF THE AMERICAN REVOLUTION*) before it. Some "sought a refuge in Florida, then a possession of Spain, and founded settlements which their descendants have since raised to prosperous and beautiful villages, renowned for groves of orange-trees and fields of cane. Others embarked on the British ships of war, and were carried to Canada or the island of Bermuda; a few turned pirates, obtained a sloop, and scoured the waters of Chesapeake bay. Many went to England, beset the ministry with petitions for relief, wearied the public with pathetic stories of the harsh ingratitude with which their sufferings had been requited, and were accused, with much show of reason, by the Americans of urging the severe restrictions which England began to lay on American commerce. Many more . . . set out for Nova Scotia. . . . The open contempt with which, in all parts of the country, the people treated the recommendation of Congress concerning the refugees and the payment of the debts, was no more than any man of ordinary sagacity could have foretold. Indeed, the state into which Congress had fallen was most wretched. . . . Each of the thirteen States the Union bound together retained all the rights of sovereignty, and asserted them punctiliously against the central government. Each reserved to itself the right to put up mints, to strike money, to levy taxes, to raise armies, to say 'what articles should come into its ports free and what should be made to pay duty. Toward the Continental Government they acted precisely as if they were dealing with a foreign power. In truth, one of the truest patriots of New England had not been ashamed to stand up in his place in the Massachusetts House of Deputies and speak of the Congress of the States as a foreign government. Every act of that body was scrutinized with the utmost care. The transfer of the most trivial authority beyond the borders of the State was made with protestations, with trembling, and with fear. Under such circumstances, each delegate felt himself to have much the character, and to be clothed with very much of the power, of ambassadors. He was not responsible to men, he was responsible to a State. . . . From beginning to end the system of representation was bad. By the Articles of Confederation each of the thirteen little republics was annually to send to Congress not more than seven and not less than two delegates. No thought was taken of

population. . . . But this absolute equality of the States was more apparent than real. Congress possessed no revenue. The burden of supporting the delegates was cast on those who sent them, and, as the charge was not light, a motive was at once created for preferring a representation of two to a representation of seven, or, indeed, for sending none at all. While the war was still raging and the enemy marching and counter-marching within the border of every State, a sense of fear kept up the number of delegates to at least two. Indeed, some of the wealthier and more populous States often had as many as four congressmen on the floor of the House. But the war was now over. The stimulus derived from the presence of a hostile army was withdrawn, and the representation and attendance fell off fast. Delaware and Georgia ceased to be represented. From the ratification of the treaty to the organization of the Government under the Constitution six years elapsed, and during those six years Congress, though entitled to 91 members, was rarely attended by 25. The House was repeatedly forced to adjourn day after day for want of a quorum. On more than one occasion these adjournments covered a period of thirteen consecutive days. . . . No occasion, however impressive or important, could call out a large attendance. Seven States, represented by twenty delegates, witnessed the resignation of Washington. Twenty-three members, sitting for eleven States, voted for the ratification of the treaty. . . . It is not surprising, therefore that Congress speedily degenerated into a debating club, and a debating club of no very high order. Neglected by its own members, insulted and threatened by its mutinous troops, reviled by the press, and forced to wander from city to city in search of an abiding place, its acts possessed no national importance whatever. It voted monuments that never were put up, rewarded meritorious services with sums of money that never were paid, formed wise schemes for the relief of the finances that never were carried out, and planned on paper a great city that never was built. In truth, to the scoffers and malcontents of that day, nothing was more diverting than the uncertain wanderings of Congress. . . . In the coffee-houses and taverns no toasts were drunk with such uproarious applause as 'A hoop to the barrel' and 'Cement to the Union'; toasts which not long before had sprung up in the army and came rapidly into vogue. . . . The men who, in after years, came to eminence as the framers of the Constitution, who became renowned leaders of the Federalists, presidents, cabinet ministers, and constitutional statesmen, were then in private life, abroad, or in the State Assemblies. Washington was busy with his negroes and tobacco; Adams was minister to Holland; Jefferson still sat in Congress, but was soon to be sent as minister to France; Madison sat in the Virginia House of Deputies; Hamilton was wrangling with Livingston and Burr at the bar of New York; Jay was minister to Spain."—J. B. McMaster, *History of the people of the United States*, v. 1, ch. 2.—Hamilton's description, in one of the papers of *The Federalist*, of the state of the country in 1787, is very graphic: "We may indeed, with propriety," he wrote, "be said to have reached almost the last stage of National humiliation. There is scarcely anything that can wound the pride, or degrade the character of an independent nation, which we do not experience. Are there engagements, to the performance of which we are

held by every tie respectable among men? These are the subjects of constant and unblushing violation. Do we owe debts to foreigners, and to our own citizens, contracted in a time of imminent peril, for the preservation of our political existence? These remain without any proper or satisfactory provision for their discharge. Have we valuable territories and important posts in the possession of a foreign power, which, by express stipulations, ought long since to have been surrendered? These are still retained, to the prejudice of our interests not less than of our rights. Are we in a condition to resent or to repel the aggression? We have neither troops, nor treasury, nor Government. Are we even in a condition to remonstrate with dignity? The just imputations on our own faith, in respect to the same treaty, ought first to be removed. Are we entitled by nature and compact to a free participation in the navigation of the Mississippi? Spain excludes us from it. Is public credit an indispensable resource in time of public danger? We seem to have abandoned its cause as desperate and irretrievable. Is commerce of importance to National wealth? Ours is at the lowest point of declension. Is respectability in the eyes of foreign powers a safeguard against foreign encroachments? The imbecility of our Government even forbids them to treat with us. Our ambassadors abroad are the mere pageants of mimic sovereignty. Is a violent and unnatural decrease in the value of land a symptom of National distress? The price of improved land in most parts of the country is much lower than can be accounted for by the quantity of waste land at market, and can only be fully explained by that want of private and public confidence, which are so alarmingly prevalent among all ranks, and which have a direct tendency to depreciate property of every kind. Is private credit the friend and patron of industry? That most useful kind which relates to borrowing and lending is reduced within the narrowest limits, and this still more from an opinion of insecurity than from the scarcity of money. To shorten an enumeration of particulars which can afford neither pleasure nor instruction, it may in general be demanded what indication is there of National disorder, poverty, and insignificance, that could befall a community so peculiarly blessed with natural advantages as we are, which does not form a part of the dark catalogue of our public misfortunes? . . . The great and radical vice in the construction of the existing Confederation is in the principle of legislation for States or Governments, in their corporate or collective capacities, and as contradistinguished from the individuals of which they consist. Though this principle does not run through all the powers delegated to the Union, yet it pervades and governs those on which the efficacy of the rest depends. Except as to the rule of apportionment, the United States have an indefinite discretion to make requisitions for men and money, but they have no authority to raise either, by regulations extending to the individual citizens of America. The consequence of this is, that, though in theory their resolutions concerning those objects are laws, constitutionally binding on the members of the Union, yet in practice they are mere recommendations, which the States observe or disregard at their option. . . . There is nothing absurd or impracticable in the idea of a league or alliance between independent nations, for certain defined purposes precisely stated in a treaty; regulating all the details of time, place, circumstance, and quantity; leaving nothing to future

discretion; and depending for its execution on the good faith of the parties. . . . If the particular States in this country are disposed to stand in a similar relation to each other, and to drop the project of a general discretionary superintendence, the scheme would indeed be pernicious, and would entail upon us all the mischiefs which have been enumerated under the first head; but it would have the merit of being, at least, consistent and practicable. Abandoning all views towards a Confederate Government, this would bring us to a simple alliance offensive and defensive; and would place us in a situation to be alternately friends and enemies of each other, as our mutual jealousies and rivalships, nourished by the intrigues of foreign nations, should prescribe to us. But if we are unwilling to be placed in this perilous situation; if we still will adhere to the design of a National Government, or, which is the same thing, of a superintending power, under the direction of a common Council, we must resolve to incorporate into our plan those ingredients which may be considered as forming the characteristic difference between a league and a Government; we must extend the authority of the Union to the persons of the citizens,—the only proper objects of Government.”—Alexander Hamilton, *The Federalist*, no. 15.—“Many of the States refused or neglected to pay even their allotted shares of interest upon the public debt, and there was no power in Congress to compel payment. Eighteen months were required to collect only one-fifth of the taxes assigned to the States in 1783. The national credit became worthless. Foreign nations refused to make commercial treaties with the United States, preferring a condition of affairs in which they could lay any desired burden upon American commerce without fear of retaliation by an impotent Congress. The national standing army had dwindled to a corps of 80 men. In 1785 Algiers declared war against the United States. Congress recommended the building of five 40-gun ships of war. But Congress had only power to recommend. The ships were not built, and the Algerines were permitted to prey on American commerce with impunity. England still refused to carry out the Treaty of 1783, or to send a Minister to the United States.”—A. Johnson, *History of American politics*, ch. 1.—“Though the war was over, the year 1783 was full of discouragement; notwithstanding the urgent calls for money, the states did not respond. Morris sent out to the governors a letter of appeal; up to June 13 his payments had exceeded his receipts by more than \$1,000,000. ‘How, indeed, could it be otherwise,’ he asked, ‘when all the taxes brought into the treasury since 1781 did not amount to seven hundred and fifty thousand dollars?’ For the year 1782 Congress asked for \$8,000,000, and for the year 1783 it asked for \$2,000,000; but by the end of the latter year less than \$1,500,000 had been paid in. A committee which was appointed to consider the matter spoke of the distress and poverty of the people ‘just relieved from the ravages of predatory armies, returning from an attendance on camps, to the culture of their fields—beginning to sow, but not yet having reaped.’ The fact is, however, that the people were not in destitution. There is abundance of contemporary evidence to show that at the end of the Revolution the people were living with more ease and circumstance than before the war. ‘The people,’ wrote Morris to Franklin, ‘are undoubtedly able to pay, but they have easily persuaded themselves into a conviction of their own inability, and in a Government

like ours the belief creates the thing.' The trouble was not poverty, but commercial confusion, vicious politics, and native disinclination to pay taxes. 'The necessity of the present application for money,' Morris said in 1782, and his remark held true for the next five years, 'arises from the necessity of drawing by degrees the bands of authority together, establishing the power of Government over a people impatient of control, and confirming the Federal Union of the several States by correcting defects in the general Constitution.'"—A. C. McLaughlin, *Confederation and the constitution, 1783-1789*, pp. 69-70.—"The territorial claims of the States and of the Union were still in confusion. Virginia roused the suspicion of the small States by making the promised cession in terms which Congress could not accept, and the other States had made no motion towards yielding their claims. Relations with the Indians were still confused. Superintendents of Indian affairs had been appointed, and in 1778 a treaty was negotiated with the Creeks; but the States, particularly Pennsylvania and Georgia, continued to make their own arrangements with Indian tribes. The finances of the country seemed to have reached their lowest ebb. An attempt was made to float a new issue of continental money at one dollar for forty of the old bills. The new obligations speedily sank to the level of the old, and the country was practically bankrupt. The aid of the French was all that kept the government afloat. The return of peace was expected to restore American commerce to its old prosperity; but having gone to war principally because colonial commerce with other countries was restricted, the Americans found themselves deprived of their old freedom of trade with England. They were subject to discriminating duties in English ports, and were excluded from the direct trade with the English West Indies, which had been the chief resource of the colonial ship-owners. The State governments were in debt, embarrassed, and beset with the social difficulties which come in the train of war. The disbanded troops were not accustomed to regular employment or to a quiet life; taxes were heavy and odious; the far Western settlements clamored to be set free from the States to which they belonged. Above all, the national government was weak, inefficient, and little respected by the army or the people at large. . . . The first and fundamental defect of the government was in the organization of Congress. The Continental Congress had been a head without a body; under the Articles of Confederation, Congress was a body without a head. A single assembly continued to be the source of all national legislative, executive, and judicial power. As though to prevent the country from getting the benefit of experience, no man could remain a member of Congress for more than three years in succession. The delegates of each State continued to cast jointly one vote; if only one member were present, the vote of a State was not counted; if but two were present, they might produce a tie. On important questions the approval of nine States was necessary, and often less than that number had voting representatives on the floor. Amendment was impossible, except by consent of all the State legislatures. Although Congress had to deal with difficult questions of peace, its principal power was that of carrying on war. Congress might make treaties, but it could pass no act in defence of American commerce. . . . The Articles of Confederation provided for a special tribunal to settle territorial disputes between the States. The sys-

tem was invoked in 1782, and a verdict was rendered in favor of Pennsylvania and against Connecticut in their rival claims to the Wyoming region. A second set of federal courts was constituted by designating certain State courts to try piracies and felonies committed on the high seas. A third and the only important federal tribunal was the Court of Appeals in prize cases, which began to sit in January, 1780, and before which were sued sixty-five cases. All the courts, like all the executive departments, were created by Congress, alterable by Congress, and subject to the control by Congress. In 1784 the Court of Appeals was allowed to lapse, by the refusal of Congress to pay the salaries of the judges."—A. B. Hart, *Formation of the Union, 1750-1829*, pp. 103-105.—"Several different circumstances must be taken into consideration in interpreting the task of of the American people in the years of national readjustment: the harassing and demoralizing experiences of a war which was at once a civil war and a revolution; the banishment and voluntary emigration of thousands of its most intelligent and substantial citizens; the political thinking of the time, which the course of the war had intensified—thinking that, if allowed to ferment in shallow-pated citizens, might endanger the stability of society itself; and, lastly, the fact that the war had been waged to support local governments against a general government. Amid all of these difficulties America was imperatively called upon to organize its empire, if we may use the word to convey the meaning of the vast territory stretching from the St. Croix to the St. Mary's and westward to the Mississippi—an empire inhabited by thirteen distinct groups of people in large measure ignorant of the lives and thoughts of one another. In solving this problem the United States was at once aided and hindered by its geographical makeup and its history. Geographically separated from Europe by thousands of miles of space and many weeks of time, the Americans felt isolated from the rest of the world, and must therefore have been impressed with the thought of a common destiny; but separated as the states were from one another, when the people were thinking of themselves and not of Europe, they must have felt their differences more keenly than their similarities. South Carolina was so remote from Virginia that we might almost think of her as belonging to the West-Indian group of colonies rather than to the continental. The Declaration of Independence was known in Paris almost as soon as in Charleston. The hardy Yankee seamen who buffeted the winds off stormy Hatteras must have felt far from home when they sailed into the harbor of Wilmington or Savannah. A Georgian knew little of New York or Massachusetts. Life on the plantations of Virginia was far different from life in the little settlements of New England. When John Adams, leaving his fireside in Braintree, went to Philadelphia as a delegate in Congress, the letters which he sent home were welcomed as tidings from a 'far country.' 'Of affairs of Georg[i]a,' wrote Madison to Jefferson in 1786, 'I know as little as of those of Kamskatska.' When we add to all this the fact that the colonies were established at different times and from different motives, and that climate, soil, and industrial life varied greatly from Maine to Georgia, we are so impressed by the diversity that union seems almost beyond the verge of possibility. And yet political unity was a necessity; any form of political order not expressing the fact of real interdependence and essential oneness of purpose was insufficient if America was to organize her

empire. Without modern means of communication, without railroads or telegraphs, the states were also without good highways of any kind. The road between Boston and New York was not very bad, but in the most favorable weather the traveller making the trip must spend four days in a clumsy, uncomfortable coach. . . . The highways of Pennsylvania were often almost impassable, and travel on them was little less than misery. South of the Potomac the roads were still worse; there even bridges were a luxury. Even on the much-travelled route between the north and the south the mails were infrequent. Three times a week throughout the summer they passed between Portland, Maine, and Suffolk, Virginia, but from Suffolk southward only twice a week in the summer and once a week in winter. Inhabitants of towns out of the main course of travel were more isolated than are now secluded hamlets in the heart of the Rockies. . . . A man in the little village of Louisville was often ignorant for months at a time of what was going on at New York or Boston, knowing no more of the internal affairs of the sea-coast towns than 'what our friends are about in the other world.' To such a people, then, thus distracted and thus divided, came the problem of imperial organization. One fact aided them materially: the states were alike in structure; they had the same political inheritance; the fundamental ideas of English liberty and law, taking root in congenial soil, had grown strong in every section; men in all the states thought in the same terms and used the same phrases. Even their Revolutionary philosophy with its notion of absolute rights was a product of English history. Moreover, events, relentless facts, were showing the way to sound union; there could be no real peace and prosperity till political organization was in harmony with industrial and social needs. If the people were reluctant, union on a proper basis was to be established by 'grinding necessity.' The important process of making state constitutions was pretty well completed four years after the Declaration of Independence, but the formation of a national system was not so simple. For some years after the Declaration the affairs of the Union were conducted by a Congress of delegates on whose discretion or authority there were no constitutional restraints; hence Congress did, not what was needed to be done, but what it was able to do or thought it wise to attempt, at times showing energy and intelligence, again sinking into sloth and incompetence. During these years America was acting under an unwritten constitution, and, in spite of the inability of Congress, establishing precedents of some weight and importance."—A. C. McLaughlin, *Confederation and the constitution, 1783-1789*, pp. 43-47.

"The year 1786 marks a crisis in the development of the Union. The inefficiency of Congress was reflected in the neglect of constitutional duties by the States: Rhode Island recalled her delegates and refused to appoint new members; New Jersey felt so much injured by a New York tariff that an act was passed taxing the lighthouse established by New York on Sandy Hook; Massachusetts, Pennsylvania, North Carolina, and Georgia already had raised troops on their own account and for their own purposes, in violation of the Articles of Confederation. Davie, of North Carolina, a little later declared that the 'encroachments of some States on the rights of others, and of all on those of the Confederation, are incontestable proofs of the weakness and imperfections of that system.' Of the requisition of that year for \$2,000,000 in specie,

only about \$400,000 was paid. Some States offered their own depreciated notes, and New Jersey refused to make any contribution until the offensive New York Acts were withdrawn. In May, 1786, Charles Pinckney on the floor of Congress declared that 'Congress must be invested with more powers, or the federal government must fall.' . . . Before the Articles of Confederation had gone into effect, Congress had already proposed a radical amendment; and within three years it suggested two others. The first proposition, made February 3, 1781, was that the States allow Congress to levy an import duty of five per cent, the proceeds to be applied 'to the discharge of the principal and interest of the debts already contracted . . . on the faith of the United States for supporting the present war.' In the course of about a year twelve States had complied with this reasonable request. Rhode Island alone stood out, and the plan failed. Forthwith Congress presented another financial scheme, which was called a 'generous revenue plan.' April 12, 1783, it asked the States to allow Congress to lay low specific import duties for twenty-five years, to be collected by officers appointed by the States. The States were further recommended to lay some effective taxes, the proceeds to be set aside for government requisitions. The effect was precisely the same as before. Twelve States agreed; but the opposition of New York prevented the first part of the plan from being carried out. Not a single State had condescended to pay attention to the second request. Apparently abandoning any hope of an adequate revenue, Congress, on April 30, 1784, proposed a third amendment, that the States should permit it to pass commercial laws discriminating against foreign powers which refused to make commercial treaties. This was aimed at Great Britain. Washington urged the measure in vigorous language. 'We are,' said he, 'either a united people, or we are not so. If the former, let us in all matters of national concern act as a nation which has a national character to support.' Yet he could not bring even Virginia to agree to the plan, and it quickly failed. A poor constitution, which could be amended only by unanimous vote, was likely to stifle the nation. A few feeble suggestions were heard that the experiment of republican government be given over; others urged that the Americans be brought within one centralized government. Alexander Hamilton would have established a government 'controlling the internal police of the States, and having a federal judiciary.' Upon the last of his three schemes, dated 1783, is written: 'Intended to be submitted to Congress, but abandoned for want of support.' Even Washington's vastly greater influence had no effect. In a circular letter to the governors, dated June, 1783, he says: 'It is indispensable to the happiness of the individual States that there should be lodged somewhere a supreme power to regulate and govern the general concerns of the confederated republic.' Yet not a State would take the initiative in reforming the constitution. From 1784 to 1786 pamphlets began to appear in which more definite suggestions were made for a new government. Pelatiah Webster proposed a government with enlarged powers, and a legislature of two houses. 'If they disagree,' said he, 'let them sit still until they recover their good humor.' The method in which the new government was to enforce its powers was put in a quaint and incisive form. 'My principle is,' said Webster, 'the soul that sinneth, it shall die. Every person . . . who shall disobey the supreme authority shall be answerable to Congress.' The idea

that the constitution needed radical amendment had at last found a lodgment in the public mind."—A. B. Hart, *Formation of the Union*, pp. 117-119.—New York's veto of the import tax "seemed to destroy the last hope of a continuance of national union in America. Perhaps the dismay caused by the action of New York was the most powerful argument in the minds of many for an immediate and complete revision of the government. The first step to Revision was not so designed. In 1785 the Legislatures of Maryland and Virginia, in pursuance of their right to regulate commerce, had appointed Commissioners to decide on some method of doing away with interruptions to the navigation of Chesapeake Bay. The Commissioners reported their inability to agree, except in condemning the Articles of Confederation. The Legislature of Virginia followed the report by a resolution, inviting the other States to meet at Annapolis, consider the defects of the government, and suggest some remedy. In September, 1786, delegates from five of the Middle States assembled, but confined themselves to discussion, since a majority of the States were not represented. [See also ANNAPOLIS CONVENTION.] The general conclusion was that the government, as it then stood, was inadequate for the protection, prosperity or comfort, of the people, and that some immediate and thorough reform was needed. After drawing up a report for their States and for Congress, recommending another Convention to be held at Philadelphia, in May, 1787, they adjourned. Congress, by resolution, approved their report and the proposed Convention. The Convention met, as proposed, May 14th, 1787."—A. Johnston, *History of American politics*, ch. 1.—"Four years only elapsed, between the return of peace and the downfall of a government which had been framed with the hope and promise of perpetual duration. . . . But this brief interval was full of suffering and peril. There are scarcely any evils or dangers, of a political nature, and springing from political and social causes, to which a free people can be exposed, which the people of the United States did not experience during that period."—G. T. Curtis, *History of the constitution*, bk. 3, ch. 1.—"It is not too much to say that the period of five years following the peace of 1783 was the most critical moment in all the history of the American people."—J. Fiske, *Critical period of American history*, p. 55.

1783-1789.—Depressed state of trade and industry.—Commercial consequences of want of nationality.—"The effect of the Revolutionary War on the merchant marine of the colonies, which thereby secured their independence as the United States, was not so disastrous as might have been expected. Many ships were lost or captured, and the gains of maritime commerce were reduced; but to offset these losses an active fleet of privateers found profitable employment in the seizure of English merchantmen, and thus kept alive the maritime spirit of the country, and supplied a revenue to the shipowners whose legitimate pursuits were suspended by the war. In 1783, therefore, the American merchant marine was in a fairly healthy condition. During the next six years the disadvantages of the new situation made themselves felt. Before the Revolution the colonies had

had open trade with their fellow-subjects in the British West India Islands. The commerce thus carried on was a very profitable business. The island colonies were supplied with lumber, corn, fish, live stock, and surplus farm produce, which the continent furnished in abundance, together with rough manufactured articles such as pipe staves, and in return the ships of New York and New England brought back great quantities of coffee, sugar, cotton, rum and indigo. . . . As a result of independence, the West India business was entirely cut off. The merchantmen of the United States then came in on the footing of foreign vessels, and all such vessels, under the terms of the Navigation Act, were rigorously excluded from trade with the British colonies. It was evident, however, that the sudden cessation of this trade, whatever loss it might inflict on the newly created state, would be tenfold more harmful to the islands, which had so long depended upon their neighbors of the mainland for the necessities of life. Pitt, then Chancellor of the Exchequer, appreciated this difficulty, and in 1783 brought a bill into Parliament granting open trade as to articles that were the produce of either country. The measure failed, owing to Pitt's resignation, and the next ministry, in consequence of the violent opposition of British shipowners, passed a merely temporary act, vesting in the crown the power of regulating trade with America. This power was occasionally exercised by suspending certain provisions of the navigation laws, under annual proclamations, but it did not serve to avert the disaster that Pitt had foreseen. Terrible sufferings visited the population of the West India colonies, and between 1780 and 1787 as many as 15,000 slaves perished from starvation, having been unable to obtain the necessary supply of food when their own crops had been destroyed by hurricanes. Apart from the unfavorable condition of the West India trade, another and more important cause had operated to check the prosperous development of American commerce. The only bond of political union at this time was that formed by the Articles of Confederation, constituting a mere league of independent States, any one of which could pass laws calculated to injure the commerce of the others."—J. R. Soley, *Maritime industries of America* (N. S. Shaler, ed., *United States of America*, v. 1, ch. 10).—"The general commerce of the granulated mass of communities called the United States, from 1783 to 1789, was probably the poorest commerce known in the whole history of the country. England sent America £3,700,000 worth of merchandise in 1784, and took in return only £750,000. The drain of specie to meet this difference was very severe, and merchants could not meet the engagements so rashly made. They had imported luxuries for customers who were poor, and non-payment through all the avenues of trade was the consequence. One circumstance and detail of the internal management of this commerce added to the distress and to the necessary difficulties of the time. Immediately after the peace, British merchants, factors, and clerks came across the seas in streams, to take advantage of the new opportunities for trade. It seemed to the citizens to be a worse invasion of their economic rights than the coming of the troops had been to the political rights of the old colonists. The whole country was agitated, but action was initiated in Boston in 1785. The merchants met and discussed all these difficulties. They pledged themselves to buy no more goods of British merchants or factors in Boston. In about three weeks the mechanics

and artisans met in the old Green Dragon Tavern and committed themselves to the same policy. But the merchants went beyond mere non-intercourse with traders at home. The root of the difficulty was in the ill-regulation or want of regulation of our commerce with all foreign countries. The confederation was giving and not getting. Where it should have gotten, foreigners were getting, because the parts of the country had not agreed to unite in acquiring for the common benefit, lest some part should be injured in the process. Congress made treaties for the Confederation. But if unable to treat with any power which excluded American shipping from its ports, or laid duties on American produce, Congress did not control our ports in an equivalent manner. Each individual state was to decide whether the unfriendly power should trade at its own ports. This in effect nullified any retaliatory action. England, being the best market, virtually controlled any change in commerce, as it was then conducted. Her ports were closed to American products unless they were brought in British vessels. France admitted our vessels to her ports, but her merchants cried out against the competition. It was feared that the ministers would be obliged to yield to their clamor and close the ports. Probably the poor economic condition of the country affected the foreign trade even more than the bad adjustment of foreign relations. All causes combined to form two parties, one advocating imposts upon foreign trade or a Navigation Act, the other opposing this scheme, and insisting upon absolute freedom of commerce. It was in this direction that the Boston people moved, after they had instituted non-intercourse in their own market with British traders. They petitioned Congress to remedy these embarrassments of trade, and sent a memorial to their own legislature. This document urged that body to insist on action by Congress. They formed a Committee of Correspondence to enforce these plans upon the whole country."—W. B. Weeden, *Economic and social history of New England*, 1620-1789, ch. 22.

1784.—Financial administration of Robert Morris.—Cost of the war.—From May, 1781, until April, 1785, the burden of the financial management of the revolutionary struggle rested upon Robert Morris, of Philadelphia, who held the office which Congress had created and entitled "the Superintendent of Finances." "Morris's detractors argued that he deserved no great credit for his management of the finances as compared with his predecessors, because in his time everything turned in his favour. It is true that if things had remained as before, he could not have restored the finances; for the miracle of carrying on a war without means has never yet been performed by anybody. The events which gave him an opportunity to restore the finances, by intelligent and energetic action, were as follows. The first was the collapse of the paper currency and its absolute removal from circulation, in May, 1781, just before he took office. As soon as it was out of the way, specie

came in. He was able to throw aside all the trammels in which the treasury operations had been entangled by the paper system. It is true that he did not succeed in his attempt to relieve himself entirely from these anticipations, which, inasmuch as they were anticipations, would have used up the revenues of his time; but it was a great gain for him to be able to conduct his current operations at least in terms of specie. The second thing in his favour was the great help granted by France in 1781, and especially the importation of a part of this in specie. This enabled him to found the bank, from which he borrowed six times what he put into it. The chief use of the bank to him, however, was to discount the notes which he took for bills of exchange. [A small loan was also obtained from Spain in 1781, and a loan was secured in Holland in 1783.] Then also it was possible for him to reduce the expenses in a way which his predecessors had not had the courage or the opportunity to accomplish, because in their time the abuses of the old method had not gone far enough to force acquiescence in the reforms. In Morris's time, and chiefly, as it appears, by his exertions and merit, the expenditures were greatly reduced for an army of a given size. When the war came to an end, it was possible for him to reduce the entire establishment to a very low scale. Next we notice that the efforts to introduce taxation bore fruit which, although it was trivial in one point of view, was large enough to be very important to him in his desperate circumstances. Finally, when his need was the greatest, and these advantages and opportunities proved inadequate, the rise of American credit made the loan in Holland possible [\$3,600,000, obtained in four different loans]. . . . By the Report of 1790 the total amount of expenditures and advances at the treasury of the United States, during the war, in specie value, was estimated as follows: 1775 and 1776, \$20,064,666.—1777, \$24,086,646.—1778, \$24,289,438.—1779, \$10,794,620.—1780, \$3,000,000.—1781, \$1,942,465.—1782, \$3,632,745.—1783, \$3,226,583.—1784, \$548,525 to November 1.—Total \$92,485,693. This table shows how the country lapsed into dependence on France after the alliance was formed. The round number opposite 1780 is very eloquent. It means anarchy and guesswork. . . . According to the best records we possess, the cost of the war to the United States, reduced to specie value year by year at the official scale of depreciation, which, being always below the truth, makes these figures too high, was, as above stated, \$92,485,693, at the treasury. There were also certificates of indebtedness out for \$16,708,009. There had been expended in Europe, which never went through the treasury, \$5,000,000. The States were estimated to have expended \$21,000,000. Total, \$135,000,000. Jefferson calculated it at \$140,000,000, by adding the debts incurred and the continental currency. The debt contracted by England during the war was £115,000,000, for which £91,000,000 were realized. The Comptroller of the Treasury of France said that it cost 60,000,000 livres a year to support the army in America. Vergennes told Lafayette, in November, 1782, that France had expended 250,000,000 livres in the war. There is an often-repeated statement that the war cost France 1,200,000,000 livres, or 1,280,000,000, or 1,500,000,000. Arthur Young put it at £50,000,000, sterling. Probably if 60,000,000 a year for five years, or \$60,000,000, was taken as the amount directly expended for and in America by France, it would be as fair a computation as could be made of her contribution to American indepen-

dence. She had large expenditures elsewhere in the prosecution of her war against Great Britain, and her incidental losses of ships, etc., were great. When England abandoned the effort to subdue the colonies, she was in a far better position for continuing it than either of her adversaries. George III. was by no means stupid in his comments and suggestions about the war. No Englishman of the period said things which now seem wiser in the retrospect. As early as September, 1780, he said: 'America is distressed to the greatest degree. The finances of France, as well as Spain, are in no good situation. This war, like the last, will prove one of credit.' This opinion was fully justified in 1782. French finances were then hastening toward bankruptcy, so that France could not continue the war expenses or the loans and subsidies to America. English credit was high. October 2, 1782, Vergennes wrote to Montmorin, that the English fleet was stronger than at the beginning of the war, while the fleets of France and Spain were weaker; that French finances were greatly weakened, while English credit was high; that England had recovered influence in Russia, and through Russia on Prussia and Austria. He wanted peace and reconciliation with England in order to act with her in eastern Europe. If England had chosen to persevere in the war, the matter of credit would have been the most important element in her chances of success, aside from the natural difficulties of the enterprise."—W. G. Sumner, *Financier and the finances of the American Revolution*, v. 2, ch. 23.—"The financial condition of the Confederation was throughout deplorable. The revolution imposed upon the country a heavy debt. The accounts of the government were so badly kept that to this day it is impossible to state the amount; but it was probably about thirty millions, with an annual interest charges of about two millions. The necessary expenditure for the support of Congress, of the army on a peace-footing, and of the executive and judicial boards and departments, called for about half a million more. The continental currency had practically been repudiated, and no more could be floated; Congress had no power to lay either direct or indirect taxes; the post-office had an income of about \$25,000 a year, all of which was expended upon the service. Hence Congress fell back on requisitions apportioned on the States: one of its principal functions was each year to calculate the amount necessary for the public service, and to call upon the State legislatures for their quota. The total sum required from 1781 to 1788 was about \$16,000,000. Of this there had actually been paid during the seven year \$3,500,000 in specie, and \$2,500,000 in certificates of national indebtedness. The annual cash income of the government was therefore about half a million, which was entirely absorbed by the necessary running expenses of the government, leaving nothing for the payment of interest. This condition of virtual bankruptcy might have been avoided had Robert Morris been able to carry out the reforms which he proposed when he became superintendent of finance in 1781. He found the financial administration complicated and corrupt. He attempted to substitute business methods and punctuality of payment. . . . In 1784 Morris resigned in despair, and thenceforward a Treasury Board mismanaged the finances of the nation."—A. B. Hart, *Formation of the Union, 1750-1829*, pp. 109-110.

1784-1788.—Disputes with England over execution of treaty of peace.—Difficulties with Spain.—Question of navigation of the Mississippi.—Eastern jealousy and Western excitement.—"Serious disputes soon arose, concerning the execution of the treaty of peace; and each nation complained of infractions by the other. On the part of the United States it was alleged that negroes had been carried away, contrary to the treaty; and as early as May, 1783, congress instructed their ministers for negotiating peace to remonstrate to the British court against this conduct of their commander in America, and to take measures to obtain reparation. The United States, also, complained that the western posts had not been surrendered, agreeably to treaty stipulations. Great Britain, on her part, alleged that legal impediments had been interposed to prevent the collection of British debts in America; and that the 5th and 6th articles, relating to the property of the loyalists, had not been complied with. In June, 1784, the legislature of Virginia not only declared that there had been an infraction on the part of Great Britain of the 7th article, in detaining the slaves and other property of the citizens of the United States, but instructed their delegates in congress to request that a remonstrance be presented to the British court against such infraction and to require reparation. They also directed them to inform congress that the state of Virginia conceived a just regard to the national honor and interest obliged her assembly to withhold their co-operation in the complete fulfilment of the treaty until the success of such remonstrance was known, or they should have further directions from congress. They at the same time declared, that as soon as reparation for such infraction should be made, or congress should judge it indispensably necessary, such acts as inhibited the recovery of British debts should be repealed, and payment made, in such time and manner as should consist with the exhausted situation of the state. In consequence of these difficulties and disputes, congress, early in the year 1785, determined to send a minister plenipotentiary to Great Britain; and on the 24th of February John Adams was appointed to represent the United States at the court of London. He was instructed 'in a respectful but firm manner to insist that the United States be put, without further delay, into possession of all the posts and territories within their limits which are now held by British garrisons.' . . . Mr. Jefferson was soon after appointed to represent the United States at the court of Versailles, in the room of Dr. Franklin, who had leave to return home, after an absence of nine years. Mr. Livingston having resigned the office of secretary of foreign affairs, Mr. Jay, in March, 1784, and before his return from Europe, was appointed in his place. Mr. Adams repaired to the British court, and was received as the first minister from the United States since their independence was acknowledged. . . . In December, 1785, Mr. Adams presented a memorial to the British secretary of state, in which, after stating the detention of the western posts contrary to the stipulations in the treaty of peace, he in the name and in behalf of the United States required 'that all his majesty's armies and garrisons be forthwith withdrawn from the said United States, from all and every of the posts and fortresses before enumerated, and from every port, place and harbor, within the territory

of the said United States, according to the true intention of the treaties.' To this memorial the British secretary, Lord Carmarthen, returned an answer, on the 28th of February, 1786, in which he acknowledges the detention of the posts, but alleges a breach of the 4th article of the treaty of peace on the part of the United States, by interposing impediments to the recovery of British debts in America. . . . This answer was accompanied with a statement of the various instances in which the 4th article had been violated by acts of the states. The complaints of Great Britain also extended to breaches of the 5th and 6th articles of the treaty, relating to the recovery of certain property and to confiscations. The answer of the British secretary was submitted to congress; and in order to remove the difficulties complained of, that body, in March, 1787, unanimously declared that all the acts, or parts of acts, existing in any of the states, repugnant to the treaty of peace, ought to be repealed; and they recommended to the states to make such repeal by a general law. . . . A circular letter to the states accompanied these declarations, in which congress say, 'we have deliberately and dispassionately examined and considered the several facts and matters urged by Great Britain, as infractions of the treaty of peace, on the part of America, and we regret that, in some of the states, too little attention has been paid to the public faith pledged by that treaty.' In consequence of this letter, the states of New Hampshire, Massachusetts, Rhode Island, Connecticut, Delaware, Maryland, Virginia, and North Carolina, passed acts complying with the recommendations contained in it. The operation of the act of Virginia, however, which repealed all acts preventing the recovery of debts due to British subjects, was suspended until the governor of that state should issue a proclamation, giving notice that Great Britain had delivered up the western posts, and was also taking measures for the further fulfilment of the treaty of peace by delivering up the negroes belonging to the citizens of that state, carried away contrary to the 7th article of the treaty, or by making compensation for the same. . . . The British court was not yet disposed to enter into any commercial treaty with the United States. The ministers were, no doubt, satisfied that the advantages they enjoyed under their own regulations were greater than could be obtained by any treaty they could make with America. And this was, probably, one of the principal reasons of their refusal to enter into any such treaty. As the British court declined sending a minister to the United States, Mr. Adams, in October, 1787, at his request, had leave to return home. . . . The United States had also at this period to encounter difficulties with Spain as well as Great Britain. The two Floridas having been ceded to his catholic majesty, serious disputes soon arose, not only on the old subject of the navigation of the Mississippi, but with respect to the boundaries of Louisiana and the ceded territory. The Spanish court still persisted in its determination to exclude the Americans from the navigation of the Mississippi."—T. Pitkin, *Political and civil history of the United States*, v. 2, ch. 17.—"In the spring of 1784 Congress commissioned John Adams, Benjamin Franklin, and Thomas Jefferson to negotiate treaties of commerce with any nations which should desire or be willing to enter into such conventions. Obviously, it was preëminently desirable for this country that it should establish such relations as widely as possible. But not a single such treaty was made, if we except one with the semi-piratical

power of Morocco. The most important purely diplomatic negotiations after the making of peace but still under the Confederation were those with Spain. That country had during the war refused to aid this country or to recognize its independence, and in the time of peace-making it exerted all its influence to our disadvantage. It was painfully divided between a desire to see England beaten and humiliated and a dread of seeing the Thirteen States succeed and become a strong new nation, since the latter achievement would certainly have an unfavorable influence upon Spain's remaining interests in the Western Hemisphere. When at last, in spite of Spanish intrigues and marplotry, the treaty of peace was made and published, Spain found in it much cause for apprehension and for offense. Two features were particularly obnoxious. One was the disposition of the Yazoo lands. . . . Spain claimed them as her own, and was not inclined to acquiesce in the treaty's disposition of them as belonging either to England or to the United States. The other was the navigation of the Mississippi River, of which in its lower reaches she claimed sole possession. France, it is true, had accepted with only formal demur these results of Jay's astute and audacious diplomacy; but Spain had no mind to do so, at least without a struggle. . . . In the summer of 1784 . . . the Spanish government sent to Congress a formal notification that Spain would not recognize the validity of that instrument, and that if American vessels sought to navigate that part of the Mississippi of which Spain still possessed both banks, they would be seized as trespassers and confiscated. Nor was this an idle or a merely formal threat. It was promptly put into effect, and an organized, vigorous, and versatile campaign was begun by Spain against American interests in the Mississippi Valley. She entered into diplomatic negotiations. She strengthened her military forces along the river. She sent secret agents among the Indian tribes, to incite them to hostility against settlers from the States. Above all, she also sent subtle emissaries among the settlers on our western frontier, to plant seeds of disaffection, discontent, and secession among them, and to induce them, if possible, either to withdraw from the United States and to set up an independent State of their own, or to annex themselves to the Spanish domain. Nor was this last propaganda difficult. Kentucky was rapidly filling up with colonists, and free navigation of the Mississippi was absolutely essential to their prosperity. In 1785 they numbered more than 20,000 souls, and were increasing at a rapid rate. [Congress considered sending a minister to Spain, but the necessity for this was obviated, for] early in the summer of 1785 the first Spanish minister came to this country. This was Don Diego de Gardoqui, and he bore a commission authorizing him to negotiate with the United States concerning all existing boundary disputes. Congress received him, and turned him over to Jay, whom it had made its secretary for foreign affairs. . . . [Negotiations, however, were fruitless, and at the end of the summer of 1786 Jay reported that] the only practicable course, in his view, was to make a treaty for a limited period, twenty-five or thirty years, under which we should have important commercial advantages, but under which, also, in return for those advantages, we should for the time being hold in abeyance our right to navigate the river. This arrangement he frankly regarded as a temporary makeshift, forced upon us by our weak and demoralized condition, and especially by our lack

of that efficient Federal Government which Washington had recommended. In time, he hoped, we should 'become more really and truly a nation,' and then we could assert and maintain our rights."—W. F. Johnson, *America's foreign relations*, v. 1, pp. 137-149.

"The commercial interests of the coast were impatient at having an agreement held up because of these western questions, which they felt to be of little concern. Not all, moreover, favored the opening of the Mississippi. In addition to a feeling that western emigration weakened the older parts of the country, there was a distinct fear voiced by such men as Rufus King, that, should the West learn to face down the Mississippi, the country would be divided into two spheres so distinct that union would cease to be possible. He believed that the development of the West had best wait on the slow process of creating transportation routes across the mountains. The position of Congress had been vacillating. In 1779 it had made the navigation of the Mississippi an ultimatum in any treaty with Spain; in 1781 it had withdrawn this condition; in 1784 it had returned to it. In 1786 Jay, who had ignored the instructions of 1781, concluded that he could not carry out those of 1784, and arranged a treaty with Gardoqui on the basis that the United States should forego the navigation for twenty-five years, without prejudicing her rights. This plan he recommended to Congress, with whom the question assumed a sectional aspect. The commercial regions, New England and the middle states, were in favor of it, the southern states, less interested in general commerce and more closely in touch with the West, were opposed. On one vote seven states out of the thirteen favored the proposal. . . . The people of the West had been anxiously watching these negotiations, and were growing restless at the protracted delay of Congress in securing what they wished. The news of Jay's proposed abandonment of what they considered their birth-right, turned restiveness into distrust. They were not a patient race and their impatience was heightened by the similar failure of Congress to deal effectually with their Indian enemies. The Southwestern Indians were more numerous than the Northwestern, and better organized; the five great tribes, Cherokee, Creeks, Choctaw, Chickasaw, and Chicamauga, could together furnish perhaps twenty thousand warriors. The close of the war found these tribes at enmity with the Americans. In 1785 commissioners arranged a treaty with the Cherokee, but the boundary provided was not satisfactory to the frontiersmen, and North Carolina stood by her citizens. The articles of Confederation gave Congress control of Indian affairs only in the case of tribes not living within the limits of a single state. North Carolina, therefore, claiming to comprehend the Cherokee, denied the validity of the treaty. To the failure of Congress to open the Mississippi was thus added the failure to quiet the Indians upon satisfactory terms, and the people of the West came to believe that their happiness must depend on their own exertions. Under these circumstances the West became fertile ground for the development of plans and plots and conspiracies. They grew up, withered, and revived again; they adjusted themselves to times and conditions; they flourished now successively, and now simultaneously even in the same mind. They stretched their threads to Congress and the coast, and across the ocean to Madrid, Paris, and London; they connected themselves with the general history of the age. At times

secret and unobserved, at times the central objects of attention, they together form one of the two leading themes of our diplomatic history until after 1803. During the Confederation they were practically all directed to the solution of western problems by some one of the following four methods,—by the self-reliant seizure of New Orleans, a task somewhat beyond existing resources; by submission to the control of Spain; by independence and alliance with Spain; or by independence and alliance with Great Britain. It is probable that the majority of the inhabitants were at most times disposed to follow a fifth course,—the obvious and legal one of urging their grievances upon the government of the United States in the hope that it would acquire the power to redress them. The supporters of this view, however, were often discouraged, for they were not sustained by any such deep-seated loyalty as developed when the nation had proved itself deserving of their devotion. Fully aware of the situation, Spain was disposed to pull every string of intrigue in order to manipulate it to her own advantage. Her Indian policy was well conceived and well executed. The government encouraged the great Scotch firm of Panton, Leslie and Company, whose American headquarters were at Pensacola. It saw to it that traders frequented the Indian villages, and that their rates for goods were moderate. It allowed a secret trade in firearms. It distributed generous presents. To the great chief of the Creeks, the most powerful man among the Indians, Alexander McGillivray, it paid a yearly pension. Of this man, Navarro, intendant or civil officer of Louisiana, wrote, April 15, 1786: 'So long as we shall have this chief on our side, we may rely on having established, between the Floridas and Georgia, a barrier which it will not be easy to break through. The Indians are now fully convinced of the ambition of the Americans; the recollection of past injuries still dwells on their minds, and, with it, the fear that these greedy neighbors may one day seize upon their lands, and strip them of a property to which they consider themselves as having a right derived from nature herself. It ought to be one of the chief points in the policy of this Government to keep this sentiment alive in their breasts.' Upon these Indians, with the creole population, the Spanish government placed its greatest dependence for the defence of Louisiana, and through Louisiana of the mines of Mexico. It hoped, however, by intrigue with the western settlers to create a still more advanced barrier, namely, to acquire or to control the region which it had endeavored to obtain in the negotiation of 1779 with England and of 1782 with Jay. Alert and eager as it was, however, the Spanish government lacked unity of purpose. One of the plans considered was that of Navarro, who wrote, December 10, 1787: 'It is necessary to keep in mind that, between this province and the territories of New Spain, there is nothing but the feeble barrier of the Mississippi, which it is as easy to pass as it is impossible to protect, and that, if it be good policy to fortify this province by drawing a large population within its limits, there are no other means than that of granting certain franchises to commerce, leaving aside, as much as possible, all restrictions and shackles, or at least postponing them to a future time, if they must exist. In addition, the government must distinguish itself by the equity of its administration, the suavity of its relations with the people, and the disinterestedness of its officers in their dealings with the foreigners who may

resort to the colony. This is the only way to form, in a short time, a solid rampart for the protection of the kingdom of Mexico.' This plan was fostered by Gardoqui, who at Philadelphia entered into relations with Colonel George Morgan and arranged a deal with him. Morgan received a grant of land and undertook to establish a colony, New Madrid, at the strategic point in what is now Missouri, opposite the mouth of the Ohio. George Rogers Clark was interested in a scheme to organize a similar colony on the Yazoo, the similar plans engaged James Wilkinson, John Brown, a delegate in Congress, Harry Inness, the attorney-general of the Kentucky district, and other men of influence and ambition. To make settlement in these new grants desirable it was proposed to allow emigrants to bring in their property free of duty and to enjoy religious tolerance; but of course the main inducement would be freedom to use the Mississippi. The essential point was to keep the river tight closed to those living in the American districts. With regard to the wisdom of this plan it may be remarked that, as immigrants of this kind would change their flag only for their personal advantage, the durability of their loyalty to the Spanish crown might well be suspected. It was like asking the fox to guard the chickens. Something like this was felt by Miro, the governor of Louisiana [who carried on negotiations with Wilkinson, Robertson and Sevier]. . . . McGillivray wrote, April 25, 1788, that the Cumberland settlers had asked for terms, and added that 'they would throw themselves into the arms of his Majesty as subjects, and that Cumberland and Kentucky are determined to free themselves from their dependence on Congress, because that body cannot protect either their persons or their property, or favor their commerce. They therefore, believe that they owe no obedience to a power which is incapable of benefiting them.' . . . The government under the Confederation, therefore, not only failed to open up commerce with the Mediterranean and the West Indies, and to put that with Spain upon a desirable basis, but it was unable to occupy the territory granted to the United States by the treaty of 1783, either in the northwest or on the Florida border. It was unable to quiet the Indians of north or south, or to provide commercial outlets for the trans-Appalachian settlers. Its failure was causing not only discontent but disloyalty, and to such a degree that, although the racial control of the great valley was probably determined by the character of the aggressive population already on the spot, its governmental future was still uncertain. While the western situation was not widely appreciated in the older portion of the country, the financial plight was fully realized. Owing to the lack of national resources, the interest on our foreign debt was met only by occasional sales of such portions of the Dutch loan arranged by Adams as had not been immediately taken up. The loans from France were still unprovided for, and it was the gossip of diplomatic circles that France might take the island of Rhode Island as her payment."—C. R. Fish, *American diplomacy*, pp. 71-78.—The settlers in the Mississippi valley "were much exasperated by the seizure and confiscation of American property by the Spaniards, on its way down the river, which took place about the same time. The proposition made in congress [temporarily to waive the claim to navigation of the river] was magnified into an actual treaty, and called from the western people most bitter complaints and reproaches. . . . To quiet

the apprehensions of the western inhabitants, the delegates from North Carolina, in September, 1788, submitted to congress a resolution declaring that 'whereas many citizens of the United States, who possess lands on the western waters, have expressed much uneasiness from a report that congress are disposed to treat with Spain for the surrender of their claim to the navigation of the river Mississippi; in order therefore to quiet the minds of our fellow citizens by removing such ill founded apprehensions, resolved, that the United States have a clear, absolute, and unalienable claim to the free navigation of the river Mississippi, which claim is not only supported by the express stipulations of treaties, but by the great law of nature.' The secretary of foreign affairs, to whom this resolution was referred, reported, that as the rumor mentioned in the resolution was not warranted by the negotiations between the United States and Spain, the members be permitted to contradict it, in the most explicit terms. Mr. Jay also stated, there could be no objection to declaring the right of the United States to the navigation of the river clear and absolute—that this had always been his opinion; and that the only question had been whether a modification of that right for equivalent advantages was advisable; and though he formerly thought such a modification might be proper, yet that circumstances and discontents had since interposed to render it questionable. He also advised that further negotiations with Spain be transferred to the new general government. On this report, congress, on the 16th of September, 1788, in order to remove the apprehensions of the western settlers, declared that the members be permitted to contradict the report referred to by the delegates from North Carolina; and at the same time resolved 'that the free navigation of the river Mississippi is a clear and essential right of the United States, and that the same ought to be considered and supported as such.' All further negotiations with Spain were also referred to the new federal government."—T. Pitkin, *Political and civil history of the United States, v. 2, ch. 17*.—"It was important for the frontiersmen to take the Lake Posts from the British; but it was even more important to wrest from the Spaniards the free navigation of the Mississippi. While the Lake Posts were held by the garrisons of a foreign power, the work of settling the northwestern territory was bound to go forward slowly and painfully; but while the navigation of the Mississippi was barred, even the settlements already founded could not attain to their proper prosperity and importance. . . . The Westerners were right in regarding as indispensable the free navigation of the Mississippi. They were right also in their determination ultimately to acquire the control of the whole river, from the source to the mouth. However, the Westerners wished more than the privilege of sending down stream the products of their woods and pastures and tilled farms. They had already begun to cast longing eyes on the fair Spanish possessions. . . . Every bold, lawless, ambitious leader among the frontier folk dreamed of wresting from the Spaniard some portion of his rich and ill-guarded domain. It was not alone the attitude of the frontiersmen towards Spain that was novel, and based upon a situation for which there was little precedent. Their relations with one another, with their brethren of the seaboard, and with the Federal Government, likewise had to be adjusted without much chance of profiting by antecedent experience. Many phases of these relations between the people who stayed at home and those who

wandered off to make homes, between the frontiersmen as they formed young States, and the Central Government representing the old States, were entirely new, and were ill-understood by both parties. . . . The attitude towards the Westerners of certain portions of the population in the older States, and especially in the northeastern States, was one of unreasoning jealousy and suspicion; and though this mental attitude rarely crystallized into hostile deeds, its very existence, and the knowledge that it did exist, embittered the men of the West. . . . In the northeastern States, and in New England especially, this feeling showed itself for two generations after the close of the Revolutionary War. On the whole the New Englanders have exerted a more profound and wholesome influence upon the development of our common country than has ever been exerted by any other equally numerous body of our people. They had led the nation in the path of civil liberty and sound governmental administration. But too often they have viewed the nation's growth and greatness from a narrow and provincial standpoint, and have grudgingly acquiesced in, rather than led the march towards, continental supremacy. In shaping the nation's policy for the future their sense of historic perspective seemed imperfect. . . . The extreme representatives of this northeastern sectionalism not only objected to the growth of the West at the time now under consideration, but even avowed a desire to work it harm, by shutting the Mississippi, so as to benefit the commerce of the Atlantic States. . . . These intolerant extremists not only opposed the admission of the young western States into the Union, but at a later date actually announced that the annexation by the United States of vast territories beyond the Mississippi offered just cause for the secession of the northeastern States. Even those who did not take such an advanced ground felt an unreasonable dread lest the West might grow to overtop the East in power. . . . A curious feature of the way many honest men looked at the West was their inability to see how essentially transient were some of the characteristics to which they objected. Thus they were alarmed at the turbulence and the lawless shortcomings of various kinds which grew out of the conditions of frontier settlement and sparse population. They looked with anxious foreboding to the time when the turbulent and lawless people would be very numerous, and would form a dense and powerful population; failing to see that in exact proportion as the population became dense, the conditions which caused the qualities to which they objected would disappear. Even the men who had too much good sense to share these fears, even men as broadly patriotic as Jay, could not realize the extreme rapidity of western growth. Kentucky and Tennessee grew much faster than any of the old frontier colonies had ever grown; and from sheer lack of experience, eastern statesmen could not realize that this rapidity of growth made the navigation of the Mississippi a matter of immediate and not of future interest to the West. . . . While many of the people on the eastern seaboard thus took an indefensible position in reference to the trans-Alleghany settlements, in the period immediately succeeding the Revolution, there were large bodies of the population of these same settlements, including very many of their popular leaders, whose own attitude towards the Union was, if anything, more blameworthy. They were clamorous about their rights, and were not unready to use veiled threats of disunion when they deemed these rights infringed; but they showed little appreciation of

their own duties to the Union. . . . They demanded that the United States wrest from the British the Lake Posts, and from the Spaniards the navigation of the Mississippi. Yet they seemed incapable of understanding that if they separated from the Union they would thereby forfeit all chance of achieving the very purposes they had in view, because they would then certainly be at the mercy of Britain, and probably, at least for some time, at the mercy of Spain also. They opposed giving the United States the necessary civil and military power, although it was only by the possession and exercise of such power that it would be possible to secure for the westerners what they wished. In all human probability, the whole country round the Great Lakes would still be British territory, and the mouth of the Mississippi still in the hands of some European power, had the folly of the separatists won the day and had the West been broken up into independent states. . . . This final triumph of the Union party in these first-formed frontier States was fraught with immeasurable good."—T. 1785-1790.—Foundation of territorial government policy.—By the cession of "the territory north and west of the Ohio River, . . . [the United States] came into the possession of a public domain estimated to amount to one or two hundred million acres, and supposed to be worth about a dollar an acre. This was an asset sufficient to meet the debt incurred in the war and to leave a balance for the running expenses of the Government. When the Treaty of Peace, in 1783, determined that the country between the Alleghenies and the Mississippi was to belong to the United States and not to any foreign power, the pent-up population broke west of the mountains in a genuine flood. In 1770 it was said that there were only one hundred and seventy-six white men in the whole Kentucky district; but by 1785 the population was estimated at from 20,000 to 30,000, and according to the census of 1790 there were 73,000 in Kentucky and 35,000 in Tennessee. The United States property was northwest of the Ohio River, and there was certain to be a great demand for it as soon as it was opened up. Congress, therefore, faced two important Western problems demanding solution: one was to determine the policy for disposing of its public lands; and the other was to provide a government for settlers upon those lands. The answer to the first was found in the Land Ordinance of 1785. As adopted by Congress it provided for the rectangular survey of the public domain into townships six miles square, each of which was divided into thirty-six sections, and the townships were to be sold, alternately, as a whole and by sections, at prices not less than one dollar an acre. The financial aspect is predominant, for this meant sale in large lots of over 20,000 acres and in small lots of 640 acres; but the purpose of encouraging settlement was not lost sight of, and it was prophetic of a most striking phase of American development when this early law contained a provision that the sixteenth section in each township was to be reserved for the maintenance of public schools. The details are tedious, but the mechanical rectangular method of survey and the requirement that the land must

be surveyed before it could be sold made possible a simple system of recording titles, rendered transfers of property easy, and thereby did away with endless confusion. It proved to be a simple and permanently excellent system which has been widely copied. The problem of government was referred to a committee of which Thomas Jefferson was chairman, where he rendered a service similar to his formulation of the Declaration of Independence, by taking up ideas that were current in the air and expressing them in an acceptable form. The people of the United States were accustomed to self-government, and in the process of expansion they had seen new colonies and even new states come into being. Vermont, although not yet recognized as a member of the Union, had declared itself to be an independent state and had a government of its own. Kentucky was practically independent of Virginia. The formation of new states was therefore not a new conception and, in the first proposals with reference to ceding the Western country to Congress, it was suggested that the territory ceded should be divided up into states. Upon the basis of these ideas Jefferson framed his Ordinance of 1784. There were features that were not satisfactory and it was never actually put into operation, yet it alone made possible its more famous successor, . . . The Ordinance of 1787, which 'has been perhaps the most notable instance of legislation that was ever enacted by the representatives of the American people.' . . . Details are not essential; the ordinance provided for an increasing measure of self-government and ultimate admission into the Union on a footing of equality with the original states. Although differing in particulars, those were the fundamental principles of Jefferson's ordinance which were thus embodied in the Ordinance of 1787. The new states that were thus planned for the West were in reality colonies, but American experience attached an unfortunate stigma to that word, and so the 'territory' northwest of the Ohio River grew to be the generic name. As each new territory was formed, the Ordinance of 1787 was extended over it, and while in the course of . . . years some provisions have been modified and details have been changed, the principles of the territorial system have remained the same. The unique feature of the system is the incorporation of the colony into the parent state, and not only has it proved to be most successful, it also has made this one of the best colonial systems the world has known. The United States at the present time consists of forty-eight separate states. Aside from the original thirteen, only six states have come into the Union without having been territories, and four of these six had had an equivalent training. The remaining twenty-nine have all passed through the territorial stage. The experience in self-government thus acquired, an experience wisely ordered to be under a form of government modeled on that of the original states and already found to be good, has led the people of a territory, in every instance, when allowed to form their own state government, to follow the model which had been set for them. Similarity of training and experience explains the fact, so often the subject of comment, that all of the states in the Union at the present time are so much alike in their form of government. A consideration of even larger significance is that, if such a process of incorporation is continued long enough, the colonies will become greater than the mother country and the colonists will outnumber the parent stock. This has been the

case in the United States. The three or four million people reported by the Census of 1790 have become the hundred million of the present [1920], nearly seventy per cent of whom live beyond the Allegheny Mountains. The colonists of 1787 have grown into the American people of today."—M. Farrand, *Development of the United States, from colonies to a world power*, pp. 63-65.

1787.—Framing of Federal constitution.—Union constructed of compromises.—The convention of delegates appointed to revise the Articles of Confederation (see above: 1783-1787), but which took upon itself the task of framing anew a Federal constitution for the states, assembled at Philadelphia on May 25, 1787, eleven days later than the day appointed for its meeting. "The powers conferred by the several states were not uniform. Virginia, Pennsylvania, and New Jersey appointed their delegates 'for the purpose of revising the Federal Constitution.' North Carolina, New Hampshire, Delaware, and Georgia 'to decide upon the most effectual means to remove the defects of the Federal Union'; New York, Massachusetts, and Connecticut 'for the sole and express purpose of revising the Articles of Confederation'; South Carolina and Maryland 'to render the Federal Constitution entirely adequate to the actual situation.' Rhode Island held aloof. She was governed by a class of men who wanted to pay their debt in paper money, and she did not wish to surrender her power to collect duties upon the goods that came into her port. The trade of Newport at that day surpassed that of New York. Connecticut came in reluctantly, and New Hampshire late in July, 1787. . . . Washington was made president of the convention. . . . Many names great in the revolutionary struggle were absent from the roll of delegates. John and Samuel Adams, and John Hancock, were not there. Patrick Henry of Virginia refused to attend. Thomas Jefferson and John Jay were absent from the country. George Washington and Benjamin Franklin, however, were there. . . . Among the younger men was James Madison of Virginia. . . . Alexander Hamilton came from New York. . . . Charles C. Pinckney was a delegate from South Carolina. . . . James Wilson of Pennsylvania was a Scotchman. He surpassed all others in his exact knowledge of the civil and common law, and the law of nations. . . . Oliver Ellsworth and Roger Sherman came from Connecticut. . . . Many of the 55 delegates shared Hamilton's contempt for a democracy, but the strength they would repose in a government they preferred to retain in the States. . . . The first business of the convention was the adoption of rules. Each state was to have one vote. Such was the rule in the Confederate Congress. Seven states made a quorum. The convention was to sit with closed doors and everything was to be kept secret: nothing was to be given to the public except the completed work. This injunction of secrecy was never removed. Fortunately James Madison kept a pretty full account of the debates and proceedings, all in his

own hand."—J. S. Landon, *Constitutional history and government of the United States*, lecture 3.—"Madison tells us in his report of these debates that previous to the opening of the Convention it had been a subject of discussion among the members present, as to how the States should vote in the Convention. Several of the members from Pennsylvania had urged that the large States unite in refusing to the small States an equal vote, but Virginia, believing this to be injudicious if not unjust, 'discountenanced and stifled the project.' On the 29th the real business of the Convention was opened by Edmund Randolph, who as Governor of Virginia was put forward as spokesman by his colleagues. He began by saying that as the Convention had originated from Virginia, and the delegation from this State supposed that some proposition was expected from them, the task had been imposed on him. After enumerating the defects of the Confederation, he detailed the remedy proposed. This latter was set forth in fifteen resolutions and was called afterwards the Virginia plan of government. Charles Pinckney from South Carolina had also a draft of a federal government, which was read and like the former referred to a committee of the whole House. . . . The Committee of the Whole . . . debated from day to day the resolutions contained in the Virginia plan, and on the 13th of June they reported nineteen resolutions based upon those of Virginia, forming a system of government in outline. On the following day Mr. Paterson, of New Jersey, asked for time to prepare another plan founded on the Articles of Confederation. This was submitted to the Convention on the 15th. The Virginia and the New Jersey plan were contrasted briefly by one of the members: Virginia plan proposes two branches in the legislature, Jersey, a single legislative body; Virginia, the legislative powers derived from the people, Jersey, from the States; Virginia, a single executive, Jersey, more than one; Virginia, a majority of the legislature can act, Jersey a small majority can control; Virginia, the legislature can legislate on all national concerns, Jersey, only on limited objects; Virginia, legislature to negative all State laws, Jersey, giving power to the executive to compel obedience by force; Virginia, to remove the executive by impeachment, Jersey, on application of a majority of the States; Virginia, for the establishment of inferior judiciary tribunals, Jersey, no provision. Neither of these plans commended themselves to men like Hamilton, who wanted a strong government, and were afraid of democracy or giving power to the people. He thought the Virginia plan 'but pork still with a little change of the sauce.' The Articles of Confederation amended, as in the New Jersey plan, set forth a government approved of by the opposite wing of the Convention, consisting of men like Lansing, who professed an ultra devotion to the rights and autonomy of the States. . . . The Convention did not go again into committee of the whole, but continued to debate the nineteen resolutions from the 19th of June until the 23d of July. Some of these were referred to grand committees, consisting of one member from each State, or they were referred to select committees consisting of five members."—K. M. Rowland, *Life of George Mason*, v. 2, ch. 4.—"In the first place [under the Virginia plan], provision was made for the separation of the three branches of government—legislative, executive, and judicial. In the second place the legislature was to consist of two houses, of which the first branch was to be elected by the people

of the several states, the second branch was to be chosen by the first out of persons nominated by the state legislatures, and the voting in both branches was to be proportional either to the quotas of contribution or to the number of free inhabitants, or to both. This legislature was to have the legislative powers of the congress of the confederation, with additional powers to cover all cases where the separate states would be incompetent, together with the right to negative state laws infringing upon the 'Articles of Union' and to use force against any state failing to fulfill its duty. In the next place, the executive was to be chosen by the national legislature, and was to be ineligible for a second term. The executive and 'a convenient number of the national judiciary' were to constitute a council of revision with a veto upon legislative acts that might, however, be overruled by a subsequent vote of both houses. Then there was to be a national judiciary, of a supreme and inferior courts, chosen by the legislature 'to hold their offices during good behaviour,' with jurisdiction in maritime questions, in cases where foreigners were interested, or which respected 'the collection of the national revenue, impeachments of any national officers, and questions which may involve the national peace and harmony.' Provision was also to be made for the admission of new states by less than a unanimous vote, for the guarantee to each state of a republican government and of its territory, for the amendment of the articles of union without the consent of the national legislature, and for the binding of state officers by oath to support the articles of union. Finally it was proposed that whatever amendments might be prepared embodying these changes should be submitted, after their approval by congress, to conventions specially chosen for the purpose by the people of each state."—M. Farrand, *Framing of the constitution*, pp. 69-71.—"The plan presented by Mr. Patterson, called the New Jersey plan, was concerted and arranged between the deputations of that State, of Delaware, of New York, and of Connecticut, with the individual co-operation of Mr. Luther Martin, one of the delegates of Maryland. The extreme jealousy . . . manifested by the representatives of the two first-named States with regard to the equal suffrage of the States in the common councils of the Confederacy, was the principal source of their aversion to the plan reported by the committee of the whole. The delegates of Connecticut, and Messrs. Lansing and Yates,—forming a majority of the delegation of New York,—united with the deputations of New Jersey and Delaware, not so much from an exclusive attachment to the principle of the sovereignty and equality of the States, as from the policy of preserving the existing framework of the confederation, and of simply vesting in Congress, as then organized, a few additional powers. It was under the influence of these mixed political views that the New Jersey plan was conceived and prepared. It proposed to vest in the existing Congress,—a single body in which all the States had an equal suffrage,—in addition to the powers already given to it by the articles of confederation, that of raising revenue by imposts and stamp and postage duties, and also that of passing acts for the regulation of commerce with foreign nations and between the States; leaving the enforcement of all such acts, in the first instance, to the State courts, with an ultimate appeal to the tribunals of the United States. Whenever requisitions on the States for contributions should be made, and any State

should fail to comply with such requisitions within a specified time, Congress was to be authorized to direct their collection in the non-complying States, and to pass the requisite acts for that purpose. None of the foregoing powers, however, were to be exercised by Congress without the concurrence of a certain number of the States, exceeding a bare majority of the whole. The plan also proposed the organization of a Federal executive and a Federal judiciary. . . . It was, finally, provided that if any State, or any body of men in any State, shall oppose or prevent the carrying into execution any act of Congress passed in virtue of the powers granted to that body, or any treaty made and ratified under the authority of the United States, the Federal executive shall be authorized to call forth the power of the confederated States, or so much thereof as may be necessary, to enforce and compel an obedience to the acts, or an observance of the treaties, whose execution shall have been so opposed or prevented. Such were the salient features of the plan now brought forward as a substitute for the Virginia propositions, as reported by the committee of the whole. . . . In the progress of the discussion upon the two plans, Colonel Hamilton, of New York, made an elaborate speech, declaring himself to be opposed to both, and suggesting a third and more absolute plan, which he thought was alone adequate to the exigencies of the country. He frankly avowed his distrust of both republican and federal government, under any modification. He entered into a minute analysis of the various sources and elements of political power, in order to show that all these would be on the side of the State governments, so long as a separate political organization of the States was maintained, and would render them an over-match for any general government that could be established, unless a 'complete sovereignty' was vested in the latter. He thought it essential, therefore, to the ends of a good and efficient government of the whole country, that the State governments, with their vast and extensive apparatus, should be extinguished; though 'he did not mean,' he said, 'to shock public opinion by proposing such a measure.' He also expressed his despair of that practicability of establishing a republican government over so extensive a country as the United States. He was sensible, at the same time, that it would be unwise to propose one of any other form. Yet 'he had no scruple,' he said, 'in declaring that, in his private opinion, the British government was the best in the world, and that he doubted much whether any thing short of it would do in America.' He descanted upon the securities against injustice, violence, and innovation, afforded, in the English system, by the permanent constitution of the House of Lords, and by the elevated and independent position of the monarch. He thence deduced the necessity of as permanent a tenure as public opinion in this country would bear, of the leading branches of the new government. 'Let one branch of the legislature,' he said, 'hold their places for life, or at least during good behavior. Let the executive also be for life.' In concluding, he expressed his conviction that 'a great progress was going on in the public mind; that the people will, in time, be unshackled from their prejudices; and, whenever that happens, they will themselves not be satisfied at stopping where the plan brought forward by Mr. Randolph [the Virginia plan] would place them, but would be ready to go as far, at least, as he proposed.' He then read a plan of government he had prepared, which, he said, he

did not submit as a proposition to the convention, but as giving a correct sketch of his ideas, and to suggest the amendment which he should probably offer to the Virginia plan in the future stages of its consideration. . . . The convention now had presented for their consideration three distinct schemes of government: one purely Federal, founded upon the idea of preserving undiminished the sovereignty and equality of the States, and of constituting a special political agency in Congress for certain purposes, but still under the dependence and control of the States; another of a consolidated character, bottomed on the principle of a virtual annihilation of the State sovereignties and the creation of a central government, with a supreme and indefinite control over both individuals and communities; the third a mixed and balanced system, resting upon an agreed partition of the powers of sovereignty between the States and the Union,—one portion to be vested in the Union for certain objects of common and national concern, the residue retained by the States for the regulation of the general mass of their interior and domestic interests. . . . On the 19th of June . . . Mr. King, of Massachusetts, moved that 'the committee do now rise, and report that they do not agree to the propositions offered by the Honorable Mr. Patterson; and that they report to the House the resolutions offered by the Honorable Mr. Randolph, heretofore reported from a committee of the whole.' The motion was carried by the votes of Massachusetts, Connecticut, Pennsylvania, Virginia, North Carolina, South Carolina, and Georgia, in the affirmative,—New York, New Jersey, and Delaware voting in the negative; and Maryland, divided."—W. C. Rives, *Life and times of James Madison*, ch. 29.—"The committee of the whole made its second report on June 19, again recommending the amended Virginia plan, and the convention proceeded at once to a more detailed consideration of the separate resolutions. The large-state men, having accomplished their main purpose, were now willing to make some concessions for the sake of harmony. For example, the objectionable word 'national' was stricken out of the first resolution by the unanimous vote, and it was 'as of course' dropped out of each of the subsequent resolutions in turn. As some of the delegates were in favor of electing the members of the lower house annually, a compromise was reached between that and the term of three years previously established, and the final vote for two years was unanimous. Although the same unanimity was not obtainable, other modifications were made that rendered the plan less objectionable; the term of the members of the upper house was fixed at 'six years, one third to go out biennially'; payment of the members of the legislature 'out of the treasury of the United States' was not insisted upon; and members of both houses were rendered eligible to state offices, though they were still declared ineligible to offices of the United States. All of these matters, however, were of minor importance, and on the more essential questions the majority were unyielding. On the other hand, the small-state men had developed a more united and more determined opposition. This fact manifested itself unmistakably. In committee of the whole the vote in favor of two branches for the legislature had been unanimous, now the question found three states in opposition with a fourth divided. Previously Charles Pinckney had only been able to get three states to support his motion for the election of the members of the lower house by the state legislatures, now

there were four states in favor of it with the vote of a fifth divided. Still the discussions were conducted with reasonable equanimity though it was felt by all that the trial was yet to come. When the question of proportional representation had been under consideration in committee of the whole, Franklin observed that 'till this point . . . came before us, our debates were carried on with great coolness and temper.' And so it was now. For a few days everything went comparatively smoothly. But it was only the lull before the storm. . . . So on June 27, when Rutledge made the motion, the convention voted unanimously to proceed at once to the resolution involving 'the most fundamental points, the rules of suffrage in the two branches.'—M. Farrand, *Framing of the constitution*, pp. 91-93.—"It appeared," wrote Madison, in a letter to Jefferson, October 24 "to be the sincere and unanimous wish of the Convention to cherish and preserve the Union of the States. No proposition was made, no suggestion was thrown out, in favor of a partition of the Empire into two or more Confederacies. It was generally agreed that the objects of the Union could not be secured by any system founded on the principle of a confederation of Sovereign States. A voluntary observance of the federal law by all the members could never be hoped for. A compulsive one could evidently never be reduced to practice, and if it could, involved equal calamities to the innocent and the guilty, the necessity of a military force, both obnoxious and dangerous, and, in general, a scene resembling much more a civil war than the administration of a regular Government. Hence was embraced the alternative of a Government which, instead of operating on the States, should operate without their intervention on the individuals composing them; and hence the change in the principle and proportion of representation. This ground-work being laid, the great objects which presented themselves were: 1. To unite a proper energy in the Executive, and a proper stability in the Legislative departments, with the essential characters of Republican Government. 2. To draw a line of demarcation which would give to the General Government every power requisite for general purposes, and leave to the States every power which might be most beneficially administered by them. 3. To provide for the different interests of different parts of the Union. 4. To adjust the clashing pretensions of the large and small States. Each of these objects was pregnant with difficulties. The whole of them together formed a task more difficult than can well be conceived by those who were not concerned in the execution of it. Adding to these considerations the natural diversity of human opinions on all new and complicated subjects, it is impossible to consider the degree of concord which ultimately prevailed as less than a miracle. The first of these objects, as respects the Executive, was peculiarly embarrassing. On the question whether it should consist of a single person or a plurality of co-ordinate members, on the mode of appointment, on the duration in office, on the degree of power, on the re-eligibility, tedious and reiterated discussions took place. The plurality of co-ordinate members had finally but few advocates. Governor Randolph was at the head of them. The modes of appointment proposed were various: as by the people at large, by electors chosen by the people, by the Executives of the States, by the Congress; some preferring a joint ballot of the two Houses; some, a separate concurrent ballot, allowing to each a negative on the

other house; some, a nomination of several candidates by one House, out of whom a choice should be made by the other. Several other modifications were started. The expedient at length adopted seemed to give pretty general satisfaction to the members. As to the duration in office, a few would have preferred a tenure during good behaviour; a considerable number would have done so in case an easy and effectual removal by impeachment could be settled. It was much agitated whether a long term, seven years for example, with a subsequent and perpetual ineligibility, or a short term, with a capacity to be re-elected, should be fixed. In favor of the first opinion were urged the danger of a gradual degeneracy of re-elections from time to time, into first a life and then a hereditary tenure, and the favorable effect of an incapacity to be reappointed on the independent exercise of the Executive authority. On the other side it was contended that the prospect of necessary degradation would discourage the most dignified characters from aspiring to the office; would take away the principal motive to the faithful discharge of its duties—the hope of being rewarded with a reappointment; would stimulate ambition to violent efforts for holding over the constitutional term; and instead of producing an independent administration and a firmer defence of the constitutional rights of the department, would render the officer more indifferent to the importance of a place which he would soon be obliged to quit forever, and more ready to yield to the encroachments of the Legislature, of which he might again be a member. The questions concerning the degree of power turned chiefly on the appointment to officers, and the controul on the Legislature. An absolute appointment to all offices, to some offices, to no offices, formed the scale of opinions on the first point. On the second, some contended for an absolute negative, as the only possible mean of reducing to practice the theory of a free Government, which forbids a mixture of the Legislative and Executive powers. Others would be content with a revisionary power, to be overruled by three-fourths of both Houses. It was warmly urged that the judiciary department should be associated in the revision. The idea of some was, that a separate revision should be given to the two departments; that if either objected, two-thirds, if both, three-fourths, should be necessary to overrule. In forming the Senate, the great anchor of the government, the questions, as they come within the first object, turned mostly on the mode of appointment, and the duration of it. The different modes proposed were: 1. By the House of Representatives. 2. By the Executive. 3. By electors chosen by the people for the purpose. 4. By the State Legislatures. On the point of duration, the propositions descended from good behaviour to four years, through the intermediate terms of nine, seven, six, and five years. The election of the other branch was first determined to be triennial, and afterwards reduced to biennial. The second object, the due partition of power between the General and local Governments, was perhaps, of all, the most nice and difficult. A few contended for an entire abolition of the States; some, for indefinite power of Legislation in the Congress, with a negative on the laws of the States; some, for such a power without a negative; some, for a limited power of legislation, with such a negative; the majority, finally, for a limited power without the negative. The question with regard to the negative underwent repeated discussions, and was finally rejected by a bare

majority. . . . I return to the third object above mentioned, the adjustments of the different interests of different parts of the continent. Some contended for an unlimited power over trade, including exports as well as imports, and over slaves as well as other imports; some, for such a power, provided the concurrence of two-thirds of both Houses were required; some, for such a qualification of the power, with an exemption of exports and slaves; others, for an exemption of exports only. The result is seen in the Constitution. South Carolina and Georgia were inflexible on the point of the slaves. The remaining object created more embarrassment, and a greater alarm for the issue of the Convention, than all the rest put together. The little States insisted on retaining their equality in both branches, unless a complete abolition of the State Governments should take place; and made an equality in the Senate a *sine qua non*. The large States, on the other hand, urged that as the new Government was to be drawn principally from the people immediately, and was to operate directly on them, not on the States; and, consequently, as the States would lose that importance which is now proportioned to the importance of their voluntary compliance with the requisitions of Congress, it was necessary that the representation in both Houses should be in proportion to their size. It ended in the compromise which you will see, but very much to the dissatisfaction of several members from the large States."—James Madison, *Letters and other writings*, v. 1, pp. 344-354.—"Those who proposed only to amend the old Articles of Confederation and opposed a new Constitution, objected that a government formed under such a Constitution would be not a federal, but a national, government. Luther Martin said, when he returned to Maryland, that the delegates 'appeared totally to have forgot the business for which we were sent. . . . We had not been sent to form a government over the inhabitants of America considered as individuals. . . . That the system of government we were intrusted to prepare was a government over these thirteen States; but that in our proceedings we adopted principles which would be right and proper only on the supposition that there were no state governments at all, but that all the inhabitants of this extensive continent were in their individual capacity, without government, and in a state of nature.' He added that, 'in the whole system there was but one federal feature, the appointment of the senators by the States in their sovereign capacity, that is by their legislatures, and the equality of suffrage in that branch; but it was said that this feature was only federal in appearance.' The Senate, the second house as it was called in the convention, was in part created, it is needless to say, to meet, or rather in obedience to, reasoning like this. . . . The Luther Martin protestants were too radical to remain in the convention to the end, when they saw that such a confederacy as they wanted was impossible. But there were not many who went the length they did in believing that a strong central government was necessarily the destruction of the state governments. Still fewer were those who would have brought this about if they could. . . . The real difficulty, as Madison said in the debate on that question, and as he repeated again and again after that question was settled, was not between the larger and smaller States, but between the North and South; between those States that held slaves and those that had none. Slavery in the Constitution, which has given so much trouble to the Abolitionists of this century, and,

indeed, to everybody else, gave quite as much in the last century to those who put it there. Many of the wisest and best men of the time, Southerners as well as Northerners, and among them Madison, were opposed to slavery. . . . Everywhere north of South Carolina, slavery was looked upon as a misfortune which it was exceedingly desirable to be free from at the earliest possible moment; everywhere north of Mason and Dixon's Line, measures had already been taken, or were certain soon to be taken, to put an end to it; and by the Ordinance for the government of all the territory north of the Ohio River, it was absolutely prohibited by Congress, in the same year in which the Constitutional Congress met. But it was, nevertheless, a thing to the continued existence of which the anti-slavery people of that time could consent without any violation of conscience. Bad as it was, unwise, wasteful, cruel, a mockery of every pretense of respect for the rights of man, they did not believe it to be absolutely wicked. . . . The question with the North was, how far could it yield; with the South, how far could it encroach. It turned mainly on representation. . . . There were some who maintained at first that the slave population should not be represented at all. Hamilton proposed in the first days of the convention 'that the rights of suffrage in the national legislature ought to be proportioned to the number of free inhabitants.'"—S. H. Gay, *James Madison*, ch. 7-8.—"When the great document was at last drafted by Gouverneur Morris, and was all ready for the signatures [September 17, 1787], the aged Franklin produced a paper, which was read for him, as his voice was weak. Some parts of this Constitution, he said, he did not approve, but he was astonished to find it so nearly perfect. Whatever opinion he had of its errors he would sacrifice to the public good, and he hoped that every member of the convention who still had objections would on this occasion doubt a little of his own infallibility, and for the sake of unanimity put his name to this instrument. Hamilton added his plea. A few members, he said, by refusing to sign, might do infinite mischief. . . . From these appeals, as well as from Washington's solemn warning at the outset, we see how distinctly it was realized that the country was on the verge of civil war. Most of the members felt so, but to some the new government seemed far too strong, and there were three who dreaded despotism even more than anarchy. Mason, Randolph, and Gerry refused to sign. . . . In the signatures the twelve states which had taken part in the work were all represented, Hamilton signing alone for New York."—J. Fiske, *Critical period of American history*, p. 303.—A "popular delusion with regard to the Constitution is that it was created out of nothing; or, as Mr. Gladstone puts it, that 'It is the greatest work ever struck off at any one time by the mind and purpose of man.' The radical view on the other side is expressed by Sir Henry Maine, who informs us that the 'Constitution of the United States is a modified version of the British Constitution' . . . which was in existence between 1760 and 1787. The real source of the Constitution is the experience of Americans. They had established and developed admirable little commonwealths in the colonies; since the beginning of the Revolution they had had experience of State governments organized on a different basis from the colonial; and, finally, they had carried on two successive national governments, with which they had been profoundly discontented. The general outline of the new Constitution seems to be

English; it was really colonial. The President's powers of military command, of appointment, and of veto were similar to those of the colonial governor. National courts were created on the model of colonial courts. A legislature of two houses was accepted because such legislatures had been common in colonial times. In the English Parliamentary system as it existed before 1760 the Americans had had no share; the later English system of Parliamentary responsibility was not yet developed, and had never been established in colonial governments; and they expressly excluded it from their new Constitution. They were little more affected by the experience of other European nations. . . . The chief source of the details of the Constitution was the State constitutions and laws then in force. Thus the clause conferring a suspensive veto on the President is an almost literal transcript from the Massachusetts constitution. In fact, the principal experiment in the Constitution was the establishment of an electoral college; and of all parts of the system this has worked least as the framers expected. The Constitution represents, therefore, the accumulated experience of the time. . . . The real boldness of the Constitution is the novelty of the federal system which it set up."—A. B. Hart, *Formation of the Union, 1750-1829, sect. 62*.—"That a constitution should be framed in detail by a body of uninstructed delegates, expressly chosen for that purpose, was familiar in the States of the Union; but was perhaps unexampled elsewhere in the world, and was certainly unexampled in the history of federations. That the instrument of federal government should provide for proportional representation in one house, and for a federal court, was a step in federal organization which marks a new federal principle. For many purposes the Union then created was stronger than the Prussian monarchy at that moment. In many respects the States were left stronger than the little nominally independent German principalities. The great merit of the members of the convention is their understanding of the temper of their own countrymen. They selected out of English, or colonial, or State usages such practices and forms as experience had shown to be acceptable to the people. . . . The Convention had further the wisdom to express their work in general though carefully stated principles. All previous federal governments had been fettered either by an imperfect and inadequate statement, as in the constitution of the United Netherlands, or by an unwritten constitution with an accumulation of special precedents, as in the Holy Roman Empire. The phrases of the Constitution of 1787 were broad enough to cover cases unforeseen. A third distinction of the federal Convention is the skill with which it framed acceptable compromises upon the three most difficult questions before it. The two Houses of Congress satisfied both large and small States; the three-fifths representation of slaves postponed an inevitable conflict; the allowance of the slave trade for a term of years made it possible for Congress to perfect commercial legislation. The Convention had profited by the experience of the Confederation: on every page of the Constitution may be found clauses which would not have stood there had it been framed in 1781. An adequate revenue was provided; foreign and interstate commerce was put under the control of Congress; the charge of foreign affairs was given entirely to the central authority; the powers of government were distributed among three departments."—A. B. Hart, *Introduction to the study of Federal government, ch. 4*.

—"That in one sense the Constitution was made in four months' time is true; in four months a series of articles and sections were pieced together. In another sense it is not true; time made the American Constitution as it has made others of any moment. An artificial constitution, not the product of a people's life, can never have vitality, strength, or usefulness. The delegates at Philadelphia did not sit brooding over the chaos of the Confederation to bring forth by their fiat a new government. The idea that they created institutions out of nothingness loses sight of the manner and the conditions of their work. Neither is it true that they copied European institutions, borrowing scraps here and there to patch up a system suited to their tastes. . . . They were practical political workers [who] had for years studied the problems of forming governments, and had been acquainted with the great process of making state constitutions. The men of the generation that declared independence and formed new states were steeped in political theory as their great-grandfathers had been in theology, and for years they were engaged in the difficult process of adapting old institutions to new ideas, framing governments and laws that suited the economic, social, and moral conditions which the New World had produced. We might, therefore, expect to find from these experienced craftsmen, not a document hurriedly patched together, nor one taken in part from distant ages or strange climes, but an American document, in its entirety new, but made up of parts that had found their places in the state organizations. If we look, then, for the origin of the Constitution, we find much of it in the failures of the Confederation, in the tribulations of eleven confused years when the nation was without a proper government and when distress and disorder and incompetence were showing the way to success; and much of it, too, in the state constitutions which had been drawn up by men familiar with colonial governments and administration. . . . It may be said that colonial history made the Constitution. Even in the division of authority between the states and the national government we see a readjustment of the old practical relationship between colonies and mother-country, a readjustment which was based in part on the imperfections of the old system but carried out the teachings of the Revolution. Even the essentially American notion, the notion that government is the agent of the people, and must not transcend the law set by the people, was an outgrowth of the free society of a new world, had found its expression in the theory of the Revolution, and had arisen in a country in which from time immemorial there had been no government possessed of all political power."—A. C. McLaughlin, *Confederation and the constitution, 1783-1789, pp. 273-276*.—"The movement for the Constitution of the United States was originated and carried through principally by four groups of personal interests which had been adversely affected under the Articles of Confederation: money, public securities, manufactures, and trade and shipping. The first firm steps toward the formation of the Constitution were taken by a small and active group of men immediately interested through their personal possessions in the outcome of their labors. No popular vote was taken directly or indirectly on the proposition to call the Convention which drafted the Constitution."—C. A. Beard, *Economic interpretation of the constitution of the United States, p. 324*.—"The convention was over; it had completed its work. In the achievement of its

task James Madison had been unquestionably the leading spirit. It might be said that he was the master-builder of the constitution. This is not an over-valuation of his services derived from his own account of the proceedings in convention, for Madison laid no undue emphasis upon the part he himself played; in fact, he understated it. Nor is it intended to belittle the invaluable services of many other delegates. But when one studies the contemporary conditions, and tries to discover how well the men of that time grasped the situation; and when one goes farther and, in the light of our subsequent knowledge, seeks to learn how wise were the remedies they proposed,—Madison stands pre-eminent. He seems to have lacked imagination, but this very lack made his work of peculiar value at the moment. His remedies for the unsatisfactory state of affairs under the confederation, were not founded on theoretical speculations, they were practical. They were in accord with the historical development of our country and in keeping with the genius of our institutions. The evidence is also strong that Madison not only took an important part in the debates but that he was actually looked up to by both friends and opponents as the leader of those in the convention who were in favor of a strong national government. In these respects, he was in marked contrast to Alexander Hamilton, who was a stronger man intellectually, and suggested a more logical and consistent plan of government than the one which was followed. But Hamilton was out of touch with the situation. He was aristocratic rather than democratic, and while his ideas may have been excellent, they were too radical for the convention and found but little support. At the same time, being in favor of a strong national government, he tried to aid that movement in every way that he could. But within his delegation he was outvoted by Yates and Lansing, and before the sessions were half over he was deprived of a vote altogether by the withdrawal of his colleagues. Finding himself of little service he went to New York and only returned to Philadelphia once or twice for a few days and to sign the completed document in September. Second to Madison and almost on a par with him was James Wilson. In some respects he was Madison's intellectual superior, but in the immediate work before them he was not as adaptable and not as practical. Still he was Madison's ablest supporter. He appreciated the importance of laying the foundations of the new government broad and deep, and he believed that this could only be done by basing it upon the people themselves. This was the principal thing for which he contended in the convention, and with a great measure of success. His work on the committee of detail was less conspicuous but was also of the greatest service. Next to these two men should come Washington. Not that he ever spoke in the convention, beyond the one recorded instance at the close of the sessions, but . . . personal influence must have been an important factor in the outcome of the convention's work, and Washington's support or opposition would be of the greatest importance. He voted with the Virginia delegation, his views were known, and it is therefore a matter of no little moment that Washington's support was given to Madison. Madison's ideas were the predominating factor in the framing of the constitution and it seems hardly too much to say that Washington's influence, however it may have been exerted, was important and perhaps decisive in determining the acceptance of those ideas by the convention.

Gouverneur Morris was a conspicuous member, brilliant but erratic. While he supported the efforts for a strong national government, his support was not always a great help. His best work in the convention was as the member of the committee on style and arrangement to whom was entrusted the final drafting of the constitution. Charles Pinckney also took a conspicuous part in the convention, but his work is not to be classed with that of other and larger minds. It is undoubtedly true that he suggested a great many things that were embodied in the constitution, but they were minor points and details rather than large, constructive features."—M. Farrand, *Framing of the constitution of the United States*, pp. 196-199.—See also U.S.A., CONSTITUTION OF; PRESIDENT: United States: Need of a single, strong executive.

1787-1789.—Struggle for Federal constitution in the states.—Its ratification.—End of confederation.—“The propertyless masses under the prevailing suffrage qualifications were excluded at the outset from participation (through representatives) in the work of framing the Constitution. The members of the Philadelphia Convention which drafted the Constitution were, with a few exceptions, immediately, directly, and personally interested in, and derived economic advantages from, the establishment of the new system. The Constitution was essentially an economic document based upon the concept that the fundamental private rights of property are anterior to government and morally beyond the reach of popular majorities. The major portion of the members of the Convention are on record as recognizing the claim of property to a special and defensive position in the Constitution. In the ratification of the Constitution, about three-fourths of the adult males failed to vote on the question, having abstained from the elections at which delegates to the state conventions were chosen, either on account of their indifference or their disfranchisement by property qualifications. The Constitution was ratified by a vote of probably not more than one-sixth of the adult males. It is questionable whether a majority of the voters participating in the elections for the state conventions in New York, Massachusetts, New Hampshire, Virginia, and South Carolina, actually approved the ratification of the Constitution. The leaders who supported the Constitution in the ratifying conventions represented the same economic groups as the members of the Philadelphia Convention; and in a large number of instances they were also directly and personally interested in the outcome of their efforts. In the ratification, it became manifest that the line of cleavage for and against the Constitution was between substantial personalty interests on the one hand and the small farming and debtor interests on the other. The Constitution was not created by ‘the whole people’ as the jurists have said; neither was it created by ‘the states’ as Southern nullifiers long contended; but it was the

work of a consolidated group whose interests knew no state boundaries and were truly national in their scope."—C. A. Beard, *Economic interpretation of the Constitution of the United States*, pp. 324-325.—"The fate of the proposed Constitution remained doubtful for many months after the adjournment of the convention. Hamilton said it would be arrogance to conjecture the result. . . . Delaware was the first state to accept it [Dec. 7, 1787]. Gratiified by the concession of equality in the federal Senate, the ratification was prompt, enthusiastic, and unanimous. Pennsylvania was the second [December 12]. The opposition was sharp, but Franklin was president of the state, and Wilson a delegate to the state convention. Their influence was great. . . . The ratification was effected by a vote of 46 to 23. Then New Jersey [December 18] and Georgia [Jan. 2, 1788] followed unanimously. Next came Connecticut [January 9] by a vote of 128 to 40. The result in these five states was the more easily obtained because the friends of the Constitution were prompt to act. With delay in the other states came a bitterness of contention which made the result doubtful. The first close struggle was in Massachusetts. The public creditor favored the proposed Constitution. He saw in it some hope of his long deferred pay. But the debtor class opposed it; for it would put an end to cheap paper money, with which they hoped to pay their debts, when it became still cheaper. . . . Hancock and Adams scarcely favored the Constitution. They feared it infringed upon the rights of the people, and especially upon the rights of the states. . . . Hancock finally came forward as a mediator. He proposed that the Constitution be ratified, with an accompanying recommendation that it be amended in the particulars in which it was thought to be defective. His proposition was adopted, and the Constitution was ratified [February 6] by a vote of 187 [186] to 168. Maryland next ratified the Constitution with much unanimity [April 28], notwithstanding the strenuous opposition of Luther Martin. . . . South Carolina followed next [May 23], and ratified the Constitution by a majority of 76, but recommended amendments substantially like those of Massachusetts. South Carolina was the eighth state [see SOUTH CAROLINA: 1788-1808]; and, if one more could be obtained, the Constitution would take effect between the nine ratifying states. There remained the five states of Virginia, New York, New Hampshire, North Carolina, and Rhode Island. The state convention of Virginia was called for the 2d of June 1788, of New York for the 17th, and of New Hampshire for the 18th of the same month. The result was expected to be adverse in every one of these states. In Virginia the opposition was led by Patrick Henry. . . . Henry was ably seconded by Richard Henry Lee, William Grayson, and George Mason. . . . James Monroe followed their lead. James Madison and Governor Randolph were the leading champions of the new Constitution. . . . John Marshall, afterwards chief justice, came to their assistance. . . . The debate lasted a month. It may be read with instruction, as it is reported in the volumes of Elliot. The ratification prevailed [June 25] by a majority of 10 [11] in a vote of 186 [167]. [See also VIRGINIA: 1788; BILL OF RIGHTS, In United States.] . . . The influence of Washington procured the result. . . . Meanwhile, the state of New Hampshire had ratified the Constitution [June 21], but the fact was not known in Virginia. The opposition to the Constitution was great and bitter in

the State of New York. Fortunately the convention was held so late that New Hampshire, the ninth state, had ratified while the New York convention was engaged in its heated discussions. Two thirds of the delegates were elected to oppose it. . . . The friends of the Constitution felt, long before the convention assembled, that public discussion might be useful in overcoming the hostile attitude of the state. Accordingly, a series of essays in exposition of the Constitution was written by Hamilton, Madison, and Jay, over the common signature of 'Publius.' These essays were published in a newspaper, between October, 1787, and June, 1788. . . . They were subsequently collected and published in a volume styled 'The Federalist.' From that day to this, 'The Federalist' has held unequalled rank as an authority upon the construction of the Constitution." On the 24th of June a fleet courier, employed by Hamilton, brought from Concord to Poughkeepsie, where the New York convention sat, news of the ratification of the Constitution by New Hampshire, the ninth state. "Now, indeed, the situation was changed. There was no longer a confederacy; the Union was already formed. . . . The state must either join the new system or stay out of it. New York was not favorably situated for a separate nation. New England on the east, and New Jersey and Pennsylvania on the south, belonged to the new Union. Canada was on the north. . . . Delay, with its altered circumstances, finally brought to Hamilton and his party the victory that had been denied to argument and eloquence. But the Anti-Federalists were reluctant to yield, and the debate was prolonged," until July 26, when the ratification was carried by 30 votes against 27. "North Carolina remained out of the Union until November, 1789, and Rhode Island until June, 1790. . . . The ratification by nine states having been certified to the Congress of the Confederacy, that body adopted a resolution fixing the first Wednesday of March, 1789, as the day when the new government should go into operation. As the day fell on the 4th of March, that day became fixed for the beginning and the end of congressional and presidential terms."—J. S. Landon, *Constitutional history and government of the United States*, lecture 4.

1789.—First presidential election.—Washington called to head new government.—"The adoption of the Federal constitution was another epoch

in the life of Washington. Before the official forms of an election could be carried into operation a unanimous sentiment throughout the Union pronounced him the nation's choice to fill the presidential chair. He looked forward to the possibility of his election with characteristic modesty and unfeigned reluctance; as his letters to his confidential friends bear witness. . . . The election took place at the appointed time [the first Wednesday in January, 1789], and it was soon ascertained that Washington was chosen President for the term of four years from the 4th of March. By this time the arguments and entreaties of his friends, and his own convictions of public expediency, had determined him to accept. . . . From a delay in forming a quorum of Congress the votes of the electoral college were not counted until early in April, when they were found to be unanimous in favor of Washington. 'The delay,' said he in a letter to General Knox, 'may be compared to a reprieve; for in confidence I tell you (with the world it would obtain little credit), that my movements to the chair of government will be accompanied by feelings not unlike those of a culprit, who is going to the place of his execution; so unwilling am I, in the evening of a life nearly consumed in public cares, to quit a peaceful abode for an ocean of difficulties, without that competency of political skill, abilities and inclination, which are necessary to manage the helm.' . . . At length on the 14th of April he received a letter from the president of Congress, duly notifying him of his election; and he prepared to set out immediately for New York, the seat of government."—W. Irving, *Life of Washington*, v. 4, ch. 37.—The secondary electoral votes, by which the vice president was, at that time, chosen, were scattered among eleven candidates. John Adams received the greater number (34) though not quite a majority of the 69, and was elected.

1789-1792.—Organization of Federal government and first administration of Washington.—Dividing of parties.—Federalists and Democratic Republicans.—"March 4th, 1789, had been appointed for the formal inauguration of the new Government, but the members elect had not yet unlearned the Confederacy's slovenly habits. It was not until April 6th that a sufficient number of members of Congress arrived in New York to form a quorum and count the electoral votes. At that time, and until 1805, no electoral votes were cast distinctively for President and Vice-President. Each elector voted by ballot for two persons. If a majority of all the votes were cast for any person, he who received the greatest number of votes became President, and he who received the next greatest number became Vice-President. When the votes were counted in 1789 they were found to be, for George Washington, of Virginia, 69 (each of the electors having given him one vote), for John Adams, of Massachusetts 34 and 35 for various other

candidates. Washington received notice of his election, and, after a triumphal progress northward from his home at Mount Vernon, was sworn into office April 30th [at Federal Hall, corner Wall and Nassau Streets, New York]. The Vice-President had taken his place as presiding officer of the Senate a few days before. Frederick A. Muhlenberg, of Pennsylvania, was chosen Speaker of the House, but the vote had no party divisions, for Parties were still in a state of utter confusion. Between the extreme Anti-federalists, who considered the Constitution a long step toward a despotism, and the extreme Federalists, who desired a monarchy modeled on that of England, there were all varieties of political opinion. . . . The extreme importance of Washington lay in his ability, through the universal confidence in his integrity and good judgment, to hold together this alliance of moderate men for a time, and to prevent party contests upon the interpretation of federal powers

ALEXANDER HAMILTON

(From painting by John Trumbull,  
Metropolitan Museum of Art, New York)

until the Constitution should show its merit and be assured of existence. The President selected his Cabinet with a careful regard to the opposite opinions of his supporters. The Treasury Department was given to Alexander Hamilton, of New York, a Federalist. . . . The War Department was given to General Henry Knox, of Massachusetts, also a Federalist. The State Department was given to Thomas Jefferson, of Virginia, an Anti-federalist. . . . Edmund Randolph, of Virginia, also an Anti-federalist, was appointed Attorney-General, and John Jay, of New York a Federalist, Chief Justice of the Supreme Court. Twelve Amendments were adopted by this Session of Congress, in order to meet the conscientious objections of many moderate Anti-federalists, and to take the place of a 'Bill of Rights.' Ten of these, having received the assent of the necessary number of States, became a part of the Constitution, and now stand the first ten of the Amendments. They were intended to guarantee freedom of religion, speech, person, and property. . . . January 9th [1790] Hamilton offered his famous Report on the Settlement of the Public Debt. It consisted of three recommendations, first,

that the foreign debt of the Confederacy should be assumed and paid in full; second, that the domestic debt of the Confederacy, which had fallen far below par [from twenty to twenty-five cents on the dollar] and had become a synonym for worthlessness, should also be paid at its par value; and third, that the debts incurred by the States during the Revolution, and still unpaid, should be assumed and paid in full by the Federal Government. Hamilton's First recommendation was adopted unanimously. The Second was opposed, even by Madison and many moderate Anti-federalists, on the ground that the domestic debt was held by speculators, who had bought it at a heavy discount, and would thus gain usurious interest on their investment. Hamilton's supporters argued that, if only for that reason, they should be paid in full, that holders of United States securities might learn not to sell them at a discount, and that the national credit might thus be strengthened for all time to come. After long debate the second recommendation was also adopted. Hamilton's Third recommendation involved a question of the powers of the Federal Government. It therefore for the first time united all the Anti-federalists in opposition to it. They feared that the rope of sand of the Confederacy was being carried to the opposite extreme; that the 'money power' would, by this measure, be permanently attached to the Federal Government; and that the States would be made of no importance. But even this recommendation was adopted, though only by a vote of 31 to 26 in the House. A few days later, however, the Anti-federalists received a reinforcement of seven newly arrived North Carolina members. The third resolution was at once reconsidered, and voted down by a majority of two. Hamilton secured the final adoption of the third resolution by a bargain which excited the deep indignation of the Anti-federalists. A National Capital was to be selected. The Federalists agreed to vote that it should be fixed upon the Potomac River [see WASHINGTON, D. C.: 1791-1800], after remaining ten years in Philadelphia, and two Anti-federalist members from the Potomac agreed in return to vote for the third resolution, which was then finally adopted. Hamilton's entire report was thus successful. Its immediate effects were to appreciate the credit of the United States, and to enrich the holders of the Continental debt. Its further effect was to make Hamilton so much disliked by Anti-federalists that, despite his acknowledged talents, his party never ventured to nominate him for any elective office."—A. Johnston, *History of American politics*, ch. 2.—"December 13, 1790, Hamilton sent to Congress his second report on the public credit and his report on a national bank. In the former he recommended an increase of duties and an excise on the manufacture of spirituous liquors. Both were designed to raise money to pay the additional expenses on account of the new interest charges. The excise encountered serious objection from those who were suspicious of consolidating influences. Hamilton urged that it would increase the power of government to collect a tax directly from the individual. The truth of this argument made it unpopular with those who were jealous of the power of the government. Although in the western parts of Pennsylvania, Virginia, Maryland, and North Carolina spirituous liquor was one of the chief products, and the excise was particularly unpopular, the measure passed into law on March 3, 1791. The prestige of its author was at its highest point, and his confident following had their way in

Congress. In the meantime they pressed for the bill to charter a national bank; but against this measure the whole Republican influence was thrown with great earnestness. There was no explicit warrant in the Constitution for such a bank, but Hamilton argued that the right to establish one was implied in specific clauses. His followers supported him closely and the bill became a law on February 25, 1791. Washington watched the debates with interest, and he was struck by the constitutional argument. Before he would sign the law he called on the members of the cabinet for their opinions on the disputed points. Jefferson and Randolph thought that it was unconstitutional, and Hamilton and Knox took the other side. The president was not clearly convinced but signed the charter on the principle that where there was equal division of opinion he would support the officer in whose department the business under discussion fell. . . . Three other features of Hamilton's financial system demand a consideration. (1) December 5, 1791, he sent to Congress his report on manufactures, in which he outlined the argument for protection. His broad reasoning rested on the necessity of a proper distribution of agricultural manufactures, and commerce in a great and prosperous society; but it was many years before this feature of his policy was accepted by Congress. (2) A sinking-fund was a part of his funding scheme. It was conceived according to the prevalent idea of English financiers; but experience was to prove its utility. Its history demonstrated the truth of the principle that 'nothing pays a debt except clear income.' (3) Hamilton recommended the establishment of a mint, and Congress adopted the suggestion. The only point which roused debate was a proposition of Hamilton's to place on the coins the head of the president in whose administration they were issued."—J. S. Bassett, *Federalist system, 1789-1801*, pp. 38-39, 41.—"Party Organization may be considered as fairly begun about the close [of the first Session of the Second Congress, in 1792]. . . . The various Anti-federalist factions, by union in resisting the Federalists, had learned to forget minor differences and had been welded into one party which only lacked a name. That of Anti-Federalist was no longer applicable, for its opposition to the Federal Union had entirely ceased. A name was supplied by Jefferson, the recognized leader of the party, after the French Revolution had fairly begun its course. That political convulsion had, for some time after 1789, the sympathy of both Federalists and Anti-federalists, for it seemed the direct outgrowth of the American Revolution. But as its leveling objects became more apparent, the Federalists grew cooler and the Anti-federalists warmer towards it. The latter took great pains, even by dress and manners, to show the keenness of their sympathy for the Republicans of France, and about this time adopted the name Democratic-Republican, which seemed sufficiently comprehensive for a full indication of their principles. This has always been the official party title. It is now abbreviated to Democratic, though the name Democrat was at first used by Federalists as one of contempt, and the party called itself Republican, a title which it could hardly claim with propriety, for its tendency has always been toward a democracy, as that of its opponents has been toward a strong republic. The name Republican, therefore, belongs most properly to its present possessors (1870). But it must be remembered that the party which will be called Republican until about 1828 was the party which

is now called Democratic."—A. Johnston, *History of American politics, ch. 2.*—Jefferson's bitterness of hostility to the Federalists was due to the belief that they aimed at the overthrow of the republic. His conviction as to these really treasonable purposes in the leaders of the party was often expressed, but never more distinctly than in a letter written in 1813 to Melish, an English traveler. At the same time, he set forth the principles and aims of his own party: "Among that section of our citizens called federalists," he wrote, "there are three shades of opinion. Distinguishing between the leaders and people who compose it, the leaders consider the English constitution as a model of perfection, some, with a correction of its vices, others, with all its corruptions and abuses. This last was Alexander Hamilton's opinion, which others, as well as myself, have often heard him declare, and that a correction of what are called its vices would render the English an impracticable government. This government they wished to have established here, and only accepted and held fast at first to the present constitution, as a stepping-stone to the final establishment of their favorite model. This party has therefore always clung to England as their prototype and great auxiliary in promoting and effecting this change. A weighty minority, however, of these leaders, considering the voluntary conversion of our government into a monarchy as too distant, if not desperate, wish to break off from our Union its eastern fragment, as being, in truth, the hot-bed of American monarchism with a view to a commencement of their favorite government, from whence the other States may gangrene by degrees, and the whole be thus brought finally to the desired point. For Massachusetts, the prime mover in this enterprise, is the last State in the Union to mean a final separation, as being of all the most dependent on the others. Not raising bread for the sustenance of her own inhabitants, not having a stick of timber for the construction of vessels, her principal occupation, nor an article to export in them, where would she be, excluded from the ports of the other States, and thrown into dependence on England, her direct, and natural, but now insidious rival? At the head of this minority is what is called the Essex Junto of Massachusetts. But the majority of these leaders do not aim at separation. In this they adhere to the known principle of General Hamilton, never, under any views, to break the Union. Anglomany, monarchy and separation, then, are the principles of the Essex federalists. Anglomany and monarchy, those of the Hamiltonians, and Anglomany alone, that of the portion among the people who call themselves federalists. These last are as good republicans as the brethren whom they oppose, and differ from them only in their devotion to England and hatred of France which they have imbibed from their leaders. The moment that these leaders should avowedly propose a separation of the Union, or the establishment of regal government, their popular adherents would quit them to a man, and join the republican standard; and the partisans of this change, even in Massachusetts, would thus find themselves an army of officers without a soldier. The party called republican is steadily for the support of the present constitution. They obtained at its commencement all the amendments to it they desired. These reconciled them to it perfectly, and if they have any ulterior view, it is only, perhaps, to popularize it further, by shortening the Senatorial term and devising a process for the responsibility of judges, more practicable

than that of impeachment. They esteem the people of England and France equally, and equally detest the governing powers of both. This I verily believe, after an intimacy of forty years with the public councils and characters, is a true statement of the grounds on which they are at present divided, and that it is not merely an ambition for power. An honest man can feel no pleasure in the exercise of power over his fellow citizens. And considering as the only offices of power those conferred by the people directly, that is to say, the executive and legislative functions of the General and State governments, the common refusal of these, and multiplied resignations, are proofs sufficient that power is not alluring to pure minds, and is not, with them, the primary principle of contest. This is my belief of it; it is that on which I have acted; and had it been a mere contest who should be permitted to administer the government according to its genuine republican principles there has never been a moment of my life in which I should have relinquished for it the enjoyments of my family, my farm, my friends and books. You expected to discover the difference of our party principles in General Washington's valedictory, and my inaugural address. Not at all. General Washington did not harbor one principle of federalism. He was neither an Angloman, a monarchist, nor a separatist. He sincerely wished the people to have as much self-government as they were competent to exercise themselves. The only point on which he and I ever differed in opinion, was, that I had more confidence than he had in the natural integrity and discretion of the people, and in the safety and extent to which they might trust themselves with a control over their government. He has asseverated to me a thousand times his determination that the existing government should have a fair trial, and that in support of it he would spend the last drop of his blood. He did this the more repeatedly, because he knew General Hamilton's political bias, and my apprehensions from it."—Thomas Jefferson, *Letter to Mr. Melish, Jan. 13, 1813* (H. A. Washington, ed., *Writings, v. 6*).—The view taken at the present day of the Federalism and the Federalists of the first three decades of the Union, among those who see more danger in the centrifugal than in the centripetal forces in government, are effectively stated in the following: "The popular notion in regard to Federalism is that to which the name naturally gives rise. By Federalists are commonly understood those men who advocated a union of the States and an efficient Federal government. This conception is true, but is at the same time so limited that it may fairly be called superficial. The name arose from its first object which the friends of the Constitution strove to achieve; but this object, the more perfect union, and even the Constitution itself, were but means to ends of vastly more importance. The ends which the Federalists sought formed the great principles on which the party was founded, and it can be justly said that no nobler or better ends were ever striven for by any political party or by any statesmen. The first and paramount object of the Federalists was to build up a nation and to create a national sentiment. For this they sought a more perfect union. Their next object was to give the nation they had called into existence not only a government, but a strong government. To do this they had not only to devise a model, to draw a constitution, to organize a legislature, executive, and judiciary, but they had to equip the government thus formed with all those adjuncts without which no government can

long exist under the conditions of modern civilization. The Federalists had to provide for the debt, devise a financial and foreign policy, organize an army, fortify the ports, found a navy, impose and collect taxes, and put in operation an extensive revenue system. We of the English race—whose creed is that governments and great political systems grow and develop slowly are the results of climate, soil, race, tradition, and the exigencies of time and place, who wholly disavow the theory that perfect governments spring in a night from the heated brains of Frenchmen or Spaniards—can best appreciate the task with which our ancestors grappled. . . . Upon a people lately convulsed by civil war, upon a people who had lost their old political habits and traditions without finding new ones in their stead, it was necessary to impose a government, and to create a national sentiment. This the Federalists did, and they need no other

himself at the head of the large though demoralized opposition to the administration he had sworn to support. Filled with the wild democratic theories which his susceptible nature had readily imbibed in France, Jefferson soon infused them into the minds of most of his followers. Instead of a vague dislike to any and all government, he substituted a sharp and factious opposition to each and every measure proposed by the friends of the Constitution.”—H. C. Lodge, *Life and letters of George Cabot*, ch. 11.

1790.—First census.—In accordance with the provisions contained in Article 1 of the constitution, the first decennial census was taken in 1790. “When the first census was taken, . . . the continuous settled area was bounded by a line which ran near the coast of Maine, and included New England except a portion of Vermont and New Hampshire, New York along the Hudson and up the Mohawk about Schenectady, eastern and southern Pennsylvania, Virginia well across the Shenandoah Valley, and the Carolinas and eastern Georgia. Beyond this region of continuous settlement were the small settled areas of Kentucky and Tennessee, and the Ohio, with the mountains intervening between them and the Atlantic area.”—F. J. Turner, *Frontier in American history*, pp. 5-6.—See also CENSUS: United States.—The result showed a total population of 3,929,827, classed and distributed as follows:

THOMAS JEFFERSON

eulogy. With no undue national pride, we can justly say that the adoption and support of the Constitution offer an example of the political genius of the Anglo-Saxon race to which history cannot furnish a parallel. The political party to whose exertions these great results were due was the Federal party. They were the party of order, of good government, and of conservatism. Against them was ranged a majority of their fellow-citizens. But this majority was wild, anarchical, disunited. The only common ground on which they could meet was that of simple opposition. The only name they had was anti-Federalists. They had neither leaders, discipline, objects, nor even a party cry. Before the definite aims and concentrated ability of the Federalists, they fled in helpless disorder, like an unarmed mob before advancing soldiers. But, though dispersed, the anti-Federalists were still in a numerical majority. They needed a leader, organization, and opportunity, and they soon found all three. Thomas Jefferson arrived in New York not only to enter into Washington's cabinet, and lend the aid of his great talents to the success of the new scheme, but soon also to put

1790.—Economic situation of the country.—“The population was still largely rural; there were but six cities of 7500 or more inhabitants, and the largest of these, New York, had only 33,000 people. Work and industry were the rule of life throughout

the country. Agriculture busied nine families out of ten; land was cheap and bought on easy credit, for there were unlimited unsettled tracts stretching out to the West, partly in State lands, partly in the national domain. The value of property employed in agriculture was far greater than that devoted to manufactures or commerce. Excepting the slave plantations of the South, the farm-holdings were small, and the cultivation of each was carried on by members of the family with little hired labor. This developed throughout the North a general equality of political and social interests, if not of economic welfare. Little change had come about in agricultural products since the colonial period. In the South, particularly in Georgia and the Carolinas, rice of a superior quality was raised in large quantities and formed an important export; the same States also produced indigo for foreign shipment as well as for domestic use. Tobacco was a staple produce throughout the South from the borders of Pennsylvania, and contributed a generous share of the exports. The wheat country extended from Virginia to the western end of New England, and American flour had an established reputation in the West Indies. Hemp and flax were raised in large quantities and formed the basis of important manufactures. Sheep for their wool, cattle, and dairy products also contributed to the prosperity of the farmer. The export of salt provisions was increasing. One of the most important economic resources was still the forests; the naval supplies, especially the tar, pitch, and turpentine of North Carolina, showed no exhaustion; and lumber and timber products were shipped from almost all the States. The clearing of the forests also yielded a by-product of pot and pearl ashes, the sale of which frequently tided the pioneer over the earlier months of privation. [See also AGRICULTURE: Modern: United States: 1776-1833.] Although agriculture was everywhere the principal occupation, the rapid expansion of settlement caused an increasing demand for mechanics to build the houses, barns, and workshops; and progress was making in some lines of manufactures. The growth of manufactures was especially marked after the establishment of peace; it is estimated that in 1787 the importation of manufactures into Massachusetts was only one-half what it was twenty years before. As soon as the restrictions of the colonial system were removed, the genius of the American people was displayed in every department of mechanical activity then known,—witness the concise description given by Hamilton in his memorable Report on Manufactures in 1791, as well as the equally authoritative papers of Tench Coxe, in which the capacities of the new republic are defended from the aspersions of English critics, who looked for an easy industrial subjugation, even if political supremacy were lost. Hamilton's investigations showed that there were seventeen distinct branches of manufactures which were carried on as regular trades and which had attained a considerable degree of maturity. Naturally these industries were closely related to raw materials which the country then afforded. As examples may be mentioned the following: manufactures of leather, trunks, gloves, parchment, and glue; tanneries were numerous, and foreign competition was hardly to be feared. From iron came bar and sheet iron, rods and nails, stoves, household utensils, and implements of husbandry, some edged tools and hollow ware. There was an abundant supply of charcoal, and iron ore of almost every quality was abundant; one-half of the steel consumed in the United States was home-made. Of copper there were manufactures of wire, utensils

for distillers, sugar refiners, and brewers, and articles for household use. Timber was the raw material of ships, an industry which had been carried to a high point of perfection; there were also manufactures of cabinet and coopers' wares. . . . The rum distilleries of Massachusetts were dependent for their raw material upon the molasses of the West Indies, but in the Middle States stills were common for the distillation of the home grains and fruits; the largest part of the malt liquors consumed was the product of domestic breweries. From flax and hemp were produced cables, sail-cloth, cordage, and twine, and though the manufactures were not large, there was a promising beginning. Manufactures of paper were well advanced, and entirely 'adequate to national supply.' Different manufactories of glass were on foot, and among the extensive and prosperous domestic manufactures were those of refined sugars and chocolates. In addition there were manufactures of bricks and pottery, hats, oils of animals and seeds, tin-ware, carriages, snuff, starch, painters' colors, and gunpowder. The variety of these manufactures was no more striking than the resourcefulness in household manufacture; industry as a whole was in the handicraft stage; cloths of wool cotton, and flax were thus produced in the greatest variety; and in some districts from two-thirds to four-fifths of all the clothing of the inhabitants was made in the home. Woollen manufactures were only beginning to take a place as a factory industry, while the establishment of cotton mills was not much more than a prophecy. The means of internal communication were undeveloped. The Hudson River was navigable 180 miles from the ocean; the Delaware 160; and the Potomac 300 miles above the falls near Georgetown. A few short and narrow canals had been constructed. Roads were everywhere poor and transportation was slow. In 1790 there were but 75 post-offices; mails were infrequent, as, for example, but three per week between New York and Boston, requiring in the best of weather five days on the road. These impediments to travel and intercourse constituted an important element of friction which needs to be thoroughly appreciated as a partial explanation of the difficulty of imposing internal taxes which would be acceptable to the whole country. The foreign trade can be described more definitely. The Americans had long enjoyed an economic advantage in the building of ships, and the enterprise of those engaged in the fisheries had developed a skilful and daring race of sailors. The country exported its surplus products of agriculture and forestry, and with the proceeds bought freely of luxuries and manufactures which were not available at home. The value of the exports at this time was about \$20,000,000, and that of the imports probably about the same. Trade returns are, however, too incomplete to present a satisfactory analysis of foreign commerce, particularly of imports. As in the colonial period, exports to the West Indies provided funds with which to pay for imports from Europe. A general survey of economic conditions must also take into account the growth of sectional interests. Slavery in the South was developing an economy of its own; New York and the New England cities were strongly inclined to commercial undertakings; Pennsylvania was awakening to the possibility of manufactures. These several interests were to furnish storm-centres in the debates and govern the discussion of economic questions."—D. R. Dewey, *Financial history of the United States*, pp. 76-79.

1791.—Adoption of first ten amendments to Federal constitution.—The first ten amendments to the constitution (see U. S. A., CONSTITUTION OF), embodying a declaration of rights which was thought to be necessary by many who had consented to the adoption of the constitution, but only with the understanding that such amendments should be added, were proposed to the legislatures of the several States by the First Congress, on September 25, 1789. At different dates between Nov. 20, 1789 and Dec. 15, 1791, they were ratified by eleven of the fourteen states. "There is no evidence on the journals of Congress that the legislatures of Connecticut, Georgia, and Massachusetts ratified them."—*Constitution, rules and manual of the United States Senate*, 1885, p. 61.

1792.—Establishment of United States mint.—Postal service established. See MONEY AND BANKING: Modern: 1782-1792; POSTAL SYSTEMS: 1600-1800.

1792.—Exploration of mouth of Columbia river by Robert Gray, basis of claim to that region. See OREGON: Early exploration.

1792.—Second presidential election.—George Washington was re-elected with unanimity, receiving 132 votes of the Electoral College, John Adams, vice president, receiving 77 votes, with 50 cast for George Clinton, 4 for Jefferson and 1 for Burr.

1793.—First fugitive slave law.—For some time after the adoption of the Federal constitution, its provision relating to the rendition of persons "held to service or labor in one State, under the laws thereof, escaping into another" remained without legislation to execute it; "and it is a striking fact that the call for legislation came not from the South, but from a free State; and that it was provoked, not by fugitive slaves, but by kidnapers. . . . A free negro named John was seized at Washington, Pennsylvania, in 1791, and taken to Virginia. The Governor of Pennsylvania, at the instigation of the Society for the Abolition of Slavery, asked the return of the three kidnapers;

but the Governor of Virginia, replied that since there was no national law touching such a case, he could not carry out the request. On the matter being brought to the notice of Congress by the Governor of Pennsylvania," a bill was passed which "became law by the signature of the President, February 12, 1793. . . . The act provided at the same time for the recovery of fugitives from justice and from labor; but the alleged criminal was to have a protection through the requirement of a requisition, a protection denied to the man on trial for his liberty only. The act was applicable to fugitive apprentices as well as to slaves, a provision of some importance at the time. In the Northwest Territory there were so-called negro apprentices, who were virtually slaves, and to whom the law applied, since it was in terms extended to all the Territories. Proceedings began with the forcible seizure of the alleged fugitive. The act, it will be observed, does not admit a trial by jury. It allowed the owner of the slave, his agent or attorney, to seize the fugitive and take him before any judge of a United States Circuit or District Court, or any local magistrate. The only requirements for the conviction of the slave was the testimony of his master, or the affidavit of some magistrate in the State from which he came, certifying that such a person had escaped. Hindering arrest or harboring a slave was punishable by a fine of five hundred dollars. The law thus established a system allowing the greatest harshness to the slave and every favor to the master. Even at that time, when persons might still be born slaves in New York and New Jersey, and gradual emancipation had not yet taken full effect in Rhode Island and Connecticut, it was repellant to the popular sense of justice; there were two cases of resistance to the principle of the act before the close of 1793. Until 1850 no further law upon this subject was passed, but as the provisions of 1793 were found ineffectual, many attempts at amendments were made."—M. G. McDougall, *Fugitive slaves, 1619-1865 (Fay House Monographs, no. 3, pp. 17-19)*.—"The fugitive-slave clause in the Constitution is of course obligatory, but there is a wide distinction between the fugitive-slave clause and the fugitive-slave law. The Constitution gives no power to Congress to legislate on the subject, but imposes on the States the obligation of rendition. Chief Justice Horblower, of New York, and Chancellor Walworth, of New York, long since pronounced the fugitive law of '93 unconstitutional on this very ground."—William Jay, *Letter to Josiah Quincy* (B. Tuckerman, ed., *William Jay and the constitutional movement for the abolition of slavery*).

1793.—Popular sympathy with French Revolution.—Washington's proclamation of neutrality.—Insolent conduct of French minister, Genêt.—"The French Revolution, as was natural from the all-important services rendered by France to the United States in their own revolutionary struggle, enlisted the warm sympathy of the American people. . . . As the United States were first introduced to the family of nations by the alliance with France of 1778, the very important question arose, on the breaking out of the war between France and England, how far they were bound to take part in the contest. The second article of the treaty of alliance seemed to limit its operation to the then existing war between the United States and Great Britain; but by the eleventh article the two contracting powers agreed to 'guarantee mutually from the present time and forever, against all

other powers,' the territories of which the allies might be in possession respectively at the moment the war between France and Great Britain should break out, which was anticipated as the necessary consequence of the alliance. Not only were the general sympathies of America strongly with France, but the course pursued by Great Britain toward the United States, since the peace of 1783, was productive of extreme irritation, especially her refusal to give up the western posts, which . . . had the effect of involving the northwestern frontier in a prolonged and disastrous Indian war. These causes, together with the recent recollections of the revolutionary struggle, disposed the popular mind to make common cause with France, in what was regarded as the war of a people struggling for freedom against the combined despots of Europe. Washington, however, from the first, determined to maintain the neutrality of the country"; and, with the unanimous advice of his cabinet, he issued (April 22, 1793) a proclamation of neutrality. "This proclamation, though draughted by Mr. Jefferson and unanimously adopted by the Cabinet, was violently assailed by the organs of the party which followed his lead. [See also NEUTRALITY: Development.] . . . The growing excitement of the popular mind was fanned to a flame by the arrival at Charleston, South Carolina [April 9], of 'Citizen' Genet, who was sent as the minister of the French Republic to the United States. Without repairing to the seat of government, or being accredited in any way, in his official capacity, he began to fit out privateers in Charleston, to cruise against the commerce of England. Although the utmost gentleness and patience were observed by the executive of the United States in checking this violation of their neutrality, Genet assumed from the first a tone of defiance, and threatened before long to appeal from the government to the people. These insolent demonstrations were of course lost upon Washington's firmness and moral courage. They distressed, but did not in the slightest degree intimidate him; and their effect on the popular mind was to some extent neutralized by the facts, that the chief measures to maintain the neutrality of the country had been unanimously advised by the Cabinet, and that the duty of rebuking his intemperate course had devolved upon the secretary of state [Jefferson], the recognized head of the party to which Genet looked for sympathy."—E. Everett, *Life of Washington*, ch. 8.—"As events rapidly transpired a change of sentiment was wrought in the United States. The bloody excesses of the revolutionists, the execution of the king, who was held in high esteem as our best friend during the war of independence, and the disregard of our commercial neutrality, led to a feeling that the French government of the day had no claim on us as an ally. It was held that the Revolution had destroyed the France with which the treaty of alliance was made, and that under the circumstances there was no obligation resting on us to take part in her aggressive wars. The existing government, on declaring war against Austria, had claimed the right, under the circumstances, of determining for itself what treaties of the old monarchy it would accept and what reject. Excitement ran high in the United States, and the country was divided between the partisans of France and those who believed we should take no part in the conflict."—J. W. Foster, *Century of American diplomacy*, p. 152.—A demand for "Genet's recall was determined on during the first days of August. There

was some discussion over the manner of requesting the recall, but the terms were made gentle by Jefferson to the disgust of that Secretary of the Treasury and the Secretary of War [Hamilton and Knox], who desired direct methods and stronger language. As finally toned up and agreed upon by the President and cabinet, the document was sufficiently vigorous to annoy Genet, and led to bitter reproaches addressed to his friend in the State Department. . . . The letter asking Genet's recall, as desired by Washington, went in due time, and in the following February came a successor. Genet, however, did not go back to his native land, for he preferred to remain here and save his head. . . . He spent the rest of his days in America, married, harmless, and quite obscure. His noise and fireworks were soon over, and one wonders now how he could ever have made as much flare and explosion as he did."—H. C. Lodge, *George Washington*, v. 2, pp. 155-156.

1793.—Whitney's cotton-gin and the series of inventions which it made complete.—Their political effect.—Strengthening of slave power, and strengthening of unionism.—"Some English artisans, who, about the middle of the last century, were obtaining a scanty living by spinning, weaving and other such occupations, turned their inventive talent to the improvement of their art. Paul and Wyatt introduced the operation of spinning by rollers; Highs, or Hargreaves, invented the jenny, by which a great many threads could be spun as easily as one. Paul devised the rotating carding-engine; Crompton the mule; Arkwright the water-frame, which produced any number of threads of any degree of fineness and hardness. These ingenious machines constituted a very great improvement on the spindle and distaff of ancient times, and on the spinning-wheel, originally brought from Asia, or perhaps reinvented in Europe. At length one spinner was able to accomplish as much work as one hundred could have formerly done. While the art of producing threads was undergoing this singular improvement, Cartwright, a clergyman, invented, in 1785, the power-loom intended to supersede the operation of weaving by hand, and to make the production of textile fabrics altogether the result of machinery. After some modifications, that loom successfully accomplished the object for which it was devised. [See also INDUSTRIAL REVOLUTION: England: Inventions in textile industry.] As these inventions succeeded, they necessarily led to a demand for motive power. In the first little cotton factory, the germ of that embodiment of modern industry, the cotton-mill, a water-wheel was employed to give movement to the machinery. The establishment was, therefore, necessarily placed near a stream, where a sufficient fall could be obtained. The invention of the steam-engine by Watt, which was the consequence of the new and correct views of the nature of vapors that had been established by Dr. Black, supplied, in due time, the required motive power, and by degrees the water-wheel went almost out of use. Textile manufacture needed now but one thing more to become of signal importance—it needed a more abundant supply of raw material. . . . Cotton, the fibre chiefly concerned in these improvements, was obtained in limited quantities from various coun-

tries; but, at the time of the adoption of the Constitution, not a single pound was exported from the United States. What was grown here was for domestic consumption. Every good housewife had her spinning-wheel, every plantation its handloom. The difficulty of supplying cotton fibre in quantity sufficient to meet the demands of the new machinery was due to the imperfect means in use for separating the cotton from its seeds—a tedious operation, for the picking was done by hand. Eli Whitney, a native of Massachusetts, by his invention of the cotton-gin in 1793, removed that difficulty. The fibre could be separated from the seeds with rapidity and at a trifling cost. There was nothing now to prevent an extraordinary development in the English manufactures. A very few years showed what the result would be. In 1790 no cotton was exported from the United States. Whitney's gin was introduced in 1793. [See also INDUSTRIAL REVOLUTION: United States.] The next year about 1½ million of pounds were exported; in 1795, about 5¼ millions; in 1860, the quantity had reached 2,000 millions of pounds. The political effect of this mechanical invention, which thus proved to be the completion of all the previous English inventions, being absolutely necessary to give them efficacy, was at once seen in its accomplishing a great increase and a redistribution of population in England. . . . In the United States the effects were still more important. Cotton could be grown through all the Southern Atlantic and the Gulf States. It was more profitable than any other crop—but it was raised by slaves. Whatever might have been the general expectation respecting the impending extinction of slavery, it was evident that at the commencement of this century the conditions had altogether changed. A powerful interest had come into unforeseen existence both in Europe and America which depended on perpetuating that mode of labor. Moreover, before long it was apparent that, partly because of the adaptation of their climate to the growth of the plant, partly because of the excellence of the product, and partly owing to the increasing facilities for interior transportation, the cotton-growing states of America would have a monopoly in the supply of this staple. But, though mechanical invention had reinvigorated the slave power by bestowing on it the cotton-gin, it had likewise strengthened unionism by another inestimable gift—the steam-boat. At the very time that the African slave-trade was prohibited, Fulton was making his successful experiment of the navigation of the Hudson River by steam. This improvement in inland navigation rendered available, in a manner never before contemplated, the river and lake system of the continent; it gave an instantaneous value to the policy of Jefferson, by bringing into effectual use the Mississippi and its tributaries; it crowded with population the shores of the lakes; it threw the whole continent open to commerce, it strengthened the central power at Washington by diminishing space, and while it extended geographically the domain of the republic, it condensed it politically. It bound all parts of the Union more firmly together. . . . In the Constitution it had been agreed that three-fifths of the slaves should be accounted as federal numbers in the apportionment of federal representation. A political advantage was thus given to slave labor. This closed the eyes of the South to all other means of solving its industrial difficulties. . . . To the cotton-planter two courses were open. He might increase his manual force, or he might resort to machinery. . . .

It required no deep political penetration for him to perceive that the introduction of machinery must in the end result in the emancipation of the slave. Machinery and slavery are incompatible—the slave is displaced by the machine. In the Southern States political reasons thus discouraged the introduction of machinery. Under the Constitution an increased negro force had a political value, machinery had none. The cotton interest was therefore persuaded by those who were in a position to guide its movements, that its prosperity could be secured only through increased manual labor.” —J. W. Draper, *History of the American Civil War*, v. 1, sect. 3, ch. 16.—See also below: 1818-1821.

1793-1795.—Indian affairs.—Threatening relations with Great Britain.—Jay Treaty.—“The Indian affairs were in a most alarming state. All through the summer stories and rumors of midnight massacres, and cold-blooded murders of emigrants along the Ohio, had been crowding the columns of the Gazettes and Journals. At first they were supposed to be merely accounts of such barbarities as the Indians had always perpetrated on the settlers of a new country from the days of John Smith and Miles Standish down. But ere Christmas came it was well known that the settlers in the western territory were involved in a general Indian war. To form a just conception of the cause of the long series of Indian wars which now began to disturb the peace and prosperity of the West, we must recall briefly the claims of the Indians and of the Government to the land in dispute. . . . When, therefore, the independence of the States was acknowledged, Great Britain surrendered what she had received from France and what she had taken from the Iroquois. But in the region to the north of the Ohio, save the title to a few acres about the forts she continued to hold, she transferred nothing; and there lived the Miamis, the Delawares, the Shawanese, the Ottawas, the Wyandots. In theory, Congress affected to hold that the claim of these Indians to the land had been forfeited by the part they took in the war. In practice, Congress treated them as sovereign nations, made treaties, and sent out commissioners to smoke the calumet and present the wampum and the beads. Indeed, between 1783 and 1790, no less than five treaties were made. The first, in 1784, at Fort Stanwix, secured from the Iroquois all claim to the lands which now make up the States of Ohio, Indiana, and Illinois. The second, at Fort McIntosh, was with the Wyandots, the Delawares, and the Chippewas. The third was with the Shawanese, at Fort Finney, in 1786. The fourth and fifth, at Fort Harmar, in 1789, confirmed the others. But with the Kickapoos, the Pottawattamies, the Miamis, the Weas, and the Eel river tribes, no treaties were made. Indeed, they declared they would make none. The Ohio should be the southern boundary between the Long Knives and the red men, and over that river no settler should ever come and live.” —J. B. McMaster, *History of the people of the United States*, v. 1, pp. 593-594, 597.—“The boundary agreed upon in the treaty of peace with England gave to the United States all that part of the northwest which lay south of a line drawn through the Great Lakes and through a chain of watercourses to the Lake of the Woods, and eastward of the Mississippi, together with the right to navigate that great river. . . . Canadian interests . . . were against the formal surrender of this region, and a way was found to impress

their ideals rather strongly on the government in London. This region was chiefly unsettled in 1789, but it was held in a military sense by the posts of Michilimackinac, Detroit, Fort Erie, Niagara, Oswego, Oswegatchie (on the St. Lawrence), and Point-au-Fer and Dutchman's Point (on Lake Champlain). England still refused to surrender these posts, hoping, no doubt, that the chaotic government under the Confederation would never be able to demand them. In fact, there was a good pretence for holding them [on the ground that the terms of the treaty had not been kept in so far as the debts owed to British subjects at the outbreak of the Revolution had not been paid, and that the severe laws against the Loyalists had not been repealed. The English claimed that they had agreed to the treaty on the assurance that recommendations made on the subject to the several states would have a compelling moral force.] . . . The Americans replied that the English must be supposed to know the powers of the Confederation, and that they could not have deluded themselves as to the exact value of the promise. Another cause of disagreement was the provision that the British would carry away no slaves from the places they then held; but it was alleged that in contravention of this they had taken away some thousands of negroes from New York and the southern ports, and no compensation had been paid. The Americans alleged that the failure to make restitution justified the states in disregarding the recommendations of Congress as to the Loyalists. Thus it happened that when the national government began we had a dispute with England over the execution of the treaty, each side charging the other with having first failed to keep its obligations. The truth of the matter was that each side had been wrong, and that each desired to put the blame on the other. . . . The British gave countenance to them [the Indians] and hinted rather broadly that it would be right to create a neutral zone running from Lake Ontario through the upper northwest to the Mississippi, to be surrendered to the savages in sovereignty and safeguarded as a buffer state. The manifest result of such a plan would be to put this buffer state into the hands of the British. Anthony Wayne was next appointed to succeed to the command on the Ohio. . . . He built Fort Greenville, about seventy-five miles north of Cincinnati, and took his forces into winter quarters there. The long and hard drill he was giving them was transforming them into veterans. In the mean time, relations with the British were dangerously near the point of hostilities. The officials on the Canadian frontier expected that Wayne would surely attack the retained posts. Detroit seemed to them to be his real objective. To protect it they sent a detachment to the rapids of the Maumee, sixty miles to the southward, where a fort was built and occupied. This action was entirely a violation of the treaty of 1783, for the spot was in no sense British territory. The excuse that it was a part of the defences of Detroit had but a semblance of truth. In America the effect was decided, and Washington, who was always for peace, ordered Wayne to reduce it if it stood in his way. . . . A still more aggravating circumstance was a speech which Dorchester [Sir Guy Carleton, earl of Dorchester], the governor of Canada, made in February, 1794, to a delegation of the hostile Indians. He told them that the United States had not kept their treaty, that the settlements in the disputed Northwest Territory were unauthorized, and that it was probable

that the British and the Americans would be at war within a year, when the Indians might recover their lands with the improvements. This speech was widely circulated among the savages, where it made a deep impression. In Philadelphia it also caused much excitement. The partisans of England said that it was too absurd to be true, and the British minister tried to parry the effects of it by saying that if it had been uttered it was only a private speech; but the administration responded that the effects on the Indians were the same whether it was private or official. The English government was not so warlike as that of Canada, and rebuked Dorchester in private for his ill-advised words. In June, 1794, Wayne was joined in his camp at Greenville by sixteen hundred mounted militia from Kentucky, and soon afterwards he began his advance. At the point where the Auglaise joins the Maumee he erected works which he called Fort Defiance. Proceeding down the Maumee, he came, on August 18, upon a band of thirteen hundred Indians assembled within two miles of the new British fort. They attacked him from a body of fallen timber which was overgrown with grass. His troops behaved excellently, charging with spirit, and the enemy retreated. The Indians seemed to have expected to be received into the forts, but its gates were not opened to them. They thereupon disappeared into the forest, and thus ended the battle of Fallen Timber. Wayne remained in the vicinity destroying crops, huts, and other Indian property. He did not spare the effects of the traders, but he left the fort untouched. To assail it would have meant the outbreak of war with England. He soon began to receive advances from the Indians. To settle matters with them, he appointed a great council for making a permanent peace in the summer of 1795. At that meeting he was able to tell them that a treaty was about to be signed by which the posts were to be surrendered, and this made his negotiation easier. The treaty of Greenville, agreed to on August 4, established a boundary between the Indians and whites, beginning on the Ohio at a point opposite the mouth of the Kentucky River, running thence to Fort Recovery, thence eastward to the Muskingum, and following that river and the Cuyahoga to Lake Erie. The region south and east of it, together with sixteen small reservations on the other side of it, was ceded to the United States. With this treaty and with the surrender of the posts in 1796 the northwest became peaceful and secure."—J. S. Bassett, *Federalist system, 1789-1801*, pp. 56-58, 66-68.—The disputes with England were not yet settled, however. "The daily increasing 'love-frenzy for France,' and the intemperate language of the Democratic press, naturally emphasized in England that reaction against America which set in with the treaty of peace. On the other hand, the retention of the frontier posts in violation of that treaty was a thorn in the side of the young Republic. In the course of the war [with France] England had adopted, by successive Orders in Council, a policy ruinous to the commerce of neutral nations, especially of the United States. In the admiralty courts of the various British West India islands hundreds of ships from New England were seized and condemned, for carrying French produce or bearing cargoes of provisions chartered to French ports. The New England fishermen and shipowners were vociferous for war, and the Democratic clubs denounced every British insult and celebrated every French victory. On March 26, 1794, an embargo

against British ships was proclaimed for thirty days, and then extended for thirty days longer. The day after the embargo was laid, Dayton, of New Jersey, moved in Congress to sequester all moneys due to British creditors, and apply it towards indemnifying shipowners for losses incurred through the Orders in Council; and on April 21st the Republicans moved a resolution to suspend all commercial intercourse with Great Britain till the western posts should be given up, and indemnity be paid for injuries to American commerce in violation of the rights of neutrals. The passage of such an act meant war; and for war the United States was never more unprepared. . . . In this crisis Washington decided to send to England a special envoy. Hamilton was his first choice, but Hamilton had excited bitter enmities." On Hamilton's recommendation, John Jay, the chief justice, was chosen for the difficult mission, and he sailed for England in May, 1794, landing at Falmouth on June 8. Within the succeeding five months he accomplished the negotiation of a treaty, which was signed on November 19. "The main points that Jay had been instructed to gain were compensation for negroes, surrender of the posts, and compensation for spoiliations; in addition, a commercial treaty was desired. When Secretary for Foreign Affairs, Jay had argued that the negroes, some 3,000 in number, who, at the time of the evacuation, were within the British lines, relying on proclamations that offered freedom, and who followed the troops to England, came within that clause of the treaty of peace which provided that the army should be withdrawn without 'carrying away any negroes or other property.' Lord Grenville, however, insisted upon refusing any compensation. Once within the British lines, he said, slaves were free for good and all. . . . From any point of view the matter was too insignificant to wreck the treaty upon it, and Jay waived the claim. As to the western posts [Oswego, Niagara, Detroit, Mackinaw, etc.], it was agreed that they should be surrendered by June 12, 1796. But compensation for the detention was denied on the ground that it was due to the breach of the treaty by the United States in permitting the States to prevent the recovery of British debts." For the determination and payment of such debts, it was now provided that a board of five commissioners should sit at Philadelphia; while another similar board at London should award compensation for irregular and illegal captures or condemnations made during the war between Great Britain and France. "Under this clause American merchants received \$10,345,000. [According to Fish, nearly \$6,000,000.] . . . The disputed questions of boundaries, arising from the construction of the treaty of peace, were referred to joint commissioners: properly enough, as the confusion was due to ignorance of the geography of the Northwest. British and American citizens holding lands at the time respectively in the United States and in any of the possessions of Great Britain were secured in their rights; a clause much objected to in America, but which was obviously just. A still more important provision followed, a novelty in international diplomacy, and a distinct advance in civilization: that war between the two countries should never be made the pretext for confiscation of debts or annulment of contracts between individuals. In the War of 1812 the United States happened for the moment to be the creditor nation, and the millions which this provision saved to her citizens it would be difficult to estimate. . . . To unpreju-

diced eyes, after the lapse of a hundred years, considering the mutual exasperation of the two peoples, the pride of England in her successes in the war with France, the weakness and division of the United States, the treaty seems a very fair one. Certainly one far less favorable to America would have been infinitely preferable to a war, and would probably in the course of time have been accepted as being so. The commercial advantages were not very considerable, but they at least served as 'an entering wedge,' to quote Jay's expression, and they were 'pro tanto' a clear gain to America."—G. Pellew, *John Jay*, ch. 11.—"The majority in the House was unfavorable to the treaty and held to the dangerous doctrine that as it could not be carried into effect without adequate appropriations by the House, which of course were within its control; and that body, therefore, had the right to judge of the expediency of the treaty, and thus practically to defeat it at their pleasure. The issue was not so much the right of the House to call for the papers in the case, as its right to refuse the necessary appropriations for carrying a treaty into effect. . . . The strictest of strict constructionists could find no word in the Constitution which empowered the House of Representatives thus to participate in the making of a treaty, and, therefore, the Republicans were forced to shift their ground to one of expediency; arguing that because of the exclusive authority given to the House to originate money bills, to regulate trade, and to lay and collect taxes, and as by the Constitution a treaty was a part of the supreme law of the land, it was expedient that the House should participate in the treaty-making power; otherwise a treaty, in which the House had taken no part, might be made which would regulate commerce. . . . The Federalists, for the time becoming strict constructionists, asserted that it was the plain intention of the Constitution to exclude the House from participating in the treaty-making power. The great speech on the subject was by Fisher Ames, whose argument would now be called economic, for he said much concerning the commercial advantages of ratifying the treaty, but very little of the constitutional functions of the House. He reached so high a plane of eloquence that the Republicans somewhat tumultuously adjourned the House lest a vote be taken, but even adjournment could not break the spell of his speech, for on the following day, the thirtieth of April, the House, though only by a majority of three, and, though a day or two before, a very large majority had vociferously opposed the appropriation, voted to carry the treaty into effect and thus settled the question of the functions of the House in the matter of treaties."—F. N. Thorpe, *Constitutional history of the United States, 1788-1861*, v. 2, pp. 340-342.—"The treaty was not published till July 2d. . . . Even before its contents were known, letters, signed 'Franklin,' appeared abusing the treaty; and in Philadelphia an effigy of Jay was placed in the pillory, and finally taken down, guillotined, the clothes fired, and the body blown up. It was clear, then, that it was not this particular treaty, but any treaty at all with Great Britain, that excited the wrath of the Republicans. On July 4th toasts insulting Jay or making odious puns on his name, were the fashion. . . . On June 24th the treaty was ratified by the Senate, with the exception of the article about the West India trade. On August 15th it was signed, with the same exception by Washington."—G. Pellew, *John Jay*, ch. 11.—"The reception given to the treaty cannot be fully explained by the existing relations between the

United States and England. It was only in consequence of its Francomania that the opposition assumed the character of blind rage."—H. von Holst, *Constitutional and political history of the United States*, v. 1, p. 124.—See also ARBITRATION, INTERNATIONAL: Modern: 1794.

1793-1800.—Genesis of the United States Navy.—"In consequence of the depredations of the Algerine corsairs, and their apprehended renewal after the conclusion of the Portuguese treaty, Congress in 1793, after a bitter contest, had authorized the building of six frigates, for the express purpose of protecting our ships in the Mediterranean. As a concession to the opponents of the measure, whose utterances were characterized by the extreme partisan violence shown in the politics of that period, it was provided that if the treaty with Algiers, then in process of negotiation, should be concluded, work on the ships should be stopped. Under this act were built the 'Constitution,' 'United States,' 'President,' and 'Congress,' of forty-four guns each, and the 'Constellation' and 'Chesapeake,' of thirty-eight guns. As the sequel showed, no finer ships of their type were ever built in the world. The treaty with Algiers was concluded in 1795, but three of the frigates—the 'Constitution,' 'United States,' and 'Constellation'—were finished notwithstanding, while the remaining three were built and commissioned three years later. About the same time the Navy Department was established. Other acts were soon after passed for the construction of ships, mostly of smaller size, and by the time that hostilities in the West Indies actually broke out, the Government had at its command a very respectable navy. This attitude of the Government had a marked effect upon the commercial community. To the great satisfaction of all classes interested in shipping the Federal authority showed a resolute purpose of affording protection, as in duty bound, to these interests, and the best evidence of this resolution lay in the building of ships of war. The leaders in Congress saw the wisdom of enlisting in the new movement the sympathies of those who were to derive especial benefit from it, and it was accordingly provided that in the various shipbuilding and commercial localities ships of war might be built by private enterprise, which the Government should take, issuing bonds to provide for their payment. By this judicious measure local interest was actively excited, and some of the most famous of the naval cruisers were constructed under the provisions of this act, notably the Essex, built by the East India merchants of Salem, which made her first voyage around the world under Preble in 1800, and which in the War of 1812, under the command of Porter, was destined in the course of a single year completely to dispossess the British in the Pacific."—J. R. Soley, *Maritime industries of America* (N. S. Shaler, ed., *United States of America*, v. 1, pp. 530-531).

1795.—Effect of Jay Treaty.—Treaty with Spain.—"The Jay treaty worked more satisfactorily than was expected. Grenville had promised Jay

some concessions not formally mentioned, and these were fulfilled. . . . From 1796, moreover, in spite of the excision of the West Indian article from the treaty, that trade was thrown open to American vessels under certain limitations. Best of all was the quieting effect on the northern frontier. Vermont was relieved by the opening of trade to Montreal, the national power was vindicated by the occupation of the whole national territory, and with the Jay treaty added to Wayne's treaty of 1795 came sixteen years of comparative peace with the Indians. . . . The effect of the Jay treaty was not confined to the relations between the United States and Great Britain. The document was observed by all the cabinets of Europe with varying emotions, but everywhere from the point of view of the obsession that the United States must be upon one side or the other. If she had rejected the overtures of France and made a treaty with England, it must mean that she was to be counted on the side of England. Nowhere, was the effect so immediate and pronounced as in Spain. . . . Her court, believing that it meant the alliance of the United States and Great Britain, saw in imagination irresistible forces descending upon her frail defences in Louisiana and attacking the mines of Mexico. Although convinced of the necessity of coming to terms, her ministers could not shake off their constitutional habits of delay, until on October 24, 1795, Pinckney [Thomas Pinckney, the minister at Madrid] announced his immediate departure for London. His bluff was successful, and on October 27 the treaty of San Lorenzo was signed. As the first treaty between United States and Spain, it laid down the general rules of intercourse upon liberal terms. In regard to neutral rights it provided that provisions should not be contraband of war, and that free ships make free goods. Until 1794 the Spanish fleet had cooperated with that of Great Britain, and had acted upon somewhat the same principles. To settle questions arising from this conduct, a commission was arranged for, which came to an end in 1800 after having awarded over three hundred thousand dollars to American claimants. But these questions were of less interest than those relating to boundaries and the use of the Mississippi. As to the former, Spain accepted the American contention, the thirty-first parallel, and agreed to evacuate her posts in the disputed region. She opened the navigation of the Mississippi to the Americans, and engaged that for three years New Orleans was to serve them as a 'place of deposit' with the right to export their goods therefrom free of duty. [See also DEPOSIT, RIGHT OF.] 'And His Majesty promises either to continue this permission, if he finds during that time that it is not prejudicial to the interests of Spain, or if he should not agree to continue it there, he will assign to them on another part of the banks of the Mississippi an equivalent establishment.' With the prompt ratification of this favorable treaty, Washington could indeed feel that the new government had justified itself to the people as their representative before the world. The diplomatic problems that had helped cause the fall of the Confederation had all been solved. Commercial treaties had been made with Spain and Great Britain. If the latter had not permanently opened her West India islands, at any rate they were open now. The Indians north and south had been quieted. Outlets had been obtained down the St. Lawrence to Montreal and Quebec, and down the Mississippi to the Gulf of Mexico. The occupation of the entire national territory had been provided for. In addition, the policy of

national independence from European disputes had been effectively laid down, the worst irregularities of belligerent interference with our commerce had been done away with, and compensation for our losses provided for. If these settlements were not all to prove permanent, at least they established precedents which we were steadily gaining added strength to enforce. For many of these successes Washington could take personal credit, over and above that of choosing the men who accomplished them. The Indian policy was peculiarly his own. His selection from the various alternatives proposed by Hamilton and Jefferson for handling the Genét affair made the policy adopted essentially his. In view of the conflicting forces within him and without, his decision to sign the Jay treaty was a great act which proved to be a wise one. Finally in his farewell address he gave the policy of neutrality a consecration in the minds of the people which still persists. The points on which he might have done better were comparatively minor. He was able to retire in March, 1797, not, to be sure, leaving all problems solved, but having settled all those, except the opening of the Mediterranean, that he was chosen to deal with, and more."—C. R. Fish, *American diplomacy*, pp. 122-125.

1796.—Washington's farewell address.—"The period for the presidential election was drawing near, and great anxiety began to be felt that Washington would consent to stand for a third term. No one, it was agreed, had greater claim to the enjoyment of retirement, in consideration of public services rendered; but it was thought the affairs of the country would be in a very precarious condition should he retire before the wars of Europe were brought to a close. Washington, however, had made up his mind irrevocably on the subject, and resolved to announce, in a farewell address, his intention of retiring. Such an instrument, it will be recollected, had been prepared for him from his own notes, by Mr. Madison, when he had thought of retiring at the end of his first term. As he was no longer in confidential intimacy with Mr. Madison, he returned to Mr. Hamilton as his adviser and coadjutor, and appears to have consulted him on the subject early in the present year [1796], for, in a letter dated New York, May 10th, Hamilton writes: 'When last in Philadelphia, you mentioned to me your wish that I should "re-dress" a certain paper which you had prepared. As it is important that a thing of this kind should be done with great care and much at leisure, touched and retouched, I submit a wish that, as soon as you have given it the body you mean it to have, it may be sent to me.' The paper was accordingly sent, on the 15th of May, in its rough state, altered in one part since Hamilton had seen it. 'If you should think it best to throw the whole into a different form,' writes Washington, 'let me request, notwithstanding, that my draft may be returned to me (along with yours) with such amendments and corrections as to render it as perfect as the formation is susceptible of; curtailed if too verbose, and relieved of all tautology not necessary to enforce the ideas in the original or quoted part. My wish is, that the whole may appear in a plain style; and be handed to the public in an honest, unaffected, simple garb.' We forbear to go into the vexed question concerning this address; how much of it is founded on Wash-

ington's original 'notes and heads of topics'; how much was elaborated by Madison, and how much is due to Hamilton's recasting and revision. The whole came under the supervision of Washington; and the instrument, as submitted to the press, was in his handwriting, with many ultimate corrections and alterations. Washington had no pride of authorship; his object always was to effect the purpose in hand, and for that he occasionally invoked assistance, to ensure a plain and clear exposition of his thoughts and intentions. The address certainly breathes his spirit throughout, is in perfect accordance with all his words and actions, and 'in an honest, unaffected, simple garb,' embodies the system of policy on which he had acted throughout his administration. It was published in September [17], in a Philadelphia paper called the *Daily Advertiser*. The publication of the Address produced a great sensation. Several of the State legislatures ordered it to be put on their journals."—W. Irving, *Life of Washington*, v. 5, ch. 30.

The following is the text of the address.

"To the people of the United States. Friends and Fellow-Citizens: The period for a new election of a citizen, to administer the executive government of the United States, being not far distant, and the time actually arrived, when your thoughts must be employed in designating the person, who is to be clothed with that important trust, it appears to me proper, especially as it may conduce to a more distinct expression of the public voice, that I should now apprise you of the resolution I have formed, to decline being considered among the number of those, out of whom a choice is to be made. I beg you, at the same time, to do me the justice to be assured, that this resolution has not been taken without a strict regard to all the considerations appertaining to the relation, which binds a dutiful citizen to his country; and that, in withdrawing the tender of service, which silence in my situation might imply, I am influenced by no diminution of zeal for your future interest; no deficiency of grateful respect for your past kindness; but am supported by a full conviction that the step is compatible with both. The acceptance of, and continuance hitherto in, the office to which your suffrages have twice called me, have been a uniform sacrifice of inclination to the opinion of duty, and to a deference for what appeared to be your desire. I constantly hoped, that it would have been much earlier in my power, consistently with motives, which I was not at liberty to disregard, to return to that retirement, from which I had been reluctantly drawn. The strength of my inclination to do this, previous to the last election, had even led to the preparation of an address to declare it to you; but mature reflection on the then perplexed and critical posture of our affairs with foreign nations, and the unanimous advice of persons entitled to my confidence, impelled me to abandon the idea. I rejoice, that the state of your concerns, external as well as internal, no longer renders the pursuit of inclination incompatible with the sentiment of duty, or propriety; and am persuaded, whatever partiality may be retained for my services, that, in the present circumstances of our country, you will not disapprove my determination to retire. The impressions, with which I first undertook the arduous trust, were explained on the proper occasion. In the discharge of this trust, I will only say, that I have, with good intentions, contributed towards the organization and administration of the

government the best exertions of which a very fallible judgment was capable. Not unconscious, in the outset, of the inferiority of my qualifications, experience in my own eyes, perhaps still more in the eyes of others, has strengthened the motives to diffidence of myself; and every day the increasing weight of years admonishes me more and more, that the shade of retirement is as necessary to me as it will be welcome. Satisfied, that, if any circumstances have given peculiar value to my services, they were temporary, I have the consolation to believe, that, while choice and prudence invite me to quit the political scene, patriotism does not forbid it. In looking forward to the moment, which is intended to terminate the career of my public life, my feelings do not permit me to suspend the deep acknowledgment of that debt of gratitude, which I owe to my beloved country for the many honors it has conferred upon me; still more for the steadfast confidence with which it has supported me; and for the opportunities I have thence enjoyed of manifesting my inviolable attachment, by services faithful and persevering, though in usefulness unequal to my zeal. If benefits have resulted to our country from these services, let it always be remembered to your praise, and as an instructive example in our annals, that under circumstances in which the passions, agitated in every direction, were liable to mislead, amidst appearances sometimes dubious, vicissitudes of fortune often discouraging, in situations in which not unfrequently want of success has countenanced the spirit of criticism, the constancy of your support was the essential prop of the efforts, and a guarantee of the plans by which they were effected. Profoundly penetrated with this idea, I shall carry it with me to my grave, as a strong incitement to unceasing vows that Heaven may continue to you the choicest tokens of its beneficence; that your union and brotherly affection may be perpetual; that the free constitution, which is the work of your hands, may be sacredly maintained; that its administration in every department may be stamped with wisdom and virtue; that, in fine, the happiness of the people of these States, under the auspices of liberty, may be made complete, by so careful a preservation and so prudent a use of this blessing, as will acquire to them the glory of recommending it to the applause, the affection, and adoption of every nation, which is yet a stranger to it. Here, perhaps, I ought to stop. But a solicitude for your welfare, which cannot end but with my life, and the apprehension of danger, natural to that solicitude, urge me, on an occasion like the present, to offer to your solemn contemplation, and to recommend to your frequent review, some sentiments, which are the result of much reflection, of no inconsiderable observation, and which appear to me all-important to the permanency of your felicity as a People. These will be offered to you with the more freedom, as you can only see in them the disinterested warnings of a parting friend, who can possibly have no personal motive to bias his counsel. Nor can I forget, as an encouragement to it, your indulgent reception of my sentiments on a former and not dissimilar occasion. Interwoven as is the love of liberty with every ligament of your hearts, no recommendation of mine is necessary to fortify or confirm the attachment. The unity of Government, which constitutes you one people, is also now dear to you. It is justly so: for it is a main pillar in the edifice of your real independence, the support of your tranquillity at home, your peace abroad; of your safety; of your prosperity; of that

very Liberty, which you so highly prize. But as it is easy to foresee, that, from different causes and from different quarters, much pains will be taken, many artifices employed, to weaken in your minds the conviction of this truth; as this is the point in your political fortress against which the batteries of internal and external enemies will be most constantly and actively (though often covertly and insidiously) directed, it is of infinite moment, that you should properly estimate the immense value of your national Union to your collective and individual happiness; that you should cherish a cordial, habitual, and immovable attachment to it; accustoming yourselves to think and speak of it as of the Palladium of your political safety and prosperity; watching for its preservation with jealous anxiety; discountenancing whatever may suggest even a suspicion, that it can in any event be abandoned; and indignantly frowning upon the first dawning of every attempt to alienate any portion of our country from the rest, or to enfeeble the sacred ties which now link together the various parts. For this you have every inducement of sympathy and interest. Citizens, by birth or choice, of a common country, that country has a right to concentrate your affections. The name of American, which belongs to you, in your national capacity, must always exalt the just pride of Patriotism, more than any appellation derived from local discriminations. With slight shades of difference, you have the same religion, manners, habits, and political principles. You have in a common cause fought and triumphed together; the Independence and Liberty you possess are the work of joint counsels, and joint efforts, of common dangers, sufferings, and successes. But these considerations, however powerfully they address themselves to your sensibility, are greatly outweighed by those, which apply more immediately to your interest. Here every portion of our country finds the most commanding motives for carefully guarding and preserving the Union of the whole. The North, in an unrestrained intercourse with the South, protected by the equal laws of a common government, finds, in the productions of the latter, great additional resources of maritime and commercial enterprise and precious materials of manufacturing industry. The South, in the same intercourse, benefiting by the agency of the North, sees its agriculture grow and its commerce expand. Turning partly into its own channels the seamen of the North, it finds its particular navigation invigorated; and, while it contributes, in different ways, to nourish and increase the general mass of the national navigation, it looks forward to the protection of a maritime strength, to which itself is unequally adapted. The East, in a like intercourse with the West, already finds, and in the progressive improvement of interior communications by land and water, will more and more find, a valuable vent for the commodities which it brings from abroad, or manufactures at home. The West derives from the East supplies requisite to its growth and comfort, and, what is perhaps of still greater consequence, it must of necessity owe the secure enjoyment of indispensable outlets for its own productions to the weight, influence, and the future maritime strength of the Atlantic side of the Union, directed by an indissoluble community of interest as one nation. Any other tenure by which the West can hold this essential advantage, whether derived from its own separate strength, or from an apostate and unnatural connexion with any foreign power, must be intrinsically precarious. While, then, every part of our

country thus feels an immediate and particular interest in Union, all the parts combined cannot fail to find in the united mass of means and efforts greater strength, greater resource, proportionably greater security from external danger, a less frequent interruption of their peace by foreign nations; and, what is of inestimable value, they must derive from Union an exemption from those broils and wars between themselves, which so frequently afflict neighbouring countries not tied together by the same governments, which their own rivalships alone would be sufficient to produce, but which opposite foreign alliances, attachments, and intrigues would stimulate and embitter. Hence, likewise, they will avoid the necessity of those overgrown military establishments, which, under any form of government, are inauspicious to liberty, and which are to be regarded as particularly hostile to Republican Liberty. In this sense it is, that your Union ought to be considered as a main prop of your liberty, and that the love of the one ought to endear to you the preservation of the other. These considerations speak a persuasive language to every reflecting and virtuous mind, and exhibit the continuance of the Union as a primary object of Patriotic desire. Is there a doubt, whether a common government can embrace so large a sphere? Let experience solve it. To listen to mere speculation in such a case were criminal. We are authorized to hope, that a proper organization of the whole, with the auxiliary agency of governments for the respective subdivisions, will afford a happy issue to the experiment. It is well worth a fair and full experiment. With such powerful and obvious motives to Union, affecting all parts of our country, while experience shall not have demonstrated its impracticability, there will always be reason to distrust the patriotism of those, who in any quarter may endeavour to weaken its bands. In contemplating the causes, which may disturb our Union, it occurs as matter of serious concern, that any ground should have been furnished for characterizing parties by Geographical discriminations, Northern and Southern, Atlantic and Western; whence designing men may endeavour to excite a belief, that there is a real difference of local interests and views. One of the expedients of party to acquire influence, within particular districts, is to misrepresent the opinions and aims of other districts. You cannot shield yourselves too much against the jealousies and heart-burnings, which spring from these misrepresentations; they tend to render alien to each other those, who ought to be bound together by fraternal affection. The inhabitants of our western country have lately had a useful lesson on this head; they have seen, in the negotiation by the Executive, and in the unanimous ratification by the Senate, of the treaty with Spain, and in the universal satisfaction at that event, throughout the United States, a decisive proof how unfounded were the suspicions propagated among them of a policy in the General Government and in the Atlantic States unfriendly to their interests in regard to the Mississippi; they have been witnesses to the formation of two treaties, that with Great Britain, and that with Spain, which secure to them every thing they could desire, in respect to our foreign relations, towards confirming their prosperity. Will it not be their wisdom to rely for the preservation of these advantages on the Union by which they were procured? Will they not henceforth be deaf to those advisers, if such there are, who would sever them from their brethren, and connect them with aliens? To the efficacy and permanency of

your Union, a Government for the whole is indispensable. No alliances, however strict, between the parts can be an adequate substitute; they must inevitably experience the infractions and interruptions, which all alliances in all times have experienced. Sensible of this momentous truth, you have improved upon your first essay, by the adoption of a Constitution of Government better calculated than your former for an intimate Union, and for the efficacious management of your common concerns. This Government, the offspring of our own choice, uninfluenced and unawed, adopted upon full investigation and mature deliberation, completely free in its principles, in the distribution of its powers, uniting security with energy, and containing within itself a provision for its own amendment, has a just claim to your confidence and your support. Respect for its authority, compliance with its laws, acquiescence in its measures, are duties enjoined by the fundamental maxims of true Liberty. The basis of our political systems is the right of the people to make and to alter their Constitutions of Government. But the Constitution which at any time exists, till changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all. The very idea of the power and the right of the people to establish Government presupposes the duty of every individual to obey the established Government. All obstructions to the execution of the Laws, all combinations and associations, under whatever plausible character, with the real design to direct, control, counteract, or awe the regular deliberation and action of the constituted authorities, are destructive of this fundamental principle, and of fatal tendency. They serve to organize faction, to give it an artificial and extraordinary force; to put, in the place of the delegated will of the nation, the will of a party, often a small but artful and enterprising minority of the community; and, according to the alternate triumphs of different parties, to make the public administration the mirror of the ill-concerted and incongruous projects of faction, rather than the organ of consistent and wholesome plans digested by common counsels, and modified by mutual interests. However combinations or associations of the above descriptions may now and then answer popular ends, they are likely, in the course of time and things, to become potent engines, by which cunning, ambitious, and unprincipled men will be enabled to subvert the power of the people, and to usurp for themselves the reins of government; destroying afterwards the very engines, which have lifted them to unjust dominion. Towards the preservation of your government, and the permanency of your present happy state, it is requisite, not only that you steadily discountenance irregular oppositions to its acknowledged authority, but also that you resist with care the spirit of innovation upon its principles, however specious the pretexts. One method of assault may be to effect, in the forms of the constitution, alterations, which will impair the energy of the system, and thus to undermine what cannot be directly overthrown. In all the changes to which you may be invited, remember that time and habit are at least as necessary to fix the true character of governments, as of other human institutions; that experience is the surest standard, by which to test the real tendency of the existing constitution of a country; that facility in changes, upon the credit of mere hypothesis and opinion, exposes to perpetual change, from the endless variety of hypothesis and opinion; and remember, especially, that, for the efficient management of

your common interests, in a country so extensive as ours, a government of as much vigor as is consistent with the perfect security of liberty is indispensable. Liberty itself will find in such a government, with powers properly distributed and adjusted, its surest guardian. It is, indeed, little else than a name, where the government is too feeble to withstand the enterprise of faction, to confine each member of the society within the limits prescribed by the laws, and to maintain all in the secure and tranquil enjoyment of the rights of person and property. I have already intimated to you the danger of parties in the state, with particular reference to the founding of them on geographical discriminations. Let me now take a more comprehensive view, and warn you in the most solemn manner against the baneful effects of the spirit of party, generally. This spirit, unfortunately, is inseparable from our nature, having its root in the strongest passions of the human mind. It exists under different shapes in all governments, more or less stifled, controlled, or repressed; but, in those of the popular form, it is seen in its greatest rankness, and is truly their worst enemy. The alternate domination of one faction over another, sharpened by the spirit of revenge, natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries, which result, gradually incline the minds of men to seek security and repose in the absolute power of an individual; and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purposes of his own elevation, on the ruins of Public Liberty. Without looking forward to an extremity of this kind, (which nevertheless ought not to be entirely out of sight,) the common and continual mischiefs of the spirit of party are sufficient to make it the interest and duty of a wise people to discourage and restrain it. It serves always to distract the Public Councils, and enfeeble the Public Administration. It agitates the Community with ill-founded jealousies and false alarms; kindles the animosity of one part against another, fomenting occasionally riot and insurrection. It opens the door to foreign influence and corruption, which find a facilitated access to the government itself through the channels of party passions. Thus the policy and the will of one country are subjected to the policy and will of another. There is an opinion, that parties in free countries are useful checks upon the administration of the Government, and serve to keep alive the spirit of Liberty. This within certain limits is probably true; and in Governments of a Monarchical cast, Patriotism may look with indulgence, if not with favor, upon the spirit of party. But in those of the popular character, in Governments purely elective, it is a spirit not to be encouraged. From their natural tendency, it is certain there will always be enough of that spirit for every salutary purpose. And, there being constant danger of excess, the effort ought to be, by force of public opinion, to mitigate and assuage it. A fire not to be quenched, it demands a uniform vigilance to prevent its bursting into a flame, lest, instead of warming, it should consume. It is important, likewise, that the habits of thinking in a free country should inspire caution, in those intrusted with its administration, to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit

of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism. A just estimate of that love of power, and proneness to abuse it, which predominates in the human heart, is sufficient to satisfy us of the truth of this position. The necessity of reciprocal checks in the exercise of political power, by dividing and distributing it into different depositories, and constituting each the Guardian of the Public Weal against invasions by the others, as been evinced by experiments ancient and modern; some of them in our country and under our own eyes. To preserve them must be as necessary as to institute them. If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way, which the constitution designates. But let there be no change by usurpation; for, though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil any partial or transient benefit, which the use can at any time yield. Of all the dispositions and habits, which lead to political prosperity, Religion and Morality are indispensable supports. In vain would that man claim the tribute of Patriotism, who should labor to subvert these great pillars of human happiness, these firmest props of the duties of Men and Citizens. The mere Politician, equally with the pious man, ought to respect and to cherish them. A volume could not trace all their connexions with private and public felicity. Let it simply be asked, Where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths, which are the instruments of investigation in Courts of Justice? And let us with caution indulge the supposition, that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect, that national morality can prevail in exclusion of religious principle. It is substantially true, that virtue or morality is a necessary spring of popular government. The rule, indeed, extends with more or less force to every species of free government. Who, that is a sincere friend to it, can look with indifference upon attempts to shake the foundation of the fabric. Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened. As a very important source of strength and security, cherish public credit. One method of preserving it is, to use it as sparingly as possible; avoiding occasions of expense by cultivating peace, but remembering also that timely disbursements to prepare for danger frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts, which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burthen, which we ourselves ought to bear. The execution of these maxims belongs to your representatives, but it is necessary that public opinion should cooperate. To facilitate to them the performance of their duty, it is essential that you should practically bear in mind, that towards the payment of debts there must be Revenue; that to have Revenue

there must be taxes; that no taxes can be devised, which are not more or less inconvenient and unpleasant, that the intrinsic embarrassment, inseparable from the selection of the proper objects (which is always a choice of difficulties), ought to be a decisive motive for a candid construction of the conduct of the government in making it, and for a spirit of acquiescence in the measures for obtaining revenue, which the public exigencies may at any time dictate. Observe good faith and justice towards all Nations; cultivate peace and harmony with all. Religion and Morality enjoin this conduct; and can it be, that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and, at no distant period, a great Nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt, that, in the course of time and things, the fruits of such a plan would richly repay any temporary advantages, which might be lost by a steady adherence to it? Can it be, that Providence has not connected the permanent felicity of a Nation with its Virtue? The experiment, at least, is recommended by every sentiment which ennobles human nature. Alas! is it rendered impossible by its vices? In the execution of such a plan, nothing is more essential, than that permanent, inveterate antipathies against particular Nations, and passionate attachments for others, should be excluded; and that, in place of them, just and amicable feelings towards all should be cultivated. The Nation, which indulges towards another an habitual hatred, or an habitual fondness, is in some degree a slave. It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray from its duty and its interest. Antipathy in one nation against another disposes each more readily to offer insult and injury, to lay hold of slight causes of umbrage, and to be haughty and intractable, when accidental or trifling occasions of dispute occur. Hence frequent collisions, obstinate, envenomed, and bloody contests. The Nation, prompted by ill-will and resentment, sometimes impels to war the Government, contrary to the best calculations of policy. The Government sometimes participates in the national propensity, and adopts through passion what reason would reject; at other times, it makes the animosity of the nation subservient to projects of hostility instigated by pride, ambition, and other sinister and pernicious motives. The peace often, sometimes perhaps the liberty, of Nations has been the victim. So likewise, a passionate attachment of one Nation for another produces a variety of evils. Sympathy for the favorite Nation, facilitating the illusion of an imaginary common interest, in cases where no real common interest exists, and infusing into one the enmities of the other betrays the former into a participation in the quarrels and wars of the latter, without adequate inducement or justification. It leads also to concessions to the favorite Nation of privileges denied to others, which is apt doubly to injure the Nation making the concessions; by unnecessarily parting with what ought to have been retained; and by exciting jealousy, ill-will, and a disposition to retaliate, in the parties from whom equal privileges are withheld. And it gives to ambitious, corrupted, or deluded citizens, (who devote themselves to the favorite nation,) facility to betray or sacrifice the interests of their own country, without odium, sometimes even with popularity; gilding, with the appearances of a virtuous sense of obligation, a commendable deference for public opinion, or a laudable zeal for public good,

the base of foolish compliances of ambition, corruption, or infatuation. As avenues to foreign influence in innumerable ways such attachments are particularly alarming to the truly enlightened and independent Patriot. How many opportunities do they afford to tamper with domestic factions, to practise the arts of seduction, to mislead public opinion, to influence or awe the Public Councils! Such an attachment of a small or weak, towards a great and powerful nation, dooms the former to be the satellite of the latter. Against the insidious wiles of foreign influence (I conjure you to believe me, fellow-citizens,) the jealousy of a free people ought to be constantly awake; since history and experience prove, that foreign influence is one of the most baneful foes of Republican Government. But that jealousy, to be useful, must be impartial; else it becomes the instrument of the very influence to be avoided, instead of a defence against it. Excessive partiality for one foreign nation, and excessive dislike of another, cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests. The great rule of conduct for us, in regard to foreign nations, is, in extending our commercial relations, to have with them as little political connexion as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop. Europe has a set of primary interests, which to us have none, or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships or enmities. Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off, when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality, we may at any time resolve upon, to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war, as our interest, guided by justice, shall counsel. Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalry, interest, humor, or caprice? It is our true policy to steer clear of permanent alliances with any portion of the foreign world; so far, I mean, as we are now at liberty to do it; for let me not be understood as capable of patronizing infidelity to existing engagements. I hold the maxim no less applicable to public than to private affairs, that honesty is always the best policy. I repeat it, therefore, let those engagements be observed in their genuine sense. But, in my opinion, it is unnecessary and would be unwise to extend them. Taking care always to keep ourselves, by suitable establishments, on a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies. Harmony, liberal intercourse with all nations, are recommended by policy, humanity, and interest. But

even our commercial policy should hold an equal and impartial hand; neither seeking nor granting exclusive favors or preferences; consulting the natural course of things; diffusing and diversifying by gentle means the streams of commerce, but forcing nothing; establishing, with powers so disposed, in order to give trade a stable course, to define the rights of our merchants, and to enable the government to support them, conventional rules of intercourse, the best that present circumstances and mutual opinion will permit, but temporary, and liable to be from time to time abandoned or varied, as experience and circumstances shall dictate; constantly keeping in view, that it is folly in one nation to look for disinterested favors from another; that it must pay with a portion of its independence for whatever it may accept under that character; that, by such acceptance, it may place itself in the condition of having given equivalents for nominal favors, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect or calculate upon real favors from nation to nation. It is an illusion, which experience must cure, which a just pride ought to discard. In offering to you, my countrymen, these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions, or prevent our nation from running the course, which has hitherto marked the destiny of nations. But, if I may even flatter myself, that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism; this hope will be a full recompense for the solicitude for your welfare, by which they have been dictated. How far in the discharge of my official duties, I have been guided by the principles which have been delineated, the public records and other evidences of my conduct must witness to you and to the world. To myself, the assurance of my own conscience is, that I have at least believed myself to be guided by them. In relating to the still subsisting war in Europe, my Proclamation of the 2d of April, 1793, is the index to my Plan. Sanctioned by your approving voice, and by that of your Representatives in both Houses of Congress, the spirit of that measure has continually governed me, uninfluenced by any attempts to deter or divert me from it. After deliberate examination, with the aid of the best lights I could obtain, I was well satisfied that our country, under all the circumstances of the case, had a right to take, and was bound in duty and interest to take, a neutral position. Having taken it, I determined, as far as should depend upon me, to maintain it, with moderation, perseverance, and firmness. The considerations, which respect the right to hold this conduct, it is not necessary on this occasion to detail. I will only observe, that, according to my understanding of the matter, that right, so far from being denied by any of the Belligerent Powers, has been virtually admitted by all. The duty of holding a neutral conduct may be inferred, without anything more, from the obligation which justice and humanity impose on every nation, in cases in which it is free to act, to maintain inviolate the relations of peace and amity towards other nations. The inducements of interest for observing that conduct will best be referred to your own reflections and experience. With me, a predominant motive

has been to endeavour to gain time to our country to settle and mature its yet recent institutions, and to progress without interruption to that degree of strength and consistency, which is necessary to give it, humanly speaking, the command of its own fortunes. Though, in reviewing the incidents of my administration, I am unconscious of intentional error, I am nevertheless too sensible of my defects not to think it probable that I may have committed many errors. Whatever they may be, I fervently beseech the Almighty to avert or mitigate the evils to which they may tend. I shall also carry with me the hope, that my Country will never cease to view them with indulgence; and that, after forty-five years of my life dedicated to its service with an upright zeal, the faults of incompetent abilities will be consigned to oblivion, as myself must soon be to the mansions of rest. Relying on its kindness in this as in other things, and actuated by that fervent love towards it, which is so natural to a man, who views in it the native soil of himself and his progenitors for several generations; I anticipate with pleasing expectation that retreat, in which I promise myself to realize, without alloy, the sweet enjoyment of partaking, in the midst of my fellow-citizens, the benign influence of good laws under a free government, the ever favorite object of my heart, and the happy reward, as I trust, of our mutual cares, labors, and dangers. GEORGE WASHINGTON."

1796.—Third presidential election.—Washington succeeded by John Adams.—After the appearance of Washington's farewell address, the result of the presidential election became exceedingly doubtful. "There was no second man to whom the whole of the nation could be won over. The Federalists . . . could not bring forward a single candidate who could calculate on the unanimous and cheerful support of the entire party. There still prevailed at the time a feeling among the people that the vice-president had a sort of claim to the succession to the presidency. But even apart from this, Adams would have been one of the most prominent candidates of the Federalists. The great majority of them soon gave him a decided preference over all other possible candidates. On the other hand, some of the most distinguished and influential of the Federalists feared serious consequences to the party and the country from the vanity and violence as well as from the egotism and irresolution with which he was charged. But to put him aside entirely was not possible, nor was it their wish. They thought, however, to secure a greater number of electoral votes for Th. Pinckney, the Federal candidate for the vice-presidency, which, as the constitution then stood, would have made him president and Adams vice-president. Although this plan was anxiously concealed from the people, it caused the campaign to be conducted by the party with less energy than if the leaders had been entirely unanimous. France was naturally desirous of Jefferson's success. . . . Wolcott asserted that Adet had publicly declared that France's future policy towards the United States would depend on the result of the election. Some did not hesitate to say that, on this account, Jefferson should have the preference, but on the more thoughtful Federalists it exerted the very opposite influence. There is no reason for the assumption that the issue of the election would have been different, had Adet behaved more discreetly. But his indiscretion certainly contributed to make the small majority expected for Adams completely certain, while Hamilton's flank movement in favor of Pinckney helped Jefferson

to the vice-presidency. . . . The result of the election, however, left the country in a very serious condition. Washington's withdrawal removed the last restraint from party passion."—H. von Holst, *Constitutional and political history of the United States*, v. 1, ch. 3.—Adams received 71 votes in the electoral college and Jefferson 68. As the constitution then provided, the majority of votes elected the president and the next greatest number of votes elected the vice president.

1797-1799.—Troubles with the French republic.—X Y Z correspondence.—On the brink of war.—"Mr. Adams took his cabinet from his predecessor; it was not a strong one, and it was devoted to Hamilton, between whom and the new President there was soon a divergence, Hamilton being fond of power, and Adams having a laudable purpose to command his own ship. The figure of speech is appropriate, for he plunged into a sea of troubles, mainly created by the unreason-

JOHN ADAMS

(From painting by Gilbert Stuart)

able demands of the French government. The French 'Directory,' enraged especially by Jay's treaty with England, got rid of one American minister by remonstrance, and drove out another [Pinckney] with contempt. When Mr. Adams sent three special envoys [Gerry, Marshall, and Pinckney], they were expected to undertake the most delicate negotiations with certain semi-official persons designated in their correspondence only by the letters X, Y, Z. The plan of this covert intercourse came through the private secretary of M. de Talleyrand, then French Minister for Foreign Affairs; and the impudence of these three letters of the alphabet went so far as to propose a bribe of 1,200,000 francs (some \$220,000) to be paid over to this minister. 'You must pay money, a great deal of money,' remarked Monsieur Y. ('Il faut de l'argent, beaucoup de l'argent.') The secret of these names was kept, but the diplomatic correspondence was made public, and created much wrath in Europe as well as in America. Moreover, American vessels were constantly attacked by France, and yet Congress refused to arm its own ships. At last the insults passed beyond bearing, and it was at this time that 'Millions for defence,

not one cent for tribute,' first became a proverbial phrase, having been originally used by Charles C. Pinckney. . . . Then, with tardy decision, the Republicans yielded to the necessity of action and the Federal party took the lead. War was not formally proclaimed, but treaties with France were declared to be no longer binding. An army was ordered to be created, with Washington as Lieutenant-general and Hamilton as second in-command; and the President was authorized to appoint a Secretary of the Navy and to build twelve new ships-of-war. Before these were ready, naval hostilities had actually begun; and Commodore Truxton, in the U. S. frigate *Constellation*, captured a French frigate in West Indian waters (Feb. 9, 1799), and afterwards silenced another, which however escaped. Great was the excitement over these early naval successes of the young nation. Merchant-ships were authorized to arm themselves, and some 300 acted upon this authority. . . . The result of it all was that France yielded. Talleyrand, the very minister who had dictated the insults, now disavowed them, and pledged his government to receive any minister the United States might send. The President, in the most eminently courageous act of his life, took the responsibility of again sending ambassadors; and did this without even consulting his cabinet, which would, as he well knew, oppose it. They were at once received, and all danger of war with France was at an end. This bold stroke separated the President permanently from at least half of his own party, since the Federalists did not wish for peace with France. His course would have given him a corresponding increase of favor from the other side, but for the great mistake the Federalists had made in passing certain laws, called the 'Alien' law and the 'Sedition' law."—T. W. Higginson, *Larger history of the United States*, ch. 14.

1797-1800.—Early attitude of slave owners in Congress.—Treatment of free blacks.—"Many people will not allow the least blame to be cast on this period [the later years of the eighteenth century], because it does not harmonize with their admiration of the 'fathers,' and because they have adopted, without any proof, the common view that the deeper shadows of slavery and slavocracy first appeared comparatively late. . . . In reading through the debates [in Congress], single striking instances of injustice do not make the deepest impression. It is the omnipresent unwillingness to practice justice towards colored persons,—yes, even to recognize them as actual beings. When the defense of their rights is demanded, then congress has always a deaf ear. . . . Swanwick of Pennsylvania laid before the house of representatives, Jan. 30, 1797, a petition from four North Carolina negroes who had been freed by their masters. Since a state law condemned them to be sold again, they had fled to Philadelphia. There they had been seized under the fugitive slave law . . . and now prayed congress for its intervention. Blount of North Carolina declared that only when it was 'proved' that these men were free, could congress consider the petition. Sigreaves of Pennsylvania asked, in reply to this, what sort of proof was offered that the four negroes were not free. This

question received no answer. Smith of South Carolina and Christie of Maryland simply expressed their amazement that any member whatever could have presented a petition of 'such an unheard-of nature.' Swanwick and some other representatives affirmed that the petition must be submitted to a committee for investigation and consideration, because the petitioners complained of violation of their rights under a law of the Union. No reply could be made to this and no reply was attempted. This decisive point was simply set aside, and it was voted by fifty ayes to thirty-three noes not to receive the petition. . . . In order to reach this result, Smith had produced the customary impression by the declaration that the refusal of the demand made by the representatives from the southern states would drive a 'wedge' into the Union. When, three years later, the same question was brought before congress again by a petition of the free negroes of Philadelphia, Rutledge of South Carolina declared in even plainer terms that the south would be forced to the sad necessity of going its own way. . . . The whites who troubled themselves about slaves or free colored persons had no better reception. . . . In all the cases mentioned, the tactics of the representatives of the slaveholding interest were the same. . . . If congress was urged to act in any way which did not please them, then slavery was always a 'purely municipal affair.'—H. von Holst, *Constitutional and political history of the United States*, v. 1, ch. 8.

1798.—Twelfth Amendment to the constitution.—The Twelfth Amendment to the constitution was proclaimed Jan. 8, 1798. See U. S. A., CONSTITUTION OF.

1798.—Organization of Mississippi Territory.—Government similar in form to that of Northwest Territory. See MISSISSIPPI: 1798-1804.

1798.—Alien and sedition laws.—Naturalization Act.—Virginia and Kentucky Resolutions.—"The outrages which we suffered from the injustice of England and France gave additional bitterness to the strife between parties at home. The anti-federal press was immoderate in its assaults upon the administration. It so happened that several of the anti-federal papers were conducted by foreigners. Indeed, there were many foreigners in the country whose sympathies were with the French, and their hostility to the administration was open and passionate. The federal leaders determined to crush out by the strong arm of the law these publishers of slanders and fomentors of discontent. Hence the famous 'alien and sedition laws' were passed. The remedy devised was far worse than the disease. It hastened the federal party to its tomb, and was the occasion of the formulation of that unfortunate creed of constitutional construction and of state sovereignty known as the 'Virginia and Kentucky Resolutions of 1798-99.'—J. S. Landon, *Constitutional history and government of the United States*, lecture 6.—The series of strong measures carried by the Federalists comprised the Naturalization Act of June 18, the Alien Act of June 25, the second Alien Act, of July 6, and the Sedition Act of July 14, 1798.

The text of the Naturalization Act is as follows:

June 18, 1798. Acts of the Fifth Congress, Statute II, Chap. liv.: An Act supplementary to, and to amend the act, intitled "An act to establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject."

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no alien shall be admitted to become a citizen of the United States or of any state unless in the manner prescribed by the act intitled "An act to establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject" he shall have declared his intention to become a citizen of the United States, five years, at least, before his admission, and shall, at the time of his application to be admitted, declare and prove, to the satisfaction of the court having jurisdiction in the case, that he has resided within the United States fourteen years, at least, and within the state or territory where, or for which such court is at the time held, five years, at least, besides conforming to the other declarations, renunciations and proofs, by the said act required, anything therein to the contrary hereof notwithstanding: Provided, that any alien, who was residing within the limits, and under the jurisdiction of the United States, before the twenty-ninth day of January, one thousand seven hundred and ninety-five, may, within one year after the passing of this act—and any alien who shall have made the declaration of his intention to become a citizen of the United States, in conformity to the provisions of the act, intitled "An act to establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject," may, within four years after having made the declaration aforesaid, be admitted to become a citizen, in the manner prescribed by the said act, upon his making proof that he has resided five years, at least, within the limits, and under the jurisdiction of the United States: And provided also, that no alien, who shall be a native, citizen, denizen or subject of any nation or state with whom the United States shall be at war, at the time of his application, shall be then admitted to become a citizen of the United States.

—*Statutes at Large of the United States* (edition of 1850), v. 1, pp. 566-567.

The following is the text of the two Alien Acts:

June 25, 1798. Statute II, Chap. lviii.—An Act Concerning Aliens.

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be lawful for the President of the United States at any time during the continuance of this act, to order all such aliens as he shall judge dangerous to the peace and safety of the United States, or shall have reasonable grounds to suspect are concerned in any treasonable or secret machinations against the government thereof, to depart out of the territory of the United States, within such time as shall be expressed in such order, which order shall be served on such alien by delivering him a copy thereof, or leaving the same at his usual abode, and returned to the office of the Secretary of State, by the marshal or other person to whom the same shall be directed. And in case any alien, so ordered to depart, shall be found at large within the United States after the time limited in such order for his departure, and not having obtained a license from the President to reside therein, or having obtained such license shall not have conformed thereto, every such alien shall, on conviction thereof, be imprisoned for a term not exceeding three years, and shall never after be admitted to become a citizen of the United States. Provided always and be it further enacted, that if any alien

so ordered to depart shall prove to the satisfaction of the President, by evidence to be taken before such person or persons as the President shall direct, who are for that purpose hereby authorized to administer oaths, that no injury or danger to the United States will arise from suffering such alien to reside therein, the President may grant a license to such alien to remain within the United States for such time as he shall judge proper, and at such place as he may designate. And the President may also require of such alien to enter into a bond to the United States, in such penal sum as he may direct, with one or more sufficient sureties to the satisfaction of the person authorized by the President to take the same, conditioned for the good behavior of such alien during his residence in the United States, and not violating his license, which license the President may revoke whenever he shall think proper.

Sect. 2. And be it further enacted, That it shall be lawful for the President of the United States, whenever he may deem it necessary for the public safety, to order to be removed out of the territory thereof, any alien who may or shall be in prison in pursuance of this act; and to cause to be arrested and sent out of the United States such of those aliens as shall have been ordered to depart therefrom and shall not have obtained a license as aforesaid, in all cases where, in the opinion of the President, the public safety requires a speedy removal. And if any alien so removed or sent out of the United States by the President shall voluntarily return thereto unless by permission of the President of the United States, such alien on conviction thereof, shall be imprisoned so long as, in the opinion of the President, the public safety may require.

Sect. 3. And be it further enacted, That every master or commander of any ship or vessel which shall come into any port of the United States after the first day of July next, shall immediately on his arrival make report in writing to the collector, or other chief officer of the customs of such port, of all aliens, if any, on board his vessel, specifying their names, age, the place of nativity, the country from which they shall have come, the nation to which they belong and owe allegiance, their occupation and a description of their persons, as far as he shall be informed thereof, and on failure, every such master and commander shall forfeit and pay three hundred dollars, for the payment whereof on default of such master or commander, such vessel shall also be holden, and may by such collector or other officer of the customs be detained. And it shall be the duty of such collector, or other officer of the customs, forthwith to transmit to the officer of the department of state true copies of all such returns.

Sect. 4. And be it further enacted, That the circuit and district courts of the United States, shall respectively have cognizance of all crimes and offences against this act. And all marshals and other officers of the United States are required to execute all precepts and orders of the President of the United States issued in pursuance or by virtue of this act.

Sect. 5. And be it further enacted, That it shall be lawful for any alien who may be ordered to be removed from the United States, by virtue of this act, to take with him such part of his goods, chattels, or other property, as he may find convenient; and all property left in the United States by any alien, who may be removed, as aforesaid, shall be, and remain subject to his order and dis-

posal, in the same manner as if this act had not been passed.
