LIST OF MAPS IN VOLUME X

1. TIBET, SHOWING DR. McGOVERN'S ROUTE TO LHASA . . . . . See TIBET: 1922
2. GROWTH OF THE TURKISH EMPIRE, FROM THE END OF THE TWELFTH CENTURY TO 1451 (colored) . . . . . See TURKEY  
[EDITOR'S NOTE: These progressive maps show the growth of the Turkish empire at the expense of the Byzantine empire, beginning with the Sultanate of Roum (Seljuk) at the close of the twelfth century; the Mongol dominion in 1865; the territory of the Seljuk and Osmanli Turks in the middle of the fourteenth century; the extent of the Osmanli empire at the accession of Mohammed II, 1451.]
3. PHYSICAL AND ECONOMIC MAP OF ASIA MINOR, SYRIA AND MESOPOTAMIA (colored) . . . . . See TURKEY
4. REPUBLIC OF TURKEY . . . . . See TURKEY: 1923
5. ECONOMIC MAP OF THE UNITED STATES AND CANADA (colored) . See UNITED STATES  
[EDITOR'S NOTE: Map showing the principal industrial districts and the regions of the chief mineral and agricultural resources.]
6. TERRITORIAL DEVELOPMENT OF THE UNITED STATES (colored) . See UNITED STATES  
[EDITOR'S NOTE: The original territory belonging to the United States, east of the Mississippi river, was augmented by the Louisiana Purchase, from France, in 1803, with boundary adjustments by treaties with Great Britain and Spain in 1818 and 1819, the year of the Florida Purchase. The map shows those explorations which blazed the way for further expansion. The possession of the Oregon country was decided by treaty with Great Britain in 1846. The Republic of Texas was joined to the Union in 1845, its western boundary being in dispute until the Mexican War. The territory between Texas and the Pacific was purchased from Mexico in 1848, while the Gadsden Purchase, from Mexico, brought into the United States in 1853 the portion of Arizona and New Mexico south of the Gila river.]
7. STATES AND TERRITORIES OF THE UNITED STATES IN 1783, 1790, 1803, 1840 AND 1860 (colored) . . . . . See UNITED STATES
8. EXTENT OF SLAVERY IN THE UNITED STATES (colored) . . . . . See UNITED STATES  
[EDITOR'S NOTE: The first of these maps shows the status of slavery from 1775 to 1865, with the effect of the Missouri Compromise of 1820, the Compromise of 1850, the Dred Scott Decision of 1857, state and territorial acts, and the Proclamation of Emancipation of January 1, 1863. The second map shows the states which seceded in 1861, the northwestern portion of Virginia, which refused to secede, becoming a separate state, West Virginia, in 1863.]
9. CIVIL WAR, PRINCIPAL THEATER OF OPERATIONS IN VIRGINIA  
See UNITED STATES: 1861 (July)
10. CIVIL WAR, CAMPAIGNS AROUND VICKSBURG . See UNITED STATES: 1863 (January-April)
11. CIVIL WAR, BATTLE OF GETTYSBURG . . . . . See UNITED STATES: 1863 (June-July)
12. CIVIL WAR, BATTLE OF CHATTANOOGA . See UNITED STATES: 1863 (October-November)
13. CIVIL WAR, ATLANTA CAMPAIGN . . . . . See UNITED STATES: 1864 (May-September)

# THE NEW LARNED HISTORY

## FOR READY REFERENCE, READING AND RESEARCH

VOLUME X

### SWEDEN

**Geographical description.**—**Area.**—**Population.**—**Natural resources.**—“The Kingdom of Sweden occupies the eastern and larger section of the Scandinavian Peninsula, which is situated in the north-west of Europe. Of the total area of this Peninsula—about 770,000 sq. km.—Sweden embraces about 448,000 sq. km. (173,000 sq. miles) or approximately 58% [and in 1921 had an estimated population of 5,954,316]. . . . Sweden, covering as it does 4.7% of the area of Europe, is one of the largest countries of that continent. It is a little smaller than either France or the German Empire but, on the other hand, it is nearly half as large again as Great Britain and Ireland. . . . Sweden is bounded on the East, South and in part also on the West by an inland sea and its various arms: the Gulf of Bothnia, the Baltic Sea, the Sound, the Kattegat and the Skagerrak. Its land boundaries are those dividing it from Finland and Norway.”—J. Guinchard, ed., *Sweden (Historical and Statistical Handbook, pt. 1, p. 1)*.—See also **EUROPE: Modern: Political map.**—The three ancient main divisions of Sweden were Svealand, Götaland and Norrland. The present day Sweden is largely agricultural and in 1919 had 428,026 farms under cultivation, with cereals, potatoes and hay as the principal crops. Timber and wood-working industries are of importance. The public forests have an area of 9,504,978 hectares. In 1920 there were 2,411 wood-working mills of all kinds with a total output valued at 1,665,544,112 kronor. Mining is the leading industry of the country. In 1921, the pig-iron produced amounted to 313,080 tons; iron-ore amounted to 4,331,046 tons; ingot iron amounted to 211,602 tons. Some of the other minerals are lead, silver, copper, zinc, and manganese.

**Early inhabitants.** See **SCANDINAVIAN STATES: Their relationships in language and blood; EUROPE: Prehistoric: Neolithic period; Bronze Age: Scandinavia; Iron Age: Scandinavia.**

**Language.**—“The languages spoken in the Scandinavian North belong to the Teutonic family of Indo-European languages, and seem to have been one and almost homogeneous up to the time of the Viking Age (about 700-1060), when various dialects commence to be distinguished. The old uniform language has been preserved in Northern loanwords in the Finnish and Lap languages and in about one hundred of the oldest Runic inscriptions. The early Old Swedish, from the Viking Age to somewhat later than 1200, did not differ much from the Old Norse (the Old Norwegian and Old Icelandic), while the difference from the Old Danish was almost imperceptible. The sources

for the study of this language period are about two thousand later Runic inscriptions and nearly one hundred Old Swedish loanwords, almost all proper names, in the Russian language. The classical period of Old Swedish falls between 1200 and about 1350. Its most important monuments are the provincial laws and a manuscript collection of saintly legends, called *Codex Bureanus*. The language of this period offers a number of dialects, of which only one, the Gutnic, is strictly defined. In the next period of Old Swedish, from 1350 to the Reformation, a universal language for the whole country is distinguished. The so-called *Oxenstiern* manuscripts and *Codex Bildstenianus* are the chief sources of our knowledge of this language period, mostly of religious contents. Modern Swedish dates from the Reformation, its later period being counted from the publication of the state law in 1734. The Swedish language seems to be based chiefly upon the dialect of Södermanland, with influences from other dialects. Among the Scandinavian languages, Swedish ranks next to the Icelandic in point of purity, and is the foremost of them all in point of beauty.”—V. Nilsson, *Sweden (World's Best Histories Series, pp. 8-9)*.—See also **PHILOLOGY: 11.**

**Early history.**—**Viking period.**—**Ynglinga dynasty.**—“We know, from English sources, that about 500 A. D. there ruled in Svealand a family named *Skilfingar*, which, by means of conquests, extended its way towards Götaland. When the native Swedish traditions first attain to any degree of credibility, the territory of this race had already dissolved into petty states, which corresponded pretty nearly to the existing provinces of Sweden. But there was still at *Uppsala* a great and much honoured *God House (gudahov)*. . . . By degrees, this God House acquired ever greater estates throughout the whole country; and without any other dominion than these estates, its ruler was at last able to defy the petty monarchs of the country. By guile and by force, king *Ingjald* gained possession of their kingdoms, thereby laying the foundations of the Kingdom of Sweden proper. It is difficult to determine the date of this event, but it was probably about 700 A. D. . . . The ancient *Uppsala*—or ‘Ynglinga’—dynasty ruled the kingdom of Sweden uninterruptedly till about the year 1050. To this time belongs that period in the history of the North which was so important for the whole of Europe and which is called the Viking Period (800-1050 A. D.). By the year 862, the Varangians had founded a dominion here, which, however, soon fell to pieces again; but in a short time messengers came to Sweden—prob-

ably from the Swedes who had remained in the East—demanding chiefs. It was then that Rörek (or Rurik), at the head of 'all the Rus'—i. e., the entire Swedish contingent or enlisted sea warriors of the east coast ('Rodslogen')—founded a dominion around Lake Ladoga and the city of Novgorod, which from his warriors—'rodsbyggare' or 'rodsmännen'—at length obtained the name of *Rus-sia*, and soon extended over the greater part of eastern Europe. From thence, the Viking fleets pursued their way down to the Caspian Sea, while Swedish Varangians in great hosts offered their services to the Emperor at Byzantium, and to the King of Georgia."—J. Guinhard, ed., *Sweden (Historical and Statistical Handbook, pt. 1, pp. 83-85)*.—See also SCANDINAVIAN STATES: 8th-9th centuries.

9th-12th centuries.—Introduction of Christianity.—Gradual elimination of paganism.—Stenkil kings.—"The expeditions of the Vikings accelerated in a high degree the introduction of Christianity into the North. In the year 820 *St. Ansgarius* [Ansgar] came to Sweden, sent by the King of the Franks. But the Christian mission which he founded in the heart of the country, at the royal town of Birka, on an island of Lake Mälaren, could not survive, surrounded as it was on all sides by Pagan territory. . . . Nearly two hundred years passed away before Christianity once more gained a secure foothold in Sweden, by way of the more favourably situated province of Västergötland. . . . [This period was] . . . marked by long and severe internal conflicts, chiefly between Christianity and Paganism, but also, as a consequence thereof, between the different provinces: between the Swedish inhabitants of Uppland and the Goths of Östergötland and of Västergötland, who could not agree on the question of succession to the throne. [During these struggles, the kingdom became an *elective monarchy*.] . . . At first it seems as if a powerful family in Västergötland, called from its first king the *Stenkil Line*, took unopposed possession of the throne of the old kings, with whom the Stenkil family was related on the female side. . . . [Inge, Stenkil's son] soon succeeded in attacking and killing his opponent, the pagan king *Blotsven*. This royal family, however, seems to have periodically maintained its power, at least in its native province of Östergötland, and great internal divisions prevailed, in consequence of which Sweden lost Jämtland and Härjedalen to Norway in 1111. The Stenkil Line became extinct before 1130. By that time the power of paganism seems to have been broken; but the irreconcilableness of the three chief tribes [Sverker, Eric, and Stenkil lines] and of their claims still remained."—J. Guinhard, ed., *Sweden (Historical and Statistical Handbook, pt. 1, pp. 85-87)*.—See also SCANDINAVIAN STATES: 8th-11th centuries.—About 1130, Sverker, a chieftain in East Götdland, who had married the widow of the last descendant of Stenkil, was elected king.

1000.—Divides Norway with Denmark. See NORWAY: 005-1000.

1150-1160.—Sverker deposed.—Reign of Eric the Saint.—Sveker only ruled over Gothic Sweden. About 1150 the Svedes deposed him and elected Eric, son of Jedvard (Edward), as king. "The line of *St. Eric* seems to have wished to build up the church upon a national foundation; and Eric himself was recognized as a saint by the people only, never by the pope. By means of a crusade to Finland (before 1160) a beginning was made by him towards the introduction of Christian Swedish

culture into that country, and towards the restoration of the Swedish dominion on the other side of the Baltic, which had been lost during the period of religious conflict. [See FINLAND: 1157-1809.] In course of time Christianity won a complete victory in Sweden. The whole country was divided into ecclesiastical districts—parishes and dioceses—and the ecclesiastical law of the papacy pushed victoriously forward."—*Ibid.*, p. 88.

1250-1397.—Folklunga period. See SCANDINAVIAN STATES: 1018-1397.

1397.—Union of Kalmar.—"The ancient royal lines in the three kingdoms of the North almost simultaneously became extinct, and the right of succession to them all fell upon a woman, Queen *Margaret* of Denmark. The Swedish lords who were discontented with King Albrekt, offered her the crown of Sweden; and after Albrekt had been defeated at the battle of Falköping (1389), there came about the union of the three kingdoms of the North, Sweden, Norway, and Denmark [which was consummated 1397]. This was the beginning of the last period of the Middle Ages in Sweden—what is called the Union of Kalmar."—*Ibid.*, p. 90.—See also SCANDINAVIAN STATES: 1018-1397; DENMARK: Survey of history.

14th-15th centuries.—Extent of territory. See SCANDINAVIAN STATES: 1397-1527 (Map).

1436-1523.—Rise of two parties.—Sten Sture.—Stockholm massacre.—Under the leadership of Engelbrekt a united national consciousness began to dawn. About 1436, "there arose in Sweden two parties, one which worked for the Danish kings, and the other a national party, which desired to hand over the government of Sweden to Swedes—forming a kind of provisional administration and bearing the name of 'Protector of the Realm' (*riksföreståndare*). At the head of the latter party there usually stood members of the two *Sture* families; and these looked for support to the peasantry of Sweden. [In 1470, *Sten Sture the Elder* was proclaimed administrator of the kingdom.] After the last Protector of the name of Sture, or *Sten Sture the Younger*, had lost his life in 1520, in a battle against King *Christian II*, the last-named monarch once more succeeded in restoring the Union. But in consequence of the insane deeds which began with the 'Massacre of Stockholm,' and caused several hundreds of the best men of Sweden to be treacherously put to death, he made his rule so detested that, in a few months, the whole of Sweden was again in a state of insurrection. This time it was the renowned *Gustavus Vasa* who placed himself at the head of the war of liberation; and with the successful completion of the war, and the proclamation, in 1523, of Gustavus Vasa as King of Sweden, the days of the Kalmar Union were past for ever."—*Ibid.*, pp. 00-02.—See also SCANDINAVIAN STATES: 1397-1527.

1523-1604.—Reigns of Gustavus Vasa and his sons.—Wars with Russia and Denmark.—Baltic question.—Prince Sigismund elected king of Poland and consequent loss of the Swedish crown.—Resulting hostilities.—"Gustavus Vasa, the founder of his dynasty, was not a very religious man. He had determined to make Sweden a Lutheran country for two main reasons: first, because he wanted the lands of the Church, both in order to enrich the crown and also to attach the nobles to his cause; secondly, because, as he said, the 'priests were all unionists in Sweden'—that is, they all wished to maintain the union of the three Scandinavian kingdoms which he had broken, and they were, therefore, irreconcilably hostile to his dynasty. Three other great services

were rendered to Sweden by Gustavus I. (1) at the Diet of Westerås, in 1544, the hereditary character of the monarchy was definitely declared. This was a great victory over the nobles, who in nearly all the Northern and Eastern Kingdoms of Europe—and in Sweden itself at a later time—succeeded in erecting an oligarchy, which oppressed the peasants and crippled the activity of the State. (2) Again, by his consistent favouring of the middle classes, and his conclusion of commercial treaties with Russia, France, and the Netherlands, he became the founder of Swedish commerce, and dealt a serious blow at the Baltic supremacy of the Hanseatic League. (3) And lastly, he appears as the founder of that policy of territorial aggression (toward the South and East), which, however, we may judge of its morality in this age . . . was certainly looked upon then as the prime duty of all Kings, and which in the case of Sweden was the direct path toward the great part which she was destined to play in the 17th century. His first enemy was Russia, a recently consolidated State, already bordering on the half-Polish province of Livonia and the Swedish province of Finland; already extending her flanks to the Caucasus and the Don on the south and to the White Sea on the north. . . . The wars of Ivan the Terrible (1534-84) for Finland and Livonia were unsuccessful, and the chief interest which they possess for us is that in 1561, the year after the death of Gustavus I., his son Eric acquired for Sweden the province of Esthonia, which appears to have previously fluctuated between dependence on Denmark and on Russia. [See REVAL.] This was the first of the so-called 'Baltic provinces' of Sweden; herewith began the exclusion of Russia from the 'Dominium Maris Baltici.' But this possession brought Eric face to face with Poland, a country which was disputing with Russia the possession of Livonia. Poland, under the last of the great Jaghellon line, was already displaying the fatal tendency to anarchy which at last devoured her. . . . Poland turned for help to the King of Denmark, in whom Eric, with keen insight, recognised the most dangerous foe for Sweden. In 1563 Eric concluded peace with Russia, and the nations of the North began to assume their natural relation to each other. The Baltic question rapidly became an European one. English sympathies were with Sweden and Russia; Spain and the Emperor as naturally took the other side, and suggested to the King of Denmark, Frederick II (1550-1588), that he should ask for the hand of Mary Stuart; to counteract which King Eric indulged in an elaborate flirtation with Elizabeth. The powers of North Germany took sides in the war (1565), but the war itself produced but little result. The able Eric displayed symptoms of insanity and was extremely unpopular with the Swedish nobles, and Denmark was as yet too powerful an enemy for Sweden to overthrow. In 1567 Eric was deposed by a revolution, the fruit of which was reaped by his brother John. When the great Gustavus I. was dying, and could no longer speak, he made a sign that he wished to write, and wrote half a sentence of warning to his people: 'Rather die a hundred times than abandon the Gospel.' . . . Then his hand failed and he dropped back dead. He was not, I have said, a particularly religious man, but he marked out the true path for Sweden. Now in 1567 a certain reaction set in: many of the nobles, who had felt the yoke of Gustavus heavy and of Eric heavier, seemed ready to drift back to Catholicism,

and John's reign (1567-1592) was one of reaction in many ways. John never openly went over to Catholicism, but he cast off all the Lutheranism that he dared to cast off. He made peace with Denmark [the Peace of Stettin, December 13, 1570] and war with Russia; thereby he allowed the former country to develop her trade and foreign relations enormously and rapidly, and made the task of his successors doubly hard. Above all, he originated, by his marriage with Catherine Jaghellon, the disastrous connexion with Poland. . . . The last of the Jaghellon Kings died in 1572, and the elected King, Stephen Bathori, died in 1586. Ivan the Terrible sought the crown of Poland. . . . John of Sweden, on the other hand, saw an opening for the House of Vasa. His son Sigismund was, by dint of bribes and intrigue, elected King of Poland. But he had to become a Catholic. . . . The union of Sweden with Poland, which would necessarily follow, if Sigismund succeeded his father on the Swedish throne, would be almost certainly a Catholic union. . . . Sweden was still a free country, in the sense of being governed in a parliamentary way with the consent of the four estates, Nobles, Clergy, Citizens, and Peasants. Whatever the Riddarhus might think upon the subject, the three non-noble estates were . . . Protestants and would have no Catholic king. Even the nobles were only induced to consent to Sigismund becoming King of Poland without forfeiting his right to succeed in Sweden, by the grant of extravagant privileges, practically so great, had they been observed, as to emasculate the Vasa monarchy. Luckily the people had a deliverer at hand. Charles, Duke of Sudermania, the youngest of the sons of Gustavus I, lived wholly in the best traditions of his father's policy. He might be relied upon to head an insurrection, if necessary. Even before John's death in 1590 murmurs began to be heard that he had been an usurper—was his son necessarily the heir? These murmurs increased, when in 1593, after waiting three years, Sigismund came home to claim his kingdom, with a present of 20,000 crowns from the Pope in his pocket, 'to defray the cost of the restoration of Catholicism in Sweden.' Duke Charles had already prepared his plans when the King arrived; there seems little doubt that he was playing a game, and for the crown. We are not concerned with his motives, it is sufficient to know that they corresponded with the interests of his country. In 1593, just before Sigismund had landed, Charles had been chosen Regent and President of the Council of State. . . . When Sigismund went back to Poland at the end of the year 1594, he could not prevent Charles being chosen to administer the kingdom in his absence, and Diet after Diet subsequently confirmed the power of the Regent. The peasants of Dalecarlia, the great province of the centre, which had first come forward to the support of Gustavus I, in 1520, sent up a petition to the effect that there ought to be only one king in Sweden, and that Sigismund had forfeited the crown. Charles himself had been unwilling to lead a revolution, until it became apparent that Sigismund was massing troops and raising money in Poland for an attack upon his native land. In 1597 the civil war may be said to have begun; in the following year Sigismund landed (with only 5,000 Polish troops) and was utterly defeated near Linköping (on September 25, 1598). On the next day a treaty was concluded by which Sigismund was acknowledged as King, but promised to send away his foreign troops and maintain Protestantism. It was ob-

viously a mere effort to gain time, and in the following year on failing to keep the condition, which he never had the remotest intention of keeping, he was formally deposed (July, 1599). The contest, however, was by no means over, and it led to that perpetual hostility between Sweden and Poland which played such an important part in the history of Northern Europe in the 17th century. . . . In 1604 Charles was solemnly crowned King; that was the second birthday of the Vasa monarchy; the crown was entailed upon his eldest son, Gustavus Adolphus, and his descendants, being Protestants, and the descendants of Sigismund were forever excluded. 'Every prince who should deviate from the Confession of Augsburg should ipso facto lose the crown. Anyone who should attempt to effect any change of religion should be declared an enemy and a traitor. Sweden should

brought up in Sweden, and might be considered as having some just claim to the throne. The queen mother and Duke John laid down the tutelage and the regency. . . . Nine days later the young king, in the presence of the representatives of the estates of Sweden, received the reins of government. . . . He was then in the first month of his 18th year. He took charge of the kingdom when it was in a critical condition. Since the death of Gustavus Vasa, his grandfather, a period of more than 50 years, Sweden had not enjoyed a single year of peace. In that long space of time, there had been constant dissensions and violence. . . . Sweden was much constrained and embarrassed by her boundaries, and by the jealousies and hostile feelings of her neighbours on the north and the south. Denmark and Norway were united in a kind of dual

1611-1629.—Danish, Russian and Polish wars of Gustavus Adolphus.—On the death of Charles in 1611 his son, Gustavus Adolphus, did not immediately assume the title of king. "Sweden remained without a sovereign for two months; for, according to the will of the deceased king, the queen and his nephew (Duke John), with six councillors of state, were to rule till the wishes of the people could be made known in the customary manner. After an interregnum of two months, the Diet opened at Nyköping. . . . Duke John was the son of Sigismund, King of Poland, had been

government under the same king; and both alike were opposed to the growth of Swedish power, and were in continual dispute with her in respect to territory, as well as to the naval and commercial uses of the adjacent seas. Those provinces in the south which are now the most productive and valuable of Sweden, then belonged to Denmark, or were in dispute between the two countries. On the east, Russia and Poland embarrassed and threatened her." During the first year of his reign Gustavus devoted his energies to the war with Denmark. He fought at a disadvantage. His resources were unequal to those of the Danes. His capital, Stockholm, was once attacked by a Danish fleet and in serious peril. But he secured an advantageous peace in the spring of 1613. "Sweden renounced some of its conquests and pretensions, and the Danes gave up to Sweden the city of Calmar on the Baltic, and at the end of six years were to surrender to Sweden its city of Elfsborg on the North Sea; the latter agreeing to pay to the Danes 1,000,000

thalers for the surrender. . . . At the death of Charles IX, and the ascension of Gustavus to the throne, Sweden was in a state of war with Russia, and was so to continue for several years; though hostilities were not all the time prosecuted with vigor, and were some of the time practically suspended. . . . The Swedes held possession of a large area of what is now Russian territory, as well as important towns and fortresses. The extensive country of Finland . . . had been united with Sweden nearly five centuries, as it continued to be nearly two hundred years longer. But towns and territory, also a long distance within the lines of the Russian population, were then in the power of the Swedish forces. The troubles and dissensions relative to the succession, and extreme dislike to the Poles, had caused a numerous party to seek a Swedish prince for its sovereign, and to this end had sent an embassy to Stockholm near the date of the death of Charles IX. Finding that the young Gustavus had acceded to the crown of his father, this Russian party desired to secure for the Russian throne Charles Philip, a younger brother of Gustavus. The Swedish king did not show eagerness to bring this plan to success; but, the war being terminated with Denmark, he was resolved to draw what advantage he could from the weakened condition of Russia, to the advancement and security of the interests of Sweden. In July, 1613, the Russians chose for czar Michael Romanoff, then sixteen years of age. . . . Gustavus proceeded to push military operations with as much vigor as possible. . . . For four years more the war between these two countries continued; . . . the advantages being generally on the side of the Swedes, though they were not always successful in important sieges." Finally, through the mediation of English agents, terms of peace were agreed upon. "The treaty was signed February, 1617. Russia yielded to Sweden a large breadth of territory, shutting herself out from the Baltic; the land where St. Petersburg now stands becoming Swedish territory. . . . The next important work in hand was to deal with Poland. . . . At the death of Charles IX. an armistice had been signed, which was to continue until July, 1612. This was thrice extended, the last time to January, 1616. The latter date had not been reached when the Polish partisans began to intrigue actively in Sweden, and those Swedes who still adhered to the religion and the dynastic rights of Sigismund could not be otherwise than secretly or openly stirred. Sigismund was not only supported by the power of Poland, and by his strong show of legal title to the Swedish crown, but there were strong influences on his side in European high political and religious quarters. He was united to the house of Hapsburg by the bonds of relationship as well as of theology. Philip III. of Spain, and he who afterwards became Ferdinand II. of Austria, were his brothers-in-law. . . . Sigismund came then to the resolution to make war for the possession of Sweden. He was promised enrolment of troops in Germany, the Spaniards had engaged to arm a fleet in his support, and the estates of Poland were to furnish their quota. . . . Efforts were made to stir up revolt against Gustavus in his own kingdom," and he promptly declared war. "During the year 1617 hostilities were prosecuted on both sides with much vigor, and loss of life. Towns and strong positions were taken, and invasions and sudden attacks were made on both sides; the advantages being generally with the Swedes, though not decisive. During the winter of 1618 the Poles invaded Livonia and Esthonia,

carrying pillage and fire in their march, and then retiring." Gustavus would not allow his generals to retaliate. "'We wish not,' he said, 'to war against the peasant, whom we had rather protect than ruin.'" In 1618 there was an armistice, with peace negotiations which failed, and the war began anew. In August, 1621, Gustavus laid siege to Riga with a strong fleet and army, and met with an obstinate resistance; but the place was surrendered to him at the end of nearly six weeks. Again the belligerents agreed to an armistice, and "the year 1624 is declared by the Swedish historians to have been the only one in which Gustavus Adolphus was able to devote all his labors and cares to the interior administration of his country. In the following year the war was renewed. The third campaign of the Swedish king against Poland was terminated by the completion of the conquest of Livonia; and the possession of Courland assured to him Riga, the object of his special care." The decisive battle of the campaign was fought at Wallhof, January 7, 1626. The king of Sweden then "resolved to transport the theater of war from the banks of the Duna to those of the Vistula, to attack Poland at the heart, and approach Germany. Here commences that part of the war of Poland which is called also the war of Prussia. . . . He [Gustavus] realized the need of a port in Eastern Prussia; and the elector of Brandenburg, his brother-in-law, was invested with that duchy under the suzerainty of Poland. [See BRANDENBURG: 1630-1634.] Gustavus did not allow these considerations to arrest his course. . . . June 26 the king arrived before Pillau, and possessed himself of that city without much resistance, the garrison being small. . . . Braunsberg capitulated June 30. July 1, Flanenberg surrendered, and Elbing on the 6th, which was followed by Marienberg on the 8th; the last a well-fortified city. Many towns of less importance were likewise soon captured. Gustavus rapidly pushed aside all resistance, and soon reached the frontiers of Pomerania." In the engagements of the campaign of 1627 the king was twice wounded—once by a musket-ball in the groin, and the second time by a ball that entered near the neck and lodged at the upper corner of the right shoulder-blade. In June, 1629, "there was a heated engagement at Stum, in which Gustavus ran great danger, his force being inferior to the enemy." In September of that year "an armistice [truce of Altmark] was concluded for six years between the belligerent kingdoms. Five cities which had been conquered by Swedish arms were given up to Poland, and three others delivered to the elector of Brandenburg, to be held during the armistice. Gustavus was to continue to occupy Pillau and three other towns of some importance. Liberty of conscience was to be accorded to Protestants and Catholics, and commerce was declared free between the two nations."—J. L. 1644-1697.—Reign and abdication of Queen Christina.—Wars of Charles X and Charles XI with Poland, Denmark and Germany.—Establishment of absolutism.—“Christina, the only child and successor of Gustavus Adolphus, had been brought up by her aunt, Katerina, the Princess Palatine, until the death of the latter in 1639, and in the year 1644, when she reached the age of eighteen, the regency was absolved, and she began to rule in her own name. She had inherited much of her father's talent, and was perhaps the most learned and accomplished woman of her time. She had received the education of a man. . . . She had great taste for the fine arts and for the pursuits of science; but while she encouraged scientific men at her court, she also spent money too recklessly in rewarding artistic merit of all kinds. . . . As a dangerous drawback to her many splendid qualities, she had all the waywardness, caprice, restlessness of mind, fickleness and love of display for which her beautiful mother, Maria Eleanora of Brandenburg, had been noted. She lavished crown lands and the money of the state upon favourites. . . . In the meanwhile the national Estates had been split up into parties, the aristocrats being led by Axel Oxenstierna, and the democrats, with whom the queen sided, by Johan Skytte. The clergy struggled to maintain their independence under the oppressive patronage of the nobles, and the peasants agitated to recover some of the power which the great Gustavus Vasa had granted them, but which his successors had by degrees taken from them. The kingdom was in a ferment, and a civil war seemed to be unavoidable. The council urged upon the queen to marry, and her cousin, Karl Gustaf of the Palatinate, entreated her to fulfil the promise which she had given him in earlier years of choosing him for her husband. At length . . . she proposed him for her successor. . . . After much opposition, Karl Gustaf was declared successor to the throne in the event of the queen having no children of her own. . . . The few years of Christina's reign after her solemn coronation were disquieted by continued dissensions in the diet, attempts at revolts, and by a general distress, which was greatly increased by her profuse wastefulness and her reckless squandering of the property of the crown. As early as the year 1648 she had conceived the idea of abdicating, but, being hindered by her old friends and councillors, she deferred carrying out her wishes till 1654.” In that year the abdication was formally accomplished, and she left the country at once, traveling through Europe. In 1655 she renounced Protestantism and entered the Roman Catholic Church. “At the death [1660] of her cousin and successor, Karl X. Gustaf, as he was called by the Swedes, and who is known to us as Charles X., she returned to Sweden and claimed the crown for herself; but neither then, nor in 1667, when she renewed her pretensions, would the council encourage her hopes, and, after a final attempt to gain the vacant throne of Poland in 1668, she gave up all schemes of ever reigning again, and retired to Rome, where she died in 1689 at the

age of sixty-three. . . . The short reign of Charles X., from 1655 to 1660, was a time of great disorder and unquiet in Sweden. . . . He resolved to engage the people in active war. . . . The ill-timed demand of the Polish king, Johan Kasimir, to be proclaimed the true heir to Christina's throne, drew the first attack upon Poland. Charles X. was born to be a soldier and a conqueror, and the success and rapidity with which he overran all Poland, and crushed the Polish army in a three days' engagement at Warsaw in 1656, showed that he was a worthy pupil and successor of his uncle, the great Gustavus Adolphus. But it was easier for him to make conquests than to keep them, and when the Russians, in their jealousy of the increasing power of Sweden, took part in the war, and began to attack Livonia and Esthonia, while an imperial army advanced into Poland to assist the Poles, who, infuriated at the excesses of the Swedish soldiers, had risen en masse against them, Charles saw the expediency of retreating; and, leaving only a few detachments of troops to watch his enemies, he turned upon Denmark. This war, which was closed by the peace signed at Roeskilde in 1658, enriched Sweden at the expense of Denmark, and gave to the former the old provinces of Skaania, Halland and Bleking [Blekinge], by which the Swedish monarchy obtained natural and well-defined boundaries. The success of this first Danish war, in which Denmark for a time lay crushed under the power of the Swedish king, emboldened him to renew his attacks, and between 1658 and 1660 Charles X. made war five times on the Danish monarch, more than once laid siege to Copenhagen; and, under his able captain, Wrangel, nearly destroyed the Danish fleet. At the close of 1659, when it seemed as if Denmark must be wholly subjugated by Sweden, the English and Dutch, alarmed at the ambition of the Swedish king, sent an allied fleet into the Cattegat to operate with the Danes.” Charles, checked in his operations, was preparing to carry the war into Norway, when he died suddenly, in the winter of 1660, and peace was made by the treaty of Oliva. “By the early death of Charles X., Sweden was again brought under the rule of a regency, for his son and successor, Charles XI., was only four years old when he became king. . . . Every department of the government was left to suffer from mismanagement, the army and navy were neglected, the defences of the frontiers fell into decay, and the public servants were unable to procure their pay. To relieve the great want of money, the regency accepted subsidies, or payments of money from foreign states to maintain peace towards them, and hired out troops to serve in other countries. In this state of things the young king grew up without receiving any very careful education. . . . Charles was declared of age in his 18th year. . . . He was not left long in the enjoyment of mere exercises of amusement, for in 1674 Louis XIV., of France, in conformity with the treaty which the regents had concluded with him, called upon the young Swedish king to help him in the war which he was carrying on against the German princes. [See NETHERLANDS: 1674-1678.] Charles sent an army into Germany, which advanced without opposition into the heart of Brandenburg, but before these forces could form a junction with the French troops then encamped in the Rhineland, the Elector came upon them unawares at Fehrbellin [June 18, 1675] and defeated them. The losses of the Swedes on this occasion were not great, but the result of their defeat was to give encouragement to the old rivals

of Sweden; and early in 1675 both Holland and Denmark declared war against the Swedish king, who, finding that he had been left by the regency almost without army, navy, or money, resolved for the future to take the management of public affairs entirely into his own hands." When he "began the war by a sea engagement with the enemy off Oeland, he found that his ships of war had suffered as much as the land-defences from the long-continued neglect of his regents. The Danes, under their great admiral, Niels Juel, and supported by a Dutch squadron, beat the Swedish fleet, many of whose ships were burnt or sunk. This defeat was atoned for by a victory on land, gained by Charles himself in 1670, over the Danes on the snow-covered hills around the town of Lund. Success was not won without heavy cost, for after a most sanguinary fight, continued from daybreak till night, King Charles, although master of the field, found that more than half his men had been killed. The Danes, who had suffered fully as much, were forced to retreat, leaving Lund in the hands of the Swedes; and although they several times repeated the attempt, they failed in recovering the province of Skaania, which was the great object of their ambition. In Germany the fortune of war did not favor the Swedes, although they fought gallantly under their general, Otto Königsmark [Stettin was surrendered after a long siege in 1677, and Stralsund in 1678]; and Charles XI. was glad to enter into negotiations for taking part in the general peace which France was urging upon all the leading powers of Europe, and which was signed at the palace of St. Germain, in 1679, by the representatives of the respective princes. Sweden recovered the whole of Pomerania, which had been occupied during the war by Austria and Brandenburg, and all Swedish and Danish conquests were mutually renounced. . . . At the close of this war Charles XI. began in good earnest to put his kingdom in order." By sternly reclaiming crown-lands which had been wantonly alienated by former rulers, and by compelling other restitutions, Charles broke the power of the nobles, and so humbled the National Estates that they "proclaimed him, in a diet held in 1603, to be an absolute sovereign king, 'who had the power and right to rule his kingdom as he pleased.' [He attained an absolutism, in fact, which was practically unlimited. He died in 1697, leaving three children, the eldest of whom, who succeeded him, was the extraordinary Charles XII."—E. C. 1697-1700.—Conspiracy of three sovereigns against Charles XII.—First campaigns of the young king, in Denmark and Russia.—"Charles XII, at his accession to the throne, found himself the absolute and undisturbed master, not only of Sweden and Finland, but also of Livonia, Carelia, Ingria, Wismar, Viborg, the Islands of Rügen and Oesel, and the finest part of Pomerania, together with the duchy of Bremen and Verden,—all of them the conquests of his ancestors. . . . The beginning of the king's reign gave no very favorable idea of his character. It was imagined that he had been more ambitious of obtaining the supreme power than worthy of possessing it. True it is, he had no dangerous passion; but his conduct discovered nothing but the sallies of youth and the freaks of obstinacy. He seemed to be equally proud and lazy. The ambassadors who resided at his court took him even for a person of mean capacity, and represented him as such to their respective masters. The Swedes entertained the same opinion of him: nobody knew his real character: he did not even know it himself, until the storm that suddenly arose in the North gave him an opportunity of displaying his great talents, which had hitherto lain concealed. Three powerful princes, taking the advantage of his youth, conspired his ruin almost at the same time. The first was his own cousin, Frederick IV, king of Denmark: the second, Augustus, elector of Saxony and King of Poland; Peter the Great, czar of Muscovy, was the third, and most dangerous. . . . The founder of the Russian empire was ambitious of being a conqueror. . . . Besides, he wanted a port on the east side of the Baltic, to facilitate the execution of all his schemes. He wanted the province of Ingria, which lies to the northeast of Livonia. The Swedes were in possession of it, and from them he resolved to take it by force. His predecessors had had claims upon Ingria, Esthonia, and Livonia; and the present seemed a favorable opportunity for reviving these claims, which had lain buried for a hundred years, and had been cancelled by the sanction of treaties. He therefore made a league with the King of Poland, to wrest from young Charles XII all the territories that are bounded by the Gulf of Finland, the Baltic Sea, Poland, and Muscovy. The news of these preparations struck the Swedes with consternation, and alarmed the council." But the effect on the young King was instantly and strangely sobering. He assumed the responsibilities of the situation at once, and took into his own hands the preparations for war. From that moment "he entered on a new course of life, from which he never afterwards deviated in one single instance. Full of the idea of Alexander and Caesar, he proposed to imitate those two conquerors in everything but their vices. No longer did he indulge himself in magnificence, sports, and recreations: he reduced his table to the most rigid frugality. He had formerly been fond of gayety and dress; but from that time he was never clad otherwise than as a common soldier. . . . He began by assuring the Duke of Holstein, his brother-in-law, of a speedy assistance. Eight thousand men were immediately sent into Pomerania, a province bordering upon Holstein, in order to enable the duke to make head against the Danes. The duke

indeed had need of them. His dominions were already laid waste, the castle of Gottorp taken, and the city of Tönningen pressed by an obstinate siege, to which the King of Denmark had come in person. . . . This spark began to throw the empire into a flame. . . . On the one side, the Saxon troops of the King of Poland, those of Brandenburg Wolfenbüttel, and Hesse Cassel, advanced to join the Danes. On the other, the King of Sweden's 8,000 men, the troops of Hanover and Zell, and three Dutch regiments, came to the assistance of the duke. While the little country of Holstein was thus the theatre of war, two squadrons, the one from England and the other from Holland, appeared in the Baltic. . . . They joined the young King of Sweden, who seemed to be in danger of being crushed. . . . Charles set out for his first campaign on the 8th day of May, new style, in the year 1700, and left Stockholm, whither he never returned. . . . His fleet consisted of three-and-forty vessels. . . . He joined the squadrons of the allies," and made a descent upon Copenhagen. The city surrendered to escape bombardment, and in less than six weeks Charles had extorted from the Danish King a treaty of peace, negotiated at Travendahl, which indemnified the Duke of Holstein for all the expenses of the war and delivered him from oppression. For himself, Charles asked nothing. "Exactly at the same time, the King of Poland invested Riga, the capital of Livonia; and the czar was advancing on the east at the head of nearly 100,000 men." Riga was defended with great skill and determination, and Augustus was easily persuaded to abandon the siege on the remonstrance of the Dutch, who had much merchandise in the town. "The only thing that Charles had now to do towards the finishing of his first campaign, was to march against his rival in glory, Peter Alexiovitch." Peter had appeared before Narva on October 1, at the head of 80,000 men, mostly undisciplined barbarians, "some armed with arrows, and others with clubs. Few of them had guns; none of them had ever seen a regular siege; and there was not one good cannoner in the whole army. . . . Narva was almost without fortifications: Baron Horn, who commanded there, had not 1,000 regular troops; and yet this immense army could not reduce it in six weeks. It was now the 15th of November, when the czar learned that the King of Sweden had crossed the sea with 200 transports, and was advancing to the relief of Narva. The Swedes were not above 20,000 strong." But the czar was not confident. He had another army marching to his support, and he left the camp at Narva to hasten its movements. Charles' motions were too quick for him. He reached Narva on November 30, after a forced march, with a vanguard of only 8,000 men, and at once, without waiting for the remainder of his army to come up, he stormed the Russian intrenchments. "The Swedes advanced with fixed bayonets, having a furious shower of snow on their backs, which drove full in the face of the enemy." The victory was complete. "The Swedes had not above 600 men. Eight thousand Muscovites had been killed in their intrenchments; many were drowned; many had crossed the river," and 30,000 who held a part of the camp at night-fall, surrendered next morning. When czar Peter, who was pressing the march of his 40,000 men, received news of the disaster at Narva, he turned homeward, and set himself seriously to the work of drilling and disciplining his troops. "The Swedes," he said phlegmatically, "will teach us to beat them."—Voltaire, *History of Charles XII.*

*king of Sweden, bk. 1-2.*—See also UKRAINE: 1700-1721.

1701-1707.—Invasion and subjugation of Poland and Saxony by Charles XII.—Deposition of Augustus from the Polish throne.—Charles at the summit of his career.—"Whilst Peter, abandoning all the provinces he had invaded, retreated to his own dominions, and employed himself in training his undisciplined serfs, Charles prepared to take the field against his only remaining adversary, the King of Poland. Leaving Narva, where he passed the winter, he entered Livonia, and appeared in the neighbourhood of Riga, the very place which the Poles and Saxons had in vain besieged. Dreading the storm that now approached, Augustus had entered into a closer alliance with the czar; and at an interview which took place at Birsen, a small town in Lithuania, it was agreed that each should furnish the other with a body of 50,000 mercenaries, to be paid by Russia. . . . The Saxon army, having failed in their attempt on Riga, endeavoured to prevent the Swedes from crossing the Dwina; but the passage was effected under cover of a thick cloud of smoke from the burning of wet straw, and by means of large boats with high wooden parapets along the sides, to protect the soldiers from the fire of the enemy, who were driven from their intrenchments with the loss of 2,000 killed and 1,500 prisoners. Charles immediately advanced to Mittau, the capital of Courland, the garrison of which, with all the other towns and forts in the duchy, surrendered at discretion. He next passed into Lithuania, conquering wherever he came, and driving 20,000 Russians before him with the utmost precipitation. On reaching Birsen, it gave him no little satisfaction, as he himself confessed, to enter in triumph the very town where, only a few months before, Augustus and the czar had plotted his destruction. It was here that he formed the daring project of dethroning the King of Poland by means of his own subjects, whose notions of liberty could not tolerate the measures of a despotic government. . . . The fate of Augustus, already desperate, was here consummated by the treachery of the primate Radziewiski, who caused it to be immediately notified to all the palatines, that no alternative remained but to submit to the will of the conqueror. The deserted monarch resolved to defend his crown by force of arms; the two kings met near Clissau (July 13, 1702), where after a bloody battle fortune again declared for the Swedes. Charles halted not a moment on the field of victory, but marched rapidly to Cracow in pursuit of his antagonist. That city was taken without firing a shot, and taxed with a contribution of 100,000 rix-dollars. The fugitive prince obtained an unexpected respite of six weeks, his indefatigable rival having had his thigh-bone fractured by an accidental fall from his horse. The interval was spent in hostile preparations, but the recovery of Charles overturned all the schemes of his enemies, and the decisive battle of Pultusk (May 1, 1703) completed the humiliation of the unfortunate Augustus. At the instigation of the faithless cardinal, the diet at Warsaw declared (February 14, 1704) that the Elector of Saxony was incapable of wearing the crown, which was soon after bestowed on Stanislaus Leczinski, the young palatine of Posnania. Count Piper strongly urged his royal master to assume the sovereignty himself. . . . But the splendours of a diadem had few charms in the eyes of a conqueror who confessed that he felt much more pleasure in bestowing thrones upon others than in winning them for himself. Having

SURRENDER OF WARSAW TO THE GREAT ELECTOR AND THE SWEDISH FIELD MARCHAL WRANGEL, 1656

(From the painting by Wilhelm Rauber)

thus succeeded in his favourite project, Charles resumed his march to complete the entire conquest of the kingdom. Everywhere had fortune crowned the bold expeditions of this adventurous prince. Whilst his generals and armies were pursuing their career from province to province, he had himself opened a passage for his victorious troops into Saxony and the imperial dominions. His ships, now masters of the Baltic, were employed in transporting to Sweden the prisoners taken in the wars. Denmark, bound up by the treaty of Travendhal, was prevented from offering any active interference; the Russians were kept in check towards the east by a detachment of 30,000 Swedes; so that the whole region was kept in awe by the sword of the conqueror, from the German Ocean almost to the mouth of the Borysthènes, and even to the gates of Moscow. The Czar Peter in the mean time, having carried Narva by assault, and captured several towns fortresses in Livonia, held a conference with Augustus at Grodno, where the two sovereigns concerted their plans for attacking the Scandinavian invaders in their new conquests, with a combined army of 60,000 men, under Prince Menzikoff and General Schulleberg. Had the fate of the contest depended on numerical superiority alone, Charles must have been crushed before the overwhelming power of his enemies; but his courage and good fortune prevailed over every disadvantage. The scattered hordes of Muscovy were overthrown with so great celerity, that one detachment after another was routed before they learned the defeat of their companions. Schulleberg, with all his experience and reputation, was not more successful, having been completely beaten by Renschild, the Parmenio of the northern Alexander, in a sanguinary action (Feb. 12, 1706), at the small town of Travenstadt, near Punitz, a place already fatal to the cause of Augustus. . . . The reduction of Saxony, which Charles next invaded, obliged Augustus to implore peace on any terms. The conditions exacted by the victor were, that he should renounce for ever the crown of Poland; acknowledge Stanislaus as lawful king; and dissolve his treaty of alliance with Russia. The inflexible temper of Charles was not likely to mitigate the severity of these demands, but their rigour was increased in consequence of the defeat of General Meyerfeld, near Kalisch, by Prince Menzikoff—the first advantage which the Muscovites had gained over the Swedes in a pitched battle. . . . The numerous victories of Charles, and the arbitrary manner in which he had deposed the King of Poland, filled all Europe with astonishment. Some states entertained apprehensions of his power, while others prepared to solicit his friendship. France, harassed by expensive wars in Spain, Italy, and the Netherlands, courted his alliance with an ardour proportioned to the distressing state of her affairs. Offended at the declaration issued against him by the diet of Ratisbon, and resenting an indignity offered to Baron de Stralheim, his envoy at Vienna, he magnified these trivial affronts into an occasion of quarrelling with the emperor, who was obliged to succumb, and among other mortifying concessions, to grant his Lutheran subjects in Silesia the free exercise of their religious liberties as secured by the treaties of Westphalia. . . . The ambitious prince was now in the zenith of his glory; he had experienced no reverse, nor met with any interruption to his victories. The romantic extravagance of his views increased with his success. One year, he thought, will suffice for the conquest of Russia. The court of Rome was next to feel his vengeance,

as the pope had dared to oppose the concession of religious liberty to the Silesian Protestants. No enterprise at that time appeared impossible to him."—A. Crichton, *Scandinavia, ancient and modern*, v. 2, ch. 3.

1707-1718.—Charles XII in Russia.—Ruinous defeat at *Poltava*.—Refuge among the Turks.—Fruitless intrigues.—His return to Sweden and death.—"From Saxony, Charles marched back into Poland [September, 1707], where Peter was making some ineffectual efforts to revive the party of Augustus. Peter retired before his rival, who had, however, the satisfaction of defeating an army of 20,000 Russians [at Golowstschin, in the spring of 1708], strongly entrenched. Intoxicated by success, he rejected the czar's offers of peace, declaring that he would treat at Moscow; and without forming any systematic plan of operations, he crossed the frontiers, resolved on the destruction of that ancient city. Peter prevented the advance of the Swedes, on the direct line, by destroying the roads and desolating the country; Charles, after having endured great privations, turned off towards the Ukraine, whither he had been invited by Mazeppa, the chief of the Cossacks, who, disgusted by the conduct of the czar, had resolved to throw off his allegiance. In spite of all the obstacles that nature and the enemy could throw in his way, Charles reached the place of rendezvous; but he had the mortification to find Mazeppa appear in his camp as a fugitive rather than an ally, for the czar had discovered his treason, and disconcerted his schemes by the punishment of his associates. A still greater misfortune to the Swedes was the loss of the convoy and the ruin of the reinforcement they had expected from Livonia. General Lewenhaupt, to whose care it was entrusted, had been forced into three general engagements by the Russians; and though he had eminently distinguished himself by his courage and conduct, he was forced to set fire to his wagons to prevent their falling into the hands of the enemy. Undaunted by these misfortunes, Charles continued the campaign even in the depth of a winter so severe that 2,000 men were at once frozen to death almost in his presence. At length he laid siege to Pultowa [or *Poltava*], a fortified city on the frontiers of the Ukraine, which contained one of the czar's principal magazines. The garrison was numerous and the resistance obstinate; Charles himself was dangerously wounded in the heel whilst viewing the works; and while he was still confined to his tent he learned that Peter was advancing with a numerous army to raise the siege. Leaving 7,000 men to guard the works, Charles ordered his soldiers to march and meet the enemy, while he accompanied them in a litter (July 8, 1709). The desperate charge of the Swedes broke the Russian cavalry, but the infantry stood firm, and gave the horse an opportunity of rallying in the rear. In the meantime the czar's artillery made dreadful havoc in the Swedish line; and Charles, who had been forced to abandon his canon in his forced marches, in vain contended against this formidable disadvantage. After a dreadful combat of more than two hours' duration, the Swedish army was irretrievably ruined; 8,000 of their best troops were left dead on the field, 6,000 were taken prisoners, and about 12,000 of the fugitives were soon after forced to surrender on the banks of the Dnieper, from want of boats to cross the river. Charles, ac-

accompanied by about 300 of his guards, escaped to Bender, a Turkish town in Bessarabia, abandoning all his treasures to his rival, including the rich spoils of Poland and Saxony. Few victories have ever had such important consequences as that which the czar won at Pultowa; in one fatal day Charles lost the fruits of nine years' victories; the veteran army that had been the terror of Europe was completely ruined; those who escaped from the fatal field were taken prisoners, but they found a fate scarcely better than death; for they were transported by the czar to colonize the wilds of Siberia; the elector of Saxony re-entered Poland and drove Stanislaus from the throne; the king's of Denmark and Prussia revived old claims on the Swedish provinces, while the victorious Peter invaded not only Livonia and Ingria, but a great part of Finland. Indeed, but for the interference of the German emperor and the maritime powers, the Swedish monarchy would have been rent in pieces. Charles, in his exile, formed a new plan for the destruction of his hated rival; he instigated the Turks to attempt the conquest of Russia, and flattered himself that he might yet enter Moscow at the head of a Mohammedan army. The bribes which Peter lavishly bestowed on the counsellors of the sultan, for a time frustrated these intrigues; but Charles, through his friend Poniatowski, informed the sultan of his vizier's corruption, and procured the deposition of that minister. . . . The czar made the most vigorous preparations for the new war by which he was menaced (A. D. 1711). The Turkish vizier, on the other hand, assembled all the forces of the Ottoman Empire in the plains of Adrianople. Demetrius Cantemir, the hospodar of Moldavia, believing that a favourable opportunity presented itself for delivering his country from the Mohammedan yoke, invited the czar to his aid; and the Russians, rapidly advancing, reached the northern banks of the Pruth, near Yassi, the Moldavian capital. Here the Russians found that the promises of Prince Cantemir were illusory," and they were soon so enveloped by the forces of the Turks that there seemed to be no escape for them. But the tsarina, Catherine—the Livonian peasant woman whom Peter had made his wife—gathered up her jewels and all the money she could find in camp, and sent them as a gift to the vizier, whereby he was induced to open negotiations. "A treaty [known as the Treaty of the Pruth] was concluded on terms which, though severe [requiring the Russians to give up Azov], were more favourable than Peter, under the circumstances, could reasonably have hoped; the Russians retired in safety, and Charles reached the Turkish camp, only to learn the downfall of all his expectations. A few series of intrigues in the court of Constantinople led to the appointment of a new vizier; but this minister was little inclined to gratify the king of Sweden; on the contrary, warned by the fate of his predecessors, he resolved to remove him from the Ottoman empire (A. D. 1713). Charles continued to linger; even after he had received a letter of dismissal from the sultan's own hand, he resolved to remain, and when a resolution was taken to send him away by force, he determined, with his few attendants, to dare the whole strength of the Turkish empire. After a fierce resistance, he was captured and conveyed a prisoner to Adrianople. . . . Another revolution in the divan revived the hopes of Charles, and induced him to remain in Turkey, when his return to the North would probably have restored him to his former eminence. The Swedes, under General Steenbock, gained one of the most brilliant

victories that had been obtained during the war, over the united forces of the Danes and Saxons, at Gadebusch [November 20, 1712], in the duchy of Mecklenburg; but the conqueror sullied his fame by burning the defenceless town of Altona [January 10, 1713] an outrage which excited the indignation of all Europe." He soon after met with reverses and was compelled to surrender his whole army. "The czar in the meantime pushed forward his conquests on the side of Finland; and the glory of his reign appeared to be consummated by a naval victory obtained over the Swedes near the island of Oeland. . . . Charles heard of his rival's progress unmoved; but when he learned that the Swedish senate intended to make his sister regent and to make peace with Russia and Denmark, he announced his intention of returning home." He traversed Europe incognito, making the journey of 1,100 miles, mostly on horseback, in seventeen days, "and towards the close of the year [1714] reached Stralsund, the capital of Swedish Pomerania. Charles, at the opening of the next campaign, found himself surrounded with enemies (A. D. 1715). Stralsund itself was besieged by the united armies of the Prussians, Danes, and Saxons, while the Russian fleet, which now rode triumphant in the Baltic, threatened a descent upon Sweden. After an obstinate defence, in which the Swedish monarch displayed all his accustomed bravery, Stralsund was forced to capitulate, Charles having previously escaped in a small vessel to his native shores. All Europe believed the Swedish monarch undone; it was supposed he could no longer defend his own dominions, when, to the inexpressible astonishment of every one, it was announced that he had invaded Norway. His attention, however, was less engaged by the war than by the gigantic intrigues of his new favourite, Goertz, who, taking advantage of a coolness between the Russians and the other enemies of Sweden, proposed that Peter and Charles should unite in strict amity, and dictate the law to Europe. . . . While the negotiations were yet in progress, Charles invaded Norway a second time, and invested the castle of Frederickshall in the very depth of winter. But while engaged in viewing the works he was struck by a cannon-ball, and was dead before any of his attendants came to his assistance [December 11, 1718]. The Swedish senate showed little grief for the loss of the warlike king."—W. C. Taylor, *Student's manual of modern history*, ch. 7, sect. 6 .

1719.—Accession of Ulrica Eleonora.

1719-1721.—Constitutional changes.—Treaties of peace ending the northern war.—Swedish cessions of territory.—"An assembly of the States was summoned in February [1719], and completely altered the constitution. Sweden was declared an elective kingdom, and the government was vested in a council of 24 members, divided into eight colleges, who were invested with a power so absolute that their elected queen was reduced to a mere shadow. In short, the ancient oligarchy was restored, and Sweden became the prey of a few noble families. . . . In November a treaty was signed at Stockholm between Sweden and Great Britain, by which the Duchies of Bremen and Verden were ceded to George I. [as elector of

Hanover] in consideration of a payment of one million rix-dollars. By another treaty in January 1720, George engaged to support Sweden against Denmark and Russia, and to pay a yearly subsidy of \$300,000 during the war. About the same time an armistice was concluded with Poland till a definitive treaty should be arranged on the basis of the Peace of Oliva. Augustus was to be recognised as King of Poland; but Stanislaus was to retain the royal title during his life, and to receive from Augustus a million rix-dollars. Both parties were to unite to check the preponderance of the Czar, whose troops excited great discontent and suspicion by their continued presence in Poland. On February 1st a peace was concluded with Prussia under the mediation of France and Great Britain. The principal articles of this treaty were that Sweden ceded to Prussia, Stettin, the Islands of Wollin and Usedom, and all the tract between the Oder and Peene, together with the towns of Damm and Golnau beyond the Oder. The King of Prussia, on his side, engaged not to assist the Czar, and to pay two million rix-dollars to the Queen of Sweden. The terms of a peace between Sweden and Denmark were more difficult of arrangement. . . . By the Treaty of Stockholm, June 12th 1720, the King of Denmark restored to Sweden, Wismar, Stralsund, Rügen, and all that he held in Pomerania; Sweden paying 600,000 rix-dollars and renouncing the freedom of the Sound. Thus the only territorial acquisition that Denmark made by the war was the greater part of the Duchy of Schleswig, the possession of which was guaranteed to her by England and France. Sweden and Russia were now the only Powers that remained at war. . . . At length, through the mediation of France, conferences were opened in May 1721, and the Peace of Nystad was signed, September 10th. . . . The only portion of his conquests that [Peter] relinquished was Finland, with the exception of a part of Carelia; but as, by his treaty with Augustus II., at the beginning of the war, he had promised to restore Livonia to Poland if he conquered it, he paid the Crown of Sweden \$2,000,000 in order to evade this engagement by alleging that he had purchased that province."—T. H. Dyer, *History of modern Europe*, v. 3, bk. 5, ch. 7.

1720.—Accession of Frederick of Hesse-Cassel, husband of Ulrica Eleonora.

1720-1792.—Wars with Russia and Prussia.—Humiliating powerlessness of the king.—Parties of the Hats and the Caps.—Constitutional Revolution.—Assassination of Gustavus III.—Ulrica Eleonora, the sister of Charles XII, resigned the crown in 1720, in favor of her husband, prince of Hesse, who became king under the title of Frederick I. His reign witnessed the conquest of Finland and the cession (1743) of a part of that province to Russia (see RUSSIA: 1740-1762). On his death in 1751, Adolphus Frederick, bishop of Lübeck, and administrator of Holstein, was raised to the throne. "Though his personal qualities commanded respect, his reign was a disastrous one. He had the folly to join the coalition of Russia, Poland, Austria, and France against the king of Prussia. [See GERMANY: 1755-1756; 1757 (April-June).] Twenty thousand Swedes were marched into Pomerania, on the pretext of enforcing the conditions of the treaty of Westphalia, but with the view of recovering the districts which had been ceded to Prussia after the death of Charles XII. They reduced Usedom and Wollin,

with the fortresses on the coast; but this success was owing to the absence of the Prussians. When, in 1758, Schwald, the general of Frederic the Great, was at liberty to march with 30,000 men into Pomerania, he recovered the places which had been lost, and forced the invaders to retire under the canon of Stralsund. The accession of the tsar Peter was still more favourable to Frederic. An enthusiastic admirer of that prince, he soon concluded a treaty with him. Sweden was forced to follow the example; and things remained, at the peace of Hubertsburg, in the same condition as before the war. [See GERMANY: 1761-1762.] Scarcely was Sweden at harmony with her formidable enemy, when she became agitated by internal commotions. We have alluded to the limitations set to the royal authority after the death of Charles XII., and to the discontent it engendered in the breasts of the Swedish monarchs. While they strove to emancipate themselves from the shackles imposed upon them, the diet was no less anxious to render them more enslaved. That diet, consisting of four orders, the nobles, the clergy, the burghers, and the peasants, was often the scene of tumultuous proceedings: it was rarely tranquil; yet it enjoyed the supreme legislative authority. It was also corrupt; for impoverished nobles and needy tradesmen had a voice, no less than the wealthiest members. All new laws, all ordinances, were signed by the king; yet he had no power of refusal; he was the mere registrar-general. . . . The king had sometimes refused to sign ordinances which he judged dangerous to the common weal: in 1756 an act was passed, that in future a stamp might be used in lieu of the sign-manual, whenever he should again refuse. More intolerable than all this was the manner in which the diet insisted on regulating the most trifling details of the royal household. This interference was resented by some of the members, belonging to what was called the 'Hat' party, who may be termed the Tories of Sweden. Opposed to these were the 'Caps,' who were for shackling the crown with new restrictions, and of whom the leaders were undoubtedly in the pay of Russia. . . . As Russia was the secret soul of the Caps, so France endeavoured to support the Hats, whenever the courts of St. Petersburg and St. Germain were hostile to each other. Stockholm therefore was an arena in which the two powers struggled for the ascendancy." Gustavus III., who succeeded his father Adolphus Frederic in 1771, was able with the help of French money and influence, and by winning to his support the burgher cavalry of the capital, to overawe the party of the Caps, and to impose a new constitution upon the country. The new constitution "conferred considerable powers on the sovereign; enabled him to make peace, or declare war, without the consent of the diet; but he could make no new law, or alter any already made, without its concurrence; and he was bound to ask, though not always to follow, the advice of his senate in matters of graver import. The form of the constitution was not much altered; and the four orders of deputies still remained. On the whole, it was a liberal constitution. If this revolution was agreeable to the Swedes themselves, it was odious to Catherine II., who saw Russian influence annihilated by it." The bad feeling between the two governments which followed led to war, in 1787, when Russia was engaged at the same time in hostilities with the Turks. The war was unpopular in Sweden, and Gustavus was frustrated in his ambitious designs on Finland. Peace was made in 1790, each party restoring its con-

quests, "so that things remained exactly as they were before the war. [On Mar. 16, 1792, Gustavus III] was assassinated, being shot at a masquerade ball, by one Ankerstrom, whose motives have remained a mystery. Suspicion attached to others, the king's brother included, but nothing to justify it is proved. The murdered king was succeeded by his son Gustavus IV, who had but just passed the age of three years."—S. A. Dunham, *History of Denmark, Sweden and Norway*, v. 3, bk. 3, ch. 4.

1807-1810.—War of Russia and Denmark with Sweden, and conquest of Finland.—Deposition of the Swedish king.—In fulfilment of the agreements of the Treaty of Tilsit (see GERMANY: 1807 [June-July]), early in August, 1807, "a show was made by Russia of offering her mediation to Great Britain for the conclusion of a general peace; but as Mr. Canning required, as a pledge of the sincerity of the Czar, a frank communication of the secret articles at Tilsit, the proposal fell to the ground." Its failure was made certain by the action of England in taking possession by force of the Danish fleet. On November 5, upon the peremptory demand of Napoleon, war was accordingly declared against Great Britain by the tsar. "Denmark had concluded (Oct. 16) an alliance, offensive and defensive, with France, and Sweden was now summoned by Russia to join the Continental League. But the King, faithful to his engagements [with England], resolutely refused submission; on which war was declared against him early in 1808, and an overwhelming force poured into Finland [see FINLAND: 1157-1809], the seizure of which by Russia had been agreed on at Tilsit."—*Epitome of Alison's history of Europe*, sect. 455-456.—"In November, 1808, Finland was virtually given up to Alexander; and Sweden was thus deprived of her great granary, and destined to ruin. [See FRANCE: 1807-1808 (August-November).] England had of late aided her vigorously, driving the Russian navy into port, and blockading them there; and sending Sir John Moore, with 10,000 men, in May, when France, Russia, and Denmark, were all advancing to crush the gallant Swedes. Sir John Moore found the King in what he thought a very wild state of mind, proposing conquests, when he had not forces enough for defensive operations. All agreement in their views was found to be impossible; the King resented the Englishman's caution; Sir John Moore thought the King so nearly mad that he made off in disguise from Stockholm, and brought back his troops, which had never been landed. . . . After the relinquishment of Finland, the Swedish people found they could endure no more. Besides Finland, they had lost Pomerania: they were reduced to want; they were thinned by pestilence as well as by war; but the King's ruling idea was to continue the conflict to the last. . . . As the only way to preserve their existence, his subjects gently deposed him, and put the administration of affairs into the hands of his aged uncle,

the Duke of Sudermania. The . . . King was arrested on the 13th of March, 1809, as he was setting out for his country seat, . . . and placed in imprisonment for a short time. His uncle, at first called Regent, was soon made King [Charles XIII]. . . . Peace was made with Russia in September, 1809, and with France in the following January. Pomerania was restored to Sweden, but not Finland; and she had to make great sacrifices. . . . She was compelled to bear her part in the Continental System of Napoleon, and to shut her ports against all communications with England"—H Martineau, *History of England, 1800-1815*, bk. 2, ch. 1.—"The invasion by the Tzar Alexander I. in 1808 led to the complete separation of Finland and the other Swedish lands east of the gulf of Bothnia from the Swedish crown. Finland was conquered and annexed by the conqueror; but it was annexed after a fashion in which one may suppose that no other conquered land ever was annexed. In fact one may doubt whether 'annexed' is the right word. . . . The conqueror had possession of the Swedish dominions, and he called on the people of that part to meet him in a separate Parliament, but one chosen in exactly the same way as the existing law prescribed for the common Parliament of the whole. . . . In his new character of Grand Duke of Finland, the Tzar Alexander came to Borga, and there on March 27th, 1809, fully confirmed the existing constitution, laws, and religion of his new State. The position of that State is best described in his own words. Speaking neither Swedish nor Finnish, and speaking to hearers who understood no Russian, the new Grand Duke used the French tongue. Finland was 'Placé désormais au rang des nations'; it was a 'Nation, tranquille au dehors, libre dans l'intérieur.' [Finland was 'Placed henceforth in the rank of the nations; it was a Nation tranquil without, free within.'] And it was a nation of his own founding. The people of Finland had ceased to be a part of the Swedish nation; they had not become a part of the Russian nation; they had become a nation by themselves. All this, be it remembered, happened before the formal cession of the lost lands by Sweden to Russia. This was not made till the Peace of Frederikshamn on September 17th of the same year. The treaty contained no stipulation for the political rights of Finland; their full confirmation by the new sovereign was held to be enough. Two years later, in 1811, the boundary of the new State was enlarged. Alexander, Emperor of all the Russias and Grand Duke of Finland, cut off from his empire, and added to his grand duchy, the Finnish districts which had been ceded by Sweden to Russia sixty years before. The boundary of his constitutional grand duchy was brought very near indeed to the capital of his despotic empire."—E. A. Freeman, *Finland (Macmillan's Magazine, Mar., 1892)*.

1810.—Election of Bernadotte to be crown prince and successor to the throne.—The new king, lately called to the throne, being aged, "the eyes of the people were fixed on the successor, or

Crown Prince, who took upon himself the chief labour of the government, and appears to have given satisfaction to the nation. But his government was of short duration. On the 28th of May 1810, while reviewing some troops, he suddenly fell from his horse and expired on the spot, leaving Sweden again without any head excepting the old King. This event agitated the whole nation, and various candidates were proposed for the succession of the kingdom. Among these was the King of Denmark, who, after the sacrifices he had made for Buonaparte, had some right to expect his support. The son of the late unfortunate monarch, rightful heir of the crown, and named like him Gustavus, was also proposed as a candidate. The Duke of Oldenburg, brother-in-law of the Emperor of Russia, had partizans. To each of these candidates there lay practical objections. To have followed the line of lawful succession, and called Gustavus to the throne, (which could not be for-

quired a high reputation in the north of Europe, both when governor of Hanover, and administrator of Swedish Pomerania. On the latter occasion, Bernadotte was said to have shown himself in a particular manner the friend and protector of the Swedish nation; and it was even insinuated that he would not be averse to exchange the errors of Popery for the reformed tenets of Luther. The Swedish nation fell very generally into the line of policy which prompted this choice. . . . It was a choice, sure, as they thought, to be agreeable to him upon whose nod the world seemed to depend. Yet, there is the best reason to doubt, whether, in preferring Bernadotte to their vacant throne, the Swedes did a thing which was gratifying to Napoleon. The name of the Crown Prince of Sweden elect, had been known in the wars of the Revolution, before that of Buonaparte had been heard of. Bernadotte had been the older, therefore, though certainly not the better soldier. On the 18th Brumaire, he was so far from joining Buonaparte in his enterprise against the Council of Five Hundred, notwithstanding all advances made to him, that he was on the spot at St. Cloud armed and prepared, had circumstances permitted, to place himself at the head of any part of the military, who might be brought to declare for the Directory. And although, like every one else, Bernadotte submitted to the Consular system, and held the government of Holland under Buonaparte, yet then, as well as under the empire, he was always understood to belong to a class of officers, whom Napoleon employed indeed, and rewarded, but without loving them, or perhaps relying on them more than he was compelled to do, although their character was in most instances a warrant for their fidelity. These officers formed a comparatively small class, yet comprehending some of the most distinguished names in the French army. . . . Reconciled by necessity to a state of servitude which they could not avoid, this party considered themselves as the soldiers of France, not of Napoleon, and followed the banner of their country rather than the fortunes of the Emperor. Without being personally Napoleon's enemies, they were not the friends of his despotic power."—W. Scott, *Life of Napoleon*, v. 2, ch. 12.—The election of Bernadotte is said to have been brought about by the audacity of a young Swedish officer, Baron Mörner, who went to Paris as a courier, bearing a message on the subject from the Swedish government which had a very different aim. He interviewed Bernadotte and persuaded that marshal to become a candidate for the vacant throne. Bernadotte laid the matter before Napoleon. "Napoleon, who had officially been informed of the thoughts of the Swedish government, looked on the whole matter as a ghost of the brain, but declared that he would not meddle with it. At Mörner's last visit (June 27, 1810) Bernadotte gave him leave to communicate that the emperor had nothing against Bernadotte's election and that he himself was ready to accept if the choice fell on him. It is easy to imagine the astonishment of Engström, the minister of state, when he heard Mörner's description of his bold attempt in Paris. 'What do you bring from Paris?' Engström asked, when Mörner came into the foreign Minister's cabinet in Stockholm. 'That I have induced the prince of Ponte Corvo to accept the Swedish crown.' 'How could you speak to him about it without being commissioned?' 'Our only safety lies in the prince of Ponte Corvo.' 'Are you sure that he will receive it so that we are not doubly committed?' 'Certainly. I have a letter here.'

JEAN BAPTISTE JULES BERNADETTE

(After the painting by Roth)

feited by his father's infirmity, so far as he was concerned,) would have been to place a child at the head of the state, and must have inferred, amid this most arduous crisis, all the doubts and difficulties of choosing a regent. Such choice might, too, be the means, at a future time, of reviving his father's claim to the crown. The countries of Denmark and Sweden had been too long rivals, for the Swedes to subject themselves to the yoke of the King of Denmark; and to choose the Duke of Oldenburg would have been, in effect, to submit themselves to Russia, of whose last behaviour towards her Sweden had considerable reason to complain. In this embarrassment they were thought to start a happy idea, who proposed to conciliate Napoleon by bestowing the ancient crown of the Goths upon one of his own Field Marshals, and a high noble of his empire, namely, John Julian Baptiste Bernadotte, Prince of Ponte Corvo. This distinguished officer was married to a sister of Joseph Buonaparte's wife, (daughter of a wealthy and respectable individual, named Clary,) through whom he had the advantage of an alliance with the Imperial family of Napoleon, and he had ac-

'From him to you?' 'No, from me to him.' 'Boy,' exclaimed Mörner's relation, his excellency Von Essen, at the end of the conference, 'you ought to sit where neither sun nor moon will shine on you.' But Mörner's project won more and more favor in the country though he himself was arrested in Örebro, whereby the government desired to prevent his presence as a member of the house of knights at the special diet called at Örebro for election. Through messengers and a pamphlet he worked for his plan."—*Sveriges Historia, 1805-1875* (tr. from the Swedish by L. G. Sellstedt), pp. 29-31.

1813-1814.—Peace of Kiel.—Cession of Norway to Sweden and of Swedish Pomerania to Denmark.—"The Danes, having been driven out of Holstein by Bernadotte [see GERMANY: 1813 (October-December)], concluded an armistice December 18th, and, finally, the Peace of Kiel, January 14th 1814, by which Frederick VI. ceded Norway to Sweden; reserving, however, Greenland, the Ferroe Islands, and Iceland, which were regarded as dependencies of Norway. Norway, which was anciently governed by its own kings, had remained united with Denmark ever since the death of Olaf V. in 1387. Charles XIII., on his side, ceded to Denmark Swedish Pomerania and the Isle of Rugen. This treaty founded the present system of the North. Sweden withdrew entirely from her connection with Germany, and became a purely Scandinavian Power. The Norwegians, who detested the Swedes, made an attempt to assert their independence under the conduct of Prince Christian Frederick, cousin-german and heir of Frederick VI. of Denmark. Christian Frederick was proclaimed King of Norway; but the movement was opposed by Great Britain and the Allied Powers from considerations of policy rather than justice; and the Norwegians found themselves compelled to decree the union of Norway and Sweden in a storting, or Diet, assembled at Christiania, November 4th 1814. Frederick VI. also signed a peace with Great Britain at Kiel, January 14th 1814. All the Danish colonies, except Heligoland, which had been taken by the English, were restored."—T. H. Dyer, *History of modern Europe, v. 4, bk. 7, ch. 16*.—See also DENMARK: Survey of history; NORWAY: 1814-1815; 1814-1800; VIENNA, CONGRESS OF.

1818-1844.—Accession of Charles XIV (Bernadotte).—Antagonism to liberal forms of government. — Norwegian - Finnmark boundary question.—Constitutional reconstruction of the cabinet.—"Charles XIII. died in February, 1818, at the age of seventy, and his talented queen followed him a few months later. Charles XIV. Johann was fifty-four years of age when ascending the throne, but a man in his prime. To the dignity of the crown he brought a great personal influence, and

his fame as a warrior, which spread throughout Europe. The firm diplomatic relations with Russia were continued, but approaches to England were also made. Charles XIV. gave close personal attention to the administration, being especially interested in the defence, finances, canals and roads. . . . One of the most remarkable works carried on during the reign of Charles XIV. was the Gotha Canal system, which was brought to completion. . . . Charles XIV., in his native country, had seen to what an intamy the abuse of liberal forms of government could lead, and he was sternly resolved to antagonize any movement which aimed to introduce more democratic principles in the handling of state affairs and in the remodelling of the system of representation. . . . The severity with which the press was censured and its members punished created a bitterness against the king personally, which ceased only during the last few years of his reign. . . . At the Riksdags of 1827 and 1828 the government was severely taken to task on account of the sale of ships to the Spanish insurgents in South America. The sales were partly annulled and the Swedish government experienced a considerable financial loss. . . . [Russia was] anxious to obtain a slice of the Norwegian Finnmark, with excellent ice-free harbors at the bay of Varanger. In the ultimate settlement . . . in 1829, a great territory was ceded [to Russia] but not any of the important harbors. In 1840 the opposition had waxed strong enough to effect one of its most desired reforms, the constitutional reconstruction of the cabinet. This body was made to consist of ten members, of whom seven were to be the heads of the various state departments. . . . The greatest of contemplated reforms was a new system of representation, but the opposition was not able to carry it through. . . . [A plan for a new diet] with the idea of one chamber, instead of two, was repeatedly discussed at the Riksdag of 1840, but not adopted. This remarkable Riksdag, which lasted seventeen months, did considerable for the improvement of education and was ultimately dismissed by Charles XIV., in a speech of a conciliatory spirit, which went far toward restoring the old popularity of the king. Charles XIV. died March 8, 1844, at the age of eighty-one."—V. Nilsson, *Sweden (World's Best Histories Series, pp. 374-379)*.

1844-1858.—Accession of Oscar I.—Proposed reorganization of Riksdag.—Concessions to Norway.—"Oscar I. was forty-five years of age at the death of his father [in 1844]. . . . Few kings have ascended a throne under such enthusiasm and joyful aspirations on the part of the people as at the Riksdag which met in 1844, and the king gave his sanction to them all. It was decided that the Riksdag should meet every third instead of every fifth year, the liberty of the press was augmented, and to women were given equal rights in the stipulations of inheritance and marriage. Oscar I. took great pains to have the industries freed from the restraint under which they had been suffering during the reign of his predecessor. . . . [In the meantime] a powerful conservative party at the Riksdag was organized, with Hartmansdorff as the leader among the nobles and Archbishop Wingard among the clergy. . . . The proposition for a reorganization of the Riksdag, made in 1840, was not

accepted, but a committee was appointed in 1848 to make a new proposition, which failed to please either government or Riksdag. The king then had a new proposition prepared, based upon general elections. The liberals did not think the royal proposition democratic enough and offered one of their own. Both of these were defeated at the Riksdag of 1850, thanks to the opposition of nobility and clergy. A third one was made by Hartmansdorff, but also failed to please, not being conservative enough for the nobles. . . . King Oscar had, from the commencement of his reign, tried to meet all demands for reform made by his Norwegian subjects. The king himself took the initiative steps to give Norway a national flag of its own, the two countries up to the reign of Oscar having had one common flag. He also . . . gave permission to place the name of Norway before that of Sweden in the Norwegian royal title. For these reasons public opinion in Sweden expected Norwegian concessions in regard to the Act of Union, which seemed in need of revision. A committee of men from both countries was appointed to make the revision, but the Norwegian members opposed all measures involving any change. . . . In 1854 the Norwegian Storting decided to abolish the office of a governor-general. King Oscar refused to sanction this law, but allowed the office to remain vacant during the rest of his reign. . . . [King Oscar's] health was injured through illness, in 1857, and he . . . died July 8, 1859."—V. Nilsson, *Sweden (World's Best Histories Series, pp. 382-384, 386, 388)*.

1852.—**Signs treaty with powers admitting Denmark's claim to Schleswig.** See DENMARK: 1848-1862.

1859-1872.—**Accession of Charles XV.**—Numerous reforms.—**New parliamentary representation.**—**Growing power of the peasant.**—"Charles XV., the eldest son of Oscar I., succeeded his father [1859], having for two years presided over the government during King Oscar's last illness. . . . He understood better than any king since Charles XI. how to put himself in cordial relation with the masses of the people. . . . The cabinet which surrounded Charles XV. was one of the strongest bodies of its kind that ever controlled the government of Sweden. During his regency, Crown Prince Charles appointed Baron Louis de Geer minister of justice and Ludvig Manderström minister of foreign affairs. These men continued their duties during the reign of Charles XV., while Gripenstedt, as minister of finance, followed up his beneficent activity for the emancipation and development of the national industries. The historian, Frederic Ferdinand Carlson . . . occupied, during the greater part of the reign of Charles XV., the position of minister of ecclesiastics (church and education), in which capacity he did great work for the improvement of educational affairs. . . . New criminal and maritime codes were made at the Riksdag of 1862, and sanctioned by the government. Through the new regulations passed in the same year the foundations for increased municipal home rule were laid. . . . Laws were made which gave the towns the right to elect members to local assemblies (*stadsfullmäktige*), with authority to act in behalf of their communities. Similar institutions (*kommunalstämmer*) were arranged for the country communities. *Landsting* were instituted in every governmental district. . . . The conditions for suffrage and elective franchise in municipal affairs

were based on personal income. The old class distinctions were thus disregarded. . . . The church got a representation of its own in the clerical assembly (*kyrkomåtet*), which meets every fifth year and consists of equal numbers of ministers and laymen. . . . The royal proposition for a new parliamentary representation, placed before the Estates in 1862, was built upon the municipal suffrage and the Landstings or district assemblies, the latter being authorized to elect the members of the senate, or First Chamber. [See also SUFFRAGE, MANHOOD: Sweden: 1866-1921.] . . . The nobility had lost its old importance. It was no longer advisable for the clergy to take a leading part in political affairs. A new industrial class of wealth and prominence had formed and demanded a representation in the burgher class. . . . The burghers and peasants at the Riksdag of 1860 petitioned the government to present a royal proposition for the reorganization of the Diet. . . . [On Dec. 4, 1865 the royal] proposition was voted on by the burghers and peasants . . . [and] accepted by a vote of 361 yeas against 294 nays. . . . The four Estates adjourned June 22, 1866, forever, and the law of the new system of parliamentary representation was sanctioned the same date. . . . The first Riksdag of the new parliamentary system met January 19, 1867. . . . The power of the peasants made itself felt at once. There was formed a strong and influential party, the *landtmanna*, or countrymen's party, consisting of small landowners. The peasants constituted the majority, but the party also counted many titled and untitled country gentlemen in interests united with them. . . . The opposition consisted of 'the Intelligence or intellectual party, which, without a solid constitution or a fixed policy, has in vain fought the spreading influence and power of the Landtmanna party. . . . After a trip abroad for his health, King Charles XV. died at Malmö, September 18, 1872."—V. Nilsson, *Sweden (World's Best Histories Series, pp. 391-393, 395-399, 407, 411)*.

1872-1892.—**Accession of Oscar II.**—**Remission of taxes.**—**Reorganization of the army.**—**New Protectionist party.**—"Oscar II. ascended the throne [Sept. 18, 1872] at a moment when universal peace was restored after the great conflict between France and Germany, and when an age of commercial prosperity for Sweden seemed to have begun. . . . King Oscar with his crowns had received as an inheritance two important problems to be solved—the reorganization of the Swedish army and the settlement of the difficulties in the relations between the two states of the Union [since 1815 Norway had endeavoured to obtain political equality with Sweden]. . . . The reorganization of the Swedish army was not effected until after twenty years of parliamentary struggle. . . . In 1885 the government and Riksdag agreed on a remission of thirty per cent of the military taxes of landowners in exchange for new regulations for the militia compulsory service. In 1887 the Riksdag sanctioned the total abolition of the 'indelta,' or cantoned troops, as far as the navy was concerned, which was the first step toward the reorganization of the navy, and the same year the militia law [universal conscription] of 1885 went into effect. The old Landtmanna, or agrarian party, in 1888 gave place to a new protectionist party. A contested election of twenty-two members from Stockholm gave a sudden majority to the protectionists, O. R. Themptander, the able minister of state, resigning. . . . The Riksdag of 1888 passed a grain tariff, which went into effect

February 14th of the same year enforcing several other points of a protective tariff system. . . . [In 1892] the land-tax was abolished and a new army bill passed. . . . King Oscar, at his succession to the throne, gave evidence of his desire to meet the reasonable demands of his Norwegian subjects."—V. Nilsson, *Sweden (World's Best Histories Series, pp. 414-419)*.—See also NORWAY: 1814-1899.

1884.—Establishment of postal savings banks. See POSTAL SAVINGS BANKS: 1884.

1887-1912.—Conciliation and arbitration boards established.—Protection of Workers' and Children's Employment Acts.—Housing problem.—"As early as 1887 a proposition was brought before the Riksdag . . . for setting up under legal sanction an organization regarding arbitration in labour conflicts. . . . [In 1899] the Government appointed a Royal Commission to carry out the inquiry, and their findings . . . were ready by the year 1901. . . . On the 31st of December, 1906, the Intervention in Labour Conflicts Act was promulgated and Instructions for Conciliators were issued. . . . The chief laws providing for the protection of workers . . . were the Act of 1900 relating to the Employment of Women and Children in certain Trades, and the Protection of Workers Act of 1889. . . . The Riksdag resolved in 1903 to demand the Amendment of the Protection of Workers and the Children's Employment Acts, and other statutes connected with them. . . . [The Protection of Workers Committee, appointed in 1905] brought forward at the end of 1909 its Report, containing proposals for laws relating to the protection of workers, domestic industries, communal inspectors, and the organization of official administration. . . . The main proposal of the Committee was made the basis of a Government Bill on the subject in the Riksdag in 1912. The Riksdag having passed the Bill with certain modifications in detail, it was issued as the *Protection of Workers Act* of the 29th June, 1912. [See also SOCIAL INSURANCE: Details for various countries: Sweden: 1884-1910.] . . . On the part of the State, the housing problem has been made the object of various sweeping measures. Thus, in 1907 the *Town Planning Act* authorized the urban communities to regulate and supervise building matters. . . . Further, the *Renting Act* of 1907 has clearly defined the legal rights of tenants as against the landlords, and considerably extended the rights of the former. . . . In 1912 there was appointed a *Dwellings Committee* in order to investigate the housing problem. . . . State measures more directly bearing on the housing problem are those for promoting the 'egna hem' ('own home') movement. . . . The erection of dwellings on the basis of *self-aid* occurs largely in Sweden."—J. Guinchard, ed., *Sweden (Historical and Statistical Handbook, pt. 1, pp. 654, 707-708, 673-674, 677)*.

1894-1899.—Legislative membership increased.—First socialist deputy elected.—"In 1894 the number of the members of the Upper Chamber was increased to 150, and that of the Lower Chamber to 250; and the further extension of the somewhat exclusive electorate was also considered, although neither the government nor the Rigsdag was prepared to adopt universal suffrage. . . . Something like a sensation was caused by the election to the Rigsdag of the first socialist deputy, Branting, in 1896; and general indignation was caused in January, 1899, when it became known that the king

and the prime minister Boström had favourably received the bearers of a monster Radical petition, with 363,638 signatures, in favour of the introduction of universal suffrage."—R. N. Bain, *Scandinavia (Cambridge Historical Series, pp. 435, 443)*.

1901.—Unveiling of monument to John Ericsson.—Nobel prizes.—First awards.—A monument to the memory of John Ericsson, the Swedish-American inventor, was unveiled at Stockholm with impressive ceremonies on September 14, 1901, that being the date of the reception of his remains at Stockholm eleven years before. The first award of the munificent prizes for beneficial services to mankind, instituted by the will of Alfred Bernard Nobel, the eminent Swedish engineer and inventor, was made on December 10, 1901. See NOBEL PRIZES.

1901-1909.—Antarctic explorations. See ANT-ARCTIC EXPLORATION: 1901-1909.

1902.—Represented at sugar bounty conference. See SUGAR BOUNTY CONFERENCE.

1905.—Seccession of Norway from the union of crowns.—King's practical deposition.—Karlstad Treaty.—"In February 1905 Norway broke off the last negotiations about a separate consular service, and its new Ministry deliberately prepared the disruption of the Union. The offer of the Swedish Crown Prince, April, 1905, acting as Regent during his father's illness, was rejected. The Storting resolved to establish a separate consular service, and when King Oscar refused to sanction this his Norwegian ministers resigned. Oscar II refused to accept their resignations, being 'unable at the moment to form a Ministry' as all parties in Norway stood behind this demand. All the ministers stuck to their resignations, and at a special meeting of the Storting on June 7, 1905, it was unanimously declared that 'as King Oscar II has announced that he is unable to form a Government, he has thereby ceased to reign.' In this strange way the Union of ninety-one years was dissolved. . . . The Swedish Parliament, in an extraordinary session, laid down certain conditions to be fulfilled by Norway before it would recognize the dissolution. This resulted in a conference at Karlstad, in Sweden, in which four members of each Government took part. . . . After several hitches the conference reached an agreement on September 23rd. . . . Disagreements arising out of the Karlstad Treaty were to be submitted to The Hague Arbitration Court. The treaty was agreed to by the Swedish Parliament and approved by Oscar II on October 26, 1905."—J. Stefansson, *Denmark and Sweden with Iceland and Finland, pp. 349-350*.—See also NORWAY: 1902-1905.

1905-1911.—First liberal ministry.—Franchise reform.—Accession of Gustavus V.—Growth of Swedish party.—"The first Liberal government of modern Swedish history was formed by Hr. Karl Staaff in 1905. This was short-lived and was succeeded by a new Conservative era, which lasted

until 1911, when Hr. Staaff came into power again."—*Neutrality of Sweden (Edinburgh Review, Apr., 1915)*.—During the Staaff ministry, the "Franchise Bill was thrown out, and the Conservative Ministry of Lindman laid proposals for proportional representation in the election for both Chambers before Parliament. The Bill was passed by the Second Chamber on condition that the municipal franchise was reformed so that a democratic element entered the communal councils which elect the First Chamber, the members of which were to be paid and elected on a lower census. [See also SUFFRAGE, MANHOOD: Sweden: 1866-1921.] The franchise reform was finally passed in 1909. . . . On the death of Oscar II in 1907 he was succeeded by Gustavus V."—J. Stefansson, *Denmark and Sweden with Iceland and Finland*, p. 347.—"The Swedish Party has now been in existence for 25 years. Founded in 1880, with a membership of 3,000, it advanced slowly during the first few years, and reached its maximum in 1907. As the party is based on the trade-unions, the crisis commencing in that year, and the consequences of the general strike of 1900, reduced its membership along with that of the unions. . . . It is to be noted that the suffrage was greatly extended in 1911, and the total number of members of Parliament increased from 165 to 230."—W. E. Walling *et al.*, *Socialism of today*, pp. 145-146.

1907.—Represented at Second Hague Conference. See HAGUE CONFERENCES: 1907.

1908.—Treaty with Denmark, England, France, Germany, and the Netherlands, for maintenance of the status quo of the North sea. See NORTH SEA: 1908.

1908-1916.—Desire to prevent Russia's control of Aland islands. See ALAND ISLANDS: 12th century to World War.

1909.—Arbitration of frontier dispute with Norway. See NORWAY: 1909 (October).

1910-1911.—Establishment of state power stations.—State railways.—On April 6, 1910, the government introduced a measure for the establishment of a state power-station at the Porjus falls, Lapland. On March 17, 1911, a bill was passed for the construction of a large hydro-electric power-station at Alfkärlby; and on May 23, 1911, another bill was passed for the construction of a state railway from Veiljarvi in Lapland to Karnugi on the Swedish-Finnish frontier and from Karnugi to Matareni.

1910-1919.—Statistics of trade unions. See LABOR ORGANIZATION: 1910-1919.

1911.—New commercial treaty with Germany.—A new commercial treaty between Germany and Sweden was passed May 13, 1911, by both Chambers of the Riksdag. "Sweden succeeded in safeguarding the advantages gained in the year 1906. . . . [and] granted to Germany a reduction on a great many goods, especially leather goods and textiles, and undertook not to impose any export duty on iron ore. As Sweden retained her single tariff system, the reduced duties immediately passed into the new tariff, which came into force on Dec. 1, 1911. The treaty is to be in force, unless terminated by one of the parties, until the year 1921; it may, however, be terminated any time after the year 1917 after one year's notice."—J. Guinchart, ed., *Sweden (Historical and Statistical Handbook, pt. 2, p. 536)*.

1912-1913.—Coöperative organizations.—Arbitration treaty with the United States.—"A fair idea of the extent to which Coöperative Societies are disseminated in Sweden can be obtained from

statistics compiled in 1912. According to these data, there were registered from 1897 to 1911 no less than 5,896 societies for economic purposes, out of which, however, 551 were eventually dissolved. Out of this total 3,800 are stated to fall under the head of workmen's cooperative societies,—1,585 being building societies, and 1,187 cooperative stores, while the remaining 2,096 societies were classed as agricultural cooperative societies."—J. Guinchart, ed., *Sweden (Historical and Statistical Handbook, pt. 1, p. 605)*.—See also COÖPERATION: Sweden.—In 1913, Sweden renewed its arbitration treaty with the United States. This treaty was negotiated in 1908, and provided for an appeal to the Permanent Court of Arbitration at the Hague, in case of differences of a legal nature between the contracting parties.

1912.—Sickness insurance. See SOCIAL INSURANCE: Details for various countries: Sweden: 1912-1919.

1912-1915.—Increase of the Socialist vote.—Proposed abolition of the monarchy.—Elections of 1915.—"The increase of the Socialist vote and of Socialist members elected has been a steady one. . . . In 1912 the Socialist leader, Lindhagen, introduced a bill in Parliament to abolish the monarchy. Another leader, Branting, opposed the introduction of the motion. . . . After a short debate the measure was lost by a vote of 118 to 12. There were at this time 65 Socialist members of Parliament. . . . The elections of September, 1914, showed a most remarkable increase of Socialist votes over those cast in the spring. The victory of the Socialists in the September elections made them the largest party in Sweden, giving them over one-third of the members of the Parliament, and brought up the question of a possible coalition Ministry, to consist of Socialists and Liberals, to go into effect at the end of the war. . . . In the elections of 1915, 'the number of members of the Socialist Party of Sweden increased from 75,444 to 84,410.'"—W. E. Walling *et al.*, ed., *Socialism of to-day*, pp. 146, 151, 153.

1914.—In Scandinavian League with Denmark and Norway. See SCANDINAVIAN LEAGUE.

1914.—Legislation for protection of children. See CHILD WELFARE LEGISLATION: 1914.

1914-1917.—Defense program.—Constitutional crisis.—Neutrality.—Activism.—Meeting of the three kings.—Reception of President Wilson's ideas.—Fall of conservative government.—Because of World War conditions, the Riksdag, in September, 1914, agreed upon a thorough defense program. In accordance with it the period of service both in the army and navy was lengthened. (See also WAR, PREPARATION FOR: 1914.) The question of defense brought about a constitutional crisis. As the status quo of Sweden was guaranteed by the Baltic Convention of 1908, the Liberal government, headed by Karl Albert Staaff, opposed the defense plans of its conservative predecessors. With the growing tension in the European situation, the popular demand for the increase of armaments became urgent. A procession of 30,000 peasants marched to the Royal Palace in Stockholm to demand a decision. Gustavus V in a speech acceded to their demands. The Staaff Cabinet, not having been consulted, resigned. A non-party Ministry with Conservative leanings took its place with the solution of the defence question as its sole programme."—J. Stefansson, *Denmark and Sweden with Iceland and Finland*, p. 351.—Harmarskjöld, the new premier, had as his foreign minister, Knut Wallenberg, to whom was due the main direction of Swedish foreign politics after the war broke out.

At the elections held subsequently the Liberal party lost many seats, chiefly to the Conservatives. The new ministry remained in power, supported not only by the Conservatives but by many Liberals. A sidelight upon the condition that obtained in Sweden at the outbreak of the World War follows: "Apart from the actual belligerents, there was no country of Europe which was more . . . startled by the outbreak of war than Sweden. [See also WORLD WAR: 1014: XII. Neutral nations.] In its determination to maintain a position severely aloof, the government of which Mr. Hammarskjöld is the head was faced by . . . difficulties which required patience and tact to overcome. . . . There existed a clique, almost a party, in Stockholm, whose sympathies were so strongly with Germany at the very outset as to create an element of anxiety for the Swedish Government. . . . In their policy of neutrality, the Swedish Ministers were supported by their natural opponents, the Liberals and the Social-Democrats. Working-class sentiment, from the first, has been steadily adverse to any participation in the fighting. But there is a military element in the country which, although not numerically strong, is able to make itself . . . heard. . . . Swedish officers had long been flattered and cajoled in Prussian military circles, and the society in which they shone at home was openly pro-German."—*Neutrality of Sweden* (Edinburgh Review, Apr., 1915).—An exposition of activism vs. neutrality follows: "In Swedish opinion about the war there are many shades, ranging from extreme Activism to a sympathy with the Entente group so pronounced that it also constitutes a counter-Activism. . . . As Activism is primarily a protest, in the Central Powers' favour, against the Neutralist policy favoured by the Swedish Government and nation, it is necessary to make clear what Swedish Neutralism is. . . . The Neutrality proclamation . . . meant that Sweden would not take sides, that she would prevent her citizens violating Neutrality's laws, and that she would resist by force the violation of her territory, showing no favour to either belligerent group. There was no agitation for Neutrality, none being needed. When Activism raised its head, proclaiming that Sweden, independently of any specific cause given by the Entente, should join Germany and Austria, a Neutralist, or Pacifist, agitation began. The Activists are not a political party. They are a group formed *ad hoc* from all parties. But the Right partisans, among whom German sympathies are most pronounced, predominate; and the Pacifist counter-agitation is largely Liberal and Socialist. Sometimes Swedish newspapers speak of 'Right' and 'Left' as practically meaning 'Activist' and 'Neutralist,' but this is not correct. . . . The Activist, and generally the Germanophile, Press declared that the Neutrality agitation was lowering Sweden's dignity, encouraging England to think that Sweden would tolerate any treatment meted out to her, and therefore injuring Sweden's interests in the negotiations. It is necessary, said the Germanophiles, to make clear that Neutrality does not mean absolute Neutrality or even Neutrality which would be abandoned only in case of a violation of Swedish territory. The controversy evoked an official definition of Neutrality. . . . M. Hammarskjöld warned the country against the dangers of both the War agitation and of the Peace agitation. To this statement no party could object. . . . The immediate cause of the Neutralist agitation was the appearance of a hook which stirred minds and caused a polemic without parallel in the history of modern political literature. This is the book, *Sweden's*

*Foreign Policy in the Light of the World-War. Sweden's Foreign Policy* has been called 'The Bible of Activism.' . . . The War-Book owes its fame to the ability with which it is written; to half-veiled anonymity (it is the work of a group of politicians, professors, and soldiers . . . ; and to the circumstance that it is not a party book, but is the work of men from all parties, including prominent Socialists. The War-Book proclaims that the present moment is critical and decisive for Sweden's future, and sharply condemns the Government for not seeing that fact, and acting thereon. An appeal is made to patriotism. 'The one thing necessary is not that we should live, but that Sweden should live. For the future security of Swedish culture and free life we bear the responsibility; and if necessary, it is our duty, as we did in the past, to seal that with our blood.' The World-War is a Culture-War; Sweden is tied up with Germany; and in helping Germany, Sweden is helping her own civilization. Sweden must join Germany. The grounds given mainly concern the old suspicion of Russia, and the old sympathy with Finland; but the War-Book adroitly appeals to such Swedes as dread a German victory more than they dread a Russian. . . . The War-Book led to the series of demonstrations against Activism which evoked M. Hammarskjöld's definition of Neutrality. The book has since caused a crisis in the Social-Democratic Party. . . . 'The Bible of Activism' . . . was written before the Austro-German offensive in Russia gave new vigour and entirely new arguments to the agitators. . . . The Swedish attitude accords with Gustav Sundbårg's 'The Swede is much concerned with his dignity; interests take second place.' This does not explain Swedish Germanophilism. But, given Germanophilism, it explains Activism. Activism appeals to no material interest; it appeals to historic memories, present pride, fear for independence, and to the national Quixotism and love for the fantastic and remote. The causes of the Germanophilism which has developed into Activism are plain. A positive love of Germany plays no rôle worth mentioning. . . . Swedish Germanophilism is primarily dread and dislike of Russia. . . . The anti-English element in Swedish Germanophilism is new. Apart from historic memories, Sweden's anti-Russian feeling is due to two questions which in effect are, one, the alleged Russian plan of aggression against the Scandinavian Peninsula, and the question of Finland. Both these questions have been well ventilated in England."—R. C. Lond. *Swedish Activism: A letter from Stockholm* (Fortnightly Review, Nov., 1, 1915).—See also PAN-GERMANISM: Pan-German League, etc.—In the meanwhile, interests between Sweden, Denmark and Norway were emphasized and consolidated by the meeting of the three kings, accompanied by their foreign ministers, in Malmö December 18, 1914. At the opening of the Riksdag in 1915, the king impressed the fact that Sweden had hitherto been able to maintain the neutrality agreed upon at the beginning of the war; but the maintenance of this neutrality had demanded military measures which involved considerable sacrifices. It was, however, necessary that these sacrifices should be cheerfully borne, for Sweden must continue to maintain her military forces intact even at the cost of serious economic suffering. In his opening address of the Riksdag, on January 17, 1916, he declared that the belligerents have neglected in an ever-increasing degree the written international laws designed for the protection of neutrals and for limiting the violence of war, and that Sweden had as-

sisted in drawing up the laws, and had taken measures for the observance of the duty of neutrals, largely in cooperation with the other two Scandinavian nations. In December, 1916, Sweden sent notes to the belligerent powers seconding President Wilson's peace move as set forth in his speech of December 20. Later the Scandinavian governments refused to follow President Wilson's suggestion relative to a severance of diplomatic relations with Germany when that country announced its policy of ruthless submarine warfare. In September, 1917, Sweden's neutrality was compromised by the revelations made by the United States government to the effect that the Swedish foreign office was permitting German official messages from foreign countries to be sent as its own messages. These, including messages from Count Luxburg, German chargé d'affaires at Buenos Aires in reference to the sinking of ships of the Argentine republic by submarines, raised a storm of protest, and breach of diplomatic relations between Germany and Argentina was narrowly averted.

1914-1918.—*Hammar skjöld-Wallenberg ministry.*—*Malmö meeting.*—*Neutrality proclamation.*—*Economic advantages.*—"When the Riksdag of 'national defence' had served its term [1914] it was dissolved, and another Riksdag resulted from the elections, which in the Upper Chamber gave the majority to the Conservatives, and in the Second Chamber to the Liberals and Socialists. This Riksdag begged the Hammar skjöld-Wallenberg Ministry—due to resign—to remain at the head of the affairs till the end of the war. . . . One of M. Wallenberg's first acts, when the Cabinet had agreed to the extension of his term of office, was to propose to the King that there should be a meeting of the three Scandinavian Sovereigns. . . . King Gustaf willingly . . . buried his personal susceptibilities. . . . The meeting took place at Malmö. . . . A programme for the conduct of the three countries with regard to the formidable events which had divided almost the whole of Europe into two hostile camps was drawn up. The three Scandinavian countries affirmed their solidarity and their excellent mutual relations."—A. Nekludoff, *Diplomatic reminiscences* (tr. by A. Paget), pp. 330-331.—The neutrality proclamation issued by the Swedish and Norwegian governments read as follows: "War having broken out among several foreign powers, the Norwegian and Swedish Governments have mutually declared their firm intention to maintain, during the state of war thus occurring, each for itself and to the final extremity, their neutrality in reference to all the belligerent powers. The two Governments have besides exchanged formal assurances with a view to rendering it impossible that the state of war existing in Europe should result in one of the kingdoms taking hostile measures in reference to the other."—United States State Department, *Neutrality proclamations, 1914-1918*, p. 47.—"The intrigues of the Swedish Activists in favour of an alliance with Germany and against the Hammar skjöld-Wallenberg Cabinet were frustrated. It was a master-stroke of the Swedish Foreign Secretary, who thus acquired a new and solid basis for his policy of open neutrality and of opposition to all sorts of adventures. . . . The world war, of which the economic consequences in the long run were disastrous for the whole of Europe, began with a sudden increase of prosperity for certain neutral countries. . . . Sweden suddenly saw the prices of her exports rising in a dazzling way. Never had the splendid Swedish iron ore been in such enormous demand; never had pit-props attained such

formidable prices. . . . Her steel and iron goods, her agricultural machines, her turbines, her pit-props, her lathes were more and more in demand abroad as the workshops of the belligerent countries specialized in the making of big guns, shells, rifles, submarines, aeroplane engines. . . . But Swedish exportation was not confined to metal, wood, and the products of her foundries and workshops. Seduced by the enormous prices that all agricultural produce had been fetching in Germany from the outbreak of the war, the southern provinces of Sweden, which up till then had supplied the country almost exclusively, began to send to the other side of the Baltic wheat, flour, butter, cattle, pigs, poultry. At first the profits were fabulous; later on the belligerents, enemies of Germany, and the Swedish Government itself put a stop to this traffic: Sweden was in danger of starving if her agricultural provinces, situated at the southern end of the kingdom, continued to send off to Germany all the product that she had hitherto sent up north. . . . Sweden, in consequence of her geographical position, was in a very peculiar situation. As the Baltic was commanding by the German Fleet, the Swedes virtually possessed free traffic with Germany. Consequently German influence weighed in a natural manner—and irrespective of all political sympathy—on the commercial direction of Sweden. And this caused the Entente countries more particularly to restrict the importation into Sweden of all produce and all commodities which might somehow or other take the road to Germany. Very soon certain commodities of neutral origin, such as American wheat, rubber, tanning materials and nitrates from Chile, were not allowed to be imported into Sweden. . . . Wallenberg's master-stroke in arranging the first meeting between the three Scandinavian sovereigns at Malmö . . . [resulted later in] conferences between Swedish, Norwegian and Danish statesmen . . . whenever circumstances or special questions demanded them. A new solidarity was becoming established—a solidarity which was apparent above all in economic and commercial spheres. The three Scandinavian countries strove to supplement mutually their resources and their needs. They made reciprocal concessions, and with regard to the blockade, the interests of the three countries collectively replaced their individual interests."—A. Nekludoff, *Diplomatic reminiscences* (tr. from French by Alexandre Paget), pp. 331-334, 354.—See also NORWAY: 1914-1921.—In February, 1917, following a cabinet crisis Prime Minister Knut H. L. Hammar skjöld resigned and Carl Swartz, one of the Conservative leaders, was entrusted with the formation of a new ministry. The general elections, which were held in September, resulted in the defeat of the Conservative government, which, under Hammar skjöld, had been in power during the World War and till the end of the year. The Socialists cast the largest number of votes, and elected 98 deputies, including 12 radical Socialists, against 62 Liberals and 61 Conservatives. After the elections a coalition government of Liberals and Socialists was formed with Nils Eden, the Liberal leader, as prime minister.

1919-1923.—*Government program.*—*Elections.*—*Marriage law.*—*Suffrage.*—*Industrial depression.*—"In Sweden the government program, as an-

nounced on October 27 [1919] included gradual reduction of armaments, industrial cooperation as opposed to socialization, government regulation of trusts, obligatory sickness insurance and relief of housing conditions. . . . The new eight-hour law, which became effective on January 1 [1920] resulted in widespread strikes; the workers demanded higher wages to compensate for shorter hours, while the employers insisted upon an increased output. Unable to agree upon the question of taxation, the coalition government, headed by Herr Eden, resigned on March 6. Five days later Hjalmar Branting, leader of the right wing of the socialist party, formed a new ministry. The Branting government [is] unique in being not only the first Socialist government in Sweden but the first to be formed in a constitutional monarchy. . . . The program of the new government includes socialization of industry of parliamentary means, expropriation of large properties for a fair compensation, democratization of courts, free legal defence, abolition of the death penalty, disestablishment of state church, and national disarmament with a view to having all necessary policing done by the League of Nations. One of the most important measures enacted under the Branting régime is a marriage law, which passed the Riksdag on April 17; by its provisions the husband is deprived of personal guardianship over the wife and of legal right to dispose of the wife's personal property. The wife may acquire property in her own right. If the husband owns the family home, he cannot sell it over the heads of his children without his wife's consent. If both parties to a marriage desire a divorce, no court action is required; the parties merely register before a judge, and the marriage is automatically dissolved."—*Scandinavian States (Political Science Quarterly, Supplement, 1920, pp. 139-140)*.—"As a result of elections held in Sweden in September [1921] for the Second Chamber of the Riksdag, the Social Democratic party, under the leadership of Hjalmar Branting, won an overwhelming victory, the political pendulum thus swinging sharply from the Right to the Left. The new laws enfranchising women [see SUFFRAGE, WOMAN: Sweden], removing the tax requirement for voters, and lowering the voting age to 23 years, greatly enlarged the electorate and gave it opportunity to express its political desires. The prospect of a Socialist régime had a depressing effect upon business. Following the election and resignation early in October of the Von Sydow cabinet, a new ministry was constituted. . . . [with Hjalmar Branting as] Premier and Minister of Foreign Affairs. . . . The Riksdag on May 31, by a vote of 105 to 94 in the Second Chamber and 81 to 47 in the First Chamber, refused to ratify a long-pending commercial treaty with Soviet Russia."—*Ibid.*, 1922, p. 110.—"The result of October [1922] elections to the Provincial Councils in Sweden indicated a sharp decline in the strength of the Liberal party; their seats decreased in number from 201 to 192; the Communists gained (21 to 31) as did also the Social Democrats (322 to 346). The Left Wing Socialists lost five (20 to 24), the Agrarians five (146 to 141), and the Conservatives twenty-four (348 to 324). . . . Industrial depression and labor difficulties gripped the country during the greater part of the year. A deadlock over wages resulted in a lockout in paper and pulp industries on January 29 affecting 30,000 workers. The trouble soon spread to the steel, lumber and shipping industries, and by March 1 [1923] approximately 70,000 were out of employment. Rejection by the Riksdag of the Govern-

ment's proposal to distribute doles among the unemployed led to resignation of the Branting ministry on April 6, (1923). Conservatives opposed the measure, alleging that its adoption would strengthen the prolonged strikes. On April 20 M. Trygger, leader of the Conservatives, formed a purely Conservative cabinet."—*Ibid.*, 1923, pp. 112-113.

SWEDEN, Constitution of.—“The Riksdag’s Resolution of 1809 inaugurated the Swedish polity that is still in force [1915]. . . . In accordance with the ancient practice that regulations were drawn up in three divisions—the three fundamental laws: the Constitution Act (*Regeringsformen*), of 6 June 1809, . . . the Organic Law for the Riksdag (*Riksdagsordningen*), 1810; and the Act of Settlement (*Successionsordningen*), 1809. . . . A fourth fundamental law was adopted in 1810: the Law on the Liberty of the Press (*Tryckfrihetsförordningen*). A new Act of Settlement had to be adopted on 26 September 1810; the Press Law was replaced by a new one on 16 July 1812; and the Organic Law for the Riksdag of 1810 was rendered null by the new one of 22 June 1866, which in 1909 underwent radical changes in the matter of franchise etc. . . . The Constitution was altered in certain details through the Union with Norway (1814-1905). . . . The King of Sweden, according to a theory that dates far back into the past, is the supreme judge; but his functions as such are conferred upon the High Court of Justice (*Högsta domstolen*). Since 1909, there has also been in existence another high court, the Supreme Administrative Court (*Regeringsrätten*), which settles appeals that may be pursued before the King in the State departments. Besides these, there has also been set up a Law Council (three members of the High Court and one of the Administrative Court) to report upon proposals for the initiation, repeal, amendment or explanation of laws and ordinances. The King-in-Cabinet exercises the right of pardon. . . . The King shares the legislative authority with the Riksdag. He possesses the right of absolute veto. The King has, moreover, one sphere of legislation of his own—that which is called Administrative and Economic Legislation—embracing not merely instructions or regulations for public offices and institutions but also ordinances referring, within certain limits defined by common practice, to the public economy and to industries. . . . In 1909 there was carried through a far-reaching alteration of the franchise for the Second (lower) Chamber in which all property qualifications were removed; and in connection with this change proportional representation was introduced. The conditions of membership of the First (upper) Chamber were also altered. The composition and methods of working of the Riksdag are described in the following section. According to the fundamental law of 1809, the Riksdag was to meet every fifth year; this regulation was altered by the Riksdag of 1844-45 to every third year; according to the new law, the Riksdag assembles every year.”—J. Guinchard, ed., *Sweden, historical and statistical handbook*, pt. 1, pp. 195-198.—“The regular session of the Riksdag (*lagtima riksdag*) begins every year on 15th January in Stockholm, and has a right to continue for four months, unless the Government dissolves one or both of the Chambers and orders new elections. . . . The Riksdag may be convened for an extraordinary (*urtima*) session by Government during the vacations; but in that case the Riksdag may only treat the subjects for which it was convened. . . . If the Chambers come to different decisions on any subject whose treatment falls to an Ordinary Committee, this body must, if possible, put forward proposals for a compromise. In order that a bill may be finally carried, it is necessary to have an identical decision from both Chambers. . . . *Financial questions* are regarded as exceptions to the rule that the consent of both Chambers is necessary; in case of disagreement between the Chambers, these

questions are decided by *united voting*, both Chambers simultaneously voting anew and the result being determined by the united number of votes. This arrangement, which has its root in older Swedish Constitution, has been of great practical importance, since it has checked the occurrence of constitutional struggles between the two Chambers.”—[J. P. Velander] T. Hedrén, *Composition and procedure of the Riksdag* (J. Guinchard, ed., *Sweden (Historical and Statistical Handbook*, pt. 1, *Land and people*, pp. 204-205).—“The First Chamber consists of 150 members, who are elected for a term of six years by the county councils (*Landsting*) of the several counties (*Län*), as well as by the town councils of the five towns of Stockholm, Gothenburg, Malmö, Norrköping, and Gävle, which are not represented in the county councils. The members of the First Chamber are distributed among the different constituencies in proportion to their population, which distribution is regulated every tenth year. . . . In 1909, in connection with the introduction of proportional representation, the period of membership was altered to six years, and it was determined which county-councils and towns should, each of the six years, elect their share of the members of the chamber. When a seat falls vacant, there is summoned for the remaining part of the retiring member’s period of membership a substitute appointed by the same party (*viz.*, the person who received the next largest number of votes). The First Chamber is thus renewed only successively. . . . For *eligibility* to membership of the First Chamber, the candidate must be 35 years old, and must own and, for at least three years before the election, have owned real estate having a rateable value of at least 50,000 kronor, or must pay taxes and, for at least three years, have paid taxes on an annual income of at least 3,000 kronor. The members of the First Chamber also now enjoy a salary of 10 kronor a day or 1,200 kr. for an entire session. . . . The constitution of the Second Chamber was based in 1866 on a thorough-going distribution between *country and town*. The whole number of members was fixed in 1894 at 230, of whom 150 were assigned to the country and 80 to the towns. Through the rise of industrial communities in the country districts and through the enlargement of the constituencies in connection with the introduction of proportional representation this distinction has been substantially limited in its practical effects. . . . The present division . . . is laid down in the Election Law; but the number of members which each constituency has to elect in proportion to the population is settled for each three-year period by the Government. The Organic Law of 1866 underwent so many changes in consequence of the new regulations of 1909 that it may justly be regarded as repealed and replaced by a new fundamental law. . . . *The right to vote* for the Second Chamber is now possessed by every *male* Swede of good character, without respect to means, but not till after the year in which he reached the age of 24 and not if he is under guardianship, or is bankrupt, or is liable for rates or taxes which have fallen due during the last three calendar years, or is in receipt of public assistance, or has neglected his military service. For *eligibility* to the Second Chamber it is necessary that a man should be qualified for the parliamentary franchise and be *domiciled within the constituency*. This last requirement, which was introduced in 1866, is an expression of the Swedish people’s marked dislike of professional politicians. The ‘constituency,’ however, as has already been

indicated above, was enlarged in 1909 from the old limit of a judicial district, a town, or a collection of small towns, so as to embrace, as a rule, a whole county or county-council area including minor towns. The elections are for a term of three years: if the chamber be dissolved . . . the new elections hold good only for the remainder of the three-year term. *The mode of election to both Chambers is proportional.*—*Ibid.*, pp. 201-202.—The following is the text of the constitution as adopted in 1809, the subsequent modifications of which are indicated above:

Form of government adopted by the King and the Estates of the Swedish Realm, at Stockholm, on the 6th of June, 1809; together with the Alterations afterwards introduced.

We Charles, by the Grace of God, King of the Swedes, the Goths, and the Vandals, &c. &c. &c. Heir to Norway, Duke of Sleswick-Holstein, Stormarn, and Ditmarsen, Count of Oldenburg and Delmenhorst, &c. &c. &c. make known, that having unlimited confidence in the estates of the realm, charged them with drawing up a new form of government, as the perpetual groundwork of the prosperity and independence of our common native land, We do hereby perform a dear and pleasing duty in promulgating the fundamental law (which has been) upon mature deliberation, framed and adopted by the estates of the realm, and presented unto Us this day, together with their free and unanimous offer of the Swedish crown. Having, with deep emotion and an affectionate interest in the prosperity of a nation which has afforded Us so striking a proof of confidence and attachment, complied with their request, We trust to our endeavors to promote its happiness, as the reciprocal rights and duties of the monarch and the subjects have been marked so distinctly, that, without encroachment on the sacred nature and power of majesty, the constitutional liberty of the people is protected. We do therefore hereby adopt, sanction, and ratify this form of government, such as it follows here:—

We the underwritten representatives of the Swedish realm, counts, barons, bishops, knights, nobles, clergymen, burghers, and peasants, assembled at a general Diet, in behalf of ourselves and our brethren at home, Do hereby make known, that, having by the late change of government, to which we, the deputies of the Swedish people, gave our unanimous assent, exercised our rights of drawing up a new and improved constitution, we have, in repealing those fundamental laws, which down to this day have been in force more or less; viz.,—The Form of Government of the 21st of August 1772, the Act of Union and Security, of the 21st of February and the 3d of April 1789, the Ordinance of Diet, of the 24th of January 1617, as well as all those laws, acts, statutes, and resolutions comprehended under the denomination of fundamental laws;—We have Resolved to adopt for the Kingdom of Sweden and its dependencies the following constitution, which from henceforth shall be the chief fundamental law of the realm, reserving to Ourselves, before the expiration of the present Diet, to consider the other fundamental laws, mentioned in the 85th article of this constitution.

Article 1. The kingdom of Sweden shall be governed by a king, who shall be hereditary in that order of succession which the estates will further hereafter determine.

Art. 2. The king shall profess the pure evangelical faith, such as is contained and declared in the

Augsburgian Confession, and explained in the Decree of the Diet of Upsala in the year 1593.

Art. 3. The majesty of the king shall be held sacred and inviolable; and his actions shall not be subject to any censure.

Art. 4. The king shall govern the realm alone, in the manner determined by this constitution. In certain cases, however, (to be specified) he shall take the opinion of a council of state, which shall be constituted of well-informed, experienced, honest, and generally-esteemed native Swedes, noblemen and commoners, who profess the pure evangelical faith.

Art. 5. The council of state shall consist of nine members, viz., the minister of state and justice, who shall always be a member of the king's supreme court of judicature, the minister of state for foreign affairs, six counsellors of state, three of whom at least must have held civil offices, and the chancellor of the court, or aulic chancellor. The secretaries of state shall have a seat and vote in the council, when they have to report matters there, and in cases that belong to their respective departments. Father and son, or two brothers, shall not be permitted to be constant members of the council of state.

Art. 6. The secretaries of state shall be four, viz. —One for military affairs; a second for public economy, mining, and all other affairs connected with the civil and interior administration; a third for the finances of the realm, inland and foreign commerce, manufactures, &c.; and the fourth, the affairs relating to religion, public education, and charities.

Art. 7. All affairs of government shall be laid before the king, and decided in a council of state: those of a ministerial nature, however, excepted, concerning the relations of the realm with foreign powers, and matters of military command, which the king decides in his capacity of commander-in-chief of the land and naval forces.

Art. 8. The king can make no decision in matters in which the council of state are to be heard, unless at least three counsellors of state, and the secretary of state whom it concerns, or his deputy-secretary, are present.—All the members of the council shall, upon due notice, attend all deliberations deemed of importance, and which concern the general administration of the affairs of the kingdom; such as questions for adopting new statutes, repealing or altering those in existence, introducing new institutions in the different branches of the administration, &c.

Art. 9. Minutes shall be kept of all matters which shall come before the king in his council of state. The ministers of state, the counsellors of state, the aulic chancellor, and the secretaries of state or deputy-secretaries, shall be peremptorily bound to deliver their opinions; it is, however, the prerogative of the king to decide. Should it, however, unexpectedly occur, that the decisions of the king are evidently contrary to the constitution and the common law of the realm, it shall in that case be the duty of the members of the council of state to make spirited remonstrances against such decision or resolution. Unless a different opinion has been recorded in the minutes (for then the counsellors present shall be considered as having advised the king to the adopted measure), the members of the council shall be responsible for their advices, as enacted in the 10th article.

Art. 10. Necessary informations having been demanded and obtained from the proper boards, authorities, and functionaries, the affairs for deliberation shall be prepared by the secretary of

state and eight skilful and impartial men, consisting of four nobles and four commoners, in order to their being laid before the king in the council of state.—The secretary, as well as all the other members of this committee (which are nominated by the king) for preparing the general affairs of the kingdom, shall upon all occasions, when so met, deliver their opinions to the minutes, which shall afterwards be reported to the king and the council of state.

Art. 11. As to the management of the ministerial affairs, they may be prepared and conducted in the manner which appears most suitable to the king. It appertains to the minister for foreign affairs to lay such matters before him in the presence of the aulic chancellor, or some other member of the council, if the chancellor cannot attend. In the absence of the minister of state this duty devolves upon the aulic chancellor, or any other member of the council of state, whom his majesty may appoint. After having ascertained the opinions of these official persons entered in the minutes, and for which they shall be responsible, the king shall pronounce his decision in their presence. It shall be the duty of the aulic chancellor to keep the minutes on these occasions. The king shall communicate to the council of state the information on these topics as may be necessary, in order that they may have a general knowledge even of this branch of the administration.

Art. 12. The king can enter into treaties and alliances with foreign powers, after having ascertained, as enacted in the preceding article, the opinion of the minister of state for foreign affairs, and of the aulic chancellor.

Art. 13. When the king is at liberty to commence war, or conclude peace, he shall convoke an extraordinary council of state: the ministers of state, the counsellors of state, the aulic chancellor, and the secretaries of state; and, after having explained to them the circumstances which require their consideration, he shall desire their opinions thereon, which each of them shall individually deliver, on the responsibility defined in the 107th article. The king shall thereafter have a right to adopt the resolutions, or make such decision as may appear to him most beneficial for the kingdom.

Art. 14. The king shall have the supreme command of the military forces by sea and land.

Art. 15. The king shall decide in all matters of military command, in the presence of that minister or officer to whom he has entrusted the general management thereof. It shall be the duty of this person to give his opinion, under responsibility, upon the resolutions taken by the king, and in case of these being contrary to his advice, he shall be bound to enter his objections and counsel in the minutes, which the king must confirm by his own signature. Should this minister or official person find the resolutions of the king to be a dangerous tendency, or founded on mistaken or erroneous principles, he shall advise his majesty to convoke two or more military officers of a superior rank into a council of war. The king shall, however, be at liberty to comply with or to reject this proposition for a council of war; and if approved of, he may take what notice he pleases of the opinions of such council, which shall, however, be entered in the minutes.

Art. 16. The king shall promote the exercise of justice and right, and prevent partiality and injustice. He shall not deprive any subject of life, honour, liberty, and property, without previous

trial and sentence, and in that order which the laws of the country prescribe. He shall not disturb or cause to be disturbed, the peace of any individual in his house. He shall not banish any from one place to another, nor constrain, or cause to be constrained, the conscience of any; but shall protect every one in the free exercise of his religion, provided he does not thereby disturb the tranquillity of society, or occasion public offence. The king shall cause every one to be tried in that court to which he properly belongs.

Art. 17. The king's prerogative of justice shall be invested in twelve men, learned in the law, six nobles, and six commoners, who have shown knowledge, experience, and integrity in judicial matters. They shall be styled counsellors of justice, and constitute the king's supreme court of justice.

Art. 18. The supreme court of justice shall take cognizance of petitions to the king for cancelling sentences which have obtained legal force, and granting extension of time in lawsuits, when it has been, through some circumstances, forfeited.

Art. 19. If information be sought by judges or courts of justice concerning the proper interpretation of the law, the explanation thus required shall be given by the said supreme court.

Art. 20. In time of peace, all cases referred from the courts martial shall be decided in the supreme court of justice. Two military officers of a superior degree, to be nominated by the king, shall, with the responsibility of judges, attend and have a vote in such cases in the supreme court. The number of judges may not, however, exceed eight. In time of war, all such cases shall be tried as enacted by the articles of war.

Art. 21. The king, should he think fit to attend, shall have right to two votes in causes decided by the supreme court. All questions concerning explanations of the law shall be reported to him, and his suffrages counted, even though he should not have attended the deliberations of the court.

Art. 22. Causes of minor importance may be decided in the supreme court by five members, or even four, if they are all of one opinion; but in causes of greater consequence seven counsellors, at least, must attend. More than eight members of the supreme court, or four noblemen and four commoners, may not be at one time in active service.

Art. 23. All the decrees of the supreme court of justice shall issue in the king's name, and under his hand and seal.

Art. 24. The cases shall be prepared in the "king's inferior court for revision of judiciary affairs," in order to be laid before, or produced in the supreme court.

Art. 25. In criminal cases the king has a right to grant pardon, to mitigate capital punishment, and to restore property forfeited to the crown. In applications, however, of this kind, the supreme court shall be heard, and the king give his decision in the council of state.

Art. 26. When matters of justice are laid before the council of state, the minister of state and justice, and, at least, two counsellors of state, two members of the supreme court, and the chancellor of justice shall attend, who must all deliver their opinions to the minutes, according to the general instruction for the members of the council of state, quoted in the 91st article.

Art. 27. The king shall nominate, as chancellor of justice, a juris-consult, an able and impartial man, who has previously held the office of a judge. It shall be his chief duty, as the highest legal officer or attorney general of the king, to prose-

cute, either personally or through the officers or fiscals under him, in all such cases as concern the public safety and the rights of the crown, on the king's behalf, to superintend the administration of justice, and to take cognizance of, and correct, errors committed by judges or other legal officers in the discharge of their official duties.

Art. 28. The king, in his council of state, has a right to appoint native Swedes to all such offices and places within the kingdom for which the king's commissions are granted. The proper authorities shall, however, send in the names of the candidates to be put in nomination for such employments. The king may, likewise, appoint foreigners of eminent talents to military offices, without, however, entrusting to them the command of the fortresses of the realm. In preferments the king shall only consider the merits and the abilities of the candidates, without any regard to their birth. Ministers and counsellors of state and of justice, secretaries of state, judges, and all other civil officers, must always be of the pure evangelical faith.

Art. 29. The archbishop and bishops shall be elected as formerly, and the king nominates one of the three candidates proposed to him.

Art. 30. The king appoints, as formerly, the incumbents of rectories in the gift of the crown. As to the consistorial benefices, the parishioners shall be maintained in their usual right of election.

Art. 31. Citizens, who are freemen of towns, shall enjoy their privilege as heretofore, of proposing to the king three candidates for the office of burgomaster or mayor, one of whom the king selects. The aldermen and secretaries of the magistracy of Stockholm shall be elected in the same manner.

Art. 32. The king appoints envoys to foreign courts and the officers of the embassies, in the presence of the minister of state for foreign affairs and the aulic chancellor.

Art. 33. When offices, for which candidates are proposed, are to be filled up, the members of the council of state shall deliver their opinions on the qualifications and merits of the applicants. They shall also have right to make respectful remonstrances against the nomination of the king respecting other offices.

Art. 34. The new functionaries created by this constitution, viz.—the ministers and counsellors of state and counsellors of justice, shall be paid by the crown, and may not hold any other civil offices. The two ministers of state are the highest functionaries of the realm. The counsellors of state shall hold the rank of generals, and the counsellors of justice that of lieutenant-generals.

Art. 35. The minister of state for foreign affairs, the counsellors of state, the presidents of the public boards, the grand governor of Stockholm, the deputy governor, and the chief magistrate of police in the city, the aulic chancellor, the chancellor of justice, the secretaries of state, the governors or lord-lieutenants of provinces, field marshals, generals and admirals of all degrees, adjutant generals, adjutant in chief, adjutants of the staff, the governors of fortresses, captain lieutenants, and officers of the king's life guards, colonels of the regiments, and officers second in command in the foot and horse guards, lieutenant-colonels in the brigade of the life regiments, chiefs of the artillery of the royal engineers, ministers, envoys, and commercial agents with foreign powers, and official persons employed in the king's cabinet for the foreign correspondence, and at the embassies, as holding places of trust, can be removed by the king,

when he considers it necessary for the benefit of the realm. The king shall, however, signify his determination in the council of state, the members whereof shall be bound to make respectful remonstrances, if they see it expedient.

Art. 36. Judges, and all other official persons, not included in the preceding article, cannot be suspended from their situations without legal trial, nor be translated or removed to other places, without having themselves applied for these.

Art. 37. The king has power to confer dignities on those who have served their country with fidelity, bravery, virtue, and zeal. He may also promote to the order of counts and barons, persons, who by eminent merits have deserved such an honour. Nobility and the dignity of a count and baron, granted from this time, shall no longer devolve to any other than the individual himself thus created a noble, and after him, to the oldest of his male issue in a direct descending line, and this branch of the family being extinct, to the nearest male descendant of the ancestor.

Art. 38. All despatches and orders emanating from the king, excepting such as concern military affairs, shall be countersigned by the secretary who has submitted them to the council, and is responsible for their being conformable to the minutes. Should the secretary find any of the decisions made by the king to the contrary to the spirit of the constitution, he shall make his remonstrances respecting the same, in the council of state. Should the king still persist in his determination, it shall then be the duty of the secretary to refuse his countersign and resign his place, which he may not resume until the estates of the realm shall have examined and approved of his conduct. He shall, however, in the meantime, receive his salary, and all the fees of his office as formerly.

Art. 39. If the king wishes to go abroad, he shall communicate his resolution to the council of state, in a full assembly, and take the opinion of all its members, as enacted in the ninth article. During the absence of the king he may not interfere with the government, or exercise the regal power, which shall be carried on, in his name, by the council of state; the council of state cannot, however, confer dignities or create counts, barons, and knights; and all officers appointed by the council shall only hold their places *ad interim*.

Art. 40. Should the king be in such a state of health as to be incapable of attending to the affairs of the kingdom, the council of state shall conduct the administration, as enacted in the preceding article.

Art. 41. The king shall be of age after having completed eighteen years. Should the king die before the heir of the crown has attained this age, the government shall be conducted by the council of state, acting with regal power and authority, in the name of the king, until the estates of the realm shall have appointed a provisional government or regency; and the council of state is enjoined strictly to conform to the enactments of this constitution.

Art. 42. Should the melancholy event take place, that the whole royal family became extinct on the male side, the council of state shall exercise the government with regal power and authority, until the estates have chosen another royal house, and the new king has taken upon himself the government. All occurrences or things having reference to the four last articles, shall be determined by the whole council of state and the secretaries of state.

Art. 43. When the king takes the field of battle, or repairs to distant parts of the kingdom, he shall constitute four of the members of the council of state to exercise the government in those affairs which he is pleased to prescribe.

Art. 44. No prince of the royal family shall be permitted to marry without having obtained the consent of the king, and in the contrary case shall forfeit his right of inheritance to the kingdom, both for himself and descendants.

Art. 45. Neither the crown prince, or any other prince of the royal family, shall have any appanage or civil place. The princes of the blood may, however, bear titles of dukedoms and principalities, as heretofore, but without any claims upon those provinces.

Art. 46. The kingdom shall remain divided, as heretofore, into governments, under the usual provincial administrations. No governor-general shall, from this time, be appointed within the kingdom.

Art. 47. The courts of justice, superior as well as inferior, shall administer justice according to the laws and statutes of the realm. The provincial governors, and all other public functionaries, shall exercise the offices entrusted to them according to existing regulations; they shall obey the orders of the king, and be responsible to him if any act is done contrary to law.

Art. 48. The court of the king is under his own management, and he may at his own pleasure appoint or discharge all his officers and attendants there.

Art. 49. The estates of the realm shall meet every fifth year. In the decree of every Diet the day shall be fixed for the next meeting of the estates. The king may, however, convoke the estates to an extraordinary Diet before that time.

Art. 50. The Diets shall be held in the capital, except when the invasion of an enemy, or some other important impediment, may render it dangerous for the safety of the representatives.

Art. 51. When the king or council convokes the estates, the period for the commencement of the Diet shall be subsequent to the thirtieth, and within the fiftieth day, to reckon from that day when the summons has been proclaimed in the churches of the capital.

Art. 52. The king names the speakers of the nobles, the burghers and the peasants; the archbishop is, at all times, the constant speaker of the clergy.

Art. 53. The estates of the realm shall, immediately after the opening of the Diet, elect the different committees, which are to prepare the affairs intended for their consideration. Such committees shall consist in,—a constitutional committee, which shall take cognizance of questions concerning proposed alterations in the fundamental laws, report thereupon to the representatives, and examine the minutes held in the council of state;—a committee of finances, which shall examine and report upon the state and management of the revenues;—a committee of taxation, for regulating the taxes;—a committee of the bank for inquiring into the administration of the affairs of the national bank—a law committee for digesting propositions concerning improvements in the civil, criminal, and ecclesiastical laws;—a committee of public grievances and matters of economy, to attend to the defects in public institutions, suggest alterations, &c.

Art. 54. Should the king desire a special committee for deliberating with him on such matters as do not come within the cognizance of any of the other committees, and are to be kept secret, the

estates shall select it. This committee shall, however, have no right to adopt any resolutions, but only to give their opinion on matters referred to them by the king.

Art. 55. The representatives of the realm shall not discuss any subject in the presence of the king, nor can any other committee than the one mentioned in the above article hold their deliberations before him.

Art. 56. General questions started at the meetings or the orders of the estates, cannot be immediately discussed or decided, but shall be referred to the proper committees, which are to give their opinion thereupon. The propositions or report of the committees shall, in the first instance, without any alteration or amendment, be referred to the estates at the general meetings of all the orders. If at these meetings, observations should be made which may prevent the adoption of the proposed measure these objections shall be communicated to the committee, in order to its being examined and revised. A proposition thus prepared having been again referred to the estates, it shall remain with them to adopt it, with or without alterations, or to reject it altogether. Questions concerning alterations in the fundamental laws, shall be thus treated:—If the constitutional committee approves of the suggestion of one of the representatives, or the committee reports in favour of or against a measure proposed by the king, the opinion of the committee shall be referred to the estates, who may discuss the topic, but not come to any resolution during that Diet.—If at the general meetings of the orders no observations are made against the opinion of the committee, the question shall be postponed till the Diet following, and then be decided solely by yes or no, as enacted in the 75th article of the ordinance of Diet.—If, on the contrary, objections are urged at the general meetings of the orders against the opinion of the committee, these shall be referred back for its reconsideration. If all the orders be of one opinion, the question shall be postponed for final decision, as enacted above. Should again a particular order differ from the other orders, twenty members shall be elected from among every order, and added to the committee, for adjusting the differences. The question being thus prepared, shall be decided at the following Diet.

Art. 57. The ancient right of the Swedish people, of imposing taxes on themselves, shall be exercised by the estates only at a general Diet.

Art. 58. The king shall at every Diet lay before the committee of finances the state of the revenues in all their branches. Should the crown have obtained subsidies through treaties with foreign powers, these shall be explained in the usual way.

Art. 59. The king shall refer to the decision of this committee to determine what the government may require beyond the ordinary taxation, to be raised by an extraordinary grant.

Art. 60. No taxes of any description whatever can be increased without the express consent of the estates. The king may not farm or let on lease the revenues of state, for the sake of profit to himself and the crown; nor grant monopolies to private individuals, or corporations.

Art. 61. All taxes shall be paid to the end of that term for which they have been imposed. Should, however, the estates meet before the expiration of that term, new regulations shall take place.

Art. 62. The funds required by government having been ascertained by the committee of finances, it shall rest with the estates whether to assign

proportionate means, and also to determine how the various sums granted shall be appropriated.

Art. 63. Besides these means, two adequate sums shall be voted and set apart for the disposal of the king, after he has consulted the council of state,—for the defence of the kingdom, or some other important object;—the other sum to be deposited in the national bank, in case of war, after the king has ascertained the opinion of the council and convened the estates. The seal of the order for this latter sum may not be broken, nor the money be paid by the commissioners of the bank, till the summons to Diet shall have been duly proclaimed in the churches of the capital.

Art. 64. The extraordinary revenues of the land, as well as the extraordinary grants which may be voted by the estates, shall be at the disposal of the king for the civil list and other specified purposes.

Art. 65. The above means may not be applied but for the assigned purposes, and the council of state shall be responsible if they permit any deviation in this respect, without entering their remonstrances in the minutes, and pointing out what the constitution in this case ordains.

Art. 66. The funds of amortissement or national debt, shall remain, as heretofore, under the superintendence and direction of the estates, who have guaranteed or come under a responsibility for the national debt; and after having received the report of the committee of finances on the affairs of that establishment, the estates will provide, through a special grant, the requisite means for paying the capital as well as the interest of this debt, in order that the credit of the kingdom may be maintained.

Art. 67. The deputy of the king shall not attend the meetings of the directors or commissioners of the funds of amortissement, on any other occasion than when the directors are disposed to take his opinion.

Art. 68. The means assigned for paying off the national debt shall not, under any pretence or condition, be appropriated to other purposes.

Art. 69. Should the estates, or any particular order, entertain doubts either in allowing the grant proposed by the committee of finances, or as to the participation in the taxes, or the principles of the management of the funds of amortissement, these doubts shall be communicated to the committee for their further consideration.—If the committee cannot coincide in the opinions of the estates, or a single order, it shall depute some members to explain circumstances. Should this order still persist in its opinion, the question shall be decided by the resolution of three orders. If two orders be of one, and the other two of a different opinion, thirty new members of every order shall be added to the committee—the committee shall then vote conjointly, and not by orders, with folded billets, for adopting, or rejecting, unconditionally the proposition of the committee.

Art. 70. The committee of taxation shall at every Diet suggest general principles for dividing the future taxes, and the amount having been fixed, the committee shall also propose how these are to be paid, referring their proposition to the consideration and decision of the states.

Art. 71. Should a difference of opinion arise between the orders, as to these principles and the mode of applying them, and dividing the taxes; or, what hardly can be presumed, any order decline participating in the proposed taxation, the order, which may thus desire some alteration, shall communicate their views to the other representatives.

and suggest in what mode this alteration may be effected without frustrating the general object. The committee of taxation having again reported thereon to the estates, they, the estates, shall decide the question at issue. If three orders object to the proposition of the committee, it shall be rejected. If, again, three orders oppose the demands of a single order, or if two be of an opinion contrary to that of the other two, the question shall be referred to the committee of finances, with an additional number of members, as enacted in the above article. If the majority of this committee assent to the proposition of the committee of taxation, in those points concerning which the representatives have disagreed, the proposition shall be considered as the general resolution of the estates. Should it, on the contrary, be negatived by a majority of votes, or be rejected by three orders, the committee of taxation shall propose other principles for levying and dividing the taxes.

Art. 72. The national bank shall remain, as formerly, under the superintendence and guarantee of the estates, and the management of directors selected from among all the orders, according to existing regulations. The states alone can issue bank-notes, which are to be recognized as the circulating medium of the realm.

Art. 73. No troops, new taxes or imposts, either in money or kind, can be levied without voluntary consent of the estates, in the usual order, as aforesaid.

Art. 74. The king shall have no right to demand or levy any other aid for carrying on war, than that contribution of provisions which may be necessary for the maintenance of the troops during their march through a province. These contributions shall, however, be immediately paid out of the treasury, according to the fixed price-current of provisions, with an augmentation of a moiety, according to this valuation. Such contributions may not be demanded for troops which have been quartered in a place, or are employed in military operations, in which case they shall be supplied with provisions from the magazines.

Art. 75. The annual estimation of such rentes as are paid in kind shall be fixed by deputies elected from among all the orders of the estates.

Art. 76. The king cannot, without the consent of the estates, contract loans within or without the kingdom, nor burden the land with any new debts.

Art. 77. He cannot also, without the consent of the estates, vend, pledge, mortgage, or in any other way alienate domains, farms, forests, parks, preserves of game, meadows, pasture-land, fisheries, and other appurtenances of the crown. These shall be managed according to the instructions of the estates.

Art. 78. No part of the kingdom can be alienated through sale, mortgage, donation, or in any other way whatever.

Art. 79. No alteration can be effected in the standard value of the coin, either for enhancing or deteriorating it, without the consent of the estates.

Art. 80. The land and naval forces of the realm shall remain on the same footing, till the king and the estates may think proper to introduce some other principles. No regular troops can be raised, without the mutual consent of the king and the estates.

Art. 81. This form of government and the other fundamental laws cannot be altered or repealed, without the unanimous consent of the king and the estates. Questions to this effect cannot be brought forward at the meetings of the orders, but must

be referred to the constitutional committee, whose province it is to suggest such alterations in the fundamental laws, as may be deemed necessary, useful, and practicable. The estates may not decide on such proposed alterations at the same Diet. If all the orders agree about the alteration, it shall be submitted to the king, through the speakers, for obtaining his royal sanction. After having ascertained the opinion of the council, the king shall take his resolution, and communicate to the estates either his approbation or reasons for refusing it. In the event of the king proposing any alteration in the fundamental laws, he shall, after having taken the opinion of the council, deliver his proposition to the estates, who shall, without discussing it, again refer it to the constitutional committee. If the committee coincide in the proposition of the king, the question shall remain till next Diet. If again the committee is averse to the proposition of the king, the estates may either reject it immediately or adjourn it to the following Diet. In the case of all the orders approving of the proposition, they shall request that a day be appointed to declare their consent in the presence of his majesty, or signify their disapprobation through their speakers.

Art. 82. What the estates have thus unanimously resolved and the king sanctioned, concerning alterations in the fundamental laws, or the king has proposed and the estates approved of, shall for the future have the force and effect of a fundamental law.

Art. 83. No explanation of the fundamental laws may be established by any other mode or order, than that prescribed by the two preceding articles. Laws shall be applied according to their literal sense.

Art. 84. When the constitutional committee find no reason for approving of the proposition, made by a representative concerning alterations or explanations of the fundamental laws, it shall be the duty of the committee to communicate to him, at his request, their opinion, which the proposer of the resolution may publish, with his own motion, and under the usual responsibility of authors.

Art. 85. As fundamental laws of the present form of government, there shall be considered the ordinance of Diet, the order of succession, and the act concerning universal liberty of the press.

Art. 86. By the liberty of the press is understood the right of every Swedish subject to publish his writings, without any impediment from the government, and without being responsible for them, except before a court of justice, or liable to punishment, unless their contents be contrary to a clear law, made for the preservation of public peace. The minutes, or protocols, or the proceedings, may be published in any case, excepting the minutes kept in the council of state and before the king in ministerial affairs, and those matters of military command; nor may the records of the bank, and the office of the funds of amortissement or national debt, be printed.

Art. 87. The estates, together with the king, have the right to make new and repeal old laws. In this view such questions must be proposed at the general meetings of the orders of the estates, and shall be decided by them, after having taken the opinion of the law committee, as laid down in the 56th article. The proposition shall be submitted, through the speakers, to the king, who, after having ascertained the opinion of the council of state and supreme court, shall declare either his royal approbation, or motives for withholding it. Should the king desire to propose any

alteration in the laws, he shall, after having consulted the council of state and supreme court, refer his proposition, together with their opinion, to the deliberation of the states, who, after having received the report of the law committee, shall decide on the point. In all such questions the resolution of three orders shall be considered as the resolution of the estates of the realm. If two orders are opposed to the other two, the proposition is negated, and the law is to remain as formerly.

Art. 88. The same course, or mode of proceeding, shall be observed in explaining the civil, criminal, and ecclesiastical laws, as in making these. Explanations concerning the proper sense of the law given by the supreme court in the name of the king, in the interval between the Diets, may be rejected by the states, and shall not afterwards be valid, or cited by the courts of judicature.

Art. 89. At the general meetings of the orders of the estates, questions may be proposed for altering, explaining, repealing, and issuing acts concerning public economy; and the principles of public institutions of any kind may be discussed. These questions shall afterwards be referred to the committee of public grievances and economical affairs, and then be submitted to the decision of the king, in a council of state. When the king is pleased to invite the estates to deliberate with him on questions concerning the general administration, the same course shall be adopted as is prescribed for questions concerning the laws.

Art. 90. During the deliberations of the orders, or their committees, no questions shall be proposed but in the way expressly prescribed by this fundamental law, concerning either appointing or removing of officers, decisions and resolutions of the government and courts of law, and the conduct of private individuals and corporations.

Art. 91. When the king, in such cases as those mentioned in the 30th article, is absent from the kingdom longer than twelve months, the council shall convoke the estates to a general Diet, and cause the summons to be proclaimed within fifteen days from the above time, in the churches of the capital, and speedily afterwards in the other parts of the kingdom. If the king, after being informed thereof, does not return to the kingdom, the estates shall adopt such measures as they deem most beneficial for the country.

Art. 92. The same shall be enacted in case of any disease or ill health of the king, which might prevent him from attending to the affairs of the kingdom for more than twelve months.

Art. 93. When the heir of the crown, at the decease of the king, is under age, the council of state shall issue summons to the representatives to meet. The estates of the realm shall have the right, without regard to the will of a deceased king concerning the administration, to appoint one or several guardians, to rule in the king's name, according to this fundamental law, till the king becomes of age.

Art. 94. Should it ever happen that the royal family become extinct in the male line, the council of state shall convene the estates, to elect another royal family to rule conformably to this fundamental law.

Art. 95. Should, contrary to expectation, the council of state fail to convoke the estates, in the cases prescribed by the 91st, 93d, and 94th articles, it shall be the positive duty of the directors of the house of nobles, the chapters throughout the kingdom, the magistrates in the capital, and the

governors in the provinces, to give public notice thereof, in order that elections of deputies to the Diet may forthwith take place, and the estates assemble to protect their privileges and rights of the kingdom. Such a Diet shall be opened on the fiftieth day from that period when the council of state had proclaimed the summons in the churches of the capital.

Art. 96. The estates shall at every Diet appoint an officer, distinguished for integrity and learning in the law, to watch over, as their deputy, the conduct of the judges and other official men, and who shall, in legal order and at the proper court, arraign those who in the performance of their offices have betrayed negligence and partiality, or else have committed any illegal act. He shall, however, be liable to the same responsibility as the law prescribes for public prosecutors in general.

Art. 97. This deputy or attorney-general of the estates shall be chosen by twelve electors out of every order.

Art. 98. The electors shall at the same time they choose the said attorney-general, elect a person possessing equal or similar qualities to succeed him, in case of his death before the next Diet.

Art. 99. The attorney-general may, whenever he pleases, attend the sessions of all the superior and inferior courts, and the public offices, and shall have free access to their records and minutes; and the king's officers shall be bound to give him every assistance.

Art. 100. The attorney-general shall at every Diet present a report of the performance of his office, explaining the state of the administration of justice in the land, noticing the defects in the existing laws, and suggesting new improvements. He shall also, at the end of each year, publish a general statement concerning these.

Art. 101. Should the supreme court, or any of its members, from interest, partiality, or negligence, judge so wrong that an individual, contrary to law and evidence, did lose or might have lost life, liberty, honour, or property, the attorney-general shall be bound, and the chancellor of justice authorised, to arraign the guilty, according to the laws of the realm, in the court after mentioned.

Art. 102. This court is to be denominated the court of justice for the realm, and shall be formed by the president in the superior court of Swea, the presidents of all the public boards, four senior members of the council of state, the highest commander of the troops within the capital, and the commander of the squadron of the fleet stationed at the capital, two of the senior members of the superior court of Swea, and the senior member of all the public boards. Should any of the officers mentioned above decline attending this court, he shall be legally responsible for such a neglect of duty. After trial, the judgment shall be publicly announced: no one can alter such a sentence. The king may, however, extend pardon to the guilty, but not admitting him any more into the service of the kingdom.

Art. 103. The estates shall at every Diet nominate a jury of twelve members from out of each order, for deciding if the members of the supreme court of justice have deserved to fill their important places, or if any member without having been legally convicted for the faults mentioned in the above articles, yet ought to be removed from office.

Art. 104. The estates shall not resolve themselves into a court of justice, nor enter into any special examination of the decrees, verdicts, resolutions of the supreme court.

Art. 105. The constitutional committee shall have right to demand the minutes of the council of state, except those which concern ministerial or foreign affairs, and matters of military command, which may only be communicated as far as these have a reference to generally known events, specified by the committee.

Art. 106. Should the committee find from these minutes that any member of the council of state has openly acted against the clear dictates of the constitution, or advised any infringement either of the same or of the other laws of the realm, or that he had omitted to remonstrate against such a violation, or caused and promoted it by wilfully concealing any information, the committee shall order the attorney-general to institute the proper proceedings against the guilty.

Art. 107. If the constitutional committee should find that any or all the members of the council of state have not consulted the real interest of the kingdom, or that any of the secretaries of state have not performed his or their official duties with impartiality, activity, and skill, the committee shall report it to the estates, who, if they deem it necessary, may signify to the king their wish of having those removed, who may thus have given dissatisfaction. Questions to this effect may be brought forward at the general meetings of the orders, and even be proposed by any of the committees. These cannot, however, be decided until the constitutional committee have delivered their opinion.

Art. 108. The estates shall at every Diet appoint six individuals, two of whom must be learned in the law, besides the attorney-general, to watch over the liberty of the press. These deputies shall be bound to give their opinion as to the legality of publications, if such be requested by the authors. These deputies shall be chosen by six electors out of every order.

Art. 109. Diets may not last longer than three months from the time that the king has informed the representatives of the state of the revenues. Should, however, the estates at the expiration of that time not have concluded their deliberations, they may demand the Diet to be prolonged for another month, which the king shall not refuse. If again, contrary to expectation, the estates at the expiration of this term have not regulated the civil list, the king shall dissolve the Diet, and taxation continue in its former state till the next meeting of representatives.

Art. 110. No representative shall be responsible for any opinion uttered at meetings of the orders, or of the committees, unless by the express permission of at least five-sixths of his own order: nor can a representative be banished from the Diet. Should any individual or body, either civil or military, endeavour to offer violence to the estates, or to any individual representative, or presume to interrupt and disturb their deliberations, it shall be considered as an act of treason, and it rests with the estates to take legal cognizance of such an offence.

Art. 111. Should any representative, after having announced himself as such, be insulted, either at the Diet or on his way to or from the same, it shall be punished as a violation of the peace of the king.

Art. 112. No official person may exercise his official authority (his authority in that capacity) to influence the elections of deputies to the Diet, under pain of losing his place.

Art. 113. Individuals elected for regulating the taxation shall not be responsible for their lawful deeds in this their capacity.

Art. 114. The king shall leave the estates in undisturbed possession of their liberties, privileges, and immunities. Modifications which the prosperity of the realm may demand can only be done with the general concurrence and consent of the estates and the sanction of the king. Nor can any new privileges be granted to one order, without the consent of the other, and the sanction of the sovereign.

This we have confirmed by our names and seals, on the sixth day of the month of June, in the year after the birth of our Lord one thousand eight hundred and nine.

On behalf of the Nobles, M. Ankarsvard. On behalf of the Clergy, Jac. Ax. Lindblom. On behalf of the Burghers, H. N. Schwan. On behalf of the Peasantry, Lars Olsson, Speakers.

The above form of government we have not only acknowledged Ourselves, but do also command all our faithful subjects to obey it; in confirmation of which, we have thereto affixed our manual signature and the seal of the realm. In the city of our royal residence, Stockholm, on the sixth day of the month of June, in the year after the birth of our Lord one thousand eight hundred and nine.

CHARLES.

**SWEDENBORG, and the New Church.**—“Emanuel Swedenborg [or Svedberg] was born at Stockholm, January 29, 1688. . . . [His] father was a Lutheran Clergyman, and afterwards Bishop of Skara. . . . A university education at Upsala, . . . and studies for five years in England, France, Holland and Germany, brought . . . [many] interests into play. . . . The earliest of these were mathematics and astronomy, in the pursuit of which he met Flamsteed and Halley. His gift for the detection and practical employment of general laws soon carried him much farther afield in the sciences. Metallurgy, geology, a varied field of invention, chemistry, as well as his duties as an Assessor on the Board of Mines and of a legislator in the Diet, all engaged him. . . . The *Principia* and two companion volumes, dedicated to his patron, the Duke of Brunswick, crowned his versatile productions in the physical sciences. . . . Conspicuous in Swedenborg's thought all along was the premise that there is a God and the presupposition of that whole element in life which we call the spiritual. As he pushed his studies into the fields of physiology and psychology, this premised realm of the spirit became the express goal of his researches. Some of his most valuable and most startling discoveries came in these fields. Outstanding are a work on *The Brain* and two on the *Animal Kingdom* (kingdom of the *anima*, or soul). As his gaze sought the soul, however, in the light in which he had more and more successfully beheld all his subjects for fifty-five years, she eluded direct knowledge. . . . It was now, for the first time, too, that he gave a deep consideration to the condition of the Christian Church, revealed in otherworld judgment to be one of spiritual devastation and impotency. To serve in the revelation of ‘doctrine for a New Church’ became his Divinely appointed work. He forewent his reputation as a man of science, gave up his assessorship, cleared his desk of everything but the Scriptures. He beheld in the Word of God a spiritual meaning, as he did a spiritual world in the world of phenomena. In revealing both of these the Lord, he said, made His Second Coming. For the rest of his long life Swedenborg gave himself with unremitting labor but with a saving calm to this

commanding cause, publishing his great Latin volumes of Scripture interpretation and of theological teaching at Amsterdam or London, at first anonymously, and distributing them to clergy and universities. . . . Swedenborg died in London, March 29, 1772. In 1908 his remains were removed from the Swedish church in that city to the cathedral at Upsala, where they lie in a monument erected to his memory by the Swedish Parliament.”—J. K. Smyth and W. F. Wunsch, *Gist of Swedenborg* (Biographical note).—“The basis of Swedenborg's teaching . . . was that the Bible must be accepted absolutely as a divinely inspired book, but must be taken in an allegorical sense. Thus where historical events are recorded they are not recorded for the sake of history, for the object of the Scriptures is to treat not of the kingdoms of the earth, but of the Kingdom of God. In other parts of the Bible, as in Genesis, there is no truth in the story from the historical point of view. The record is merely an allegory of the soul. His doctrine of Correspondences was merely the recognition of this allegorical relationship of the spiritual and material. The universe, according to Swedenborg, is symbolical throughout. All material things are derived from their spiritual archetypes, and are representations of these. The bodily form represents the spiritual character, for the spirit forms the body in its own likeness. A man's acts are thus the outcome of his inward nature, and there is consequently a similar correspondence between them and the inward man. The basis of these ideas is, of course, the ancient occult teaching that the universe is the macrocosm, and man the microcosm. . . . Swedenborg's doctrine of Degrees appears to follow from his doctrine of Correspondences. The three degrees of the human mind correspond to the three kingdoms of Nature: animal, vegetable, and mineral, corresponding to spirit, soul, and body. ‘Degrees,’ Swedenborg tells us, ‘are of two kinds, discrete and continuous.’ ‘All things, from least to greatest, in both the spiritual and natural worlds, co-exist at once from discrete and continuous degrees. In respect of discrete degrees there can be no intercourse between either by continuity.’ It follows, therefore, with regard to the degrees of the human mind, the celestial, spiritual, and the natural, that they cannot communicate under normal conditions one with another. Thus, too, men on earth can have no sensible communication with the spiritual world or see things of that world without a special opening of the spiritual sight. . . . Another doctrine of Swedenborg's was that of regeneration. In order to be partaker of the higher life, man, he held, must be born again, but this regeneration was not a special occurrence of any particular date, but a continuous process. One of the orthodox doctrines which Swedenborg attacked was that of the Trinity. He denied that Jesus Christ was merely the Second Person of a Divine Trinity. He cites St. Paul's statement that ‘in Him dwelleth all the fullness of the Godhead bodily,’ and maintains that the whole Trinity is centred in his Person.”—R. Shirley, *Occultists & mystics of all ages*, pp. 107-100.—The first movement toward organization of the New Church began in London in 1782, when a printer, Robert Hindmarsh, formed a class for the study of Swedenborg's writings. Gradually a society developed, and in 1788 public services were held. In 1780 the first General Conference of the New Jerusalem Church was held in England. In 1915 there were seventy-two societies in the Conference, with a total membership of 6694. There were also a few societies not con-

nected with the Conference. Throughout Great Britain and Ireland, there are about 10,000 followers of Swedenborg. On the continent there are societies in Paris, Zurich, Berlin, Budapest, Vienna, Stuttgart, Copenhagen, and Stockholm. The first society of the New Church in the United States was organized in Baltimore in 1792. The first meeting of the General Convention of the New Jerusalem in the United States and Canada was held in Philadelphia in 1817. In 1922 the Convention reported a membership of 107 churches, composed of a total of 7066 persons. Taken altogether, it is estimated that there are about 20,000 members of the faith in the world.—See also SCANDINAVIAN LITERATURE: 1750-1807.

## SWITZERLAND

Geographical description.—Resources.—“Switzerland lies in the mountainous heart of southwestern Europe. Germany is her neighbor to the north, Austria and the diminutive principality of Liechtenstein to the east, Italy to the south, and France to the west. . . . Switzerland is the only considerable European state without direct access to salt water. . . . The area of Switzerland is 15,976 square miles [and the population, 1920, was 3,880,320]. The lowest point in Swiss territory is 646 feet above sea level. Her highest peaks tower to an altitude of 15,000 feet. Only 2 per cent of the area of the country is below 1000 feet in elevation, 58 per cent is between 1000 and 4000, and 34 per cent is over 4000 feet high. Lakes, glaciers, and perpetual snow fields cover over 6 per cent of the surface. . . . Switzerland falls naturally into three great divisions: first, the region of the Alps, which with their ramifications cover the whole central, southern, and eastern sections of the country; second the Jura district, the lesser ranges of which are merely outlying spurs of the Alps; and third, the plateau or basin which lies between two mountainous divisions.”—R. C. Brooks, *Government and politics of Switzerland*, pp. 1-2.—“Apart from building stone, cement, and salt, the mineral resources of the country are negligible. . . . Switzerland is still in the main an agricultural and pastoral country. . . . Of the entire productive area of Switzerland slightly more than a third is devoted to grass and meadows, and nearly three tenths to forestry. . . . The remaining one third of the arable land of the country is divided between fruit production and ordinary crops,—18.7 per cent of

the whole being devoted to the former and 16.4 per cent to the latter. . . . Potatoes are produced in quantities almost sufficient for the domestic demand. Hemp, flax, and tobacco also are grown to a small extent. In five cantons the grape is cultivated. . . . It is on the side of animal husbandry, however, that Swiss farmers are most successful. Nearly three fourths of the total value of their annual production is due to this branch of agriculture. . . . Cheese, condensed milk, and milk chocolate, all of which enjoy a great reputation abroad, are the principal products of this form of Swiss agricultural industry. . . . Switzerland is a land of small peasant holdings, nearly 300,000 in number. . . . These holdings average less than twenty acres, but each of them represents a definite ‘stake in the country’ for the peasant proprietor and the members of his family. . . . [In manufacturing] textiles take first rank, with a total of over 100,000 employees engaged in silk, cotton, woolen, linen, and embroidery factories; in machine building, metal working, and electrical and chemical industries, 82,000 workers are engaged; jewelry and watch-making nearly 35,000. [Other important industries are the manufacture of food products, clothing, wood-working, paper and graphic trades, clay and stone works.]”—*Ibid.*, pp. 4-8.

Lake dwellings.—“In many parts of Europe, especially in Switzerland and northern Italy, plain traces of some curious habitations of people who lived through the later Stone Age into the Bronze Age, and even after it, have been brought to light. These are the ‘lake dwellings,’ or ‘lacustrine habitations,’ as they have been called, which have excited interest in late years. They

were generally built on piles, driven into a lake-bottom, at such distance from shore as would make them easy of defense against enemies. The foundations of whole villages of these dwellings have been found in the Swiss and North Italian lakes, and less numerous elsewhere. From the lake-mud under and around them, a great quantity of relics of the lake-dwellers have been taken, and many facts about their arts and mode of life have been learned. It is known that, even before a single metal had come into their hands, they had begun to cultivate the earth; had raised wheat and barley and flax; had domesticated the horse, the ox, the sheep, the goat, the pig and the dog; had become fairly skilful in weaving, in rope-making, and in the art of the potter, but without the potter's wheel. Gradually copper and bronze made their appearance among the implements of these people, as modern search discovers them imbedded, layer upon layer, in the old ooze of the lake-beds where they were dropped. In time iron, too, reveals itself among their possessions, showing that they lived in their lake-villages from the latter Stone Age into that third period of the early process of civilization which is named the Iron Age—when men first acquired the use of the most useful of all the metals. It appears, in fact, that the lake-dwellings were occupied even down to Roman times, since articles of Roman make have been found in the ruins of them."—J. N. Larned.—See also LAKE DWELLINGS; EUROPE: Prehistoric period: Lake dwellings of Switzerland.

**Strategic position of country.** See ALPS: As barriers.

**Three Forest Cantons.—Original confederation (Eidgenossenschaft).—Relations with the House of Austria.**—It is pretty clear that among those Helvetii (see HELVETII) with whom Cæsar had his cruel struggle, and who subsequently became an integral portion of the empire, there were no people from the Forest Cantons of Schwyz, Uri, and Unterwalden. "The Swiss Confederation is one of the numerous states which have arisen out of the dissolution of the Holy Roman Empire, but it differs from all the rest both in its origin and in its characteristics. Whereas elsewhere the German states owed their origin to princely houses, which had brought together their various domains by inheritance, by marriage, and by conquest, Switzerland grew out of the voluntary union of small communities to form a republican federation of states. . . . In August, 1201, the three Forest Cantons, Uri, Schwyz, and Unterwalden, became united by an Everlasting League [*Eidgenossenschaft*] into an indissoluble community and secured their democratic independence by the glorious victory which in 1315 at Morgarten on the Lake of Aegeri they obtained over Leopold of Austria and his knights. These three original Cantons constituted the nucleus around which gathered all those between the Jura, the Rhine, and the Alps that were hostile to the Habsburg rule. In commemoration of the victors at Morgarten, the men of Schwyz, this union received the name of the *Swiss Confederation*. Towns such as Lucerne, Zurich, Bern, Fribourg, and Solothurn, and rural districts like Glarus, Zug, and Appenzell endeavoured by joining the Confederation to secure their right to self-government. . . . In Germany the feudal aristocracy and its princely leaders maintained their authority; in Switzerland, on the other hand, the lower social strata, the burghers, and the peasants, took the power into their hands. With the diminution of the power of

the Habsburg ruling house went that of the higher and the lower nobility, save in so far as the nobles submitted to absorption into the civic communities. With trifling exceptions, the lordships of the nobles which separated the towns from the rural districts of the Confederation gradually fell to the latter by purchase, by mortgage, and by the fortune of war, and thus there came into existence the continuous geographical area which was essential for the formation of the Swiss state. . . . At the end of the fifteenth century there existed in Switzerland two classes only: on the one hand, the burghers of the sovereign towns, and the country folk of the sovereign rural cantons; and, on the other, the dwellers in the subject domains. . . . Every 'subject' could enter a town, and could there, for a few gulden, acquire the right of citizenship; and then the path to honours and offices was as open to him as to any burgher by birth. It was hardly possible to rule against its will a people every one of whom had a pike and a halberd hanging on the wall of his house. Even though the governments of the town cantons were exclusively composed of the burghers of the chief town, the authority of these was limited by the laws and the customs of the country regions. Moreover, it was found advantageous, in important emergencies, to ask the opinion of the whole people, not merely that of the burghers in the town, but also that of their relatives in the country districts, and to be guided by the popular voice. It followed that the inhabitants of the subject lands felt themselves to be also free Confederates; they also were proud to be liberated from the 'arbitrary rule of the princes and the nobles'; and by them also the tyrannicide, William Tell, was honoured, in word and picture, as a national hero."—W. Oechsli, *History of Switzerland, 1400-1014*, pp. 1-3.—According to the popular tradition, the people of the three cantons were maddened by wanton outrages and insolences on the part of the Austrian dukes, until three bold leaders, Werner Stauffacher, Arnold of the Melkthal, and Walter Fürst, assembled them in nightly meetings on the little meadow of Grütli or Rütli, in 1307, and bound them by oaths in a league against Austria, which was the beginning of the Swiss confederation. This story, and the famous legend of William Tell, connected with it, are fading out of authentic history under the light which modern investigation has brought to bear on it.

ALSO IN: O. Delepiepierre, *Historical difficulties.*—J. Heywood, *Establishment of Swiss freedom, and the Scandinavian origin of the legend of William Tell* (*Royal Historical Society Transactions*, v. 5).—*Legend of Tell and Rütli* (*Edinburgh Review*, Jan., 1869).

**Nationality.—Character of Swiss politics and political organization.**—"The Swiss are the supreme example of the phenomenon of Nationality as independent of Religion and Language. On a map of religious or linguistic 'distribution' they would not figure as an entity at all: on a map of Nationality they deserve distinction as much as, or more than, any other European group."—J. Toynbee, *Nationality and the war*, p. 505.—"The scanty attention which Swiss institutions have received, and the inadequate recognition of their value to students of political philosophy, seem largely due to the unexciting and what may be called the prosaic humdrum character of Swiss political life. There are no sensational events to draw the eyes of the outer world; no Cabinet crises, as in England; no brilliant displays of

oratory, as in the French Chamber; no dramatic surprises, as in the huge national nominating conventions of the United States. So the achievements of modern Switzerland, just because they do not appeal to imagination or emotion, have been little regarded, though directed with unusual success to what ought to be the main aims of government, the comfort and well-being of the individual, the satisfaction of his desire for intellectual pleasures, the maintenance of peace and kindly relations between social classes."—J. Bryce, *Modern democracies*, v. 1, pp. 505-506.—"There is not one democracy in Switzerland; there are as many democracies as there are cantons and demicantons. The twenty-five more or less autonomous states which comprise the Confederation and this Confederation itself are political laboratories, al-

four centuries thereafter Rome occupied the country, imposing its language, religion, and civilization upon the native tribes. Primitive forms of agriculture soon gave way before the better methods taught by the conquerors. Swiss mountain passes and valleys were opened up by well-made roads of the sort which everywhere followed the triumphant flight of the Roman eagles. Along these highways trade flowed freely, under the protection of the *pax Romana*. Toward the close of the imperial occupation Christianity spread rapidly. But, on the other hand, during this period Roman soldiery domineered over the native peoples. Roman vices sapped their vitality, and the crafty Roman policy of *divide et impera* reduced them to political impotence."—R. C. Brooks, *Government and politics of Switzerland*, p. 16.

THE OATH AT THE RÜTLI MEADOW  
 (After drawing by Hottenroth)

ways at work. They are all so many small nations animated by a ceaseless desire to perfect their political organization and to develop their democratic institutions. Politically Switzerland offers a picture almost as varied in its character as it does physically. All forms of popular government are, or have been, practiced in Switzerland, and the results of all of them can be studied there at the present time."—F. Bonjour, *Real democracy in operation*, p. vii.

**B. C. 1st century.—Celtic inhabitants.—Roman occupation.**—"At the time when Roman writers first mention Switzerland, it was inhabited by Keltic tribes, chief among which were the Rhaetians, who lived in the projecting eastern angle of the country, and the Helvetians, who occupied all the plateau or basin region and the adjacent mountain districts. The Helvetians [see HELVETII] raised cattle and carried on a rude sort of agriculture, but were almost constantly engaged in warfare among themselves and in raiding expeditions against their neighbors. In 58 B. C. Cæsar began the conquest of the Helvetians. For

**A. D. 3rd-5th centuries.—Teutonic invasions.**—"With the breakdown of the Empire under barbarian inroads the influence of Rome in Switzerland was quickly obliterated, and little remained to show it save the ruins of her highways and engineering works. As early as 260 A. D. the first wave of the Allemanni [see ALEMANNI: 496-504], a German race, reached northeastern Switzerland. Successive waves of this conquering people followed, until by the middle of the fifth century they had spread as far west as Geneva. Also from Savoy, where land had previously been allotted them by the Romans, the Burgundians pushed into Switzerland [see BURGUNDY: 500], occupying Valais, Freiburg, and other western districts. From these two basic stocks the Swiss people and civilization of today are largely derived. However, it was in exclusively Teutonic territories that the political evolution of modern Switzerland originated and received much of its distinctive form. Not till a comparatively recent date do the French-speaking descendants of the Burgundians begin to cooperate in this process.

The Allemannians were pagan worshippers of Odin, who seized goods and lands alike and reduced their captives to slavery. In accordance with Teutonic customs the territory conquered by these tribes, under the leadership of various chieftains and kings, was divided into counties, each of which was placed under the rulership of a count, chosen by the people from among the nobles. When war broke out all the fighting men united under a duke or leader of their own choosing. From time to time popular assemblies of freemen were held to decide upon common action, to render judicial decisions, and for religious and other purposes. In spite of these democratic elements there were sharp distinctions among the Allemannians between the 'free' and the 'unfree.' Indeed, the feudalism which was to spread over Switzerland later had its roots in the sharp social cleavages established by the barbarian conquests."—*Ibid.*, pp. 16-18

536-843.—Frankish control.—Feudal system and the opposition of the walled cities.—"As a result of the Frankish conquest in the sixth century Switzerland passed under the control of the Merovingian dynasty (536-752 A.D.), and later of the Carolingian dynasty (752-843 A.D.). With the exception of the reigns of a few enlightened monarchs, these were centuries of disorder, war, and misery. One bright spot was due to the coming, early in the seventh century, of a party of Irish monks, whose fiery preaching spread the gospel over the entire country and led to the foundation of many churches, shrines, and monasteries. Under the Merovingians the system of government was further centralized. Feudalism was thoroughly established, cruelty and oppression were widespread. Even the monasteries became landlords on a great scale, although as a rule their tenants were treated more humanely than those of the lay nobles. Early in the ninth century Switzerland became a part of the German Empire. As such it took its full share of the fighting and much more than its full share of the suffering caused by the long-drawn-out duel between the imperial and papal powers. Not till the end of the thirteenth century does the country begin to have an independent history. It had been but a minor pawn in the game of conquest waged first by the Romans, then by Allemannians and Franks: it was nothing more in the hands of the Holy Roman Emperors. In the great struggle against feudalism which was to be fought out later over the whole of Europe, walled cities everywhere became centers of the democratic movement. Fortunately Switzerland had such centers from an early date. Owing to the pouring in of marauders from the east, the building of strong walls around all towns of a certain size was ordered in the tenth century. . . . In return for the burden thus imposed and to encourage immigration from rural districts, certain privileges were conferred upon the *Bürger*, or citizens living within such fortified places (*Bürgen*). But Switzerland possessed other possible centers of resistance to feudal oppression. These were the high and remote valleys of the country, protected, not by man-made walls, but by frowning mountain ramparts. Communities dwelling within such valleys could resist assaults as well as could the fortified cities of the plain. If beaten they could flee pursuit, a thing which the *Bürger* could not do. Finally, they had the advantage of offering far less to the cupidity of conquerors than did the wealthy lowland centers of trade and industry. Switzerland owes its liberty to a union of

peasant communes and walled cities. It was by the former . . . that the first great historic step was taken toward independence."—*Ibid.*, pp. 18-20.

14th century.—Military organization. See MILITARY ORGANIZATION: 13.

1332-1460.—Extension of the old confederation, or "Old League of High Germany."—Three cantons increased to eight.—"All the original cantons were German in speech and feeling, and the formal style of their union was 'the Old League of High Germany.' But in strict geographical accuracy there was . . . a small Burgundian element in the Confederation, if not from the beginning, at least from its aggrandizement in the 13th and 14th centuries. That is to say, part of the territory of the states which formed the old Confederation lay geographically within the kingdom of Burgundy, and a further part lay within the Lesser Burgundy of the Dukes of Zähringen. But, by the time when the history of the Confederation begins, the kingdom of Burgundy was pretty well forgotten, and the small German-speaking territory which it took in at its extreme northeast corner may be looked on as practically German ground. . . . It is specially needful to bear in mind, first, that, till the last years of the 13th century, not even the germ of modern Switzerland had appeared on the map of Europe; secondly, that the Confederation did not formally become an independent power till the 17th century; lastly, that, though the Swiss name had been in common use for ages, it did not become the formal style of the Confederation till the 10th century. Nothing in the whole study of historical geography is more necessary than to root out the notion that there has always been a country of Switzerland, as there has always been a country of Germany, Gaul, or Italy. And it is no less needful to root out the notion that the Swiss of the original cantons in any way represent the *Helvetii* of Cæsar. The points to be borne in mind are that the Swiss Confederation is simply one of many German Leagues, which was more lasting and became more closely united than other German Leagues—that it gradually split off from the German Kingdom—that in the course of this process, the League and its members obtained a large body of Italian and Burgundian allies and subjects—lastly, that these allies and subjects have in modern times been joined into one Federal body with the original German Confederates. The three Swabian lands [the three forest cantons] which formed the kernel of the Old League lay at the point of union of the three Imperial kingdoms, parts of all of which were to become members of the Confederation in its later form. . . . The Confederation grew for a while by the admission of neighbouring lands and cities as members of a free German Confederation, owning no superior but the Emperor. First of all [1332], the city of Luzern joined the League. Then came the Imperial city of Zürich [1351], which had already begun to form a little dominion in the adjoining lands. Then [1352]

came the land of Glarus and the town of Zug with its small territory. And lastly came the great city of Bern [1353], which had already won a dominion over a considerable body of detached and outlying allies and subjects. These confederate lands and towns formed the Eight Ancient Cantons. Their close alliance with each other helped the growth of each canton separately, as well as that of the League as a whole. Those cantons whose geographical position allowed them to do so, were thus able to extend their power, in the form of various shades of dominion and alliance, over the smaller lands and towns in their neighbourhood. . . . Zürich, and yet more Bern, each formed, after the manner of an ancient Greek city, what in ancient Greece would have passed for an empire. In the 15th century [1415-1460], large conquests were made at the expense of the House of Austria, of which the earlier ones were made by direct Imperial sanction. The Confederation, or some or other of its members, had now extended its territory to the Rhine and the Lake of Constanz. The lands thus won, Aargau, Thurgau, and some other districts, were held as subject territories in the hands of some or other of the Confederate States. . . . No new states were admitted to the rank of confederate cantons. Before the next group of cantons was admitted, the general state of the Confederation and its European position had greatly changed. It had ceased to be a purely German power. The first extension beyond the original German lands and those Burgundian lands which were practically German began in the direction of Italy. Uri had, by the annexation of Urseren, become the neighbour of the Duchy of Milan, and in the middle of the 15th century, this canton acquired some rights in the Val Leventina on the Italian side of the Alps. This was the beginning of the extension of the Confederation on Italian ground. But far more important than this was the advance of the Confederates over the Burgundian lands to the west."—E. A. Freeman, *Historical geography of Europe*, ch. 8, sect. 6.

1386-1388.—Austrian defeats at Sempach and Naefels.—"Seldom, if ever, has Switzerland seen a more eventful month than that of July, 1386, for in that month she fought and won the ever-memorable battle of Sempach. . . . There is seldom much love lost between oppressor and oppressed, and Austria and the Swiss Confederation had for some time held that relation to each other. A ten years' peace had indeed been concluded between the two powers, but it was a sham peace, and the interval had been used by both to prepare for new conflicts. . . . Zurich laid siege to Rapperswyl with the intent to destroy the odious Austrian toll-house; Lucerne levelled with the ground the Austrian fort Rothenburg, and entered into alliances with Entlebuch and Sempach to overthrow the Austrian supremacy. This was equal to a declaration of war, and war was indeed imminent. Duke Leopold III., of Austria, was most anxious to bring the quarrel to an issue, and to chastise the insolent Swiss citizens and peasantry. . . . The nobles of Southern Germany rallied round the gallant swordsman, and made him their leader in the expeditions against the bourgeoisie and peasantry. And no sooner had the truce expired (June, 1386), than they directed their first attack on the bold Confederation. . . . Leopold's plan was to make Lucerne the centre of his military operations, but in order to draw away attention from his real object, he sent a division of 5,000 men to Zurich to simulate an

attack on that town. Whilst the unsuspecting Confederates lay idle within the walls of Zurich, he gathered reinforcements from Burgundy, Swabia, and the Austro-Helvetian Cantons, the total force being variously estimated at from 12,000 to 24,000 men. He marched his army in the direction of Lucerne, but by a round-about way, and seized upon Willisau, which he set on fire, intending to punish Sempach 'en passant' for her desertion. But the Confederates getting knowledge of his stratagem left Zurich to defend herself, and struck straight across the country in pursuit of the enemy. Climbing the heights of Sempach, . . . they encamped at Meyersholz, a wood fringing the hilltop. The Austrians leaving Sursee, for want of some more practicable road towards Sempach, made their way slowly and painfully along the path which leads from Sursee to the heights, and then turns suddenly down upon Sempach. Great was their surprise and consternation when at the junction of the Sursee and Hiltisrieden roads they came suddenly upon the Swiss force. . . . The Swiss . . . drew up in battle order, their force taking a kind of wedge-shaped mass, the shorter edge foremost, and the bravest men occupying the front positions. . . . The onset was furious, and the Austrian Hotspurs, each eager to outstrip his fellows in the race for honour, rushed on the Swiss, drove them back a little, and then tried to encompass them and crush them in their midst. . . . All the fortune of the battle seemed against the Swiss, for their short weapons could not reach a foe guarded by long lances. But suddenly the scene changed. 'A good and pious man,' says the old chronicler, deeply mortified by the misfortune of his country, stepped forward from the ranks of the Swiss—Arnold von Winkelried. Shouting to his comrades in arms, 'I will cut a road for you; take care of my wife and children!' he dashed on the enemy, and, catching hold of as many spears as his arms could encompass, he bore them to the ground with the whole weight of his body. His comrades rushed over his corpse, burst through the gap made in the Austrian ranks, and began a fierce hand-to-hand encounter. . . . A fearful carnage followed, in which no mercy was shown, and there fell of the common soldiers 2,000 men, and no fewer than 700 of the nobility. The Swiss lost but 120 men. . . . This great victory . . . gave to the Confederation independence, and far greater military and political eminence. . . . The story of Winkelried's heroic action has given rise to much fruitless but interesting discussion. The truth of the tale, in fact, can neither be confirmed nor denied, in the absence of any sufficient proof. But Winkelried is no myth. . . . There is proof that a family of the name of Winkelried lived at Unterwalden, at the time of the battle. . . . The victory of Naefels [April, 1388] forms a worthy pendant to that of Sempach. . . . The Austrians, having recovered their spirits after the terrible disaster," invaded the Glarus valley in strong force, and met with another overthrow, losing 1,700 men. "In 1380 a seven years' peace was arranged. . . . This peace was first prolonged for 20 years, and afterwards, in 1412, for 50 years."—Mrs. L. Hug and R. Stead, *Story of Switzerland*, ch. 15.

1396-1499.—Grey Leagues.—Democratic independence of Graubünden (Grisons) achieved.—Alliance with the Swiss cantons.—Swabian War.—Practical separation of the confederacy from the Empire.—"It was precisely at this epoch [the later years of the fourteenth century] that the common people of Graubünden [or the Grisons]

felt the necessity of standing for themselves alone against the world. Threatened by the Habsburgs, suspicious of the See of Chur [see TYROL], ill-governed by their decadent dynastic nobles, encouraged by the example of the Forest Cantons, they began to form leagues and alliances for mutual protection and the preservation of peace within the province. Nearly a century was occupied in the origination and consolidation of those three Leagues which turned what we now call Graubünden into an independent democratic state. . . . The town of Chur, which had been steadily rising in power, together with the immediate vassals of the See, took the lead. They combined into an association, which assumed the name of the Gotteshausbund; and of which the Engadine [the upper valley of the Inn] formed an important factor. Next followed a league between the Abbot of Dissentis, the nobles of the Oberland, the Communes of that district, and its outlying dependencies. This was called the Grey League—according to popular tradition because the folk who swore it wore grey serge coats, but more probably because it was a League of Counts, Gräfen, Grawen. The third league was formed after the final dispersion of the great inheritance of Vaz, which passed through the Counts of Toggenburg into the hands of females and their representatives. This took the name of Zehn Gerichte, or Ten Jurisdictions, and embraced Davos, Belfort, Schanfigg, the Prättigau, and Maienfeld. The date of the formation of the Gotteshausbund is uncertain; but its origin may be assigned to the last years of the 14th century [some writers date in 1396]. That of the Grey League, or Graue Bund, or Obere Theil, as it is variously called, is traditionally 1424. (It is worth mentioning that this League took precedence of the other two, and that the three were known as the Grey Leagues.) That of the Zehn Gerichte is 1438. In 1471 these three Leagues formed a triple alliance, defensive and offensive, protective and aggressive, without prejudice to the Holy Roman Empire of which they still considered themselves to form a part, and without due reservation of the rights acquired by inheritance or purchase by the House of Austria within their borders. This important revolution, which defeudalized a considerable Alpine territory, and which made the individual members of its numerous Communes sovereigns by the right of equal voting, was peaceably effected. . . . The constitution of Graubünden after the formation of the Leagues, in theory and practise, . . . was a pure democracy, based on manhood suffrage. . . . The first difficulties with which this new Republic of peasants had to contend, arose from the neighbourhood of feudal and imperial Austria. The Princes of the House of Habsburg had acquired extensive properties and privileges in Graubünden. . . . These points of contact became the source of frequent rubs, and gave the Austrians opportunities for interfering in the affairs of the Grey Leagues. A little war which broke out in the Lower Engadine in 1475, a war of raids and reprisals, made bad blood between the people of Tirol and their Grisons neighbours. But the real struggle of Graubünden with Austria began in earnest, when the Leagues were drawn into the so-called Swabian War (1496-1499). The Emperor Maximilian promoted an association of south German towns and nobles, in order to restore his Imperial authority over the Swiss Cantons. They resisted his encroachments, and formed a close alliance with the Grey Leagues. That was the commencement of a tie which bound Graubünden,

as a separate political entity, to the Confederation, and which subsisted for several centuries. Graubünden acted as an independent Republic, but was always ready to co-operate with the Swiss. . . . Fighting side by side [in the Swabian War] with the men of Uri, Glarus, Zürich, the Bündners learned the arts of warfare in the lower Rheinthal. Afterwards, in 1499, they gained the decisive battle of this prolonged struggle on their own ground and unassisted. In a narrow gorge called Calven, just where the Münsterthal opens out into the Vintschgau above Glurns, 5,000 men of the Grey Leagues defeated the whole chivalry and levies of Tirol. Many thousands of the foe (from 4,000 to 5,000 is the mean estimate) were left dead upon the field." Maximilian hastened to the scene with a fresh army, but found only deserted villages, and was forced by famine to retreat. "The victory of Calven raised the Grisons to the same rank as the Swiss, and secured their reputation in Europe as fighting men of the best quality. It also led to a formal treaty with Austria, in which the points at issue between the two parties were carefully defined."—J. A. Symonds, *History of Graubünden* (Strickland's "The Engadine," pp. 29-33).—During the Swabian War, in 1499, the Swiss concluded a treaty with France. "Willibald Pirckheimer, who was present with 400 red-habited citizens of Nuremberg, has graphically described every incident of this war. The imperial reinforcements arrived slowly and in separate bodies; the princes and nobles fighting in real earnest, the cities with little inclination. The Swiss were, consequently, able to defeat each single detachment before they could unite, and were in this manner victorious in ten engagements." The emperor, "dividing his forces, despatched the majority of his troops against Basle, under the Count von Fürstenburg, whilst he advanced towards Geneva, and was occupied in crossing the lake when the news of Fürstenburg's defeat and death, near Dornach, arrived. The princes, little desirous of staking their honour against their low-born opponents, instantly returned home in great numbers, and the emperor was therefore compelled to make peace [1499]. The Swiss retained possession of the Thurgau and of Basle, and Schaffhausen joined the confederation, which was not subject to the imperial chamber, and for the future belonged merely in name to the empire, and gradually fell under the influence of France."—W. Menzel, *History of Germany*, v. 2, ch. 191.

1481-1501.—Disagreements over the spoils of the war with Charles the Bold.—Threatened rupture.—Convention of Stanz.—Enlargement of the confederacy.—Its loose and precarious constitution.—"In the war with Charles the Bold, Bern had gained greatly in extent on the west, while the immense booty taken in battle and the tributes laid on conquered cities seemed to the country cantons to be unfairly divided, for all were supposed to receive an equal share. The cities protested that it was no fair division of booty to give each one of the country states, who had altogether furnished 14,000 men for the war, an even share with Bern which had sent out 40,000. Another bone of contention was the enlargement of the union. The cities had for a long time desired to bring the cantons of Freiburg and Solo-

thurn into the League. . . . But these were municipal governments, and the Forest States, unwilling to add more to the voting strength of the cities and thereby place themselves in the minority, refused again and again to admit these cantons. The situation daily grew more critical. Schwyz, Uri, and Unterwalden made an agreement with Glarus to stand by each other in case of attack. Luzern, Bern, and Zürich made a compact of mutual citizenship, a form of agreement by which they sought to circumvent the oath they had taken in the League of Eight to enter into no new alliances. Just at this point there was alleged to have been discovered a plot to destroy the city of Luzern by countrymen of Obwalden and Entlibuch. The cities were thrown into a frenzy and peace was strained to the utmost. Threats and recriminations passed from side to

tion and importance, was a most desirable acquisition, and in the same year the addition of Schaffhausen, like Basel, a free imperial city with outlying territories, still further strengthened the Union. The next, and for 285 years the last, addition to the inner membership of the alliance was Appenzell. . . . Connected with the confederacy there were, for varying periods and in different relationships, other territories and cities more or less under its control. One class consisted of the so-called Allied Districts ('Zugewandte and Verbündete Orte'), who were attached to the central body not as equal members, but as friends for mutual assistance. This form of alliance began almost with the formation of the league, and gradually extended till it included St. Gallen, Biel, Neuchâtel, the Bishopric of Basel (which territory lay outside the city), the separate confederacies

COUNCIL HOUSE AT CONSTANCE

side, but finally, as an almost hopeless effort toward reconciliation, a Diet was called to meet at Stanz on the 8th of December, 1481. The details of this conference read like romance, so great was the transformation which took place in the feelings of the confederates. . . . Just as the Diet was about to break up in confusion a compromise was effected, and an agreement was drawn up which is known as the Convention of Stanz (Stanzerverkommis). . . . As to the matter latest in contention, it was agreed that movable booty should be divided according to the number of men sent into war, but new acquisitions of territory should be shared equally among the states participating. Thus the principle of state-rights was preserved and the idea of popular representation received its first, and for 300 years almost its only recognition. In another agreement, made the same day, Freiburg and Solothurn were admitted to the League on equal terms with the others. In 1501 the confederation was enlarged by the admission of Basel, which, on account of its situa-

tion and importance, was a most desirable acquisition, and in the same year the addition of Schaffhausen, like Basel, a free imperial city with outlying territories, still further strengthened the Union. More closely attached to the confederation were the 'Gemeine Vogteien,' or subject territories [Aargau, Thurgau, etc.], whose government was administered by various members of the league in partnership. These lands had been obtained partly by purchase or forfeiture of loans and partly by conquest. . . . Before the middle of the 16th century nearly all the territory now included in Switzerland was in some way connected with the confederation. Upon this territorial basis of states, subject lands and allies, the fabric of government stood till the close of the 18th century. It was a loose confederation, whose sole organ of common action was a Diet in which each state was entitled to one vote. . . . Almost the only thread that held the Swiss Confederation together was the possession of subject lands. In these they were interested as partners in a business corporation. . . . These common properties were all that prevented complete rupture on several critical occa-

sions."—J. M. Vincent, *State and federal government in Switzerland*, ch. 1.

HULDREICH ZWINGLI

Differences between the Swiss Reformers and the German Protestants.—Conference at Marburg.—Civil war among the cantons.—Death of Zwingli.—From Zurich, "the reformed faith penetrated, but only gradually, into the northern and eastern cantons. Bern was reached in 1528, after a brilliant disputation held in that city. Basel and Schaffhausen followed in 1529, and then St. Gall, Appenzell, Graubünden, and Solothurn, though some of them had serious struggles within themselves and fell in only partly with the reforms. But in the Central or Forest Cantons it was that the fiercest opposition was encountered. . . . From the very simplicity of their lives the people ignored the degeneracy of the priesthood, and amongst these pastoral peoples the priests were of simpler manners and more moral life than those in the cities; they disliked learning and enlightenment. Then there was the old feeling of antipathy to the cities, coupled with a strong dislike for the reforms which had abolished 'Reislaufen' [military service under foreign pay], that standing source of income to the cantons. Lucerne, bought

with French gold, struggled with Zurich for the lead. So far was the opposition carried that the Catholic districts by a majority of votes insisted (at the Diet) on a measure for suppressing heresy in Zurich, whilst some were for expelling that canton from the league. The Forest Cantons issued orders that Zwingli should be seized should he be found within their territories; consequently he kept away from the great convocation at Baden, 1526. . . . Wider and wider grew the chasm between the two religious parties, and Zwingli at length formed a 'Christian League' between the Swiss Protestants and some of the German cities and the Elector of Hesse. On the other hand, the Catholics entered into an alliance with Ferdinand of Austria, a determined enemy to the reformed religion. At last the Protestant party was exasperated beyond bearing, and Zurich declared war on the Forest Cantons, Zwingli himself joining in the vicissitudes of the campaign. His camp presented the 'picture of a well-organized, God-fearing army of a truly Puritan stamp.' The encounter at Kappel, in June, 1529, however, took a peaceful turn, thanks to the mediation of Landammann Aebli, of Glarus, greatly to the disgust of Zwingli, who prophetically exclaimed that some day the Catholics would be the stronger party, and then they would not show so much moderation. All ill-feeling, indeed, subsided when the two armies came within sight of each other. The curious and touching episode known as the 'Kappeler Milchsuppe' took place here. A band of jolly Catholics had got hold of a large bowl of milk, but lacking bread they placed it on the boundary line between Zug and Zurich. At once a group of Zurich men turned up with some loaves, and presently the whole party fell to eating the 'Milchsuppe' right merrily. A peace was concluded on the 29th of June, 1529, by which the Austrian League was dissolved, and freedom of worship granted to all. . . . By his treatise, 'De vera et falsa religione' (1525), Zwingli had, though unwillingly, thrown the gauntlet into the Wittenberg camp. The work was intended to be a scientific refutation of the Catholic doctrine of transubstantiation, and a war of words arose. The contest was by each disputant carried on 'suo more'; by Luther with his usual authoritative and tempestuous vehemence, by Zwingli in his own cool reasoning, dignified, and courteous style and republican frankness. Presently there came a strong desire for a union between the German Protestants, and the Swiss Reformers [called Sacramentarians by the Lutherans], . . . the impulse to it being given by Charles V.'s 'Protest' against the Protestants. Landgrave Philip of Hesse, the political leader of the German reformers, invited Luther and Zwingli to meet at his castle of Marburg [1529], with the view of reconciling the two sections. The religious colloquium was attended by many savants, princes, nobles, and all the chief leaders of the Reformation, and might have done great things, but came to grief through the obstinacy of Luther, as is well known, or rather through his determination to approve of no man's views except they should agree exactly with his own. Luther insisted on a literal interpretation of the words 'This is my body,' whilst Zwingli saw in them only a metaphorical or symbolical signification. . . . To return for a moment to home politics. The peace of 1529 was a short-lived one. Zwingli, anxious only to spread the reformed faith over the whole republic, did not realize clearly the hatred of the Forest district against the new creed. . . . War was imminent, and was indeed eagerly desired on

both sides. Bern, finding that war was likely to be injurious to her private ends, insisted on a stoppage of mercantile traffic between the opposing districts, but Zwingli scorned to use such a means to hunger the enemy and so bring them to submit. However Zurich was outvoted in the Christian League (May 16th), and the Forest was excluded from the markets of that city and Bern. . . . On Zurich was turned all the fury of the famished Forest men, and they sent a challenge in October, 1531. A second time the hostile armies met at Kappel, but the positions were reversed. Zurich was unprepared to meet a foe four times as numerous as her own, and Bern hesitated to come to her aid. However Göldlin, the captain of the little force, recklessly engaged with the opposing army, whether from treachery or incapacity is not known, but he was certainly opposed to the reformed faith. Zwingli had taken leave of his friend Bullinger, as though foreseeing his own death in the coming struggle, and had joined the Zurich force. He was with the chief banner, and with some 500 of his overmatched comrades, fell in the thickest of the battle. . . . But the reformation was far too deeply rooted to be thus destroyed. Bullinger, the friend of Zwingli, and, later on, of Calvin, worthily succeeded to the leadership of the Zurich reformers."—Mrs. L. Hug and R. Stead, *Switzerland*, ch. 22.

1531-1648.—Religious divisions and conflicts.—Annexations of territory.—Peace with the duke of Savoy.—Coming of Protestant refugees.—Industrial progress.—Peace.—"A peace at Denikon in 1531 marks the acknowledgment of the principle of each Canton's independence. . . . The Confederacy was now fatally divided. There is, perhaps, no other instance of a State so deeply and so permanently sundered by the Reformation. Other governments adopted or rejected the reformed religion for their dominions as a whole; the Confederacy, by its constitution, was constrained to allow each Canton to determine its religion for itself; and the presence of Catholic and Reformed States side by side, each clinging with obstinacy to the religion of their choice, became the origin of jealousies and wars which have threatened more than once to rend asunder the ties of union. Next to the endless but uninteresting theme of religious differences comes the history of the annexations" by which the confederacy extended its limits. "In the direction of the Jura was a country divided between many governments, which the princes of Savoy, the Hapsburgs of the West, had once effectually ruled, but which had become morselled among many claimants during a century and a half of weakness, and which Duke Charles III. of Savoy was now seeking to reconcile to his authority. Geneva was the chief city of these parts. . . . Factions in favour of or against [the rule of the duke of Savoy] . . . divided the city [see GENEVA: 1504-1535]. The alliance of Bern and Freyburg was at length sought for; and the conclusion of a treaty of co-citizenship in 1526 opened at once the prospect of a collision between the House of Savoy and the Confederacy. That collision was not long delayed. In 1536, after repeated acts of provocation by Charles III., 7,000 men of Bern appeared within Geneva. To reach the city they had traversed the Pays de Vaud; after entering it they passed onwards to the provinces of Gex and Chablais. All that they traversed they

annexed. Even the city which they had entered they would have ruled, had not some sparks of honour and the entreaties of its inhabitants restrained them from the annihilation of the liberties which they had been called on to defend. The men of Freyburg and of the Valais at the same time made humbler conquests from Savoy. Later, the strong fortress of Chillon, and the rich bishopric of Lausanne, were seized upon by Bern. A wide extent of territory was thus added to the Confederacy; and again a considerable population speaking the French tongue was brought under the dominion of the Teutonic Cantons. These acquisitions were extended, in 1555, by the cession of the county of Gruyère, through the embarrassments of its last impoverished Count. They were diminished, however, by the loss of Gex and Chablais in 1564. The jealousy of many of the cantons at the good fortune of their confederates, and the reviving power of the House of Savoy, had made the conquests insecure. Emmanuel Philibert, the hero of St. Quentin, the ally of the great sovereigns of France and Spain, asked back his provinces; and prudence counselled the surrender of the two, in order to obtain a confirmation of the possession of the rest [see SAVOY AND PIEDMONT: 1559-1580]. The southern side of the Lake Lemman, which had thus been momentarily held, and which nature seemed to have intended to belong to the Confederacy, was thus abandoned. The frontiers, however, which were now secured became permanent ones. The Dukes of Savoy had transferred much of their ambition, with their capital, beyond the Alps; and the Confederates remained secure in their remaining possessions. The Confederacy might now have added further to its power by admitting new members to its League. . . . Constance . . . had urged its own incorporation. The religious tendencies of its inhabitants, however, had made it suspected; and it was allowed to fall, in 1548, without hope of recovery, under the dominion of Austria. Geneva . . . was pleading loudly for admission. The jealousy of Bern, and later the hostility of the Catholic Cantons to the faith of which the city had become the centre, refused the request. She remained a mere ally, with even her independence not always ungrudgingly defended against the assaults of her enemies. Religious zeal indeed was fatal during this century to political sagacity. Under its influence the alliance with the rich city of Mulhausen, which had endured for more than a hundred years, was thrown off in 1587; the overtures of Strasburg for alliance were rejected; the proposals of the Grisons Leagues were repulsed. The opportunities of the Confederates were thus neglected, while those of their neighbours became proportionately increased. . . . The progress that is to be traced during the 16th century is such as was due to the times rather than to the people. The cessation of foreign wars and the fewer inducements for mercenary service gave leisure for the arts of peace; and agriculture and trade resumed their progress. Already Switzerland began to be sought by refugees from England, France, and Italy. The arts of weaving and of dyeing were introduced, and the manufacture of watches began at Geneva. . . . War, which had been almost abandoned except in the service of others, comes little into the annals of the Confederation as a State. . . . As another century advances, there is strife at the very gates of the Confederation. . . . But the Confederacy itself was never driven into war."—C. F. Johnstone, *Historical abstracts*, ch. 7.

1579-1630.—Catholic revival and rally.—Borromeo or Golden League.—“Pre-eminent amongst those who worked for the Catholic revival was the famous Carlo Borromeo, Archbishop of Milan and nephew of Pius IV. He lived the life of a saint, and in due time was canonized. To his see belonged the Swiss bailliages in the Ticino and Valtellina. Indefatigable in his labours, constantly visiting every part of his diocese, toiling up to the Alpine huts, he gathered the scattered flocks into the Papal fold, whether by mildness or by force. . . . For the spread of Catholic doctrines he hit upon three different means. He called into being the Collegium Helveticum in 1579 at Milan, where the Swiss priests were educated free. He sent the Jesuits into the country, and placed a nuncio at Lucerne, in 1580. In 1586 was signed, between the seven Catholic cantons, the Borromeo or Golden League, directed against the reformers, and in the following year a coalition was, by the same cantons, excepting Solothurn, entered into with Philip of Spain and with Savoy. The Jesuits settled themselves in Lucerne and Freiburg, and soon gained influence amongst the rich and the educated, whilst the Capuchins, who fixed themselves at Altorf, Stanz, Appenzell, and elsewhere, won the hearts of the masses by their lowliness and devotion. In this way did Rome seek to regain her influence over the Swiss peoples, and the effect of her policy was soon felt in the semi-Protestant and subject lands. . . . In the Valais, the Protestant party, though strong, was quite swept out by the Jesuits, before 1630.”—Mrs. L. Hug and R. Stead, *Switzerland*, ch. 25.

1652-1789.—Peasant revolt and the Toggenburg War.—Religious conflicts.—Battles of Villmergen.—Peace of Aarau.—“About the middle of the 17th century there was growing up, in all the cantons except the Waldstätten, a feeling of strong discontent among the peasants, who still suffered from many of the tyrannies which had descended to them from the old days of serfdom. They felt the painful contrast between their lot and that of the three old cantons, where every peasant voted for his own magistrates and his own laws, and helped to decide the taxes and contributions which he should pay. . . . Now that their liberty had been proclaimed at Westphalia, they were inspired with the idea of trying to make it a reality. . . . They rose on the occasion of the reduction of the value of their copper coinage. . . . Opposition began among the Entlibuchers of Lucerne, a tall and sturdy race, that lived in the long, fertile valley on the banks of the Emmen. . . . Their spirit was soon quenched, however, by the threats of Zurich and Berne; but though they yielded for the moment, their example had spread, and there were popular risings, excited in the large canton of Berne by the same causes, which were not so easily checked. There was a second revolt in Lucerne, which was intended to be nothing less than a league of all the lower classes throughout the ten cantons. The peasants of Lucerne, Berne, Basel, Solothurn, and the territory of Aargau, all joined in this and held an assembly

at Sumiswald, in April 1653, where they chose Nicholas Leuenberger as their chief, and proclaimed their purpose of making themselves free as the Small Cantons. To this union, unfortunately, they brought neither strength of purpose nor wisdom. . . . Meanwhile the cities were not idle. Zurich, the capital, gave the order for the whole confederacy to arm, in May 1653. The struggle was short and decisive. For a few weeks Leuenberger's soldiers robbed and murdered where they could, and made feeble and futile attempts upon the small cities of Aargau. Towards the end of May he met, near Herzogenbuchsee, the Bernese troops. . . . A desperate fight ensued, but the insurgents were soon overpowered. . . . This battle ended the insurrection.” Leuenberger was beheaded. “No sooner was this revolt of the peasants over than the smouldering fires of religious hatred, zealously fanned by the clergy on both sides, broke out again. . . . Several families of Arth, in Schwyz had been obliged by the Catholics to abjure their faith, or fly from their homes.” Zurich took up their cause, and “a general war broke out. . . . Berne first despatched troops to protect her own frontier, and then sent 40 banners to the help of Zurich.” The Bernese troops were so careless that they allowed themselves to be surprised (January 14, 1656) by 4,000 Lucerners, in the territory of Villmergen, and were ruinously defeated, losing 800 men and eleven guns. “Soon afterwards a peace was concluded, where everything stood much as it had stood at the beginning of this war, which had lasted only nine weeks. . . . A second insurrection, on a smaller scale than the peasants' revolt, took place in St. Gall in the first years of the 18th century. The Swiss, free in the eyes of the outside world, were, as we have already seen, mere serfs in nearly all the cantons, and such was their condition in the country of Toggenburg. . . . The greater part of the rights over these estates had been sold to the abbot of St. Gall in 1468. In the year 1700, the abbey of St. Gall was presided over by Leodegar Burgisser as sovereign lord. . . . He began by questioning all the commune rights of the Toggenburgers, and called the people his serfs, in order that they might become so used to the name as not to rebel against the hardness of the condition. Even at the time when he became abbot, there was very little, either of right or privilege, remaining to these poor people. . . . When, in 1701, Abbot Leodegar ordered them to build and keep open, at their own expense, a new road through the Hummelwald, crushed as they had been, they turned.” After much fruitless remonstrance and appeal they took up arms, supported by the Protestant cantons and attacked by the Catholics, with aid contributed by the nuncio of the pope, himself. “The contest was practically ended on the 25th of July, 1712, by a decisive victory by the Protestants on the battle-field of Villmergen, where they had been beaten by the Lucerne men 56 years before. The battle lasted four hours, and 2,000 Catholics were slain. . . . In the month of August, a general peace was concluded at Aarau, to the great advantage of the conquerors. The five Catholic cantons were obliged to yield their rights over Baden and Rapperswyl, and to associate Berne with themselves in the sovereignty over Thurgau and the Rheinfeld. By this provision the two religions became equalized in those provinces. . . . The Toggenburgers came once more under the jurisdiction of an abbot of St. Gall, but with improved rights and privileges, and under the powerful protection of Zurich and Berne. The Catholic Cantons were

(After the painting by A. Noack)

long in recovering from the expenses of this war. . . . During 86 years from the peace of Aarau, the Swiss were engaged in neither foreign nor civil war, and the disturbances which agitated the different cantons from time to time were confined to a limited stage. But real peace and union were as far off as ever. Religious differences, plots, intrigues, and revolts, kept people of the same canton and village apart, until the building which their forefathers had raised in the early days of the republic was gradually weakened and ready to fall, like a house of cards, at the first blow from France."—H. D. S. Mackenzie, *Switzerland*, ch. 15-16.

1792-1798.—Ferment of the French Revolution.—Invasion and subjugation by the French.—Robbing of the treasure of Berne.—Formation of the Helvetic republic.—"The world rang with arms and cries of war, with revolutions, battles and defeats. The French promised fraternity and assistance to every people who wished to make themselves free. . . . Their arms advanced victorious through Savoy and the Netherlands and over the Rhine. Nearer and nearer drew the danger around the country of the Alpine people. But the government of the Confederate states showed no foresight in view of the danger. They thought themselves safe behind the shield of their innocence and their neutrality between the contending parties. They had no arms and prepared none; they had no strength and did not draw closer the bands of their everlasting compact. Each canton, timidly and in silence, cared for its own safety, but little for that of the others. . . . All kinds of pamphlets stirred up the people. At Lausanne, Vevey, Rolle and other places, fiery young men, in noisy assemblages, drank success to the arms of emancipated France. Although public order was nowhere disturbed by such proceedings, the government of Berne thought it necessary to put a stop to them by severe measures and to compel silence by wholesome fear. They sent plenipotentiaries supported by an armed force. The guilty and even the innocent were punished. More fled. This silenced Vaud, but did not quell her indignation. The fugitives breathed vengeance. . . . In foreign countries dwelt sadly many of those who, at various times, had been banished from the Confederacy because they had, by word or deed, too boldly or importunately defended the rights and freedom of their fellow-citizens. Several of these addressed the chiefs of the French republic. . . . Such addresses pleased the chiefs of France. They thought in their hearts that Switzerland would be an excellent bulwark for France, and a desirable gate, through which the way would be always open to Italy and Germany. They also knew of and longed for the treasures of the Swiss cities. And they endeavored to find cause of quarrel with the magistrates of the Confederates. . . . Shortly afterwards, came the great general Napoleon Buonaparte, and marched through Savoy into Italy against the forces of the emperor. . . . In a very few months, though in many battles, Buonaparte vanquished the whole power of Austria, conquered and terrified Italy from one end to the other, took the whole of Lombardy and compelled the emperor to make peace. He made Lombardy a republic, called the Cisalpine. When the subjects of Grisons in Valtellina, Chiavenna and Bormio saw this, they pre-

ferred to be citizens of the neighboring Cisalpine republic, rather than poor subjects of Grisons. For their many grievances and complaints were rarely listened to. But Buonaparte said to Grisons: 'If you will give freedom and equal rights to these people, they may be your fellow-citizens, and still remain with you. I give you time; decide and send word to me at Milan.' . . . When the last period for decision had passed, Buonaparte became indignant and impatient, and united Valtellina, Chiavenna and Bormio to the Cisalpine republic (22d Oct., 1797). . . . So the old limits of Switzerland were unjustly contracted; four weeks afterwards also, that part of the bishopric of Bâle which had hitherto been respected on account of its alliance with the Swiss, was added to France. Thereat great fear fell on the Confederates. . . . Then the rumor spread that a French army was approaching the frontiers of Switzerland to protect the people of Vaud. They had called for the intervention of France in virtue of ancient treaties. But report said that the French intended to overthrow the Confederate authorities and to make themselves masters of the country. . . . Almost the whole Confederacy was in a state of confusion and dissolution. The governments of the cantons, powerless, distrustful and divided, acted each for itself, without concert. . . . In the meanwhile a large army of French advanced. Under their generals Brune and Schauenberg they entered the territory of the Confederates, and Vaud, accepting foreign protection, declared herself independent of Berne. Then the governments of Switzerland felt that they could no longer maintain their former dominion. Lucerne and Schaffhausen declared their subjects free and united to themselves. Zurich released the prisoners of Stafa, and promised to ameliorate her constitution to the advantage of the people. . . . Even Freiburg now felt that the change must come for which Chénaur had bled. And the council of Berne received into their number 52 representatives of the country and said: 'Let us hold together in the common danger.' All these reforms and revolutions were the work of four weeks; all too late. Berne, indeed, with Freiburg and Solothurn, opposed her troops to the advancing French army. Courage was not wanting; but discipline, skill in arms and experienced officers. . . . On the very first day of the war (2d March, 1798), the enemy's light troops took Freiburg and Solothurn, and on the fourth (5th March), Berne itself. [See BERNE.] . . . France now authoritatively decided the future fate of Switzerland and said: 'The Confederacy is no more. Henceforward the whole of Switzerland shall form a free state, one and indivisible, under the name of the Helvetic republic. [See HELVETIAN REPUBLIC.] All the inhabitants, in country as well as city, shall have equal rights of citizenship. The citizens in general assembly shall choose their magistrates, officers, judges and legislative council; the legislative council shall elect the general government; the government shall appoint the cantonal prefects and officers.' The whole Swiss territory was divided into 18 cantons of about equal size. For this purpose the district of Berne was parcelled into the cantons of Vaud, Oberland, Berne and Aragus; several small cantons were united in one; as Uri, Schwyz, Unterwalden and Zug in the canton of Waldstätten; St. Gallen district, Rheintal and Appenzell in the canton of Santis; several countries subject to the Confederacy, as Baden, Thurgau, Lugano and Bellinzona, formed new cantons. Valais was also added as one; Grisons was invited

to join; but Geneva, Muhlhausen and other districts formerly parts of Switzerland, were separated from her and incorporated with France. So decreed the foreign conquerors. They levied heavy war-taxes and contributions. They carried off the tons of gold which Berne, Zurich and other cities had accumulated in their treasure-chambers during their dominion. . . . But the mountaineers of Uri, Nidwalden, Schwyz and Glarus, original confederates in liberty, said: 'In battle and in blood, our fathers won the glorious jewel of our independence; we will not lose it but in battle and in blood.' . . . Then they fought valiantly near Wollrau and on the Schindellegi, but unsuccessfully. . . . But Aloys Reding reassembled his troops on the Rothenthurm, near the Morgarten field of victory. There a long and bloody battle took place. . . . Thrice did the French troops renew the combat: thrice were they defeated and driven back to Aegeri in Zug. It was the second of May. Nearly 2,000 of the enemy lay slain upon that glorious field. Gloriously also fought the Waldstätten on the next day near Arth. But the strength of the heroes bled away in their very victories. They made a treaty, and, with sorrow in their hearts, entered the Helvetic republic. Thus ended the old Bond of the Confederates. Four hundred and ninety years had it lasted; in seventy-four days it was dissolved."—H. Zschokke, *History of Switzerland*, ch. 57, 60.—"A system of robbery and extortion, more shameless even than that practised in Italy, was put in force against the cantonal governments, against the monasteries, and against private individuals. In compensation for the material losses inflicted upon the country, the new Helvetic Republic, one and indivisible, was proclaimed at Aarau. It conferred an equality of political rights upon all natives of Switzerland, and substituted for the ancient varieties of cantonal sovereignty a single national government, composed, like that of France, of a Directory and two Councils of Legislature. The towns and districts which had been hitherto excluded from a share in government welcomed a change which seemed to place them on a level with their former superiors: the mountaintowns fought with traditional heroism in defence of the liberties which they had inherited from their fathers; but they were compelled, one after another, to submit to the overwhelming force of France, and to accept the new constitution. Yet, even now, when peace seemed to have been restored, and the whole purpose of France attained, the tyranny and violence of the invaders exhausted the endurance of a spirited people. The magistrates of the Republic were expelled from office at the word of a French Commission; hostages were seized; at length an oath of allegiance to the new order was required as a condition for the evacuation of Switzerland by the French army. It was refused by the mountaineers of Unterwalden, and a handful of peasants met the French army at the village of Stanz, on the eastern shore of the Lake of Lucerne (Sept. 8). There for three days they fought with unyielding courage. Their resistance inflamed the French to a cruel vengeance: slaughtered families and burning villages renewed, in this so-called crusade of liberty, the savagery of ancient war."—C. A. Fyffe, *History of modern Europe*, v. 1, ch. 4.—"Geneva at the same time [1798] fell a prey to the ambition of the all-engrossing Republic. This celebrated city had long been an object of their desire; and the divisions by which it was now distracted afforded a favourable opportunity for accomplishing the object. The democratic party loudly demanded a union

with that power, and a commission was appointed by the Senate to report upon the subject. Their report, however, was unfavourable; upon which General Gerard, who commanded a small corps in the neighbourhood, took possession of the town; and the Senate, with the bayonet at their throats, formally agreed to a union with the conquering Republic."—A. Alison, *History of Europe, 1789-1815*, v. 6, ch. 25.—See also FRANCE: 1792 (June-August).

1803-1848.—Napoleon's Act of Mediation.—Independence regained and neutrality guaranteed by Congress of Vienna.—Geneva, the Valais, and Neuchâtel.—Federal pact of 1815.—Sonderbund and civil war.—Federal constitution of 1848.—Bonaparte summoned deputies of both parties to Paris, and after long consultation with them he gave to Switzerland, on the 2d February 1803, a new Constitution termed the Act of Mediation. Old names were restored, and in some cases what had been subject lands were incorporated in the League, which now consisted of 19 Cantons, each having a separate Constitution. The additional six were: St. Gallen, the Grisons, Aargau, Thurgau, Ticino, and Vaud. This was the fifth phase of the Confederation. A Diet was created, there being one deputy to each Canton, but still with limited powers, for he could only vote according to his instructions. The 19 deputies had, however, between them 25 votes, because every deputy who represented a Canton with more than 100,000 inhabitants possessed two votes, and there were six of these Cantons. The Diet met once a year in June, by turns at Zürich, Bern, Luzern, Freiburg, Solothurn, and Basel, the Cantons of which these were the capitals becoming successively directing Cantons. Three were Catholic and three Protestant. The head of the directing Canton for the time being was Landammann of Switzerland and President of the Diet. The Act of Mediation was not acceptable to all parties, and before Switzerland could become entirely independent there was to be one more foreign intervention. The fall of the Emperor Napoleon brought with it the destruction of his work in that country, the neutrality and independence of which were recognized by the Congress of Vienna [see VIENNA, CONGRESS OF], though upon condition of the maintenance in the Con-

federation of the new Cantons; and in 1814 the Valais (a Republic allied to the Confederation from the Middle Ages till 1708), Neuchâtel (which, from being subject to the King of Prussia, had been bestowed by Napoleon upon Marshal Berthier), and Geneva (which had been annexed to France under the Directory in 1798, but was now independent and rendered more compact by the addition of some territory belonging to France and Savoy) were added to the existing Cantons. Finally, the perpetual neutrality of Switzerland and the inviolability of her territory were guaranteed by Austria, Great Britain, Portugal, Prussia, and Russia, in an Act signed at Paris on the 20th November 1815. Neuchâtel, however, only really gained its independence in 1857, when it ceased to be a Prussian Principality. The Confederation now consisted of 22 Cantons, and a Federal Pact, drawn up at Zürich by the Diet in 1815, and accepted by the Congress of Vienna, took the place of the Act of Mediation, and remained in force till 1848. It was in some respects a return to the state of things previous to the French Revolution, and restored to the Cantons a large portion of their former sovereignty. . . . Then came an epoch of agitation and discord. The Confederation suffered from a fundamental vice, i.e., the powerlessness of the central authority. The Cantons had become too independent, and gave to their deputies instructions differing widely from each other. The fall of the Bourbons in 1830 had its echo in Switzerland, the patricians of Bern and the aristocratic class in other Cantons lost the ascendancy which they had gradually recovered since the beginning of the century, and the power of the people was greatly increased. [See SUFFRAGE, MANHOOD: Switzerland: 1830-1848.] In several months 12 Cantons, among which were Luzern and Friburg, modified their Constitutions in a democratic sense, some peaceably, others by revolution. . . . Between 1830 and 1847 there were in all 27 revisions of cantonal Constitutions. To political disputes religious troubles were added. In Aargau the Constitution of 1831, whereby the Grand Council was made to consist of 200 members, half being Protestants and half Catholics, was revised in 1840, and by the new Constitution the members were no longer to be chosen with any reference to creed, but upon the basis of wide popular representation, thus giving a numerical advantage to the Protestants. Discontent arose among the Catholics, and eventually some 2,000 peasants of that faith took up arms, but were beaten by Protestants of Aargau at Villmergen in January 1841, and the consequence was the suppression of the eight convents in that Canton, and the confiscation of their most valuable property. . . . A first result of the suppression of these convents was the fall of the Liberal government of Luzern, and the advent to power of the chiefs of the Ultramontane party in that Canton. Two years later the new government convoked delegates of the Catholic Cantons at Rothen, near Luzern, and there in secret conferences, and under the pretext that religion was in danger, the basis of a separate League or Sonderbund were laid, embracing the four Forest Cantons, Zug, and Friburg. Subsequently the Valais joined the League, which was clearly a violation not only of the letter but also of the spirit of the Federal Pact. In 1844 the Grand Council of Luzern voted in favour of the Jesuits' Council to be entrusted with the direction of superior public education, and this led to hostilities between the Liberal and Ultramontane parties. Bands of volunteers attacked Luzern and

were defeated, the expulsion of the Jesuits became a burning question [see JESUITS: 1700-1871], and finally, when the ordinary Diet assembled at Bern in July 1847, the Sonderbund Cantons declared their intention of persevering in their separate alliance until the other Cantons had decreed the re-establishment of the Aargau convents, abandoned the question of the Jesuits, and renounced all modifications of the Pact. These conditions could evidently not be accepted. . . . On the 4th November 1847, after the deputies of the Sonderbund had left the Diet, this League was declared to be dissolved, and hostilities broke out between the two contending parties. A short and decisive campaign of 25 days ensued, Friburg was taken by the Federal troops, under General Dufour, later Luzern opened its gates, the small Cantons and the Valais capitulated and the strife came to an end. . . . As soon as the Sonderbund was dissolved, it became necessary to proceed to the revision of the Federal Pact."—F. O. Adams and C. D. Cunningham, *Swiss Confederation*, ch. 1.

1848-1890.—New constitution drawn up.—Revisions.—Constitution of 1874.—On the conclusion of the Sonderbund secession and war, the task of drawing up a constitution for the confederacy was confided to a committee of fourteen members, and the work was finished on April 8, 1848. "The project was submitted to the Cantons, and accepted at once by thirteen and a half; others joined during the summer, and the new Constitution was finally promulgated with the assent of all on the 12th September. Hence arose the seventh and last phase of the Confederation, by the adoption of a Federal Constitution for the whole of Switzerland, being the first which was entirely the work of Swiss, without any foreign influence, although its authors had studied that of the United States. . . . It was natural that, as in process of time commerce and industry were developed, and as the differences between the legislation of the various Cantons became more apparent, a revision of the first really Swiss Constitution should be found necessary. This was proposed both in 1871 and 1872, but the partisans of a further centralization, though successful in the Chambers, were defeated upon an appeal to the popular vote on the 12th May 1872, by a majority of between five and six thousand, and by thirteen Cantons to nine. The question was, however, by no means settled, and in 1874 a new project of revision, more acceptable to the partisans of cantonal independence, was adopted by the people, the numbers being 340,100, to 108,013. The Cantons were about two to one in favour of the revision, 14½ declaring for and 7½ against it. This Constitution bears date the 20th May 1874, and has since been added to and altered in certain particulars."—F. O. Adams and C. D. Cunningham, *Swiss Confederation*, ch. 1.—"Since 1848 . . . Switzerland has been a federal state, consisting of a central authority, the Bund, and 10 entire and 6 half states, the Cantons; to foreign powers she presents an united front, while her internal policy allows to each Canton a large amount of independence. . . . The basis of all legislative division is the Commune or 'Gemeinde,' corresponding in

some slight degree to the English 'Parish.' The Commune in its legislative and administrative aspect or 'Einwohnergemeinde' is composed of all the inhabitants of a Commune. It is self-governing and has the control of the local police; it also administers all matters connected with pauperism, education, sanitary and funeral regulations, the fire brigade, the maintenance of public peace and trusteeships. . . . At the head of the Commune is the 'Gemeinderath,' or 'Communal Council,' whose members are elected from the inhabitants for a fixed period. It is presided over by an 'Ammann,' or 'Mayor,' or 'President.' . . . Above the Commune on the ascending scale comes the Canton. . . . Each of the 19 Cantons and 6 half Cantons is a sovereign state, whose privileges are nevertheless limited by the Federal Constitution, particularly as regards legal and military matters; the Constitution also defines the extent of each Canton, and no portion of a Canton is allowed to secede and join itself to another Canton. . . . Legislative power is in the hands of the 'Volk'; in the political sense of the word the 'Volk' consists of all the Swiss living in the Canton, who have passed their 20th year and are not under disability from crime or bankruptcy. The voting on the part of the people deals mostly with alterations in the cantonal constitution, treaties, laws, decisions of the First Council involving expenditures of Frs. 100,000 and upward, and other decisions which the Council considers advisable to subject to the public vote, which also determines the adoption of propositions for the creation of new laws, or the alteration or abolition of old ones, when such a plebiscite is demanded by a petition signed by 5,000 voters. . . . The First Council (Grosse Rath) is the highest political and administrative power of the Canton. It corresponds to the 'Chamber' of other countries. Every 1,300 inhabitants of an electoral circuit send one member. . . . The Kleine Rath or special council (corresponding to the 'Ministerium' of other continental countries) is composed of three members and has three proxies. It is chosen by the First Council for a period of two years. It superintends all cantonal institutions and controls the various public boards. . . . The populations of the 22 sovereign Cantons constitute together the Swiss Confederation. . . . The highest power of the Bund is exercised by the 'Bundesversammlung,' or Parliament, which consists of two chambers, the 'Nationalrath,' and the 'Ständerath.' The Nationalrath corresponds to the English House of Commons, and the Ständerath partially to the House of Lords; the former represents the Swiss people, the latter the Cantons. The Nationalrath consists of 145 members. . . . Every Canton or half Canton must choose at least one member; and for the purpose of election Switzerland is divided into 49 electoral districts. The Nationalrath is triennial. . . . The Ständerath consists of 44 members, each Canton having two representatives and each half Canton one. . . . A bill is regarded as passed when it has an absolute majority in both chambers, but it does not come into force until either a plebiscite is not demanded for a space of three months, or, if it is demanded (for which the request of 30,000 voters is necessary) the result of the appeal to the people is in favor of the bill. This privilege of the people to control the decision of their representatives is called Das Referendum [see REFERENDUM]. . . . The highest administrative authority in Switzerland is the Bundesrath, composed of seven members, which [like the Bundesversammlung] . . . meets in Bern. Its members are chosen by the

Bundesversammlung and the term of office is ten years. . . . The president of the Confederation (Bundespräsident) is chosen by the Bundesversammlung from the members of the Bundesrath for one year. . . . The administration of justice, so far as it is exercised by the Bund, is entrusted to a Court, the Bundesgericht, consisting of nine members."—P. Hauri, *Sketch of the constitution of Switzerland (Strickland's "The Engadine")*.—See also SWITZERLAND, CONSTITUTION OF; FEDERAL GOVERNMENT: Modern federations; INITIATIVE AND REFERENDUM: Early development and growth in Switzerland; PRESIDENT: Switzerland; SUFFRAGE, MANHOOD: Switzerland: 1874-1921.

1870-1897.—Socialism.—Federal legislation.—Initiative and referendum.—"Revolutionary socialism as a political factor of importance in Swiss national affairs is a product of the last generation. The origin of the industrial proletariat in Switzerland . . . dates back about a century and a so-called 'Swiss Social Democratic Party' was founded as early as 1870, but . . . long remained unorganized and ineffective. In 1890 six socialists were elected to the National Council (House of Representatives), whose membership was at that time but 147. In 1893 the party launched its first constitutional initiative proposing the insertion of a general 'right-to-work' clause in the fundamental law of the land. The signature of 52,387 citizens—only 2000 more than were required—having been secured, the measure was put to a vote of the electorate. It was rejected on June 3, 1894, by all the cantons and by a crushing popular majority of 308,298 nays against 75,880 ayes."—W. E. Rappard, *Democracy vs. demogogy (Political Science Quarterly, June, 1923, p. 201)*.—"Meanwhile vigorous work was undertaken in the development of the Federal legislation required by the constitution of 1874. In . . . [1874] the permanent Federal Supreme Court was instituted, sitting in Lausanne; the military system was transformed by a new military organization; in 1875, by a law relating to civil status, which, after a fierce struggle, was adopted by a Referendum with 213,199 votes against 205,069, obligatory civil marriage was introduced; in 1877, by a factory law, a normal working day of eleven hours was fixed, and by an employer's liability law an epoch-making step was taken in legislation for the protection of labour; in 1880 a law of commercial obligations, including commercial law and the law of exchange, was passed; in 1801, there was founded at Zurich a Swiss National Museum of national antiquities; in 1894, a Swiss National Library was opened in Bern. Since 1884, the Confederation has spent considerable sums in subsidies to the Cantons and communes and to private associations, on behalf of agricultural, industrial, commercial and economic education, and also on behalf of the cultivation of the arts and sciences. Owing to the continued new demands upon the activities of

the Confederation, there gradually ensued, from 1874 onwards, a transformation of the Federal constitution, effected by a number of partial revisions. In 1879, in an ebullition of popular sentiment aroused by certain murders, the prohibition of capital punishment was removed from the constitution. In 1885, as the outcome of the campaign against alcoholism, the State monopoly of alcohol was introduced, the income from the drink traffic being divided by the Confederation among the Cantons. In 1887, the registration of patents, in 1890 insurance against illness and accident, and in 1891 the issue of bank-notes, became purely Federal affairs. Through a further partial revision, constitutional changes were facilitated by the addition of the Popular Initiative; on the initiative of 50,000 burghers, the repeal or alteration of any article in the Federal constitution or the introduction of new articles must be submitted to the Swiss nation. [See also INITIATIVE AND REFERENDUM: Early development.] For a time, the extremists of the Right and of the Left competed with one another in initiative proposals of a more or less dubious character, most of which, however, were frustrated by the good sense of the community without doing any harm. On the other hand, in 1897, the Federal supervision over forests and canals was extended to the entire country; and the Confederation became competent to legislate in matters relating to food inspection. As regards the foreign world, the creditable position occupied by the country was manifested by entrusting to the Swiss *Bundesrat* the management and supervision of a number of international concerns, some of which had been called into existence, partly in response to popular initiative—for instance the postal union (1874), the international telegraph union (1875), the union for the protection of industrial property (1883) and of artistic property (1886), and the international agreement concerning the transport of goods by railway (1890).—W. Oechslí, *History of Switzerland, 1490-1914*, pp. 414-416.

1898-1912.—Nationalization of railways.—Codification of the civil and criminal law.—“A mile-stone in the internal development of the Federal State was passed in the year 1898, when, on February 20th, by a popular vote of 387,000 against 183,000, the nationalisation of the principal railways was decided on; and when, on November 13th, the codification of the civil and of the criminal law was voted by 265,000 against 102,000, and by 16½ Cantons against 5½. Within a few years, by far the greater portion of the network of Swiss railways, including the St. Gotthard line and the Simplon line (begun in 1808 and completed in 1906) had been acquired by the State [see RAILROADS: 1005-1006], and since then have been worked as Federal railways. In 1902, the duty was imposed upon the Confederation of giving financial support to the Cantons in matters of primary education; and in 1908 it acquired the right of legislating about industrial matters, the utilisation of water power, and the supply of electrical energy. In 1903, a new customs' tariff was instituted, the increase of certain duties constituting an economic measure of defence against foreign competition. In 1907, a new system of

military organisation was adopted, increasing the term of service for the militia, and involving a considerable increase of military expenditure, the change being approved on a Referendum by 330,000 votes against 268,000. In 1906, a Swiss national bank was instituted as a central note-issuing bank for the regulation of the monetary circulation. In codified civil code was completed, and was put in force on New Year's Day of 1912. In 1912, the law for general insurance against accident and illness was approved by 287,000 against 241,000 votes.”—W. Oechslí, *History of Switzerland, 1490-1914*, p. 415.

1900-1905.—Rejection of new electoral proposals.—Defeat of Socialists.—On Nov. 4, 1900, the Swiss nation gave its decision regarding two important proposals which under the name of the “double initiative” had been causing great excitement among the population of the confederation. One of these proposals had for its object the election of members of the National Council on the system of proportional representation, the other the election of the Federal Council by the people. Both proposals were rejected. The coalition hitherto maintained between Radical and Socialist parties was broken entirely in the elections of October, 1905, because of the anti-military attitude of the latter, who sought to have all national feeling and policy sunk in international sentiments and principles. The Socialists elected but two representatives in the National Council.—See also SOCIALISM: 1899-1908.

1901.—Poor law reforms. See CHARITIES: Switzerland: 1892-1901.

1902.—Commercial treaty with Germany. See TARIFF: 1902-1906.

1907.—Represented at Second Hague Conference. See HAGUE CONFERENCES: 1907.

1909-1915.—St. Gotthard railway agreement.—An “interesting manifestation of Swiss democratic feeling toward diplomacy occurred in connection with the long-drawn-out controversy over the St. Gotthard Railway treaties. To facilitate the construction of the tunnel for that line, agreements were entered into with Germany and Italy in 1860. . . . When the Swiss government finally decided to nationalize railways, negotiations regarding the St. Gotthard line were again taken up with Italy and Germany, certain objections being raised by the latter power.”—R. C. Brooks, *Government and politics of Switzerland*, pp. 272-273.—“The St. Gotthard line, laid down in 1882, was only completed, thanks to subsidies amounting to 30 millions from Germany, and 55 millions from Italy, while Switzerland only spent 28 millions. Germany and Italy demanded an important share in the profits as a reward for their contributions, and thus obtained a controlling right which was very annoying to the Federation. Switzerland, therefore, declared her intention, in 1904, of buying in the shares of the other two nations. They, however, did not see why they should abandon, merely for a refund of money, all the material and moral advantages which they had acquired in the country. The negotiations for the repurchase, which were very long and complicated, ended in that notorious Convention of Berne [1906]. . . .

1. It confers upon Germany and Italy Most Favored Nation treatment no longer merely over the St. Gotthard system but over all Swiss railways. This treatment, which till then had only applied to 276 kilometers of line laid down in common, now extended to 2,700 kilometers of rail. 2. Germany and Italy obtained the right to control all the arrangements that the Swiss Government might make in the future with foreign railways. This, as Swiss patriots pointed out . . . constituted a limitation of the sovereignty of the Swiss Federation for the benefit of Germany and Italy. To all intents and purposes Switzerland was prohibited from ever having a free policy in railway matters; she could never, for instance, make an agreement with France to connect the systems, or by a reduction of rates attempt to attract goods or passenger traffic going to Italy. 3. The Swiss Government, to allow Germany and Italy to recover their capital, consented to reduce by 35 per cent. up to 1912 and by 50 per cent. after that date the surcharge on tariffs which the great expense of running a mountain line renders imperative."—P. Vergnet, *France in danger*, pp. 127-128.—The St. Gotthard agreement, drawn up by Germany, Italy and Switzerland Oct. 13, 1909, was immediately ratified by the two former countries but the Swiss feared the domination of the Triple Alliance. "During the progress of these negotiations, it was learned that Germany had protested eleven years earlier against the ownership and operation of railroads by the Swiss government. As a result of the withholding of this knowledge from the people, intense feeling was engendered against secret diplomacy. An enormous public demonstration of protest, attended by representative citizens from all parts of the country, was held at Bern."—*Ibid.*, p. 273.—In spite of opposition the convention was finally ratified by the National Council on April 4, 1913. The 108 affirmative votes were cast mostly by Liberals of the German provinces with an opposition of 77 Democrats, Social Democrats, Clericals and French.—See also RAILWAYS: 1905-1909.—"Out of this movement there came a demand by means of initiative petition for an amendment to the constitution providing for the submission of treaties to the referendum on the same terms as ordinary legislation."—*Ibid.*, p. 274.

1910-1919.—Statistics for trade unions.—Social insurance. See LABOR ORGANIZATION: 1910-1919; SOCIAL INSURANCE: Details for various countries: Switzerland: 1912-1919.

1913.—Reorganization of Federal Council.—Revision of factory law.—The Federal Council was reorganized in 1913. The essential feature in the reorganization was the restoration of the system under which the president of the confederation, instead of taking charge during his year of office of the political department which includes foreign affairs, remains in charge of the same department as before his election to the presidency; also, the function of the permanent members was extended, to lessen the administrative work of the Federal Council members. The factory law of 1877 was revised in 1913. The principal provisions of the new law relate to the prohibition of women and children in night and Sunday work; rest after confinement for women; and prohibiting the employment of boys under fourteen and girls under fifteen.

1914-1918.—Neutrality during World War.—Mobilization of the army.—Food regulation.—Press control.—Activities of the Red Cross.—"With the outbreak of war a quick and sweeping

transfer of authority was effected by the passage of a federal resolution providing in part that: 'the Federal Assembly confers unlimited power . . . upon the Federal Council to take all measures necessary to the security, integrity, and neutrality of Switzerland [see also BELGIUM: 1830-1914], and to protect the credit and economic interests of the country, especially including the assurance of its food supply. For this purpose the Federal Council shall possess unlimited credit to meet expenses. It is especially authorized to conclude all necessary loans. The Federal Council shall account to the Federal Association at its next session with regard to its employment of the unlimited powers hereby conferred upon it.' . . . The Federal Assembly conferred plenary powers upon the Swiss executive. To safeguard this power against abuse in the field of foreign relations, each of the two houses promptly established a neutrality committee."—R. C. Brooks, *Government and politics of Switzerland*, pp. 114, 281.—See also WORLD WAR: Diplomatic background: 51.—"On Friday, July 31st, . . . the 'last line' troops (*Landsturm*), . . . were at once called out to do guard duty on railroad bridges, tunnels, stations, and roads so as to allow the troops of the first and second line (*Élite and Landwehr*) to go to the assembling places of their units. . . . On the first of August the Government decided to call out the entire armed strength of the nation. . . . August 3d, . . . mobilization was proclaimed and every man from twenty up to forty-eight, who had ever had military training, was called to the colors. The Government assumed full control of all the railroads and turned their operation over to the railroad department of the General Staff. [See RAILROADS: 1917-1919.] . . . Within forty-eight hours the full strength of the country had been assembled and concentrated with all the reserves, all the equipment, all the horses, up to the full number of 300,000 men."—T. A. Christen, *Organization and training of the Swiss army (National Service, May, 1917)*.—"Closely connected with the maintenance of neutrality were certain economic difficulties which threatened not only the industries but the very life of the people. Switzerland depends upon other countries for four-fifths of its grain, and for virtually all the coal and iron needed by its railroads, manufacturers, hotels, and homes. After the outbreak of war it was forced to procure grain through the territories of the Entente, chiefly from America. On the other hand the only possible source of supply of coal and iron was Germany. . . . The Swiss government . . . tried to meet this situation by negotiating a series of economic agreements with each of the belligerent groups."—R. C. Brooks, *Government and politics of Switzerland*, p. 281.—"The Council . . . [August 2, 1914] initiated a strictly paternal *régime* throughout the country; export was checked or completely cut off; a maximum price was declared in many instances; the Confederation announced a monopoly of many articles of food, as, for example, in the case of rice, sugar, etc. The vast milk and cheese output was brought under Federal control, and all arbitrary and unreasonable advance in prices was brought under the strictest provisions of penal legislation."—G. E. Sherman, *Maintenance of Swiss neutrality in the present war (University of Pennsylvania Law Review, Feb., 1917, pp. 317-322)*.—"Early in the war the strongly expressed sympathies of the people, dividing along racial lines, for the various belligerents threatened to compromise neutrality and even to

break down the sentiment of national unity. Never has the tension been greater between the German and non-German sections of the country. Exaggerations of these differences by certain newspapers led to the establishment of a political Press Control Commission of five members appointed by the Federal Council, two of them, to be nominated by the Swiss Press Association. [See WORLD WAR: Miscellaneous auxiliary services: III. Press reports and censorship: d, 1.] On two occasions the Federal Council found itself compelled to address words of solemn warning directly to the people. No utterances called forth by the great war express a deeper sentiment of patriotism."—R. C. Brooks, *Government and politics of Switzerland*, p. 281.—"At the outbreak of war the International Committee at Geneva was . . . fully prepared to take up the great work which had been allotted to it by international convention. The Genevese Committee was fortunate in its President [Gustave Ador], . . . president of the Swiss Confederation. . . . The International Committee at Geneva made its first appeal to the belligerents on August 15th, 1914, requesting the belligerents to form those special commissions for prisoners of war which had been part of the engagements taken by all Red Cross Societies at the International Conference in 1912. Further, the Genevese International Committee informed the Red Cross Societies of the belligerents that it was proposed to open at Geneva an *Agence Internationale de Secours et de Renseignements en Faveur des Prisonniers de Guerre*. Further, invoking the terms of the Hague agreement of 1907, the Genevese Committee requested all the Governments concerned to accord free postage to letters and parcels sent to and from the prisoners of war. The great majority of such letters and parcels passed through Switzerland. During the war the Swiss postal service transmitted the gigantic sum of more than ten million letters and parcels to and from prisoners of war. . . . The Swiss did not charge postage on letters and parcels sent to and from prisoners of war. . . . The first object, . . . of the *Agence* was to trace the missing. . . . A special and most important branch of the *Agence* dealt with the civilians interned. At the beginning of the war the *Agence* undertook to trace all civilians who had been lost sight of by their families since the outbreak of war. The *Agence* further undertook to arrange for letters and to forward parcels, precisely as they had done for the military prisoners. . . . At a very early stage of the war the Swiss suggested to both groups of belligerents that prisoners of war who were not qualified for direct exchange . . . might be interned in Switzerland. . . . In January, 1916, the first convoys of interned arrived. Most of the early arrivals were prisoners suffering from tuberculosis. Of these the French were sent to Leysin and Montana and the Germans to Davos and Arosa, these being the four best stations in the Alps for the cure of tuberculous diseases. In May, 1916, the first English arrived, the second convoy arriving in July. The English were sent to Château d'Oex, in French-Switzerland, and to Mürren, the famous English centre in the Bernese Oberland. . . . The Germans were sent, for the most part, to the Grisons. The respective Governments paid four francs a day for the N. C. O.'s and men and six francs a day for the officers."—S. Croft, *Was Switzerland pro-German?* pp. 101-102, 104, 109-110.—See also RED CROSS: 1919-1920.

1914-1918.—Increase of public debt and taxation due to the World War. See WORLD WAR:

Miscellaneous auxiliary services: XIV. Cost of war: b, 9, ii.

1915.—German-Swiss commercial agreement. —"Early in the war there was no shortage of bread grain, but the raw material problem was apparent to the Swiss Government from the first. . . . But the tendency of each set of belligerents was to insist, as far as possible, that what it furnished did not inure to the benefit of its enemy and that some compensation should be made for its sacrifice in letting Switzerland have material which it wanted for itself. . . . The outcome of this controversy was an agreement by which coal to the amount of 253,000 tons was furnished by Germany, with the iron and steel required; German-owned goods in Switzerland were to be held by the government until the end of the war, and foodstuffs were furnished to Switzerland by the Entente Powers. Such was the arrangement until the spring of 1918 when the coal supply was reduced to 200,000 tons."—T. S. Woolsey, *German-Swiss commercial agreement* (*American Journal of International Law*, 1918, pp. 590-597).

1915-1919.—Constitutional amendments.—Direct taxation.—Strike in Zurich.—Growth of the Socialist party.—Proportional representation.—"The measures found necessary to meet the extraordinary expenses incident to mobilization and maintaining the country's military force soon obliged the Federal Council to seek financial aid through some means outside of the Confederation's ordinary sources of supply. These, which are summarized in Article 42 of the National Constitution, do not comprise the power of *direct* taxation, but are derived from tariff and excise sources, through the Confederation's administration of the Post, Telegraph and Telephone service, the monopoly of powder and alcohol, the military exemption tax, etc., and in the last resort from contributions of the Cantons, according to their wealth and population. The existing war situation having strained the Federal finances to the uttermost and the Cantonal governments having no adequate means of raising revenue sufficient to meet the national want, the Council on February 12th, 1915, laid before Parliament, then in its winter session, a proposition looking to the enactment of a new constitutional provision permitting the laying of a direct tax *for the period of the war only on both property and income*. The result of this step was that Parliament, on the 15th day of April following, determined to lay before the people a project of constitutional amendment on the lines proposed by the Council, the proposition for constitutional change containing the hitherto unknown feature of a grant of authority to the Federal Assembly to carry out the proposed amendment by any such measure or measures as it should deem proper, these measures not, therefore, to be subject to referendum vote [and in addition to the foregoing, the amendment was to remain in force only until the tax was completely paid]. On April 23rd, June 6th was fixed by the Council as the date for a popular vote on the constitutional proposal and provision was made at the same time for taking the suffrages of all men under the colors, with the result that the amendment was accepted as proposed by Parliament, by a vote of 452,117 as against 27,461 opposed, this being the highest numerical majority ever attained in the many votes on constitutional change in Switzerland."—G. E. Sherman, *Maintenance of Swiss neutrality in the present war* (*University of Pennsylvania and American Law Register*, Feb.,

1917, pp. 322-323).—"Paid in the course of 1916 and 1917, this first war tax produced about 125 millions, of which the federal treasury retained about 100 millions, after ceding twenty per cent of the receipts to the cantons as provided for in the constitutional amendment. As the war and its expenses continued and as on the other hand it had given rise to great industrial and commercial activity in many quarters, a federal war-profits tax was next adopted in 1916. . . . On May 13, 1917, the people adopted another constitutional amendment providing for the introduction of a stamp tax on securities, which by the end of 1918 had yielded about ten millions of francs. The sums thus raised by direct taxation, although compensating the loss resulting from the decrease of customs revenue, were far from sufficient to cover the greatly increased current expenses, to repay the public debt and still less to allow for the realization of any scheme of old-age pensions. . . . Encouraged . . . by the success of the first war tax . . . [the Socialist party] initiated a movement in favor of a constitutional amendment giving the federal government the right to levy a permanent direct tax on the capital and earnings of individuals and corporations. . . . The Council of States (federal Senate) after discussing the socialist bill on March 12, 1918, rejected it by a vote of 31 to 1. . . . In the National Council . . . it was rejected by 138 votes against those of the socialist members and of a few extreme radicals, 21 in all. On June 2, 1918, the people at the polls confirmed this decision by rejecting the bill by 325,814 nays against 276,735 ayes. . . . Immediately after this referendum, which had rejected the socialist proposal, the government presented its own bill for 'a renewed federal war tax.' This measure was drafted with a view both to fiscal and to political ends. It was to provide for a speedy repayment of the war debt and at the same time to refute the criticisms of the 276,735 citizens who had voted in favor of the socialist proposal and who since their defeat were naturally inclined to accuse the majority of having none but a negative policy. The bill was based on the same principles as the first war tax of 1915, but the rate applied both to property and to earned income was slightly higher, and more steeply progressive. Besides it was to be levied, not once only, but every three years until three-quarters of the mobilization costs had been paid off. It was hotly discussed in the latter half of September, 1918, by the National Council and finally carried in that branch of the legislature on October 2, 1918, by 98 votes against 43. . . . The policy of the government was approved in both Houses by the representatives of all the non-socialist parties and sanctioned by a vote of 136 against 15 in the National Council and by a unanimous decision in the Council of States."—W. E. Rappard, *Democracy vs. demogogy (Political Science Quarterly, June, 1923, pp. 294, 296, 298-299)*.—"Just before the signature of the armistice, in the first days of November, 1918, a general strike of a clearly revolutionary character broke out in Zurich and soon spread all over Switzerland. On November 10 the strike committee, composed of the leaders of the Socialist party, demanded the immediate demobilization of the troops that had been raised to maintain order and the prompt compliance with a brief but very radical program of political and social reform. Among the nine demands made, two of the most moderate concerned the establishment of an old-age pension and invalidity insurance scheme and the repayment of all public debts by the propertied

classes. The government in response mobilized more troops, but at the same time made some very significant statements as to its social and political policies. On November 12, 1918, Mr. Calonder, president of the Confederation, addressed Parliament on behalf of his unanimous colleagues of the government. . . . 'For Swiss democracy, it is a question of to be or not to be. . . . While we believe that the condition of the laboring classes should as far as is at all possible be improved step by step, we would emphasize that all reforms must naturally be realized on the basis of right and law and that the will of the whole people must be respected in conformity with our democratic constitutional and legal institutions. In our democracy the majority alone rules. The most thorough social reforms and changes can with us be accomplished without upsetting or impeding our national life. All social and political battles are to be fought with the sole weapon of the ballot. That is our pride and our strength.' . . . On November 14, 1918, President Calonder was able to announce in both Houses that, at two o'clock that morning the strike committee had informed him of their decision unconditionally to recall the strike. . . . After the general strike [November 1918] its first financial effect was directed towards securing the final adoption of the renewed war-tax measure, the discussion of which had been interrupted in October, 1918. After several prolonged parliamentary debates the constitutional bill was voted by both Houses on February 13 and 14, 1919, by majorities of 81 to 10 and 27 to 2 respectively. . . . The bill was finally submitted to the constitutional referendum on May 4, 1919, and adopted by 307,528 ayes against 165,119 nays, two French-speaking cantons alone rejecting the measure. In its final form it provides that the extraordinary tax shall be levied every four, and not every three, years until the total mobilization costs, and not only three-quarters thereof, shall have been covered. . . . Since . . . [1804] the socialist party has gradually gained in power, but in 1918 it still had but 19 representatives in the National Council, whose membership, based on the population of the country, had grown to 189. . . . At the October elections of 1919, at which the principle of proportional representation was applied for the first time, the socialists captured 38 seats, besides 3 which were secured by their still more extreme communist allies. However even then they represented only a fourth to a fifth part of the national electorate."—*Ibid.*, pp. 291, 298-300, 302.

1917 (June).—Grimm-Hoffman Affair.—"Grimm, a member of the National Council and of the extreme wing of the Socialist party, had gone to Petrograd shortly after the outbreak of the Russian revolution. Throwing himself into the whirlpool of plots and counterplots, he was able to persuade the Swiss minister to transmit a telegram to Herr Arthur Hoffmann, head of the political (foreign affairs) department of the Federal Council, inquiring as to the German attitude toward Russia. After an interval of a week Hoffmann replied stating what purported to be the German peace terms and assuring Grimm that Germany would undertake no offensive so long as a satisfactory agreement with Russia seemed possible. Both telegrams were intercepted and made public by Russian officials, and Grimm was expelled from the country. Publication of these facts caused an enormous sensation in Switzerland. In spite of all that was said in defense of Federal Councilor Hoffmann, it was evident that his con-

duct could be interpreted,—indeed, was certain to be interpreted,—in the chancelleries of the Entente, as undertaken in the interests of a separate peace between Germany and Russia, and hence as threatening the interests of the Entente in the most dangerous manner. From a Swiss point of view it was 'a blow against international confidence in the unconditional honorable neutrality of our leading men and thence in the conduct of the country itself.' Before any remonstrances were received from the countries unfavorably affected by his conduct, Federal Councilor Hoffmann tendered his resignation in a statement which made it clear that he had acted in the matter wholly on his own responsibility and without the knowledge of his colleagues of the Federal Council. The election of Gustav Ador of Geneva, president of the International Committee of the Red Cross, to the vacancy did much to allay the bitter feeling created in Romance Switzerland by the Grimm-Hoffmann affair. Another consequence was the determination to return to the old system whereby the Federal President takes charge of the political department. It was believed that Federal Councilor Hoffmann's long-continued tenure of this position predisposed him to disregard his colleagues in the Grimm case. With a new head in charge of foreign affairs each year, similar errors are not so likely to occur."—R. C. Brooks, *Government and politics of Switzerland*, pp. 283-284.

1919-1920.—Controversy over the relation of Switzerland to the League of Nations.—Restatement of Swiss neutrality.—"By its resolution of November 21, 1919, the Federal Assembly authorized the Federal Council to declare, at an opportune time, the accession of Switzerland to the Covenant establishing the League of Nations, which was adopted by the Peace Conference. At the same time it decreed that the resolution should be submitted to the vote of the people and the cantons, but it specified that such a vote could not take place until all the five Great Powers should have ratified the League Covenant. . . . The Council of the League has taken cognizance of the declarations made by the Swiss Government in its message to the Federal Assembly of August 4, 1919, and in its memorandum of January 13, 1920, declarations which have been confirmed by the Swiss delegates to the session of the Council, and according to which Switzerland recognizes and proclaims the duties of joint liability which devolve upon her from the fact that she is to be a member of the League of Nations, including the duty of participating in the commercial and financial measures demanded by the League of Nations against a State which violates the Covenant, and is ready for every sacrifice to defend her own territory herself in all circumstances, even during an action undertaken by the League of Nations, but that she shall not be forced to participate in a military action or to permit the passage of foreign troops or the preparation of military

enterprises upon her territory. In accepting these declarations, the Council recognizes that the perpetual neutrality of Switzerland and the guaranty of the inviolability of her territory, such as were derived from international law, particularly by the Treaties and the Acts of 1815, are justified by the interests of universal peace and, consequently, are compatible with the Covenant. As concerns the declaration of accession to be made by the Swiss Government, the Council of the League of Nations, being mindful of the altogether unique constitution of the Swiss Confederation, is of the opinion that the notification based on the decision of the Federal Assembly and effected within the time limit of two months beginning January 10, 1920, the date of the entrance into effect of the Covenant of the League of Nations, may be accepted by the other members of the League as the declaration required by Article I for admission as an original member, on condition that the confirmation of this declaration by the people and the Swiss cantons be effected in the shortest time possible.

"Done at London, Saint James Palace, February 13, 1920."—*Federal resolution of Nov. 21, 1919, concerning the accession of Switzerland to the League of Nations (International Conciliation, July, 1920, pp. 316-324).*

1920.—Accession to League of Nations.—At the beginning of March, 1920, both Houses of Parliament passed by large majorities the resolution declaring the adhesion of Switzerland to the League, only the Socialist party opposing the resolution. The government were therefore able to announce the accession of Switzerland within the two months prescribed for original members by the Treaty of Versailles, although in the case of Switzerland the accession was subject to the approval of a plebiscite. "The Swiss referendum of May 16 on the League of Nations was the most important vote of its kind in the history of the republic. All other countries entering the league thus far have done so by parliamentary and executive action, that is, through purely representative means. Switzerland alone referred the question to the direct decision of her electorate. . . . Acceptance of membership in the league was strongly favored by the powerful Independent Democratic (Radical) party, the Liberal Democratic (Protestant Conservative) party, the recently formed anti-bolshevist Peasants' party, the Christian Social party, and the *Grüthliker*. The Catholic Conservatives were divided, some of their most eminent leaders, both lay and clerical, being found in opposing camps. The Socialists who have accepted bolshevist leadership fought the league with all their accustomed arguments and bitterness. Curiously enough, the same attitude was taken by a group of the higher officers of the Swiss army, led by Ulrich Wille, the former general in chief. Party lines were more or less cut across, however, by racial linguistic, religious and personal prejudices. A very marked influence upon the referendum was exerted by the federal council, all seven members of which not only favored the league but also campaigned for it vigorously throughout the country. Further, the federal council on May 7, officially issued a powerful appeal to the Swiss people urging them to vote affirmatively. . . . Although not entering largely into public discussion, there was an underlying fear that rejection of the league might cause grave disaffection, perhaps even a secessionist movement, in Romance Switzerland. Opponents of the league made the utmost of the failure of the United States to ratify, but this was discounted as due

almost entirely to partisan and anti-Wilson rancor prior to a presidential election. Very little was said openly about German influence, but it seems to have been generally accepted that the Junker and bolshevist elements of Germany desired the Swiss to reject the league, while all the elements supporting the present government of that country favored its acceptance. Certain it is that Dr. Müller, German ambassador to Switzerland, openly expressed the wish to Federal President Motta that 'the hopes and efforts of the federal council in favor of the entry of Switzerland' into the League of Nations might be realized. . . . The referendum resulted in a popular vote of 415,819 for to 323,225 against the league. It is estimated that about 76 per cent of the electorate voted, which is a very high, although not the highest, percentage of participation on record."—R. C. Brooks, *Swiss referendum on the League of Nations* (*American Political Science Review*, Aug., 1920).—In December, 1920, M. Edmond Schulthess, who had been president in 1917, was again elected president for 1921 by the legislature, in succession to M. Motta, whose term expired this month.

1920.—Liechtenstein incorporated with Switzerland for postal and telegraphic purposes. See LIECHTENSTEIN.

1921.—New president elected.—Statement of financial conditions.—Deficit and taxation.—At the close of the year, 1921, the Swiss Federal Assembly elected Robert Haab, president of the confederation to succeed M. Motta who retained charge of the political department. Finance minister Musy announced in the National Council that the financial situation of the confederation was still so serious, that at the end of 1921, the deficit would be greater than at the close of 1920, when expenditures exceeded receipts by 99,500,000 gold francs (\$3,980,000). Consequently there was no other course than to levy a new tax on dividend warrants, which was expected to yield from fifteen to seventeen million gold francs annually.

1921-1922.—Federal capital levy.—Contested political battle.—Unusual proportion of electors.—“On September 13, 1921, the executive committee of the Swiss Socialist party submitted to the Federal Council a constitutional initiative petition providing for a federal capital levy. . . . In certain of its more formal provisions it was a conscious imitation of the two previous direct federal taxes of 1915 and 1919, while on other points of more material importance it was, for Switzerland at least, a novel and very bold socialistic measure. Like the 'non-renewable war tax' of 1915 and the 'new extraordinary war tax' of 1919, the 'single capital levy' of 1922 was a direct federal tax of a temporary nature, which could be introduced only by means of a constitutional amendment. It was therefore provided that it should, like its predecessors, be submitted to the vote of the people and of the cantons and should remain in force only until it had been duly collected. Like them also it was to be administered by the cantonal authorities for the Confederation and its proceeds were to be divided between the central and local governments. The tax-bearers in all three measures were to be individuals and corporations; and the tax-free public institutions, enumerated in almost identical terms, were in all cases appreciably the same. There, however, the main analogies between the three taxes cease. The socialist proposal differed from the two preceding measures in purpose, subject and rates as well as in the period and mode of its collection. While the two war taxes were destined to allow the

repayment of the war debt, the yield of the capital levy was expressly intended to finance new State projects of social reform and notably the long-promised old-age pensions and invalidity insurance scheme. While the 1915 and 1919 taxes were assessed on property and on earned income, the 1922 proposal was a capital levy only. . . . The most novel and significant provision of the 1922 bill was that relating to the optional or compulsory payment of the tax in kind. . . . Having taken cognizance of the constitutional initiative petition, the Federal Assembly on March 28 and April 5, 1922, instructed the government to prepare a report on the proposal. This report was published on August 1, 1922. . . . On the basis of this report parliament proceeded to the discussion of the socialist proposal at its autumn session of 1922. The Council of States, which happened to have the priority in the matter, devoted its sitting of September 28, 1922, to the bill. . . . At the end of this parliamentary controversy [Oct. 6, 1922], the National Council . . . rejected the socialist capital levy by 129 votes against 40. . . . Under Swiss law any constitutional amendment proposed by 50,000 citizens must, after discussion in Parliament, be submitted to a popular vote. . . . The date fixed for the constitutional referendum was December 3, 1922. . . . On the side of the friends of the proposal the direction of the operations lay exclusively in the hands of the executive committee of the Swiss Social Democratic Party. In all parts of the country the official socialist organizations and press were solidly in favor of the measure. The minority group of 'Gruttléens,' or moderate, national socialists, were divided, but their numbers were small and their importance almost negligible. The enemies of the bill, on the other hand, were much less cohesively organized. The government was unanimously against the capital levy, but they did not take a very active part in the popular campaign. . . . Besides the Federal Council and quite independently of it, all the non-socialist political organizations decided to participate in the campaign and several Cantonal governments took the rather unusual step of issuing proclamations against the capital levy. The economic organizations were no less active. All the banking, manufacturing, artisan and agricultural interests, grouped in Chambers of Commerce, associations, unions, and clubs of various sorts, passed resolutions opposing the bill. The churches and particularly the Catholic bishops condemned it from the pulpit and one university even so far departed from the academic tradition of political neutrality as to denounce it in a public statement. In most of the larger cantons non-partisan committees were formed to coordinate the efforts of these various groups and institutions, to raise campaign funds, organize lectures, issue and distribute pamphlets, tracts, posters, etc., and to supply local sub-committees with propaganda material. The cantonal committees were loosely federated into a 'National Action Committee Against the Capital Levy,' which established its headquarters in Berne. . . . The campaign was conducted very much along the lines adopted during the preparation of the referendum on the League of Nations. . . . The socialists, attacked from all possible angles and by all imaginable means, overwhelmed by the written and spoken propaganda of the united bourgeois parties, and seeing their own troops faltering under the pressure of their enemies, were toward the end of the campaign placed entirely on the defensive.

After the referendum of September 24, 1922, at which, allied to a large part of Swiss liberal opinion, they had scored a signal victory by defeating a government measure at the polls, some of their leaders may have believed in the possible success of the capital levy initiative. A large portion of the investing public certainly did so, as the prolonged panic on the stock exchange, the very important withdrawals of cash and securities, the disappearance of gold, the fall of the exchange and the increased circulation of paper money clearly showed. After the legislative elections of October 20, 1922, however, which demonstrated that the socialists did not represent more than a fourth part of the electorate, no one still seriously doubted the outcome of the referendum. Here again the favorable reaction of the stock market was symptomatic. From then on until Dec. 3, the only subject of political speculation was the probable strength of the negative majority. These results came as a stupendous surprise to all concerned, as well as to all Swiss and foreign observers. Never in the history of the country had such a large proportion of electors taken part in a federal referendum and never had a contested political battle been so decisively won. . . . Direct democracy has once more been vindicated in the eyes of impartial observers, although there is a growing feeling that the use of the constitutional initiative should be regulated so as to prevent a small minority of the electorate from periodically plunging the body politic into sterile and economically harmful agitation."—W. E. Rappard, *Democracy vs. demagogy (Political Science Quarterly, Sept., 1923, pp. 361, 366-367, 369, 371, 379-381, 384, 386-387.*

SWITZERLAND, Constitution of.—After the Sonderbund secession and War of 1847 (see SWITZERLAND: 1803-1848), the task of drawing up a constitution for the confederacy was confided to a committee of fourteen members. The work was finished Apr. 14, 1848. The following text of the federal constitution of the Swiss confederation is a translation from parallel French and German texts, by Professor Albert Bushnell Hart, of Harvard University. It appeared originally in "Old South Leaflets," no. 18. Amendments, to July, 1893, are included.

mote the unity, strength, and honor of the Swiss nation, has adopted the federal constitution following:

Chapter I

Article 1. The peoples of the twenty-two sovereign Cantons of Switzerland, united by this present alliance, viz.: Zurich, Bern, Luzern, Uri, Schwyz, Unterwalden (Upper and Lower), Glarus, Zug, Freiburg, Solothurn, Basel (urban and rural), Schaffhausen, Appenzell (the two Rhodes), St. Gallen, Grisons, Aargau, Thurgau, Ticino, Vaud, Valais, Neuchâtel, and Geneva, form in their entirety the Swiss Confederation.

Art. 2. The purpose of the Confederation is, to secure the independence of the country against foreign nations, to maintain peace and order within, to protect the liberty and the rights of the Confederates, and to foster their common welfare.

Art. 3. The Cantons are sovereign, so far as their sovereignty is not limited by the Federal Constitution; and, as such, they exercise all the rights which are not delegated to the federal government.

Art. 4. All Swiss are equal before the law. In Switzerland there are neither political dependents, nor privileges of place, birth, persons, or families.

Art. 5. The Confederation guarantees to the Cantons their territory, their sovereignty, within the limits fixed by Article 3, their Constitutions, the liberty and rights of the people, the constitutional rights of citizens, and the rights and powers which the people have conferred on those in authority.

Art. 6. The Cantons are bound to ask of the Confederation the guaranty of their Constitutions. This guaranty is accorded, provided: (a) That the Constitutions contain nothing contrary to the provisions of the Federal Constitution. (b) That they assure the exercise of political rights, according to republican forms, representative or democratic. (c) That they have been ratified by the people, and may be amended whenever the majority of all the citizens demand it.

Art. 7. All separate alliances and all treaties of a political character between the Cantons are forbidden. On the other hand the Cantons have the right to make conventions among themselves upon legislative, administrative or judicial subjects; in all cases they shall bring such conventions to the attention of the federal officials, who are authorized to prevent their execution, if they contain anything contrary to the Confederation, or to the rights of other Cantons. Should such not be the case, the covenanting Cantons are authorized to require the coöperation of the federal officials in carrying out the convention.

Art. 8. The Confederation has the sole right of declaring war, of making peace, and of concluding alliances and treaties with foreign powers, particularly treaties relating to tariffs and commerce.

Art. 9. By exception the Cantons preserve the right of concluding treaties with foreign powers, respecting the administration of public property, and border and police intercourse; but such treaties shall contain nothing contrary to the Confederation or to the rights of other Cantons.

Art. 10. Official intercourse between Cantons and foreign governments, or their representatives, shall take place through the Federal Council. Nevertheless, the Cantons may correspond directly with the inferior officials and officers of a foreign State, in regard to the subjects enumerated in the preceding article.

IN THE NAME OF ALMIGHTY GOD. THE SWISS CONFEDERATION, desiring to maintain and to pro-

Art. 11. No military capitulations shall be made.

Art. 12. No members of the departments of the federal government, civil and military officials of the Confederation, or federal representatives or commissioners, shall receive from any foreign government any pension, salary, title, gift, or decoration. Such persons, already in possession of pensions, titles, or decorations, must renounce the enjoyment of pensions and the bearing of titles and decorations during their term of office. Nevertheless, inferior officials may be authorized by the Federal Council to continue in the receipt of pensions. No decoration or title conferred by a foreign government shall be borne in the federal army. No officer, non-commissioned officer, or soldier shall accept such distinction.

Art. 13. The Confederation has no right to keep up a standing army. No Canton or Half-Canton shall, without the permission of the federal government keep up a standing force of more than three hundred men; the mounted police [gendarmerie] is not included in this number.

Art. 14. In case of differences arising between Cantons, the States shall abstain from violence and from arming themselves; they shall submit to the decision to be taken upon such differences by the Confederation.

Art. 15. In case of sudden danger of foreign attack, the authorities of the Cantons threatened shall request the aid of other members of the Confederation and shall immediately notify the federal government; the subsequent action of the latter shall not thereby be precluded. The Cantons summoned are bound to give aid. The expenses shall be borne by the Confederation.

Art. 16. In case of internal disturbance, or if the danger is threatened by another Canton, the authorities of the Canton threatened shall give immediate notice to the Federal Council, in order that that body may take the measures necessary, within the limits of its power (Art. 102, §§ 3, 10, 11), or may summon the Federal Assembly. In extreme cases the authorities of the Canton are authorized, while giving immediate notice to the Federal Council, to ask the aid of other Cantons, which are bound to afford such aid. If the executive of the Canton is unable to call for aid, the federal authority having the power may, and if the safety of Switzerland is endangered shall, intervene without requisition. In case of federal intervention, the federal authorities shall take care that the provisions of Article 5 be observed. The expenses shall be borne by the Canton asking aid or occasioning federal intervention, except when the Federal Assembly otherwise decides on account of special circumstances.

Art. 17. In the cases mentioned in Articles 15 and 16, every Canton is bound to afford undisturbed passage for the troops. The troops shall immediately be placed under federal command.

Art. 18. Every Swiss is bound to perform military service. Soldiers who lose their lives or suffer permanent injury to their health, in consequence of federal service, are entitled to aid from the Confederation for themselves or their families, in case of need. Each soldier shall receive without expense his first equipment, clothing, and arms. The weapon remains in the hands of the soldier, under conditions which shall be prescribed by federal legislation. The Confederation shall enact uniform provisions as to an exemption tax.

Art. 19. The federal army is composed: (a) Of the cantonal military corps. (b) Of all Swiss who do not belong to such military corps, but are never-

theless liable to military service. The Confederation exercises control over the army and the material of war provided by law. In cases of danger, the Confederation has also the exclusive and direct control of men not included in the federal army, and of all other military resources of the Cantons. The Cantons have authority over the military forces of their territory, so far as this right is not limited by the Federal Constitution or laws.

Art. 20. The laws on the organization of the army are passed by the Confederation. The enforcement of military laws in the Cantons is intrusted to the cantonal officials, within limits which shall be fixed by federal legislation, and under the supervision of the Confederation. Military instruction of every kind pertains to the Confederation. The same applies to the arming of troops. The furnishing and maintenance of clothing and equipment is within the power of the Cantons; but the Cantons shall be credited with the expenses therefor, according to a regulation to be established by federal legislation.

Art. 21. So far as military reasons do not prevent, bodies of troops shall be formed out of the soldiers of the same Cantons. The composition of these bodies of troops, the maintenance of their effective strength, the appointment and promotion of officers of these bodies of troops, belong to the Cantons, subject to general provisions which shall be established by the Confederation.

Art. 22. On payment of a reasonable indemnity, the Confederation has the right to use or acquire drill-grounds and buildings intended for military purposes, within the Cantons, together with the appurtenances thereof. The terms of the indemnity shall be settled by federal legislation.

Art. 23. The Confederation may construct at its own expense, or may aid by subsidies, public works which concern Switzerland or a considerable part of the country. For this purpose it may expropriate property, on payment of a reasonable indemnity. Further enactments upon this matter shall be made by federal legislation. The Federal Assembly may forbid public works which endanger the military interests of the Confederation.

Art. 24. The Confederation has the right of superintendence over dike and forest police in the upper mountain regions. It may cooperate in the straightening and embankment of torrents as well as in the afforesting of the districts in which they rise. It may prescribe the regulations necessary to assure the maintenance of these works, and the preservation of existing forests.

Art. 25. The Confederation has power to make legislative enactments for the regulation of the right of fishing and hunting, particularly with a view to the preservation of the large game in the mountains, as well as for the protection of birds useful to agriculture and forestry.

Art. 26. Legislation upon the construction and operation of railroads is in the province of the Confederation.

Art. 27. The Confederation has the right to establish, besides the existing Polytechnic School, a Federal University and other institutions of higher instruction, or to subsidize institutions of such nature. The Cantons provide for primary instruction, which shall be sufficient, and shall be placed exclusively under the direction of the secular authority. It is compulsory and, in the public schools, free. The public schools shall be such that they may be frequented by the adherents of all religious sects, without any offense to their freedom of

conscience or of belief. The Confederation shall take the necessary measures against such Cantons as shall not fulfill these duties.

Art. 28. The customs are in the province of the Confederation. It may levy export and import duties.

Art. 29. The collection of the federal customs shall be regulated according to the following principles: 1. Duties on imports: (a) Materials necessary for the manufactures and agriculture of the country shall be taxed as low as possible. (b) It shall be the same with the necessities of life. (c) Luxuries shall be subjected to the highest duties. Unless there are imperative reasons to the contrary, these principles shall be observed also in the conclusion of treaties of commerce with foreign powers. 2. The duties on exports shall also be as low as possible. 3. The customs legislation shall include suitable provisions for the continuance of commercial and market intercourse across the frontier. The above provisions do not prevent the Confederation from making temporary exceptional provisions, under extraordinary circumstances.

Art. 30. The proceeds of the customs belong to the Confederation. The indemnity ceases which hitherto has been paid to the Cantons for the redemption of customs, for road and bridge tolls, customs duties and other like dues. By exception, and on account of their international alpine roads, the Cantons of Uri, Grisons, Ticino, and Valais receive an annual indemnity, which, considering all the circumstances, is fixed as follows: Uri, 80,000 francs. Grisons, 200,000 francs. Ticino, 200,000 francs. Valais, 50,000 francs. The Cantons of Uri and Ticino shall receive in addition, for clearing the snow from the Saint Gotthard road, an annual indemnity of 40,000 francs, so long as that road shall not be replaced by a railroad.

Art. 31. The freedom of trade and of industry is guaranteed throughout the whole extent of the Confederation. The following subjects are excepted: (a) The salt and gunpowder monopoly, the federal customs, import duties on wines and other spirituous liquors, and other taxes on consumption expressly permitted by the Confederation, according to article 32. (b) [Added by amendment of Dec. 22, 1885.] The manufacture and sale of alcohol, under Article 32 (ii). (c) [Added by amendment of Dec. 22, 1885.] Drinking places, and the retail trade in spirituous liquors; but nevertheless the Cantons may by legislation subject the business of keeping drinking places, and the retail trade in spirituous liquors, to such restrictions as are required for the public welfare. (d) [Originally (b)] Measures of sanitary police against epidemics and cattle diseases. (e) [Originally (c)] Provisions in regard to the exercise of trades and manufactures, in regard to taxes imposed thereon, and in regard to the police of the roads. These provisions shall not contain anything contrary to the principle of freedom of trade and manufacture.

Art. 32. The Cantons are authorized to collect the import duties on wines and other spirituous liquors, provided in Article 31 (a), always under the following restrictions: (a) The collection of these import duties shall in no wise impede transportation; commerce shall be obstructed as little as possible and shall not be burdened with any other dues. (b) If the articles imported for consumption are reexported from the Canton, the duties paid on importation shall be refunded, without further charges. (c) Products of Swiss origin shall be less burdened than those of foreign coun-

tries. (d) The existing import duties on wines and other spirituous liquors of Swiss origin shall not be increased by the Cantons which already levy them. Such duties shall not be established upon such articles by Cantons which do not at present collect them. (e) The laws and ordinances of the Cantons on the collection of import duties shall, before their going into effect, be submitted to the federal government for approval, in order that it may, if necessary, cause the enforcement of the preceding provisions. All the import duties now levied by the Cantons, as well as the similar duties levied by the Communes, shall cease, without indemnity, at the end of the year 1890.

Art. 32 (ii). [Amendment of Dec. 22, 1885.] The Confederation is authorized by legislation to make regulations for the manufacture and sale of alcohol. In this legislation those products which are intended for exportation, or which have been subjected to a process excluding them from use as a beverage, shall be subjected to no tax. Distillation of wine, fruit, and their by-products, of gentian root, juniper berries, and similar products, is not subject to federal legislation as to manufacture or tax. After the cessation of the import duties on spirituous liquors, provided for in Article 32 of the Constitution, the trade in liquors not distilled shall not be subjected by the Cantons to any special taxes or to other limitations than those necessary for protection against adulterated or noxious beverages. Nevertheless, the powers of the Cantons, defined in Article 31, are retained over the keeping of drinking places, and the sale at retail of quantities less than two liters. The net proceeds resulting from taxation on the sale of alcohol belong to the Cantons in which the tax is levied. The net proceeds to the Confederation from the internal manufacture of alcohol, and the corresponding addition to the duty on imported alcohol, are divided among all the Cantons, in proportion to the actual population as ascertained from time to time by the next preceding federal census. Out of the receipts therefrom the Cantons must expend not less than one tenth in combating drunkenness in its causes and effects. [For additional articles of this amendment see Temporary Provisions, Article 6, at the end of this constitution.]

Art. 33. The Cantons may require proofs of competency from those who desire to practice a liberal profession. Provision shall be made by federal legislation by which such persons may obtain certificates of competency which shall be valid throughout the Confederation.

Art. 34. The Confederation has power to enact uniform provisions as to the labor of children in factories, and as to the duration of labor fixed for adults therein, and as to the protection of workmen against the operation of unhealthy and dangerous manufactures. The transactions of emigration agents and of organizations for insurance, not instituted by the State, are subject to federal supervision and legislation.

Art. 34 (ii). [Amendment of Dec. 17, 1890.] The Confederation shall by law provide for insurance against sickness and accident, with due regard for existing sick-benefit funds. The Confederation may require participation therein, either by all persons or by particular classes of the population.

Art. 35. The opening of gaming houses is forbidden. Those which now exist shall be closed Dec. 31, 1877. The concessions which may have been granted or renewed since the beginning of the year 1871 are declared invalid. The Con-

ederation may also take necessary measures concerning lotteries.

Art. 36. The posts and telegraphs in all Switzerland are controlled by the Confederation. The proceeds of the posts and telegraphs belong to the federal treasury. The rates shall, for all parts of Switzerland, be fixed according to the same principle and as fairly as possible. Inviolable secrecy of letters and telegrams is guaranteed.

Art. 37. The Confederation exercises general oversight over those roads and bridges in the maintenance of which it is interested. The sums due to the Cantons mentioned in Article 30, on account of their international alpine roads, shall be retained by the federal government if such roads are not kept by them in suitable condition.

Art. 38. The Confederation exercises all the exclusive rights pertaining to coinage. It has the sole right of coining money. It establishes the monetary system, and may enact provisions, if necessary, for the rate of exchange of foreign coins.

[Art. 39. (*Abrogated by the article following it*). *The confederation has the power to make by law general provisions for the issue and redemption of bank notes. But it shall not create any monopoly for the issue of bank notes, nor make such notes a legal tender.*]

Art. 39. [Substitute for former Art. 39, adopted Oct. 18, 1891.] The Confederation has the exclusive power to issue bank notes and other like currency. The Confederation may exercise the exclusive power over the issue of bank notes through a National Bank carried on under a special department of administration; or it may assign the right to a central joint stock bank hereafter to be created, which shall be administered under the coöperation and supervision of the Confederation; but the privilege to take over the bank, by paying a compensation, shall be retained. The bank possessed of the exclusive right to issue notes shall have for its chief function to regulate the circulation of money in Switzerland and to facilitate exchange. To the Cantons shall be paid at least two-thirds of the net profits of the bank beyond a reasonable interest or a reasonable dividend to the stockholders, and the necessary transfers to the reserve fund. The bank and its branches shall not be subjected to taxation by the Cantons. The Confederation shall not make bank notes and other like currency legal tender, except in urgent need in time of war. The principal office of the bank and the details of its organization, as well as in general the carrying into effect this article, shall be determined by federal law.

Art. 40. The Confederation fixes the standard of weights and measures. The Cantons, under the supervision of the Confederation, enforce the laws relating thereto.

Art. 41. The manufacture and the sale of gunpowder throughout Switzerland pertain exclusively to the Confederation. Powders used for blasting and not suitable for shooting are not included in the monopoly.

Art. 42. The expenditures of the Confederation are met as follows: (a) Out of the income from federal property. (b) Out of the proceeds of the federal customs levied at the Swiss frontier. (c) Out of the proceeds of the posts and telegraphs. (d) Out of the proceeds of the powder monopoly. (e) Out of half of the gross receipts from the tax on military exemptions levied by the Cantons. (f) Out of the contributions of the Cantons, which shall be determined by federal legislation, with special reference to their wealth and taxable resources.

Art. 43. Every citizen of a Canton is a Swiss citizen. As such he may participate, in the place where he is domiciled, in all federal elections and popular votes, after having duly proven his qualification as a voter. No person can exercise political rights in more than one Canton. The Swiss settled as a citizen outside his native Canton enjoys in the place where he is domiciled, all the rights of the citizens of the Canton, including all the rights of the communal citizen. Participation in municipal and corporate property, and the right to vote upon purely municipal affairs, are excepted from such rights, unless the Canton by legislation has otherwise provided. In cantonal and communal affairs, he gains the right to vote after a residence of three months. Cantonal laws relating to the right of Swiss citizens to settle outside the Cantons in which they were born, and to vote on communal questions, are submitted for the approval of the Federal Council.

Art. 44. No Canton shall expel from its territory one of its own citizens, nor deprive him of his rights, whether acquired by birth or settlement. [Origine ou cité.] Federal legislation shall fix the conditions upon which foreigners may be naturalized, as well as those upon which a Swiss may give up his citizenship in order to obtain naturalization in a foreign country.

Art. 45. Every Swiss citizen has the right to settle anywhere in Swiss territory, on condition of submitting a certificate of origin, or a similar document. By exception, settlement may be refused to or withdrawn from, those who, in consequence of a penal conviction, are not entitled to civil rights. In addition, settlement may be withdrawn from those who have been repeatedly punished for serious offenses, and also from those who permanently come upon the charge of public charity, and to whom their Commune or Canton of origin, as the case may be, refuses sufficient succor, after they have been officially asked to grant it. In the Cantons where the poor are relieved in their place of residence the permission to settle, if it relates to citizens of the Canton, may be coupled with the condition that they shall be able to work, and that they shall not, in their former domicile in the Canton of origin, have permanently become a charge on public charity. Every expulsion on account of poverty must be approved by the government of the Canton of domicile, and previously announced to the government of the Canton of origin. A Canton in which a Swiss establishes his domicile may not require security, nor impose any special obligations for such establishment. In like manner the Communes cannot require from Swiss domiciled in their territory other contributions than those which they require from their own subjects. A federal law shall establish the maximum fee to be paid the Chancery for a permit to settle.

Art. 46. Persons settled in Switzerland are, as a rule, subjected to the jurisdiction and legislation of their domicile, in all that pertains to their personal status and property rights. The Confederation shall by law make the provisions necessary for the application of this principle and for the prevention of double taxation of a citizen.

Art. 47. A federal law shall establish the distinction between settlement and temporary residence, and shall at the same time make the regulations to which Swiss temporary residents shall be subjected as to their political rights and their civil rights.

Art. 48. A federal law shall provide for the regulation of the expenses of the illness and burial

of indigent persons amenable to one Canton, who have fallen ill or died in another Canton.

Art. 49. Freedom of conscience and belief is inviolable. No person can be constrained to take part in a religious society, to attend religious instruction, to perform a religious rite, or to incur penalties of any kind whatever on account of religious opinion. The person who exercises the parent's or guardian's authority has the right, conformably to the principles above stated, to regulate the religious education of children up to the age of sixteen completed years. The exercise of civil or political rights shall not be abridged by any provisions or conditions whatever of an ecclesiastical or religious kind. No person shall, on account of a religious belief, release himself from the accomplishment of a civil duty. No person is bound to pay taxes of which the proceeds are specifically appropriated to the actual expenses of the worship of a religious body to which he does not belong. The details of the carrying out of this principle are reserved for federal legislation.

Art. 50. The free exercise of religious worship is guaranteed within the limits compatible with public order and good morals. The Cantons and the Confederation may take suitable measures for the preservation of public order and of peace between the members of different religious bodies, and also against encroachments of ecclesiastical authorities upon the rights of citizens and of the State. Contests in public and private law, which arise out of the formation or the division of religious bodies, may be brought by appeal before the competent federal authorities. No bishopric shall be created upon Swiss territory without the consent of the Confederation.

Art. 51. The order of the Jesuits, and the societies affiliated with them, shall not be received into any part of Switzerland; and all action in church and school is forbidden to its members. This prohibition may be extended also, by federal ordinance, to other religious orders, the action of which is dangerous to the state or disturbs the peace between sects.

Art. 52. The foundation of new convents or religious orders, and the reestablishment of those which have been suppressed, are forbidden.

Art. 53. The civil status and the keeping of records thereof is subject to the civil authority. The Confederation shall by law enact detailed provisions upon this subject. The control of places of burial is subject to the civil authority. It shall take care that every deceased person may be decently interred.

Art. 54. The right of marriage is placed under the protection of the Confederation. No limitation upon marriage shall be based upon sectarian grounds, nor upon the poverty of either of the contractants, nor on their conduct, nor on any other consideration of good order. A marriage contracted in a Canton or in a foreign country, conformably to the law which is there in force, shall be recognized as valid throughout the Confederation. By marriage the wife acquires the citizenship of her husband. Children born before the marriage are made legitimate by the subsequent marriage of their parents. No tax upon admission or similar tax shall be levied upon either party to a marriage.

Art. 55. The freedom of the press is guaranteed. Nevertheless the Cantons by law enact the measures necessary for the suppression of abuses. Such laws are submitted for the approval of the Federal Council. [*By amendment of Nov. 13, 1808, this paragraph will cease to be in force as soon as a*

*Federal criminal code is adopted.*] The Confederation may enact penalties for the suppression of press offenses directed against it or its authorities.

Art. 56. Citizens have the right of forming associations, provided that there be in the purpose of such associations, or in the means which they employ, nothing unlawful or dangerous to the state. The Cantons by law take the measures necessary for the suppression of abuses.

Art. 57. The right of petition is guaranteed.

Art. 58. No person shall be deprived of his constitutional judge. Therefore no extraordinary tribunal shall be established. Ecclesiastical jurisdiction is abolished.

Art. 59. Suits for personal claims against a solvent debtor having a domicile in Switzerland, must be brought before the judge of his domicile; in consequence, his property outside the Canton in which he is domiciled may not be attached in suits for personal claims. Nevertheless, with reference to foreigners, the provisions of international treaties shall not thereby be affected. Imprisonment for debt is abolished.

Art. 60. All the Cantons are bound to treat the citizens of the other confederated States like those of their own State in legislation and in all judicial proceedings.

Art. 61. Civil judgments definitely pronounced in any Canton may be executed anywhere in Switzerland.

Art. 62. The exit duty on property [*traite foraine*] is abolished in the interior of Switzerland, as well as the right of redemption [*droit de retrait*] by citizens of one Canton against those of other confederated States.

Art. 63. The exit duty on property is abolished as respects foreign countries, provided reciprocity be observed.

Art. 64. The Confederation has power to make laws: On civil capacity. [*The confederation shall also have the power to legislate concerning all other matters within the field of the civil law. (As amended Nov. 13, 1808. After several years of legislative work a Swiss civil code was adopted on Dec. 10, 1007, and became effective on Jan. 1, 1912.)*] On all legal questions relating to commerce and to transactions affecting chattels (law of commercial obligations, including commercial law and law of exchange). On literary and artistic copyright. On the protection of new patterns and forms, and of inventions which are represented in models and are capable of industrial application. [*Amendment of Dec. 20, 1887.*] On the legal collection of debts and on bankruptcy. The organization of the courts, judicial procedure, and the administration of justice shall remain, as heretofore, subject to cantonal control. [*As amended Nov. 13, 1808.*]

Art. 65. The death penalty is abolished; nevertheless the provisions of military law in time of war shall be observed. Corporal punishment is abolished. [*Amendment of June 20, 1870: No death penalty shall be pronounced for a political crime. Corporal punishment is abolished.*]

Art. 66. The Confederation by law fixes the limits within which a Swiss citizen may be deprived of his political rights.

Art. 67. The Confederation by law provides for the extradition of accused persons from one Canton to another; nevertheless, extradition shall not be made obligatory for political offenses and offenses of the press.

Art. 68. Measures are taken by federal law for the incorporation of persons without country

(Heimathlosen), and for the prevention of new cases of that nature.

Art. 60. Legislation concerning measures of sanitary police against epidemic and cattle diseases, causing a common danger, is included in the powers of the Confederation.

Art. 70. The Confederation has power to expel from its territory foreigners who endanger the internal or external safety of Switzerland.

## Chapter II

Art. 71. With the reservation of the rights of the people and of the Cantons (Articles 89 and 121), the supreme authority of the Confederation is exercised by the Federal Assembly, [Assemblée fédérale; Bundesversammlung] which consists of two sections or councils, to wit: (A) The National Council. (B) The Council of States.

Art. 72. The National Council [Conseil National; Nationalrath] is composed of representatives of the Swiss people, chosen in the ratio of one member for each 20,000 persons of the total population. Fractions of upwards of 10,000 persons are reckoned as 20,000. Every Canton, and in the divided Cantons every Half-Canton, chooses at least one representative.

Art. 73. The elections for the National Council are direct. They are held in federal electoral districts, which in no case shall be formed out of parts of different Cantons.

Art. 74. Every Swiss who has completed twenty years of age, and who in addition is not excluded from the rights of a voter by the legislation of the Canton in which he is domiciled, has the right to vote in elections and popular votes. Nevertheless, the Confederation by law may establish uniform regulations for the exercise of such right.

Art. 75. Every lay Swiss citizen who has the right to vote is eligible for membership in the National Council.

Art. 76. The National Council is chosen for three years, and entirely renewed at each general election.

Art. 77. Representatives to the Council of States, members of the Federal Council, and officials appointed by that Council, shall not at the same time be members of the National Council.

Art. 78. The National Council chooses out of its own number, for each regular or extraordinary session, a President and a Vice-President. A member who has held the office of President during a regular session is ineligible either as President or Vice-President at the next regular session. The same member may not be Vice-President during two consecutive regular sessions. When the votes are equally divided the President has a casting vote; in elections he votes in the same manner as other members.

Art. 79. The members of the National Council receive a compensation out of the federal treasury.

Art. 80. The Council of States [Conseil des États; Ständerath] consists of forty-four representatives of the Cantons. Each Canton appoints two representatives; in the divided Cantons, each Half-State chooses one.

Art. 81. The members of the National Council and those of the Federal Council may not be representatives in the Council of States.

Art. 82. The Council of States chooses out of its own number for each regular or extraordinary session a President and a Vice-President. Neither the President nor the Vice-President can be chosen from among the representatives of the Canton

from which the President has been chosen for the regular session next preceding. Representatives of the same Canton cannot occupy the position of Vice-President during two consecutive regular sessions. When the votes are equally divided the President has a casting vote; in elections he votes in the same manner as the other members.

Art. 83. Representatives in the Council of States receive a compensation from the Cantons.

Art. 84. The National Council and the Council of States consider all the subjects which the present Constitution places within the competence of the Confederation, and which are not assigned to any other federal authority.

Art. 85. The subjects within the competence of the two Councils are particularly the following: 1. Laws on the organization of and election of federal authorities. 2. Laws and ordinances on subjects which by the Constitution are placed within the federal competence. 3. The salary and compensation of members of the federal governing bodies and of the Federal Chancery; the creation of federal offices and the determination of salaries therefor. 4. The election of the Federal Council, of the Federal Court, and of the Chancellor, and also of the Commander-in-chief of the federal army. The Confederation may by law assign to the Federal Assembly other powers of election or of confirmation. 5. Alliances and treaties with foreign powers, and also the approval of treaties made by the Cantons between themselves or with foreign powers; nevertheless the treaties made by the Cantons shall be brought before the Federal Assembly only in case the Federal Council or another Canton protests. 6. Measures for external safety and also for the maintenance of the independence and neutrality of Switzerland; the declaration of war and the conclusion of peace. 7. The guaranty of the Constitution and of the territory of the Cantons; intervention in consequence of such guaranty; measures for the internal safety of Switzerland, for the maintenance of peace and order; amnesty and pardon. 8. Measures for the preservation of the Constitution, for carrying out the guaranty of the cantonal constitutions, and for fulfilling federal obligations. 9. The power of controlling the federal army. 10. The determination of the annual budget, the audit of public accounts, and federal ordinances authorizing loans. 11. The superintendence of federal administration and of federal courts. 12. Protests against the decisions of the Federal Council upon administrative conflicts. (Art. 113.) 13. Conflicts of jurisdiction between federal authorities. 14. The amendment of the federal Constitution.

Art. 86. The two Councils assemble annually in regular session upon a day to be fixed by the standing orders. They are convened in extra session by the Federal Council upon the request either of one fourth of the members of the National Council, or of five Cantons.

Art. 87. In either Council a quorum is a majority of the total number of its members.

Art. 88. In the National Council and in the Council of States a majority of those voting is required.

Art. 89. Federal laws, enactments, and resolutions shall be passed only by the agreement of the two Councils. Federal laws shall be submitted for acceptance or rejection by the people, if the demand is made by 30,000 voters or by eight Cantons. The same principle applies to federal resolutions which have a general application, and which are not of an urgent nature.

Art. 90. The Confederation shall by law estab-

lish the forms and intervals to be observed in popular votes.

Art. 01. Members of either Council vote without instructions.

Art. 02. Each Council takes action separately. But in the case of the elections specified in Article 85, § 4, of pardons, or of deciding a conflict of jurisdiction (Art. 85, § 13), the two Councils meet in joint session, under the direction of the President of the National Council, and a decision is made by the majority of the members of both Councils present and voting.

Art. 03. Measures may originate in either Council, and may be introduced by any of their members. The Cantons may by correspondence exercise the same right.

Art. 04. As a rule, the sittings of the Councils are public.

Art. 05. The supreme direction and executive authority of the Confederation is exercised by a Federal Council [Conseil fédéral; Bundesrath], composed of seven members.

Art. 06. The members of the Federal Council are chosen for three years by the Councils in joint session from among all the Swiss citizens eligible to the National Council. But not more than one member of the Federal Council shall be chosen from the same Canton. The Federal Council is chosen anew after each election of the National Council. Vacancies which occur in the course of the three years are filled at the first ensuing session of the Federal Assembly, for the remainder of the term of office.

Art. 07. The members of the Federal Council shall not, during their term of office, occupy any other office, either in the service of the Confederation or in a Canton, or follow any other pursuit, or exercise a profession.

Art. 08. The Federal Council is presided over by the President of the Confederation. There is a Vice-President. The President of the Confederation and the Vice-President of the Federal Council are chosen for one year by the Federal Assembly from among the members of the Council. The retiring President shall not be chosen as President or Vice-President for the year ensuing. The same member shall not hold the office of Vice-President during two consecutive years.

Art. 09. The President of the Confederation and the other members of the Federal Council receive an annual salary from the federal treasury.

Art. 100. A quorum of the Federal Council consists of four members.

Art. 101. The members of the Federal Council have the right to speak but not to vote in either house of the Federal Assembly, and also the right to make motions on the subject under consideration.

Art. 102. The powers and the duties of the Federal Council, within the limits of this Constitution, are particularly the following: 1. It conducts federal affairs, conformably to the laws and resolutions of the Confederation. 2. It takes care that the Constitution, federal laws and ordinances, and also the provisions of federal concordats, be observed; upon its own initiative or upon complaint, it takes measures necessary to cause these instruments to be observed, unless the consideration of redress be among the subjects which should be brought before the Federal Court, according to Article 113. 3. It takes care that the guaranty of the cantonal constitutions be observed. 4. It introduces bills or resolutions into the Federal Assembly, and gives its opinion upon the proposals

submitted to it by the Councils or the Cantons. 5. It executes the laws and resolutions of the Confederation and the judgments of the Federal Court, and also the compromises or decisions in arbitration upon disputes between Cantons. 6. It makes those appointments which are not assigned to the Federal Assembly, Federal Court, or other authority. 7. It examines the treaties made by Cantons with each other, or with foreign powers, and approves them, if proper. (Art. 85, § 5.) 8. It watches over the external interests of the Confederation, particularly the maintenance of its international relations, and is, in general, intrusted with foreign relations. 9. It watches over the external safety of Switzerland, over the maintenance of independence and neutrality. 10. It watches over the internal safety of the Confederation, over the maintenance of peace and order. 11. In cases of urgency, and when the Federal Assembly is not in session, the Federal Council has power to raise the necessary troops and to employ them, with the reservation that it shall immediately summon the Councils if the number of troops exceeds two thousand men, or if they remain in arms more than three weeks. 12. It administers the military establishment of the Confederation, and all other branches of administration committed to the Confederation. 13. It examines such laws and ordinances of the Cantons as must be submitted for its approval; it exercises supervision over such departments of the cantonal administration as are placed under its control. 14. It administers the finances of the Confederation, introduces the budget, and submits accounts of receipts and expenses. 15. It supervises the conduct of all the officials and employees of the federal administration. 16. It submits to the Federal Assembly at each regular session an account of its administration and a report of the condition of the Confederation, internal as well as external, and calls attention to the measures which it deems desirable for the promotion of the general welfare. It also makes special reports when the Federal Assembly or either Council requires it.

Art. 103. The business of the Federal Council is distributed by departments among its members. This distribution has the purpose only of facilitating the examination and despatch of business; decisions emanate from the Federal Council as a single authority.

Art. 104. The Federal Council and its departments have power to call in experts on special subjects.

Art. 105. A Federal Chancery [Chancellerie fédérale; Bundeskanzlei], at the head of which is placed the Chancellor of the Confederation, conducts the secretary's business for the Federal Assembly and the Federal Council. The Chancellor is chosen by the Federal Assembly for the term of three years, at the same time as the Federal Council. The Chancery is under the special supervision of the Federal Council. A federal law shall provide for the organization of the Chancery.

Art. 106. There shall be a Federal Court [Tribunal fédéral; Bundesgericht] for the administration of justice in federal concerns. There shall be, moreover, a jury for criminal cases. (Art. 112.)

Art. 107. The members and alternates of the Federal Court shall be chosen by the Federal Assembly, which shall take care that all three national languages are represented therein. A law shall establish the organization of the Federal Court and of its sections, the number of judges

and alternates, their term of office, and their salary.

Art. 108. Any Swiss citizen eligible to the National Council may be chosen to the Federal Court. The members of the Federal Assembly and of the Federal Council, and officials appointed by those authorities, shall not at the same time belong to the Federal Court. The members of the Federal Court shall not, during their term of office, occupy any other office, either in the service of the Confederation or in a Canton, nor engage in any other pursuit, nor practice a profession.

Art. 109. The Federal Court organizes its own Chancery and appoints the officials thereof.

Art. 110. The Federal Court has jurisdiction in civil suits: 1. Between the Confederation and the Cantons. 2. Between the Confederation on one part and corporations or individuals on the other part, when such corporations or individuals are plaintiffs, and when the amount involved is of a degree of importance to be determined by federal legislation. 3. Between Cantons. 4. Between Cantons on one part and corporations or individuals on the other part, when one of the parties demands it, and the amount involved is of a degree of importance to be determined by federal legislation. It further has jurisdiction in suits concerning the status of persons not subjects of any government (heimathlosat), and the conflicts which arise between Communes of different Cantons respecting the right of local citizenship. [Droit de cité.]

Art. 111. The Federal Court is bound to give judgment in other cases when both parties agree to abide by its decision, and when the amount involved is of a degree of importance to be determined by federal legislation.

Art. 112. The Federal Court, assisted by a jury to decide upon questions of fact, has criminal jurisdiction in: 1. Cases of high treason against the Confederation, or rebellion or violence against federal authorities. 2. Crimes and misdemeanors against the law of nations. 3. Political crimes and misdemeanors which are the cause or the result of disturbances which occasion armed federal intervention. 4. Cases against officials appointed by a federal authority, where such authority relegates them to the Federal Court.

Art. 113. The Federal Court further has jurisdiction: 1. Over conflicts of jurisdiction between federal authorities on one part and cantonal authorities on the other part. 2. Disputes between Cantons, when such disputes are upon questions of public law. 3. Complaints of violation of the constitutional rights of citizens, and complaints of individuals for the violation of concordats or treaties. Conflicts of administrative jurisdiction are reserved, and are to be settled in a manner prescribed by federal legislation. In all the fore-mentioned cases the Federal Court shall apply the laws passed by the Federal Assembly and those resolutions of the Assembly which have a general import. It shall in like manner conform to treaties which shall have been ratified by the Federal Assembly.

Art. 114. Besides the cases specified in Articles 110, 112, and 113, the Confederation may by law place other matters within the jurisdiction of the Federal Court; in particular, it may give to that court powers intended to insure the uniform application of the laws provided for in Article 64.

Art. 115. All that relates to the location of the authorities of the Confederation is a subject for federal legislation.

Art. 116. The three principal languages spoken in Switzerland, German, French, and Italian, are national languages of the Confederation.

Art. 117. The officials of the Confederation are responsible for their conduct in office. A federal law shall enforce this responsibility.

### Chapter III

[*(These four articles abrogated by the four articles following them, 118-122.)* Art. 118. *The federal constitution may at any time be amended.*]

Art. 119. [*Amendment is secured through the forms required for passing federal laws.*]

Art. 120. [*When either Council of the Federal Assembly passes a resolution for amendment of the federal constitution and the other Council does not agree; or when fifty thousand Swiss voters demand amendment, the question whether the Federal Constitution ought to be amended is, in either case, submitted to a vote of the Swiss people, voting yes or no. If in either case the majority of the Swiss citizens who vote pronounce in the affirmative, there shall be a new election of both councils for the purposes of preparing amendments.*]

Art. 121. [*The amended federal constitution shall be in force when it has been adopted by the majority of Swiss citizens who take part in the vote thereon and by a majority of the States. In making up a majority of the states the vote of a half-canton is counted as half a vote. The result of the popular vote in each canton is considered to be the vote of the State.*]

Art. 118. [*Amendment of July 5, 1891.*] The Federal Constitution may at any time be amended as a whole or in part.

Art. 119. [*Amendment of July 5, 1891.*] General revision is secured through the forms required for passing the federal laws.

Art. 120. When either Council of the Federal Assembly passes a resolution for general revision and the other Council does not agree; or when fifty thousand Swiss voters demand general revision the question whether there shall be such a revision must, in either case, be submitted to the popular vote of the Swiss people. If, in either case, the majority of the Swiss citizens who vote on the question pronounce in the affirmative, there shall be a new election of both Councils for the purpose of preparing a general revision.

Art. 121. [*Amendment of July 5, 1891.*] Specific amendments may be brought forward either through a Proposition of the People [Volksanregung] (Initiative) or by Federal legislation. A Proposition of the People means a demand supported by fifty thousand Swiss voters, either for suspension, repeal, or alteration of specified articles of the Federal Constitution. If by means of the method of Proposition of the People several different subjects are brought forward either for alteration or for incorporation into the Federal Constitution, each one of those separate subjects must be presented in a separate demand for a popular vote [Initiativbegehren]. The demand for a popular vote may take the form either of a request in general terms, or of a definite draft. If such a demand be made in the form of a request in general terms and the Councils of the Federal Assembly agree thereto, the said Councils shall thereupon prepare a specific amendment of the purport indicated by those asking amendment; and such specific amendment shall be submitted to the people and to the states for their acceptance or rejection. In case the Councils of the Federal Assembly do not agree thereto, the question of specific amendment shall then be subjected to the people for a popular vote; and in case the majority of the Swiss voters vote therefor, an amend-

ment of the purport indicated by the vote of the people shall then be prepared by the Federal Assembly. In case the request shall take the form of a specific draft and the Federal Assembly agree thereto, the draft is then to be submitted to the people and the States for acceptance or rejection. If the Federal Assembly shall not agree thereto it may either prepare a substitute draft for itself, or it may propose the rejection of the proposition. The proposition to reject such substitute draft or proposition shall be submitted to the vote of the people and of the States at the same time with the general Proposition of the People.

Art. 122. [*Amendment of July 5, 1891.*] The procedure upon the Proposition of the People and the popular votes concerning amendment of the Federal Constitution, shall be regulated in detail by a Federal Law.

Art. 123. [*Amendment of July 5, 1891.*] The amended Federal Constitution or the specific amendments proposed, as the case may be, shall be in force when adopted by the majority of the Swiss citizens who take part in the vote thereon and by a majority of the Cantons. In making up the majority of the States the vote of a half of each Canton is counted as half a vote. The result of the popular vote in each Canton is considered to be the vote of the state.

**Temporary Provisions**

Article 1. The proceeds of the posts and customs shall be divided upon the present basis, until such time as the Confederation shall take upon itself the military expenses up to this time borne by the Cantons. Federal legislation shall provide, besides, that the loss which may be occasioned to the finances of certain Cantons by the sum of the charges which result from Articles 20, 30, 36 (§2), and 42 (e), shall fall upon such Cantons only gradually, and shall not attain its full effect till after a transition period of some years. Those Cantons which, at the going into effect of Article 20 of the Constitution, have not fulfilled the military obligations which are imposed upon them by the former Constitution, or by federal laws, shall be bound to carry them out at their own expense.

Art. 2. The provisions of the federal laws and of the cantonal concordats, constitutions or cantonal laws, which are contrary to this Constitution, cease to have effect by the adoption of the Constitution or the publication of the laws for which it provides.

Art. 3. The new provisions relating to the organization and jurisdiction of the Federal Court take effect only after the publication of federal laws thereon.

Art. 4. A delay of five years is allowed to Cantons for the establishment of free instruction in primary public education. (Art. 27.)

Art. 5. Those persons who practice a liberal profession, and who, before the publication of the federal law provided for in Article 33, have obtained a certificate of competence from a Canton or a joint authority representing several Cantons, may pursue that profession throughout the Confederation.

Art. 6. [*Amendment of Dec. 22, 1885. For the remainder of this amendment see Art. 32 (ii).*] If a federal law for carrying out Article 32 (ii) be passed before the end of 1800, the import duties levied on spirituous liquors by the Cantons and Communes, according to Article 32, cease on the going into effect of such law. If, in such case,

the shares of any Canton or Commune, out of the sums to be divided, are not sufficient to equal the average annual net proceeds of the taxes they have levied on spirituous liquors in the years 1880 to 1884 inclusive, the Cantons and Communes affected shall, till the end of 1890, receive the amount of the deficiency out of the amount which is to be divided among the other Cantons according to population; and the remainder shall be divided among such other Cantons and Communes, according to population. The Confederation shall further provide by law that for such Cantons or Communes as may suffer financial loss through the effect of this amendment, such loss shall not come upon them immediately in its full extent, but gradually up to the year 1895. The indemnities thereby made necessary shall be previously taken out of the net proceeds designated in Article 32 (ii), paragraph 4.

Thus resolved by the National Council to be submitted to the popular vote of the Swiss people and of the cantons. BERN, January 31, 1874. ZIEGLER, President. SCHIESS, Secretary.

Thus resolved by the Council of States, to be submitted to the popular vote of the Swiss people and of the Cantons. BERN, JANUARY 31, 1874. A. KOPP, President. J. L. LUTSCHER, Secretary.

His kingdom. See GAUL: 457-486.

SYBARIS, SYBARITES.—Sybaris and Kroton were two ancient Greek cities, founded by Achaean colonists, on the coast of the gulf of Tarentum, in southern Italy. "The town of Sybaris was planted between two rivers, the Sybaris and the Krathis (the name of the latter borrowed from a river of Achaia); the town of Kroton about twenty-five miles distant, on the river Æsarus. . . . The fatal contest between these two cities, which ended in the ruin of Sybaris, took place in 510 B. C., after the latter had subsisted in growing prosperity for 210 years. . . . We are told that the Sybarites, in that final contest, marched against Kroton with an army of 300,000 men. . . . The few statements which have reached us respecting them touch, unfortunately, upon little more than their luxury, fantastic self-indulgence and extravagant indolence, for which qualities they have become proverbial in modern times as well as in ancient."—G Grote, *History of Greece*, pt. 2, ch. 22.—"The wealth of Sybaris, which became proverbial, was due mainly to her command and use of this 'isthmus' road [Strait of Messina], which led across in two days' journey to her colony of Laos on the Western coast. Here the goods were re-embarked for the ports of Etruria on the further West. That is why, when Sybaris had been destroyed by her neighbor Croton, 'the Milesians of every age shaved their heads and displayed marks of deep mourning; for these two cities had been more closely befriended than any others we know of.' Miletus was the chief Greek trading city."—H. Zimmern, *Greek commonwealth*, p. 27.—See also ACHÆAN CITIES, LEAGUE OF THE.

SYBEL, Heinrich von (1817-1895), German historian. See HISTORY: 28.

SYBOTA, Naval Battle of (432 B. C.), fought between the fleets of Corinth and Corcyra, in the quarrel which led up to the Peloponnesian War,

The Athenians had ten ships present, as allies of the Corcyreans, intending only to watch affairs, but at the end they were drawn into the fight. The Corcyreans were beaten.—Based on Thucydides, *History* (tr. by Jewett), *bk. 1, sect. 46*.

**SYCOPHANTS**.—"Not until now [about 428 B. C., when the demagogue Cleon rose to power at Athens] did the activity of the Sycophants attain to its full height; a class of men arose who made a regular trade of collecting materials for indictments, and of bringing their fellow citizens before a legal tribunal. These denunciations were particularly directed against those who were distinguished by wealth, birth and services, and who therefore gave cause for suspicion; for the informers wished to prove themselves zealous friends of the people and active guardians of the constitution. . . . Intrigues and conspiracies were suspected in all quarters, and the popular orators persuaded the citizens to put no confidence in any magistrate, enjoin or commission, but rather to settle everything in full assembly and themselves assume the entire executive. The Sycophants made their living out of this universal suspicion. . . . They threatened prosecutions in order thus to extort money from guilty and innocent alike; for even among those who felt free from guilt were many who shunned a political prosecution beyond all other things, having no confidence in a jury."—E. Curtius, *History of Greece, v. 3, bk 4, ch. 2*.—See also DELATION.

**SYLLABARIES**.—"A good deal of the [Assyrian] literature was of a lexical and grammatical kind, and was intended to assist the Semitic student in interpreting the old Accadian texts. Lists of characters were drawn up with their pronunciation in Accadian and the translation into Assyrian of the words represented by them. Since the Accadian pronunciation of a character was frequently the phonetic value attached to it by the Assyrians, these syllabaries, as they have been termed—in consequence of the fact that the cuneiform characters denoted syllables and not letters—have been of the greatest possible assistance in the decipherment of the inscriptions."—A. H. Sayce, *Assyria, its princes, priests and people, ch. 4*.

**SYRACUSE**, city of Sicily on the east coast of the island, having a communal population, 1921, of 64,840.

B. C. 734.—**Founding of the city**.—"Syracuse was founded the year after Naxos, by Corinthians, under the leader named Archias, a Heracleid, and probably of the ruling caste, who appears to have been compelled to quit his country to avoid the effects of the indignation which he had excited by a horrible outrage committed in a family of lower rank. . . . Syracuse became, in course of time, the parent of other Sicilian cities, among which Camarina was the most considerable. . . . Forty-five years after Syracuse, Gela was founded by a band collected from Crete and Rhodes, chiefly from Lindus, and about a century later (B. C. 582) sent forth

settlers to the banks of the Acragas, where they built Agrigentum."—C. Thirlwall, *History of Greece*, ch. 12.—The first settlement at Syracuse was on the islet of Ortygia. "Ortygia, two English miles in circumference, was separated from the main island only by a narrow channel, which was bridged over when the city was occupied and enlarged by Gelón in the 72nd Olympiad, if not earlier. It formed only a small part, though the most secure and best-fortified part, of the vast space which the city afterwards occupied. But it sufficed alone for the inhabitants a considerable time, and the present city in its modern decline has again reverted to the same modest limits. Moreover, Ortygia offered another advantage of not less value. It lay across the entrance of a spacious harbour, approached by a narrow mouth, and its fountain of Arethusa was memorable in antiquity both for the abundance and goodness of its water."—G. Grote, *History of Greece*, pt. 2, ch. 22.—See also ACHRADINA.

**B. C. 480.**—Defeat of Carthaginians at Himera. See SICILY: B. C. 480.

**B. C. 415-413.**—Siege by Athenians.—The Greek city of Syracuse, in Sicily, having been founded and built up by colonization from Corinth, naturally shared the deep hatred of Athens which was common among the Dorian Greeks, and which the Corinthians particularly found many reasons to cherish. The feeling at Athens was reciprocal, and, as the two cities grew supreme in their respective spheres and arrogant with the consciousness of superior power, mutual jealousies fed their passion of hostility, although nothing in their affairs, either politically or commercially, brought them really into conflict with one another. But Syracuse, enforcing her supremacy in Sicily, dealt roughly with the Ionian settlements there, and Athens was appealed to for aid. The first call upon her was made (428 B. C.) in the midst of the earlier period of the Peloponnesian War, and came from the people of Leontini, then engaged in a struggle with Syracuse, into which other Sicilian cities had been drawn. The Athenians were easily induced to respond to the call, and they sent a naval force which took part in the Leontine War, but without any marked success. The result was to produce among the Sicilians a common dread of Athenian interference, which led them to patch up a general peace. But fresh quarrels were not long in arising, in the course of which Leontini was entirely destroyed, and another Sicilian city, Egesta, which Athens had before received into her alliance, claimed help against Syracuse. This appeal reached the Athenians at a time (416 B. C.) when their populace was blindly following Alcibiades, whose ambition craved war, and who chafed under the restraints of the treaty of peace with Sparta which Nicias had brought about. They were carried by his influence into the undertaking of a great expedition of conquest, directed against the Sicilian capital—the most costly and formidable which any Greek state had ever fitted out. In the summer of 415 B. C. the whole force assembled at Corcyra and sailed across the Ionian sea to the Italian coast and thence to Sicily. It consisted of 134 triremes, with many merchant ships and transports, bearing 5,100 hoplites, 480 bowmen and 700 Rhodian slingers. The commanders were Nicias, Lamachus and Alcibiades. On the arrival of the expedition in Sicily a disagreement among the generals made efficient action impossible and gave the Syracusans time to prepare a stubborn resistance. Meantime the enemies of Alcibiades at Athens had brought about a decree for his arrest, on account of an

alleged profanation of the sacred Eleusinian mysteries, and, fearing to face the accusation, he fled, taking refuge at Sparta, where he became the implacable enemy of his country. Three months passed before Nicias, who held the chief command, made any attempt against Syracuse. He then struck a single blow, which was successful, but which led to nothing; for the Athenian army was withdrawn immediately afterwards and put into winter quarters. In the following spring the regular operations of a siege and blockade were undertaken, at sea with the fleet and on land by a wall of circumvallation. The undertaking promised well at first and the Syracusans were profoundly discouraged. But Sparta, where Alcibiades worked passionately in their favor, sent them a general, Gylippus, who proved to be equal to an army, and promised reinforcements to follow. The more vigorous Athenian general, Lamachus, had been killed, and Nicias, with incredible apathy, suffered Gylippus to gather up a small army in the island and to enter Syracuse with it, in defiance of the Athenian blockade. From that day the situation was reversed. The besieged became the assailants and the besiegers defended themselves. Nicias sent to Athens for help and maintained his ground with difficulty through another long winter, until a second great fleet and army arrived, under the capable general Demosthenes, to reinforce him. But it was too late. Syracuse had received powerful aid, in ships and men, from Corinth, from Sparta and from other enemies of Athens, had built a navy and trained sailors of her own, and was full of confident courage. The Athenians were continually defeated, on land and sea, and hoped for nothing at last but to be able to retreat. Even the opportunity to do that was lost for them in the end by the weakness of Nicias, who delayed moving on account of an eclipse, until his fleet was destroyed in a final sea-fight and the island roads were blocked by an implacable enemy. The flight when it was undertaken proved a hopeless attempt, and there is nothing in history more tragical than the account of it which is given in the pages of Thucydides. On the sixth day of the struggling retreat the division under Demosthenes gave up and surrendered to the pursuers who swarmed around it. On the next day Nicias yielded with the rest, after a terrible massacre at the river Assinarus. Nicias and Demosthenes were put to the sword, although Gylippus interceded for them. Their followers were imprisoned in the Syracusan quarries. "There were great numbers of them and they were crowded in a deep and narrow place. At first the sun by day was still scorching and suffocating, for they had no roof over their heads, while the autumn nights were cold, and the extremes of temperature engendered violent disorders. Being cramped for room they had to do everything on the same spot. The corpses of those who died from their wounds, exposure to the weather, and the like, lay heaped one upon another. The smells were intolerable; and they were at the same time afflicted by hunger and thirst. . . . Every kind of misery which could befall man in such a place befell them. This was the condition of all the captives for about ten weeks. At length the Syracusans sold them, with the exception of the Athenians and of any Sicilian or Italian Greeks who had sided with them in the war. The whole number of the public prisoners is not accurately known, but they were not less than 7,000. Of all the Hellenic actions which took place in this war, or indeed of all Hellenic actions which are on record, this was the greatest—the most glorious to the

victors, the most ruinous to the vanquished; for they were utterly and at all points defeated, and their sufferings were prodigious. Fleet and army perished from the face of the earth; nothing was saved, and of the many who went forth few returned home. Thus ended the Sicilian expedition."—Thucydides, *History* (tr. by Jowett), *bk.* 6-7.—See also ATHENS: B. C. 413-411.

**B. C. 397-396.**—Dionysius and the Carthaginians.—Eighteen years after the tragic deliverance of Syracuse from the besieging host and fleet of the Athenians, the Sicilian capital experienced a second great peril and extraordinary escape of like kind. The democratic government of Syracuse had meantime fallen and a new tyrant had risen to power. Dionysius, who began life in a low station, made his way upward by ruthless energy and cunning, practising skilfully the arts of a demagogue until he had won the confidence of people, and making himself their master in the end. When the sovereignty of Dionysius had acquired firmness and the fortifications and armament of his city had been powerfully increased, it suited his purposes to make war upon the Carthaginians, which he did 397 B. C. He attacked Motye, which was the most important of their cities in Sicily, and took it after a siege of some months' duration, slaughtering and enslaving the wretched inhabitants. But his triumph in this exploit was brief. Imilkon, or Himilco, the Carthaginian commander, arrived in Sicily with a great fleet and army and recaptured Motye with ease. That done he made a rapid march to Messene, in the northeastern extremity of the island, and gained that city almost without a blow. The inhabitants escaped, for the most part, but the town is said to have been reduced to an utter heap of ruins—from which it was subsequently rebuilt. From Messene he advanced to Syracuse, Dionysius not daring to meet him in the field. The Syracusan fleet, encountering that of the Carthaginians, near Katana, was almost annihilated, and when the vast African armament, numbering more than seventeen hundred ships of every description, sailed into the great harbor of Syracuse, there was nothing to oppose it. The city was formidably invested, by land and sea, and its fate would have appeared to be sealed. But the gods interposed, as the ancients thought, and avenged themselves for insults which the Carthaginians had put upon them. Once more the fatal pestilence which had smitten the latter twice before in their Sicilian wars appeared and their huge army was palsied by it. "Care and attendance upon the sick, or even interment of the dead, became impracticable; so that the whole camp presented a scene of deplorable agony, aggravated by the horrors and stench of 150,000 unburied bodies. The military strength of the Carthaginians was completely prostrated by such a visitation. Far from being able to make progress in the siege, they were not even able to defend themselves against moderate energy on the part of the Syracusans; who . . . were themselves untouched by the distemper. [In this situation the Carthaginian commander basely deserted his army. Having secretly bribed Dionysius to permit the escape of himself and the small number of native Carthaginians in his force, he abandoned the remainder to their fate (394 B. C.). Dionysius took the Iberians into his service; but the Libyans and other mercenaries were either killed or enslaved. As for Imilkon, soon after his return to Carthage he shut himself in his house

and died, refusing food. The blow to the prestige of Carthage was nearly fatal, producing a rebellion among her subjects which assumed a most formidable character; but it lacked capable command and was suppressed."—G. Grote, *History of Greece*, pt. 2, ch. 82.

**B. C. 394-384.**—Conquests and dominion of Dionysius.—"The successful result of Dionysios' first Punic War seems to have largely spread his fame in Old Greece," while it increased his prestige and power at home. But "he had many difficulties. He too, like the Carthaginians, had to deal with a revolt among his mercenaries, and he had to give up to them the town of Leontinoi. And the people of Naxos and Katane, driven out by himself, and the people of Messana, driven out by Himilkon, were wandering about, seeking for dwelling-places. He restored Messana, but he did not give it back to its old inhabitants. He peopled it with colonists from Italy and from Old Greece. . . . He also planted a body of settlers from the old Messenian land in Peloponnésos," at Tyndaris. "Thus the north-eastern corner of Sicily was held by men who were really attached to Dionysios. And he went on further to extend his power along the north coast. . . . The Sikel towns were now fast taking to Greek ways, and we hear of commonwealths and tyrants among them, just as among the Greeks. Agyris, lord of Agyrium, was said to be the most powerful prince in Sicily after Dionysios himself. . . . With him Dionysios made a treaty, and also with other Sikel lords and cities." But he attacked the new Sikel town of Tauromenion, and was disastrously repulsed. "This discomfiture at Tauromenion checked the plans of Dionysios for a while. Several towns threw off his dominion. . . . And the Carthaginians also began to stir again. In B. C. 393 their general Magón, seemingly without any fresh troops from Africa, set out from Western Sicily to attack Messana." But Dionysios defeated him, and the next year he made peace with the Carthaginians, as one of the consequences of which he captured Tauromenion in 391. "Dionysios was now at the height of his power in Sicily. . . . He commanded the whole east coast, and the greater part of the north and south coasts. . . . Dionysios and Carthage might be said to divide Sicily between them, and Dionysios had the larger share." Being at peace with the Carthaginians, he now turned his arms against the Greek cities in Southern Italy, and took Kaulonia, Hipponion, and Rhegium 387 B. C. (see RHEGIUM, SIEGE OF [387 B. C.]) making himself, "beyond all doubt, the chief power, not only in Sicily, but in Greek Italy also." Three years later (384 B. C.) Dionysios sent a splendid embassy to the Olympic festival in Greece. "Lysias called on the assembled Greeks to show their hatred of the tyrant, to hinder his envoys from sacrificing or his chariots from running. His chariots did run; but they were all defeated. Some of the multitude made an attack on the splendid tents of his envoys. He had also sent poems of his own to be recited; but the crowd would not hear them."—E. A. Freeman, *Story of Sicily*, ch. 10.

**B. C. 383.**—War with Carthage. See SICILY: B. C. 383.

**368.**—Siege of Lilybæum by Dionysius. See LILYBÆUM.

**B. C. 344.**—Fall of Dionysian tyranny.—The elder Dionysius,—he who climbed by cunning demagoguery from an obscure beginning in life to the height of power in Syracuse, making himself the typical tyrant of antiquity, died in 307 B. C.

after a reign of thirty-eight years. He was succeeded by his son, Dionysius the younger, who inherited nothing in character from his father but his vices and his shameless meannesses. For a time the younger Dionysius was largely controlled by the admirable influence of Dion, brother-in-law and son-in-law of the elder tyrant (who had several wives and left several families). Dion had Plato for his teacher and friend, and strove with the help of the great Athenian who visited Sicily thrice to win the young tyrant to a life of virtue and to philosophical aims. The only result was finally to destroy the whole influence with which they began, and Dion, ere long, was driven from Syracuse, while Dionysius abandoned himself to debaucheries and cruelties. After a time Dion was persuaded to lead a small force from Athens to Syracuse and undertake the overthrow of Dionysius. The gates of Syracuse were joyfully opened to him and his friends, and they were speedily in possession of the whole city except the island-stronghold of Ortygia, which was the entrenchment of the Dionysian tyranny. Then ensued a protracted and desperate civil war in Syracuse, which half ruined the magnificent city. In the end Ortygia was surrendered, Dionysius having previously escaped with much treasure to his dependent city of Lokri, in southern Italy. Dion took up the reins of government, intending to make himself what modern times would call a constitutional monarch. He wished the people to have liberty, but such liberty as a philosopher would find best for them. He was distrusted, misunderstood, denounced by demagogues, and hated, at last, as bitterly as the tyrants who preceded him. His high-minded ambitions were all disappointed and his own character suffered from the disappointment. At the end of a year of sovereignty he was assassinated by one of his own Athenian intimates, Kallippus, who secured the goodwill of the army and made himself despot. The reign of Kallippus was maintained for something more than a year, and he was then driven out by Hipparinus, one of the sons of Dionysius the elder, and half-brother to the younger of that name. Hipparinus was presently murdered and another brother, Nysæus, took his place. Then Nysæus, in turn, was driven out by Dionysius, who returned from Lokri and re-established his power. The condition of Syracuse under the restored despotism of Dionysius was worse than it ever had been in the past, and the great city seemed likely to perish. At the last extremity of suffering, in 344 B. C., its people sent a despairing appeal to Corinth (the mother-city of Syracuse) for help. The Corinthians responded by despatching to Sicily a small fleet of ten triremes and a meagre army of 1,200 men, under Timoleon. It is the first appearance in history of a name which soon shone with immortality; for Timoleon proved himself to be one of the greatest and the noblest of Greeks. He found affairs in Sicily complicated by an invasion of Carthaginians, coöperating with one Hiketas, who had made himself despot of Leontini and who hoped to become master of Syracuse. By skilfully using the good fortune which the gods were believed to have lavished upon his enterprise, Timoleon within a few months, had defeated Hiketas in the field; had accepted the surrender of Dionysius in Ortygia and sent the fallen tyrant to Corinth; had caused such discouragement to the Carthaginians that they withdrew fleet and army and sailed away to Africa. The whole city now fell quickly into his hands. His first act was to demolish the stronghold of tyranny

in Ortygia and to erect courts of justice upon its site. A free constitution of government was then re-established, all exiled citizens recalled, a great immigration of Greek inhabitants invited, and the city revived with new currents of life. The tyranny in other cities was overthrown and all Sicily regenerated. The Carthaginians returning were defeated with fearful losses in a great battle on the Krimesus, and a peace made with them which narrowed their dominion in Sicily to the region west of the Halykus. All these great achievements completed, Timoleon resigned his generalship, declined every office, and became a simple citizen of Syracuse, living only a few years, however, to enjoy the grateful love and respect of its people.—Based on G. Grote, *History of Greece*, pt. 2, ch. 84-85.

Also in: Plutarch, *Timoleon*.

B. C. 317-289.—Under Agathokles.—A little more than twenty years after Timoleon expelled the brood of the tyrant Dionysius from Syracuse, and liberated Sicily, his work was entirely undone and a new and worse despot pushed himself into power. This was Agathokles, who rose, like his prototype, from a humble grade of life, acquired wealth by a lucky marriage, was trusted with the command of the Syracusan army—of mercenaries, chiefly—obtained a complete ascendancy over these soulless men, and then turned them loose upon the city, one morning at daybreak (317 B. C.), for a carnival of unrestrained riot and massacre. "They broke open the doors of the rich, or climbed over the roofs, massacred the proprietors within, and ravished the females. They chased the unsuspecting fugitives through the streets, not sparing even those who took refuge in the temples. . . . For two days Syracuse was thus a prey to the sanguinary, rapacious, and lustful impulses of the soldiery; 4,000 citizens had been already slain, and many more were seized as prisoners. The political purposes of Agathokles, as well as the passions of the soldiers, being then sated, he arrested the massacre. He concluded this bloody feat by killing such of his prisoners as were most obnoxious to him, and banishing the rest. The total number of expelled or fugitive Syracusans is stated at 6,000." In a city so purged and terrorized, Agathokles had no difficulty in getting himself proclaimed by acclamation sole ruler or autocrat, and he soon succeeded in extending his authority over a large part of Sicily. After some years he became involved in war with the Carthaginians, and suffered a disastrous defeat on the Himera (310 B. C.). Besieged in Syracuse, as a consequence, he resorted to bolder tactics than had been known before his time and "carried the war into Africa. [His invasion of Carthage was the first that the Punic capital ever knew, and it created great alarm and confusion in the city. The Carthaginians were repeatedly beaten, Tunes, and other dependent towns, as well as Utica, were captured, the surrounding territory was ravaged, and Agathokles became master of the eastern coast. But all his successes gained him no permanent advantage, and after four years of wonderful campaigning in Africa, he saw no escape from the difficulties of his situation except by basely stealing away from his army, leaving his two sons to be killed by the furious soldiers when they discovered his flight. Returning to Sicily, the wonderfully crafty and unscrupulous abilities which he possessed enabled him to regain his power and to commit outrage after outrage upon the people of Syracuse, Egesta, and other towns, until his death in 289 B. C.]—G. Grote, *History of Greece*, pt. 2, ch. 97.

B. C. 212.—Siege and capture by the Romans. See PUNIC WARS: Second.

A. D. 279.—Sacked by Franks.—The Emperor Probus, who expelled from Gaul 277 A. D., the invaders then beginning to swarm upon the hapless province, removed a large body of captive Franks to the coast of Pontus, on the Euxine, and settled them there. The restive barbarians soon afterwards succeeded (279 A. D.) in capturing a fleet of vessels, in which they made their way to the Mediterranean, plundering the shores and islands as they passed towards the west. "The opulent city of Syracuse, in whose port the navies of

Athens and Carthage had formerly been sunk, were sacked by a handful of the trembling inhabitants. [This was the crowning exploit of the escaping Franks, after which they continued their voyage.]"—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 12.

878.—Siege and capture by Saracens. See SICILY: 827-878.

SYR-DARYA, or Syr-Dariinsk, province in Turkestan, having an area of 166,000 square miles, and a population of more than 1,500,000. The principal city and commercial center is Tashkent. See TURKESTAN.

## SYRIA

Syria is an independent state under the protection of France as a mandatory power. "Between the Arabian Desert and the eastern coast of the Levant there stretches—along almost the full extent of the latter, or for nearly 400 miles—a tract of fertile land varying from 70 to 100 miles in breadth. This is so broken up by mountain range and valley, that it has never all been brought under one native government. . . . It has . . . therefore, been covered by one name, Syria. Like that of Palestine, the name is due to the Greeks, but by a reverse process. As 'Palestina,' which is really Philistina, was first the name of only a part of the coast [see PALESTINE: Name; JEWS: 130-134; CHRISTIANITY: Map of Palestine in the time of Christ] and thence spread inland to the desert, so Syria, which is a shorter form of Assyria, was originally applied by the Greeks to the whole of the Assyrian Empire from the Caucasus to the Levant, then shrank to this side of the Euphrates, and finally within the limits drawn [below]."—G. A. Smith, *Historical geography of the Holy Land*, bk. 1, ch. 1.—Under the mandate, Syria is bounded on the east by Mesopotamia; on the south by the northern boundary of Palestine; on the west by the Mediterranean; and on the north by Turkey. The boundary between Turkey and Syria was fixed by the Franco-Turkish Treaty of October 30, 1921. Palestine, which is geographically part of Syria, has been created a separate state and is administered by Great Britain as a mandatory power. The area of the territory mandated to France is 60,000 square miles. The estimated population, 1923, was 3,000,000.—See also DAMASCUS; TURKEY: Map of Asia Minor.

ALSO IN: H. C. Butler, *Desert Syria, the land of a lost civilization* (*Geographical Review*, Feb., 1920).

**Resources.**—"The poverty of Syria and Palestine is a tradition against which one cannot protest enough. The wheat fields are vast and fertile; tobacco, olive, the vine, fruits are cultivated with profit. . . . Syrian industry is not less important than agriculture; manufactures of silks and woollens, of jewelry, furniture, weapons, sponges, mother-of-pearl, and perfumes, and the preserving of fruit furnish an export business. . . . At the outbreak of the war, the total trade of Syria reached 500,000,000 francs. . . . The sub-soil, which is as yet little known, contains all the particularly valuable metals: gold, silver, copper, iron, nickel, lead, petroleum, bitumen, coal, marble, phosphates, hot mineral waters."—G. Sarné *French interest in Syria* (*Living Age*, Dec. 7, 1918).

*Ansariyeh*, ch. 11 (*I. D.* 1215, *Handbook of Syria, including Palestine*, pp. 351-355).

**Racial and religious divisions.**—"The bulk of the population of Syria is Arab in origin, and is of two general classes, the settled, or Felahin, and the nomadic, or Bedouin. The settled population is of very mixed blood. It includes the Syrians, by which we mean the descendants of all these peoples, except the Jews, who spoke Aramaic at the beginning of the Christian era. This stock is modified by an admixture of Arab and Crusader blood, and its language is now Arabic. The Syrians present a great diversity of types. There are the half-nomad, crude farmer folk of the borderland between civilization and the desert, the more advanced farmer class of the mountain districts, the conservative inhabitants of the inland cities, and the fairly cosmopolitan people of the coast cities. . . . Besides the divisions created by location and by occupation there are still others created by religion. . . . Some of the Syrians became Moslems at the time of the Turkish conquests, but a very large proportion are still Christians. The latter are of many denominations, often with antagonistic interests. Probably the foremost bodies among them are the Greek Orthodox and the Maronites, the latter adherents of a modified form of the Roman Catholic Church. . . . While the Druzes are the most numerous of the schismatic sects, there are a number of others, notably the Muta-wallehs, and the Nusairiyeh."—M. McGilvary, *Dawn of a new era in Syria*, pp. 29-30.—See also ASSYRIA: People; PRIESTHOOD: In Semitic religions (non-Jewish).

**Language.** See PHILOLOGY: 15.

B. C. 1500-1000.—Invasions by the Egyptians.—**Campaigns against Hittites.**—**Rise of the Aramæans.**—"Syria chiefly because she includes Phœnicia and Palestine, has been of greater significance to mankind, spiritually and materially, than any other single country in the world. The home of two of the monotheisms which have spread round the earth, and close neighbour to that of the third, Syria holds sites sacred to them all, and is still the resort of their pilgrims from nearly every nation under the sun. . . . The nerves of all three religions still quiver in the soil of Syria, and sometimes round the same stones. . . . Nowhere else has so much history run into or through so narrow a space. The storm-centre of the Ancient East, the debatable ground between its rival Empires in Mesopotamia and on the Nile, and between their Greek successors, the Seleucids and Ptolemies, Syria was for three thousand years the field upon which our civilizations clashed, mingled and found a common deflection to the West by

the islands of the Mediterranean."—G. A. Smith, *Syria and the Holy Land*, pp. 5-6.—"Syria is the north end of the Arabian world. . . . The population of Syria has always been essentially Semitic. [See SEMITES.] . . . It is doubtful whether history has to record any great campaigns . . . earlier than those which Egypt and Assyria waged against each other across the whole extent of Syria. [See EGYPT: About B. C. 1700-1400 to B. C. 670-525.] . . . The Hittites came south from Asia Minor over Mount Taurus, and the Ethiopians came north from their conquest of the Nile.—G. A. Smith, *Historical geography of the Holy Land*, bk. 1, ch. 1.—"One of the periodic overflows of the population of Arabia into Syria took place [in the fourteenth century B. C.]. The invaders were called Khabiri, and gradually mastered the centre and the south, where the Canaanite towns were disunited, and succumbed in turn to the warlike invaders. Towards the end of the century the Egyptian kings of the XIXth Dynasty (Seti I) began to restore Egyptian authority. Rameses II (early thirteenth century) has left several accounts of a great campaign in which he challenged the power of the Hittites of the north. . . . A few years later peace was made between the Hittites and Egypt. The former remained in possession of the north, the latter retained Palestine and the Phœnician coast. . . . By the thirteenth century the Arameans, another overflow from Arabia, . . . began to settle in considerable numbers in northern Syria. In the twelfth century the Hittites were severely shaken by swarms of immigrants from Asia Minor, 'the peoples of the sea,' so that the Arameans became the dominant power in northern and central Syria. They absorbed the old Canaanite population and not a few of the Hittites, who had preceded them."—*Great Britain Naval Intelligence Division, Naval Staff, Admiralty (I. D. 1215, Handbook of Syria, including Palestine, pp. 114-115)*.—See also EGYPT: About B. C. 1500-1400; about B. C. 1350-1200; HITTITES.

**B. C. 1000-700.—Entrance of Hebrews into southern Syria.—Height of Hebrew power under David and Solomon.**—The entrance of the Philistines and the Hebrews into southern Syria, took place about 1000 B. C. The Philistines were the only one of the 'peoples of the sea' to secure a permanent footing in Syria. . . . The Hebrews, on the contrary were a fresh inflow from the desert, whose settlement amongst the Canaanites resembled that of the Khabiri, with whom some would identify them. For 150 or 200 years they acknowledged no central authority, and their tribes made peace and war, separately or in groups, with the Canaanites and with the border peoples (Moabites, Midianites, &c.). This is the period of the judges 'when there was no king in Israel.' . . . The ultimate fusion of Hebrew and Canaanite may be attributed to their common suffering at the hands of the Philistines. In the early part of the eleventh century the Philistines became masters of inland Palestine as far as the Jordan. Saul's career is distinguished by his deliverance of the hill country from their yoke. . . . The reign of David exemplifies the establishment of a native Syrian power of some considerable extent. David drove the Philistines back into the western lowlands, united the rest of Palestine under his rule, and subdued the country east of Jordan, including the Aramean district of Damascus. But his conquests did not survive his lifetime, and the union of Israel which he effected ended with the death of his son (Solomon). . . . The division of Israel into two petty kingdoms after Solomon's death was probably

settled or confirmed by the Egyptian invasion which then took place."—*Great Britain Naval Intelligence Division, Naval Staff, Admiralty (I. D. 1215, Handbook of Syria, including Palestine, pp. 115-116)*.—See also JEWS: Conquest of Canaan, to Kingdoms of Israel and Judah.

**B. C. 854-701.—Invasions under the later Assyrian empire.—Campaigns against Damascus.—Tiglath Pileser IV.—Syrian revolts.**—"In 854 B. C. a Syrian league, which included Hama and Damascus and Israel, was formed against Assyria. The allies were defeated at Quarqar, on the Orontes, near Hama. This opened the way for a series of campaigns against Damascus (850, 840, 840, 842, 839). But Damascus, although deserted by its allies, was not conquered. . . . Towards the end of the ninth century (805-804 B. C.) Damascus was besieged by the Assyrians and compelled to pay tribute. From then it lost ground in the border warfare with Israel. During the next half century the Assyrians were little seen in Syria. The reconquest of the north was, therefore, one of the early tasks of Tiglath Pileser (IV) in 741-738 B. C. The conquest of the southern states and towns followed. In three years (734-732) Tiglath Pileser subdued north Israel and the Philistine cities and finally Damascus. A large part of the territory of Israel and of the territory of Damascus became Assyrian provinces. . . . The Assyrian king was the professed ally of King Abaz of Judah, so that Judah was unmolested and a portion of northern Israel survived as a vassal state. The Assyrian conquests were, indeed, far from secure. The Egyptians felt themselves to be menaced and fomented rebellion. Always, however, when it came to a battle, Egypt was defeated, and the revolts of the Syrians made their position less tolerable than before. During one rebellion (724-721) Ephraim was eliminated and became part of an Assyrian province, in another (720) the king of Hama was defeated at Quarqar and an Egyptian army, helper of the Philistines, on the Syrian border at Rafah. A second Philistine revolt (713-711) were also suppressed. In 705 B. C. there was a general rising which could not be dealt with until 701 B. C. In that year the Egyptians were defeated near Ekron, and Judah escaped destruction only because of an incalculable catastrophe which befell Sennacherib's army in the Philistine plain."—*Great Britain Naval Intelligence Division, Naval Staff, Admiralty (I. D. 1215, Handbook of Syria, including Palestine, pp. 117-118)*.—See also ASSYRIA: Later Assyrian empire.

**B. C. 700-500.—Under Babylonian kings.—Continued revolts.—Destruction of Judah.—Becomes a province of Persia.**—"In the first half of the seventh century Egypt was several times invaded and partially conquered. . . . The years 652-348 were a time of revolt in Mesopotamia, which the subject peoples were not slow to turn to their advantage. Egypt recovered its independence. The Assyrian empire was hastening to its fall. Tribes from Asia Minor and the north swept over its borders. Medes on the east and Babylonians from the south renewed their attacks. After the capture of Ninevah by the Medes (about 606 B. C.) Babylonian kings ruled Mesopotamia and Euphratesia and Syria. [See BABYLONIA: Later empire.] An attempt of the Egyptians to annex Syria failed. They defeated a Syrian army at Megiddo (607 B. C., death of king Josiah), and advanced through the Biquâ' and northwards to the Euphrates, only to be defeated in turn by Nebuchadnezzar at Karkemish. Under the Babylonians the Phœnician towns and the peoples of

southern Syria (Jews, Philistines, &c.) showed the same tendency to revolt as in the time of the Assyrians, and were instigated and backed as before by the Egyptians. It was now that the little kingdom of Judah was destroyed, after having twice revolted (586 B. C.).—*Great Britain Naval Intelligence Division, Naval Staff, Admiralty, Military history, ch. 4 (I. D. 1215, Handbook of Syria, including Palestine, pp. 118-119)*.—"Towards the end of the great duel between Assyria and Egypt, the Scythians from north of the Caucasus devastated Syria. When the Babylonian Empire fell, the Persians made her a province of their empire, and marched across her to Egypt. [See EGYPT: B. C. 525-332.]"—G. A. Smith, *Historical geography of the Holy Land, bk. 1, ch. 1*.

B. C. 333-332.—Conquest by Alexander. See MACEDONIA: B. C. 334-330.

B. C. 332-167.—Rule of the Seleucidæ.—In 332, Alexander established his sway in Syria. "The battle of Ipsus (301 B. C.) placed Alexander's successful marshal Selucius, hitherto satrap of Babylonia, in possession of all northern Syria, . . . and twenty years later the overthrow of Lysimachus at Corupedion added all the Macedonian possessions in Asia Minor. This immense realm was governed from three separate capitals, Antioch in Syria [founded by Seleucus], Seleucia on Tigris, the head of the eastern satrapies, and Sardes, the seat of the government in Asia Minor. . . . The main interests of the Seleucid family were now centred on the Mediterranean sea-board, whence they engaged in rivalry with the other Macedonian kings. Thus native powers were allowed to grow up in the interior. . . . After the decisive defeat of the Seleucid army by the Romans at Magnesia in 190, the Taurus range was left as the northern boundary of the kings' dominions. Coele-Syria for some time remained a hone of contention between the Seleucid and Ptolemaic dynasties, but in the reign of Antiochus Epiphanes (175-164) the dominion of the Seleucids was compensated for losses in the north by an extension to the frontiers of Egypt, so that it now became co-extensive with Syria. [See JEWS: B. C. 106-40.]"—E. S. Bouchier, *Syria as a Roman province, pp. 19-20*.—See also SELEUCIDÆ: B. C. 281-224; 224-187; GREECE: B. C. 3rd century; JEWS: B. C. 332-167; MACEDONIA: B. B. C. 64-63.—Various races at the time of the Roman conquest.—Variety of governments.—Languages.—Romanization of the country.—"A country so strongly diversified naturally presented several types of inhabitants of very different degrees of advancement. . . . When the Romans arrived they found Syria in possession of Greeks and Macedonians who had settled since Alexander's conquests, and, in partial subjection to them, four chief Semitic races, more closely connected with each

other than were the peoples of Europe, and at this period, with one exception, practically identical in language. . . . The Arab or Aramaeo-Arab peoples east of Antilibanus were just at the stage where powerful guidance could be most serviceable. Real Roman colonies were set up among them, which, though not drawn solely from Italians, formed genuine communities, and did not, as in western Syria, consist of mere augmentations of cities of ancient civilization. The Arabs and Syrians were drafted into auxiliary corps and stationed in various parts of the empire; rings of forts were established to protect the more civilized areas, and often garrisoned with members of friendly tribes. Military high roads were constructed, and the facilities for trade which they provided encouraged many nomad clans to adopt a settled life. . . . As fresh waves of immigrants from the Arabian peninsula swept up, they fell into similar habits, and though, as the empire weakened, the vicious system of client princes revived and tribes had to be hired to defend the frontier, it is extremely probable that the marvellous powers of organization, the discipline and devotion, which finally carried the Saracens as conquerors over half the empire, were in some measure due to their familiarity with Roman methods. . . . The Arameans, or north Syrians, took their name from Mesopotamia, but had now spread over most of Syria outside Phœnicia and Palestine. The Phœnicians, whether they derived their origin from the Persian Gulf area, or, as seems more probable, from inland Palestine and adjoining districts, occupied a long strip of coast from Aradus to Dora, with towns situated on the shore, but owning territories which extended as far as or beyond Lebanon. . . . The Phœnicians, though much mingled with Greek settlers, had not lost their individuality, which underwent a curious revival both in art and religion in the Antonine age. They were the chief survivors of the Canaanite race which existed in Old Testament times; but other branches no doubt occupied much of the land on both sides of Jordan, extending to the borders of Phœnicia on the west, but hardly distinguishable from the general Aramaeo-Arab population. A similar mixture of races occupied Palestine, with the addition in the north and centre of some descendants of the Assyrian settlers who were brought to replace the conquered ten tribes. The Jews, while most numerous in Judæa and Galilee, had large colonies in all the great towns of Syria, and had finally abandoned their Hebrew speech in favour of Aramaic about a century before the arrival of the Romans. East and south of all these peoples came a variety of Arab tribes, more or less civilized, of which in the earlier period the Nabataeans, whose capital was Petra, came most into contact with the Romans. The Ituraeans, too, were powerful in northern Palestine, and the Idumæans, who had partially adopted Jewish customs, were settled along the south-west coast. . . . Traces of alien races are not extensive. The Giblites of Byblus and Berytus, once noted for their skill in masonry, represented some aboriginal race from Lebanon of unknown origin, but they were now merged with the Phœnicians. In the north, as in Commagene, Hittite settlements had once been powerful, and the cult of Jupiter Dolichenus, which had its centre in northern Syria, was of Hittite or at least Anatolian origin. Some noble families, such as the royal house of Samosata, traced their ancestry to Persian sources. . . . In the south-west there no doubt remained some descendants of the Philistines, whom research now proves to have been a non-Semitic

people, perhaps akin to the Etruscans, who, coming last from Crete about the time of the Jewish Judges, brought letters and commercial instincts to the coast dwellers of Palestine. Of the five cities of the Old Testament period, three—Gaza, Ascalon and Azotus—were still important under the Romans; and though the Philistine language had disappeared about the fifth century B. C. the cults of Dagon-Marnas and Derceto-Aphrodite continued for some centuries longer. . . . A Græco-Macedonian element existed in all the chief towns, strongest in colonies directly due to the Seleucid kings, as Antioch, Apamea, Seleucia, Chalcis or Laodocæa, but important wherever trade flourished, as in the Phœnician or Philistine coast cities or great inland centres like Damascus or Palmyra. . . . In fact, though Macedonians seem to have been more numerous in Syria than in any other part of Alexander's conquests, and their language influenced the spoken Greek as well as the place nomenclature, the civilization which the Romans found in western Syria was almost purely Hellenistic. The city states . . . to a large extent secured their independence of the central power, and were ruled by their own archons or strategi, under whom stood an elective senate, usually of 500 persons, and a popular assembly, while the native Syrians lacked privileges and were chiefly artisans or slaves. In some cases, indeed, tyrants had sprung up, primarily to repel the attacks of native peoples, but without affecting the form of constitution. . . . The native communities at this time stood under a variety of governments. The Semites had of themselves evolved a system of city states quite apart from the Greek, generally on an oligarchical principle such as we see at Carthage. . . . Others were less centralized, and made the tribe the centre of administration rather than the city. . . . On the eastern frontiers were the still looser organizations of Arab tribes, in some cases professing allegiance to a central chief, but really split up into a number of hordes under military rule. . . . The Hellenistic communities, provided the assembly were not given too much power and the senate were kept fairly exclusive, supplied a ready-made municipal system. The tyrants, indeed, soon disappeared, but as the Romans now guaranteed protection, they were not regretted, and a real service was done by the deliverance of Greek cities from neighbouring Semitic princes, Jew or Arab. The oligarchical Semitic cities also needed little change, while the theocracies were treated with respect. The Jewish high-priest, though no longer a king, was still under the Romans a nominee of native princes. . . . Aramaic was the ordinary language in most of the native principalities, as well as of the country people and lower-class town population within the province. . . . It was sufficiently important for a double version, in Greek and Aramaic, of public acts to be set up in some places, as at Palmyra. . . . There was no fusion of the two languages, the wide differences of structure between an Aryan and a Semitic speech making this unlikely; but . . . each borrowed certain words from the other. . . . Aramaic, besides being spoken in Roman times over all central Syria, Phœnicia, and Palestine, was readily adopted by the more settled Arab peoples on the east, as at Palmyra and among the Nabataeans; and its descendant still holds its ground against Arabic in a few remote valleys. . . . Apart from the Jews, very slight active resistance was made by the Syrians to the superficial Romanizing of their country. Not only was the Roman yoke accepted without opposition, but, with the

exception of the ambitious designs of the Arab dynasty of Palmyra, no serious attempt was made to throw it off. . . . Roman weights, measures, and coinage were very generally adopted, the local calendars mostly gave place to the Roman, even when Macedonian month-names were retained; the commonest era for individual towns was the year in which they had been incorporated in the empire. Latin was the official speech of the magistrates. . . . Citizens' wills were expected to be in Latin, but municipal business outside colonies would be conducted in Greek, and from Trajan's time Greek lettering becomes normal on the coinage. Latin was spoken by the lower class of settlers, soldiers, traders, and the various subordinate officials, and many Syrian inscriptions in Latin are due to such persons. . . . Enfranchised Syrians, such as soldiers who obtained the citizenship on discharge from the army, tended to adopt Roman names, or at least a Roman prænomen, which was thought to lend dignity to the original Greek or Aramaic designation. The massive resistance which the eastern provinces opposed to the Romanizing process is only part of their traditional character. The Syrians appreciated the benefits of the *pax Romana*, and, though they cared little about expeditions against Parthia, heartily supported the empire both in the Jewish revolts and in the rebellion of Zenobia."—E. S. Bouchier, *Syria as a Roman province*, pp. 3-15.

B. C. 57-27.—Under Roman pro-consuls.—Disaster at Carrhæ.—Anthony's efforts to restore order.—Syria under an imperial legate.—"From 57 B. C. onwards a proconsul commanding a powerful army occupied the governor's quarters at Antioch, assisted by a quaestor in the collection of the revenues. . . . The first proconsul was A. Gabinius (57-55 B. C.). . . . In spite of Cicero's invectives in the *de provinciis consularibus*, it is clear that Gabinius was a man of uncommon ability and independence. . . . Disregarding the vacillation of the senate, he boldly ended the anarchy in Egypt by restoring King Ptolemy Auletes, and took up a firm attitude towards the Parthians, who, since the humiliation of Armenia and its subordination to Roman influence, became the chief enemies of the Republic in the East. . . . The successor of Gabinius was the triumvir M. Crassus [who was so disastrously defeated by the Parthians at Carrhæ. (See ROME: Republic; B. C. 57-52.)] . . . Realizing that the Roman hold on all Syria was jeopardized by this disaster Cassius hastened to put the province into a state of defence. During his march against Pharnaces [see Rome: Republic; B. C. 48-47], Cæsar made some stay in Syria (47 B. C.), and conferred privileges on several cities. . . . After the battle of Philippi Antony was charged with the settlement of the East. . . . The Parthian inroads after the defeat of Crassus had resulted in the revival of several of the local tyrants, who [fought] . . . out their quarrels in Syrian territory. . . . A succession of legates despatched by Antony at length restored some sort of order. The Parthians, who were mere marauders, . . . were expelled by the quondam mule-driver Ventidius Bassus, and Antigonus, the last Maccabee to wear the Jewish crown, was deposed by C. Sosius (37 B. C.), and replaced by Herod the Great. Much of the country was still, however, in the hands of native rulers, and a considerable part of Phœnicia and Coele-Syria was granted by Antony to his Egyptian lover. He even ventured to inaugurate one of his sons by Cleopatra, Ptolemy, who could claim descent from the Seleucid royal house, as titular sovereign of

Syria. . . . In 27 B. C., . . . Syria, owing to its importance as a frontier district bordering on the only serious rival of Rome, was placed under an imperial legate, always of consular rank."—E. S. Bouchier, *Syria as a Roman province*, pp. 26-30.

B. C. 40-A. D. 26.—Siege and occupation of Jerusalem.—Judæa made a Roman province.—Roman rule. See JEWS: B. C. 40-A. D. 44.

A. D. 17-66.—Under the early Roman empire.—Policy of Julian and Claudian cæsars.—Struggles with the Parthians.—"The history of Syria in the early empire is much less eventful than in the troublous years which preceded. . . . A few veteran colonies were founded in Syria, and the imperial cult, established at Antioch, formed a centre for provincial gatherings. . . . In A. D. 17, under Tiberius . . . both Syria and Judæa are described as exhausted by their burdens. . . . During the rule of C. Ummidius Quadratus, who held office for a long period under Nero, there took place the first Parthian war since the campaigns of Antony. Since the death of Herod Agrippa (A. D. 44) the Jewish kingdom had been placed under a procurator subordinate to the Syrian legate, who thus had an immense area to administer, and it was resolved to establish a separate military government in the north for the period of the war. Accordingly the able general Domitius Corbulo was ordered (A. D. 55) to command two of the Syrian legions, and act as governor of the territories north of Taurus. . . . The Armenian capital, Tigranocerta, was captured (A. D. 59), and a Roman nominee was placed on the throne instead of Tigranes. A second victorious campaign, in the course of which a Parthian invasion of Syria was repelled, roused the jealousy of Nero, who recalled Corbulo. . . . The succeeding years were fully occupied with the Jewish revolt, and with the events which led to the placing of their own nominee on the imperial throne by the Syrian legions."—E. S. 1860-1864.—Lebanon massacre.—Intervention of European powers.—"The Lebanon Mountains became in 1860 the scene of a tragedy. . . . In this year occurred the massacre of the Christians by the Druzes in some scores of Lebanon villages and the slaughter of about three thousand Christians in Damascus. . . . In view of the fact that the Ottoman Government would do nothing to restore order, the European Powers found it necessary to intervene in Lebanon, which was occupied by 20,000 foreign troops, about half of which were French. The French occupation continued till 1861 when the Sublime Porte was forced to accede to an arrangement which would tend to lessen quarrels between the Christians and the Druzes. . . . Lebanon was constituted a Privileged Province by statute of September 6, 1864, with an autonomous government under the protection of the five Great Powers: England, France, Italy, Austria, and Germany. The Governor of Lebanon was to be a Christian, . . . and arrangements were made for the gradual withdrawal of the Druzes from the jurisdiction of the State."—M. McGilvary, *Dawn of a new era in Syria*, pp. 32-33.

1876-1909.—Abdul Hamid's policy in Syria.—Objection to establishment of Jewish colonies.—Palestine separated from the vilayet of Syria.—"The reign of Abdul Hamid marked a great change in the position and condition of Syria. His foreign policy placed an emphasis upon his Asiatic provinces by which he hoped to redress the balance of Europe. In this policy Syria had a central place as being essential to hold together Mesopotamia, Arabia and Egypt. . . . The Treaty of Berlin, by giving most of the Caucasus to Russia, resulted in the emigration of thousands of Circassians into Turkey. These Abdul Hamid placed in agricultural colonies throughout Syria, especially along the desert, and they became bulwarks against Arab nomadism. Aware that the best method to link Syria with Constantinople was by means of railroads, by the time of his dethronement [1909] he had constructed a splendid railway from Aleppo to Beersheba which was linked by branch roads to five ports on the Syrian coast. The building of the Hejaz railway resulted in Damascus becoming once more the chief gathering place for Moslem pilgrims from all over the Near East and the building of the Bagdad railway effected a revival of the importance of Aleppo in the commerce between East and West. . . . [With the rise of the Zionist movement, Jewish colonies were established in Palestine.] In 1888 the Porte informed the powers that it would not permit the founding of another Jewish colony in Palestine. . . . [In 1904 Abdul Hamid] withdrew Palestine from the vilayet of Syria and erected it into a distinct mutesarif dependent directly upon Constantinople."—S. P. Duggan, *Syrian question (Journal of International Relations, Apr., 1891, pp. 571-574)*.—See also **JEWS: Zionism: Definition; 1897-1918.**

1908-1921.—Under young Turk régime.—Influence of World War.—Sykes-Picot Agreement.—Emir Feisal proclaimed king.—His deposition.—French mandate.—"It would be an exaggeration to say that when the Young Turk revolution occurred in 1908 Syria was a contented province of the Ottoman Empire. Due to Abdul Hamid's personal interest in its fortunes, however, it had secured an unusual share of government help, and it certainly had no thought of revolt. But the principles of liberty, equality, and fraternity under a national and representative government ap-

pealed to the Arabs of Syria as much as to other people in the Ottoman Empire. . . . The Reform Club founded at Beirut in 1909 was copied elsewhere in Syria, and a movement was started in favor of control of local affairs by the inhabitants and the use of Arabic as an official language. It did not take long, however, for the Arabs to learn the program of the Young Turks, viz., one race, one language, one administration. Drastic suppression of the Home Rule movement had the same result in Syria that it had in Albania, though the result was longer in developing. The literary societies were transformed into secret political societies; the decentralization movement became a definitely separatist movement. Syrian patriots, in fear of arrest, fled to Cairo and formed a committee there for the control and supervision of the movement. In June, 1913, a Syrian-Arab Congress met in Paris and was officially received by the French Minister of Foreign Affairs. It drafted a program calling for the use of Arabic as an official language, the establishment of a General Assembly to collaborate with the Governor General in the control of Syrian administration, the suppression of vexatious taxation, the modification of the military laws, which had been the direct cause of a large emigration, and the reorganization of the judicial administration. . . . The year 1914, . . . was a year of revolutionary intrigue in most of the cities of Syria. When Turkey entered the war on the side of Germany, Turkish officials seized the archives of the French Consul at Beirut, and found evidence of the guilt of the Syrian leaders. A veritable reign of terror was introduced. Permanent courts-martial established at Damascus and Aleppo sent to the gallows or into exile all the leaders of the Syrian movement. 'The Mountain,' as the Lebanon is called, was occupied by Turkish troops the following year, and in 1916 the Organic Statute of 1860, guaranteeing its autonomy, was denounced. . . . Almost to the day of the armistice the reign of terror was maintained, by Djemal Pasha, uniting the Syrians as they had never been united before in hatred of the Turkish rule and in prayer for the success of the allied cause."—S. P. Duggan, *Syria and its tangled problems* (*New York Times Current History*, Feb., 1921).—"On October 25, 1915, the representative of the Sheriff at Cairo was given a document by the governor-general of Egypt, Sir Henry McMahon, in which Great Britain undertook, conditional upon an Arab revolt, to recognize the independence of the Arabs of the Ottoman Empire (south of latitude 37 degrees, except in the provinces of Bagdad and Basra where British interests require special measures of administrative control and also except where Great Britain 'is not free to act without detriment to the interests of France.' The last sentence was to bring the agreement as nearly as possible in conformity with the Secret Treaty of March 5, 1915, whereby it was assumed by all Frenchmen that France was to be given a predominant position in Syria. But as the Arabs knew nothing of that treaty, the agreement of October 24, 1915, had the effect of giving a great impetus to the Pan-Arabian movement for the formation of an Arab Empire to include Arabia, Syria and Mesopotamia."—S. P. Duggan, *Syrian question* (*Journal of International Relations*, Apr., 1921, p. 576).—"In the spring of 1916, the French, somewhat concerned by our [British] dealings with the Arabs, and jealous of their ancient rights in Syria, pressed for an understanding with regard to the future estate of Turkey-in-Asia. In consequence of this what is known as the Sykes-Picot agreement was hastily

concluded. . . . This pact, made between Britain and France in May, 1916, is described by Colonel Lawrence as follows: 'It divides the Arabic provinces of Turkey into five zones, roughly, (a) Palestine from the Jordan to the Mediterranean, to be "international"; (b) Haifa and Mesopotamia from near Tekrit to the Gulf to be "British"; (c) the Syrian coast, from Tyre to Alexandretta, Cilicia, and most of Southern Armenia, from Sivas to Diarbekir, to be "French"; (d) the interior (mainly the provinces of Aleppo, Damascus, Urfa, Deir and Mosul) to be "independent Arab" under two shades of influence: (i.) Between the lines Akaba-Kuweit and Haifa-Tekrit, the French to seek no "political influence," and the British to have economic and political priority, and the right to supply "such advisers as the Arabs desire."' (ii.) Between the line Haifa-Tekrit and the southern edge of French Armenia or Kurdistan, Great Britain to seek no "political influence," and the French to have economic and political priority and the right to supply "such advisers as the Arabs desire.'"—*Problem of Syria* (*Balkan Review*, Sept.-Oct., 1919, p. 206).—See also ARABIA: 1916; WORLD WAR: 1916: 111. Turkish theater: c, 3.—"The Sykes-Picot treaty was a secret document but news of it leaked out and, probably because of the unknown nature of its contents, much dissatisfaction arose among the Arabs, especially the Syrians. As it was most important in 1917 that the Allies in the Near East retain the hearty support of the Arabs in operating against the Turks, Sir Mark Sykes on June 11, 1917, handed a document to seven representatives of Syria which gave assurance that pre-war Arab states, and Arab areas freed by military action of their inhabitants during the war should remain entirely independent. . . . In the summer of 1919 the American Peace Mission at Paris sent the King-Crane Commission to the Near East to discover the wishes of the populations on the subject of mandates. The report of the Commission has never been published, and the State Department refuses to permit it to be read. But the newspaper accounts and the reports of eyewitnesses of the Mission's work enable one to arrive at a conclusion that is probably not far removed from that of the official report. In Palestine the overwhelming mass of the population opposed the separation of Palestine from the rest of Syria and the erection in it of a Jewish commonwealth."—S. P. Duggan, *Syrian question* (*Journal of International Relations*, Apr., 1921, pp. 578-583).—"Prince Feisal, who represented the Hedjaz at the Peace Conference, [1919] proposed that a unified Syria be made a mandatory of the League of Nations. He expressed his own preference for the United States as the mandatory power, and, failing that, Great Britain. . . . The French press campaign for the withdrawal of the British from the regions in Syria, in which, according to the Sykes-Picot treaty, the French were to have 'economic and political priority,' [see SEVRES TREATY OF (1920)] . . . resulted in the agreement of Sept. 15 [1919]. By this agreement the British troops were wholly withdrawn from Syria and Cilicia and replaced by French troops, except in Occupied Enemy Territory Administration (East), which was to continue under the administration of Feisal, provided he maintained order in that region. The Arab administration of that area was to look to France and not to Great Britain for advice and support. Finally General Gouraud replaced General Allenby as head of the Allied Military Administration in Syria and Cilicia, and was

also appointed French High Commissioner. [See ARABIA: 1910: Results of treaty; PARIS, CONFERENCE OF: Syria and Mesopotamia.] . . . [General Gouraud's] greatest problem was how to hold Cilicia and Southern Armenia against the attacks of Kemal Pasha's Nationalist Turks. The Turks had become reconciled to the loss of their Arab provinces, but they were determined to keep all territory north of the Taurus Mountains. General Gouraud's forces were inadequate, and his operations were seriously hampered by the intrigues of the Syrian Nationalists. His troops were besieged in Marash and Aintab, and were finally compelled to evacuate them in February, 1920, and fall back to Aleppo and Adana. A dreadful massacre of Armenians, who attempted to accompany the French, resulted. . . . On March 8, 1920, a Pan-Syrian Congress, made up of delegates chiefly though not wholly representing Occupied Enemy Territory Administration (East), was held in Damascus, and it unanimously declared the independence of Syria, including Palestine. Prince Feisal was elected King with the title of Feisal I. A decentralized civil government was ordered established as soon as arrangements could be made for the cessation of foreign military occupation. Feisal, who in January, 1920, had returned to Syria from the Peace Conference, had hoped for a message from the Supreme Council that would have satisfied the Syrian extremists. He was compelled to stand by the congress, however, and issued a declaration stating that, as the Allies had repeatedly declared their intention to erect native Governments in the lands rescued from the Turks, the Syrian Congress had merely anticipated the decisions that must inevitably be taken by the Supreme Council. The Supreme Council refused to recognize the Pan-Syrian Congress, and requested Feisal to go to Paris to explain the situation. His departure would unquestionably have resulted in his dethronement by the Arabs, so he sent a representative instead on the plea that his own presence was necessary to prevent conflicts. But the action of the Damascus Congress had been felt throughout the whole of Syria, and conflicts everywhere increased in number and intensity. . . . The action of the Supreme Council at the San Remo Conference in April in allotting Palestine to Great Britain and Syria to France, respectively as mandates, . . . did not have a calming influence in Syria. Nor did the fact that France relinquished her claim to mandatory powers over Cilicia appease the Turkish Nationalists. Taking advantage of the excitement in Syria they denounced the armistice with the French that had existed for several months, and on June 14 renewed their attacks. Gouraud's operations against the Turks were endangered by the obstacles put in his way by the Syrians, who controlled the railroads leading north from Damascus. Though Feisal and the Syrian Government may really have tried to maintain neutrality, there can hardly be any question that larger bodies of Syrian Nationalists were co-operating with the Turks. . . . On July 15, 1920, Gouraud sent Feisal an ultimatum to be answered within four days on pain of its being enforced by military measures. The chief provisions of the ultimatum were the acceptance of the French mandate over Syria, the acceptance of French-Syrian currency in Feisal's area of administration, French control of the railroad from Risk to Aleppo, French occupation of the City of Aleppo and the punishment of revolutionary criminals. Feisal accepted the ultimatum, but the day after his acceptance had reached Gouraud, the French column advancing east was

attacked by Syrian regulars. The French then pushed forward to Damascus, which they occupied on July 25. Their commander, General Goybet, issued a proclamation dethroning King Feisal, exacting a war contribution of 10,000,000 francs, ordering immediate disarmament of the inhabitants, and reducing the Syrian Army to a police force. Since that date the French have administered the whole of the territory between the British mandates of Palestine and Mesopotamia."—S. P. Duggan, *Syria and its tangled problems* (*New York Times Current History*, Feb., 1921, pp. 239-247).—See also WORLD WAR: 1918: VI. Turkish theater: c; X. ALSO IN: "Taira," *France and Feisal* (*Balkan Review*, Oct., 1920).

1914-1918.—Conditions during World War.—"In 1914, when the Ottoman Empire broke relations with the Entente Powers, Lebanon ceased to be regarded as an Independent Protectorate. It was ranked as an Independent *Mutaserrifiyeh* and given a Moslem Governor, or *Mutaserrif*, responsible to the Sultan. . . . Lebanon suffered more heavily during the years of the war [1914-1918] than any other part of Syria. Practically three-fourths of her population of approximately half a million were wiped out by starvation. The reason for this was that the rugged Lebanon district, unfit for much level cultivation, raised only a small fraction of the wheat necessary for her population. . . . The Entente blockade, instituted the second year of the war, caused the cessation of numerous small industries. . . . and the temporary destruction of the silk-raising industry. . . . The Government commandeered wholesale, without payment, animals for transport and for army food supply. People dependent on their sheep or mules for support were impoverished, and there were no longer enough animals for the transport of foodstuffs from one place to another; . . . the railways, being in Turkish or German hands, were available only for military use. . . . Had the Turk permitted it, the whole of Syria might have been fed by the two main inland areas, the vast level tracts in the Central Depression and the Hauran. Around Aleppo, Hama, and Homs the apparently bare and uninteresting levels are capable of raising a great deal of wheat. These plains during the war were entirely separated from each other and from the rest of Syria, save for roads over mountain passes or the slender thread of the railway between Aleppo and Reyak. . . . Still more isolated was Hauran, the great wheat-raising region of Syria, which once fed half the Roman world. The plateau of Hauran lies south of Damascus and adjacent to it is another wheat country, Jebel ed-Druz, or Druze Mountain. . . . The coast, dependent both on external and internal trade relations, was isolated on both sides. . . . Syria as a whole was a victim because her position geographically and politically facilitated her becoming a closed highway. . . . With the rupture of diplomatic relations between Turkey and the Entente, the British, French, and Russian steamers discontinued their service to Turkish ports. All possibilities of import were thus cut off. . . . In a few weeks the Beirut Custom-House was closed, although it contained over one million dollars' worth of goods which the owners could not afford to clear. Within a very short time the general supply of stores in the country was exhausted, or had been hidden. . . . [to protect them from the] mob-plunder carried on by soldiers or by government representatives. . . . In December, 1914, the

local officials in Syria and Palestine were instructed to deport the subjects of belligerent nations resident on the seacoast into the interior. . . . On December 9, 1914, the first deportees, a . . . little band of British, French and Russian subjects, . . . were packed into the train and taken to Damascus, where they were held as civil prisoners. . . . The majority were held nearly four years as civil interned prisoners until shortly before the signature of the Turkish Armistice on October 31, 1918. . . . Later the women also were deported to Aleppo. . . . Later all the belligerents, men, women and children, were deported . . . to Urfa, in the Mesopotamian Valley. Here they witnessed all the horrors of one of the two Armenian massacres before the women were transported to the seacoast at Alexandretta, whence they were removed by an American cruiser. After the second massacre of the Armenians, the men were returned to Anatolia and were scattered in isolated and out-of-the-way Turkish villages about Konia, Sivas and Angora."—M. McGilvary, *Dawn of a new era in Syria*, pp. 33-37, 50, 78-79, 81.

1921.—Ratification of the French treaty with the Angora government of the Turkish Nationalists.—"On October 30 [1921], France announced the ratification of a separate French treaty with the Angora government. . . . By its terms France agrees to withdraw from Cilicia and, in return, receives various economic advantages. . . . The new boundary line between Turkey and French Syria runs from the Bay of Alexandretta, near Bayas, to the railway station of Meidan, thence southeast leaving the region of Marsova in Syria and Killis in Turkey, thence to the railway at Tchebin Bey to Nisibin, thence northeast to Jezireh on the Tigris. [See also TURKEY: 1921 (October).] This treaty was exceedingly distasteful to both Great Britain and Greece. . . . Gaunaris, Greek premier, visited the western chancelleries in a vain attempt to nullify the French efforts. . . . The action of France was furthermore severely condemned by Lord Curzon, who asserted that she had no right to dispose of mandated territory. . . . During November and December a series of lively notes were exchanged between France and Britain in which the former admitted negotiation of a number of secret agreements with the Turkish nationalists which were not included in the Angora treaty. In this correspondence the British insisted, first, that the Angora agreement be revised to correspond with the abandoned treaty of Sèvres and the old tripartite agreements, and, secondly, that France participate in a new tripartite 'intervention in Turkey for the purpose of bringing about peace.' In yielding, France on January 6 officially declared that the Angora agreement was not to be regarded as a treaty of peace and implied neither *de facto* nor *de jure* recognition of the Angora government."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, *Supplement*, pp. 16-17.—See also TURKEY: 1921 (March-April): Secret treaties.

SYRTIS MAJOR AND SYRTIS MINOR.—These were the names given by the Greeks to the two gulfs (or rather the two corners of the one great gulf) which deeply indent the coast of North Africa. Syrtis Major, or the Greater Syrtis, is now known as the Gulf of Sidra; Syrtis Minor as the Gulf of Khabs, or Cabes.

SYSSITIA.—"The most important feature in the Cretan mode of life is the usage of the Sys-sitia, or public meals, of which all the citizens partook, without distinction of rank or age. The origin of this institution cannot be traced; we learn however from Aristotle that it was not peculiar to the Greeks, but existed still earlier in the south of Italy among the Cœnотrians. . . . At Sparta [which retained this institution, in common with Crete, to the latest times], the entertainment was provided at the expense, not of the state, but of those who shared it. The head of each family, as far as his means reached, contributed for all its members; but the citizen who was reduced to indigence lost his place at the public board. The guests were divided into companies, generally of fifteen persons, who filled up vacancies by ballot, in which unanimous consent was required for every election. No member, not even the king, was permitted to stay away, except on some extraordinary occasion, as of a sacrifice, or a lengthened chase, when he was expected to send a present to the table: such contributions frequently varied the frugal repast."—C. Thirlwall, *History of Greece*, ch. 7-8.

**TABORITES.**—"The declaration of war by the Church and the German empire against Bohemia, brought about by the burning of Johannes Huss, led to the overthrow of the traditional rules regulating property and society. . . . This was the . . . moment for the communistic sects who now openly declared themselves. . . . In 1410 . . . communist agitators were driven out of Austria, where there was a strong Catholic party. They established themselves . . . on a broad hill overlooking the Luznic River [104 kilometers from Prague]. . . . Here they made their stronghold and named it Tabor. . . . Communists streamed there. . . . Their entire organization was modelled for the purposes of war. They divided them-

selves into two groups, of which one remained at home and labored for the other whose functions were exclusively military, and who were always under arms. . . . The Taborite army was the first since the downfall of ancient Rome, which was regularly organized. . . . [The Taborites] became the most dreaded warriors of Europe. . . . The greater . . . [their] success, the more intolerable became the position of their foes [who laid aside ecclesiastical and political differences to make common cause against them]."—K. Kautsky, *Communism in Central Europe in the time of the Reformation*, pp. 56, 58, 66, 67, 69.—"The Taborites . . . demanded along with ecclesiastical reforms the secularization of church property, and they desired to institute a socialistic theocracy based upon their conception of the primitive Christian life. . . . There were interwoven an insurrection against the authority of the Church, an outbreak of the national spirit, and an attempt to settle the fundamental problems that confront secular society. . . . It came to include a disprizal of culture and a belief that the golden age was to be reached . . . by a sudden and stupendous catastrophe. . . . The movement succumbed to the persistency of the warfare against it and to its own excesses."—E. M. Hulme, *Renaissance, the Protestant Revolution and the Catholic Reformation in continental Europe*, p. 244.—May 30, 1434, a "decisive battle was fought at the village of Lipau, near Brod in Bohemia. . . . Out of 18,000 Taborite soldiers 13,000 were . . . killed. This broke forever the strength of the Taborites."—K. Kautsky, *Communism in central Europe in the time of the Reformation*, p. 74.—See also BOHEMIA: 1410-1434; 1434-1457.

**TABRIZ,** capital of the province of Azerbaijan, Persia. From ancient days it has been an important commercial center, but recently much of its trade has been diverted to the Bagdad road. In 1908, it was the center of the revolutionary movement supported by the Constitutional party. The estimated population was 200,000 in 1923. See PERSIA: 1400-1887; 1908-1909; TURKEY: 1481-1520.

**TAGOS**, or Tagus, ancient Greek title applied to supreme magistrates. See **DEMIURGI**; **THESSALY**.

**TAHITI**, largest of the Society islands in the eastern Pacific belonging to France. (See **PACIFIC OCEAN**: Map of southeastern Asia.) It has an area of 600 square miles. The population in 1923 was 11,746. Ten smaller, contiguous islands form the archipelago. It has impressive mountain scenery and a healthful and delightful climate. The chief town is Papeete on the northwest coast. It is the nearest good harbor in Polynesia to Panama, and lies on the route of the Australian and New Zealand steamers. The chief productions of Tahiti are coconuts, bananas, oranges, sugar cane and vanilla. Its chief industries are the preparation of copra, rum and sugar. Tahiti was discovered by the French explorer, Bougainville in 1763; also, independently, in 1767, by Wallis, captain of *H. M. S. Dolphin*. Roman Catholic missionaries came from Peru before 1707; but soon abandoned the field. In 1707 the London Missionary Society planted a mission there, and in 1809, as a result of civil war, the missionaries retired with the exception of two. After 1812 English civilization and Christianity spread rapidly. In 1825, the then reigning Queen Pomare unsuccessfully petitioned England for protection against European invaders, and for the right to raise the English flag. In 1830, two French Catholic priests landed but were compelled to depart. In 1844 an English missionary was driven out for inciting the natives against the French. (See **FRANCE**: 1842-1848.) This was the beginning of a long and fierce controversy involving England, France and the Tahitian régime, which only ended with the annexation of Tahiti by the French in 1880. A final settlement in 1888 left France free to extend her sovereignty over the whole group.—See also **PACIFIC OCEAN**: B. C. 2500-1500.

**TAHRAK**, or Tihhaka, ruler of Egypt, 688-663 B. C. See **EGYPT**: B. C. 670-525.

**TAI**, a people from the table-lands of Yunnan, who were called Shans by the Burmans, whose country they invaded in 1270. They founded the Tai dynasty. See **BURMA**: Early history.

**TAIF**, city in Arabia, about sixty miles east of Mecca. It was taken by the Arabs during their revolt against the Turks in 1016. See **WORLD WAR**: 1910: VI. Turkish theater: c, 3.

**TAIFALÆ**.—In the fourth century, "the Taifalæ inhabited that part of the province of Dacia which is now called Wallachia. They . . . subsequently accompanied the Visigoths in their migrations westward, and settled on the south side of the Liger, in the country of the Pictavi, where they were in the time of Gregory of Tours, who calls them Theiphali, and their district Theiphalia." —W. Smith, *Note to Gibbon's history of the decline and fall of the Roman empire*, ch. 26.

**TAIFASY**, tribe inhabiting Madagascar. See **MADAGASCAR**: Area.

**TAIKO**, or Great Councillor. See **JAPAN**: 1540-1905.

**TAIKWA ERA**. See **JAPAN**: 550-708.

**TAILLE AND GABELLE.**—Under the old régime, before the Revolution, "the chief item in the French budget was the taille [analogous to the English word "tally" or villein tax]. This was a direct tax imposed upon the property of those assessed, and in theory it was in proportion to the amount they possessed. But in the most of France it fell chiefly upon personal property. It was impossible that with the most exact and honest system it should be accurately apportioned, and the system that was in force was both loose and dishonest. The local assessors . . . released their friends or their villages, and imposed an increased burden upon others, and, to a very large extent, exemptions or reductions were obtained by those who had money with which to bribe or to litigate. . . . From it, indeed, a large part of the population, and the part possessing the most of the wealth of the country, was entirely exempt. . . . Only laborers and peasants, it was said, still remained subject to it. Out of 11,000,000 people [in the seventeenth century] in those portions of France where the taille was a personal tax, probably 2,500,000 were exempt. . . . Next to the taille, the most important tax was the gabelle, and, though less onerous, it also produced a vast amount of misery. The gabelle was a duty on salt. . . . The burden of an excessive tax was increased by the cupidity of those who bought the right to collect its proceeds. The French government retained a monopoly of salt, much like that which it now possesses of tobacco, but the price which it charged for this article of necessity was such that the States of Normandy declared that salt cost the people more than all the rest of their food. . . . From this tax there were no personal exemptions, but large portions of the country were not subject to the gabelle. About one-third of the population were free from this duty, and the exemption was so valued that a rumor that the gabelle was to be imposed was sufficient to excite a local insurrection. Such a duty, on an article like salt, was also necessarily much more oppressive for the poor than the rich. As the exorbitant price would compel many to go without the commodity, the tax was often rendered a direct one. The amount of salt was fixed which a family should consume, and this they were forced to take at the price established by the government. . . . A family of six would, on an average, pay the equivalent of ninety francs, or about eighteen dollars a year, for this duty."—J. B. Perkins, *France under Mazarin*, v. 2, ch. 18.—"This word gabelle is the same as the Anglo-Saxon word 'gafol,' a tax."—T. Wright, *History of France*, v. 1, p. 364.—See also FRANCE: 1761-1773; GHENT: 1451-1453.

**TALENT, Attic, Babylonian, etc.**—"Not only in Attica, but in almost all the Hellenic States, . . . money was reckoned by talents of sixty minas, the mina at a hundred drachmas, the drachma at six oboli. At Athens the obolus was divided into eight chalcid . . . the chalcid into seven lepta. Down to the half obolus, the Athenian money was, in general, coined only in silver; the dichalehon, or quarter obolus, in silver or copper; the chalcid and the smaller pieces only in copper. . . . The value of the more ancient Attic silver talent, silver value reckoned for silver value, will be 1,500 thlr. Prussian currency; of the mina, 25 thaler; of the drachma, 6 gute groschen; of the obolus 1 g. gr.—equivalent to \$1.026, \$17.10, 71.1 cents., 2.85 cents. respectively. . . . Before the time of Solon, the Attic money was heavier; also the commercial weight was heavier than that by which money was weighed. One hundred new drachmas were equivalent to 72-73 ancient drachmas; but the ancient weight remained with very little alteration as commercial weight, to which, in later times, an increase was also added. Through the alterations of Solon, the Attic money, which before stood to the Æginetan in the relation of 5:6, had to the same the relation of 3:5. The new was related to the ancient Attic money as 18:25. Compared with the heavy Æginetan drachma, . . . the Attic was called the light drachma. . . . The former was equivalent to ten Attic oboli; so that the Æginetan

talent weighed more than 10,000 Attic drachmas. It was equal to the Babylonian talent. Nevertheless the Æginetan money was soon coined so light that it was related to the Attic nearly as 3:2. . . . The Corinthian talent is to be estimated as originally equivalent to the Æginetan, but it was also in later times diminished. . . . The Egyptian talent . . . contained, according to Varro in Pliny, eighty Roman pounds, and cannot, therefore, have been essentially different from the Attic talent, since the Attic mina is related to the Roman pound as 4:3. . . . The Euboic talent is related . . . to the Æginetan as 5:6, and in no other than the money-talent of the Athenians in use before the time of Solon, and which continued in use as commercial weight. According to the most accurate valuation, therefore, one hundred Euboic drachmas are equivalent to  $138\frac{1}{2}$  drachmas of Solon. . . . Appian has given the relation of the Alexandrian to the Euboic talent in round numbers as 6 to 7 = 120 to 140; but it was rather more accurately as 120 to 138%. . . . So much gold . . . as was estimated to be equivalent to a talent of silver, was undoubtedly also called a talent of gold. And, finally, a weight of gold of 6,000 drachmas, the value of which, compared with silver, always depended upon the existing relation between them, was sometimes thus called."—A. Boeckh, *Public economy of Athens* (tr. by Lamb), bk. 1, ch. 4-5.—See also SIEKEL; GREECE: B. C. 4th century; Economic conditions.

**TALFOURD**, Thomas Noon (1795-1854), English jurist and dramatist. See DRAMA: 1815-1877.

**TALIENWAN**. See DAIREN; also CHINA: 1905-1909; PORTSMOUTH, TREATY OF.

**TALKAN**, district of Bokhara. See BOKHARA.

**TALLAGE**.—"Under the general head of donum, auxilium, and the like, came a long series of imposts [in the period of the Norman kings], which were theoretically gifts of the nation to the king, and the amount of which was determined by the itinerant justices after separate negotiation with the payers. The most important of these, that which fell upon the towns and demesne lands of the Crown, is known as the tallage. This must have affected other property besides land, but the particular method in which it was to be collected was determined by the community on which it fell, or by special arrangement with the justices."—W. Stubbs, *Constitutional history of England*, v. 1, ch. 13, sect. 161.

**TALLARD**, Camille d'Hostun, Duc de (1652-1728), marshal of France. Defeated the German Imperialists at Speyer, 1703; defeated at Blenheim and taken prisoner by Marlborough, 1704. See GERMANY: 1703; 1704.

**TALLEYRAND-PÉRIGORD**, Charles Maurice de (1754-1838), French diplomatist and statesman. Associated with Mirabeau as member of the department of Paris; went to England after overthrow of monarchy, was expelled, and went to the United States, 1793; permitted to return to France, 1795; foreign minister, July, 1797-1799; became grand chamberlain of the empire upon the assumption of the imperial title by Napoleon, 1804; represented the House of Bourbon at the Congress of Vienna, 1814-1815; formed alliance with England and prevented partition of French territory; foreign minister, July-September, 1815; as ambassador to England signed treaty which made France, Great Britain, Spain, and Portugal allies, 1834. See FRANCE: 1807; 1814 (March-April); GERMANY: 1801-1803; VIENNA, CONGRESS OF.

**TALLIGEWIS**, North American Indian tribe. See ALLEGHANS; CHEROKEES.

**TALLIS**, Thomas (c. 1515-1585), English organist and composer. Organist of Waltham Abbey; appointed gentleman of the chapel royal, serving under Henry VII, Edward VI, Queen Mary and Queen Elizabeth; has been styled the "father of English cathedral music." See MUSIC: Modern: 1540-1672.

**TALMUD**.—"The Talmud [from a Hebrew verb signifying 'to learn'] is a vast irregular repository of Rabbinical reflections, discussions, and animadversions on a myriad of topics treated of or touched on in Holy Writ; a treasury, in chaotic arrangement, of Jewish lore, scientific, legal, and legendary; a great storehouse of extra-biblical, yet biblically referable, Jewish speculation, fancy, and faith. . . . The Talmud proper is throughout of a twofold character, and consists of two divisions, severally called the Mishna and the Gemara. . . . The Mishna, in this connection, may be regarded as the text of the Talmud itself, and the Gemara as a sort of commentary. . . . The Gemara regularly follows the Mishna, and annotates upon it sentence by sentence. . . . There are two Talmuds, the Yerushalmi [Jerusalem], or, more correctly, the Palestinian, and the Babil, that is, the Babylonian. The Mishna is pretty nearly the same in both these, but the Gemaras are different. The Talmud Yerushalmi gives the traditional sayings of the Palestinian Rabbis, . . . the 'Gemara of the Children of the West,' as it is styled; whereas the Talmud Babil gives the traditional sayings of the Rabbis of Babylon. This Talmud is about four times the size of the Jerusalem one; it is by far the more popular, and to it almost exclusively our remarks relate."—P. I. Hershon, *Talmudic miscellany, introduction*.—The date of the compilation of the Babylonian Talmud is fixed at about A. D. 500; that of the Jerusalem Talmud was at least a century or more earlier.—See also MISCHNA.

**TALTARUM CASE OF BARRING ENTAILS**. See COMMON LAW: 1473.

**TALUKDARS**.—"A Taluka [in India] is a large estate, consisting of many villages, or, as they would be called in English, parishes. These villages had originally separate proprietors, who paid their revenue direct to the Government treasury. The Native Government in former times made over by patent, to a person called Talukdar, its right over these villages, holding him responsible for the whole revenue. . . . The wealth and influence thus acquired by the Talukdar often made him, in fact, independent. . . . When the country came under British rule, engagements for payment of the Government Revenue were taken from these Talukdars, and they were called Zamindars."—R. Temple, *James Thomason*, p. 158.—See also INDIA: Finance.

**TAMMANEND**, American Indian chief, after

whom Tammany is said to have been named. See TAMMANY SOCIETY.

**TAMMANY RING.** See TAMMANY SOCIETY; NEW YORK: 1863-1871.

**TAMMANY SOCIETY**, or Tammany Hall.—Tammany Hall, or the Society of St. Tammany, as the order was originally called, was established by William Mooney of New York, an ex-soldier and upholsterer, on May 12, 1789, six years after the peace that ended the American Revolution (1783). When the society was incorporated by the state of New York in 1805, it was designated as the Tammany Society or Columbian Order. "The primary purpose of the society seems to have been to resist a centralization of power in the federal government. Mooney evidently got the name Tammany from older organizations which existed prior to the Revolution under the name of Sons of St. Tammany. . . . The name is supposed to have been derived from [King] Tammanend, an old [Delaware] Indian chief. . . . The title Saint was prefixed to Tammany in imitation of the societies of St. Andrew, St. George, and the like. . . . the Society of St. Tammany adopted Indian customs, dress and names. It was ruled by a board of thirteen Sachems. . . . from. . . which the Chief, or Grand Sachem, was chosen. . . . Washington, toward the end of his second administration, issued a warning against. . . self-creative societies, fearing that they would ultimately be detrimental to the public welfare. As a result. . . a large part of the membership of the (Tammany) society withdrew, but the original founder refused to allow the order to die. He. . . took in members who made it a strictly partisan society, with the specific purpose of exercising an influence over politics. . . . Soon after its reorganization Tammany passed under the influence of Aaron Burr. . . [who] became its acknowledged leader, and it was largely due to him that it became an effectual political organization. So pronounced were Burr's influence and methods that. . . men who had been his. . . followers were influential in it. . . almost to 1840. . . . In the election of 1800 Tammany played an important part, making use of the shrewd methods which have ever since characterized its political campaigns. . . . By 1802 the Tammany Society had grown and extended its power to such proportions under the leadership of Burr, that it was recognized as the local organization of the Republican party, afterward called the Republican-Democratic party, and finally the Democratic party."—C. M. Stebbins, *Tammany Hall, its history, organization and methods*. pp. 3-4, 5, 6-7.—For the later history of Tammany Hall see NEW YORK: 1863-1871; 1913: Impeachment, etc.; NEW YORK CITY: 1874-1892; 1894-1895; 1901-1903; 1909; 1910; Boss: In politics; BUCKTAILS.

**TANG**, celebrated dynasty of China. It lasted from 618-907. It fostered learning and literature to a striking degree, and marked one of the most brilliant periods of Chinese history. See CHINA: Origin of the people.

**TANG SHAO YI**, Chinese statesman. Became premier, 1912. See CHINA: 1912: Yuan Shi-kai elected president; 1916-1917; OPIUM PROBLEM: 1906.

**TANGA**, seaport of Tanganyika Territory, on the southern shore of Tanga bay. In 1912, it had a population of 16,400. It is the terminus of the railway connecting the Usambara district with the coast. The harbor of Tanga is entered by a broad channel five to eight fathoms in depth. The city is a regular port of call for steamships. Tanga came under British administration in 1919.

Center of activity during World War. See WORLD WAR: 1914: VI. Africa: c, 1; 1916: VII. African theater: a, 11.

**TANGANYIKA COMPANY.** See AFRICA: Modern European occupation; 1914-1920: Lack of railway and industrial development.

**TANGANYIKA TERRITORY.**—Tanganyika Territory, a portion of former German East Africa, is located in the southeastern part of Africa. (See AFRICA: Map.) It had in 1921 a population of 4,124,447. Its total area "is about 365,000 square miles, or 20,000 square miles less than the total area of ex-German East Africa. [It has a coast line of about 500 miles.] . . . Mafia [an island off the coast] with an area of about 200 square miles, . . . although included in Tanganyika Territory, has hitherto been administered from Zanzibar. . . . The two most important seaports are Dar-es-Salaam and Tanga. . . . The most important inland town. . . Tabora, . . . is situated at the junction of the main caravan routes from the coast to Tanganyika, and from Victoria Nyanza to Nyasa. . . . The territory is served by two railways, the Central Railway from Dar-es-Salaam to Kogoma [on Lake Tanganyika] (780 miles), and the Tanga Railway from Tanga to Moshi (222 miles), with a temporary line [built by the British troops during the World War] from Kabe Station linking up with the Uganda Railway at Voi. . . . Damaged by the Germans in 1916, the Tanga line was reopened in August 1916, and the

Central Railway in February 1917. There has existed on the coast of East Africa an ancient civilisation from very early times. . . . The natives of East Africa had trade connections with Arabia and India before the beginning of the Christian era, and . . . there was a regular migration of Himyarites from South Arabia to South Africa, who worked gold mines, and possibly built Zimbabwe and other ruins in Rhodesia. It is also probable that such localities as the Lamu Archipelago, Mombasa, Tanga, Pangani, Dar-es-Salaam and Kilwa . . . were repeatedly occupied before the oldest civilization of which there is any record. . . . Active colonization by Arabs from Oman appears to have begun in the 8th century A. D. . . . Whether the Arabs were preceded or followed by the Persians is uncertain, but the presence of true Persians on the East African Coast has been established by the discovery of Persian inscriptions and coins and of ruins of Persian architecture. . . . The oldest known town in Tanganyika Territory is Kilwa-Kisiwani (Kilwa-on-the-island). . . . This Persian town was founded—probably upon a far older site. . . . The Arabian and Persian colonies in East Africa are said to have reached the height of their prosperity between 1100 and 1300 A. D. . . . The authentic history of East Africa can be said to commence when in 1498 the first Portuguese expedition under Vasco da Gama sailed along this coast on its way to India. . . . A Turkish corsair in 1585 ejected the Portuguese from most of their settlements, but was eventually defeated. . . . The Portuguese rule . . . rested always on rather weak foundations, and the Arabs of Oman and Muskat, . . . between 1660 and 1700 [drove] . . . the Portuguese out of practically all their East African possessions except Mozambique. . . . About 1740 . . . the Mazrui Government of Mombasa and the Nabahan King of Pate declared themselves independent and proceeded to fight with one another for the supremacy of the Coast. This declaration of independence was probably connected with a revolution in Oman when the Yorubi were replaced as the ruling family by the Bu Saidi. . . . For nearly 100 years the Bu Saidi did not trouble much more than the Yorubi had done about their African possessions until Said bin Sultan, the fifth of the line, transferred his capital in 1832 from Muscat to Zanzibar. . . . After Seyid Said's death in 1856 . . . until the partition of Africa between the European powers began in the eighties, few political events of importance occurred in East Africa. . . . The interior of Tanganyika Territory was discovered principally by Englishmen and Germans. Among these may be mentioned . . . Livingstone and Stanley.”—*Report on Tanganyika Territory covering the period from the conclusion of the armistice to the end of 1920, pp. 5, 8, 49, 23, 24, 25.*

**German colonization.**—“German East Africa, the most important of the German Protectorates, came under German influence through the individual initiative of Dr. Karl Peters [representing the Society of German Colonization]. In 1884, Peters, with three companions, made a journey to the interior, and . . . concluded twelve treaties with native chiefs, the territory of these chiefs being then declared by the explorers to be German territory. . . . In 1885 the newly acquired land was placed under the Imperial Government. [See GERMANY: 1899 (June).] This arrangement was recognised by the British Government in 1886, but a ten-mile belt along the littoral was still held to belong to Zanzibar. Two years later Germany

acquired the right of collecting customs duties on the coast, and in 1890 took over the coast strip on payment of £200,000 to the Sultan of Zanzibar.”—*Ibid.*, pp. 25-26.—“The treaty of 1890 left Germany with an East African possession which had an area of twice the German Empire in Europe—roughly, a million square miles, and a population of between 7,000,000 and 8,000,000 people.”—A. F. Calvert, *German African empire*, p. 117.—“The development and pacification of the Protectorate in its early days was largely due to the energy and enterprise of Major Wissmann, who organized the troops raised in 1889 to quell the Arab rising . . . and took part in the suppression of many of the native insurrections which signaled the bringing of the country under European rule. From 1801 to 1893 the Germans were engaged in [tribal wars]. . . . During the latter years of the German Administration the country was to outward appearances comparatively peaceful. . . . The German Imperial Chancellor was originally responsible for the administration of all the German Protectorates, but in 1907 the Colonial Office was separated from the Foreign Office and made independent. The head of the local Government was the Governor, who was assisted by a Council. . . . On the outbreak of war the Governor was Dr. Schnee . . . whilst Major (afterwards Major-General) von Lettow-Vorbeck was commandant of the Troops.”—*Report on Tanganyika Territory covering the period from the conclusion of the armistice to the end of 1920, pp. 26, 30-31*

**Military operations during World War.** See WORLD WAR: 1914: VI. Africa: c; c, 1; 1915: VIII. Africa: b; b, 2; 1916: VII. African theater: a; a, 8; a, 10; a, 12.

**British mandate.**—“By Article 119 of the Treaty of Peace with Germany, signed at Versailles on June 28, 1919, Germany renounced in favour of the Principal Allied and Associated Powers all her rights over her overseas possessions, including German East Africa; and the Principal Allied and Associated Powers, in virtue of their rights of sovereignty over the territories which formerly constituted German East Africa, . . . agreed that His Britannic Majesty . . . [should] exercise, in conformity with Article 22, Part 1 (Covenant of the League of Nations) of the above-mentioned Treaty of Peace, a mandate to administer a portion of the said territories. . . . On the ratification of the Peace Treaty with Germany on January 10th, 1920, that part of the former German East African Colony which the Principal Allied and Associated Powers had agreed should be administered by Great Britain was named the Tanganyika Territory.”—*Report on Tanganyika Territory covering the period from the conclusion of the armistice to the end of 1920, pp. 4, 36.*—See also BAGAMOYO; BELGIAN CONGO: 1920; BRITISH EAST AFRICA.

**Part awarded to Belgium as a mandatory by Treaty of Versailles.** See BELGIUM: 1919 (June 28).

**TANGIER**, seaport of Morocco, on the Straits of Gibraltar. (See MOROCCO: Geographic description.) Near its site stood an ancient Roman settlement, Tingio; later it passed successively into the hands of the Vandals, Byzantines, and Arabs. By the eighth century it had become a city of considerable importance. Tangier was taken by the Portuguese in 1471. It was captured by Spain in 1580 and returned to Portugal in 1650. In 1602 it passed into the hands of the English as a part of the dowry of Catherine of Braganza on her marriage to Charles II, but was relinquished by them to the Moors in 1684. It was bombarded

by the English in 1844, and by the French in 1846. See FRANCE: 1842-1848.

1905.—German emperor's speech. See GERMANY: 1905-1906.

1906.—Algeciras Act.—The Moroccan ruler had been so unsuccessful in his attempts to assure proper protection to the European residents upon whom a series of atrocities had been committed that representatives from several European nations and the United States met in conference and drew up the Algeciras Act which provided for a strong police force to guarantee protection of life and property to foreign residents and a supervision of the administration. The port of Tangier was regulated by European authorities.—See also MOROCCO: 1905-1906.

1912.—Franco-Spanish relations.—A Franco-Spanish agreement was reached November 27,

to Camp Colt, Gettysburg, Pennsylvania, and organized and recruited as the Tank Corps. Later camps were at Tobyhanna, Pennsylvania, and Raleigh, North Carolina. Battalions of both light and heavy tanks were organized. Only a few of the French machines were available, but the recruits received a thorough infantry and artillery training, with instruction in the gas line engine. Out of some 12,000 "tankers" about 8,000 reached France, where they occupied barracks and billets near the fortress of Langres. A few of these troops were sent as replacements to the two battalions fighting in the Meuse-Argonne. American-made large and small tanks began to reach Langres about the time of the Armistice. Tank Corps General Headquarters at Chaumont, and all the tankers in the American Expeditionary Forces were classified as General Headquarters Troops and assigned

BRITISH TANK

Forcing its way through barbed wire entanglements

1912, guaranteeing to the participating countries specific rights and privileges in Tangier and the vicinity. Tangier and its vicinity were excluded from the Spanish zone, and became a special zone under the Moroccan government.

TANK CORPS, United States Army.—Early in 1918, in the American Expeditionary Forces in France, men were taken from infantry and artillery limits, trained in the operation of the French two-men tanks and organized into two battalions, which saw active service at St. Mihiel and Meuse-Argonne. Simultaneously in America, a tank unit known at first as the 65th Engineers was recruited, mobilized at Camp Meade, Maryland, and sent to England, where it was trained to operate the large British tanks, later engaging, as a battalion, in severe fighting in a British sector. A number of men left behind at Camp Meade were transferred

to the 1st Army. In 1919 the Tank Corps was reorganized at Camp Meade, Maryland, as a permanent force.

TANKARAMAS, inhabitants of Madagascar. See MADAGASCAR: Area.

TANKS: Invention.—Ancient prototypes.—Evolution.—Development in World War.—“If we look back on the 4,000 years of the known history of war, we shall find that . . . in battle the soldier has to think of four main acts: (i) How to strike his opponent when at a distance from him; (ii) How to move forward towards him; (iii) How to strike him at close quarters; (iv) How to prevent himself being struck throughout the whole of this engagement. In these four acts must be sought the origin of the tank, the idea of which is, therefore, much older than the Trojan horse.”—J. F. C. Fuller, *Tanks in the Great War*, p. 1.—“The present machine is the result of evolution, through intermediate stages, as mechanical science has grown, of old prototypes,

such as the Roman Testudo, or Tortoise, and the medieval Belfry, used in siege operations, in which the missile-throwing power of the defense gradually forced on the attack the adoption of some form of mobile protection."—E. D. Swinton, *"Tanks,"* p. 11.—"Conrad Kyeser, in his military manuscript, written between 1395 and 1405, pictures several 'battle cars.' Some of these are equipped with lances, whilst others are armed with cannon. A few years later, in 1420, Fontana designed a large 'battle car,' and the following year Archinger another, to enclose no fewer than 100 men. All these cars were moved by means of muscle power, *i.e.*, men or animals harnessed inside them. . . . In a work of Valturio's, dated 1472, a design is to be found of one of these vehicles propelled by means of wind wheels. . . . Ten years later . . . Leonardo da Vinci engaged in the design of an-

Watt in 1765 we find an early attempt to apply it to land transportation. . . . As early as 1769 Cugnot, in France, set a steam boiler upon the frame of a wagon and succeeded in making the wagon go. His idea was that this invention could be used in war. . . . Napoleon must have visualised the possibilities of Cugnot's machine . . . for when [he] . . . was selected a member of the French Institute, the subject of his paper was 'The Automobile in War.' [A tank was designed for use in the Crimean War, but was abandoned as being barbarous.] The 'battle car' had now, at least experimentally, evolved into the steam wagon which could run on roads; the next step was to invent one which would move . . . across country, in other words to replace the wheels by tracks. The evolution of the caterpillar tractor brings us to the fourth phase in the evolution of the

UNITED STATES WHIPPET TANK

Carries a three-inch gun and two machine guns

other type of self-moving machine. . . . What the motive force of this engine of war was is unknown, but the . . . description is that of the tank of today. . . . A somewhat similar self-moving wagon was designed for Maximilian I, and in 1558 Holzschuher describes a battle car a picture of which shows it in action preceded by infantry and flanked by cavalry. . . . In 1590 Simon Stevin is supposed to have constructed for the Prince of Orange two veritable landships . . . [consisting of] small battleships fully rigged, mounted upon wheels. . . . 'The earliest English patent for a self-moving wagon which could, if desired, be used in war, was probably that taken out by David Ramsey in 1634. In 1658 Caspar Schott designed one to inclose 100 men and to be employed against the Turks' . . . [But] the science of mechanics was not sufficiently advanced to render self-movement practical and it was not until the middle of the eighteenth century that a fresh attempt was made. . . . 'After the practical application of steam by

'battle car.'"—J. F. C. Fuller, *Tanks in the Great War*, pp. 4, 5, 7, 8, 9.—In 1888 a practical design was made for a kind of caterpillar to be driven by steam. "The first definite proposal for a fighting machine on the lines of the existing tank was due to the appearance of the Hornsby-Ackroyd Caterpillar Tractor, which was tested for military traction purposes in England in 1900-1908. . . . The project died for want of support."—E. D. Swinton, *Tanks*, p. 15.—"The Holt caterpillar is the outstanding American design for tractors which . . . [was] adopted during the [World] War. . . . In October . . . [1914] Lieutenant-Colonel (now Major-General) E. D. Swinton put forward a suggestion for the construction of an armoured car on the Holt tractor or a similar caterpillar system, capable of crushing down wire entanglements and crossing trenches. At the same time, Captain T. G. Tulloch, manager of the Chilworth Powder Company, was also devoting his attention to the possibility of constructing a land

cruiser sufficiently armoured to enable it to penetrate . . . to the enemy's gun and howitzer positions. . . . While Lieutenant-Colonel Swinton and Captain Tulloch were urging their proposals, a third scheme was brought forward by Admiral Sir Reginald Bacon. The name 'tank' was suggested in December, 1915, to insure secrecy during the experimental stages of the invention. . . . On February 2, 1916, occurred . . . the first trial of the new machine. . . . France asked that the army be supplied with a certain number. . . . The first British tank made, and to be used, was . . . the Mark I tank, the general outline of which remained the standard design for the hulls of all British heavy machines up to the end of the war."—J. F. C. Fuller, *Tanks in the Great War*, pp. 18, 21, 29-31, 35.—See also WORLD WAR: 1916: II. Western front: c, 3; d, 13; e, 15; 1917: II. Western front: c, 4; g, 1; g, 3; 1918: II. **TANZIMAT**, Turkish decree promulgated in 1839. See TURKEY: 1839.

**TAOISM.**—Lao-tse, born in the principality of Thsu, 604 B. C., was highly renowned even in his lifetime as a profound philosopher. . . . He wrote the famous *Tao-te-King*, which became the most sacred book of the [Taoist] sect. . . . *Tao* . . . possesses among the Taosse, who derive their name from it, a mystic significance, and is even worshipped by them as a divine being. Lao-tse distinguishes in his book between the nameless, supreme Tao, which is the ultimate source, and the Tao which can be named, and is the mother of everything. To this, and to the power of virtue proceeding from it (*te virtus*), the highest worship, according to him, is due, and in this does the sage find his ideal. To withdraw entirely into himself and free himself from the constraints of sense, in order, thus, without action or speech, to exercise a blessed power, must be his aim. This is the best philosophy of life and the best policy. The often obscure system developed in the *Tao-te-King* is purely Chinese, and is incorrectly derived from the influence of Indian philosophy. . . . From the Buddhist doctrine it is essentially different. It is marked by a morbid asceticism, and takes up an attitude of hostility towards civilisation and progress, but it is distinguished by a pure and sometimes very elevated morality. . . . The later writings of the Taosse, among which the Book of Rewards and Punishments occupies a prominent place, show that they did not maintain this morality at the same elevation, but gradually lost themselves in confused mysticism and an unreason-

ing belief in miracles. To gain long life and immortality by means of self-chastisement, prayer, and watching, as well as by the use of certain charms, was their highest endeavour."—C: P. Tiele, *Outlines of the history of religion*, pp. 36-38.—See also CHINA; Religions of the people; LAO-TSE; MYTHOLOGY: Chinese; PRIESTHOOD: In China and Japan.

**TAO-KWANG** (1781-1850), Chinese emperor, 1820-1850. See CHINA: 1839-1842.

**TAORMINA**, (or Ancient *Tauromenion*).—About 302 B. C. Dionysios, the tyrant of Syracuse, expelled the Sikels, or natives of Sicily, from one of their towns, *Tauromenion* (modern *Taormina*) on the height of *Tauros* (see SYRACUSE: B. C. 394-384), and it subsequently became a Greek city of great wealth, the remains of which are remarkably interesting at the present day. "There is the wall with the work of the Sikel and the Greek side by side. There is the temple of the Greek changed into the church of the Christian Apostle of Sicily. There is the theatre, the work of the Greek enlarged and modified by the Roman, the theatre which, unlike those of Syracuse and Argos, still keeps so large a part of its scena, and where we hardly mourn the loss of the rest as we look out on the hills and the sea between its fragments."—E. A. Freeman, *History of Sicily*, v. 4, ch. 11, sect. 2.

**TAO-TEH-KING**, sacred book of Taoism. See LAO-TSE; TAOISM.

**TAPÆ**, Battle of (102). See DACIA: 102-106.

**TAPPANS**, North American Indian tribe. See ALGONQUIAN FAMILY.

**TAPROBANE**, name by which the island of Ceylon was known to the ancients. Hipparchus advanced the opinion that it was not merely a large island, but the beginning of another world.—Based on E. H. Bunbury, *History of ancient geography*, v. 2, ch. 23, sect. 2.

**TAPURIANS.**—"To the west of the Hyrcanians, between Elburz and the Caspian, lay the Tapurians, whose name has survived in the modern *Taberistan*, and further yet, on the sea-coast, and at the mouth of the *Mardus* (now *Safidrud*), were the *Mardians*."—M. Duncker, *History of antiquity*, v. 5, bk. 8, ch. 1.

**TAPUYAS**, South American Indian tribe. See PATAGONIANS and FUEGIANS; INDIANS, AMERICAN: Cultural areas in South America; Amazon area.

**TARA**, Battle of (980). See IRELAND: 9th-10th centuries; NORMANS: 10th-13th centuries.

**TARA**, Dynasty of. See IRELAND: From Tuathal to Cormac.

**TARA**, The Hill, the Feis, and the Psalter of.—The Feis Teavrach, or Feis of Tara, in Irish history, was a triennial assembly on the royal hill of Tara, in Meath, which is claimed to have been instituted by a certain King Ollamh Fodhla, at so remote a period as 1,300 years before Christ. "All the chieftains or heads of septs, bards, historians, and military leaders throughout the country were regularly summoned, and were required to attend under the penalty of being treated as the king's enemies. The meeting was held in a large oblong hall, and the first three days were spent in enjoying the hospitality of the king, who entertained the entire assembly during its sittings. . . . What may have been the authority of this assembly, or whether it had any power to enact laws, is not clear; but it would appear that one of its principal functions was the inspection of the national records, the writers of which were obliged to the strictest accuracy under the weightiest penalties."—M. Haverty, *History of Ireland*, p.

24.—The result of the examination and correction of the historical records of the kingdom were "entered in the great national register called the Psalter of Tara, which is supposed to have been destroyed at the period of the Norman invasion. . . . It is supposed that part of the contents of the Psalter of Cashel, which contains much of the fabulous history of the Irish, was copied from it."

—T. Wright, *History of Ireland*, v. 1, bk. 1, ch. 2.

**TARENTEENS**, or Tarratines, North American Indian tribe. See ABNAKIS; ALGONQUIAN FAMILY; NEW ENGLAND: 1675 (July-September).

**TARENTUM** (modern Taranto).—Taranto, situated on the southeast coast of Italy, on a large gulf of the same name, had a population of 58,166 in 1911. It has an important naval harbor with extensive docks. Tarentum was the most important of the Greek cities in Italy. Of its early history

little is known, excepting that it was a Lacedæmonian colony of very great antiquity. Legend attributes its origin to colonization by a group of Lacedæmonian youths, the natural sons born to Spartan women during the absence of their husbands at the second Messenian war. These youths known as the Parthenii, migrating to Magna Græcia and locating in the territory of the Iapygæ, founded Tarentum. The city had an excellent harbor, strongly fortified. The "native fisherman were always ready to man the navy of the state. But they made indifferent soldiers. Therefore when any peril of war threatened the state, it was the practice of the government to hire foreign captains, soldiers of fortune, who were often kings or princes, to bring an army for their defence. . . . This practice of hiring foreign armies for their wars . . . saved them from the domination of successive tyrants. . . . The government of Tarentum was better and more regular than that of most Greek Republics. . . . Of all the Greek cities of Magna Græcia . . . Tarentum alone was in a condition to cope with Rome."—H. G. Liddell, *History of Rome*, pp. 231-232.—See also SIRIUS; ACHÆAN CITIES, LEAGUE OF.

**TARI**, Italian coin. See MONEY AND BANKING: Medieval: Coining and banking in the Middle Ages.

**TARIFA**, seaport in Spain, in the province of Cadiz, about twenty-one miles southwest of Gibraltar. It was a scene of struggle between the Christians and Moors. See SPAIN: 1273-1460.

## TARIFF

Origin of the term.—Antiquity of import and export customs.—Modern systems defined.—"Tariffs may embrace duties on exports as well as on imports; but duties on exports are prohibited by the Constitution of the United States and are now levied only by a few countries. . . . The word 'tariff' is said to be derived from the Spanish town of Tarifa, near Gibraltar, where the Moors in the days of their power collected duties, probably much after the manner of those Chinese local custom-houses called 'squeeze stations.' But the thing is older than the name. Augustus Cæsar levied duties on imports into Italy, and there were tariffs long before the Cæsars. The purpose in which tariffs originate is that of raising revenue. The idea of using them for pro-

tection is an afterthought."—II. George, *Protection or free trade*, v. 4, p. 60.—By the Greeks "all trade and commerce were considered to be subject to the control of the community, because they first became possible by the assembling and living together of men in well-regulated societies. Hence proceeded the right of the state, both to regulate trade, as well as indeed, partially, itself to engross its advantages. . . . Moreover, examples enough are found of states controlling exportation and importation, according to their own aims, and wants. This also is not exactly consistent with complete freedom of trade. Aristotle presents five objects of public policy, as the most important, namely, the finances, war and peace, the defence of the country, importation and ex-

portation, legislation. With regard to importation and exportation, it must be ascertained what quantity of the necessities of life the state needs, what amount of them may be raised in the country or may be imported, and what importations and exportations the state requires, in order to make agreements and contracts with those who may be needed for these purposes. Commerce, therefore, was an object of public policy; whence many restraints, and, on the other hand, many concessions, must have arisen. If the exportation of all the products of the soil, except that of oil, was not prohibited by Solon [in the sixth century B. C.], yet he acknowledged, notwithstanding the liberality of his disposition, the admissibility of such prohibitions. And also the exportation of oil was probably not first regulated in the reign of [the Roman emperor] Hadrian, but in more ancient times, in such a manner that a supply for the requirements of the state was first to be secured. The exporter was required to hand in his manifest . . . of the oil which he was about to export, together with the names of those from whom he had obtained it, under penalty of its confiscation. The exportation of grain was always forbidden in Attica. Other states had certainly similar laws; as, for example, the Selymbrians in a time of scarcity prohibited the exportation of grain. There were also many other commodities, the exportation of which was prohibited at Athens, . . . as timber for building, pitch, wax, cordage, flax, askomata; articles which were specially important for the building and equipping of the fleets. It might indeed be supposed, that this prohibition existed only against the Peloponnesians during the war. But how often did Greece enjoy the blessings of peace?"—A. Boeckh, *Public economy of the Athenians* (tr. by A. Lamb), pp. 73-76.—"Three tariff systems are commonly recognized [in modern times]: 1. The single tariff.—Under this system only one schedule of duties is imposed, no discriminations being made among countries. This system is rare. Nevertheless, the United States, with a great variety of duties, many of them at very high rates, retained such a system until 1909. Under this system the executive department of the National Government is deprived of the power of bargaining with other countries through the making of special commercial treaties, designed to secure advantages. For this reason most of the great commercial nations have preferred one of the systems mentioned below. 2. The general and conventional system.—Through the application of a 'most favored nation' clause, lower rates than those agreed upon in general schedules are given to certain countries. [See MOST FAVORED NATION CLAUSE.] The other countries pay the rates named in the general schedule. This system was applied by Germany from the year 1891 until the outbreak of the World War. 3. The maximum and minimum system.—This consists of two schedules similar to the one just named. The maximum corresponds to the general tariff; the minimum to the conventional tariff. The minimum schedule is composed of a fixed list of rates of duties determined by law, not by the treaty making power. In negotiations with other countries, the executive making a commercial treaty may not go below this minimum schedule, but may apply this schedule to countries entitled to 'most favored nation' treatment. This system was adopted by France in 1892 with some modifications, and from 1909 to 1913 by the United States. There are three kinds of duties: 1. Ad valorem duties.—When duties are levied at a fixed per-

centage of the value of the goods imported, these duties are known as ad valorem. This system required collectors of revenue of tested honesty and ability and importers of high integrity. Under this system the temptation to undervaluation is very great and exporters in foreign countries will frequently aid their customers by underbidding their goods. In consequence, the inspectors and appraisers in the importing country must be highly trained men, constantly informed regarding foreign markets and importers. This system also requires a large body of trained detectives to prevent smuggling, a most undesirable and, in many cases, unsuccessful plan. 2. Specific duties.—The specific duties are generally used in Europe and Asia. They are little used in the United States except in combination with the ad valorem duties. These duties are based on units of measurement, number or weight, as, for example, a certain fixed amount in dollars or cents per yard or gross or pound. The tariff under this system is extremely complicated, but when once framed is simple to enforce by the collectors. 3. Compound duties.—The third system much in use in the United States until the passage of the Underwood Tariff Act in 1913, consists in the main of a specific duty, to which is added a supplementary ad valorem duty. By this method it is sought to combine the advantages of both the ad valorem and specific duties. In many cases the real amount of duty levied is disguised. In some instances discretion is left to the collector to apply either the specific or the ad valorem rate; and he applies whichever will yield the larger amount of revenue. To the collection of the compound duties is added the difficulties of both the ad valorem and specific duties, so that the working of the system is more cumbersome and costly than that of either of the other systems. A bounty has been defined as a premium paid by a government to encourage some branch of production or industry. The best known example in the United States is the beet sugar bounty established under the McKinley Tariff Act of 1890. Usually, in order that the bounty may be effective, it must be accompanied by an import duty to insure its working in case of large fluctuations in prices. Whereas a protective tariff tends to increase the price both of goods imported and goods produced at home (in the latter case during the development of important industries), the bounty affects only the goods produced at home and must be paid out of the general revenues. The bounties, therefore, do not affect the selling price of the goods and are a direct burden upon the taxpayers. . . . With the single exception of the slavery question, the tariff, more than any other issue, has tended to divide the country [United States] on sectional lines. The reason is clearly economic."—J. H. Hammond and J. W. Jenks, *Great American issues*, pp. 174-177, 179.—See also BOUNTIES.

15th-17th centuries.—Venice.—Beginning of

systematic exclusion and monopoly. See VENICE: 15th-17th centuries.

15th-17th centuries.—England.—Tariff control of exported wool.—Trade relations with Flemish towns.—Tariff preferences in navigation laws.—Commercial treaty with Portugal.—“The great export of English raw wool to the Flemish weavers was early made a source of revenue for the French wars by means of an export duty, while in Tudor times the careful restrictions on the export of corn, only allowed when there was an excess, remind us that control of commerce can be in the direct interest of the consumer, though nowadays the interest of the consumer, so far from being a plea for control, has become one of the strongest arguments against any control—the policy of plenty; free trade. One of the earliest examples of interference on behalf of industry is of a similar character, namely, the control of the export of raw wool to ensure ample and cheap supplies for our own growing cloth manufacture under Edward III. It is noticeable that early tariffs were so often in restraint of export; tariffs are more often, in the present age, levied on imports, but a reminder that the export trade can be included in a Protectionist scheme is salutary. . . . By the chartering of privileged trading companies with exclusive rights to participation in trade with specified regions, overseas, effective instruments were created for the pushing of business abroad. They were numerous, but the two greatest examples are ample illustrations of the system; the Merchant Adventurers who wrested our trade with North-West Europe from the German Hansa in Tudor times, and the East India Company.”—A. S. Turberville and F. A. Howe, *Great Britain in the latest age*, pp. 223-224.—“One of the most important events of the reign (Henry VII.) was the Intercursus Magnus, the great treaty with Flanders which followed on the two years suspension of trade (1494-96). It made traffic between the two countries absolutely free in all commodities; each was to aid the other against piracy, and each to open its law courts to merchants of the others. Its result, however, was to transfer to England the cloth manufacture of Flanders.”—H. D. Traill, *Social England*, v. 2, p. 451.—“Control by legislation was also undertaken, the most conspicuous examples being the Navigation Acts. . . . The intention was to encourage our industry, commerce and shipping, to secure the colonies almost entirely and the other non-European countries as far as possible as markets for English manufactures and sources for English raw materials. . . . [and to suppress] competition either from the colonies or foreign countries. [See also NAVIGATION LAWS.] Tariff preferences were introduced, goods in British ships paying lower customs than those in ships of the country of origin. Finally, certain goods useful for our [English] manufactures, such as cotton, wool, indigo, and dye-woods, as well as sugar, tobacco and ginger, typical colonial produce, and suitable material for a flourishing entrepot trade, were always to come to England from the colonies, and never to be shipped from the colonies direct to a foreign country. These methods were often supplemented by tariff treaties. Charles II. concluded treaties with Spain, France, and other countries, whereby the contracting countries concluded bargains for the reduction of tariffs on goods of their respective production. The Methuen treaty of 1703, exchanging the removal of our prohibition on Portuguese wine for a removal of their prohibitive tariff on British cloth is particularly notable, since the contracting powers

guaranteed each other most-favoured-nation treatment, by which each undertook to extend to the other reductions and removal of prohibitions offered to any third power, and not already conceded to the other party of the treaty.”—A. S. Turberville and F. A. Howe, *Great Britain in the latest age*, pp. 223-226.—See also PORTUGAL: 1703; SPAIN: 1703-1704; below: 1689-1721.

17th-18th centuries.—Europe.—Mercantile system of trade.—Colonial policy.—Balance of trade theory.—“Statesmen . . . of the period under discussion, set a peculiarly high value on foreign commerce, and regarded it as a more important branch of industry than any other. The chief reason for this view lay in the fact that most of the European states produced little or none of the precious metals, and could get them only by trade with a neighbor or with a distant country. Now money is the ‘sinews of war’ and when states were constantly at war with each other, a good supply of money seemed to the statesman a matter of the first necessity. . . . [Governments] made it a cardinal point in their policy to regulate commerce, so as to increase, if possible, the stock of the precious metals in the country. They argued that the country would make money if it sold more merchandise than it bought of them, for then the foreigners would have to make up the balance in gold or bullion. This was called a ‘favorable balance of trade’ as tending to bring money into the country. If the country became indebted for foreign merchandise to an amount greater than could be offset by the exports, the country would owe a cash balance abroad, and this was an ‘unfavorable balance of trade.’ At the beginning of the period the government tried to effect its object simply by prohibiting the export of bullion (gold and silver); this was the ‘bullionist’ policy. Prohibitions were found to be ineffective, however, and were a severe hindrance to some branches of commerce, that with the East especially, in which the foreigners demanded considerable supplies of the precious metals. The export of bullion, therefore, was generally permitted [as in the case of the East India company], and the government contented itself with a regulation of commerce in merchandise which it hoped would bring more bullion into the country than was carried out. Mercantilism and modern protectionism easily ran together . . . but the spirit animating restrictions was in this period mainly mercantilist, based, that is, on consideration of the flow of precious metals. The methods of tariff regulation, moreover, differed from those of modern protectionism; statesmen did not in most cases, attempt to seal the duties so as just to balance the advantages of the foreign producer, but resorted to downright prohibition of the wares which they desired to exclude from the home market. In the second place, exports were encouraged, for they represented the credit items in a country’s trade, and might bring home a balance in cash. . . . Altogether the best kind of imports, however, was held to be the raw materials of manufacture; if these could be worked up in England and exported, the country cleared not only the sum originally due for the imported material, but also the extra charge for the manufacture. Home industries were given various privileges by the government, because they either spared the

importation or increased the exportation of the wares which they produced. . . . After this review of the characteristics of commercial policy the reader will naturally inquire what were its effects. On one point an answer can be given with considerable assurance; the policy had no important effect on the distribution of the precious metals. Gold and silver were brought from America, the chief source of supply, to Spain, and flowed from Spain to the countries where they were needed in business; it seemed as though all the people in the world were in an unconscious conspiracy to defeat the plans of statesmen for checking or directing the flow. It is noteworthy that Spain, the country which had the best chance, apparently, to accumulate treasure and which pursued a policy of exaggerated mercantilism, was always complaining of the dearth of gold and silver, while Oriental states, which had never heard of mercantilism, accumulated large stores of bullion. The attempts of European countries to rob other countries of their treasure by legislation present, from one point of view, an absurd spectacle, for they were all applying the same principles in much the same way, action and reaction were equal, and no amount of political straining affected the distribution due to economic demand. The commercial policy of the mercantilist period had effects in other directions, if it did miss the mark at which it aimed. It was important, considered merely as a policy of restriction, in checking the exchange of commodities between states. Just as manors and the districts centering around a city had aimed at self-sufficiency in an earlier period, so the states of this period were led by their dislike of imports to attempt the production of everything possible within their borders; and an international organization, in which each state would specialize in the products for which it was best fitted, and would depend on commerce with others for supplying deficiencies, was hindered from developing. The mercantile system furnished a natural basis for the system of national protection, which grew up from it, and which has not entirely outgrown, even yet, its mercantilist origins. One of the most obvious effects of mercantilist commercial policy can be traced in its influence on the foreign relations of states. It was not, as is often said, the cause of the many wars which vexed Europe at this period; their cause lay deeper than any theory of favorable or unfavorable balances of trade. The balance of trade theory did, however, affect the political grouping of countries to a considerable extent, and inclined statesmen to look for friends or foes in the countries with which the balance was favorable or unfavorable. England, for example, made herself the ally of Portugal through a large part of the modern period, because Portugal bought her manufactures, and sold in return wines and other commodities which could not be produced at home; and England kept alive the traditional hostility toward France because the trade with that country showed regularly an unfavorable balance. Based on considerations like the preceding, the colonial policy of this period was marked by restrictions entirely opposed to modern ideas of commercial freedom. A government which permitted or encouraged the establishment of colonies in distant lands, considered it a duty to itself to see that other governments or the colonists themselves did not rob it of the rewards of success. The colonial policy of the period has sometimes been pictured as purely one-sided, selfishly sacrificing the colonists to the interests of the people at home. This view leaves out of

account not only the generous help given by European governments to their dependencies, but also a great mass of legislation aiming to benefit the colonists by assuring them of a market in the home country, and imposing sometimes serious restrictions on the inhabitants there. A government did no more than hold resolutely to the idea that emigrants, wherever they might be, were still citizens of their native state and bound to help maintain its power. The government tried ordinarily to frame its regulations so that mother country and dependency would devote themselves to different lines of production, and so supplement rather than compete with each other. It considered it only natural and proper that the colony should trade mainly or entirely with the mother country. As said above, this was a period of bitter conflict among the European states, and a country's commerce was thought to be one of the mainstays of its military and naval power; it seemed, therefore, to be the plain duty of colonists to contribute by their commerce to the resources on which the independent existence of the whole nation was thought to depend."—C. Day, *History of commerce*, pp. 166-172.

1629.—England.—Question of tonnage and poundage. See ENGLAND: 1629; TONNAGE AND POUNDAGE.

1631-1709.—United States.—Tariffs in colonial period.—Powder duties.—Slave trade.—In the colonial period of American history, "the tonnage duties were more general than any other kind of . . . imposts. [See TONNAGE AND POUNDAGE.] In Rhode Island they seem to have been the only duties; and there were not more than three colonies—Georgia, New Jersey, and Delaware—which did not lay a tax on shipping. The powder duties, as the impost on shipping was first called, are also the earliest of any duties imposed by a colonial assembly; and they were continued by most of the colonies until the Constitution transferred to Congress the power of levying imposts. 1631 is the date of the first powder duty and Virginia the colony which imposed it. . . . But the act of 1632 provided that every ship should pay one hundred pounds of powder and ten iron shot for every one hundred tons burden. These are about the average rates imposed in all the colonies. . . . After money became more plentiful, the powder duties were commuted into cash payments ranging from sixpence to one or two shillings per ton, according to the amount of depreciation in the provincial currency. The earliest dates at which powder duties are to be found for the several colonies are, Massachusetts, 1645; Maryland, 1661; Pennsylvania, 1683; South Carolina, 1686; New York, 1709. . . . All the tonnage duties were clearly for revenue, but they were so framed that the colonial shipping interest secured a good degree of protection. In fact, there was no colony which did not exempt at least its own shipping from tonnage dues. The northern colonies all had reciprocity arrangements, by virtue of which the vessels of each entered the ports of the others free. . . . As it was, almost all ships which had a legal right to trade with the northern colonies were freed from the tonnage duties; and, if the navigation acts have been enforced, little revenue could have been received from this source. . . . The tax on slaves imported was a considerable source of revenue to Virginia and Maryland, and still more to South Carolina; while in Massachusetts,

New York and Pennsylvania it was of less importance, both because they imported fewer slaves and because the duties were not very high. In fact, it seems probable that in Massachusetts, at least, the tax was laid to discourage importation rather than to raise revenue."—W. Hill, *First stages of the tariff policy of the United States*, pp. 18-21, 27.

1664-1667. — France. — Colbert's commercial policy.—"Protection from undue competition from without was the early watchword of Colbert, the inspiring principle of the tariff reform of 1664 [in France]. The main object of this reform was the removal of the multitude of vexatious tariffs within the kingdom, and the introduction of a certain amount of fiscal unity. But the foreign trade of the kingdom as a whole was not neglected. A duty was imposed on foreign shipping, with a view to promote the growth of a merchant marine. The import duties on most of the commodities coming from England and Holland were raised considerably, the increase varying from five or six, to forty or even fifty per cent. On the whole, the intention evidently was, as Colbert professes, merely to protect the newly established industries to a moderate extent, until they were sufficiently strong to stand alone. . . . The theory of the self-sufficiency of that particular territorial unit which we are wont to style a nation, has doubtless an attractive and popular aspect; it appeals both to sentiment and practical instincts, to pride and self-interest; it is a valuable means for the promotion of political unity during the process of national consolidation. But we find that, from the very outset, considerable modifications in the rigid theory were necessary before it could be put into practice in France. The royal power could introduce manufactures, but could not supply the workers with raw material. The method of Colbert was, 'to reduce the export duties on the products and manufactures of the kingdom, and to diminish the import duties on all raw materials for manufacture; but to keep out, by raising the duties, the products of foreign manufacture.' Still, as a consistent advocate of the theory of self-sufficiency, he was unwilling to depend on strangers even for raw material. . . . The tariff of 1664 was intended to clear the way for the revival of industry, and to encourage the home producer by handicapping his foreign competitor. France as yet could not stand alone; time was needed for development. But in the short period of three years, Colbert seems to have considered that the resources of France warranted an extension of the system of protection. The expression of this view was the revised tariff of 1667. . . . The duties of that of 1664 on foreign merchandise were in many cases doubled, in some more than doubled. . . . The tariff of 1664 had caused little serious complaint; the case was far otherwise in 1667. England replied with retaliatory duties on French wines, but only to a moderate extent. Charles was in the pay of Louis, and naturally unwilling to push matters to extremities. Colbert, in referring to the matter, attempts to show, by a strange piece of fallacious reasoning, that the retaliation, so far from decreasing, had actually increased the consumption of French wines in England. The consumption had undoubtedly increased;

he accounts for it by the curious statement, that it is a matter of experience that people drink more wine in proportion as it costs them more. Perhaps the fallacy was not quite accidental."—A. J. Sargent, *Economic policy of Colbert*, pp. 49, 52, 72, 73.—See also FRANCE: 1661-1683.

1689-1721.—England.—Commercial relations with India, Portugal, and France.—King William's War against France in 1689, intensified the "simmering discontent which had been felt since the time of Cromwell, in regard to the rapidly increasing importations of manufactured goods from France . . . [especially] when Colbert revised the French tariffs, and imposed prohibitory rates on English cloth. . . . There had been days when wool, or undressed cloth, had been the chief commodities of English export, but eighteenth century statesmen were more concerned in trying to secure a better market for finished cloth. This was the aim of Mr. Methuen, in carrying through the much vaunted treaty with Portugal, which was concluded in 1703 [abrogated in 1713]. All those who were interested in the widely diffused manufacture of English cloth, regarded the negotiations as most successful, since they served to reopen a market which had been partially closed. During the preceding twenty years, the Portuguese, in the hope of fostering a native manufacture, had prohibited all importation of English cloth. Mr. Methuen was sent as a special ambassador to Portugal and intimated that it would be very acceptable to the Queen of England 'if the woollen cloths, and the rest of the woollen manufactures of Britain, might be admitted into Portugal, the prohibition of them being taken off.' He was able to carry this point: on the other hand, he conceded to the Portuguese that their wines should always be admitted into England at two-thirds of the duty paid on French wines. . . . A still more interesting illustration of the eagerness of the English public to form such foreign relationships as might conduce to the prosperity of our manufactures, is furnished by the failure of the Tory Government to carry out their schemes of trade policy, when they were negotiating the Treaty of Utrecht in 1713. The treaty proposed to open trade, on the basis of the arrangements which had existed in 1664, before the war of tariffs and occasional prohibitions, which had lasted for nearly half a century, had begun to rage. Bolingbroke endeavoured, without success, to revert to the traditional policy of the Court party in regard to intercourse with France; by the eighth and ninth clauses of the commercial treaty, which accompanied the Treaty of Peace, it was agreed that French goods should be imported subject to the duties exacted in 1664 and on the same terms as the most favoured nation. A bill was drafted to give effect to this agreement and make the necessary alterations in the tariffs, which then imposed more than fifty per cent. on French imports above what was taken on the goods of other countries. There was a general dread that the proposed arrangement would not only open the home market to the competition of French manufactures, but would indirectly lead to a rupture with Portugal, and the closing of the profitable market for English goods which had been secured in 1703. The proposal roused a storm of indignation; the Government endeavoured to be loyal to their agreement, and tried to secure the suspension of the duties on French wines for two months, in the hope that there would be difficulty in re-imposing

them; but though they commanded a majority in the House of Commons, the motion was rejected. . . . The reasoning which brought about the interruption of the French trade in 1678 gave rise to a new agitation against the East India Company and its operations. In the early seventeenth century the export trade of this Company had been the chief subject of attack, as they were so much in the habit of sending silver to the East. The fiercest opposition, in the period of Whig ascendancy, was directed against their import trade; since the goods they brought from the East, served as substitutes for textiles fabrics woven in England. It was alleged that Indian muslins and silks interfered with the demand for English goods in the home market, and prevented the export of English manufactures to foreign countries."—W. Cunningham, *Growth of industry and commerce, modern times*, pp. 458-463.—"The conclusion of the treaty with France would have required the abandonment of the policy of protecting the woolen industry. The issue that was joined with reference to this measure was thus curiously interwoven with the controversy that had long centered around the East India Company. . . . The agitation of the woolen interests continued and began to assume an acute phase in 1710. This finally resulted in the passage of the Calico Act of 1721, 'an act to preserve and encourage the woolen and silk manufactures and for the more satisfactory employment of the poor, by prohibiting the use and wear of all printed, painted, flowered or dyed calicoes in apparel, household stuffs, furniture or otherwise' after December 25, 1722."—A. P. Usher, *Introduction to industrial history of England*, pp. 283-284.—See also INDIA: 1670-1823.

18th century.—France.—Physiocrats and their doctrine of trade.—Forerunners of free trade.—"It was not till the middle of the 18th century, when a great School of Economists arose in France, that both rulers and people were forced to pay some regard to the demand for freedom of trade. The demand was simply that what was spontaneous in its origin should be allowed to be spontaneous in its development. This demand was first made (in connection with a system of doctrine) by the remarkable group of French writers, known in their own day as the 'Economists,' and perhaps best known in ours as the Physiocrats."—J. Bonar, *Philosophy and political economy*, p. 133.—"All exchange, the Physiocrats thought was unproductive, for by definition it implies a transfer of equal values. If each party only receives the exact equivalent of what it gives there is no wealth produced. It may happen, however, that the parties to the exchange are of unequal strength, and the one may grow rich at the expense of the other. In giving a bottle of wine in exchange for a loaf of bread there is a double displacement of wealth, which evidently affords a fuller satisfaction of wants in both cases, but there is no wealth created, for the objects so exchanged are of equal value. To-day the reasoning would be quite different. The present-day economist would argue as follows: 'If I exchange my wine for your bread, that is a proof that my hunger is greater than my thirst, but that you are more thirsty than hungry. Consequently the wine has increased in utility in passing from my hands into yours, and the bread, likewise, in passing from your hands into mine, and this double increase of utility constitutes a real increase of wealth.' Such reasoning

would have appeared absurd to the Physiocrats, who conceived of wealth as something material, and they could never have understood how the creation of a purely subjective attribute like utility could ever be considered productive. . . . The Physiocrats would have condemned both the Mercantile and Colbertian systems. Both of these aimed at securing a favourable balance of trade—an aim which the Physiocrats considered illusory, if not actually immoral. But if they thought all trade was useless it is not easy to understand their enthusiasm for Free Trade. Those economists who nowadays favour Free Trade support it in the belief that it is of immense benefit to every country wherein it is practised, and that the more it is developed the richer will the exchanging countries become. But such was not the Physiocratic doctrine. It is a noteworthy fact that they are to be regarded as the founders of Free Trade, not because of any desire to favour trade as such, but because their attitude towards it was one of disdainful *laissez-faire*. They were not, perhaps, altogether free from the belief that *laissez-faire* would lead to the disappearance of commerce altogether. They were Free Traders primarily because they desired the freedom of domestic trade, and we must not lose sight of those extraordinary regulations which completely fettered its movements at this time."—C. Gide and C. Rist, *History of economic doctrines*, pp. 27-30.—See also ECONOMICS: 18th century; Physiocrats.

1776.—England.—Trade conditions.—Adam Smith's "Wealth of Nations."—His attack on mercantile system.—"The principle of regulation was applied [by England] much more thoroughly to our external than to our internal trade. The former was entirely carried on by great chartered companies, whether they were on a joint-stock footing, like the East India Company, or were 'regulated' like the Turkey Company, in which every man traded on his own Capital. . . . Adam Smith carried too far his revolt against the restrictive system, which led him to denounce corporate trading as vicious in principle. If we bought less than we sold, it was argued, the balance of trade must be paid in coin. To accomplish this end every encouragement was given to the importation of raw materials and the necessaries of life, but the purchase of foreign manufactures was, for the most part, prohibited, and individuals were entreated not to buy imported luxuries. The result was retaliation abroad, and a deadlock in the commercial machine. Wars of tariff were common; for instance, we prohibited the importation of gold-lace from Flanders, and the Flemings in return excluded our wool. The system, however, resisted the teaching of experience, despite the fact that in abolishing the prohibition of the export of gold and silver, the Government acknowledged the true principle of free trade put forward by the East Indian Company. The latter contended that the law forbidding the export of bullion was not only useless, since it was easily stultified by smuggling, but even, if enforced, was hurtful, since the Orientals would only sell their valuable goods for silver. The success of this contention marks the transition from the Mercantile System proper to modern Protection. The advocates of that system had shifted their ground, and instead of seeking merely to prohibit the export of the precious metals, they established a general protection of native industries. Their measures were not all alike bad. The Navigation Acts, for in-

stance, were defended by Adam Smith, and Mill has indorsed his defence, on the ground that national defence is more important than national opulence. The most famous of these Acts was the law . . . by which no goods of the growth or manufacture of Asia, Africa, or America were to be imported into England, Ireland, or the Plantations, except in ships belonging to English subjects, and manned by a crew three-fourths of whom were English; while no goods of any country in Europe were to be imported except in English ships, or ships belonging to the country from which the goods came. The argument used by the promoters of the law was that by excluding the Dutch from the carrying trade to this country we should throw it into the hands of English shipowners, and there would be an increase of English ships. It was admitted, indeed, that this would be giving a monopoly to English shipowners and English sailors, and that therefore freights would be dearer, and a check given to the growth of commerce. It was further admitted that owing to their higher charges English ships might be driven out of neutral ports; but the contention was, that we should secure to ourselves the whole of the carrying trade between America and the West Indies and England, and that this would amply compensate for our expulsion from other branches of commerce. These anticipations were on the whole fulfilled. The price of freights were raised, because English ships cost more to build and man than Dutch ships, and thus the total amount of our trade was diminished. We were driven out of neutral ports, and lost the Russian and the Baltic trades, because the English shipowners, to whom we had given a monopoly, raised their charge. But on the other hand, we monopolized the trade to ports coming within the scope of the Act, the main object of which was 'the preservation of our plantation trade entire.' Our shipping received a great stimulus, and our maritime supremacy grew with it. At the time when the Navigation Act was passed our colonial trade was insignificant; New York and Jersey were Dutch; Georgia, the Carolinas, Pennsylvania, Nova Scotia were not yet planted; Virginia, Maryland, New England were in their infancy. At the end of the century the Barbadoes alone employed 400 vessels; while with the growth of the colonies the English power at sea had increased, until it rivalled the Dutch. In the next century the continuous development of the American and East Indian trades gave us a position of unquestionable maritime superiority. There is another argument in favour of Protection, at any rate in its early days. Its stimulus helped to overcome the apathy and dullness of a purely agricultural population, and draw a part of the people into trade. But here, as everywhere, Protection involves this great disadvantage, that, once given, it is difficult to withdraw, and thus in the end more harm is done than good. English industries would not have advanced so rapidly without Protection, but the system, once established, led to perpetual wrangling on the part of rival industries, and sacrificed India and the colonies to our great manufacturers. And our national dislike to Protection deepens into repugnance when we examine the details of the system. Looking at its results during the period from 1688 to 1776, when it was in full force, we are forced to acknowledge that Adam Smith's invectives against the merchants, violent as they were, were not stronger than the facts demanded. . . . If we look for the fundamental ideas of Adam Smith, those which distinguish him most clearly

from earlier writers, we are first struck by his cosmopolitanism. He was the precursor of Cobden in his belief that commerce is not of one nation, but that all the nations of the world should be considered as one great community. We may see how widely he had departed from the old national system of economy, by contrasting the mere title of his book, *The Wealth of Nations* (1776), with that of Mun's treatise, *England's Treasure in Foreign Trade*. This cosmopolitanism necessitated a detailed refutation of the mercantile system. He had to prove that gold and silver were not more important than other forms of wealth; and that if we wanted to buy them, we could always do so, if we had other consumable goods to offer in exchange. But it might be objected: 'What if a nation refuses to take your other goods, and wants your gold?' Adam Smith replied: 'In that case, gold will leave your country and go abroad; as a consequence, prices will fall at home, foreigners will be attracted by the low prices to buy in your markets, and thus the gold will return.' . . . Equally prominent in Adam Smith is his individualism, his complete and unhesitating trust in individual self-interest. He was the first to appeal to self-interest as a great bond of society. As a keen observer, he could point to certain facts, which seemed to bear out his creed. If we once grant the principle of the division of labour, then it follows that one man can live only by finding out what other men want; it is on this fact, for instance, that the food supply of London depends. This is the basis of the doctrine of *laissez faire*. It implies competition, which would result, so Adam Smith believed, in men's wants being supplied at a minimum of cost. In upholding competition he was radically opposed to the older writers, who thought it a hateful thing; but his conclusion was quite true. Again it implies the best possible distribution of industry; for under a system of free competition, every man will carry on his trade in the locality most suitable for it."—A. J. Toynbee, *Lectures on the industrial revolution of the eighteenth century in England*, pp. 53, 55-58, 61-62.—See also ECONOMICS: 17th-18th centuries; 18th century.

1780-1785.—United States.—Protection in Pennsylvania.—"Before the Revolution Pennsylvania had always been slow to impose burdens on trade. While Massachusetts, New York and South Carolina were raising considerable sums from imposts, Pennsylvania commerce was free from restrictions. In 1780, however, the need of revenue overcame the predilection of the Quakers for free trade and they decided 'that considerable sums can be raised by a small impost on goods and merchandise imported into this state without burdening commerce.' Accordingly, low duties were laid on wines, liquors, molasses, sugar, cocoa and tea, with 1 per cent. on all other imports. In 1782 the duties were doubled and the revenue was appropriated to the defence of commerce on the Delaware river and bay. This was done at the request of the merchants who wished to have their interests protected and 'signified their willingness

to submit to a further impost on the importation of goods for that purpose.' When peace came, however, the merchants at once represented it as detrimental to the interests of the state to continue the duties, and they were repealed. In 1784 low duties were again imposed, and later in the same year increased. Early in 1785 . . . came the important act 'to encourage and protect the manufactures of this state by laying additional duties on certain manufactures [imported] which interfere with them.' . . . The Pennsylvania act is of importance . . . because it formed the basis of the tariff of 1789."—W. Hill, *First stages of the tariff policy of the United States*, pp. 53-54.—The preamble of the Pennsylvania Act of 1785 set forth its reasons as follows: "Whereas, divers useful and beneficial arts and manufactures have been gradually introduced into Pennsylvania, and the same have at length risen to a very considerable extent and perfection, insomuch that in the late war between the United States of America and Great Britain, when the importation of European goods was much interrupted, and often very difficult and uncertain, the artizans and mechanics of this state were able to supply in the hours of need, not only large quantities of weapons and other implements, but also ammunition and clothing, without which the war could not have been carried on, whereby their oppressed country was greatly assisted and relieved. And whereas, although the fabrics and manufactures of Europe, and other foreign parts, imported into this country in times of peace, may be afforded at cheaper rates than they can be made here, yet good policy and a regard to the wellbeing of divers useful and industrious citizens, who are employed in the making of like goods, in this state, demand of us that moderate duties be laid on certain fabrics and manufactures imported, which do most interfere with, and which (if no relief be given) will undermine and destroy the useful manufactures of the like kind in this country, for this purpose. Be it enacted" &c.—*Pennsylvania Laws*, 1785.

1784-1786. — England. — Smuggling developed by trade restrictions.—Eden Commercial Treaty with France.—Pitt's trade policy.—The strict regulation of trade by the English government led to smuggling, which the government made an attempt to control. In 1784, "an Act known as the 'Hovering Act,' authorised the confiscation of a kind of vessel that was specially built for the smuggling trade, and of all vessels carrying tea, coffee, spirits, and any goods liable to forfeiture on importation, that were found at anchor or 'hovering' within four leagues of the coast; and an immense variety of regulations were made for preventing frauds in the process of distillation and for increasing the difficulties and dangers of the vast smuggling business which was carried on by vessels in the regular trade. At the same time, in the true spirit of Adam Smith, Pitt clearly recognised the fact that the extraordinary development of smuggling in any article is a proof that the duty on it is excessive, and he adopted on a large scale the policy of reducing and equalising duties, and diffusing the burden over a wide area. It was found by experience that the duty on tea gave rise to the most numerous frauds, and it had hitherto proved impossible to detect them. Pitt, reviving a policy which had been pursued by Pelham, reduced this duty from 110 to 12½ per cent., and provided for the loss which the exchequer might possibly incur by largely increasing the duty on the windows of houses, which it was not

possible to evade. The duty on British and West India rum, which was another important article of the smuggling trade, was also greatly diminished, while the duties on wine were transferred from the Custom House to the excise, which was found the least expensive and the most effectual method of collecting them. . . . Pitt revived the idea of a close commercial treaty with France. Eden was selected as the English negotiator in Paris, and the treaty was signed in September, 1786. This policy required some courage. The memory of the explosion of indignation caused by the commercial clauses of the Treaty of Utrecht had not died away. The popular antipathy to France had naturally acquired a fresh strength during the American War. That the conduct of France to England during the American War was extremely unfriendly, Pitt fully acknowledged. But the policy of nations should not be determined by mere motives of resentment, and it was a matter of legitimate pride that, after so many efforts to crush England, France now acknowledged herself to have failed, and was looking forward with eagerness to the benefit of an amicable connection. . . . The English manufacturers were well established. With the English superiority in capital and coal they were never likely to be shaken. They were increasing with an extraordinary rapidity, and their great want was a more extended market. This market the treaty would give them, and it would more than compensate them for the loss of the monopoly in America. France, on the other hand, was pre-eminently a country of wines and brandies, of oil and vinegar, articles which England did not produce, and which it was a great object to her to obtain at a cheap rate. The two countries were thus peculiarly fitted to carry on a mutually advantageous trade, for each had its own distinct staple; each produced in great abundance what the other wanted, and the great and leading lines of their respective riches did not clash. It was true that duties on a number of articles of import were to be lowered on an average of fifty per cent., but it was well-established and often a wise policy to surrender revenue for great commercial purposes. Nor was such a surrender likely to be serious, for increased consumption would rapidly recuperate the Treasury, and the chief loss would certainly fall upon the smuggling trade, which it was a main object of recent commercial legislation to suppress. . . . In spite of the [opposing] arguments which were . . . powerfully urged, the commercial treaty was carried. . . . One of its most remarkable consequences was an immediate revival of the taste for French wines which had prevailed in England before the wars of the Revolution and the importation of these wines which in the year before the treaty was less than 100,000 gallons rose in six years to 683,000 gallons."—W. E. H. Lecky, *History of England in the eighteenth century*, pp. 31-46.

1789-1792.—United States.—First tariff.—Policy formulated by Alexander Hamilton's report on manufactures.—"The immediate necessity of raising some money led to the passage of a tariff bill at the first session of Congress. It was prepared and carried through the House chiefly by Madison; and its contents, no less than the general tone of the debate in which it was discussed, showed a decided leaning towards the protective system. But this legislation was temporary. . . . The report of Hamilton [on manufactures] deter-

mined the policy of the country. For good or for evil protection was resorted to, with the avowed purpose of encouraging domestic manufacturing as well as of raising a revenue. . . . The principles upon which Hamilton based his tariff were not quite those of pure protection, but constituted what was known as the 'American System'; a system which has been believed in by former generations with a warmth of conviction not easy to withstand."—J. T. Morse, Jr., *Life of Alexander Hamilton*, ch. 11.—Hamilton's celebrated report (1791) opens with an elaborate argument to prove the desirability of manufacturing industries in the country, and then proceeds: "A full view having now been taken of the inducements to the promotion of manufactures in the United States, accompanied with an examination of the principal objections which are commonly urged in opposition, it is proper, in the next place, to consider the means by which it may be effected, as introductory to a specification of the objects which in the present state of things appear the most fit to be encouraged, and of the particular measures which it may be advisable to adopt in respect to each. In order to a better judgment of the means proper to be resorted to by the United States, it will be of use to advert to those which have been employed with success in other countries. The principle of these are:—I. Protecting duties, or duties on those foreign articles which are the rivals of the domestic ones intended to be encouraged. Duties of this nature evidently amount to a virtual bounty on the domestic fabrics, since by enhancing the charges on foreign articles they enable the national manufacturers to undersell all their foreign competitors. The propriety of this species of encouragement need not be dwelt upon, as it is not only a clear result from the numerous topics which have been suggested, but is sanctioned by the laws of the United States in a variety of instances; it has the additional recommendation of being a resource of revenue. Indeed, all the duties imposed on imported articles, though with an exclusive view to revenue, have the effect in contemplation; and, except where they fall on raw materials, wear a beneficent aspect towards the manufacturers of the country. II. Prohibitions of rival articles, or duties equivalent to prohibitions. This is another and an efficacious mean of encouraging manufactures; but in general it is only fit to be employed when a manufacture has made such a progress, and is in so many hands, as to insure a due competition and an adequate supply on reasonable terms. Of duties equivalent to prohibitions there are examples in the laws of the United States; and there are other cases to which the principle may be advantageously extended, but they are not numerous. Considering a monopoly of the domestic market to its own manufacturers as the reigning policy of manufacturing nations, a similar policy on the part of the United States, in every proper instance, is dictated, it might almost be said, by the principles of distributive justice; certainly by the duty of endeavoring to secure to their own citizens a reciprocity of advantages. III. Prohibitions of the exportation of materials of manufactures. The desire of securing a cheap and plentiful supply for the national workmen; and, where the article is either peculiar to the country, or of peculiar quality there, the jealousy of enabling foreign workmen to rival those of the nation with its own materials, are the leading motives to this species of regulation. It ought not to be affirmed that it is no instance proper, but it is certainly one which ought to be adopted with

great circumspection and only in very plain cases. IV. Pecuniary bounties. This has been found one of the most efficacious means of encouraging manufactures, and it is, in some views, the best, though it has not yet been practiced upon the government of the United States,—unless the allowance on the exportation of dried and pickled fish and salted meat could be considered as a bounty—and though it is less favored by public opinion than some other modes. Its advantages are these:—1. It is a species of encouragement more positive and direct than any other, and for that very reason has a more immediate tendency to stimulate and uphold new enterprises, increasing the chances of profit, and diminishing the risks of loss in the first attempts. 2. It avoids the inconvenience of a temporary augmentation of price, which is incident to some other modes, or it produces it to a less degree, either by making no addition to the charges on the rival foreign article, as in the case of protecting duties, or by making a smaller addition. The first happens when the fund for the bounty is derived from a different object (which may or may not increase the price of some other article according to the nature of that object); the second when the fund is derived from the same or a similar object of foreign manufacture. One per cent. duty on the foreign article, converted into a bounty on the domestic, will have an equal effect with a duty of 2% exclusive of such bounty; and the price of the foreign commodity is liable to be raised in the one case in the proportion of 1%, in the other in that of 2%. Indeed, the bounty when drawn from another source, is calculated to promote a reduction of price, because, without laying any new charge on the foreign article, it serves to introduce a competition with it, and to increase the total quantity of the article in the market. 3. Bounties have not, like high protecting duties, a tendency to produce scarcity. An increase of price is not always the immediate, though where the progress of a domestic manufacture does not counteract a rise, it is commonly the ultimate effect of an additional duty. In the interval between the laying of the duty and a proportional increase of price, it may discourage importation by interfering with the profits to be expected from the sale of the article. 4. Bounties are sometimes not only the best, but the only proper expedient for uniting the encouragement of a new object of agriculture with that of a new object of manufacture. It is the interest of the farmer to have the production of the raw material promoted by counteracting the interference of the foreign material of the same kind. It is the interest of the manufacturer to have the material abundant and cheap. If prior to the domestic production of the material in sufficient quantity to supply the manufacturer on good terms, a duty be laid upon the importation of it from abroad, with a view to promote the raising of it at home, the interest both of the farmer and manufacturer will be disserved. By either destroying the requisite supply, or raising the price of the article beyond what can be afforded to be given for it by the conductor of an infant manufacture, it is abandoned or fails; and there being no domestic manufactories to create a demand for the raw material which is raised by the farmer, it is in vain that the competition of the like foreign article may have been destroyed. It cannot escape notice that a duty upon the importation of an article can not otherwise aid the domestic production of it than by giving the latter greater advantages in the home market. It can have no influence upon the advantageous sale of the article produced in foreign

markets, no tendency, therefore, to promote its exportation. The true way to conciliate these two interests is to lay a duty on foreign manufactures of the material, the growth of which is desired to be encouraged, and to apply the produce of that duty by way of bounty either upon the production of the material itself, or upon its manufacture at home, or upon both. In this disposition of the thing the manufacturer commences his enterprise under every advantage which is attainable as to quantity or price of the raw material. And the farmer, if the bounty be immediately to him, is enabled by it to enter into a successful competition with the foreign material. . . . There is a degree of prejudice against bounties, from an appearance of giving away the public money without an immediate consideration, and from a supposition that they serve to enrich particular classes at the expense of the community. But neither of these sources of dislike will bear a serious examination. There is no purpose to which public money can be more beneficially applied than to the acquisition of a new and useful branch of industry, no consideration more valuable than a permanent addition to the general stock of productive labor. As to the second source of objection, it equally lies against other modes of encouragement, which are admitted to be eligible. As often as a duty upon a foreign article makes an addition to its price, it causes an extra expense to the community for the benefit of the domestic manufacturer. A bounty does no more. But it is the interest of the society in each case to submit to a temporary expense, which is more than compensated by an increase of industry and wealth, by an augmentation of resources and independence, and by the circumstance of eventual cheapness, which has been noticed in another place. It would deserve attention, however, in the employment of this species of encouragement in the United States, as a reason for moderating the degree of it in the instances in which it might be deemed eligible, that the great distance of this country from Europe imposes very heavy charges on all the fabrics which are brought from thence, amounting from 15% to 30% on their value according to their bulk. [See also BOUNTIES: Bounties by the United States government.] . . . V. Premiums. These are of a nature allied to bounties, though distinguishable from them in some important features. Bounties are applicable to the whole quantity of an article produced or manufactured or exported, and involve a correspondent expense. Premiums serve to reward some particular excellent or superiority, some extraordinary exertion or skill, and are dispensed only in a small number of cases. But their effect is to stimulate general effort. . . . VI. The exemption of the materials of manufactures from duty. The policy of that exemption, as a general rule, particularly in reference to new establishments, is obvious. . . . VII. Drawbacks of the duties which are imposed on the materials of manufactures. It has already been observed as a general rule, that duties on those materials ought, with certain exceptions, to be forborne. Of these exceptions, three cases occur which may serve as examples. One where the material is itself an object of general or extensive consumption, and a fit and productive source of revenue. Another where a manufacture of a simpler kind, the competition of which with a like domestic article is desired to be restrained, partakes of the nature of a raw material from being capable by a further process to be converted into a manufacture of a different kind, the

introduction or growth of which is desired to be encouraged. A third where the material itself is the production of the country, and in sufficient abundance to furnish a cheap and plentiful supply to the national manufacturers. . . . Where duties on the materials of manufactures are not laid for the purpose of preventing a competition with some domestic production, the same reasons which recommend, as a general rule, the exemption of those materials from duties, would recommend, as a like general rule, the allowance of drawbacks in favor of the manufacturer. . . . VIII. The encouragement of new inventions and discoveries at home, and of the introduction into the United States of such as may have been made in other countries; particularly those which relate to machinery. This is among the most useful and unexceptionable of the aids which can be given to manufactures. The usual means of that encouragement are pecuniary rewards, and, for a time, exclusive privileges. . . . IX. Judicious regulations for the inspection of manufactured commodities. This is not among the least important of the means by which the prosperity of manufactures may be promoted. It is indeed in many cases one of the most essential. Contributing to prevent frauds upon consumers at home and exporters and preserve the character of the national manufactures; it cannot fail to aid the expeditious and advantageous sale of them, and to serve as a guard against successful competition from other quarters. . . . X. The facilitating of pecuniary remittances from place to place—is a point of considerable moment to trade in general and to manufactures in particular, by rendering more easy the purchase of raw materials and provisions, and the payment for manufactured supplies. A general circulation of bank paper, which is to be expected from the institution lately established, will be a most valuable mean to this end. . . . XI. The facilitating of the transportation of commodities. Improvements favoring this object intimately concern all the domestic interests of a community; but they may, without impropriety, be mentioned as having an important relation to manufactures. . . . The foregoing are the principal of the means by which the growth of manufactures is ordinarily promoted. It is, however, not merely necessary that the measures of government which have a direct view to manufactures should be calculated to assist and protect them; but that those which only collaterally affect them, in the general course of the administration, should be guarded from any peculiar tendency to injure them. There are certain species of taxes which are apt to be oppressive to different parts of the community, and, among other ill effects, have a very unfriendly aspect towards manufactures. All poll or capitation taxes are of this nature. They either proceed according to a fixed rate, which operates unequally and injuriously to the industrious poor; or they vest a discretion in certain officers to make estimates and assessments, which are necessarily vague, conjectural, and liable to abuse. . . . All such taxes (including all taxes on occupations) which proceed according to the amount of capital supposed to be employed in a business, or of profits supposed to be made in it, are unavoidably hurtful to industry." —Alexander Hamilton, *Report on manufactures* (*Works*, v. 3).—This document set forth the stand which the Federalists took, and their successors the Republicans have since maintained, on the tariff. From 1792 on, the issues which defined the two leading political parties of the United States, under various names, included the tariff, the

Democrats advocating tariff for revenue only, and the Republicans, protection.

1789-1826.—France.—Policy during French Revolution.—Napoleon's continental system.—Restoration of prohibitory duties.—The Revolution of 1780 first gave economic unity to France. Until that time internal commerce was hampered by innumerable tolls and feudal dues, by the right of the various provinces to impose customs duties against each other. . . . The transit of goods through the country was so costly as to be almost impossible. The Constituent Assembly swept away all these obstacles; in 1790 it abolished the internal tolls and the provincial tariffs, and it established one common and uniform tariff against foreign countries in 1791. The new duties were fairly moderate; they ranged from 5 to 15 per cent. (or in a few cases 20 per cent.) on manufactured articles, and admitted free most raw materials (such as hides,\* wool, flax, and iron) and foodstuffs, such as corn and cattle. It is true that there were a number of prohibitions of import, but very few were of any economic importance; and the prohibition of exports, to any considerable extent, only came when war was inevitable, and could be justified as a war measure. . . . But in 1792 war broke out, and gradually the tariff policy of France became more and more restrictive. All existing commercial treaties, especially the one made with Great Britain in 1786, were annulled, and the prohibition of the export of commodities was extended; and then the National Convention, recognising that Great Britain was its most dangerous foe, entered on the attempt to cripple her by destroying her foreign trade. In March, 1793, the entry into France of certain commodities coming chiefly from Great Britain was prohibited, and in October of the same year, as that measure did not suffice, the import, sale, and use of all commodities made or manufactured in the United Kingdom or in the British Empire were forbidden under extremely heavy penalties. Yet even this enactment fell very far short of attaining the desired end, and the Directory found it necessary to go still further. It ordered that a large number of commodities, whatever their place of origin, should be *reputed* to be British produce, and should be liable to be seized as such wherever found. But this extreme measure also proved insufficient; certainly by 1802 the customs revenue had fallen to 42 million francs (of which 11 millions were swallowed up by the cost of collection), but an enormous smuggling trade had arisen, and the French Government, in spite of its efforts, could not prevent the constant influx of British goods. Under the Consulate, with Napoleon holding practically supreme power, the same policy was pursued, but its further application was delayed for a time by the negotiations which preceded the Treaty of Amiens, and the signature of that treaty in March, 1802. Though Napoleon declined to accept the contention of the British ministry that the signature of the treaty of peace restored the commercial relations of the two countries to their position under the agreement of 1786, he showed himself willing to make a fresh arrangement, and negotiations commenced, only to be brought to an abrupt end by the renewal of war in May, 1803. After Trafalgar, Napoleon, now become Emperor, began his supreme effort to break Great Britain's industrial and commercial power by isolating her from Continental Europe. The Berlin Decrees

of November, 1806, with their sequel, the Milan Decrees of 1807 and 1808, prohibited all commercial relations between the countries under Napoleon's control (that is, the greater part of Europe) and Great Britain, announced that that country was in a state of blockade, and declared all vessels which had touched at British ports to be lawful prize. Meanwhile, the French tariffs were steadily rising; there had been a great increase in the duties on colonial produce in 1806, and in February and August, 1810, they were raised to an extraordinary height. There were advances also on manufactured goods, but in spite of this and the prohibitions, the manufacturers were constantly asking for yet more protection. The disorders of the early years of the Revolution had almost destroyed the good effect of the liberating work of the Constituent Assembly; up to 1799 trade and commerce in France rather declined than advanced. With the rise to power of Napoleon, who really cared for industrial progress, and with the re-establishment of internal order, conditions began to improve. . . . But there was a reverse side to this industrial progress. The development was essentially artificial; it was the outcome, not so much of the enterprise of French manufacturers, as of the compulsion laid upon consumers to have recourse to them, and their undisturbed sway in the home market. Except in a few cases there was no considerable improvement in their methods, and 'after being kept apart for a quarter of a century from all regular contact with the products of the British manufacturers, we [the French] found ourselves at the establishment of peace even further behind than was the case prior to the war; whilst machinery had gradually developed in England, in France it had made very little progress.' Moreover, there was much over-speculation in France, followed by extensive monetary difficulties, and the bad harvest of 1811 made things worse. The result was a commercial crisis in the years 1811 to 1813. Napoleon recognised that his attempt to destroy the economic basis of Great Britain's power had failed, and that the 'continental system' had resulted only in considerable disaster to the French ports. He tried, therefore, in 1813 to improve matters by granting licences enabling certain goods needed for French manufactures, such as cotton, tobacco, lumber, to be brought in ships so licensed at a duty of only 50 per cent., on condition that the same ships took an outward cargo of French products. But it was too late to save the situation; the commercial disorder and general collapse discredited Napoleon's statesmanship, as the disastrous Russian campaign did much to destroy his military reputation. The Restoration Monarchy was called on to deal with an extremely difficult problem. The economic policy of Napoleon had brought into existence a small but powerful class of iron-masters and textile manufacturers, who were bent on maintaining their monopoly of the French market, and dreaded the threatened invasion of British goods. The landowners were anxious to keep up the high price of grain. In April, 1814, the Comte d'Artois, acting as Lieutenant-General of the realm, issued an edict greatly reducing the duties on coffee and sugar, and practically abolishing those on raw cotton. The merchants holding stocks of colonial produce, and the cotton-spinners, who also thought that the value of their stocks would consequently be depreciated, were at once aroused, and, by representing the Government's action as the first step towards the abandonment of Protection, the opponents of the new policy were able to carry

all the manufacturers with them. . . . The new Government was not able to resist the pressure. Absolute prohibition was maintained in a great many cases, and with regard to others high Protection was adopted, and the record of the economic policy of the Restoration monarchy is simply the story of a Government attempting to hold the balance between the party which favoured commercial liberty and the various well-organised groups representing particular interests, and forced again and again to go much further in the direction of Protection than it desired. The Tariff Act of 1816 made it perfectly clear that, for a very long time, France would adhere to the commercial policy which she had adopted during the war. . . . Commercial policy during the Restoration period . . . was a policy of Protection continued from the Napoleonic era, originally in the interests of the manufacturers; but as the reactionary and agrarian party gained the upper hand in Parliament, the system was generalised, and extended particularly to serve the purpose of agriculture, though some compensation was offered to manufactures in the form of bounties on exports, and drawbacks. The culminating point was reached in the Tariff Act of 1826, which completed the whole scheme of Protection, and seemed intended to make France almost entirely self-contained."—P. Ashley, *Modern tariff history*, pp. 269-275, 278-279.—See also FRANCE: 1806-1810.

1808-1824.—United States.—Effect of War of 1812.—Tariffs of 1816 and 1824.—Free trade advocated by Webster and Hayne.—"The industrial situation changed abruptly in 1808. The complications with England and France led to a series of measures which mark a turning-point in the industrial history of the [United States]. The Berlin and Milan decrees of Napoleon, and the English Orders in Council, led, in December, 1807, to the Embargo. The Non-Intercourse Act followed in 1809. War with England was declared in 1812. During the war, intercourse with England was prohibited, and all import duties were doubled. The last-mentioned measure was adopted in the hope of increasing the revenue, but had little effect, for foreign trade practically ceased to exist. This series of restrictive measures blocked the accustomed channels of exchange and production, and gave an enormous stimulus to those branches of industry whose products had before been imported. Establishments for the manufacture of cotton goods, woollen cloths, iron, glass, pottery, and other articles, sprang up with a mushroom growth. . . . It is sufficient here to note that the restrictive legislation of 1808-15 was, for the time being, equivalent to extreme protection. The consequent rise of a considerable class of manufacturers, whose success depended largely on the continuance of protection, formed the basis of a strong movement for more decided limitation of foreign competition."—F. W. Taussig, *Protection to young industries*, p. 20.—In his annual report in December, 1815, Dallas [secretary of the treasury] had proposed the extension of the double duties until June 30, 1816, in order to give time for the elaboration of a new tariff bill; and after some discussion Congress agreed to this plan. February 13 he transmitted his reply to the resolutions of the previous February, closing with a carefully prepared schedule of new tariff rates. This, after being worked over in the Ways and Means Committee, was

embodied in a bill and introduced into the House March 12, by Lowndes of South Carolina. . . . The tariff of 1816 was a substantial victory for the manufacturers. . . . But . . . in its working out the tariff of 1816 proved a bitter disappointment to the manufacturing interests."—O. L. Elliott, *Tariff controversy, 1789-1833* (*Leland Stanford University monographs*, no. 1, pp. 163-211).—"The revision of the Tariff, with a view to the protection of home industry, and to the establishment of what was then called, 'The American System,' was one of the large subjects before Congress at the session of 1823-24, and was the regular commencement of the heated debates on that question which afterwards ripened into a serious difficulty between the federal government and some of the southern States. . . . Revenue the object, protection the incident, had been the rule in the earlier tariffs: now that rule was sought to be reversed, and to make protection the object of the law, and revenue the incident. . . . Mr. Clay, the leader in the proposed revision, and the champion of the American System, expressly placed the proposed augmentation of duties on this ground. . . . The bill was carried in the House, after a protracted contest of ten weeks, by the lean majority of five—107 to 102—only two members absent, and the voting so zealous that several members were brought in upon their sick couches. In the Senate the bill encountered a strenuous resistance. . . . The bill . . . was carried by the small majority of four votes—25 to 21. . . . An increased protection to the products of several States, as lead in Missouri and Illinois, hemp in Kentucky, iron in Pennsylvania, wool in Ohio and New York, commanded many votes for the bill; and the impending presidential election had its influence in its favor. Two of the candidates, Messrs. Adams and Clay, were avowedly for it; General Jackson, who voted for the bill, was for it, as tending to give a home supply of the articles necessary in time of war, and as raising revenue to pay the public debt."—T. H. Benton, *Thirty years' view*, v. 1, ch. 13.—"The protective tariff of 1824 was christened with the absurd name of the "American System" though it was American in no other or better sense than foreign war to protect fancied national interests is an American system, and though the system had come from the Middle Ages in the company of other restrictions upon the intercourse of nations. It was carried on by the factitious help of this designation and the fine leadership of Henry Clay. . . . The debates upon the tariff in the House of Representatives and in the Senate in April, 1824 were admirable presentations of the subject. Webster in the House and Hayne in the Senate put the free trade side."—E. M. Shepard, *Martin Van Buren*, pp. 84-86.—Their great speeches on the tariff were notable summaries of the arguments of the free traders.

1815-1828.—England.—Corn Laws for protection of English agriculture.—Interests involved.—"The English Corn Laws are of great variety, and have a very long history. Speaking generally, it may be said that throughout there were three principal objects kept in view, the emphasis being varied according to the needs of the time. All three objects were in themselves eminently reasonable—(1) there was the interest of the consumer in cheapness and abundance; (2) the interest of the producers was naturally an object of concern when for centuries agriculture was the chief occupation

of the great mass of the people; and (3) the interest of the nation, as distinct from the amalgam of the interests of individuals and classes, was considered in various aspects as, for example, with regard to the prerogative of the Crown in trade, or the advancement of naval supremacy or colonial dominion. . . . There is a popular opinion that the interests of the consumer only began to be considered in 1846; as a matter of fact, in England the interests of the consumer had received the continuous attention of the Government for more than six centuries before that date."—J. S. Nicholson, *History of the English corn laws*, pp. 12-14.—During the Napoleonic wars in Europe there was a prolonged period of scarcity, approaching to famine, in Great Britain. There were scant harvests at home and supplies from abroad were cut off by the "Continental system" of Napoleon. (See above: 1789-1826.) "The cry of starvation was everywhere heard amongst the working classes, and tradesmen of all kinds suffered severely; whilst the only well-to-do people were the Farmers and the Landlords. As soon as the war was over, and out ports were opened for the reception of foreign grain, prices came down rapidly. Then the Landlords took alarm, and appealed to Parliament to resist the importation of foreign grain, which they asserted, would be the ruin of the English Farmers. They insisted that in this country, the costs of cultivation were extremely heavy, as compared with those of foreign producers of grain, and that therefore the British Farmer must receive protection in order to prevent his ruin. Hence a Parliament, composed mostly of Landlords, proceeded, in 1815, to enact the Corn Law, which excluded foreign wheat, except at high rates of duty, until the market price should reach 80s. per quarter; and other kinds of grain, until there was a proportionate elevation in prices. The discussions in Parliament on this question made a great impression, and led to a wide-spread sympathy, and to the belief that there was need of a measure, which, according to its advocates, would preserve our Agriculture from ruin, and be at the same time a provision against famine. But by many thoughtful and patriotic people this law was viewed with intense dislike, and was characterised as an atrocious fraud. The fact was, that . . . when rents ought either to have been lowered, or the methods of cultivation improved, the Corn Law was passed by the Landlords in order to keep out foreign corn and to maintain high rents; and many of the common people saw, or thought they saw, what would be the effect; for whilst the legislature was engaged in the discussion of the question, the people of London became riotous, and the walls were chalked with invectives such as 'Bread or Blood,' 'Guy Fawkes for ever,' etc. A loaf, steeped in blood, was placed on Carlton House, (now the Tory Club House). The houses of some of the most unpopular of the promoters of the measure were attacked by the mob. . . . Regardless, however, of the public demonstrations of dislike to the Corn and Provision Laws, the Legislature persisted in upholding the most stringent provisions thereof until the year 1828, when the duties on the importation of grain were adjusted by a sliding scale, in accordance with the average prices in the English market. . . . It was soon found that as a means of protection to the British Farmer, the operation of the sliding scale of duties was scarcely less effective, by deterring imports of grain, than the previous law, which absolutely excluded wheat until it reached 80s. per quarter. The Act certainly provided that foreign

grain might at any time be imported, and be held in bond till the duty was paid; a provision under which it was expected to be stored until the price should be high, and the duty low; but the expenses attendant upon warehousing and preserving it from injury by keeping, were usually looked upon as an undesirable or even dangerous investment of a merchant's capital. . . . Agricultural protection, as exhibited by the Corn Law, would, however, have been very incomplete without the addition of the Provision Laws. By these Laws the importation of Foreign Cattle and foreign meat were strictly prohibited. Butter and Lard were indeed allowed to be imported, but they were not to be used as food, and in order to provide against any infraction of the law, the officers at the Custom Houses were employed to 'spoil' these articles on their arrival, by smearing them with a tarred stick. They could then be used only as grease for wheels, or for the smearing of sheep. With bread purposely made dear, with the import of cattle and of flesh meat prohibited, and with lard and butter wilfully reduced from articles of food to grease for wheels, there is no difficulty in accounting for the frequent murmurs of discontent, and for the starvation among the poorer classes in every part of the Kingdom. Soup kitchens were opened almost every winter, and coals and clothing gratuitously distributed in many places; but such palliatives were regarded with derision by all who understood the true causes of the evil. Such help was scorned, and a cry for justice was raised; scarcity was said to be created by Act of Parliament, in order to be mitigated by philanthropy."—H. Ashworth, *Recollections of Richard Cobden*, ch. 1.

1817.—Germany.—Internal tariff.—Menace to commerce. See COMMERCE: Commercial Age: 1800-1900.

1817-1848.—England.—Free trade school of economists.—Ricardo and Mill.—Triumph of free trade in repeal of Corn Laws.—"From 1800 on, the most acute economic thinkers began to turn from the, until then, definitive text of the 'Wealth of Nations' and to press their inquiry along these lines left vague or fragmentary by Adam Smith. Long before the corn law issue of 1813-14 brought the debate to some culmination, Malthus, West, Torrens, and probably even Ricardo had undertaken to analyze the principles determining the relative shares of rent, profits, and wages. . . . It is not too much to say that much of our present-day wisdom with respect to (a) currency, (b) taxation and (c) international trade is based upon Ricardo's analyses. . . . But more than this, the theory of international trade, 'as it was left by Ricardo, and expounded, but not substantially altered, by Mill' has furnished the scientific basis for the practical rule of free trade. This is alike the argument of advocates, and the verdict of historians of freedom of trade."—J. H. Hollander, *David Ricardo, a centenary estimate (pamphlet)*, pp. 110, 123, 125.—The corn laws had led the common people of England to want for food, and their hunger caused riots, the culmination of which was the discovery in 1817 of an organized attempt to overthrow the government. Under such circumstances "the Free Trade doctrine . . . gave birth to one of the most powerful movements in economic history, which led to the famous law of June 25, 1846, abolishing import duty on corn.

This law was followed by others, and ended in the complete removal of all tariff barriers. But the eloquence of Cobden, of Bright, and of others was necessary before it was accomplished. A national Anti-Corn League had to be organised, no less than ten Parliamentary defeats had to be endured, the allegiance of Peel and the approval of the Duke of Wellington had to be secured before they were removed. All this even might have proved futile but for the poor harvest of 1845. This glorious campaign did more for the triumph of the Liberal economic school and for the dissemination of its ideas than all the learned demonstrations of the masters."—C. Gide and C. Rist, *History of economic doctrines*, pp. 365-366.—It was a preface to the liberal movements throughout Europe in 1848.—See also ECONOMICS: 19th century: Forerunners of the historical school.

1820-1923.—Latin America.—Revenue tariffs.—Reason for slow development of protectionism.—Since 1820, when the Latin American countries threw off the yoke of Spain, each of the republics has carried out a tariff policy determined by the resources of these countries in raw materials, and their need of manufactured imports. In 1923, "Latin American tariffs [were] primarily for raising revenue. Most Latin American governments are apt to look at the particular tariff provision from the point of how much revenue it will produce, and consequently rates are often raised or lowered in experimental attempts to arrive at the high-revenue producing mark. A secondary purpose underlying Latin American tariffs is that which generally speaking has been the chief purpose of the United States tariff laws and revisions thereof, to protect domestic industry. But the bases for the protection of domestic industry through tariff laws do not exist in any of the Latin American countries as in the United States. As stated above, these countries are not manufacturing countries in the sense that the United States and Western Europe are. Protection is a fact, and not solely a result of the law. The law intended to foster an industry can never become a protective law until the industry exists, and then it is protective only to the degree, in kind and quantity, to which this domestic industry is able to supply the domestic wants. Certain Latin American countries—notably Brazil, Mexico, and Chile—have enacted tariff laws intended to be protective, but the industries have in only a few instances responded in quantity and less often in kind to the domestic demand, so that the foreign exporter may disregard the protective features of Latin American, even of Brazilian, Mexican, and Chilean, tariff laws and regard all such as being high tariff rates in a certain degree, restrictive of trade. In other words Latin-American protective laws are very apt to be not protective, although far above the revenue producing mark."—*Latin American tariffs (Bulletin of the Pan American Union, July, 1910, pp. 42)*.

1828.—United States.—"Bill of Abominations."—Webster's change of stand on tariff question.—Attitude of the South.—"The contest between the North and South entered an acute stage when a

still higher protective tariff was demanded by the Northern woolen and iron manufacturers in 1827, and the demand was supported by a protectionist congress held at Harrisburg, Pennsylvania. . . . The South was violent in protest. . . . The Southerners were not strong enough to keep a new high tariff bill out of Congress in 1828, but they resorted to a shrewd trick to defeat it. Instead of seeking to lower the tariff rates proposed, they joined the Western farmers in greatly increasing them. A presidential election was approaching, and the South appealed to a large anti-Adams sentiment to frame a tariff bill so preposterous that new England would reject it, and so bring dishonor and defeat upon Adams' cause. . . . All New England's demands for protection to manufactures were granted in the bill, but their benefits were largely neutralized by the addition of high duties on raw wool to please the sheep raisers of Ohio, on hemp to satisfy the farmers of Kentucky, and on pig iron to conciliate the miners of Pennsylvania. In spite of this shrewd plan of the South to match the West against New England, and thus to please nobody by pleasing everybody, the fantastic bill passed the House by a vote of 105 to 94, the Senate by 26 to 21, and became a law by President Adams' signature. . . . The 'Tariff of Abominations', as this bill was called, was one of the most outrageous pieces of legislation ever passed by Congress. It was a low political job which as Randolph said 'had to do with no manufactures except the manufacture of a President!'—D. S. Muzzey, *American history*, pp. 271-273.—"For this bill Mr. Webster spoke and voted. He changed his ground on this important question absolutely and entirely, and made no pretence of doing anything else. . . . Opinion in New England changed for good and sufficient business reasons, and Mr. Webster changed with it. Free trade had commended itself to him as an abstract principle, and he had sustained and defended it as in the interest of commercial New England. But when the weight of interest in New England shifted from free trade to protection Mr. Webster followed it"—H. C. Lodge, *Daniel Webster, ch. 6*.—See also U. S. A.: 1828-1833.

1830-1848.—France.—Bastiat's efforts for free trade versus industrial monopolies of the Restoration period.—His influence outside of France.—"The Governments of the Restoration—both Bourbon and Orleanist [during the long reign of Louis Philippe, 1830-1848], were very much more liberal than the Parliamentary majorities. They were, however, powerless against the coalition of 'big' manufacturers and landowners, who were enabled by the restriction of the franchise to control the legislative bodies. It was in these days that a monopolist in the Upper House dared to assert candidly the truth which, under a more democratic régime, is apt to be concealed: 'No society can dispense entirely with an aristocracy; every government has need of one. Do you wish to know the aristocracy of the July monarchy? It is the aristocracy of the great ones in the industrial and manufacturing world. They are the founders of the new dynasty.' It is only fair to add that public opinion was almost without exception on the side of the monopolists. The agitation initiated by Bastiat in imitation of Cobden's League was a failure."—H. O. Meredith, *Protection in France* (W. H. Dawson, ed., *Protection in Various Countries Series, pp. 5-6*).—In

England Bastiat "had become acquainted with the leaders of the Anti-Corn Law League, and determined to do for France what they had done and were doing for England. In 1845 he published *Cobden and the League* (*Cobden et la Ligue*) to glorify 'the grand movement' as he called it. . . . In 1845 Bastiat moved to Paris and became secretary of the Free Trade Association there, and also took charge of a newspaper called *Free Trade*. . . . His most ambitious work and his attempt at a more positive and constructive contribution was the *Harmonies Economiques*. . . . In general criticism of Bastiat's work, it is to be observed that he was greatly influenced by the controversial atmosphere in which he lived. His doctrines appear unduly warped by his propaganda against protectionism and Socialism, while underlying all his argument is the unsound idea that the organization of society under competition is the most perfect that can be effected or even conceived of. . . . Its popular influence has, however, been remarkable. . . . It owed its existence to a great extent to the extreme free trade party in England, called on the Continent generally the Manchester Party, from the city where it has its stronghold. But Bastiat's system has also reacted upon this party, leading it to greater extremes in doctrine. In Germany a party was also formed . . . opposing all interference of government, and accepting Bastiat without reserve."—L. H. Haney, *History of economic thought*, pp. 251-253, 259-260.

1832.—United States.—Clay's tariff of 1832.—American system saved.—President Jackson, in his message of December, 1831, "invited attention to the fact that the public debt would be extinguished before the expiration of his term, and that, therefore, 'a modification of the tariff, which shall produce a reduction of the revenue to the wants of the government,' was very advisable. He added that, in justice to the interests of the merchant as well as the manufacturer, the reduction should be prospective, and that the duties should be adjusted with a view 'to the counteraction of foreign policy, so far as it may be injurious to our national interests.' This meant a revenue tariff with incidental retaliation. He had thus arrived at a sensible plan to avoid the accumulation of a surplus. Clay took the matter in hand in the Senate, or rather in Congress. . . . He recognized the necessity of reducing the revenue, but he would reduce the revenue without reducing protective duties. The 'American System' should not suffer. It must, therefore, not be done in the manner proposed by Jackson. He insisted upon confining the reduction to duties on articles not coming into competition with American products. . . . Instead of abolishing protective duties he would rather reduce the revenue by making some of them prohibitory. . . . When objection was made that this would be a defiance of the South, of the President, and of the whole administration party, he replied, as Adams reports, that 'to preserve, maintain and strengthen the American System, he would defy the South, the President and the devil.' He introduced a resolution in the Senate, 'that the existing duties upon articles imported from foreign countries, and not coming into competition with similar articles made or produced within the United States, ought to be forthwith abolished, except the duties upon wines and silks, and that those ought to be reduced; and that the Committee on Finance be instructed to report a bill accordingly.'" After long debate Clay's "tariff resolution was

adopted, and in June, 1832, a bill substantially in accord with it passed both houses, known as the tariff act of 1832. It reduced or abolished the duties on many of the unprotected articles, but left the protective system without material change. As a reduction of the revenue it effected very little. . . . The reduction proposed by Clay, according to his own estimate, was not over seven millions; the reduction really effected by the new tariff law scarcely exceeded three millions. Clay had saved the American System at the expense of the very object contemplated by the measure. It was extremely short-sighted statesmanship. The surplus was as threatened as ever, and the dissatisfaction in the South grew from day to day."—C. Schurz, *Life of Henry Clay*, v. 1, ch. 13.—See also AMERICAN SYSTEM.

1833.—United States.—Nullification in South Carolina.—Clay's compromise tariff. See U. S. A.: 1828-1833; SOUTH CAROLINA: 1828-1833.

1833.—Germany.—Frederick List's agitation for protection.—Formation of Zollverein.—"At the close of the Napoleonic Wars, the continental blockade system, under which Germany had left the advantage of Protection in many of her manufactures, came to an end. German ports were thrown open to foreign manufactured imports at low rates of duty, but custom-houses continued to gather duties on the frontiers of all the petty German States from one another. An association, formed to promote the abolition of these internal barriers to trade, elected [Frederick] List as its president. His election to this office, which was disapproved of by the Government authorities, cost List his official appointment in the civil service of Würtemberg, and eventually led him to seek his fortunes in America. While there he made the acquaintance of General Lafayette, President Jackson, Henry Clay and other leading spirits of the United States. His stay in America, where he was successful both in journalism and industrial enterprise, doubtless tended to strengthen his belief in the national and federal value of Free Trade within the national territories, and a Protective tariff outside. On his return to his native country he returned with renewed vigour to the task of converting his countrymen to his views. In 1841 appeared the first part of his *National System of Political Economy*—the fourth part entitled *The Politics* being published in 1844. The avowed object of this work was to advocate a policy for uniting Germany by a Customs Union or Zollverein embracing all the different States, in other words to do as the United States had already done, to allow no duties within the Federation but to maintain and develop them without. Free Trade for the home manufacturer within his own domain—restricted trade for the foreign competitor. A nation without great productive industries of its own, dependent for the bulk of its manufactured supplies on other countries, was no more acceptable to List than it had been to Hamilton, however much such a scheme might commend itself to the English free traders writing avowedly in the broad interests of mankind at large, but really, as List stoutly maintained, on behalf of their country, then the workshop of the world. At the time List wrote his book, the Free Trade doctrines of J. B. Say and Adam Smith had been for some time before the world and had attracted many followers. In meeting them List had no difficulty in showing how much the policy by which England had risen to greatness differed from the teachings of these writers. . . . A Manufacturers' Union with branches throughout Germany

was formed. . . . Deputations visited every German court, the work of the Zollverein began in earnest. [A union was first formed between Württemberg and Bavaria, then, in 1833, with some of the German states and Prussia; then between the middle German states—Saxony, Brunswick, Schaumburg-Lippe, Hesse Cassel, Hesse Darmstadt and Baden; finally there occurred a fusion of these three groups into a general customs union which comprised the whole of Germany (including Luxemburg), except Austria, Hanover, the Hansa towns and the two Mecklenburgs, Hanover, Oldenburg and the Hansa towns formed the North-western League. Trade within the union or Zollverein was free and unrestricted, but as against the outside world a moderate protectionist tariff was maintained.]—A. P. Hillier, *Commonweal*, pp. 73-75, 78.—See also GERMANY: 1817-1840; INDUSTRIAL REVOLUTION: Germany.

1836-1841.—England.—Formation of Anti-Corn Law Association at Manchester.—Cobden's leadership.—In 1836 Richard Cobden, on his return from Spain and the Near East, published his epoch-making pamphlet on Russia, and entered into political activity at Manchester. "In October, 1838, a band of seven men met at a hotel in Manchester, and formed a new Anti-Corn Law Association. They were speedily joined by others, including Cobden, who from this moment began to take a prominent part in all counsel and action. That critical moment had arrived, which comes in the history of every successful movement, when a section arises within the party, which refuses from that day forward either to postpone or to compromise. The feeling among the older men was to stop short in their demands at some modification of the existing duty. . . . The more energetic members protested against these faltering voices. . . . The meeting was adjourned, to the great chagrin of the President, and when the members assembled a week later, Cobden drew from his pocket a draft petition which he and his allies had prepared in the interval, and which after a discussion of many hours was adopted by an almost unanimous vote. The preamble laid all the stress on the alleged facts of foreign competition, in words which never fail to be heard in times of bad trade. It recited how the existing laws prevented the British manufacturer from exchanging the produce of his labour for the corn of other countries, and so enabled his foreign rivals to purchase their food at one half of the price at which it was sold in the English market; and finally the prayer of the petition called for the repeal of all laws relating to the importation of foreign corn and other foreign articles of subsistence, and implored the House to carry out to the fullest extent, both as affects manufactures and agriculture, the true and peaceful principles of free-trade. In the following month, January, 1839, the Anti-Corn-Law Association showed that it was in earnest in the intention to agitate, by proceeding to raise a subscription of an effective sum of money. Cobden threw out one of those expressions which catch men's minds in moments when they are already ripe for action. 'Let us,' he said, 'invest part of our property, in order to save the rest from confiscation.' Within a month £6,000 had been raised, the first instalment of many scores of thousands still to come. A great banquet was given to some of the parliamentary

supporters of Free Trade; more money was subscribed, convictions became clearer and purpose waxed more resolute. On the day after the banquet, at a meeting of delegates from other towns, Cobden brought forward a scheme for united action among the various associations throughout the country. This was the germ of what ultimately became the League."—J. Morley, *Life of Richard Cobden*, v. 1, ch. 6.—Cobden carried the agitation against the corn laws into Parliament, to which he was elected in 1841.

1842.—United States.—Act of 1842.—Need of increased revenue.—"There had been a lull in tariff legislation for ten years. . . . Whatever difference of opinion existed respecting the necessity of additional protection to manufacturers, some expedient, it was universally conceded, must be adopted to increase the public revenue. As no one favored direct taxation, a revision of the tariff was the only mode of enriching the treasury. . . . The committee on manufactures did not report to the House until the last of March, 1842. . . . The leading provisions of the bill reported by the committee were the following: 1. A general ad valorem duty of 30 per cent, with few exceptions, where the duty was on that principle. 2. A discrimination was made for the security of certain interests requiring it by specific duties, in some instances below, in others above, the rate of the general ad valorem duty. 3. As a general principle, the duty on the articles subject to discrimination was made at the rate at which it was in 1840, after the deduction of four-tenths of the excess on 20 per cent by the Act of 1833."—A. S. Bolles, *Financial history of the United States, 1789-1860*, bk. 3, ch. 6.

1842.—England.—First step toward free trade in Peel's modification of Corn Laws.—Sir Robert Peel was called upon to form the new Tory ministry when in 1841 the Whig administration under Melbourne gave way. (See ENGLAND: 1841-1842.) "But neither party was yet prepared to sweep away the whole clumsy and baneful machinery of a tax on the nation's food. The Whigs had declared in 1841 for a fixed duty of 8s. a quarter. This compelled their opponents by an irresistible law of party warfare to adopt the only practicable alternative of a modified sliding scale. . . . With the unerring instinct of a threatened monopoly they felt that to touch the corn law was to weaken it. The Whigs had touched the ark of protection and had perished; the sacred emblem was now placed in the custody of Peel, and it was impossible that he could betray them [so the Tories thought]. Peel was content at the outset to tinker with the sliding scale. The burden must remain, for so the country had resolved, and he was still convinced himself of the justice and necessity of the tax, but he would make it easier to bear. Even this change, however, sufficed to alarm the more thorough-going Protectionists."—J. R. Thursfield, *Peel (English Statesmen Series, pp. 183-185)*.—"On the 9th of February [1842] Peel moved that the House should resolve itself into a Committee to consider the Corn Laws. His speech, which lasted nearly three hours, was necessarily dull, and his proposal was equally offensive to the country gentlemen and to the Anti-Corn Law League. It amounted merely to an improvement

of the sliding-scale which had been devised by the Duke of Wellington's Cabinet [see above: 1815-1828], and was based on the axiom that the British farmer, taking one year with another, could not make a profit by growing corn if foreign corn were admitted at a price of less than 70s. a quarter. By a calculation of prices extending over a long term of years, Peel had satisfied himself that a price of 56s. a quarter would remunerate the British farmer. He proposed to modify the sliding-scale accordingly. . . . Peel retained the minimum duty of 1s. when corn was selling at 73s. the quarter; he fixed a maximum duty of 20s. when corn was selling at from 50s. to 51s. the quarter, and he so altered the graduation in the increase of duty as to diminish the inducement to hold grain back when it became dear. . . . So general was the dissatisfaction with Peel's Corn Law that Russell ventured once more to place before the House his alternative of a fixed 8s. duty. He was defeated by a majority of upwards of 120 votes. Two days later Mr. [Charles] Villiers made his annual motion for the total repeal of the Corn Laws, and was beaten by more than four votes to one. The murmurs of Peel's own supporters were easily overborne, and the Bill was carried through the House of Commons after a month spent in debates. As soon as it had passed, and the estimates for the army and navy had been voted, Peel produced what was really his Budget, nominally Mr. Goulburn's. . . . In every one of the last five years there had been a deficit. . . . Peel therefore resolved to impose an income tax. With these and with the income tax he calculated that he would have a surplus of £1,000,000. Peel was thus able to propose a reduction of the tariff upon uniform and comprehensive principles. He proposed to limit import duties to a maximum of 5 per cent. upon the value of raw materials, of 12 per cent. upon the value of goods partly manufactured, and of 20 per cent. upon the value of goods wholly manufactured. Out of the 1,200 articles then comprised in the tariff, 750 were more or less affected by the application of these rules, yet so trivial was the revenue raised from most of them that the total loss was computed at only £270,000 a year. Peel reduced the duty on coffee; he reduced the duty on foreign and almost entirely abolished the duty on Canadian timber. Cattle and pigs, meat of all descriptions, cheese and butter, which had hitherto been subject to a prohibitory duty, he proposed to admit at a comparatively low rate. He also diminished the duty upon stage coaches. So extensive a change in our system of national finance had never before been effected at one stroke. . . . Immense was the excitement caused by the statement of the Budget. . . . Every part of Peel's scheme was debated with the utmost energy. . . . He procured the ratification of all his measures subject to some slight amendments, and at the cost of a whole session spent in discussing them. Little or nothing else was accomplished by Parliament in this year. Peel had returned to power as the champion of protection. His first great achievement was the extension of the freedom of trade."—F. G. Montague, *Life of Sir Robert Peel*, ch. 8.—"Notwithstanding the objections which free traders might raise, the Budget of 1842 proved the first great advance in the direction of free trade. It did not remove the shackles under which trade was struggling, but it relaxed the fastenings and lightened the load."—S. Walpole, *History of England from 1815*, v. 4, ch. 18.

1845-1846.—England.—Repeal of the Corn Laws.—Political issues involved.—"The Anti-Corn-Law agitation was one of those movements which, being founded on right principles, and in harmony with the interest of the masses, was sure to gather fresh strength by any event affecting the supply of food. It was popular to attempt to reverse a policy which aimed almost exclusively to benefit one class of society. . . . The economic theorists had the mass of the people with them. Their gatherings were becoming more and more enthusiastic. And even amidst Conservative land-owners there were not a few enlightened and liberal minds who had already, silently at least, espoused the new ideas. No change certainly could be expected to be made so long as bread was cheap and labour abundant. But when a deficient harvest and a blight in the potato crop crippled the resources of the people and raised grain to famine prices, the voice of the League acquired greater power and influence. Hitherto they had received hundreds of pounds. Now, thousands were sent in to support the agitation. A quarter of a million was readily contributed. Nor were the contributors Lancashire mill-owners exclusively. Among them were merchants and bankers, men of heart and men of mind, the poor labourer and the peer of the realm. The fervid oratory of Bright, the demonstrative and argumentative reasoning of Cobden, the more popular appeals of Fox, Rawlins, and other platform speakers, filled the newspaper press, and were eagerly read. And when Parliament dissolved in August 1845, even Sir Robert Peel showed some slight symptoms of a conviction that the days of the corn laws were numbered. Every day, in truth, brought home to his mind a stronger need for action, and as the ravages of the potato disease progressed, he saw that all further resistance would be absolutely dangerous. . . . It was evident that the cabinet was too divided to justify him in bringing forward his measures, and he decided upon resigning office. His resolution to that effect having been communicated to the Queen, her Majesty summoned Lord John Russell to form a cabinet, and, to smooth his path, Sir Robert Peel, with characteristic frankness, sent a memorandum to her Majesty embodying a promise to give him his support. But Lord John Russell failed in his efforts, and the Queen had no alternative but to recall Sir Robert Peel, and give him full power to carry out his measures. It was under such circumstances that Parliament was called for January 22, 1846, and on January 27 the Government plan was propounded before a crowded House. It was not an immediate repeal of the corn laws that Sir Robert Peel recommended. He proposed a temporary protection for three years, till February 1, 1849, imposing a scale during that time ranging from 4s. when the price of wheat should be 50s. per quarter and upward, and 10s. when the price should be under 48s. per quarter, providing, however, that after that period all grain should be admitted at the uniform duty of 1s. per quarter. The measure, as might have been expected, was received in a very different manner by the political parties in both Houses of Parliament. There was treason in the Conservative camp, it was said, and keen and bitter was the opposition to the chief of the party. For twelve nights speaker after speaker indulged in personal recriminations. They recalled to Sir Robert Peel's memory the speeches he had made in de-

fence of the corn laws. And as to his assertion that he had changed his mind, they denied his right to do so. . . . The passing of the measure was, however, more than certain, and after a debate of twelve nights' duration on Mr. Miles's amendment, the Government obtained a majority of 97, 337 having voted for the motion and 240 against it. And from that evening the corn law may be said to have expired. Not a day too soon, certainly, when we consider the straitened resources of the country as regards the first article of food, caused not only by the bad crop of grain, but by the serious loss of the potato crop, especially in Ireland."—L. Levi, *History of British commerce*, pt. 4, ch. 4.

Also in: H. O. Meredith, *Outline of economic history of England*.—W. J. Ashley, *Economic organization of England*.

1846-1861.—United States.—Walker tariff.—Tariff of 1857.—"In 1846 was passed what we will call the 'Walker tariff,' from Robert J. Walker, then Secretary of the Treasury. It reduced the duties on imports down to about the standard of the 'Compromise' of 1833. It discriminated, however, as the Compromise did not, between goods that could be produced at home and those that could not. It approached, in short, more nearly than any other, in its principles and details, to the Hamilton tariff, although the general rate of duties was higher. From that time up to 1857 there was a regular and large increase in the amount of dutiable goods imported, bringing in a larger revenue to the government. The surplus in the treasury accumulated, and large sums were expended by the government in buying up its own bonds at a high premium, for the sake of emptying the treasury. Under these circumstances the 'tariff of 1857' was passed, decidedly lowering the rates of duties and largely increasing the free list. The financial crisis of that year diminished the imports, and the revenue fell off \$22,000,000. It rallied, however, the next two years, but owing to the large increase of the free list, not quite up to the old point."—A. L. Perry, *Elements of political economy*, p. 464.—The Walker tariff was used as the basis for the Morrill tariff of 1861. "The free traders consider the tariff of 1846 to be a conclusive proof of the beneficial effect of low duties. They challenge a comparison of the years of its operation, between 1846 and 1857, with any other equal period in the history of the country. Manufacturing, they say, was not forced by a hothouse process to produce high-priced goods for popular consumption, but was gradually encouraged and developed on a healthful and self-sustaining basis, not to be shaken as a reed in the wind by every change in the financial world. Commerce, as they point out, made great advances, and our carrying trade grew so rapidly that in ten years from the day the tariff of 1846 was passed our tonnage exceeded the tonnage of England. The free-traders refer with especial emphasis to what they term the symmetrical development of all the great interests of the country under this liberal tariff. Manufacturers were not stimulated at the expense of the commercial interest. Both were developed in harmony, while agriculture, the indispensable basis of all, was never more flourishing. The farmers and planters at no other period of our history were in receipt of such good prices, steadily paid to them in gold coin, for their surplus product, which they could send to the domestic market over our own railways and to the foreign market in our own ships. Assertions as to the progress of manufactures in the period under

discussion are denied by the protectionists. While admitting the general correctness of the free-trader's statements as to the prosperous condition of the country, they call attention to the fact that directly after the enactment of the tariff of 1846 the great famine occurred in Ireland, followed in the ensuing years by short crops in Europe. The prosperity which came to the American agriculturist was therefore from causes beyond the sea and not at home,—causes which were transient, indeed almost accidental. Moreover an exceptional condition of affairs existed in the United States in consequence of our large acquisition of territory from Mexico at the close of the war and the subsequent and almost immediate discovery of gold in California. A new and extended field of trade was thus opened in which we had the monopoly, and an enormous surplus of money was speedily created from the products of the rich mines on the Pacific coast. At the same time Europe was in convulsion from the revolutions of 1848, and production was materially hindered over a large part of the Continent. This disturbance had scarcely subsided when three leading nations of Europe, England, France, and Russia, engaged in the wasteful and expensive war of the Crimea. The struggle began in 1853 and ended in 1856, and during those years it increased consumption and decreased production abroad, and totally closed the grain-fields of Russia from any competition with the United States. The protectionists therefore hold that the boasted prosperity of the country under the tariff of 1846 was abnormal in origin and in character. . . . The protectionists maintain that from 1846 to 1857 the United States would have enjoyed prosperity under any form of tariff, but that the moment the exceptional conditions in Europe and in America came to an end, the country was plunged headlong into a disaster [the financial crisis of 1857] from which the conservative force of a protective tariff would in large part have saved it. . . . The free-traders, as an answer to this arraignment of their tariff policy, seek to charge responsibility for the financial disasters to the hasty and inconsiderate changes made in the tariff in 1857, for which both parties were in large degree if not indeed equally answerable."—J. G. Blaine, *Twenty years of Congress*, v. 1, ch. 9.

1846-1879.—England.—Gradual adaptation of free trade policy.—In England, "with the fall of the principle of the protection in corn may be said to have practically fallen the principle of protection . . . altogether. That principle was a little complicated in regard to the sugar duties and to the navigation laws. The sugar produced in the West Indian colonies was allowed to enter this country at rates of duty much lower than those imposed upon the sugar grown in foreign lands. The abolition of slavery in our colonies has made labour there somewhat costly and difficult to obtain continuously, and the impression was that if the duties on foreign sugar were reduced, it would tend to enable those countries which still maintained the slave trade to compete at great advantage with the sugar grown in our colonies by that free labour to establish which England had but just paid so large a pecuniary fine. Therefore, the question of Free Trade became involved with that of free labour; at least, so it seemed to the eyes of many a man who was not inclined to support the protective principle in itself. When it was put to him, whether he was willing to push the Free Trade principle so far as to allow countries growing sugar by slave labour to

drive our free grown sugar out of the market, he was often inclined to give way before this mode of putting the question, and to imagine that there really was a collision between Free Trade and free labour. Therefore a certain sentimental plea came in to aid the Protectionists in regard to the sugar duties. Many of the old anti-slavery party found themselves deceived by this fallacy, and inclined to join the agitation against the reduction of the duty on foreign sugar. On the other hand, it was made tolerably clear that the labour was not so scarce or so dear in the colonies as had been represented, and that colonial sugar grown by free labour really suffered from no inconvenience except the fact that it was still manufactured on the most crude, old fashioned, and uneconomical methods. Besides, the time had gone by when the majority of the English people could be convinced that a lesson of the beauty of freedom was to be conveyed to foreign sugar-growers and slave-owners by the means of a tax upon the products of their plantations. Therefore, after a long and somewhat eager struggle, the principle of Free Trade was allowed to prevail in regard to sugar. The duties on sugar were made equal. The growth of the sugar plantations was admitted on the same terms into this country, without any reference either to the soil from which it had sprung or to the conditions under which it was grown."—J. McCarthy, *Epoch of reform*, ch. 12.—"The contest on the Navigation Laws [finally repealed in 1849 (see NAVIGATION LAWS: 1849)] was the last pitched battle fought by the Protectionist party. Their resistance grew fainter and fainter, and a few occasional skirmishes just reminded the world that such a party still existed. Three years afterwards their leaders came into power. In February, 1852, the Earl of Derby became Prime Minister, and Mr. Disraeli Chancellor of the Exchequer and leader of the House of Commons. The Free-traders, alarmed at the possibility of some attempt to reverse the policy of commercial freedom which had been adopted, took the earliest opportunity of questioning those Ministers in Parliament on the subject. The discreet reply was that the Government did not intend to propose any return to the policy of protection during the present Session, nor at any future time, unless a great majority of members favourable to that policy should be returned to Parliament. But far from this proving to be the case, the general election which immediately ensued reinstated a Liberal Government, and the work of stripping off the few rags of protection that still hung on went rapidly forward. On the 18th of April, 1853, Mr. Gladstone, as Chancellor of the Exchequer, made his financial statement in an able and luminous speech. Such was the admirable order in which he marshalled his topics, and the transparent lucidity with which he treated them, that although his address occupied five hours in the delivery, and although it bristled with figures and statistics, he never for a moment lost the attention or fatigued the minds of his hearers. Mr. Gladstone's financial scheme included, among other reforms, the reduction or total remission of imposts on 133 articles. In this way, our tariff underwent rapid simplification. Each subsequent year was marked by a similar elimination of protective impediments to free commercial intercourse with other countries. In 1860, butter, cheese, &c., were admitted duty free; in 1860, the small nominal duty that had been left on corn was abolished; in 1874, sugar was relieved from the remnant of duty that had survived from previous reductions. It would

be superfluous, as well as tedious, to enter upon a detailed reference to the various minor reforms through which we advanced towards, and finally reached, our present free-trade tariff. In fact, all the great battles had been fought and won by the close of the year 1849, and the struggle was then virtually over. By 1879 it [was] evident . . . that our tariff [did] not contain within it one solitary shred of protection."—A. Montgredien, *History of free trade movement in England*, ch. 13.

1853-1870.—Germany.—Free trade era.—Bismarck's early policy of low tariff.—Trade treaties.—"The German Liberal party . . . had been skilfully shepherded by Prince Smith into the Free Trade fold. Bismarck required the support of the German Liberal party for the work of unifying Germany. He also required the neutrality of France and of England during his wars with Denmark and Austria. He therefore concluded a commercial treaty with France and followed a low tariff policy in Germany. Bismarck, says Schäffle, was at that time (in the sixties) 'at once the political guardian and the political favourite of the Free Trade party.' Bismarck carried things so far that in February, 1870, the Cobden Club actually proposed to make him a member, and would have done so had not Morier threatened to resign if Bismarck were elected. Morier was disarmed but not altogether deceived by these tactics. 'I am totally at a loss to understand,' he wrote to Mallet, 'on what principle of "unnatural selection" you propose to elect Bismarck, of all God's creatures under the sun, a member of the Cobden Club. . . . When our great-grandchildren have to get up the history of the nineteenth century, they will to a certainty find Cobden labelled as the representative of the one doctrine—exchange of cotton goods and Christian love internationalism—and Bismarck as the representative of the opposite doctrine—exchange of hard knocks and blood and iron nationalism.' A rude awakening came with the Franco-Prussian War [1870]. Morier saw to his horror the whole fabric of German Liberalism swept away in a single night."—I. D. Colvin, *Safety of the nation*, pp. 96-98.—"The general liberalization . . . of political life in Western Europe through the events [of 1848] . . . and the larger sympathy they engendered between nations produced, however, a strong movement in Germany and German-Austria in favor of greater freedom of commercial exchange between these two countries. It resulted in the conclusion, for the term of twelve years, of the treaty of 1853 between the Zollverein and Austria, as the first of the international compacts for the promotion of commercial intercourse that formed so prominent a feature of European history during the following twenty years. The treaty was a first, but long step towards free exchange, providing, as it did, for uniform duties on imports from other countries, for a considerable free list and for largely reduced duties between the contracting countries. It also contained stipulations for its renewal on the basis of entire free trade. . . . A very influential association was formed, with free trade as the avowed ulterior object. Its leaders, who were also the champions of political liberalism, represented intellects of the highest order. They included the well-known economists Prince Smith, Mittermaier, Rau, Faucher, Michaelis, Wirth, Schulze and Braun. An 'Economic

Congress' was held annually, the proceedings of which attracted the greatest attention, and exercised a growing influence upon the policy of the governments composing the Zollverein. . . . The beneficial results of the treaty of 1853 were so obvious and instantaneous that the Zollverein and Austria would have no doubt sought to bring about improved commercial relations with other nations by the same means, but for the disturbance of the peace of Europe by the Crimean war, and the conflict of 1859 between France, Italy and Austria. The bitter feelings, caused by the latter war against the two first named countries wherever the German tongue was spoken, rendered the negotiation of commercial treaties with them out of the question for a time. . . . [But] the Zollverein lost no time in following the example of Napoleon by entering successively in 1865 and 1866 into commercial treaties with Belgium, Italy, Great Britain and Switzerland, which were simple conventions, by which the contracting parties granted to each other the position of the most favored nation, or formal tariff regulating treaties after the model of that between the Zollverein and France. These additional treaties were no more than the latter the work of Bismarck. . . . The general upheaval in Germany arising from the war between Prussia and Austria and her North and South-German Allies, while temporarily delaying the farther progress of tariff reform, subsequently accelerated its forward march. . . . A special treaty for the reform of the constitution, so to speak, of the Zollverein was concluded in July, 1867, between the North-German Federation, the new political constellation Prussia had formed out of all Germany north of the Main, after destroying the old Diet, and Bavaria, Wuerttemberg, Baden and Hesse, under the provisions of which the tariff and revenue policy of all Germany was to be managed by the 'Zollparlament,' consisting of an upper house, made up of representatives of the governments, and of a lower house of representatives of the people elected by universal suffrage on a population basis. Thus tariff reform was actually the chain that bound up, as it were, the material interests of all Germans outside of Austria for the first time, as those of one nation. Negotiations for a new commercial treaty with the dual monarchy of Austria-Hungary—into which Austria had changed in consequence of the events of 1866—commenced immediately after the restoration of peace, and were brought to a satisfactory conclusion in March, 1868. The treaty was to run nine years, and provided for still lower duties than under the old treaty, the principal reductions being on all agricultural products, wines and iron. . . . The Franco-German war put an end to the treaty of 1862 between France and the Zollverein."—H. G. Villard, *German tariff policy* (*Yale Review*, May, 1892).

1854-1866.—United States.—Reciprocity with Canada observed for eleven years.—Reasons for discontinuance.—"The Marcy-Elgin treaty of 1854, which regulated our reciprocal commercial relations with the British North American provinces now composing the Dominion of Canada, besides the independent colony of Newfoundland, is noteworthy as being the first instance of the successful adoption by the United States of the reciprocity principle in treaty form. It established limited free trade in natural products between the two countries, the conventional list (identical on both sides) including 28 articles or classes of articles, the

produce of the farm, forest, mine, and fisheries. It also provided for liberal fishing privileges for American fishermen and mutual transportation rights."—J. B. Osborne, *Reciprocity in the American tariff system* (*Annals of American Academy of Political and Social Science*, Jan., 1904).—Article 3 (of the treaty) was as follows: "It is agreed that the articles enumerated in the schedule hereunto annexed, being the growth and produce of the aforesaid British colonies or of the United States, shall be admitted into each country respectively free of duty: Schedule: Grain, flour, and breadstuffs, of all kinds. Animals of all kinds. Fresh, smoked, and salted meats. Cotton-wool, seeds, and vegetables. Undried fruits, dried fruits. Fish of all kinds. Products of fish, and of all other creatures living in the water. Poultry, eggs. Hides, furs, skins, or tails, undressed. Stone or marble, in its crude or unwrought state. Slate. Butter, cheese, tallow. Lard, horns, manures. Ores of metals, of all kinds. Coal. Pitch, tar, turpentine, ashes. Timber and lumber of all kinds, round, hewed, and sawed, unmanufactured in whole or in part. Firewood. Plants, shrubs, and trees. Pelts, wool. Fish-oil. Rice, broom-corn, and bark. Gypsum, ground or unground. Hewn, or wrought, or unwrought burr or grindstones. Dye-stuffs. Flax, hemp, and tow, unmanufactured. Unmanufactured tobacco. Rags." Article 5 provided that the treaty should take effect whenever the necessary laws were passed by the imperial Parliament, the provincial Parliaments, and the Congress of the United States, and that it should "remain in force for ten years from the date at which it may come into operation, and further until the expiration of twelve months after either of the high contracting parties shall give notice to the other of its wish to terminate the same. [Article 6 extended the provisions of the treaty to the island of Newfoundland, so far as applicable, provided the Imperial Parliament, the Parliament of Newfoundland and the Congress of the United States should embrace the island in their laws for carrying the treaty into effect; but not otherwise.]"—*Treaties and conventions between the United States and other powers* (edition of 1889, pp. 448-452).—"This treaty was in actual operation, as respects its customs features, during a period of exactly eleven years. It was terminated March 17, 1866, having been denounced by the United States one year previously in compliance with an act of Congress. The value of the reciprocal arrangement to this country has long been the subject of much discussion and radical difference of opinion. At the outset it was certainly beneficial to both contracting parties, but as time progressed the preponderance of commercial advantage was heavily in favor of Canada. There are several important reasons for this result. . . . But, of course, the circumstance, or rather series of circumstances, that particularly fired the popular indignation and opposition in this country was the sympathy and assistance extended in Canada to Confederate refugees in their hostile movements along the border during the war. The abrogation of the treaty is usually ascribed to the just anger of our people on that account, and, in a lesser degree, to the unsatisfactory economic operation of the treaty. Still another sensible reason for the abandonment of the treaty—and one that has been almost entirely lost sight of by writers on this subject—was that the Government of the United States, at the close of the Civil War, was obliged to retrench expenditures and husband its revenues in every possible quarter; the special free list so

long extended to Canada offered a resource for sorely needed revenue, and the opportunity was improved by Congress; the conventional notice of one year was given to the other high contracting party, and the treaty came to an end as stated."—J. B. Osborne, *Reciprocity in the American tariff system (Annals of American Academy of Political and Social Science, Jan., 1904)*.

1859.—Canada.—Protection developed in the Galt tariff.—"From the earliest dawn of her history Canada has been much concerned about tariffs. Protection was designed in the first instance to secure her absolute industrial dependence on the Motherland, France; at a later date to secure the trade of Canada to her foster-mother, England; still later to bring about her manufacturing independence of the world outside; and the last development was reached when, of her own free will, and without return, Canada modified her protectionist duties in order to give a preference to manufactures in England. . . . Up to 1859 there were a few alterations in the Canadian tariff, tending on the whole in the direction of Protection, and in the year 1859 the Finance Minister, Mr. Galt, introduced a new tariff, in which the protective character was very strongly marked, though the Government was largely influenced by the need of revenue to meet deficits and interest on railway bonds guaranteed by the State. . . . This introduction of Protection into Canada, incidental though it may have been to revenue requirements, was strongly resented in England, and the discussion between the Colonial Office and the Canadian Government which arose out of it was important, as setting once for all the right of the self-governing Colonies to adopt such methods of taxation as they chose. . . . This policy was stated by the Finance Minister, Sir Leonard Tilley, to be: 'To select for a higher rate of duty those articles which are manufactured or can be manufactured in the country, and to have those that are neither made nor are likely to be made in the country at a lower rate.' In spite of this declaration and the imposition of stiff protective duties in accordance with it, there seemed still to be confusion of thought and a strong hankering after reciprocity with the United States, which, if attained, would have exposed Canadians to the unfettered competition of the rivals whom they most feared."—C. H. Chomley, *Protection in Canada and Australia (W. H. Dawson, ed., Protection in Various Countries Series)*.

1860.—France.—Cobden.—Chevalier commercial treaty.—Favored nation clause.—"Richard Cobden had succeeded in using the Free Trade movement as an instrument for placing the effective government of England on a democratic basis; but he was still more enthusiastic about the results which might be expected from the progress of this economic doctrine in the sphere of international politics. He believed that, if the various nations would only agree to allow full commercial intercourse, an era of universal peace would necessarily ensue. . . . Such was the position of affairs when Cobden succeeded in passing the commercial treaty with France in 1860. The Anglo-French Treaty of 1860 was important from the manner in which it enabled each country to participate in the natural advantages of the other; the French opened up their markets to English

iron, and French wines were imported in much larger quantities. The main importance of the agreement lay in the fact that it served as a foundation-stone on which a whole fabric of treaties securing greater freedom of commercial intercourse was built up. The treaty contained a most favoured nation clause; according to this England pledged herself not only to lower her duties on French products, but on similar products from other countries, and France made a corresponding engagement. 'This was not reciprocity of monopoly, but reciprocity of freedom, or partial freedom. England had given up the system of differential duties, and France knew that the products of every other country would receive at the English ports exactly the same measure of treatment as her own. France, on the other hand, openly intended to take her treaty with England as a model for treaties with the rest of Europe, and to concede by treaty with as many Governments as might wish, a tariff just as favourable as that which had been arranged with England. As a matter of fact within five years of the negotiation of 1860 France had made treaties with Belgium, the Zollverein, Italy, Sweden, Norway, Switzerland, and Austria.' These treaties . . . recognised the 'most favoured nation' principle, the 'sheet-anchor' of Free Trade, as it has been called [by the free traders]."—W. Cunningham, *Rise and decline of the free trade movement, pp. 75, 82-83*.—See also FRANCE: 1860.

1860-1883.—United States.—Morrill tariff and Civil War tariffs.—Tariffs in reconstruction period.—"In 1861 the Morrill tariff act began a change toward a higher range of duties and a stronger application of protection. The Morrill act is often spoken of as if it were the basis of the present protective system. But this is by no means the case. The tariff act of 1861 was passed by the House of Representatives in the session of 1859-60, the session preceding the election of President Lincoln. It is clear that the Morrill tariff was carried in the House before any serious expectation of war was entertained; and it was accepted by the Senate in the session of 1861 without material change. It therefore forms no part of the financial legislation of the war, which gave rise in time to a series of measures that entirely superseded the Morrill tariff. Indeed, Mr. Morrill and the other supporters of the act of 1861 declared that their intention was simply to restore the rates of 1846. The important change which they proposed to make from the provisions of the tariff of 1846 was to substitute specific for ad-valorem duties. . . . The specific duties . . . established were in many cases considerably above the ad-valorem duties of 1846. The most important direct changes made by the act of 1861 were in the increased duties on iron and on wool, by which it was hoped to attach to the Republican party Pennsylvania and some of the Western States. Most of the manufacturing States at this time still stood aloof from the movement toward higher rates. . . . Hardly had the Morrill tariff been passed when Fort Sumter was fired on. The Civil War began. The need of additional revenue for carrying on the great struggle was immediately felt; and as early as the extra session of the summer of 1861, additional customs duties were imposed. In the next regular session, in December, 1861, a still further increase of duties was made. From that time till 1865 no session, indeed hardly a month of any session, passed in which

some increase of duties on imports was not made. . . . The great acts of 1862 and 1864 are typical of the whole course of the war measures; and the latter is of particular importance. . . . The three revenue acts of June 30, 1864, practically form one measure, and that probably the greatest measure of taxation which the world has seen. The first of the acts provided for an enormous extension of the internal-tax system; the second for a corresponding increase of the duties on imports; the third authorized a loan of \$400,000,000. . . . Like the tariff act of 1862, that of 1864 was introduced, explained, amended, and passed under the management of Mr. Morrill, who was chairman of the Committee on Ways and Means. That gentleman again stated, as he had done in 1862, that the passage of the tariff act was rendered necessary in order to put domestic producers in the same situation, so far as foreign competition was concerned, as if the internal taxes had not been raised. This was one great object of the new tariff. . . . But it explains only in part the measure which in fact was proposed and passed. The tariff of 1864 was a characteristic result of that veritable furor of taxation which had become fixed in the minds of the men who were then managing the national finances. Mr. Morrill, and those who with him made our revenue laws, seem to have had but one principle: to tax every possible article indiscriminately, and to tax it at the highest rates that any one had the courage to suggest. They carried this method out to its fullest extent in the tariff act of 1864, as well as in the tax act of that year. . . . Every domestic producer who came before Congress got what he wanted in the way of duties. Protection ran riot; and this, moreover, not merely for the time being. . . . The average rate on dutiable commodities, which had been 37.2 per cent. under the act of 1862, became 47.06 per cent. under that of 1864. . . . In regard to the duties as they stood before 1883, it is literally true, in regard to almost all protected articles, that the tariff act of 1864 remained in force for twenty years without reductions. The woollens act of 1867 . . . is the most striking illustration of the manner in which protective duties were advanced after the war at the request of domestic producers. There are not a few other cases in which an increase of duties beyond the level reached during the war was made. Wool and woollens, copper, steel rails, marble . . . sufficient examples of the manner in which duties, already raised to high figures during the war, were still further increased after the war, for the benefit of the domestic producers. Other instances could be given in which an equal disregard of the consumer and taxpayer has been shown. . . . The retention of the high duties of the war is to be explained by the pressure of other problems, the fear of infringing on vested rights and interests, the powerful opposition which is always met in withdrawing public notice when once it has been conferred."—F. W. Taussig, *Tariff history of the United States*, pp. 158-160, 210, footnote.—"The process of decided reduction was begun by the act of July 14, 1870. Under that statute the rates on teas, which had been twenty-five cents a pound, were made fifteen cents; coffee, which had been five cents, was made three cents; pig-iron which had been rated \$9 a ton, was carried down to \$7. Spices were generally reduced. Other imposts were changed in a like spirit. The estimated decrease in duties was \$29,000,000 a year, from the operation of this law. Tea and coffee were placed on the free list May 1, 1872. On

the first of June, 1872, another act was passed still further cutting down the war imposts. It was reported by Mr. Dawes, of Massachusetts, and one of its provisions was to strike off ten per cent from the rates collected on most of the commodities, and to put others into the free list. The effect of the acts of May and June, 1872, was estimated to be the reduction of the receipts from customs to the extent of \$44,374,721 a year. The business reaction which produced the panic of 1873, and the consequent falling off in government receipts, in addition to the estimated results of legislation, led to the restoration of this ten per cent., March 3, 1873. No important changes in duties occurred until the appointment of the tariff commission, May 15, 1882, and its report leading to the act of March 3, 1883."—E. H. Roberts, *Government revenue: Especially the American system*, p. 118.—See also U.S.A.: 1877.

1862-1892.—Australia.—Contrasted tariff histories of Victoria and New South Wales.—"It is in Victoria and New South Wales that the tariff battles of Australia have really been fought, with the result that while the former remained steadily protectionist, the latter maintained, up to the date of federation, almost unflinching allegiance to Free Trade. . . . In the year 1864 a slight tincture of protectionism was given to the New South Wales tariff, but it was soon removed, and up to 1892 customs duties were levied for revenue purposes only. Then Sir George Dibbs, defeating Sir Henry Parkes, introduced a mild protective tariff, containing a number of ten per cent. duties, and carried it through both Houses."—C. H. Chomley, *Protection in Canada and Australia* (W. H. Dawson, ed., *Protection in Various Countries Series*).—On the other hand, Victoria, from 1866 developed a protectionist policy. This difference of opinion on trade policy came out markedly in the conference which the colonies had with one another a few years earlier on matters of tariffs, foreign and intercolonial, and on other subjects of importance to a pioneer civilization. This conference was proposed in 1862 and held the following year. The opposite views on the tariff questions also formed one of the keenest issues of the federation period.

1870-1900.—Germany.—Bismarck's change to protective policy.—Reasons for his reversal of policy.—Caprivi commercial treaties.—"Just as it had been considerations of high policy which had led the commercial policy pursued by Prussia in the Zollverein, so also the considerations which caused Prince Bismarck, in 1878, to return to a Protectionist policy were not of a commercial nature. Prince Bismarck had, with the help of a liberal majority, lifted the German empire into the saddle [by the War of 1870]. But towards the end of the seventies this liberal ma-

majority was no longer willing to follow his leadership unless a substantial share in Government was given to it. This Prince Bismarck was not willing to concede. He therefore looked out for another majority. The economic conditions of the time were favourable to him. The boom which had set in after the peace of Frankfort had been followed by the crash of 1873; great depression prevailed in all industries; and when the competition of American and Russian and Indian wheat drove the German agriculturists not only from the English market, but began to endanger their position even in the German markets, the German agrarians, who, during the entire nineteenth century, had been Free Traders, began to turn Protectionists. Prince Bismarck would not have been the politician he was had he not utilized these changed circumstances. He found the new majority which he wanted by giving up the 'Kulturkampf'; and, by giving them Protective duties, made the men, who till then had been his bitterest foes, his most enthusiastic friends. He repeated the policy which, before him, William III. had pursued to consolidate his English throne. He granted to each interest, at the cost of the entire community, the duties it cried for—to the agrarians duties on corn and cattle, to the manufacturers duties on all kinds of foreign manufactures. The era of the so-called 'system of Protectionist solidarity' began; *i. e.*, Parliament became a mart where one traded in duties; each interest was ready to grant to the other the duties it asked for on condition that it got what it gave. Thus a majority was soldered together out of Conservatives, the Catholic centre, and industrial magnates belonging to the National Liberal party, which, in return for the Protectionist duties granted to it, voted to the Government the expenditure and the revenue for which it asked. The costs fell on the mass of the people, which more and more went over to Social Democracy. . . . [By 1900] competition and drastic freedom of trade [belonged] in Germany to the past. Germany [came] under the constantly growing domination of the principle of monopoly. The avowed object of these monopolies [was] to prevent prices being reduced by domestic competition to the level of the prices in the free market of the world. As a justification for them you hear it said that the legislature, by granting duties on foreign manufactures, desired that home-made manufactures should fetch a price in Germany higher than the price in the free market of the world by the amount of the duty; and in order to secure that price each branch of industry must be organised into a 'Kartell.' . . . The Kartells are agreements as to prices, as to the mapping out of the country into districts the supply of each of which is granted as a monopoly to particular members of the Kartell, as to the restriction of the output of each member, or as to the share of each in the sale or in the profit realised by the whole trade."—L. Brentano, *Industrial organisation of Germany under the influence of protection (International Free Trade Congress, London, Aug., 1908)*.—See also CARTELS.—"Since then the stages in the further development of that policy [of protection] have been as follows: (1) A great increase—a trebling indeed on rye and wheat—of the agricultural duties in 1885. This was of course due to the alarm produced by the competition of the corn of the new countries, the United States, Argentina, and (in a sense) Russia. It may be recalled that it was in 1884-85 that the great permanent drop took place in the price of wheat in England. (2) The period of commercial

treaties [containing favored nation clauses] negotiated by the Chancellor Caprivi with Austria-Hungary, [Serbia], Italy, Switzerland, and Belgium (1892), with Roumania (1893), and, most important of all, with Russia (1894)—so arranged as all to last till 1903-4. The last treaty secured, among other things, a reduction of Russian duties on German manufactures in return for a lowering of the tariff barrier against Russian rye. (3) Caprivi's policy, which was justified on the ground of the greater stability it gave to trade, met with the keenest opposition from the 'Agrarians' or representatives of the agricultural interests."—W. J. Ashley, *Progress of the German working classes in the last quarter of a century*, pp. 55-56.—See also GERMANY: 1892-1894.

1870-1901.—Europe.—Protection movement following Franco-Prussian War.—Tariffs of Italy, Belgium, Russia, Spain, Portugal, Holland.—"The nations of the nineteenth century had to face entirely new conditions of industry, commerce, transport, agriculture and colonization, and the question was what ought to be the national attitude. Should the State conduct industry itself or leave it to individuals? If the latter, should it regulate and direct those individuals or leave them entirely free to make their own contracts and bargains? In commerce, ought the nation to adopt the policy of free imports or that of protecting home industry by a tariff? In agriculture, should it intervene to save the peasant or leave the growth of the large farm to proceed unchecked? In transport, ought the railways to be State subsidized or should the building and control of them be left to private companies? In colonization, how far should the State finance or assist the development of the new areas and to what extent should it leave the work to individuals and chartered companies? These questions had to be faced, not by the old governing aristocracy but by the newly enfranchised masses. . . . Hence the new democracies were all on the side of leaving everything to the individual, who was to be as far as possible unhampered by government regulation. In industry they believed in laissez-faire, in commerce in free trade. The result was that they attacked and swept away the old protectionist and development policy of the autocratic kings which had stood for regulation and which was known as mercantilism. To this succeeded, after 1848, an era of liberalism and cosmopolitanism, when the removal of commercial restrictions and the freedom of individual initiative and enterprise was the goal. This is reflected in the commercial treaties of the period, all of which were negotiated on the basis of a low tariff, and in the small amount of legislation which was enacted. A reaction followed, and a third change of national policy becomes obvious after 1870, when there was a return to protection and State regulation on every side increased. There was an abandonment of laissez-faire in commerce, industry, transport and agriculture. This was due to intensified national feelings which rejected the cosmopolitanism of the previous twenty years and strove to make the new unit of the nation more self-sufficing by developing its own resources inside a barrier of tariffs. The admission of the working classes to greater political power also worked in the same direction. With the constant spread of the industrial revolution and the consequent change in working conditions, the artisans demanded and obtained in

every great country an increasingly elaborate code of labour legislation for their protection. . . . In agriculture, the imports of wheat and meat from North America and Australasia produced an acute crisis in Europe with further State intervention. On every side the power of the Government has been extended; even in the United States, the most individualist of all the Great Powers during the century. The functions exercised by the State in the last quarter of the nineteenth century differed, however, from the old mercantilism and paternalism which prevailed from the sixteenth to the beginning of the nineteenth century as fundamentally as did the liberal era of the fifties and sixties. Fifthly, the new nations were anxious to extend their power and influence over-seas, which gave rise to fresh State activity in the colonial sphere. Raw materials and markets became vital questions for the great industrial powers, the railways enabled continents to be opened up, the steamships brought the produce to Europe and the whole world was brought under the economic influence of the new Europe by a new effort of national expansion and colonisation. Distance was largely abolished as a barrier by the new methods of transport, capital was increasingly invested in the undeveloped lands, a new colonial era was inaugurated and the whole world became economically linked up in spite of the striving after self-sufficiency which was characteristic of the new reaction to protection after 1870. The national idea still persisted, however, in the desire to include the mother country and the colonial areas in bigger units which should favour each other or penalize other countries by some form of discrimination in tariffs or shipping. The ideal was the creation if possible of self-sufficing economic Empires—a tendency constantly counteracted by the developments of transport which make for a world economy, *i. e.*, for world production and world distribution irrespective of national boundaries.”—L. C. A. Knowles, *Industrial and commercial revolutions in Great Britain during the nineteenth century*, pp. 11-14.—Italy, “from the formation of the kingdom till 1875, . . . was liberal and tending towards freedom. About the latter date the forces that we have indicated above as operating generally throughout Europe, commenced to affect Italy. The public expenditure had largely increased, and additional revenue was urgently required. Agriculture was so depressed that, though the country is pre-eminently agricultural, alarm was excited by the supposed danger of foreign competition. The result was that on the general revision of duties in 1877 much higher rates were imposed on the principal imports. . . . Depression both in agriculture and elaborative industries continued and strengthened the protectionist party, who succeeded in securing the abandonment of all the commercial treaties, and the enactment of a new tariff in 1887. . . . The first effect of the new system of high taxation with no conventional privileges was to lead to a war of tariffs between France and Italy. . . . Austria may be added to the list of countries in which the protectionist reaction . . . [was] effectively shown. . . . In Russia the revival (or perhaps it would be more correct to say continued existence), of protection . . . [was] decisively marked. . . . Spain and Portugal had long been strongholds of protectionist ideas.”—C. F. Bastable, *Commerce of nations*, ch. o.—Germany under the ministry of von Bülow (1901) was working out her new protective tariff on an agrarian basis. Besides England, with her established free trade traditions, Holland and Belgium

alone adhered to a revenue system in their tariff policies.

Higginson, *Tariffs at work*.

1871-1892.—France.—Protection reinforced by Franco-Prussian War.—Tariffs of 1872, 1881, and 1892.—“The Franco-German War (1870-1) and the overthrow of Napoleon III at once arrested the free-trade policy, which had little support in the national mind, and was hardly understood outside the small circle of French economists. The need of fresh revenue was imperative, and M. Thiers, the most prominent of French statesmen, was notoriously protectionist in his leanings. Pure revenue duties on colonial and Eastern commodities were first tried; the sugar duty was increased 30%; that on coffee was trebled; tea, cocoa, wines and spirits, were all subjected to greatly increased charges. As the yield thus obtained did not suffice, proposals for the taxation of raw materials were brought forward but rejected by the legislature in 1871, when M. Thiers tendered his resignation. To avoid this result the measure was passed, not however to come into operation until compensating productive duties had been placed on imported manufactures. The existing commercial treaties were a further obstacle to changes in policy, and accordingly negotiations were opened with England and Belgium, in order that the new duties might be applied to their products. As was justifiable under the circumstances, the former country required that if imported raw products were to be taxed, the like articles produced in France should pay an equivalent tax, and therefore, as the shortest way of escape, the French Government gave notice for the termination of the treaties (in the technical language of international law ‘denounced’ them), and new conventions were agreed on; but as this arrangement was just as unsatisfactory in the opinion of the French Chambers, the old treaties were in 1873 restored to force until 1877, and thus the larger part of the raw materials escaped the new taxation. The protectionist tendency was, too, manifested in the departure from the open system introduced in 1866 in respect to shipping. A law of 1872 imposed differential duties on goods imported in foreign vessels. . . . The advance of the sentiment in favour of a return to the restrictive system was even more decidedly indicated in 1881. Bounties were then granted for the encouragement of French shipping, and extra taxes imposed on indirect imports of non-European and some European goods. In 1880 the carrying trade between France and Algiers was reserved for native ships. The revision of the general tariff was a more serious task, undertaken with a view to influencing the new treaties that the termination of the old engagements made necessary. The tariff of 1881 (to come into force in 1882) made several increases and substituted many specific for ad valorem duties. Raw materials escaped taxation; half-manufactured articles were placed under moderate duties. The nominal corn duties were diminished by a fraction, but the duties on live stock and fresh meat were considerably increased. . . . A new ‘conventional tariff’ speedily followed in a series of fresh treaties with European countries. . . . The duties on whole or partially-manufactured goods remained substan-

tially unchanged by the new treaties, which do not, in fact, vary so much from the general tariff as was previously the case. The number of articles included in the conventions had been reduced, and all countries outside Europe came under the general code. The reaction against the liberal policy of 1860 was thus as yet very slight, and did not seriously affect manufactures. The agricultural depression was the primary cause of the legislation of 1885, which placed a duty of 3 francs per quintal on wheat, 7 francs on flour, 2 francs on rye and barley, and one franc on oats, with additional duties on indirect importation. Cattle, sheep, and pigs came under increases of from 50% to 100%. A more decided step towards protection was made by the measure of 1892, under which two scales of tariff were arranged, the lower one to apply to those countries only that should conclude commercial treaties with France. The tariff thus became a double autonomous one, for France was left free, in spite of the conclusion of treaties, to alter not only the general rates, but also the minimum rates; so that, although there was a temptation to enter into commercial agreements with France, nevertheless her freedom of action was much greater than it would have been had she concluded customs treaties of the ordinary type, in which her ability to manipulate the conventional rates would have been limited for the lifetime of the treaty. The inauguration of a new tariff régime was not without its difficulties. A tariff war with Switzerland ensued, which lasted from 1893 to July, 1895, and resulted on the whole in a victory for the Swiss. The French tariff of 1892 remained substantially unaltered till 1910."

1879-1894.—Canada.—Act of 1879.—Commercial union with United States advocated.—"The [Canadian] Tariff Act of 1879, provided that, with reference to the natural products of both countries, if the United States repealed its duties in whole or in part, the Canadian Government would meet them with equal concessions, and the Finance Minister said that 'the Government intended to impose duties on a great many articles imported from there which had been left on the free list since 1875, in the vain hope of inducing our neighbours to renew the Reciprocity Treaty.' In accordance with this intention the average duty on American goods under this tariff was made 25 per cent."—C. H. Chomley, *Protection in Canada and Australia* (W. H. Dawson, ed., *Protection in Various Countries Series*).—"During the years 1887-1891 there was a strong movement in Canada in favour of 'Commercial Union' with the United States. The leaders of this movement did not hesitate to propose that Canada should agree to set up the same tariff barriers as the United States against all other countries, including the United Kingdom, in return for greater freedom of trade with the land to the South. . . . Considering the position at that time of English public opinion, a Canadian statesman might well despair of closer commercial union with the mother country."—W. J. Ashley, *Tariff problem*, pp. 255, 256, 263.—Amendments were made to the tariff of 1879 in 1887 and 1888, but in 1894 the tariff was revised with considerable reduction of duties.

1883.—United States.—Hayes tariff commis-

sion.—Revision of the tariff.—President Arthur, by direction of Congress, had appointed in 1882 a tariff commission, headed by John L. Hayes of Massachusetts, "to take into consideration, and to thoroughly investigate, all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, so far as the same may be necessary to the establishment of a judicious tariff, or a revision of the existing tariff upon a scale of justice to all interests." . . . Early in their deliberations, the commission became convinced that a substantial reduction of the tariff duties was demanded. . . . The attempt to modify the tariff brought into bold relief the numerous conflicting interests, and the difficulty and delicacy of the undertaking. . . . Although not all of the recommendations of the commission were adopted [in the tariff of 1883] most of them were. Those which pertained to the simplification of the law were adopted with only slight changes. The bill reported by the commission contained, not including the free list, 631 articles and classifications. . . . Less than 25 articles, mainly in the cotton, woolen goods, and the iron and steel schedules, were matters of contention. The rates on 409 of the 631 articles mentioned in the tariff recommended by the commission were adopted, and between 50 and 60 more articles have substantially the same rates, though levied under different clauses. Of the 170 changes, 98 were fixed at lower rates than those proposed by the commission, 46 at higher, and 26 . . . [were] classed as doubtful."—A. S. Bolles, *Financial history of the United States, 1861-1885*, bk. 2, ch. 7.

ALSO IN: J. G. Blaine, *Twenty years of Congress*.—J. Bernhardt, *History of tariff commission, 1887-1888*.—United States.—President Cleveland's efforts to reduce the national surplus by a reduction of the tariff.—Mills Bill.—President Cleveland "startled the country at the opening of the fiftieth Congress [1885] by devoting the whole of his annual message to the single topic of a reduction of the surplus through a revision of the rates of duties upon imports. In so doing he departed from the unbroken usage of all the Presidents for well-nigh a hundred years. The text upon which he based his urgent appeal for a remission of duties was the redundancy of the revenue, which left a considerable surplus after the demands of the sinking fund had been met. The result was an accumulation of funds in the Treasury, for which there was no outlet, and a corresponding withdrawal of loanable funds from the channels of business. The President examined briefly, and rejected, the plan of disposing of the surplus by repealing internal taxes, and quickly reached the consideration of his main thesis: the necessity of making a large reduction of tariff duties. . . . On another point all men at home as well as abroad were in perfect agreement. It was universally admitted that the President had exhibited splendid courage. There were, to speak broadly, no issues of a vital nature dividing men into parties. The old question that arose out of the Civil War had been fully decided. . . . The free coinage of silver, on the other hand, had not yet become in a true sense an issue between parties. Neither in the Republican nor in the Democratic organization was the preponderance of opinion so strongly in favor of free coinage or opposed to it that either faction ventured so to phrase its sentiments as to drive the other faction into the ranks of the opposition. Administrative reform, also, was rather an aspiration of the best

element in both parties than a guiding principle of either party. Thus the situation was as if, in war, two opposing armies had occupied their camps so long that they had forgotten the original cause of their quarrel. They might have their periodical skirmishes, even now and then a pitched battle; but when the conflict of the day was ended they both retired to the tents they had left in the morning, with no thought of advancing and of occupying conquered territory. Mr. Cleveland changed all this. He announced a policy. . . . Since that time, up till the close of the century, at least, the Democratic party has never been without a purpose. It has not long held to the same purpose, but it has stood for a well-defined policy. The message was of course received with delight by the free trade newspapers and by all men in public or in private life who were urgent for a reduction of tariff rates. The Republicans were hardly less pleased than the revenue reformers; they professed satisfaction that the Democrats must now 'show their true colors.' They themselves had consistently declared their adhesion to the principles of protection. . . . Notwithstanding the extraordinary assistance from without which the committee is supposed to have had, and its freedom from partisan opposition in the preliminaries, the [Mills] bill was not in a state to be reported to the House until April 2 [1886], four months after Congress was informed by the President of the instant need of a reduction of the surplus. The Republicans were prepared to find the 'Mills Bill' unsatisfactory in the whole and in all parts, and their expectations were not disappointed. The main features of the measure were: (1) a transfer of raw materials to the free list; (2) a large substitution of ad valorem for specific duties; and (3) a general reduction of protective duties. . . . While the bill was under discussion in detail in Committee of the Whole, the national conventions of the two great parties were held. The Democrats met at St. Louis on the 5th of June. Their platform may be characterized as an echo of the message of President Cleveland, whom they nominated for reelection. . . . The Republicans were quite as emphatic as their opponents in their expressions of opinion upon the tariff and the Mills Bill. At their national convention held at Chicago, beginning on June 19, they declared themselves 'uncompromisingly in favor of the American system of protection.' 'We accept the issue, and confidently appeal to the people for their judgment. The protective system must be maintained. . . . We denounce the Mills Bill. . . . We condemn the proposition of the Democratic party to place wool on the free list,' and so on. . . . Seventeen days after the adjournment of Congress the election took place. The Republicans were successful. General Harrison was chosen President. The House of Representatives was carried by a narrow majority; the State legislatures gave promise of a Republican majority in the Senate. . . . The report was never taken up for action, and the Mills Bill came to an end without a formal disagreement between the two houses of Congress."—E. Stanwood, *American tariff controversies in the nineteenth century*, v. 2, pp. 226-229, 236-237, 240-242.

1890.—United States.—McKinley Bill.—Reciprocity and Pan-Americanism.—Blaine's influence.—Bounties introduced.—"As Mr. McKinley of Ohio was chairman of the House committee

on ways and means, the act [of 1890] . . . is popularly known by his name. The title of the long and detailed act reads: 'An act to reduce the revenue and equalize duties on imports, and for other purposes.' The justification of any such characterization lay in the repeal of the raw sugar duties; in the reduction of duties on steel rails, iron, and steel plates, and on structural iron and steel; and in an increase of the free list embracing a number of articles of no great commercial importance. Throughout the debate the protectionist philosophy was developed to a point hitherto unknown in tariff discussion. Restrictive duties were no longer regarded as a temporary stage in the arduous journey toward industrial freedom, but a principle which ought to be permanently adopted. Protection was affirmed in increased duties upon wool, woollen goods,—particularly the finer grades,—and dress goods; upon the finer cottons, lawns, laces, and embroideries; upon linens, silk laces, and plush goods; upon cutlery and tin-plate; and upon barley, hemp, and flax. In some cases the duties were practically prohibitory, and so far forth the revenue was certainly reduced. The minimum principle was extended beyond the experiment of 1828; for cotton stockings, velvets, and plushes, boiler and plate iron, pen-knives, shotguns, and pistols, and table cutlery, classes were established based upon values; and on all goods of the same class the same specific duty was laid. The administrative regulations for collecting the customs were made more stringent by another act in the same session. Two new principles were introduced by the McKinley Act: one was the grant of a bounty of two cents a pound for fourteen years on the production of sugar within the United States; and the other, the recognition of commercial reciprocity. The president was empowered to levy duties by proclamation on sugar, molasses, tea, coffee, and hides, if he considered that any country, exporting these commodities to the United States, imposed duties upon agricultural or other produce of the United States, which in view of the free admission of sugar, molasses, tea, coffee, and hides into the United States, he might deem to be reciprocally unjust and unreasonable. This policy was especially designed to apply to Central and Southern American countries, and was adopted largely through Mr. Blaine's influence as a part of a wider measure of Pan-American commercial union. [He had vigorously criticized the original bill.] By this method the executive branch of the government was relieved from submitting to the Senate special reciprocity treaties. Under this act commercial agreements relating to reciprocal trade were made with Brazil, the Dominican Republic, Spain (for Cuba and Puerto Rico), Guatemala, Salvador, the German Empire, Great Britain (for certain West Indian colonies and British Guiana), Nicaragua, Honduras, and Austria-Hungary. During the debate the reciprocity provision was opposed by some excellent constitutional lawyers within the Republican party, on the ground that Congress could not delegate its taxing power to the president. It is held, however, that the president did not under this act receive legislative power, but simply the right to determine the particular time when certain legislation should go into effect. The grant of a federal bounty also raised constitutional objections, more particularly after the Democrats came back into power in 1893. In 1895 the comptroller of the treasury refused to pay the sugar bounty levied while the law was in operation, on the ground that such a

grant was unconstitutional, but this contention was not sustained by the Supreme Court."—D. R. Dewey, *Financial history of the United States*, pp. 438-440.—See also BOUNTIES: Bounties by the United States government.

1894.—United States.—Wilson-Gorman tariff.—Failure of Cleveland's tariff reform.—Income tax introduced.—"The reaction [against the McKinley tariff] continued, and the Presidential campaign of November, 1892, ended in the return of the Democratic candidate, Cleveland, who represented the anti-protectionist policy. . . . The new President considered his large majority as a mandate for a reform of the customs tariff on the lines which he had indicated, but the hopes with which he undertook the task were doomed to disappointment [in the Wilson-Gorman bill]. The problem was complicated by two circumstances; one being the small and uncertain Democratic majority in the Senate, and the other the silver question. . . . The President had intended that all raw materials should be admitted free, and had carried the House of Representatives with him; the Senate, however, could not be induced to go so far. The chief illustrations of this were furnished by iron ore and coal. The House of Representatives had abolished the duty on both of these commodities; the Senate was content to reduce the duty in each case from 75 cents to 40 cents a ton. Other commodities which the House of Representatives had placed on the free list, but on which the Senate reimposed duties, were nickel, mica and quicksilver, unmanufactured clays or earths, various chemicals (such as ammonia, borax, sulphur), molasses, raw or refined sugar, beef, mutton, pork, bacon, meats, dressed, undressed, or preserved lard, apples, eggs, and coke. The duty on pig-iron was lowered from \$6.72 to \$4 a ton, on steel rails from \$13.44 to \$7.84 a ton, and even on tin plates from 2½ cents to 1½ cents per pound. One other serious change was in the case of sugar. The clauses affecting that commodity in the McKinley Tariff had caused very considerable dissatisfaction: for one thing, the financial results had been somewhat unsatisfactory, and for another, it was widely believed that the duty on refined sugar and the bounties were largely in the interests of the Sugar Trust—one of the earliest of those organisations which now play so great a part in American industrial life. The Democrats now proposed to admit refined sugar as well as raw sugar free, and to abolish the bounty system, but the Senate made many amendments admittedly in the interest, and under the influence, of the Sugar Trust. An *ad valorem* duty of 40 per cent. was imposed on raw sugar; refined sugar was made subject to this rate with the addition of ½ cent per lb., and the surtax on bounty-fed sugar, imported into the United States, was retained."—P. Ashley, *Modern tariff history*, pp. 213-217.—"The Act of 1894 was so garbled in its passage through Congress that the tariff reform president of the period, Cleveland, allowed it to become a law without his signature."—H. R. Seager, *Practical problems in economics*, p. 408.—"When the President [Cleveland] submitted his message to Congress in December, 1893, we find the first suggestion of an income tax, not, indeed, in the shape of a tax on incomes in general, but in the form of a tax on incomes from corporations. . . . Since, therefore, the proposed tariff schedules would have meant a considerable deficit, and since no relief

was to be expected from the internal revenue system, the proposition to make good the difference by introducing the income tax received a hearty welcome. But while the anticipated deficit gave the Western and Southern representatives their opportunity, it was not so much the idea of increasing the revenue as that of correcting inequalities in the tax system that was really in their mind. The truth of this assertion is evident when we reflect on the fortunes of the Wilson bill in the Senate. The Gorman bill put sugar back on the dutiable list, and made many other changes which so weakened the radical nature of the House bill that all danger of a deficit seemed to be at an end. The income tax was no longer a fiscal necessity. Yet all attempts to expunge it from the bill were utterly unavailing. The farmers' influence was too strong. . . . The sentiment in favor of some form of income taxation was so overwhelming among the mass of the voters that the Republican leaders preferred to preserve silence and not run the risk of opposing a popular measure. Thus the vehement Eastern opposition, instituted by the Republicans and more or less openly sympathized with by the Democrats, was wholly ineffectual. No feature of the tariff bill was ever in smaller danger of being successfully opposed than were the income tax sections; for revenue considerations were the pretext for their introduction, not the cause."—E. R. A. Seligman, *Income tax*, pp. 405-496, 500-508.—The following year the Supreme Court decided that the income tax was unconstitutional.

1897 (March-July).—United States.—Dingley tariff.—High protection.—Reciprocity with European nations.—Argol agreements.—Kasson treaties.—"The first business of the new Congress [called by McKinley] was to provide revenue. Mr. Cleveland's administration had inherited, as already pointed out, a deficit of nearly \$70,000,000. The tariff bill which had been revised to increase the revenue had failed. The sugar refiners, finding that a duty was to be put on raw sugar, had brought in enormous quantities, free, to hold for their needs. Thus, by their foresight, the treasury in Mr. Cleveland's first year was despoiled of revenues it had a right to count on. Again, the income tax on which they depended for a large sum was declared unconstitutional. Something had to be done to bring in more money. The Republicans had decided to use their power to put back the tariff on wool and to increase that on a variety of manufactured articles, and on December 26, 1895, Mr. Dingley reported a bill providing for these increases. The bill was passed at once by the House. . . . The influence on the bill of the despotic power of the wool interests was similar to that of sugar on the Wilson Bill, but it did not make itself clear in the Senate as it had in the earlier bill. It came out in the conference of the two Houses which followed the passage of the bill by the Senate on July 7 [in the special session of March to July, 1897]. Some 872 amendments had been tacked to the measure and the conference spent nearly a fortnight over

them. When finally reported, the rates were generally higher than either the House or the Senate had advised. It was impossible to give to wool all it demanded on a threat of defeating the bill, unless other interests were favored, and so it happened that when the Dingley Bill was finally passed, it was, on the whole, a more oppressive measure than the McKinley Bill."—I. M. Tarbell, *Tariff in our times*, pp. 240, 251-252.—See also U. S. A.: 1895-1896 (December-February).—"In brief, then, the Act of 1897 was aggressively protectionist. . . . Business was prosperous after the enactment of the Dingley tariff and little agitation for a change was observable for a decade. Prosperity, being world wide, was doubtless not due in its entirety to the American tariff, yet the coincidence of protection and good times gave the Dingley act a pleasant reputation."—C. R. Lingley, *Since the Civil War*, pp. 383-385.—"The United States Tariff Act of 1897 made provision for three kinds of reciprocal arrangements. In the second part of Section 3 of that Act is found a provision identical in principle with Section 3 of the Tariff Act of 1890. The President was authorized, without reference to Congress, to negotiate and proclaim treaties securing to the United States special, although not necessarily exclusive, privileges in foreign markets and to grant in return the continued free admission from the countries with which the treaties were made, of coffee, tea, tonka beans, and vanilla beans. These products were admitted free under the regular tariff, and the penalty duties provided were to be used by the President in placing any country from which the specified products came, on a less favorable basis, than other nations, in case of refusal by that nation to grant to the United States special favors in its markets. This part of Section 3 led to no agreements, but it was a favor in securing for the United States preferential treatment in the Brazilian market in 1904. In the first part of Section 3 of the Act of 1897 is found a provision for negotiating reciprocity treaties on a different principle. The President was authorized in return for 'reciprocal and equivalent concessions' to grant specified reductions from duties on argols, brandies, sparkling and still wines, and paintings and statuary. Instead of using penalty duties, the principle is here introduced of making special reductions in the regular tariff rates on certain articles in return for reciprocal reductions in the tariff rates of other countries. Agreements under this provision required neither the ratification of the Senate nor the approval of Congress. Agreements, known as the 'Argol Agreements,' were negotiated and proclaimed with France, Portugal, Germany, Italy, Switzerland, Spain, Bulgaria, the United Kingdom, and the Netherlands. In return for its concessions the United States received reciprocal concessions in each of these agreements. In no case, however, were these concessions confined to the United States. In most cases they consisted in the grant to the United States, either for the first time or in renewal of a previous grant, of all or part of the rates of minimum or conventional schedules already enjoyed by all the favored nations. In several cases, however, the agreements secured for the United States the benefit of conventional rates lower than those that had previously been effective. The third reciprocity provision (Section 4) in the Tariff Act of 1897 differs from each of those thus far considered, in that treaties negotiated under it had to be ratified by the Senate and approved by Congress before they became effective. Under it the President was authorized to nego-

tiate for concessions in foreign markets and to concede in return a reduction in the duties of the Tariff Act of not more than 20 per centum of those duties, or to transfer to or agree to retain on the free list specified articles from any country making satisfactory concessions. Treaties known as the 'Kasson Treaties' were negotiated with France, with Great Britain for the British West Indies, with Denmark for St. Croix, with the Dominican Republic, Nicaragua, Ecuador, and the Argentine Republic. These treaties failed of ratification in the Senate and, therefore, never became effective."—W. S. Culbertson, *Commercial policy in war time and after*, pp. 270-272.

1897-1898.—Canada.—High tariff with British preferences.—"The preference for Great Britain was the only departure of any significance from the National Policy [in the Canadian tariff of 1897]. Some of the schedules were simplified in the new tariff. Mixed duties—that is, *ad valorem* and specific duties combined—were in most cases replaced by *ad valorem* duties. . . . These decreases, however, were offset by increases in the cotton-schedules to safeguard the Canadian factories from the preference, and to afford them even higher protection against New England competition than they had had under Conservative tariffs. The general range of duties in the Liberal National Policy tariff of 1897, and their avowedly protectionist character, may be judged from the fact that embodied in it were eighty-three duties of twenty-five per cent, and seventy of thirty per cent; while fifty were of thirty-five per cent, which, except for two or three items, was the highest range of duties in the tariff of 1894. Besides the reductions in the iron-schedules, which were of advantage to many manufacturers, there were also reductions on other raw materials, and the upward movement in prices that began in 1898 has since then more than compensated for the small reductions in many of the *ad valorem* duties."—E. Porritt, *Sixty years of protection in Canada, 1846-1907*, pp. 387-388.—Preferential treatment was extended in 1898 to New South Wales, the free trade colony of Australia.

1898-1910.—Germany.—Tariff war with Canada.—"Directly Canada, from August, 1898, gave preferential treatment to Great Britain and certain British Colonies, and began to apply to foreign countries her standing tariff, Germany made reprisals. While continuing most-favoured-nation treatment to the rest of the British Empire, she withdrew from Canada the benefit of the conventional tariff and put into force against her the unmodified autonomous tariff. This retaliation on Germany's part lasted for five years, after which Canada imposed a surtax upon German goods to the extent of one-third of the general tariff duties, and this surtax took effect on April 16th, 1903."—W. H. Dawson, *Protection in Germany (Protection in Various Countries Series, p. 123)*.—An agreement finally reached in 1910 ended this tariff war between Germany and Canada.

1900-1919.—China.—Effect of "open door" policy in China upon the tariff.—China's foreign trade policy controlled by great powers.—"The ten years beginning in 1900 were termed 'the open door decade' [in China]. This period was a sort of crucial one in breaking down Chinese barriers, with the completion of the military campaign following the Boxer revolts. China was more open than ever to foreign influence, and the future of the country seems to have been fixed by Western ideas. England and the United States have been the great promoters of the open door policy. Japan has been especially aggressive in forcing her influence on China. New treaties were dictated by these three countries in 1902-03 which gave added opportunities for trade in China. China has been so bound by treaties that in 1914 she was not at liberty to fix her own tariff."—C. A. Herrick, *History of commerce and industry*, p. 432.—In 1919 her tariff was revised subject to ratification by the great powers. It was believed this revision would increase China's revenue by eight million dollars a year.

1902-1906.—Germany.—Tariff law of 1902.—Special tariff treaties with European nations.—Von Bülow's policy.—Germany's "autonomous tariff," sponsored by Prince von Bülow, was adopted in December, 1902. "The new tariff obviously marked a clear departure from the policy pursued with so much success by Count von Caprivi. That policy was to hold the balance as fairly as possible between agriculture and industry, while making special allowance for the two important facts that (1), driven by the force of circumstances, Germany is destined to become more and more an industrial country, and that (2) the vital condition of this inevitable transition is cheap food for the working classes. Count von Bülow also professed, in perfect good faith, that it was equally his own desire to give to both factors in the productive life of the nation a fair chance—in his own words, to 'strike the balance between interests that are in many instances opposed to each other'—but with him agriculture had prior consideration. He frankly confessed, when introducing the Tariff Bill in the Reichstag on December 2nd, that his object was 'above all to endeavour to meet those wishes which have been expressed by the agricultural interest in favour of increased protection.' Taking the old duties as a whole, they averaged in 1902 10 per cent. of the aggregate value of the imports taxed. Count von Bülow estimated that the new duties would

add 17 per cent. to that of industrial goods."—W. H. Dawson, *Protection in Germany (Protection in Various Countries Series, p. 147)*.—The tariff was to be in full force by 1906. "The essence of this [so called conventional tariff] system, . . . accompanied by an extensive network of commercial treaties, . . . [was] the mutual exchange of tariff concessions. Its origin is to be found in the change of tariff policy made by Germany in 1891. Until that year the single tariff framed by Bismarck in 1879 had been maintained, and had so far succeeded in its aim of stimulating domestic protection that German manufacturers were now demanding not merely protection at home but also an entry into foreign markets. The other nations of Europe, however, had by this time discarded, wisely or unwisely, the free-trade principles which seemed, in the decade subsequent to 1860, likely to spread far beyond the shores of the United Kingdom, and had returned, from motives which were in most cases relative to the circumstances of the particular countries concerned, to the principle of protection. Consequently, from the markets of Europe, Germany found her goods excluded by high tariff walls, and the only way of obtaining an entrance was by means of reciprocal tariff concessions. Whilst retaining, therefore, the tariff of 1879 as a 'general' tariff, negotiations were opened with the surrounding nations for such reductions as they were prepared to concede in return for a reduction of Germany's 'general' duties upon their exports. Treaties containing reciprocal concessions were concluded with seven countries of Europe, viz., Italy, Switzerland, Russia, Austria, Roumania, Servia and Belgium. The rates of duty thus agreed upon were, by the operation of the Most Favoured Nation clause, extended to certain other countries, and these rates, which are, in most cases, lower than those of the 'general' tariff, formed what was known as the 'conventional' schedule. The tariff of Germany thus consisted of two schedules, one containing the high rates which were to be maintained against imported commodities in general and the other containing the lower duties imposed upon the imports from such nations as extended favourable treatment to the products of Germany. The treaties thus made expired in the year 1903, but the system had been found to work so well that it was continued and numerous new treaties of the same general character were concluded, which will not expire until the year 1917. The example thus set by Germany has been followed by the following countries: Austria, Bulgaria, Greece, Italy, Japan, Roumania, Russia, Spain and Switzerland. The 'general and conventional' principle may now be said to dominate the tariff policy of Continental Europe."—J. H. Higginson, *Tariffs at work*, pp. 8-10.—The United States entered into a commercial agreement with Germany based on her conventional tariff between 1905 and 1906. "Thanks to the Tariff Law of 1902, our [German] economic policy regained that agrarian bias so indispensable to the interests of the whole community. Side by side with the foreign trade, advancing with such mighty strides, the maintenance of a strong home industry was secured. German agriculture, under the influence of the new tariff and of the commercial treaties based on it, has experienced a decade of vigorous development."—Prince B. von Bülow, *Imperial Germany*, pp. 281, 284.

1903-1906.—England.—Preferential tariffs challenge free trade tradition.—Imperialistic basis for tariff revision under Chamberlain.—“Free Trade remained almost unchallenged for fifty years in England, because, first, the need of the industries for expansion, and, later, the trade for her great mercantile interests at sea and abroad were best served by the unimpeded exchange of commodities. . . . Before the end of last century the tendencies which had been already matured into systems of high tariffs elsewhere began to exercise some influence in England. English industry had lost its position of overwhelming superiority, not by reason of decay, for it was strong and healthy still, but because other countries, their industrial revolutions completed, were reaching a high state of efficiency. Competition was keen, the evil effects of ‘dumping’ were being realised, and the new industry that invention and discovery brought into being. In the same way, the mercantile marines of other countries were becoming important, especially that of Germany, which, fostered by the state, was making immense strides. . . . Industry began to ask for protection against unfair competition, for a tariff wall behind which to rear new infant industries as their need was revealed. Free Traders retorted that the security of the tariff would discourage initiative and energy in the protected trades, and at the same time the bogey of high prices was exhibited to the full. The dispute became one of tremendous heat and a good deal of renown, and as a result the cases both for Protection and Free Trade were drawn up in very great detail. One strong point greatly insisted upon by the tariff party was that Free Trade left us almost completely outside the treaty system which was regulating the commercial relations of the world. Because we had few tariffs with which to negotiate, so few directions in which we could offer reductions, therefore we could obtain few concessions from other countries. We had not the bargaining power of the tariff. . . . The revival of interest in the colonies, and the closer touch with them brought about by modern communications, suggested the idea of *imperial* self-sufficiency. True, Great Britain could never be a self-sufficing nation, but the resources of the Empire were varied and big enough to enable it to get nearer than any nation in the world, not even excepting the United States, to self-sufficiency. It was the imperial movement that in England attacked Free Trade on the side of politics while competition was attacking it on the side of economics. The argument for imperial preference, championed by Joseph Chamberlain, the man inspired above all others by the vision of close union between the mother and daughter states, was added to the demands of industry and commerce, and drew into the tariff reform party many who would not have been convinced by the economic argument alone.”—A. S. Turberville and F. A. Howe, *Great Britain in the latest age*, pp. 240-257.—Chamberlain, the colonial secretary, exhorting Englishmen to “think imperially” left the cabinet in order to obtain a free hand in advocating tariff reform. His ideas were adopted by the Unionist party, but encountered defeat in the election of 1906. In 1903 South Africa had granted preference in trade to Great Britain; New Zealand followed in 1904.—See also ENGLAND: 1903 (May-September).

1904-1922.—Dumping laws in various countries of the world.—Special legislation to offset dumping has been the feature of the tariff programs of many nations. “Seven countries have enacted laws which specifically provide for the imposition of additional duties on imports sold at dumping prices. These countries, and the dates of original enactment of their laws, are as follows: Canada, 1904; British South Africa, 1914; Great Britain, Australia, New Zealand, Newfoundland, United States, 1921. The Canadian law was amended in 1907 and again in 1921. The British South African law was amended in 1922. The bulk of this legislation has, therefore, been enacted within the last two years, and all of it is still in effect. Another group of laws also in effect at present consists of the Australian Industries Preservation Act of 1906-10 and several American laws which deal with predatory dumping as a phase of the problem of unfair competition. Not clearly belonging to either of these two groups are: the Japanese law of 1920, providing for the imposition of additional duties on foreign goods sold at unreasonably low prices; the Canadian law of 1922 authorizing the arbitrary valuation for assessment of customs duties of natural products imported into Canada under such conditions as prejudicially to affect the interests of Canadian producers; and the provision of the New Zealand law of 1921 authorizing the governor-general in special cases to change the tariff treatment of any class of imports when the existing tariff provisions operate injuriously.”—J. Viner, *Dumping: A problem in international trade*, p. 274.

1905.—Baltic and White Sea Conference for minimum rates. See BALTIC AND WHITE SEA CONFERENCE.

1907.—Canada.—Tariff revision.—The seventh revision of the Canadian “tariff was made in 1907. The outstanding features of that tariff were the introduction of the threefold classifications of preferential, intermediate and general duties, and the establishment of the drawback principle in respect to raw materials imported and subsequently exported in the form of finished products. With rates of duty there was very little interference, the average rate remaining about as before.”—W. L. Edmunds, *New Canadian tariff (New York Times Current History, May, 1921)*.

1909.—United States.—Payne-Aldrich tariff.—Double system inaugurated.—Beginnings of a tariff board.—“Until the passage of the Payne-

Aldrich Act all the trade conventions by the United States were on the basis of the single schedule system. This law introduced a new principle into American tariff policy, that of the double tariff. The form followed was an adaptation of the conventional tariffs of European countries based on two sets of schedules. Maximum and minimum rates were provided, the minimum being twenty-five per cent. lower than the maximum rates, or, as it was sometimes put, the maximum being twenty-five per cent. higher than the minimum rates. Nominally, the maximum was the basic tariff. Virtually, it was not, since the minimum rates were accepted as the real measure of customs duties. Under this dual tariff commercial relations were adjusted with one hundred and thirty-four countries. No nation sought to enforce maximum rates against the United States, and all received the minimum rates. The maximum and minimum provision was useful in securing removal of discrimination against cotton-seed oil and other American products. For the first time it enabled something to be effected by the diplomacy of commerce in securing more favorable treatment for American live-stock and meat products under the restrictions which were imposed by foreign governments exercising broad police powers in enforcing sanitary regulations. Some of the most acrid chapters in American diplomacy were the record of controversies on this subject, particularly with Germany and France. When the Payne-Aldrich law was passed, the people of the United States were consuming the bulk of the meat production, and the question was not a vital one. Nevertheless, advantage was taken of the readjustment of the tariff relations to secure the removal of discrimination construction and pure-food and sanitary regulations, although neither France nor Germany admitted that their regulations were utilized as disguised measures of protectionism. The whole world, however, knew that the objection was an economic one insisted on by the powerful agrarian aristocracy of Germany and by the French farmers who wanted American cattle and meats kept out of France. The maximum and minimum experiment was crude, but promising. Its operation showed distinct advantages though it also developed defects. Official recommendations for curing these defects, and giving the principle a more effective application had been made when political revulsion changed the party majority in Congress and the national administration."—C. M. Pepper, *American foreign trade*, pp. 118-119.—Of the bill in general President Taft said: "The bill is not a perfect tariff bill or a complete compliance with the promises made, strictly interpreted; but a fulfilment free from criticism in respect to a subject matter involving many schedules and thousands of articles could not be expected. It suffices to say that, except with regard to whiskey, liquors, and wines, and in regard to silks and as to some high classes of cottons—all of which may be treated as luxuries and proper subjects of a revenue tariff—there have been very few increases in rates. There have been a great number of real increases in rates, and they constitute a sufficient amount to justify the statement that this bill is a substantial downward revision, and a reduction of excessive rates. This is not a free trade bill. It was not intended to be. The Republican party did not promise to make a free trade bill. It promised to make the rates protective, but to reduce them when they exceeded the difference between the cost of production abroad and here, making allowance for the greater normal profit on active in-

vestments here. I believe that while this excess has not been reduced in a number of cases, in a great majority, the rates are such as are necessary to protect American industries, but are low enough, in case of abnormal increase of demand, and raising of prices, to permit the possibility of the importation of the foreign article, and thus to prevent excessive prices."

In the preparation of the Payne-Aldrich bill, "millions of money were spent in securing a mass of information or misinformation during a period of less than five months. It was a physical impossibility for the men on the Ways and Means Committee to frame up a measure which could be fair and equitable. . . . Through all the months of hearings, there was a persistent note which sounded clear throughout the country and the question was asked from Maine to California, why not have a Tariff Body of Experts or a Tariff Commission, call it what you will, but have a scientific system of acquiring facts without even a suggestion of privilege or preference. . . . The real exponents of scientific tariff making stood by until the last and finally saw what appeared to be a tiny provision included in the Payne-Aldrich Tariff Act, which became a law on August 5, 1909. This was in Article 718, Section 2, and read as follows: 'To secure information to assist the President in the discharge of the duties imposed upon him by this Section (that is, relating to the application of the maximum and minimum rates), and the Officers of the Government in the administration of the Customs Laws, the President is hereby authorized to employ such persons as may be required.' Thus was born what was afterward designated as 'The Tariff Board' and the builders of a Tariff Commission began to see a glimmer of hope. It was not until September 14, 1909, that the President under the authority thus given appointed three persons to assist him in the manner contemplated by the act and designated them as constituting the Tariff Board"—H. T. Wills, *Scientific tariff making*, pp. 73-74.

1909-1914.—Germany.—Germany's economic position in Europe paralleled by her political prestige.—Protection in Europe determined by Germany's tariff policy.—By 1909 Germany, triumphant in the European crisis which was precipitated when Austria annexed Bosnia with Germany's approval in the face of the protests from England, France, and Russia, was recognized as the political arbiter on the continent. This political prestige was paralleled by her commercial power. "In 1914 Continental Europe was largely protectionist; but since the leader in the protectionist movement was a country primarily interested in foreign trade and possessed of a keen economic sense, the protective tariffs of the important commercial countries were modified by numerous treaties, so that each country was enabled to obtain tariff concessions for its principal products in return for reciprocal concessions. The

foundation of the whole structure was the series of eight treaties negotiated by Germany on the basis of the new German tariff of 1902, specifically constructed with that end in view. It was a highly specialized tariff, considered by many the most scientific tariff in existence—i. e., best adapted to bring about the developments desired by the men who were directing the economic forces of the German Empire. If we take into consideration the fact that the tariff relations between Germany and France were fixed on a most-favored-nation basis by Article II of the Treaty of Frankfurt, and if we allow for the free trade policy of Great Britain, we are justified in stating that the German treaty system embraced most of Europe. In addition to getting the benefit of the treaties concluded directly, Germany, as well as most of the other European countries was also benefiting, by virtue of the most favored nation treatment clause embodied in her treaties, by the concessions to each other or to countries outside of the treaty powers by the countries with which she concluded treaties. These treaties were to expire at the end of 1917 on twelve months' notice and there were evidences of preparation for a new tariff alignment when the war broke out."—L. Domeratzky, *Instability of tariff conditions in Europe* (*Harvard Business Review*, Oct., 1923).—"Russia was before 1914 one of the best markets which her great neighbor, Germany had for manufactured goods, and was also one of the most promising fields for the employment of German capital in industrial enterprises. The prosperity and purchasing power of Russia were growing fast, so German manufactures had a cogent motive for desiring Russia's prosperity and for extending the very profitable trade they were driving with her. Nevertheless, this motive did not prevent the German Government from going to war with Russia in 1914, a step contemplated as probable for some time previously, as was shown by the newspaper campaigns which the German and the Russian newspapers carried on against one another. The action of Germany may have been due partly to a fear of Russia's material growth, which made her think it best to strike at once, partly to the confident belief that Russia, even though leagued with France, could be easily overthrown and brought into a commercial subservience which would enable German traders to dominate Russia and hold it as their exclusive preserve. Be this as it may, considerations of immediate economic loss counted for little or nothing. Even the leading German manufacturers and financiers did not try to prevent war. The other case is still more instructive. For many years before 1914 the growing commercial prosperity of Germany had made for the expansion of the trade between her and England. Among all foreign countries she was England's largest customer, and both countries were profiting immensely by this trade. Though they competed in some kinds of goods, they were in other kinds complementary to one another, for English manufacturers bought from Germany many partly manufactured articles and after finishing them exported them to Germany as well as elsewhere. Despite the check on imports which the high German tariff imposed, the German market was extremely valuable to England, and the English market no less valuable to Germany. On the other hand, there had begun to exist in English manufacturing and mercantile circles a certain jealousy of the rapid extension of German trade, which was supplanting that of England in certain markets, such as those of Spanish America, the

importance of which British exporters had been the first to discover."—J. Bryce, *International relations*, pp. 88-89.—"More specifically, the largest items among the German raw material imports were: raw cotton, silk, and wool (19.8 per cent); raw copper (5.3 per cent); hides and skins (10.0 per cent); iron-bearing ores and pig iron (5.0 per cent); rubber (2.3 per cent); tin, lead, and aluminum (1.8 per cent); pine, walnut, oak, mahogany, and other hard woods (6.4 per cent); chemicals and dyestuffs (6.4 per cent). These raw materials entered directly into the manufacture of commodities for export. Cotton, silk, and wool were converted into textiles and clothing; copper and iron went into the manufacture of industrial and agricultural machinery, rolling stock, and tools and metal articles of all kinds and descriptions for both household and industrial uses; hides and skins went into the manufacture of leather and leather articles; the various woods were used in practically every type of manufacturing; chemicals and dyestuffs produced dyes, fertilizers, and pharmaceutical products; etc., etc. The five principal groups of exports of German manufactured goods and their percentages of the total export in 1913 are as follows: Iron products (15.8 per cent); machinery (11.2 per cent); textiles, not including clothing (12.7 per cent); chemicals and dyes (9.4 per cent); leather and leather articles (5.4 per cent). The vital relationship between the importations of raw materials and the maintenance of German exports is sufficiently illustrated by the foregoing examples."—H. G. Moulton and C. E. McGuire, *Germany's capacity to pay*, p. 44.

ALSO IN: B. E. Schmidt, *Germany, and England*.  
1910.—United States.—Corporation tax in relation to tariff policy.—European tariff agreements.—The 1910 "federal tax on corporations and companies . . . [was] the resultant of several political forces which were brought into play during the discussion of the Tariff Act of 1909. Congress, it will be remembered, had convened upon the call of the President in extraordinary session for the purpose as many people hoped and as a few believed, of reducing the tariff duties upon imports. A bill for that purpose, in accordance with the constitutional requirement, could only originate in the House of Representatives. Accordingly, a comprehensive tariff bill was introduced in that body, and under its expeditious rules was speedily passed. When this bill reached the Senate, however, it was subjected to considerable discussion. A large number of Senators, for one reason or another, were in favor of incorporating in the bill a provision for a tax upon incomes, both of individuals and of corporations. The dominant party, or faction, was opposed to this measure, for reasons which it is not now material to inquire into. They were obligated to admit, however, that the scale of duties on imports which they were desirous of maintaining and which the bill provided for, would not, in all probability, raise sufficient revenue to supply the needs of the government. Possibly, had the tariff duties been reduced, so as to remove the virtual embargo which they imposed on many articles of foreign commerce, this prospective deficit might have been averted; but that remedy was regarded as even worse than an income tax. Yet so long as the proposed income tax was the only suggested source of additional revenue, as an alternative to the inadmissible plan of reducing duties on imports, there was a strong probability that an income tax would be adopted. In vain the powers-that-be argued that an unapportioned

income tax would certainly be pronounced unconstitutional by the Supreme Court, and that the government would thus be left without adequate revenue, as was the case when the Income Tax of 1894 met a similar fate. In spite of all these arguments, the adoption of an income tax by the Senate seemed imminent. At this point, a plan was devised . . . which, it was supposed, would raise sufficient revenue, would avoid the constitutional objections to a general income tax, and would at the same time enable the leaders of the Senate to escape the humiliation of a defeat upon the proposed income-tax amendment to the tariff bill. This plan was a so-called excise tax on corporations and companies in proportion to their income. This plan was incorporated in an amendment to the tariff bill, which was adopted in the Senate, and concurred in by the House of Representatives. The bill including this feature was signed by the President on August 5th, 1909."—A. W. Machen, Jr., *Treatise on the Federal corporation tax law of 1909*, pp. 1-3.—In accordance with the same tariff law, on January, 1910, the president issued the first of his proclamations relative to the operation of the maximum and minimum rates of duty. Six countries, namely, Great Britain, Russia, Italy, Spain, Switzerland, and Turkey, were designated as entitled to the minimum rates. A second proclamation, February 7, announced the conclusion of an agreement with Germany which gave to each country the minimum rates of the other. This agreement had been ratified by the Reichstag on the 5th. Negotiations with France and with Canada occupied more time, being protracted in the latter case almost to the limit of the period prescribed in the act. Terms of agreement were arrived at in both instances, and, in the end, the president was not called on to apply the maximum rates to any country.—See also CANADA: 1910-1911.

1910.—France.—Tariff revision.—No change of policy.—Contrast of French tariff with other European tariffs.—In the Tariff of 1910 "there was no suggestion of any change in the commercial policy of France, which followed the example of the United States rather than that of the German Empire and other states of the Continent. France, as the United States, had established two scales of duty; the lower scale to be applied, in whole or part, to the products of countries which did not discriminate unfavorably against French products, and the higher scale to be applied against countries which did so discriminate. Unlike Germany, she had declined as a general rule to enter into treaties which should fix these minimum rates for any definite length of time, and consequently she had retained her autonomy in tariff matters undiminished. There was now in France no controversy whatever as to the desirability of continuing this arrangement and the other characteristic features of French tariff policy, such as colonial preference and the *surtaxes d'entrepôt*; the revision was to be, in consequence, solely a revision of the rates of duty. . . . The revision was predominantly in the interests of industry, thus contrasting strongly with the latest revision of the German tariff, which had been dictated largely by regard for agriculture. . . . The most sweeping changes proposed in regard to the minimum rates, which so far as most industrial nations trading with France are concerned are alone of importance, were in the schedules relating to metals, where the duties were increased especially as regards special steels; manufactures of metal, where there was a far-reaching reclassification and increases in the

rates of duty on such classes of imports as steam-engines, pumps, and ventilators, agricultural machinery, machine tools, mechanics' tools, cables and wire, detached parts of machines, and watches and watch movements; and the textile schedules, owing (*inter alia*) to reclassification, the imposition of surtaxes for mercerization and stamping (*gaufrage*), and the increase of the rates of duty on the highest counts of cotton and linen yarns. . . . A curious provision of the new French law authorized the Government (subject to legislative approval) 'to maintain in force exceptionally and as a temporary measure the rates of the general [*i. e.*, maximum] tariff in force prior to the present law as regards all or any goods the produce of countries which do not subject French products to any differential treatment whatever.' The exact purpose of this clause was not clear, unless it were to give the French government the opportunity of establishing an 'intermediate' tariff, following in this respect the example of Canada; but it was immediately utilized in an agreement with the United States. Under this arrangement, which was confirmed by the Legislature on the same day as the new tariff was enacted, the United States obtain the new minimum rates on a large number of commodities, including, however, some (such as those on coffee, cocoa, pepper, tea and coal) in which they are not specially interested, and not including any of the rates in the textile schedules, and the old general tariffs are continued in respect of certain of their exports, such as preserved fruits, fine cutlery, some classes of boots, iron and steel tubes, common brushware and various other articles."—P. Ashley, *Modern tariff history*, pp. 348-354.

1911.—Canada.—Commercial treaty with Japan. See CANADA: 1911-1913.

1913.—United States.—Underwood tariff.—Revision on basis of ad valorem duties.—It was said that the Underwood tariff of 1913 "was not a 'scientific' tariff. . . . The duties were in fact settled in more or less rough and ready fashion. Doubtless the exact rates in many cases were the results of compromise, not of any close calculation or accurate information. Beyond question the same sort of thing had gone on in previous years, and even more flagrantly. But the Republicans could maintain that since 1909 the Tariff Board had been at work and had shown the possibility of more deliberate and discriminating procedure. And yet the Democrats could not be seriously expected to pay much attention to this demand for prolonged preparation and expert examination. In the first place, the Tariff Board was a Republican device. However excellent its work,—and no competent observer would deny that it had thrown much needed light on the industries which it investigated,—a flavor of partisanship remained. The very fact of its being a Republican product caused the Democrats to turn their backs on it. More important, however, was the circumstance that detailed and elaborate inquiry necessarily meant delay. . . . Postponement of action by the Democrats until the results of an expert board's inquiries should be at hand was to give up their golden opportunity. They had control for the first time in many years of all branches of the national legislature,—not only the House and the Presidency, but even the Senate. Their time had come, and to have waited would have been politically suicidal. Among the changes in duties made in the act of 1913 by far the most conspicuous and important were those on sugar and wool. Both were admitted free; wool at once,

and sugar after an interval of two and a half years. . . . It is difficult to see how anything could be said in favor of free sugar on the principle of a competitive tariff, or on that of attacking only the 'illegitimate' industries. So far as raw sugar is concerned, there had been steady competition between the domestic producers, as well as between them and the foreign producers. The imports of sugar had always been large. The production of cane sugar and beet sugar within the United States was as legitimate as could be the case with any highly protected industry. Possibly the circumstance that the sugar planters of Hawaii and Porto Rico, and in less degree those of Cuba and the Philippines, had been among the beneficiaries of protection, may have promoted an unrelenting attitude. Yet in the main the abolition of the duty, while tactically justified as a move toward lowering the cost of living, could be defended with consistency only on the ground that a cheap supply from abroad is better than a dear supply at home. This is the gist of the principle of free trade. What has been said of free sugar holds for the complete and immediate abolition of the duty on wool. In their tariff bills of 1911 and 1912, the Democrats had not ventured to go so far. It had been proposed to leave the duty on wool at 20 per cent. Through the influence of President Wilson, the bolder step was taken of admitting it free once for all. It will be remembered that this had been the one radical change made in the ill-starred tariff act of 1894. In urging the same step in 1913, President Wilson showed the unhesitating courage which won the respect of his opponents no less than of his friends. It happened that the juncture was favorable for the change. A sweeping reduction, perhaps amounting to complete abolition, had been on the cards for so many months that the market had adjusted itself to the prospect, and the price of wool had been for some time on a free wool basis. . . . Nominally, the reduction in protection on woollens was solely in the reduced *ad valorem* rate only. In fact, however, the abolition of the specific compensating duties meant a further reduction of protection. They had been more than enough to accomplish their nominal object, that of simply offsetting the influence of the wool duty in raising the domestic price of wool. . . . It would seem that in this case the Democrats strove to apply the competitive principle. The inquiries of the defunct Tariff Board, and some further calculations based upon them, indicated that a duty of 35 per cent. would correspond roughly to the difference in expenses of production between American and foreign manufacturers. . . . On cotton goods the reductions were not dissimilar in character and in effect from those in the *ad valorem* rates on woollens. The changes on the statute book were great. But in this case also the consequences in trade and industry were likely to be much less considerable than in the figures. . . . All the duties on cotton goods were now assessed by value. Except for the retention of a remnant of the fence system in the hosiery duties, not a specific rate appeared in the entire schedule. This radical change was made the occasion for severe criticism, on the familiar ground that *ad valorem* duties tempt to undervaluation and fraud. . . . The duties on silks were readjusted on the same principle as those on cottons. *Ad valorem* duties were substituted throughout for specific. The general rate on silk fabrics was made 45 per cent.; on velvets and plushes, 50 per cent. In the Senate, amendments were inserted retaining (though with some reduc-

tions) the previous system of rates by the pound. But the House refused to concur in these amendments and the act as finally passed swept away almost every specific duty in the silk schedule."—F. W. Taussig, *Tariff history of the United States*, pp. 424-444.—The main articles placed on the free list were agricultural implements, leather, dairy products, coal, and lumber.—See also U. S. A.: 1913 (April-December).

ALSO IN: F. A. Ogg, *National progress*.—W. Macdonald, *Three centuries of American democracy*. 1914-1916.—United States.—Effect of the World War on the tariff.—After the outbreak of the World War, "the decline in imports [into the United States] was mainly due to changed conditions within the countries from which our imports had come. Both forces were at work. In 1914-1915, as compared with the previous fiscal year, imports of articles which were not decisively necessary, such as laces, art works, silks, and precious stones, showed a decrease of \$120,000,000; while commodities whose production in belligerent countries had been interfered with by the war, such as breadstuffs, chemicals, dyestuffs, manufactures of copper, fertilizers, fibres, and hides and skins declined by \$159,000,000. On the other hand, the stoppage of the beet-sugar exportation from Europe stimulated the importation of cane-sugar from Cuba. Sugar, India-rubber, wool, meat, and dairy products caused an increase in imports of \$112,500,000 (of which sugar made up \$72,300,000). The severe decline in imports of August, 1914, was followed by a slight recovery (due to orders placed before the war) in the next two months; but the December imports were the lowest in five years. The loss in 1914-1915 from six belligerents was \$259,700,000, offset by a gain of \$83,000,000 from Cuba and Argentina. Including all countries, there was a net decrease of \$220,000,000. The loss from Great Britain was chiefly in textiles, tin, wool, and precious stones; from France, in art works, silks, cotton goods, and wines; from Russia, in hides and wool; from Belgium in hides, rubber, and precious stones. The greatest loss was from Germany, chiefly in colors and dyes, dressed and undressed furs, leather gloves, toys, chinaware, cotton goods, hides and skins, rubber, and tin. In view of later events, it is worth noting that imports from Germany to us recovered after August, 1914, and reached nearly normal proportions in January, 1915. By the middle of 1915, however, they had almost ceased. Looking over the course of imports as a whole before the war and then to the end of the third year [1916], we find they rose in 1915 to about the normal level of \$150,000,000 per month; but since then they [rose] . . . to twice that amount, reflecting somewhat the influence of exceptionally large exports."—J. L. Laughlin, *Credit of the nations*, pp. 306-307.—See also AGRICULTURE: Modern: United States: 1880-1916.

ALSO IN: *American interests as affected by the European war (Annals of American Academy of Political and Social Science, Sept., 1915)*.

1914-1918.—Europe.—Tariff situation at the beginning and during the World War.—"In regard to German trade with England herself, it is common knowledge that English markets were flooded with German goods, so that 'made in Germany' became a commercial shibboleth. In short, British companies freely carried on operations in Germany, and German companies and banks were established in Great Britain. Trade is reciprocal, and these rivals were necessary to each other. In 1911 exports from Germany to

the British Empire amounted to \$360,725,000, and the goods sent by the latter to the former were valued at \$442,475,000. There were evidently no restrictions on trade beyond those set by protective tariffs and relative advantages. The British took from Germany sugar, electrical and mining machinery, and mechanical products of the new technic. In return, they sent to Germany products of the older technic, in which the British retained their superiority, such as agricultural and textile machinery; and, in addition, raw materials to be used in the chemical industries, together with yarn, wool, hides, as well as articles of luxury and fashion, like leather goods, laces, cloths, plate glass, porcelain, china, best grades of paper, etc. Gradually it resulted that Germany, as she gained industrially, was buying less from England and England was buying more from Germany. Again French and German bankers were freely competing in Russia and Turkey, and in the Balkan States; while the British were aiding the Turkish navy, Germany was reorganizing the Turkish army. How, then, could it be said that Germany's trade was hindered in these countries? Without doubt, something more than the economic gains of peace entered into the national aspirations of Germany. If the conditions before the war brought to her the greatest progress obtained by any other country in the last thirty years, then the retention of those conditions was the thing most to be desired. Her phenomenal commercial gains were in themselves proof that she had the freedom of the seas. How else could her foreign trade and her shipping have grown so amazingly? The facts show only too clearly that she had the freedom of the seas, and the entry of her goods on equal terms in all ports of the world where her costs allowed her to undersell. Equally clear is it that her cry for the 'freedom of the seas' was born of a plan for herself so to control the seas that, when war came, she would be dominant on the ocean as well as on land. She already had freedom of the seas for peaceful commerce; but an exaggerated ambition looked to dominance on the seas in time of war. Such appears to be the only possible explanation of her foreign and colonial policy. . . . The situation of France made it impossible to greatly increase her exports of goods in order to help pay for the much-needed imports of food and war supplies. The dislocation in trade was very serious. In five months of 1915, as compared with the same months in 1914, the imports had declined 25 per cent and exports 58 per cent. In 1915 the industries of Lyons had now shown recovery; but the china, glass, woodworking, and metal industries showed improvement, while there was a gain of perhaps 20 per cent over the whole field. Workers for the government, as well as those in the chemical, leather, cotton, woollen, canned food, chain, motor, and engineering industries, were occupied night and day. Those formerly producing for export were now largely occupied in supplying war goods. The balance of payments, having been in favor of France before the war, so continued for a time after war began. The franc did not fall below par until May, 1915. It was then that the merchandise account was reversed. In 1915 imports exceeded exports by \$1,000,000,000, and in 1916 by over \$2,500,000,000. The purchases, especially from the United States, were very heavy. The payment for the imports, however, could be offset only to a reduced extent by the exports of goods (although there was a noticeable gain in 1916).—J. L. Laughlin, *Credit of the nations*, pp. 30-32, 186-187.—"Naturally no

constructive tariff legislation took place during the war; the chief use made of the tariff during that period was to encourage the importation of food-stuffs and supplies essential for war purposes, or to assist in the economic phases of the war. As a protectionist measure the tariff naturally played a very insignificant part during the war, its influence being modified or eliminated by the tonnage scarcity, high freight rates, and the tremendous demand for war supplies. It is true, however, that the foundation for the post-war protectionist movement in Great Britain, for instance, was laid as early as 1916, when the lack of certain 'key' commodities, like dyestuffs, scientific glassware, and other products of the highly specialized industries of Germany called attention to the industrial dependence of Great Britain and of the other belligerents as well as neutrals, like the United States, to that country. . . . After the signing of the Armistice and the gradual abandonment of the pretentious but rather hazy reconstruction schemes, the tariff problem was taken up again by nearly all countries, not so much with a view to building up a new system to meet the new economic conditions, but rather to construct a temporary shelter which would enable distracted or overstimulated industries to adjust themselves to the new conditions and save them from the anticipated onslaught of American or German industries."—L. Domeratzky, *Instability of tariff conditions in Europe* (*Harvard Business Review*, Oct., 1923).

1916.—Europe.—Paris Economic Conference of Allies and their war tariff policy.—In June, 1916, the Allies (England, France, Italy, Japan, Belgium, Russia, Serbia, and Portugal) "adopted 'on grounds of necessary and legitimate defense' the famous resolutions of the Paris Economic Conference. These resolutions proposed an economic war during an indefinite period, called the 'reconstruction' period, following the Peace Conference. Most-favored-nation treatment was to be refused to the Central Powers, that is, they were to be discriminated against; and since experience has shown that discrimination is a sword that cuts both ways, compensatory outlets were to be given to any Ally whose commerce was injured. Added to this plan to restrict the markets of the Central Powers, the Allies proposed to deprive German industries of raw materials by conserving for themselves 'their natural resources' and establishing 'special arrangements to facilitate the interchange of these resources.' The commerce of the 'enemy Powers' was to be submitted to 'special treatment,' and their goods—let us not forget that this was to be after peace had been signed—were to be subjected 'either to prohibitions or to a special régime of an effective character.' 'Special conditions' were also to be imposed on Teuton ships—more 'navigation laws,' it may be supposed. As if these restrictions were not enough to remind us of the fiercest days of trade conflict in former centuries, it was proposed to revive the practice of excluding foreigners from all retail trade in the mediæval town; the subjects of the Central Powers were to be prevented from exercising in the countries of the Allies 'industries or professions which concern national defense or economic independence.' This economic alliance was not, according to the reso-

lutions, to be temporary. In the spirit of exclusive nationalism the Allies decided 'to take the necessary steps without delay to render themselves independent of the enemy countries in so far as regards the raw materials and manufactured articles essential to the normal development of their economic activities.' This self-sufficiency was to be achieved by subsidies, enterprises controlled by Government, scientific and technical research, customs duties, and 'prohibitions of a temporary or permanent character.' The Paris resolutions proclaimed Germany a people with whom the Allies would have no dealings. Although the signing of some sort of peace was assumed, the resolutions proposed that after it there should remain an impassable economic gulf between the Allies and the 'enemy countries.'—W. S. Culbertson, *Commercial policy in war time and after*, pp. 346-348).—See also WORLD WAR: 1916: XII. Political conditions in the belligerent countries: a.

The following is the text of the resolutions of the Paris Economic Conference:

The representatives of the allied Governments have met in Paris, Mr. Clementel, Minister of Commerce, presiding, on the 14th, 15th, 16th and 17th of June, 1916, for the purpose of fulfilling the mandate which was confided to them by the conference of Paris on March 28, 1916, to put into practice their solidarity of views and interests and to propose to their respective Governments suitable measures for realizing this solidarity. They perceive that the central powers of Europe, after having imposed upon them their military struggle in spite of all their efforts to avoid the conflict, are preparing to-day, in concert with their allies, a struggle in the economical domain which will not only survive the re-establishment of peace, but at that very moment will assume all its amplitude and all its intensity. They cannot in consequence conceal from themselves that the agreement which is being prepared for this purpose amongst their enemies has for its evident object the establishment of their domination over the production and the markets of the whole world and to impose upon the other countries an in-acceptable hegemony. In the face of such a grave danger the representatives of the allied Governments consider that it is their duty, on the grounds of necessary and legitimate defense, to take and realize from now onward all the measures requisite on the one hand to secure for themselves and the whole of the markets of neutral countries full economic independence and respect for sound commercial practice, and on the other to facilitate the organization on a permanent basis of this economic alliance. For this purpose the representatives of the allied Governments have decided to submit for the approval of their Governments the following resolutions:

#### A. Measures for War Period

I. Laws and regulations prohibiting trading with the enemy shall be brought into accord for this purpose: A. The allies will prohibit their own subjects and citizens and all persons residing in their territories from carrying on any trade with the inhabitants of enemy countries of whatever nationality, or with enemy subjects, wherever resident, persons, firms and companies whose business is controlled wholly or partially by enemy subjects or subjects to enemy influence, whose names will be included in a special list. B. The allies will also prohibit importation into their territories of

goods originating or coming from enemy countries. C. The allies will further devise means of establishing a system of enabling contracts entered into with enemy subjects and injurious to national interests to be canceled unconditionally.

II. Business undertakings, owned or operated by enemy subjects in the territories of the allies, are all to be sequestered or placed under control. Measures will be taken for the purpose of winding up some of these undertakings and realizing the assets, the proceeds of such realizations remaining sequestered or under control. In addition, by export prohibitions which are necessitated by the internal situation of each of the allied countries, the allies will complete the measures already taken for the restriction of enemy supplies both in the mother countries and the dominions, colonies and protectorates: 1. By unifying lists of contraband and export prohibition, particularly by prohibiting the export of all commodities declared absolute or conditional contraband. 2. By making the grant of license to export to neutral countries, from which export to the enemy territories might take place, conditional upon the existence in such countries of control organizations approved by the allies, or in the absence of such organizations, upon special guaranties, such as the limitation of the quantities to be exported, and supervision by allied consular officers, etc.

#### B. Transitory Measures for the Period of the Commercial, Industrial, Agricultural and Maritime Reconstruction of the Allied Countries

I. The allies declare their common determination to insure the re-establishment of the countries suffering from acts of destruction, spoliation and unjust requisition, and they decide to join in devising means to secure the restoration to those countries, as a prior claim, of their raw materials—industrials, agricultural plant and stock—and mercantile fleet, or to assist them to re-equip themselves in these respects.

II. Whereas the war has put an end to all treaties of commerce between the allies and enemy powers, and it is of essential importance that during the period of economic reconstruction the liberty of none of the allies should be hampered by any claim put forward by enemy powers to most-favored-nation treatment, the allies agree that the benefit of this treatment will not be granted to those powers during a number of years to be fixed by mutual agreement among themselves.

During this number of years the allies undertake to assure each other, so far as possible, compensatory outlets for trade in case consequences detrimental to their commerce should result from the application of the undertaking referred to in the preceding clause.

III. The allies declare themselves agreed to conserve for the allied countries, before all others, their natural resources during the whole period of commercial, industrial, agricultural and maritime reconstruction, and for this purpose they undertake to establish special arrangements to facilitate the interchange of these resources.

IV. In order to defend their commerce and industry and their agriculture and navigation against economic aggression resulting from dumping or any other mode of unfair competition the allies decide to fix by agreement a period of time during which commerce with the enemy powers will be submitted to special treatment, and goods originating from their countries will be subjected either

to prohibitions or to a special régime of an effective character. The allies will determine by agreement, through diplomatic channels, the special conditions to be imposed during the above-mentioned period on the ships of enemy powers.

V. The allies will devise measures, to be taken jointly or severally, for preventing enemy subjects from exercising in their territories certain industries or professions which concern national defense or economic independence.

### C. Permanent Measures of Mutual Assistance and Collaboration Among the Allies

I. The allies decide to take the necessary steps without delay to render themselves independent of enemy countries in so far as regards raw materials and manufactured articles essential to the normal development of their economic activities. These measures will be directed to assuring the independence of the allies, not only so far as concerns sources of supply, but also as regards their financial, commercial and maritime organization. The allies will adopt such measures as seem to them most suitable for the carrying out of this resolution according to the nature of the commodities and having regard to the principles which govern their economic policy. They may, for example, have recourse to either enterprises subsidized and directed or controlled by the governments themselves or to the grant of financial assistance for the encouragement of scientific and technical research and the development of national industries and resources, or to customs duties or prohibitions of a temporary or permanent character, or to a combination of these different methods. Whatever may be the methods adopted, the object aimed at by the allies is to increase the production within their territories, as a whole, to a sufficient extent to enable them to maintain and develop their economic position and independence in relation to enemy countries.

II. In order to permit the interchange of their products the allies undertake to adopt measures facilitating mutual trade relations, both by the establishment of direct and rapid land and sea transport services at low rates and by the extension and improvement of postal, telegraphic and other communications.

III. The allies undertake to convene a meeting of technical delegates to draw up measures for the assimilation, so far as may be possible, of their laws governing patents, indications of origin, and trademarks. In regard to patents, trademarks, literary and artistic copyright which come into existence during the war in enemy countries, the allies will adopt, so far as possible, an identical procedure to be applied as soon as hostilities cease. This procedure will be elaborated by the technical delegates of the allies.

### D

Whereas, for the purpose of their common defense against the enemy, the allied powers have agreed to adopt a common economic policy on the lines laid down in the resolutions which have been passed; and whereas, it is recognized that the effectiveness of this policy depends absolutely upon these resolutions being put into operation forthwith, the representatives of the allied Governments undertake to recommend that their respective Governments shall take, without delay, all the measures, whether temporary or permanent, requisite to giving full and complete effect to this

policy forthwith and to communicate to each other the decisions arrived at to attain the object.

PARIS, JUNE 17, 1916.

ALSO IN: *American foreign trade relations (Proceedings of American Academy of Political and Social Science, v. 9, no. 2)*.—National foreign trade council, *European economic alliances*.

1916.—United States.—Creation of permanent tariff commission.—“As it became clear that the economic effects of the European War would transform the industrial and commercial world, the need of information as a guide to future policies of the government in economic affairs became generally manifest. On January 24, 1916, President Wilson, in a letter to the Chairman of the House Ways and Means Committee, urged the creation of a tariff commission. . . . Provision for the creation of the commission was made by act of September 8, 1916 (39 Stat. L., 705). The act provided for a commission of six members appointed for overlapping terms by the President and confirmed by the Senate. Nonpartisanship was to be secured by the requirement that not more than three of the Commissioners were to be members of the same political party.”—J. Bernhardt, *Tariff commission, service monographs of the United States government, no. 5, pp. 16-17*.—Professor F. W. Taussig of Harvard University, economic expert, was appointed chairman of the commission. One of the functions of the tariff commission has been to issue reports of the results of their investigations of trade conditions throughout the world. These officials reports are very valuable in the detailed study of tariff questions.

1917-1919.—United States.—Control of imports and exports as war measures.—“On October 12, 1917, the President [Wilson] took steps for the exercise of the powers in respect to the control of imports and the enforcement of the provisions regarding trading with the enemy which had been vested in him by the Trading-with-the-Enemy Act of October 6, 1917. This he did by the issue of an executive order of that date setting forth in detail the manner in which the several powers conferred by that Act should be exercised. It . . . created and defined the duties of a Censorship Board and the office of Alien Property Custodian, in addition to making provision for the exercise of control over imports and exports and of trading with the enemy. In respect to the latter features, which are the only ones with which we are here concerned, the order made provision for two new bodies, to be known as the War Trade Council and the War Trade Board, which should supersede and take over the duties of the Exports Council and the Exports Administrative Board and in addition exercise control over imports and the trading with the enemy features of the Act. . . . The signing of the armistice had, probably, less immediate effect upon the operations of the War Trade Board than upon those of any of the other special war agencies. Because of the fact that the embargo against Germany and her allies was rigidly maintained during the period of negotiation of the terms of peace, and the fact that tonnage available for overseas trade still continued wholly inadequate to meet the world needs, the necessity still existed for the maintenance by the United States of a large measure of control over the importation and exportation of most commodities. Notwithstanding this, it was the policy of the United States to alleviate or wholly remove restrictions upon foreign trade as rapidly as circumstances would permit. Especially was it de-

sired to remove restrictions upon trade with neutral nations and to abolish the regulations governing trading with enemy firms or ally-of-enemy firms located in our own or neutral countries. Order after order was accordingly issued having these ends in view. On April 28, 1919, announcement was made that, dating from April 29, 1919, all Enemy Trading Lists theretofore issued or compiled by the War Trade Board were withdrawn and that all disabilities attached to trade and communication with persons included in such lists would cease to operate. This order, however, did not affect any existing restrictions against trade and communication between the United States and Germany or Austria-Hungary. The reservation was also made that the Enemy Trading List might be reimposed at any time should circumstances make such action desirable."—W. F. Willoughby, *Government organization in war time and after*, pp. 128-129, 141.—See also U.S.A.: 1916-1918; AGRICULTURE: Modern: United States: Effects of World War.

ALSO IN: J. Clark, W. Hamilton and H. Moulton, *Readings in economics of war.—International economics (Annals of American Academy of Political and Social Science, Mar., 1919)*.—F. W. Taussig, *Free trade, tariff, and reciprocity*.

1918-1919.—United States.—Free port system recommended by tariff commission, and opposed by protectionists.—Between the years 1918 and 1919 the question of free ports,—in imitation of the customary free ports of Europe—came up in Congress. The United States tariff commission, which had made a prolonged study of reciprocity, recommended the establishment of such ports. "A 'free port' is simply an inclosure in a harbor of a country that has a tariff system, into which ships may come and go, unload or transfer cargoes, etc., without necessity of customs supervision. The first idea has been to have these 'free ports' as general international markets, where trans-shipment and re-export business may be freely carried on. Re-export markets give the manufacturers in a country having them an advantage in prices. They also help along the shipping and the general merchandising organization to have these collateral activities of international commerce going on. In the greatest modern development of international commerce, however, the 'free ports' are used as the means of constructing the finest mechanical devices for helping to make transoceanic shipping just as cheap as possible. By having a safely inclosed area, with custom-house entrances and exits on the land side at which the tariff business may be transacted when goods move across the 'tariff line,' it is easy to handle goods and machinery in big units without the careful supervision of customs officials that necessarily impedes and makes costly the movement of loading and unloading at ordinary piers."—*Future machinery for building up commerce (The Americas, July, 1918, p. 136)*.—Opposition of the advocates of protection to the free port policy was voiced in their journal, the *American Economist*. Other recommendations of the tariff commission were: "the United States should ask no special favors and should grant no special favors;" that "it should exercise its powers and should impose its penalties not for the purpose of securing discriminations in its favor but to prevent discriminations to its disadvantage"; and that it should enact legislation authorizing the imposition of additional or penalty duties by proclamation of the president on imports from countries not according the United States the same

treatment accorded to other most-favored nations.

ALSO IN: T. E. G. Gregory, *Tariffs, a study in method*.

1919.—England.—Post-war tariff conditions.—"The War had destroyed the old sense of security, already shaken by the expansion of competing industrial nations, the penetration of our industries and trade by German enterprise, the swift recurrence of cycles of unemployment, and the chronic discontent with low wages. The War has also lifted the questions of the safeguarding of industries and the conservation of raw materials out of the narrow confines of party politics and set them on their proper basis as problems of Imperial meaning. . . . The trend of opinion towards these principles is well illustrated by the report of the Royal Commission presided over by Lord Balfour of Burleigh. This Commission, which included eight Free Traders in its eighteen members, was appointed in July 1916 to consider the commercial and industrial policy to be adopted by Great Britain after the War, with special reference to the conclusions reached at the Economic Conference of the Allies, and to the maintenance of industries essential to the safety of the nation, the recovery of home and foreign trade lost during the War, the opening up of new markets, the development of the resources of the Empire, and their preservation from foreign control. . . . These suggestions were offered as embodying definite lines on which tariffs could be applied, providing a distinct preference to the Empire over neutrals and a smaller preference to Allies who were willing to reciprocate."—E. Saunders, *Self-supporting empire*, pp. 76-77, 80-82.—As a temporary measure England resorted to import restrictions, in 1919, on a wide variety of articles in order to stimulate home production, and to meet the unemployment crisis.

1919.—Europe.—Customs duties and regulations as fixed by the Versailles Treaty. See VERSAILLES, TREATY OF: Part X. Section 1: Chapter 1.

1919.—Poland.—Tariff regulations. See POLAND: 1919 (June 28).

1919-1920.—France.—Post-war tariff.—System of "coefficients of increase" introduced.—"Some months after the Armistice, the total prohibition of all imports into France, except as licensed and except from the French colonies was enacted as law. When the prohibitions were largely removed, after a short experiment with ad valorem surtaxes, in July, 1919, 'co-efficients of increase' were introduced. These co-efficients (which have been copied in Belgium) ranged at first from 1.1 to 3; but for luxuries, upon the repeal of the later prohibition upon their importation, co-efficients as high as 7.1 are now used. By multiplying the old specific rates by these co-efficients, new rates are easily formed, which for any desired part of a schedule maintain the previous relations between the rates on different articles and between the minimum and general tariff rates. The original set of co-efficients covered all the schedules except animals, animal products, vegetable products and crude minerals, but included wool and slate. The co-efficients are freely revised by decrees which appear at short intervals and nearly all the changes are increases. France has also participated in the movement to restrict the importation of luxuries, and from April to July, 1920, about 175 articles were on the prohibited list, and some 20 articles remain under the ban. The prohibition of luxuries met with especial opposition from a large number of manufacturers and merchants who cater to the tastes of wealthy visitors and who maintain some

of the most characteristic lines of French exports. On the whole, it does not appear that the French have made excessive increases in their import duties. With the balance of trade heavily against them and under severe pressure, both to raise revenue and to restrict imports, their increase in the tariff rates have not kept pace on the average with the advance of prices."—B. B. Wallace, *Post-war tariff changes and tendencies (Annals of American Academy of Political and Social Science, v. 94, p. 181)*.

1919-1920.—Germany.—Post-war tariff on exports.—To meet the trade restrictions imposed upon her by the peace treaty, and also as a means of correcting the depreciation of the exchanges, Germany, in an "ordinance of 20th December, 1919, 'concerning control of export trade' introduced, . . . a tax on export licenses. By the Ministerial Proclamation of 8th April, 1920, Art. 9, the tax is assessable 'on the total value which is put to the account of the foreign consignee . . . if the merchandise is exported unsold, the tax will be calculated according to the export value of the goods; and in the case of "improvement trade," according to the value of payments made in connection therewith.' The Ministers for Economic Affairs and of Finance can regulate the charges to be made, and are bound to alter them on demand of the Reichsrat. By Art. 10, 'if the wares are priced in foreign currency the value is to be calculated in German currency converted at the rate of exchange to be fixed' by the said Ministers, 'for the purpose of computing the amount of the charge.' So long as the internal purchasing power of the mark was greater than its parity value in terms of foreign currency, this system represented a sharing of the profits between the foreign buyer and the German Government. The value of the system becomes problematical when the internal value of the mark falls, for then no profit is to be obtained by buying German goods, and the tax operates like any other export tax as a discouragement to export."—T. E. G. Gregory, *Tariffs, a study in method, pp. 486-487*.—The Peace treaty allowed Germany, and Austria to require payment in gold.

1919-1920.—World-wide tariff tendencies after the World War.—Increase of protection.—"The significance of the world-wide movement for the increase of tariff rates [1919-1920] need not be overestimated. Modifications in revenue tariffs—the tariffs found throughout Asia, Africa and Latin America, with the exception of Japan, the Union of South Africa and certain colonies of Japan, France and the United States—[were] of importance only to the consumers. . . . Exceptions to the generalization that recent tariff changes are upwards are found in certain of the belligerent countries which pushed their revenue rates very high during the war and [after] . . . lowered or only maintained them. . . . Few countries . . . made an approach to a general revision of their tariffs—changes [were] . . . most extensive in France, Belgium, Spain, Portugal, Argentina, Brazil, Mexico and Peru. The European states named, however [considered] the changes . . . made merely tentative. . . . The Italian Government . . . expressed a preference for an autonomous tariff; i.e., a two-column tariff whose lower rates

may be accorded by treaty *en bloc*, but which remain alterable by the legislature. [See WORLD WAR: Miscellaneous auxiliary services: XII. Reconstruction: c, 2.] The British Empire demands more extended consideration. In recent decades the Empire has been sharply divided on tariff policy: Great Britain, India and the Crown Colonies have held to free trade, while Canada, Australia, New Zealand and South Africa adopted, and from time to time have extended, systems of protection. Further, these Dominions grant to Great Britain (and to some extent to other parts of the Empire) preferential tariff rates. The war . . . strengthened . . . the adherence of the Dominions—now recognized as nations—to the protective policy, and [gave] a new prominence to the question whether the rest of the Empire should maintain its free-trade and non-preferential policy. The British self-governing Dominions [showed] no prospect of any substantial lowering of their protective barriers. . . . A widespread demand for lower duties . . . in Canada led, in 1919, to the repeal of the war tax of 5 per cent ad valorem on merchandise admitted under the preferential tariff, . . . and, in 1920, to the repeal of the 7½ per cent war tax on non-preferential merchandise. . . . In South Africa there . . . [was] some lowering of revenue duties on articles not produced in the country, and some additions of raw materials to the free list. But a strongly nationalist (partly anti-British) feeling in South Africa, combined with the advance in industry, . . . [made] an extension of protection most probable, and an extension of the principle of imperial preference rather improbable. Australia, alone of the British Dominions, . . . thoroughly revised its tariff since the war. The new rates, which went into force provisionally in March, 1920, . . . extended the range and raised the rates even of the preferential schedule but . . . increased also the surtaxes upon non-preferential goods. Ninety manufactured articles . . . [were] made dutiable for the first time. The object . . . [was] not only to protect industries which arose during the war, but also to promise protection to some which it . . . [was] expected will be established. . . . For this purpose 'deferred duties' . . . [were] provided—to go into effect at prescribed future dates unless the Minister of Commerce [decided] that the industries are not yet on a producing basis. The avowed aim . . . [was] to make Australia self-sufficient and independent of long lines of communications, in-so-far as her raw materials provide the basis for self-sufficiency. In India, both educated and uneducated, native and Anglo-Indian opinion [was] strongly in favor of protection, and . . . [had] been increasingly insistent for many years upon the adoption of this policy. [See also INDIA: 1012-1022.] . . . In the United Kingdom two points of recent tariff history stand out. During the war there were imposed—primarily to check imports of luxuries—duties of 33½ per cent ad valorem upon clocks and watches, passenger automobiles and motorcycles, musical instruments, and at specific rates upon cinematograph films and matches. These duties have been maintained since the war obviously as heavily protective. The maintenance of these duties has been the subject of much discussion, and is optimistically regarded by many 'tariff reformers' as the beginning of a general system of protection. Secondly, by the budget bill of 1910, not only these duties but the revenue rates upon tea, coffee, cocoa, sugar, dried fruits, tobacco and alcoholic beverages were reduced in favor of colonial products, i.e., the principle of imperial prefer-

erence was accepted for the whole of the limited tariff schedules of the United Kingdom."—B. B. Wallace, *Post-war tariff changes and tendencies (Annals of American Academy of Political and Social Science, Mar., 1921)*.

1921.—Germany.—Tariff situation in regard to German imports crux of the reparation problem. —"Almost every country whose manufactures were stimulated during the period of the war . . . raised tariff barriers in the hope of safeguarding these infant industries. When in the summer of 1921 German trade showed a slight revival from the depression of the early months of that year, and German goods began once more to appear in increased volumes in world markets; when it was believed that the depreciation of the German currency would give an artificial stimulus to German foreign trade, the trade and financial press of the world was filled with articles . . . about the menace of reviving German competition in foreign markets. A recovery of German exports was regarded as something to be prevented at any cost. Emergency tariff, anti-dumping laws, and safeguarding of industry acts are the striking features of post-war commercial legislation. One can find no more striking example of human fatuity than the demand on the part of the Allied Countries that Germany must make vast reparation payments and the simultaneous erection of tariff barriers, the result of which is to make such payments impossible. The tragedy is that . . . few people realize that any inconsistency is involved. . . . The ability of Germany to develop an export surplus is the essence of the whole reparation problem."—H. G. Moulton and C. E. McGuire, *Germany's capacity to pay*, pp. 138, 242.

De Haas, *Present outlook of United States' trade with Germany (Annals of American Academy of Political and Social Science, Mar., 1921)*.

1921.—Great Britain.—Safeguarding of British Industries Act.—"In the Safeguarding of British Industries Act, 1921, we find a combination of motives—protection for the encouragement of industries considered essential from a national standpoint as a result of the World War experience, and an attempt to protect British industry in general against the dumping by countries enjoying the stimulus to export trade involved in a depreciated currency. The measure [provided] for a 33 $\frac{1}{3}$ % ad valorem duty on the products of the so-called 'key' industries—optical glass, laboratory apparatus, scientific instruments, magnetos, hosiery, needles, and so forth; in addition, there . . . [was] a general anti-dumping clause which [authorized] the imposition of a duty up to 33 $\frac{1}{3}$ % ad valorem on goods of any kind, other than food or drink or the products of any part of the British Empire, which are sold or offered for sale in the United Kingdom (a) at prices below cost of pro-

duction, or (b) at prices which, by reason of the depreciation of the currency of the country of origin, are below the prices at which similar goods can be profitably manufactured in the United Kingdom. The first part, dealing with the protection of 'key' industries, . . . [was] to remain in effect for five years from October 1, 1921."—L. Domeratzky, *Instability of tariff conditions in Europe (Harvard Business Review, Oct., 1923)*.

1921.—United States.—American tariff policy reviewed.—Problem of adjusting commercial traditions to economic crisis in Europe.—"The tariff policy of the United States since our Civil War has been dominated by the purpose to protect and encourage the development of new industries. During most of the time, the political party which avowedly favored this policy has been in power at Washington, and during the short periods that the opposition was in power it could not undertake to make very radical changes. Even if one accepts the doctrines of free trade as theoretically sound, he is forced to admit that a people who possess a country of vast natural resources, like the United States, capable of supporting a great population and of developing a variety of industries will be inclined naturally to use their governmental powers to hasten such development. They are not likely to be content to await the slower processes of unaided growth. Practically all new countries adopt the policy of stimulating development, the daughter dominions of free-trade England as well as the others. . . . The main purpose of the protective policy in the past has been to get our domestic industries into a more balanced state, with factories to supply our own wants and to employ a population which would create a home market for our agricultural products. The policy of protection was not pursued to promote foreign trade. We have not been acting with a view to developing foreign markets. We have not been thinking about foreign markets, or planning to enter them with manufactured goods. In fact, the argument for protection has been based upon the theory that we could not compete successfully with foreign goods in open markets. In recent years, however, our attitude in this respect has been changing. In many lines of goods our producers have demonstrated their ability to compete in the markets of the world and to maintain a profitable and growing volume of sales. What they have done, there is reason to believe that others can do, if they have a fair chance, and the interests of those who are building up an export business are beginning to clash with the interests of those who claim that they must have protection to enable them to succeed even in the home market. . . . While under pre-war conditions we were obliged to have a favorable trade balance of about \$500,000,000 per year in order to meet our obligations abroad, hereafter foreign countries will need to have about such a balance in their dealings with us, in order to meet their obligations. . . . If we expect to have any commercial relations with the world whatever, we must consent to reciprocal relations. If we have any interest in procuring foreign customers, we must give some thought to the means by which they will be able

to make payment, and there is no way in which they can make payment save in the goods of their own production. In other words, it is idle for us to talk of developing foreign trade if we mean only the development of export business. Trade consists of exchange of products. It follows, therefore, that if we wish to allow our producers who are able and desirous of competing in foreign markets to do so, we must allow goods of foreign production to be sold in our markets to balance those exports. We will put an unbearable handicap upon our exporters by restricting imports to an extent which will cause foreign exchange charges to rise against them. . . . The people who advocate prohibitory tariffs are actuated by a mistaken idea that without such protection foreign countries will flood us with goods and ruin our industries. This is an illusion, for other countries can no more sell to us without taking products in exchange than we can sell to them without so doing. The rule of goods for goods is binding on all countries. If a great trade balance should develop against us, as feared, exchange rates would turn about and set up a barrier against imports more flexible and effective than any that can be established by law."—G. E. Roberts, *Imports, the tariff and American foreign trade* (*Annals of American Academy of Political and Social Science, Mar., 1921*).—In his message to Congress in 1919 President Wilson had advocated the following tariff position: "Anything, therefore, which would tend to prevent foreign countries from settling for our exports by shipments of goods into this country could only have the effect of preventing them from paying for our exports and therefore preventing the exports from being made." Commenting on the president's stand on the tariff, Representative Nicholas Longworth of Ohio, Republican member of the ways and means committee, which was called upon to frame a new tariff bill, said: "The logical conclusion to be deduced from this statement would be that no tariff bars should be erected against the free importation into his country of goods from debtor nations. . . . With this conclusion I am entirely unable to agree. The President goes on to say: 'The productivity of the country, greatly stimulated by the war, must find an outlet by exports to foreign countries and any measures taken to prevent imports will inevitably curtail exports.' And later on he says: 'Whatever, therefore, may have been our views during the period of the growth of American business concerning tariff legislation we must adjust our new economic life to a changed condition growing out of the fact that American business is full grown and that America is the greatest capitalist in the world.' The enactment into law of such a doctrine would in my judgment bring absolute disaster to American business and industry. I concede of course that conditions have changed, but have they changed to such an extent that we ought to abandon all the standards and policies of the past and forgetting our home market to enter into a mad scramble for the world's market?"—N. Longworth, *American tariff policies adapted to present economic situation* (*Proceedings of Academy of Political and Social Science, Jan., 1921*).—"Discriminatory duties on imports carried in American vessels have been a feature of our tariff legislation from the establishment in 1789 of a national policy governing foreign trade to the present time. During much of this period such duties have, for the most part, been rendered imperative by reciprocal treaties with practically all the commercial countries of the world, mutually exempting from such

discrimination the goods carried in the vessels of the contracting nations, or by provisions in the laws themselves exempting from their enforcement articles imported in the ships of countries levying no discriminatory rates against goods carried to their ports in American bottoms. The Merchant Marine Act . . . passed by Congress [1920] and signed by the President provides for the termination of treaties or conventions which restrict the right of the United States to impose discriminatory duties in favor of imports entering this country in American vessels. The evident purpose of this enactment is to encourage trade in American bottoms as a means of protecting and enlarging our mercantile marine."—A. Berglund, *Discriminatory duties on imports in American bottoms* (*Annals of the American Academy of Political and Social Science, Mar., 1921*).

1921 (March).—United States.—First Farmers Emergency Tariff Bill.—In the last grand rush of the closing session of Wilson's second administration many projected laws fell by the wayside, but the most controversial measure, the Fordney Emergency Tariff Bill, managed to secure a favorable vote in both the House of Representatives and the Senate. The bill was not a complete tariff measure, as it is virtually limited to agricultural products. President Wilson vetoed the bill on March 3 and the House failed to obtain the necessary two-thirds majority when it attempted to pass it over the president's veto.

1921 (May).—United States.—Second Farmers' Emergency tariff.—"All the popular debates of the last generation had inculcated the belief that the mere imposing of a duty served at once to benefit the domestic producer. In a time of distress this notion of the wonder-working effect of an import duty naturally led the leaders to propose, and the rank and file to welcome, immediate and drastic tariff changes. Early in the extra session of Congress (May 27, 1921), the [Fordney] 'Emergency' act imposed high duties upon wheat, corn, meat, wool, sugar. It was originally passed with a provision that the duties should be in force for six months only, but was reenacted step by step and remained in effect until the final passage of the [Fordney-McCumber] act of 1922. As a means of meeting the emergency of the time it was hardly more than an amiable gesture. The prices of the several products continued to decline; hardly a better proof could be found of the failure of tariff duties to serve as a remedy of immediate efficacy."—F. W. Taussig, *Tariff Act of 1922* (*Quarterly Journal of Economics, Nov., 1922*).

1922.—United States.—Fordney-McCumber tariff of 1922.—Five years of the tariff commission.—Effect of Tariff Act of 1922 on European trade situation.—"Although the new Tariff Commission had been at work for more than five years at the time of the passage of the Fordney-McCumber Act [in 1922], its influence on that measure was weakened by the fact that most of its members were Democratic appointees. The old plan of enumerating all the articles likely to be imported was continued, and the advice of the Commission as regards rates was largely ignored. On the other hand, the experts of the Commission did succeed in bringing about a much needed reclassification of the commodities enumerated in the Act, conforming more closely to current commercial practices, and in re-drafting the administrative provisions of the law. In general, however, the methods used in preparing the 1922 tariff were as haphazard and unscientific as those in

connection with any earlier tariff measure. . . . To a greater extent than any previous tariff it [levied] high duties on our leading agricultural products, which normally enter very little into American import trade, while at the same time it [increased] the duties on many manufactured products until they [were] practically prohibitive. . . . As was to have been expected, the new tariff returned to the dutiable list many of the articles that had been transferred to the free list in the Underwood Act, such as pig iron and manufactures of iron and steel, flax, hemp, wool, salt and most of the staple food products. There were left on the free list, however, iron ore, coal, coke, lumber, wood pulp, waste bagging and standard newsprint paper. The most remarkable provision in the . . . law is that which gives the President the power to revise the rates of duty whenever he shall find, after investigation by the Tariff Commission, that differences in production costs in the United States and in the principal competing countries are not equalized by the rates of duty provided in the new measure. The change which may be made by the President may not exceed 50 per cent of the rate as passed by Congress, but if this is not sufficient to bring about the equalization desired, the President may direct that any *ad valorem* duty, based upon the value of the imported article in the country of its origin shall thereafter be based upon its selling price in the American market. . . . [The tariff of 1922] added not a little to the complications of an international situation in which the debts owed to the United States by European countries are a highly important factor. These debts must eventually be paid, if paid at all, largely in goods, the importation of which the 1922 tariff . . . [sought] to limit and in some cases to prohibit."—H. R. Seager, *Practical problems in economics*, pp. 413-415.

1923.—England.—Tariff crisis in the Baldwin election.—Free trade policy retained by England.—The great question as to whether or not England should relinquish her historic policy of free trade, maintained for three quarters of a century, was submitted to the people in the December elections of 1923 called for by Prime Minister Baldwin. Of this significant election, the editor of the *Economist*, F. W. Hirst, wrote to the *New York World*, "I doubt if ever in our political history we have witnessed a political transformation so swift, so sudden, so unexpected, as that of the last month. Perhaps the nearest approach to it occurred when Sir Robert Peel, leader of the Protectionist Tory Party, became a convert to Free Trade and with the help of the Whigs repealed the Corn Laws in 1846. But in his case public opinion had been prepared for the conversion by two budgets which had gone a long way in the direction of Free Trade. Another parallel is that of 1885-6, when Mr. Gladstone, leader of the Liberal Party, announced his

conversion to Home Rule for Ireland, losing in the process a large section of his followers. That too was a surprise. It startled the country; but at least he gave the electors six months' time for reflection, for the subject was thoroughly discussed in Parliament and in the country before the electors were consulted in the summer of 1886. Mr. Baldwin has given the people no time for reflection. Within a month of his conversion from the policy of 'tranquillity and stability' to the policy of a fiscal revolution, which would throw the whole business of the country into confusion, he has advised the King to dissolve Parliament and has plunged us all into the whirlpool of a general election. His excuse for it all is that an immediate remedy for unemployment must be found, that in his opinion there is no remedy except a protective tariff, and he was pledged at the general election of last year not to introduce a protective tariff during the lifetime of the Parliament then elected. He therefore asks for a new mandate with full powers to impose whatever import duties he and his advisers may think proper for the purpose of increasing employment before winter is over. . . . The appeal of the protectionists is to a number of small industries which for one reason or another are unable to export successfully, and are suffering from competition in the home market. Let me mention a few of the most important. Our imports of paper are valued at ten millions and our exports at only seven millions sterling. Our imports of silk goods are valued at fifteen millions and our exports at only one million. Our imports of leather at eight millions, against exports of four millions. I should have said these figures are for the first nine months of the current year, January to October, 1923. Taking the whole official statistics of our imports and export trade in goods mainly or wholly manufactured for these nine months, we find that imports into Great Britain are valued at 191 millions and exports at 482 millions. So that a policy aiming at the reduction of imports for the benefit of the home market—a policy which would necessarily increase the cost of living and production—might easily lead to disaster; for British manufacturers would stand to lose £48 for every £19 they stood to gain. Here are the seven biggest trades in the list excluding coal, shipbuilding and shipping, which, of course, are bound to lose under a protective tariff like that which Mr. Baldwin contemplates.

	Value of imports in millions sterling.	Value of exports in millions sterling.
Cotton goods.....	5	148
Iron and steel.....	11	62
Woolen goods.....	8	53
Other textiles .....	9	19
Apparel .....	13	22
Chemicals .....	10	21
Vehicles .....	5	24

"Here, then, we have a rough-and-ready test of the probable effect of a protective tariff upon British industries. All experience, of course, shows that a restriction of imports must mean a restriction of exports and vice versa. But British manufacturers are more dependent than those of any other country upon foreign trade, and the margin of profit is usually very narrow."—F. W. Hirst, *New York World, Dec., 6, 1923*.—"On Friday, Dec. 7, Britain . . . voted down protection. Not only in a three-cornered contest involving 20,000,-

ooo votes, have the majority—probably by 4,000,000—been cast against protection, but the latest returns leave little doubt that the whole Conservative majority has been wiped out, which means that, with the Liberals and Laborites both favoring a continuance of the policy of free trade, Premier Baldwin . . . could not put through his radical tariff reform. He has been beaten in a fight which he sought."—*New York Times*, Dec. 7, 1923.

**TARSHISH**, unidentified ancient city referred to several times in the Old Testament. It seems to have been an important commercial center frequented by the Phoenicians. It has been associated with Crete, Cyprus, and Rhodes.

**TARSUS**, capital of Cilicia, is in the southeast corner of Asia Minor, about twenty miles from the seaport of Mersina. The population in 1911 was estimated at about 25,000, and comprises a medley of peoples from various parts of the East. Tarsus, "a great commercial, political and intellectual centre, is the ideal exponent of the cosmopolitan trend in the continuous life of the

Mediterranean. Its legendary early foundation by a Hittite hero-god, Sandan, and its place in the Hittite empire of the second millennium illustrate its fundamental Anatolian character. This was modified by the addition of a large early Hellenic colony, apparently Ionian, with traditions of foundation by Perseus. In the IX cent. B.C. it came under Assyrian rule, which probably reinforced the Babylonian elements in the Hittite culture of the city. Then for several more centuries it was the centre of a province of the Persian Empire; after which, under the Seleucid kings of the Hellenistic age, it was recolonized with Dorian Greeks and Jews, from whose important colony came Paul of Tarsus. In Roman times it was one of the most important intellectual centres of the world, in the same class as Alexandria and Antioch. In fact it became so much a university town that its government was in the hands of its university professors, who were also famous as travellers and eloquent expositors, so that they had great influence in Rome itself from Augustus to the later Antonines. At one time Tarsus was the capital of three provinces. In this continuous history of some two thousand years while Tarsus never lost her Anatolian character she showed great hospitality to Greek ideas. Also, in the period of which we know most, beginning in the Fifth century B.C., the prominence given to her religious system, as illustrated in her coins, entitles us to use this material as further proof that her high intellectual level makes her an ideal exponent of religious cosmopolitanism."—A. L. Frothingham, *Cosmopolitan religion of Tarsus and the origin of Mithra*, p. 1.—See also CILICIA.

**TASMAN**, Abel Janszoon (c. 1602-1650), Dutch navigator and explorer. Discovered Van Diemen's Land (Tasmania), New Zealand, and the Fiji islands, 1642. See AUSTRALIA: 1601-1800; FIJI ISLANDS; NEW ZEALAND: 1642-1814; PACIFIC OCEAN: 1513-1704.

**TASMANIA**, formerly Van Diemen's Land, is an island situated south of Australia from which

it is separated by Bass Strait. (See AUSTRALIA: Map.) It has an area of 26,215 square miles including the small islands off the coast, and had a population of 213,877 in 1921, of which 227 were half-caste aboriginals. The pure aboriginal is extinct. The chief agricultural productions of Tasmania are grains, potatoes, fruit and live stock. Forests cover a considerable part of the island. Extensive mineral resources are copper, tin, silver, lead, zinc, coal, aspidium and tungsten ores. The principal industries for export are metal extraction and fruit-preserving. Wool, timber and grains are also exported. Hobart, the capital, having a population of 52,163 in 1921, is located on the southern coast and is a regular port of call for steamers from Australia, New Zealand and London. Tasmania was discovered in 1642 by the Dutch navigator, Abel Janszoon Tasman and named by him in honor of Governor Van Diemen of the Dutch East Indies. In 1798 it was visited by Dr. George Bass who discovered that it was an island, not a peninsula, as Tasman had believed. (See AUSTRALIA: Location and physical features; 1601-1800.) "The first occupation of Van Diemen's Land as a British settlement dates from the 13th of June, 1802, when Lieutenant John Bowen, of H. M. S. Glatton, was instructed by the Governor of New South Wales to proceed thither from Sydney in order 'to establish His Majesty's right' to the Island. . . . A mere handful of convicts, guarded by a few soldiers, constituted the vanguard of the great army of criminals which was to follow. . . . Lieutenant-Colonel Arthur was appointed Lieutenant-Governor of the colony in 1824. . . . About 18 months after his arrival in Van Diemen's Land it was proclaimed an independent colony [see NEW SOUTH WALES: 1821-1831], and the Imperial Government instituted Executive and Legislative Councils, with advisory and legislative functions. . . . For the better administration of justice, Governor Arthur divided the island into police districts, with a stipendiary magistrate for each; but he caused the laws to be executed with a Draconic severity, which transformed wretched convicts—many of whom had been transported for trivial offences—into sullen madmen, or ferocious and revengeful devils. . . . In the year 1825, as many as 100 escaped convicts with arms in their hands had re-established a reign of terror in the country districts. . . . Governor Arthur placed himself at the head of a strong body of soldiers and civilians, and hunted the daring outlaws down. As many as 103 persons underwent capital punishment in the years 1825 and 1826. . . . The Government of the Island remained in the hands of Colonel Arthur for twelve years. . . . Captain Sir John Franklin . . . was the next Governor of Van Diemen's Land, where he arrived in January, 1837. . . . To numbers of even well-informed persons in the Old World the very name of this remote island was unfamiliar until it became associated with that of the illustrious navigator. . . . Sir John Franklin was replaced in the Government of the colony by Sir John Eardley Wilmot, on the 21st of August, 1843. . . . Shortly after his appointment to the Governorship of Van Diemen's Land, the penal settlement in Norfolk Island had been constituted a dependency of the former; and the most depraved, desperate and irreclaimable of the convicts had been herded together on that beautiful spot. It would be difficult to exaggerate the horrors perpetrated by such a 'pestilent congregation' of criminals of the deepest dye. . . . There were 2,000 prisoners concentrated in Norfolk

Island in the year 1845, under the nominal rule of a superintendent who is alleged to have been stern, merciless and cruel in the exercise of the authority entrusted to him. . . . The result was the prevalence of a state of things upon the Island, which, in its unexampled misery and horror, it would be impossible to find adequate words to describe. The Imperial Government happening to learn what a pandemonium Norfolk Island had become, determined upon putting an end to it, and Governor Wilmot received instructions for the immediate transfer of the establishment to Port Arthur. . . . A turning point had now arrived in the history of Van Diemen's Land; and its free population found itself confronted by two alternatives. Either it must consent to succumb to, and to be overwhelmed by, the criminal and servile element, . . . or it must resolve, as it soon afterwards did, that transportation should cease. . . . In . . . 1846 Sir Eardley Wilmot was recalled. . . . The vice-regal term of Governor Denison, who followed, marks the dawn of the new day. . . . In the year 1850 the Imperial Parliament passed an Act for the better Government of the Australian Colonies, and among its provisions was one for the establishment of a Legislative Council in Van Diemen's Land, to consist of eight Members nominated by the Governor for the time being, and sixteen to be elected by as many districts. . . . The new Legislative Council did not meet for the dispatch of business until the 1st of January, 1852, and one of its earliest proceedings was to pass a resolution condemnatory of the continuance of the system of transportation. . . . Sir William Denison pertinaciously advised the Secretary of State for the Colonies to uphold transportation to Van Diemen's Land, and stigmatized its opponents as 'a few itinerant agitators.' Happily, wiser counsels prevailed in Downing Street, and when the Earl of Aberdeen came into office, the Duke of Newcastle was enabled to convey to the people of Van Diemen's land the gratifying assurance that . . . transportation to that Island had been put an end to for ever. The welcome dispatch . . . was published in . . . May, 1853. . . . To break the more effectually with such of the associations of the past as were painful in the present, there was a general understanding that the old name of Van Diemen's Land should be allowed to fall into disuse, and that that of the Dutch navigator who had discovered the Island should be bestowed upon it. . . . Henceforth it was to be known as Tasmania, and the judicious change was formally sanctioned by Legislative Enactment a short time afterwards. . . . By an Act of the Imperial Parliament which received the Royal Assent upon the 1st of May, 1855, a Constitution was bestowed upon Tasmania. Two Houses, both of them elective, the Council consisting of 15, and the Assembly of 30 Members, were created and invested with all the Legislative and Administrative powers and functions enjoyed by the august body which had called them into existence."—J. Smith, *Historical review of Tasmania (Australasia Illustrated, v. 2, pp. 925-941)*.—Since its constitutional organization, the history of Tasmania has been one of moderate progress. Tasmania became a state in the Australian Commonwealth on Jan. 1, 1901, and is represented in the federal Parliament by six senators and five representatives.

TATARIC LANGUAGE. See PHILOLOGY: 20.

TATARS.—"The Chinese used the name in a general sense, to include the greater part of their northern neighbours, and it was in imitation of them, probably, that the Europeans applied the name to the various nomad hordes who controlled Central Asia after the Mongol invasion. But the name properly belonged, and is applied by Raschid and other Mongol historians, to certain tribes living in the north-eastern corner of Mongolia, who, as I believe, were partially, at least, of the Tungusic race, and whose descendants are probably to be found among the Solons of Northern Manchuria."—H. H. Howorth, *History of the Mongols*, pt. 1, p. 25.—"The name of Tartars, or Tatars, has been variously applied. It was long customary among geographical writers to give this title to the Kalmucs and Mongoles, and even to use it as a distinguishing name for those races of men who resemble the Kalmucs in features, and who have been supposed, whether correctly or not, to be allied to them in descent. Later authors, more accurate in the application of terms, have declared this to be an improper use of the name of Tartar, and by them the appellation has been given exclusively to the tribes of the Great Turkish race, and chiefly to the northern division of it, viz. to the hordes spread through the Russian empire and independent Tartary. . . . Whatever may be the true origin of the name of Tartar, custom has appropriated it to the race of men extensively spread through northern Asia, of whom the Ottoman Turks are a branch. It would, perhaps, be more strictly correct to call all these nations Turks, but the customary appellation may be retained when its meaning is determined."—J. C. Prichard, *Researches into the physical history of the races of mankind*, v. 2, ch. 5, sect. 1.—"The populations in question [the remnants, in southern Russia and Siberia, of the great Mongol empire of the Kiptchak], belong to one of three great groups, stocks, or families—the Turk, the Mongol, or the Tungus. When we speak of a Tartar, he belongs to the first, whenever we speak of a Kalmuk, he belongs to the second, of these divisions. It is necessary to insist upon this; because, whatever may be the laxity with which the term Tartar is used, it is, in Russian ethnology at least, a misnomer when applied to a Mongol. It is still worse to call a Turk a Kalmuk."—R. G. Latham, *Nationalities of Europe*, v. 1, ch. 23.—See also MONGOLIA; TURKEY; PAN-TURANISM; GYPSIES; MILITARY ORGANIZATION: 33; 42.

TAUNTON, capital of Somersetshire, England, in the valley of the Tone, thirty-eight miles south-west of Bristol.

1685.—Welcome to Monmouth.—Maids of Taunton and their flag.—"When Monmouth marched into Taunton [1685], it was an eminently prosperous place. . . . The townsmen had long leaned towards Presbyterian divinity and Whig politics. In the great civil war, Taunton had, through all vicissitudes, adhered to the Parliament, had been twice closely besieged by Goring, and had been twice defended with heroic valour by Robert Blake, afterwards the renowned Admiral of the Commonwealth. Whole streets had been burned down by the mortars and grenades of the Cavaliers. . . . The children of the men who, forty years before, had manned the ramparts of Taunton against the Royalists, now welcomed Monmouth with transports of joy and affection. Every door and window was adorned with wreaths of flowers. No man appeared in the streets without wearing in his hat a green bough, the badge of the popular cause. Damsels of the best families in the town wove colours for the insurgents. One flag in particular was embroidered gorgeously with emblems of royal dignity, and was offered to Monmouth by a train of young girls. [After the suppression of Monmouth's rebellion, and while the "bloody Assizes" of Jeffreys were in progress, these little girls were hunted out and imprisoned, and the queen's maids of honor were permitted to extort money from their parents for the buying of their pardon and release.]"—T. B. Macaulay, *History of England*, ch. 5.—See also ENGLAND: 1685 (May-July).

**TAXATION: Direct and indirect taxes.—Incidence of property tax.—Corporation taxes.—**“A tax may be defined as a compulsory contribution to the government to defray expenses incurred for the common benefit without reference to special advantages enjoyed. The points to be emphasized in this definition are that the payment is compulsory, that the proceeds are to be used for the common benefit and that the justification for the payment is participation in these common benefits rather than any special advantage enjoyed.”—H. R. Seager, *Principles of economics*, p. 481.—“Taxation in normal times takes the place of compulsory service in modern states. When citizens become free it is often detrimental to their interests for them to perform governmental service and neglect their own affairs. Hence they readily grant a small per cent of their income in lieu of service. This proves advantageous to the government also, for with money it can hire willing workers, always more efficient than compulsory service. In modern states, therefore, the government through taxation secures means to support a well trained permanent army and navy, and capable officials and skilled labor for public works. As the citizens themselves in democracies fix by law their own tax rates, and settle the items for expenditure and supervise the auditing of accounts, friction is thereby avoided. Government and people harmoniously cooperate in furthering general interests, for all recognize that joint success is individual benefit and that the injury of any part becomes the detriment of the whole. . . . The modern battles of democracy have regularly raged about principles of taxation. In England the struggle has been for the ‘control of the purse’; in the American Colonies, that there be ‘no taxation without representation’; and in general, that all taxation be for public, never for private, interests, and that the burden of taxes be equitably assessed. The motive in such struggles is not necessarily mercenary; experience shows that when the citizen body as a whole controls the tax rate and expenditures, public policy loses its military aspects and attention is concentrated on the upbuilding of internal improvements and systems of general education.”—J. Q. Dealey, *State and government*, pp. 318-320.—“Writers upon finance have commonly made a distinction between direct and indirect taxes. The former are said to be levied directly upon the person who has to bear the burden of them; while the latter are collected in the first instance from people who add the amount of the tax to the prices of commodities, and thus shift the burden upon the ultimate consumers of the articles taxed. Income, poll, property, and inheritance taxes are called direct; and customs and excise taxes are considered to be indirect. . . . Poll or inheritance taxes are clearly borne by the very persons who are called upon to pay them, and most of our customs and excise taxes ultimately fall upon other people than those from whom the government collects them. But other cases present considerable difficulty. If I import goods for my own use, without resorting to any middleman, the customs duty will fall directly upon me. Again it is often difficult to determine who will ultimately bear the burden of such a direct tax as

that upon property. In some cases the tax can be shifted from the landlord to the tenant. . . . Such facts as these seem to deprive this distinction between direct and indirect taxes of strict scientific validity. [When considering the incidence of the general property tax] . . . we are not dealing with one tax, but rather with a group of diverse taxes, which may be classified as follows: (1) a tax on land; (2) a tax on consumable goods in the hands of their owners; and (3) taxes on investments of private capital. The incidence of the tax on land will be first considered. This tax is levied in this country [the United States] upon the selling price of the land, and it is virtually graded according to the amount of rent that each tract yields, since the selling price is the annual rental capitalized at the current rates of interest. Now a tax levied upon economic rent must be borne by the landowner, and cannot be shifted. The rent of land is determined by the superior advantages that one tract furnishes for the investment of capital over the opportunities offered by the poorest tracts utilized. The landlord will, if competition is active, exact from the tenant all that the superior situation or quality of his land enables him to demand. The imposition of the tax will not alter the situation so as to change the economic rent and enable the landlord to shift the burden onto the tenant by charging a higher rental. But it is important to notice that the land tax in this country is a burden mainly upon the original owner of the property at the time that a new tax is first laid, or an old one increased. This is because a prospective purchaser will make allowance for the tax when he determines how much he can afford to pay for the land. Investments in corporation securities and many other things largely escape taxation under our present methods. A man will not purchase land unless he can obtain from it the same return that can be secured from these untaxed investments; and he will, accordingly, offer a smaller price than he would be willing to pay if the land were untaxed. Thus, if a tract of land yielded an annual rent of \$5,000, and the rate of interest on equally secure investments was five per cent., its selling price would be \$100,000. Now if a tax of \$500 should be imposed, prospective purchasers would deduct \$10,000, the capitalized value of the tax, from the price that they would be willing to pay; and the burden would fall entirely upon the original owner. The property tax, in the second case, reaches many kinds of consumer's goods in the hands of their owners, such as dwelling-houses inhabited by owners, household furniture, and the like. All these goods are not kept for sale or for hire, but solely for the owners' use. Consequently the tax cannot be shifted onto tenants or purchasers, and must be borne by the owners of the property. In the third case, the general property tax is supposed to fall upon all kinds of private capital invested for the sake of income. If the purpose of the laws were actually accomplished, so that all possible fields of investment were taxed equally, the tax could not be shifted, and would be borne by the owners of capital. This is for the reason that shifting can take place only when capital can be withdrawn from an industry that is taxed, and invested in others that are free from taxation. When this can be done, the taxation of capital invested in a few industries results in a readjustment of prices, which will finally enable the taxed investments to yield the same return as those which are untaxed. Now the wholesale evasion of our property tax leaves a large part

of the field for investments virtually untaxed, so that it is frequently possible for shifting to take place. Some of the more important kinds of investments need to be examined separately. (A) Taxes upon dwelling-houses that are built for hire are in large measure shifted onto the occupier, since capitalists will not make such investments unless the same rate of return can be obtained as can be secured in untaxed enterprises. In case, however, a lessened demand for lodgings makes the supply of houses greater than the number actually required, then rentals will have to be lowered and the tax will fall upon the owners. This is because the capital invested in the form of houses cannot be withdrawn and applied elsewhere in new enterprises. (B) Taxes upon buildings, machinery, and stocks of goods used in commerce or manufactures would also be shifted if competition were perfect. But these investments, when once made, are highly specialized, and trade conditions often make it difficult to shift such taxes upon consumers. Thus, for instance, competition by foreign producers, or by producers more advantageously situated in some other part of the country, may render it impossible for merchants or manufacturers to raise prices and shift the tax. (C) The same considerations apply to taxes on buildings, live stock, and implements used in agriculture, and with added force. American farmers sell a large part of their products in foreign markets where prices are determined by international competition. Moreover, they are slow to adjust themselves to new conditions, so that competition acts very imperfectly upon agricultural industry. It seems reasonably certain that taxes upon farming capital are borne by the farmers themselves. (D) Taxes upon mortgages operate very differently. The capital invested in this manner is more free to seek the most profitable fields of investment. It can in a few years leave any state or community where unusual burdens are placed upon it, and has repeatedly done so. The result is that, where our tax laws actually reach mortgage investments, the tax is surely shifted upon the borrower, in the form of a higher rate of interest. In many states mortgages practically evade all taxation; but when they are reached, as in California, the rate of interest is higher than that asked for other equally safe investments, and higher by something more than the amount of the tax. (E) Finally, we may mention taxes upon corporation stocks and bonds. For the most part these escape taxation, but, when they are reached, the probability is that shifting often takes place. (F) The results of the foregoing discussion need to be qualified in the case of taxes that reach enterprises of a monopolistic character. These cannot be shifted if they are fixed in amount, or if they are proportioned to monopoly profits."—C. J. Bullock, *Introduction to the study of economics*, pp. 548-549, 564-568.—"Taxes on corporations and on franchise privileges furnish a constantly increasing revenue for the state. The state even may itself engage in business for public-welfare purposes and derive income from the excess of profits over expenditure. The conditions of modern business life are so complex by contrast with those of former centuries, that national systems of taxation are undergoing rapid changes and are constantly subject to revision so as to suit newer conditions of economic life and changes in the variety and intensity of public demands."—J. Q. Dealey, *State and government*, p. 65.—See also DEATH DUTY; PHYSIOCRATS; SINGLE TAX; TARIFF.

Growth from earliest times.—Taxation in the

Middle Ages.—Venetian republic.—England.—Florence.—France.—Germany.—"Taxation in its early crude forms was naturally suited to the conditions of savage or barbarian life. As war was the chief and almost only business of the state, its activity was intermittent. Taxation consisted in a demand for the services of its fighting men for war and of other capable members of the community for purposes of advice, defense, and maintenance. . . . The state's power of taxation, then, implied its right to enroll or to conscript its able-bodied men for war and to demand suitable arms and supplies. . . . As the state grew in importance, it assumed other functions that involved men's services. Roads and bridges had to be built for war and commercial purposes; public buildings, such as temples, palaces, monuments, and fortresses had to be erected; cities were founded, irrigating canals dug, public lands cultivated, and civic business administered. All these involved taxation, and the system employed was similar to that used in war."—J. Q. Dealey, *State and government*, pp. 62-63.—"The method of capitation seems . . . to appertain to the infancy of the system of taxation. . . . In fact ancient Persia and ancient China [see LIKIN] had . . . systems of imposts, eminently personal. . . . [The land tax] . . . appears in the economic history of the peoples coeval with private property. . . . The first indication of this we find among the Hebrews precisely in the form of a tenth. It was a land tax consisting of an annual impost paid to the Levites . . . [and] comprised a tenth part of the products of the land. . . . In ancient Egypt, according to Diodorus, the land was divided in equal parts between the kings, the priests and the military caste, and according to the Bible, the kings had the right to a fifth of the product of the lands conceded to the two orders of citizens. . . . The kings of Greece in Homeric times had no other resource than that proceeding from the land. . . . In Persia the land tax certainly existed, as one deducts from the orders . . . given by Darius to measure the territory of the Greek colonies in Asia Minor and tax it by parasangs."—E. La Cecilia, *Historic essay on the evolution of tributes* (tr. from the Italian), v. 1, pp. 29-31.—"The Kings of ancient Chaldea made "such large concessions of [their territory] . . . to their vassals that the greater part of their domains was always in the hands of the nobles or private individuals . . . [who] paid on account of it a tax which varied at different epochs, but which was always burthensome."—G. Maspero, *Dawn of civilization, Egypt and Chaldea* (tr. by M. L. McClure), p. 701.—"A definite system of taxation came into use with the rise of private property and the personal ownership of flocks and the products of agriculture. Its first form was the levy of a definite per cent of the produce of the flocks or herds or of the fruits and crops of the land. The privilege of collecting this, involving much extortion, was given to favorites or sold to collectors, the *publicani* of the New Testament."—J. Q. Dealey, *State and government*, p. 63.—In Babylon during the reign of Hammurabi (c. 2124-2081 B. C.) "wool of the flocks was a source of revenue both for the temple and the palace."—R. C. Thompson, *Cambridge ancient history*, v. 1, p. 545.—In ancient Egypt, "beside the poll and house tax [the workmen of the towns] . . . were subject to a special toll, a trade licence which they paid in products of their commerce or industry. . . . The time when the tax fell due came upon the nomes [provinces] as a terrible crisis which affected the whole population. For several days

there was nothing to be heard but protestations, threats, beating, cries of pain from the tax payers and piercing lamentations from the women and children. . . . [The free agricultural laborers] paid, beside the capitation tax, a ground rent proportionate to the extent of their property . . . and to the kind of land of which it was composed. . . . The capitation tax, the ground rent and the house duty of the time of the Ptolemies already existed under the rule of the native Pharaohs. . . . Everything tends to make us believe that . . . [the land] tax represented one-tenth of the gross produce, but the amount of the latter varied. It depended on the annual rise of the Nile and it followed the course of it with almost mathematical exactitude. . . . In theory the collecting of the tax was based on the actual amount of land covered by the water. . . . In practise it was regulated by taking the average of preceding years and deducting from that a fixed sum which was never departed from except in extraordinary circumstances. . . . The payment of taxes was exacted in wheat, dourah, beans and field produce. . . . In the same way as in the town, the stick facilitated the operations of the tax collector."—G. Maspero, *Dawn of civilization, Egypt and Chaldea* (tr. by M. L. McClure), pp. 311, 314, 328 and footnote, 330-332.—An elaborate system of farming the revenues is found in Ptolemaic Egypt.—Based on W. S. Davis, *Wealth in imperial Rome*, p. 27.—In ancient Greece "the payment of taxes in kind, which was still in use during the sixth century . . . had in the following century been generally superseded by money contributions. Extraordinary expenditure . . . was sometimes met by the imposition of a general property tax. . . . The first levy of [the property tax in Athens] . . . is recorded in 428 B.C. (Thuc. III. 19). . . . In the fourth, probably also in the fifth century, both real and personal estate was taxed, and corporate property was also subject to the impost, but the poorer citizens were exempt."—M. O. B. Caspari, *Finance* (L. Whibley, ed., *Companion to Greek studies*, pp. 492, 494).—See also ATHENS: B.C. 466-454; B.C. 413-411; LITURGIES; SYMMORIAE.—"The chief source of income for the [Chinese] government [reign of Wu Ti, second century B.C.] . . . was the property tax, which was levied to the extent of one-fifteenth of the produce of the land. At times this was reduced to one-thirtieth, and was even remitted entirely in years of famine or in districts through which the emperor had passed on his journeys. The occupant himself was responsible for the declaration of his assessment and false information was punishable by death."—M. von Brandt, *Japan, China and Korea* (*World's history*, v. 2, ch. 1, p. 79).—When to the tax on the produce of land "was added a tax on property fixed to the land, e.g., a building, we have the modern idea of real estate as distinct from movable, or personal, property. Personal services were gradually commuted for other forms of payment. . . . In farming communities real property is naturally large in amount when compared with personal property, but the rise of commerce and manufactures multiplied this latter form of property, resulting in the development of newer forms of taxation. Besides the direct tax on personal property, always hard to estimate and to collect, came taxes on goods sent out or brought into a country, the modern export and import taxes. Again, a tax might be levied on goods manufactured for the purpose of domestic sale, or on the sales themselves, or on the profits of business transactions; or on special business

transactions, as a stamp tax; or on occupation, a special form of which is the license tax, for permission to enter on business which from its nature must be under governmental supervision, such as the sale of liquors, explosives, or poisons. A common but obnoxious tax is the poll, or head, tax. Income and inheritance, or legacy, taxes have a history of many centuries. They were levied in the classic period and owing to the exigencies of the war period have become increasingly popular with governments."—J. Q. Dealey, *State and government*, p. 64.—In imperial Rome an important indirect tax was introduced by Augustus, and paid from the year 6 A.D. "It was a charge of 5% on all sums above 100,000 sesterces bequeathed to persons other than near relations, and its introduction was partly due to Augustus' anxiety to encourage matrimony. Its imposition was vigorously opposed, and was only carried by the threat of introducing a direct tribute into Italy. Only Roman citizens paid the legacy-duty."—G. H. Stevenson, *Finance* (J. E. Sandys, ed., *Companion to Latin studies*, p. 350).—See also ROME: Empire: A.D. 54-64; CENSUS: Ancient; TRIBUTUM; VECTIGAL.—"The main outlines of a public fisc are . . . present already in the feudal state of the Middle Ages. In virtue of the military character of that state, the duty which . . . constitutes the foundation of every state, becomes the central fact in its system of public duties. . . . Scutage and tallage [see SCUTAGE; TALLAGE] are contributions of a genuine political character toward defraying the expenses of war, and they replace the liability to personal military service and form the transition to the modern system of taxation. . . . Where, contrary to its nature [the tax] . . . takes on the character of a fixed burden, it is transformed into a burden on real property; a fixed personal tax being, to the mediæval sense of personal liberty and dignity, a mark of the bondman. And . . . this class of imposts blends with the peculiar burdens pertaining to villenage; a fact which becomes intelligible when it is remembered that villenage originates in personal inability to bear arms. . . . But even during these earlier centuries the personal taxes developed into quite a different form when employed under circumstances which approached modern political life in being freed from the trammels of the feudal system and the territorial state. What I have in mind is the democratic organizations of the old cantons of Switzerland and the city republics of the Middle Ages. The rule is the same here as elsewhere during those centuries. The tax is for the most part an extraordinary burden, levied to meet cases of special necessity or the exigencies of war. Still, in certain ones of them there is a relatively early development of a fixed tax constituting a permanent element of the public finances."—G. Cohn, *Science of finance*, pp. 86-87, 382, 384.—See also GAFAL; BRITAIN: 284-305.—In the Venetian republic "the payment of tithes was a usage of high antiquity. Posterior to 697 it was customary for each House to lay at the feet of the Chief Magistrate its proportionate oblation of fish, bread, oil, honey, wine and the other necessaries of life."—W. C. Hazlitt, *Venetian republic*, v. 1, p. 66.—"Venice was almost to the last severely protectionist. . . . Imports and exports alike paid duty; a stringent excise guarded all points of ingress or egress; and even the members of the Craft-guilds contributed a certain quota of their gains in addition to the entrance fees."—*Ibid.*, v. 2, p. 776.—In England "from a period antecedent to the Conquest itself commerce had been nominally at least

—under the control of the Crown. . . . The origin of the royal prerogative . . . may perhaps be traced from the tribal contributions in support of the kingly state, which took the later form of purveyance, per-emption, prisage and butlerage, dismes, and finally Customs. . . . From the middle of the twelfth century onwards a regular scale of dues was levied at the outports. Similar dues were also exacted by seigniorial and municipal franchises, but these depended in turn upon a grant from the Crown. . . . [Under Richard I the royal ministers] made assessment by elected representatives the regular rule for taxation, both of personalty and of land, and thus left but one step to be taken toward the creation of representative parliaments. . . . The constitutional history [of England] might, in fact, be written, so to speak, in terms of taxation. The improvement of the judicial system in the twelfth century originated as a mode of gathering taxes; the royal administration was primarily a tax-collecting agency, and the growth of Parliament was necessitated by new forms of taxation. Thus the feudal aid, which was the earliest form of tax, being in theory a voluntary gift, established the principle that taxation requires the subjects' assent. When the new taxes on personalty came in, this assent was made a greater reality by the taxpayer's help being required for assessment and collection; gradually the separate negotiations with each shire were simplified by calling the representatives of each shire to meet all at once and settle the grant. . . . Thus it is clear that as late as 1290, so great a man as Edward I still regarded the old feudal council as adequate for all purposes of government except the new form of taxation; for this, and this alone, he deemed a representative assembly necessary."—H. D. Traill, ed., *Social England*, v. 1, pp. 460-470, 262-263, 400-401.—See also ENGLAND: 1085-1086; 1629; 1629-1640; BAGMONT'S ROLL; TONNAGE AND POUNDAGE.—In Florence "taxation from Cosimo's time [1389-1464] had been the Medici substitute for the dagger. Opponents were crushed out financially where elsewhere they disappeared bodily. . . . [Lorenzo] made no such cruel and vindictive use of it as Cosimo had made . . . and . . . took some steps to put the general system of taxation upon a fixed and definite basis. His fundamental principle was that taxation should be graduated, and fall mainly on the land. . . . The revenue derived from land was supplemented by a graduated poll-tax . . . and later on, a graduated tax was imposed on movables and earnings."—E. L. S. Horsburgh, *Lorenzo the Magnificent and Florence in her Golden Age*, p. 207.—"In France . . . from the time that feudalism became fully established, and the old allodial taxation, which of course had been used under the Merovingians and Karlings, was entirely superseded, . . . the support of the king and of the framework of government depended legally on demesne lands and the proceeds of the feudal incidents. While the kingdom was very weak, it made government cheap and war difficult, and taxation accordingly small. . . . But Philip the Fair, having called together the states-general for a political purpose, would fain utilise them for a financial one. In 1314 they granted him a subsidy, . . . the towns for the first time being consulted whether they would give or no. The towns before this had been tallaged at the will of the king, now they vote money as a free state. . . . The states of Tours in 1484 were a remarkable, and the last remarkable, assembly of the kind. . . . [They] demanded that no tax should ever be levied again without the consent

of the states. They tried for too much and came to an end in a not altogether inglorious way. Henceforth the king took his taxes as he wanted them. [See also FRANCE: 1509-1610; PARIS: 1381; TAILLE AND GABELLE; TARIFF: 1664-1667.] . . . [In Germany] it would be difficult to say that there was any general taxation through the middle ages commonly so called; the emperor was, as a matter of fact, entirely dependent on the proceeds of his own estates and on the money voted by his hereditary provinces."—W. Stubbs, *Lectures on early English history*, pp. 304-306.—"It is quite in accord with the traditions of the feudal system that we find that the Great Elector of Brandenburg, as late as the year 1662, had gradually . . . succeeded in substituting, in place of special grants for the purpose, fixed contributions from his territories toward the support of the standing army which he had created. At the same time the obligation of the knighthood to follow the sovereign in war was commuted into a money payment of forty thalers for each horseman. In the towns, wherever the requirements of the tax administration permitted, the excise was generally introduced after 1667, to take the place of Contributions; a step which lightened the taxes of the burghers and increased the revenue. The inadequacy of the Contribution became evident as early as the years 1677 and 1679, when an extraordinary subsidy, a 'poll-money' [*Kopfschoss*], was levied on all inhabitants. In point of fact this contribution appears to have been an income tax. . . . This poll tax was repeated under his successor with increasing frequency but was made the subject of a formal waiver by Frederick William I. (1715), and was restricted to the case of a defensive war. Frederick the Great finally found other means of obtaining a revenue in order to provide for the heavy expenditures of the wars. [See MILITARY ORGANIZATION: 27.] . . . The Contribution, however, was made use of by both the two great Prussian kings of the eighteenth century as the point of departure for reforms which prepared the way for the modern land tax by means of a registry of incomes; they aimed partly to consolidate the burdens resting on the land into a single impost, partly to lessen the inequality of the burdens resting on land owned by peasants compared with that owned by the knighthood."—G. Cohn, *Science of finance*, pp. 382-384.—See also TITHES.

Parliamentary taxation in England.—American Revolution.—Adam Smith's canons.—"The Declaration of Right, with some slight but essential changes, was incorporated at the second session of this Parliament, the 25th of October, 1689, in statutory form known subsequently as the Bill of Rights. In the matter of taxation, it sums up in a few clauses the whole principle which had been in course of evolution since the German chieftains received gifts of cattle and fruits from their people. . . . It states that King James 'did endeavor to subvert and extirpate . . . the laws and liberties of this kingdom . . . by levying money for and to the use of the crown, by pretense of prerogative, for other time and in other manner than the same was granted by Parliament.' Then follows the definite assertion, 'that levying money for or to the use of the crown by pretense of prerogative, without grant of Parliament for longer time or in other manner than the same is or shall be granted, is illegal.' The clause which gave to these statements the force of law, emphasizes the power of Parliament. 'All which their Majesties are contented and pleased,' so it goes, 'shall be declared,

enacted, and established by authority of this present Parliament, and shall stand, remain, and be the law of this realm forever; and the same are by their said Majesties, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in Parliament assembled, and by the authority of the same, declared, enacted and established accordingly.' With the passing of the Bill of Rights the principle was vindicated in its fullness that Parliament rather than the crown has the power to tax. Within Parliament itself the power of laying taxes had undergone further differentiation in that the House of Commons claimed the sole right of initiating tax levies. The theory deduced therefrom, that the House of Commons has sole control over money bills and that interference by the House of Lords is an assumption of power beyond the constitutional rights of that House, came up for fuller definition 220 years later. The corollary principle that Parliament has the power to appropriate supplies for specific purposes and that it can demand an accounting for the money so appropriated were accorded general acquiescence then and thereafter."—S. A. Morgan, *History of parliamentary taxation in England*, pp. 306-308.—See also BILL OF RIGHTS, ENGLISH.—"The second year of the war of American Independence forms a date of peculiar interest in the history of taxation in this country [England]. Our chancellors of the exchequer had for years been at their wits' end for new and productive taxes. . . . Despair of obtaining additional revenue at home had driven us to the unfortunate attempt to obtain revenue from our colonies in America. How . . . was North . . . able to find the taxes necessary for the purpose of this long and costly war? An answer may be supplied by reference to the title-page of the first edition of Adam Smith's work on 'the cause of the increase in the wealth of nations,' subsequently famous as . . . 'The Wealth of Nations.' . . . To this work North had recourse for suggestions in taxation in 1777, when he was compelled to find an additional revenue of nearly a quarter of a million."—S. Dowell, *History of taxation and taxes in England*, v. 2, ch. 7, pp. 105-106, 168.—"The maxims inseparably associated with [the name of Adam Smith] were in his own day accepted by theorists and statesmen, and have by constant repetition become an indispensable part of any exposition of finance. Though fully in harmony with the spirit of the last century [the eighteenth], they have not been found inapplicable to modern conditions, and in spite of much hostile criticism bid fair to hold their ground in the future. These famous maxims . . . are four in number, and run as follows: (1) 'The subjects of every State ought to contribute towards the support of the government as nearly as possible in proportion to their respective abilities—that is, in proportion to the revenue which they respectively enjoy under the protection of the State.' (2) 'The tax which each individual is bound to pay ought to be certain and not arbitrary. The form of payment, the manner of payment, the quantity to be paid ought all to be clear and plain to the contributor and to every other person.' (3) 'Every tax ought to be levied at the time or in the manner in which it is most likely to be convenient for the contributor to pay it.' (4) 'Every tax ought to be so contrived as both to take out and to keep out of the pockets of the people as little as possible, over and above what it brings into the public treasury of the State.'"—C. F. Bastable, *Public finance*, p. 384.

Prussia, France and Great Britain.—Tax reform and development during the nineteenth century.—In Prussia, "the reforms of Stein and Hardenburg in the forms of land tenure . . . may be regarded as having been accomplished in 1811. Briefly stated, their result was to abolish personal serfdom, dissolve the feudal partnership between tenants and proprietors, and establish free trade in land. Although these reforms had to do mainly with land, and although the accompanying edict of 1810 promised speedy reform of the land tax on the basis of a new survey, or *cadastre*, nothing material was accomplished in the reorganisation of this tax until 1861. . . . The edict of 1810, which . . . [promised] a reform of the land tax, seriously attempted to remove inequalities by destroying many feudal exemptions and privileges, and removing local differences. A general scheme of consumption taxes on necessities, of which the excise on meal is a type, was planned for city and country alike. It was, however, immediately found that the meal tax was hard to collect in rural parts. As early as 1811, therefore, a poll tax of one-half thaler from every person over twelve years of age was substituted for the meal tax in all places except the larger towns. In 1820 this tax, still applying to the same places, developed into a classified poll tax. . . . In 1851, this tax was changed in order to make room for the introduction of an income tax on all persons having an income of over 1000 thalers. Those persons whose incomes were below this amount were taxed in the large cities by the meal and meat tax; in the country and in small towns, by a class tax. . . . The income tax . . . was a progressive tax on the income of every person. When the land tax was reformed in 1861, the building tax was separated from it, having been until that time a part of it; and all old taxes of a similar sort were merged in the new one. . . . One of the reforms that was made after the peace of Tilsit to strengthen the weakened economic resources of the country was the establishment of general industrial freedom. Naturally, such a change would have been regarded as a failure from the standpoint of the statesmen of the times, if it could not be made to yield a revenue to the treasury; so the new industries were burdened with a new tax. This tax, which was very weak, and which, wisely, perhaps, failed to meet all the new forms of industry which came into existence, was subjected to a thoroughgoing reform in 1801. . . . The Prussian system, as it existed before the great reforms of 1803, may now be seen as a whole. It consisted of two parts: (1) There was a group of three complementary taxes upon the produce of property and capital,—the land tax, the building tax, and the industry tax; (2) there was a system of personal taxes culminating in an income tax. The former group, true to the economic tenets of the first three-quarters of the century, taxed the productive agencies. The latter, although it originated as a consumption

tax, aimed at taxing the shares in distribution. Thus the older consumption taxes, which were originally assessed without any very clear idea of what the justification was, but were used because productive of large revenues, yielded to new taxes supposed to be more fairly in accord with the modern system of distribution. We are now in position to see the significance of the great reforms of 1893 (all of which went into effect in 1895), made under the leadership of *Finanzminister* Dr. Miquel. . . . The income tax, which has long been correctly regarded as the foundation of the Prussian tax system, was subjected to a thorough reform in 1891. . . . It was felt that the existing produce taxes (*Ertragsteuern*), the land, building and industry taxes, failed to accomplish this end. Hence one of the reforms of 1893 was the surrender of these taxes as royal taxes, and the initiation of a general property tax as supplementary to the income tax. . . . This tax being supplementary to the income tax accomplishes the result of imposing a differential rate on funded income as against unfunded income. The abandonment by the State of the three old taxes on land, buildings, and industry rendered the reform of local taxation possible. [See also GERMANY: 1885.] In France indirect taxation has probably found a higher development than anywhere else. Some of the main taxes are on the consumption of wine, spirits, beer, sugar, salt, tobacco, etc.; there are also the *octrois* or gate duties collected by some of the cities as a means of contributing their share of some of the direct taxes to the general treasury. There are also the taxes on acts and transfers, and the customs duties. Not peculiar to France, but receiving a high development there, is the mode of collecting a tax on consumption by a monopoly of the manufacture of tobacco in the hands of the government. The imperative necessity under which France has laboured all through this [nineteenth] century of continually increasing her revenues, and the danger of making the burden unbearable if thrown upon the existing direct taxes, as well as the desire on the part of the legislators of concealing so far as possible the actual burden, lest an impatient constituency rebel, accounts well for the relatively high development of indirect taxation. . . . Direct taxation in France dates in its present form from the Revolution. All the taxes of the ancient monarchy were abolished at that time and a fixed scheme of taxes on revenue-yielding property substituted. This system of direct taxes had four chief members: (1) the tax on real estate; (2) the tax on persons in dwellings; (3) the tax on doors and windows; (4) the tax on business. Supplementary to this system are a number of taxes classed officially as assimilated to the direct taxes. These, so far as they flow into the State treasury, are: (1) the tax on mines; (2) the charges for the verification of measures; (3) the tax on goods in mortmain falling on the property of the *communes*, hospitals, churches, seminaries, charitable institutions, etc.; (4) the charges for the cost of inspection of pharmacies, grocers, druggists, and herbists. Of these numbers 2 and 4 are practically fees, numbers 1 and 3 are merely definite kinds of real estate taxes. The real estate tax, the personal and dwelling tax, and the door and window tax are apportioned taxes. The real estate tax, which is a combined land and building tax, is apportioned upon the basis of a very elaborate survey and valuation completed in 1850, and carefully kept up. These taxes are apportioned in successive steps first to the *departments*, then to the *arrondissements*, and then to the

communes, by the several legislative bodies, and finally divided among the individuals in each commune by a 'conseil de repartition.' The tax on persons and dwellings, also apportioned, is a poll tax, with an attempt at gradation according to the ability supposed to be indicated by the rent of the building occupied. It consists of two parts: (1) The amounts of three days' wages of labour at from one-half to one and one-half francs *per diem*; (2) the tax on the rent of the building occupied as a private dwelling. The cities of Paris, Lyons, Marseilles, and a few others raise their shares of this tax by the means of duties on goods brought into the city, *i. e.*, *octroi*. The door and window tax is an apportioned tax rated according to the number of windows and doors in the houses. It was intended to supplement the personal and dwelling tax, but it is really an addition to the real estate tax. It is paid by the owner and he is allowed to shift it if he can to the tenant. The industry tax, contribution des *patentes*, unlike the other member of the system, is not apportioned but proportioned. It is intended to reach the bulk of the personal property, and in a rough way covers income from certain kinds of labour. Originally it was assessed in proportion to the value of the location of the factory, store, or workshop occupied by the industry. Now it is assessed upon some elaborately constituted classes, in rates which vary with the size of the community in which the business is done, and the rental of the place of business. It includes all kind of commercial and industrial enterprises and occupations, large and small, and also the liberal professions, when not exercised in behalf of some already taxed business enterprise. The agriculturists are exempt. Direct taxation in France may be summarized as falling mainly on the agents of production and the sources of wealth. [See also FRANCE: 1801-1809.] . . . The greatest change in the British scheme of taxation within this [nineteenth] century was the elimination of the protective principle from the customs duties,—and indirectly from the excises also,—brought about in the period from 1840-1850, by the abolition of the corn laws and the agitation leading thereto. The consequent simplification of both the import duties and the excises rendered it possible to manage them simply as a source of revenue with a view to obtaining relatively larger sums. The customs duties, the entire tariff of which now contains only 40 rates, and the somewhat more numerous excises and stamp duties, pay one-half the total annual revenue. The property and income tax . . . was restored in 1842 and has since been the variable or elastic element in the system. . . . Inasmuch as this famous property and income tax is a system, in itself, of five taxes which are calculated to fall upon the chief sources of wealth, it complies, in a way, with the requirements of universality. Its rate is digressive, so that it attempts to comply with the requirements of justice. It may be looked upon as the complete system of direct taxation. Outside of the system there are two remnants of older taxes. . . . They are the land tax of the eighteenth century, which is now a redeemable rent charge, and the house duty. This latter developed out of the hearth tax of 1662. In 1688 it had been replaced by a window tax. In 1778 a tax on the annual rental was added to the window tax, and finally after 1851 this tax on the rental value was left to stand alone. There is still another tax which supplements the property and income tax, and that is the inheritance tax. . . . These inheritance

taxes, 'death duties,' . . . have existed in England since 1694. . . . The important thing to note in this connection is that these taxes have introduced the principle of progression very extensively into the tax system of England. The English system as it now stands, consists (1) of the customs and excise duties, (2) of the so-called property and income tax, a digressive tax upon five kinds of income, (3) two older taxes, the land tax and the house tax, (4) a graduated inheritance tax. The different authorities that have had the power to levy local rates in England are very numerous. The whole system is very complex. The different rates, each going by the name of the authority that levies it, or the purpose for which it is collected, are mostly upon the same base, namely, the annual rental of the various tenements. They are generally levied upon occupiers. In the case of tenements of less than £10 annual value, the difficulty of collecting from the occupier is so great that the plan of making the landlord advance the tax has been adopted. He then shifts it to the occupier. The recent reforms of county and municipal government in England have resulted in a simplification of local rates."—C. C. Plehn, *Introduction to public finance*, pp. 150-162.—See also ENGLAND: 1885; IRELAND: 1850-1896; TARIFF: 1842: England.

Land taxation in New Zealand. See NEW ZEALAND: 1890-1909.

Outline in United States.—"The principal taxes imposed in the United States may be classified as follows: Taxes on income, including inheritance taxes; taxes on property; and taxes on business, including excise taxes and customs duties. The Federal Government derives more than nine-tenths of its net revenue from internal revenue or excise taxes, and tariff or customs duties. These are described as taxes on business because they apply to commodities usually before they have come into the possession of consumers and consequently affect business relations. The revenues of the states come for the most part from the general property tax and from corporation, license and inheritance taxes. The last are characterized as taxes on income because from one point of view inheritances are income and may be so described for purposes of taxation. Finally, the local governing bodies depend for their revenues mainly upon the general property tax, which may be supplemented by local license taxes. Among the influences which have given its present form to the system of taxation in operation in the United States are certain provisions inserted in the Federal Constitution when the country was still in its infancy and altered only by judicial interpretation [or constitutional amendment] since. Of these the most important are: (1) The requirement that 'all duties, imposts and excises shall be uniform throughout the United States.' (2) The provision that 'no capitation or other direct tax shall be laid [by Congress] unless in proportion to the census' of population. (3) The provision that 'no tax or duty shall be laid by Congress on articles exported from any state.' (4) The provision that 'no state shall, without the consent of the Congress, lay any impost or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws.' The principal effects of these provisions have been to make the courts very strict in their insistence on the rule that taxes must be 'uniform'; to give to the Federal Government exclusive use of import duties as a source of revenue; to prevent any hampering of the country's export business through taxation;

and to nullify the income tax imposed in 1894 and cause the adoption, after a long struggle, of the amendment to the federal constitution expressly giving Congress the power to tax incomes in February, 1913. [See U. S. A., CONSTITUTION OF.] . . . The general property tax is an institution peculiar to the United States, which owed its existence largely to the conditions found in a primitive agricultural community. When the American states began imposing taxes they accepted two principles for their guidance, first, that every head of the family should contribute something toward the support of the government and, second, that the amount of a man's property was the fairest index of his ability to pay taxes. In harmony with these views they imposed poll and general property taxes. Because of their inconvenience and of the small returns to be derived from them poll taxes have now been given up by most of the states, but the general property tax is almost universally retained."—H. R. Seager, *Principles of economics*, pp. 495-498.—See also SINGLE TAX.

Various federal taxes in the United States.—Excise duties.—Transaction taxes.—Income taxes.—"Excise duties are levied upon commodities of domestic production. Except for a few years after the adoption of the present Constitution, and in the War of 1812, they were not used by our federal government prior to the Civil War. Moreover, the freedom of commercial intercourse between the States was such that no commonwealth could levy an excise without injuring or destroying the industry upon which it might fall. But in 1862 and 1864 Congress was obliged to establish a formidable system of excise taxes upon almost all conceivable articles, by which, in 1866, an internal revenue of not less than \$190,000,000 was obtained. After the war taxation was reduced, and most of the excise duties were repealed; but the expenditures remained so much larger than they had been in 1860 that the taxes on spirits, beer, and tobacco had to be retained. . . . In 1913 the internal revenue receipts aggregated \$344,416,000. Our commodity taxes are collected by means of stamps which must be affixed to all packages containing the dutiable articles, in such a manner that the stamps will be destroyed when the goods are opened for consumption. In addition, producers of these articles are subject to a certain amount of supervision. . . . During the . . . war with Spain the rates imposed on beer and tobacco were largely increased and some additional articles were taxed. . . . The Civil War led to the establishment of many duties upon business or legal transactions in which written instruments were employed; and again in 1898 stamp taxes were levied upon bills of exchange, transfers of stocks and bonds, bills of lading, bank checks, telegraph messages, express receipts, and some other objects. In other countries transaction taxes form a part of the permanent revenue system; but, with us, they have been reserved for employment in special emergencies. If additional income must be had, the use of such a resource is legitimate; but, on purely economic grounds, the taxation of transactions is not to be commended. It is next to impossible to

graduate these taxes according to the amount of the transaction, except in a few cases; so that the burden cannot be equitably distributed. Then, too, they have the effect of interfering with the normal course of business, since they oblige taxpayers to avoid so far as practicable the transactions upon which duties are laid. During the recent war transaction taxes were again introduced, and in 1918 they yielded \$18,815,000. During the Civil War Congress was obliged to establish an income tax, which, in 1866, yielded the sum of \$72,982,000. Up to that time this form of taxation had been used by a few states without much success, but had never been tried by the national government. The federal tax was discontinued in 1872, and thereafter taxation of incomes was practically unknown in the United States. In 1894, in order to obtain additional revenue and equalize the burden of taxation, Congress established another tax upon incomes, exempting all of less than \$4,000; but before it could go into operation, this law was pronounced unconstitutional by the Supreme Court. . . . An amendment conferring upon Congress power to levy an income tax without apportioning it according to population, was finally adopted by Congress in 1909 [see also U. S. A.: 1909 (July)], and ratified by the necessary number of states early in 1913. Acting under the authority thus granted, Congress proceeded immediately to frame a law imposing a tax upon incomes. This Act of 1913 imposed an ordinary tax of one per cent upon all incomes in excess of \$3,000 (or \$4,000 in the case of a married couple), and also a graduated surtax, or additional tax, ranging from one to six per cent, on incomes in excess of \$20,000, the highest rate applying to the excess of incomes above \$500,000. In the case of corporations the ordinary tax was collected from the corporations themselves and stockholders were exempted from it. This tax yielded \$60,710,000 in 1914. In 1916, on account of the reduction of the yield of customs duties as a result of the European war, the rate of the normal tax was increased to two per cent and the rates of the surtax were fixed at from one to thirteen per cent., the highest rate applying to the excess of incomes above \$2,000,000. This produced about \$323,000,000 of revenue in 1917."—C. J. Bullock, *Elements of economics*, pp. 376-377, 379, 381.—The income tax for the fiscal year ending June 30, 1923, yielded \$1,680,177,400.

**Local taxation in the United States.**—**Property tax.**—Poll, corporation, license, inheritance and income taxes.—"American states, counties, cities, and towns have long derived most of their revenue from the general property tax, which is supposed to be levied upon all the property, both real and personal, in the possession of the taxpayers. In 1902 the total amount of the state and local receipts was \$934,020,000; and of this sum, taxes on property yielded about seventy-five per cent. . . . Many of our American commonwealths levy poll or capitation taxes. These are imposed at a uniform rate, at \$2 per poll, upon all males between the ages of 20 or 21 and 45 or 60. . . . The poll tax has been abandoned in most civilized countries, and must be viewed as an antiquated financial expedient. . . . The failure of the general property tax to reach the stocks and bonds of corporations had led various states to adopt a much more successful expedient, the taxation of the corporations themselves; and as the number of business corporations has increased, corporation taxes have become increasingly important in state finance. . . . License taxes upon various business

and professional pursuits have been often employed in the United States. In time of emergency the federal government has made extensive use of them. . . . Practically all of our cities . . . and many of the states impose license taxes upon certain occupations. In the cities of the South a very extensive system of business taxes exists. . . . Elsewhere licenses are confined to a few occupations, such as those of . . . peddlers, pawnbrokers, and the like, and have other purposes oftentimes than the mere collection of revenue. . . . The inheritance tax, as it is popularly called, is imposed 'on the devolution of property, whether real or personal, whether by will or by intestacy.' It is extensively employed to-day in Europe and Australia; and has been introduced, in some form, in most of our states. In many of our commonwealths only collateral inheritances are taxed, but in most cases direct inheritances are also included. The tax has met with such general success that its adoption by other states seems merely a question of time."—C. J. Bullock, *Elements of economics*, pp. 385, 389-390, 393.—The following states levy income taxes, individual and corporation: ALABAMA, MASSACHUSETTS (see STATE GOVERNMENT: 1913-1921), MISSOURI, NEW MEXICO, NEW YORK (see NEW YORK: 1919), NORTH DAKOTA, OKLAHOMA, VIRGINIA, WEST VIRGINIA, WISCONSIN (see WISCONSIN: 1911); individual: DELAWARE (see DELAWARE: 1917), MISSISSIPPI, NORTH CAROLINA; corporation: CONNECTICUT, MONTANA.

**World War taxation.**—Great Britain.—France.—Italy.—Russia.—Germany.—United States.—Taxation of war profits and incomes.—Great Britain endeavored to raise as much revenue as possible from taxation. The war expenditures were, however, so prodigious that it soon turned out to be impracticable to obtain more than a comparatively small proportion of the total outlay from taxation. For five years, the proportion of war taxes to war expenditures was about 17 per cent. But even this proportion of revenue derived from taxation was sufficient to maintain the credit of Great Britain. (See ENGLAND: 1914-1918: Taxation policy; 1918-1921; 1921: Local taxation.) In France the invaded territory represented the richest and the most industrially developed part of

the country. This operated largely to reduce the ordinary revenue. The resultant economic confusion, as well as the general political situation, rendered it difficult to impose any new taxes at all. The first three years of the war the tax revenues of France were actually smaller than before the war and did not suffice even to defray the ordinary peace expenditures. After a while, indeed, France found it possible to levy some war taxes; but they were only just about sufficient to make up the deficit in the ordinary peace budget. In France, therefore, we may conclude that no part of the war expenditures was met by war taxes. Italy entered the war somewhat later and was not compelled to endure the strain for so long a time. Italy consequently proceeded as soon as possible to levy new war taxes; but, as it had always been relatively overtaxed as compared with Great Britain, the war taxes levied by Italy were just about sufficient to pay the interest on the war loans, and she was not able to defray any of the war expenditures proper out of war taxation. Even before the October revolution in 1917 Russia was able to put very little reliance upon revenue from war taxation. Germany at the outset of the war, had so confidently counted upon victory, with resultant huge indemnities, that it resolved to follow the loan policy, at all events so far as the imperial government was concerned. In Germany a not insignificant part of the war expenses was met by the separate states; and in the states a considerable increase of taxation was provided for at once. As the hopes of a speedy and complete victory gradually faded away, Germany began to change her policy, and decided, especially from 1916 on, to impose more and more taxes. The result was that by the end of the war, Germany had done a little better than France although a little less well than Italy. When the United States entered the World War, it was confronted by the two rival theories of public finance. One was to the effect that the war expenses should be defrayed entirely by loans. The other theory was that the war expenditures ought to be defrayed entirely out of war taxes. The prodigious profits made during the opening years of the World War and the resulting prosperity throughout the country enabled Congress to levy taxes far higher than had ever before been attempted in the nation's history. Even with an immense addition to taxation, however, the proportion derived from war taxes was relatively small, and in fact considerably smaller than is ordinarily stated. For the entire period of our participation in the war it appears that less than one fourth (or exactly 23.3 per cent) of the war expenditures were paid out of war taxes. And if the loans to Allies are excluded, the proportion is still under one third or, more exactly, 32.5 per cent. In almost all of the continental countries, about as much additional revenue was raised from indirect as from direct taxation. In France about 60 per cent was raised from direct and about 40 per cent from indirect taxes. In Italy, in 1916, while the rate of the war profits tax was increased so as to vary from 20 to 60 per cent and that of the income tax to about 16 per cent, the stamp taxes were raised and the number of state monopolies was increased. The same policy was followed during the next year. The result was that in 1918 just about as much additional revenue was derived from the new indirect taxes as from the new direct taxes. In Germany the exact figures as to the proportion between the two categories of taxation are not yet available (1919); but it is quite safe to say that in the

federal government, at least, the revenue from indirect taxes considerably exceeded that from direct taxes. In the separate commonwealths . . . the situation was the reverse, without, however, materially changing the general result. In England considerable increase of revenue was derived from indirect taxes like customs and excises. However, the chief reliance for meeting the war expenditures was placed on a new war profits tax and an augmented income tax. In the United States (see U. S. A.: 1917-1919: Taxation and expenditures) as a result of the Revenue Act of 1917, over seventy-nine per cent of the tax revenue came from direct taxation, principally the income tax and the excess profits tax. As a consequence of the second great Revenue Act of 1918, the proportions were still more favorable, the amount ascribable to direct taxation in 1919 being in reality almost eighty-one per cent although the introduction of the system of payment by instalments somewhat obscures this result.—Based on E. R. A. Seligman, *Cost of the war and how it was met* (*American Economic Review*, Dec., 1919, pp. 748-761).—See also CANADA: 1915-1918; WAR POWERS OF THE UNITED STATES: Taxing power; INSURANCE: Early effects of the World War.

**TCHICHERIN, Georgi Vasiliyevitch**, Russian statesman. Minister for foreign affairs; representative at the Genoa conference. See GENOA CONFERENCE (1922).

**TCHINOVNIKS**.—In the days of the empire, to keep the vast and complex bureaucratic machine of Russia in motion it [was] . . . necessary to have a large and well-drilled army of officials. "These are drawn chiefly from the ranks of the noblesse and the clergy, and form a peculiar social class called Tchinovniks, or men with 'Tchins.' As the Tchins plays an important part in Russia, not only in the official world, but also to some extent in social life, it may be well to explain its significance. All officers, civil and military, are, according to a scheme invented by Peter the Great, arranged in fourteen classes or ranks, and to each class or rank a particular name is attached. . . . As a general rule a man must begin at or near the bottom of the official ladder, and he must remain on each step a certain specified time. The step on which he is for the moment standing, or, in other words, the official rank or Tchins which he possesses, determines what offices he is competent to hold. Thus rank or Tchins is a necessary condition for receiving an appointment, but it does not designate any actual office, and the names of the different ranks are extremely apt to mislead a foreigner."—D. M. Wallace, *Russia*, ch. 13.

**TELEGRAPHS AND TELEPHONES: Invention.** See **ELECTRICAL DISCOVERY: Telegraphy and telephony.**

**State and private ownership.**—"The free right of way granted by the American government to the telegraph is in distinct contrast to the absolute control taken of it in European countries. To the telephone also free scope was given by the national government, though it had not the same right of way. . . . In Europe, on the other hand, with the constant menace of war, the telegraph was early taken possession of because of its fundamental importance as a military necessity. The service in many countries is good, with low rates, which satisfy the people. The losses, where they occur, are made up, as are the postal deficits in our own country, from the general government funds."—K. B. Judson, *Government ownership of telegraphs and telephones*, p. ii, introduction.—"In the various European countries, we find that with one exception the work of establishing and developing telephonic communication was at first taken up by commercial companies working under a license or concession from the Government. The exception is Germany. . . . Telephone companies were organized and started work in the early eighties with the crude apparatus which was then available. Even in Germany a beginning was made in organizing a telephone company, but the German Post Office compensated the enterprising organisers and took over the nucleus of the system before it was established as a business. In most of the licenses or concessions granted to the early telephone companies the various Governments reserved the right to buy out the companies at stated intervals, generally at periods from five to seven years apart, and in almost all cases the Government reserved to itself the privilege of building and operating the trunk or long-distance lines between towns. In a large proportion of cases the Government option to purchase the telephone systems was exercised at a very early date, as soon as it had become evident that the telephone service was a practical and remunerative business."—H. L. Webb, *Development of the telephone in Europe*, pp. 24-25.

**1845-1847.—France.—Government construction of telegraph lines.**—"In France, the first electric telegraph line was constructed in 1845 by the government for its own purposes. . . . This line was not open to the public. A year or two later a railroad company established a short line for operating purposes only, from Versailles to St. Germain. Further private construction was forbidden by the Government."—A. N. Holcombe, *Public ownership of telephones on the continent of Europe*, p. 8.—In 1837, a law had been passed in France making every kind of telegraph including the optical telegraph, forerunner of the electric telegraph, a state monopoly.—Based on J. Lee, *Economics of telegraphs and telephones*, p. 2.

**1846-1849.—Austria.—Government construction and ownership of telegraph lines.**—"In Austria, in 1846, Metternich issued a decree declaring the telegraph to be a monopoly of the state. Here he stopped, but after the events of 1848 . . . the

work of building telegraphs in Austria was taken up with great energy. . . . In . . . 1849, the system was established, and . . . tentatively opened to the public."—A. N. Holcombe, *Public ownership of telephones on the continent of Europe*, p. 11.

**1847-1852.—Netherlands.—Construction and ownership of telegraph lines.**—"In the Netherlands, a royal ordinance of December 8, 1847, prescribed the conditions under which private persons might establish telegraph undertakings. The government reserved the right of precedence for state despatches, of operation by the authorities in time of war, of approval of rates, and of compensation for loss occasioned to the postal revenue by the competition of telegraphs. . . . March 7, 1852, a law was enacted providing that the Government itself should build the important lines itself, leaving to others only the secondary lines. . . . What actually happened was that the local municipal authorities had to undertake the task of completing the Dutch telegraph system after the central government had constructed the main trunk line."—*Ibid.*, p. 13.

**1849.—Prussia.—State telegraphs established.**—"In 1849 the Prussian state telegraphs were established, the military authorities having from the outset regarded it as reasonable to let the public share in the convenience."—J. Lee, *Economics of telegraphs and telephones*, p. 3.

**1850-1851.—Belgium.—Construction of telegraph lines.—Government ownership.**—"An English company began the work of constructing telegraph lines in Belgium, and actually completed the line from Brussels to Antwerp, but found it unprofitable. "In 1850 the company . . . sold back its original undertaking to the public authorities [who built] . . . their telegraph system themselves. . . . The government constructed lines on the state railroads and opened them to the public. In 1851 other lines were also opened to the public, and the system soon proved profitable."—A. N. Holcombe, *Public ownership of telephones on the continent of Europe*, p. 12.—"The Belgian government possesses the monopoly of the telegraph. . . . The use of telegraphic stamps is obligatory for all telegrams."—R. B. Lines, *Report on telegraphic service (to United States Congress)*, 1880, p. 15.

**1850-1867.—France.—Expansion of telegraph service.**—"On the 20th of November, 1850, a law was made permitting private persons to send dispatches over the wires (the state hitherto was the only party using it) after rigorous investigation of their identity. . . . On the 31st of December, 1851, was inaugurated the submarine cable from Calais to Dover. . . . In 1854 was created the general direction of telegraphic lines. The writing apparatus of Morse substituted the fugitive signals of the Foy-Bréguet system. . . . The year 1860 was signaled by an important fact. A conditional agreement was concluded with Mr. Hughes, professor of physics at New York, the celebrated inventor of the printing apparatus, which was definitely adopted in 1861 by the French. . . . [In 1867] the first pneumatic line appeared in Paris. With the advent of the third republic, and up to within the last years, prodigious developments have been made in telegraphy."—W. Lodian, *Century of the telegraph in France (Popular Science Monthly, Apr., 1804, p. 797)*.

**1853-1855.—Russia.—State ownership of telegraphs.**—Telegraphs were established in Russia in 1853, the state declaring a monopoly in 1855.

**1854-1908.—Switzerland.—State ownership of telegraphs and telephones.**—"In Switzerland the state monopoly had been declared (in 1854) and

in . . . four years Switzerland had the most extensive system on the continent of Europe."—J. Lee, *Economics of telegraphs and telephones*, p. 3.—"The laws regulating telegraphs in Switzerland commence with the Act of December 20, 1854, organizing the Service as a branch of the post office. The ordinance of the Federal Council of November 29, 1880 [regulated] . . . the establishment of telephone lines."—R. B. Lines, *Report on telegraphic service (to United States Congress)*, 1880, p. 14.—"The telegraphic and telephonic service extends to nearly every town and village in the country, and every railway service is equipped with both systems. . . . They are operated in connection with the postal service, every post office being provided with telegraphic facilities, and practically all of them with public telephones. . . . Long distance connections are made with all the local or urban telephone lines. . . . There are also international connections with all the countries bordering on Swiss territory. A feature of the Swiss telephone service is that the government manufactures all the instruments used, makes the insulations and controls the business absolutely."—R. H. Mansfield, *Monthly Consular and Trade Report*, no. 332:161-162 (quoted by K. B. Judson; *Government ownership of telegraph and telephones*, p. 120).

1858.—India.—Telegraph in the siege of Delhi.—So important was the telegraph in the siege of Delhi in 1858 that since that date an arrangement has been in force whereby the Government can seize at will all wires, including those controlling railway traffic.

1861-1889.—Italy.—Status of telegraphs at formation of kingdom.—Subsequent developments.—"The Kingdom of Italy being established and the various telegraphic administrations of the different provinces centered under one central management, great reforms were put into operation in material, in personnel and in the arrangement of service. . . . Not alone . . . was there lack of communication on a large scale between the various important centres of the peninsula but . . . very often between different sections in the interior of individual provinces. . . . Available data on the various old administrations shows that when they ceased to have separated existence they totalled 8243 Kilometers [of telegraph line]."—*Statistical report on the use of the telegraphs in the year 1862*, pp. 3-4.—"The new Ministry of Posts and Telegraphs [was formed in 1888. The posts and telegraphs previously] were a subdivision of the Ministry of Public Works and were entrusted to two general managements which had a certain autonomy. . . . [Among the innovations established by the new ministry was] the instruction of 'the postal employees in telegraph service and of the telegraph employees in postal service, with the intention of combining the two very important services wherever it was deemed possible and advantageous.' . . . At the end of 1880 [the postal and telegraph services were united at Rome, Turin, and nine other centers]."—A. F., *Ministry of posts and telegraphs and reforms in posts and telegraph service (Nuova Antologia, 1800, v. 26, pp. 640-653)*.

1865.—New Zealand.—Establishment of telegraphs.—"Some telegraph lines were constructed by the Provincial Governments [of New Zealand] before 1865, but nothing was done in a national way until that year, when the general assembly authorized the governor to establish electric telegraphs and appoint a Commissioner of Telegraphs to manage them. . . . The telegraphs afterwards became a part of the postal system."—F. Parsons, *Story of New Zealand*, p. 87.

1867-1875.—Germany.—Control of telegraphs by the state.—"In Prussia the telegraphs had remained a part of the postal service until 1867, . . . [when] they were erected into a separate department under the management of a military officer. In the following year the telegraph service was made over to the North German Confederation, and in 1871, together with the telegraphs of the other German states, except Bavaria and Wurtemberg, to the German Empire. . . . The service . . . in 1875 was joined once more to the Post Office."—A. N. Holcombe, *Public ownership of telephones on continent of Europe*, p. 23, footnote.—"The telegraphs in Germany [except Bavaria and Wurtemberg] are regulated by the provisions of article 48 of the Imperial constitution [1871]. Telegraphy has from the beginning been a state institution in Germany, and has always been administered as such. . . . It is permitted to pay the duties for telegraphs, which are handed to a telegraph office, by means of postage stamps."—R. B. Lines, *Report on telegraphic service (to United States Congress)*, 1880, p. 15.

1868.—England.—Government control of telegraphs.—"In Great Britain the telegraph was at first controlled by private parties. . . . In July, 1868, an act was passed 'to enable Her Majesty's Postmaster-General to acquire, work and maintain electric telegraphs. . . . The rate for messages was fixed throughout the kingdom at one shilling for twenty words, excluding the address and signature. This rate covered delivery within one mile of the office of address, or within its postal delivery. . . . [The lines of the existing telegraph companies were purchased on terms which were commonly held to be exorbitant.] . . . It was this sentiment that led Parliament to change the original intention and to confer a monopoly of the telegraphs on the post office department. . . . But notwithstanding the exorbitant price paid for the telegraph, the investment has not proved an unprofitable one.—N. P. Hill, *Speech in the Senate of the United States, Jan. 14, 1884 ("Speeches and Papers," pp. 212, 214, 215)*.

1870-1872.—Australia.—Telegraph lines connected with Java cable.—In 1870 the colony of South Australia constructed "a telegraph line from Adelaide to Port Darwin, on the shores of the Indian Ocean. To that place a cable was laid . . . from Java and when, after two years [in 1872], the overland line was completed, all Australia was united by the electric telegraph with the northern hemisphere."—R. P. Thomson, *National history of Australia, New Zealand and the adjacent islands*, p. 206.

1872.—Cape Colony.—Purchase of telegraph lines by government.—"So far as telegraphic communication is concerned . . . South Africa held a low position in 1872, but [owing to] the success of the Diamond Fields . . . Parliament resolved to purchase the lines belonging to the Cape of Good Hope Telegraph Company for £45,000 and to spend £25,000 in extending the wires towards the new seat of riches and enterprise near the Vaal River."—A. Wilmot, *History of our own times in South Africa*, p. 36.

1873.—Austria-Hungary.—Government control of telegraphs.—In Austria the telegraph was under the direction of the ministry of commerce, together with the post-office, but in 1873 this special direction was abolished and its duties transferred to the minister himself. In the new organization the post and the telegraph formed one section of the ministry above named, at the head of which was placed a director-general under the authority of

the minister. In Hungary the direction of telegraphs was placed under the authority of the director-general of posts and telegraphs, who was himself subject to the minister of commerce.—Based on—Commissioners of United States to International Exhibition at Vienna, *Reports*, 1873, v. 2, *sect. 1, ch. 2, pp. 54-55.*

1873.—Belgium.—Union of telegraphs with railways and posts.—“The direction of the Belgium telegraphs forms one of the eight bureaux of the general direction of railways, posts, and telegraphs, under the department of public works. . . . Except in the principal offices, the same employé is charged with two of these services, and sometimes with all three. The post-office gives its aid gratuitously to the telegraph in forwarding telegrams, and in the smaller towns messages and letters are delivered by the same carriers. . . . Messages on postal service are sent free by the telegraph.”—*Ibid.*, p. 55.

1873.—Rumania.—Merged with the post-office.—“In Roumania the two administrations [telegraph and post-office] form but one general direction, belonging to the ministry of the interior. Their organization is regulated by the same law, they have the same central administration, and, save in a few important places, their offices are in the same building and under the authority of the same person. Finally, their receipts and expenses are merged together in their accounts.”—*Ibid.*, p. 57.

1873.—Serbia.—Under the department of the interior.—“In Serbia the telegraph is a bureau in the department of the interior. If not completely merged with the post-office, as in Roumania, it has at least many points in common with it, both as regards the central administration and the working of its offices.”—*Ibid.*, p. 57.

1873.—Spain.—Government control of telegraphs.—Relation to postal system.—“In Spain the telegraph forms one section of the general direction of posts and telegraphs, often styled the general direction of communications, which itself is placed under the ministry of the interior. The two services have distinct staffs in the principal offices, but in the smaller towns the telegraph is not generally employed, except in conjunction with the post-office, the municipalities furnishing the necessary offices. . . . The question of a more intimate union between the post-office and the telegraph has been frequently raised. In 1865 the proposition was rejected after inquiry by a committee and a debate in the Corps Legislatif.”—*Ibid.*, pp. 55-56.

1879-1910.—Belgium.—Telephones established.—Taken over by government.—“In Belgium the telephone business was started in 1879-80 by companies, but only short term licences were granted and almost all the company systems were taken over by the Government in 1893. . . . In 1894 there were 8,500 subscribers in Belgium, and by 1910 the total . . . increased . . . to 42,540.”—H. L. Webb, *Development of the telephone in Europe*, pp. 59-60.

1880.—Great Britain.—Status of the telephone.—Control of system by postmaster-general.—“The High Court [of Great Britain and Ireland] in 1880 . . . declared that the telephone, in law, was a telegraph instrument. That settled the Postmaster-General's monopoly of the telephone. . . . With a couple of exceptions . . . all the telephone systems of the United Kingdom are now under the control of the Postmaster-General.”—J. Lee, *Economics of telegraphs and telephones*, pp. 5, 11.

1880-1890.—Germany.—State control of tele-

phone services.—“By the end of 1877 fifteen rural villages [had been brought] . . . into the general telegraph system by means of telephone connections. . . . In the year 1880 [the postmaster general] decided to introduce the telephonic system of communication into the German urban telegraph service.”—A. N. Holcombe, *Public ownership of the telephones on the continent of Europe*, pp. 24-25.—In “1890 there were 4,000 telegraph offices in Germany equipped with a telephone as the telegraph instrument. The post office has equipped some 2,000 small telegraph offices, both in rural districts and in the outer districts of large towns with a telegraph instead of a telephone instrument.”—J. Lee, *Economics of telegraphs and telephones*, p. 6.—Bavaria and Würtemberg have always retained intrastate control of their telegraph and telephone services. “In some of the South German states the question of private or public ownership never even arose. The only commercial undertakings which felt the need of rapid telegraphic service were themselves in the hands of the public authorities. Thus in Würtemberg . . . a telegraph signal service was quietly installed by the state railroad management.”—A. N. Holcombe, *Public ownership of telephones on the continent of Europe*, p. 10.—“In Germany the telephone has always been a Government monopoly, and, as in other branches of industrial effort, the German Government has encouraged the development of the telephone on purely German lines without regard to the experience of other countries and without relying on external aid of any sort. The German Post Office has had its own rate schemes and its own ideas of technical practice in telephony, and has usually refused to adopt improvements devised in other countries until German manufacturers have been able to supply them, or imitations of them. . . . These various errors in technical policy have naturally resulted in a very low standard of efficiency in the German telephone service, and have made it necessary, as modern telephone practice has tardily penetrated into Germany, for the Administration to reconstruct entirely the large city telephone systems.”—H. L. Webb, *Development of the telephone in Europe*, pp. 64-65.

1881-1901.—Russia.—Development of telephone.—Concessions.—Government control of long-distance service.—“The first exchanges in Russia—those of St. Petersburg and Moscow—opened in 1881.”—A. R. Bennett, *Telephone systems of the continent of Europe*, p. 316.—“The development of the telephone [in Russia] is extremely low, barely reaching one telephone per 1,000 inhabitants. . . . Telephone companies were established under licence from the Government in Moscow, St. Petersburg, and Warsaw, . . . but the progress made was extremely slow, . . . when the expiry of the original licences approached, the Russian Government, with a view to securing greater development, lower rates, and a higher efficiency of service, put up new concessions to competition, the competition to hinge upon the offer of low rates and of proper guarantees of an efficient service. In St. Petersburg the concession was obtained by the municipality, and in Moscow and Warsaw by companies organised by a group of Swedish, Danish and Russian capitalists. These new concessions were granted in 1901. . . . Similar concessions were granted for Riga and Odessa. . . . The Russian Government, while hedging round these concessions with numerous restrictions and retaining the right to purchase the telephone systems at the end of the licence, . . . [encouraged]

the development of the telephone for the benefit of the public and [exacted] . . . from the concessionaires a royalty of only three per cent. on the gross receipts. . . . The long-distance service in Russia . . . [remained] in the hands of the Government, and is very undeveloped, Moscow and St. Petersburg being practically the only great cities connected by long-distance telephone lines."—H. L. Webb, *Development of the telephone in Europe*, pp. 70-71.

1881-1917.—Italy.—Development of the telephone.—"Italy occupies telephonically one of the very last places among civilized nations as much in regard to its diffusion as to the quality of its service. . . . In our country the telephone made its appearance for public use in 1881. . . . The first interurban line was opened to the public only in 1804, between Milan and Monza. . . . The State saw in the telephone only a source of competition with the telegraph."—P. Ferrerio, *Telephone service in Italy* (*L'Elettrotecnica*, v. 8, 1920, pp. 2-3).—In 1910 there were "only 62,000 telephones [in Italy] among a population of 33,500,000. The Italian Government . . . assumed an entire monopoly of the service, and . . . organized a State Telephone Department, separate from the Telegraph Administration."—H. L. Webb, *Development of the telephone in Europe*, p. 70.—In the Chamber of Deputies from 1886 to 1917 various bills were successively introduced, aimed at the improvement of the telephone service. These projects have constituted a continuous see-saw between those who believe in the necessity of government control of telephones and those who favor private ownership.—Based on P. Ferrerio, *Telephone service in Italy* (*L'Elettrotecnica*, v. 8, 1920, pp. 3-4).

1884-1891.—Spain.—Government ownership of telephones.—Concessions.—"A royal decree, dated August 11, 1884, made telephonic exchange communication a Government monopoly; but . . . in June 1886 another decree entirely reversed the first one and provided that the exploitation of telephones in Spain should henceforth be left to private enterprise. . . . Under this decree concessions for thirty-five exchange systems were granted. . . . The exchanges in Madrid and Barcelona . . . opened in 1886. . . . A third royal decree made its appearance in November 1890 and came into operation on January 2, 1891. . . . It was deemed judicious to recall the decree of 1886 in order that the State might again be free to undertake exchange work where expedient. At the same time, it was proposed to give future companies a greater degree of freedom. . . . The new policy has, it is understood, been attended by considerable development. . . . The Spanish system, although now modified on decidedly liberal lines—so liberal as to include the cheapest rate for telegrams in the world—is defective in one important particular. The concessions are for twenty years only, after which the whole system becomes the property of the State *without payment* to the concessionaries of any kind, unless the State is willing to take over the switch-boards and subscribers' instruments . . . which will then be paid for at a rate to be settled by arbitration failing friendly agreement."—A. R. Bennett, *Telephone systems of the continent of Europe*, pp. 323, 325-327.

1884-1904.—New Zealand.—Telephone, a public monopoly.—"The Electric Lines Act of 1884 provided for the establishment of telephone systems by the Governor, and prohibited anyone else from constructing or maintaining for hire or profit any electric line for communication by telephone,

except by the sanction of the Government. That is the telephone . . . was made a public monopoly from the start. It is now [1904] a part of the postal system. . . . The national ownership of railways, telegraphs and telephones, was not included among . . . disputed questions in New Zealand, because there was practically no difference of opinion in respect to public ownership."—F. Parsons, *Story of New Zealand*, pp. 87, 95.

1887-1902.—Netherlands.—Government concessions in construction and operation of telephones.—"Owing to financial and other reasons it was not . . . deemed politic for the State to undertake the constructions of trunks; but it was not till 1887 . . . that it was resolved to allow [a private company] . . . to connect Amsterdam with Haarlem."—A. R. Bennett, *Telephone systems of the continent of Europe*, p. 221.—"In Holland the early telephone work, both local and long distance, was undertaken by companies. . . . In later years it became the policy of the Dutch Government to operate the long distance service itself and to grant concessions for operating the local service to companies or to the municipalities. . . . The early telephone companies . . . did not develop the business with sufficient activity and did not either keep their plant up to date or adopt modern tariffs and commercial policy. The result was that in the large cities the concessions to the companies were cancelled at the end of their original term and new concessions were granted to the municipalities of Amsterdam, Rotterdam, and the Hague; the municipalities built new systems and started the telephone business afresh, so to speak, in Amsterdam and Rotterdam in 1896, and in the Hague in 1902. . . . Since the establishment of the new municipal systems the development of the telephone in Holland has been more rapid than previously."—H. L. Webb, *Development of the telephone in Europe*, pp. 60-61.

1896-1903.—Austria-Hungary.—Government monopoly of the telephone.—"A beginning [of telephone installation] was made by private companies, chiefly of English origin, but by 1896 the last of these had disappeared and the telephone service had been converted into a complete Government monopoly. The antiquated tariffs adopted and the frequent political deadlocks . . . prevented any sound and rapid development of the telephone. . . . In recent years [written in 1910] more enlightened efforts have been made to develop the telephone in Austria by the adoption of graduated rates and the abolition of the old practice of charging the subscriber with the capital cost of his line. Arrangements have also been made for the annual supply of a certain amount of capital for new telephone construction. By these measures the checks on the development of the telephone in Austria have been somewhat lessened, and more rapid progress is now being made; but this is purely relative to the previous stagnation. . . . Hungary has its separate telegraph Administration, and the telephone branch has followed its own policy, and not imitated that of Austria. Outside of Budapest there is little development of the telephone, and the development of the whole country is somewhat lower than that of Austria. . . . In Budapest the telephone service was originally started by a company, but the State purchased the system after a few years and assumed the monopoly of telephone work. The system was reconstructed in 1903."—*Ibid.*, pp. 60-70.

1904.—Russia.—Development of telegraph in Siberia.—Russia (including the Asiatic dominion) possesses, approximately 100,000 miles of tele-

graph lines. In Siberia there are two lines from Port Arthur to the Baikal, then three to Irkutsk, four to Omsk and six to the Urals and (then merging with the Russian lines proper) eight to a dozen to the capital, St. Petersburg. Installed originally by Danish capital, with Scandinavian operators throughout, the trans-Siberian telegraph has since a dozen years reverted entirely to the Russian state and not even one of the old employees is left.—Based on L. Lodian, *Telegraph in Siberia* (*Electrical Review*, [N. Y.] 1904, v. 44, p. 594).

1908.—France.—State management of telegraphs and telephones.—“The telephone was made a Government monopoly in France in 1889, and twenty years later it is described by most Frenchmen, and notably by those who have investigated it the most closely, as a national disgrace. The development is extremely low, the plant is largely antiquated, or where it has been renewed its efficiency is destroyed by bad organization, the tariff is the tariff of the eighties, and the commercial practice is the rigid and cumbersome routine of the most bureaucratic of bureaucracies. The service, notably in Paris, which contains about a third of all the telephones in France, is a by-word with all Frenchmen.”—H. L. Webb, *Development of the telephone in Europe*, p. 63.—“Despite the diversity of its operations, the Postal, Telegraph and Telephone administration has not known how, or has not desired to apply the principle of specialization. . . . The administration starts with the principle that any employee . . . is able to fill any position in the three services, postal, telephone and telegraph, which it operates. . . . He will become proficient at the expense of the public. We need not be astonished, therefore, that our letters do not reach their destination until after several days' journey, that our telegrams are distorted and incomprehensible, that our telephone connections are made at random.”—France, *Official Report on Budget for posts and telegraphs*, 1908, pp. 11-13 (quoted by K. B. Judson, *Government ownership of telephones on the continent of Europe*, p. 100).

1908.—Comparative use of telegraphs and telephones in New Zealand, Australia, Great Britain, France, Switzerland, Belgium, Norway and the United States.—“The use of the Government telegraphs in New Zealand amounts [in 1908] to 5 telegrams per year for each inhabitant against 1 per inhabitant in the United States. The use of the state telegraphs in Australia, Great Britain, France, Switzerland, Holland, Belgium and Norway is also greater than the telegraph traffic [in the United States]. Sweden and Norway are the best ‘telephoned’ nations in the world, and Switzerland next; but the use of the telephone is greatest in the United States, and the figures for Massachusetts far exceed any of the national averages [in number of exchanges per 1,000 population, and annual number of conversations per capita].”—F. Parsons, *Story of New Zealand*, p. 722.

1908.—United States.—Ownership and operation of the Washington-Alaska cable and telegraph system.—Cable and telegraph lines in the Philippines and Porto Rico.—“The United States government owns and operates one of the longest and most intricate commercial cable and telegraph systems in the world—the Washington-Alaska system, which join the cities and towns of the United States and the world in general with the cities and towns of the Alaskan coast, the Yukon Valley and the region around the Bering straits. . . . Cable and telegraph lines have also been officially built and operated in the Philippines. . . . At pres-

ent [1908] 6322 miles of land lines and 1437 lines of cable besides twenty-four telephone systems are operated in the Philippine archipelago, which are fixed, according to the postal system, irrespective of distance. In Porto Rico [1908] the Government is operating telegraph and telephone lines so profitably that . . . the price of telegrams was reduced. The smallest towns in the most remote part of the islands are connected with telegraph stations by the telephone.”—J. Martin, *Our government's widespread socialistic activities* (*World's Work*, Sept., 1908).

1912.—Porto Rico.—Telephone concessions.—In 1912 “an ordinance granted to P. J. Rosaly the right to construct, maintain and operate a system of long distance telephone lines between the city of Ponce and certain towns together with local systems in such towns, and authorized the South Porto Rico telephone company to extend its service to Cabo Rojo.”—*Railroad telegraph and telephone franchises in Porto Rico, Message from President of the United States Transmitting Ordinances*, Washington, 1912.

1912.—Case against Oregon. See SUPREME COURT: 1888-1913.

1913.—Countries owning telegraph and telephone systems.—In 1913 the following countries owned both telegraph and telephone: “Australia, Austria, Belgium, Bosnia-Herzegovina, Bulgaria, New Caledonia, Dahomey, Denmark (at least part—state, private and municipal), Egypt (part), Formosa, France (Tunis), Germany, Switzerland, Great Britain, Sweden (greater part), Greece, South Africa (Union of) French Guinea, Servia, Hungary, Roumania, India (British—state and private), India (Dutch—state and private), Norway (greater part), Japan (including Korea), New Zealand, Luxembourg, the Netherlands (state, municipal and private), Russia (state and private). Countries owning telegraphs only [were]: Alaska, Argentine, Bolivia (not all), Brazil, Chili (nearly all), Colombia, Costa Rica, Cuba, Mexico, Paraguay, Persia, Peru, Portugal, Spain, Turkey, Uruguay. England, since January 1912 . . . has assumed the entire postal function by taking over the Bell service. Some of the provinces of Canada took the step a few years ago.”—D. J. Lewis, *Discussion on government ownership of telegraphs and telephones* (*Congressional Record*, Dec. 22, 1913).

1914-1918.—Use in World War.—Wireless telephone for airplanes. See ELECTRICAL DISCOVERY: Telegraphy and telephony: Wireless or radio: 1914-1918; WORLD WAR: 1916: IV. Austro-Italian front: d, 2; Miscellaneous auxiliary services: V. Moving men and materials: a, 12; VI. Military and naval equipment: a, 2.

1916.—Canada.—Government control of telephones.—An inquiry into the status of telephone ownership made in 1916, include the systems of the province of Alberta, Saskatchewan and Manitoba. In these provinces government ownership had been adopted about a decade previous. In Manitoba, the Bell property was purchased by the government Dec. 30, 1907.—Based on J. Mavor, *Government telephones, preface and p. 28*.

1918.—South Africa.—Use of telegraph service.—The postmaster-general of South Africa in his report for 1918 called attention to the widespread telegraph service of South Africa, taking into consideration the comparatively sparse European population and the immense area of the country.

1919.—Germany.—Provisions under the constitution of the republic.—“In the same way there is an increase in the authority of the Reich over

the interior situation, the provisions according to which the Reich only has the power to legislate on posts, telegraphs, and telephones. It is true that the former constitution had put forward the principle that the posts and telegraphs of the German Empire should be organized and administered in a uniform manner; but this provision and principle was nullified by the fact that it was not applied in Bavaria and in Wurtemberg, these states having in virtue of special treaties 'particular' rights. But these rights were annulled by the present constitution."—R. Brunet, *New German constitution*, p. 63.

1920.—Grants to Turkey by Treaty of Sèvres. See SÈVRES, TREATY OF (1920): Part XI: Ports, etc.: Telegraph and telephone.

1920.—Germany.—Ownership of telegraphs.—Length of lines.—The postal and telegraph services were retained by the republican government. There were 138,446 miles of telegraph lines and 91,450 miles of telephone lines.

1921.—Extent of telegraph and telephone lines in Switzerland, Belgium, Spain and Netherlands.—Switzerland had 1,664 miles of telegraph lines and 13,917 miles of telephone lines. There were 2,810 telegraph offices and 376,457 miles of telephone line in service in Belgium. Spain had 72,905 miles of telegraph lines; also 110 urban and 595 interurban telephone circuits. In the Netherlands most of the telegraph lines were owned by the state, but there were several private lines. The length of the state lines was 5,617 miles. The telephone, administered by the state, had 2,742 miles of line.

1922.—Great Britain.—Extent of telegraph and telephone lines.—There were 587,652 miles of post-office wires used for telegraphic purposes and 13,080 telegraph offices. The telephone system included 8520 circuits.

1923.—Canada.—Extent of service.—Compilations by the Department of Trade and Commerce show that "at least one out of every ten inhabitants of Canada has telephone service, placing the dominion second in proportion of telephones in the world. . . . There are now 944,029 telephones in Canada, an increase of 212 per cent. since 1911."—*New York Evening Mail*, Oct. 26, 1923.

1923.—France.—Proposed telephone extension.—"The administration of the P. T. T., manager of telephone service, acknowledges 'that there is a great telephone crisis in France.' . . . To remedy this [the administration] proposes a 'program of extension' which has been inserted in the Bill of Finances of 1923 already voted by the Chamber and which is under discussion in the Senate. The program of extension . . . is to be completed in ten years."—*Telephone problem in France (Revue politique et parlementaire, May 10, 1923, pp. 256, 284)*.

TEMPERA PAINTING. See PAINTING: Meaning.

TEMPERANCE. See LIQUOR PROBLEM.

TEMPERANCE MOVEMENTS.—Organized movements in behalf of temperance having begun in the United States in 1820, the idea soon spread through Great Britain. In 1820 temperance societies were formed in Ireland at New Ross and in Scotland at Glasgow. The first English society is reported to have taken form at Bradford in 1830. A British and Foreign Temperance Society was organized in 1831. The Order of Rechabites in England was instituted in 1835. In 1838, Father Mathew entered on his great temperance mission in Ireland. In 1853, the United Kingdom Alliance for the suppression of the liquor traffic was formed in Great Britain. See LIQUOR PROBLEM.

TEMPLARS: 1118.—Founding of the order.—In 1118, nine knights, of whom Hugh de Payens was the principal, took a vow, in the presence of Baldwin I, king of Jerusalem, to be both monks and soldiers, devoting themselves to the protection of the pilgrims who visited the Holy Land. They were given part of the king's palace for residence, and the open space between the palace and the temple—whence they took the name of Templars. In 1128 Hugh de Payens and others visited Europe and awakened great interest in the order. "Then Templars appeared before the council of Troyes, and gave an account of their order and its objects, which were highly approved of by the fathers. The celebrated Bernard, abbot of Clairvaux, took a lively interest in its welfare, and made some improvements in its rule. A white mantle was assigned as their habit, to which Pope Eugenius some years afterwards added a plain red cross on the left breast; their banner was formed of the black and white striped cloth named Bauseant, which word became their battle-cry, and it bore the humble inscription. 'Not unto us, O Lord, but

unto thy name be glory! Hugh de Payens returned to Syria at the head of three hundred knights of the noblest houses of the West, who had become members of the order."—T. Keightley, *Crusaders*, ch. 2.

ALSO IN: J. A. Froude, *Spanish story of the Armada and other essays*, ch. 4.

1185-1313.—Order in England and elsewhere.—"The Knights Templars first established the chief house of their order in England, without Holborn Bars [London] on the south side of the street, where Southampton House formerly stood; . . . but when the order had greatly increased in numbers, power, and wealth, and had somewhat departed from its original purity and simplicity, we find that the superior and the knights resident in London began to look abroad for a more exten-

KNIGHT TEMPLAR

sive and commodious place of habitation. They purchased a large space of ground, extending from the White Friars westward to Essex House without Temple Bar, and commenced the erection of a convent on a scale of grandeur commensurate with the dignity and importance of the chief house of the great religio-military society of the Temple in Britain. It was called the New Temple, to distinguish it from the original establishment at Holborn, which came thenceforth to be known by the name of the Old Temple. . . . [In 1185] Geoffrey, the superior of the order in England, caused an inquisition to be made of the lands of the Templars, . . . and the amount of all kinds of property possessed by the Templars in England at that period is astonishing. . . . The annual income of the order in Europe has been roughly estimated at six millions sterling! According to Matthew Paris, the Templars possessed nine thousand manors or lordships in Christendom, besides a large revenue and immense riches arising from the constant

charitable bequests and donations of sums of money from pious persons. . . . The Templars, in addition to their amazing wealth, enjoyed vast privileges and immunities."—C. G. Addison, *Knights Templars*, ch. 3.—When the order of the Templars was suppressed and its property confiscated, the convent and church of the temple in London were granted by the king, first, in 1313, to Aymer de Valence, earl of Pembroke; afterwards, successively, to the duke of Lancaster and to Hugh le Despenser. "The Temple then came for a short time into the hands of the Knights Hospitallers, and during the reign of Edward III, it seems to have been occupied by the lawyers, as tenants under the Hospitallers. When that order was dissolved by Henry VIII, the property passed into the hands of the Crown, the lawyers still holding possession as tenants. This continued till the reign of James I, when a petition was drawn up and presented to the king asking him to assign the property to the legal body in permanence. This was accordingly done by letters patent, in A.D. 1609, and the Benchers of the Inner and Middle Temple received possession of the buildings, on consideration of a small annual payment to the Crown."—F. C. Woodhouse, *Military religious orders*, pt. 2, ch. 7.—"Many of the old retainers of the Temple became servants of the new lawyers, who had ousted their masters. . . . The dining in pairs, the expulsion from hall for misconduct, and the locking out of chambers were old customs also kept up. The judges of Common Pleas retained the title of knight, and the Fratres Servientes of the Templars arose again in the character of learned serjeants-at-law, the coil of the modern serjeant being the linen coif of the old Freres Serjens of the Temple."—W. Thornbury, *Old and new London*, v. 1, ch. 14.

1307-1314.—Prosecution and destruction of the order.—"When the Holy Land fell completely into Mahomedan hands on the loss of Acre in 1291 [see JERUSALEM: A.D. 1291] they [the Templars] abandoned the hopeless task and settled in Cyprus. By the end of the thirteenth century they had almost all returned to Europe. They were peculiarly strong and wealthy in France—the strength and wealth were alike dangerous to them. In Paris they built their fortress, the Temple, over against the King's palace of the Louvre; and in that stronghold the King himself had once to take refuge from the angry Parisian mob, exasperated by his heavy extortions. During the life and death struggle with the Papacy, the order had not taken the side of the Church against the sovereign; for their wealth had held them down. Philip [Philip IV], however, knew no gratitude, and they were doomed. A powerful and secret society endangered the safety of the state: their wealth was a sore temptation: there was no lack of rumours. Dark tales came out respecting the habits of the order; tales exaggerated and blackened by the diseased imagination of the age. . . . There were strange rumours of horrible infidelity and blasphemy; and men were prepared to believe everything. So no one seemed to be amazed when, in October, 1307, the King made a sudden coup d'état, arrested all the Templars in France on the same day, and seized their goods. The Temple at Paris with the Grand Master fell into his hands. Their property was presently placed in the custody of the Pope's nuncios in France; the knights were kept in dark and dismal prisons. Their trial was long and tedious. Two hundred and thirty-one knights were

examined, with all the brutality that examination then meant; the Pope also took the depositions of more than seventy. From these examinations what can we learn? All means were used: some were tortured, others threatened, others tempted with promises of immunity. They made confession accordingly; and the ghastly catalogue of their professed ill-doings may be read in the history of the trial. Many confessed and then recanted their confession. . . . The knights made a dignified defence in these last moments of their history; they did not flinch either at the terrible prospect before them, or through memory of the tortures which they had undergone. Public opinion, in and out of France, began to stir against the barbarous treatment they had received; they were no longer proud and wealthy princes, but suffering martyrs, showing bravery and a firm front against the cruelties of the King and his lawyers. Marigni, Philip's minister and friend, and the King himself, were embarrassed by the number and firmness of their victims, by the sight of Europe looking aghast, by the murmurs of the people. Marigni suggested that men who had confessed and recanted might be treated as relapsed heretics, such being the law of the Inquisition, . . . and accordingly in 1310 an enclosure was made at Paris, within which fifty-nine Templars perished miserably by fire. Others were burnt later at Senlis. . . . The King and Pope worked on the feeble Council, until in March 1312 the abolition of the order was formally decreed; and its chief property, its lands and buildings, were to be given over to the Knights of St. John, to be used for the recovery of the Holy Land; 'which thing,' says the Supplementor to William of Nangis, 'came not to pass, but rather the endowment did but make them worse than before.' The chief part of the spoil, as might be well believed, never left the King's hands. . . . The four heads of the order were still at Paris, prisoners—Jacques de Molai, Grand Master, Guy of Auvergne, the Master of Normandy, and two more. The Pope had reserved their fate in his own hands, and sent a commission to Paris, who were enjoined once more to hear the confession of these dignitaries, and then to condemn them to perpetual captivity. But at the last moment the Grand Master and Guy publicly retracted their forced confessions, and declared themselves and the order guiltless of all the abominable charges laid against them. Philip was filled with devouring rage. Without further trial or judgment he ordered them to be led that night to the island in the Seine; there they were fastened to the stake and burnt."—G. W. Kitchen, *History of France*, v. 1, bk. 3, ch. 10, sect. 3.—In England, a similar prosecution of the Templars, instigated by the pope, was commenced in January, 1308, when the chiefs of the order were seized and imprisoned and subjected to examination with torture. The result was the dissolution of the order and the confiscation of its property but none of the knights were executed, though some died in prison from the effects of their barbarous treatment. "The property of the Templars in England was placed under the charge of a commission at the time that proceedings were commenced against them, and the king very soon treated it as if it were his own, giving away manors and convents at his pleasure. A great part of the possessions of the Order was subsequently made over to the Hospitallers. . . . Some of the surviving Templars retired to monasteries, others returned to the world, and assumed secular habits, for which they incurred the censures of the Pope. . . . In Spain, Portugal,

and Germany, proceedings were taken against the Order; their property was confiscated, and in some cases torture was used; but it is remarkable that it was only in France, and those places where Philip's influence was powerful, that any Templar was actually put to death."—F. C. Woodhouse, *Military religious orders*, pt. 2, ch. 5, 6-7.

TEMPLE OF CONCORD.—After the long contest in Rome over the Licinian laws, which were adopted 367 B. C., M. Furius Camillus—the great Camillus—being made dictator for the fifth time, in his eightieth year, brought about peace between the patricians and plebeians, in commemoration of which he vowed a temple to Concord. "Before he could dedicate it, the old hero died. The temple, however, was built according to his design; its site, now one of the best known among those of ancient Rome, can still be traced with great certainty at the northwestern angle of the Forum, immediately under the Capitoline. The building was restored with great magnificence by the Emperor Tiberius; and it deserved to be so, for it commemorated one of the greatest events of Roman history."—H. G. Liddell, *History of Rome*, v. 1, bk. 2, ch. 15.

TEMPLE OF JANUS.—"The Temple of Janus was one of the earliest buildings of Rome, founded according to Livy (i. 10.) by Numa. It stood near the Curia, on the northeast side of the Forum, at the verge of a district called the Argiletum. . . . [It was] a small 'aedicula' or shrine, which towards the end of the Republic, or perhaps earlier, was of bronze. It is shown with much minuteness on a First Brass of Nero as a small cella, without columns, but with richly ornamented frieze and cornice. Its doors were closed on those rare occasions when Rome was at peace with all the world. From the time of its traditional founder, Numa, to that of Livy, it was only twice shut—once after the first Punic War, and secondly after the victory of Augustus at Actium. . . . It contained a very ancient statue, probably by an Etruscan artist, of the doublefaced Janus Bifrons, or Geminus. . . . The Temple of Janus gave its name to this part of the edge of the Forum, and from the numerous shops of the argentarii or bankers and money-lenders which were there, the word Janus came to mean the usurers' quarter."—J. H. Middleton, *Ancient Rome in 1885*, ch. 5.—The temple of Janus was closed, once more, by Vespasian, after the destruction of Jerusalem and the ending of the war in Judea, 71 A. D. "It had stood open since the German wars of the first princes [Augustus]; or, according to the computation of the Christian, Orosius, from the birth of Christ to the overthrow of the Jewish people: for the senate had refused to sanction Nero's caprice in closing it on his precarious accommodation with Parthia. Never

before had this solemn act addressed the feelings of the citizens so directly. . . . The Peace of Vespasian was celebrated by a new bevy of poets and historians not less loudly than the Peace of Augustus. A new era of happiness and prosperity was not less passionately predicted."—C. Merivale, *History of the Romans*, ch. 60.

**TEMPLE OF REASON.** See FRANCE: 1793 (November).

**TEMPLE OF SOLOMON.**—"There were at Solomon's accession, two Tabernacle tents in Israel [one of which] had the Ark of the Covenant within its bosom. Scarcely had David transferred the Ark to the capital than the incongruity of its resting 'within curtains' while he himself dwelt in a palace lined of cedar, struck him, and preparations were set on foot for the planning and building of a permanent Temple such as the settled conditions of public affairs demanded. These preparations were completed before David's death. So minute were the specifications of the work to be carried out, that not only were patterns of the various utensils given to Solomon by his father, but also gold was provided by weight for the vessels of gold, and silver by weight for all the vessels of silver (1 Chronicles XXVIII, 14). So [it was] with all other materials used. . . . Plans and preparations for the Temple occupied the closing years of David's life. Between the transfer of the Ark to Jerusalem and his death lay that tract of time which . . . the royal poet devoted to the working out of his ideal, in writing and drawing. (1 Chronicles XXVIII, 19). . . . It was determined to find in the Tabernacle of Moses the outline and the measures which were to dominate the new Temple building. . . . The materials for the Temple were to be costlier and less perishable than those used in the Tabernacle, but they were to be treated as wholly subordinate to the scope and design of the structure."—W. S. Caldecott, *Solomon's Temple, its history and its structure*, pp. 220-221.—"The Temple of Solomon was largely of Phœnician workmanship. Its actual remains are most scanty, consisting of certain foundations, the megalithic aspect of which recalls similar work at Baalhec. Among the many restorations of the temple based upon Biblical texts, great discrepancies exist. None of them bear such an air of inherent probability as to be really convincing. From the texts it is easily seen that the Temple of Solomon has an entrance porch, a rectangular chamber lighted by narrow windows, and called the holy part, and a cubical sanctuary, the holy of holies. All these excepting the porch, were surrounded by many small chambers, three stories in height, apparently in the thickness of the exterior wall. Although the arrangement of the plan is clear, the manner in which the exterior was treated is not known. The very detailed description of the temple seen by Ezekiel in a vision is partly a memory of the earlier structure and partly a fabric of the imagination. Ezekiel shows us a temple with surroundings far larger and more complete than those of the earlier temple."—F. M. Day, *Temples* (R. Sturgis, *Dictionary of architecture and building*, v. 3, pp. 764-765).—"The one great achievement of Jewish architecture was the national Temple of Jehovah, represented by three successive edifices on Mount Moriah, the site of the present so-called 'Mosque of Omar.' The first, built by Solomon (1012 B. C.) appears from the Biblical description [1 Kings VI-VII; 2 Chronicles III-IV] to have combined Egyptian conceptions (successive courts, lofty entrance-pylons, the Sanctuary and the sekos of 'Holy of Holies')

with Phœnician and Assyrian details and workmanship (cedar wood-work, empaistic decoration or overlaying with repoussé metal work, the isolated brazen columns Jachim and Boaz). The whole stood on a mighty platform built up with stupendous masonry and vaulted chambers from the valley surrounding the rock on three sides."—A. D. F. Hamlin, *Textbook of the history of architecture*, p. 39.—"It is not doubted that the site of the Temple of the Jews was the great terrace that encloses the summit of Mount Moriah at the southeast corner of Jerusalem. This is an irregular quadrangle more than a quarter of a mile long from north to south and two-thirds as long from east to west. . . . In the middle is a platform rising some 16 feet above the terrace, which an unbroken Jewish tradition holds to be the platform of the Temple itself. In this most modern authorities concur. This platform which encloses the summit of Mount Moriah . . . is about 450 feet and is reached by eight flights of steps. . . . Solomon's temple, burned in 588 B. C., when Jerusalem was taken by the Chaldeans, was restored by Zerubbabel [515 B. C.] on about the same plan as the original, but with much less richness and remained until Herod undertook its complete reconstruction with a view of renewing the splendor of Solomon."—W. P. P. Longfellow, *Cyclopedia of works of architecture in Italy, Greece and Levant*, pp. 186-187.—The Temple "precinct was nearly doubled in size by Herod (18 B. C.) who extended it southward by a terrace-wall of still more colossal masonry. Some of the stones are twenty-two feet long; one reaches the prodigious length of forty feet. The 'Wall of Lamentations' is a part of this terrace, upon which stood the Temple on a raised platform. As rebuilt by Herod, the Temple reproduced in part the antique design, and retained the porch of Solomon along the east side; but the whole was superbly reconstructed in white marble with abundance of gilding. Defended by the Castle of Antonia on the northwest, and embellished with a new and imposing triple colonnade on the south, the whole edifice, a conglomerate of Egyptian, Assyrian and Roman conception and forms, was one of the most singular and yet magnificent creations of ancient art."—A. D. F. Hamlin, *Textbook of the history of architecture*, p. 39.—See also ARCHITECTURE: Oriental: Palestine; TEMPLES: Stage of culture, etc.; JERUSALEM: B. C. 1400-700; JEWS: Religion and the prophets; CHRISTIANITY: Map of Jerusalem.

**TEMPLE SOCIETY**, religious organization. See FRIENDS OF THE TEMPLE.

**TEMPLES:** Stage of culture represented by development of temple architecture.—Survey of temples of Egypt, Asia Minor, Greece and Rome, India and the Far East.—"The temple is common to religions which have reached a certain stage of advancement, having generally passed beyond the worship of natural objects and reached a point at which an image of the god needs the protection of walls and a roof. Thus the Cultos image is the *raison d'être* of the temple."—F. M. Day, *Temples* (R. Sturgis, *Dictionary of architecture and building*, v. 3, p. 759).—"The earliest temples were nothing but caverns, and from this circumstance the custom of consecrating caverns was long preserved in Greece, and by many other people, but more particularly in Persia and India. . . . Troglodites adored their gods in grottoes. Where natural grottoes were not to be found,

RECONSTRUCTION OF THE TEMPLE OF SOLOMON AT JERUSALEM

vast artificial caverns were formed with incredible labour. In the plains the temple was, perhaps, at first merely an enclosure, containing an altar for sacrifice. This enclosure they surrounded with upright stones, forming a rude kind of colonnade, as we find instances among the Druids of the west, and in many scattered remains of antiquity in various parts of the East."—R. Stuart, *Dictionary of architecture*, v. 2, p. 10.—"By the time that man had superimposed a stone horizontally upon two vertical ones . . . the embryo was conceived that in the fullness of time would be developed into the trabeated design of the Egyptian temple and the column-and-entablature design of Classic architecture. From the colossal, monolithic form, still preserved, for example, in Stonehenge, there is a direct progression to the highly organized perfection of the Parthenon."—C. H. Caffin, *How to study architecture*, p. 8.—See also ARCHITECTURE: Prehistoric; AVEBURY; STONEHENGE.—"The religious ceremonies of the ancients were largely centred around the altar, which, although it was not within the temple, was of more moment to them than the image of the god. Thus a temple is not necessarily a place of public worship [see BABYLONIA: Social structure], many temples being open to the priests only. In providing for the needs of both worship and ritual, a temple generally has, first, either in or near it, a place for the meeting of the worshippers (as around the altar in the Greek and Roman temple or in the great forecourt in the Egyptian temple); second, an important chamber (as the naos of the Greek or the hypostyle hall of the Egyptian temple); third, a sanctuary, adytum, or holy of holies."—F. M. Day, *Temples* (R. Sturgis, *History of architecture and building*, v. 3, p. 750).—See also ASYLUM, RIGHT OF.—In ancient Egypt "the Temples embody the pride and glory of the national, collective life. [See MILITARY ORGANIZATION: 2.] Indeed, it would seem that during life the individual, except only the King, . . . was regarded simply as a factor in the collective organisation of the community, the splendour and power of which was visualised in the Temples. [See EDUCATION, ART: Egypt.] Hence the importance which was attached to size and beauty of colour in the Temple architecture."—C. H. Caffin, *How to study architecture*, p. 33.—See also ARCHITECTURE: Oriental: Egypt; CARTOUCHE.—"Certain Assyriologists maintain that the plain-inhabiting races of Mesopotamia regarded their gods as mountain-born and as dwellers upon mountain tops, and that, therefore, in erecting dwelling places for them, they sought to reproduce their mountain homes. Certain it is that a mound of earth was piled up and formed into a terrace for the temple, which, both in Babylonia [see BABYLON: Origin and influence; Decline] and Assyria, took the form of a square tower, known as the zikkurat. . . . Hugeness and especially height were the criteria of excellence in the zikkurat. [See also ARCHITECTURE: Chaldean.] The Phœnicians, who carried the arts of Egypt and Mesopotamia to all the shores of the Mediterranean, were undoubtedly builders of great temples. . . . There is sufficient evidence to show that a monumental enclosure surrounded a great platform (as at Baalbec) [see BAALBEK], on which stood a sanctuary. Of the sanctuary itself, our knowledge, revived chiefly from certain medals, is very slight. [See ARCHITECTURE: Oriental: Phœnicia.] The architecture of ancient Judæa was Phœnician in character."—F. M. Day, *Temples* (R. Sturgis, *Dictionary of architecture and building*, v. 3, pp. 763-764).—"The problem set before

the architect of the first [Solomon's] temple . . . was no other than to produce a Tabernacle—tent in wood and stone. . . . From that tent-like construction . . . the Jewish Temple never departed during the thousand years of its existence. It was the master-idea which flowed from Mosaic, through Davidic and Maccabean, to Herodian days."—W. Shaw Caldecott, *Solomon's Temple, its history and its structure*, p. 222.—See also TEMPLE OF SOLOMON; ARCHITECTURE: Oriental: Palestine.—"The architectural remains of Persia include no temples. The Zoroastrian religion has no use for temples made with hands. Its temple was the universe; the floor of it the mountain tops of Persia, from which countless altars . . . sent up flames in worship of the element of fire. [See also ARCHITECTURE: Oriental: Persia.] . . . The

HINDU TEMPLE AT TANJORE, INDIA

architecture of Greece reached its highest expression in the temple, the supreme monument of the community's civic consciousness. [See AMPHICTYONIC COUNCIL; ATHENS: B. C. 461-431: General aspect, etc.] The developed form of the Hellenic temple resembled the Egyptian in being a product of the 'post and beam' principle of construction; but differed in its purpose that the outside rather than the inside should present superior dignity of design. . . . [The genius of Rome] was displayed in practicalness; in the resourcefulness with which it extended the scope of architecture to serve the necessities and ideals of life. Hence the temple-form . . . ceased to occupy the chief attention. . . . The plan of the Roman temple was circular, polygonal, or rectangular; the last being the most usual type."—C. H. Caffin, *How to study architecture*, pp. 80-81, 116, 160.—See also ARCHITECTURE: Classic; TEMPLE OF CONCORD; TEMPLE OF JANUS.—"Of the temples of the first Brahmini-

cal period in India, the age anterior to the third century B. C., and extending to the fifth century of our era, abundant remains of temples, both above and below ground, exist. [See BUDDHIST TEMPLES.] The general form of the tope or tumulus raised over a sacred relic is a hemisphere carried on a circular basement, while that of the cave temple is a basilica with two aisles and a nave, at the end of which stands a sanctuary in the form of a tope. The façade, ornamented with columns, was cut like the rest of the temple from the rock. . . . The second Brahminical period, beginning about the fifth century and reaching to the present time, developed new temple types, of which the pagoda is the most striking and important. [See ARCHITECTURE: Oriental: India.] . . . [In China and Japan the temple] is a building of two stories, of which the lower is open in front but surrounded by a veranda, while the upper is covered by an ornate roof. The sanctuary is enclosed by a sort of cloister, behind which are rooms for pilgrims and cells for bonzes. . . . In China the arrangement of temples is generally a symmetrical one. [See ARCHITECTURE: Oriental:

most splendid of which is the Kailds, built about 760-780.—See also SCULPTURE: India, etc.

**ERECTHTEION, OR ERECHTHEUM.** A temple on the Acropolis of Athens, in the Ionic style, and of irregular plan, portions being dedicated to Athene Polias, Erechtheus, Poseidon, and Hephæstus; completed 408 B. C., damaged by fire and repaired soon after; used as a church in Christian times, and as a harem under Turkish rule; much damaged in the siege of 1827; now being restored. See ARCHITECTURE: Classic: Greece; ERECTHTEION AT ATHENS.

**HEROD, TEMPLE OF.** At Jerusalem; built on site of Solomon's Temple; plan uncertain; Hellenistic influence in treatment.

**HORIJUJ, MONASTERY OF.** Near Nara, Japan; begun in 593 by Korean architects; gate, temple and pagoda are original structures; the remainder has been rebuilt from time to time in the same style.

**JUPITER CAPITOLINUS, TEMPLE OF.** At Rome; first built in wood; rebuilt, last by Domitian, on same plan. See ARCHITECTURE: Classic: Etruscan.

**KAABA.** Temple at Mecca. See KAABA AT MECCA.

RUINS OF THE BASILICA AND TEMPLE OF NEPTUNE AT PÆSTUM.

The Basilica, at the left, apparently a temple for two deities, Ceres and Proserpina, dates from about the sixth century B. C. The Temple of Neptune is a coarse stone building, hexastyle peripteros with fourteen columns on each side. It was built about the fifth century B. C.

China.] In Japan, where the picturesque prevails, the sacred enclosure is often treated as an informal park. [See ARCHITECTURE: Oriental: Japan.] A similarity exists between the temples of Mesopotamia and those of Mexico, Yucatan, and Peru.—F. M. Day, *Temples* (R. Sturgis, *Dictionary of architecture and building*, v. 3, pp. 771-773).

See also MEXICO: Aboriginal peoples; WOMAN'S RIGHTS: B. C. 2250-538.

**Ancient examples.**—The most famous of the ancient temples are as follows:

**ATHENA NIKE, TEMPLE OF** (wrongly called Nike Apteros). On the Acropolis of Athens; a very small (18½ x 27 ft.) and perfect example of the Ionic style, built 450-400 B. C. See ARCHITECTURE, Classic: Greece.

**BAAL, TEMPLE OF.** At Baalbek. See BAALBEK.

**DIANA, TEMPLE OF** (more properly Artemis). At Ephesus; also called the Artemision; (1) a large Ionic structure, built in the sixth century B. C. and contributed to by Cræsus; destroyed by fire in the fourth century B. C., (2) a Hellenistic edifice on the same site, begun immediately after this, sacked and burned by the Goths in 262 A. D.; excavated on behalf of the British Museum, 1863-1874, 1904-1905.—See also EPHEBUS.

**ELLORA, TEMPLES AT.** In the native state of Hyderabad, India; a series of rock cut temples, the

**KARNAK, TEMPLES OF.** In Egypt; three enclosures, the greatest of which is the temple of Ammon, begun during the Middle Kingdom, and continued from time to time through the reigns of Ptolemies, the immense Hall of Columns being built by Seti I and Rameses II. See ARCHITECTURE: Oriental: Egyptian.

**LUXOR, TEMPLE OF.** In Egypt; sacred to Ammon, Mut and Khons; built by Amenophis III, court added by Rameses II, sanctuary rebuilt by Alexander; since occupied by Christian churches and Moslem village and tomb; cleared since 1885. See ARCHITECTURE: Oriental: Egyptian.

**MAISON CARRÉE.** Græco-Roman temple at Nîmes, France; most important example remaining; built under Augustus; now used as museum.

**NIKKO, TEMPLES AT.** In Japan; various buildings, but especially the shrine and tomb of Iyeyasu, first shogun of the Tokugawa dynasty.

**OBAKU-SAN, TEMPLE OF.** Near Kyoto, Japan; typical of the Chinese revival of the seventeenth century.

**PANTHEON.** At Rome; its dome has the largest diameter in the world (about 142 feet); probably built under Hadrian, replacing earlier structure called Pantheon of Agrippa; since 609 a Christian church, S. Maria Rotunda. See ARCHITECTURE: Classic: Roman; PANTHEON AT ROME.

**PARTHENON.** Chief temple of Athena, on the Acropolis at Athens; most perfect example of Doric order; built by Pericles to replace an earlier building of the same name; probably remained intact until the sixth century A. D. See ARCHITECTURE: Classic: Greek; SCULPTURE: Greece: B. C. 5th century.

**PHILE, TEMPLES OF.** In Egypt; group dating from the third century B. C. to the second A. D., the most important, a temple of Isis, finally closed under Justinian; occupied by a Christian church; now submerged as consequence of Assuan dam.

**POSEIDON, OR NEPTUNE, TEMPLE OF.** Chief of a group (so-called Basilica and Temple of Ceres, Greek, sixth century B. C., and Roman Temple of Peace, second century B. C.) at Paestum or Posidonia, a Greek colony in Italy; built; about 420 B. C. See ARCHITECTURE: Classic: Greek.

**SOLOMON, TEMPLE OF.** See TEMPLE OF SOLOMON.

**SUN, TEMPLE OF THE (or of Jupiter-Baal).** At Baalbek (Heliopolis); dedicated in reign of Septimius Severus; built on foundations of Phœnician temple; clearance undertaken in 1901. See ARCHITECTURE: Classic: Roman; BAALBEK.

**THESEION, OR THESEUM.** At Athens; Doric temple believed to be dedicated to Theseus, but now known to have been a temple of Hephæstus; used as a church in the Middle Ages.

**VESTA, TEMPLE OF.** Name applied with more or less accuracy to various circular Roman temples; especially to one in the Forum at Rome, the ruins of which were re-discovered in 1875. See ARCHITECTURE: Classic: Roman.

**ZEUS, TEMPLE OF.** At Athens; called also Temple of the Olympian Zeus; built first in early historical days; existing remains date from Hadrian. See ARCHITECTURE: Classic: Greek.

**ZEUS, TEMPLE OF.** At Olympia, Doric style, built in fifth century B. C.; dismantled and used as fortress in fifth century A. D. and later destroyed by earthquakes; excavated 1875-1881.

Two modern edifices from an architectural point of view have been distinctly inspired by the classic temple: The Church of the Madeleine, Paris (eighteenth century), is on a Roman columnar plan, with three cupolas; the Pantheon de Paris, designed by Soufflot in the reign of Louis XVI, is in the Roman domed style. See ARCHITECTURE: Modern: France.

**TEN, Board of (Probuli),** administrative body in Athens. See ATHENS: B. C. 413-411.

**TEN, Council of,** administrative body in Venice, 1310-1797. See VENICE: 1032-1310.

**TEN HOURS BILL,** England (1847). See CHILD WELFARE LEGISLATION: 1802-1847; LABOR LEGISLATION: 1801-1878.

**TEN THOUSAND,** Greek assembly. See GREECE: B. C. 404-350.

**TEN TRIBES OF ISRAEL.** See JEWS: Kingdoms of Israel and Judah.

**TEN YEARS' WAR** (431-421 B. C.).—The long conflict between Athens and her confederated enemies, Sparta at the head, which is usually called the Peloponnesian War, was divided into two periods by the Peace of Nicias. The war in the first period, covering a decade, was known as the Ten Years' War; though the Peloponnesians called it the Attic War.—E. Curtius, *History of Greece*, bk. 4, ch. 2.—See ATHENS: B. C. 421.

**TENANT FARMING,** British Isles. See AGRICULTURE: Modern: British Isles: 20th century.

**TENANT LEAGUE,** Irish, organization for reform of land laws founded in 1850. See IRELAND, 1847-1860.

**TENANT RIGHT,** Ulster. See IRELAND: 1845-1847; 1847-1860.

**TENAWAS,** North American Indian tribe. See APACHE INDIANS; INDIANS, AMERICAN: Cultural areas in North America: Southwest area.

**TENCHEBRAI,** Battle of (1106). See ENGLAND: 1087-1135.

**TENCHI (Tenji),** emperor of Japan, 668-671. See JAPAN: 550-708.

**TENCHERI,** Germanic tribe. See USIPETES.

**TENEDOS,** island in the Ægean sea, five miles from the northwest coast of Asia Minor, having an area of sixteen square miles. (See ÆGLAN.) It belonged successively to Persia, Athens, Rome, the Byzantine emperors, Venice, and Turkey.

circa B. C. 1100.—Early Greek settlement. See ASIA MINOR: B. C. 1100.

1378.—Dispute of Genoa and Venice over sovereignty. See VENICE: 1378-1379.

1455-1920.—Occupied by Turks. See TURKEY: 1498-1502.

1655-1656.—Taken by Venetians and retaken by the Turks. See TURKEY: 1645-1660.

1920.—Ceded to Greece by the Treaty of Sèvres. See GREECE: 1918-1920; SÈVRES, TREATY OF (1920): Part III Political clauses: Greece.

1922.—Placed under Turkish sovereignty.—By an article in the draft Treaty of Lausanne (1922), Tenedos, although outside the Dardanelles, was placed under Turkish sovereignty subject to special arrangements for its local administration.—See also TROIA; CONSTANTINOPLE: Map of the Dardanelles, etc.

**TENEZ,** North American Indian tribe. See ZAPOTEC.

**TENNESSEE,** state in the south central part of the United States, known popularly as the "Volunteer state." It has an area of 42,022 square miles, and the population in 1920 was 2,337,885. It is bordered on the north by Kentucky and Virginia; on the east by North Carolina; on the south by Georgia, Alabama and Mississippi; and on the west by the Mississippi river. The Cumberland and the Tennessee are the principal rivers traversing its territory.

**Resources.**—Coal is the most important mineral production of Tennessee, the coal fields of the state having an area of 4,400 square miles. Other principal resources are gold, silver, iron, copper, and other metals, marble, phosphates and timber. The well-defined natural divisions of the state cause a diversity of soils and climatic conditions very favorable to a variety of productions and industries. The production of fruits, vegetables and grains is common to the entire state. Stock-raising, including sheep, cattle, hogs, horses and mules, while carried on everywhere, is especially developed in central Tennessee where the blue grass flourishes spontaneously. Tobacco and cotton are among the staple crops of that portion of the Mississippi valley marking the western border of the state. Development of water-power has resulted in the rapid progress of manufacturing. The manufacture of flour-mill, and grist mill, products, lumber and timber products, and iron and steel working are the most important industries of the state.—See U. S. A.: Economic Map.

**Aboriginal inhabitants.** See INDIANS, AMERICAN: Cultural areas in North America: Southeastern area; CHEROKEES; IROQUOIS CONFEDERACY: Their conquests and wide dominions.

1629.—Embraced in the Carolina grant to Sir Robert Heath. See AMERICA: 1620.

1748.—First English exploration from Virginia. See OHIO: 1748-1754.

1768.—Treaty with the Six Nations at Fort Stanwix.—Pretended cession of country south of the Ohio. See U.S.A.: 1765-1768.

1769-1772.—First settlers in the eastern valley.—Watauga commonwealth and its constitution.—“Soon after the successful ending of the last colonial struggle with France, and the conquest of Canada, the British king issued a proclamation forbidding the English colonists from trespassing on Indian grounds, or moving west of the mountains. [See NORTHWEST TERRITORY OF THE UNITED STATES: 1763.] But in 1768, at the treaty of Fort Stanwix, the Six Nations agreed to surrender to the English all the lands lying between the Ohio and the Tennessee [see U.S.A.: 1765-1768]; and this treaty was at once seized upon by the backwoodsmen as offering an excuse for settling beyond the mountains. However, the Iroquois had ceded lands to which they had no more right than a score or more other Indian tribes. . . . The great hunting-grounds between the Ohio and the Tennessee formed a debatable land, claimed by every tribe that could hold its own against its rivals. The eastern part of what is now Tennessee consists of a great hill-strewn, forest-clad valley, running from northeast to southwest, bounded on one side by the Cumberland, and on the other by the Great Smoky and Unaka Mountains; the latter separating it from North Carolina. In this valley arise and end the Clinch, the Holston, the Watauga, the Nolichucky, the French Broad, and the other streams, whose combined volume makes the Tennessee River. The upper end of the valley lies in southwestern Virginia, the headwaters of some of the rivers being well within that State; and though the province was really part of North Carolina, it was separated therefrom by high mountain chains, while from Virginia it was easy to follow the watercourses down the valley. Thus, as elsewhere among the mountains forming the western frontier, the first movements of population went parallel with, rather than across, the ranges. As in western Virginia the first settlers came, for the most part, from Pennsylvania, so, in turn, in what was then western North Carolina, and is now eastern Tennessee, the first settlers came mainly from Virginia, and, indeed, in great part, from this same Pennsylvanian stock. Of course, in each case there was also a very considerable movement directly westward. They were a sturdy race, enterprising and intelligent, fond of the strong excitement inherent in the adventurous frontier life. Their untamed and turbulent passions, and the lawless freedom of their lives, made them a population very productive of wild, headstrong characters; yet, as a whole, they were a God-fearing race, as was but natural in those who sprang from the joins of the Irish Calvinists. Their preachers, all Presbyterians, followed close behind the first settlers and shared their toil and dangers. . . . In 1769, the year that Boon first went to Kentucky, the first permanent settlers came to the banks of the Watauga, the settlement being merely an enlargement of the Virginia settlement, which had for a short time existed on the headwaters of the Holston, especially near Wolf Hills. At first the settlers thought they were still in the domain of Virginia, for at that time the line marking her southern boundary had not been run so far west. . . . But in 1771, one of the new-comers, who was a practical surveyor, ran out the Virginia boundary line some distance to the westward, and discovered that the Watauga settlement came within the limits of North Carolina. Hitherto the settlers had supposed that they themselves were

governed by the Virginian law, and that their rights as against the Indians were guaranteed by the Virginian government; but this discovery threw them back upon their own resources. They suddenly found themselves obliged to organize a civil government. . . . About the time that the Watauga commonwealth was founded, the troubles in North Carolina came to a head. Open war ensued between the adherents of the royal governor, Tryon, on the one hand, and the Regulators, as the insurgents styled themselves, on the other, the struggle ending with the overthrow of the Regulators at the battle of Alamance. [See NORTH CAROLINA: 1766-1771.] As a consequence of these troubles, many people from the back counties of North Carolina crossed the mountains, and took up their abode among the pioneers on the Watauga and upper Holston; the beautiful valley of the Nolichucky soon receiving its share of this stream of immigration. Among the first comers were many members of the class of desperate adventurers always to be found hanging round the outskirts of frontier civilization. . . . But the bulk of the settlers were men of sterling worth; fit to be the pioneer fathers of a mighty and beautiful state. . . . Such were the settlers of the Watauga, the founders of the commonwealth that grew into the State of Tennessee, who early in 1772 decided that they must form some kind of government that would put down wrong-doing and work equity between man and man. Two of their number already towered head and shoulders above the rest in importance and merit especial mention; for they were destined for the next thirty years to play the chief parts in the history of that portion of the Southwest which largely through their own efforts became the State of Tennessee. These two men, neither of them yet thirty years of age, were John Sevier and James Robertson. . . . With their characteristic capacity for combination, so striking as existing together with the equally characteristic capacity for individual self-help, the settlers determined to organize a government of their own. They promptly put their resolution into effect early in the spring of 1772, Robertson being apparently the leader in the movement. They decided to adopt written articles of agreement, by which their conduct should be governed; and these were known as the Articles of the Watauga Association. They formed a written constitution, the first ever adopted west of the mountains, or by a community composed of American-born freemen. It is this fact of the early independence and self-government of the settlers along the headwaters of the Tennessee that gives to their history its peculiar importance. They were the first men of American birth to establish a free and independent community on the continent. . . . The first step taken by the Watauga settlers, when they had determined to organize, was to meet in general convention, holding a kind of folk-thing, akin to the New England town-meeting. They then elected a representative assembly, a small parliament or ‘witanagemot,’ which met at Robertson’s station. Apparently the freemen of each little fort or palisaded village, each block-house that was the centre of a group of detached cabins and clearings, sent a member to this first frontier legislature. It consisted of thirteen representatives, who proceeded to elect from their number five—among them Sevier and Robertson—to form a committee or court, which should carry on the actual business of government, and should exercise both judicial and executive functions. This court had a clerk and a sheriff, or

executive officer, who respectively recorded and enforced their decrees. . . . In fact, the dwellers, in this little outlying frontier commonwealth, exercised the rights of full statehood for a number of years; establishing in true American style a purely democratic government with representative institutions."—T. Roosevelt, *Winning of the West*, v. 1, ch. 7.

1776-1784.—Annexation to North Carolina.—Cession by that state to the Congress of the Confederation.—Consequent revolt.—Repeal of the act of cession.—"The Watauga people had hopes, when the articles of association were adopted, of being able eventually to form an independent government, governed as the older colonies were governed, by royal governors. When the disagreements between the colonies and the mother country arose, they modified their views to the new order of things, and regarded themselves as a distinct though as yet inchoate state. But their weakness . . . rendered the protection of some more powerful state necessary for their welfare. . . . They petitioned North Carolina for annexation in 1776. Their petition was granted. . . . The provincial congress of North Carolina met at Halifax in November, 1776, and [Robertson, Sevier and two others] were delegates from Washington District, Watauga settlement. . . . After the annexation of the Washington District the old form of government was allowed to stand until the spring of 1777. . . . In November of this year, 1777, the District of Washington became Washington County. . . . From 1777 until the disturbances of eight years later, the history of Tennessee was a part of the history of North Carolina. . . . The part played by the inhabitants of Tennessee in the war for independence was active, and in one instance [at King's Mountain] decisive. Their operations were chiefly of a desultory, guerilla kind, under the leadership of Sevier . . . and Shelby." Sevier was also the leader in wars with the Indians, which were carried on with unsparing fierceness on both sides. "In the April session of 1784, the General Assembly of North Carolina, in accordance with the recommendation of Congress itself, as well as with the dictates of a far-seeing and enlightened statesmanship, imitated the example of Virginia and New York and ceded to the United States all the territory which is now the State of Tennessee. This of course included all the settlements. The condition of the cession was its acceptance by Congress within two years. Until Congress should have accepted the ceded territory, the jurisdiction of North Carolina over it was to remain in every respect the same as heretofore. . . . When the question of cession was first broached, it was accepted by the four representatives of the western counties at Hillsboro, as well as by those who proposed it, as the natural and legitimate solution of a complex problem. No one apparently dreamed of opposition on the part of the settlers themselves. . . . There is no reason to think that the Watauga people had any objection to the cession. . . . The objection was against the manner of the cession and its conditions. . . . The main cause of complaint was that North Carolina had left them without any form of government for two years. . . . A storm of indignation swept through the entire settlement. . . . The people regarded themselves without government, and, true to the traditions of their race, they sought the solution of the difficulty in their own re-

sources. . . . It is one of the noteworthy facts in the history of institutions that the possessors of English tradition always begin with the first primal germ of local self-government at hand, be it court leet, court of quarter sessions, township, county, school district, or military company, and build upward. The Watauga people had nothing so convenient as the militia companies, and they began with them as representing a more minutely varied constituency than the county court. Each company elected two representatives, and the representatives so elected in each county formed themselves into a committee, and the three committees of Washington, Sullivan, and Greene counties met as a kind of impromptu or temporary legislature, and decided to call a general convention to be elected by the people of the different counties. This convention met on the 23d of August, 1784, at Jonesboro. John Sevier was elected president, and Landon Carter secretary. . . . It is supposed that the convention which met at Jonesboro adopted the resolution to form a 'separate and distinct State, independent of the State of North Carolina.' . . . Provision was made for the calling of a future convention in which representation was to be according to companies. . . . The meeting adjourned, having fairly inaugurated the contest with North Carolina, which still claimed jurisdiction." Soon afterward the legislature of North Carolina repealed the act of cession, and "for a time it was supposed that this would terminate the agitation in favor of a new State."—J. Phelan, *History of Tennessee*, ch. 5-10.

1779-1780.—Colonization of Cumberland by Henderson.—Judge Richard Henderson, "in whom the genius of the colonizer and the ambition of the speculative capitalist were found in striking conjunction, was. . . inspired . . . to open for colonization, settlement and the sale of land, the vast wilderness of the valley of the Cumberland . . . But so universal was the prevailing uncertainty in regard to boundaries that it was necessary to prolong the North-Carolina-Virginia line in order to determine whether or not the Great French Lick, the ideal location for settlement lay within the chartered limits of North Carolina. . . . Judge Henderson chose as leader of the now colonizing party the ablest of the Tennessee pioneers, James Robertson, . . . who set forth from the Holston settlement on February 6, 1770, to make a preliminary settlement and to plant corn 'that bread might be prepared for the main body of emigrants in the fall.' After erecting a few cabins for dwellings and posts of defense, Robertson plunged alone into the wilderness and made the long journey to Post St. Vincent on the Illinois, in order to consult with George Rogers Clark. . . . After perfecting arrangements with Clark for securing 'cabin rights' should the land prove to lie in Virginia, Robertson returned to Watauga to take command of the migration."—A. Henderson, *Conquest of the Old Southwest*, pp. 270-282.—"Nothing more heroic is recorded of these people than the migration of three hundred and sixty of their number from Watauga into the wilds of West Tennessee under the lead of James Robertson. . . . It was the coldest winter ever known on this continent; their way was beset by lurking enemies. . . . Robertson's party set out from Watauga about the 1st of November, 1770; but the route through the woods soon became deep

with snow, and, encumbered as they were with cattle, and pack-horses laden with provisions and farming-utensils, their progress was slow."—J. R. Gilmore, *Advance-guard of western civilization*, pp. 3, 4.—"During the autumn Judge Henderson and other commissioners from North Carolina, in conjunction with commissioners from Virginia, had been running out the boundary line between the two states. On the very day—Christmas, 1770—that Judge Henderson reached the site of the Transylvania Fort, now called Boonesborough, the swarm of colonists from the parent hive at Watauga, under Robertson's leadership, reached the French Lick and on New Year's Day, 1780, crossed the river on the ice to the present site of Nashville."—A. Henderson, *Conquest of the Old Southwest*, p. 282.—The women and children with their escort arrived the following April. "But all the immigrants had not arrived in safety. . . . Thirty-three had perished by the way, and, of those who escaped, nine were more or less wounded.

JOHN SEVIER

. . . Nearly two thousand miles they had journeyed, in frail boats, upon unknown and dangerous rivers, never before navigated by a white man. The country through which they passed was infested by hostile Indians, and their way had been over foaming whirlpools and dangerous shoals thirty miles in extent, where for days they had run the gauntlet and been exposed to the fire of the whole nation of Chickamaugas, the fiercest Indian tribe on this continent."—J. R. Gilmore, *Advance-guard of western civilization*, pp. 7-8.—"Shortly after the middle of April [1780], Judge Henderson . . . proceeded to organize a government for the little community. On May 1st articles of association were drawn up; and important additions thereto were made on May 13th, when the settlers signed the complete series."—A. Henderson, *Conquest of the Old Southwest*, p. 285.

1785.—Organization of state of Franklin.—"Toward the close of May [1785] the western lands being again under discussion [in Congress], a resolution was carried urging North Carolina to reconsider her act of the previous November, and once more cede to Congress her possessions beyond the mountains. Had the request been granted, there can be no doubt the measure would have speedily brought peace and quiet to that distracted region. But North Carolina was too intent on bringing her rebellious subjects to terms to think for a moment of bestowing them with their lands and goods on Congress. Indeed, when the news of the request was carried into the district some months later, the malcontents expressed much surprise. They could not, they said, understand why Congress should apply to North Carolina; North Carolina had nothing to do with them. The parent State had, by her act of 1784, given them away. Congress did not take them under its protection. They belonged, therefore, to nobody, and while in this condition had called a convention, had framed a constitution, had formed a new State, had chosen for it a name, and elected a Legislature which was actually in session at the time the act of the 23d of May was passed. . . . Much of what they stated was strictly true. The delegates to the second convention had assembled early in 1785. These had given the State the name of Franklin, and had drawn up a constitution which they submitted to the people. It was expected that the men of the district would consider it carefully, and select delegates to a third convention, which should have full power to ratify or reject. The place fixed upon for the meeting of the convention was Greenville. But as there was then no printing-press nearer than Charleston or Richmond, and as much time must elapse before the constitution could become known to all, the delegates were not to convene till the 14th of November. Meanwhile the Legislature was to organize. Elections were held without delay; members were chosen after the manner in which the settlers had long been accustomed to elect representatives to the Assembly of the parent State, and these, meeting at Jonesboro, conducted their business with so much dispatch that on the last day of March they adjourned. . . . The name of the State has often been asserted to be Frankland, the land of the Franks, or Freemen. . . . But letters are extant from high officials of the State to Benjamin Franklin declaring that it was named after him."—J. B. McMaster, *History of the People of the United States*, v. 1, ch. 3, with footnote.

1785-1796.—History and the fall of state of Franklin.—Rise of the state of Tennessee.—On receiving news of the organization of the independent state of Franklin, Governor Martin, of North Carolina, issued a proclamation which was skillfully addressed to the cooler judgment of the mountaineers and which "was not without its effect." But, although the adherents of North Carolina "gradually gained ground in the new commonwealth, a majority still clung to Sevier, and refused to recognize any government but the one they themselves had organized. In this opposition of parties, disorders sprang up which presently degenerated into lawlessness. Both governments claimed jurisdiction, and both sought to exercise it. The consequence was that both became inefficient. Party quarrels ensued; old friends became enemies; Tipton and his followers

openly supported the claims of North Carolina; Sevier sought to maintain his authority as the executive officer of Franklin. This antagonistic spirit led to the commission of various outrages. . . . But in the midst of these inglorious quarrels, Governor Sevier did not neglect to defend from Indian aggressions the state over which he had been called to preside. . . . He was far less successful, however, in giving peace to the distracted state of Franklin. The continuance of intestine dissensions, and the nice balance of parties which took place in 1787, induced the people to refuse to pay taxes either to North Carolina or to the local government, until the supremacy of one or the other should be more generally acknowledged. In this state of affairs, with his government tottering to its downfall, Sevier earnestly appealed to North Carolina for a ratification of the independence of the state of Franklin, and to Franklin himself, and the governors of Georgia and Virginia, for counsel and assistance. Disappointed on all sides, he finally rested for support upon his immediate friends, conscious of the rectitude of his own intentions. . . . But the people were already weary of a feud which threatened, at every fresh outbreak, to end in bloodshed. In 1787 the last legislature of the state of Franklin held its session at Greenville. . . . The conciliatory measures of North Carolina presently disarmed the malcontents of all further arguments for opposing the reunion; and in February, 1788, the state of Franklin ceased to exist." Fierce conflicts between Sevier and Tipton and their hotter partisans still continued for some time; until, in October, Sevier was arrested for high treason and imprisoned at Morgantown. He escaped soon after, through the aid of his sons, was elected to the North Carolina senate, and was permitted to qualify for the seat on renewing his oath of allegiance. "His services were remembered and his faults forgotten." Meantime, settlements on the Cumberland, founded in 1779 by James Robertson, had prospered and grown strong, and Nashville, the chief among them, assumed its name in 1784, "in commemoration of the patriotic services of Colonel Francis Nash," of North Carolina, who fell in the battle of Germantown. In 1790, after ratifying the Federal Constitution, North Carolina, re-enacted the cession of her western territory, coinciding with the present state of Tennessee, to the United States, stipulating "that no regulation made or to be made by Congress shall tend to the emancipation of slaves." The "Territory southwest of the Ohio" was then organized, with William Blount for governor. Six years later (January, 1796), the population of the territory having been ascertained by a census to be 67,000 free white inhabitants and 10,000 slaves, a constitution was adopted, the state of Tennessee was formed, with John Sevier for governor, and, after some opposition in Congress, it was formally admitted to its place and rank as one of the United States of America. Its first representative in the House was Andrew Jackson.—W. H. Carpenter, *History of Tennessee*, ch. 13-17.—See also U.S.A.: 1781-1786; 1785-1790.

1785-1800.—Question of free navigation of the Mississippi.—Discontent of settlers and intrigues among them. See LOUISIANA: 1785-1800.

1813-1814.—Creek War. See U.S.A.: 1813-1814 (August-April).

1815-1835.—Era of expansion.—Growth of democracy.—Constitutional revision.—"The gen-

eration and more following the admission of the state and preceding the constitutional convention of 1834 was marked by the passage of the frontier beyond the borders of Tennessee; Tennesseans themselves became emigrants. It was an era of expansion and of aspirations for greater expansion. The population of the state, between 1800 and 1830, increased more than six-fold—from 105,602 to 681,004—while the population of the country as a whole little more than doubled. The slave population was increasing still faster and was setting another barrier between the mountains of the east and the hills and lowlands west of the Cumberland. The attitude toward free negroes was growing intolerant, while abolition movements were beginning to spring up. Land holdings grew smaller, but, except following the opening of new districts to settlement, land was no longer to be cheaply bought. Business enterprise of various kinds was springing up and bearing fruit. Banks, both state and national, were coming to the aid of commercial transactions. . . . The people were taking advantage of steam for navigation and were ready to lead the triumph of the agricultural sections of the country, which were striving for foreign markets and low tariffs, against the manufacturing interests of the northeast, when they sent Jackson to the White House in 1829. It was during his second administration that, yielding to the influence of the ascendant political democracy of the times—to dissatisfaction with land taxation that took no account of value, and to the desire for express authorization for state aid to internal improvement schemes, the people sent their representatives to Nashville for a constitutional revision. In response to the economic demands of the times, the new instrument ratified by the electorate in 1835, while retaining the provisions already in force—except the specific land tax—added (1) that a 'well-regulated system of internal improvement . . . ought to be encouraged by the general assembly'; (2) an express provision that the legislature could grant charters of incorporation; (3) that the legislature should fix a uniform rate of interest; (4) that laws for the emancipation of slaves without the consent of their owners should not be passed; and finally (5) that all property reserved for taxation should be taxed 'according to its value.' . . . Increased democracy—but democracy limited to the white race—was the keynote of the convention's work. Property qualifications both for voting and holding office were swept utterly away, so far as officials named in the constitution were concerned. Free white men, who were citizens of the United States and had been citizens of the county for six months, constituted the electorate. Disfranchisement for crime was, however, authorized. . . . Finally, instead of the provision for calling a convention to change the constitution there was devised a method of amending it by vote of two successive legislatures and submission to the electorate."—M. McClure, *Development of the Tennessee constitution* (*Tennessee Historical Magazine*, 1015, pp. 306-310).

ALSO IN: J. W. Caldwell, *Studies in the constitutional history of Tennessee*, ch. 5.

1830-1847.—Establishment of free school system.—"In 1823 the Legislature passed the first public school law enacted in this State. . . . The provision for a school fund, in the Act of 1823, was too insignificant to be of value, except as a first step in the direction of a public system. A small addition was made to it in 1825, and a substantial fund was provided in 1827."—W. R. Garrett and A. V. Goodpasture, *History of Tennessee*, pp. 200,

300.—“The first definite plan attempted was by the act of 1820. County courts at the first or second term after January 1, 1830, were to appoint commissioners to meet at regimental musters on the third Saturday in April 1830, to divide regiments into school districts and make registers of names of heads of families. . . . This bill gave existence to the common-school system of Tennessee, and this is the germ from which the present organization has grown. . . . The constitution of 1834 provided that the common-school fund should be ‘a perpetual fund, the principal of which should never be diminished by legislative appropriations.’ . . . The establishment of the bank of 1838, one object of which was to increase the public-school fund, but partially accomplished its purpose. . . . On the 10th of February, 1836, an act was passed making it the duty of the superintendent of public instruction to prepare plans for the improvement and organization of common schools. Under this act some changes of minor importance were made in the organization of the schools, and the first scholastic year began in July, 1838. In 1845 was passed a measure which manifested for the first time a correct understanding of the true principle of common education. This was the introduction of the feature of self-taxation for the support of common schools.”—J. Phelan, *History of Tennessee*, pp. 235-236, 237.—“The first long stride toward a more efficient [school] system was made by the city of Nashville. Professor J. H. Ingraham came to reside in that city in 1847. . . . He proposed a plan . . . in 1848. . . . The Nashville system of public schools was put in operation in 1885.”—W. R. Garrett and A. V. Goodpasture, *History of Tennessee*, pp. 300-301.

1834-1856.—Gubernatorial elections.—Rise of Whigs.—Election of President Polk from Tennessee.—Immortal Thirteen.—Party conflicts and fall of Whigs.—“With the adoption of the Constitution of 1834, Tennessee entered upon a new and distinct epoch in her history. Hitherto there had been no considerable division in the State upon questions of national politics. . . . There was but one political party in the State—that now known as the Democratic party, of which Andrew Jackson had long been the masterful leader. Jackson was about to retire from the Presidency. He felt himself under a weight of obligation to Martin Van Buren, of New York, whom he desired to succeed him as President. [This antagonized many political supporters who thereupon joined the Whig party.] . . . The Tennessee election in August, 1835, received national attention on account of its supposed influence on the Presidential election in 1836. Interest was intense from the beginning, and the contest determined and bitter. . . . Cannon [Whig] was elected by a plurality of more than 11,000 votes. . . . In 1837 . . . Cannon was again elected by an increased majority. . . . At the Presidential election in 1836, White [Whig] carried Tennessee by a majority of nearly 10,000 over all other candidates. . . . The Democrats determined to make a supreme effort to recover the State in 1839. . . . Governor Cannon offered for reelection and was accepted as the Whig candidate. The Democrats desired to put their strongest man forward to oppose him. The choice fell on James K. Polk, then serving his second term as Speaker of the national House of Representatives. . . . Polk was elected by a majority of 3,000, and the Democrats secured a majority in both branches of the State Legislature. . . . The struggle for supremacy between the

Whigs and Democrats of Tennessee from 1834 to 1844 was really but one continuous contest. . . . Polk was a candidate for reelection. None of the old Whig leaders seemed willing to meet him on the stump. In their desperation, the Whigs nominated James C. Jones, a man of yesterday ‘unknown to fame.’ . . . Jones was elected, and reelected in 1843. He was the first native Tennessean elected governor. . . . While Jones carried the State by a comfortable majority in 1841, the Legislature was almost evenly divided between the Whigs and Democrats. The Whigs claimed a majority of one on joint ballot, but the Senate had thirteen Democrats against twelve Whigs. These thirteen Democratic members of the Senate—the ‘Immortal Thirteen,’ as they were called . . . steadfastly refused to meet with the House for the purpose of electing United States Senators, whereby they prevented the election of two United States Senators, and Tennessee went without representation in the Senate from 1841 to 1843. . . . The cause of Texas independence and, afterwards, of the annexation of Texas to the United States, were earnestly favored by the people of the Southwest, and especially by those of Tennessee. . . . As the Presidential election of 1844 approached, James K. Polk declared that ‘the present opportunity should not be lost of becoming reunited with a country from whom we should never have been separated.’ . . . When the convention met, it nominated James K. Polk, a result that gave great satisfaction to the friends of Texas annexation. . . . The Whigs nominated Henry Clay, and opposed the annexation of Texas. After a hard-fought campaign, Polk was elected, but he failed to carry Tennessee. This is the only instance in which a President has been elected without receiving the vote of his own State. Still, Polk is entitled to the credit of having reduced the Whig majority in Tennessee from 12,102, in 1840, to 113, in 1844. . . . The gubernatorial contest in 1845 was between Aaron V. Brown, Democrat, and Ephraim H. Foster, Whig. . . . Brown was elected by a majority of 1,623 votes. . . . The annexation of Texas resulted in war with Mexico. Upon the requisition of the War Department, on the 26th of May, 1847, Governor Brown called for three regiments of volunteers, numbering in all 2,800 men. In answer to his call, 30,000 volunteers promptly tendered their services. . . . The contest in 1847 came on before the close of the Mexican War. The rich fruits of Polk’s sagacious policy were not yet apparent. Aaron V. Brown offered for reelection, and the Whigs nominated Neill S. Brown to oppose him. . . . The election was close and hotly contested, but resulted in a majority for Neill S. Brown. . . . When the war was ended, its returning heroes were received with little less than a triumph, and were honored by the people of the nation and State with the highest offices in their gift. . . . In Tennessee, . . . General William Trousdale, known as ‘the War Horse of Sumner County,’ was nominated by the Democrats to oppose Governor Neill S. Brown. . . . When the Whig convention met in 1851, William B. Campbell was nominated for governor by acclamation. . . . Trousdale was again the candidate of the Democrats. . . . The people again alternated between the parties . . . and elected Campbell by the customary small majority. He was the last Whig governor. . . . The opposing candidates for governor in 1853 were Andrew Johnson, Democrat, and Gustavus A. Henry, Whig. . . . After a remarkable canvass, in which the speeches of the

candidates bore little reference to each other, Johnson was elected. . . . The Know-Nothing party, . . . gave their support to Meredith P. Gentry, whom the Whigs brought forward to oppose the reelection of Governor Johnson, in 1855. . . . Johnson made Know-Nothingism the leading issue of the canvass, and in a memorable campaign defeated Gentry. . . . The Democratic party had now gained a permanent ascendancy in Tennessee. In the presidential election of 1856, the State went Democratic for the first time since the election of Andrew Jackson, in 1832. In 1857, Isham G. Harris, Democrat, was elected governor over Robert Hatton by more than eleven thousand majority. . . . In 1859, Governor Harris was re-elected."—W. R. Garrett and A. V. Goodpasture, *History of Tennessee*, pp. 182, 185, 187-191, 193-202.—See also U.S.A.: 1850 (June).

1853-1861.—State property taxed for public school support.—"Andrew Johnson . . . in his message in 1853 . . . urged a State appropriation to maintain schools. . . . Accordingly the Legislature passed an Act taxing all the property of the State for school purposes, under which the fund available for public schools was doubled. This was the first school tax ever levied by the State. But the law was defective in many respects, and the Civil War came on before any successful system of public schools was put into operation."—W. R. Garrett and A. V. Goodpasture, *History of Tennessee*, p. 301.

1860.—Topography of Tennessee in its relation to slavery.—Events leading up to secession.—"Tennessee was composed of three grand divisions which were in several essentials so different as to be almost separate states. The citizens of one division spoke and thought of those of the others very much in the same manner as of the citizens of the adjoining states. In topography and soil the difference of these divisions was very marked. East Tennessee consisted of rugged mountains and narrow valleys; Middle Tennessee, of long mountain slopes and plateaux and undulating table-lands; West Tennessee, of broad alluvial plains. These conditions influenced the people in their attitude toward slavery. . . . There was a radical difference in the character, sentiments and traditions of the people of the East and West Divisions which had been inherited from the original settlers. East Tennessee was settled at a time when hostile Indians inhabited the region in such numbers as to make life and property unsafe. Slave-labor did not seek such a home. The sturdy Scotch, Pennsylvania Dutch and the poorer people from Virginia and North Carolina were the first settlers. It was here that the first abolition society in America was organized, and the first abolition paper published. West Tennessee was settled after the Indians had been removed beyond the Mississippi river, and by men from the sea-board who brought their slaves thither for larger enterprise."—J. W. Fertig, *Secession and reconstruction of Tennessee*, p. 28.—"The first attitude of Tennessee on the question dividing the North and the South immediately before the outbreak of the Civil War was one of nominal neutrality. This attitude was foreshadowed by the action of her delegates in the Charleston Convention of 1800. They voted against the Southern proposition to give slavery *carte blanche* in the territories, and met afterwards with the Northern delegates at Baltimore, but when the Baltimore convention refused to readmit the delegates who withdrew at Charleston, the Tennessee delegates, believing a compromise no longer possible, withdrew and joined the other

Southern delegates in nominating Breckinridge, thus forecasting the attitude and action of their state in the secession movement. In the Presidential election which followed, the state gave another example of her neutral attitude by casting her electoral vote for her own son, John Bell, the National Union candidate, who stood for the Constitution and the laws as they then existed and opposed alike the doctrine of the Democrats and Republicans. . . . Although Lincoln had not received a single vote in the state there was no cause to fear any opposition from her citizens. They had expected his election and were prepared to do their duty under the Constitution. . . . An open letter from ex-Governor Neil Brown, published in all the journals of the state, exhorted the people to stand by the Union, since there was every reason to believe that President Lincoln would administer the government in a conservative manner. . . . The fact that ex-Governor Johnson, one of the United States Senators, and a majority of the Representatives were uncompromising Union men, further served to steady public sentiment. The strong Union sentiment in Tennessee, although not the result of, was in a large degree dependent upon, the attitude and acts of the other Southern States. A few days after the election of Lincoln were sufficient to show that South Carolina would, without doubt, execute her threat of secession, and the spread of the contagion southward and westward depended upon the action of Georgia. . . . When the Legislature of the latter state, November 18th, decided to call a state convention to take action on the question of secession, and appropriated \$1,000,000 to arm the state, the neutral policy of Tennessee was materially weakened. This policy was further weakened when the Legislature of Georgia adopted, December 3, a resolution proposing a conference of all the slave-holding states. This action of the Legislature of Georgia played into the hands of the secessionists in Tennessee. Under pretext of advocating this conference, meetings were held in various parts of the state for the purpose of creating and organizing secession sentiment. . . . Petitions were signed at these meetings asking the Governor to convene the Legislature to appoint delegates to the proposed conference. Governor Harris, warmly sympathizing with the secession movement, and maintaining an active correspondence with its leaders in other states, was not slow to act on these petitions. . . . Accordingly, on the 8th of December he issued his proclamation calling the General Assembly to meet in extra session, January 7, 1861. The purpose of the session as expressed in the proclamation was 'to consider the present condition of the country,' a phrase sufficiently indefinite to cover secession or any measures less radical."—*Ibid.*, pp. 15-17.

1861 (January-May).—Secession from Union.—"The Legislature of Tennessee met on the 6th of January. On the 12th, a bill for the calling of a state convention [with the object of following the lead, in secession, which South Carolina had taken on the 20th of December (see U.S.A.: 1860: October-December)] was passed. It was passed subject to the approval of the voters. The election took place on the 8th day of February. The people voted against holding a convention by 67,360, to 54,150. In disregard of this vote of the people, however, the legislature, on May 1st, passed a joint resolution authorizing the governor to enter into a military league with the Confederate States. The league was formed. The Governor, Isham G. Harris, sent a message to the legislature,

announcing the fact. He stated its terms. . . . It stipulated that until the state should become a member of the Confederacy, 'the whole military force and military operations, offensive and defensive, of said state, in the impending conflict with the United States, shall be under the chief control and direction of the President of the Confederate States.' It was also agreed that the state would, as soon as it should join the Confederacy, turn over all public property it might acquire from the United States. The legislature ratified the league by decided majorities of both branches. These final proceedings took place on the 7th day of May. On the preceding day, the legislature put forth a declaration of independence. It was submitted to the votes of the people for ratification. This document waives the right of secession, as follows: 'We, the people of the State of Tennessee, waiving an expression of opinion as to the abstract doctrine of secession, but asserting the right, as a free and independent people,' declare that all the laws and ordinances by which Tennessee became a member of the Federal Union, 'are hereby abrogated.' The vote for separation was declared by the governor to be 104,010 for, and 47,238 against that measure. It thus appears that the Legislature of Tennessee, in declaring the separation of the state from the Federal Union, placed its action upon the ground of a revolutionary right."—S. S. Cox, *Three decades of federal legislation*, ch. 6.

1861 (June).—East Tennessee convention.—Loyalty of East Tennessee.—"Seventy per cent of the vote against secession was cast in East Tennessee, which cast only thirty per cent of the entire vote. . . . Such radical difference of sentiment made it unlikely that East Tennessee would submit to the domination of the rest of the state, although out-voted two to one. As soon as it was known that the ordinances had been passed by the Legislature, a call was issued by the leading men of East Tennessee, chief among these, Senator Andrew Johnson, for a convention to meet at Knoxville, May 30. Delegates from all the counties of East Tennessee and from a few counties of Middle Tennessee came together that day, and formulated and published an address to the people of the state. They protested against secession as ruinous and heretical, and against the attempt of those in authority to override the deliberate judgment of the people expressed in the previous election. They declared that the Legislature had disregarded the rights of the people and had transcended its constitutional powers, in negotiating the Military League which they regarded as the only authority for arming the state. They appealed to the people to restore the state to its former position. . . . While East Tennessee was protesting against the usurpation of the Legislature, West Tennessee fortified the Mississippi from Memphis to the Kentucky line, raised an army of 15,000 men under General Pillow, admitted into the state 8,000 troops from Mississippi, and sent several thousand troops to East Tennessee to suppress any insurrection or to repel any attack in that quarter. . . . The convention of East Tennessee met again [June 17], and this time at Greeneville, as it was unsafe at Knoxville on account of the number of Confederate troops there. Reaffirming the work done

at Knoxville, they protested against the want of freedom in the election and against the dishonesty at the count, and appointed . . . a committee to prepare a memorial to the General Assembly asking that East Tennessee, and such counties of Middle Tennessee as desired to cooperate, be allowed to withdraw and form a separate state. [See also ALABAMA: 1861.] . . . The memorial, which the committee drew up and presented to the Legislature then in session, was referred to a committee of four from the Senate and eight from the House, but the Legislature adjourned in three days without taking further action. In case their petition was not granted, it was the intention of the leaders in East Tennessee to raise an army, place John Baxter at its head, seize the railroads and hold that part of the state for the Union by force of arms. For this purpose, they secretly organized the people, but before they could arrange for a general rising, the Confederates were in the state in such force that an attempt to hold the region would have been a desperate enterprise. . . . By the election in June it was decided that the state should send representatives to the Confederate Congress. The election of these representatives was set for the first Thursday in August. . . . In the four districts of East Tennessee the people would not vote for the Confederate candidates, but nominated and elected men to go to Washington. . . . The action of the people of East Tennessee so alarmed Governor Harris that he requested President Davis to send 14,000 additional troops into that part of the state. From this time Union men were suppressed into silence or hunted from the state. Many thousands left the state and joined the Union army in Kentucky."—J. W. Fertig, *Secession and reconstruction of Tennessee*, pp. 27-32.

Government, who have never voluntarily given aid and comfort to the enemy.' . . . Tennessee, as Johnson bluntly maintained, could only be organized and controlled as a State in the Union by that portion of her citizens who acknowledged their allegiance to the Government of the Union. Under this theory of procedure the popular convention proposed an amendment to the State constitution, 'forever abolishing and prohibiting slavery in the State,' and further declaring that 'the Legislature shall make no law recognizing the right of property in man.' The convention took several other important steps, annulling in whole and in detail all the legislation which under Confederate rule had made the State a guilty participant in the rebellion. Thus was swept away the ordinance of Secession, and the State debt created in aid of war against the Union. All these proceedings were submitted to popular vote on the 22d of February,

1865-1866. — Reconstruction. — Abolition of slavery.—Restoration of the state to its "former, proper, practical relation to the Union."—In the early part of 1865, Andrew Johnson, though vice president-elect, was "still discharging the functions of military governor of Tennessee. A popular convention originating from his recommendation and assembling under his auspices, was organized at Nashville on the 9th day of January, 1865. Membership of the body was limited to those who 'give an active support to the Union cause, who have never voluntarily borne arms against the

and were ratified by an affirmative vote of 25,203 against a negative vote of 48. The total vote of the State at the Presidential election of 1860 was 145,333. Mr. Lincoln's requirement of one-tenth of that number was abundantly complied with by the vote on the questions submitted to the popular decision. . . . Under this new order of things, William G. Brownlow, better known to the world by his soubriquet of 'Parson' Brownlow, was chosen governor without opposition on the 4th day of March, 1865, the day of Mr. Lincoln's second inauguration. The new Legislature met at Nashville a month later, on the 3d of April, and on the 5th ratified the Thirteenth Amendment; thus adding the abolition of slavery by National authority to that already decreed by the State. The Legislature completed its work by electing two consistent Union men, David T. Patterson and Joseph S. Fowler, to the United States Senate. The framework of the new Government was thus completed and in operation before the death of Mr. Lincoln."—J. G. Blaine, *Twenty years of*

*Congress, v. 2, ch. 3.*—After the organization of a loyal government in Tennessee, more than a year passed before the restoration of the state to its constitutional relations with the United States, by the admission of its senators and representatives to Congress. Tennessee was the first, however, among the seceded states to obtain that recognition, by being the first to ratify the Fourteenth Constitutional Amendment. "Immediately on the reception of the circular of the Secretary of State containing the proposed amendment, Governor Brownlow issued a proclamation summoning the Legislature of Tennessee to assemble at Nashville on the 4th of July [1866]. . . . Every effort was made to prevent the assembling of the required number [to constitute a quorum]. The powerful influence of the President himself was thrown in opposition to ratification." By arresting recalcitrant members, and by "the expedient of considering the members who were under arrest and confined in a committee room as present in their places," the quorum was assumed to have been made up and the amendment was ratified. "Immediately after the news was received in Washington, Mr. Bingham, in the House of Representatives, moved to reconsider a motion by which a joint resolution relating to the restoration of Tennessee had been referred to the Committee on Reconstruction," and, this motion being adopted, he introduced a substitute which declared, "That the State of Tennessee is hereby restored to her former, proper, practical relation to the Union, and again entitled to be represented by Senators and Representatives in Congress, duly elected and qualified, upon their taking the oaths of office required by existing laws. [On the following day this joint resolution passed the House, and a day later (July 21), it was adopted by the Senate.]"—W. H. Barnes, *History of the 30th Congress, ch. 20*.

1870.—New state constitution.—Its important provisions.—"The war resulted in a tremendous destruction of values, and in the complete overthrow of the industrial system. . . . The people were impoverished, helpless, despairing. The future was inscrutable and threatening. . . . Nevertheless we find a Constitutional Convention assembling in 1870 . . . and in this body were many of the most thoughtful, capable and conservative men of the state, prominent in public affairs."—J. W. Caldwell, *Studies in the constitutional history of Tennessee, ch. 6, p. 146*.—"The convention of 1870 met as a result of a successful political coup, made possible by dissensions in the ranks of the party which had opposed secession and was an expedient whereby the Democrats sought to realize permanently again their ante-bellum control of the state. Beyond this the convention as a whole did not care to proceed, and evidently thought that more settled times were at hand when a succeeding convention could more efficiently renovate the constitution. The revised instrument, like its predecessor, contains a preamble setting forth the outline of the previous constitutional enactments of the state, and eleven articles, the first of which is a declaration of rights, followed by a schedule of temporary adjustments. . . . Though much longer, it is . . . very similar to the work of the convention of 1834. There are few

provisions which can be said to be the direct voluntary result of the economic developments of the period preceding its adoption. The old ones generally were retained, with some extensions, as that the interest rate must not be more than ten per cent., and that laws for the creation of corporations must be general and alterable at will, provided such alteration does not disturb vested rights. There are also provisions concerning the state finances and state aid to private undertakings. . . . The property tax section, making mandatory the taxation of all property, merely puts into the constitution what statutes, gradually adding items to the list as the variety of property increased had already accomplished. Its all-inclusiveness naturally led to certain specific exemptions, permissive save in the case of products of the soil in the hands of the producer and his immediate vendee and one thousand dollars' worth of personality to each taxpayer. The latter provisions and the homestead exemption from sale under legal progress, within certain circumstances, may be evidenced as signs of growing social democracy, as may also the absolute prohibition of imprisonment for debt in civil cases. The permissive income tax on stocks and bonds not taxed according to a value was intended to draw revenue from the holders of Federal government bonds. The constitution has remained unchanged since 1870."—W. McClure, *Development of the Tennessee constitution (Tennessee Historical Magazine, 1915, pp. 310-311)*.

1870-1884.—State debt and its importance in state politics.—"At the general election, November 1870, General John C. Brown was elected governor, with a Democratic Legislature. . . . The comptroller reported that the State debt reached the enormous sum of \$41,863,406.69. The Thirty-eighth General Assembly, upon the recommendation of the governor, passed [a] . . . measure . . . to fund the State debt. . . . A strong opposition was . . . offered to his financial policy. In spite of this, his influence was sufficient to secure the enactments which he recommended. During his two terms, the bonded indebtedness was reduced from \$41,863,406.69, to a little over \$20,000,000; a large floating debt liquidated; an act was passed to fund the State debt at par; the payment of interest was resumed, and the credit of the State was fully restored. . . . Having served two terms with distinction, Governor Brown declined to be a candidate for reelection. In 1874, Hon. James D. Porter (Democrat) was elected governor, with a Democratic Legislature. . . . Governor Porter served two terms, extending from 1875 to 1879. Early in his administration, the Funding Act of 1873 was repealed. The Democratic party was divided in reference to the State debt. . . . Governor Porter repeatedly urged upon the Legislature to make a final adjustment of the State debt, and to provide for paying the interest. . . . An extra session of the Legislature was called to consider the proposition, which convened December 5, 1877, but failed to reach a final adjustment. . . . Governor Porter declined reelection at the end of his second term, and Col. A. S. Marks was elected governor. . . . During the two years of this administration, the State debt was the pressing issue. . . . The status of the debt was unsatisfactory and confused. The payment of interest had been suspended for several years, and the credit of the State was suffering. The Democrats were divided on the question of funding the debt. . . . Finally, a law was passed by the Legislature, providing for funding the debt at the ratio of fifty

cents on the dollar in bonds bearing four per cent interest; the said law to be submitted for ratification or rejection to a vote of the people. The election was held August 7, 1879, and the proposed law . . . was defeated. . . . At the end of his term, Governor Marks declined to be a candidate for reelection. The Democratic convention for nomination of a candidate was hopelessly divided. Hon. John V. Wright was nominated by the 'State Credit' wing and Hon. S. F. Wilson by the 'low tax' wing. . . . This split in the Democratic party led to the election of Hon. Alvin Hawkins (Republican) as governor. . . . An effort was made at the beginning of this administration to settle the State debt on a basis satisfactory to the bondholders. An act was passed in 1881 'to settle the State debt at one hundred cents on the dollar, and three per cent interest, and making coupons receivable for taxes.' The Supreme Court declared this act unconstitutional, and the vexed question was again opened. Three extra sessions of the Legislature were held. At the third extra session an act was passed 'to settle and fund the State debt into bonds.' . . . This act was approved May 20, 1882, and bonds were issued under it to the amount of \$8,211,000. Like its predecessors, it was unsatisfactory to the people. . . . The Democratic Convention, which met in June, adopted in its platform a plan for settling the State debt, and nominated Gen. William B. Bate for governor. . . . General Bate was elected. . . . Upon the strong recommendation of the governor, the Legislature enacted a law for the funding of the State debt, which proved to be the final adjustment of the vexed question. . . . This settlement was accepted by the bondholders, and the entire State debt was ultimately funded under the act."—W. R. Garrett and A. V. Goodpasture, *History of Tennessee*, pp. 261-267.

**1870-1885.—Changes in public school system.—Creation of new state bureaus, offices and commissions.**—"The results of the Civil War changed the whole aspect of public education in Tennessee. A bill was introduced into the legislature for the 'Reorganization, Supervision, and Maintenance of Common schools,' in October, 1865, but did not become a law until March, 1867. In 1870 the legislature unwisely repealed the law of 1867, and remitted the support of the public schools to the action of the several counties. . . . The school law passed by the legislature in 1873 was a bill drafted and recommended by a committee of the State Teachers' Association . . . and is entitled 'An Act to establish and maintain a uniform system of public schools.' It provides for State and County Superintendents of Public Instruction, and combined the State, county, and district systems. The permanent school fund of \$1,500,000, together with the interest accrued thereon during the war . . . were funded into a certificate of indebtedness . . . bearing six per cent interest. The interest on the permanent school fund was supplemented by a tax of one mill on the dollar levied by the State for school purposes, and by a State poll tax of \$1. The counties and school districts were also authorized to levy taxes for the benefit of their local schools, but the provision respecting districts was found to be unconstitutional and was repealed in 1875."—W. R. Garrett and A. V. Goodpasture, *History of Tennessee*, pp. 301, 302.—"During Governor Brown's administration, the Bureau of Agriculture and the Bureau of Immigration were established. It was at this time that the office of state geologist and the office of superintendent of prisons were created. As a

result of the prevalence of yellow fever in Tennessee during the year 1878, the State Board of Health was created. This board has continued its work down to the present day. During Governor Bate's first term of office the State Railroad Commission was established, . . . but at the next meeting of the legislature [1885] this law was repealed."—G. W. Dyer, *School history of Tennessee*, p. 197.

**1887-1908.—Liquor question.—Prohibition measures.—Pendleton law.—Election contests.—Assassination of Senator Carmack.**—"In 1887, the legislature passed the 'Four Miles Law.' This prohibited the sale of intoxicating liquors within four miles of an incorporated institution of learning, unless such sale should take place in an incorporated town. This was the first law passed by the Tennessee legislature after the Civil War to restrict the sale of liquors in the state. . . . In 1887, an amendment to the constitution, prohibiting the sale of liquors in the state, was voted on by the people of Tennessee [and defeated]. . . . The legislature of 1880 passed an act which allowed all incorporated towns in the state with a population of two thousand or less, to surrender their charters which prohibited the sale of liquors within their borders. In 1903, this law was amended so that it was made to apply to towns of 5,000 population or less; and in 1907, the law was extended to all the cities and towns of the state. This act is known as the Pendleton Law, taking its name from Senator I. L. Pendleton, who introduced the measure in the senate and led the fight for its passage. Acting under this law, all the towns in the state, with the exception of four which had not surrendered their charters under previous laws, gave up their charters and reincorporated as 'dry' towns. The four places in which the sale of liquors continued were Memphis, Nashville, Chattanooga, and LaFollette. Governor Patterson [1907-1911] opposed very vigorously the Pendleton Act, but he was not able to prevent its passage. Governor Patterson was a candidate for reelection in 1908. A state Democratic primary was arranged for nominating a candidate for governor. Governor Patterson and ex-Senator Carmack were candidates before this primary for the Democratic nomination for governor. The leading issue in the primary campaign was the question of state-wide prohibition, Senator Carmack standing for state-wide prohibition and Governor Patterson against it. Governor Patterson received the nomination. Soon after this primary, Senator Carmack became the editor of the *Nashville Tennessean*. He with many others asserted that the people had a right to take any position they desired on the liquor question, when they came together in their state convention to adopt a platform for the Democratic Party; that the primary did not settle anything except the question of the nominee of the Democratic Party for governor. When the state convention assembled to adopt a platform, the state committee acting in the interest of Governor Patterson, unseated one hundred and fifty-one delegates sent to the convention by the people, and appointed others in their places . . . Senator Carmack, as editor of the *Tennessean*, said that this committee had no right to unseat the people's delegates and substitute its own appointees in their places, and he refused to be bound by the platform of such a convention which he asserted did not represent the views of the majority of the people. He supported the nominee of the party, but repudiated the platform, and urged the people to elect a legislature that would

pass a state-wide prohibition law. When the returns came in after the November election, it seemed that in both the senate and the lower house a majority who were in accord with Senator Carmack's views had been elected. Within one week after this election [November 9, 1908] Senator Carmack was killed on the streets of Nashville by Duncan B. Cooper and his son, Robin Cooper. Colonel Duncan B. Cooper had been a strong supporter of Governor Patterson. . . . The legislature met in the following January and passed the state-wide prohibition law. This law was fought in every possible way by Governor Patterson, but it was passed by a large majority in both houses over the governor's veto. Duncan B. Cooper and his son were denied bail, and were kept in jail until their trial. They were convicted by the jury and were given a sentence of twenty years in the penitentiary. The case was appealed to the supreme court . . . [which] affirmed the sentence of Duncan B. Cooper, but granted a new trial to Robin Cooper. Governor Patterson granted a full pardon to Duncan B. Cooper, within a few minutes after the supreme court had affirmed the sentence of the lower court. A new judge and a new attorney-general had now come into office in Davidson County, the judge by appointment of Governor Patterson, and the attorney-general by election. These officials had the case against Robin Cooper dismissed without allowing it to come to trial a second time."—G. W. Dyer, *School history of Tennessee*, pp. 206-210.

1891-1899.—Development of school system.—"The public school course has been extended by the enactment of the Secondary School law in 1891, . . . to expand the curriculum, but not to impair 'the efficiency of elementary instruction, which is, and always must be, the foundation of every good school system.' In 1899 an additional step was taken by the enactment of the High School law, which confers on the several counties the power to establish High Schools, and thus render the school course of the county complete. . . . Another educational enactment of great importance was 'An act to create a State Text-Book Commission, and to procure for use in the free public schools in this State a uniform series of text-books.'"—W. R. Garrett and A. V. Goodpasture, *History of Tennessee*, pp. 285, 303.

1897.—Centennial exposition.—The centennial anniversary of the admission of Tennessee to the American Union was celebrated by the holding of a very successful exposition at Nashville, which opened May 1, 1897.

1898.—Part in the Spanish-American War.—"In this war, Tennessee maintained her title to the 'Volunteer State.' She furnished her full quota of troops, and other volunteers offered their services. Four regiments from the State were accepted and mustered into the Volunteer Army of the United States."—W. R. Garrett and A. V. Goodpasture, *History of Tennessee*, p. 281.

1907.—Railroad legislation. See RAILROADS: 1907.

1913-1917.—Legislative enactments.—Part played in World War.—In 1913 the parole system for convicts in the state penitentiary was adopted. Not until 1917 did the state take its place in the ranks of those states having compulsory primary election laws. In the same year the legislature approved an act providing for an executive budget system. Besides the coal, iron, zinc, lead and other materials, which Tennessee contributed toward increasing the strength of the nation during the World War, she sent 75,825 of her men into

the national armies. This was 2.02 per cent. of the total fighting force.—See also WORLD WAR: 1918: II. Western front: p. 2.

1919.—Ratification of Federal constitutional amendments.—Two Federal constitutional amendments were ratified by the state legislature subsequent to the armistice. On January 8, 1919, the Eighteenth (or prohibition) Amendment was ratified. The Nineteenth (or woman suffrage) Amendment caused a constitutional question in the state legislature which attracted the attention of the entire country. In June, 1920, President Wilson sent a telegram to Governor Roberts, urging him to call the legislature in special session to consider ratification of the Federal amendment. This Governor Roberts did, in spite of restriction contained in Article II, section 32 of the State Constitution, which reads: "No convention or general assembly shall act upon any amendment of the Constitution of the United States proposed by Congress to the several states, unless such convention or general assembly shall have been elected after such amendment has been submitted." The opposition to woman suffrage in the legislature grouped its arguments about this section of the state constitution and held that the governor's action in calling a special session sought to nullify the ordinance. The supporters of woman suffrage relied upon opinions from the state's attorney and the solicitor-general of the United States to the effect "that the power of the legislature to ratify an amendment to the Federal Constitution is derived solely from the people of the United States through the Federal Constitution and not from either the people or the Constitution of the State." The Nineteenth Amendment was finally ratified, Tennessee making the required three-fourths of the states.

**TERRITORIAL AND RESERVE FORCES ACT**, England (1907). See WAR, PREPARATION FOR: 1907-1909: British territorial force.

**TERRITORIAL FORCE**, English. See MILITARY ORGANIZATION: 33.

**TERRITORIES AND DEPENDENCIES OF THE UNITED STATES**.—In the administrative system of the United States a territory signifies a region of the national domain which has not been admitted to the Union as a state. In 1923, Alaska (see ALASKA: 1884-1912) and Hawaii were the only territories under United States rule. The Philippines, Porto Rico, Guam, Samoan islands and Virgin islands, besides some small islands scattered in the Pacific, are classified as "insular dependencies."—See also U.S.A.: Historical geography; COLONIZATION: United States.

"Congress, notwithstanding its sincere desire to give to the principle of self-government the fullest possible application, has not hesitated to deny the grant of such privilege until it has been satisfied that the inhabitants of the territory in question are fully qualified for its enjoyment. . . . Congress has in the same way laid down the principle that all of the rights guaranteed to citizens of the States by the Constitution do not of their own force apply to dependent territory but only as they are expressly extended to it by legislative act. Neither has Congress felt itself under any compulsion to apply in all cases those political principles which lie at the very basis of the American constitutional system, but on the other hand has resolutely refused to do so until it has been satisfied that such action will be for the best interests of the people of both the dependent territory and the nation as a whole. Thus Congress has granted to the same person, the President of the United

States, full executive and judicial power to take such action as he may deem best for the government of territory pending definite provision by Congress. Even when Congress itself has created a system of government, the exercise of two or all three of the branches into which governmental powers are divided—legislative, executive and judicial—has been placed in the same hands, thus violating the principle of the separation of powers, which is considered one of the most characteristic features of our constitutional system. So, also, Congress has not hesitated to make provision for an appointive or partly appointive instead of an elective legislature."—W. F. Willoughby, *Territories and dependencies of the United States*, pp. 51-52.—"The Government of an organized territory has usually provided for three departments: 1. Executive; 2. Legislative; 3. Judicial. 1. The executive consists of a Governor and other officers appointed for four years by the President of the United States, confirmed by the Senate. The Governor performs the ordinary executive duties, to see that the laws of the United States and of the Territory are faithfully executed. He generally has a veto on legislative acts, which may be overridden by a two-thirds vote of each House. The other executive officers of the Territory, the Secretary, Treasurer, Auditor, and Superintendent of Public Instruction, are also appointed by the President and confirmed by the Senate, and, like the Governor, are subject to the President's removal. 2. The legislature is composed of two Houses, a Senate of twenty-four persons, and a House of sixty-two persons. Each House is elected by the voters of the Territory for a term of two years, and the legislature sits but once in that period. . . . The House work by the *Committee System*. . . . The legislative power of every Territory is as extensive as that of a State,—extending 'to all rightful subjects of legislation not inconsistent with the Constitution and laws of the United States.' This includes, of course, the organizing act creating the Territory. . . . 3. The judiciary consists of three or more judges of a Supreme Court, appointed for four years by the President with the consent of the Senate, together with a United States District Attorney and a United States Marshal. . . . These officers administer both the Federal and local law."—J. A. Woodburn, *American republic and its government*, pp. 305-307.—See also IOWA: 1838-1848; U.S.A.: 1853-1854; 1862 (April-June); 1865-1872.

**TERROR**, ship commanded by Ross in Antarctic explorations, 1830-1842. See ANTARCTIC EXPLORATION: 1830-1845.

**TERROR**, Reign of.—As commonly used, this phrase describes the prevailing conditions in France during a period of the French Revolution which ended with the fall of Robespierre, July 27 (Ninth Thermidor), 1794. The beginning of the period so called is usually placed at the date of the coup d'état, May 31-June 2, 1793, which overthrew the Girondists and gave unrestrained power into the hands of the Terrorists of the Mountain. The Reign of Terror was not however fully organized as a deliberately merciless system, and made, according to the demand of the Paris commune, "the order of the day," until the following September. In another view, the Reign of Terror may be said to have begun with the creation of the revolutionary tribunal, March, 1793. See FRANCE: 1793 (February-April), to 1794-1795 (July-April).

**TERRY**, Alfred Howe (1827-1800), American general. Captured Fort Fisher in 1865; commanded an attack against the Indians, 1876. See

U. S. A.: 1864-1865 (December-January: North Carolina); 1866-1876.

**TERTULLIAN** (Quintus Septimius Florens Tertullianus) (c. 155-c. 222), church father. See LATIN LITERATURE: 2nd-4th centuries; CHRISTIANITY: 100-300: Church in Carthage.

**TESCHEN**, small district in the southeast corner of the former province of Austrian Silesia, has an area of 2,282 square kilometres. Its mineral wealth, especially its coke and gas coal and its position as a nodal point in the road and railway system of central Europe, give it an importance out of all proportion to its actual size. In the settlement of territorial questions growing out of the disintegration of the Austro-Hungarian empire the first problem dealt with by the Peace Conference of Paris was that of Teschen, partly occupied by Czech and partly by Polish troops. An Inter-Allied mission was authorized for Teschen January 30, 1919, but all attempts on the part of the Peace conference and Inter-Allied commission to bring about an adjustment either by plebiscite or by arbitration failed. Finally on the 28th of July, 1920, the Supreme Council sent to the delegates of the four Allied Powers in the Ambassadors' conference, instructions dividing the duchy of Teschen between the two republics. The Ambassadors' conference, consisting of the representatives of the four Powers and of the United States of America, drew up a declaration delimiting the frontiers of Teschen, . . . which was signed by Great Britain, France, Italy and Japan, while Poland and Czecho-Slovakia signed their acceptance of the award on July 28, 1920. The agreement was ratified by the Czecho-Slovak Chamber on January 28, 1921. The line of division assigns to Czecho-Slovakia the whole of the Karvin mining area and the Oderberg-Jablunka railway, which passes through a modern suburb of Teschen on the western bank of the river. Poland, on the other hand, obtains the ancient town of Teschen, which since 1848 has been the centre of Polish literary and political activities in the duchy. She also acquires the valuable agricultural region to the east of the Olsa, containing the German enclave of Bielitz with its textile factories which are connected economically with those in the German town of Biala in Galicia.—Based on *History of the peace conference of Paris* (H. W. V. Temperley, ed.), v, 4, pp. 132, 350-363.

**TETHMOSIS**. See THOTHMES.

**TETON-DAKOTA**, North American Indian tribe. See INDIANS, AMERICAN: Cultural areas in North America; Plains area; SIOUAN FAMILY.

**TETRARCH**.—As originally used, this official title, from the Greek, signified the governor of one-fourth part of a country or province. Later, the Romans applied it to many tributary princes, in Syria and elsewhere, to whom they wished to give

a rank inferior to that of the tributary kings.

**TETRICUS, C. Pius Esvuvius** (fl. 267-274), king of Gaul, 267-270. Pretender to the Roman throne, defeated at Chalons, 271. See CHALONS, BATTLE OF.

**TETZEL, Johann** (c. 1460-1519), German Dominican preacher. Attacked by Luther for his sale of indulgences. See GERMANY: 1517-1523; PAPACY: 1517: Tetzel, etc.

**TEUCHTERI**, wandering German tribe. See GERMANY: 3rd century.

**TEUKRIANS**.—"The elegiac poet Kallinus, in the middle of the seventh century B. C., was the first who mentioned the Teukrians; he treated them as immigrants from Krête, though other authors represented them as indigenous, or as having come from Attica. However the fact may stand as to their origin, we may gather that, in the time of Kallinus, they were still the great occupants of the Troad [northwestern Asia Minor]. Gradually the south and west coasts, as well as the interior of this region, became penetrated by successive colonies of Æolic Greeks. . . . The name Teukrians gradually vanished out of present use and came to belong only to the legends of the past."—G. Grote, *History of Greece*, pt. 2, ch. 14.

**TEUTECAS**, early Indian tribe of Mexico. See ZAPOTECAS.

**TEUTOBERG FOREST, Battle of** (9 A. D.). See GERMANY: B. C. 8-A. D. 11; ROME: Empire: B. C. 8-A. D. 11.

**TEUTONES, TEUTONIC**.—The Teutones were a tribe of Germans living at the mouth of the Elbe. They joined the Cimbri and moved southward into Gaul in the last part of the second century B. C. They were annihilated by Marius at Aquæ Sextiæ in 102 B. C. (See BARBARIAN INVASIONS: B. C. 113.) "In the way of evidence of there being Teutones amongst the Germans, over and above the associate mention of their names with that of the Cimbri [see CIMBRI], there is but little. They are not so mentioned either by Tacitus or Strabo. . . . Arguments have been taken from . . . the supposed connection of the present word 'Deut-sch'='German,' with the classical word 'Teut-ones' . . . It is clear that the present word 'Deut-sch' proves nothing respecting the Teutones. Perhaps, however, as early as the time of Martial the word 'Teutonicus' was used in a general sense, denoting the Germans in general. Certain it is that, before his time, it meant the particular people conquered by Marius, irrespective of origin or locality."—R. G. Latham, *Germany of Tacitus*, appendix 3.—The name Teutonic is applied particularly to a division of European people composed of almost the whole of the population of Germany, the Scandinavian countries, the Netherlands, Great Britain (see ENGLAND: End of the 6th century) and Switzerland. It is also represented by large numbers in other parts of the world.—See also ARYANS, OR ARYAS: Meaning of term; EUROPE: Introduction to historic period: Distribution of races; Migrations.

**TEUTONIC COURTS**. See COURTS: Early Teutonic.

**TEUTONIC KNIGHTS OF THE HOSPITAL: Founding of the order**.—"It is not possible to find the exact date of the foundation of the Teutonic Order, but it was probably about 1190 that it received its full organization as one of the recognized Religious Military Orders. Its actual commencement, like that of the other Orders, was obscure and humble. About 1128 or 1129, a wealthy German, who had taken part in the siege and capture of Jerusalem, settled there

with his wife, intending to spend the remainder of his life in the practice of religion and in visiting the holy places. His attention and interest were soon excited by the misfortunes of his poorer countrymen, who came in great numbers as pilgrims to Jerusalem. Many fell sick, and endured great miseries and hardships. Moved with compassion, he received some of the more distressing cases into his own house. But he soon found that the work grew beyond this, and he built a hospital, with a chapel dedicated to the Blessed Virgin. In this institution he passed the whole of his time, nursing the sick pilgrims; and to their maintenance he devoted the whole of his means." One by one, others of his countrymen joined the pious German in his benevolent work, and "banded themselves together after the pattern of the Order of St. John of Jerusalem, and united the care of the sick and poor with the profession of arms in their defence, under the title of Hospitaliers of the Blessed Virgin. This little band put themselves under the direction of the Grand Prior of the Hospitaliers of St. John of Jerusalem, although they did not actually join this Order, whose operations they so closely imitated. . . . It was, however, during the siege of Acre [1180-1191] that the Teutonic Order received its final and complete organization as one of the great Military Religious Orders of Europe." At Acre, the Hospitaliers of the Blessed Virgin, then driven from Jerusalem by Saladin's conquest, joined certain citizens of Bremen and Lubeck in providing a field-hospital for the wounded and sick, and in their new sphere of labor they acquired the designation of the Teutonic Knights of the Hospital of the Blessed Virgin at Jerusalem. (See JERUSALEM: 1021.) "It is said that the Order owed its constitution to Frederick Duke of Suabia; but there is much obscurity, and little authentic record to determine this or to furnish particulars of the transaction. The Order seems, however, to have been confirmed by Pope Celestine III."—F. C. Woodhouse, *Military religious orders*, pt. 3, ch. 1.—The order was composed of knights, priests and servants, and the insignia was a white mantle and a black cross.

13th century.—Conquest of Prussia. See PRUSSIA: 13th century; LIVONIA: 12th-13th centuries.

1386-1466.—Subjection to Poland.—Secularization of the order.—Surrender of its territories. See POLAND: 1333-1572.

1455.—Sale of New March to Brandenburg. See BRANDENBURG: 1417-1640.

1803.—Electoral vote retained after Lunéville Treaty. See GERMANY: 1801-1803.

1809.—Suppression by Napoleon. See GERMANY: 1809 (July-September).

TEWFIK PASHA (1852-1892), khedive of Egypt, 1870-1892. During his reign Egyptian finances were controlled by the French and English, 1870-1882; the rebellion of the Nationalists under Arabi Pasha occurred in 1882, which led to the establishment of an English protectorate over the country; the revolt of the Mahdists, 1884-1885, led to the loss of the Nile and Upper Sudan regions. See EGYPT: 1875-1882; 1882-1883.

TEWKESBURY, Battle of (1471), final battle of the "Wars of the Roses," in which Edward IV of England overthrew the last Lancastrian army, collected by Queen Margaret of Anjou and her adherents fought May 4, 1471. Three weeks previously, at Barnet, he had defeated and slain the earl of Warwick. At Tewkesbury, Queen Margaret was taken prisoner, her young son disappeared, how or when is uncertain, and her husband, the deposed

King Henry VI, died mysteriously a few days afterwards in his prison in the tower. It was the end of the Lancastrian struggle. See ENGLAND: 1455-1471.

TEXAS, south central state of the United States, the largest in the union, popularly called the "Lone Star State." It is bounded on the north by Arkansas, Oklahoma, and New Mexico; on the east by Louisiana and Arkansas, and, in the so-called Panhandle region, by Oklahoma; on the south by the Republic of Mexico and the Gulf of Mexico; and on the west by New Mexico and the Republic of Mexico. The area of Texas is 262,398 square miles. The population numbered 4,663,228 in 1920 and was estimated at 4,860,658 in July, 1922.

Archæological remains.—"In Ochiltree county, Texas, on the south bank of Wolf creek, is a group of stone ruins which has . . . caused much speculation. . . . An expedition consisting of twelve members . . . [was] equipped and sent out by the scientific department . . . [of Canadian (Texas) Academy] during March of 1907 for the purpose of excavating among the ruins. . . . The pottery and flints found here are the culture of . . . [the Plains Indian] tribes and can be found all over the plains region northward and eastward from this section. . . . But the remains of recent times are not to be confounded with those of the 'buried city' which certainly antedated these by many years and form a distinct subject for ethnological research. . . . Certain peculiarities . . . indicate the work of a tribe more advanced in civilization than were the majority of the Plains Indians."—T. L. Everly, *Buried city of the Panhandle (Archæological Bulletin, Jan.-Mar., 1912, pp. 1-2, 4)*.—In March, 1920, "arrangements were made for the financing of a large expedition. The survey located itself on the ranch owned by Messrs. Sam and Oscar Handley, Wolf creek, Ochiltree county. . . . Something like three hundred specimens were secured. . . . About twenty-five miles southwest, on the main Canadian, is a similar group . . . now named King's ruins. Farther up the river at Plemons are Cotton Wood and Tarbox creeks. On both of these are more buildings or foundations than occur at either King's or Handley's. . . . Still farther up the river . . . are other groups. . . . Proceeding to the Landerger ranch, forty miles north of Amarillo is yet another group. . . . The expedition of 1920 did not extend operations beyond the Landerger ranch. . . . As a result of the . . . expedition . . . nearly one hundred sites or places where aboriginal work was in evidence have been mapped. . . . The survey of 1920 has opened a new field in American archæology. . . . There is nothing found indicating Mexican origin or Pueblo influence. On the contrary, so far as the writer can observe, we have a tribe originally living in the buffalo country and of Plains Culture status which changed as it spread westward up the Canadian. . . . As they moved farther away from the buffalo country they continued to change and develop until they established themselves in permanent villages—were no longer nomads—and finally became the Pueblo-Cliff Dweller people."—W. K. Moorehead, *Recent explorations in northwestern Texas (American Anthropologist, Jan.-Mar., 1921)*.

Resources and industries.—Within the domain of this great "empire" cotton, corn, wheat, oats, and rice, sugar-cane and tobacco, vegetables and fruits are successfully grown. Texas produces more cotton than any other state in the Union. Other agricultural products are hay, prairie grasses, millet, alfalfa, broom corn, tobacco, and peanuts. Stock-

raising is the chief industry in the western half of the state. In the year 1920, of the 2,950,488 acres of land of the arid region of Texas, 585,120 acres had been irrigated and were under cultivation. The mineral resources are coal, lignite, oil (petroleum), asphaltum (mineral pitch), natural gas, iron ores, quicksilver, mercury, silver, copper and lead, salt, sulphur, gypsum, lime and cement rocks. The manufacturing industries of the state include shops for the construction of cars and railroad appliances wood-working mills, flour and rice mills, machine shops and foundries. According to the reports of the United States Geological Survey for 1922, Texas ranked third among the states in the production of petroleum, the total output for the year being 116,670,000 barrels.—See also U.S.A.: Economic map.

**Aboriginal inhabitants and name.**—Amongst the small tribes found early in the nineteenth century existing west of the Mississippi on Red river and south of it, and believed to be natives of that region, were the Caddoes, "the Nandakoos, the Inies or Tachies, who have given their name to the province of Texas, and the Nabadaches . . . [who] speak dialects of the Caddo language. [Also, the Natchitoches, the Yatasees, the Adaise, the Appelousas, etc.]"—A. Gallatin, *Synopsis of the Indian tribes (Archæologia Americana, v. 2, introduction, sect. 3)*.—See also APACHE INDIANS; COAHUILTECAN FAMILY; KARANKAWAN FAMILY; TONKAWAN FAMILY.

ALSO IN: *President's message, Feb. 19, 1806, with accompanying documents.*

**1528-1684.—Early Spanish explorations.**—"The success of Cortes [in Mexico, 1519-1521] aroused the envy and jealousy of many influential Spanish leaders, who wished to have the continuation of his enterprise committed to themselves . . . [and the following experience was one of the results]: There arrived in Mexico in the year 1536 three white men and a negro who told one of the most extraordinary tales of shipwreck, suffering, captivity, and ultimate escape that ever fell from mortal lips. The most prominent man of the party, Cabeza de Vaca, afterwards wrote a detailed account of his experiences. The four were survivors of the Narvaez expedition, which had been sent out from Spain to subdue and govern Florida, and the remnant of which had suffered shipwreck on the western shore of the Gulf in the year 1528. After an awful experience of about seven years in slavery among the Indians, they had run away and finally reached the Christian settlements in Mexico. They were apparently the first Europeans to tread the soil of Texas, and they brought the earliest information as to the inhabitants and the character of the yet unchristened land. . . . In 1540 Coronado led forth from his province a strong and well-equipped force into the northern wilds. With his two years of wanderings and conquests and the disappointment of both himself and Mendoza over the unsubstantial results of the expedition we have nothing here to do. The one fact to be noted in this connection is that his route must have carried him across the northern part of what is now Texas. Subsequently the country was penetrated by explorers at various points while it was yet unsettled and nameless. . . . An *entrada* of 1650, led by Captains Hernan Martin and Diego del Castillo, is said to have penetrated to the Tejas tribe of Indians; and in another in 1684 Padre Nicolas Lopez and Captain Juan Domingo de Mendoza conducted a party of missionaries and soldiers from El Paso down the Rio Grande to the mouth of the Conchos

and thence into the interior across the Pecos to a *rancheria* of Jumanas and Hediondas."—G. P. Garrison, *Texas*, pp. 14-16.

**1685-1687.**—La Salle's shipwrecked colony. See CANADA: 1660-1687.

**1690-1806.—First European settlement.—Failure of early missions.—Cession to Spain by France.—Questions raised by Louisiana Purchase.**—"In his search for the Mississippi, La Salle had wandered over much of East and Central Texas. He had also made the first real European settlement on . . . [the] State soil. For these reasons France claimed Texas. . . . The Spaniards learned from the sailors that the French were on their way to plant a colony on the Gulf shore. Four different times Spanish vessels were sent overland, but it was not until 1689 that Captain De Leon . . . and his men found the ruins of Fort St. Louis [which La Salle had built on the Lavaca river]. . . . On De Leon's return, the Viceroy of Mexico inquired closely into the condition of affairs. From the reports of De Leon and Father Massanet . . . he decided to found a mission in Texas. In 1690 at the request of the Indians, the mission of San Francisco de los Tejas . . . was established in the land of the Tejas, . . . [but it] was not successful. . . . In 1693, the priests, at the command of the Spanish government, abandoned the missions. . . . For some twenty years after this neither Spain nor France took steps toward colonizing Texas. . . . In 1712 the King of France gave the sole right of Louisiana trade to Antoine Crozat, one of the keenest business men of the day. Crozat saw a fortune was to be made by opening trade with Mexico through Texas and began to make his plans to that purpose. . . . Governor Cadillac [of Louisiana] . . . sent a ship to Vera Cruz [1713] to ask if trade might not be opened between Louisiana and Mexico. The Viceroy refused, saying Spain was unwilling to permit any country to trade with her colonies. [See LOUISIANA: 1698-1712.] . . . In 1713 the [French] Governor called upon Saint-Denis, . . . a bold, dashing, young trader and explorer, to lead an expedition into Texas . . . [but the Spanish] captain . . . held them [at the presidio of the Rio Grande] . . . until he could obtain orders from the Viceroy. . . . Finally a guard was sent to escort Saint-Denis to the City of Mexico; here he was asked to write out the object of his expedition. . . . His story was enough to arouse the Spaniards. . . . [The Viceroy decided that] the French must be kept out; to do this, the Spaniards must build missions and establish permanent settlements in East Texas. . . . With Captain Diego Ram6n in command an expedition started northward [in 1716] to carry out these plans. The Mission San Francisco was reestablished and five other missions were founded. . . . France . . . ceded Louisiana to Spain in 1762. . . . In 1800 Spain secretly returned Louisiana to France. Napoleon . . . sold Louisiana, in 1803, to the United States. [See LOUISIANA: 1798-1803.] Spain objected to this; and when the Americans claimed all the land east of the Rio Grande as a part of Louisiana, she grew indignant. . . . for Spain not only claimed Texas, but even wanted to cross the Sabine and take a part of Louisiana. At last the matter was peacefully arranged (October, 1806) by making the land between the Sabine and the Arroyo Hondo . . . neutral till the boundary question should be settled. . . . This contract, about which a certain amount of mystery has always hung, was entered into suddenly by Generals Wilkinson and Herrera. It was an agreement between men and not between nations."

1799-1821.—Spanish rule.—Nolan's expedition.—Invasion by Gutierrez and Magee.—Republic of Texas established by Long.—“In the beginning of the nineteenth century when Spanish laws had become almost unbearable, the fame of Texas . . . had spread further and further to the east. French traders . . . had told the story and aroused the interest not only of the French and the Creoles but also of the Americans. In the year 1800 a number of American adventurers, under the leadership of Philip Nolan, came to Texas as far as Waco. They were rounding up and catching wild mustangs and, whilst engaged in this work, were surprised by a company of Spanish soldiers. Eleven of their number were taken as prisoners and brought to San Antonio. . . . As a consequence of this incident the Spanish government placed a large number of soldiers in the San Antonio garrison and enacted still more stringent laws against the influx of foreigners and trading with foreign countries. . . . As a result of . . . [these laws] a revolutionary party was born in Mexico, a branch of which was organized in San Antonio. . . . In San Antonio the revolutionary party . . . was a secret organization . . . [and] at that time [the city] was the gathering place of numerous, leading Spanish generals and spies. . . . Trouble was brewing between the United States and Spain on account of the Louisiana Purchase Act. . . . The first revolution broke out in Mexico under the leadership of Father Hidalgo, a religious. This attempt for liberty met with failure: the Republicans were defeated by the Royalists, Father Hidalgo was taken prisoner and promptly executed. Two other patriots escaped, one of them to San Antonio where he, too, was captured [and] beheaded. . . . Bernardo Gutierrez, another one of Father Hidalgo's assistants, escaped to ‘no man's land’—a strip of territory in eastern Texas which, by an agreement between the United States and Spain, was not to be transgressed by soldiers of either nationality. . . . ‘No Man's Land,’ in the course of time, had become the home of a daring band of lawless adventurers, who had congregated here for the purpose of holding up and robbing the trading expeditions. These renegades of all nations had finally become so bold that the Secretary of War of the United States was forced to send an expedition in order to break up these bands. . . . Lieutenant Augustus W. Magee was put in command of a sufficient force and he succeeded in routing the outlaws. He became acquainted with Bernardo Gutierrez, the fugitive Republican. Gutierrez . . . gave to Lieutenant Magee such a glowing account of the struggle for independence going on in Texas and Mexico, as to finally inflame the patriotism and ambition of Magee and his band. As soon as Magee had carried out his orders, he resigned his position in the United States army and proceeded to organize an army of his own which was called ‘The Republican Army of the North.’ The army, to all appearances, was under the command of Gutierrez, but Magee was the commander in fact.”—R. Sturmberg, *History of San Antonio and of the early days in Texas*, pp. 52-54.—“In 1812 Bernardo Gutierrez and Augustus Magee . . . invaded Texas with a considerable force of American adventurers, Spaniards and Indians. They took Nacogdoches [and La Bahia] in August, and Goliad in October. Here Magee died. In the spring of 1813 [Gutierrez] . . . advanced in

San Antonio and after defeating the Spanish governor in a terrible battle [at Rosillo], entered the town on April 1. Gutierrez's brutality to the prisoners alienated many of the Americans, who now abandoned him. The others were decoyed into an ambush by General Arredondo near the Medina River in June and badly defeated. . . . After the signature of the Florida treaty of 1819 by which the United States relinquished its claim to Texas, Dr. James Long of Natchez, Mississippi, led an expedition which for a brief time occupied Nacogdoches and proclaimed the independence of Texas. . . . At the time of Long's invasion the royalist power had almost succeeded in stamping out the revolution in Mexico, and Texas was well defended. Troops advanced from San Antonio, and catching Long's forces in scattered detachments easily defeated and expelled them. Long took advantage of the renewed revolutionary wave in 1820 to return to Texas, but was no more successful than before. In fact, he was taken prisoner and sent to Mexico City, and there a short time later was killed by a Mexican soldier. In a sense Nolan, Magee and Long, with the men whom they led, were but the advance couriers of American expansion. . . . That the adventurous pioneers entered Texas in organized bands rather than as peaceful trappers and settlers was probably due to the revolutionary condition of New Spain from 1810 to 1821.”—F. W. Johnson, *History of Texas and Texans*, v. 1, p. 5.

1819-1835.—Relinquishment of American claims to Spain.—Condition as a Mexican province.—Encouragement of immigration from the United States and Europe.—Austin's colony.—“By the treaty of 1819 with Spain for the cession of the Floridas, the United States relinquished all claim to the western portion of Louisiana lying south of Red River and west of the Sabine. [See FLORIDA: 1810-1821; LOUISIANA: 1708-1803.] After the final ratification of that treaty by both governments, and the cession and delivery of the Floridas to the United States, the Spaniards took formal possession of the country west of the Sabine, and erected it into the ‘Province of Texas,’ under the authority and jurisdiction of the Viceroy of Mexico. From that time the Sabine River was the western boundary of the United States, near the Gulf of Mexico. The province of Texas at this time was occupied by the native tribes of savages, interrupted only by a few Spanish settlements. . . . The whole population, including some settlements in the vicinity of the sea-coast, scarcely exceeded 5,000 souls, of whom the greater portion were the remains of old colonies formed during the Spanish dominion over the province of Louisiana. Each principal settlement, from San Antonio de Bexar to Nacogdoches, was placed under the government of a military commandant, who exercised civil and military authority within the limits of his presidio. . . . Such was the province of Texas under the Spanish monarchy until the year 1821, when Mexico became an independent nation. . . . On the 24th of October, 1824, the Mexican States adopted a Republican form of government, embracing ‘a confederation of independent states’ known and designated as the ‘United States of Mexico.’ In this confederation the departments of Texas and Coahuila were admitted as one state, and were jointly represented in the Congress of Mexico. Soon after the establishment of independence in the United States of Mexico, the

colonization and settlement of Texas became a favorite subject of national policy with the new government. To attract population for the settlement of the country, colonization laws were enacted, to encourage enterprising individuals from foreign countries to establish large colonies of emigrants within the limits of Texas. Under the provisions of these laws enterprise was awakened in the United States and in some portions of Europe. Founders of colonies, or 'Empresarios,' were induced to enter into engagements for the occupancy and settlement of large tracts of country, designated in their respective 'grants'; the extent of the grant being proportionate to the number of colonists to be introduced. The first grant was made to Moses Austin, a native of Durham, Connecticut, in 1821, and under its provisions he was required by the Mexican authorities to introduce 300 families from the United States. This enterprising man, having departed from Bexar for the introduction of his colony, died on his journey through the wilderness, leaving his plans of colonization to be prosecuted by his son, Colonel Stephen F. Austin. . . . Having succeeded to his father's enterprise, he subsequently acquired more influence with the Mexican government than any other 'empresario' in the province. . . . But a few years had elapsed when nearly the whole area of the department of Texas had been parceled out into extensive grants for settlement by the different 'empresarios' with their colonies. . . . Emigration from the United States, as well as from Great Britain and Ireland, continued to augment the population in all the departments until the year 1834, when political troubles began to convulse the Mexican Republic." In 1835 "the whole Anglo-American population of Texas was about 20,000; of this number General Austin's colony comprised no less than 13,000, or more than half the entire population. These were chiefly emigrants from the United States. . . . The Mexicans within the limits of Texas at this period scarcely exceeded 3,000, most of whom resided in the vicinity of Bexar."—J. W. Monette, *Discovery and settlement of the Mississippi valley*, v. 2, pp. 569-572.

ALSO IN: H. Yoakum, *History of Texas*, v. 1, ch. 15-21.—E. C. Barker, *Government of Austin's colony*.

1824-1830.—Introduction of slavery.—Schemes of the slave power in the United States.—The American settlers in Texas "brought their slaves with them, and continued to do so notwithstanding a decree of the Mexican Congress, issued in July, 1824, which forbade the importation into Mexican territory of slaves from foreign countries, and notwithstanding the Constitution adopted the same year, which declared free all children thereafter born of slaves. About that time the slave holders in the United States began to see in Texas an object of peculiar interest to them. The Missouri Compromise, admitting Missouri as a Slave State and opening to slavery all that part of the Louisiana purchase south of 36° 30', seemed at first to give a great advantage to the slave power. But gradually it became apparent that the territory thus opened to slavery was, after all, too limited for the formation of many new Slave States, while the area for the building up of Free States was much larger. More territory for slavery was therefore needed to maintain the balance of power between the two sections. At the same time the Mexican government, growing alarmed at the unruly spirit of the American colony in Texas, attached Texas to Coahuila, the two to form one state. The constitution of Coahuila forbade the

importation of slaves; and in 1829 the Republic of Mexico, by the decree of September 15, emancipated all the slaves within its boundaries. Then the American Slave States found themselves flanked in the southwest by a power not only not in sympathy with slavery, but threatening to become dangerous to its safety. The maintenance of slavery in Texas, and eventually the acquisition of that country, were thenceforth looked upon by the slaveholding interest in this Republic as matters of very great importance, and the annexation project was pushed forward systematically. First the American settlers in Texas refused to obey the Mexican decree of emancipation, and, in order to avoid an insurrection, the Mexican authorities permitted it to be understood that the decree did not embrace Texas. Thus one point was gained. Then the Southern press vigorously agitated the necessity of enlarging the area of slavery, while an interest in the North was created by organizing three land companies in New York, which used pretended Mexican land grants in Texas as the basis of issues of stock, promising to make people rich overnight, and thus drawing Texas within the circle of American business speculation. In 1830 President Jackson made another attempt to purchase Texas [Henry Clay, in 1827, when Secretary of State under John Quincy Adams, had already made a proposal to the Mexican government for the purchase], offering five millions, but without success. The Mexican government, scenting the coming danger, prohibited the immigration of Americans into Texas. This, however, had no effect."—C. Schurz, *Life of Henry Clay*, v. 2, ch. 17.—"In the year 1830 America was divided into two well-marked and antagonistic factions—the free, industrial, and rapidly developing North, the slaveholding, agricultural, and stagnant South. . . . Texas was already largely American and Southern in personnel. Slavery was one of its established institutions. Its territory when divided properly would be sufficient to return no less than eighteen additional Democratic Senators to Washington. . . . [The Washington delegate] Poinsett was succeeded at the Mexican legation by Butler—a close friend of Andrew Jackson, and a *slave-holder*. Shortly after his arrival in Mexico City in 1829 Butler wrote Jackson the following illuminating note. 'I have not lost sight for one moment of the Texas question in which you have such a great interest, not only because I know your wishes about it, but because I know the great advantage to our country to obtain it. But the public opinion of this country is so strongly opposed to the acquisition of Texas by the United States that I believe the Government will never be willing to entertain a proposition in this respect, and much less the cession of Texas. Any time that the press try to arouse the fire of the opposition against President Guerrero, articles appear in the papers charging him with being willing to sell Texas to us, and that for this one crime alone he deserves to be thrown out of office.' (*Revue des Deux Mondes*, 15 July, 1844, p. 239.) When Jackson recognized that the Mexican Liberal government was not to be brought into the cession of Texas he changed his tactics: and by making known the failure of his overtures turned the attention of the South toward more drastic measures. . . . To this end he dispatched to the scene of operation his friend, Sam Houston [of Tennessee. Houston had fought with General Jackson in the Indian wars and was a capable and daring leader.] The Journal de la Louisiane, in speaking of Houston's departure for Texas, announced: . . . 'He has gone to Texas to

start a revolution in favour of its independence with the purpose of annexing it to the United States. We may expect shortly to hear of his raising his flag."—L. G. De Lara and E. Pinchon, *Mexican people*, pp. 112-115.

Also in: N. W. Stephenson, *Texas and the Mexican War*, pp. 17-62.

1824-1835.—Causes of the war with Mexico.—Abolition of the federal system.—Unwillingness of the colonists to revolt.—Lawless methods of Mexican church party and military authorities.—Annexationist, Independent and Mexican parties.—"In considering the war with Texas it will be necessary to bear in mind several important basic facts: 1. The Church in Mexico wanted war. A war with some foreign country was at this time absolutely necessary to the ruling class in Mexico for the preservation of its powers. 2. The Southern States of the United States wanted war. A war with some foreign country was at this time beginning to be highly desirable for the ruling class in the Southern States, for the diversion of national attention from the conflicting issues of the North and South, and for the preservation of the planting interests in Congress. 3. The Southern States wanted Texas for political, not territorial, reasons. In view of the rapid development of the industrial North, the feudal South recognized that unless it could strengthen its numerical representation in the Senate by the acquisition of additional slave-holding territory, such as Texas, it would soon lose its economic and political dominance in the country. 4. The Texans were loyal to Mexico. The Texan colonists were heartily opposed to secession from Mexico, and not until the last moment, when harried to desperation by bands of hired American outlaws and bodies of Mexican regulars, did they take any hand in the matter themselves. 5. A tacit understanding existed between Andrew Jackson and Santa Ana. . . . Never at any time was the conflict viewed seriously by either of the ruling classes, American or Mexican, who invoked it: never at any time did Lucas Alaman, the Mexican Minister of Foreign Relations, and Santa Ana, the Mexican President and commander-in-chief of the Army . . . act in conflict with the desires of Andrew Jackson and his Cabinet in Washington. [See U. S. A.: 1808 (March-April).] 6. The interests of the Church in Mexico and of the Southern planters were identical. . . . 7. Religious fanaticism was used by both parties to fan the conflict. . . . When Bustamante seized the control of government from the hands of President Guerrero, he at once obeyed the dictates of the Church. . . . There was but one possible method of averting the coming conflict—to embroil the nation in a foreign war (and) it was to this well-worn expedient that the Clerical party, represented by Bustamante and Alaman, turned. . . . Bustamante, immediately after his accession to power, abolished the federal system in Texas, and established the central system, accompanied by brutal military rule. . . . Stephen Austin . . . wrote, in a letter addressed to General Mier y Teran: 'I have informed you many times, and I inform you again, that it is impossible to rule Texas by a military system. I am convinced that the more the army is increased in Texas the greater will become the danger to the country's peace and tranquillity. . . . From the year 1821 I have maintained order and enforced the law in my colony simply by means of civil courts without a single soldier, and without a dollar of expense to the nation. . . . Upon this subject of military despotism I have never hesitated to express my

opinion, for I consider it the source of all revolutions, and of the slavery and ruin of free peoples. I firmly believe that until the reduction of military authority and the abatement of military privilege is accomplished, no peace, stability, or progress can be expected in Mexico. This, and the establishment of religious liberty, are the two remedies most sorely needed, and the man who will bring them to pass will deserve the honest name of "Washington of Mexico." . . . The fact that more than half of the colonists were Protestant Americans, and that the Protestant faith was beginning to gain ground even among the Mexicans, furnished the Church with yet another weapon for provoking the required strife. . . . As matter of history the United States as a whole was profoundly ignorant of the wretched imbroglio. . . . President Bustamante had dispatched General Mier y Teran to Texas with instructions to suppress all trace of civil government. Teran executed his orders with zeal, and not only suppressed the civil courts and trial by jury established by the colonists, but even declared null and void all contracts and land concessions made by the federal government prior to April, 1830, thus . . . depriving the more recent colonists of the farms and homes which they had established. . . . Teran [also] permitted . . . Francisco Madero, who had accompanied him from Mexico, to set himself up as a distributor of land concessions under the supposed authority of the central government: and many of these land concessions included the cancelled concessions already homesteaded. In addition to this, on the 6th of April, 1830, the national Congress of Mexico passed a measure prohibiting the further colonization of Texas by American immigrants: and General Teran, in enforcing the law, interpreted it in such fashion as to deny the right of any man of Anglo-Saxon extraction to hold Texan land concessions, giving to this . . . interpretation a retroactive effect against the land concessions already recognized by the law. . . . From the moment General Teran set foot in Texas the country was given over to the lawless ruffianism of the Mexican military. . . . In the month of April, 1835, President Santa Ana was preparing to strike the final blow at the revolutionary movement of the Liberals under Gomez Farias, and it is a matter of the highest significance that at this time 'it was announced in the . . . government offices that in the year 1830 an expedition would be dispatched against the Texan colonists, not merely to enforce their obedience to the law, but to punish them severely with extermination or expulsion.' (Blas Filisola, *Guerra de Texas*, Vol. 2, p. 137, 138.) At . . . [this] time the Texan colonists were not in revolt. . . . On the 31st of August, 1835 . . . a circular, couched in the following terms, was addressed to all governors and municipal authorities at the instigation of the Church: 'The colonists, established in Mexico have shown unequivocally to what extremes they are prepared to go in their perfidy, ingratitude, and treachery. Forgetting their duty to the Supreme Government and to the nation which had so generously given them a place in her bosom, with fertile lands for cultivation, and all the natural resources necessary for their bountiful living, they have revolted against this nation under the pretext of sustaining a system, a change in which has been desired by the majority of Mexicans; in this way hoping to hide their criminal ambitions to dismember the Republic' (*Collection de Leyes Decretos y Circulares. Dublin y Maza tomo que comprende los anos de 1835 à 1840.*) The effect of this circular distributed broadcast throughout

the country, coupled with the persistent agitation set up by the pulpit and press, was successful in arousing the . . . people of Mexico to the desired war fever, and in causing them to lay aside for the time all effort to remedy their own . . . wrongs. . . . The population of Texas as a whole at this time was divided into three parties: The Annexationist, the Independent, and the Mexican. The Annexationist party comprised only a weak and uninfluential group organized by the paid agents . . . maintained in Texas by Andrew Jackson, then the President of the United States. The Independent party, another comparatively weak and uninfluential minority, wished to erect Texas into a separate independent republic. They were strongly opposed to the policy of the annexationists, for they clearly discerned that annexation to the

claimed.—Battle of San Jacinto.—In 1835 the half-hearted conflict, in which the great majority of the colonists held aloof, began. "The three counts which in the later months of 1835 made up the Texan indictment of Mexico were: first, the destruction of the constitution of 1824; second, the use of military power to tyrannize a state; and third, duplicity of conduct. Upon this basis the Consultation drew up a *Declaration of causes for taking up arms against Mexico*. Though some phrases savored of independence, the heart of the manifesto was the statement that Texas would 'continue faithful to Mexico, so long as that nation is governed by the constitution and laws that were framed for the government of the political association.' The Consultation offered to combine with those Mexicans who stood by the constitution of

THE ALAMO

Franciscan mission at San Antonio, Texas, built about 1722

United States meant annexation to the already jeopardized slave-holding interest of the South. The Mexican party, on the contrary, which included in its ranks the great majority of the wealthier and better educated colonists, and of course the Mexican residents, upheld the policy of loyalty to Mexico at any price. It opposed annexation for the same reason that the Independent party opposed it, and it opposed independence on the . . . grounds that it would prove a very costly matter for so small a population as Texas then held to maintain a separate system of governmental machinery as well as the large standing army which her exposed position would render imperative."—L. G. De Lara and E. Pinchon, *Mexican people*, pp. 100-120.

ALSO IN: E. C. Barker, *Government of Austin's colony*.—S. F. Stephen, *Austin and the independence of Texas*.

1835-1836.—Spirit of manifesto to Mexico.—Armed conflicts.—Independence of Texas pro-

1824 and whose rights, like theirs, were 'threatened by encroachments of military despots.' A motion to secede was voted down by a large majority. But it was significant of the temper of the assembly that for president of the provisional government which was now set up, Henry Smith was elected by a vote of 31 as against 22 for Austin. The organization of an army was provided for, and Sam Houston was made its commander."—N. W. Stephenson, *Texas and the Mexican War*, pp. 64-65. —"General Santa Anna, who by a successful revolutionary stroke had put himself at the head of the Mexican government, attempted to reduce the unruly Americans to obedience. In 1835 armed conflicts took place, in which the Americans frequently had the advantage. The Texans declared their independence from Mexico on March 2, 1836. The declaration was signed by about 60 men, among whom there were only two of Mexican nationality. The constitution of the new republic confirmed the existence of slavery under its juris-

diction, and surrounded it with all possible guaranties. Meanwhile Santa Anna advanced at the head of a Mexican army to subdue the revolutionists. Atrocious butcheries marked the progress of his soldiery. On March 6 the American garrison [250 men] of the Alamo [a mission church at San Antonio de Bexar] was massacred, and on the 27th a large number [500] of American prisoners at Goliad met a like fate. These atrocities created a great excitement in the United States. But on April 21 the Texans under Houston, about 800 strong, inflicted a crushing defeat upon Santa Anna's army of 1,500 men, at San Jacinto, taking Santa Anna himself prisoner. The captive Mexican President concluded an armistice with the victorious Texans, promising the evacuation of the country, and to procure the recognition of its independence; but this the Mexican Congress refused to ratify. The government of the United States maintained, in appearance, a neutral position. President Jackson had indeed instructed General Gaines to march his troops into Texas, if he should see reason to apprehend Indian incursions. Gaines actually crossed the boundary line, and was recalled only after the Mexican Minister at Washington had taken his passports. The organization of reinforcements for Houston, however, had been suffered to proceed on American soil without interference."

ALSO IN: H. von Holst, *Constitutional and political history of the United States*, v. 2, ch. 7.—H. H. Bancroft, *History of the Pacific states*, v. 8, (Mexico, v. 5), ch. 7.—A. M. Williams, *Sam Houston and the War of Independence in Texas*.—E. C. Barker, *San Jacinto campaign*.

1836-1845.—Eight years of independence.—Annexation to the United States.—Question in Congress and the country.—Presidents of the period.—"Santa Anna, . . . constrained in his extremity to acknowledge the independence of Texas, . . . was liberated, and the new republic established in October, 1836, with a Constitution modeled on that of the United States, and with General Houston inaugurated as its first President. The United States forthwith acknowledged its independence [Mar. 2, 1837]. In less than a year application was made to the United States government to receive the new republic into the Union, and, though this was at the time declined, it was obvious that the question was destined to play a most important part in American civil policy. The North saw in the whole movement a predetermined attempt at the extension of slavery, and in the invasive emigration, the revolt, the proclamation of independence, the temporary organization of a republic, and the application to be admitted into the Union as a state, successive steps of a conspiracy which would, through the creation of half a dozen or more new states, give a preponderance to the slave power in the republic. Mr. Van Buren, who had declined the overtures for the annexation of Texas, was succeeded in the Presidency by General Harrison, who, dying almost immediately after his inauguration, was followed by the Vice President, Mr. Tyler, a Virginian, and a supporter of extreme Southern principles. The annexation project was now steadily pressed forward, but, owing to the difficult circumstances under which Mr. Tyler was placed, and dissensions arising in the party that had elected him, nothing decisive could be done until 1844, when Mr. Upshur, the Secretary of State, being accidentally killed by the bursting of a cannon, Mr. Calhoun succeeded him. A treaty of annexation was at once arranged, but, on being submitted to the Senate, was rejected.

Undiscouraged by this result, the South at once determined to make annexation the touchstone in the coming Presidential election. . . . Mr. Van Buren and Mr. Clay, the prominent candidates of the two opposing parties for the Presidency, were compelled to make known their views previously to the meeting of the nominating Conventions," and both discountenanced annexation. Van Buren was accordingly defeated in the Democratic Convention and James K. Polk received the nomination. Clay was nominated by the Whigs, and made an attempt, in the succeeding canvass, to change his ground on the Texas question; but "his attempt only served to make the matter worse, and cost him the support of the anti-slavery party, whose votes would have elected him." Polk was chosen President; but the annexation of Texas did not wait for his inauguration. "On December 10th a joint resolution was introduced into the House of Representatives providing for annexation. Attempts were made to secure

SAM HOUSTON

half the country for free labor, the other half being resigned to slavery. . . . This proposition was, however, defeated. . . . As the measure eventually stood, it made suitable provision for the mode in which the 'State of Texas' should be admitted into the Union, the disposal of its munitions of war, public property, unappropriated lands, debts. On the main point it was arranged that new states, not exceeding four in number, in addition to Texas proper, should subsequently be made out of its territory, those lying south of latitude 36° 30' to be admitted with or without slavery, as their people might desire; in those north of that line, slavery to be prohibited. Mr. Tyler, on the last day of his term of office, unwilling to leave to his successor, Mr. Polk, the honor of completing this great Southern measure, dispatched a swift messenger to Texas; her assent was duly secured, and the Mexican province became a state of the Union. But the circumstances and conditions under which this had been done left a profound dissatisfaction in the North. The portion of territory ceded to freedom did not belong to Texas; her boundary did not approach within 200 miles of the Missouri Compromise line. The South

had therefore secured the whole of the new acquisition; she had seized the substance, and had deluded the North with a shadow."—J. W. Draper, *History of the American Civil War*, v. 1, ch. 22.—During the period of the republic the presidency of Sam Houston, 1836-1838, was followed by that of Mirabeau B. Lamar, 1838-1841. Houston was again president, 1841-1844 and was followed by Anson Jones, 1844-1846.—See also U. S. A.: 1841-1844.

ALSO IN: T. H. Benton, *Thirty years' view*, v. 2, ch. 135, 138-142, 148.—H. H. Bancroft, *History of the Pacific states*, v. 8, ch. 13.—H. Greeley, *History of the struggle for slavery extension*, ch. 10.—J. H. Smith, *Annexation of Texas*.

1839-1850.—Location of capital.—"Houston . . . [was] the capital until 1839, when Congress decided to locate a city that should bear the name of Austin. . . . The site of the present city was chosen and the capital was located there. . . . In 1842 President Houston, thinking Austin in danger from an attack by the Mexicans, removed the headquarters of the department to Houston. . . . When the United States proposed terms for annexation . . . President Jones convened the convention at Austin, July 4, 1845. . . . The State Convention provided that in 1850 the people should select a capital for the next twenty years. Austin received the majority of votes."—A. J. Pennybacker, *History of Texas*, pp. 231, 346.—Austin has remained the seat of government.

1846-1848.—Mexican War. See MEXICO: 1846 to 1848.

1846-1849.—First governors.—J. Pinckney Henderson, a Democrat, was the first governor of the new state, 1846-1847. He was followed by George T. Wood, 1847-1849.

1848.—Territory extorted from Mexico in the Treaty of Guadalupe-Hidalgo. See MEXICO: 1848.

1850 (June).—Represented at Nashville convention. See U. S. A.: 1850 (June).

1850-1861.—Advantages to Texas from joining the United States.—Prosperity.—Immigration.—"For the relinquishment of independence Texas was not without compensation. Her revenue from customs had passed to the United States, but along with it had gone the burden of the diplomatic and military establishments incident to nationality. The payment to Texas provided for by the Compromise of 1850 was partly in the nature of indemnity for the loss incurred by the transfer of the duties; and this . . . was the main element in bringing order to the finances of the State. The expenditures of the Republic for military purposes had been quite small for some years previous to annexation, but how long they could have remained so if the independent status had continued is exceedingly doubtful. The greatest gain, however, lay in getting rid of the question of foreign relations. Delicate and serious as this question was for the great powers in their dealings with the Republic, it was infinitely more so for the Republic in dealing with them. . . . [After the annexation to the United States] prosperity . . . visited the State. Its abundant natural resources began to make themselves apparent. Immigration flowed in, and wealth began to increase with leaps and bounds. . . . In the great stream of immigration that flowed into Texas during the fifteen years of statehood previous to the Civil War, as well as during the ten years of the Republic, there came a few whose coming was due to the fact that they had committed some offense against the law. It is scarcely worth while to say that there were not

enough of this class to determine the character of the population in any given locality."—G. P. Garrison, *Texas*, pp. 260-271.

1850-1861.—Troubles with Indians and Mexicans.—Brazos and Clear Fork Indian agencies.—Removal of Indians across Red river.—Negro uprising.—"Cart war."—Depredations of Juan Cortina.—Governors of the period.—There was more serious trouble for the state than undesirable immigration. "It was impossible for the United States to protect the State from invasion, Texas had an enemy that was practically within her gates, with whom it was much more difficult to deal. This was the Indian. The tribes inside the limits of the State on the north were friendly, but those of the Indian Territory made frequent raids into the country south of Red River, and were very troublesome. . . . The most annoying Indians . . . were the Comanches, along the western frontier . . . [where] the line of exposure was several hundred miles in length. The circumstances invited the application of the system of colonizing the Indian on reservations. The State granted the necessary lands, and in 1855 two colonies were established on reservations, situated the one on the upper course of the Brazos River [1851], and the other on one of its tributaries known as Clear Fork. At the Brazos agency were gathered about eight hundred Indians of various tribes who had long been in contact with the whites, and whose original locations were now within the settled districts, while on the Clear Fork, considerably further west, were placed about three hundred Comanches. The colonies appear, from the reports of the agents, to have prospered beyond reasonable anticipation. The Indians on the reservations, who in 1858 amounted in all to nearly fifteen hundred, were said to be rapidly acquiring the arts of civilized life. A number of them were enlisted in the ranger service and had made themselves very useful. It seemed for a time that the amount expended by the United States government on these Indians, which reached about three hundred and fifty thousand dollars in four years, would be well repaid in tangible good results. But unfortunately there were on the reservations a few who could not give up the habit of horse-stealing and plundering, and who broke away from time to time and joined with roving Indians. . . . This greatly exasperated the settlers in the neighborhood, who had at best too little patience with the Indians, and they soon began to insist that none of them should leave the reservations at all. In December, 1858, a party from the Brazos reservation which was encamped beyond its limits on the river was surprised by a band of whites and nearly all killed or wounded. The other Indians were much angered by this event and declared their intention to be avenged. The whites made counter threats and organized and armed themselves in anticipation of an outbreak of hostilities. Finally in 1859 the situation became so serious that the Indians were moved across Red River into the Territory. From this time on, the depredations along the northern frontier became specially frequent and troublesome."—G. P. Garrison, *Texas*, pp. 260, 271-273.—"Affairs in Mexico were in such a troubled condition that scores of Mexican laborers sought refuge in Texas. Some of these married negro slaves. In 1856, in Colorado County, it was discovered that the negroes were on the point of rising against their masters; they had organized, and had collected a supply of arms. Their plan was to murder the whites, seize all the property they could carry with them, and then flee to Mexico. Two hundred of the negroes

were severely punished, a few of them being put to death. . . . It was believed that the instigators of the plot were Mexicans, hence a violent prejudice against all Mexican laborers sprang up throughout Colorado [county] and the adjoining counties, . . . and the Mexicans were ordered to leave. . . . At this time Mexican teamsters were doing most of the hauling from the seaports to San Antonio, for they worked more cheaply than Texan wagoners. In spite of public warnings, farmers and merchants continued to employ the labor they could get for the least money. The Texas teamsters and their friends then attacked the teams of the Mexicans, stole their goods, killed their animals, destroyed their wagons . . . [hence called the "Cart War"] and, in some cases, murdered the drivers. Indignant at the cruelty inflicted upon his countrymen, the Mexican minister (October, 1857) complained to the United States authorities."—A. J. Pennybacker, *History of Texas*, pp. 232-233.—"Shortly after this a reign of terror was inaugurated on the lower Rio Grande, from Laredo to Brownsville, by the Mexican, Juan Cortina. He began his career by combining with his business of stockman that of cattle-stealer and bandit. In 1850, in order to increase his following, he began to represent himself as the avenger of the wrongs of the native Mexicans, and he had about him at one time five or six hundred of them. In September, 1859, he and his men took temporary possession of Brownsville and killed a peace officer and several other citizens who became involved in resistance to them. Within the next two months two successive expeditions were sent against him, but both retreated without accomplishing anything. In December, however, he was attacked by a combined force of United States regulars and Texas rangers amounting to about three hundred, and was defeated and driven into Tamaulipas."—G. P. Garrison, *Texas*, p. 275.—The governors of Texas during this period included P. H. Bell, 1840-1853; acting governor James W. Henderson, 1853; and H. R. Runnels, 1857-1859. Sam Houston, of military fame, the first president of the republic, was elected governor as an Independent and Unionist in 1859.

1850-1861.—Educational progress.—Conditions preceding Act of 1858.—Provisions of Act of 1858.—"Disorders were natural to a new and still unadjusted social organization including diverse and antagonistic elements. There were, however, other activities and tendencies prevailing in the life of the State that were full of promise. One of these appeared in the gradual development of a system of free public education. The provisions of the constitution of 1836 concerning education and the act of January, 1839, in accordance therewith . . . was followed up by another [act] in February, 1840, providing for a board of school commissioners with power to organize school districts, inspect schools, give certificates to teachers, etc. The educational provisions of the first constitution of the State, adopted in 1845 . . . [substituted] for the general and indefinite terms of . . . [the constitution of 1836] an explicit and positive mandate to the legislature to 'establish free schools throughout the State, and . . . furnish means for their support by taxation on property.' . . . [These provisions were followed by the Act of 1853, which] set aside as a permanent educational fund two million dollars of the five per cent. bonds received from the United States, and provided that the interest thereon should be distributed among the counties in proportion to the number of free white children between six and sixteen years of age. It required the division of the counties into school

districts, in each of which the people must provide a good and properly furnished school-building before they could obtain their share of the public money. This money was to be expended only in payment of the teachers, and the balance due, over and above the amount of the public fund, was to be paid by the patrons of the school, each contributing in proportion to the number of pupils he sent and the time they were in actual attendance. [By] the act of 1839, . . . fifty leagues of land [had been] appropriated for the purpose of establishing two colleges or universities . . . [but] the idea of having two . . . colleges or universities was abandoned for that of one, which was on its organization made coeducational. The act of February 11, 1858, was a more definite step towards realizing the plan of a state university. This provided for the creation of an endowment for an institution of higher learning by setting apart for the purpose one hundred thousand dollars of the United States bonds in the treasury, and every tenth of the alternate sections of land reserved by the State in the grants to railroads made in pursuance of the statute of January 30, 1854. The statute referred to granted sixteen sections of land for each mile of railroad to be built thereafter in the State, the land to be surveyed in solid blocks, and alternate sections to be reserved by the State. . . . The act of 1858 provided also for the organization of the university, but this was prevented by the approach and outbreak of the Civil War."—G. P. Garrison, *Texas*, pp. 275-277, 279.

1861 (February).—Secession from the Union. See U.S.A.: 1860 (November-December); 1861 (January-February).

1861 (February).—Twiggs' surrender of the Federal army, posts and stores. See U.S.A.: 1860-1861 (December-February).

1861-1865.—Governors of Civil War period.—Sam Houston was succeeded in the governorship, in 1861, by Francis R. Lubbock, after a short period during which Edward Clark was acting governor. Pendleton Murrah served as governor from 1863 to 1865, when the provisional government was set up.

1862.—Farragut's occupation of coast towns. See U.S.A.: 1862 (May-July: On the Mississippi).

1865.—Last battle of the Civil War.—The last battle of the Civil War in the state, was fought at Palmito, on the Rio Grande, May 13, 1865.

1865-1876.—Provisional government.—New constitution.—Reconstruction measures.—Freedmen's bureau.—Inadequate frontier protection.—Constitution of 1866.—Resumption of military control.—Carpet bag constitution.—Readmission to Union (1870).—Constitution of 1876.—"The final formal surrender of the Trans-Mississippi department, including Texas, was made on board a United States flagship, off Galveston bar, on the 2d of June, 1865. . . . On the 10th the Federal General Granger landed and took military possession. By proclamation General Granger announced the freedom of the slaves and the suspension of all civil and military [rule]."—M. M. Brown, *School history of Texas*, p. 245.—"On June 17, 1865 . . . President Johnson . . . appointed A. J. Hamilton provisional governor of Texas. . . . Governor Hamilton arrived in Galveston on July 21st. . . . He found all affairs of state in confusion. . . . Immediately a commission was appointed to look into the condition of the treasury. . . . Taxes were assessed by proclamation and ordered collected. . . . As rapidly as possible officers of district, county, and justice courts, sheriffs, tax assessors and collectors, and county commis-

sioners were appointed and the machinery of the law set in motion. . . . The chief duty of the provisional governor . . . was to provide for the assembling of a constitutional convention elected by the loyal people of the state. The test of loyalty was simply the taking of the oath of amnesty. . . . Governor Hamilton, on August 10th [1860], issued a proclamation providing for the registration of voters. . . . The people responded to the invitation without enthusiasm. . . . A lingering belief was manifest . . . that compensation might yet be secured for the loss of slaves, and hence a reluctance to take the amnesty oath lest it should in some way estop claims for the compensation. . . . But . . . the people gave abundant evidence of good-will toward the provisional government itself. . . . As soon as the new state government had been set up, public meetings . . . were called in many counties, and resolutions were passed tendering the provisional governor the support of the citizens in the maintenance of law and order and in the restoration of the civil government on the basis of the President's policy. . . . Most of the charges of disloyalty in Texas were based upon alleged persecution and maltreatment of Union men and freedmen. . . . Violence of this sort constantly occurred, but it appears to have been due far less to actual hostility to the Federal government than to the wide-spread disorder and lawlessness attending the break-up and the interregnum following it. . . . In response to petitions from various quarters where outrages were occurring, and from others where fears of a negro uprising existed, the governor issued a proclamation, November 18th [1865] authorizing the organization of a police force in each county, to be subject to the civil authorities and to act with the military. . . . The most immediate and pressing problem . . . was to preserve the normal balance of society, and to provide for the freedman an industrial position in that society such that agricultural interests would suffer the least possible additional shock. . . . The Freedmen's Bureau, created by act of Congress, March 3, 1865, to take control of all subjects relating to freedmen, refugees, and abandoned lands in the conquered states, did not begin operations in Texas until much later than elsewhere. . . . It was not until December that . . . [it was] so far perfected [as] an organization as to [have] . . . a dozen local agents, of whom five were civilians, at the most important points in the interior. . . . The general character of the work the Bureau had to do in Texas [since] there were no abandoned lands in the state and the Union refugees usually depended upon the military for such protection as they needed . . . [was] confined to looking after the interests of the negro. These activities may be classified roughly as relief work, educational work, labor supervision, and judicial protection. . . . Throughout 1865 and 1866 the whole extent of the frontier from north to south was in constant terror and became almost depopulated. The governor was besieged with petitions for troops and made repeated requests to General Wright for cavalry. Wright disclaimed any authority over the cavalry and referred the matter to Sheridan. Sheridan refused the troops on the ground that they were needed at interior garrisons for the protection of freedmen. Hamilton, too, believed that there were not enough troops in the interior to maintain order, and thereafter contented himself with appealing in Washington for more soldiers for Texas. Almost two years elapsed, however, before frontier posts were finally established and some measure of

protection afforded."—C. W. Ramsdell, *Reconstruction in Texas*, pp. 55-62, 64, 66-68, 70-72, 75-76, 84.—Although the convention had been called in January, it was not until early in the summer that "a constitution was formed, and ratified by a vote of the people June 4, 1866, at which time, also, all State, district, and county officers were elected—James W. Throckmorton, Governor, and George W. James, Lieutenant-Governor. The Legislature met and organized August 13, 1866, Nathaniel M. Burford of Dallas being elected Speaker of the House of Representatives. The Governor and Lieutenant-Governor were installed, then the provisional government ceased. The Legislature enacted such laws as were deemed necessary, and adjourned. This action, and President Johnson's plan of reconstruction were disapproved by Congress, and Texas was again provisionally put under military control, being, with Louisiana, declared to be Military District, No. 5, under General Sheridan, with headquarters in New Orleans, while under him, General Griffin, with headquarters in Galveston, commanded Texas. On July 30, 1867, General Sheridan removed Governor Throckmorton, and appointed ex-Governor Pease instead. A new registration of voters was ordered, and the State divided into fifteen registration districts. General Winfield S. Hancock for a time succeeded General Sheridan; in a short time he was superseded by General J. J. Reynolds, with headquarters in Austin. . . . Governor Pease resigned as provisional Governor [1869], and from that time till February, 1870, the State was directly under military government. A second convention, elected under orders from General Griffin, assembled June 1, 1868, elected Edmund J. Davis as its president, and was officially recognized by Governor Pease. It sat three months, adjourned, and reassembled December 7th, finally adjourning February 6, 1869. The constitution framed by it was . . . properly enrolled and submitted to the people for ratification or rejection at an election to be held in July, at which time, also, should be elected State and county officers. President Grant changed the date of election to the 30th of November and the first three days of December. At that time Edmund J. Davis [a Republican] was elected Governor, with a full set of State officers and a new Legislature. A military order declared this election provisional, and ordered the Legislature to meet in provisional session February 5, 1870."—M. M. Brown, *School history of Texas*, pp. 245-247.—"In February, 1870, the Texas legislature ratified the fourteenth and fifteenth amendments to the United States Constitution. On March 30, 1870, by act of congress, Texas was re-admitted to the Union. Her senators and representatives once more entered the halls of congress and military rule was withdrawn. . . . [Governor Davis remained and continued in office until 1874.] Difficulties beset the new administration on every hand. At the close of the war, Texas had no debt worthy of mention; in 1874 she owed three and a half millions, besides various undetermined claims. Many of the taxes had been left for years uncollected. The credit of the state was low. . . . The constitution adopted in 1869 was unpopular. The state officers [Richard Coke, a Democrat, assumed the governorship in 1874] and legislators found it impossible to remedy many of the evils then existing so long as this constitution was in force. In September 1875, a Constitutional Convention met at Austin. After two and a half months of hard work, they presented the [new] Constitution. . . . The Constitution was ratified (February 15, 1876)."—A. J.

Pennybacker, *History of Texas*, pp. 249, 252-253.—See also U. S. A.: 1865 (May-July), to 1868-1870: Reconstruction complete.

1866-1883.—Cattle trade with Indian Territory.—Cattle Raisers' Association. See OKLAHOMA: 1866-1883.

1869.—Case of Texas vs. White. See U. S. A.: 1869-1872; SUPREME COURT: 1866-1873.

1870-1896.—Border raids.—Reciprocal agreement with Mexico (1882).—Apache "Kid."—Governors of the period.—"During the some fifteen or sixteen years subsequent to the Civil War in the United States and the fall of Maximilian in Mexico, conditions on the international border, and especially along the Rio Grande, were probably more unsettled and irritating than ever before or since. . . . The states to the south were perturbed by revolutions and counter-revolutions characteristic of the section from the achievement of Mexico's independence to the régime of the iron-handed Diaz. On the right bank of the lower Rio Grande bands of cattle thieves were systematically organized. . . . Above Laredo, Texas, the American border was being laid waste by Indians, which the inhabitants of the region declared to live in the mountain fastnesses of Coahuila and Chihuahua. . . . Successive commissions sent by the United States to the border . . . [reported that] conditions were little short of appalling. . . . Matters reached their worst stage between 1870 and 1880. . . . In southwestern Texas cattle raising was followed on a very large scale during this period. . . . Horse raising was likewise engaged in to a considerable extent along the lower Rio Grande, and on a much larger scale farther to the northwest. The raids of the thieves threatened to destroy these important industries. . . . While the main object of the raiders who crossed over into the Rio Grande-Nueces region was the theft of cattle, they were . . . led into the perpetration of even worse outrages. Travelers who chanced to meet them and individuals who were thought likely to give out incriminating information were murdered; thousands of dollars in money, merchandise, and other property were taken; towns were raided; postoffices and customs houses were looted; and numerous public officials were killed. . . . Between 1875 and 1877 the situation in this section amounted to a reign of terror. . . . The policy of the Mexican government in regard to these raids was ineffective, and in the eyes of the government of the United States, dilatory and indifferent. . . . These occurrences led the Washington government to issue positive orders for the crossing of the Mexican border in the pursuit of Indian and Mexican marauders. On June 1, 1877, General Sherman was instructed in regard to the southwestern frontier as follows: 'The President desires that the utmost vigilance on the part of the military forces in Texas be exercised for the suppression of these raids. . . . You will instruct General Ord, commanding in Texas, to invite such cooperation on the part of the local Mexican authorities, and to inform them that while the President is anxious to avoid giving offense to Mexico, he is nevertheless convinced that the invasion of our territory by armed and organized bodies of thieves and robbers to prey upon our citizens should not be longer endured. . . . You will, therefore, direct General Ord that in case the lawless incursions continue he will be at liberty, to the use of his own discretion, when in pursuit of a band of marauders, and when his troops are either in sight of them or upon a fresh trail, to follow them across the Rio Grande, and to overtake and punish them, as

well as retake stolen property taken from our citizens and found in their hands on the Mexican side of the line.' . . . In the course of the more than two years during which the orders remained in force, some ten or fifteen punitive expeditions were made. . . . Certain readjustments which the United States government attempted to make in the location of these Indians led to a series of the most formidable uprisings the southwestern frontier had witnessed in years. . . . In order to cope with the situation the United States government again appealed to Mexico for permission to cross the border in pursuit of the marauders, and . . . in the fall of 1880, President Diaz prevailed upon the Mexican Senate to permit an agreement for reciprocal crossing of the boundary for three months. . . . On July 29, 1882 . . . such a reciprocal agreement was made, and this was renewed from time to time so that troops were permitted to pursue Indian raiders into Mexico from August 18, 1882, to November 1, 1886, with the exception of a brief interval lasting from August 18 to October 31, 1884. . . . Again in 1890 Indian difficulties led a provisional agreement to remain in force not more than a year; and on November 25, 1892, it was renewed for another year in order that the troops of the United States might pursue the band of the Apache 'Kid,' a notorious outlaw and fugitive from justice, who had escaped into Sonora whence he and his accomplices frequently made destructive raids upon the American frontier. After May, 1893, nothing seems to have been heard of this outlaw for some time; but he apparently put in his appearance again in the summer of 1896, for on June 4 of that year the United States and Mexico signed another agreement to remain in force until 'Kid's hand' was 'wholly exterminated.'—J. F. Rippey, *Some precedents of the Pershing expedition into Mexico* (E. C. Barker and H. E. Bolton, ed., *Southwestern Historical Quarterly*, Apr., 1921, pp. 299-302, 310, 313-315).—Richard B. Hubbard succeeded Governor Coke in 1877, the new constitution then being in force. Oran M. Roberts served as governor, 1879-1883, and John Ireland, 1883-1887. Lawrence S. Ross took office in 1887 remaining in the chair until 1891 when James S. Hogg became governor of the state.

1875.—Farmers' Alliance organized. See NATIONAL FARMERS' ALLIANCE; U. S. A.: 1866-1877.

1881-1884.—"Fence Cutters' War."—"For many years the public lands of Texas had been a free pasture for thousands of cattle. In 1881 and 1882, this land was placed on the market. It sold rapidly, the buyers being mostly wealthy cattle men, who bought immense tracts. They at once began building wire fences about their property. . . . They did not stop with fencing their own land; hundreds of acres of school land were fenced. Few roads were left. Small lots belonging to poor men were either inclosed within these large fences, or they were so cut off from all roads as to be worthless. . . . A strong feeling arose against the cattle men; their fences were cut again and again [hence the name "Fence Cutters' War"]. In January, 1884, the governor called a special session of the legislature to settle the troubles. It was decided that all public roads must be left open; that gates must be made every three miles; that persons whose land had been fenced without their consent should have full redress; that fence-cutting should be considered a felony."—A. J. Pennybacker, *History of Texas*, pp. 258-259.

1881-1888.—New capitol.—The old state capitol at Austin was completely destroyed by fire on Nov. 9, 1881. As three million acres of land in

the Panhandle of Texas had been set apart to pay for a new state house, arrangements were made to apply the fund realized on the sale of the land to a new capitol instead. The building was completed and dedicated on May 16, 1888.

1883.—Opening of university.—The state university at Austin, organized two years previously and arranged for by the Act of Feb. 11, 1858, opened its doors to students in 1883.

1892.—Opposition of railroad company to railway commission.—“The most important political problem which Texas has met and solved since the days of reconstruction, is the proper regulations of the railroads and express companies doing business in the state. The most prominent man in working out this problem, was Governor James Stephen Hogg. . . . In November [1891] . . . the legislature passed a law, . . . creating a commission of three men, appointed by the governor, with powers to investigate all complaints against railroads and to fix the rates which they could charge for carrying freight and passengers. . . . The railway . . . disobeyed the orders . . . [of] the new commission, . . . saying that the law creating their office was unconstitutional. The Supreme Court of the United States . . . decided that the law was constitutional. . . . [The railroad then] tried to defeat Governor Hogg and . . . secure a repeal or a modification of the commission law. But . . . this also . . . failed, for in November 1892, . . . Governor Hogg was re-elected. . . . [This event] ended the fight on the commission. . . . Later . . . the commission . . . was given power to control the issuing of railroad stocks and bonds.”—E. C. Barker, C. S. Potts and C. W. Ramsdell, *School history of Texas*, pp. 256-258.

1895-1915.—State administration.—Charles A. Culberson followed James S. Hogg as governor of the state, 1895-1899. Incumbents of the governorship up to the year 1915 included Joseph D. Sayers, 1899-1903; S. W. T. Lanham, 1903-1907; Thomas M. Campbell, 1907-1911; and Oscar B. Colquitt, 1911-1915. James E. Ferguson became governor in 1915.

1896-1923.—Texas and Oklahoma boundary settlement.—The case of the United States vs. Texas, in 1896, brought about a decision which has since been made more definite in the question of the boundary line between Texas and Oklahoma. “The [Texas boundary] line as agreed upon by the United States and Spain was to run up the Sabine River from its mouth to thirty-two degrees north, thence north to the Red River, . . . etc., but the Red River has two branches. . . . Texas claimed the north fork; and until the matter was finally adjudicated, exercised jurisdiction . . . over the district included between . . . the two forks, which was known as Greer County. In 1896 . . . a decree of the supreme court of the United States fixed the boundary of Texas at the south fork.”—G. P. Garrison, *Texas*, p. 267.—This matter was again brought into the Supreme Court in 1921 by the state of Oklahoma against the state of Texas to ascertain and have marked on the ground the boundary line between the two states along Red river. The portion of the boundary in question is about 600 miles in length. “In the early stages of the suit the chief point of difference between the parties was that Oklahoma and the United States were claiming the south bank of the river as the boundary, while Texas was contending for the thread or middle of the stream. That difference was disposed of in an opinion delivered April 11, 1921, wherein the Court recognized that in the earlier case of United States v.

Texas [Greer County case, 1896] . . . it had been adjudged that the boundary, as fixed by the treaty, is along the south bank. . . . The purport of that opinion was embodied in an interlocutory decree of June 1, 1921, which also made provision for taking additional evidence and for a further hearing to determine what constitutes the south bank, where along that bank the boundary is, and the proper mode of locating it on the ground,—these being matters on which the parties were unable to agree.”—*Opinion of the court, Oklahoma vs. Texas (United States Reports of Supreme Court, v. 260, no. 4, p. 624)*.—The principal issue then to be determined by the Supreme Court was whether the boundary should be run at high water mark as contended for by Oklahoma and the United States or at low water mark being “the edge of the water at that usual and ordinary state in which it is found most of the year,” as contended by the defendant. The conclusion reached by the court January 15, 1923, was that “the boundary line intended is on and along the bank and not at low water mark or any other point within the river bed.” Three commissions were appointed by the court for running, locating, and marking the boundary, decrees to this purpose being declared on Mar. 12, 1923. An order directing the commissions in the work was entered June 4, 1923 and an order providing for the release from existing receivership of lands lying on the north side of the medial line of Red river was entered June 11, 1923.

1898.—Part played in the Spanish-American War.—“Upon the outbreak of the [Spanish-American war] . . . Texas came forward with her full quota of four regiments of infantry and one of cavalry. In addition to this a regiment of ‘immunes’ or men who had had yellow fever, was raised at Galveston and sent to Cuba. The most famous regiment recruited in Texas was Colonel Roosevelt’s Rough Riders. . . . It was organized in San Antonio [and] . . . composed of cowboys and frontiers men from many of the western states.”—E. C. Barker, C. S. Potts and C. W. Ramsdell, *School history of Texas*, p. 260.

1900.—Galveston flood.—“On September 8, 1900, a furious tropical storm swept over the entire coast of Texas, doing tremendous damage to life and property. The greatest damage was done at Galveston. . . . The people of Galveston set to work to rebuild their city.”—*Ibid.*, pp. 262-265.—See also GALVESTON; 1900.

1901.—Beginning of commission government in Galveston. See COMMISSION GOVERNMENT IN AMERICAN CITIES; 1901-1903.

1901-1902.—Boll-weevil attack on cotton crop.—The years of 1901 and 1902 were marked by a severe and wide-spread drought that resulted in great decrease in crops. The Mexican boll-weevil made its appearance in many parts of the state, causing ruin to the cotton crops.

1901-1919.—Discovery and development of oil fields.—“The story of the discovery and development of the Texas Oil Fields is one of the most interesting and romantic of all the stories in this magic industry. Like other fields which have become famous, surface indications of oil were observed many years ago. Special attention was called to these indications in 1883. . . . Only the inaccessibility of Texas to established lines of transportation prevented its immediate development. . . . Interest was perceptibly increased in 1894 by the discovery of oil in Navarro County, in what has since been known as the Corsicana field. . . . It was not, however, until 1901 that Texas aston-

ished the oil world with the famous 'gusher,' known as Spindle Top. It was on January 10th [1901] that the drill tapped the imprisoned oil at a depth of 1050 feet. So great was the pressure that the 1000 feet of four-inch iron drill pipe was lifted from the bore hole, completely wrecking the derrick. A six-inch stream of oil was thrown one hundred and sixty feet into the air. The estimated rate of this flow was between 70,000 and 100,000 barrels per day. . . . Spindle Top was, therefore, the beginning of that phenomenal development which includes Mexico, Central America and Colombia, as well as Texas. . . . Following the sinking of the Spindle Top well, a new era began for Beaumont and southeastern Texas. Hundreds of oil companies were organized and many wells were drilled. So great was the rush to sink wells that the heavy machinery necessary, was frequently shipped by express from the north regardless of the great expense involved. As a result production soon exceeded storage capacity and transportation facilities. Many of the companies soon failed and very few have survived to the present time. A conspicuous exception to these failures was The Texas Company which has become one of the great oil companies of our day. . . . A pipe line was built to the coast at Port Arthur, docks constructed and storage tanks built. Very soon, too, a refinery was added to this equipment. In this way the Company was not only able to care for the oil produced by its own wells, but to purchase oil from the many Companies which had provided no such facilities. The Port Arthur works now cover many acres and through its refinery more than 50,000 barrels of crude oil pass every day. . . . During the ten years following the Spindle Top discovery in 1901, many new fields were discovered in the Coastal Region."—L. A. Harvey, *Oil fields of Texas (Pan-American Magazine, Nov., 1919, pp. 25-26, 28)*.—In 1905 the Humble field in Harris county was opened up; in 1911, Goose Creek; in 1910, the Burkburnett field in Wichita county and the Ranger field in Eastland county; in 1918, Desdemona in Comanche county and Breckenridge in Stephens county; and in 1919, the Blue Ridge and West Columbia fields (the latter in Brazoria county). In 1919 the centre of interest was in the Desdemona field where 120 companies were operating and from forty to forty-five thousand barrels of oil were being produced daily.

1906.—Brownsville Affair. See U.S.A.: 1906 (August).

1907-1909.—Disasters.—Irrigation.—In 1907 a disastrous fire occurred in Houston and a money panic prevailed throughout the country. The following year floods destroyed about ten million dollars worth of railroad property, in and near Dallas. Another great fire occurred in Fort Worth in 1909 with a loss of about a million dollars. Since 1900, irrigation of the arid district has made rapid progress; by 1909 there were about six hundred thousand acres of this land being irrigated and under cultivation. Nearly half of the acreage was sown in rice.

1910.—Race riot at Slocum.—Lynching at Del Rio.—About twenty negroes were killed in a race riot at the town of Slocum during 1910, when a mob of whites, incited by the insolent remark of a negro to a white man, attacked the colored population. State rangers quelled the disturbances and placed several white men under arrest. The lynching of Antonio Rodriguez, a Mexican, at Del Rio, Texas, on November 2, following the man's

murder of a ranchman's wife was followed by official protestations from Mexico. An investigation resulted in the finding that the victim of the lynching was a citizen of New Mexico and that Mexico was therefore not concerned.

1910-1919.—Ratification of Federal amendments.—On Aug. 17, 1910, the Sixteenth Federal Amendment (authorizing an Income Tax) was ratified; this was followed on Feb. 7, 1913, by the Seventeenth (Direct Election of Senators); on Mar. 1, 1918, by the Eighteenth (Prohibition); on June 28, 1919, by the Nineteenth (Woman Suffrage).

1911-1917.—Important court decisions and legislation.—In 1911 the United States Supreme Court decided that the recall was constitutional. This decision was the outgrowth of a case arising from the recall of the superintendent of schools at Dallas. In 1913 a presidential primary election law and a measure permitting cities of less than 5000 inhabitants to adopt the commission form of government were passed, a bureau of child and animal protection was created, an act providing for the adoption of indeterminate sentence and parole, and one providing a fifty-four hour week for women in certain industries were passed. In 1915 it was proposed to divide the state by creating out of Panhandle a new state to be known as Jefferson. Such action on the part of a legislature was unusual, and was not taken in this case but proposal was significant in demonstrating that such a right exists for Texas. It was conferred in the act admitting Texas to the Union. In 1917 a mothers' pension act was passed.

1912-1913.—Fire at Houston.—Home rule.—A disastrous fire again occurred in 1912 destroying fifty-seven city blocks in Houston and causing a loss of about \$5,000,000. The measure for home rule of cities passed by the legislature in 1913 was largely the result of such repeated disasters.

1914.—Houston ship canal completed.—Convict labor abolished.—A ship canal was completed at Houston in 1914. Improvements on the canal began soon after, with the expectation of making it navigable for the largest sea-going vessels. Convict labor, which had in some measure been employed on this work, was abolished Jan. 1, 1914, and since then no prisoners have been allowed to be leased, or worked out on shares.

1917.—Race riots at Houston.—Impeachment of Governor Ferguson.—In retaliation for violence in the arrest of some negro soldiers at Houston, riots were started by other negroes of the regiment. Seventeen persons were killed and many wounded. The city was placed under martial law and the negro soldiers involved in the killing were courtmartialled. Thirteen were hanged on December 11, and forty-one others committed to life imprisonment.

The impeachment of Governor Ferguson was a significant event of the year 1917. "The state Senate on September 22nd [1917], sitting as a high court of impeachment, by more than the required two-thirds majority, sustained ten of the twenty-one articles of impeachment preferred against Governor Ferguson by the House of Representatives. Three days later the Senate pronounced judgment against the governor removing him from office, and disqualifying him from again holding any office of honor, trust or profit under the state government. . . . The attempt of Governor Ferguson to dominate the State University through improper influence on the Board of Regents and his vetoing the university appropriation brought matters to a head and forced the impeachment pro-

ceedings. But it was the proving of actual crooked dealings in the state's money affairs which compelled the final vote of removal and disqualification."—*Impeachment of governor of Texas (Equity, Jan., 1918)*.

**1917-1918.—Part played in World War.**—When the president called for troops, the state furnished 155,000 soldiers, or 4.5% of the whole force. A national army camp, Camp Travis, was maintained; National Guard camps, Logan, Bowie and McArthur were located at Houston, Fort Worth and Waco; and a motor transport camp at San Antonio. There was also an aviation camp, Camp Love, at Dallas, maintained on the old exhibition grounds.

**1917-1923.—Governors of the state.**—Following the impeachment and removal from office of James E. Ferguson, September, 1917, the lieutenant-governor, William P. Hobby, became governor. Hobby defeated Ferguson in the Democratic primaries the next year and was elected governor. He was reelected for the term 1919-1921. Pat M. Neff was made governor in 1921 and reelected in 1923.

**1918.—State prohibition measure.—Fund for suppression of lynching.**—An act of the legislature providing for state-wide prohibition became effective on June 26, 1918. During the year "the *San Antonio Express*, . . . at a stockholders' meeting, voted for the establishment of a fund of \$100,000 to be paid in rewards for the punishment of inciters to mob violence and of lynchers. A reward of \$500 . . . [was to] be paid to each person who . . . [should] be directly responsible for the arrest, the subsequent conviction and punishment of any person or persons who were instrumental in arousing a mob to commit a lynching or in putting through the lynching itself, when the individual lynched was not a Negro, and a reward of \$1,000 for the same deed of public valor when the victim was a Negro."—*Common welfare (Survey, Aug. 24, 1918, p. 593)*.

**1919.—State health department.—Information bureau.—Home of helium.—Cotton crop.**—Early in the year 1919, three new bureaus were established in the state department of health of Texas; that of Child Hygiene, Communicable Diseases, and Public Health Education. The Texas College Association created in 1919 the Texas Information Bureau to receive and gather information as to lectures, publicists, demonstrators, musicians, or exponents of literature, art, political science, music, drama, or anything of cultural value to the state. The headquarters of this association was at Dallas. In 1919, Texas was the only place in the United States where helium, a gas in demand for airplane use, was being extracted in any large quantities. At this time the chief works in operation for this gas, were in Petrolia, under government auspices, which had arranged to spend \$6,000,000 in producing it. There were also two other plants producing helium at Fort Worth, which were closely guarded by men from the United States army, no civilian being permitted to enter the plants. At the close of the World War the gas was being shipped in cylinders to New Orleans and from there to France. In spite of the absence of so many men in the service the cotton production of the year was estimated at 2,700,000 bales of 500 lbs. each. This was the largest yearly yield of any single state in the Union.

**1919.—Minimum wage law passed.** See LABOR REMUNERATION: 1910-1920.

**1919.—Trouble with Mexico.** See MEXICO: 1919 (June-December).

**1920.—Open port or anti-strike law.**—The State of Texas enacted an anti-strike law of a very definite and restricted character in the latter part of 1920. "In reviewing this bill the American Association for Labor Legislation, which is devoted to the legislative interests of the workingmen, published the following: 'TEXAS. It is declared to be state policy that the operation of common carriers shall not be impeded or interfered with, to molest or harass persons engaged in transporting commerce, by intimidation or violence is unlawful. Transporting commerce includes employment by express companies or on docks, wharves, switches, railroad tracks, compresses, depots, freight depots, pipe lines or approaches or appurtenances to or incident to or used in connection with handling commerce by common carriers. Anyone who in conversation or otherwise with a person engaged in transporting commerce, or with any member of his family, at work or at home, attempts to cause him to desist from work through fear of violence, is deemed guilty of intimidation. Violation is heavily penalized. (B. B. 6. In effect, January 2, 1921.)'"—*Texas open port law (Survey, Feb. 12, 1921, p. 700)*.

**1921.—Antagonism to Japanese and Mexicans.**—"Japanese farmers in California in view of the increasing hostile attitude of the government of the state, recently tried through an agent to acquire land in Texas on which to settle. This agent was met at the border by delegates of the American Legion and threatened with dire consequences to himself and those he represented if they endeavored to carry out that plan, which was subsequently abandoned. . . . On February 16 at Ranger there were about one hundred Mexican workmen . . . beaten up by masked men and ordered to leave town. Mexican homes in the nearby oil camps were attacked and women and children chased into the open. The mayor of Ranger, in cooperation with the Texas Rangers . . . [took] steps to protect these workers."—*Survey, Feb. 26, 1921, p. 774*.

**1921-1923.—Legislative measures.**—Measures passed by the state legislature in session in 1921 were an amendment relative to the enforcement of the law concerning the rights and disabilities of aliens; an amendment providing for increased conservation of the state's national resources; a provision for cooperative marketing associations; one authorizing international trading corporations under state laws; proposed constitutional amendment restricting suffrage to native born or naturalized citizens and providing for absentee voting; provision for the adoption of the commission form of government by cities of less than 5000; proposed constitutional amendment for the purpose of granting pensions to confederate war veterans and their widows. Legislation in the session of 1923 included an amendment making more stringent the state anti-trust laws; the extension of certain oil and gas permits on specified lands then under receivership control of the United States Supreme Court; a measure authorizing the control of highways by the state and providing for the construction, operation and maintenance of a system of public highways; creation of a state board of vocational education; creation of a commission to codify the general laws of the state; a measure releasing citizens of Hidalgo County from the payment of state taxes for twenty-five years in view of calamities they had suffered; appropriation of \$3,000,000 from the state treasury to aid rural schools, and the creation of a state educational survey commission; the request for the cooperation of the Uni-

versity of Texas in working out a plan to reduce illiteracy in the state; and provision for a topographic survey to be made by the board of water engineers and the state reclamation engineer.

THALES (640-546 B. C.), Greek philosopher. "Thales of Miletus, of Phœnician descent, . . . is distinguished by Aristotle as the originator of the Ionic Natural Philosophy [and hence indirectly also of Greek philosophy in general]. The fundamental doctrine of his philosophy of nature is thus expressed: Water is the original source of all things. . . . 'According to Thales, the magnet is animated, because it attracts iron.' . . . 'Thales believed that all things were filled with gods.' . . . The reason, according to Aristotle, why philosophy begins with Thales, is that in his attempt to explain the world, a scientific tendency is first manifested, in opposition to the mythical form, which prevailed in the works of the ancient poets, and, to a great extent, in those of Pherecydes also. [All the writers who give lists of the seven wise men of Greece mention his name.]"—F. Ueberweg, *History of philosophy, v. 1: History of ancient and mediæval philosophy* (tr. by G. S. Morris, additions by N. Porter), pp. 32, 34-35.

THANAGE, old Celtic tenure by which certain thanes' estates were held in Scotland, and which feudalism displaced.—Based on W. F. Skene, *Celtic*

*Scotland, v. 3, p. 246*.—Thanage was the name given to the district of a thane or the services due a thane.

THIANE, or Thegn, name of a minor class of nobles in Anglo-Saxon times, acting originally as household servants and companions, and following the lord to war as his bodyguard. See COMITATUS; ÆTHEL; MILITARY ORGANIZATION: 30; ENGLAND: 959-975.

THANET, Isle of, northeastern part of Kent, England. It was invaded by the Jutes in 449. See ENGLAND: 449-473.

THANKSGIVING DAY, American.—In 1621 the Pilgrims, at Plymouth, "determined to have a period of recreation, combined with thanksgiving for their many mercies. The Governor thereupon sent out four huntsmen, who in one day secured enough game to supply the Colony for nearly a week. Hospitality was extended to Massasoit, who accepted and brought ninety people with him. The guests remained three days, during which they captured five deer to add to the larder of their hosts."—J. A. Goodwin, *Pilgrim republic, pp. 179-180, and footnote*.—The first Thanksgiving Day observed in all the states of the American Union was recommended by a proclamation from the Continental Congress, after Burgoyne's surrender, in 1777, and fixed for Thursday, December 18. Each year thereafter, until 1784, the Continental Congress continued to recommend a day for thanksgiving services which the several states accepted and appointed. Then came an interval during which the observance was left wholly to the states. The first Congress under the Federal constitution, in 1789, adopted a resolution which requested President Washington to recommend a day for national thanksgiving and prayer, and the president's proclamation named Thursday, November 26, of that year. This proceeding, however, was much opposed by the anti-federalists, and it was not repeated until 1795, when President Washington, without action of Congress, recommended a day of thanksgiving, on February 19. Until 1815 there was no other national appointment. In that year, by resolution of Congress and proclamation of the president, April 13 was set apart as a day of national thanksgiving for the restoration of peace. Then, for almost half a century, the national observance ceased. It was revived by President Lincoln in 1863, when he appointed a special day of thanksgiving for the victory of Gettysburg, on August 16, and nationalized, by his proclamation, the autumnal Thanksgiving Day of November, which had become a fixed festival in most of the states. From that time the day has been appointed for the whole nation each year by presidential proclamation.—Based on W. De L. Love, Jr., *Fast and thanksgiving days of New England, ch. 27*.—The latest day upon which Thanksgiving Day has ever fallen since the revival by President Lincoln was in 1865 when because of the many settlements to be arranged after the Civil War, President Johnson appointed December 7th. "The President's designation of December 7th for a National Thanksgiving will meet with a far more general and hearty response from the people than if a much earlier day had been named, for we have had time to realize the greatness of victory which last April consummated."—*New York Tribune, Dec. 5, 1865*.—See also HOLIDAYS, UNITED STATES.

THAPSACUS, important fording place on the

Euphrates, where many armies crossed the river in ancient times. See APAMEA.

**THAPSUS**, in ancient geography, a town on the coast of northern Africa, near the modern Cape Dimas in Tunis, thirty miles southeast of Susa. Here Caesar defeated the adherents of Pompey in 46 B. C. See CARTHAGE: DOMINIANS; ROME: Republic: B. C. 47-46; AFRICA: Ancient and medieval civilization: Roman occupation.

**THAREKETARA**, ancient city of Burma. See BURMA: Early history.

**THASOS**, island off the coast of Thrace, in the northern part of the Ægean sea, celebrated in antiquity for its gold mines. After an attempted revolt in 463 B. C., it was reduced by the Athenians who held it intermittently until the end of the 3rd century B. C., when it passed into the hands of Macedonia. After the battle of Cyncephala, 197 B. C., it enjoyed autonomy under Rome. See ATHENS: B. C. 466-454; GREECE: B. C. 477-461.

**THAUSS**, Battle of (1431). See BOHEMIA: 1419-1434.

**THEATER**.—"The Athenians are given the credit for first designing buildings especially for the presentation of plays, and the word theater itself is from the Greek, meaning a place for seeing. The date when the first Greek theater was built is not known, but it was certainly before 500 B. C., although perhaps no really permanent structure was erected before that time. The great theater at Athens, known as the Dionysiac Theater, was begun about this time and was completed 340 B. C. It is hollowed out of the rock at the base of the Acropolis, and its magnificent view of the Athenian temples and the island-studded waters of the blue Ægean sea must have given added point to the lofty passages of the old plays."—T. C. Atwood, *Amphitheater, theater and stadium, ancient and modern* (American City, Jan., 1917, p. 1).—See also DRAMA: Origin.—"The theatre at Epidaurus is perhaps the easiest to trace in all its parts of all the theatres of purely Greek design, as the stone steps forming the seats are generally in place, and large fragments of the proscenium remain within reach. This also is known to history as the most important and splendid of the theatres of Greece, the circular space occupied by the orchestra was forty feet in diameter, with a fountain in the middle evidently for the altar of Dionysos. [See DRAMA: Physical features of the ancient Greek theater.] . . . The Roman theatre, modelled upon that of the Greeks and consisting like it of a nearly semicircular funnel-shaped auditorium with seats either of wood or stone, differed from its prototype in having a semi-circular space reserved for the chorus, and a stage much enlarged, raised high above the floor of the orchestra, and backed by somewhat elaborate architectural structures, often a two-story or three-story colonnaded building. The lavish way in which the Roman proconsuls and prætors built is exemplified by the comparative indifference shown to taking advantage of the ground, as well as by the costly architectural work of the stage and proscenium. [See also COLOSSEUM.] . . . The theatre of Marcellus, at Rome, has preserved for us more of the exterior of the auditorium than any other, but the wall behind the stage and the other structures there can best be judged from the theatre at Orange (Vaucluse) in the south of France, where the great wall forming the back or outside of the proscenium stands almost intact, 140 feet high. The colonnades of the stage, which in this case was roofed and open on one side only, can be partly under-

stood. . . . [When, after many centuries the art of the theater was rediscovered, a very different type of building was evolved.] A modern theatre . . . consists properly of two buildings closely attached each to the other. The one of these contains the scenery and the galleries and passages for its arrangement and its easy management, together with the Dressing Rooms for actors, a Foyer or more foyers than one, and some few private rooms and offices. This building may be extremely simple, four-square, and roofed with an ordinary low-pitch roof, as nothing is needed but a large, safe, unobstructed interior in which the theatrical engineer and machinists can do their work. . . . The other building, that which contains the auditorium, contains so much else in addition to this that frequently the auditorium seems in plan to be but a minor consideration. In any large modern theatre, vastly more superficial space on any one horizontal plane is occupied by lobbies, staircases, the foyer for the public, ticket offices, corridors, and the like, than for the mere seating of the spectators. . . . The number of seatings is generally kept down from considerations of acoustics, of easy view of the stage from all parts of the house, and of reluctance to have an auditorium so large that it will be but rarely filled. Thus, the opera house at Paris, though built at lavish cost between 1865 and 1875, provides for only 2156 spectators; and the famous *Théâtre Française*, largely supported by the state, which supplies the house as well as an annual income, seats but 1520 persons. The famous *Odéon*, standing free on all sides and forming an architectural monument of some importance, has 1650 seatings."—R. Sturgis, *Dictionary of architecture and building*, v. 3, pp. 788-791.—Other notable theaters, of earlier date, are: the Olympic theater at Vicenza, built in 1580, after the designs of Palladio; the Sheldonian theater at Oxford (1660-1664), after those of Wren; and the Royal theater at Berlin, designed by Schinkel.—See also HIPPODROME; ODEUM.

**Early English theaters**. See DRAMA: 1558-1592; 1592-1648.

**THEATINES**, a Roman catholic religious order which was second only to the Jesuits in its importance in the reform movement of the sixteenth century. The founders of the order of the Theatines (1524) were "Gaetano of Thiene [St. Cajetan], a native of Vicenza, and Gian Pietro Caraffa [afterwards Pope Paul IV]. The former had quitted a lucrative post at the Roman court in order to transplant the ideas of the Oratory of the Divine Love to his native city, Verice, and Verona, and had gradually come to concentrate his pious thoughts upon the reformation of the secular clergy of the Church. On his return to Rome, Bonifacio da Calle, a Lombard lawyer, became interested in his design, and then it was enthusiastically taken up by Caraffa, whose bishopric of Chieti, or, according to the older form, Theate, gave its name to the new order of the Theatines."—A. W. Ward, *Counter Reformation*, p. 28.—"To the vow of poverty they made the special addition that not only would they possess nothing, but would even abstain from begging, and await the alms that might be brought to their dwellings. . . . They did not call themselves monks, but regular clergy—they were priests with the vows of monks. . . . The order of the Theatines did not indeed become a seminary for priests precisely, its numbers were never sufficient for that; but it grew to be a seminary for bishops, coming at length to be considered the order of priests peculiar to the nobility."—L. von Ranke, *History of*

*the popes, v. 1, bk. 2, sect. 3.*—They spread over Italy, Spain, Poland and Germany in succeeding years, and the first French house was established in Paris under Cardinal Mazarin. In 1099 Pope Pius X united the order with a Spanish order at Barcelona.—See also MONASTICISM: 10th-19th centuries.

1607.—Expelled from Venice. See VENICE: 1606-1607.

**THEBAIS**, southern district of upper Egypt, taking its name from Thebes.

**THEBAN SACRED BAND.** See MILITARY ORGANIZATION: 5; THEBES: B.C. 378.

**THEBAU.** See THIBAW.

**THEBES**, Egypt, famous ancient city, capital of the fourth nome of upper Egypt. The site of the ruined city is today occupied by scattered villages. "No city of the old world can still show so much of her former splendour as Egyptian Thebes. . . . Not one of the many temples of Thebes has wholly disappeared; some are almost complete; many of the royal and private tombs were, until the tourist came, fresh with colours as of yesterday. . . . The origin of the great city is obscure. Unlike Memphis, Thebes, her southern rival, rose to the headship by slow degrees. It was towards the close of the dark age marked by the rule of Hanes, that a new line of kings arose in the upper country, with Thebes for their capital. At first they were merely nobles; then one became a local king, and his successors won the whole dominion of Egypt. These were the sovereigns of the Eleventh Dynasty. Their date must be before Abraham, probably some centuries earlier. . . . Thebes, like the other cities of Egypt, had a civil and a religious name. The civil name was Apiu, 'the city of thrones,' which, with the article 't' or 'ta,' became Ta-Apiu, and was identified by the Greeks with the name of their own famous city, by us corruptly called Thebes. The sacred name was Nu-Amen, 'the city of Amen,' and god of Thebes; or simply Nu, 'the city,' and Nu-ā, 'the great city.' In these names we recognize the No-Amon and No of Scripture."—R. S. Poole, *Cities of Egypt*, ch. 4.—See also ASSYRIA: Map.—It was in the twelfth dynasty that "the seat of government was transferred from Herakleopolis to Thebes. . . . Whilst the Hyksos [see EGYPT: Hyksos] of the fifteenth and sixteenth dynasties were in possession of the Delta, a considerable number of petty kings reigned at Thebes. . . . How long the struggle for supremacy between them lasted cannot be said, but towards the end of the Hyksos rule it is . . . certain . . . as quoted by Josephus, 'the Kings of the Thebais . . . made an insurrection against the Shepherds, and there was a long and terrible war.' . . . The fight between the Hyksos and the Thebans appears to have taken a turn favourable to the latter under a small group of kings who formed the seventeenth dynasty from Thebes. . . . The great kings of the eighteenth, nineteenth, and twentieth dynasties [still held Thebes as the capital]."—E. A. W. Budge, *Short history of the Egyptian people*, pp. 53, 69, 71.—See also EGYPT: Old empire and the middle empire.—"Egypt became a military state. . . . The wealth, the rewards and the promotion open to the professional soldier were a constant incentive to a military career. . . . In the biographies which they have left in their tombs at Thebes the survivors of the noble class narrate with the greatest satisfaction the campaigns which they went through at Pharaoh's side, and the honours which he bestowed upon them. [Among the chief biographies recorded, is that of

Nakht, at one time scribe and serving priest of Amon who died late in the reign of Amenhotep III.] Side by side with the soldier appears another new and powerful class, that of the priesthood. . . . The head of the state temple at Thebes, the High Priest of Amon, was the supreme head of the greater body also. . . . The triumph of a Theban family had brought with it the supremacy of Amon. . . . Thutmose III, . . . named king by oracle of Amon, . . . laid out his imposing colonnaded halls at the . . . east end of the temple [of Karnak], where they today form one of the great architectural beauties of Thebes. . . . In Hatshepsut's (his consort's) splendid temple her fame still lives. . . . Her Karnak obelisk displays her name and records. . . . A pair of enormous obelisks . . . were erected [by Thutmose] at the Karnak temple and one of them bore the proud words 'Thutmose, who crossed the great "Bend of Naharin" (the Euphrates) with might and with victory at the head of his army.' The other obelisk of this pair has perished but this one now stands in Constantinople. . . . Of his two Heliopolitan obelisks, one is on the Thames Embankment in London and the other in Central Park, New York City. . . . The wealth and the captive labour of Asia and Nubia were being rapidly transmuted into noble architecture, on a scale of size and grandeur surpassing all precedent, and at Thebes a new fundamental chapter, in the history of the world's architecture was being daily written. Amenhotep [III] supported his architects with all his unparalleled resources. . . . At Luxor, the old southern suburb of Thebes, his architects laid out a superb forecourt of the temple of Amon, in front of which they planned a pew and more ambitious hall than had ever been attempted before. . . . Unfortunately the vast hall was unfinished at the death of the king and the whole stands to-day a mournful wreck of an unfinished work of art, the first example of a now universal type of great architecture. . . . Amenhotep now proceeded to give the great buildings of the city a unity which they had not before possessed. Approaching the gorgeous pylon which he set up in front of the Karnak temple, an avenue led up from the river between two tall obelisks, which flanked a colossal portrait statue of the Pharaoh, hewn from a single block sixty-seven feet long. Through the beautiful gardens, with which he united Karnak and Luxor, avenues of sculptured rams connected the great temples. . . . Thebes was thus rapidly becoming a worthy seat of empire, the first monumental city of antiquity. Nor did the western plain on the other side of the river behind which the conquerors slept, suffer by comparison with the new glories of Karnak and Luxor. Along the foot of the rugged cliffs, from the modest chapel of Amenhotep I on the north, there stretched southward in an imposing line the mortuary temples of the emperors. At the south end of this line, but a little nearer the river, Amenhotep III now erected his own mortuary sanctuary, the largest temple of his reign. . . . But this sumptuous building, probably the greatest work of art ever wrought in Egypt, has vanished utterly. Only the two weather beaten colossi which guarded the entrance still look out across the plain. . . . Behind the temple appeared a palace of the king . . . Innumerable products of the industrial artist which fill the museums of Europe indicate with what tempered richness and delicate beauty such a royal chateau was furnished and adorned. . . . The walls were covered with woven tapestry which skilled judges have declared equal

to the best modern work. Besides painted pavements depicting animal life, the walls also adorned with blue glazed tiles, the rich color of which shone through elaborate designs of gold leaf, while glazed figures were employed in encrusting larger surfaces. [It was these walls that the Metropolitan Museum Egyptian expedition of 1907, studied and copied.] . . . Sculpture also flourished under such circumstances as never before. . . . The perfection attained in the sculpture of animal forms by the artists of this time marks the highest level of achievement attained by Egyptian art herein. . . . Especially in relief were the artists of this age masters."—J. H. Breasted, *History of the ancient Egyptians (Historical Series for Bible Students, v. 5, pp. 193-104, 203, 221, 222, 229, 234, 243, 256-260)*.—Toward the end of the Middle Empire "the dominance of Egypt in Asiatic affairs had irresistibly drawn the centre of power on the Nile from Thebes to the Delta. Thebes remained the religious capital of the state and . . . a distinct principality, capable of offering serious opposition to the ruling family in the Delta. The city itself at least was not taxable by Pharaoh, and was never visited by his fiscal officials. . . . The state of disorganization and helplessness which was gradually evolving is revealed to us in a chapter from the government of the Theban necropolis preserved in certain legal archives of Rameses IX reign. . . . Thebes . . . was now rapidly declining but it continued to be the burial place of all the royal dead. . . . Within a generation as the work of plunder continued all the bodies of Egypt's kings and emperors buried at Thebes, were despoiled, and of the whole line of Pharaohs from the beginning of the Eighteenth to the end of the Twentieth Dynasty, only one body, that of Amenhotep II, has been found still lying in its sarcophagus. [Tut-ankh-Amen's body was found in a sarcophagus.] . . . Thus while the tombs of the Egyptian emperors at Thebes were being ransacked and their bodies rifled . . . the empire which they had . . . conquered was crumbling to final ruin."—*Ibid.*, pp. 362, 349-350.—See also ARCHITECTURE: Oriental: Egypt.

**THEBES, Greece**, city of Bœotia in ancient Greece. A modern town occupies the site of the ancient citadel but few traces of the old city remain "In the fruitful plain, only traversed by low hills, which stretches from the northern declivity of Mount Cithæron to the Bœotian lakes opposite the narrowest part of the sound which separates Eubœa from the mainland, in the 'well-watered, pasture-bearing region of the Aones,' as Euripides says, lay the citadel and town of Thebes. According to Greek tradition, it was built by Cadmus the Phœnician. The Aones, who inhabited the country, are said to have amalgamated with the Phœnicians whom Cadmus brought with him, into one people. The citadel lay on a hill of moderate height between the streams Ismenus and Dirce; it bore even in historical times the name Cadmea; the ridge to the north of the town was called Phœnicium, i. e., mountain of the Phœnicians. In the story of Cadmus and Europa, Greek legend relates the Phœnician mythus of Melkarth and Astarte. In order to seek the lost goddess of the moon, Astarte, Cadmus-Melkarth, the wandering sun-god, sets forth. He finds her in the far west,

in Bœotia, and here in Thebes, on the Cadmea, celebrates the holy marriage. . . . There are a few relics of the wall of the citadel of Cadmea, principally on the north side; they are great blocks, not quite regularly hewn. Of the city wall and the famous seven gates in it nothing remains; even this number seven points to the Phœnicians as well as the designations which were retained by these gates even in historical times. The Electric gate belonged to the sun-god Baal, called by the Greeks Elector; the Neitic gate, it would seem, to the god of war. . . . The gate Hypsistia was that of Zeus Hypsistos, whose shrine stood on the Cadmea; . . . the Prætidic gate belonged to Astarte, whose domain was the moon; the Oncaic gate in the north-west belonged to Athena Onca, who is expressly called a Phœnician goddess. . . . It is probable that the two remaining gates, the Homoloic and the Crenaic, were also dedicated to gods of this circle—to the spirits of planets. According to Greek legend, Cadmus invented the building of walls, mining, armour, and letters. Herodotus contents himself with saying that the Phœnicians who came with Cadmus taught much to the Greeks, even writing; from the Phœnicians the Ionians, in whose midst they lived, had learned letters. If even this early borrowing of writing on the part of the Greeks is incorrect, all the other particulars,—the legend of Cadmus, which extends to the Homeric poems, where the inhabitants of Thebes are called Cadmeans; the rites of the Thebans; the walls and gates,—taken together, give evidence that the Phœnicians went over from Eubœa to the continent, and here fixed one of their most important and lasting colonies upon and around the hill of Cadmea."—M. Duncker, *History of Greece, bk. 1, ch. 4*.—See also BŒOTIA; BŒOTIAN LEAGUE.

B. C. 378.—Sacred band.—"This was an institution connecting itself with earlier usages of the land. For already in the battle of Delium a band of the Three Hundred is mentioned, who fought, like the heroes of the Homeric age, associated in

pairs, from their chariots in front of the main body of the soldiery. This doubtless very ancient institution was now [378 B.C.] revived and carried out in a new spirit under the guidance of Epaminondas and Gorgidas. They had quietly assembled around them a circle of youths, with whom they had presented themselves before the community on the day of the Liberation, so that they were regarded as the founders of the Sacred Band of Thebes. It was now no longer a privilege of the nobility to belong to the Three Hundred; but those among the youth of the land who were in feeling the noblest and most high-minded, and who already under the oppression of the Tyrants had been preparing themselves for the struggle for freedom, were henceforth the elect and the champions. It was their duty to stimulate the rest eagerly to follow their example of bravery and discipline; they were associated with one another by the bonds of friendship and by identity of feelings. . . . A soldier-like spirit was happily blended with ethical and political points of view, and ancient national usage with the ideas of the present and with Pythagorean principles; and it constitutes an honorable monument of the wisdom of Epaminondas."—E. Curtius, *History of Greece*, bk. 6, ch. 1.

**THEISM.**—"Theism by etymology means all forms of belief in the existence of the Divine, but in usage is identified with monotheism, and is opposed to pantheism and polytheism, as well as atheism. It holds that the universe owes its existence and continuance to one supreme and perfect Being, who is distinct from what he created. The historical origin of the belief is much disputed, some regarding it as the primeval form of religion, while others hold that it was always preceded by polytheism. Not enough of man's primitive condition is known to decide this point on scientific

grounds."—T. W. Chambers, *Theism (Concise dictionary of religious knowledge*, p. 909).—In the eighteenth century the term theism was frequently identified with deism, but a later interpretation of the two beliefs recognizes the negative attitude of deism in its denial of revelation and the positive or affirmative element in theism in its emphasis on belief in God. In the nineteenth century Theodore Parker and others applied the term theism to their speculative belief in God. "Without renouncing theism, he [Parker] affirmed that its doctrine issues from the progress of religion on the plane of nature, and is not derived from supernatural teaching. . . . The essentials of Christianity had been reduced to a *minimum*; that minimum Parker conveyed over to natural theology."—G. P. Fisher, *History of Christian doctrine*, p. 434.—"As is well known, when the Christian Church began to feel the need of a philosophical foundation for its theology, it sought that foundation primarily in Neo-Platonism. . . . [By the fifth century] the Neo-Platonic conception of God . . . became a part and parcel of the orthodox Christian thought. It is this conception that St. Anselm assumes in his famous attempt to prove the existence of God by an argument which . . . has been a centre of philosophical controversy from the date of its first becoming generally known to our day—the so-called 'ontological proof' of the existence of God . . . In the 13th century, the golden age of scholastic philosophy, it was rejected as a sophism by St. Thomas Aquinas, whose great authority has ever since discredited it. . . . The most important of the relevant passages in the works of Thomas Aquinas are *Summa contra Gentiles* i. 10, 11, and *Summa Theologica*, I. qu. ii. art. 1, both dealing formally with the question whether the proposition 'God exists' is self-evident. . . . Descartes' theism, like that of his mediæval predecessors, is predominantly of the Neo-Platonic type, and is intimately connected with the assumption, which underlies the reasoning of the *Meditation*. . . . [In] Leibniz's treatment of the subject . . . the proposition 'God exists' holds a unique position. It is a 'truth of fact' and therefore, like all 'truths of facts' synthetic. . . . The most important philosophical treatment of the theistic problem between Leibniz and Kant is unmistakably that of Hume in his *Dialogues concerning Natural Religion*. . . . His real attitude towards theism seems to have been . . . [that] he is very unwilling to believe that his leaning towards it rests on nothing more solid than emotional bias, but the alleged proofs of theism are open to criticisms which Hume does not know how to refute, and there are 'appearances' which it is hard to reconcile with the theistic 'hypothesis.' . . . Much more closely knit is the assault on the whole of natural theology in Kant's *Critique of Pure Reason*. . . . Kant had not always been a disbeliever in the possibility of demonstrating theism. In his thesis for his degree . . . he offers proof . . . that 'there is a being whose existence is antecedent to the possibility of itself and of all things, which being must therefore be said to exist with an absolute necessity.' . . . Lotze . . . [reasserted] this particular version of the cosmological argument which finds in God the necessary actual ground of possibilities . . . in the chapter of 'Proof of the Existence of God.' . . . The Theistic argument as presented by Lotze provides an opportunity for considering the type of ultimate pluralism . . . as the most serious philosophical alternative to theism. This type of view is best represented in contemporary English philoso-

phy by the writings of G. E. Moore and Bertrand Russell."—A. E. Taylor, *Theism* (J. Hastings, ed., *Encyclopaedia of religion and ethics*, v. 12, pp. 272-275, 281-282).—See also BRAHMANISM: Essential features; CHRISTIANITY: Stage of development of religious philosophy; JEWS: Religion and the prophets; MOHAMMEDANISM: Moslem orthodoxy; NEOPLATONISM; ZOROASTRIANS.

**THEMES**, administrative divisions of the Byzantine empire. "The term *thema* was first applied to the Roman legion. The military districts, garrisoned by legions, were then called *themata*, and ultimately the word was used merely to indicate geographical administrative divisions."—G. Finlay, *History of Byzantine empire*, bk. 1, ch. 1, sect. 1, footnote.—See also BYZANTINE EMPIRE: 717.

**THEMISTOCLES** (c. 514-449 B. C.), Athenian statesman and general. Became political leader in opposition to Aristides, who was ostracized in 483 B. C.; instrumental in creating the naval resources of Athens, and in bringing about the victory over the Persians at Salamis, 480 B. C.; ostracized, c. 471 B. C.; charged with complicity in the treason of Pausanias; lived in exile in Argos, and went to Persia, 465 B. C., where he was pensioned by Artaxerxes. See GREECE: B. C. 480: Persian Wars: Salamis; ATHENS: B. C. 470-476; B. C. 472; ACROPOLIS OF ATHENS.

**THEOBALD**. See THIBAUT.

**THEOCRITUS** (fl. 3rd century B. C.), Greek poet. See GREEK LITERATURE: Greek poetry reborn in Sicily.

**THEODORA** (c. 508-547), Byzantine empress, 527-547. As the wife of Justinian, she took an important part in the administration of state affairs. See ROME: Medieval city: 527-565.

**Theodora** (d. 1057), Byzantine empress, 1054-1057. Daughter of Constantine VIII; joint empress with her sister, Zoë, 1042; became sole ruler, 1054.

**Theodora** (called the *Senatrix*) (fl. 10th century), Roman woman. Influential in Rome and in papal affairs; instrumental in the election of Pope John X, 914. See PAPACY: 887-1046; ROME: Medieval city: 903-964.

**THÉODORE I**, pope, 642-649.

**Theodore II**, pope, 807.

**Theodore (Feodor) I** (1557-1508), tsar of Russia, 1584-1598. See RUSSIA: 1533-1682.

**Theodore II** (1589-1605), tsar of Russia, April to July, 1605.

**Theodore III** (1661-1682), tsar of Russia, 1676-1682.

**THEODORE**, Davilmar (d. 1015), Haitian revolutionist. Military president of Haiti, 1914. See HAITI, REPUBLIC OF: 1911-1916.

**THEODORE LASCARIS** (d. 1222), emperor of Nicæa, 1206-1222. Was raised to the throne after distinguishing himself during the sieges of Constantinople by the Venetians and the Crusaders, 1203-1204. See NICÆA: 1204-1261.

**THEODORE LIJ KASA**. See LIJ KASA.

**THEODORE VON NEUHOFF**. See NEUHOFF, THEODORE STEPHEN, BARON VON.

**THEODORIC I**, king of the Franks, at Metz, 511-534.

**Theodoric II**, king of the Franks (Austrasia), 612-613; king of Burgundy, 596-613.

**Theodoric III**, king of the Franks (Neustria and Burgundy), 670-691.

**Theodoric IV**, king of the Franks (Neustria, Austrasia and Burgundy), 720-737.

**Theodoric I, the Great** (c. 454-526), king of the Ostrogoths, c. 474-526. Sent as hostage to Constantinople, 451; invaded Mæsia with his father, 473; succeeded his father, c. 474; invaded Italy, 488; defeated Odoacer at Isonzo, and Verona, 489; concluded a peace with Odoacer, February, 493, by which they were to rule Italy conjointly; violated truce by killing Odoacer, March, 493; sole ruler of Italy, 493-526, and during this period introduced many reforms. See GOTHS: 473-488; ROME: Medieval city: 488-520; ALEMANNI: 490-504; RAVENNA: 493-525.

**Theodoric I** (d. 451), king of the Visigoths, 419-451. Fought against the Huns under Attila at the battle of Chalons, 451. See GOTHS: 419-451; HUNS: 451.

**Theodoric II** (426-466), king of the Visigoths, 453-466. See GOTHS: 453-484.

**THEODOSIA** (fl. 4th century), Roman physician. See MEDICAL SCIENCE: Ancient: 3rd-6th centuries.

**THEODOSIAN CODE**.—"In the year 429 Theodosius determined to form a collection of all the constitutions issued by the renowned Constantine, the divine Emperors who succeeded him, and ourselves." The new code was to be drawn up on the model of the Gregorian and Hermogenian codes, and the execution of the work was entrusted to a commission of nine persons, among whom was Apelles, professor of law at the new university. Nine years later the work was completed and published, but during the intervening years the members of the commission had changed; of the eight who are mentioned in the edict which accompanied the final publication only two, Antiochus and Theodorus, were among the original workers, and a constitution of A. D. 435, which conferred full powers on the committee for the completion of the work, mentions sixteen compilers. The code was issued conjointly by Theodosius and Valentinian, and thus expressed the unity of the Empire (February 15, A. D. 438). The visit of the younger Emperor to Constantinople on the occasion of his marriage with his cousin Eudoxia facilitated this co-operation. On December 23 of the same year, at a meeting of the Senate of Old Rome, the code which had been drawn up by the lawyers of New Rome was publicly recognised, and an official account of the proceedings on that occasion—*gesta in senatu Urbis Romæ de recipiendo Codice Theodosiano*—may still be read. . . . The Code of Theodosius was superseded at the end of a hundred years by the Code of Justinian."—J. B. Bury, *History of the later Roman empire*, v. 1, pp. 232-234.—See also CODES: 117-533; CORPUS JURIS CIVILIS.

**THEODOSIUS I, the Great** (c. 346-305), Roman emperor (Eastern), 379-305. Commanded in Mæsia, 374; made joint emperor by Gratian and ruler over the East, 379; defeated the Visigoths and Ostrogoths 380-383; after the death of Gratian, had as colleagues Maximus, Valentinian II, and Eugenius; ordered the massacre at Thessalonica, for which he had to suffer the humiliation of submission to Bishop Ambrose, 390; defeated Arbogast

and Eugenius at the Frigidus, near Aquileia, 394, and became sole emperor. See **ROME: Empire: 363-379; 379-395; 391-395; GOTHs: 379-382; BARBARIAN INVASIONS: 4th century; THESSALONICA: 390.**

**Theodosius II** (401-450), Roman emperor (Eastern), 408-450. Waged wars against the Persians, 421, and 441; during his reign frequent incursions of the Huns took place; ordered the compilation of the Theodosian Code, 429. See **ROME: Empire: 400-518; THEODOSIAN CODE.**

**Theodosius** (d. 370), Roman general of Spanish birth. Freed southern Britain from the Caledonians and Scots, 367-370. See **BRITAIN: 367-370.**

**THEOPHILUS**, Roman emperor (Eastern), 820-842. Waged war against the Saracens, 837. See **AMORIAN WAR.**

**THEOPHRASTUS** (c. 372-287 B.C.), Greek philosopher. Disciple of Aristotle; succeeded him as head of the Peripatetic school, 322-287 B.C. See **SCIENCE: Ancient: Greek; EDUCATION: Ancient: B.C. 7th-A.D. 3rd centuries: Greece: Socrates and the philosophical schools.**

**THEORI.**—The name of Theori, among the ancient Greeks, "in addition to its familiar signification of spectators at the theatre and public ambassadors to foreign sanctuaries and festivals, was specially applied to certain public magistrates, whose function it was to superintend and take charge of religious affairs in general, though they often possessed along with this some more extensive political power."—G. Schömann, *Antiquities of Greece: The state, pt. 2, ch. 5.*

**THEORICON.**—"By means of the Theoricon, . . . the most pernicious issue of the age of Pericles, there arose in a small free state [Athens] a lavish expenditure, which was relatively not less than in the most voluptuous courts, and which consumed large sums, while the wars were unsuccessful for the want of money. By it is understood the money was distributed among the people for the celebration of the festivals and games, partly to restore to the citizens the sum required for their admission into the theatre, partly to enable them to procure a better meal. In part it was expended for sacrifices, with which a public feast was connected. . . . The superintendents of the theoricon were not called treasurers; but they evidently had a treasury. Their office was one of the administrative offices of the government, and indeed of the most eminent. They were elected by the assembly of the people through cheirotomia. Their office seems to have been annual. Their number is nowhere given. Probably there were ten of them, one from each tribe. . . . The Athenian people was a tyrant, and the treasury of the theorica its private treasury."—A. Boeckh, *Public economy of Athens* (tr. by Lamb), *bk. 2, ch. 7, 13.*

**THEOSOPHY.**—According to its exponents "Theosophy has long been the name for the ancient Wisdom-religion: those basic truths that have always been the life of religion, philosophy, science and art. This being a world of growth, the practical value of Theosophy lies most in its cultivation of discernment between non-essentials and the things that are worth while, resulting in determination to achieve true progress. . . . 'Divine-Wisdom Religion' or Theos-osophia is that which has been the enlightening principle of all culture and

of every civilization. Beside Brotherhood, its tenets with which we have most concern are un-failing Compensation of 'Karma,' and Reincarnation."—C. T. Stark, *What is Theosophy? (Overland Monthly, Apr., 1916, p. 304)*.—"To estimate the value of the work done by Theosophy is rather a difficult task. It has certainly popularized, in Europe and America, a number of the best Oriental books, such as the Upanishads [see **UPANISHADS**] and the *Gita*, and has taught Theosophists to sympathize with Orientals and to think of them as brothers; while in India it has helped to restore to the Hindu and the Buddhist that self-respect which tended to evaporate amid the almost universal depreciation of Oriental thought, life and art. But there is a vast amount to be placed on the other side of the account. Theosophy under Madame Blavatsky condemned and ridiculed Orientalists, and yet took from them, almost without acknowledgement, practically all the trustworthy knowledge of the East it possessed."—J. N. Farquhar, *Modern religious movements in India, pp. 288-289*.—"The system of thought and terms used are largely drawn from Hinduism and Buddhism. The theosophical system is divided into various stages of individual spiritual development—namely: Adept, Master, Mahatma,—Mahatma being the highest. The theosophist of this last class refrains from entering Nirvana and remains on earth that he may help mankind by his presence. "There are now [1922] branches of the Theosophical Society in almost every country in the world. The number of lodges is 1,100, the membership about 30,000, and the influence of theosophical teaching is even greater than these considerable numbers might lead us to imagine. . . . It is undoubtedly true that India is the country most affected by theosophical influences. [See **INDIA: 1815-1922.**] America, however, is a good second, and in the latter country the percentage is greater. . . . Besides this, there is in America a Society, with a considerable membership, calling itself the Universal Brotherhood and Theosophical Society, and claiming to be the original Theosophical Society. . . . In Britain the explicit progress of theosophy has not been so rapid as in America and India. . . . The modern history of theosophy may be said to date from the year 1875, when in the words of Mrs. Besant, 'theosophy again rode into the arena of the world's thought, mounted on its new steed, the Theosophical Society,' under the guidance of . . . Helena Petrovna Blavatsky . . . known by her followers as H. P. B. . . . In 1873 she went to America, and in 1875. . . . she, in conjunction with Col. Olcott, founded the Theosophical Society. . . . As things in America did not prove altogether to their liking, the two leaders, frequently known as the 'Theosophical Twins,' migrated to India in 1878, and here fortune favoured them to a greater extent. Madame Blavatsky . . . made a direct appeal to India's justifiable pride in a rich philosophical and religious inheritance, and thus evoked the patriotic sentiments of the people of the land. . . . [She] left Madras in 1885, never to return. . . . Mr. W. Q. Judge, one of the Blavatsky group, separated from the main Theosophical Society, and founded the 'Universal Brotherhood and Theosophical Society,' having its headquarters in California. The main tradition in India was carried on by Col. Olcott and Mrs. Besant (who had spent most of her time there since 1893), and since the death of the former, in 1907, Mrs. Besant has been the President of the Theosophical Society."—W. S. Urquhart, *The-*

osophy and Christian thought, pp. 16-22.—See also MYSTICISM; NEOPLATONISM.

**THÉOT**, Catherine (1716-1794), French visionary. Her hallucinations, that Robespierre was to be the redeemer of mankind, figured in the proceedings of the ninth Thermidor. See FRANCE: 1794 (June-July); French victory at Fleurus.

**THEOW**.—"In the earliest English laws . . . slaves are found; the 'theow' [from the same root as "dienen," to serve] or slave simple, whether 'wealh'—that is, of British extraction, captured or purchased—or of the common German stock descended from the slaves of the first colonists; the 'esne' or slave who works for hire; the 'wite-theow' who is reduced to slavery because he cannot pay his debts."—W. Stubbs, *Constitutional history of England*, ch. 5, sect. 37.

**THERA**, ancient name of the Greek island of Santorin, one of the Sporades, whose inhabitants were enterprising navigators, and weavers and dyers of purple stuffs. They are said to have founded Cyrene, on the north African coast.—Based on E. Curtius, *History of Greece*, bk. 2, ch. 3.—See also CYRENAICA; GREECE: B. C. 416.

**THERAMENES** (d. 403 B.C.), Athenian statesman and general. Leader of the Four Hundred, the oligarchy which he later opposed, 411 B.C.; took part in the battle of Cyzicus, 410 B.C.; brought about the condemnation of the Athenian generals after the defeat at Arginusæ, 406 B.C.; concluded peace with Sparta, 404 B.C.; was chosen one of the Thirty Tyrants; put to death through the influence of Critias, 403 B.C. See ATHENS: B. C. 404-403.

**THERESA**, Saint (Teresa de Cepeda) (1515-1582), Spanish Carmelite nun and reformer. Canonized by Gregory XV, 1622.

**THERESA OF CASTILE** (fl. 11th century), regent of Portugal, 1114-1128. See PORTUGAL: 1095-1325.

**THERMA**, ancient site of the modern Salonika. See SALONIKA.

**THERMÆ**, public baths of Roman cities. See BATHS.

**THERMES**, Palais de. See PARIS: Julian's residence.

**THERMIDOR**, eleventh month of the French revolutionary calendar. See CHRONOLOGY: French revolutionary era, etc.

Ninth of Thermidor. See FRANCE: 1794 (June-July).

**THERMIDORIANS**, French revolutionary party. See FRANCE: 1794-1795 (July-April).

**THERMOPYLÆ**, Greek pass leading from Locris into Thessaly, between Mount Oeta and the Maliac gulf. See THESSALY; GREECE: Map of ancient Greece.

B. C. 480.—Defense by Leonidas against the Persians. See GREECE: B. C. 480: Persian Wars: Thermopylæ.

1822.—Greek victory over the Turks. See GREECE: 1821-1829.

**THERVINGI**, Roman name for the Visigoths. See GOTHS: 376.

**THESES OF LUTHER**, Ninety-five. See PAPACY: 1517.

**THESEUM**, temple of Athens. See ATHENS: B. C. 461-431: General aspect of Periclean Athens; TEMPLES: Ancient examples.

**THESMOTHETÆ**, six junior archons at Athens. See ATHENS: B. C. 753-650.

**THESPIÆ**, ancient Greek city of Bœotia, eight miles southwest of Thebes. It sent 700 men to Thermopylæ who fought against the Persians with the Spartans under Leonidas. See GREECE: B. C. 480: Persian Wars: Thermopylæ.

**THESPIS** (fl. 6th century B.C.), Greek poet, called the founder of Greek tragedy. See DRAMA: Origin.

**THESPROTIANS**, Hellenic tribe. See HELLAS; EPIRUS.

**THESSALONICA**, ancient city of Greece, now known as Salonika. Originally called Therma from the hot springs in the vicinity. This city of Macedonia, received the name of Thessalonica, about 315 B.C., in honor of the sister of Alexander the Great, who married Cassander. Cassander gave an impetus to the city which proved lasting. It rose to a high commercial rank, acquired wealth, and became, under the Romans, the capital of the Illyrian provinces.

A. D. 52-53.—St. Paul's missionary work. See CHRISTIANITY: A. D. 35-60.

390.—Massacre ordered by Theodosius.—A riotous outbreak at Thessalonica, 390, caused by the imprisonment of one of the popular favorites of the circus, was punished by the Emperor Theodosius in a manner so fiendish that it seems well-nigh incredible. He caused the greatest possible number of the inhabitants to be invited, in his name, to witness certain games in the circus. "As soon as the assembly was complete, the soldiers, who had secretly been posted round the circus, received the signal, not of the races, but of a general massacre. The promiscuous carnage continued three hours, without discrimination of strangers or natives, of age or sex, of innocence or guilt; the most moderate accounts state the number of the slain at 7,000; and it is affirmed by some writers that more than 15,000 victims were sacrificed. . . . The guilt of the emperor is aggravated by his long and frequent residence at Thessalonica."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 27.

904.—Capture and pillage by the Saracens.—The capture of Thessalonica by a piratical expedition from Tarsus, 904, was one of the most terrible experiences of its kind in that age of blood and rapine, and one of which the fullest account, by an eye-witness and sufferer, has come down to posterity. The wretched inhabitants who escaped the sword were mostly sold into slavery, and the splendid city—then the second in the Byzantine empire—was stripped of all its wealth. The defense of the place had been neglected, with implicit dependence on the good will and the power of St. Demetrius.—G. Finlay, *History of the Byzantine empire, from 716 to 1057*, bk. 2, ch. 1, sect. 2.

1204-1205.—Acquired by the marquis of Monferrat. See BYZANTINE EMPIRE: 1204-1205.

1222-1234.—Greek empire. See EPIRUS: 1204-1350.

1430.—Capture by Turks.—Thessalonica, feebly defended by Venetians and Greeks, was taken by the Turks, under Amurath II, in February, 1430.

"The pillage and the carnage," relates the Greek Anagnosta, an eye-witness of this disastrous night, 'transcended the hopes of the Turks and the terror of the Greeks. No family escaped the swords, the chains, the flames, the outrages of the Asiatics fierce for their prey. At the close of the day, each soldier drove like a herd before him, through the streets of Salonica, troops of women, of young girls, of children, of calovers and anchorites, of monks of all the monasteries. Priests were chained with virgins, children with old men, mothers with their sons, in derision of age, of profession, of sex, which added a barbarous irony to nudity and death itself.'"—A. Lamartine, *History of Turkey*, bk. 10, sect. 27.

For later history see SALONIKA.

**THESSALY**, division of ancient Greece, now a part of the Hellenic kingdom. "Thessaly, the largest and most fertile country of [ancient] Greece Proper, was almost identical with the basin of the Peneus. [See GREECE: Map of ancient Greece.] It was a region nearly circular in shape with a diameter of about seventy miles. Mountains [familiar names, such as Olympus, Pelion and Ossa, Parnassus, Helicon and Othrys] surrounded it on every side, from which descended numerous streams, all of them converging, and flowing ultimately into the Peneus. The united waters passed to the Sea through a single narrow gorge, the celebrated vale of Tempe which was said to have been caused by an earthquake. Thessaly was divided into four provinces:—(a) Perrhaebia on the north, along the skirts of Olympus and the Cambunians; (b) Histiaiotis, toward the west, on the flanks of Pindus, and along the upper course of the Peneus; (c) Thessaliotis, towards the south, bordering on Achaea Phthiotis and Dolopia; and (d) Pelasgiotis, towards the east, between the Enipeus and Magnesia. [See MAGNESIA.] Its chief cities were, in Perrhaebia, Gonni and Phalanna, in Histiaiotis, Gomphi and Tricca; in Thessaliotis, Cierium and Pharsalus; in Pelasgiotis, Larissa and Pherae."—G. Rawlinson, *Ancient history*, p. 101.—"Quitting Thesprotia in Epirus (about B. C. 1200) the Thessalians crossed the Pindus mountain chain, and descending on the fertile valley of the Peneus, drove out the Boeotians and occupied it. . . . [Under the conquerors] a federal tie of the weakest character united the several states of Thessaly in ordinary times; but upon occasions this extreme laxity was replaced by a most stringent centralization. A Tagus (commander-in-chief) of all Thessaly was appointed, who exercised powers little short of despotic over the whole country."—*Ibid.*, pp. 131-132.—See also GREECE: Migrations of Hellenic tribes in the peninsula.—As late as after 500 B. C. the tagus was chosen from the princely family of the Alenadae whose stronghold was on Peneus. "Under their influence Thessaly . . . received a common system of national institutions, particularly an organization of its army. . . . They extended their dominion into the vicinity of Thermopylae, and are by Herodotus styled outright the kings of the country. . . . Their ambition was directed to the acquisition of an unconditioned and hereditary sway over the country; and they therefore entered into negotiations with the Persians . . . [and were] the first among all the Hellenes to offer voluntary homage to Xerxes . . . in the name of the Thessalian people, though wholly unauthorized by the latter. . . . Thus before Xerxes had taken a single step himself, he found the largest country of Greece prostrate at his feet. [After the battle of Thermopylae] the

Thessalians rejoiced in the opportunity of vengeance on their hated enemies, the Phocians, since the latter had . . . refused to purchase the mediation of the Thessalians. . . . The Persians, guided by the Thessalians devastated the valley of Cephians."—E. Curtius, *History of Greece*, v. 2, pp. 274-275, 315.—In 480 B. C. Mardonius, commander-in-chief of the Persian troops, was stationed in Thessaly.—See also GREECE: B. C. 470: Persian Wars; Plataea.—"Conditions of division and party-conflict continued during the entire period of the Peloponnesian War; and we see individual party-chiefs, who succumbed at home, seeking for aid abroad and thus drawing foreign states into the sphere of the domestic affairs of Thessaly. Thus Hellenocrates, the Larisaean, applies to the Macedonian king Archelaus, and again Aristippus to Cyrus, who sends him money, to enable him to hire troops and maintain himself at Larisa. . . . Sparta resumed her endeavors to acquire power in Thessaly with fresh order after the overthrow of Athens. The Spartans recovered possession of the city of Heraclea, . . . placed a garrison in Pharsalus, and established for themselves a supremacy over the tribes of Southern Thessaly. . . . About the close of the Peloponnesian War new movements . . . [broke] out in Thessaly. . . . Here Medius, the dynast of Larisa had for years been involved in a feud with Lycophron, the tyrant of Pherae. The latter being supported by Sparta, had the advantage in this quarrel. As soon [however] as the Larisaean heard of the anti-Spartan [Corinthian] league they applied to it, and . . . succeeded in taking Pharsalus. . . . The whole of Thessaly joined the League [305 B. C. and] . . . in the space of a few months, the influence of Sparta in Central and Northern Greece had been virtually annihilated. . . . But Lycophron contrived to maintain himself even without foreign support; and now succeeded in placing Pharsalus on his side. . . . The schemes of Lycophron were carried out by Iason, his successor in the government . . . [whose goal was] the union of Thessaly, a single undivided Hellas from Mount Olympus to Crete, and a Persian war under Thessalian leadership. . . . Thessaly had become one vast military camp. . . . Pherae was the centre and focus of the entire country . . . [when in 370 B. C. at the Pythian festival at Delphi] Iason . . . in the character of supreme military chief was assassinated. . . . With him the whole future of Thessaly was carried to the grave. . . . The contrary of all Iason had sought to bring about actually came to pass; instead of a lawful government, savage despotism; instead of union of the land, division and discord; instead of a power reaching beyond the boundaries of Thessaly, weakness, an instance of which was her appeal to Thebes, intervention from abroad, and dependence upon foreign powers."—E. Curtius, *History of Greece*, v. 4, pp. 462-464, 244, 460, 470, 472-473.—See also GREECE: B. C. 477-461; B. C. 371-362; ATHENS: B. C. 458.—In 344 B. C. Thessaly became united with Macedonia through the influence of King Philip. (See GREECE: B. C. 357-336.) While Philip was in Epirus, 342 B. C., Athens had stirred up an agitation among the Thessalians. For this reason Philip divided the country into four parts, and placed each part under a separate tetrarch entirely dependent upon himself. Consequently Thessaly ceased to exist, and the numerous separate Hellenic town-communities were mere villages devoid of rights and belonging to the Macedonian province. The country remained under

Macedonian control until 197 B. C. when it was united with Macedonia and made subject to Rome. After Constantine it became a separate Roman province. It was under the rule of the Venetians in 1204, but from 1331-1355, during the reign of Stephen VI, it was under the sway of Serbia. In 1355 it was taken by the Turks, but by the Treaty of Berlin, 1881, it was again acquired by Greece (which had become an independent kingdom in 1832), and constituted the northern frontier of Greece until the Balkan War in 1912.—Based on L. Thorndike, *History of mediæval Europe*, pp. 554, 536.—See also GREECE: 1862-1881.

1878.—Under Turkish control by Treaty of San Stefano See BALKAN STATES: 1878.

1897.—Ceded to Greece. See TURKEY: 1897.

THETES, term for the lowest of the four classes in Athens. See ATHENS: B. C. 504.

THEUDEBERT (d. 548), king of the Franks (Austrasia), 534-548. Conquered Rhatia, 536. See FRANKS: 539-553.

THIASI.—"The name denotes associations [in ancient Athens] which had chosen as their special protector and patron some deity in whose honour at certain times they held sacrifices and festal banquets, whilst they pursued in addition objects of a very varied nature, sometimes joint-stock businesses, sometimes only social enjoyments."—G. F. Schömann, *Antiquities of Greece*, pt. 3, ch. 3, sect. 2.

THIAUMONT, fortified position east of the Meuse and about two miles north of Verdun, eastern France. In 1016 it was taken by the Germans and retaken by the French. See WORLD WAR: 1916: II. Western front: b, 15; b, 18.

THIBAUT, or Theobald I (1201-1253), count of Champagne and Brie, king of Navarre, 1234-1253, and French poet. Went to Palestine, 1239, and was defeated at Gaza. See SPAIN: 1212-1238; MUSIC: Medieval: 12th-14th centuries.

Thibaut II, king of Navarre, 1253-1270.

THIBAUT, Jacques Anatole. See FRANCE, ANATOLE.

THIBAW, or Thebau (d. 1916), king of Burma, 1878-1886. Dethroned by the British and sent to India, 1886, when his territories were annexed by Britain. See BURMA: Early history; 1824-1886; INDIA: 1864-1893.

THIBET. See TIBET.

THIEPVAL, village of northern France, in the department of Pas-de-Calais, about four miles north of Albert. In 1916, during the battle of the Somme, it was taken from the Germans by the Allies. It was also a scene of fighting in 1918. See WORLD WAR: 1916: II. Western front: d, 5; d, 9; d, 12; 1918: II. Western front: k, 1.

THIERRY, or Theodoric, name of several Frankish kings. See THEODORIC.

THIERRY, Jacques Nicolas Augustin (1795-1856), French historian. See HISTORY: 29; 30; FRANCE: 12th-13th centuries.

THIERS, Louis Adolphe (1797-1877), French statesman and historian. Supported Louis Philippe, and held various cabinet offices, 1832-1836; premier, 1836, and 1840; banished by Napoleon III, 1851, but returned to France, 1852; elected to the Corps Législatif, 1863; led the opposition to the imperial policies of Napoleon; opposed the war with Prussia, 1870; conducted peace negotiations with Germany, 1871; suppressed the insurrection of the commune; was declared president of the republic by the as-

sembly, 1871; resigned, 1873. See FRANCE: 1830-1840, to 1842-1848; 1851: Plot of the coup d'état; 1871 (January-May); 1871-1876; 1875-1889; TARIFF: 1871-1892; PARIS: 1833-1848; DEMOCRACY: Genesis of modern democracy; HISTORY: 28.

ALSO IN: *Memoirs of M. Thiers*, 1870-1873.

THIN, or Thinā, ancient name of China. See CHINA: Names of the country.

THING, THINGVALLA, ALTHING.—"The judicial and legislative assembly of the Northmen represented by the word 'thing' (from 'tinga' = to speak, and allied to our English word 'think') can be traced in many local names throughout England, and more especially in the extreme North, where the Scandinavian race prevailed, and where the 'thing' was primitively held upon the site of, or as an appanage to, a 'hof' or temple. It is plainly seen in the Tynwald Court or general legislative assembly for the Isle of Man, where the distinctive feature of the primitive open-air assembly still survives in the custom of the whole assembly going once a year in solemn procession, attended by the governor of the island and a military escort, to a hill known as the Tynwald Hill, whence all the laws that have been passed in the course of the past year are proclaimed in English and Manx. . . . In Norway there is an 'Al-thing' or general assembly, and four district 'things' for the several provinces, as well as a Norwegian Parliament familiar to us as 'Stor-thing' or great council."—R. R. Sharpe, *Introduction to calendar of wills, Court of Hustling, London*, v. 1.—"By the end of the period of the first occupation of Iceland, a number of little kingdoms had been formed all round the coast, ruled by the priests, who, at stated times, convened their adherents and retainers to meetings for the settlement of matters which concerned any or all of them. These were called 'Things'—meetings, i. e. Mot-things. Each was independent of the other, and quarrels between the members of two separate Things could only be settled as the quarrels of nations are settled, by treaty or war. But the time soon arrived when the progress of political thought began to work upon this disjointed constitution; and then amalgamation of local Things into an Althing, of local jurisdiction into a commonwealth jurisdiction, was the historical result. . . . The Thingvalla, or Thingfield itself, was a vast sunken plain of lava, about four miles broad and rather more than four miles deep, lying with a dip or slope from north-east to south-west, between two great lips or furrows. A stream called Öxará, (Axewater) cuts off a rocky portion of the plain, so as almost to form an island. This is the famous Hill of Laws, or Lögberg, which was the heart of the Icelandic body politic. . . . This example of the Icelandic Thing is the most perfect that is known to history."—G. L. Gomme, *Primitive folk-moots*, ch. 2.

THIRTY-NINE ARTICLES.—The "Thirty-nine Articles of Religion were drawn up [1553, originally Forty-two Articles] by Cranmer and revised 1563 by Archbishop Parker in Queen Elizabeth's reign. . . . They are not intended as articles of Faith, but are rather explanations and safeguards to the Faith as set forth in the Creeds."

—J. S. Littell, *Historians and the English Reformation*, p. 118.—The articles were again revised in 1571 and an act passed by Parliament requiring the subscription of the clergy to "such of them as only concern the confession of the true Christian faith, and the doctrine of the Sacraments." A convocation of 1604 settled disputed points and left the articles as they now stand. The Irish church in convocation adopted them in 1635 and the Scottish Episcopal church in 1804. The American Episcopal church in its general convention of 1801 adopted the articles with several slight modifications. "The chief differences are the omission of the Athanasian Creed in Art. VIII.; the omission of Art. XXI., on the authority of General Councils; and the entire reconstruction of Art. XXXVII., on the Power of the Civil Magistrate."—P. Schaff, *Creeds of Christendom*, v. 3, p. 486.—The text may be found in the standard American edition of the "Book of Common Prayer."—See also CHURCH OF ENGLAND: 1534-1563.

THIS, or Thinis, in ancient geography, a city of Upper Egypt, near Abydos or perhaps identical with it. See EGYPT: Old empire and middle empire; MEMPHIS.

THISTLE: Scottish national emblem. See ST. ANDREW, SCOTTISH ORDER OF.

THISTLE, Order of the, Scottish order of knighthood instituted by James V in 1530.

THISTLEWOOD, Arthur (1770-1820), instigator of the Cato Street conspiracy, a plot formed to assassinate British cabinet ministers in 1820. See ENGLAND: 1820-1827.

THÖKÖLY, or Tekeli, Imre (Emerich), Prince (1657-1705), Hungarian patriot. Led an insurrection in Hungary, 1678; was aided by the Turkish sultan, Mohammed IV, 1682; imprisoned by the Turks after his defeat in 1685; invaded Transylvania, 1680, but was forced back; excluded from the amnesty promised to Hungarian rebels by the Peace of Carlowitz, 1699. See HUNGARY: 1668-1683; 1683-1687.

THOMAR, Antonio Bernardo da Costa Cabral, Count of (1803-1880), Portuguese statesman. Minister of justice and ecclesiastical affairs, 1830-1842; minister of the interior, 1842-1846; overthrown by a popular uprising, 1846; prime minister, 1840-1851. See PORTUGAL: 1824-1880.

THOMAS, Albert, French political leader. Minister of national industry, 1914. See FRANCE: 1914 (August-September).

THOMAS, Augustus (1850- ), American dramatist. See DRAMA: 1865-1913.

THOMAS, George Henry (1816-1870), American general. Made commander of the Army of the Cumberland, October, 1863; fought at the battle of Chattanooga, and with General Sherman invaded Georgia; 1864; defeated Hood at Nashville, 1864.

Campaign against Zollicoffer. See U.S.A.: 1862 (January-February: Kentucky-Tennessee).

Refusal of the command of the Army of the Ohio. See U.S.A.: 1862 (June-October: Tennessee-Kentucky).

At Chickamauga, and in the Chattanooga campaign. See U.S.A.: 1863 (August-September: Tennessee); Rosecrans's advance; (October-November: Tennessee).

Atlanta campaign. See U.S.A.: 1864 (May: Georgia), to (September-October: Georgia).

Campaign against Hood. See U.S.A.: 1864 (November: Tennessee); (December: Tennessee).

Secretary of war in President Johnson's cabinet. See U.S.A.: 1867 (March-May).

THOMAS, Isaiah (1740-1831), American printer and publisher. See PRINTING AND THE PRESS: 1850-1922.

THOMAS, John (1725-1776), American general. See U.S.A.: 1775 (May-August).

THOMAS, John (1805-1871), English divine. Founder of the society of the Brothers of Christ. See CHRISTADELPHIANS.

THOMAS, Philemon (1764-1847), American soldier and political leader. Led an insurrection in West Florida against Spain, 1810; member of the House of Representatives from Louisiana, 1831-1835. See FLORIDA: 1708-1810.

THOMAS, Theodore (1835-1905), American conductor. See MUSIC: Modern: 1774-1908.

THOMAS À BECKET. See BECKET, THOMAS À.

THOMAS À KEMPIS (Thomas Hammerken (c. 1380-1471), German mystic writer, generally re-

garded as the author of the "Imitation of Christ." See MYSTICISM.

**THOMAS OSTOJIC.** See STEPHEN VI.

**THOMOND**, ancient district of Ireland and part of the present County Clare in the province of Munster. It fell under Irish control in 1369. See IRELAND: 1327-1367.

**THOMPSON, William Hale** (1869- ), mayor of Chicago, 1915-1923. See CHICAGO: 1919 (April).

**THOMPSON, William Ormonde**, American lawyer. Counsel for the Commission on Industrial Relations, at Washington, and member of the coal commission. See U.S.A.: 1918-1920.

**THOMSON, David**, English colonial settler in New Hampshire. Took possession of a grant of land called Pannaway in 1623. See NEW HAMPSHIRE: 1622-1679.

**THOMSON, Sir Joseph John** (1856- ), English physicist. See SCIENCE: Modern: 20th century: Physics; NOBEL PRIZES: Physics: 1906.

**THOPIA**, House of, ruling family of northern Albania, 1359-1392. See ALBANIA: 1358-1443.

**THOR**, in Northern mythology, the god of thunder. He was second only to Odin in power, and first of all the gods of Valhalla in warlike exploits, especially directed against the evil giants and other malign forces.—See also MYTHOLOGY: Scandinavian.

**THORBECKE, Jan Rudolf** (1798-1872), Dutch statesman. Premier, 1840-1853, 1862-1866, and 1871-1872. See NETHERLANDS: 1840-1890, to 1853-1867.

**THOREAU, Henry David** (1817-1862), American naturalist and writer. See AMERICAN LITERATURE: 1830-1845.

**THORFINN KARLSEFNE**, or Karlsefni (fl. 11th century), Scandinavian explorer. Leader of the chief medieval expedition for the colonization of America, about 1007. See AMERICA: 10th-11th centuries.

**THORGILS.** See TURGEIS.

**THORGILSSON, Ari Frodi**, or Are (1067-1148), Icelandic chronicler. See SCANDINAVIAN LITERATURE: 1120-1250.

**THORILD, Thomas** (1750-1808), Swedish critic. See SCANDINAVIAN LITERATURE: 1750-1807.

**THORINGTON VS. WHITE**, Case of. See U.S.A.: 1869-1872.

**THORIUM**, Discovery of. See CHEMISTRY: Radio-activity: Thorium.

**THORLAKSSON, Jon** (1744-1819), Icelandic poet. See SCANDINAVIAN LITERATURE: 1600-1850.

**THORN**, or Torun, fortress town in Upper Silesia, Poland, on the right bank of the Vistula. It was founded by the Teutonic order in 1231, as an outpost against the Poles, and it was one of the towns of the Hanseatic League. In 1454 the townspeople revolted against the Teutonic order, and Thorn became a Polish town. It became an important stronghold in the 17th century and in 1878 it was converted into a fortress of the first rank. In 1921 Thorn had a population of 39,419. It was one of the towns of Upper Silesia allotted to Poland by the Ambassador's Conference July 28, 1920.—See also POLAND: 1793-1796; VIENNA, CONGRESS OF.

**Peace of (1466).** See POLAND: 1333-1572.

**THORNTON, Sir Edward** (1817-1906), English diplomat. Ambassador to the United States, 1867-1881; aided in the settlement of the Alabama Claims controversy, 1871. See ALABAMA CLAIMS: 1869-1871.

**THORNTON, Matthew** (1714-1803), American patriot. Signer of the Declaration of Independence.

See U.S.A.: 1776 (July): Text of Declaration of Independence.

**THORNTON, William** (1762-1828), American architect. Submitted plans which were accepted for the capitol at Washington, 1793; superintendent of patents, 1802-1828. See WASHINGTON, D. C.: 1791-1800; STATE, DEPARTMENT OF, UNITED STATES: 1790-1909.

**"THOROUGH" SYSTEM IN IRELAND.** See IRELAND: 1633-1639.

**THORVALD** (fl. 10th century), Icelandic missionary. Converted Iceland to Christianity, about 1000 A.D. See ICELAND: 981-1000.

**THOTH**, Greek name for the Egyptian god of letters, invention, and wisdom. See MYTHOLOGY: Egyptian.

**THOTHMES, or Tethmosis I**, son of Amenophis I. King of Egypt, c. 1540 B.C. See EGYPT: About B. C. 1700-1400.

**Thothmes II**, king of Egypt, c. 1500 B.C. See EGYPT: About B. C. 1700-1400.

**Thothmes III**, king of Egypt, c. 1503-1449 B.C. Conquered the known world of his day, including Syria, Phœnicia, Libya, and Ethiopia; built the temple of Karnak at Thebes. See EGYPT: About B. C. 1700-1400; CYPRUS: Early history; THEBES, EGYPT.

**THOU, Jacques Auguste de.** See DE THOU, JACQUES AUGUSTE.

**THOUROUT**, town of Belgium, in West Flanders, eleven miles southwest of Bruges. It was occupied by the Allies in 1918. See WORLD WAR: 1918: II. Western front: m; r, 2.

**THRACE**, name applied from ancient times to a large area in the Balkan peninsula, its boundaries varying from time to time.

**People.**—"That vast space comprised between the rivers Strymon and Danube, and bounded to the west by the easternmost Illyrian tribes, northward of the Strymon, was occupied by the innumerable subdivisions of the race called Thracians, or Threïcians. [See BALKAN STATES: Map showing distribution of nationalities.] They were the most numerous and most terrible race known to Herodotus: could they by possibility act in unison or under one dominion (he says) they would be irresistible. . . . Numerous as the tribes of Thracians were, their customs and character (according to Herodotus) were marked by great uniformity: of the Getæ, the Trausi, and others, he tells us a few particularities. . . . The general character of the race presents an aggregate of repulsive features unredeemed by the presence of even the commonest domestic affections. . . . It appears that the Thynians and Bithynians, on the Asiatic side of the Bosphorus, perhaps also the Mysians, were members of this great Thracian race, which was more remotely connected, also, with the Phrygians. And the whole race may be said to present a character more Asiatic than European; especially in those ecstatic and maddening religious rites, which prevailed not less among the Edonian Thracians than in the mountains of Ida and Dindymon of Asia, though with some important differences. The Thracians served to furnish the Greeks with mercenary troops and slaves."—G. Grote, *History of Greece*, pt. 2, ch. 26.—"Under Seuthes [424 B.C.], Thrace stood at the height of its prosperity. It formed a connected empire from Abdera to the Danube, from Byzantium to the Strymon. . . . The land abounded in resources, in corn and flocks and herds, in gold and silver. . . . No such state had as yet existed in the whole circuit of the Ægean. . . . But their kingdom failed to endure. After Seuthes it broke up into several princi-

palities."—E. Curtius, *History of Greece*, bk. 7, ch. 1.

B. C. 323-281.—Kingdom of Lysimachus and its overthrow. See MACEDONIA: B. C. 323-316, to 297-280.

B. C. 200.—Yielded to the Romans by Macedonia. See ROME: Republic: B. C. 215-100.

B. C. 168-A. D. 46.—As an autonomous state under Roman rule.—After the fall of Macedonia Thrace was for a time an independent state. In 133 B. C. it came under the suzerainty of Rome. Under the supremacy of the Romans, the Thracians were governed by a native line of vassal kings, reigning at Bizye (Wiza), between Adrianople and the coast of the Black sea, until the Emperor Claudius, 46 A. D., suppressed the nominal kingdom and made Thrace a Roman province.—Based on T. Mommsen, *History of Rome*, bk. 8, ch. 6.

379-382.—Settlements made by the Goths. See GOTHs: 379-382.

395.—Invasion by the Goths under Alaric. See GOTHs: 395.

395-1453.—As part of the Eastern empire.—From the time that Constantinople became the capital of the Eastern empire, the fortunes of Thrace were closely connected with it. When Constantinople fell, in 1453, the whole country came into the hands of the Turks. In the eighth and ninth centuries, "the great Thracian race, which had once been inferior in number only to the Indian, and which, in the first century of our era, had excited the attention of Vespasian by the extent of the territory it occupied, had . . . almost disappeared. The country it had formerly inhabited was peopled by Vallachian and Slavonian tribes."—G. Finlay, *History of the Byzantine empire*, bk. 1, ch. 1, sect. 1.

1307-1309.—Ravaged by Catalans. See CATALAN GRAND COMPANY.

1878-1913.—Bulgarian Thrace.—Creation of Eastern Rumelia and its union with Bulgaria.—Cession of territory in western Thrace to Bulgaria.—By the Treaty of Berlin, 1878, after the close of the Russo-Turkish War, the northern portion of Thrace became an autonomous province under the name of Eastern Rumelia, under Turkish suzerainty, but to be ruled by a Christian governor nominated by the Porte. The people of the province revolted in 1885 and proclaimed their union with Bulgaria. By the Treaty of London, May 30, 1913, Bulgaria received from Turkey a narrow section of western Thrace which gave her a frontage on the Aegean.—See also BALKAN STATES: 1913; BULGARIA: 1913; Second Balkan War.

1914-1918.—Part in the World War.—Eastern Thrace.—Western Thrace was occupied by Greece, with the consent of the allied and associated powers. See BULGARIA: 1914-1918; TURKEY: 1914-1918.

1918-1921.—Thracian problem at Paris peace conference.—Geographical, racial and religious factors involved.—Treaties of Neuilly and Sèvres.—"Thrace, consisting of the Provinces of Adrianople and Constantinople [in 1918, was] . . . on the table before the Peace Conference for more than two months [in 1910], and . . . caused more discussion in the political circles than any other territorial problem, with the exception of Fiume. Modern Thrace [then comprised] . . . the region extending along the Aegean Sea and the Sea of Marmora, from the eastern boundary of Macedonia, which is generally coterminous with the Mesta River, to Constantinople on the Bosphorus. . . . It touched on the east the Black Sea and [extended] . . . northward to the Bulgarian Plateau. The river Maritza which leaves Bulgaria in the

neighborhood of Adrianople and flows southward to the sea near Enos and Dedeagatch, divide[d] Thrace into two parts, Eastern Thrace, otherwise known as Turkish Thrace, and Western or Bulgarian Thrace. The northern boundary of Eastern Thrace which [was the] . . . boundary with Bulgaria, pass[ed] to the north of Adrianople and Kirk-Kilisse from the Maritza River to the Black Sea. The northern boundary of Western Thrace follow[ed] generally the course of the Arda River, from the neighborhood of Pasmakli to its junction with the Maritza in the neighborhood of Adrianople."—G. M. Bolling, *Question of Thrace at the peace conference* (*Journal of International Relations*, Jan., 1920, p. 337).—"The racial problems of Thrace are [extremely complicated]. . . . Religious factors add to the confusion. In Western Thrace there is a large population called the Pomaks; people who are probably Bulgarian in race and speech, but who are Moslems in religion. . . . In Eastern Thrace the Greeks . . . [had] the best claim on the basis of nationality . . . [for] not only did the Greeks hold virtually the entire coast, even on the side of the Black Sea; but in the interior they formed the matrix of this strange agglomeration, in which the Turkish and Bulgarian enclaves were embedded. In Western Thrace . . . Mr. Venizelos estimated a total population of about 400,000, made up . . . of Turks, . . . Greeks, and . . . Bulgarians. . . . In 1919 Bulgarian estimates . . . [did] not admit the existence of any Greeks at all there. . . . A slight Greek majority over the Bulgarians . . . [was] claimed by the one side . . . and a large Bulgarian preponderance . . . [was] claimed by the other. . . . Bulgaria [claimed that if she were] . . . deprived of Western Thrace . . . [her] one direct and secure access to the open sea, . . . [it] would be a disaster and an affront from which . . . [her] people would never recover. . . . From the standpoint of nationality, it would seem only just to award Eastern Thrace to Greece, and perhaps at least the southern half of Western Thrace as well. . . . The Greeks ardently . . . [desired] this, both for the sake of liberating their kinsmen, and also . . . in order to build a bridge towards Constantinople."—E. H. Haskins and R. H. Lord, *Some problems of the peace conference*, pp. 282-284.—In accordance with the Peace Treaty of Neuilly, Nov. 27, 1919, Bulgaria ceded to Greece the section of western Thrace which she had obtained from Turkey in 1913. (See BULGARIA: 1919.) According to the Treaty of Sèvres with Turkey (Aug. 10, 1920), Turkey ceded eastern Thrace, west of the Chatalja to Greece, receiving only the Derkos water-supply. (See GREECE: 1918-1920; 1920.) "On February 2, 1921, Thracian deputies in the Greek National Assembly presented a memorandum to the Minister of Great Britain, France, Italy, and the United States, asking that Thrace under no circumstances be separated from Greece."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, Supplement, p. 85.—See also BALKAN STATES: 1921; Greece.

1922.—Return of eastern Thrace to Turkey.—Exodus of Christians.—"The Near Eastern problem, during the year [1922, was] featured by . . . the elimination of Greece from Asia Minor, and the return of the Turk to Eastern Thrace. . . . As soon as it was definitely known that Eastern Thrace was once more Turkish territory a great exodus of Christian inhabitants from that region began. On November 11 Dr. Dokiader, the Greek Minister of Interior, stated that there were over 1,500,000

refugees from Thrace and Asia Minor in Greece and that outside assistance would be needed if they were to be cared for."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1023, *Supplement*, pp. II-13.—See also GREECE: 1922 (September-October); TURKEY: 1922-1923.

1923.—Greek status quo maintained as result of the Near East conference. See NEAR EAST CONFERENCE (1922-1923).

**THRACER BULLET.** See RIFLES AND REVOLVERS: Shot-guns in World War.

**THRACIAN BOSPORUS.** See BOSPORUS: Thracian Bosphorus.

**THRACO-ILLYRIANS**, early tribe of Bulgaria. See BULGARIA: Earliest inhabitants.

**THRASYBULUS** (died c. 380 B. C.), Athenian general and statesman. Opposed the oligarchists at Samos, 411 B. C.; commanded at the battle of Cynossema, 411 B. C.; banished by the Thirty Tyrants, 404 B. C.; overthrew the Thirty and restored democracy, 403 B. C.; aided Thebes against Sparta, 395 B. C. See ATHENS: B. C. 413-411; B. C. 404-403.

**THREE CHAPTERS**, Dispute of, famous church dispute raised in the sixth century by the Emperor Justinian, who discovered an heretical taint in certain passages, called the Three Chapters, culled out of the works of Theodore of Mopsuestia and two other doctors of the church who had been teachers and friends of Nestorius. A solemn church council called (553) at Constantinople—the fifth general council—condemned the Three Chapters and anathematized their adherents. But this touched by implication the decrees of the Council of Chalcedon, which were especially cherished in the Latin church, and Rome became rebellious. In the end, the Roman opposition prevailed, and, "in the period of a century, the schism of the three chapters expired in an obscure angle of the Venetian province."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 47.

Also in: H. H. Milman, *History of Latin Christianity*, bk. 1, ch. 4.

**THREE KINGS' ALLIANCE** (1849). See GERMANY: 1850-1851.

**THREE LEGS OF MAN.** See TRI-SKELION.

**"THREE MILE LIMIT,"** boundary of territorial waters of a maritime state, that is, the line to which absolute jurisdiction, as over land, extends from the shore.

**THREE PRESIDENCIES OF INDIA.** See INDIA: 1600-1702.

**THREE RESOLUTIONS** (1620). See ENGLAND: 1620.

**THREE THOUSAND OF ATHENS.** See ATHENS: B. C. 404-403.

**THUCYDIDES** (c. 471-c. 401 B. C.), Greek historian. See HISTORY: 16; AMPHIPOLIS; ATHENS: B. C. 461-431: Appreciation of the Age of Pericles.

**THUGS**, members of an Indian cult devoted to assassination. They were worshipers of the goddess Kali, the patroness of destruction. The British took active measures against the Thugs in 1831 and by 1840 they were practically suppressed. See INDIA: 1823-1833; DACOITS.

**THULE.**—Pytheas, a Greek traveler and writer of the time (as supposed) of Alexander the Great,

was the first to introduce the name of Thule into ancient geography. He described it vaguely as an island, lying six days' voyage to the north of Britain, in a region where the sea became like neither land nor water, but was of a thick and sluggish substance, resembling that of the jelly fish. "It appears to me impossible to identify the Thule of Pytheas with any approach to certainty; but he had probably heard vaguely of the existence of some considerable island, or group of islands, to the north of Britain, whether the Orkneys or the Shetlands it is impossible to say."—E. H. Bunbury, *History of ancient geography*, ch. 15, sect. 2, footnote.—Some modern writers identify Thule with Iceland; some with the coast of Norway, mistakenly regarded as an island. But, whichever land it may have been, Thule to the Greeks and Romans, was Ultima Thule,—the end of the known world,—the most northerly point of Europe to which their knowledge reached.—Based on R. F. Burton, *Ultima Thule*, v. 1, introduction, sect. 1.

**THUNDERING LEGION.**—During the summer of the year 174, in a campaign which the Emperor Marcus Aurelius Antoninus conducted against the Quadi, on the Danube, the Roman army was once placed in a perilous position. It was hemmed in by the enemy, cut off from all access to water, and was reduced to despair. At the last extremity, it is said, the army was saved by a miraculous storm, which poured rain on the thirsty Romans, while lightning and hail fell destructively in the ranks of the barbarians. According to the pagan historians, Aurelius owed this "miraculous victory," as it was called, to the arts of one Arnuphis, an Egyptian magician. But later Christian writers told a different story. They relate that the distressed army contained one legion composed entirely of Christians, from Melitene, and that these soldiers, being called upon by the emperor to invoke their God, united in a prayer which received the answer described. Hence, the legion was known thereafter, by imperial command, as the Thundering Legion.—Based on P. B. Watson, *Marcus Aurelius Antoninus*, ch. 5.—See also ROME: Empire: 138-180.

Also in: Eusebius, *Ecclesiastical history*, bk. 5, ch. 5.

**THUN-HOHENSTEIN**, Count Franz Anton (b. 1847), Austrian statesman. Premier, 1898-1899. See AUSTRIA: 1898.

**THURGAU**, canton of northeastern Switzerland, bordering on the Lake of Constance and the Rhine as it issues from that lake. The population, in 1920, was 135,933. It became an independent canton in 1803, and in 1831 proposed a revision of the Federal Pact of 1815. See SUFFRAGE, MANHOOD: Switzerland: 1830-1848.

**THURII**, or **Thurium**, in ancient geography, a city of Magna Græcia, Italy, near the site of the older Sybaris and the modern Terranova. It was founded by fugitives from Sybaris in 452 B. C., who were soon after expelled, and it was refounded by Greek colonists, 443 B. C. It was plundered and depopulated by Hannibal in 204 B. C. See SIRIS; ATHENS: B. C. 466-445.

**THURINGIA**, territory and free state of central Germany. (See GERMANY: Map.) It is made up of a group of states lying between Prussia, Hesse-Nassau, Bavaria, and Saxony and consists of the union of the seven states of Weimar, Meiningen, Altenburg, Gotha, Reuss, Schwarzburg-Rudolstadt, and Schwarzburg-Sondershausen. It has a total area of 4,546 square miles, and in 1919, the population was 1,512,866. "To the eastward of the Saxons and of the Franks, the Thuringians had

just formed a new monarchy. That people had united to the Varni and the Heruli, they had spread from the borders of the Elbe and of the Undstrut to those of the Necker. They had invaded Hesse or the country of the Catti, one of the Frankish people, and Franconia, where they had distinguished their conquests by frightful cruelties. . . . It is not known at what period these atrocities were committed, but Thierry [or Theoderic, one of the four Frank kings, sons of Clovis] towards the year 528, reminds his soldiers of them to excite their revenge; it is probable that they were the motives which induced the Franks of Germany and those of Gaul to unite, in order to provide more powerfully for their defence." Thierry, the Frank king at Metz, and Clotaire, his brother, who reigned at Soissons, united in 528 against the Thuringians and completely crushed them. "This great province was then united to the monarchy of the Franks, and its dukes, during two centuries, marched under the standards of the Merovingians."—J. C. L. S. de Sismondi, *French under the Merovingians*, ch. 6.—See also EUROPE: Map showing barbaric migrations; SAXONY.

TIBARENIANS, people who anciently inhabited the southern coast of the Euxine, toward its eastern extremity.—Based on G. Rawlinson, *Five great monarchies: Persia*, ch. 1.

TIBBOOS, Egyptian name for the Berber race. See LIBYANS.

TIBERIAS, town in Palestine on the western shore of the sea of Galilee, seventeen miles north-east of Nazareth. It was founded by Herod Antipas in the first half of the first century A. D. and was a seat of Hebrew learning. It was taken by Saladin in 1187. The town was occupied by the British in 1918. See JEWS: 200-400; JERUSALEM: 1144-1187; WORLD WAR: 1918; VI. Turkish theater: c, 13; c, 21.

TIBERIUS (Tiberius Claudius Nero) (42 B.C.-37 A.D.), Roman emperor, 14-37 A.D. Became consul in 13 B.C., and tribune, 6 B.C.; adopted by Augustus, 4 A.D.; conducted several campaigns in Germany; became emperor, 14 A.D. See ROME: Empire: 14-37; GERMANY: B.C. 8-A. D. 11.

TIBERIUS ABSIMARUS, Roman emperor (Eastern), 698-704.

TIBERIUS CONSTANTINUS (d. 582), Roman emperor (Eastern), 578-582. See ROME: Medieval city: 505-628.

TIBET: Name.—Geography.—Inaccessibility

of Lhasa.—Priest government.—Dalai Lama and Tashi Lama compared.—Seats of learning.—Civil law.—Parties.—The name of Tibet is applied not only to the southwest portion of China but also to more than half of Kashmir occupied by people of Tibetan origin. "Tibet owes its remarkable isolation from the outside world primarily to its geographical position. [See ASIA: Influence of geography, etc.; CHINA: Map.] Between the Himalayas and the northern ranges of the Kuen-Lun and Arkha Tagh lies the Chang-tang, or 'northern plain,' the highest and most extensive tableland in the world, comprising some 300,000 square miles of bleak and barren waste at an average altitude of 14,000 to 16,000-feet above sea-level. North of this, again, lie the trackless sand-deserts of Gobi and Takla Makan, and along the whole southern border of Tibet the huge wall of the Himalayas bars the road to India; while in the south-east wild tribes, such as the Abors and Mishmis, prevent any intercourse with Burma or Assam. Thus Tibet is effectually shut off from her neighbours, except in the North-east and East, where a number of large rivers, springing from the edge of the plateau, flow into Chinese territory, forming so many roads from China into Tibet, and hence we find that the Mongols and Chinese alone of all nations have ever invaded Tibet or established close intercourse with the inhabitants. The total extent of [all] Tibet is certainly not less than 700,000 square miles. [The area of Tibet proper or Central Tibet was estimated, in 1922, as 463,200 square miles with a population of about 2,000,000.] The country is divided into four great provinces: Nari; . . . Tsang, on the upper waters of the Tsang-pu River; . . . U, . . . meaning 'central,' the most fertile and populous part of Tibet, containing the holy city of Lhasa; and Kham [and Kashmir] which includes the eastern districts adjoining China, governed by eighteen chiefs. . . . Tsang and U constitute Tibet proper, and are governed directly from Lhasa."—G. E. Bruce, *Our relations with Tibet (Imperial and Asiatic Quarterly Review, July, 1904, pp. 32-33)*.—The inaccessibility of Lhasa which lies in the very heart of the country is due in part to the "well-nigh insurmountable natural barriers [see LHASA] . . . and to the extreme difficulty of journeying within the country of Tibet itself, owing to the enormous elevation . . . and the absence of all facilities for travel. But the chief cause has been the political barriers raised by the [Buddhist] monks, the lamas, who are at the same time the rulers, the priests and the merchants of the country; and who prompted by their own commercial and clerical self-interest and their dread of losing their advantageous monopoly by the introduction of Europeans and their methods, have struggled and striven by every means in their power to preserve their isolation. . . . Nor was the jealousy of the Lamas directed against Europeans only. All natives of India, whether Buddhists or not, except a few well-known merchants from Nepal and Ladak, were equally excluded and prevented from crossing the frontier, in accordance with the standing order of the Emperor of China . . . which prescribed that 'no Moghul, Hindostani (Indian) Pathan or Feringhi (European) should be admitted into Tibet. . . . This isolation of Lhasa maintained for so many centuries, has resulted in that city becoming the center of the most extreme form of priest government the world has ever seen, and has led its esoteric priest-king [the Dalai Lama], in his luxurious, self-centered leisure, to arrogate to himself the position of the

divinity. He is adored as a manifestation of the Divine Being who has taken an undying form upon the earth."—L. A. Waddell, *Lhasa and its mysteries*, pp. 3-4, 20.—Of the two provinces of Central Tibet, or Tibet proper, Tsang in the west and U in the east, Tsang has in recent years come under the political control of the eastern province of which Lhasa with its Dalai Lama is the capital. Nevertheless the abbot of the Tashilhunpo Monastery is still the titular ruler of Tsang; and while the Dalai Lama has more political power, the two abbots rank as equals in religious matters and many Tibetans regard the Dalai Lama as the secular and the so-called Tashi Lama as the spiritual ruler of the country at large. The Dalai Lama lives in a magnificent palace called the Potala where he receives in audience pilgrims bearing rich gifts from every part of Tibet. A great army of priests and monks has grown up, the lamas of Lhasa alone numbering about 20,000. Monasteries

erated by the real owner. The very houses and furniture and all movable property are held in trust for the supreme master, whose subjects must be grateful if he takes a portion only for the requirements of the administration. One of the most ordinary sentences, in fact, is wholesale confiscation, when the condemned must leave house and lands, betaking themselves to a camp life, and living by begging in the districts assigned to them."—É. Reclus, *Earth and its inhabitants: Asia*, v. 2, ch. 2.—See also LAMAS; PRIESTHOOD: Pagan.—The code of laws in use in Tibet has for years been only a custom code and according to the observations made in a series of articles in the *New York Times*, October-November, 1923, by Professor W. M. McGovern, an Englishman who visited Lhasa in 1923, even this code "has broken down and the magistrates now attempt to judge every case on its individual merits, irrespective of statutes and only slightly influenced by precedents." Pro-

PALACE OF THE DALAI LAMA

Potala Hill, Lhasa, Tibet

exist in almost every town and country-side, some of the better known ones being, besides Lhasa and Tashilhunpo, Samding, Samyé and Mindolling, all celebrated for many centuries as seats of learning and all immensely wealthy. While thus opportunity for education is open to those of the priestly class who care to seize it, the monks and priests are for the most part lazy, sensual, degraded and law-breaking, while the bulk of the lay population are hopelessly ignorant and superstitious. "The Tibetan Government is in theory a pure theocracy. The Dalai-lama, . . . is at once god and king, master of the life and fortunes of his subjects, with no limit to his power except his own pleasure. Nevertheless he consents to be guided in ordinary matters by the old usages, while his very greatness prevents him from directly oppressing his people. His sphere of action being restricted to spiritual matters, he is represented in the administration by a viceroy chosen by the Emperor in a supreme council of three high priests. . . . The whole land belongs to the Dalai-lama, the people being merely temporary occupants, tol-

lessor McGovern also states that Tibet has never had a prison system and that since the formerly practiced inhuman punishments have recently been abolished by the present Dalai Lama as inconsistent with Buddhism, the only legal recourse for crimes, including murder, is flogging or banishment. The Dalai Lama acting under the advice of a liberal-minded and powerful minister, Tsarong Shapé, has instituted many reforms since he returned to power after the expulsion of the Chinese in 1912. Most of his progressive measures have met with vigorous resistance by the monks who dictate the policy of the so-called National Assembly, the reactionary party, pro-Chinese in its sympathies. The Court party, also autocratic, is however comparatively progressive and is pro-British in temper.

ALSO IN: H. Bower, *Diary of a journey across Tibet*, ch. 16.—E. Amundsen, *In the land of the lamas*.—F. Gerard, *Tibet: The country and its inhabitants*.

Early History.—"The early history of Tibet is wrapped in myth. The first King of whom we

have any authentic record was Fanni Tübat, of the great Tartar clan of Tübat, who reigned about the year 461 A. D., and from whom Tibet is supposed by some to take its name. . . . The fifth in descent from Fanni Tübat was Srong-btsan-sgampo, a powerful and enlightened King, who introduced Buddhism and handwriting from India, and founded the city of Lhasa in 639 A. D. He extended his kingdom as far as Ladak and Nepal, and Chinese historians assert that his rule ran to the Bay of Bengal, which they say was known up to the tenth century as the Tibetan Sea. . . . In the eighth and ninth centuries Tibet was involved in war with China, but, after a prolonged struggle and severe fighting, peace was finally made in 821 A. D. The monarchy ended about 1026, and an interregnum ensued which lasted until 1256, when Kublai Khan, who had ascended the throne of China, entered Tibet and conquered the eastern portion. He largely increased the temporal power of the lamas, and thenceforth much jealousy and dissension arose between rival monasteries, culminating about the year 1340 in open war, which ended in Chyang Chub Gyaltsan, surnamed Phagmodu, from his native town, seizing the throne and establishing a dynasty of twelve Kings, who ruled for many years over Tibet proper and the south-eastern province of Kham. The last Kings of this dynasty, however, were too weak to control their turbulent subjects, and civil war again broke out."—G. E. Bruce, *Our relations with Tibet* (*Imperial and Asiatic Quarterly Review*, July, 1904, p. 29).

1660-1875.—Beginning of Manchu influence.—Expulsion of Mongols by Chinese (1720).—Expulsion of Nepalese by Chinese (1790).—Annexation of Nyarong (1860).—Death of twelfth and reincarnation of thirteenth Dalai Lama (1875).—"China's position as Suzerain of Tibet appears to date from the early days of the Manchu Dynasty in the latter half of the seventeenth century. Lamaism (Tibetan Buddhism) had by that time already spread over vast areas of High Asia from Ladak to Manchuria, and the early Manchu Emperors, by adopting Lamaism as their State religion and recognising the Dalai Lama of Tibet as its head, secured a hold over Tibet, Mongolia, and the other lamaistic countries of Asia, which lasted until the fall of their Dynasty two and a half centuries later in 1911. [See also CHINA: 1662-1838.] It was the Manchu Emperor, rather than the Chinese Government, who was for more than two centuries recognised by the Tibetans as their Suzerain; and up to the last days of the Dynasty the Emperor was represented at Lhasa by a Manchu and not a Chinese. Early in the eighteenth century Tibet was invaded by the Dzungarian Mongols. The Manchu Emperor thereupon despatched two armies to the assistance of the Tibetans. Advancing by the Tachientu road from Szechuan and the Sining road from Kansu, the Chinese succeeded in reaching and occupying Lhasa and expelled the Mongols [1720]. This was the first of three successful Chinese advances into Tibet, each of which assured the dominion of the Manchu Emperors over the country for a short time afterwards. On this occasion a Manchu Resident and a garrison of Chinese soldiers were left in Lhasa, while communications with China were assured. . . . During the latter part of the eighteenth century Chinese power in Tibet was on the wane until, about 1790, the Nepalese invaded the country and sacked Shigatse. Roused to action the Manchu Emperor Ch'ien Lung despatched an army into Tibet, which defeated and expelled the Nepalese and even pursued them into their own country. At this period

the power of the Manchus was at its height, and Chinese armies, under Manchu leadership, were able to march thousands of miles from Peking across the plains and mountains of China and the deserts of Tibet to appear on the frontiers of Hindostan. This was the second of the three Chinese advances into Tibet, and again the Manchus decided to consolidate their position and strengthen their hold over the country. By Imperial Decrees of 1793 two Ambans were appointed, given equal rank with the Dalai and Panshen Lamas, and made responsible for the superintendence of the administration of the country. The Dalai Lama was placed to some extent in the hands of the Ambans by a law providing that he could only communicate with the Throne by means of memorials forwarded through the Ambans. After the death of the great Ch'ien Lung there followed the weak reigns of the Emperors Chia Ch'ing, Tao Kuang, Hsien Feng, Tung Chih, and Kuang Hsü, and again Chinese power in Tibet waned to the point of extinction. . . . In 1860 the Tibetans of Nyarong, under the leadership of an ambitious and warlike Chief named Gombu Nyamjyel, invaded and conquered the neighbouring States, including De-ge, and the Five Principalities of Hor. . . . The Tibetan claim to Nyarong, and to a lesser extent to De-ge and the Hor States, dated from this time (1865). Nyarong appears to have been annexed by the Dalai Lama with the approval of the Manchu Throne. . . . In 1875 the twelfth Dalai Lama died, and was reincarnated in the present Pontiff, thirteenth of the long line of Priest Rulers of Tibet."—E. Teichman, *Travels of a consular officer in eastern Tibet*, pp. 1-2, 4-6.

1886-1902.—Events leading to Sikkim convention.—Provisions of Sikkim convention (1890).—Repudiation by Tibetans.—"In 1886, the Tibetans raided the Sikkim frontier, and were expelled a year or two later by a small British expedition. As a result of these events the Sikkim Convention was concluded in 1890 between Great Britain and China, and a set of Trade Regulations for the control of commercial relations between India and Tibet was signed three years later. No Tibetan representative took part in the negotiations for the Sikkim Convention, Great Britain dealing with China as the master of Tibet. These events brought Great Britain for the first time [although earlier attempts to open communications had been made by both Warren Hastings and Coleman Ma-caulay], on the scene of Sino-Tibetan relations. . . . The Sikkim Convention concluded between Great Britain and China in 1890 defined the boundary between Sikkim and Tibet, and contained a reciprocal engagement on the part of both contracting parties to prevent acts of aggression across the border. During the years following its conclusion, however, it became more and more apparent that no progress had been made in opening friendly relations between India and Tibet and that little satisfaction was to be expected from this instrument concluded with China over the heads of the Tibetans; for the latter appeared to consider that as they were not directly a party to the Convention there was no need for them to carry out its provisions. All attempts by the Authorities in India to open friendly relations with the Tibetan Government were frustrated, peaceful messengers were maltreated, and letters returned unopened. The Sikkim Convention had been concluded with the Chinese Government on behalf of the Tibetan Government at the request of the former. But when the Tibetans failed to observe its provisions and recourse was had to diplomatic representations

at Peking, the Chinese Government were found to be apparently unable to influence the Tibetans in any way."—*Ibid.*, pp. 6, 9-10.

1902.—Russo-Chinese treaty for control of the country.—"A Russo-Chinese treaty concerning Tibet was negotiated [in the later months of 1902] . . . by Yung-lu. And as it had to be notified to the Chief-Lamas of the different Buddhist countries, it became possible to obtain the confidential communication of its text immediately on its conclusion. This text . . . runs as follows:

"Art. 1st.—Tibet being a territory situated between Central China and Western Siberia, Russia and China are mutually obliged to care for the maintenance of peace in that country. In case troubles should arise in Tibet, China, in order to preserve this district, and Russia, in order to pro-

the European model, and obliges herself to carry into effect this reform in a good spirit and without incurring blame from the native population. China, for her part, is to take care of the development of the economic situation of Tibet, and especially of her progress abroad."—A. Ular, *England, Russia, and Tibet* (*Contemporary Review*, Dec., 1902).

1902-1904.—British enforcement of unfulfilled promises.—Peaceful mission of Colonel Younghusband which forced its way to Lhasa.—Anglo-Tibetan convention, 1904.—Following renewed attempts in 1902-1903 to make a settlement through China of trade relations between India and Tibet "the British Government, realising the hopelessness of continuing to attempt to deal with the Tibetans through the Chinese Government and the absolute necessity of establishing direct relations with the

GALLERY OF ABBOTS IN THE MONASTERY AT GYANTSE, TIBET

tect her frontiers, shall despatch thither military forces on mutual notification.

"Art. 2nd.—In case of apprehension of a third Power's contriving, directly or indirectly, troubles in Tibet, Russia and China oblige themselves to concur in taking such measures as may seem advisable for repressing such troubles.

"Art. 3d.—Entire liberty in what concerns Russian orthodox as well as Lamaist worship will be introduced in Tibet; but all other religious doctrines will be absolutely prohibited. For this purpose, the Grand-Lama and the Superintendent of the Orthodox Peking Mission are bound to proceed amicably and by mutual assent, so as to guarantee the free propagation of both religions and take all necessary measures for avoiding religious disputes.

"Art. 4th.—Tibet shall be made, gradually, a country with an independent inner administration. In order to accomplish this task, Russia and China are to share the work. Russia takes upon herself the reorganisation of the Tibetan military forces on

Lhasa Government if trade was ever to be opened between India and Tibet and the peace of the frontier secured by proper treaty relations with the neighbouring State, despatched a Mission [under Colonel Younghusband in June, 1903], to negotiate a commercial agreement with the Tibetan Authorities direct. [Meetings promised by the Chinese resident or Amban at Lhasa failed to materialize.] Whatever the advice tendered to the Tibetans by the Chinese Amban may have been, they refused to receive any communication from the Mission, which met with repulse after repulse, until, having started as a peaceful embassy, it eventually reached Lhasa in August, 1904, as a military expedition. The Dalai Lama fled for the north shortly before the British force reached Lhasa. A convention was, however, concluded with the remainder of the Tibetan Government in the summer of 1904. Under this Agreement Tibet undertook to recognise the Sikkim Convention (which she has faithfully observed ever since), while provision was also made

for the opening of commercial relations between India and Tibet and for the establishment of Trade Marts at Gyantse and Gartok as well as at Yatung (the latter already opened under the Sikkim Convention). The British troops withdrew from Lhasa immediately after the conclusion of this Agreement, leaving the territorial integrity of Tibet and the independence of the Tibetan Government unimpaired."—E. Teichman, *Travels of a consular officer in eastern Tibet*, p. 10.

1904-1906.—Confirmation of Anglo-Tibetan convention.—"Negotiations were soon after opened to secure the adhesion of China, the nominal suzerain of Tibet, to the Anglo-Tibetan Convention of 1904. The Chinese Government at first endeavoured to revive their claim to be the sole medium of communication between the Government of India and the Tibetans and to replace the Anglo-Tibetan Treaty by a new Agreement. Eventually, however, the Lhasa Convention was duly confirmed by an Agreement between Great Britain and China signed at Peking in April, 1906. Under this instrument China adhered to and confirmed the Anglo-Tibetan Convention of 1904, while Great Britain undertook not to annex Tibetan territory or to interfere in any way in the internal Tibetan administration of the country."—*Ibid.*, p. 11.

1907.—Anglo-Russian convention concerning Tibet.—"In August, 1907, an Agreement was arrived at between Great Britain and Russia under which both parties undertook to respect the territorial integrity of Tibet and to refrain from interfering in the internal affairs of the Tibetan Government."—*Ibid.*, p. 11.—See also ANGLORUSSIAN AGREEMENT OF 1907.

1908.—Trade regulation conference in India.—"In 1908 a set of Trade Regulations governing Indo-Tibetan trade was signed at Calcutta between British, Chinese, and Tibetan representatives. The object of Great Britain in concluding these various agreements was to assure the territorial integrity of Tibet and to safeguard her existence as a peaceful autonomous buffer State between the three great Asiatic Empires, Russia, India and China, as well as to provide for the opening of friendly relations between the British and Tibetan Authorities in the interests of the peace of the Indian border and of trans-frontier trade. The fact, however, had been overlooked that China had through these very agreements obtained a free hand in re-establishing and consolidating her position in Tibet without the possibility of foreign interference, and was thus enabled to keep the Tibetans for a few more years in a state of political and economic vassalage."—*Ibid.*, pp. 11-12.

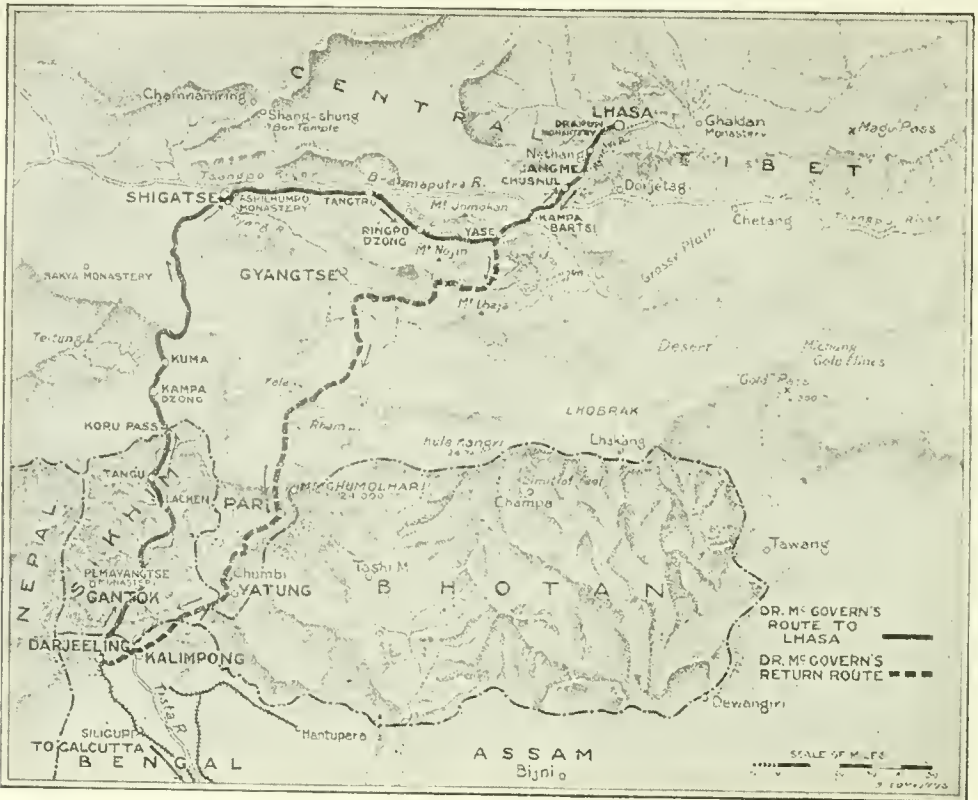

1910-1914.—Chinese authority strengthened in Tibet.—Flight of the Dalai Lama.—His formal deposition.—Expulsion of Chinese and return of Dalai Lama.—Chinese action checked by Great Britain.—Independence of Tibet proclaimed.—Conference at Simla.—The Dalai Lama, who had fled from Lhasa in 1904, on the approach of the British expeditionary force under Colonel Younghusband, did not return to Tibet until more than five years later. Meantime he had visited Peking, where he was coldly received, and seems to have wandered widely through the empire. During his absence the Chinese authority in Tibet had been strengthened, and his return was followed by a considerable reinforcement of troops to support the Ambans who represent the Chinese government at Lhasa. What friction arose then is not known, but the lama fled again, this time into India, and on February 25, 1910, he was deposed by an imperial decree. "During the three years following

the close of the conference in India peace reigned on the frontier between China and Tibet, though civil war and political strife in Western China, reacting on border affairs, prevented the Chinese from making any progress in consolidating their position in the Tibetan inhabited districts left in their hands. . . . Autonomous Tibet, on the other hand, freed from Chinese rule, had been enjoying years of internal peace and prosperity, and had reorganised and strengthened her frontier army."—*Ibid.*, pp. 47, 51.—"Taking advantage of the confusion . . . [in Chinese ranks] the Tibetans expelled them from their country, brought back the Dalai Lama to Lhasa [June, 1912] and duly installed him in authority. The semi-independent Chiefs in Inner Tibet and in Chinese territory west of the Yalung River were likewise affected. They challenged Chinese authority, and forced the garrisons that had been stationed there to withdraw. The Chinese government despatched the Szechuanese and the Yunnanese armies to suppress the revolt. Hsiangchen and Litang were occupied by its force, but at this point the British government intervened. On August 17, 1912, the British Minister at Peking informed the Chinese authorities that his government disapproved of China's interference in Tibet's internal affairs; that it opposed the exercise of administrative power by the Chinese officials in Tibet and refused to recognize China's rights to treat Tibet as one of her provinces, and to station an unlimited number of soldiers within its borders and insisted that a convention must be concluded embodying these proposals; and that for the time being the communications between China and Tibet via India were closed. He further declared that unless China would send delegates to confer on these matters Great Britain and Tibet would separately make treaties. In conclusion, China was invited to come to an agreement prior to Great Britain's recognition of the Republic. . . . On January 11, 1913, Tibet declared its independence by concluding a treaty with the Living Buddha of Urga, the head of Outer Mongolia. [See MONGOLIA: 1913.] The Tutuh [governor] of Szechuan despatched troops to attack Hsiangchen. Simultaneously President Yuan Shih-Kai [of China] sent a delegate to Chiamodo to discuss with the representatives of the Dalai Lama the terms of peace and the demarcation of the frontier. In May the British Minister renewed his demand for the early settlement of the Tibetan question, which resulted in the holding of a Tripartite Conference at Simla between October 13, 1913, and July 3, 1914. . . . China finally agreed to the extension of the eastern boundary of the Outer Tibet to as far as the Salween River. . . . [Regarding] the northern boundary . . . the Tibetan delegate insisted upon the inclusion in Outer Tibet, of that part of Chinghai south of the Altyn-tao, while the Chinese delegate contended with equal persistence that Inner Tibet where China would be at liberty to develop and strengthen her position, should have the Tangla Range as its southern boundary. As China was unable to give up over 40,000 square miles of her territory, her delegates refused to sign the Convention [and the question remained unsettled]."—H. K. Tong, *British and Chinese governments again considering Tibetan question* (*Millard's China National Review*, June 7, 1910, pp. 8, 10).

1917-1919.—Renewal of hostilities with Chinese.—Provisional settlement.—Toward the end of 1917 a pretext for resuming hostilities was found by the neglected and disaffected Chinese

border forces who had been practicing brigandage and plundering the natives. The Tibetans undertook the rescue of one of their officers who had been seized in the course of a trivial dispute, skirmishing followed and the Chinese claimed that the truce of 1915 was over and prepared to advance. This step was followed by the surrender of the Chinese relief force at Toba and the siege and fall of Chamdo, a Chinese fortress. "With the fall of Chamdo the greater part of the old Szechuan Frontier Force (*Pien Chün*), which had garrisoned the border since the days of Chao Erh-feng, had ceased to exist. Two or three thousand Chinese prisoners of war were marched off to Lhasa, where they were well treated, judging by

cessation of hostilities, and the mutual withdrawal of the troops of both sides out of touch with one another. The provisional boundary between Szechuan and Tibet resulting from these frontier negotiations chanced to coincide to a considerable extent with the old seventeenth century line of the Manchus, the Chinese remaining in control of Batang, Litang, Nyarong, Kanze and the country to the east of those States, while the Tibetans retained Chamdo, Draya, Markam and De-ge, and the country further west. By the end of 1918 the frontier regions had settled down after the conclusion of the truce, the trade routes had been reopened, and peaceful relations generally had once more been resumed between China and Tibet."

MAP OF TIBET SHOWING DR. MCGOVERN'S ROUTE TO LHASA

oriental standards, and whence they were subsequently repatriated to West China . . . with the assistance of the British Authorities, via India, Burma, and Yunnan. . . . By the middle of the summer of 1918, . . . the Lhasa forces [were practically] in possession of all the country up to Tachienlu. At this juncture, however, the local Chinese leaders on the frontier invoked the mediation of the British Consular Agent stationed in Western China, whose duty it was to watch events on the border with a view to keeping the peace between the two parties pending a final settlement of the dispute by diplomatic means, and, the Tibetan leaders having been persuaded to stay their advance, the fighting ceased. . . . Peace negotiations followed between the various Chinese and Tibetan frontier authorities, the British representative acting as middleman, and arrangements were eventually concluded providing for a general

E. Teichman, *Travels of a consular officer in eastern Tibet*, p. 58.

1922-1923.—British scientific expedition.—Experience of Dr. McGovern in Lhasa.—Dr. William W. McGovern, the scientific adviser of a British research mission to Tibet made a perilous and significant visit to Tibet in 1923 reaching the Forbidden City of Lhasa. In July, 1922, the expedition called the British Buddhist Mission, sailed for India and proceeded to Tibet after receiving permission from the Indian government to travel to Gyantse via Yatsung. The Tibetan government, however, refused it permission to continue to Lhasa. McGovern was forced with the others to return to India to keep his word of honor to the government of India but he had studied the country closely in order to return secretly in disguise. He spoke Tibetan fluently. Leaving Darjeebug on Jan. 10, 1923, he made a

hazardous journey disguised as a coolie, straight through Sikkim, entering Tibet near Kampa Dzong thence north through the heart of Tsang Province to Shigatse and the Brahmaputra river and on to Lhasa. He arrived in Lhasa about the middle of February in time for the Tibetan New Year's festivities, when, for twenty-one days the city government is turned over to a government of monks and the Dalai Lama and his cabinet have no control. The results of McGovern's unusual experience in the Forbidden City where he enjoyed the patronage of the Dalai Lama's favorite minister, Tsarong Shapé, the strong man of Tibet (although he was compelled to become a prisoner of state to escape the fanaticism of the temporary priestly régime) were the securing of numerous priceless manuscripts and an extraordinary opportunity for observing the life and institutions of the country. Many of his impressions have been recorded in printed form and by the cinematograph camera secretly used. After six weeks stay in Lhasa McGovern was permitted to return to India under escort.

**TIENTSIN** (Chinese "Ford of Heaven"), most important city of northern China, and the principal sea outlet for the trade of the provinces of Chihli, Shansi, Shensi, Kansuh and part of Honan. It is situated at the head of the Gulf of Pechili at the junction of the Grand canal and the Pei Ho and is about eighty miles distant from Peking with which it is connected by water and by rail. The estimated population in 1923 was 2,000,000.—See also **CHINA**: map.

Early history.—Tientsin was formerly a military station only, but toward the end of the seventeenth century became a city of great importance. "Before the advent of steamers . . . Tientsin had become a flourishing centre for junk traffic, and when the tribute rice no longer followed the Grand Canal route—owing to the shoaling of this ancient and celebrated waterway—it was sent to Tientsin in sea-going junks until comparatively recent years. . . . During the long satrapy of Li [Ilung-Chang] the trade and importance of the city developed exceedingly. Li, by the vigour of his rule, soon quelled the rowdiness for which the Tientsinese were notorious throughout the empire, and as he made the city his chief residence and the centre of his many experiments in military and naval education [he established the Imperial Military College in 1884], it came to be regarded as the focus of the new learning and national reform. [The Imperial University was established in 1805 by Americans with the approval of the emperor.] . . . The expeditions of the Allies in 1858-61 greatly enhanced the importance of the city, as it then proved to be the military key of the capital, and an excellent base. It was here on June 26th, 1858, that Lord Elgin signed the treaty which was to conclude the war, but which unhappily led to its prolongation. . . . The city . . . [witnessed] the massacre of the French Sisters of Mercy and other foreigners on June 21st, 1870. . . . The Roman Catholic Cathedral was destroyed on that occasion. . . . The foreign affairs of China were practically directed from Tientsin during the two decades 1874-94. . . . Li Hung-Chang authorized . . . [the sinking] of a coal shaft at Tong Sha in the 'seventies'; this was done and proved the precursor of a railway, which was later extended to Shan haik wan for military purposes, and from thence round the Gulf of Liau to Kinchow; 1000 saw the line pushed on to Newchwang. In 1897 the line to Peking was opened, and proved such a success that the line had to be doubled in 1898-9. . . . A river improvement scheme of some importance was inaugurated in 1898 . . . [and] resulted in deepening the channel and facilitating navigation for the time being."—*Tientsin (Directory and Chronicle for the Far East, 1923, pp. 608-609, 612)*.

1900-1923.—Effect of Boxer uprising.—Development of foreign concessions.—Flood of 1917.—Work of flood commission.—"In 1900 the violence of the Boxers was chiefly directed against the railways, all of which were more or less destroyed, but under British, French, and Russian military administration they were afterwards all restored to their former efficiency. Foreigners formerly lived in three concessions—British, French and

German. . . . The Japanese took up a concession in accordance with the terms of the Treaty of Shimonoseki. . . . During 1901 Russia, Belgium, Italy and Austro-Hungary all appropriated large areas . . . while the existing concessions extended their boundaries very considerably. These developments have thrown all present and future landing facilities for direct sea-going traffic into foreign hands. . . . Upon the entry of China into the Great War in 1917 the Chinese Authorities took over the German and Austrian Concessions on the 16th March of that year, and these have since been administered by the Chinese Police Bureau, but authority has been received from the Central Government to form an advisory committee of local residents. In the autumn of 1920 the local Chinese authorities assumed charge of Russian Consular functions and the policing of the Russian Concession, leaving the Municipal Council, however, to continue to function in minor municipal affairs. . . . During the first half of the year 1917 the country suffered from a prolonged drought, lasting for over six months. Later on there were incessant rains. . . . Early in September the Hunho was in flood, and, finally, the Grand Canal burst its banks a few miles west of Tientsin, carrying away the main line of the Tientsin-Pukow Railway, which resulted in the concessions being flooded before much warning of the impending danger could be given. . . . The flood waters . . . [were pumped out by steam pumps lent by] the South Manchurian Railway Company and worked by a detachment of army engineers from Manchuria. It is estimated that . . . crops to the value of \$100,000,000 were utterly lost, and that 80,000 groups of dwellings . . . were destroyed. The question of conserving the waterways of the Chihli province with a view to preventing a recurrence of such disasters and safeguarding the trade and shipping interests of Tientsin . . . was brought forward in the autumn of 1917 . . . with the appointment of a 'joint-commission' composed of representatives of the Chinese Government and the Haiho Conservancy Board [established by the peace protocol]. . . . During 1920, the surveys of the rivers to the northward of Tientsin were completed, and a topographic survey of the country lying between the Yungtingho and Peiho was approaching completion. Towards the south, river surveys . . . were completed in addition to topographical surveys of several localities. . . . The new outlet channel for the Machang Canal, commenced in October, 1920, has been completed [1923]. . . . Four important cuttings have been effected [1923] in the river . . . which have not only facilitated the movement of the flood tide but have shortened the distance to the sea by some 20 miles by the removal of some corkscrew windings and dangerous bends; and powerful dredgers have been acquired for work on the Bar."—*Tientsin (Directory and Chronicle for the Far East, 1923, pp. 609-611)*.

TIERRA FIRME.—"The world was at a loss at first [after Columbus's discovery] what to call the newly found region to the westward. It was easy enough to name the islands, one after another, as they were discovered, but when the Spaniards reached the continent they were back-

ward about giving it a general name. . . . As the coast line of the continent extended itself and became known as such, it was very naturally called by navigators 'tierra firme,' firm land, in contradistinction to the islands which were supposed to be less firm. . . . The name Tierra Firme, thus general at first, in time became particular. As a designation for an unknown shore it at first implied only the Continent. As discovery unfolded, and the magnitude of this Firm Land became better known, new parts of it were designated by new names, and Tierra Firme became a local appellation in place of a general term. Paria being first discovered, it fastened itself there; also along the short to Darien, Veragua, and on to Costa Rica, where at no well defined point it stopped, so far as the northern seaboard was concerned, and in due time struck across to the South Sea, where the name marked off an equivalent coast line. . . . As a political division Tierra Firme had existence for a long time. It comprised the provinces of Darien, Veragua, and Panamá, which last bore also the name of Tierra Firme as a province. The extent of the kingdom was 65 leagues in length by 18 at its greatest breadth, and 9 leagues at its smallest width. It was bounded on the east by Cartagena, and the gulf of Urabá and its river; on the west by Costa Rica, including a portion of what is now Costa Rica; and on the north and south by the two seas. . . . Neither Guatemala, Mexico, nor any of the lands to the north were ever included in Tierra Firme. English authors often apply the Latin form, Terra Firma, to this division, which is misleading."—H. H. Bancroft, *History of the Pacific states, v. 1, p. 290, footnote*.—See also SPANISH MAIN.

TIERS ÉTAT. See ESTATES, THREE.

TIFLIS, capital of the government of the same name in Transcaucasia, on the Kura river. The city was made the capital of the Transcaucasian republic, established in April, 1918. When Georgia became a separate state, May, 1918, its independence was proclaimed in Tiflis, and the city was made the seat of government. In 1915 the government had a population of 1,394,800.—See also GEORGIA, REPUBLIC OF: 1920: Foreign relations.

Tiglath Pileser III or IV (Poros, Pulu, or Pul) (d. 727 B. C.), king of Assyria, 745-727 B. C. Conducted a campaign in Syria in 738 B. C. See JEWS: Kingdom of Israel and Judah; SYRIA: B. C. 854-701.

TIGORINI, or Tigurini, in Gaul.—After the Cimbri had defeated two Roman armies, in 113 and 109 B. C., "the Helvetii, who had suffered much in the constant conflicts with their north-eastern neighbours, felt themselves stimulated by the example of the Cimbri to seek in their turn for more quiet and fertile settlements in western Gaul, and had, perhaps, even when the Cimbrian hosts marched through their land, formed an alliance with them for that purpose. Now, under the leadership of Divico, the forces of the Tougeni (position unknown) and of the Tigorini (on the

lake of Murten) crossed the Jura and reached the territory of the Nitiobroges (about Agen on the Garonne). The Roman army under the consul Lucius Cassius Longinus, which they here encountered, allowed itself to be decoyed by the Helvetii into an ambush, in which the general himself and his legate, the consular Gaius Piso, along with the greater portion of the soldiers, met their death."—T. Mommsen, *History of Rome*, bk. 4, ch. 5.—Subsequently the Tigorini and the Tougeni joined the Cimbri, but were not present at the decisive battle on the Raudine plain and escaped the destroying swords of the legions of Marius, by flying back to their native Helvetia.—See also CIMBRI AND TEUTONES: B. C. 113-101.

**TIGRANOCERTA**, Battle of (60 B. C.). See ROME: Republic: B. C. 78-68.

**TIGRIS-EUPHRATES VALLEY**.—The ancient Greeks gave to the land embraced by the Tigris and Euphrates rivers the name of Mesopotamia, meaning "the land between the rivers." "Physical conditions in the Tigris-Euphrates valley were in many ways similar to those along the Nile. A warm but invigorating climate, fertile, alluvial soil, deposited by the great rivers and renewed each year by the floods, and the protection of the desert on the west favored the development of a virile civilization, as early if not earlier than that of Egypt. Starting from the same northern mountains, the two great rivers find their way to the Persian Gulf by widely different courses. The Tigris flows southeast in a comparatively direct course of eleven hundred miles. Its name, 'The Arrow,' suggests the rapidity of its descent. The Euphrates, on the contrary, makes a long detour westward toward the Mediterranean and then turns to the southeast, where for the greater part of the last half of its one thousand eight hundred miles it flows through the desert."—C. F. Kent, *Biblical geography and history*, pp. 5-6.—"Differences in geological structure divide this region into an upper and a lower district; and this twofold physical division is reflected, as we shall see, throughout its political history. The northern part of the valley, the portion that comprises ancient Assyria, consists of undulating plains, broken in places by mountain ridges. This region nourished a hardy and warlike race, and became the seat of a great military empire. The southern part of the valley, the part known as Babylonia or Chaldea, is, like the Delta region of Egypt, an alluvial deposit. The making of new land by the rivers has gone on steadily during historic times. . . . In ancient times the land was protected against the river floods, and watered in seasons of drought, by a stupendous system of dikes and canals, which at the present day, in a ruined and sand-choked condition, cover like a network the face of the country. The productions of Babylonia are very like those of the Nile valley. The luxuriant growth of grain upon these river flats excited the wonder of the Greek travelers who visited the East. . . . This favored plain in a remote period of antiquity became the seat of an agricultural, industrial, and commercial population among which the arts of civilized life found probably their very earliest development."—P. Van Ness Myers, *General history for colleges and high schools*, pp. 30-32.—See also BABYLONIA: Land and its characteristics.

TIMAR, TIMARLI, SAIM, SPAHI.—"It was Alaeddin who first instituted a division of all conquered lands among the 'Sipabis' or Spahis (horsemen), on conditions which, like the feudal tenures of Christian Europe, obliged the holders to service in the field. Here, however, ends the likeness between the Turkish 'Timar' and the European fief. The 'Timarli' were not, like the Christian knighthood, a proud and hereditary aristocracy almost independent of the sovereign and having a voice in his councils, but the mere creatures of the Sultan's breath. The Ottoman constitution recognised no order of nobility. . . . The institution of military tenures was modified by Amurath I., who divided them into the larger and smaller ('Siamet' and 'Timar'), the holders of which were called 'Saim' and 'Timarli'. . . . The symbols of . . . investment were a sword and colours ('Kilidsch' and 'Sandjak')."—T. H. Dyer, *History of modern Europe*, v. 1, introduction.—See also SPAHIS; MILITARY ORGANIZATION: 42.

TIMUR

Miniature in the Bodleian Library, Oxford

**TIMUQUANAN FAMILY, TEQUESTAS.**—“Beginning at the southeast, we first meet the historic Timucua family, the tribes of which are extinct at the present time. . . . In the 16th century the Timucua inhabited the northern and middle portion of the peninsula of Florida, and although their exact limits to the north are unknown, they held a portion of Florida bordering on Georgia, and some of the coast islands in the Atlantic ocean. . . . The people received its name from one of their villages called Timagoa. . . . The name means ‘lord,’ ‘ruler,’ ‘master’ (‘atimuca,’ waited upon ‘muca,’ by servants, ‘ati’), and the people’s name is written Atimuca early in the 18th century. . . . The languages spoken by the Calusa and by the people next in order, the Tequesta, are unknown to us. . . . The Calusa held

the southwestern extremity of Florida, and their tribal name is left recorded in Calusahatchi, a river south of Tampa bay. . . . Of the Tequesta people on the southeastern end of the peninsula we know still less than of the Calusa Indians. There was a tradition that they were the same people which held the Bahama or Lucayo Islands.”—A. S. Gatschet, *Migration legend of the Creek Indians*, v. 1, pt. 1.—During the eighteenth century, when a neighboring tribe in the Atlantic states, the Catawba Indians (Siouan stock) of South Carolina, were active in the wars of the English against the French, the Timuquans were already extinct.—See also INDIANS, AMERICAN: Cultural areas in North America: Southeastern area.

**TIMUR, Timour, or Tamberlaine, Conquers of.**—“Timour the Tartar, as he is usually termed in history, was called by his countrymen Timourlenk, that is, Timour the Lame, from the effects of an early wound; a name which some European writers have converted into Tamerlane, or Tamberlaine. He was of Mongol origin, and a direct descendant, by the mother’s side, of Zenghis Khan. He was born at Sebzar, a town near Samarcand, in Transoxiana, in 1336 [and reigned from 1370 to 1405]. . . . Timour’s early youth was passed in struggles for ascendancy with the petty chiefs of rival tribes, but at the age of thirty-five he had fought his way to undisputed pre-eminence, and was proclaimed Khan of Zagatai by the ‘couroul-tai,’ or general assembly of the warriors of his race. He chose Samarcand as the capital of his dominion, and openly announced that he would make that dominion comprise the whole habitable earth. . . . In the thirty-six years of his reign he raged over the world from the great wall of China to the centre of Russia on the north; and the Mediterranean and the Nile were the western limits of his career, which was pressed eastward as far as the sources of the Ganges. He united in his own person the sovereignties of twenty-seven countries, and he stood in the place of nine several dynasties of kings. . . . The career of Timour as a conqueror is unparalleled in history; for neither Cyrus, nor Alexander, nor Cæsar, nor Attila, nor Zenghis Khan, nor Charlemagne, nor Napoleon, ever won by the sword so large a portion of the globe, or ruled over so many myriads of subjugated fellow-creatures.”—E. S. Creasy, *History of the Ottoman Turks*, ch. 3.—Timur “bore throughout life the humble title of Emir, and led about with him a nominal Grand Khan [a descendant of Chagatai, one of the sons of Jenghiz Khan], of whom he professed himself a dutiful subject. His pedigree may in strictness entitle him to be called a Mogul; but, for all practical purposes, himself and his hordes must be regarded as Turks. Like all the eastern Turks, such civilization as they had was of Persian origin; and it was of the Persian form of Islam that Timour was so zealous an assertor.”—E. A. Freeman, *History and conquests of the Saracens*, lecture 6.—In 1378 Timur overran Khuarezm. Between 1380 and 1386 he subjugated Khorasan, Afghanistan, Baluchistan and Sistan. He then passed into southern Persia and forced the submission of the Mozafferides who reigned over Fars, punishing the city of Isfahan for a rebellious rising by the massacre of 70,000 of its inhabitants. This done, he returned to Samarkand for a period of rest and prolonged carousal. Taking the field again in 1389, he turned his arms northward and shattered the famous “Golden Horde,” of the khanate of Kiptchak, which dominated a large part of Russia. In

1392-1393 the Tatar conqueror completed the subjugation of Persia and Mesopotamia, extinguishing the decayed Mongol empire of the Ikhans, and piling up a pyramid of 90,000 human heads on the ruins of Bagdad, the old capital of Islam. (See BAGDAD: 1393-1638.) Thence he pursued his career of slaughter through Armenia and Georgia, and finished his campaign of five years by a last destroying blow struck at the Kiptchak Khan whom he is said to have pursued as far as Moscow. Once more, at Samarkand, the red-handed, invincible savage then gave himself up to orgies of pleasure-making; but it was not for many months. His eyes were now on India, and the years 1398-1399 were spent by him in carrying death and desolation through the Punjab, and to the city of Delhi, which was made a scene of awful massacre and pillage. No permanent conquest was achieved; the plunder and the pleasure of slaughter were the ends of the expedition (see INDIA: 1200-1308). A more serious purpose directed the next movement of Timur's arms, which were turned against the rival Turk of Asia Minor, or Roum—the Ottoman, Bayezid, who boasted of the conquest of the Roman Empire of the East. In 1402, Bayezid was summoned from the siege of Constantinople to defend his realm. On the 20th of July in that year, on the plain of Angora, he met the enormous hosts of Timourlenk and was overwhelmed by them—his kingdom lost, himself a captive. The merciless Tatar hordes swept hapless Anatolia with a besom of destruction and death. Nicæa, Prusa and other cities were sacked. Smyrna provoked the Tatar savage by an obstinate defense and was doomed to the sword, without mercy for age or sex. Even then, the customary pyramid of heads which he built on the site was not large enough to satisfy his eye and he increased its height by alternate layers of mud. Aleppo, Damascus, and other cities of Syria had been death with in like manner the year before. When satiated with blood, he returned to Samarkand in 1404, rested there until January 1405, and then set out upon an expedition to China; but he died on the way. His empire was soon broken in pieces.—Based on A Vámbéry, *History of Bokhara*, ch. 10, 11, 12.—See also TURKEY: 1380-1403.

**TITANIC.**—"A terrible disaster, involving a greater loss of life than has ever been known in the history of the mercantile marine, happened to the White Star liner 'Titanic' . . . [Apr. 14, 1912]. The 'Titanic' which was the largest ship in the world, was on her maiden voyage across the Atlantic. When in latitude 41.16 North, longi-

tude 50.14 West, the nearest land being Cape Race, she struck an iceberg about 11.40 p. m. According to a statement drawn up by some of the survivors, there was a smooth sea and the stars were visible, though there was no moon. The iceberg was reported by the look-outs to the officers on the bridge, but not in time to avoid the collision. The boats were lowered and took off the women and children and a proportion of the men. But the boats, which numbered twenty in all, including the collapsible boats, were not nearly enough, and out of the 2,208 persons on board apparently only 705 were saved. The number of drowned is therefore said to have reached the appalling total of 1,503. The 'Titanic,' carrying down with her the great majority of men passengers and crew, sank about 2 a. m.—*Spectator*, Apr. 20, 1912, p. 605.—On April 16, following the disaster, the transatlantic lines mutually agreed to make use of routes farther south in the iceberg zone. Following the investigation of the calamity by a sub-committee of the Committee on Commerce of the United States Senate during April and May of 1912, a number of the general rules and regulations applying to safety at sea were amended. The British court of inquiry appointed by the ministry acting for the Board of Trade was headed by Lord Mersey. It found that the loss of the ship was due to collision with an iceberg brought about by the excessive speed at which the ship was being navigated. In view of the customary practice of masters in the North Atlantic, who steam at full speed in clear weather, the court found itself unable to blame the captain. At the same time, its recommendations that speed must be reduced when ice is reported, that there should be "boats for all," that boat-drill, a continuous service of wireless telegraphy, and the policing of a disaster are vital precautions, were steps toward setting up a new standard on the sea. "The owner [of the Titanic], the Ocean Steam Navigation Company, Ltd., alleging that the loss was occasioned and incurred without its privity or knowledge filed a petition under the statutes of the United States and the rules in admiralty praying that the petitioner's interest in the life-boats and pending freight be appraised, the sum paid into court, that the petitioner's liability be adjudged as limited to this sum, and that the prosecution of all suits against the petitioner for loss resulting from the accident be enjoined. . . . Under the British rule the contingent liability of the owner of the Titanic was represented by a huge fund, while under the United States statute applied by the Supreme Court to the advantage of the British shipowner against American claimants, it was practically nothing."—A. K. Kuhn, *International aspects of the Titanic case (American Journal of International Law, Apr., 1915, pp. 336, 351)*.—See also ELECTRICAL DISCOVERY: Telegraphy and telephony: Wireless, or radio: 1909-1912.

**TITCHFIELD ABBEY**, medieval abbey of the thirteenth century in Hampshire, England. The ruins are still extant. See LIBRARIES: Medieval: Monastic libraries.

**TITHE**, tenth part, recognized from very early times as a religious or secular tax, either voluntary or enforced.

**Primitive conceptions.**—Practice among ancient peoples.—Evidence shows that "the Egyptians recognized it as a duty to offer a part of their property to their gods . . . [for] as far back as we know anything of their history . . .

the god's portion was deemed sacred, and . . . to diminish it was regarded a sin. . . . Pharaoh and his officials, with many, if not all of the people, annually offered the first fruits of their crops to their temples, which they permanently endowed with estates, towns, ships, lands, slaves, cattle, soldiers, and scribes for the assistance, education and support of the priests as well as for temple repairs and enlargements, together with the furniture and accessories of worship. They offered also a portion of the spoils taken in war and on festivals and various other occasions, made further offerings of the most varied kinds. . . . [The] proportion these offerings bore to their entire income . . . seems to have been not less than a tenth and in some cases is believed to have reached a sixth. . . . [Similarly] we find Tiglath Pileser, Nebuchadnezzar, Nabonidus, Belshazzar, Cyrus, and other [Babylonian and Semitic] sovereigns, with all classes of the people in the Euphrates valley, as well as Phoenician colonists in Carthage . . . annually offering a tenth of their increase, whether from fruits of the ground or profits from merchandise; whether from spoils of war, from transit-dues, portions of tribute, or other sources of income, whereby the temples were furnished and endowed, the priests supported, and the gods honoured. . . . The earliest allusions to tithe-paying in Greece come down from mythological times and cluster around the oldest writers and lawgivers, such as Hesiod and Draco. . . . We have [as a later example] Pausanius, a Spartan general [who died before 466 B. C.], after his victory over Mardonius, paying out of the tithe of the spoil a tripod of gold to Apollo, and two brazen statues, one to Jupiter Olympus, the other to the Isthmian Neptune. . . . Among the earliest peoples and persons known to us in Europe, we have the Pelasgi, the Argives, and the legendary kings of Rome, offering tenths of their warlike spoils. . . . When, moreover, we reach the period of authentic history, we read of Spartan generals, Roman dictators, lawyers and farmers, Greek shepherds, sailors, merchants, miners, cooks . . . even dissolute women—thinking it right and religious to offer a tenth of their increase to the gods. . . . This practice of tithe-paying was known and observed also among other European nations, such as the Samothracians, Sicilians, Gauls, and even Britons and Saxons, . . . facts attested by . . . Hesiod, Herodotus, Thucydides, Xenophon, Aristophanes, Aristotle and Demosthenes among the Greeks; and among the Romans, Plutarch, Cicero, Varro, Julius Caesar, Pliny and others."—H. Lansdell, *Sacred tenth*, v. 1, pp. 19-21, 24, 36.—See also AGRICULTURE: Zoroastrian literature provides allusions to both ecclesiastical and secular tithes and Chinese sacred literature refers to a levy of a tenth of the harvest. In Mohammedan law the tithe was sometimes only one-twentieth or one-fortieth, but the same general notion of a fractional tax or tribute prevailed and is still the general method of taxation in Mohammedan countries. Among the Hebrews the tithe system was a recognized and regulated method of religious support. Abraham paid tithes to Melchizedek, king of Salem, who "was the priest of the most high God" (Genesis, 14-20); Jacob vowed to the Lord "of all that thou shalt give me I will surely give the tenth unto thee" (Genesis, 28:22). "Later the Mosaic law made the tithe obligatory upon the Israelites. The tithe, whether of the seed of the land or of the fruit of the tree belonged to Yhwh and consequently was holy.

... According to the Rabbis . . . there were three kinds of tithes: (1) that given to the Levites as stated in Num. 18:21 *et seq.*, and termed 'the first tithe'; . . . (2) the tithe which was to be taken to Jerusalem and there consumed by the landowner and his family, and which was termed 'the second tithe,' . . . it being taken from what remained after the first tithe had been appropriated; and (3) that given to the poor. . . . Therefore two tithes were to be taken every year except in the seventh year: Nos. 1 and 2 in the first, second, fourth and fifth years; Nos. 1 and 3 in the third and sixth years. . . . Samuel informed the Israelites that they would have to give a tenth of everything to the king (1 Sam. 8:15, 17). When the Israelites afterward fell into idolatry, they continued to bring their tithes to the temple of their idols. . . . King Hezekiah again imposed the tithe on his subjects; and the people of Judah brought it in abundance, apparently for the use of the Levites. . . . In the time of . . . [Amos] the Israelites paid tithes for the use of their sanctuaries in the Northern Kingdom, as, similarly, in the Persian period the tithes were converted to the use of the Temple of Yhwh. . . . Those instituted by Nehemiah for payment to the Levites were a development of the heave-offering . . . given to the priests. . . . It is stated in Neh. 10:37 *et seq.*, that the Levites were required to collect their tithes under the supervision of a priest."—M. Seligsohn, *Tithe* (*Jewish encyclopedia*, v. 12, pp. 150-152).

**Early Christian and medieval periods.—**Claims of the church enforced by ecclesiastical and civil law.—"The tithe customary with the Hebrews passed from the synagogue to the church at a time when the latter's officiant came to be viewed as priest and the priesthood of the Church as the continuation and fulfilment of that in the Old Testament. Hence it was now required of all Christians to pay tithes as a religious obligation [Apostolic Constitutions, Apostolic Canons, etc.] . . . However, some time elapsed before this requirement was generally recognized. The tithes actually paid bore the appearance of a voluntary contribution, and so continued till the sixth century. On the other hand, the second Synod of Macon (585) commanded payment under threat of excommunication, and from that time forth payment was enjoined in various ways, especially through the confessional, where the omission to pay tithes was treated as a sin. . . . The provision was made [in the capitulares of Charlemagne] . . . that of the goods of the Church which the State leased as benefices subject to reversion to the Church, the tithe, and furthermore, a ninth of the remaining ninety per cent, or two tithes in all, were to be contributed. . . . The bishops were . . . empowered to receive and to distribute tithes. The obligation was transferred to the newly converted Saxons in the so-called *Capitulatio de partibus Saxonie*, chap. XVII. . . . From that time onward, the tithes were in continual use in Germany and France, also in other countries, coming with the introduction of Christianity, though often fiercely opposed. Thus they were established in Portugal not until the close of the eleventh century, about the same time in Denmark and Iceland, and in Sweden not till the beginning of the thirteenth century. . . . Special provisions . . . in the canonical collections . . . aim to restore to the Church such tithes as had been withdrawn through alienation or otherwise. Possession of tithes by

the laity was pronounced a sin. All attempt to contest the claims of the Church to tithes were opposed by the Council of Trent" (1545-1563).—E. Sehling, *Tithes* (*New Schaff-Herzog encyclopedia of religious knowledge*, v. ii, p. 454).—See also INSURANCE: Life insurance: Early forms.

**Development of system after the Reformation.**—Retention of system by evangelical bodies.—Policy of repeal by civil governments.—Modification of system.—Following the Reformation, the tithe system passed on to the evangelical bodies. The Anabaptists of Switzerland, alone, seem to have denied its authority. The twelve German articles of 1525 did not repudiate the obligation, while Luther not only regarded the tithe system as the most expedient form of taxation but advocated their payment to the temporary ruler. Tithes were retained in the German evangelical state churches with modifications and strict limitations. France formally repealed the tithes without indemnity in 1780. Other countries repealed certain of them with compensating indemnity. The repeal of tithes has in general been promoted by the state on economic and political grounds. "At the present time, in most countries where some species of tithes still exist, as in England (for the Established Church), in Austria, and Germany, the payment has been changed into a rent charge. In English speaking countries generally, as far as Catholics are concerned, the clergy receive no tithes. In consequence . . . equivocal payments in lieu of tithes [have been substituted] . . . In some parts of Canada, the tithe is still recognized by civil law, and the Fourth Council of Quebec (1808), declared that its payment is binding in conscience on the faithful."—W. H. W. Fanning, *Tithes* (*Catholic encyclopedia*, v. 14, p. 742).

**Evolution of system in England.**—Early recognition (8th century).—Statute of Westminster (1285).—Alienation by suppression of monasteries under Henry VIII.—Exemptions and commutations.—Church revenue commissions.—Corn-rent Commutation Act of 1836.—Amendment acts.—Redemption provisions in Act of 1918.—"English law very early recognized the tithe, as in the reigns of Athelstan, Edgar, and Canute before the Norman Conquest. In English statute law proper, however, the first mention of tithes is to be found in the Statute of Westminster of 1285."—W. H. W. Fanning, *Tithes* (*Catholic encyclopedia*, v. 14, p. 741).—"Long prior to the Reformation and probably by the middle of the thirteenth century predial tithe was recognized as payable as of common right to the parson in return for services rendered. 'The suppression of the monasteries,' says Hallam ('Constitutional History of England,' p. 67), 'poured in an instant such a torrent of wealth upon the Crown, as has seldom been equalled in any country by the confiscations following a subdued rebellion.' . . . The tithes thus alienated, though only a small part of the properties confiscated, passed into the hands of laymen. In most cases the grantee purchased the tithes from the Crown on a valuation of twenty years' purchase. Others had tithes given to them for services rendered to the Crown. Some obtained the tithes by the exchange of lands and other property given to the Crown as an equivalent. Under Elizabeth and James I. commissioners were appointed by letters patent who employed contractors to sell to the highest bidder and pay the proceeds into the Exchequer. Others received grants of tithes 'for the support of their

dignity.' While a vast amount of tithe was thus alienated to secular purposes a large portion was given back to the Church by Henry VIII., who endowed the new sees of Bristol, Chester, Oxford, Peterborough and Westminster almost exclusively with tithes. Hospitals and schools were also endowed with tithe by Edward VI. Prior to the Reformation, land belonging to the religious orders had been exempted by the Pope from the payment of tithe. This benefit was confirmed by the Statute 31 Hen. VIII. cap. 13 s.21. It thus comes about that a vast extent of land is held by lay owners tithe free, a fact which is not commonly known. It appears from a partial examination of the tithe apportionment deeds . . . ('Alienated Tithes,' 1896) that the laity hold abbey lands exceeding 82,000 acres on which they pay no tithes [and that] . . . this acreage would be 'thrice doubled' . . . by further search. A vast amount of tithe has disappeared by the merging of tithe in glebe lands, by the merging of tithes in the freehold of their lands by owners who held the tithe and land as well jointly by the sale of tithe by clerical owners to redeem land tax, by the sale by Bishops to build episcopal residences, by episcopal and Capitular Corporations under the Enfranchising Acts, and by the Ecclesiastical Commissioners; though in these cases the Church has obtained an equivalent in money value. From the time of Henry VIII. to the year 1835 there appears to be no official parliamentary report of the revenues of the Church. But on June 16 of that year was published the Report of the Ecclesiastical Revenues Commission. And on February 4, 1835, another Royal Commission was appointed to consider the state of the several dioceses with reference to the more equal distribution of episcopal duties and to consider the state of the several Cathedral and Collegiate Churches, and to devise the best mode of providing for the cure of souls with special reference to the residence of the Clergy on their respective benefices. This commission is generally known as the 'Church Enquiry Commission.' It presented four Reports, which, in conjunction with the previous commission, made clear the whole facts relating to the revenues of the Church. . . . The Commutation Act of 1836 made a great change. Between the years 1757 and 1830 there had been upwards of 2,000 Acts containing clauses for the commutation of tithes, as appears from a parliamentary return of December 5, 1831, but many of these, being under Local Enclosure Acts, were of the nature of Private Estate Acts, and were not printed by authority unless at the expense of the parties obtaining the Acts. For four or five years previous to 1831, there had been a period of agricultural depression and much discontent amongst tithe-payers. It was agreed by economists that the right of the Church to appropriate a tenth of the produce was a bar to cultivation, and prevented waste lands from being brought into productive use. The clergy had frequently been content with much less than their legal due, and there was ill-will between farmers and clergymen. Pitt and Peel had both attempted to deal with the evil, but it was left to Lord John Russell to frame the Act by which the question was settled. . . . The principle of the . . . [Act of 1836] was that the landowner or tenant might agree with the tithe-owner to commute the tithe, whether paid by modus or composition or otherwise, into a corn-rent payable in money and permanent in

quantity, but fluctuating in yearly value. The corn were to be wheat, barley and oats, and the basis of the calculation was to be the tithe paid for the seven-years previous to Christmas 1835. All other tithable produce was disregarded, which explains why land which may never have grown wheat may nevertheless be liable to tithe rent-charge. The arrangement was to be voluntary up to October 1, 1838, then compulsory. Three Commissioners, two of whom were appointed by the Crown and one by the Archbishop of Canterbury, were empowered to proceed by certain fixed rules to a final adjudication. The process was completed in about seven years. . . . Many of the provisions of the Tithe Commutation Act have now become obsolete, as the process of commutation has been completed, and for the purpose of statute-law revision, all the provisions in the Tithe Acts relating exclusively to the process of commutation have been repealed. These extensive repeals have left the Tithe Acts in many cases obscure, and a Consolidation Act is much required, and should be undertaken without delay. . . . Between the years 1836 and 1886 twelve Tithe Amendment Acts were passed. The most important of these was the Extraordinary Tithe Redemption Act, 1886 . . . [which], in addition to the ordinary charge for the parish, . . . introduced an extraordinary charge which was to be a rate per acre, and payable only when the land was cultivated with hops or fruits, or as a market garden. . . . The Act of 1886 provided that until redemption at the capital value fixed the lands should be charged with a rent-charge of four per cent. on such capital value. The parishes to which the Act applied numbered 541 in fifteen counties. Two hundred and ninety of these parishes were in Kent. The total area under this special cultivation in 1886 was found to be 68,772- $\frac{3}{4}$  acres. The clergy of the parishes affected by the Act had their incomes reduced by about thirty per cent., but on the other hand the rent-charge was exempted from the payment of any rates. It was one object of the Act of 1918 to encourage redemption, and as the clauses of this part of the Act are favourable to the landowners redemption is now [1921] taking place on a large scale. . . . Various leaflets have been put out by the Ministry of Agriculture and Fisheries which may be briefly summarized as sufficiently summarizing the changes made by the Act of 1918. This Act provides that tithe rent-charge of any amount shall, on the application of the owner of the land, and without the consent of the owner of the tithe rent-charge, the Bishop or the patron, be directed by the Minister of Agriculture and Fisheries to be redeemed, unless owing to exceptional circumstances the Minister directs otherwise. It further provides that the minimum limit of twenty-five years' purchase shall be abolished, and that the consideration for redemption shall be fixed by agreement between the landowner, and the titleowner, or in default of such agreement shall be determined by the Minister. No agreement however so far as spiritual person is concerned in respect of his benefice is valid without the consent of Queen Anne's Bounty Board."—A. G. B. Atkinson, *Tithe rent-charge*, pp. 3-7.—See also FRANKPLEDGE.

**TOGA, Roman**.—"The toga, the specifically national dress of the Romans, was originally put on the naked body, fitting much more tightly than the rich folds of the togas of later times. About the shape of this toga, which is described as a semicircular cloak . . . many different opinions

prevail. Some scholars consider it to have been an oblong piece of woven cloth . . . others construct it of one or even two pieces cut into segments of a circle. Here again we shall adopt in the main the results arrived at through practical trials by Weiss ('Costümkunde,' p. 956 et seq.). The Roman toga therefore was not . . . a quadrangular oblong, but 'had the shape of an oblong edged off into the form of an oval, the middle length being equal to about three times the height of a grown-up man (exclusive of the head), and its middle breadth equal to twice the same length. In putting it on, the toga was at first folded lengthwise, and the double dress thus originated was laid in folds on the straight edge and thrown over the left shoulder in the simple manner of the Greek or Tuscan cloak; the toga, however, covered the whole left side and even dragged on the ground to a considerable extent. The cloak was then pulled across the back and through the right arm, the ends being again thrown over the left shoulder backwards. The part of the drapery covering the back was once more pulled towards the right shoulder, so as to add to the richness of the folds.' . . . The simpler, that is narrower, toga of earlier times naturally clung more tightly to the body."—E. Guhl and W. Koner, *Life of the Greeks and Romans*, sect. 95.—"No tacks or fastenings of any sort indeed are visible in the toga, but their existence may be inferred from the great formality and little variation displayed in its divisions and folds. In general, the toga seems not only to have formed, as it were, a short sleeve to the right arm, which was left unconfined, but to have covered the left arm down to the wrist. . . . The material of the toga was wool; the colour, in early ages, its own natural yellowish hue. In later periods this seems, however, only to have been retained in the togas of the higher orders; inferior persons wearing theirs dyed, and candidates for public offices bleached by an artificial process. In times of mourning the toga was worn black, or was left off altogether. Priests and magistrates wore the 'toga pretexta', or toga edged with a purple border called pretexta. This . . . was . . . worn by all youths of noble birth to the age of fifteen. . . . The knights wore the 'trabea', or toga striped with purple throughout."—T. Hope, *Costume of the ancients*, v. 1. —See also COSTUME: Egyptian, etc.

**TOGOLAND**, or Togo, colony on the Gulf of Guinea, West Africa, bounded on the east by Dahomey, on the south by the Gulf of Guinea, on the west by the Gold Coast Colony, and on the north by the colony of the Upper Senegal and Niger. (See AFRICA: Map.) "Although the smallest of the territories which formed the German Colonial Empire in Africa, Togoland, with its area of 33,000 square miles, and its population estimated in 1913 at 1,030,000, was officially regarded as a model colony since it had been for many years financially independent of the Fatherland. . . . [While the country was under German administration, a stable government was established, the hinterland was opened up, three railways and many excellent roads were built, slavery

was abolished and inter-tribal warfare discouraged, and a number of experimental plantations were formed.] The Government, by its energetic policy, . . . developed the resources of the country, established trade and commerce on sound lines, and made considerable progress towards the betterment and prosperity of the people. The whole country has been described as a great storehouse, actual and potential, for the supply of the most varied tropical products—including palm kernels and palm oil, cotton, cocoa, maize, groundnuts, cassava, coffee, rice, and rubber. . . . Some German merchants, with a view to avoiding the high import duties on the English Gold Coast, obtained a concession from the local chief, and founded factories in Anecho or Little Popo. From the death of the chief in 1833 until 1884, the disputes over the succession kept the country in a ferment. In July, of the latter year, Dr. Nachtigal, the German Consul General for West Africa, restored order by entering Little Popo and hoisting the German flag in Bagida and Lome. [See AFRICA: Modern European occupation: Later 19th century.] In 1886 a defensive treaty was concluded between the German Imperial Commissioner Falkenthal and the paramount chief, the German standard was unfurled in Agome-Palimo in 1887, and in 1888 Falkenthal made his successful march to Salaga, which was followed by the Anglo-German treaty declaring the neutrality of Goneja and Dagomba. (See also GERMANY: 1800 (June).) . . . With the beginning of 1913, steps were taken to erect a powerful wireless station at Kamina. Road construction was proceeded with so steadily that by 1914 there were 755 miles of roads suitable for motor traffic."—A. F. Calvert, *German African empire*, pp. 215-218.—On the outbreak of the World War the German wireless station immediately attracted the attention of the Allied naval authorities and the whole province was soon forced to surrender unconditionally, August, 1914, to the French and British. (See also WORLD WAR: 1914: VI. Africa: a.) In the peace settlement after the war, 1919, Togoland was divided between France and Great Britain, the latter receiving about one-third of the interior region bordering on the Gold Coast territory.—See also AFRICA: Modern European occupation: 1918-1920: Territorial acquisitions.

**TOHOPEKA**, Battle of (1814). See U. S. A.: 1813-1814 (August-April).

**TOISON D'OR**, French name of the "Order of the Golden Fleece." See GOLDEN FLEECE.

**TOKIO**, or Tokyo, capital and first city of the Japanese empire. It is situated on Tokio bay on the southeastern coast of the island of Hondo. The river Sumida divides the city into two unequal parts, the eastern portion low and flat, the western portion hilly with thickly populated valleys. The population, census of 1920, was 2,173,162. See JAPAN: Map.

**Feudal city of Yedo.**—"Tokyo is by no means an ancient city as things go in Japan. For nearly a thousand years, while the center of the Empire was at Nara and Kyoto far away to the southwest, the site of Tokyo was a remote marsh at the base of a low rolling plain stretching back from the head waters of the bay. It was not until the twelfth century that its old name Yedo appears in the records of Japan; it was not until Ota Dokwan built his fortress there in 1457 that it began to be a center of influence. Its real importance, however, dates from the year 1603 when the mighty feudal lord, Tokugawa Iyeyasu,

having laid all other lords low in the dust, became the Shogun, chief minister of the Emperor, and with his 80,000 retainers took up his residence in Yedo. [See JAPAN: 1549-1605.] That was in the reign of King James, four years before the founding of Jamestown, Virginia, and seventeen years before the landing of the Pilgrims. For two centuries and a half, the mighty Tokugawa family ruled Japan from its seat at Yedo while the Emperors, as nominal sovereigns, whiled away their hours with ceremonies amid the exquisite beauties of far-off Kyoto. Established as the center of real power at the time when America was being founded, Tokyo was still the center of power when Commodore Perry, representing the independent United States of America, anchored in the mouth of the Bay of Yedo in 1853. [See JAPAN: 1797-1854.] During those long years [from 1603 to 1853], the city grew into a huge metropolis. Official reckonings made in 1687 placed the population at 1,370,000 people, not counting the feudal lords, Daimios and their retainers (Samurai), stationed there. Fire after fire swept over the city; earthquakes shattered it again and again; plagues decimated it; but undaunted in spirit it arose anew after each disaster, stronger and richer than ever. So it was a great city when in 1869 the Tokugawa shogunate was overthrown, the Emperor restored to real power, the capital of the empire moved from Kyoto to Yedo and the ancient name changed to Tokyo, or, translated into English, 'the Eastern Capital.' [See JAPAN: 1868-1894.] This history gives the key to the physical structure and spirit of Tokyo. The home of feudal lords with their armies of retainers and families, the life of the city centered in feudal customs and ceremonials. The shrewd Tokugawas compelled the restive and warlike vassals to live under the frowning walls of their castles a certain part of each year and to leave their families there as hostages for good behavior when at home on their estates. So everything revolved around the needs of the feudal lords. The shops, industries, and mercantile establishments that sprang up catered to the lordly families. The consummate skill of weaving, carving, building, and metal working was drawn upon to serve the Daimios and Samurai of Tokyo and their families. Thus Yedo, like Kyoto, became a center of taste as well as political power."—C. A. Beard, *Rebuilding in Japan* (*American Review of Reviews*, Oct., 1923).

1869-1923.—**Removal of capital from Kyoto to Tokio.**—Introduction of modern civilization.—Effect of World War on industrial and financial enterprise.—Progress in municipal government.—Viscount Goto's program of modernization.—"When the Emperor moved his residence to Tokyo all the old characteristics were merely accentuated. New and still more splendid temples and palaces were erected. The army of imperial officers was transferred to the city. It became the center of the great revolution brought about by the introduction of steam, electricity, railways, and industry. It became the center of the new financial institutions associated with the revolution in the government. To the ancient feudal society, proud, restrained, and limited, were added new and strange foreign elements, as ambassadors and ministers from all civilized countries of the world who brought their retinues into Tokyo. Brick and stone buildings after European styles began to appear, sometimes looming up like monstrosities beside the characteristic architecture of

old Yedo. There the Japanese gentlemen began to cast off their flowing robes for frock coats, trousers, and high hats; the ladies, more conservative, clinging with greater tenacity to old ways and costumes. For almost fifty years, however, Tokyo while changing rapidly in appearance, manners, and customs, went on her course in a somewhat conservative manner, as if regretting the dying days. When the World War broke out in 1914 the economic life of the Empire was quickened beyond all precedents. Huge war fortunes were accumulated. Thousands of Japanese hurried to the West to study, to discover new business methods, and to buy new industrial devices. Factories sprang up as if by magic in the city and in the suburbs. With Europe an influence almost cut off, American influence rose to immense heights, and with it the American passion for skyscrapers. Almost in a flash new steel and concrete buildings, five, six or seven stories high began to shoot up from the wide reaching sea of low wooden buildings. Great department stores were opened on American models. Brilliantly lighted streets lined with shops displaying wares from the ends of the earth pushed out in every direction from the center to the city. For enterprise, industrial activity, financial stability, Tokyo took her place among the great capitals of the world. . . . At Tokyo the East and the West met in strange confusion; and a social revolution was being wrought under our very eyes. . . . Measured by the standards of the best-governed American cities, Tokyo on September 1, 1923, was still in a primitive condition in many respects. But compared with old Yedo immense progress had been made. A water-works plant had been erected and an army of working people was engaged in extending it. . . . Wooden, concrete, and asphalt pavements were going down. . . . One large section of the city had sewer service and mains were being laid rapidly; but more than three-fourths of the city was without sewers and relief upon ancient methods for removing the night soil which was used for fertilizer by the outlying farmers. The city owned and operated a street-car system which served the great thoroughfares, but was utterly inadequate to handle the traffic of the city. A private corporation furnished gas to most of the city and many of the surrounding suburbs. With electric light and power the people of Tokyo were abundantly supplied by the city government and a private corporation. . . . The city of Tokyo was busily engaged in a program of modernization when it was shaken down by the earthquake. . . . The magnificent plan for a greater Tokyo, inaugurated under the inspiration of Viscount Goto, was being pushed under his competent successor, Mayor Nagata. . . . A plan for extending the boundaries to cover the area of greater Tokyo had been prepared and laid before the imperial Government. It was in the Home Office when the crash came. . . . In addition to enlarging the physical boundaries of the city and making better provision of public services, the Goto plan embraced a large program of social work; the construction of municipal lodging houses and dwellings for working people (some of which were finished just in time to be thrown down), new hospitals, a new waste-disposal system, employment exchanges, playgrounds, day nurseries, orphanages, municipal markets, the destruction of slum areas, and child health stations. This was not a paper program; energetic leaders with ample

funds were engaged in actual construction and operation. Within a decade or more Tokyo would have been transformed. In keeping with material improvements there was a progressive development of municipal democracy which revealed a startling change in the outlook of Japanese statesmen. When Tokyo was given autonomous government in 1889, the Prussian model was adopted under the influence of a Prussian adviser. In other words, the city council was elected under the three-class system. The highest taxpayers, who paid one-third of the taxes, formed the first class; those who paid a second third formed the second class; and all the remaining taxpayers formed the third class. . . . At the last election under this system in 1920, there were only 51,000 eligible voters legally entitled to vote for city councillors, in a city of more than two million people. Many and vigorous were protests made against this exclusive system, and at length, in 1922, the Imperial Parliament . . . abolished the three-class system and substituted a two-class system. Every male person who for two years had paid a direct municipal tax, no matter how small, even a license tax for a bicycle or rickshaw, can vote. The voters are divided into two classes. The total amount of taxes paid by the direct taxpayers is divided by the number of taxpayers and an 'average tax' is thus established. All those who pay the average amount or more are put into the first class and elect one-half of the municipal councillors. The remainder who pay less than the average, fall into the second class and elect half the councillors. The effect of this act was a three-fold increase in the municipal electorate at the election held in July, 1922. . . . Like the other premier cities . . . [Tokio] is governed under a general imperial law. The city is merely a subdivision of the prefecture and all its important acts must be approved by the prefect who is appointed by the Imperial Government, as well as by the appropriate Imperial minister under whose authority the act comes. Police control is in the hands of a commissioner of police appointed by the Imperial Government and responsible to it. The authority of the commissioner is very wide; it covers police protection, fire administration, and the enforcement of the building code. As would be expected, there is a duplication of functions and much waste in this system. An essential part of Viscount Goto's program, therefore, dealt with the vexatious questions which Americans know as 'home rule.' It called for the ousting of the prefect altogether from the entire area of Greater Tokyo, and the transference of many functions from the police commissioner to the city authorities."—C. A. Beard, *Rebuilding in Japan* (*American Review of Reviews*, Oct., 1923).

1923.—Earthquake and fire.—In September, 1923 Tokio and "all along Tokyo Bay, westward and northward to the Mountains, suburbs, villages and towns . . . [were] shaken down by earthquake, ravaged by fire, or scourged by tidal waves."—*New York Times*, Sept. 9, 1923.—"The unprecedented earthquake came without warning a few minutes before noon, on Sept. 1. The shock was so violent that its work of destruction was completed in a few minutes reducing to debris not only Tokio, Yokohama and Yokosuka but numerous other cities. . . . In Tokio by 4 o'clock the same afternoon fire was raging in at least twelve different sections and lasted until the evening of Sept. 3, when more than 350,000 houses or 75 per cent of the total number of houses in

the metropolis had been converted into smoldering charcoal and ashes. All the Government buildings with the exception of the Navy and Justice buildings were destroyed by the flames. All the foreign embassies and delegations met the same fate, although the Ambassadors and Ministers; as well as their staffs, were able to escape. Today 1,400,000 inhabitants, or almost 80 per cent of Tokio's entire population are homeless. . . . On Sept. 7 the Home Department estimated the number of dead in Tokio at 47,000. The next day the figures rose to 60,000. On Sept. 10 the figures from the same source were 84,114; on Sept. 12 the number of dead and injured was 1,336,749. . . . When a comprehensive estimate is made Tokio's dead will reach 100,000 with a proportionately large number of injured. . . . On the day after the earthquake while Tokio was still ablaze and the earth still heaving, the new Yamamoto Cabinet was organized on the open ground adjoining the Akasaka, detached palace of the Prince Regent. With remarkable vigor and resolution the new Government took hold of the appalling situation. . . . Due to their . . . [efficient organization] perfect order was maintained throughout the cities and by Sept. 8 trolley and lighting systems and the water works in Tokio were again partially in operation. . . . Immediately after the earthquake the Government appropriated 9,500,000 yen (\$4,750,000) for relief while the Emperor contributed 10,000,000 yen (\$5,000,000). On Sept. 8 the Government appropriation was increased to 520,000,000 yen (\$260,000,000). . . . Meanwhile the world went to the rescue. . . . The American warships were the first to arrive at the scene of the disaster with provisions and medical supplies."—K. K. Kawakami, *Japan's ordeal through earthquake and fire* (*New York Times Current History*, Oct., 1923).—“Howard P. Moore, general manager of the Foreign Insurance Association . . . stated that the figures for damages to property by earthquake, fire and flood in Tokio and Yokohama should be put at \$843,213,750. He does not believe the total will exceed \$1,000,000,000. . . . According to Moore, the recent earthquake and fires will (as in the earthquake of 1855) be a total economic loss without any insurance to act as a cushion.”—*New York Times*, Sept. 9, 1923.

1923 (December).—**Restoration plans.**—“When Yamamoto became Premier on the heels of the earthquake, with Shimpei Goto, Minister for Home Affairs, it was expected that the recovery of the country would proceed quietly, quickly and without undue friction. There was the moral influence of the fact that the Premier belonged to the Satsuma clan, into which the Prince Regent was about to enter through his contemplated marriage with Princess Nagako Kuni; there were the comprehensive plans of Goto for the building of magnificent and durable twin metropolises over the ruins of Tokio and Yokohama. But the time when such moral influence could be successfully employed had gone by. Disbelief and suspicion prevailed. The House of Representatives voted a restoration fund of \$171,016,400, apportioned over six years. It reduced the budget some \$50,000,000. But it declined to accept Viscount Goto's plans. Legislation was blocked in both houses in spite of the intervention of the Crown.”—*Ibid.*, Jan. 13, 1924.

**TOLEDO, Pedro de** (1484-1553), Spanish viceroy in Naples, 1532-1553. See ITALY (Southern): 1528-1570.

**TOLEDO, Ohio,** county-seat of Lucas county, on both banks of the Maumee river, about ninety-five miles west of Cleveland. It was first settled in 1817, as Port Lawrence and in 1853 united with the town of Vistula under the name of Toledo, after the famous city in Spain. It was the scene of much fighting with the Indians. In 1920 it had a population of 243,164.

1805-1836.—**Site in dispute between Ohio and Michigan.** See MICHIGAN: 1837.

1899-1903.—**“Golden Rule” Jones as mayor.**—Importance was given to the municipal election of April, 1899, by the character of the chosen mayor, Samuel M. Jones. He had first made himself known as a manufacturer in the city, by his dealings with his employees. The “Golden Rule” was posted in his shops, as the law by which he expected his own conduct and that of the men who served him to be governed, and it was found that he consistently obeyed the rule. In 1897, the Republican party, needing a candidate for mayor, put him forward and elected him. In office, he served the people so well and the politicians and monopoly interests so little to their satisfaction, that his party, obedient to the latter, cast him aside and nominated to the mayor's office a more “practical” man. In 1903 Mayor Jones was reelected for his fourth term. He died in 1904.

1906-1911.—**Brand Whitlock as mayor.**—Brand Whitlock, who later was American minister to Belgium, was mayor from 1906 to 1911 and carried on the independent movement begun by “Golden Rule” Jones.

1917-1921.—**Municipal experiments.**—Early in 1917 Toledo installed at a cost of \$190,924 a high-pressure fire protection station operating over a large part of the business sections of the city. “The abuses arising from the petty court system constituted the chief cause for the passage by the Ohio legislature of the Toledo Municipal Court Act [1918], which abolished all justice courts in the city and established one municipal court which took their place as well as that of the so-called city courts and the police court. . . . [After] this municipal court . . . [had] been in existence for more than three years a survey made by the Commission of Publicity and Efficiency showed that . . . [former] abuses . . . [had] been eliminated under the new system.”—W. F. Johnson, *Poor man's court* (*Survey*, Feb. 11, 1922, p. 767).

**TOLEDO, Spain**, capital of the province of Toledo and formerly of the whole kingdom, forty-seven miles southwest of Madrid on the River Tagus. It is the seat of an archbishop who bears the title of primate of all the Spains. The city is also famous for its manufacture of arms, especially the Toledo blades. In 1919 the population was 444,156.

531-712.—Capital of Gothic kingdom in Spain. See **GOTHS**: 507-711.

712.—Surrender to Arab-Moors. See **SPAIN**: 711-713.

1033-1085.—Recovery from the Moors.—On the crumbling of the dominions of the Spanish caliphate of Cordova, Toledo became the seat of one of the most vigorous of the petty kingdoms which arose in Moorish Spain. But on the death of its founder, Aben Dylhun, and under his incapable son Yahia, the kingdom of Toledo soon sank to such weakness as invited the attacks of the Christian king of Leon, Alfonso VI. After a siege of three years, on May 25, 1085, the old capital of the Goths was restored to their descendants and successors.—Based on S. A. Dunham, *History of Spain and Portugal*, bk. 3, sect. 1, ch. 1.

**TONGA, or FRIENDLY ISLANDS**, archipelago in the south Pacific ocean, about 250 miles southeast of Fiji and 350 miles southwest of Samoa. There were 22,689 natives and 350 Europeans here in 1919. (See **BRITISH EMPIRE: Extent**.) "According to Mariner, the Tongans did not deserve the name Cook gave them, that of the Friendly Islanders. He says that the chiefs intended to treacherously massacre Cook and his company, but the scheme came to nothing on account of differences among themselves as to how their amiable designs should be carried out. . . . The Tongan Archipelago is composed of at least a hundred islands and islets, comprised between 18° and 20° S. lat., and 174° and 170° W. long. The three principal islands of Tongatabu, Vavau and Eoa, are alone of any extent, which is in their cases from 15 to 20 miles in length. Six others, namely, Late, Tofua, Kao, Namuka, Lefuga, and Ilaano are from five to seven miles in extent. The rest are much smaller. Many of them are in fact only banks of sand and coral, covered with some tufts of trees. . . . Late Island has a peak

about 1800 feet high in the centre of the island, which at one time was a volcano. . . . The Tongans, like the Fijians and Samoans, have had, from time immemorial, a civilisation of their own. They have more moral stamina, energy and self-reliance than any other existing race in the Pacific. Had they been acquainted formerly with the use of metals, there can be no doubt that they would have subdued all Polynesia. When Captain Cook was in the islands, the habits of war were little known to the natives; the only quarrels in which they had at that time engaged had been among the inhabitants of the Fijis. They visited that group for the purpose of getting sandalwood, and to join the fighting Fijians for their own ends. From the latter they gained a knowledge of improved spears, and bows, and arrows."—H. Stonehewer Cooper, *Coral lands*, v. 2, ch. 12.—"In 1835 some Methodist missionaries arrived in New Zealand, whence they sailed to the Friendly or Tonga Islands. There they effected the conversion of the supreme chief of that archipelago. King George of Tonga, following the principle of 'cujus regio, ejus religio,' had his subjects baptised. The British Government recognised his title of king, concluding a treaty of friendship with him in 1879, and established a consulate in his capital. At the instance and under the direction of the missionaries, George I. granted his people a free constitution and parliament. . . . The archipelago has attained a degree of comparative prosperity and civilisation such as is not found in any other independent group of Oceania."—Baron von Hübnér, *Through the British empire*, v. 2, pt. 5, ch. 2.—"On each of the great islands there resides a governor. These are men of intelligence who speak English, dress well, and live in imported houses of the European fashion. . . . The Tongan laws are generally just, and are very strictly enforced. The statutes are printed, and distinctly understood by all the people. . . . The laws of Tonga forbid the sale of land to foreigners, but it is permitted to be leased on such liberal conditions and for so long a term as to be tantamount to an actual sale. All traders, planters, or permanent foreign residents not in the service of the Government, are obliged to take out a license. Spirits and some other articles pay a heavy duty. All the people contribute to the support of the state, the tax being on an adult male about six dollars per annum. All the great islands are traversed by broad roads laid out by a European engineer. They are formed and kept in repair by the labour of convicted criminals."—H. S. Cooper, *Coral lands*, v. 2.

1899-1918.—British protectorate.—Up to 1890 the Tonga islands continued to be neutral territory in accordance with the declaration of Berlin, Apr. 6, 1886. By the Anglo-German Agreement of Nov. 14, 1890 (see SAMOA: 1889-1900), they were under the suzerainty of Great Britain, and a British protectorate was formally declared in May, 1900. In December, 1900, a British high commissioner assumed civil and criminal jurisdiction over subjects of foreign powers in the islands. In 1905 British coin was made the only legal tender. In 1918 upon the death of her father, George II, Queen Salote succeeded to the rule of the islands under the British protectorate.

**TONGALAND.** See AMATONGALAND.

**TONGKING.** See TONKIN.

**TONIKAN FAMILY.**—"The Tonika are known to have occupied three localities: First, on the Lower Yazoo River (1700); second, east shore of

Mississippi River (about 1704); third, in Avoyelles Parish, Louisiana (1817). Near Marksville, the county seat of that parish, about twenty-five are now living."—J. W. Powell, *Seventh Annual Report of the Bureau of Ethnology*, p. 125.

**TONKAWAN FAMILY**, North American Indian tribe. "The Tonkawa were a migratory people and a coluvies gentium, whose earliest habitat is unknown. Their first mention occurs in 1719; at that time and ever since they roamed in the western and southern parts of what is now Texas."—J. W. Powell, *Seventh Annual Report of the Bureau of Ethnology*, p. 126.—See also INDIANS, AMERICAN: Cultural areas in North America: South-eastern area.

**TONKIN**, or Tongking, Province in the north-eastern part of French Indo-China, bounded on the north by the provinces of Kwang-Si and Yun-nan, on the west by Laos, on the south by Annam, and on the east by the Gulf of Tonkin. The population was 6,850,453 in 1921. See CHINA: Map; INDO-CHINA.

Of the American Revolution, and their exile. —“Before the Revolution the parties in the colonies were practically identical with the Whigs and Tories of the mother country, the Whigs or anti-prerogative men supporting ever the cause of the people against arbitrary or illegal acts of the governor or the council. In the early days of the Revolution the ultra Tories were gradually driven into the ranks of the enemy, until for a time it might be said that all revolutionary America had become Whig; the name Tory, however, was still applied to those who, though opposed to the usurpations of George III., were averse to a final separation from England.”—G. Pellet, *John Jay*, p. 200.—“The terms Tories, Loyalists, Refugees, are burdened with a piteous record of wrongs and sufferings. It has not been found easy or satisfactory for even the most candid historian to leave the facts and arguments of the conflict impartially adjusted. Insult, confiscation of property, and exile were the penalties of those who bore these titles. . . . Remembering that the most bitter words of Washington that have come to us are those which express his scorn of Tories, we must at least look to find some plausible, if not justifying, ground for the patriot party. Among those most frank and fearless in the avowal of loyalty, and who suffered the severest penalties, were men of the noblest character and of the highest position. So, also, bearing the same odious title, were men of the most despicable nature, self-seeking and unprincipled, ready for any act of evil. And between these were men of every grade of respectability and of every shade of moral meanness. . . . As a general rule, the Tories were content with an unarmed resistance, where they were not reinforced by the resources or forces of the enemy. But in successive places in possession of the British armies, in Boston, Long Island, New York, the Jerseys, Philadelphia, and in the Southern provinces, there rallied around them Tories both seeking protection, and ready to perform all kinds of military duty as allies. By all the estimates, probably below the mark, there were during the war at least 25,000 organized loyalist forces. . . . When the day of reckoning came at the close of the war, it needed no spirit of prophecy to tell how these Tories, armed or unarmed, would fare. . . . That it was not till six months after the ratification of the treaty by Congress that Sir Guy Carleton removed the British army from New York—the delay being caused by his embarrassment from the crowds of loyalists seeking his protection—is a reminder to us of their forlorn condition. . . . From all over the seaboard of the continent refugees made their way to New York in crowds. . . . They threw themselves in despair upon the protection of the British commander. . . . He pleaded his en-

cumbrances of this character in answer to the censures upon him for delaying his departure, and he vainly hoped that Congress would devise some measures of leniency to relieve him. . . . Many hundreds of them had been seeking refuge in Nova Scotia and New Brunswick since the autumn of 1782, and additional parties, in increasing number, followed to the same provinces. . . . Large numbers of the loyalists of the Southern provinces were shipped to the Bahamas and to the West India Islands. At one time Carleton had upon his hands over 12,000 Tories clamorous for transportation. . . . A celebration of the centennial of the settlement of Upper Canada by these exiles took place in 1884. At a meeting of the royal governor, Lord Dorchester, and the council, in Quebec, in November, 1789, in connection with the disposal of still unappropriated crown lands in the province, order was taken for the making and preserving of a registry of the names of all persons, with those of their sons and daughters, ‘who had adhered to the unity of the empire, and joined the royal standard in America before the treaty of separation in the year 1783.’ The official list contains the names of several thousands. [See also U.S.A.: 1783-1787.] . . . It was by their descendants and representatives that the centennial occasion referred to was observed. . . . Some bands passed to Canada by Whitehall, Lake Champlain, Ticonderoga, and Plattsburg, then southward to Cornwall, ascending the St. Lawrence, and settling on the north bank. Others went from New Brunswick and Nova Scotia up the St. Lawrence to Sorel, where they wintered, going afterwards to Kingston. Most of the exiles ascended the Hudson to Albany, then by the Mohawk and Wood Creek to Oneida and Ontario lakes. [See also ONTARIO: 1783-1841.] . . . As these exiles had stood for the unity of the empire, they took the name of the ‘United Empire Loyalists’ [a name which is often abbreviated in common use to U. E. Loyalists].”—G. E. Ellis, *Loyalists and their fortunes (Narrative and critical history of America, v. 7, pp. 185-214)*. —“Some 10,000 refugees had, in 1784, and the few years following, found homes in Western Canada, just as it is estimated . . . that 20,000 had settled in the provinces by the sea. Assuming full responsibility for the care and present support of her devoted adherents, Great Britain opened her hand cheerfully to assist them. . . . The sum paid by the British Government to the suffering refugees was about \$15,000,000.”—G. Bryce, *Short history of the Canadian people, ch. 7, sect. 2*.—See also U.S.A.: 1778 (June-November); (July).

**TORONTO**, capital of the province of Ontario, is the second largest city in Canada. It is situated on a sheltered bay on the northern side of Lake Ontario, opposite the mouth of the Niagara river. It is noted for its parks, its beautiful public building, and its many churches. It has large numbers of manufacturers, is second only to Montreal in finance and industry in the Dominion, and, as the

three transcontinental railways run through the city, it is the chief distributing point for the agricultural products of the rich province of which it is the chief social and political center. Its population in 1921 was 521,893.

1749.—**First settlement.**—"The Northern Indians were flocking with their beaver-skins to the English of Oswego; and in April, 1749, an officer named Portneuf had been sent with soldiers and workmen to build a stockaded trading-house at Toronto, in order to intercept them,—not by force, which would have been ruinous to French interests, but by a tempting supply of goods and brandy. Thus the fort was kept well stocked, and with excellent effect."—F. Parkman, *Montcalm and Wolfe*, v. 1, ch. 3.

1790-1813.—**Founding of the city.—Growth of population.**—Toronto, first known as York, was founded in 1790, as the capital of Upper Canada, by John Graves Simcoe, first lieutenant-governor of the province. "Though the first meeting of the Executive Council of the Province was held at York . . . [in 1797] there was as yet no building. . . . Meantime, the work of laying out the town advanced; and ere the woods had put on their autumnal glory several huts were built, and some portion of the region surveyed. . . . Shrewdly discerning the importance of communication northward, he determined to open up a highway . . . [to the north. The road which he planned is thirty-two miles long, and runs from the bay, through the city, northward to Lake Simcoe. It] was called after the English Secretary of War, and has ever since borne the name of Yonge Street. . . . The Governor periodically returned to Newark to summon and prorogue Parliament and direct the affairs of State. The buildings which he had ordered to be planned for the Legislature at York meantime had been proceeded with, and streets were beginning to branch out from the site of the New Westminster. With all his enthusiasm and practical energy, however, the development of the town was necessarily slow. The plan of the city was extensive, and before it could be built the forest had to be cleared. Yet there was progress as the years went by. . . . [The legislature sat in York in June, 1797, where two halls for the legislature and courts of justice had been erected.] They were built of brick, and might have seen length of years, and been preserved to later generations as a sacred relic, but unfortunately, in 1813, they fell a prey to the torch of the invader. . . . The population of the capital had by this time grown to 2,000."—*History of Toronto and County of York*, v. 1, pp. 207-208, 211.

1813.—**Taken and burned by Americans.** See U. S. A.: 1813 (April-July).

1816-1878.—**Growth of the town.—First hospital.—City Charter Act.—Change of name.—Cholera.—Fires.—Growth of population.**—"In 1816 we find a grant made by the legislature for the re-establishment of the library which had been destroyed by the invaders in 1812. . . . In the following year provision was made for the first police system. Meanwhile York was extending its boundaries. . . . About the market had sprung up a number of public buildings, stores, taverns, and land and steamboat offices, and more than one denomination had begun to build itself a sanctuary. . . . Newspapers had come into existence, and there was already talk of founding a college, in addition to the District Grammar School. . . . The professions also were beginning to establish themselves, and legislation had been enacted to regulate their practice. In legislation we also find the evi-

dence of growth and prosperity. In 1820 increased representation was granted to the House of Assembly. . . . In 1822 the Bank of Upper Canada came into corporate existence; and steps were taken to establish a uniform currency. The following year saw the erection of a jail and court-house; and the unexpended moneys of the 'Loyal and Patriotic Society of Upper Canada' were devoted to the building of an hospital. . . . The population of York in 1834, the year which witnessed the birth of the City of Toronto, was, in round numbers, ten thousand souls. Within its contracted limits nearly every industrial occupation was represented; there were steam sawmills, iron foundries, and steam-engine manufactories, starch, candle and soap, and paper factories, besides a theatre, schools, and half a dozen printing offices, a fire department, and an artillery company. . . . In February, 1834, a Bill embodying . . . proposed [incorporation] measures was introduced in the Legislature by Mr. Jarvis, the member for the town, and carried through the House. On the 6th of March it received the Royal assent and became law. The main features of the Act, which was a formidable document, . . . were provisions for constituting the place a city, under the name of the City of Toronto, . . . with two Aldermen and two Common Councilmen for each ward, to be elected by the citizens, and a Mayor, who should be elected by the Aldermen and Common Councilmen from among themselves. . . . [The first mayor and alderman were elected on March 27.] The city's finances were in a deplorable condition; it was burdened by a debt of over nine thousand pounds. . . . Its treasury was practically empty, and money was urgently needed for public buildings, and still more urgently for the repair of the streets. . . . [Money was raised by taxation and borrowing for revenue and needed improvement, and from that time forward the city prospered. Toronto was visited in 1834 by an epidemic of cholera, from which five per cent. of the population of the city died. In 1838 it was proposed to move the legislature of the province to Kingston and on the formation of the union of the two provinces this was done. It was feared that this proceeding would militate against the prosperity of Toronto. On the contrary, however], during the eight years from 1841 to 1849 the growth of the city was rapid. . . . At the time of the incorporation of the city in 1834 its population was somewhat under 10,000; in 1841, the first year of the Union, it was slightly in excess of 15,000. Sir R. H. Bonnycastle, who visited Toronto in 1845, describes it as 'a city in earnest, with upwards of 20,000 inhabitants—gas-lit, with good plank sidewalks and macadamized streets, with vast sewers and fine houses of brick or stone.' . . . Gas had been introduced in 1840. . . . [In the year 1846], a local chronicler stated that the city—the entire length of which was three miles—contained ninety-two streets, twenty-one churches and chapels, fifteen common schools, and ten newspapers; it enjoyed the privileges not only of gas but of waterworks; it was connected by steamboat with Kingston, Hamilton, Niagara and Rochester. . . . [In 1849] the city was swept by a disastrous fire by which damage to the extent of £100,000 sterling was sustained by the citizens. [The fire] was followed by another epidemic of cholera . . . [which raged] until it was checked by the approach of cold weather. 1849 was marked by . . . [riots, against the amnesty, which permitted the return of William Lyon McKenzie and other insurgents, to the country. No one was injured, however, and the city quieted

down quickly.] In 1856 there were evidences of commercial depression and monetary stringency, but 1857 . . . [was] the gloomiest epoch in the history of the commerce and industries of the country. Solvency and enterprise seemed to be things of the past. Mercantile houses of long established reputation went by the board; the factories were idle, trade was stagnant, and the streets swarmed with beggars and vagrants. . . . During 1858 the condition of affairs underwent a slight improvement, but it was not until the following year that confidence was re-established, and the city resumed its normal business-like aspect. In 1851 . . . the population of the city was 30,775. In 1856 this had increased to 45,000. . . . [On December 27, 1867, the first meeting of the legislature of Ontario was held in Toronto, and from that time forward the growth of the city in importance was continuous.] Of the growth in population an idea may be formed from the following figures: In the census of 1871 the population was given as 56,092, being an increase of 11,271 during the previous decade. In 1881 the census gave 86,415. . . . [During the years 1872 to 1874 Toronto began to make rapid strides in commercial progress, but in 1875 a period of depression set in, which lasted until 1878. In September 1878 an Industrial Association Exhibition was held, to mark the semi-centennial of the city.]—*History of Toronto and County of York, v. 1, pp. 239, 253, 255, 260, 267-268, 278.*—See also CANADA: 1838-1843.

1837.—Mackenzie rising.—Defeat of the rebels. See CANADA: 1837-1838.

1879-1913.—Industrial exhibition.—Introduction of electric light.—Other civic undertakings.—Fire of 1904.—Negotiations over railway and electric light franchises.—In March, 1870, the Industrial Exhibition Association was organized and incorporated, as an outcome of the exhibition of the year before. "Under this constitution the Exhibition has grown in importance from year to year until [in 1923 it was] the largest and most complete annual Fair in the world, with annual paid admissions exceeding one million. . . . [In 1881, electric light was introduced, and in 1883, the public library was authorized.] At the beginning of 1891 the general debt of the City was \$12,349,415.20. . . . The most important event in civic administration was the expiry of the street railway franchise. In thirty years the railway system had expanded greatly although it had not kept pace with transportation requirements of the growing city. The total length of single-track was 80.60 miles, and the Company possessed 90 two-horse closed cars and 56 open, 116 one-horse cars, 90 buses, 100 sleighs and 1,372 horses. Preparatory to the taking over of the property the city had secured from the Legislature interpreting acts setting forth the procedure of the necessary arbitration. . . . [The arbitrators] . . . thoroughly examined the claim of the Company for compensation exceeding \$5,000,000 [and their] judgment was that the assets of the Company were worth \$1,453,788. No allowance was made for 'intangibles,' since the terms of the franchise was very clearly 30 years, without provision for renewal. . . . [There was a body of opinion in favor of the civic ownership and operation of the railway, but the more conservative considered the risks too great, and it was leased to a company to be transformed into an electric railway system.] The Sunday cars agitation which turned the entire community into a debating club, had its beginning in 1891. Public opinion was generally hostile, and a clause

was written into the agreement providing that no Sunday cars would be allowed on the streets until the electors had given approval at the polls. . . . At last on May 15th, 1897, the electors reversed previous judgments. The vote was 16,372 for Sunday cars, and 16,051 against—a majority of 321. . . . On September 18th, 1899, the new City Hall was officially opened by Mayor Shaw—eight years after the laying of the cornerstone, and ten years after the granting of the contract. . . . [A great fire swept the wholesale warehouse section of the city on April 19 and April 20, 1904. The fire began] on the north side of Wellington Street near Bay, probably from an electric short circuit. There was a strong north wind and despite the most ardent efforts of the firemen building after building caught fire. By midnight the whole area south of the *Telegram* office to the Bay and from the Queen's Hotel to the old Custom House on the corner of Front and Yonge Streets was a seething furnace. Firemen came to aid from Hamilton, Niagara Falls, Buffalo, Peterboro', Brantford and London, but despite all efforts 14 acres of warehouses were razed, and the loss reached \$13,000,000. . . . [In 1913 the mayor proposed] to purchase the assets of the Toronto Railway Company and the Toronto Electric Light Company. Mr. Hocken initiated the negotiations with Sir William Mackenzie for the ending of these franchises, and finally \$22,000,000 was named for the railway [which was taken over by the city] and \$8,000,000 for the lighting plant [which the Electric Light Company elected to keep]. While the sum was large the supporters of the proposal pointed out the advantage of obtaining a complete monopoly of the city lighting market for the Hydro-Electric distributing plant, now practically completed."—J. E. Middleton et al., *Municipality of Toronto, a history, v. 1, pp. 313, 339, 343-344, 347, 353, 368, 372.*

1914-1923.—Effect of World War on municipal affairs.—Finances.—War work.—Municipal control of street railways.—Progress of city apparent in 1923.—"The war was the great fact of 1914 and successive years, and municipal affairs were subordinated to it. The pressure of rising prices for materials and labor bore hard upon the municipalities in Canada. In Toronto the comfort of a low tax rate fled away. From 1898 to 1913 the average impost on the ratepayer was a shade over 19 mills. In 1915, it was 23; 1916, 22.5; 1917, 25.5; 1918, 30.5. . . . [and in 1922 it had reached] 32.35. The pre-war position of the City's finances was as follows: The bonded debt, less sinking fund accumulations, was \$60,564,385.48. Of this rather more than \$34,000,000 was invested in revenue-producing properties and 'specials,' such as the waterworks, the Hydro System, the Exhibition, the Local Improvement loans, the street railway pavement loans. This \$34,000,000 was 'self-carrying.' The debt which had to be carried by interest and fixed charges collected in taxation amounted to \$26,158,114. Against this, the City owned real estate valued by the assessment department, a low valuation, at \$41,747,541. . . . [The city sent to the World War a number of men equivalent to three divisions. The exhibition buildings were used as a concentration camp and a large aviation camp was created in the vicinity.] From 1914 to 1918 Toronto subscribed \$7,645,000 to [the Patriotic Fund]. . . . Of this amount \$1,000,000 was paid through the civic treasury and the remainder, through private subscriptions. The second largest item [of contribution to the war cost] was paid out for life insurance on

citizens. The City Council agreed to pay \$1,000 to the relatives of every citizen who was killed overseas and this entailed a civic expense which amounted to about \$4,500,000. . . . [Subscriptions to other funds brought the total contributed by Toronto to \$20,000,000 exclusive of Victory Loans. In 1920 an act was passed authorizing the city to take over the Toronto Railway Company and the street railways are now operated by the city.] For the first twenty years of its existence Toronto was a nest of small houses in a clearing, a meeting place of three roads; from Kingston, from Holland Landing, from Dundas and beyond, a village beside a marsh, but with as fair a prospect of forest, lake and island as one could ask. From the end of the war with the Americans until the 'forties,' the village had expanded to a size commensurate with its dignity as a capital. 'The streets are well paved, and lighted with gas, the houses are large and good, the shops excellent.' . . . The era of railway building continued the prosperity and growth of the city. . . . [In 1923] from the town-line between York and Scarborough to the Humber the City [lay] . . . an east and west distance of twelve miles. It runs northward to the very edge of Hogg's Hollow, six miles from the Bay. The total assessment in 1922 was \$775,578,488. . . . 'The Water Works System of Toronto has been municipally controlled and operated since July, 1873, at which time the privately owned plant was taken over at a price of \$220,000.' [Since the incorporation in 1834 the population was doubled every fifteen years.]"—J. E. Middleton et al., *Municipality of Toronto, a history*, v. 1, pp. 373, 389, 398-399.

**"TORP" TENANCY.** See FINLAND: 1918.

**TORPEDO: Development.—Origin of Whitehead type.—Addition of gyroscope.—Other early types.**—"In 1864 Captain Lupuis of the Austrian Navy conceived the idea of a new form of destructive engine to be used in naval warfare. The proposed weapon was a very crude affair resembling a small surface boat in shape, which was to be driven by a propeller turned by clock work from within and guided by means of ropes from the shore. The fore part of the little boat was to carry a heavy charge of gunpowder which was to be exploded by a trigger device operated by a contact spar fitted to the bow. When the spar struck the side of a ship the impact would pull the trigger and explode the charge. The only bit of importance attached to this device however, is that in its conception Captain Lupuis consulted Mr. Robert Whitehead, an English civil engineer residing in Fiume, Austria, about some of the mechanical problems involved. The idea brought to Mr. Whitehead in this way without a doubt was the first occasion that he had ever given thought to such a device. . . . His imagination was set to work though, and after about two years he built his first torpedo, which was made of boiler plate, carried eighteen pounds of gun-cotton and had a speed of six knots for a very short distance. . . . [Since that time all naval powers have used Whitehead self-propelled torpedo or some modification of it.] When the head of the torpedo strikes a ship or any other rigid object the firing pin or plunger is driven against a percussion cap containing fulminate of mercury and situated in the center of the bursting charge. The explosion of this cap detonates the high explosive

contained in the chamber with sufficient force to rupture the plating of any battleship. . . . In actual practice though, it was found that no matter how carefully the torpedo had been tested and balanced, it would behave in a very erratic manner when fired. Instances have been known when the torpedo would run a certain distance and then swerve to the right or left or perhaps dive to the bottom. . . . No practical remedy was found for this objectionable feature until the advent of the gyroscope. . . . [Captain John A. Howell's gyroscope method for steering torpedoes, invented about 1884, was driven out of the field by another] ingenious device known as the Obry gear, acting in conjunction with rudders placed at the stern [by which] the torpedo is steered in a horizontal plane just as is a ship. By the use of the Obry gear the [Whitehead style of] torpedo can now be held true to a course, the direction in which it is first aimed from the launching tube, or the gear can be so adjusted that the torpedo can be fired in one direction and after running a certain distance the gyroscopic influence of the gear acting on the rudders will cause it to take up and continue an entirely different course."—A Hoar, *Submarine torpedo boat*, pp. 174, 179-180.—In the meantime the first controllable torpedo, propelled by carbonic-acid gas and directed by electricity, was invented by J. L. Lay. This type of torpedo also represented by later inventions, the Lay-Haight, Nordenfelt, Sims-Edison and others, has been discarded.—See also INVENTIONS: 20th century: Instruments; SUBMARINES.

**Use in World War.—American production and developments for submarine use.—Air and seaplane use.—Recent inventions.**—During the World War the use of the torpedo became of increased importance due to the emphasis placed upon it by the Germans in their submarine campaign. The various participants of naval engagements used the torpedo on large ships, torpedo boats, destroyers, coastal motor boats and experimentally on airplanes and seaplanes. (See also SUBMARINES: 1914-1918; WARSHIPS: 1914-1918.) "When war was declared the Newport station, in conjunction with the E. W. Bliss Company—which manufactures the major proportion of the American Navy's torpedoes—was designing a 21 inch torpedo for war in submarines. On April 1st, 1917, only twenty torpedoes were approaching completion at the Bliss works. In order to hasten production the Navy Department made an arrangement with the company . . . [by which] it was hoped . . . to bring the output up to at least 300 torpedoes a month. This figure, however, was never attained . . . and the maximum output per month did not exceed 150 torpedoes. . . . In August, 1918, it was decided to build (a Government torpedo assembly) plant at Alexandria, Va. The Armistice was not allowed to interfere with this work which has since been completed. Near at hand in Chesapeake Bay, 220,000 yard torpedo range has been laid out. In November, 1917, a torpedo repair station was established at Queens-town, Ireland, to take care of the torpedo material of the American vessels co-operating with the British naval forces. Some months later the Paravane shed at Haulbowline was turned over to the Americans by the Admiralty . . . and later on . . . enlarged at the joint expense of the American and British. . . . In contrast to the reciprocating engine type used by practically every other navy, the American torpedo is propelled by balanced turbines. . . . Since the summer of 1918 when the demand for increased range became

apparent, the Bureau, [of Ordnance] in connection with the Naval Gun Factory, completed the design of three new torpedoes, which are . . . in process of manufacture. Two of these torpedoes will have a range in excess of any torpedoes now known to exist, while the third will be capable of a range at a speed greater than any yet realized."—*American ordnance production in the Great War* (*Engineer*, Sept. 9, 1921, p. 268).

Italian and British naval experts first experimented in the use of the torpedo in air attacks. Admiral Fiske of the United States Navy was also an advocate of this method of warfare before the World War was declared. Experimental work was carried on with numerous practical results throughout the course of the war. Torpedo seaplanes were successfully employed only late in the war. Recently these are thought to lie in the field of greatest future development. "The torpedoed system of fighting (virtually adopted by the British, Italian, Japanese and American navies) is that by which an airplane or seaplane equipped with an automobile submarine torpedo which may be detached at the right moment, attacks a fighting ship and launches the torpedo at such close range and with such easy aim that the ship is practically helpless before the attack."—*Scientific American*, Jan. 15, 1921, p. 46.—The "torpedo-carrying mechanism of . . . [the torpedo seaplane recently completed for the United States Navy Department] is described as a cantilever monoplane, with the Engines virtually mounted on wings."—*Another step in torpedo air-craft* (*Illustrated World*, Sept., 1922, p. 70).—Recent ingenious inventions include the application of the gyroscopic method to a high-powered turbine-driven airplane torpedo designed by H. W. Shounard of Montclair, New Jersey (associated with the Bliss-Levitt torpedo) and a radio controlled air torpedo devised by Charles S. Price, a British mechanical engineer.

**TOTEMS**.—"A peculiar social institution exists among the [North American] Indians, very curious in its character; and though I am not prepared to say that it may be traced through all the tribes east of the Mississippi, yet its prevalence is so general, and its influence on political relations so important, as to claim especial attention. Indian communities, independent of their local distribution into tribes, bands, and villages, are composed of several distinct clans. Each clan has its emblem, consisting of the figure of some bird, beast, or reptile; and each is distinguished by the name of the animal which it thus bears as its device; as, for example, the clan of the Wolf, the Deer, the Otter, or the Hawk. In the language of the Algonquins, these emblems are known by the name of 'Totems.' The members of the same clan, being connected, or supposed to be so, by ties of kindred more or less remote, are prohibited from intermarriage. Thus Wolf cannot marry Wolf; but he may, if he chooses, take a wife from the clan of Hawks, or any other clan but his own. It follows that when this prohibition is rigidly observed, no single clan can live apart from the rest; but the whole must be mingled together, and in every family the husband and wife must be of different clans. To different totems attach different degrees of rank and dignity; and those of the Bear, the Tortoise, and the Wolf are among the first in honor. Each man is proud of his badge, jealously asserting its claims to respect; and the members of the same clan, though they may, perhaps, speak different dialects, and dwell far asunder, are yet bound together by the closest ties of fraternity. If a man is killed, every member of the clan feels called upon to avenge him; and the wayfarer, the hunter, or the warrior is sure of a cordial welcome in the distant lodge of the clansman whose face perhaps he has never seen. It may be added that

certain privileges, highly prized as hereditary rights, sometimes reside in particular clans; such as that of furnishing a sachem to the tribe, or of performing certain religious ceremonies or magic rites."—F. Parkman, *Conspiracy of Pontiac*, ch. 1.—"A totem is a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation. The name is derived from an Ojibway (Chippeway) word 'totem,' the correct spelling of which is somewhat uncertain. It was first introduced into literature, so far as appears, by J. Long, an Indian interpreter of last century, who spelt it 'totam.' . . . The connexion between a man and his totem is mutually beneficent; the totem protects the man, and the man shows his respect for the totem in various ways, by not killing it if it be an animal, and not cutting or gathering it if it be a plant. As distinguished from a fetich, a totem is never an isolated individual, but always a class of objects, generally a species of animals or of plants, more rarely a class of inanimate natural objects, very rarely a class of artificial objects. Considered in relation to men, totems are of at least three kinds:—(1) the clan totem, common to a whole clan, and passing by inheritance from generation to generation; (2) the sex totem, common either to all the males or to all the females of a tribe, to the exclusion in either case of the other sex; (3) the individual totem, belonging to a single individual and not passing to his descendants."—J. G. Frazer, *Totemism*, pp. 1-2.—See also CHURCH AND STATE: Totemism; RELIGION: Universal elements.

TOTILA (d. 552), king of the Ostrogoths, 541-552. See BARBARIAN INVASIONS: 527-533; ROME: Medieval city: 535-553.

TOTONACOS.—"The first natives whom Cortes met on landing in Mexico were the Totonacos. They occupied the territory of Totonacapan, now included in the State of Vera Cruz. According to traditions of their own, they had resided there 800 years, most of which time they were independent, though a few generations before the arrival of the Spaniards they had been subjected by the arms of the Montezumas. . . . Sahagun describes them as almost white in color, their heads artificially deformed, but their features regular and handsome. Robes of cotton beautifully dyed served them for garments, and their feet were covered with sandals. . . . These people were highly civilized. Cempoalla, their capital city, was situated about five miles from the sea, at the junction of two streams. Its houses were of brick and mortar, and each was surrounded by a small garden, at the foot of which a stream of fresh water was conducted. . . . The affinities of the Totonacos are difficult to make out. . . . Their language has many words from Maya roots, but it has also many more from the Nahuatl."—D. G. Brinton, *American race*, p. 139.—See also INDIANS, AMERICAN: Cultural areas in Mexico and Central America: Aztec area.

TOUL, town in northeastern France, capital of an arrondissement in the department of Meurthe-et-Moselle, twenty-one miles west of Nancy. France acquired possession of it in 1552. See FRANCE: 1547-1559.

1648.—Incorporated with France in the Peace

of Westphalia. See GERMANY: 1648: Peace of Westphalia; WESTPHALIA, PEACE OF (1648).

TOULON, seaport, fortress and naval station in the department of Var, France, capital of the arrondissement of Toulon, on the Mediterranean, forty-two miles southeast of Marseilles. Its population was 106,331 in 1921.

1793-1794.—Revolt against the revolutionary government at Paris.—English aid called in.—Siege, capture and frightful vengeance by the Terrorists. See FRANCE: 1793 (June); (July-December): Civil War; Progress of the war of the coalition; 1793-1794 (October-April).

TOULOUSE, Raymond IV, Count of (d. 1105), leader of the First Crusade, 1096. Besieged Tripolis, 1104. See CRUSADES: 1104-1111; Military aspect, etc.; Map of Mediterranean lands in 1097.

TOULOUSE, Raymond VI, Count of (1156-1222), leader of the Albigenses against the Crusaders under Simon de Montfort. Defeated by the latter, 1213. See ALBIGENSES: 1209; 1210-1213; 1217-1220.

TOULOUSE, city of southwestern France, on the Garonne, capital of the department of Haute-Garonne, 159 miles southeast of Bordeaux. The population was 175,434 in 1921.

B. C. 106.—Acquisition by the Romans.—Tolosa, modern Toulouse, was the chief town of the Volcæ Tectosages (see VOLCÆ), a Gallic tribe which occupied the upper basin of the Garonne, between the western prolongation of the Cévennes and the eastern Pyrenees. Some time before 106 B. C. the Romans had formed an alliance with the Tectosages which enabled them to place a garrison in Tolosa; but the people had tired of the arrangement, had risen against the garrison and had put the soldiers in chains. On that provocation, Q. Servilius Cæpio, one of the consuls of the year 106, advanced upon the town, found traitors to admit him within its gates, and sacked it as a Roman general knew how to do. He found a great treasure of gold in Tolosa, the origin of which has been the subject of much dispute. The treasure was sent off under escort to Massilia, but disappeared on the way, its escort being attacked and slain. Consul Cæpio was accused of the robbery; there was a great scandal and prosecution at Rome, and "Aurum Tolosanum"—"the gold of Toulouse"—became a proverbial expression, applied to ill-gotten wealth.—Based on G. Long, *Decline of the Roman republic*, v. 2, ch. 1.

A. D. 410-509.—Gothic kingdom. See BARBARIAN INVASIONS: 408-423; GOTHs: 410-419, 453-484; 507-509.

721.—Repulse of the Moslems. See CALIPHATE: 715-732.

781.—Made a county of Aquitaine. See AQUITAINE: 781.

10th-11th centuries.—Rise of the counts.—The counts of Toulouse "represented an earlier line of dukes of Aquitaine, successors of the dukes of Gothia or Septimania, under whom the capital of southern Gaul had been not Poitiers but Toulouse, Poitou itself counting as a mere underfief. In the latter half of the tenth century these dukes of Gothia or Aquitania Prima, as the Latin chroniclers sometimes called them from the Old Roman name of their country, had seen their ducal title transferred to the Poitevin lords of Aquitania Secunda—the dukes of Aquitaine with whom we have had to deal. But the Poitevin overlordship was never fully acknowledged by the house of Toulouse; and this latter in the course of the following century again rose to great importance and distinction, which reached its height in the person of Count

Raymond IV., better known as Raymond of St. Gilles, from the name of the little county which had been his earliest possession. From that small centre his rule gradually spread over the whole territory of the ancient dukes of Septimania. In the year of the Norman conquest of England [1066] Rouergue, which was held by a younger branch of the house of Toulouse, lapsed to the elder line; in [1088] the year after the Conqueror's death Raymond came into possession of Toulouse itself; in 1094 he became, in right of his wife, owner of half the Burgundian county of Provence. His territorial influence was doubled by that of his personal fame; he was one of the chief heroes of the first Crusade; and when he died in 1105 he left to his son Bertrand, over and above his Aquitanian heritage, the Syrian county of Tripoli. On Bertrand's death in 1112 these possessions were divided, his son Pontius succeeding him as count of Tripoli, and surrendering his claims upon Toulouse to his uncle Alfonso Jordan, a younger son of Raymond of St. Gilles. Those claims, however, were disputed. Raymond's elder brother, Count William IV., had left an only daughter who, after a childless marriage with King Sancho Ramirez of Aragon, became the wife of Count William VIII. of Poitou. From that time forth it became a moot point whether the lord of St. Gilles or the lord of Poitiers was the rightful count of Toulouse. . . . With all these shiftings and changes of ownership the kings of France had never tried to interfere. Southern Gaul—"Aquitaine" in the wider sense—was a land whose internal concerns they found it wise to leave as far as possible untouched."—K. Norgate, *England under the Angevin kings*, v. 1, ch. 10.—See also **BURGUNDY**: 1032.

12th century.—Joyous court. See **PROVENCE**: 1179-1207.

1209.—Beginning of the Albigensian crusades. See **ALBIGENSES**: 1209.

1213.—Conquest by Simon de Montfort and his Crusaders. See **ALBIGENSES**: 1210-1213; **ARAGON**.

1229.—End of the reign of the counts. See **ALBIGENSES**: 1217-1229.

1321.—Persecution of the Jews. See **JEWS**: 1321.

1323-1324.—"Floral games."—The famous "floral games" were instituted in Toulouse in 1324. In these games, held at the height of the spring season between the first and the third of May, the poets of Languedoc contended for the prize of the golden amaranth and other gold and silver flowers. The tradition of the floral games is still maintained by the Académie des Jeux Floraux, which awards similar prizes for compositions in prose or verse.

1814.—Last battle of the Peninsula War.—Occupation of the city by the English. See **SPAIN**: 1812-1814.

**TOURAINNE**, former province in France along the banks of the Loire, bounded on the north by Orléanais, on the west by Anjou and Maine, on the south by Poitou and on the east by Berry. It belonged to England from 1154 to 1205. See **ENGLAND**: 1205.

**TOURCOING**, town of northeastern France in the department of Nord, close to the Belgian border. During practically the whole of the World War the town was held by the Germans. The population was 78,600 in 1921. See **WORLD WAR**: 1916: V. German rule in northern France and Belgium: a, 1.

Battle of. See **FRANCE**: 1794 (March-July).

**TOURNAMENT**. See **TOURNEY**.

**TOURNAI** (Tourhai), town on the Scheldt in the province of Hainaut, in western Belgium, near the French border. It had a population of 35,805 in 1920. It has several buildings of medieval architecture, notably the Cathedral of Notre Dame.

1513.—Capture by the English. See **FRANCE**: 1513-1515.

1581.—Siege and capture by the Spaniards. See **NETHERLANDS**: 1581-1584.

1583.—Submission to Spain. See **NETHERLANDS**: 1584-1585.

1667.—Taken by the French. See **BELGIUM**: 1667.

1668.—Ceded to France. See **NETHERLANDS**: 1668.

1709.—Siege and reduction by Marlborough and Prince Eugene. See **NETHERLANDS**: 1708-1709.

1713.—Ceded to Holland. See **UTRECHT**: 1712-1714; **NETHERLANDS**: 1713-1715.

1745-1748.—Siege.—Battle of Fontenoy and surrender to the French.—Restoration at the peace. See **BELGIUM**: 1745; **AIX-LA-CHAPELLE**: Congresses: 2.

1794.—Battles near the city.—Surrender to the French. See **FRANCE**: 1794 (March-July).

1814.—Belgian provinces annexed to Holland. See **FRANCE**: 1814 (April-June).

1830-1832.—Separation of Belgian provinces from Holland.—Creation of an independent government. See **BELGIUM**: 1830-1832.

1914-1918.—Captured by the Germans (August, 1914).—Taken by the Allies (October, 1918). See **WORLD WAR**: 1918: II. Western front: w, 2.

**TOURNEY, TOURNAMENT, JOUST**.—"The word tourney, sometimes tournament, and in Latin 'torneamentum,' clearly indicates both the French origin of these games and the principal end of that exercise, the art of manœuvring, of turning ('tournoyer') his horse skilfully, to strike his adversary and shield himself at the same time from his blows. The combats, especially those of the nobility, were always fought on horseback, with the lance and sharp sword; the knight presented himself, clothed in armour which covered his whole body, and which, while it preserved him from wounds, bent to every movement and retarded those of his war horse. It was important, therefore, that constant exercise should accustom the knight's limbs to the enormous weight which he must carry, and the horse to the agility which was expected of him. In a 'passage' or 'pass of arms' ('passage' or 'pas d'armes') the generic name of all those games, this exercise was composed of two parts: the joust, which was a single combat of knight against knight, both clothed in all their arms, and the tourney, which was the image of a general battle, or the encounter and evolutions of two troops of cavalry equal in number."—J. C. L. de Sismondi, *France under the feudal system* (tr. by W. Bellingham), ch. 8.—Tournaments were said, by the earliest chroniclers of the game, to have been invented by a French baron, Geoffire de Prulli, in the eleventh century. In England in the twelfth century tournaments were forbidden by Henry II, who feared lest such great martial gatherings be turned to something besides sport. Richard I, however, granted licenses for tournaments, and the sources of our knowledge of these assemblies are often found in the record of the granting or withholding of licenses for tournaments and the reasons therefor, together with records of fines and penalties for unlicensed tourneying. By the fourteenth century tournaments had, in many instances, become very rich and splendid international assem-

blies of princes and nobles." On St. George's Day in 1344 a mighty tournament was held at Windsor, and heralds published at all the principal courts of the continent, in France, Burgundy, Flanders, etc., a notice of the tournament and the king's offer of safe-conduct for competitors. Even monarchs themselves took part in the games. Henry II of France died of a wound incurred in a tournament. As time went on, pageants and masques were included as part of the general display of the tournament, and by the sixteenth century, the martial element in the game had yielded to gorgeous show.

**TOURS**, city of central France, capital of the department of Indre-et-Loire, 145 miles southwest of Paris. It was named from the Gallic tribe, Turones, and was an ally of Vercingetorix against the Romans. In 473 it was taken by the Visigoths and in 507 by the Franks under Clovis. In 732 Charles Martel defeated the Moors here. (See **FRANKS**: 511-752; **GERMANY**: 687-800.) In 1870 it became the seat of the French provisional government of national defense. During the World War it was an important divisional center of the American army in France. It had a population of 75,096 in 1921.

Council of (566). See **CHARITIES**: France: 511-1553.

**TOURVILLE**, Anne-Hilarion de Cotentin (or Costantin), Comte de (1642-1701), French admiral and marshal of France. Defeated the Anglo-Dutch fleet off Palermo, 1677, and near the Isle of Wight, 1690; was defeated at La Hogue, 1692. See **ENGLAND**: 1602.

**TOUSSAINT L'OUVERTURE**, or Louverture, Pierre-Dominique (c. 1746-1803), one of the liberators of Haiti. See **HAITI, REPUBLIC OF**: 1632-1803.

**TOWER AND SWORD**, Order of the.—This was an order of knighthood founded in Portugal by Alfonso V, who reigned from 1438 to 1481. "The institution of the order related to a sword reputed to be carefully guarded in a tower of the city of Fez: respecting it there was a prophecy that it must one day come into the possession of a Christian king; in other words, that the Mohammedan empire of northwestern Africa would be subverted by the Christians. Alfonso seemed to believe that he was the destined conqueror."—S. A. Dunham, *History of Spain and Portugal*, v. 3, p. 225.

**TOWER BRIDGE**, drawbridge spanning the Thames just below the Tower of London. See **LONDON**: 1804.

**TOWER OF LONDON**.—"Built originally by the Conqueror to curb London, afterwards the fortress-palace of his descendants, and in the end the State prison, from which a long procession of the ill-starred great went forth to lay their heads on the block on Tower Hill; while State murders, like those of Henry VI. and the two young sons of Edward IV., were done in the dark chambers of the Tower itself."—Goldwin Smith, *Trip to England*, p. 56.—"Even as to length of days, the Tower has no rival among palaces and prisons. . . . Old writers date it from the days of Caesar; a legend taken up by Shakespeare and the poets in favour of which the name of Caesar's Tower remains in popular use to this very day. A Roman wall can even yet be traced near some parts of the ditch. The Tower is mentioned in the Saxon Chronicle, in a way not incompatible with the fact of a Saxon stronghold having stood upon the spot. The buildings as we have them now in block and plan were commenced by William the Conqueror; and the series of apartments in Caesar's Tower

[the great Norman keep now called the White Tower]—hall, gallery, council chamber, chapel—were built in the early Norman reigns and used as a royal residence by all our Norman kings."—W. H. Dixon, *Her majesty's tower*, ch. 1.—"We are informed by the 'Textus Roffensis' that the present Great or White Tower was constructed by Gundulph, Bishop of Rochester, under the direction of King William I, who was suspicious of the fidelity of the citizens. The date assigned by Stow is 1078."—J. Britton and E. W. Brayley, *Memoirs of the Tower of London*, ch. 1.—See also **LONDON**: 1066-1154.

Also in: Lord de Ros, *Memorials of the tower*.

**TOWN**.—"Burh, burgh, borough, in its various spellings and various shades of meaning, is our native word for urbes of every kind from Rome downward. It is curious that this word should in ordinary speech have been so largely displaced by the vaguer word tun, town, which means an enclosure of any kind, and in some English dialects is still applied to a single house and its surroundings."—E. A. Freeman, *City and borough* (*Macmillan's Magazine*, May, 1889).—See also **TOWNSHIP**; **BOROUGH**; **GUILDS**: Medieval; **COMMUNE**; **EUROPE**: Middle Ages: Growth of towns; also **ENGLAND**: 959-975; **GERMANY**: 1648: Thirty-Years' War.

**TOWNSHEND**, Sir Charles Vere Ferrers (1861- ), British major-general. Commanded a British expeditionary force in Mesopotamia, 1915; was besieged by the Turks at Kut-el-Amara and was forced to surrender, Apr. 28, 1916; remained a prisoner of war until October, 1918. See **WORLD WAR**: 1916: VI. Turkish theater: a, 1, iii; b, 2; c; c, 2; c, 3; c, 4; c, 4, i; c, 4, ii; 1918: VI. Turkish theater: c, 25.

**TOWNSHEND MEASURES**. See **U.S.A.**: 1766-1767; 1770.

**TOWNSHIP**.—"In recent historical writing dealing with Anglo-Saxon conditions, a great place has been occupied by the 'township.' The example was set sixty years ago by Palgrave; but it does not seem to have been generally followed until in 1874 Dr. Stubbs gave the word a prominent place in his 'Constitutional History.' With Dr. Stubbs the 'township' was 'the unit of the constitutional machinery or local administration'; and since then most writers on constitutional and legal history have followed in the same direction. . . . The language commonly used in this connection need not, perhaps, necessarily be understood as meaning that the phenomenon which the writers have in mind was actually known to the Saxons themselves as a 'township' ('tunscepe'). It may be said that 'township' is merely a modern name which it is convenient to apply to it. Yet, certainly, that language usually suggests that it was under that name that

the Saxons knew it. . . . It is therefore of some interest, at least for historical terminology,—and possibly for other and more important reasons—to point out that there is no good foundation in Anglo-Saxon sources for such a use of the term; that 'tunscepe' in the few places where it does appear does not mean an area of land, an extent of territory, or even the material houses and crofts of a village; that it is probably nothing more than a loose general term for 'the villagers.' . . . Only three passages in Anglo-Saxon literature have as yet been found in which the word 'tunscepe' appears,—the Saxon translation of Bede's 'Ecclesiastical History,' v. 10, the laws of Edgar, iv. 8, and the 'Saxon Chronicle,' s. a 1137. . . . The later history of the word 'township' would probably repay investigation. It is certainly not a common word in literature until comparatively recent times; and, where it does appear, its old meaning seems often to cling to it. . . . There is a good deal to make one believe that 'town' [see TOWN] continued to be the common popular term for what we may describe in general language as a rural centre of population even into the 18th century. . . . The far more general use of the word 'town' than of 'township' in early New England is most naturally explained by supposing that it was the word ordinarily employed in England at the time of the migration,—at any rate, in East Anglia.—W. J. Ashley, *Anglo-Saxon "Township"* (*Quarterly Journal of Economics*, Apr., 1894). See MANORS; SELECTMEN; COURTS: Teutonic; also VIRGINIA: 1700.—The word was given a distinct meaning, an American usage, by the act of Congress in 1785 which prescribed that the western lands offered for sale by the Ohio Company, should be laid out in townships six mile square, each township to be divided into thirty-six sections. Every sixteenth section was to be reserved for the support of a school, and the company was required to set aside two townships for a university. This township system served as a pattern for the development of the western lands throughout the United States.—See also U. S. A.: 1785-1790.

**TOWNSHIP AND TOWN-MEETING, New England.**—“When people from England first came to dwell in the wilderness of Massachusetts Bay, they settled in groups upon small irregular-shaped patches of land, which soon came to be known as townships. . . . This migration . . . was a movement, not of individuals or of separate families, but of church-congregations, and it continued to be so as the settlers made their way inland and westward. . . . A township would consist of about as many farms as could be disposed within convenient distance from the meeting-house, where all the inhabitants, young and old, gathered every Sunday, coming on horseback or afoot. The meeting-house was thus centrally situated, and near it was the town pasture or ‘common,’ with the school-house and the block-house, or rude fortress for defence against the Indians. . . . Around the meeting-house and common the dwellings gradually clustered into a village, and after a while the tavern, store, and town-house made their appearance. . . . Under these circumstances they developed a kind of government which we may describe in the present tense, for its methods are pretty much the same to-day that they were two centuries ago. In a New England township the people directly govern themselves; the government is the people, or, to speak with entire precision, it is all the male inhabitants of one-and-twenty years of age and upwards. The people tax themselves. Once each year, usually in March but sometimes as early as

February or as late as April, a ‘town-meeting’ is held, at which all the grown men of the township are expected to be present and to vote, while any one may introduce motions or take part in the discussion. . . . The town-meeting is held in the town-house, but at first it used to be held in the church, which was thus a ‘meeting-house’ for civil as well as ecclesiastical purposes. At the town-meeting measures relating to the administration of town affairs are discussed and adopted or rejected; appropriations are made for the public expenses of the town, or in other words the amount of the town taxes for the year is determined; and town officers are elected for the year. . . . The principal executive magistrates of the town are the selectmen. They are three, five, seven, or nine in number. . . . It [the town] was simply the English parish government brought into a new country and adapted to the new situation. Part of this new situation consisted in the fact that the lords of the manor were left behind. There was no longer any occasion to distinguish between the township as a manor and the township as a parish; and so, as the three names had all lived on together, side by side, in England, it was now the oldest and most generally descriptive name, ‘township,’ that survived, and has come into use throughout a great part of the United States. . . . New York had from the very beginning the rudiments of an excellent system of local self-government. The Dutch villages had their assemblies, which under the English rule were developed into town-meetings, though with less ample powers than those of New England. . . . The New York system is of especial interest, because it has powerfully influenced the development of local institutions throughout the Northwest.—J. Fiske, *Civil government in the United States*, ch. 2, 4.—“The name town first occurs in the record of the second colonial meeting of the Court of Assistants [Massachusetts bay, Sept. 7, 1030], in connection with the naming of Boston, Charlestown and Watertown. . . . A rude pattern of a frame of town government was shaped by Dorchester, when, in place of the earlier practice of transacting business at meetings of the whole body of its freemen (the grants of land being certified by a committee consisting of the clergymen and deacons), it designated certain inhabitants, twelve in number, to meet weekly, and consult and determine upon public affairs,—without any authority, however, beyond other inhabitants who should choose to come and take part in their consultations and votes. About the same time, at Watertown, it was ‘agreed by the consent of the freemen, that there should be three persons chosen for the ordering of the civil affairs.’ In the fourth year from the settlement of Boston, at which time the earliest extant records were made, three persons were chosen ‘to make up the ten to manage the affairs of the town.’ The system of delegated town action was there perhaps the same which was defined in an ‘Order made by the inhabitants of Charlestown, at a full meeting [Feb. 10, 1035], for the government of the town by Selectmen,—the name presently extended throughout New England to the municipal governors. . . . The towns have been, on the one hand, separate governments, and, on the other the separate constituents of a common government. In Massachusetts, for two centuries and a quarter, the Deputies in the General Court—or Representatives, as they have been named under the State Constitution—continued to represent the municipal corporations. In New Hampshire, Vermont, Connecticut and Rhode Island, that basis of represen-

tation still subsists."—J. G. Palfrey, *History of New England*, v, 1, ch. 9.—"Boston . . . is the largest community that ever maintained the town organization, probably the most generally able and intelligent. No other town ever played so conspicuous a part in connection with important events. It led Massachusetts, New England, the thirteen colonies, in the struggle for independence. Probably in the whole history of the Anglo-Saxon race, there has been no other so interesting manifestation of the activity of the Folk-mote. Of this town of towns, Samuel Adams was the son of sons. . . . One may almost call him the creature of the town-meeting."—J. K. Hosmer, *Samuel Adams, the man of the town-meeting* (*Johns Hopkins University Studies*, series 2, no. 4).—See also NEW ENGLAND: 1640-1644; SELECTMEN.

ALSO IN: E. Channing, *Town and county government in the English colonies* (*Johns Hopkins University Studies*, series 2, no. 10).—J. A. Fairlie, *Local government in cities, towns and villages*.—W. B. Munro, *Government of the United States*, pp. 530-537, 561-564.

**TOWTON, Battle of** (1461).—On Palm Sunday, Mar. 20, 1461, two armies of Englishmen met on a "goodly plain," ten miles from the city of York, between the villages of Towton and Saxton, to fight out the contention of the parties of the "two roses,"—of Lancaster and York. The battle they fought is called the bloodiest that ever dyed English soil. It raged through an afternoon and a night until the following day, and the slain of the two sides has been variously reckoned by different historians at 20,000 to 38,000. No quarter was given by the victorious partisans of Edward IV and the Lancastrians were utterly crushed. Henry VI fled to Scotland and Queen Margaret repaired to France.—Based on C. Ransome, *Battle of Towton* (*English Historical Review*, July, 1889).—See also ENGLAND: 1455-1471.

**TOXANDRIA**.—After Julian's successful campaigns against the Franks, 358, the latter were permitted to remain, as subjects of the Roman empire, in "an extensive district of Brabant, which was then known by the appellation of Toxandria, and may deserve to be considered as the original seat of their Gallic monarchy. . . . This name seems to be derived from the 'Toxandri' of Pliny, and very frequently occurs in the histories of the middle age. Toxandria was a country of woods and morasses, which extended from the neighbourhood of Tongres to the conflux of the Vahal and the Rhine."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 19, with footnote.—See also GAUL: 355-361.

**TRAILS**, in American history: Old Mohawk Trail.—Branch across New York State.—Oneida Trail.—"There is plenty of evidence that our first

settlers found the wilderness crossed by numerous Indian footpaths or trails, which by the testimony of Indians then living, had been used by countless generations of their race. . . . Because of the Indian habit of traveling single file these trails were seldom over eighteen inches wide, yet they were the highways for traders, migrating Indians or settlers, embassies and messengers. They naturally follow the line of least resistance. . . . So it was that the first settlers of the Deerfield Valley found one of these ancient trails following the river up from Deerfield, and the first settlers at Albany found a similar trail following the Hoosic from its mouth nearly to its source. . . . So for centuries ran the Indian foot path up the Hoosic valley, across the Hoosic divide and down the Deerfield valley to the Connecticut. But with the advent of the white men, it immediately began to disappear and as settlements pushed along the Hoosic and Deerfield from either side, the trail was replaced by roads, the course across the divide being the last portion to be replaced. At the building of Fort Massachusetts we know that a passable road existed from there to the Hudson. A road from Deerfield to Charlemont was made at an even earlier period, but not until 1753 did a road cross the mountain barrier, the ancient trail thus losing the last portion of its course as a foot path. . . . The Mohawk Trail runs from the mouth of the Hoosic River to North Adams, thence to the Deerfield and on to the Connecticut. Popularly there is no limit to its extension east and west of these points. From the mouth of the Hoosic to Eagle Bridge it seems to be generally accepted that the trail lay along the river bank, and probably on both sides of the river. . . . From Eagle Bridge, . . . its course was practically the same as the existing roads on the northerly bank. From this point the trail followed along the left bank in practically the exact location of the present highway past Williamstown station through Blackinton and North Adams. . . . [On] June 12, 1764, Samuel Rive of the Charlemont petitioned the General Court as follows: "The road over Hoosuck mountains being at present very dangerous, several creatures have lost their lives thereof, your petitioner hath found a better place for a road, and as there is about 200 acres of Province Land near the Deerfield River, prays for a grant of same, he obliging himself to build a road up said mountain as good as the land will allow of." . . . It was better in that it led directly into the Charlemont intervals and crossed the river at a better place. . . . In 1786 a committee was named by the General Court to sell unappropriated lands on Hoosac Mountain and to complete a good wagon road over the mountain from the west line of Charlemont to the east line of Adams. The road was to be built before 1787, with a bridge over the Deerfield at a convenient place. . . . Unlike the second road, the new road did not ascend the mountain at the crossingplace, but kept along the river bank until it reached the point nearest the Hoosic valley where it made its steep ascent over the mountain precisely as later on the tunnel made the passage through the mountain at the same spot. This was the long used stage road. . . . In 1707 the Turnpike Association was incorporated with Asaph White and Jesse King and their associates as incorporators and continued until dissolved March 14, 1833."—W. B. Browne, *Mohawk Trail*, pp. 5-8, 24-25.—During colonial times that branch of the Mohawk Trail across New York state was of great importance. It was the strategic portage in the route from Albany to

Oswego and Niagara, and in the route from central New York to Pennsylvania. "In 1777 the 'Northern War Path' became again the route of armies. . . . The western war-route to the Lakes was up the Mohawk and down the Onondaga (Oswego) Rivers. Albany and Oswego were its termini; and the Oneida carrying-place of one mile (in favorable seasons) between the Mohawk River and Wood Creek, at Rome, New York, was its key. . . . 'The first carrying place on the great western route was from the Hudson at Albany through the pine woods to the Mohawk at Schenectady. . . . At the terminus of the old Indian carrying place on the Hudson, now called Albany, the Dutch, under Hendrick Christensen, in 1614, built Fort Nassau on Castle Island. . . . In 1617 they built another fort at the mouth of the Normanskill.' . . . In the year 1662 Arendt van Curler, and other inhabitants of Fort Orange, 'went west' across the old carry through the pines to the rich Mohawk flats and founded a settlement. To this settlement they applied the old Indian name of Albany, calling it Schenectady. . . . 'From Schenectady' the western trail ran up the Mohawk to what is now the city of Rome, where there was another carry of a mile in length, to a Wood Creek which flows into Oneida Lake. This carrying place [was] afterward the site of Fort Stanwix. . . . From it the old trail ran through the Oneida Lake, and down the Oswego River to Lake Ontario. . . . The Oneida portage—as the carrying place between the Mohawk and Wood Creek is known in history—was guarded at its Mohawk terminus as early as 1732 by the erection of Fort Williams, and at the Wood Creek terminus as early as 1737 by Fort Bull. Throughout the century of conflict between French and English the Oneida portage route was of utmost importance. In the crucial years between 1755 and 1759 it was especially important. . . . In the British Museum may be seen a colored 'plan of the forts at the Oneida, or great carrying place, in the province of New York in America.' . . . The Oneida portage led to the West—to the Lakes and the Ohio Basin."—A. B. Hulbert, *Portage paths (Historic highways of America, v. 7, pp. 135-138, 143)*.

**Boone's Trace, or the Wilderness Road.**—The Wilderness Road "is said to be the first road built into the wilderness for the purpose of encouraging settlement and development. . . . Daniel Boone, the noted hunter and explorer, had several times left his home in North Carolina to hunt and travel in the wilds of Kentucky. He brought back to the eastern side of the mountains glowing descriptions. These excited the cupidity of a friend, a judge and prominent citizen of North Carolina, James Henderson. Henderson employed Boone to confer with the Cherokee Indians who claimed this territory for the sale of their rights. Boone sought out the Indians and by means now unknown got them to agree to sell."—G. R. Chatburn, *Highways and highway transportation*, p. 30.—See also KENTUCKY: 1792.

**Cumberland, or National Road.** See CUMBERLAND, OR NATIONAL, ROAD.

**Nashville, Lexington-Limestone and Louisville Roads.** See KENTUCKY: 1792.

**Scioto Trail.**—"Traders from Virginia who reached far out in Tennessee and Kentucky found competition from those who came down by one of the several routes from the Great Lakes or up from the lower Mississippi. A route left Lake Erie at what is now Cleveland, passed up the Cuyahoga, portaged across to a tributary of the Ohio, then into Kentucky; another left the Lake at Sandusky, fol-

lowed the Miami, crossed to the Scioto, thence down to the Ohio, across Kentucky to Cumberland Gap, sometimes called the Scioto trail and farther south the Warrior's Trail. As western territory settled, trails and roads became more numerous."—G. R. Chatburn, *Highways and highway transportation*, p. 38.

**Transcontinental trails.**—Passes through the Rockies.—Oregon Trail.—Salt Lake, later California, Santa Fé, Gila, and Spanish Trails.—“Following the purchase of the Louisiana territory [and the Lewis and Clark expedition of 1804] there was, of course, an extension of settlement to the prairies beyond the Missouri. . . . The settlement of these lands, together with the opening of Oregon and later California with its great gold rush, created a demand for transcontinental roads. The mountain ranges were searched for passes, possibly not so much for the purposes of settlement as means of going to and coming from fur trading posts which large companies established through the whole Rocky Mountain region. St. Louis became the greatest fur center in the world. . . . Provost, leader of a detachment of the Rocky Mountain Fur Company . . . found the South Pass by way of the Sweetwater branch of the North Fork of the Platte River, 1823. This pass held preëminence as a crossing through the Rockies to the great interior basin and to the Pacific coast. . . . Bridger discovered the pass in Southern Wyoming bearing his name, about 1824. This defile though wide enough for an army to pass through seems narrow because of its lateral walls of red granite and metamorphic sandstone extending almost perpendicularly from 1000 to 25,000 feet. The overland mail route prior to the building of the Union Pacific Railroad was through this pass. Jedediah Smith . . . explored practically all the region from Great Salt Lake to the Pacific, and from San Diego to the upper Columbia River in Canada. . . . New England was especially interested in the Oregon country and through men from there the Humboldt River route was discovered. During this same period there were being opened up trade and trade routes with the Spanish possessions farther south. In 1822 a wagon train was taken from Missouri to Santa Fé by a man named Beckwith, to trade for horses and mules. . . . The Oregon Trail, the Santa Fé Trail, the Spanish Trail and the Gila Route, had become quite well known by the early ‘thirties’ and after the discovery of gold in California in ‘forty-nine’ carried many people and much traffic across the continent. . . . The Astorian Expedition [was] organized June 23, 1810, by John Jacob Astor’s American Fur Company. This Expedition discovered the Oregon Trail which spread knowledge of the Nebraska country leading to its occupancy by white people. . . . As a result two expeditions were fitted out to go to and establish trading posts in Oregon with a central control or main post at Astoria. One of these expeditions went by water around Cape Horn to ‘carry out the people, stores, ammunition and merchandise, requisite for establishing a fortified trading post at the mouth of the Columbia River.’ The other . . . ‘was to proceed up the Missouri, and across the Rocky Mountains, to the same point: exploring a line of communication across the continent, and noting the place where interior trading posts might be established.’ The overland expedition, consisting of about sixty men with four boats . . . proceeded up the [Missouri] river in the spring of 1811. They deviated somewhat from Lewis and Clark’s route by leaving the Missouri River at the mouth

of the Grand River. . . . They seem to have gone across the country north of the Black Hills into Wyoming to the Wind River and Wind Mountains south of the Yellowstone Park, . . . thence a short distance to the head waters of the Snake River, a part of the Lewis and Clark route, which with some deviations they followed to the Columbia. At the mouth of the Columbia they met the sea party, and on July 28, 1812, a party of six men started back with dispatches. . . . The Oregon Trail was . . . clearly outlined and . . . was thoroughly established in 1842. . . . The Trail as finally adopted and used by emigrants and freighters to Oregon in the ‘forties’ started from Independence and Westport (outfitting stations near the present metropolis of Kansas City, Missouri) then followed in a general way the Kansas, Big Blue, and Little Blue Rivers to near the Platte, crossing over to the latter river a short distance west of the present city of Kearney. The trail here proceeded up the South bank of the forks, and from there up the North Fork to the Sweetwater which it followed through South Pass. Thence it bore southwestward, westward, and northwestward to the Snake River which was followed to a point about west of Boise where a cutoff was made through the Blue Mountains arriving at the Columbia River about the mouth of the Umatilla, thence down the Columbia to the Pacific Ocean. . . . [Many variations of the Salt Lake Trail were in use at this time.] Travelers up the Missouri River disembarked at St. Joseph, Nebraska City, Plattsmouth and especially at Council Bluffs. The great Mormon trek was made from the last-named place. They reached the Platte River west of Omaha and followed it on the north bank, paralleling the Oregon Trail from Fort Kearney to Fort Laramie, where they crossed over and joined with the Oregon Trail through South Pass then leaving that trail turned south and west to Great Salt Lake. . . . The Later California Trail was a continuation of the Salt Lake route. It ran north of Great Salt Lake and along the Humboldt River, across the desert to near Lake Tahoe, where there was a crossing through the Sierra Nevada Mountains, the Truckee Pass, thence to the Gold Diggings or across California by way of the American and Sacramento Rivers. . . . [It was] very popular to California gold miners and was afterwards used by the overland stage. . . . [The Santa Fé Trail] passed westward and a little south to the Arkansas River, which it followed to Bent’s Fort (Colorado), thence up Timpas Creek and over the Raton Pass to Las Vegas (New Mexico). Then westward through Apache Canõn to Santa Fé. This trail was too rough for wagon traffic, so later a route which crossed over south from the Arkansas to the Cimarron and meeting the old trail at Las Vegas was used. . . . [The Gila and Spanish Trails were the two routes possible from Santa Fé. One passed] southwestward by way of the Rio Grande and Gila Rivers into southern California. The other took a northwesterly direction up the Chama River, down the Dolores Valley, and across to the Grand River near the present site of Moab, Utah. Then west to the Sevier, up which it followed until it crossed over to the Virgin River; up this for a short distance then turned directly southwest across the Mohave desert toward Los Angeles. This last route received the name of Spanish Trail. Many of these trails were difficult on account of scarcity of water in the deserts. Description of early travel over them are replete with hardships, sickness, and deaths. . . . Many travelers and settlers

were killed by the Indians; the tribes apparently becoming more hostile as the number of whites increased until their own numbers became so decimated they could no longer command sufficient warriors to warrant further attacks."—G. R. Chatburn, *Highways and highway transportation*, pp. 53-58.

**TRANSRHENANE,** beyond the Rhine (looking from the Roman standpoint), that is, on the eastern and northern side of the Rhine.

**TRANS-SIBERIAN RAILWAY.**—"For over 30 years the question of constructing this line had been a theme of interminable discussions and reports. Finally, the following unmistakably emphatic note of its Imperial founder, the Emperor Alexander III., appended to a report on the general condition of Siberia, moved the whole project definitely forward as a thing that was to be and at once: 'How many of these reports of the Governors-General of Siberia have I perused, and with sorrow and shame must own that the Government has hitherto hardly done anything to satisfy the demands of this rich but neglected region! It is time, indeed time!' A further equally emphatic and still briefer note, added to a report of the Minister of Ways with regard to the projected Ussuri route, is to form the appropriate inscription to the monument to be erected at Vladivostok, the terminus of his great work, to his late Imperial Majesty: 'The construction of this railway must be begun forthwith.' . . . A Siberian railway committee was formed under the presidency of the then Grand Duke Nicholas Alexandrovich, whose duties were (1) to construct the main and necessary feeding lines; (2) to take measures for the general commercial and industrial development of Siberia; and (3) to direct and control the colonisation movement."—Great Britain, *Parliamentary Publications (Papers by Command: Miscellaneous series no. 533, 1900, pp. 5-7)*.—"The construction of the railway was begun at the Pacific end, and . . . Czar Nicholas II, when Czarvitch, inaugurated the colossal enterprise by laying the first stone of the eastern terminus at Vladivostok on May 12, 1901. Uniformity of gauge is the unbending rule of Russian railway engineers, so that the five foot gauge of the Great Siberian makes it uniform with all the railroads throughout the Russian empire. The Trans-Siberian nominally begins in Europe starting with the magnificent iron bridge which spans the Volga at Samara, in East Russia. . . . This . . . bridge joins the European railway system with the Asiatic line, but that line practically begins in the heart of the Ural Mountains, . . . [at] the little town of Cheliabinsk which formerly was the terminus of the European system. . . . The Siberian line was designed to run through the arable lands of the fertile zone but for many hundreds of versts [verst = two-thirds of a mile] it traverses the pasture lands of the Kirghiz. . . . Both for pasture and for the culture of cereals, the vast territory between the Obi and Yenisei is unrivaled in the world. . . . Very soon after the opening of the railway Siberian grain began to find its way to foreign markets and as early in its history as 1898 there was an acute congestion on

the West Siberia line of endless wagonloads of wheat. . . . Reaching the Yenisei river, the greatest of Siberian waterways, the train crosses it by a bridge 1,000 yards in length. . . . A little further on the railway reaches Irkutsk and somewhat beyond that, one of the most remarkable places in the world—Lake Baikal. This great sheet of water is as long as England; it is nearly a mile deep, and covers an area of 13,430 square miles; its surface is 1,500 feet above the level of the sea, and on every side it is hemmed in by lofty mountains covered with thick forest. . . . At first the forty mile width of Lake Baikal was crossed by means of a train-ferry service but later the railroad was continued around its southern border. The section of which this is a part takes the line from Lake Baikal to the Amur, in a gradual ascent to the crest of the Yablonoi Mountains, reaching a height of 3,412 feet above the sea level, the greatest altitude attained by the Siberian railway. . . . To avoid the great northern bend made by the Amur and [to] save the construction of bridges and tunnels, . . . it was necessary to take the shorter and comparatively easy cut across Chinese Manchuria. A perception of this necessity came simultaneously with the sudden and surprising victories of Japan over China in 1895, which brought her triumphant army to Newchwang, with an open road to Peking. . . . Hence the agreement of September 6, 1896, between the Chinese Government and the Russo-Chinese Bank which contemplated the construction of a railroad to be called the Eastern Chinese, from Stretensk to Vladivostok by way of an obscure settlement on the Sungari, since known . . . as Harbin. This was followed by the agreement of March, 1898, under which permission was obtained to continue the Eastern Chinese railroad southward from Harbin to Talienwan and Port Arthur. [This was begun in 1900 and finished in 1901.] The route as originally projected from St. Petersburg to Vladivostok covered a distance of 9,876 Russian versts, or . . . 6,173 miles. . . . The change of route shortened the distance by 1,200 miles and supplied the Pacific terminus of the road with an ice-free port. The work of construction in the Chinese Eastern railway was started in the spring of 1897, and in the same year the city of Harbin was founded and made the headquarters of construction. . . . The completed system in Manchuria measured about 1,600 miles. In August, 1905, the Japanese government by virtue of article 6 of the Treaty of Peace between Russia and Japan, acquired that part of the Manchurian main line between Changchun and Port Arthur, together with its branch lines and all the rights, privileges, and properties attaching thereto, including the coal mines formerly owned by the Chinese Eastern Railway. The gauge had been reduced by Japan during the war to a narrow gauge to suit the Japanese equipment, and a light railway had been constructed between Mukden and Antung for military purposes. With the transfer of the railway to Japan preliminary agreements were entered into for the construction of a branch from Kwan-chengtzte to Kirin by Japanese and Chinese capital; for the transfer and reconstruction of the Mukden-Antung line. In undisputed Russian control, there remained the trans-Siberian as extended through Manchuria by way of Harbin to Vladivostok, under the agreement with China of September, 1896. . . . [During the World War] the main function of the line . . . [was] the transportation of munitions and military stores, and along its route normal business enterprise [languished]."—J. Foord,

*Siberia and its railway (Asia, June, 1917).*—After the revolution of 1917, upon the request of the Kerensky government, President Wilson sent the first party of expert American engineers under the direction of J. F. Stevens, to Russia. They arrived at Petrograd in June and placed their services at the disposal of the government. They had the entire control of the Russian and Siberian railways until October, 1917, when, because of the overthrow of the government by the Bolsheviks, the commissioners returned to the United States, with the exception of J. F. Stevens, who remained to study the railroad question in Manchuria, Japan and Siberia. On Mar. 5, 1919, a new board was formed, called the Inter-Allied Railway Technical Board, consisting of engineers from Italy, France, England, Czechoslovakia, United States, China, Russia, and Japan, who took complete control of the entire Siberian railroad, excepting such parts as were under the power of the Bolsheviks. This commission continued until Nov. 1, 1922, when by an agreement between the governments of the United States and Japan, the commission was to cease to act and be dissolved, when the last of the Allied soldiers should leave Siberia. After the Allied troops had departed, the Japanese left Oct. 25, 1922. Six days later, the Inter-Allied Railway Technical Board was dissolved. These men had worked through the various changes of government during this time. The Kerensky and Kolchak governments had been very friendly and had assisted the board in every way that was within their power. With the Bolsheviks, they had no official connection. After October, 1922, the Trans-Siberian Railroad was taken over by the Soviet government, excepting a thousand miles crossing Manchuria, which remained partially under the control of China.—See also RAILROADS: 1876-1921; ASIA: 1500-1000; also map.

**TRANSUBSTANTIATION, Doctrine of.** See MASS.

**English royal declaration against it.**—From the time of the enactment of the Bill of Rights (1689) and the Test Act (1672-1673) it was the custom of the British monarch, on ascending the throne, to take an oath that he believed the doctrine of transubstantiation and the invocation of the saints to be "idolatrous." This clause which had long been offensive to Catholics, and against which there was considerable agitation at the time of the accession of Edward VII, was removed from the coronation oath by the Accession Declaration Act of 1910, passed by Parliament at the time of the accession of George V. Instead of specifically disclaiming Roman Catholic doctrines, the King of England now uses the following form: "I (name of sovereign) do solemnly and sincerely in the presence of God, profess, testify, and declare that I am a faithful Protestant, and that I will, according to the true intent of the enactments which secure the Protestant succession to the Throne of my Realm, uphold and maintain the said enactments to the best of my powers according to law."

**TRANSVAAL**, inland province of the Union of South Africa, between the Vaal and the Limpopo rivers. It is bounded on the south by the Orange Free State and Natal; on the west by the Cape province and the Bechuanaland protectorate; on the north by Rhodesia; and on the east by Portuguese East Africa and Swaziland. It has an area of 110,450 square miles. The districts of Utrecht and Vryheid and part of the district of

Wakkerstroom, which were included in the Transvaal republic were transferred to Natal in 1903. In 1921, the total population was 2,087,636.—See also SOUTH AFRICA, UNION OF: 1899 (October-December): Map of Boer republics; AFRICA: Modern European occupation: 1914-1920: Climatic conditions.

**TRAPPISTS**, name originally applied to the monks of La Trappe, a Cistercian abbey near Soligny in Normandy. This celebrated abbey was one of the most ancient, belonging to the Order of Cîteaux (the Cistercians). "In the year 1122 Rotrou, Count of Perche, founded an abbey which he called 'L'Abbaye de Notre-Dame de la Maison-Dieu de la Trappe.' . . . The abbey at its foundation in 1122 was affiliated with the order of Fontevault. . . . but in the year 1148, under the guidance of the fourth abbot, it had become Cistercian, and through the efforts of St. Bernard himself became one of the many monasteries closely connected with Cîteaux. . . . In the fourteenth century the power of the church . . . [was] dealt a serious blow by the exile of the Popes to Avignon. . . . But another factor . . . much more potent than the 'Babylonian Captivity' in min-

istering to the decay of monastic purity in France . . . was the 'One Hundred Years' War.' . . . The abbey was sacked again and again by the English. . . . Absence from the monastery and its restraints, and the corruption of the world into which they had been forced, had produced a total change in their views of the rigid rule of Cîteaux. . . . Temporal ruin followed swiftly upon the decadence of spiritual life. . . . The reformation of La Trappe, and the introduction into this abbey of the rigid observances known to this day as Trappist, were due to the efforts of Armand Jean le Bouthillier de Rancé, Abbé in Commendam. . . . De Rancé became a Cistercian monk and Abbot in possession, and in formal terms, of La Trappe [in 1664]. . . . The reforms . . . which were introduced by De Rancé may be summarized as follows: 1. Abstinence. 2. Perpetual Silence. 3. Manual Labor. . . . The confiscation of La Trappe immediately upon the decree of the Assembly in 1790 had been postponed in view of numberless petitions in its favor, but now the blow fell, the monks were scattered, a contingent of them went to Switzerland, the rest dispersed, the buildings of the monastery were thrown down and the fields were left uncultivated. In 1815, after the final defeat of Napoleon, La Trappe was repurchased by the Abbot, new buildings were erected, and from that time . . . it has continued to be the Mother House of the Order."—W. R. Perkins, *History of the Trappist abbey of New Melleray in Dubuque county, Iowa* (State University of Iowa Publications, *Historical monograph*, no. 2, pp. 10-11, 13, 15, 21-23). —"The French Revolution drove the Trappists as wanderers into various countries. Some of them went to Ireland and founded the abbey of Mount Mellary, whence, in 1851, the cloisters having become crowded, thirty of the monks were dispatched to build a new home in America. The site of New Mellary [twelve miles from Dubuque, Iowa], was selected after long searching, and there was built a wooden structure which stands some distance from the present abbey. The latter . . . is a spreading quadrangular pile, enclosing a specious court, and, solidly built of white stone. . . . Since 1858 an offshoot of the abbey of La Meilleraye, reoccupied after the subsidence of the fury of the French Revolution, has been established at Gethsemane, in Kentucky, and more recently another band of French Trappists have found a home in the province of Quebec."—R. R. Wilson, *Brothers of silence* (*National Magazine*, Apr., 1901, p. 50). —There is also a Trappist monastery in the Chinese hills, a two days' journey from Peking. In 1917 there were about twenty of the Trappist Fathers in the monastery, eight of them French, German, Dutch and Canadian, and a dozen Chinese. There were about seventy Chinese lay-brothers of secondary rank who do more of the work and less of the ceremonials than the Fathers.—Based on L. D. Frielick, *Trappist in the Peking hills* (*Journal of the American Asiatic Association*, Mar.-Dec., 1917).

**TRAVELS OF MARCO POLO**: Their influence.—“The most famous of all mediæval travellers in the East were the Venetian merchants Nicolo and Matteo Polo and their nephew Marco. These enterprising traders, leaving their warehouses in Soldaia on the Crimea, in two successive journeys made their way along the northern and central trade-routes to Peking, in northern China, or Cathay, which had become the capital of the Great Khan. For almost twenty years the Polos were attached to the court of Kublai Khan, the nephew, Marco, rising higher and higher in the graces of that ruler. Marco Polo was one of the well-known type of Italian adventurers who appeared at foreign courts, and, with the versatility of their race, made themselves useful, and indeed indispensable, to their masters. He learned the languages of the East, and went upon missions for the Great Khan to all parts of his vast empire. When, in 1202, the Polos obtained permission to return home they followed the longest and most important of the three main trade-routes. . . . They sailed from Zaiton, a seaport of China, and passing along the shores of Tonquin, Java, and farther India, made their way from port to port through the Bay of Bengal to Ceylon, then to the Malabar coast of India, along which they passed to Cambay, and thence through Red Sea to Cairo, and so to Venice. Their journey homeward from China, with its long detentions in the East Indies, took almost three years. All the world knows of Marco Polo's subsequent experiences in Venice, his capture and imprisonment in Genoa, the stories of his travels with which he whiled away the weary days of his captivity, and the gathering of these into a book which spread widely through Europe within the next few years and has been eagerly read ever since. Neither the travels of Marco Polo nor those of his predecessors or immediate successors disclosed any lands the existence of which was not before known to Europeans; but they gave fuller knowledge of many countries and nations of which the names only are known; and they gave this knowledge with astonishing freshness, minuteness, and accuracy. The writers of these books travelled over many thousands of miles, and they described, in the main, what they saw, although, of course, they repeated, with more or less of exaggeration, much which they only knew from conversation or from hearsay. Besides the written stories of such experiences, other Europeans who accompanied these travellers, or who made independent journeys to various parts of Asia, spread knowledge of the same things. . . . As a result of these travellers' reports, the traditions of earlier times and the knowledge of the nearer East possessed by traders were supplemented and popularized. The journeys of the travellers of the later thirteenth and the fourteenth centuries were a veritable revelation to Europe of the condition of Tartary, Persia, India, China, and many intervening lands. Espe-

cially strong was the impression made by the reports about China and Japan. The land of the Seres, lying on the border of the eastern ocean, had indeed been known to the ancients, and mentioned by tradition as the sources from which came certain well-known products; but under the name of Cathay, which Marco Polo and his contemporaries gave to it, it attained a new and strong hold on men's imaginations. Its myriad population, its hundreds of cities, its vast wealth, its advanced civilization, its rivers, bridges, and ships, its manufactures and active trade, the fact that it was the easternmost country of Asia, washed by the waters of the external ocean—all made Cathay a land of intense interest to the rising curiosity of thirteenth-century Europe. Similarly the great island of Cipangu, or Japan, lying a thousand miles farther to the eastward, though never actually visited by Marco Polo, and described by him with a vague and extravagant touch, was of equally keen interest to his readers, as were the 'twelve thousand seven hundred islands' at which he calculates the great archipelagoes which lie in the Indian Ocean and the Pacific. It was his accounts of 'the province of Mangi,' 'the cities of Zaiton and Quinsay,' 'the Great Khan,' 'the island of Cipangu,' and of their vast wealth and active trade that took special hold on the mind of Columbus. His copy of Marco Polo may still be seen, its margins filled with annotations on such passages, made by the great navigator; and it was to these that his mind reverted when he had discovered in the West Indies, as he believed, the outlying parts of the Khan's dominions.” —E. P. Cheyney, *European background of American history, 1300-1600*, pp. 46-50.—See also CHINA: 1250-1204.

**TREASON**.—“Treason is a breach of allegiance, and on account of self-preservation being the first duty of government, is regarded as the highest crime known to the law.”—S. A. Hackett, *Treason* (W. Mack, ed., *Cyclopedia of law and procedure*, v. 38, p. 951).

Roman law. See MAJESTAS, LAW OF.

English law.—“The principal English statute (25 Edw. III, c. 2 [1351]) declares that treason consists (1) in compassing or imagining the death of the king or queen or their eldest son and heir; (2) in violating the king's companion, or the king's eldest daughter unmarried, or the wife of the king's oldest son and heir; (3) in levying war against the king in his realm; (4) in adhering to the king's enemies in his realm, giving to them aid and comfort in the realm or elsewhere; and (5) slaying the chancellor, treasurer, or the king's justices of the one bench or the other, justices in eyre, or justices in assize, and all other justices assigned to hear and determine, being in their places doing their offices. . . . The crime has been

further extended in England by later statutes, particularly by 1126 How. Vict. c. 12, §1 which in effect declares it to be treason for any person or persons within the realm or without to compass, imagine, invent, devise, or intend death or destruction, or any bodily harm tending to death or destruction, maim or wounding, imprisonment or restraint, of the person of the king, or his heirs or successors, and such compassings, imaginings, inventions, devices or intentions, or any of them, to express, utter or declare, by publishing any printing or writing, or by any overt act or deed. . . . In England the crime of petit treason at common law was involved in some uncertainty. . . . [Under Edward III it was] reduced to three heads: (1) Where a servant killed his master; (2) where a wife killed her husband; (3) where an ecclesiastic killed his superior. . . . However, that portion of the statute relating to petit treason was repealed . . . [under George IV and Victoria] in which offences formerly constituting petit treason are declared to be murder only. . . . The most famous treason trials in English history are those of Stafford, Laud and Anne Boleyn. Canadian statutes (Can. Rev. St., 1906, p. 2438; 55 & 56 Vict. c. 29, 65; 57 & 58 Vict. c. 57, §1) are generally similar to English law in defining treason."—S. A. Hackett, *Treason* (W. Mack, ed., *Cyclopedia of law and procedure*, v. 38, p. 952).—See also CRIMINAL LAW: 1547; 1695; LESE-MAJESTY.

**United States law.**—"While various and numerous acts against the sovereign and the government are classed as treason under the statutes of England and Canada, the constitution of the United States itself defines and limits the crime by declaring that 'treason against the United States, shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort,' [United States Constitution, Article III, Section 3] thus not only abolishing and refusing to recognize petit and what is commonly known as constructive treason, but leaving congress without power to enlarge or restrict the offense. . . . [In order to be convicted of treason, either the accused must confess in court, or the testimony of two witnesses to the overt act must be obtained. The treason of Benedict Arnold never resulted in conviction as the culprit fled to England before he could be tried. Another notable case was that of Aaron Burr. The jury which tried him could find no "overt act of treason" and he was therefore discharged. (See U. S. A.: 1781; 1807).] While the jurisdiction of state courts over cases of treason against the state depends entirely upon the statutes of the state, cases of treason against the United States are not cognizable in the state courts, but are triable only by the United States courts located in the state and district wherein the alleged crime was committed. . . . The statutory punishment for treason in the United States is death [Act of April 30, 1790] or, at the discretion of the court, imprisonment at hard labor for not less than five years, together with a minimum fine of ten thousand dollars, and incapacity to hold any office under the United States. [Act of 1862 and statutes of 1878 and 1901.]"—S. A. Hackett, *Treason* (W. Mack, ed., *Cyclopedia of law and procedure*, v. 38, pp. 952, 957, 959).—See also WAR POWERS OF THE UNITED STATES: Treason.

**TREASURY DEPARTMENT, United States.**—"The Secretary of the Treasury is charged by law with the management of the national finances. . . . He prepares plans for the improvement of the revenue and for the support of the public credit; superintends the collection of the revenue, and di-

rects the forms of keeping and rendering public accounts and of making returns; grants warrants for all moneys drawn from the Treasury in pursuance of appropriations made by law and for the payment of moneys into the Treasury; and annually submits to Congress estimates of the probable revenues and disbursements of the Government. He also controls the construction of public buildings; the coinage and printing of money, the administration of the life-saving, revenue-cutter, and the public health and marine hospital branches of the public service, and furnishes generally such information as may be required by either branch of Congress on all matters pertaining to these. There are three Assistant Secretaries of the Treasury, to whom are assigned the general direction and supervision of the various divisions and offices of the department. There are besides these: the Controller of the Treasury, who prescribes the form of keeping and rendering all public accounts save those relating to postal revenues; auditors for the departments of the Treasury, War, Post-office, Interior and Navy, and for the State and other departments; a Treasurer of the United States, who is charged with the disbursement of all public moneys that may be deposited in the Treasury at Washington and in the Sub-Treasuries and in the National Bank United States depositaries; who is the agent for the redemption of National bank notes, trustee for bonds held to secure National Bank circulation and public deposits in National Banks, custodian of miscellaneous trust funds, fiscal agent for paying interest on the public debt, and for paying the land purchase bonds of the Philippine Islands, special disbursing officer for the school fund of the Indian Territory and for the Philippine Islands 'tariff fund,' and agent and commissioner in other and minor interests; a Register of the Treasury, who signs and issues all bonds of the United States and who performs other duties suggested by the name Register; the Controller of the Currency, who has, under the direction of the Secretary of the Treasury, supervision of National Banks; their organization, the preparation and issue of National Bank circulation, the examination and consolidation of the reports of National Banks, and the redemption and destruction of notes used by National Banks; the Director of the Mint, who has general supervision of all the mints and assay offices of the United States; the Commissioner of Internal Revenue, who has general supervision of the collection of all internal revenue taxes, the enforcement of internal revenue laws, the employment of agents, etc.; the Surgeon-General of the Public Health and Marine Hospital service, who has supervision of marine hospitals and other relief stations of the service, the care of sick and disabled seamen taken from merchant vessels of the United States and from vessels in public service, the distribution of supplies to medical officers, the making of tests for pilot licenses, the forming of regulations for the prevention of the introduction and spread of contagious diseases and the conduct of the quarantine service of the United States; the Bureau of Engraving and Printing; and the General Superintendent of the Life-Saving Service."—J. H. Finley and J. F. Sanderson, *American executive and executive methods*, pp. 295, 298.—"In establishing the Treasury Department a strong effort was made to create a Secretary of the Treasury as an agent of Congress rather than as the officer of the President. The details of the office were therefore carefully regulated by the statute, and specific duties

were assigned to the Secretary. He was, however, appointed by the President, and the question was raised whether he was also removable by the President. The Senate insisted that the removal should not be valid without its approval; the House insisted that the President should be unrestrained: by the casting vote of the Vice-President the latter system was adopted."—A. B. Hart, *Formation of the Union, 1750-1820*, p. 144.—The law allows Congress to call directly upon the Treasury Department for information without requesting it of the president, as in the case of the other departments. During the World War, the Bureau of War Risk Insurance was added to the Treasury Department.—See also BUDGET; MONEY AND BANKING: Modern; 1782-1792; 1790-1816; 1817-1833; 1861-1864; 1863-1914; 1874-1890; 1901-1909; 1912-1913; INDEPENDENT TREASURY: United States; U. S. A.: 1837; 1921 (June).

**TREATIES, Making and termination of.**—"A war between two hostile nations cannot, from the nature of the case, be perpetual, hence the introduction of treaties of peace to settle their differences, a method which has been in practice from very early times. Besides treaties of peace, strictly so called, there are various others, such as treaties for commerce, extradition, trade-marks, loans, the settlement of claims, for navigation, for the settlement of frontier boundaries, for naturalization, about consuls and their rights, and other objects. No special form of words is essential to the validity of a treaty, but usage requires them to be written. A treaty of guarantee or alliance is an engagement by which one state promises to aid another when threatened by a third power; it may be offensive or defensive. By an offensive treaty, the ally engages to assist the other party against a hostile power; by a defensive treaty, the ally aids only in a war of aggression against the contracting power. . . . A convention is an agreement or contract less definite than a treaty, and is sometimes preliminary to that instrument. It may be formal, or it may be informal, as between commanders of armies for the suspension of hostilities. A protocol is the first copy or rough draught of treaties or other documents. The following are some of the general principles in regard to treaties: Commissioners, to execute a treaty, must all agree to the same, and subscribe their names with their seals attached. A *Treaty of Cession* is a deed or grant by one sovereign power to another, transferring the right to property alone. Every nation acquiring territory, by treaty or otherwise, must hold it subject to the constitution and laws of that nation's own government. All treaties, contracts, and rights of property between governments, are suspended during hostilities of the parties. . . . Treaties are regarded as terminated or suspended, as the case may be. A violation of a treaty with a foreign state, by a citizen of the United States, may be punished by indictment in the Federal courts. A suspension of hostilities between belligerents, and a mutual agreement to waive all claims which caused the war, is sometimes designated a *peace*: as the Peace of Antalcidas, the Peace of Thorn, the Peace of Augsburg. Certain compacts between nations may be made by virtue of a general implied power, confided to certain public agents, as included in their official positions; such as the acts of generals and admirals, limiting hostilities by truces, capitulations, or car-

tels for the exchange of prisoners, which do not require the ratification of the supreme authority, unless there be a reservation making it necessary. In other cases, however, a public minister or other diplomatic agent is not entitled to conclude or sign a treaty with a foreign state to which he is accredited, without full power, independent of his general letter of credence. Even then, it is sometimes considered expedient to have special ratification. . . . Men, from the earliest periods of history, have confessed their helplessness when isolated, by seeking the aid and sympathy of their neighbors; and for this purpose they have formed associations, called leagues, for the attainment of some desired object, or for defence against powerful foes. A league, then, may be defined as a union between persons or states for the attainment of the same object, and may, like treaties, be offensive or defensive. The term is sometimes synonymous with alliance, confederacy, coalition, compact, and so forth. It was used to designate, in the sixteenth and seventeenth centuries, more particularly a political alliance or coalition. Some of these leagues were formidable military organizations, and carried on extensive wars, and constitute a large part of ancient, mediæval, and even modern history. . . . As treaties form so important a part in the history of nations, and are largely the results of their wars, some facts connected with them are necessary to an intelligent understanding of the frequent allusions to these compacts, by writers on public affairs. A treaty generally takes the name of the place where the commissioners meet for the purpose of arranging the terms, and it sometimes occurs that more than one treaty has been formed in the same place; therefore it is important to designate which one is intended, whether first, second, and so forth,—otherwise, confusion or mistakes may arise. For illustration: A treaty was made at Aix-la-Chapelle, between France and Spain, at the close of the war for the possession of the Spanish Netherlands, 1668; and another in 1748, at the end of the eight years' war of the succession of Maria Theresa to the Empire. This ancient town, one of the capitals of Charlemagne, in which thirty-seven German Emperors and eleven Emperesses have been crowned, was ceded to France by the treaty of Campo Formio in 1797, and again by the treaty of Luneville, 1801, but in 1815 it came into possession of Prussia. Aix-la-Chapelle was also selected for the meeting of a congress of the great powers, in 1818, to settle the affairs of Europe, when France was admitted to the league, and formed one of the five great states that signed a protocol declaring the policy known as the Holy Alliance. Commercial treaties were formed as early as the thirteenth century, when Edward I. formed a compact of that nature, with the Earl of Flanders, and in 1338, Edward III. formed a similar treaty with Flanders, which was followed by frequent alliances of this kind between the two countries. . . . The commercial importance of the Netherlands, on account of their value as an inlet to trade, naturally gave rise to numerous treaties between them and other countries, more especially Great Britain. Most of the great nations of antiquity found it necessary, for their interest and self-preservation, to enter into friendly or commercial relations with one another, therefore, their treaties constitute an important feature in their history. Of these nations, Greece, Rome, and Carthage were the greatest treaty-making powers"—S. M. Burnham, *Struggles of the nations*, v. 2, pp. 727-731.

Forms of international contract.—"The prac-

tice of the United States differs in one respect from the procedure . . . [in other countries]. According to the constitution of that country, the treaty-making power is vested in the Senate, to whose approval a treaty must be submitted before ratification, and there are instances on record in which the Senate has introduced amendments into a treaty as a condition of its acceptance. If such amendments are not accepted by the other party to the treaty, the treaty remains inoperative, as in the case of the 'Clarendon-Dallas' Treaty of October 17, 1856, relating to Central America. In the United States a treaty duly ratified by the Senate, and entering into force, becomes *ipso facto* a portion of the law of the land. [See CONGRESS OF THE UNITED STATES: SENATE: POWERS.] This is not so in England, and care has therefore to be taken in negotiating a treaty that its stipulations are not antagonistic to the law, or if they are so, that the law be amended so that it shall agree with the treaty; otherwise a government may find itself in the position of being bound towards a foreign country to give effect to stipulations which the law of the land forbids it to carry out. . . . In the case of general treaties between several Powers, concluded as a rule in the French language, the Plenipotentiaries sign in alphabetical order of countries: thus the German Plenipotentiary would sign under the letter A (Allemagne); those of Spain and the United States under the letter E (Espagne, Etats-Unis). This principle was adopted in the Vienna Congress Treaty of 1815. Nevertheless, the British copy of the General Act of Brussels of 1890 (relating to the African Slave Trade) was signed first by the British Plenipotentiaries, the others following in the Alphabetical order of their countries. . . . All treaties and conventions contain, or should contain, a ratification article. Although its absence is no bar to ratification, it sets at rest all doubt as to the intention. There are instances in which the less formal 'Agreement' has received ratification, though unprovided with a stipulation requiring it. . . . In order to avoid disputes respecting the true interpretation of a treaty when signed in more than one language, it has occasionally been agreed that in the event of discrepancy between the different 'texts,' one or other of them shall be held to convey the intentions of the negotiators. Thus, in the Treaty of Peace between Japan and Russia signed at Portsmouth (United States) on September 5, 1905, it was agreed, in Article XV, as follows: 'The present Treaty shall be signed in duplicate, in both the English and French languages.' The texts are in absolute conformity, but 'in case of discrepancy in interpretation, the French text shall prevail.'—A. Oakes and R. B. Mowat, *Great European treaties of the nineteenth century*, pp. 1-8.—See also ARBITRATION, INTERNATIONAL: Modern: 1913; PRESIDENT: United States: President and foreign affairs; "MOST FAVORED NATION" CLAUSE.

Termination of treaties.—"In modern times Treaties of *Commerce* have almost invariably been made terminable at the end of a certain specified time, subject to one of the parties thereto giving notice to the other of an intention to terminate it. Such a notice is often referred to as a 'Denunciation' of the treaty. . . . Speaking generally, political treaties are of a permanent character, and are not made subject to termination, unless their nature is such as to render that course desirable or obvious; but there are other treaties besides those for regulating commercial intercourse, which are as a rule terminable on denunciation, for instance, Extradition Treaties and others treating of

a particular subject. . . . A treaty which is not, in virtue of its stipulations, terminable in the manner described, can in strictness be terminated only by mutual agreement between the contracting parties, or by the occurrence of a war between them, war being considered, with certain exceptions, as having the effect of abrogating treaties, or by the advent of special circumstances incompatible with its continued observance. . . . An abrogation without consent has been attempted, namely, in the case of the Black Sea Articles of the Treaty of Paris of 1856, regarding which the Russian Government announced, in 1870, that it held itself to be emancipated. Great Britain replied that it had always been held that the right of releasing a party to a treaty belonged only to the Governments which had been parties to the original instrument. Russia's bare announcement of withdrawal, if acquiesced in, would result in the entire destruction of treaties in their essence. Russia thereupon abandoned the position she had taken up, and a conference was held in London at which the articles objected to were amended by common consent, and a Declaration was at the same time signed by the Powers (including Russia) on January 17, 1871, recognizing 'that it is an essential principle of the Law of Nations that no Power can liberate itself from the engagements of a Treaty, nor modify the stipulations thereof, unless with the consent of the Contracting Powers by means of an amicable arrangement.' The Treaty for the revision of the Black Sea Articles of the Treaty of 1856 was signed on March 13, 1871.—A. Oakes and R. B. Mowat, *Great European treaties of the nineteenth century*, pp. 9-11.—Article 19 of the League of Nations Covenant will, if effective, provide a reasonable solution for this predicament.

Treaty-making power.—Supreme Court affirming constitutionality of Migratory Bird Treaty.—Power of Congress to carry out treaty pledges and administrative regulations.—International Labor conference to enact for the United States its recommendations on labor.—"From the historical point of view no more interesting case was decided last term than that of *Missouri v. Holland*, (252 U.S. 416) in which a bill in equity brought by the state of Missouri to prevent a game warden of the United States from attempting to enforce the Migratory Bird Treaty Act of July 3, 1918. The act gives effect to the Treaty of August 16, 1916, between the United States and Great Britain, which pledges this government and the Canadian government reciprocally to protect certain game birds making seasonal migrations from the United States into Canada and vice versa. Earlier than this Congress had, by the Act of March 4, 1913, attempted to extend the protection of the national government over migratory game birds, but the act had been held void by a state and one or two federal courts, passing muster, however, in another. It was before the Supreme Court in *Cary v. So. Dak.*, 250 U.S. 118, but for construction only. (See U.S.A.: 1913: Protection of migratory birds.) . . . The objectors to the statute and the underlying treaty based their argument upon the Tenth Amendment. 'The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people,'

supplemented by the proposition that the control of migratory birds within their respective limits is a power reserved to the states, . . . and from these premises they proceeded to draw the conclusion that 'what an act of Congress could not do unaided, in derogation of the powers reserved to the states, a treaty cannot do.' But, Justice Holmes answers in his opinion for the court, the treaty-making power is expressly delegated to the United States (Article 2, section 2, which reads: 'He [the President] shall have power, by and with the advice and consent of the Senate, to make treaties, provided two thirds of the Senators present concur'; treaties made under the authority of the United States are the supreme law of the land, and by article 1, section 8, Congress may pass all laws necessary and proper to carry valid treaties into effect: 'The Congress shall have power . . . to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.' He then proceeds: 'Acts of Congress are the supreme law of the land only when made in pursuance of the Constitution, while treaties are declared to be so when made under the authority of the United States. It is open to question whether the authority of the United States means more than the formal acts prescribed to make the convention. We do not mean to imply that there are no qualifications to the treaty-making power; but they must be ascertained in a different way. It is obvious that there may be matters of the sharpest exigency for the national well-being that an act of Congress could not deal with, but that a treaty followed by such an act could, and it is not lightly to be assumed that, in matters requiring national action, "a power which must belong to and somewhere reside in every civilized government" is not to be found. . . . But for the treaty and the statute, there soon might be no birds for any powers to deal with. We see nothing in the Constitution that compels the government to sit by while a food supply is cut off and the protectors of our forests and of our crops are destroyed. It is not sufficient to rely upon the states. The reliance is vain, and were it otherwise, the question is whether the United States is forbidden to act. We are of opinion that the treaty and statute must be upheld.' Among the parts omitted in the above quotation from the opinion is the following striking passage: 'We may add that when we are dealing with words that also are a constituent act, like the Constitution of the United States, we must realize that they have called into life a being the development of which could not have been foreseen completely by the most gifted of its begetters. It was enough for them to realize or to hope that they had created an organism; it has taken a century and has cost their successors much sweat and blood to prove that they created a nation. The case before us must be considered in the light of our whole experience, and not merely in that of what was said a hundred years ago.' . . . These rather sweeping propositions raise some interesting questions with reference to Part 13 of the pending Peace Treaty with Germany [August 1921]. This division of the treaty provides for an International Labor Conference whose 'draft conventions' or 'recommendations,' as the case may be, must be submitted to the proper authorities of the member states for action upon them within a year. But 'in the case of a federal state,' the document reads, 'the power of which to enter in

conventions is subject to limitations, it shall be in the discretion of that Government to treat a draft convention to which such limitations apply as a recommendation only.' Supporters of the league and the treaty in the senate and elsewhere have been at pains to explain that this provision was inserted at the particular instance of the United States and to meet the requirements of the United States Constitution. It may, however, be fairly asked, with *Missouri v. Holland* in mind, whether the power of the national government to enter into conventions on labor is 'subject to limitations.' And if it is not, we are confronted with the further question, whether we should like to see the treaty-making power and Congress, either separately or conjointly, vested by an unqualified ratification of Part 13 of the treaty with the power of enacting for the United States such recommendations as the International Labor Conference may elect to make from time to time. Unquestionably *Missouri v. Holland* makes more important than ever the political check which resides in the senate on the treaty-making power. The case has another interesting aspect. 'The ground of the bill is that the statute is an unconstitutional interference with the rights reserved to the states by the Tenth Amendment, and that the acts of the defendant, done and threatened under that authority, invade the sovereign right of the state and contravene its will manifested in statutes. The state also alleges a pecuniary interest, as owner of the wild birds within its borders and otherwise, admitted by the government to be sufficient, but it is quite enough that the bill is reasonable and proper means to assert the alleged quasi sovereign rights of a state.'—E. S. Corwin, *Migratory bird treaty (American Political Science Review, Feb., 1921, pp. 52-54)*.

**TREBIZOND**, capital of the Turkish vilayet of the same name in Asia Minor, on the southeastern shore of the Black sea. (See TURKEY: Land; Map of Asia Minor). The population of the city numbers 55,000. By their railroad from Batum to

Baku, the Russians reduced the importance of the caravan trade to Persia and Central Asia, of which Trebizond was the western terminus. There is a considerable Greek and Armenian population in the city, handling this commerce.

Origin of the city.—"Trebizond, celebrated in the retreat of the Ten Thousand as an ancient colony of the Greeks, derived its wealth and splendour from the munificence of the Emperor Hadrian, who had constructed an artificial port on a coast left destitute by nature of secure harbours. The city was large and populous."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 10.

258.—Capture by Goths. See GOTHIC: 258-267.

1204-1461.—Greek empire.—"The empire of Trebizond was the creation of accident. . . . The destruction of a distant central government, when Constantinople was conquered by the Frank Crusaders, left [the] provincial administration without the pivot on which it had revolved. The conjuncture was seized by a young man, of whom nothing was known but that he bore a great name, and was descended from the worst tyrant in the Byzantine annals. This youth grasped the vacant sovereignty, and, merely by assuming the imperial title, and placing himself at the head of the local administration, founded a new empire. Power changed its name and its dwelling, but the history of the people was hardly modified. The grandeur of the empire of Trebizond exists only in romance. Its government owed its permanence to its being nothing more than a continuation of a long-established order of civil polity, and to its making no attempt to effect any social revolution." The young man who grasped the sovereignty of this Asiatic fragment of the shattered Byzantine empire was Alexius, a grandson of Andronicus I, the last emperor at Constantinople of the family of Comnenos. This Alexius and his brother David, who had been raised in obscurity at Constantinople, escaped from the city before it was taken by the Crusaders, and fled to the coast of Colchis, "where their paternal aunt, Thamar, possessed wealth and influence. [See CAUCASUS: 1080-1393.] Assisted by her power, and by the memory of their tyrannical grandfather, who had been popular in the east of Asia Minor, they were enabled to collect an army of Iberian mercenaries. At the head of this force, Alexios entered Trebizond in the month of April 1204, about the time Constantinople fell into the hands of the Crusaders. He had been proclaimed emperor by his army on crossing the frontier. To mark that he was the legitimate representative of the imperial family of Komnenos, and to prevent his being confounded with the numerous descendants of females, or with the family of the emperor Alexius III. (Angelos), who had arrogated to themselves his name, he assumed the designation of Grand-Komnenos. Wherever he appeared, he was acknowledged as the lawful sovereign of the Roman empire." For a time Alexius of Trebizond, with the help of his brother David, extended his dominions in Asia Minor with rapidity and ease, and he was brought very soon into collision with the other Greek emperor, Theodore Lascaris, who had established himself at Nicea. It seemed likely, at first, that Trebizond would become the dominant power; but the movement of events which favored that one of the rival empires was presently stayed, and then reversed, even though Alexius took aid from the Latin emperor at Constantinople. Not many years later, in fact, the empire of Trebizond evaded extinction at the hands of the Turkish sul-

tan of Iconium, or Roum, only by paying tribute and acknowledging vassalage to that sovereign. For sixty years the so-called empire continued in a tributary relationship to the Seljuk sultans and to the grand khan of the Mongols who overthrew them in 1244. But, if not a very substantial empire during that period, it seems to have formed and exceedingly prosperous and wealthy commercial power, controlling not only a considerable coast territory on its own side of the Euxine, but also Cherson, Gothia, and all the Byzantine possessions in the Tauric Chersonesos; and "so close was the alliance of interest that these districts remained dependent on the government of Trebizond until the period of its fall." On the decline of the Mongol power, the empire of Trebizond regained its independence in 1280, and maintained it for nearly a century, when it was once more compelled to pay tribute to the later Mongol conqueror, Timur. At the end of the fourteenth century the little "empire" was reduced to a strip of coast, barely forty miles wide, extending from Batum to Kerasunt, and the separated city of Oinaion, with some territory adjoining it. (See MONGOLIA: Map of Mongolian empires.) But, within this small compass, "few countries in Europe enjoyed as much internal tranquillity, or so great security for private property. [The commerce of Trebizond had continued to flourish, notwithstanding frequent quarrels and hostilities with the Genoese, who were the chief managers of its trade with the west. But the decay of the empire, politically, commercially, and morally, was rapid in its later years. First becoming tributary to the Ottoman conqueror of Constantinople, it finally shared the fate of the Byzantine capital. The city of Trebizond was surrendered to Mohammed II. in 1461. (See also TURKEY: 1451-1481). Its last emperor, David, was permitted to live for a time, with his family, in the European dominions of the Turk; but after a few years, on some suspicion of a plot, he was put to death with his seven sons, and their bodies were cast unburied to the dogs. The wife and mother of the dead—the fallen empress Helena—guarded them and dug a grave for them with her own hands. The Christian population of Trebizond was expelled from the city and mostly enslaved. Its place was taken by a Moslem colony.]"—G. Finlay, *History of the empire of Trebizond (History of Greece and of the empire of Trebizond)*.

1914-1920.—In the World War.—During the first two years of the World War, Trebizond was bombarded by Russian fleets and on Apr 18, 1916, after a combined attack by land and sea it was captured by them (see WORLD WAR: 1916: VI. Turkish theater: d, 5), but was retaken by the Turks Feb. 24, 1918. After the armistice, near the end of 1918, the city was reoccupied by Allied representatives. It was intended to unite the vilayet of Trebizond, with a population of 1,000,000 people, to the new republic of Armenia, along with the vilayets of Van, Erzerum and Bitlis; but owing to the strength of the Turkish Nationalist power and the refusal of any Allied power to undertake a mandate of the League of Nations for Armenia, the latter was retaken by the Turks in 1920.—See also ARMENIA: 1910-1920; WORLD WAR: 1915: VI Turkey: d, 1; SEVRES, TREATY OF (1920): Part III. Political clauses: Armenia; Part XI. Ports, waterways and railways.

to be trench warfare. "When the British and French armies began their retreat from Mons, the British army was hampered by its lack of knowledge of trench warfare as used in the South African War. The men retired day by day, hardly staying in one place long enough to dig themselves in. At that time, one valuable lesson for digging a trench system was learned and that was, that the hole they had been taught to make in such circumstances was useless, as it offered them no protection against overhead shrapnel. This hole used to be dug a little more than the width of a man and straight back his full length; he naturally threw the dirt in front of him and thus made a little parapet. After the battle of the Marne a new system was used. A round hole was dug by

BRITISH NORTH COUNTY TROOPS WITH CAMOUFLAGE HELMETS WAITING IN RESERVE TRENCHES

Official photograph taken on the British Western Front, Battle of Menin Road, 1917

**TRENCH WARFARE**: Beginning and development.—Listening posts.—Observation posts and support trenches.—The use of trenches as an important factor in warfare must ever be associated with the World War. Trenches and ditches as auxiliaries to fortification and siege-craft were probably known in the earliest days and were certainly employed extensively in classical and medieval times. The occasional use of rifle-pits had been noted in the American Civil and Russo-Japanese wars. However, these sporadic occurrences never approached what we now understand

each man to fit his individual size. Here he squatted and fought if necessary, with the enemy's line from 100 to 500 yards distant from him. During the night, when not fighting, these men deepened their shelters and joined them together by little narrow ditches. During the next day there might be bitter fighting so that it would be even possible that other troops would come up and relieve during the early dusk. The relieved troops would retire a short distance and dig themselves another row of holes where they might act as supports in case the temporary front line gave. During that night the holes on the front line would be enlarged until they finally joined, and gradually, without deliberate intention, the trench became a permanent feature. Then the line slightly in the rear became connected with the front line system by what were then merely ditches. This was the origin of the system. The trench systems

generally consisted of three complete lines or systems of trenches, each system being self-supporting and independent of the other. The second and third systems were generally laid with due consideration to protection, fields of fire, and all the other tactical requirements necessary to such a system, because it was practically impossible to keep these points in mind during the building of the first or original line. These systems usually ran to a depth of six to eight miles from the front firing line. They were so constructed that when a firing line was broken through to any great extent, what was formerly a communication trench at once became a fire trench, and served to bring a heavy enfilade fire on the troops occupying the captured area. The site for a defensive firing line was divided into three sections: firing line, immediate support and reserves. The probable lines and manner of defense of the enemy

fire-bays interrupted by a series of traverses. The object of these being to localize the effect of shells or bombs landing in a fire-bay and to prevent enfilade fire down the length of the trench, as well as to localize any entry of the enemy into your line. Dimensions varied up and down the line, sometimes according to the lay of the land, sometimes according to the opinions or whims of the regiments making them, but the following dimensions show the average of the whole general line on the western front. Fire-bays generally were from twelve to eighteen feet long (defendable by four to six men, but accommodating eight to twelve, when necessary) plus a two foot covered sentry-box recessed into the traverse and giving room for one more man; this depending entirely on the energy and initiative of the men occupying the section. Every traverse averaged 9 x 9 feet, including a fairly liberal allowance for wear and

TRENCH MORTAR

had to be considered and whether the trenches were for permanent or for temporary use. The main object was to attain the greatest firing field that could be covered by defensive fire and the greatest security from offensive fire. The work of filling sandbags was continuous. Any damage to parados or traverses was at once attended to, and in the night damage to the wire entanglements was repaired. The ultimate design of a fire-trench depended upon its closeness to the enemy. When the latter were within 150 yards, the traversed fire trench had to provide adequate accommodation and protection for men who might at any moment be called upon to make use of bomb, bayonet and bullet; but if the enemy trenches were more than 150 yards distant, the ultimate design would depend upon the number of machine guns and automatic rifles available. Each of these guns had a firing capacity equal to about 25 rifles. Each gun therefore decreases the number of men required to hold the line, and in consequence reduces the amount of trench needed to protect these men. A traversed trench consisted of a series of

tear, and was the minimum allowance for stopping enfilade fire and localizing fire. Three feet was about the maximum width at the bottom of the trench. Recesses were dug at favorable places for the storage of bombs. Only in exceptional circumstances were shelters cut in a trench wall. The real dug-outs for the accommodation of men holding a line were generally behind the fire-trenches in an immediate support line, or as in the case of T-bays, in the control trench and communication trenches leading to and from them. These were large dug-outs, having a depth of thirty and forty feet, and in some cases capable of holding 100 to 250 men, generally having from five to ten exits and entrances. Here the men stayed during the bombardment, they were generally safe from any caliber shell that might light on top, unless a number dropped on the same spot. Between the front lines of the opposing armies, in No Man's Land, there were often areas of ground, ditches, and streams that, because of the lay of the land, could not be watched from a fire trench immediately facing them. The control of these areas was

necessary to prevent surprise attacks, etc. The listening post was often dug just inside the outer fringe of the barbed wire entanglements, just large enough to allow two men to stand in it unobserved. It was reached by a very narrow, irregular trench running out from a fire-bay, where it was easy to secure the maximum amount of concealment necessary to give protection. The soil excavated from these places was placed in sand bags and taken into the trench and used there. The chief duties of a listening post were to listen and report. Most of the work was done at night and no firing or sniping was allowed from it during the day. Patrols generally came out via one listening post and returned by another, so that all listening posts were warned of the trench by which the patrol would come out and the approximate time of departure and of return. During an attack, firing through loopholes was never possible because they were too restricted to have value. All the firing was done over the parapet. The difficulty of constructing new observation posts, which were effectual and inconspicuous for any length of time, resulted in their not being made in a parapet, where when located by the enemy they were as often as not a source of danger. A support trench was usually within 30 to 300 yards of a fire trench for the purpose of covering the fire trenches of skilled riflemen or an indirect machine-gun fire but mainly to shelter troops from observation and shell fire. Support dug-outs served three purposes: replacing casualties occurring in the fire trenches; holding the support trenches when fire trenches were captured by the enemy; and in an attack on enemy's trenches leading the attack over the heads of the occupants of the fire trench. Support points were forts, or strong points 100 to 300 yards behind the fire trenches garrisoned with firing troops strongly protected with barbed wiring and sandbags. The Second Line trenches duplicated the front line system, and were far enough behind it so that, in the event of the first system being taken, the second line was ready to be taken up by the troops driven out of the front line.—Based on J. S. Smith, *Trench warfare*, pp. viii-xi, 1-48.

**Defensive weapons.—Body armor and helmets.**—"When the movements of armies in the great war ceased and they were held in deadlock in the trenches, the fighters at once began devising weapons with which they could kill each other from below ground. . . . [They] developed the hand grenade [from the Roman fire-ball throwers] beyond the point which it had been brought in the European warfare of the last century. They called upon an industry which had once existed solely for the amusement of the people, the fireworks industry, for its golden rain and rainbow-hued stars for signals with which to talk to each other by night. Other geniuses of the trenches took empty cannon cartridges and, setting them up as ground mortars, succeeded in throwing bombs from them across No Man's Land into the enemy ranks. They even for a time resurrected the catapult of Trojan days, although this device attained no great success. But from all such activities new weapons of warfare sprang, crude at first, but later refined as only modern science and manufacture could protect them. . . . There is a widespread impression that helmets and body armor passed away with the invention of gunpowder and because of that invention. This impression is not at all true. Body armor came to its highest development long after gunpowder was in common use in war. The sixteenth century witnessed the most extensive use

of armor; yet at that time guns and pistols formed an important part of the equipment of every army, and even a weapon which is generally fancied to be ultramodern, the revolver, had been invented. The fact is that not gunpowder but tactics caused the decline of armor. Not that armor was unable to stop many types of projectiles shot from guns, but that its weight hampered swift manœuvring, caused it to be laid aside by the soldier. The decline of armor may be said to date from the Thirty Years' War. The armies in that period, and particularly that of the Swedes, began making long marches for surprise attacks, and the body armor of the troops was found to be a hindrance in such tactics. Thereafter armor went out of fashion. Yet it never completely disappeared in warfare. Gen. Rochambeau is said to have worn body armor at the siege of Yorktown. Great numbers of corselets and headpieces were worn in the Napoleonic wars. The corselet which John Paul Jones wore in his fight with the *Serapis* is preserved at the Metropolitan Museum of Art in New York. The Japanese army was mailed with good armor as late as 1870. Breastplates were worn to some extent in the Civil War in the United States, and an armor factory was actually established at New Haven, Conn., about 1862. In the museum at Richmond, Va., is an equipment of armor taken from a dead soldier in one of the trenches at the siege of that city. There was a limited use of armor in the Franco-Prussian War. Some of the Japanese troops carried shields at Port Arthur. Helmets were worn in the Boer War. A notorious Australian bandit in the eighties for a long time defied armed posses to capture him because he wore armor and could stand off entire squads of policemen firing at him with Martini rifles at close range. Thus it cannot be said that armor, in coming into use again in the great war, was resurrected; it was merely revived. In its static condition during most of the four-year period, the war against Germany was one in which armor might profitably be used. This opportunity could scarcely be overlooked, and indeed it was not. . . . Yet body armor itself was coming into favor again, and only the welcome but unexpected end of hostilities prevented it, in all probability, from becoming again an important part of the equipment of a soldier. As a consequence of the attenuated but persistent use of armor by soldiers during the past two centuries and of the demand of the aristocratic for helmets and armor as ornaments, the armorer's trade had been kept alive from the days of Gustavus Adolphus to the present. The war efforts of the United States in 1917 and 1918 demanded a wide range of human talents and special callings; but surely the strange and unusual seemed to be reached when in the early days of our undertaking the Engineering Division of the Ordnance Department sought the services of expert armorers. It may be said that there were but two nations in the great war which went to the Middle Ages for ideas as to protective armor—ourselves and Germany. The Germans, who applied science to almost every phase of warfare, did not neglect it here. Germany at the start consulted her experts on ancient armor and worked along lines which they suggested. The German helmet used in the trenches was undoubtedly superior to any other helmet given a practical use. The first helmets to be used in the great war were of French manufacture. They were designed by Gen. Adrien, and 2,000,000 of them were manufactured and issued to the French Army. These helmets were the product of hasty pioneer work, but the fact that they saved from

2 to 5 per cent of the normal casualties of such a war as was being fought at once impelled the other belligerents to adopt the idea. Great Britain, spurred by the necessity of producing quickly a helmet in quantity, designed the most simple helmet to manufacture, which could be pressed out of cold metal. When America entered the war she had, naturally, no distinctive helmet; and the English type, being easiest to make, was adopted to fill the gap until we could design a more efficient one ourselves. . . . The British helmet possessed some notable defects. It did not afford a maximum of protective area. The center of gravity was not so placed as to keep the helmet from wobbling. The lining was uncomfortable and disregarded the anatomy of the head. It was vulnerable at the

a thickness of 0.036 of an inch is able to stop at a distance of 10 feet a jacketed, automatic pistol ball, .45 caliber, traveling at the rate of 600 feet a second. This was important not only from the standpoint of helmet production, but from the further inference that body armor of such steel might still be profitably used. The records of the hospitals in France show that 7 or 8 of every 10 wounded soldiers were wounded by fragments of shell and other missiles which even thin armor plate would have kept out. The German troops used body armor in large numbers, each set weighing from 19 to 24 pounds. In this country we believed it possible to produce body armor which would not be difficult to carry and which would resist the impact of a machine-gun bullet at fairly

GERMAN SNIPER'S POST MADE OF THREE-INCH KRUPP STEEL

concave surface where bowl and brim joined. It is not an astonishing circumstance that some of the earlier helmets worn by the men-at-arms of the days of knighthood possessed certain of these same defects, notably, that they were apt to be top-heavy and uncomfortable. Only by centuries of constant application and improvement were the armorers of the Middle Ages able to produce helmets which overcame these defects and which embodied all of the principles of defense and strength which science could put into them. The best medieval helmets stand at the summit of the art. It was the constant aim of the modern specialist, aided by the facilities of the twentieth century industries, to produce helmets as perfect technically as those rare models which are the pride of museums and collectors. Certainly in one respect we had the advantage of the ancients in that we have nowadays at our disposal the modern alloy-steels of great resistance. An alloy of this kind having

close range. The production of helmets, however, was our first concern; and in order to be sure of a sufficient quantity of these protective headpieces, we adopted the British model for production in the United States. . . . For the metal we adopted after much experimentation a steel alloy with a high percentage of manganese. This was practically the same as the steel of the British helmet. Its chief advantage was that it was easy to work in the metal presses in existence and it required no further tempering after leaving the stamping presses. Its hardness, however, wore away the stamping tools much more quickly than ordinary steel sheets would do. While we adopted the British helmet in design and substantially in metal used, we originated our own helmet lining. The lining was woven of cotton twine in meshes three-eighths of an inch square. This web, fitting tightly upon the wearer's head, evenly distributed the weight of the two-pound helmet, and in the same way distributed

the force of any blow upon the helmet. The netting, together with small pieces of rubber around the edge of the lining, kept the helmet away from the head, so that even a relatively large dent could not reach the wearer's skull. . . . The helmets were painted in the olive-drab shade for protective coloring. While on dull days such objects could not be discerned at a great distance, in bright weather their rounded surfaces might catch and reflect sunbeams, thus betraying the positions of their wearers. To guard against this, as soon as the helmets were treated to a first coat of paint, fine sawdust was blown upon the wet surface. When this had dried, another coat of paint was applied, and a nonreflective, gritty surface was thus produced."—B. Crowell, *America's munitions, 1917-1918*, pp. 200, 221-224.

TRENT AFFAIR.—"Immediately after the firing upon Fort Sumter, Jefferson Davis, president of the then newly organized Confederate States, had sent out to Europe agents to forward the interests of the proposed nationality. These agents had there spent some seven months, accomplishing little. Disappointed at their failure, Davis determined upon a second and more formal mission. The new representatives were designated as 'Special Commissioners of the Confederate States of America, near the Government' whether of Great Britain or of France, as the case might be. James Murray Mason of Virginia and John Slidell of Louisiana were selected, the first named for London, the second for Paris. Both . . . had recently been senators of the United States, Slidell having withdrawn from the Senate February 4, 1861, immediately after the passage of the Ordinance of Secession by the state of Louisiana; while Mason, having absented himself about March 20, during the session of the Senate for executive business, did not again take his seat. Virginia seceded April 17, and Mason, together with several other Southern senators, was in his absence expelled by formal vote (July 11) at the special session of the Thirty-Seventh Congress, which met under the call of President Lincoln, July 4, 1861. Probably no two men in the entire South were more thoroughly obnoxious to those of the Union side than Mason and Slidell. The first was, in many and by no means the best ways, a typical Virginian. Very provincial and intensely arrogant, his dislike of New England, and especially of Massachusetts, was pronounced, and exceeded only by his contempt. Slidell, on the other hand, an intriguer by nature, unscrupulous in his political methods, was generally looked upon as the most dangerous person to the Union the Confederacy could select for diplomatic work in Europe. The first object of the envoys was to secure the recog-

nitiation of the Confederacy. The ports of the Confederate States were then blockaded; but the blockade had not yet become really effective. The new envoys selected Charleston as their port of embarkation, and October 12 as its date. The night of the 12th was dark and rainy, but with little or no wind, conditions altogether favorable for their purpose. They left Charleston on the little Confederate steamer *Theodora*, evaded the blockading squadron, and reached New Providence, Nassau, two days later, the 14th. It had been the intention of the envoys to take passage for Europe at Nassau on an English steamer; but, failing to find one which did not stop at New York, the *Theodora* continued her voyage to Cardenas in Cuba, whence the envoys and those accompanying them proceeded overland to Havana. Arriving at Havana about the 22d of October, Messrs. Mason and Slidell remained there until the 7th of November. They then embarked on the British steamer *Trent*, the captain of the *Trent* having full knowledge of their diplomatic capacity as envoys of an insurgent community, and giving consent to their embarkation. The *Trent* was a British mail packet, making regular trips between Vera Cruz, in the Republic of Mexico, and the Danish island of St. Thomas. She was in no respect a blockade-runner; was not engaged in commerce with any American port; and was then on a regular voyage from a port in Mexico, by way of Havana, to her advertised destination, St. Thomas, all neutral ports. At St. Thomas direct connection could be made with a line of British steamers running to Southampton. The envoys, therefore, when they left Havana, were on a neutral mail steamer, sailing under the British flag, on a scheduled voyage between neutral points. At just that time the United States war steamer, *San Jacinto*, a first-class screw sloop mounting fifteen guns, was returning from a cruise on the western coast of Africa, where for twenty months she had been part of the African squadron engaged in suppressing the slave-trade. She was commanded by Captain Wilkes, who had recently joined her. Returning by way of the Cape Verde Islands, Captain Wilkes there learned from the newspapers about the last of September of the course of public events in the United States, and rumors reached him of Confederate privateers, as they were then called, destroying American vessels in West Indian waters. He determined to make an effort at the capture of some of these 'privateers'. On October 10 the *San Jacinto* reached the port of St. Thomas, and subsequently touched at Cienfuegos on the south coast of Cuba. There Captain Wilkes learned, also from the newspapers, that the Confederate envoys were at that very time at Havana, and about to take passage for Southampton. Reaching Havana on the 28th of October, the commander of the *San Jacinto* further learned that the commissioners were to embark on the steamer *Trent*, scheduled to leave Havana on the 7th of November. Captain Wilkes then conceived the design of intercepting the *Trent*, exercising the right of search, and making prisoners of the envoys. No question as to his right to stop, board, and search the *Trent* seems to have entered the mind of Captain Wilkes. He did, however, take into his confidence his executive officer, Lieutenant Fairfax, disclosing to him his project. Lieutenant Fairfax entered, it is said, a vigorous protest against the proposed action, and strongly urged on Captain Wilkes the necessity of proceeding with great caution unless he wished to provoke international difficulties, and not impossibly a war with Great Britain. He then suggested that his commanding officer consult

an American judge at Key West, an authority on maritime law; which, however, Captain Wilkes declined to do. Leaving Key West on the morning of November 5, Captain Wilkes directed the course of the *San Jacinto* to what is known as the Bahama Channel, through which the *Trent* would necessarily pass on its way to St. Thomas, and there stationed himself. About noon on the 8th of November, the *Trent* hove in sight, and when she had approached sufficiently near the *San Jacinto*, a round shot was fired athwart her course; the United States flag was run up at the masthead at the same time. The approaching vessel showed the English colors, but did not check her speed or indicate a disposition to heave to. Accordingly, a few instants later, a shell from the *San Jacinto* was exploded across her bows. It is unnecessary to go into the details of what then occurred. For present purposes it is sufficient to say that the two envoys, together with their secretaries, were identified and forcibly removed, being taken on board the *San Jacinto*; which, without interfering with the mails or otherwise subjecting the *Trent* to search, then laid its course for Fortress Monroe. Arriving there on the 15th, news of the capture was immediately flashed over the country. The *Trent*, on the other hand, proceeded to St. Thomas, where her passengers were transferred to another steamer, and completed the voyage to Southampton. They arrived and the report of the transaction was made public in Great Britain Nov. 27, twelve days after the arrival of the *San Jacinto* at Fortress Monroe, and the publication of the news of the arrest in the United States.—C. F. Adams (*American Historical Review*, Apr., 1912, pp. 541-543).—See also U.S.A.: 1861 (November).

**TREVES** (Trier), city of Rhenish Prussia, on the Moselle river, sixty-nine miles southwest of Coblenz. It is the oldest Roman settlement north of the Alps. Several buildings of ancient origin may be found, notably the Porta which is in excellent condition and was formerly the gateway to the city, and a Roman amphitheatre. Its population, in 1919, was 53,248.

**Origin.**—Trèves was originally the chief town of the Treviri, from whom it derived its name. When the Romans established a colony there they called it Augusta Trevirorum. In time, the Augusta was dropped and Trevirorum became Trèves, or Trier. See TREVIRI.

**Under the Romans.**—"The town of the Treveri . . . soon gained the first place in the Belgic province; if, still, in the time of Tiberius, Durocortorum of the Remi (Rheims) is named the most populous place of the province and the seat of the governors, an author from the time of Claudius already assigns the primacy there to the chief place of the Treveri. But Treves became the capital of Gaul—we may even say of the West—only through the remodelling of the imperial administration under Diocletian. Aiter Gaul, Britain and Spain were placed under one supreme administration, the latter had its seat in Treves; and thenceforth Treves was also, when the emperors stayed in Gaul, their regular residence, and, as a Greek of the fifth century says, the greatest city beyond the Alps."—T. TRIANON, a palace museum situated close to Versailles park, some miles outside Paris, comprising two buildings, the grand and petit Trianon. The historical interest of the place begins with Louis XIV, who bought the hamlet of Trianon on the outskirts of his new park, had its little dwellings torn down, and a small summer house of porcelain built on the site, for the Marquise de Montespan. After de Montespan had lost his favor, he had this small building pulled down and replaced by the château known as the grand Trianon. The petit Trianon, which was erected by Louis XV for Madame du Barry, was the favorite retreat of Marie Antoinette, the unhappy queen of Louis XVI.

TRIANON, Treaty of (1920).—"The treaty [of the Allies] with Hungary, which was delayed for three months, awaiting the establishment of a stable and representative government, was delivered to the Hungarian delegation, headed by Count Apponyi, on January 15, at Neuilly, near Paris, where the Bulgarian treaty had been signed. As originally drafted it provided that Hungary should formally waive claim to Fiume and to all former Austro-Hungarian territory awarded to Italy, Rumania, Jugoslavia and Czechoslovakia; that she should adhere to the clauses of the Austrian treaty concerning national minorities; that her army should not exceed 35,000 men, with guns of not more than ten centimeter calibre and heavy guns not larger than 105 millimeter bore; that she should assume a proportional share of the Austro-Hungarian debt; place no restriction upon the export of foodstuffs into Austria; and insure to Austrian purchasers terms as favorable as those given to Hungarians. The remaining clauses of the treaty were similar to those of the treaty of St. Germain. So bitter were the denunciations of the treaty in Hungary, and so determined were the Hungarians that they would not accept it as drafted, that it was reconsidered by the Supreme Council. The revised document, however, granted only a few economic concessions, and the territorial clauses, against which such vigorous protest had been made, were unchanged."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, p. 4.—The boundary settlements of Hungary were more drastic than any except the proposed Turkish. As between Austria and Hungary, the principle of nationality was apparently applied in favor of the former republic by the award of Búrgenland in the west, which was only effected in October, 1921; Slovakia in northern Hungary was united with Bohemia to form the

independent Czecho-Slovakian republic, including however a considerable minority of Magyars; on the east Transylvania, including colonies of Hungarians and Germans, became Rumanian; the banat of Temesvar in the south was divided between Rumania and the new kingdom of the Serbs, Croats and Slovenes, the latter two constituents having separated themselves from Hungary, which also lost its only outlet to the sea, the port of Fiume. Thus, Hungary as well as Austria and Czecho-Slovakia each was reduced to landlocked conditions like little Switzerland, the only country in Europe without a seaport before the World War. An international control of communications, established in the previous Versailles Treaty with Germany, of all the principal rivers of central Europe, including the Danube, was confirmed. In addition to the demarkation of the boundaries "the main features of the treaty are as follows: "Hungary recognizes the full independence of the State of Serbs, Croats and Slovenes and the Czechoslovak State: the frontiers between Hungary and the State of the Serbs, Croats and Slovenes and Rumania will be determined by a commission composed of seven members, five of whom will be appointed by the principal allied and associated powers, one by the interested State and one for Hungary. Hungary renounces in favor of Italy, the State of Serbs, Croats and Slovenes, Rumania and the Czechoslovak State all rights and claims on the territory of the former Austro-Hungarian Monarchy recognized as being an integral part of these States. Rumania accepts the dispositions that the principal allied and associated powers judge necessary for the protection in Rumania of the interests of the inhabitants who differ from the majority of the population by race, language or religion. She agrees also to clauses framed for the protection of the freedom of transit and an equitable régime for the trade of other nations. The Czechoslovak State undertakes not to erect any military works on the part of its territory situated on the right bank of the Danube to the south of Bratislava. Hungary renounces all rights and claims to Fiume and the adjacent territory belonging to the former Hungarian Kingdom and comprised within the boundaries which will be ultimately fixed, and she undertakes to recognize the stipulations which will be made on this subject. Hungary renounces in favor of Austria all her rights in territories of the old Hungarian Kingdom, situated beyond the boundaries fixed today. The military clauses are identical with those contained in the treaty of Saint Germain, except on two points. The total number of the Hungarian military forces is fixed at 35,000 men. No heavy guns are permitted—that is to say, guns of a larger calibre than 105 millimeters. As to reparations, the provisions are the same as those in the treaty of Saint Germain, except that Hungary is to give the allied powers an option on the annual delivery of railway coal for the period of five years, the amount to be fixed by the Réparations Commission, and the coal to go to the State of the Serbs, Croats and Slovenes. Regarding the proportion and character of the financial obligations of Hungary which will be borne by the Serb-Croat-Slovene State, Rumania and Czechoslovakia, by virtue of territory placed under their sovereignty, these will be decided upon in conformity with the financial clauses of the present treaty, which are identical with those of the Treaty of Saint Germain, except for two additions. The provisions by which Hungary must undertake to support the allied armies of occupa-

tion in her territory are not to apply to military operations subsequent to Nov. 3, 1918, without the consent of the principal allied and associated powers. In this case the Reparations Commission will fix the share of the expense to be borne by Hungary. On the other hand, it is laid down that the Hungarian Government must guarantee to pay in addition to the Hungarian public debt, part of the Austrian debt representing her contribution to the general debt of Austria-Hungary. The economic clauses are identical with those of the Treaty of Saint Germain, except as to some points of detail concerning economic relations between Austria and Hungary. Publication of these terms caused an uproar in Hungary. A statement issued by Count Apponyi on his arrival in Vienna, implied that the treaty in the form dictated would never be signed.—*New York Times Current History, Mar., 1920, p. 447.*—"The treaty . . . was accepted by the delegation for Hungary only after protest and a demand for modification, especially regarding boundaries, for which a decision by plebiscite was asked. . . . [In reply] it was pointed out that the conditions in Central Europe were such that it was impossible to make the political frontiers coincide with the ethnic. More than one aggregation of Magyars, consequently, said M. Millerand, the allied spokesman, must of necessity find themselves under the sovereignty of another State. A return of such territories to Hungary, when containing compact masses of population averse either to union or assimilation, would be impossible. Hence the allied Governments refused on practical grounds to modify the frontiers. It was further stated that plebiscites, if conducted fairly, would bring no substantial alteration in the boundaries as laid down by the allied experts after careful scientific study of the conditions prevailing. After this unequivocal rejection of the Hungarian demands, however, the note announced that the allied and associated powers had adopted a method of correcting frontier lines. The Delimitations Commissions, which had already begun their work, were given power, in case they were of the opinion that the boundary provisions of the treaty created injustice, to report this to the Council of the League of Nations, which could then offer its good offices to rectify the original line. . . . Modifications on the subjects of national minorities, military and naval clauses and war-guilty nationals were similarly rejected, and Hungary was given ten days in which to declare her willingness to sign the terms imposed. M. Prasenowski, Hungarian Minister, reached Paris from Budapest on May 21, the last day of the time limit. Early in the afternoon he notified the allied authorities that his Government accepted the treaty as drawn. A note, signed by the Hungarian Premier and Foreign Minister, was also presented, stating that the provisions of the treaty would be carried out loyally. The ceremony of signing was held on June 4 in the long gallery of the Grand Trianon [at Versailles]. It was brief and un spectacular. . . . The day of signing was made a day of national mourning in Budapest. They city was hedecked with black flags and draperies, railways and street cars stopped service, and stores and banks were closed. One of the features of the celebration was a series of riots in which 'awakening Magyars' killed several Jews and wounded many more. These occurrences were reported to the State Department at Washington by U. Grant Smith, American High Commissioner at Budapest, who said that the allied missions at Budapest protested to the Hungarian Government, demanding

the restoration of law and order. The Peace Treaty was denounced in the National Assembly, in the churches and public meetings as an outrage."—*Ibid., July, 1920, pp. 615-617.*

**TRIBUNITIA, Potestas.** See POTESTAS TRIBUNITIA.

**TRIBUTUM,** war-tax, collected from the Roman people in the earlier periods of the republic. It was "looked upon as a loan, and was returned on the termination of a successful war out of the captured booty. . . . The principle that Rome was justified in living at the expense of her subjects was formally acknowledged when, in the year 167 B. C., the tributum—the only direct tax which the Roman citizens paid—was abolished, because the government could dispense with it after the conquest of Macedonia. The entire burden and expense of the administration were now put off upon the subjects."—W. Ihne, *History of Rome, v. 4, bk. 6, ch. 7.*

**TRICAMARON, Battle of (533).** See VANDALS: 533-534.

**TRICASSES,** earlier name of the city of Troyes, France.

**TRICHINOPOLY,** capital of the district of Madras, British India. It was governed by a line of rajahs until 1732, and was the scene of fighting between the English and the French during the Carnatic wars, 1740-1761. It came under British control in 1801. The population in 1921 was 120,422. See INDIA: 1743-1752.

**TRIEWALD**, Martin (1601-1747), Swedish engineer and mathematician. See INVENTIONS: 18th century: Improved diving bell.

**TRIFORIUM**, in architecture, the arcaded story between the nave and the clerestory of a cathedral. See CATHEDRAL: Historical importance.

**TRIGLYPHS**, blocks used in the decoration of the Greek Doric column. See ORDERS OF ARCHITECTURE.

**TRI-INSULA**, independent commonwealth to consist of Long, Staten, and Manhattan islands, proposed in 1861 by New York City.

**TRIKOUPIS**, Charilaos. See TRICOUPIS.

**TRIM**, capital of the county of Meath, Ireland, on the Boyne, about thirty miles northwest of Dublin. It was under English control in 1367. See IRELAND: 1327-1367.

**TRINACRIA**, name for Sicily. See ITALY (Southern): 1232-1300.

**TRINCOMALEE**, Battle of (1767). See INDIA: 1767-1769.

**TRINIDAD**.—The island of Trinidad, which lies close to the South American continent, off the delta of the Orinoco, was discovered by Columbus on his third voyage, 1498 (see AMERICA: 1498-1505), but the Spaniards made little use of it, except for slave hunting. Late in the eighteenth century a French settlement was established in the island, though under the government of Spain. In 1797 it was taken by the English, and it was ceded to England in 1802. United with the neighboring island of Tobago, it is one of the crown colonies of the British empire. (See BRITISH EMPIRE: Treaties promoting expansion: 1815.) The area of Trinidad is 1,862 square miles. The population, in 1921, was 365,913. It is one of the most fertile of the West Indies islands. Its sole mineral wealth is in the extraordinary lake of half-solid pitch or asphalt, of which a graphic description may be found in the eighth chapter of Charles Kingsley's account of his visit to Trinidad, in 1860, entitled "At Last."—See also BRITISH EMPIRE: Extent; WEST INDIES: 1920-1922.

**TRINITY**. See ARIANISM.

**TRINITY COLLEGE**, Dublin. See UNIVERSITIES AND COLLEGES: 1258-1921; 1591-1917; DUBLIN: 1400-1600; IRELAND: 1844.

**TRINITY HOUSE**.—"Perhaps there is throughout Britain no more interesting example of the innate power and varied developments of the old gild principle, certainly no more illustrious survival of it to modern times, than the Trinity House. It stands out now as an institution of high national importance, whose history is entwined with the early progress of the British navy and the welfare and increase of our sea craft and seamanship; in an age when the tendency is to assume state control over all matters of national

interest the Trinity House, a voluntary corporation, still fulfils the public functions to which its faithful labours, through a long course of years, have established its right and title. Although its earliest records appear to be lost or burned, there seems to be no doubt that Henry VIII's charter of 1514 was granted to a brotherhood already existing. . . . In the charter itself we read that the shipmen or mariners of England 'may anew erect' a gild, and lands and tenements in Deptford Strond, already in possession, are referred to. Similar bodies were formed in other places. . . . The charitable side of the Trinity House functions has always been considerable; in 1815 they possessed no less than 144 almshouses, besides giving 7,012 pensions; but of late years their funds applicable to such purposes have been curtailed. . . . It is significant that in Edward VI's reign the name and style of Gild was abandoned by the brethren for the title of 'the Corporation of the Trinity House of Deptford Strond.' Gilds now had come into disrepute. The functions of the Trinity House have long been recognized of such value to the public service that their honourable origin, so consonant with other English institutions, is apt to be forgotten. . . . To cherish the 'science and art of mariners,' and to provide a supply of pilots, especially for the Thames up to London, were their prime duties. The Admiralty and Navy boards were established as administrative bodies in 1520, and the ship-building yard at Deptford, with the store-houses there, 'was placed under the direct control of the gild.' The Sea Marks Act of 1566, which throws considerable light on the position of the company at that time, endowed them with the power of preserving old and setting up new sea marks or beacons round the coasts, among which trees came under their purview. How far their jurisdiction extended is not stated; it would be interesting to know whether their progress round the whole shores of Britain were gradual or not. It is, perhaps, for its work in connexion with light-houses, light-ships, buoys, and beacons, that the Trinity House is best known to the general public. . . . It was only in 1836 that parliament 'empowered the corporation to purchase of the crown, or from private proprietors, all lights then in existence,' which are therefore at present under their efficient central control. . . . The principal matters in their sphere of action [are] the important provision of pilots, the encouragement and supply of seamen, ballastage and ballast, lights and buoys, the suppression of piracy and privateers, tonnage measurement, the victualling of the navy, their intimate connexion with the gradual growth and armament of the navy, the curious right to appoint certain consuls abroad"—L. T. Smith, *Review of "Trinity house of Deptford Strond"*; by C. R. B. Barrett (*English Historical Review*, Apr., 1894).

**TRINOBANTES**.—The Trinobantes were the first of the tribes of Britain to submit to Cæsar. They inhabited the part of the country now embraced in the county of Essex and part of Middlesex. Their chief town, or stronghold (*oppidum*) was Camulodunum, where the Romans afterwards founded a colony which became the modern city of Colchester. Cunobelin, the Cymbeline of Shakespeare, was a king of the Trinobantes who acquired extensive power. One of the sons of Cunobelin, Caractacus, became the most obstinate enemy of the Romans when they seriously began the conquest of Britain, in the reign of Claudius.—Based on E. L. Cutts, *Colchester*, ch. 2-3.—See also BRITAIN: Celtic tribes; 43-53.

ALSO IN: C. Merivale, *History of the Romans*, ch. 51.

**TRIOBOLON.**—Three oboli was the daily compensation paid in Athens to citizens who served as judges in the great popular courts; afterwards paid, likewise, to those who attended the assemblies of the people.—Based on A. Boeckh, *Public economy of Athens*, bk. 2, ch. 15.

**TRIPLANE.** See AVIATION: Development of airplanes and air service: 1910-1920.

**TRIPLE ALLIANCE.**—There have been a number of triple alliances formed in European history (see NETHERLANDS: 1668; SPAIN: 1713-1725; FRANCE: 1717-1719); but the one in recent times to which allusion is often made is that in which Germany, Austria-Hungary, and Italy, were the three parties. It was formed by treaty in May, 1882, and was preceded by an alliance between Austria-Hungary and Germany, known as the Dual Alliance.—See also BALANCE OF POWER: Neutralization of states.

**Austro-German alliance of 1879.**—"A close alliance between Germany and Austria was an idea which Bismarck had entertained before [1879], and even informally suggested. . . . Yet, much as he had disliked the previous hollow friendship between Vienna and Berlin, which he believed to be entirely to the advantage of the former, and convinced as he was that Prussia could only fulfil her ambitions by a successful war with Austria, none the less, even before that war was finished [1866], he had begun to look forward to better relations in the future. The obstinacy with which in the hour of victory he had stood out against the eager wish of his master and of the Prussian military leaders for an acquisition of Austrian territory, was due only in part to the immediate dangers that he perceived in case Prussia should show herself immoderate in her demands. It was also due to his extraordinary foresight as to the advantages of not alienating Austria permanently, but of leaving the way open to a subsequent reconciliation. . . . Whatever may have been Bismarck's designs in 1875, the famous war scare [with Russia] at least made clear that Russia was not minded to permit him to attack France. . . . Neither Russia nor Germany was ready at the last analysis to grant the other a perfectly free hand as against France and Austria respectively. . . . To these considerations we may add the deeper one of the common nationality and history of the Germans in Germany and of those in Austria. For a thousand years they had been in the same empire, and their present political severance from one another dated back scarcely more than a decade. Such factors weighed with Bismarck, and he mentions them among the reasons for his decision. . . . Angered by the attitude of Russia since the Congress of Berlin [1878], and fearing that in spite of assurances to the contrary, the retirement of Andrassy [Austria-Hungary's foreign minister] might lead to a change of policy at Vienna, he determined while there was still time to bind Germany and Austria together by an alliance which should put an end to the dangers that threatened them both. . . . Count Andrassy, on his part . . . had been aiming for just such a result ever since he had become foreign minister. It did not, therefore, take long for the two statesmen to reach an understanding when they came together at Gastein. They agreed that after each had obtained the approval of his master, Bismarck should proceed to Vienna to enter into formal negotiations for an Austro-German alliance. The idea was immediately approved by Emperor Fran-

cis Joseph, but the aged German emperor was at first quite unfavorable to it. . . . Only after obstinate resistance did . . . [Emperor William] unwillingly consent to negotiations for a defensive alliance, but it must not be one that was specifically directed against Russia. On September 21, Prince Bismarck arrived in Vienna. . . . The discussion between him and Count Andrassy and the drawing up of the treaty lasted but three days. Andrassy declined Bismarck's suggestion that the pact should be made part of the constitution of both empires, thus bringing them into a permanent relation with one another that would recall in a measure the Germanic federation dissolved by the war of 1866. He also refused to sign any general treaty of alliance, declaring that Austria had no quarrel with France and wished to keep on good terms with her, partly out of consideration for England. As Germany was amply able to hold her own against France without assistance, just as Austria was against Italy, an alliance for such contingencies was not necessary or desirable. The only real menace was from Russia, or from a combination of Russia and some other power, and this was all that should be provided against. . . . [So] in a memorandum to his emperor, on September 24, [Bismarck] recommended the ratification of the agreement that had been reached. This led to another acute crisis. Emperor William asserted repeatedly that the proposed treaty would be an act of ill faith on his part . . . [and] most reluctantly he yielded to the pressure put upon him. . . . On October 7, 1879, the Austro-German alliance was signed by him and by Prince Reuss, the German ambassador in Vienna [and] the news of what had been done soon transpired. In both Germany and Austria it was greeted with loud applause. . . . It was purely defensive in character, . . . by its existence and power it formed a dam against the progress of Pan-slavism, while it helped to keep France quiet by making her feel her isolation."—A. C. Coolidge, *Origins of the Triple Alliance*, pp. 157, 163, 166, 169-170, 172.

**Predicament of Italy, 1870-1882.**—**International situation.**—**Triple Alliance formed.**—"The young kingdom of Italy had been completed by the occupation of Rome in September, 1870. Unlike Prussia, Italy had not reached greatness by brilliant victories of her own; her success had been due not only to her efforts, but also to the misfortunes of others, which she had turned to good account. After the achievement of her unity, she still feared an Austrian attempt to reverse the verdict of 1859 and of 1866, and that this time she would not have a French or a Prussian ally. She feared still more that some power might take up the cause of the Pope and demand the restoration of his temporal authority, and she believed that the greatest danger in this respect threatened her from the side of France. . . . [Napoleon III, at the Peace of Villafranca] had exacted, in compensation for his services and for the sacrifices of France, the cession of Nice and Savoy. . . . The enforced cession of these two districts, although not objected to by the inhabitants themselves, have not been forgiven by the Italians to this day. Whenever relations have been strained between Italy and France, the eyes of those who dream of Italia Irredenta and every Italian patriot has dreamed of it more or less—have turned in the direction of Nice and Savoy, and of the island of Corsica, which once belonged to the republic of Genoa and . . . have been French only since

the middle of the eighteenth century. Another cause of Italian discontent was the continued occupation of Rome by French troops, in deference to the wishes of the clerical party in France. When the garrison was withdrawn in 1867, Garibaldi's ill-advised expedition against the city led to its prompt return, and to the painful incident of the hero's defeat at Mentana. In 1870 Italy, if given permission to occupy Rome, was ready to join with France against Prussia, her partner of four years earlier. But as Napoleon refused his consent until too late, the Italians, without running any risks, profited by his disasters, and after the withdrawal of the French garrison seized the Eternal City. . . . After the Peace of Frankfurt [Jan. 18, 1871] the relations between France and Italy became worse. The Italians . . . had little sympathy for the French republic, whose example might encourage the republican party in Italy, though they feared a Bourbon restoration, believing that it would mean a French intervention in behalf of the Pope. This fear was strengthened by the outspoken advocacy of the papal claims by many French royalists, including the Pretender, the Comte de Chambord himself, and also by the fact that until October, 1874, the French government unwisely kept a man-of-war stationed at Civita Vecchia, the port of Rome. The Italians, therefore, began to look for friends in other quarters. In 1873 King Victor Emmanuel visited Vienna and Berlin, and there was talk of the probable adhesion of Italy to the League of the Three Emperors. But these first advances led to nothing. The three empires looked askance at Italy and felt no particular need of her friendship. . . . In 1877, aroused by rumors of the agreement of Reichstadt, the Italian government sent Francesco Crispi on a mission to sound the German chancellor as to the possibility of an alliance between Italy and Germany against France and Austria. But Bismarck, while expressing a willingness to make a defensive treaty against France, frankly declared that he was on excellent terms with Austria and would remain so. . . . At the Congress of Berlin [1874] Italy neither gained anything herself nor dared oppose the gains of Austria. This outcome produced disappointment and discontent in the peninsula, which was not much allayed by the statement of the ministry that 'Italy had returned from the congress with clean hands'; others called it with empty hands. France, too, came back from Berlin 'with clean hands,' but she had something in her pocket, and that something was an object Italy coveted."—A. C. Coolidge, *Origins of the Triple Alliance*, pp. 179-180, 182, 184-191.—"Tunis and French Mediterranean ambitions brought France at once into sharp collision with the sister Latin race in Italy. The kingdom of Italy desired colonies and a sure grip on the Mediterranean. The French occupation of Tunis was a bitter blow. [See TUNIS: 1878-1881; 1881-1898.] . . . Isolated, [Italy's] . . . position was becoming desperate, [for] she could not stand alone. . . . A confidential explanation from Berlin of the terms and meaning of the Dual Alliance of 1879, made one certainty absolutely clear. 'Unredeemed Italy' (*Italia irredenta*)—Trieste and Istria, the Alpine frontier of the Napoleonic kingdom of Italy of 1810, the Balkan littoral of the Adriatic were now postponed to the German Kalends. If Italy could not get these from Austria single-handed, she assuredly could not get them by a war in which Germany stood behind Austria. The Dual Alliance sponged from the screen of the future the Italian dream of

rounding off the unification of 1859 and 1866 by the incorporation of unredeemed Italy or securing the Dalmatian coast of the Adriatic. And the exposed shores of the peninsula were vulnerable to sea-power and to French sea-power, located at Toulon, Corsica, Tunis, Bizerta—perhaps Egypt. Given the conditions of 1882, the accession of Italy to the Dual Alliance was—if the invitation were held out from Berlin—a foregone conclusion."—C. G. Robertson, *Bismarck*, p. 405.—"The treaty was accordingly negotiated. The final cause that ended the negotiation, and which Bismarck used as a decisive factor to win Italy over, was the seizure by France, in 1882, of the land which bordered on Italy's province of Algeria.—See also ITALY: 1870-1901.

**Success of the alliance.**—"To Bismarck the conclusion of the Treaty of May 20, 1882, was the culmination of his system. Henceforward German hegemony in Central Europe moved securely on the pivotal point of the Triple Alliance, which gradually and naturally grew into the one grand combination of the European State system, with which all other possible combinations or ententes had to reckon. . . . [The] Italian policy in 1882 came under the control of the Wilhelmstrasse, and control was stealthily and relentlessly followed by the moral and economic penetration of the German bankers, cartels, syndicates, and commercial travellers."—C. G. Robertson, *Bismarck*, p. 407.—By means of the agreement between the three countries, sufficient unanimity of policy was obtained so that the Triple Alliance achieved considerable success. After the retirement of Bismarck, the main reliance of the coalition was not German diplomacy so much as German military power.

**Content of the treaties.**—"The leading statesmen of Germany, Austria-Hungary, and Italy have often discussed the contents of the treaties, but always in the most general terms, limiting themselves to the statement that the Triple Alliance had purely defensive aims: the maintenance of peace on the territorial bases created by the national unification of Germany and of Italy, and by the reconstruction of Austria-Hungary in the year 1867, followed by the occupation of Bosnia and Herzegovina in 1878. . . . Bismarck, it was reported, had declared that the tenor of the treaties of the Triple Alliance would never be made public, even after the Alliance had ceased to have legal force. Fostered by this assertion, fantastic rumors concerning the stipulations made by the several allies found wide circulation and ready credence. . . . In the summer of 1915, the Austro-Hungarian government published four articles of one of the treaties in question, thus furnishing the first authentic contribution to the knowledge of their contents. It was learned that the three powers had reciprocally promised friendship and peace. They had also agreed to enter upon an exchange of views upon political and economic questions of a general nature, and to pledge their support to one another within the limits of their particular interests (Article I). Reciprocal assistance backed by full military strength was to be rendered whenever one or two of the signatories were attacked by two or more of the Great Powers without direct challenge on their part (Article 3). In case one of them should, through the menaces of a Great Power not a party to the treaty, become involved in a war with such a power, the other two signatories were under all conditions to observe a benevolent neutrality towards their ally. Furthermore, it was left to the judgment of each of them,

whether or not to participate in such a passage at arms by the side of its ally (Article 4). The last of the articles published (7) concerned Austria-Hungary and Italy alone. It determined when, and under what conditions, one of these powers was to enter upon temporary or permanent occupation of territories in the Balkans or on the Ottoman coasts of the Adriatic or the Ægean Sea. The presupposition was that such occupation should take place only upon previous agreement between Austria-Hungary and Italy. Such an agreement would be on the basis of reciprocal indemnification for every territorial or other advantage over and beyond the existing status quo. . . . Let it be emphasized first of all that the Triple Alliance is by no means to be regarded as supplanting the Austro-Hungarian-German treaty of October 7, 1879. On the contrary, it did not impair the validity of that treaty in any way. Independently of the treaty which the Central Powers concluded with Italy in 1882 (a treaty four times renewed), the Austro-Hungarian-German treaty, from October, 1879, to the outbreak of the World War, constituted the basis of action of the Central Powers in all questions of foreign policy, most especially as concerns their relation to Russia. For in none of the treaties of the Triple Alliance is Russia mentioned as that power, upon whose single and unprovoked attack upon one of the allies the *casus foederis* was to be considered established for the other two. The duty of giving aid in this case devolved exclusively upon Germany and Austria-Hungary, to the extent provided for in the treaty of October, 1879. . . . The first treaty of the Triple Alliance, with a five-year term, was signed on May 20, 1882. It contained Articles 1, 3, and 4, published by the Austro-Hungarian government in 1915, the contents of which have already been given. Of the remaining articles of the treaty, the most important is the one binding Austria-Hungary and Germany to aid Italy with their entire military strength in case she should be attacked without provocation by France (Article 2). Italy alone assumed a similar obligation towards Germany; Austria-Hungary did not. The latter was to aid the German Empire against France only in case another Great Power aligned itself with France. Nor was Italy bound to give armed assistance to Austria-Hungary in case the latter should be attacked without provocation by Russia alone. By the terms of the treaty, Italy was in this case bound merely to observe a benevolent neutrality towards Austria-Hungary. For Germany also, as has been already mentioned, the treaty of the Triple Alliance contained no stipulation which would have compelled her participation in a war provoked by an attack of Russia upon Austria-Hungary. Germany was pledged to such participation only through the treaty of October 7, 1879, of which the Italian government had no knowledge in 1882. A guaranty of the possessions of the three allies, especially of Rome to Italy, which was repeatedly mentioned as an established fact in the literature on the subject, was expressed neither in the first nor in any of the subsequent treaties of the Triple Alliance. To be sure, there was no lack of attempts in this direction by the Italian statesmen during the negotiations which preceded the conclusion of the first of the treaties of the Triple Alliance; but their efforts were frustrated by the firm refusal of the cabinet of Vienna to heed Italy's wishes. Nor was Italy more successful in having inserted in the treaty stipulations concerning the promotion of Italy's colonial plans or the combination of Austria's future terri-

torial acquisitions in the Balkans with Italian claims on the Trentino. . . . It is to be ascribed solely to Italy's incessant urging that the second treaty of the Triple Alliance, concluded on February 20, 1887, for another term of five years, no longer exhibits the purely defensive nature characteristic of the first treaty. Austria-Hungary and Germany were now pledged to participate in wars which could no longer be regarded as a defence against unprovoked attacks of a hostile Great Power. Italy, it is true, did not succeed in carrying her demands to their full extent. The cabinet of Vienna refused most emphatically to enter upon engagements which might embroil Austria-Hungary in a war with France for the sake of Italy's Mediterranean programme. Prince Bismarck, on his part, was most desirous of keeping Germany, so far as possible, aloof from all active participation in Balkan wars—if only on account of Russia. After protracted and heated negotiations, which several times threatened to miscarry, a compromise was finally resorted to in order to avoid a break. This compromise, presumably adopted on Bismarck's initiative, provided for a division of the obligations to be assumed by Germany and Austria. To this end three treaties were concluded in 1887. . . . Four years later, in 1891, the third treaty of the Triple Alliance was concluded. By dint of incessant urging, Italy succeeded this time in bringing about the union of the three treaties into one. On the other hand, the efforts of the Italian statesmen to obtain a material extension of the obligations of the Central Powers were frustrated. Austria-Hungary declined all further intervention in behalf of Italy's Mediterranean interests; Germany took the same ground with respect to Italian plans in the Balkans. Italy was again successful, however, in that Germany's willingness to intervene in behalf of Italian interests in Northern Africa—Tunish was now brought into the foreground, as well as Tripoli—was more definitely formulated, and the intention was expressed to come to an agreement with England with reference to these questions. As far back as December, 1887, England had been in harmony with Austria-Hungary and Italy concerning the maintenance of the Turkish possessions in the Orient. Now a protocol attached to the treaty gave consideration to Italy's desire to induce England to approve and support certain stipulations in the Treaty of the Triple Alliance in as binding a form as possible, a desire energetically seconded by Germany. These stipulations concerned the North African territories bordering on the central and western Mediterranean. This marks England's closest approach to the Triple Alliance, as well as the culmination of the importance of the Triple Alliance in safeguarding the interests of the allies and the peace of Europe. The crucial test of the Triple Alliance began with the moment in which the first serious differences between Germany and England made their appearance. As far back as 1896, Italy, as the present investigation shows, had notified the Central Powers that she could not participate in a war in which England and France should figure as the joint adversaries of the states included in the Triple Alliance. The fact that Germany, and likewise Austria-Hungary under the influence of Germany, refused to take cognizance of this declaration, which was incompatible with the contents of the treaty, did not alter the fact that Italy from that time on moved away from her allies and entered upon a course which gradually led her into the camp of their enemies. The treaty of the Triple Alliance was,

indeed, twice renewed in unchanged form, in 1902 and 1912 [see ITALY: 1912-1914]; likewise the protocol of 1891, although the latter, in so far as it had reference to England, became less and less in harmony with the actual facts through the widening divergences between Germany and England. Furthermore, Italy succeeded in inducing Austria-Hungary to attach a declaration to the treaty of 1902, in which Austria-Hungary expressed the willingness to give her ally a free hand in Tripoli. Moreover, in a second protocol to the treaty of 1912, Austria-Hungary recognized the sovereignty of Italy over Tripoli, and confirmed the agreements made with Italy in 1901 and 1909 concerning Balkan questions, and particularly concerning Albania. All other demands of the ally that had now become untrustworthy were rejected by the Central Powers. The assertion often made, that the treaties of the Triple Alliance also contained definite military stipulations, is incorrect. Article 5 of the Treaty of 1882, which has hitherto remained unknown, merely stated that the allies, at the moment when danger was threatened, should agree in due season upon the military measures necessary for joint operations. And it rested here; no further dispositions are to be found in any of the later treaties of the Triple Alliance. However, a number of special military agreements were made in the course of time."—A. F. Pribram, *Secret treaties of Austria-Hungary*, pp. 3-11.

**Effect of Russo-Japanese War on European balance of power.**—Triple Entente, a counterpoise.—The Dual Alliance (France and Russia) "was the inevitable outcome of the existence and power of the Triple Alliance. . . . [It] grew out of the need which both Russia and France felt, of outside support in the presence of so powerful a combination. If there was to be anything like a balance of power in Europe, Russia and France must combine."—C. D. Hazen, *Modern Europe*, p. 685.—That balance was seriously disturbed for a time by Russia's defeat in the war with Japan in 1904-1905. The Entente Cordiale between Great Britain and France in 1904 can hardly be said to have restored that balance, for the agreement contained no defensive provisions. It was not until the conclusion of the Anglo-Russian Agreement of 1907 that a possible counterpoise of the Triple Alliance was created. The German declarations of war against Russia and France in 1914 converted the Entente into a solid alliance. See WORLD WAR: Causes: Indirect: c.

**Break-up of Triple Alliance.**—**Secession of Italy.**—"The lack of dexterity shown by our [German] diplomacy—where could all the high-horn Borussen and Saxo-Borussen be expected to learn skill in business!—the defects of our diplomacy are constantly made good by the weight of the army, standing in the background. . . . Thus in all the conflicts of recent years Germany, in union with Austria and Italy, has come out quite well in the end, and her allies, relying on the power of Germany, have been able to bear home spoil, with which it would scarcely be proper to compare the acquisitions of the Triple Alliance. Was Austria not able in 1908 to bag Bosnia and Herzegovina, a fat morsel of more importance than twenty Moroccos? Was Italy not able to appropriate without a European conflict Tripoli and the Ægean islands. . . . In addition to the open door in Morocco, which is of more value than any costly rights of possession demanding the expenditure of blood, have we not got into the bargain a considerable piece of the French Congo—an exchange which cost Caillaux, the Minister respon-

sible for it, his prestige and his position, and which almost cost his wife her life? Did we not, acting with our ally Austria, achieve in her interests the great feat of gracefully turning the Montenegrins out of Scutari, which they had purchased with streams of blood, and of introducing there an international garrison? Was not the creation of that mannikin-kingdom of Albania, . . . accomplished exclusively in the interests of our allies Austria and Italy? Were we not able to complete with England and Turkey an agreement that was favourable to us in connection with Asia Minor and the Bagdad line?"—R. Grelling, *J'accuse*, pp. 72-73.—"Italy was bound by the agreement of the Triple Alliance to aid Germany and Austria in case of a defensive war. Deciding that this was offensive on the part of her allies, she abandoned them and gave her allegiance to the Entente, declaring war on her old-time enemy, Austria, on May 23d, 1915."—V. Duruy, *History of France*, p. 728.—See also ITALY: 1914: Position of Italy; WORLD WAR: 1915: IV. Italy: a.

**Text of the document.**—The following is the text of the Triple Alliance published in A. F. Pribram's "Secret treaties of Austria-Hungary." The translation is by D. P. Myers and J. G. D'Arcy Paul:

#### A. First Treaty of Alliance between Austria-Hungary, Germany, and Italy

(Vienna, May 29, 1882)

Their Majesties the Emperor of Austria, King of Bohemia, etc., and Apostolic King of Hungary, the Emperor of Germany, King of Prussia, and the King of Italy, animated by the desire to increase the guaranties of the general peace, to fortify the monarchical principle and thereby to assure the unimpaired maintenance of the social and political order in their respective States, have agreed to conclude a Treaty which, by its essentially conservative and defensive nature, pursues only the aim of forestalling the dangers which might threaten the security of Their States and the peace of Europe. To this end Their Majesties have appointed, to wit, His Majesty the Emperor of Austria, King of Bohemia, etc., and Apostolic King of Hungary. Count Gustavus Kálnoky, General, His Minister of the Imperial Household and of Foreign Affairs: His Majesty the Emperor of Germany, King of Prussia, Prince Henry VII of Reuss, Aide-de-Camp General, His Ambassador Extraordinary and Plenipotentiary to His Imperial and Royal Apostolic Majesty, His Majesty the King of Italy, Count Charles Felix Nicolis de Robilant, Lieutenant-General, His Ambassador Extraordinary and Plenipotentiary to His Imperial and Royal Apostolic Majesty, who, furnished with full powers which have been found in good and due form, have agreed upon the following Articles:

Article 1. The High Contracting Parties mutually promise peace and friendship, and will enter into no alliance or engagement directed against any one of their States. They engage to proceed to an exchange of ideas on political and economic questions of a general nature which may arise, and they further promise one another mutual support within the limits of their own interests.

Art. 2. In case Italy, without direct provocation on her part, should be attacked by France for any reason whatsoever, the two other Contracting

Parties shall be bound to lend help and assistance with all their forces to the Party attacked. This same obligation shall devolve upon Italy in case of any aggression without direct provocation by France against Germany.

Art. 3. If one, or two, of the High Contracting Parties, without direct provocation on their part, should chance to be attacked and to be engaged in a war with two or more Great Powers nonsignatory to the present Treaty, the *casus foederis* will arise simultaneously for all the High Contracting Parties.

Art. 4. In case a Great Power nonsignatory to the present Treaty should threaten the security of the states of one of the High Contracting Parties, and the threatened Party should find itself forced on that account to make war against it, the two others bind themselves to observe towards their Ally a benevolent neutrality. Each of them reserves to itself, in this case, the right to take part in the war, if it should see fit, to make common cause with its Ally.

Art. 5. If the peace of any of the High Contracting Parties should chance to be threatened under the circumstances foreseen by the preceding Articles, the High Contracting Parties shall take counsel together in ample time as to the military measures to be taken with a view to eventual co-operation. They engage henceforward, in all cases of common participation in a war, to conclude neither armistice, nor peace, nor treaty, except by common agreement among themselves.

Art. 6. The High Contracting Parties mutually promise secrecy as to the contents and existence of the present Treaty.

Art. 7. The present Treaty shall remain in force during the space of five years, dating from the day of the exchange of ratifications.

Art. 8. The ratifications of the present Treaty shall be exchanged at Vienna within three weeks or sooner if may be.

In witness whereof the respective Plenipotentiaries have signed the present Treaty and have affixed thereto the seal of their arms.

Done at Vienna, the twentieth day of the month of May of the year one thousand eight hundred and eighty-two.

Kánoky.	H. VII of Reuss.	C. Robilant.

**B. Additional Declaration of Italy That the Provisions of the Alliance Could Not Be Regarded as Directed against England**

(Rome, May 22, 1882)

**Ministerial Declaration**

The Royal Italian Government declares that the provisions of the secret Treaty concluded May 20, 1882, between Italy, Austria-Hungary, and Germany, cannot, as has been previously agreed, in any case be regarded as being directed against England. In witness whereof the present ministerial Declaration, which equally must remain secret, has been drawn up to be exchanged against identic Declarations of the Imperial and Royal Government of Austria-Hungary and of the Imperial Government of Germany.

Rome, May 22, 1882.  
The Royal Minister of Foreign Affairs.  
L. S. Mancini.

**C. Declaration of Austria-Hungary Similar to the Italian One**

(Vienna, May 28, 1882)

**Ministerial Declaration**

The Imperial and Royal Government declares that the provisions of the secret Treaty concluded May 20, 1882, between Austria-Hungary, Germany, and Italy, cannot, as has been previously agreed, in any case be regarded as being directed against England. In witness whereof the present ministerial Declaration, which equally must remain secret, has been drawn up to be exchanged against identic Declarations of the Imperial Government of Germany and of the Royal Government of Italy.

The Imperial and Royal Minister of Foreign Affairs  
Vienna, May 28, 1882.

**D. Declaration of Germany Similar to the Italian One**

(Berlin, May 28, 1882)

**Ministerial Declaration**

The Imperial Government declares that the provisions of the secret Treaty concluded May 20, 1882, between Germany, Austria-Hungary, and Italy, cannot, as has been previously agreed, in any case be regarded as being directed against England. In witness whereof the present ministerial Declaration, which equally must remain secret, has been drawn up to be exchanged against identic Declarations of the Imperial and Royal Government of Austria-Hungary and of the Royal Government of Italy.

**TRIPLE ENTENTE.** See LITTLE ENTENTE. **TRIPLE INDUSTRIAL ALLIANCE**, Great Britain. See LABOR ORGANIZATION: 1013-1021; LABOR STRIKES AND BOYCOTTS: 1021-1022; Great Britain; ENGLAND: 1910 (October).

**TRIPLE MONARCHY**, proposed monarchy to consist of Austria, Hungary and the kingdom of Croatia, Bosnia-Herzegovina and Dalmatia. See AUSTRIA-HUNGARY: 1000 (December); 1014 (June).

**TRIPOLI:** Geographic description.—Early history.—Under Turkish rule.—“The great territory of Tripolitania embraces what is known as the *vilayet* of Tripoli, the Fezzan to the south, and the province of Barca on the east, governed as an integral part of Turkey. The Pashalic of Tripoli includes that portion of the vilayet extending from Tunisia to the southern-most point of the Gulf of Sidra. [See AFRICA: Map.] . . . The majority of those who live in the towns of Tripolitania . . . are of the four great native races: Berbers, descendants of the original inhabitants; Arabs, progeny of those conquerors who overran the country centuries ago; the native Jew; and lastly, itinerant Blacks who migrate from the South. . . . Twelve centuries before Christ, Phœnician traders had worked their way along the southern shores of the Mediterranean. As centuries rolled by Outili (Utica) and other cities were reared, among them

Carthage and at the close of the Third Punic War, the territory we now know as Tripolitania, became a province of the Cæsars. Three cities, Leptis, Sabrata, and Oea, anciently constituted a federal union known as Tripolis, while the district governed by their Concilium Annum was called Lybia Tripolitania. [See also LEPTIS MAGNA.] On the site of Oea modern Tripoli, in Barbary, now stands. 647 A. D. saw the beginning of the great Arab invasion. . . . It broke down what was left of Roman rule, and merged the wild Berber aborigines into the great sea of Islam. Since that remote past the flags of various nations of the Cross have for brief periods flung their folds in victory over this Moslem stronghold. In the sixteenth century the Turkish Sultan, Soliman the Magnificent, drove the Knights of St. John from Tripoli, and received the submission of the Barbary States. [See BARBARY STATES: 1505-1510; 1543-1560.] In 1714 the Arabs of Tripoli gained independence from their Turkish rulers and for over a century were governed by their own bashaws. In 1835 Tripoli again came under Turkish rule.—C. W. Furlong, *Tripoli in Barbary* (*Journal of Race Development*, July, 1911).

1785-1816.—Depredations upon American commerce.—War with the United States.—Abolition of Christian slavery. See BARBARY STATES: 1785-1801; 1803-1805; 1815; 1816.

1838-1911.—Italy's desire for colonization.—German enterprises.—"Italian aspirations to a share of the lands of Northern Africa, bordering on the Mediterranean, date back to the chaotic days before unity was achieved. Even as early as 1838, only three years after Tripoli had been declared a Turkish vilayet, Massini and other Italian patriots, looking to the future, asserted that Tripoli must become an Italian colony. . . . When Italy attained to nationhood almost her first solicitude was to turn her attention to the North African littoral. The severe check to Italian ambitions administered by France in occupying Tunis, made Italian statesmen all the more determined to gain the control of Tripoli. In 1890 Crispi. [premier of Italy] resolutely set about to secure Italian sovereignty of the Barbary Coast, and by making friends with Hassuna Pasha Karamanli, the direct descendant of the old Tripolitan 'Bashaws,' took the first decisive step in behalf of Italy. . . . Toward the end of . . . [1896] the Marchese Visconti Venosta, who had taken over the direction of the Foreign Office, entered into an agreement with France regarding the revision of the treaties respecting Tunis. . . . He pointed out clearly that Italy expected compensation for this step in Tripolitana. Italy, in recognising French sovereignty over Tunis, had opened the road for her own occupation of Tripoli. . . . [By] 1911 . . . Germany had shown a singular interest in Tripolitana. A German Consulate was newly established at Tripoli, and a German line of steamers . . . made the city a regular port of call; German capital was being invested in local enterprises, and towards the end of the spring of 1911, the Italians learned that a German group was on the eve of securing considerable concessions from the Ottoman Government, which would have given the German interests essential commercial advantages in Tripoli. . . . Italy, therefore, felt justified in seizing the occasion to vindicate her claims to Tripolitana and Cyrenaica. Italian grievances against Turkish rule in Tripolitana were numerous. . . . The new Young Turk régime had made matters worse rather than better. . . . On July 20, 1911, the Italian Government instructed its representa-

tives abroad that, unless there was an improvement in their relations with Turkey regarding Tripoli, Italy would take action."—W. K. Wallace, *Greater Italy*, pp. 114-118.—See also TURKEY: 1911-1912.

1911-1913.—Italian war with Turkey.—Treaty of Lausanne.—"The first of the Young Turks' external calamities came from Italy. . . . In 1911 the Rome government having made sure of the diplomatic situation and being well informed as to the blunders of the new régime at Constantinople, on September 26, demanded the right to occupy Tripoli 'under the suzerainty of the Sultan.' A forty-eight-hour time limit was set to these demands. The Turks rejected them with fury. The Italians declared war, took Tripoli by force, and their navy prevented any successful effort by the Turks to save the isolated province. The Moorish tribes of the interior indeed made much trouble for the invaders, and out of regard for Austria Italy refrained from any serious attacks upon the Ottoman territories in Europe and Asia; nevertheless the utter weakness of the Young Turkish régime was advertised to the world. After vain procrastination the Porte signed the Treaty of Lausanne with Italy, October 18, 1912, by which the Ottomans relinquished the last of their African possessions."—W. S. Davis, *Short history of the Near East*, pp. 367-368.—"Early in January, 1913, the Italians resumed their forward movement for the occupation of the interior of Tripolitania. Without great difficulty, though at the cost of great hardships to the troops, the Italian forces pushed their way through Zintan, Fessato, and Nalut to the Tunisian border and south to Ghadames, which was entered by Captain Pavone on April 27. At the same time other columns were pressing south through Misna and Socna to the Fezzan and Murzuk which was occupied in the fall of the same year. And practically all of Tripolitania proper has . . . passed under Italian control."—N. D. Harris, *Intervention and colonization in Africa*, p. 305.—See also ITALY: 1911-1912.

1915-1922.—Railroads.—Pacification of the country.—Economic conditions.—Education.—"Since 1915 there have been built in Tripolitania about 150 miles of railway of the standard gauge (about four feet) adopted by almost all railways in the African continent. The Tripoli Railway System connects with the new harbor, also built by Italy, and in North Africa second only to Alexandria and Port Said. . . . Since the spring of 1922 the whole western half of Tripolitania has been carefully raked and cleaned, all rebels disarmed, contrabands suppressed, and the Berber tribes . . . reinstated on their lands and in their homes. The whole country has been thoroughly pacified. In this work both Erythrean and Libyan troops have served successfully and efficiently under Italian officers. . . . Italy is a compact nation of 40,000,000 people, rapidly increasing in numbers and wealth; while the inhabitants of Tripolitania may at the utmost number 500,000, of whom 300,000 living in the seacoast oases are peaceful and law-abiding agriculturists, who have nothing to lose and everything to gain by the advent of Italian colonists who do not covet their land. The 200,000 population of the interior is divided into tribes that have been incessantly fighting and robbing each other since even before the times of Cæsar. Depending on trade with the coast for such necessary commodities as tea, sugar, cotton, goods, etc., and unable to market their dates and wool except by way of the coast,

they have an economic interest to be at peace with Italy. [By the end of 1922] wherever a few Italians lived, Arab youngsters [had learned] . . . to speak Italian; while many Italian workmen and agriculturists . . . (had picked) up the Arab tongue, the study of which [was] compulsory in . . . [Italian] schools. Similarly in the Arab schools the study of Italian . . . [was] compulsory."—E. O. Fenzi, *Italy, at home and abroad (Outlook, Feb. 21, 1923)*.—On September 12, 1910, as a result of the treaty of 1915, the frontier was altered so that it extended in a curve from west of Ghadames to south of Tummo.

**TRIPOLI**, Syria, town in Asiatic Turkey on the river Abu-Ali about two miles from the port Al-Mina. It was captured by the Crusaders in 1109, ravaged by the Carismians in 1244 and recaptured by the sultan of Egypt in 1289. See **CRUSADES**: 1104-1111; **JERUSALEM**: 1100; 1244.

1918.—Captured by the British. See **WORLD WAR**: 1918: VI. Turkish theater: c, 13; c, 23.

**TRIPONTIUM**, town in Roman Britain, where one of the great roads crossed the Avon, near modern Lilburne.—Based on T. Wright, *Celt, Roman and Saxon, ch. 5*.

**TRISAGION**, short hymn in the Eastern church. See **CONSTANTINOPLE**: 511-512.

**TRI-SKELION, GAMMADION, FYLFOT-CROSS, SWASTIKA**.—"One of the most remarkable instances of the migration of a symbol is that afforded by the 'tri-skelion,' or, as we more familiarly know it, 'the three legs of Man.' It first appears on the coins of Lycia, circa B. C. 480; and then on those of Sicily, where it was adopted by Agathocles, B. C. 317-307, but not as a symbol of the morning, midday, and afternoon sun, but of the land of Trinacria, i. e., 'Three Capes,' the ancient name of Sicily; and finally on the coins of the Isle of Man, on which it seems to refer rather to the position of that island between England, Scotland, and Ireland, than to its triangular shape. The tri-skelion of Lycia is made up of three cocks' heads. . . . But on the coins of Sicily and of the Isle of Man the tri-skelion consists of three human legs of an identical pattern, excepting that those of the latter island are spurred. This form of tri-skelion is borne on the arms of several old English families, and it was in all probability first introduced into this country [England] by some Crusader returning from the East by way of Sicily. . . . The tri-skelion is but a modification of the 'gammadion' or 'lyllot-cross,' the 'svastika' of the Hindus. The latter was long ago suspected by Edward Thomas to be a sun-symbol; but this was not positively proved until Mr. Percy Gardner found a coin of the ancient city of Mesembria in Thrace stamped with a gammadion bearing within its open centre an image of the sun—Mesem meaning the city of 'Mid-day,' and this name being figured on some of its coins by the decisive legend  $ME\S\text{A}$ . . . . The gammadion has travelled further afield than any other symbol of an Itiquy. . . . Count Goblet d'Alviella traces it back at last to the Troad as the cradle of its birth, some time anterior to the 13th century B. C."—*Athenaeum, Aug. 13, 1892 (Reviewing Comte Goblet d'Alviella's "La migration des symboles")*.—The swastika appeared first in the Bronze Age, and has been found in the Swiss lake dwellings, but its origin appears to have been in the Caucasus. It was used as a sacred symbol in India by both Jainism and Buddhism, and it was probably through Buddhism that it was introduced to China, Japan, and Tibet. It is found also, in the historic period, in Armenia, Asia Minor, Korea,

Greece, Italy, France, Germany, Russia, Scandinavia, Great Britain, Mexico, and North and South America in Indian mounds.

**TRITAEA**, ancient city in the southern part of Achaia. It was a member of the Achaean League. See **ACHAEAN LEAGUE**.

**TRITTYES**, political division of the four tribes or phylæ of the Greek state. See **PHYLÆ**.

**TRIUMPH AND OVATION**, Roman.—"The highest reward of the commander was the triumphal entrance. At first it was awarded by senate and people to real merit in the field, and its arrangement was simple and dignified; but soon it became an opportunity of displaying the results of insatiable Roman rapacity and love of conquest. Only the dictators, consuls, praetors, and, in late republican times, occasionally legates, were permitted by the senate to enter Rome in triumph, the permission to the legate being granted only in case he had commanded independently ('suis auspiciis'), and conducted the army to Rome from a victorious campaign 'in sua provincia.' As in later times it was impossible to conduct the whole army from distant provinces to Rome, the last-mentioned condition was dispensed with, the claim of the commander to a triumph being acknowledged in case of one of the battles gained by him 5,000 enemies had been killed. The senate granted the expenses necessary for the procession after the quaestor urbanus had examined and confirmed the commander's claim. Streets and squares through which the procession had to pass were festively adorned. The temples were opened, and incense burnt on the altars. Improvised stands were erected in the street, filled with festive crowds shouting 'Io triumphe!' The commander, in the meantime, collected his troops near the temples of Bellona and Apollo, outside the gates of Rome. . . . The victor was met at the 'porta triumphalis' by the senate, the city magistrates, and numerous citizens, who took the lead of the procession, while lictors opened a way through the crowd. After the city dignitaries followed tibicines, after them the booty. . . . Fettered kings, princes, and nobles followed, doomed to detention in the Mamertine prison. Next came sacrificial oxen with gilt horns, accompanied by priests; and, finally, preceded by singers, musicians, and jesters, the triumphal chariot drawn by four horses. Clad in a toga picta and the tunica palmata, temporarily taken from the statue of the Capitoline Jupiter, the triumphator stood in his chariot holding the eagle-crowned ivory sceptre in his hand, while a servus publicus standing behind him held the corona triumphalis over his head. The army brought up the rear of the procession, which moved from the Campus Martius through the circus of Flaminius to the Porta Carmentalis, and thence, by way of the Celabrum and the Circus Maximus, the Via Sacra and the Forum, to the Capitol. Here the triumphator deposited his golden crown in the lap of the Capitoline Jupiter, and sacrificed the usual suovetaurilia. . . . The ovatio was granted for less important conquests, or to a general for victories not won 'suis auspiciis.' The victor, adorned with the toga praetexta and the myrtle crown, originally used to walk; in later times he rode on horseback."—E. Guhl and W. Koner, *Life of the Greeks and Romans, sect. 100*.—See also **VIA SACRA**; **RECREATION**: B. C. 100-A. D. 400.

**TROTULA** (fl. 1050), woman physician. See MEDICAL SCIENCE: Medieval: 10th-12th centuries.

**TROUBADOURS**, **TROUVÈRES**, **JOGLARS**, **JONGLEURS**.—"The poets of the South of France during the Middle Age called themselves 'Trobadors,' that is to say, 'inventors' or 'finders'; and they adapted the 'langue d'oc,' also called the Romansh of the South, or the Provençal, to the expression of poetical sentiments. It is probable that poets of this description existed as early as the formation of the idiom in which they wrote. At any rate, we know that toward the year 1000 they already enjoyed considerable distinction, although there is scarcely now anything left us from the earliest period of their existence. . . . In regard to

the time within which the poetry of the Troubadours was in vogue, M. Fauriel assumes only two periods. But it may perhaps be more conveniently divided into three, as follows: The first commences with its origin, as a popular poetry, and extends to the time when it became an art and a profession, the poetry of the nobles and the courts, that is to say, from about 1090 to 1140. The second is the period of its culmination, which extends from the year 1140 to 1250. The third is the period of its decadence, from 1250 to 1290."—G. J. Adler, *Introduction to Fauriel's "History of Provençal poetry."*—"Sufficient has been said . . . to show the superiority of lyrical over epic poetry in Provence. This inequality of the two branches implied a commensurate difference of praise and social esteem awarded to those who excelled in either of them, and it is perhaps from this point of view that the two great divisions of poets in the 'langue d'oc,' respectively described as 'joglars' and 'troubadors,' or, in the French and generally adopted form of the word, 'troubadours,' may be most distinctly recognised. . . . It seems sufficiently established that the verb 'trobar' and its derivative noun first and foremost apply to lyrical poetry. To speak therefore of the Troubadour as the singer of songs, of cancos and sirventeses and albas and retroensas is a correct and tolerably comprehensive definition."—F. Hueffer, *Troubadours*, ch. 6.—"In the twelfth century, the Romance-Wallon [or the 'langue d'oïl' of northern France] became a literary language, subsequent, by at least a hundred years, to the Romance-provençal. . . . The reciters of tales, and the poets, giving the name of Troubadour a French termination, called themselves Trouvères. With the exception of the difference of language, it may be thought that the Troubadour and the Trouvère, whose merit was pretty nearly equal; who were equally ignorant or well-informed; who both of them spent their lives at courts, at which they composed their poems, and where they mingled with knights and ladies; and who were both accompanied by their jongleurs and minstrels, should have preserved the same resemblance in their productions. Nothing, however, can be more dissimilar than their poems. All that remains of the poetry of the Troubadours is of a lyrical character, while that of the Trouvères is decidedly epic. . . . The Trouvères have left us many romances of chivalry, and fabliaux."—J. C. L. S. de Sismondi, *Literature of the south of Europe*, v. 1, ch. 7.—"We know nothing of the rise or origin of the two classes of Trouveurs and Jongleurs. The former (which it is needless to say is the same word as Troubadour, and Trobador, and Trovatore) is the term for the composing class, the latter for the performing one. But the separation was not sharp or absolute."—G. Saintsbury, *Short history of French literature*, bk. 1, ch. 1.—See also FRENCH LITERATURE: 1050-1350; MUSIC: Folk music and nationalism: Italy; Medieval: 12th century.

**TROY**: Geography of the Troad.—Scene of Homeric legends.—Discoveries of Schliemann and Dörpfeld.—The northwestern promontory of Asia Minor, known as the Troad, or land of Troy, is bounded on the north by the Hellespont and the Propontis, on the west by the Ægean sea, on

the south by the Gulf of Adramytheum, and on the east by the mountain range of Ida. "The springs of the Ida range collect into rivers, of which two flow to the Propontis, and one, the Scamander, into the Ægean. The latter first flows through his bed high in the mountains, through which he then breaks in a narrow rocky gorge, and quitting the latter enters the flat plain of his watershed, surrounded on three sides by gentle declivities, and open on the West to the sea. . . . In the innermost corner of this plain projects a rocky height with precipitous sides, as if it would bar the passage of the river breaking forth from the ravine. Skirted in a wide curve by Scamander on the East, it sinks to the West in gentle declivities, where numerous veins of water spring from the earth; these unite into two rivulets, distinguished by the abundance and temperature of their water, which remain the same at all seasons of the year. This pair of rivulets is the immutable mark of nature, by which the height towering above is recognized as the citadel of Ilium."—E. Curtius, *History of Greece*, bk. 1, ch. 3.—The Troad owes its fame and its never-dying interest to the Homeric poems and legends. (See ASIA MINOR: B. C. 1100.) "In the days when Crete was first receiving metal (after 3000 B. C.), there arose at the northwest corner of Asia Minor a shabby little Late Stone Age village known as Troy. It was probably built by traders attracted by the profitable traffic which was already crossing back and forth between Asia and Europe at this point. By 2500 B. C., some centuries after the first metal had been introduced, the rulers of Troy were wealthy commercial kings, and their castle was the earliest fortress in the Ægean world, for it was a thousand years older than the fortresses at Mycenæ and Tiryns. During this thousand years (2500 to 1500 B. C.) Troy was rebuilt several times, but it continued to flourish, and it finally must have controlled a kingdom of considerable extent in northwestern Asia Minor. Thus about 1500 B. C. the splendid and cultivated city of Troy was a powerful stronghold. . . . The discoverer of the Ægean civilization [see ÆGEAN CIVILIZATION: Excavations and antiquities: Mycenaean area] . . . was Heinrich Schliemann. Schliemann was an American citizen of German birth. [His American citizenship was merely accidental, due to the fact that he happened to be in California when it was admitted to statehood.] In his youth before coming to America he had a romantic business career. After being shipwrecked on the coast of Holland, he began his business experience there while a mere lad, as a clerk in a little grocer's shop. In the brief intervals of leisure between dealing out smoked herring and rolls of butter, he taught himself Greek and began to read Homer. In the infatuated ears of this enthusiastic boy the shouts of the Greek heroes on the plain of Troy mingled with the jingle of small change and the rustle of wrapping paper in the dingy little Dutch grocery. He had not lost this fascinating vision of the early world, when years afterward he retired from business, after having won a large fortune in Russian petroleum. It was therefore as the fulfillment of a dream of his youth that Schliemann led a body of Turkish laborers to begin excavations in the great mound of Troy in 1870. In less than four years he uncovered the central portions of nine successive cities, each built upon the ruins of the next city beneath, which had preceded it. A towered gateway in the Second City contained a splendid treasure of golden jewelry, and Schliemann be-

lieved that he had here discovered the Troy of Homer's Greek heroes. But we now know that this Second City was built a thousand years before Homer's Troy (the Sixth City)."—J. H. Breasted, *Ancient times; A history of the early world*, pp. 238-239, 245-246.—There had been great discussion with regard to the exact site of ancient Ilium, even to the last decade of the nineteenth century. Hissarlik and Bunárbashi were the leading claimants, with the balance of opinion in favor of the latter. "Dr. Schliemann commenced his famous excavations on the mound of Hissarlik in 1871, believing that here would be found the site of ancient Troy rather than on the *Balidagh*. The mound of Hissarlik confessedly occupied the site of new Ilium, but most modern scholars, with the exception of Grote, had partly followed Demetrius of Scepsis, who denied that New Ilium was on the site of Old Ilium. . . . Modern scholars saw the site of Troy in the ruins of Balidagh half-an-hour above Bunárbashi. Schliemann followed the local tradition and excavated at New Ilium from 1871 to 1879. He found great fortification walls and gates, but what he declared to be the palace was only an assemblage of petty dwelling-houses with small rooms and thin walls. In 1882 in the second stratum from the bottom were found the strong walls of extensive buildings, afterwards proved through the analogous structures at Tiryns and Mycenæ to have been the principal chambers of a palace."—W. Ridgeway, *Early age of Greece*, v. 1, p. 42.—"In 1882 Schliemann . . . resumed his excavations, in company with a German architect, Dr. Dörpfeld, whose help was of the greatest value. Schliemann himself was no architect, and was not even a scientifically-trained observer. His natural commonsense stood him in good stead. But he was often too downright in his methods, and might at times be accused of vandalism in the pursuit of his end—the discovery of the Heroic civilization of Greece. He cut through everything ruthlessly to get down to the stratum he wanted. Dörpfeld was a guarantee of more scientific methods, necessary on a site like Troy, with its superimposed strata of different ages of settlement very different from the simple grave-clearing at Mycenæ. The result of the renewed work was eventually the discovery of the 'Mycenaean' city of Troy. This, however, was not the work of Schliemann, but of Dörpfeld, and the discovery was not communicated to the world till the 'nineties—after Schliemann's death."—M. R. Hall, *Ægean archaeology*, pp. 17-18.—"With regard to the discoveries at Hissarlik, it must in this place suffice to say that the main result as regards the Iliad is this: first, that evidence for the historical reality of a siege of Troy by the Achæans is now greatly strengthened; and secondly, that the account of it given in the Iliad is at best based upon vague tradition."—W. Leaf, *Introduction to C. Schuchhardt, Schliemann's excavations*, p. xxxi.

Story of the Trojan War.—"In mythological chronology the war of the Epigoni immediately precedes the expedition against Troy, whose legend forms the termination of the Heroic Age. While it was the last, it was also the greatest of all the heroic achievements. It formed the subject of innumerable epic poems, and has been immortalized by the genius of Homer. Paris, son of Priam, king of Ilium or Troy, abused the hospitality of Menelaus, king of Sparta, by carrying off his wife Helen, the most beautiful woman of the age. All the Grecian princes looked upon

the outrage as one committed against themselves. Responding to the call of Menelaus, they assemble in arms, elect his brother Agamemnon, king of Mycenae, leader of the expedition, and sail across the Ægean in nearly 1200 ships to recover the faithless fair one. Several of the confederate heroes excel Agamemnon in fame. Among them Achilles, chief of the Thessalian Myrmidons, stands pre-eminent in strength, beauty, and valour, while Ulysses, king of Ithaca, surpasses all the rest in the mental qualities of counsel, subtlety and eloquence. Thus, though by opposite endowments, these two heroes form the centre of the group. Next to them . . . [came] the aged Nestor, king of Pylus, distinguished for his wisdom and experience; the valiant Diomedes, king of Argos, son of Tydeus, slain at Thebes, and one of the Epi-goni; the Telamonian Ajax, of Salamis, who, though somewhat heavy and unwieldy, is next to Achilles in person and fighting power; and lastly, Idomeneus of Crete, a grandson of Minos. Among the Trojans, Hector, one of the sons of Priam, is most distinguished for heroic qualities, and forms a striking contrast to his handsome but effeminate brother Paris. Next to Hector in valour stands Aeneas, son of Anchises and Aphrodite (Venus). Even the gods take part in the contest, encouraging their favourite heroes, and sometimes fighting by their side or in their stead. It is not till the tenth year of the war that Ilium yields to the inevitable decree of fate, and it is this year which forms the subject of the Iliad. Achilles, offended by Agamemnon, abstains from the war, and even entreats his mother Thetis to obtain from Jove victory for the Trojans. In his absence the Greeks are no match for Hector. The Trojans drive them back into their camp, and are already setting fire to their ships, when Achilles gives his armour to his friend Patroclus, and allows him to charge at the head of the Myrmidons. Patroclus repulses the Trojans from the ships, but the god Apollo is against him, and he falls under the spear of Hector. Desire to avenge the death of his friend proves more powerful in the breast of Achilles than anger against Agamemnon. He appears again in the field in new and gorgeous armour, forged for him by the god Hephaestus (Vulcan) at the prayer of Thetis. The Trojans fly before him; and although Achilles is aware that his own death must speedily follow that of the Trojan hero, he slays him in single combat. The Iliad closes with the burial of Hector. The death of Achilles and the capture of Troy were related in later poems, as well as his victories over Penthesilea, queen of the Amazons, and Memnon, king of Ethiopia. The hero of so many achievements perishes by an arrow, shot by the unwarlike Paris, but directed by the hand of Apollo. The noblest combatants had now fallen on either side, and force of arms had proved unable to accomplish what stratagem at length effects. It is Ulysses who now steps into the foreground and becomes the real conqueror of Troy. By his advice a wooden horse is built, in whose inside he and other heroes conceal themselves. The infatuated Trojans admit the horse within their walls. In the dead of night the Greeks rush out and open the gates to their comrades. Ilium is delivered over to the sword, and its glory sinks in ashes.—W. Smith, *General history of Greece*, pp. 22-23.—See also MILITARY ORGANIZATION: 3; PALLADIUM; also HOMER AND THE HOMERIC POEMS.

**Roman Ilium.**—The burnt city.—According to the legend Ilium immortalized by Virgil, the great an-

cestor of the founders of Rome was Æneas, who escaped from the destruction of Troy to found a state in Latium. Belief in the story caused the Romans to regard Troy with great veneration; and many of their rulers and leading men visited the site as pilgrims. Under the usurped rule of Sulla, Ilium, the city founded by Rome on the accepted site of the old Troy, was adorned with magnificent temples. Cæsar also paid great attention to Ilium, and is reported to have conceived the plan of making that city the great residential centre of the Roman Empire. After Constantine, who had some thought of making Ilium his capital, transferred his choice to Byzantium, the city was neglected, and finally fell into complete ruin. "On the top of a hillock which sustains no less than nine successive settlements stands Roman Ilium with a marble temple of Athena. Next beneath it lie two Hellenic villages which flourished between 1000 B. C. and the Christian era. The sixth city from the bottom is now widely accepted as Homer's Troy. It has a mighty circuit wall, with imposing towers, and is built of massive ashlar masonry. Its area is about two and a half times as great as that of the Second City and it flourished in the latter half of the second millennium B. C. Immediately below this stratum are the remains of three prehistoric settlements, with unimportant houses of stone and brick built on and with the ruins of the Second City and covering the period of *circa* 2000-1500 B. C. Archæologists were especially interested in the discovery of the Second or Burnt City, which antedates Homeric Troy by as many years as separated the latter from classical times. It was a small fortress, not more than one-third the size of the Acropolis at Athens, but well built with stout walls of stone surmounted by brick. At this level was unearthed an extraordinary mass of treasure, including silver jars, gold daggers, and diadems of pure gold, one of which was woven of more than 16,000 rings and leaves—a Crown jewel indeed. The Burnt City had a chequered career, for during an existence of about 500 years, 2500-2000 B. C., it was attacked and destroyed three times. Its predecessor was an unimportant primitive settlement, with walls of small quarry stones and clay, built upon the virgin rock."—C. H. and H. Hawes, *Crete, forerunner of Greece*, pp. 6-7.

**TRUCE OF GOD.**—"The extraordinary institution is the most speaking witness, at once to the ferocity of the times [eleventh century], and also to the deep counter feeling which underlay men's minds. Clergy and laity alike felt that the state of things which they saw daily before their eyes was a standing sin against God and man, repugnant alike to natural humanity and to the precepts of the Christian religion. States were everywhere so subdivided, governments were everywhere so weak, that, in most parts of Europe, every man who had the needful force at his command simply did that which was right in his own eyes. . . . Every man claimed the right of private war

against every other man who was not bound to him by some special tie as his lord or his vassal. And the distinction between private war and mere robbery and murder was not always very sharply drawn. . . . A movement on behalf of peace and good will towards men could not fail in those days to assume an ecclesiastical form. As of old the Amphiktyonic Council, the great religious synod of Greece, strove to put some bounds to the horrors of war as waged between Greek and Greek, so now, in the same spirit, a series of Christian synods strove, by means of ecclesiastical decrees and ecclesiastical censures, to put some bounds to the horrors of war as waged between Christian and Christian. . . . The movement began in Aquitaine [1034], and the vague and rhetorical language of our authority would seem to imply that all war, at any rate all private war, was forbidden under pain of ecclesiastical censures. It must not be forgotten that, in that age, it must have been exceedingly difficult to draw the distinction between public and private war. . . . But the doctrine, hard as it might be to carry out in practice, was rapturously received at its first announcement. As the first preaching of the Crusade was met with one universal cry of 'God wills it,' so the Bishops, Abbots, and other preachers of the Truce were met with a like universal cry of Peace, Peace, Peace. Men bound themselves to God and to one another to abstain from all wrong and violence, and they engaged solemnly to renew the obligation every five years. From Aquitaine the movement spread through Burgundy Royal and Ducal. But it seems to have been gradually found that the establishment of perfect peace on earth was hopeless. After seven years from the first preaching of peace, we find the requirements of its apostles greatly relaxed. It was found vain to forbid all war, even all private

war. All that was now attempted was to forbid violence of every kind from the evening of Wednesday till the morning of Monday. It was in this shape that the Truce was first preached in northern and eastern Gaul. The days of Christ's supper, of His passion, of His rest in the grave and His resurrection, were all to be kept free from strife and bloodshed."—E. A. ## TRUSTS

**Definition.**—"A Trust was originally a combination of a number of companies through a board of trustees to whom the shareholders assigned their shares in exchange for trust certificates. This special form of industrial organization which is now illegal in the United States, except in Massachusetts, has given the popular name to the general movement of industrial combination which includes a great variety of structures. The prominence of the Standard Oil, Sugar, and Whiskey Trusts made the name familiar and it passed over to the companies which were formed to replace the 'trusts' declared illegal in 1892. From that to the whole problem of industrial organization was an easy step, and everyone speaks of the trust problem, the trust danger, including forms as various as the Beef Trust, the Westphalian Coal Kartell or Messers. J. & P. Coats. The one common point about all forms is the combination of several capitalists who formerly operated singly; beyond that the structure may vary infinitely, it may be in intention permanent or temporary, it may be for all purposes, or for some only, it may include manufacturers only, or wholesalers only, or retail vendors only, or any two or all three of those classes. The object of all forms is the same, so to regulate the industry that it may become more profitable to those in whose interests it is regulated. In the words of Mr. S. C. T. Dodd, Attorney to the Standard Oil Co., a trust 'em-

braces every act, agreement, or combination of persons or capital believed to be done, made, or formed with the intent, effect, power, or tendency to monopolize business, restrain, or interfere with competitive trade, or to fix, influence or increase the price of commodities.'"—H. W. Macrosty, *Trust movement in British industry* (*Harvard Law Review*, Oct., 1893, pp. 1-2).—See also CAPITALISM.

### AUSTRALIA

1906-1910.—Industries Preservation Act.—"The Australian Industries Preservation Act of 1906 as amended in 1907, 1909, and 1910, in its title provides 'for the preservation of Australian industries, for the repression of destructive monopolies.' The following extracts contain the most important provisions of the Act.

#### "Part II. Repression of Monopolies

"4. (1) Any person who, either as principal or as agent, makes or enters into any contract, or is or continues to be a member of or engages in any combination in relation to trade or commerce with other countries or among the States—(a) in restraint of or with intent to restrain trade or commerce; or (b) to the destruction or injury of or with intent to destroy or injure by means of unfair

competition any Australian industry the preservation of which is advantageous to the Commonwealth, having due regard to the interests or producers, workers, and consumers, is guilty of an offense. Penalty, £500, or, in the case of a continuing offense, £500 for each day during which the offense continues. . . .

"6. (1) For the purposes of section 4 and section 10 of this act, unfair competition means competition which is unfair in the circumstances; and in the following cases the competition shall be deemed to be unfair unless the contrary is proved: (a) If the defendant is a commercial trust. (b) If the competition would probably or does in fact result in an inadequate remuneration for labor in the Australian industry. (c) If the competition would probably or does in fact result in an inadequate remuneration for labor in the Australian industry or throwing workers out of employment. (d) If the defendant, with respect to any goods or services which are the subject of the competition, gives, offers, or promises to any person any rebate, refund, discount, or reward upon condition that that person deals, or in consideration of that person having dealt, with the defendant to the exclusion of other persons dealing in similar goods or services. (2) In determining whether the competition is unfair, regard shall be had to the management, the processes, the plant, and the machinery employed or adopted in the Australian industry affected by the competition being reasonably efficient, effective, and up to date.

"7. (1) Any person who monopolizes or attempts to monopolize, or combines or conspires with any other person to monopolize, any part of the trade or commerce with other countries or among the states, is guilty of an indictable offense. Penalty, £500 for each day during which the offense continues, or one year's imprisonment, or both; or, in the case of a corporation, £1,000 for each day during which the offense continues. . . .

"7A. (1) Any person who, in relation to trade or commerce with other countries or among the states, either as principal or agent, in respect of dealings in any goods or services, gives, offers, or promises to any other person any rebate, refund, discount, concession, or reward for the reason, or upon the condition, express or implied, that the latter person (a) deals, or has dealt, or will deal, or intends to deal exclusively with any person, either in relation to particular goods or services or generally; or (b) deals, or has dealt, or will deal, or intends to deal exclusively with members of a commercial trust, . . . or (c) does not deal, or has not dealt, or will not deal, or does not intend to deal with certain persons, . . . or (d) is or becomes a member of a commercial trust, is guilty of an offense. Penalty, £500. . . . (3) It shall be a defense to a prosecution under this section, and an answer to an allegation that a contract was made or entered into in contravention of this section, if the party alleged to have contravened this section proves that the matter or thing alleged to have been done in contravention of this section was not to the detriment of the public, and did not constitute competition which was unfair in the circumstances, and was not destructive of or injurious to any Australian industry. . . .

"11. (1) Any person who is injured in his person or property by any other person, by reason of any act or thing done by that other person in contravention of this part of this act, or by reason of any act or thing done in contravention of any injunction granted under this part of this act, may, in the high court, before a justice, without a jury,

sue for and recover treble damages for the injury.

(2) No person shall, in any proceeding under this action, be excused from answering any question put either viva voce or by interrogatory, or from making any discovery of documents, on the ground that the answer or discovery may criminate or tend to criminate him; but this answer shall not be admissible in evidence against him in any criminal proceeding other than a prosecution for perjury. . . .

"17. Unfair competition has in all cases reference to competition with those Australian industries, the preservation of which, in the opinion of the comptroller general or a justice as the case may be, is advantageous to the Commonwealth, having due regard to the interests of producer, workers, and consumers."—J. W. Jenks, *Trust problem*, pp. 460-464.

1912.—Commission to deal with combinations appointed.—In 1912 an Australian interstate commission of three members was appointed, and given authority to deal with combinations in restraint of trade or commerce by unfair competition or to the detriment of the public.

ALSO IN: A. Marshall, *Industry and trade*.

## AUSTRIA

1852-1915.—Regulation of combinations.—The earliest provisions by law for restraining combinations in Austria were in 1852 and in 1870. These statutes together with the civil law have made price agreements and other trade contracts to the detriment of the public illegal. At the same time many and powerful combinations have been in existence and through selling bureaus and by division of markets have successfully controlled outputs and prices. "In 1897 the combinations among the brewers, sugar refiners and others seemed to the Government to threaten somewhat the interests of the treasury. . . . With this thought in mind the Finance Department proposed a bill placing these combinations whose goods were subject to the consumption tax under the somewhat rigid supervision of the Government, and providing that in case unreasonable measures were taken, the Government might forbid a contract or might give the fullest degree of publicity to all of the business of the combination. Owing in part to the political condition of Austria, in part also, perhaps, to the fact that the law was not more general in its application, nothing further has come of this. About the same time the Department of Trade and Industry appointed a special committee to consider the subject of the regulation of the combinations. This committee, after careful discussion of the whole question, handed in its report . . . [recommending the legal recognition of combinations under certain conditions] which would prevent abuse of the power which they undoubtedly possess. The recommendations however were not enacted into law, and the only laws against the combinations are those of the civil law and some special provisions of earlier laws of 1852 and 1870. Under these laws agreements of manufacturers for the purpose of raising the price of a commodity to the disadvantage of the public are unlawful. The courts have in several cases upheld the law and declared agreements invalid when though prices had not in fact been advanced, the intent as it appeared from the agreement being sufficient. . . . Whatever [anti-trust] agitation there may have been has been limited largely to editorials and speeches without any very effective results, except somewhat more rigid court decisions and the re-

fusal to favor the combinations, as in Germany. . . . During the [early years of] the war the Kartells . . . [were] able to carry out a regular policy of steadily increasing prices while the unorganized industries . . . [were] in many cases . . . subjected to any irregular, often extraordinary, contradictory price policy sometimes dictated by a few unimportant firms."—J. W. Jenks, *Trust problem*, pp. 232, 236, 238, 240.—The most successful combinations in the country have been those in iron, sugar and petroleum.

Also in: F. W. Hirst, *Monopolies, trusts and Kartells*.—W. Z. Ripley, *Trusts, pools and corporations*.—C. R. Van Hise, *Concentration and control*.

## CANADA

1888-1910.—*Regulation under criminal code and Customs Act*.—"The earliest serious official notice of combines [in Canada] came to light in 1888 when the House appointed a committee to examine into and report upon the effect of combines. The committee found combination to exist in the case of sugar and groceries, undertakers' supplies, cordage and binder twine, among millers, founders, confectioners, etc. Their report advised legislative action for repressing the evils arising from these and similar combinations. As a result of this report legislation was enacted which now appears as Section 408 of the Criminal Code. . . . In 1897 a further provision against the evils of combination was inserted in the Customs Act. . . . This allows the government to commission any judge of the Supreme Court or Exchequer Court of Canada or of any superior court in any Province to make an investigation and report findings when there is reason to believe that a combine is unduly enhancing prices. If the report of the judge shows that the customs duties enable a combine to injure the consumers, the Governor in Council is empowered to reduce or remove the duty on the article in question. In 1900 this law was enlarged to apply to combines resulting from a court judgment. This law was invoked once in 1901 in the case of news-print paper and the duty was reduced. What effect resulted may be gathered from the fact that prices were already lower in Canada than at other sources of supply. In 1906 an act was passed allowing the government to cancel any inland revenue license where the manufacturer holding the same employed a contract imposing a burden upon those customers who dealt also in the goods of rival firms. There is no record at hand to show that this law was invoked for any but the specific case for which it apparently was brought into being viz., the American Tobacco Company of Canada, Ltd. In the few years before the panic of 1907 there were several prosecutions under the Criminal Code, Section 408, in which convictions were secured. . . . In the first decade of the century the movement toward actual consolidation found considerable impetus. About 1910 a temporary reaction set in owing to the collapse of a few of the ventures, and it was several years before the movement toward combination was fully renewed."—R. J. McFall, *Regulation of business in Canada (Political Science Quarterly, June, 1922, pp. 178-180)*.

1909.—*Merger of Dominion Iron, Steel, and Coal Companies*.—*Cement combination*.—The following is a press dispatch from Halifax, Nova Scotia, Nov. 13, 1909: "The formation of the Canada Steel Corporation, the proposed \$70,000,000 merger of the Dominion Iron and Steel Company and the Dominion Coal Company, was made possi-

ble by the agreement of James Ross of Montreal, president of the Dominion Coal Company, to transfer to a syndicate of Toronto capitalists a portion of his holdings of the coal company stock. Final arrangements regarding the stock transfer will be made here to-day. President Ross owns coal company stock of a par value of \$5,000,000, and, although he does not dispose of all this, he is to transfer enough to give control of the coal company to the Toronto capitalists, who have already acquired a controlling interest in the steel company. The plants of the Dominion Iron and Steel Company and the Dominion Coal Company are in Cape Breton, where they give employment to thousands of men, and where they have caused little fishing villages to spring up into flourishing cities." Announcement of the completion of the merger was made in December.

1910-1912.—*Combines Investigation Act*.—*Upheld by judicial committee of Privy Council*.—*Reasons for disuse*.—"The old legislation had been aimed at conspiracies between two or more separate parties. Actual mergers were not covered by the law. To include such mergers in the provisions of the law and also to provide machinery for enforcement somewhat similar to that which was giving satisfactory results in the field of labor disputes, Mr. Mackenzie King, as Minister of Labour, introduced the Combines Investigation Act which became law in May, 1910. This included among the interdicted forms of business organization 'what is known as a trust, monopoly or merger.' The new legislation provided machinery for investigations and penalties for infractions. However, to set this machinery in motion it was necessary that six or more British subjects, residents of Canada, should state in writing to a judge that they believed that a certain combine existed and that thereby prices were enhanced or competition restricted to the detriment of consumers or producers. They must also declare themselves to be injured by the alleged combine and must set forth in writing (a) the nature of the alleged combine and the persons believed to be concerned therein; (b) the manner in which the alleged combine affected prices or restricted competition, and the extent to which the alleged combine was believed to operate to the detriment of consumers or producers. Following the receipt of such a detailed charge the judge must hold a hearing of the complaint and the defense. If upon such hearing the judge was satisfied that a combine existed which was injurious to trade or which operated to the detriment of consumers or producers, and that it was in the public interest that an investigation be held, the judge was supposed to direct an investigation under the act. The order of the judge directing the investigation was to be forwarded to the Department of Labour and the Minister thereupon was to appoint an impartial board to make a complete investigation. This board was to have full power to compel the attendance of witnesses and the production of documents. However, they were not allowed to make field investigation or otherwise to make an effective audit of any books. Upon return of a verdict of guilty to the Minister of Labour the offenders were confronted with the penalty of \$1,000 a day if they still persisted in the same offense. The government also might have any protective customs tariff reduced if they saw fit."—R. J. McFall, *Regulation of business in Canada (Political Science Quarterly, June, 1922, pp. 180-181)*.—Before two years had passed after its enactment, the Combines Investigation Act was tested in the courts, "the

litigation arising out of an order granted in February [1911] . . . by one of the Quebec judges for an investigation under the act of the business of the United Shoe Machinery Company in respect of an alleged combine, in the manufacture and sale of boot and shoe making machinery. The company sought to delay and prevent investigation proceedings by raising technical and other objections to methods of procedure, and the rights of the parties to secure, as well as the powers of the government to compel an inquiry in accordance with the provisions of the statute. . . . Having exhausted the courts of the Dominion in its applications for injunctions and appeals, the company sought leave to appeal to the judicial committee of the Privy Council in England; this body, the highest and final court in the British Empire, refused to grant such leave and this admitted the rights of the applicants to an inquiry and the government's power to compel an investigation in accordance with the provisions of the statute."—W. L. M. King, *Canadian Combines Investigation Act (Annals of the American Academy of Political and Social Science, July, 1912)*.—"But there was no provision for prosecution for offense committed before the final findings of the board. At most, the offenders could be told that if they were not good in future they might be fined. As was to be expected, only one action was taken under this act and that was against a foreign corporation. In labor disputes men can readily be found to bring complaint. But for anyone who is an injured party under an alleged combine to lay information is to court reprisals, whether or not the case is successful. The case of one man in Hamilton, who laid information before the Board of Commerce and was not only openly reproved for the same by the acting chairman of the Board but dismissed from the corporation by which he was employed, was sufficient to make it plain in Canada that no relief could come from such a program. This law lay on the statute books until it was forgotten."—R. J. McFall, *Regulation of business in Canada (Political Science Quarterly, June, 1922, p. 182)*.

1919-1922.—Combindes and Fair Prices Act.—Its inadequacy.—Proposed legislation for Ontario.—Finally the Combines Investigation Act "was repealed in July, 1919, with the passage of its successor, the Combines and Fair Prices Act. . . . The new legislation under which the Board [of Commerce] acted was prepared by the former 'Acting Commissioner.' It forbade all combines, but defined a combine as any agreement, merger etc. that the Board decided was against the public interest. It also forbade prices or profits on necessities of life which the Board said were unfair, and in addition to food, fuel or clothing and their related commodities, any articles prescribed as such by the Board might also be included in the definition of 'necessaries of life.' The law gave the Board the right and duty to make preliminary inquiry and final investigation into suspected combines, on complaint or on its own initiative. However, the formalities required for bringing a complaint were as onerous as in the Combines Investigation Act which was repealed. The law under which the Cost of Living Commissioner had acted was rescinded. The provisions in the Criminal Code against combines were rendered inoperative without the written consent of the Board. No provision was made for penalty for acts committed before a hearing was held. Only ignoring or refusing to obey the orders of the Board was subject to penalty. . . . The situation at present [1922] is that there is no Board [two having

resigned], and consequently even the old Criminal Code provisions cannot be called into play by consumers, afflicted business rivals or even an Attorney-General of a Province."—*Ibid.*, pp. 205, 208.—"Before the board of commerce (appointed by the Dominion government in 1920) disbanded, it had looked into the matter of the methods of two grocers' associations, but no charge of illegality was filed. . . . Later the attorney-general of Ontario brought suit against the wholesale Grocers Association of Ontario to try to prove that the association was a combine in restraint of trade. . . . The decision here was that the attorney-general had no right to try such a case and the point as to the legality of fixing resale prices was not passed upon. The attorney-general's next move was to introduce a bill in the Ontario Legislature making it illegal for a manufacturer to have a fixed resale price on his products from wholesaler to retailer. This bill was submitted [early in 1922], . . . but because of objections from manufacturers, wholesalers, and retailers, it was held over . . . and it has since been decided not to put through the bill in its original form. A new bill which has been drafted, and which will no doubt be submitted at the new session of the provincial legislature permits the agent of the attorney general to examine books and records and to investigate the policies, systems, contracts, etc. of any manufacturer. If this agent thinks there is a restraint of trade, the manufacturer can then be brought to trial."—F. S. Johnson, *Ontario's new Anti-Combine Bill (Commercial Reports, Mar. 19, 1923, pp. 761-762)*.

1920.—Formation of Canadian steel trust.—There was formed in Canada in May, 1920, a steel corporation of large proportions. The new organization, known as the British Empire Steel Corporation, started out with an authorized capitalization of \$500,000,000 and an initial capital issue of \$207,000,000, the result of the merging of the Dominion Steel Corporation and its subsidiaries; the Nova Scotia Steel and Coal Company, the Canadian Steamship Company, the Canada Foundry and Forgings, the Maritime Nail Company, the Halifax Shipyards, Ltd., the Collingwood Shipbuilding Company, the Port Arthur Shipbuilding Company, the Davie Shipbuilding and Repair Company, as well as several smaller concerns. The real strength of the merger arose out of the support given to the promoters by a strong group of British industrial interests, assuring financial success from the beginning. With its control of valuable oil fields in Newfoundland, and no less valuable coal fields in Nova Scotia, the corporation is in a position to compete on favorable terms with any other part of the world in the manufacture of steel. The control also of the Canada Steamship Company gives it the beginning of a fleet to carry ore to Nova Scotia and products to foreign ports. With raw materials at tide water, ample rail and water transportation facilities, a nucleus of iron-and-steel manufacturing units, and an abundance of British capital, the British Empire Steel Corporation may soon become a formidable competitor even of the United States Steel Corporation.

## FRANCE

Policy toward corporate organization.—"In France the laws provide heavy penalties against

price agreements for food products. The courts have held that combinations which do not have the purpose of raising prices, but to prevent prices from falling and to regulate their fall, are lawful. . . . Also combinations which do not strive to raise prices but only to secure a market so as to put them in a position to compete with their rivals have been held to be lawful. One of the effects of the laws against combinations and agreements in France has been to drive them to secrecy, the same as in this country [United States]. It is therefore difficult to ascertain the extent to which combinations exist, but it is certain that they are wide spread. Selling bureaus have been established which receive orders and fix prices for the establishments concerned. This form of organization has not been successfully attacked in the courts. These agreements and selling agencies affect many industries, including sugar, petroleum, and porcelain."—C. R. Van Hise, *Concentration and control*, pp. 220-221.

1810-1896.—Penal code of 1810.—Effect of trade association law of 1884.—Significant cases and decisions.—Practical value of law to-day.—“The era of the Revolution was marked by the abolition of the ancient corporations, maitrises, or jurandes, and by the enactment of severe laws against combination. . . . Most of the legislation of the Revolution in this direction was of an ephemeral character, but the law against l'accapement, with less severe penalties, was embodied in the penal code of 1810, articles 410 and 420, and has continued to the present day. The more important of these articles reads as follows: ‘Art. 419. All those who by false or calumnious reports sown by design in the community, by offers of prices in advance of those asked by the vendors themselves, by union or coalition between the principal possessors of the same merchandise or commodity not to sell or to sell at a certain price only, or by whatever fraudulent ways and means, shall have effected the advance or decline of the prices of commodities or merchandise or of public securities above or below the prices which the natural and free competition of trade would have fixed, shall be punished with imprisonment of one month at least or of one year at most and with a fine of 500 francs to 10,000 francs. The culprits may, further, be placed by decree or judgment under the oversight of the superior police during two years at least and five years at most.’ The following article (420) provides heavier penalties if the commodities in question are breadstuffs, bread, or wine or other potables. Since the adoption of this code other laws of minor importance have been enacted concerning combinations under particular conditions. For our present purpose these require no notice. One law, however, not directly concerned with our subject, requires attention, because it has been declared in some quarters to abrogate articles 410 and 420 of the penal code. This is the law of March 21, 1884, concerning the establishment of trade associations. In Article 3 of this law the aim of the associations authorized is defined as follows: ‘Professional syndicates have for their exclusive aim the study and defense of economic, industrial, commercial, or agricultural interests.’ The courts have held, as seems only reasonable, that this does not permit them to violate a criminal statute from the operation of which they are not expressly excepted. One of the earliest cases involving the status of cartels under the criminal code was that of certain soda manufacturers of Marseille, which was decided in

1838. The manufacturers had formed a combination to sell all their output through the agency of one Mille, who added the precaution of hiring six factories which were not in operation, in order to prevent the re-establishment of competition. Prices were advanced about 25 per cent, although the price of the raw material had declined. The court of cassation declared briefly that this combination came within the prohibition of article 419. In a case decided in the same year the court of cassation declared that a combination of concerns in the form of a fusion or consolidation was not an illegal coalition within the meaning of that article, because a plurality of persons was necessary, and this was not found in a single juristic person (*personne morale*). In the year following (1839) an action was brought against a coach company respecting agreements as to the price of places, and the court of cassation declared that the commodities embraced in article 419 included incorporeal as well as corporeal goods. The following decision illustrates the application of the law where prices are depressed by combination. A case came before the court of cassation in 1870 concerning a combination among the manufacturers of iodine, who employed a common purchasing agent, divided up the field which supplied the raw material, and fixed the prices of the same. The court said that this was a combination ‘organized by the principal manufacturers of iodine,’ tending to give to the commodity prices above or below the course which would have been determined ‘by the free and natural competition of commerce,’ and was repugnant, therefore, to article 410 of the penal code and to article 1133 of the civil code. The earlier judgments of the French courts showed a tendency to interpret and apply article 410 in a comprehensive and effective manner. The modern tendency has been less rigorous. . . . A case of international notoriety and of some interest on account of the points of law involved, arose in connection with the famous copper corner (1887-1880) engineered by Secrétan in Paris. Appeal was taken to the court of cassation from the judgment of the court of Paris, but the same was affirmed on grounds substantially as follows: . . . One circumstance, . . . essential to the proof of a violation of the law was lacking, namely, an agreement as to the price. From the nature of the arrangement this could only exist in the assumption by Secrétan of an obligation to sell only above a certain price, and no such condition was to be found in the contracts. Hence the court concluded that the law had not been violated. A rather interesting case came up in 1802 concerning a combination of pottery manufacturers near Grenoble who had established a central selling agency. In view of the facts that the agreement was limited as to time and as to markets, that it embraced only a minority of the producers of the commodity, and that the prices had fluctuated with the market, the court concluded that the agreement was not an unlawful one under article 410. The courts do not always take this benignant attitude, even at the present day. . . . [The case of Germain-Perret in the court of Lyons, 1806, against a syndicate of dealers in aerated waters, which had advanced prices by artificial methods, was decided against the syndicate as contrary to the penal code and not exonerated by the law of 1884.] An attempt to form a monopoly contrary to article 410 of the penal code was condemned very recently in the case of the St. Astier Lime Co. This was an association ‘sous nom collectif.’ The plaintiff, Mallebray, de-

manded the dissolution of the association, on the ground that it was formed with the sole purpose of suppressing competition among the lime manufacturers of St. Astier. The defendants declared, on the other hand, that it was not an unlawful coalition, such as had formerly existed among them and had been dissolved by judicial decree [Dec. 16, 1890], but a legally organized association. This combination was condemned, nevertheless, on the ground stated in the complaint. . . . The provisions of the civil law have often been applied to industrial combinations by the courts, generally in connection with article 419 of the penal code, but sometimes independently where the penal code could have no application. . . . In considering the French law and the interpretation of the courts, the first impressions probably would be that they were characterized by uncertainty and inconsistency. It is doubtful, however, if this impression is correct. In the interpretation of the various rules established by the law, it is the effort of the courts, as has been shown by the above citations, to ascertain whether there is a combination exercising a monopoly power in a manner injurious to the consumers. . . . Duchaine complains that the law is of little practical value in view of the almost undisturbed monopoly enjoyed by the sugar and oil combinations, and Colliez calls it a 'super-annuated text,' which does not correspond to the necessities of the present day. This writer in fact says that the benevolent attitude of the courts in recent years is 'inspired perhaps by the desire to permit the French manufacturers to combat with equal weapons against their foreign competitors.'—F. Walker, *Law concerning monopolistic combinations in continental Europe (Trusts in Foreign Countries, Laws and References concerning Industrial Combinations in Australia, Canada, New Zealand, and continental Europe, United States Committee on Interstate Commerce pamphlet, pp. 67-73)*.

### GERMANY

Corporation reforms.—Cartel and trust systems compared.—Influences of coal and coke cartels.—Thirty years ago the German people went through corporation experiences much like our own. There, as here, the corporation, as originally designed, was a mere shell. There, as here, under the shelter of that shell, the property of the country was being transferred from the German people at large, even the little they had, to the few. There, thirty years ago, as here now, great corporate scandals were exposed. And there, as here, the human nature that is everywhere behind civilization eventually began to recoil. It began there before it began here, only because conditions reached a climax there earlier than here, and because we as a people were too prosperous and too busy to look even a little way beneath the surface of things. But when the work of reform did come there, it was a genuine reform. It did not content itself with indiscriminate denunciation, or with mere lawsuits. Nor did it die out, leaving the door still open to every character of corporation the cunning of men might conceive. Before a corporation can be organized in that country, it must prove, as in a court proceeding, its rightful title to a corporate existence. In the same way it must establish the amount and the character of the capitalization it is allowed to put out. When property is turned in, its value

must be judicially ascertained. Upon officers and directors is not conferred supreme power; in the German corporation the shareholders' meeting is the counterpart of our New England town meetings—a genuine assembly intended to do something more than pass resolutions of approval. And every violation of trust, not merely to the public, but to the shareholder as well, is quickly punished with punishment that smarts. There is in the German corporation no room for one to do, with impunity, in his capacity as a corporation officer or promoter, what if done individually would land him in the penitentiary."—S. Grosscup, *Corporation and the people (Outlook, Jan. 12, 1907)*.—Industrial combinations, quite as effective as the trusts of the United States, have been created in Germany on a wholly different plan. The constituent organizations in them, of capital and industry, are simply knitted or tied together by hard and fast agreements, instead of being fused into huge corporations, as the trusts are. For the kind of covenant which unites them a military term has been borrowed, and they are called "cartels." The difference between the cartel and the trust is described by a Scottish writer, D. H. Macgregor, in his work on "Industrial combination," as follows: "The Cartel is an agreement for a time, the Trust is a permanent structure; the former is therefore a factor in industry full of speculative possibilities, both as regards its actual operation, and because the 'residual' competition of parties who break away at the end of the period is considerably to be feared. . . . The principle of the pure Cartel is compensatory action. It is an organization in which certain producers deal with themselves, and exist for that purpose in a double relation; they are producers of goods, and purchasers of their own produce. What they stand to lose in one aspect they stand to gain in the other. . . . The operation is broadly as follows. The members of the Cartel, meeting as producers in general assembly, determine a price for their product which covers cost of production, being in fact practically a competitive price. This is the base or normal price (*Richtpreis*). Thus they assure themselves, in this capacity, of adequate remuneration. They then sell to the Syndicate, that is to themselves as members of the Syndicate, for what is called the 'taking over' or 'accounting' price (*Verrechnungspreis*) which is usually on the average higher than the base price, so that they have now created for themselves as producers a 'Cartel advantage.' The Syndicate then resells to the consumer, for a price which will be as high as it can get, but which varies with the competition to be met in different parts of the market; this price (*Verkaufspreis*) may not in some cases be so high as the taking-over price, or may not exceed it by more than the margin necessary to cover the Syndicate's expenses of management. . . . It is the Syndicate which figures in the public eye; and while it itself offers no sign of monopoly profit it shelters the companies which gain by its handling of their goods. It conceals monopoly dividends."—D. H. Macgregor, *Industrial combination*.—An elaborate history and description of the "Monopolistic combinations in the German coal industry," by Francis Walker, was published for the American Economic Association in 1904. These are treated as representative, because, says Francis Walker, "the most important and fundamental of all German cartelled industries" are those in mining and metallurgy. He traces their development from a beginning in 1858, when an association of the mining interests of the mining district of Dortmund

was founded. In part, his conclusions as to the effect of the coal cartels are as follows: "The German coal cartels have not had an injurious influence, in general, on the production of coal. More particularly they cannot be accused, justly, of unduly limiting production among themselves. Nor have they attempted to accomplish the same end by crushing outside competition, by unfair methods. It would be preposterous to say that they have hindered technical progress. The cost of production, on the other hand, probably has been somewhat increased by the preservation of weak and costly mines through participation in the cartels. In regard to prices, the policy of the coal cartels, on the whole, has been moderate, taking circumstances into consideration, while the policy of the coke cartel may be fairly pronounced extortionate. The prices of coal have been more stable than they would have been under free competition; during the *hausse* they were not screwed up so high as they might easily have been, but, on the other hand, they have not declined so quickly with the *baisse*. The like may be said of the coke prices, but, at the same time, they were exorbitant considered from the point of view of costs and profits. . . . The *déroute* of the iron industry was not due to the coal or coke cartels in any important degree, *i. e.*, even with low prices, disaster to the iron industry would have been inevitable. No other industry was affected so much as iron, and it is at least very questionable whether the cartels in general (excluding the coal cartels in particular) are to be blamed for the crisis. . . . That they are to be blamed for the ill-judged over-development of certain industries, which was apparently the real cause of the crisis, does not seem to be a just conclusion. On the other hand, the cartels may be accused, with more probability of truth, of retarding the convalescence of German industry by not reducing prices, and if this is true, the coal and coke cartels are specially to blame."—F. Walker, *Monopolistic combinations in the German coal industry*, pp. 322-323.—See also CARTELS.

1896-1906.—Tendency to industrial concentration.—"The tendency to industrial concentration is shown by the returns of public companies, which point to the growing domination of large undertakings. Of 4,740 registered public companies in 1805, 13.6 per cent. had a share capital not exceeding £5,000, but in 1906, of 5,000 such companies, only 0.6 per cent. had a capital of that amount; the companies with a capital from £5,000 to £12,500 decreased from 14.0 to 10.4 per cent., and those with a capital of from £12,500 to £25,000 decreased from 16.0 to 14.2 per cent. On the other hand the companies with a capital of from £25,000 to £50,000 increased from 20.7 to 21.3 per cent.; those with a capital of from £50,000 to £250,000 increased from 28.5 to 35.0 per cent.; those with a capital of from £250,000 to £500,000 increased from 3.4 to 5.4 per cent., and those with a capital exceeding £500,000 increased from 2.0 to 4.1 per cent. In 1806 there were only two companies with a capital exceeding five millions; in 1906 there were nine such companies, and their combined capital was over seventy millions, having been more than doubled since 1806. In spite of this tendency towards the concentration of capital and the multiplication of large undertakings, however, Germany is still an interesting illustration of an industrial country which has not yet entirely gone over to the factory system of production. The handicrafts, the characteristic feature of which is the small, independent master-workman, sur-

rounded by his handful of journeymen and apprentices, contend tenaciously, yet unfortunately with only partial success, against the on-coming tide of 'great capitalism' (private joint stock, and coöperative), and the house industries continue to afford employment to a multitude of workers of both sexes, estimated at half a million."—W. H. Dawson, *Evolution of modern Germany*, pp. 50-60.

1904-1917.—German steel syndicate.—Tendency toward integration in marketing.—"The union of the leading German steel manufacturers in the steel syndicate in the year 1904 brought into existence the most comprehensive combination in the German iron industry and, next to the coal syndicate, the most powerful of all German cartels. Its organization was of the advanced cartel type; providing adequate machinery for the purposes of the combination, chief among which were limitation of production and control of price. The steel works owners became members of the Association of Steel Works Owners and at the same time stock holders of the steel syndicate, which constituted the sales and administrative agency of the combination. . . . The steel syndicate contracts, made in 1904 were to expire in three years from date of organization—so short a period that matters connected with the initial organization had scarcely been settled when the question of renewal came up for consideration. Experience of the members with the operation of the syndicate had been sufficiently satisfactory to incline them toward extension rather than toward restrained competition. . . . Nevertheless it was recognized that renewal would be effected only with difficulty and would be dependent upon the satisfactory adjustment of several important matters of controversy. . . . As is so often the case in cartel negotiations there seemed to prevail a sort of fatalistic hope that the combination would be extended eventually, even though nothing was accomplished before the last day (in this case April 30, 1907). In the course of the protracted negotiations extending from the middle of 1906, after the plan for provisional renewal had been abandoned, now the one problem, now the other seemed to dominate the situation. The less important differences were taken up first and disposed of; attention was then turned to decisive matters. But the necessary assent to extension was secured only two hours before the time limit had expired. At this time the Westphalian Steel Works Company entered. As extended, the steel syndicate was essentially the same in form as before."—H. R. Tosdal, *German steel syndicate* (*Quarterly Journal of Economics*, Feb., 1917).—"The great Westphalian Coal Syndicate disposes of the whole output of its members, except that part which those integrated firms which are members use in their own iron and steel works. The powerful Steelworks Union, until its dissolution after the Peace of Versailles, aimed at covering all the successive processes in the steel industry except the most elaborate of all, and undertook the whole marketing of the simpler products of its members, such as blooms and rails, though with regard to their more highly finished products, such as sheets and wheels, it had to be content with regulation of output. . . . The syndicate of this kind is in theory a somewhat democratic form of organization, involving a wide diffusion of the powers of industrial government. For whereas with unfettered competition or complete amalgamation the small firm disappears altogether, in the syndicate each firm, however small and weak, receives its 'participation,' or allotted quota of the

output, and maintains its own separate existence. In practice, however, things do not always work out this way, for the stronger firms are apt sooner or later to buy up the participations of the weaker. Further, the syndicate form encourages the practice of vertical integration: for by this device the more powerful firms can avoid handing over their output to the syndicate for sale. For both these reasons there has been a tendency even in Germany for strong amalgamations, typified in English imaginations by the name of Herr Stinnes, to grow up within the walls of the Cartel and to dominate its policy. And in two of the strongest groups of German industries, the electrical and chemical groups, the Cartel form has never played a prominent part: but the powerful firms controlling them have exercised joint control over marketing, especially abroad. On the whole there can be no doubt that the integration of marketing increases the concentration of industrial power in the hands of a few persons."—D. H. Robertson, *Control of industry*, pp. 54-55.

1920.—New German industrial trusts.—Effect of World War on organization of industries.—Since the signing of the Versailles treaty Germany has been working out an entirely novel economic system along the line of greater concentration in national industries. "This system is the 'Plan Industry.' The trust or syndicate is not its only feature, but it is the dominant feature; and the union of all the trusts into a single trust is an ultimate aim. The aim was most comprehensively put by one of the original planners, Dr. Walther Rathenau, head of the Allgemeine Elektrizitäts-Gesellschaft, who counselled handling the national industry in the way in which it would be handled if a single milliardaire or 'bank purchased all the producing concerns of Germany, and set himself to combine them in a single concern.' Unnoticed by the outside world, this process of trust-creation has already gone pretty far; the three greatest branches of raw material production, coal, potash and iron, have for some time past been working as all-German trusts; coal-tar has followed; an all-German paper trust is already fully planned; and all-German trusts for textiles, chemicals, potteries, wood and about fifteen other industries, have been considered, and duly allotted their places in the all-German trust scheme. But these trusts, big as they are, do not exhaust the plan. The 'Plan Industry,' which by adopting the trust form proclaims in the interest of productive efficiency for all the unshrinking methods of uncontrolled capitalism, is to be mitigated by a separate parallel Social-organization, the function of which is to ensure a fair equilibrium between economic exigencies and social needs. Each of these two branches of the 'Plan-Industry' is highly complicated and differentiated. The typical all-German trust is not to be a simple combine of a whole branch of industry producing uniform goods. It is to ramify down into smaller trusts embracing more specialized, smaller branches; and further to have appended to it an organization for controlling the whole foreign trade in its branches and sub-branches. The parallel chain of social organizations is also to consist of numerous ramifications; all, first, on territorial lines; secondly, on the lines of division between employers and employed. Finally, the two chains of organizations—the trust organizations and the social organizations—are to meet in, and be together controlled by, a supreme representative body, the Federal Economic Council which last month (July, 1920) held its first sessions; and it already bids fair to eclipse the Reichs-

tag in all matters that concern finance, industry and trade."—R. C. Long, *All German industrial trust: A letter from Berlin (Fortnightly Review, Sept., 1920, pp. 377-378)*.

1922-1923.—Further development of trust concentration.—Effect of depreciating currency.—Industrial and political domination of corporation magnates.—"Before the war the cartels and syndicates were private enterprises, now some have been reorganized as semipublic corporations by the intervention of the Government, while others have been converted into trusts or absorbed by large concerns. . . . The best-known example of a trust is the great Stinnes concern, the most powerful of all. Three large mining and manufacturing companies, the Gelsenkirchener Bergwerk, the Deutsch-Luxemburgische Gesellschaft and the Bochumer Gusztahlverein united to form the Rhine-Elbe Union, with which were later incorporated the electrical works of the Siemens-Schuckert group and a large number of other plants, including paper mills and even news bureaus and newspapers. The Allgemeine Elektrizitäts Gesellschaft has absorbed a number of industrial companies and now produces everything from coal to an electric railway. Other powerful trusts are associated with the names of Wolff, Thyssen, Stumm, Kloeckner, Haniel and others. Navigation, banking and insurance are following the example set by industry, and concentration is the order of the day. This feverish activity in trust building is due to several causes. A rational readjustment of production is usually given as the principle reason for the new combinations, though it may at times be but a secondary one. . . . Other important factors are to be considered, such as the desire for power, independence, and freedom from official interference, and finally the elimination of the risk involved in the fluctuations of a depreciating currency. That risk appears to be one of the principal compelling forces in the building of trusts, while, on the other hand, the steady depreciation of currency offers an efficient protection against foreign competition in the domestic market, apart from the tariff."—J. J. Kral, *Trade associations abroad (United States Department of Commerce, Trade Association Activities, Elimination of Waste Series, 1923, pp. 315-316)*.—"During the long months of the reparations controversy facts were brought to light which laid to the door of the powerful German industrial magnates the gigantic German mark swindle which found victims not only in Germany but in other countries. The United States alone is said to have lost more than a billion dollars through the depreciation of the mark brought about by the machinations of the great corporations headed by Hugo Stinnes, long recognized as the financial and industrial dictator of the country, and now said to be aiming at political domination as well. The situation as typified in the Krupp plant at Essen has been described in the *New York Times* in an interview at Düsseldorf with Representative A. Piatt Andrew of Massachusetts formerly of the economics department in Harvard university. At the Krupp factory [see CAPITALISM: 19th-20th century], Andrews was informed that the plant had its own printing presses to print money to pay the wages of its employees. 'That chance remark is the key to the situation in the Ruhr. What Krupp has been doing, Thyssen has been doing and all the other great industrial mining magnates in the Ruhr. It is indicated by the paper money issued by scores of Ruhr firms which I obtained at the Dresdner Bank. It is evidenced also by the scores of mines and cokeries and

foundries which I saw in travelling through the Ruhr, which are producing nothing today, but in whose plants one sees vast new chimneys and factory walls rising in process of construction.' This policy of putting employes at new construction work to add to their capital and of avoiding taxation by not creating immediate income or produce that could be taxed and of paying wages in worthless currency 'seems to have been followed not only in the Ruhr, but throughout the length and breadth of Germany. The National Government . . . [said to be under the control of the industrialists] has built, extended or improved canals, railroads and public works. The municipalities and other local governments have built schools and other public buildings. Great corporations have built new factories and large foundries, improved docks, constructed ships, erected immense apartment houses, stores, office buildings and long rows of dwellings. On almost every street in German cities, and especially in industrial towns, one sees building operations going on.'—*New York Times*, Oct. 11, 1923.

1922-1923.—Franco-German combine proposal.—Steps in its realization.—"After the Wiesbaden agreement [of August, 1921, also known as the Rathenau-Loucheur Accord, providing for direct understandings without government intervention between property-owners sustaining damages and the German industrialists], there were considerable possibilities that a Franco-German industrial combination would come into existence based on the coal and iron of the Basin du Nord, the smelting furnaces and roller mills of Creusot, and the electrical technique of the A. E. G. (Allgemeine Elektrische Gesellschaft). The Rhine-Elbe Union, on the other hand, was seeking to create an Anglo-German combine for the exploitation of Russia. The French landholders and the international money houses in Paris and London largely broke down the chances of the Loucheur-Rathenau combination."—M. P. Price, *Capitalist concentration in Germany* (*Labour Monthly*, June, 1922).—Nevertheless, the idea of a Franco-German coal and iron combine was still held by many to be the only solution to troubles in Central Europe, the entire basin of the Rhine to be treated as one economic and geological unit, and coal, coke, lignite, iron and potash to be consolidated in one comprehensive industry. This would imply that the great German industrialists like Thyssen and Stinnes would have an understanding with great French industrialists like Schneider, de Lubersac and de Wendel of the Lorraine steel plants to work together for Europe. "Nearly 70 per cent of the coke used in the blast furnaces in Lorraine comes from German Westphalia. . . . At the same time the purely German plants on the East side of the Rhine cannot get along satisfactorily without large quantities of Lorraine ore. This forms a natural basis for workable commercial arrangements, and eventually such arrangements will materialize, in spite of the political obstacles which may have to be surmounted."—H. C. Estep, *New Balance of Power in European iron and steel* (*Manchester Guardian Commercial: Reconstruction in Europe*, Sept. 7, 1922, p. 434).—Late in October, 1923, a definite agreement with Otto Wolff and the Carp group was signed "by the German interests concerned and the representatives of France and Belgium. This agreement provides for gratuitous delivery of reparation coal. Negotiations are in progress with the Stinnes group. The Harpener group (coal mines) has asked to be allowed to enter into negotiations with the Inter-allied Mission."—*New*

*York Times*, Oct. 22, 1923.—On October 28, the newspapers reported that negotiations were already far advanced with the Krupp directors.

## GREAT BRITAIN

Development of industrial combinations.—Four types.—Examples of horizontal and vertical consolidations.—"The pre-war position of Trusts in Great Britain need not detain us long, not because the study is not interesting, but because most of the information is now out of date as a result of the war. . . . The causes making for trustification of industries in Great Britain are quite different from those of America and Germany. It will be better to indicate them after stating what types of combination existed in Great Britain before the war. Broadly speaking, there were four types of combinations in this country. First 'honourable' understandings, varying from informal meetings of a Chamber of Trade in a country town to fix closing hours and variations of prices of similar commodities, to tacit and informal meetings of traders to fix medium prices on certain articles such as nails, boot protectors and leather. Next we have associations, local, district or national, for the regulation of trade and the fixing of prices. These differ from the former in that they are more definite and are properly constituted with a secretary, officers, subscriptions. . . . The third type of association was the combine [or 'pool'], which was an association of a temporary nature for the fixation of prices, for the regulation of output without fixing prices, or for the determination of output and prices, or that would undertake the selling of the members' products. It is important to note that when this last phase has been reached the constituent members are still financially and technically independent. Thus a good example of this type was the Bedstead Makers' Federation formed in 1912. . . . Arrangements similar to that described above were before the war in existence in almost every large industry or trade in the United Kingdom. The National Light Castings Association had an advanced type of organization. Several associations in the non-ferrous metal industries were highly organized, so also the smelter industry, the white lead, sheet lead and lead oxide industries. The same remarks apply to the electrical industries, while the textile industries, the chemical, building, oil and petrol industries all had associations either for fixing prices or output on the combine or 'pool' type. The fourth type of association is that of the consolidation, which can be described as an association in the same type of industry, financially interlocked with a single board of directors controlling the separate units, though these might continue to trade under their original name; or, secondly, a strong association or merger, again financially a single unit, comprising unifications of businesses in different types of industry. The former are sometimes called horizontal combinations, and the latter vertical. A few examples of each of these will clear up any ambiguity in regard to their structure. The 'consolidation' type of association is usually permanent, not terminable. The 'vertical' combination is the kind of association that exists in the coal and steel industries. That is, the financial power controls all the stages of manu-

facture from the raw material or iron ore and coal to the finished product in the form of engines and bridges. Examples of this type in Great Britain will presently be described. The 'horizontal' type of consolidation is the name given to associations of a permanent character which comprise mergers of industries usually at the same stage of manufacture or in one type of industry. The textile trades have several good examples of this type of combination. In the spinning branches there are two very powerful associations, one of which is 'The Fine Cotton Spinners' and Doublers' Association, Ltd., which is an amalgamation of over forty similar concerns; the other is the 'Linen Thread Company.' Then again, in dyeing and printing both in the woollen and cotton industries we have very powerful horizontal combinations, the best known of which is the Bradford Dyers' Association, Ltd., a merger of forty-six firms. . . . One good example of the vertical and horizontal type of consolidation in the same firm is that of Palmers Shipbuilding and Iron Company, Ltd. Established in 1865 as engineers and shipbuilders for both Naval and Mercantile Marine Services, the firm has grown until it forms now a huge composite and mixed establishment. It has shipbuilding yards, engine works, iron and steel works at Jarrow and Hebburn, on the river Tyne, while at Hebburn it has a shipyard, boiler shop, foundry and important graving dock carried on by the Palmers Hebburn Company, Ltd., the whole of the shares of which are owned by the Palmers Shipbuilding Company. The Companies own extensive works and valuable sites on the Tyne, where vessels of large tonnage are built for the British Government as well as for British shipowners. It controls its own supplies of ore, smelts it, manufactures its own steel and converts it into engines of all kinds, as well as forming it into the various multitudinous shapes and conditions necessary for incorporations as passenger, refrigerated tank, cargo and oil tank steamers. The capital of the Company is well over five millions. During the war this Company alone turned out one Dreadnought battleship, one cruiser, three monitors, eighteen torpedo-boat-destroyers and two submarines, all important vessels of war. Another example of a vertical combination on a large scale in the iron, steel and shipbuilding industries is that of Vickers, which on the marine side has a magnificent shipyard and engine works at Barrow. They have a motor-car works and also works for airships and aeroplanes. In addition to the heavy steel industries as outlined above in the case of Palmers, after the war there seems to be financial interlocking and amalgamation with other firms manufacturing sewing-machines, machine-tools, heavy oil engines and electric plant, so that the total capitalization of the Company has been increased to 26½ millions. The Bradford Dyers' Association is a good example of a horizontal combination of twenty-two firms. The issued capital is £3,886,000 and debentures amount to £1,455,000. This firm and the British Cotton and Wool Dyers' Association are 'commission dyers.' This is, they execute work according to orders. We shall give examples of other horizontal groupings later on in this book. It will suffice at this stage to point out that in addition to powerful consolidations, generally of a horizontal type, in the textile industries, other examples of consolidation of both types of structure are found in entirely dissimilar classes of British industry. Two cement combinations control practically the whole industry, though there are one or two other

firms outside. All salt producers and sellers are connected together by the Salt Union, Ltd., or the North Eastern Salt Co., Ltd., while Borax Consolidated, Ltd., represents a grouping of twelve firms originally. Another combination which has secured complete dominance of the trade of the Union Kingdom is the Wall Paper Manufacturers, Ltd., while the Imperial Tobacco Company, Ltd., with its capital of over fifteen millions, has a very strong grip of the home market. It was formed in 1901 to resist the attack on the United Kingdom market by the United States interests. . . . It is true that small firms manufacturing well-known brands are able to hold their own, but they form on the whole an insignificant percentage of the total turnover of trade. The chemical industries noted by Mr. Ashley are the United Alkali Company, Ltd., a consolidation of forty-eight firms and Brunner Mond & Co., Ltd., which has very important connexions with the Mond Gas Co., Ltd., and the Mond Nickel Co., Ltd. The Castner-Kellner Alkali Co., Ltd., has by an exchange of shares consolidated its interests with that of Brunner Mond. Lever Bros., Ltd., has control of both sources of supply and oils requisite for soap manufacture with the consequent practical monopoly of the market. British Oil & Cake Mills, Ltd., which was formed in 1899, is a combination of seventeen firms. It has refineries and crushing mills capable of dealing with over one-half of the oil seeds imported into the United Kingdom. The foregoing constitute the principal groupings that were well known in this country before the war."—J. M. Rees, *Trusts in British industry, 1914-1921*, pp. 15-21.—See also EQUITY LAW: 1742; 1836; MUNICIPAL GOVERNMENT: Early development of public works.

1918-1923.—Post-war development of combinations.—Cotton and wool.—Iron and steel.—"The war has brought a profound change in the size of units of manufacture. The big financial promoter has come into the cotton industry, and whereas, before the war, 'The Fine Cotton Spinners,' 'Calico Printers and Bradford Dyers' represented the strong combinations in some special processes, and firms like Messrs. J. & P. Coats in sewing cotton, now the whole area is becoming rapidly linked up into powerful consolidations from raw cotton supply to the finished product. This is a new phase as regards the cotton industry."—*Ibid.*, pp. 114, 245.—"The present tendency towards large amalgamation in the wool textile industry is regarded with disfavor by the majority of traders. Up to within recent years it was the boast of the West Riding industry that private control gave the best results but the movement in the direction of fusion is now a power to be reckoned with."—*Textile fusion (Economist [London], Sept. 22, 1923, p. 433)*.—"The National Federation of Iron and Steel Manufacturers came into existence in 1918 to deal with economic questions affecting the industry. . . . It has not superseded the local machinery of wage negotiations or the various price associations. While, therefore, it has become one of the great powers in the world of industrial politics, it has not become a trust, though by bringing the members of the industry constantly together and compelling them to formulate a trade point of view this product of the war is obviously a potential breeder of trusts. In this connection two tendencies call for comment. In the first place, both during and since the war developments have been consistently in the direction not of horizontal combinations within the iron and steel trade itself, but of further in-

tegration between the earlier and later stages of metallurgical production. Thus important engineering groups have acquired control of iron and steel works which in their turn possess reserves in ore and fuel, while the chief producers of tin plates and galvanized sheets—the largest export sections of the iron and steel trade—have all in the last few years become associated with or have built steelworks which assure their supply of material. Perhaps the most remarkable episode of this kind was the scramble in 1919 and 1920 of the big shipbuilding concerns of the country to acquire steel works in order to assure their supply of plates. . . . [However] some, though by no means all of the arrangements for linking steel-works to the shipbuilding industry have fallen through.”—*Influence of the war on the British iron and steel industry (Manchester Guardian Commercial; Reconstruction in Europe, Sept. 7, 1922, p. 440).*

1919.—Report of trust committee.—Recent tendency toward concentration in industry.—Recommendations.—A committee appointed by the minister of reconstruction to consider and report on organizations and combinations in the United Kingdom presented a comprehensive report in 1919. “We find,” says the committee, “that there is at the present time in every important branch of industry in the United Kingdom an increasing tendency to the formation of Trade Associations and Combinations, having for their purpose the restriction of competition and the control of prices.” It is, on the whole, impossible to quarrel with this verdict, though it may be suggested that there is a tendency to overload the emphasis. There are still many branches of production and distribution in which organization is non-existent or rudimentary, and even where it exists, competition frequently plays a larger part in the process than would be gathered from some paragraphs in the document. Nevertheless, the committee’s statement remains broadly true.”—C. E. Fayle, *Trade combinations (Edinburgh Review, July, 1919, p. 3)*.—“In their Conclusions and Recommendations” [1921] the members of the Committee on Trusts state: More information is urgently required. . . . The first recommendation of the Committee on Trusts is that it ought to be the duty of the Board of Trade to obtain from all sources information on these matters and that it ‘shall present annually to Parliament a report upon the nature, extent and development of such forms of organizations.’”—J. M. Rees, *Trusts in British industry, 1914-1921, p. 246*.

## NEW ZEALAND

1910.—Legislation for repression of monopolies.—“The New Zealand Act for the repression of monopolies in trade or commerce of 1910 goes quite into detail as regards restraints of business. The following quotations illustrate fully its spirit:

“2. (1) In this act, unless the contrary intention appears, ‘commercial trust,’ means any association or combination (whether incorporated or not) of any number of persons, established either before or after the commencement of this act, and either

in New Zealand or elsewhere, and (a) having as its object, or as one of its objects, that of (1) controlling, determining, or influencing the supply or demand or price of any goods in New Zealand or any part thereof or elsewhere, or that of (2) creating or maintaining in New Zealand or any part thereof or elsewhere a monopoly, whether complete or partial, in the supply or demand of any goods; or (b) acting in New Zealand or elsewhere with any such object as aforesaid: and includes any firm or incorporated company having any such object, or acting as aforesaid.

“3. Every person commits an offense who, either as principal or agent in respect of dealings in any goods, gives, offers, or agrees to give to any other person any rebate, refund, discount, concession, allowance, reward, or other valuable consideration for the reason or upon the express or implied condition that the latter person (a) Deals . . . exclusively or principally, . . . with any person or class of persons, either in relation to any particular goods or generally; or (b) Does not deal . . . with any person or class of persons, either in relation to any particular goods or generally; or (c) Restricts . . . his dealing with any person or class of persons, either in relation to any particular goods or generally; or (d). . . . Becomes a member of a commercial trust; or (e) Acts . . . in obedience to or in conformity with the determinations, directions, suggestions, or requests of any commercial trust with respect to the sale, purchase, or supply of any goods.

“4. Every person commits an offense who, either as principal or agent, refuses, either absolutely or except upon disadvantageous or relatively disadvantageous conditions, to sell or supply to any other person, or to purchase from any other person, any goods for the reason that the latter person (a) Deals . . . with any person or class of persons, either in relation to any particular goods or generally; or (b) Is not . . . a member of a commercial trust; or (c) Does not act . . . in obedience to or in conformity with the determinations, directions, suggestions, or requests of any commercial trust with respect to the sale, purchase, or supply of any goods.

“5. Any person who conspires with any other person to monopolize wholly or partially the demand or supply in New Zealand or any part thereof of any goods, or to control wholly or partially the demand or supply or price in New Zealand or any part thereof of any goods, is guilty of an offense if such monopoly or control is of such a nature as to be contrary to the public interest.

“6. (1) Every person commits an offense who, either as principal or agent, sells or supplies, or offers for sale or supply, any goods at a price which is unreasonably high, if that price has been in any manner directly or indirectly determined, controlled, or influenced by any commercial trust of which that person or his principal (if any) is or has been a member. (2) Every person commits an offense who, in obedience to or in consequence of or in conformity with any determination, direction, suggestion, or request of any commercial trust, whether he is a member of that trust or not, sells or supplies, or offers for sale or supply, any goods, whether as principal or agent, at a price which is unreasonably high.

“7. (1) If any commercial trust, whether as principal or agent, sells or supplies, or offers for sale or supply, any goods at a price which is unreasonably high, every person who is then a member of that trust shall be deemed to have committed an offense against this act. (2) If in

any such case the commercial trust is a corporation, it shall itself be guilty of an offense against this act; but the liability of the trust shall not exclude or affect the liability of its members under the last preceding subsection.

"8. For the purposes of this act the price of any goods shall be deemed to be unreasonably high if it produces or is calculated to produce more than a fair and reasonable rate of commercial profit to the person selling or supplying, or offering to sell or supply, those goods, or to his principal, or to any commercial trust of which that person or his principal is a member, or to any member of any such commercial trust.

"9. Every person who aids, abets, counsels, or procures, or is in any way knowingly concerned in the commission of, an offense against this act, or the doing of any act outside New Zealand which would if done in New Zealand be an offense against this act, shall be deemed to have committed that offense.

"10. (1) Every person who commits an offense against this act shall be liable to a penalty of £500. (2) If two or more persons are responsible for the same offense against this act, each of those persons shall be severally liable to a penalty of £500, and the liability of each of them shall be independent of the liability of the others.

#### "SCHEDULE

##### "GOODS TO WHICH THIS ACT APPLIES

"Agricultural implements, coal, meat, fish. Flour, oatmeal, and other products or by-products of the milling of wheat or oats. Petroleum or other mineral oil (including kerosene, naphtha, and the other products or by-products of any such oil). Sugar. Tobacco (including cigars and cigarettes)."  
—J. W. Jenks, *Trust problem*, pp. 465-468.

#### UNITED STATES

Industrial combinations.—Evolution of forms.—Gentlemen's agreement.—Pool.—Legal trust.—Corporation.—Reorganizations in New Jersey.—Survival of legal trust in Massachusetts.—"The simplest and most elementary form of industrial coöperation was the *gentlemen's agreement*. The manufacturers met together infrequently or at regular intervals and discussed what prices 'ought to be.' The meeting usually ended with a tacit understanding that all the manufacturers would maintain prices at these levels, but no written agreements were ordinarily entered into because of the impossibility of enforcing them, even under the common law. Sometimes the price understandings were reinforced by a definite agreement to curtail production, but such supplementary arrangements were not necessarily involved in any agreement covering the maintenance of price. A good outline of the successive forms of gentlemen's agreements is suggested by J. W. Jenks in his outline of the history of the cordage industry by Clark. . . . The second stage was a *pool*. The difference between a gentlemen's agreement and a pool is that the latter always involved a paying in and drawing out clause. Finding that one or more of the parties to the first form of gentlemen's agreement always broke the agreement, in spirit if not in letter, the manufacturers who intended to live up to their compact insisted that some forfeit be established so that what could not be enforced in law should be maintained from motives of pecuniary expediency. This was accomplished by penalizing over-production. The outputs of all

the manufacturers were agreed upon among themselves according to the existing capacities of their factories. The total probable sales at remunerative prices were then apportioned in accordance with the capacities of the various plants. Each manufacturer was permitted to increase his output beyond the allotment, but in that case he paid into the pool or common treasury a certain amount per unit of product,—for example a half a cent a pound on binder twine or glucose,—which was believed to represent the net profit. The manufacturer whose output fell below the allotment drew out the same amount for each unit of the difference between his actual sales and his allotted sales. Generally there was an auditor who examined the books of the members of the pool to prevent deceptions. Such deceptions would, however, occur in spite of the utmost precautions and the stronger members would insist on a real allotment when it became clear that they continuously paid in, so that the individual pool always proved short-lived although a succession of pools, under varying agreements, might continue for a long period of time. The third stage was the *legal trust*. Conditions of law and policy were changed after 1890, so that none of the industrial consolidations promoted after that time passed through this stage. In effect the trust form of consolidation arose as a safe-guard against the deception and misrepresentation of the pool form of organization, just as the pool arose as the means of making more binding the looser gentlemen's agreement. The trustees of the trust were usually important men in the industry or else managers of the previous pool. They were usually selected for strategic purposes to represent the more important manufacturers and the various sections of the country in which the trust operated. These trustees held either the legal title to the shares of the corporations merged under the trust agreement, or else the titles in fee or the leaseholds of the separate pieces of real estate. The surrender of the stock to the trustees, rather than of the actual property, was the commoner method, that the constituent corporations might operate under their original charters. In return for the stocks or real estate, the trustees issued certificates which gave the registered holders rights under the original deed of trust but no legal title to the property held by the trustees. In this way the entire property acquired could be administered by the trustees as a unit for the interests of all, factories could be closed when it seemed wise, prices could be raised or depressed at will, and as the trustees were the legal owners of the constituent companies, there could be no destructive competition, no deception and no aggressive policies maintained at the expense of one over another. The fourth stage was the *corporation*, or more properly the holding corporation. Owing to legal complications on the one hand and the liberality of the New Jersey statutes on the other, the old trusts were reorganized as holding corporations, which took title to the property previously held by the trustees. All consolidations promoted of late years assumed directly the corporate form of organization so that the stage of the trust, intermediate between the pool and the organized corporation, is seldom to be found after 1890 and never after 1892, except in Massachusetts, where it survives to the present, sanctioned by the English common law, and undisturbed by Massachusetts statutes."—A. S. Dewing, *Corporate promotions and reorganizations*, pp. 518-521.

Historical outline of movement.—Two cycles

previous to depression of 1903.—Emphasis on suppression of competition and increase of production.—New type of consolidations beginning 1915.—Emphasis on capitalization and integration.—“The large manufacturing corporation is of very recent development in the industrial organization of society. The great combinations of manufacturing establishments—the ‘trusts’ so called—appeared suddenly during the closing years of the nineteenth century, with comparatively little warning. [See CAPITALISM: 10th century: United States.] The movement quickly reached its climax, and then shrunk to inconspicuous proportions. [See U. S. A.: 1866-1877.] In 1880 there was nothing analogous to an industrial trust or consolidation in the sense that the term was used later. By 1888 several industries were dominated by large consolidations such as the Standard Oil ‘trust.’ By 1800 the tendency had reached such proportions that public opinion, thoroughly aroused against a movement in industry which seemed to threaten the stability of democratic institutions, brought about the passage of the Sherman Anti-Trust Act. [See SHERMAN ANTI-TRUST ACT.] The movement toward industrial consolidations stopped abruptly with the panic of May, 1893, and remained dormant during the depression of the succeeding three years. It started in afresh, with renewed vigor, in 1897, when the first pulsations of returning prosperity began to quicken business enterprise. It again reached a climax about 1901, and again ceased altogether with the industrial depression of 1903. Since 1905 there have been sporadic instances of industrial consolidations but no general movement analogous in magnitude or significance to the consolidations of the closing years of the last century. The stupendous wave of industrial consolidations which began in the late eighties and closed with the depression of 1903 has been divided in another connection into two cycles. Each cycle began with the prosperity succeeding a depression, each culminated at the climax of feverish speculation and each was abruptly terminated by conditions verging on a panic. The earlier, or minor cycle, so called because the consolidations were fewer in number and smaller in size, began in the years immediately following the depression of the middle eighties—a depression caused by the failure of numerous overextended railroads. The consolidations formed at this time were of the typical trust form of organization in which a board of trustees assumed ownership of the corporate shares of numerous small, previously competing concerns. The trusts stifled competition effectually, but in so doing thoroughly aroused public opinion against them. The trusts were seen in the garb of a social menace. They became the dominating social and political ‘problem’ demanding a legislative solution, and the Sherman Anti-Trust Act of 1890 was the response of a feverishly aroused Congress. Engrossing the act on the federal statute books had, it is true, little immediate effect. Two state court decisions, one in New York and the other in Ohio, were adverse to the trust form of organization, and in consequence most of the consolidations formed after 1800 were organized as holding companies. Yet neither the prohibiting federal statute nor the anti-trust court decisions decreased the rate at which consolidations were forming. These continued with increasing frequency until the spring of 1893, and attained even greater size. Then occurred the scandalous failure of the National Cordage Company, the bankruptcy of several great transcontinental railroads [see also RAILROADS: 1890-1902;

1893-1910], and the evil consequences of the bimetallic legislation. The panic of 1893 followed quickly and with it the promotion of industrial consolidations ceased. The later or major cycle of industrial consolidations began in 1897. It was among the first outward signs of the returning prosperity following the stagnation consequent upon the panic of 1893. At first the consolidations were few in number, but the movement, once begun again, quickly reached far beyond anything thought of in the preceding period. Every conceivable line of manufacturing had its trust. Conservative bankers, shrewd business men, and doctrinaire economists became infected with the virus of large-scale production. People condemned the trusts one moment and bought their securities in the next. It was the harvest-time of promoters. By the end of 1899 more than a hundred and thirty consolidations of considerable magnitude had been organized, all for the sole purpose of suppressing competition and increasing the scale of production. During 1900 and 1901 the movement continued, but the new promotions were fewer in number, owing to the fact that most opportunities for the formation of ‘trusts’ had already been fully exploited by the bankers and promoters. Accordingly the ground was combed over again. The trusts themselves were consolidated. A pyramid was built of pyramids. The United States Steel Corporation, capitalized at over thirteen hundred millions of dollars, was built up out of half a dozen smaller ‘trusts,’ themselves, in several cases, the combinations of smaller combinations. By 1902 signs were apparent that many of the trusts had not justified the predictions of their promoters. The public investors became suspicious. Stock market quotations of speculative industrial common stocks became at first unsteady and then began to fall. New promotions became infrequent and several embryonic consolidations were stifled before their birth. By 1903 a veritable panic occurred in the stocks of industrial consolidations and new promotions ceased altogether. An industrial depression ensued. During 1905 and 1906 few consolidations were formed, and these few were of insignificant importance. After the depression following the panic of 1907 there were occasional consolidations of industrial business, more especially in the retail merchandizing and automobile industries. Yet, after all is said, the evidence is clear that during the period from 1902 down to the opening of the Great War the number of industrial consolidations was insignificant compared with the period of fifteen years preceding the depression of 1903. Several highly significant reasons explain why the movement toward consolidations ended as quickly as it did. Paramount is the simple fact that, as a whole, the trusts had turned out ill. They failed to meet the expectations of their promoters. Competition was not suppressed and the widely heralded economies of large-scale production were not realized. Most of the securities of the consolidations were acquired by public investors with a speculative trend of mind who fully expected to make their fortunes out of them. Anticipated earnings did not develop. The bankers who underwrote new promotions during the closing years of the period found themselves with large amounts of such securities remaining unsold. The public investors witnessed the slow but nevertheless uninterrupted decline of the ‘trust stocks.’ Few paid any dividends on the common shares and many ceased to pay regular dividends on the preferred shares, even after dividends had been begun. Highly speculative

common stocks were carried on margin by speculators and accumulating interest charges steadily increased the loss. Furthermore, many of the industrials actually failed. And at the time of each failure, financial scandals, unconscionable bankers' and promoters' profits, even downright dishonesty and fraud, were fully and widely featured by the daily press. As a direct consequence the business world, the public investors, even the economists, lost faith in the economic expediency and financial wisdom of industrial consolidation. A second reason for the almost total cessation of industrial promotions was the changed attitude of the law. Although the Sherman Act was passed in 1890, it was not until early in 1895 that an important case under this act was reviewed by the United States Supreme Court. The decision of the highest court indicated clearly that industrial consolidations were to be considered legal. The court let them pass, by a verbal subterfuge, notwithstanding the spirit of the act. But in 1890 the Supreme Court reversed itself. Consolidations were not to be legalized by a mere verbal subterfuge. The act of 1890 did apply to the combinations of manufacturing plants and could, moreover, be invoked to dismember those which had been illegally formed. But this idea did not vividly and thoroughly permeate the intelligence of the banking world until the great Northern Securities decision in 1903 [see RAILROADS: 1901-1905], when the teeth of the act of 1890 were felt. [See also ANDYSTON PIPE CASE.] This decision was widely advertised and the country as a whole realized that the act of 1890 was not dead legal verbiage, but meant exactly what it said—namely, that consolidations of competing enterprises were illegal. A third reason that explains the decline of industrial promotions after 1903 was the shift of investment sentiment. This reason was perhaps less important than the others, but it was, nevertheless, very vital in the point of view of the banker without whom no industrial consolidation could be promoted. Public utilities began to assume importance to promoters and to bankers. Prior to 1900 most of the local utilities had been built and extended by local capital alone. The savings of the community produced the local utility. But slowly the promoter-engineer began to succeed in enlisting the help of bankers in combining local utilities into large operating and holding companies. Much new capital was required. And both bankers and investors turned from manufacturing enterprises, where competition would not be inhibited by combination, to public service enterprises where competition was legally prohibited by means of the exclusive franchise. These were the main causes which brought about the shift of promoting, banking, and investing sentiment away from industrial consolidations in the decade preceding the Great War. But beginning in the autumn of 1915, as a direct consequence of the enormously increased demand for manufactured products, the rapidly rising prices, the loosening of restrictions on monopoly—all economic concomitants of great war—a new movement toward industrial combinations began. These recent consolidations differed in many important respects from the consolidations of twenty or more years before. In the first place, no attempt was made to secure all the plants in a given industry—good, bad, and indifferent—in the confident hope that thereby competition could be suppressed. On the contrary the purpose was to select a relatively few plants and these were chosen on the basis of efficiency of operation. Very often the chief pur-

pose was to secure more capital for an old-established industry, either from bankers or the public. The consolidation of separate and independent plants was a mere incident to expansion. New capital, rather than the suppression of competition, was held to be essential to success. . . . A second type of enterprise, in which consolidation has been of obvious benefit, is in those industries in which it is possible to reach back to the primal raw material and forward to the ultimate consumer. This is known as 'integration.' . . . Integration has been one of the chief reasons for the success of the United States Steel Corporation. It acquired, with the old Illinois Steel Company, extensive iron mines west of Lake Superior; it acquired, with the Carnegie Steel Company, a railroad from Lake Erie to Pittsburgh. Certain of its constituents, like the American Steel and Wire Company, the National Tube Company, and the American Bridge Company, manufactured and sold fabricated steel products to the ultimate consumer. The Steel Corporation acquired coking coal and limestone deposits, coke ovens, and pig iron furnaces. It organized numerous intermediate links to the chain so that, soon after its organization, the corporation could claim, in truth, that it carried on every branch of the steel business, from mining the ore to the sale of the fabricated products to their ultimate consumers. Other successful industrial consolidations have followed the same policy, so far as individual conditions permitted. The American Agricultural Chemical Company owns very large areas of phosphate rock in the South, and had, until the events of the Great War changed entirely the complexion of American investments abroad, a large interest in German potash deposits. In addition, it has pushed the retail sale of its private brands of fertilizers among the small farmers. One conspicuous reason for the success of the present Corn Products Refining Company under the Bedford management has been the fact that it has directed its chief efforts to producing end products sold directly to the ultimate consumers, rather than intermediate products sold to other manufacturers. It even acquired control of companies which produced the end products when this course seemed preferable to developing a market of its own. The number of instances in which this kind of vertical consolidation has taken place within recent years is very large. But the central idea in every case is the same—to control all the steps of production and distribution from the raw material to the delivery of the finished product into the hands of the ultimate consumer."—A. S. Dewing, *Financial policy of corporations*, v. 4: *Expansions*, pp. 34-41, 54-56.—See also CAPITALISM; 19th century; Regulation of capitalism in the United States; SUPREME COURT: 1887-1914; MICHIGAN: 1896-1900; NORTH DAKOTA: 1892-1896.

**Standard Oil Company.**—Events leading to organization in 1882.—Report on, in 1900.—Testimony of John D. Rockefeller and others.—Question of discriminations.—Dissolution and reorganization.—The form of organization that has given industrial combinations their name "trusts" was that started by the Standard Oil Trust in 1882, afterwards followed by the Whisky Combination—the Distillers and Cattle Feeders' Trust—and by the Sugar Trust. "In 1881 the Standard Oil Company of Ohio, the nucleus of the Standard 'alliance,' was a corporation capitalized at \$3,500,000. Since the formation of the 'alliance' it had maintained connections with its allies by a union, not of corporations, but of stock-

holders. 'Then,' as the solicitor of the Standard Oil Company [S. C. T. Dodd] explains, 'for convenience of control and management the Standard Oil Trust was formed. It was simply an agreement, placing all the stock of these various companies in the hands of trustees, declaring the terms on which they were held, and providing for the issuance of a certificate showing the amount of each owner's interest in the stock so held in trust. . . . We organized a Standard Oil Company in New York, in New Jersey, in Kentucky, in Iowa, in Minnesota; and similar corporations already existed in Ohio and Pennsylvania.' As the first 'trust' form of combination, the agreement under which this union was brought about deserves attention. There were three classes of parties to the contract; first, all the stockholders and members of the Standard 'alliance,' together with members of some other companies; second, all the more important officers and stockholders of these several companies; and, third, a portion of the stockholders and members of some additional corporations and limited partnerships. Provision was made for the admission of new companies and individuals, and for the formation, whenever advisable, of a Standard Oil Company in any State or Territory in the Union. The parties of the several classes were to transfer all their property to the Standard Oil Companies in their several States, in consideration of which they should receive stock equal at par value to the appraised value of the property so transferred. This stock—and here is the significant feature of the new organization—was to be delivered to trustees, and held by them and their successors thereafter; and no subsequent issue of stock should be made by the companies except by these trustees. In return for the stock intrusted to them, the trustees were to deliver trust certificates, equal to the par value of the stock of the several Standard Oil Companies to be established and to the appraised value of the stocks of other companies delivered to the trustees. The trustees provided for were nine in number. They were John D. Rockefeller, O. N. Payne, and William Rockefeller, elected to hold office till 1885; J. A. Bostwick, H. M. Flagler, and W. G. Warden, to hold office till 1884; and Charles Pratt, Benjamin Brewster, and John D. Archbold, to hold office till 1883. At each annual meeting the certificate owners elected three trustees for three years each, to fill vacancies due to expiration of term. Such was the 'trust' as formed by the agreement of January 2, 1882. By an amendment two days later this agreement was slightly changed, as it was deemed inexpedient that all the companies mentioned should transfer their property immediately to the several Standard Oil Companies. The trustees were given power to decide what companies should convey their property and when the sale should take place. The powers of the trustees, then, as defined by the 'trust' agreement, were to collect on the stock which they held the dividends of the several constituent companies, and afterwards, upon the trust certificates outstanding, to disburse their receipts as dividends. Four years before the formation of the trust, two pipe-line companies—the Seaboard Pipe-Line Company and the Equitable Petroleum Company—projected to afford an outlet to the seaboard, had been organized by oil producers. Upon their failure, the producers organized the Tidewater Pipe-Line Company, which ran from the Bradford region to Williamsport, a distance of one hundred and ten miles; and thence, by a connection with the Philadelphia and Reading Railroad, the

oil was carried a distance of two hundred and fifty miles to Philadelphia. On the 1st of June, 1879, this company commenced the shipment of oil. The railroads were not content to see the oil traffic slip through their hands; and on the 5th of June, at a conference between the four trust lines at Niagara Falls, resolute measures were adopted to drive this rival transportation agent from the business. The rate on crude oil per barrel was lowered to 20 cents on all oil of the Standard 'alliance' moving from the oil regions to New York, Philadelphia, and Baltimore. A corresponding reduction of the rate to the general public was made from \$14 to 30 cents. These rates took effect at once; and, as competition continued, a further reduction was made on August 1st to 15 cents per barrel. Throughout the period of the organization of the trust, and for a full year after, this fierce contest between the railroads and the Tidewater Pipe-Line Company continued. The immediate effect, of course, was to benefit the shippers, and particularly the largest shipper, which was the Standard. The ownership by the Standard of the terminal facilities and of the greater number of the oil-cars of the railroads now became a fact of importance. In consideration of its heavy investments in these interests, and of its agreements to ship and to unload its oil at its own risk, the Standard had already been allowed rebates. But now the Standard began the building of pipe-lines to the seaboard and the formation of the National Transit Company. As pipe-lines were a cheaper mode of transportation than railways, the building of these lines made necessary a readjustment of freight rates; and, as the pipe-lines then building could not carry the oil the entire distance, contracts for joint carrying had to be made with the railroads. The first contract—made between the National Transit Company and the Pennsylvania Railroad on May 6, 1881—related to the apportionment of the freight when the haul was partly by pipe-line and partly by rail. The Pipe-Line Company guaranteed the railroad one-third of the transportation of oil to the seaboard. The Standard was to pay exactly the same rate as other shippers over the railroad. On such oil as was carried partly by pipe-line and partly by rail a through rate was made, of which the pipe-line naturally received a share; and, finally, the Pipe-Line Company agreed to remit part of the charge of its local pipes to the railroad. Instead of a contract for rebates to the Standard, this was a contract for rebates to the railroad. The reason for this contract was that the seaboard pipe-line of the Standard did not extend beyond Hamilton, Pennsylvania; and to compensate the railroad for its low rate of freight and for its grants of rights of way—no free-pipe-line law then existing in New Jersey—these rebates were provided. Strengthened by these mutually helpful contracts, the National Transit Company and the railroads were meanwhile wearing out the Tidewater Pipe-Line Company, and in 1883 forced it to cease its opposition. The company was never absorbed by the Standard Oil Trust; but on October 6th, by an agreement with the National Transit Company, it agreed to accept as its share of the oil traffic eleven and one-half per cent. of the total pipe-line transportation of petroleum to the seaboard, and was guaranteed \$500,000. in annual profits for fifteen years. With this settlement the war of the transportation agents ceased, and the Standard Oil Trust established itself in the strategic position which substantially controlled the transportation of oil to

the seaboard. By the early seventies the Standard had attained the pre-eminence in mechanical efficiency which it has ever since maintained; by the agreement with the Pennsylvania Railroad in 1878 it had gained a dominance over transportation which it never since has lost; and by its contract in 1881 it made possible the completion of its pipe-line to the seaboard and its independence of railroads. Such contracts as the Standard subsequently made with the Pennsylvania Railroad were agreements by which the railroad got some part of the freight, though it did no part of the carrying. The Standard Oil Trust now gave rebates instead of receiving them. Over every branch of the industry, in 1883, it was supreme. . . . The passing of the Interstate Commerce Act, in 1887, makes a natural division in the record of the railroad arrangements made by the Standard. By the terms of that act discriminations were forbidden, and such contracts with shippers as had

JOHN D. ROCKEFELLER

been the rule since the late sixties were made illegal. The Interstate Commerce Act seems to have been observed by the Standard Oil Company. 'Little testimony,' says the Industrial Commission of 1900, 'was brought forward to prove that it actually receives lower rates for shipment over the same tracks than its competitors.' In the testimony before the commission on this latter point the opinion was expressed by witnesses testifying in opposition to the Standard Oil Company that direct discriminations and rebates are still received by the Standard; but the evidence adduced in proof of this opinion was unsatisfactory, and was considered entirely inconclusive by the commission. In other ways than by discriminations in actual rates the Standard Oil Company, after 1887, secured special advantages in transportation. The shipments of oil from those localities which it chose for distributing points were so large that the freight rates for that locality were naturally most favorable to this chief commodity of shipment. Competitive points, points where several railroads compete, or where water transportation competes with the railways, were generally fixed upon as distributing

centres, accordingly, lower freight rates prevailed at the large shipping points of the Standard than prevailed at places where its competitors made most of their shipments. The Standard Oil Company located its refineries at points nearer the place of consumption, and so economized in shipping distance. Thus it transferred most of its business from Cleveland to Whiting, Indiana, in order to be nearer the Southern market and to the West, and began to supply the Eastern market from its refineries at Bayonne, New Jersey. By wise distribution of its refineries the Standard became largely independent of the changing freight rates that distressed those independent refiners who shipped their oil long distances. A less honorable advantage, it has been alleged, accrued to the Standard by the practice, among the railroads, of under-billing the weight of the contents of the tank-car. As to interstate shipments, this has been specifically denied by representatives of the Standard Oil Company; and the instances where such under-billing has occurred are explained as occasional errors. . . . With nothing more exciting than an occasional case before the Interstate Commerce Commission regarding shipments by tank-car, the Standard Oil Trust continued from 1887 until 1892. Its growth and prosperity had been steady. The property of the various companies that entered the trust in 1882 was valued at \$75,000,000. In 1892 the value was estimated at \$121,631,312; and fifty per cent. of this increase had come from profits invested and the remainder from additional capital subscribed. The dividends meanwhile had risen from five and a quarter per cent. in 1882 to twelve per cent. in 1891. During the ten years following 1882 there had been a gentle decrease in the price of refined oil and a slight decrease in the difference between the price of refined and the price of crude oil—a difference which measures the charge for refining. The attitude of the Standard Oil Trust during these years was one of quiet dominance. It was now to meet an unexpected difficulty in the courts, which rendered necessary a complete change of organization."—G. H. Montague, *Rise and progress of the Standard Oil Company*, pp. 77-88, 101-106, 108-110.

The following passages from testimony concerning the history of these early years throw additional light on the questions of discriminating rates received from the railroads and of pipe-line consolidations. The first is from the examination of John D. Rockefeller made by a United States Industrial Commission some years later:

"Q. Did the Standard Oil Company or other affiliated interests at any time before 1887 receive from the railroads rebates on freight shipped, or other special advantages?—A. The Standard Oil Company of Ohio, of which I was president, did receive rebates from the railroads prior to 1880, but received no special advantages for which it did not give full compensation. The reason for rebates was that such was the railroad's method of business. A public rate was made and collected by the railway companies, but, so far as my knowledge extends, was never really retained in full, a portion of it was repaid to the shippers as a rebate. . . . The Standard Oil Company of Ohio, being situated at Cleveland, had the advantage of different carrying lines, as well as of water transportation in the summer, and taking advantage of those facilities made the best bargains possible for its freight. All other companies did the same, their success depending largely upon whether they had the choice of more than one route. The Standard sought also to offer advantages to the

railways for the purpose of lessening rates of freight. It offered freights in large quantity, car-loads and train loads. It furnished loading facilities and discharging facilities. It exempted railways from liability for fire. For these services it obtained contracts for special allowances on freights. These never exceeded, to the best of my present recollections, 10 per cent. But in almost every instance it was discovered subsequently that our competitors had been obtaining as good, and, in some instances, better rates of freight than ourselves. . . .

"Q. About what percentage of the profits of the Standard Oil Company came from special advantages given by the railroads when these were greatest?—A. No percentage of the profits of the Standard Oil Company came from advantages given by railroads at any time. Whatever advantage it received in its constant efforts to reduce rates of freight was deducted from the price of oil. The advantages to the Standard from low freight rates consisted solely in the increased volume of its business arising from the low price of its products. . . .

"Q. To what advantages, or favors, or methods of management do you ascribe chiefly the success of the Standard Oil Company?—A. I ascribe the success of the Standard to its consistent policy to make the volume of its business large through the merits and cheapness of its products. It has spared no expense in finding, securing, and utilizing the best and cheapest methods of manufacture. It has sought for the best superintendents and workmen and paid the best wages. It has not hesitated to sacrifice old machinery and old plants for new and better ones. It has placed its manufactories at the points where they could supply markets at the least expense. It has not only sought markets for its principal products, but for all possible by-products, sparing no expense in introducing them to the public. It has not hesitated to invest millions of dollars in methods for cheapening the gathering and distribution of oils by pipe lines, special cars, tank steamers, and tank wagons. It has erected tank stations at every important railroad station to cheapen the storage and delivery of its products. It has spared no expense in forcing its products into the markets of the world among people civilized and uncivilized. It has had faith in American oil, and has brought together millions of money for the purpose of making it what it is, and holding its markets against the competition of Russia and all the many countries which are producers of oil and competitors against American oil."—United States Industrial Commission, *Preliminary Report, Mar., 1900, (56th Congress, 1st Session, House of Representatives, Document no. 476, pt. 2, p. 704)*.

Against the testimony of Rockefeller that the Standard Oil Company obtained no exclusive advantages from railway companies, other witnesses contended that such advantages were given to it. On this point, the Commission say in their report: "It was charged by most of the leading opponents of the Standard Oil Company that the chief reason for the rapid growth of the Standard, and its apparent great success in underselling rivals and winning markets, was the special advantages that it had received from the railroads. It was claimed that the company not merely received discriminating rates on its own shipments, but that it was frequently paid rebates on the shipments of its competitors. It was conceded by representatives of the Standard Oil Company that before the passage of the interstate-commerce act

special freight rates and rebates were frequently received. It was asserted, however, that this was the usual custom on the part of all railroads with all large shippers and that competitors of the Standard had received similar favors. . . . Much greater differences of opinion exist with reference to the condition of affairs since the passage of the interstate-commerce act. It has been charged as a matter of general belief on the part of almost all of the opponents of the Standard Oil Company that these discriminations in various forms have been continually received even up to date. On the other hand, these charges have been denied in toto and most emphatically by every representative of the Standard Oil Company with reference to all cases excepting one, which they claim was a mistake, the amount of freight due being promptly paid on discovery of the error. . . . Certain opponents of the company claimed that the Standard Oil Company received commissions for shipping freight over railroads, which commissions amounted to rebates. This charge is emphatically denied by the Standard Oil Company and no positive proof on the subject has been offered."—*Ibid., pt. 1, p. 25*.

Of testimony on the subject of pipe-line consolidations in the oil business, the report says: "Several witnesses describe the process by which the Standard Oil Company gradually secured control of the various pipe lines throughout the oil regions. The opponents of the trust attribute the success of the Standard Oil Company in this movement to the railway discriminations upon oil received from pipe lines controlled by that company. It appears that for a considerable period a rebate of 22 cents per barrel was allowed on oil from pipe lines maintaining the agreed rates of pipage. . . . Other opponents of the combination ascribe its success in driving out competing pipe lines largely to the practice of paying premiums upon oil in the territory of such competing lines. Mr. Boyle [publisher of the *Oil City Derrick*] gives the fullest statement of the growth of the pipe-line consolidation during the seventies and attributes it to the natural advantages arising from large capital and from skill in organizing. He testifies that during the early part of that decade very numerous pipe lines had been established. These, were at first constructed on a small scale by separate oil producers, but, having entered the business, many producers were inclined to extend their lines and form a system. There thus arose an excessive number of competing lines, and the solvency and integrity of some of them became a matter of doubt. This excessive competition was the cause of driving the pipe lines into a more complete organization. As early as 1873 or 1874 a pooling arrangement was made by some of the pipe lines, and rebates were paid by railways on oil received from such lines. The United Pipe Line Company was established in 1877, with a capital at first of \$3,000,000, and acquired by purchase a large number of lines. The new company included many producers and stockholders of the smaller companies, but it is estimated that the persons controlling the Standard Oil Company had somewhat more than a one-half interest in the United Pipe Lines. The National Transit Company is the present owner of the United Pipe Lines System, and the Standard Oil Company controls the National Transit Company. . . . It was pointed out by several witnesses that the almost complete control of the pipe-line system by the Standard Oil Company gives it great power in fixing the prices of crude oil, since producers can

dispose of their product only through the pipe lines, especially in view of the further fact, which is alleged, that railway rates on crude oil are by agreement kept at least as high as, if not higher than, the pipe-line charges. The pipe-line system also gives the combination great advantage over other refiners, who must pay the rates of pipage fixed by the Standard, which are claimed to be excessively high or the high rates of freight."—*Ibid.*, pt. 1, p. 100.—"In 1891 the State of Ohio, by its attorney-general, began action to oust the Standard Oil Company of its corporate rights, on the ground that it had abused its corporate franchises in becoming a party to an agreement against public policy. . . . The place this case occupies in the law of corporations is of the first importance. A previous case, in which the Sugar Trust was defendant, had decided that an agreement of associations to which the corporations were party was *ultra vires*. Further than declaring partnership of corporations illegal, however, the law had not yet gone; and upon the question whether such combination was illegal, because in restraint of trade and opposed to public policy, the court had declined to express an opinion. In the instance of the Standard Oil Company the court made a bold advance; it not only forbade members of several corporations to combine as such and merge their interests in a trust, but it also declared such combination a restraint of trade, illegal, and quite opposed to public policy, and by the force of its decision put an end to the trust as a form of business combination. Accordingly, in 1892, the Standard Oil Trust was dissolved and the separate establishments and plants reorganized into twenty constituent companies. . . . While the independent refiners have been seeking security in the trust form of organization, the Standard Oil Company has adopted the contrary policy. In 1892 the trust dissolved into its constituent companies, the former trustees holding a majority of the stock in each corporation and the holders of trust certificates exchanging them for the stock of the several companies in agreed proportion. By purely informal harmony, a unity of action among these corporations was maintained. A large quantity of trust certificates were still outstanding; and the dividends, when declared, were at a certain percentage upon these outstanding certificates and at a properly adjusted rate upon the capital stock of the different companies, so that the rate of dividends might be considered as if it were entirely on the trust certificates at their former full amount. In order to secure more complete unity and to provide for the claims of smaller holders of trust certificates, the Standard Oil Company was organized under the laws of New Jersey in 1899. This corporation, though practically a new organization, was in form a continuation of the old Standard Oil Company of New Jersey, with an amended charter and capital increased from \$1,000,000 to \$110,000,000. This corporation was authorized to own the stock of any of the different corporations connected with the Standard Oil Company, and to buy from all parties who own such stock whenever they desired to sell. 'The new Standard Oil Company of New Jersey,' said the Industrial Commission in 1900, 'has recently been formed with the intention of transferring the stock of the different corporations into the stock of the new company, so that, when the transfer is finally made, one single corporation, the Standard Oil Company of New Jersey, will own outright the property now owned by the separate companies which are commonly known and mentioned to-

gether under the name of the Standard Oil Company. This combination at present has no formal unity. It has a practical unity as great as it will have probably after the complete change into the New Jersey company is affected."—G. H. Montague, *Rise and progress of the Standard Oil Company*, pp. 110, 114-115, 127-129.—See also U. S. A.: 1882-1889; SUPREME COURT: 1888-1913.

ALSO IN: I. Tarbell, *History of Standard Oil Company*.

**Sugar trust.—Report on, in 1900.—Testimony of Henry O. Havemeyer.**—The following, submitted by the same report is from the testimony of Henry O. Havemeyer:

"Q. The history and organization of the Sugar Refining Company has been gone over so many times in testimony before that it is not worth while to dwell on it at length, but in order that we may have the record somewhat complete, will you give a brief sketch of its development, going back to the conditions of the old sugar trust? [1887]—A. There were about twenty-five different firms or corporations in the sugar business. I think the evidence before some one of the Congressional committees was that for a period of 5 or 6 years before the formation of the trust, 18 of those failed or went out of business.

"Q. Eighteen out of 25?—A. Not out of 25; 18 out of about 40. It occurred to some one to consolidate the others, and 18 out of 21, I believe, went into the trust, leaving 3 or 4 outside, who represented, I think, 30 per cent. Then Spreckles built a refinery in Philadelphia, and, 2 or 3 years after the formation of the trust, the trust or its successor bought the Philadelphia refineries.

"Q. Will you explain in a word or two the difference between the trust and its successor and the reason for its going into this other form?—A. The trust was attacked, and the courts decided it was illegal, and a company was organized in New Jersey which bought outright and paid for the different companies, which were the constituent companies of the trust. They then represented, I think, over 90 per cent of the output; then other refineries began to be constructed, until now I think they would represent 50 per cent of the consumption. . . .

"Q. The condition before the formation of the trust was about this: When these 18 different companies failed, business was in such a condition, as a whole, that it was considered unprofitable?—A. Very unprofitable—ruinous.

"Q. Now, can you tell what special advantages—if you can give this in some detail I shall be glad—come from this organization, and in what way you make your savings?—A. The greatest advantage is in working the refinery full and uninterrupted. Of course, if you have a capacity of 1,000,000 and you can only melt 100,000,000 somebody has got to cut down materially. The moment you cut down you increase the cost; by buying up all the refineries . . . and concentrating the meltings in four refineries and working them full, you work at a minimum cost. That enables us to pay a dividend on the common stock.

"Q. So the chief advantage in the combination was in concentrating the production and destroying the poor refineries?—A. Precisely."—United States Industrial Commission, *Preliminary Report, Mar., 1900 (56th Congress, 1st Session, House of Representatives Document no. 476, pt. 2, p. 109)*.—See also U. S. A.: 1897 (March-July); 1909 (October-November) SUGAR BOUNTIES.

**Earlier combinations in steel production.—Report on, in 1900.**—"Mr. Reis, president of the

National Steel Company, states that that company was organized in February, 1899, under the laws of New Jersey, with a capital of \$59,000,000, \$27,000,000 of 7 per cent cumulative preferred stock and \$32,000,000 of common stock. The company includes six steel plants, located at New Castle, Youngstown, Sharon, Mingo Junction, Bellaire, and Columbus. These plants are engaged in producing steel billets and slabs, which are the raw materials for making tin plates and various other products. The plants include 15 blast furnaces. The company also owns iron mines in northern Michigan at Iron Mountain and Ishpeming. These are expected to produce from 1,250,000 to 1,400,000 tons of ore annually, the total amount required for the use of the steel plants in the combination being about 3,000,000 tons. The National Steel Company also owns nine lake boats for transporting ore, capable of carrying about 1,000,000 tons annually. . . . Mr. Reis testifies that the National Steel Company is not a 'trust' in the ordinary sense, since it makes no attempt to secure control of a large proportion of the output of steel. Its economies are sought in the combination of steel plants with sources of raw materials. The National Steel Company produces only about 18 per cent of the Bessemer steel made in this country. The other chief concerns engaged in steel production are the Carnegie Steel Company; Federal Steel Company; the Maryland; Jones & Laughlin Steel Company; Wheeling Steel and Iron Company, and the Lorain Steel Company. . . . Mr. Reis states that the tariff, so far as it is placed upon steel billets, bars, and sheets, is no longer necessary for the protection of the industry. No steel is imported, and during the past 8 or 10 years the tariff has cut no figure. But if the tariff should be removed from the tin plate or from certain other branches of the iron and steel industry there would be an indirect effect upon the making of steel. . . . Mr. Gary states that the Federal Steel Company owns all the capital of the Minnesota Iron Company, the Illinois Steel Company, the Lorain Steel Company, and the Elgin, Joliet and Eastern Railroad Company. The Minnesota Iron Company is the owner of 150,000 acres of iron ore property on the Vermilion and Mesaba ranges. It owns the Duluth and Iron Range Railroad Company, connecting its mines with Lake Superior at Two Harbors and Duluth. It owns large ore docks and also 22 steel lake vessels capable of carrying 2,000,000 tons per annum. The product of the Minnesota Iron Company will probably be 3,500,000 tons in 1900. The Lorain Steel Company manufactures chiefly steel rails for street railways, and to some extent steel billets. It produces about 500,000 tons of pig iron per year. The Illinois Steel Company has plants at North Chicago, West Chicago, South Chicago, Milwaukee, and Joliet. It produces about 1,500,000 tons of pig iron per year, and also manufactures steel rails, billets, plates, etc. It owns the Chicago, Lake Shore and Eastern Railway, which connects its plants in the neighborhood of Chicago. It also owns large tracts of coal property in Pennsylvania and West Virginia, and makes there about 1,500,000 tons of coke per year. This company also owns iron mines in Wisconsin and Michigan. . . . Mr. Stetson, a lawyer, who drafted the charter and conducted the legal arrangements in the organization of the Federal Steel Company, testified that it was organized in September, 1898, with an authorized capital of \$100,000,000 6 per cent noncumulative preferred stock and \$100,000,000 common stock. Of this, \$98,000,000 in all was originally issued

. . . Mr. Gary states that the Federal Steel Company is not a trust in any sense. It has not sought to restrict competition and has not brought together companies which were competing with one another, as is the case with most so-called trusts. The company has bought the stocks of companies doing different lines of business, just as an individual might do. . . . The American Steel and Wire Company operates iron mines in the Lake Superior region. It controls, perhaps, one-sixth or one-seventh of the output of that region. It owns and operates coal mines and burns coke. It operates 8 or 9 blast furnaces, 17 open-hearth furnaces, from 22 to 25 rolling mills, and from 20 to 30 wire mills. Its finished product is plain wire, barbed wire, wire fencing, rope, etc., wire nails, and all kindred articles. . . . Mr. Gates, chairman of the American Steel and Wire Company of New Jersey, testified concerning the formation of that company. It was organized on January 12, 1899. A gradual process of consolidating wire plants had been going on previously. As early as 1890 companies in which Mr. Gates was interested practically controlled the manufacture of barbed wire in this country. In December, 1897, and January, 1898, J. P. Morgan & Co investigated the value of the various wire plants throughout the country with a view to further consolidation. The American Steel and Wire Company of Illinois, formed in March, 1898, seems to have resulted from this effort. . . . The combination into the American Steel and Wire Company was not rendered necessary by excessive competition and consequent losses among the wire companies. The Consolidated Steel and Wire Company, for example, made between 27 and 28 per cent during the last three years of its existence. It was believed, however, that more profit would be made through better management under consolidation."—*Ibid.*, pt. 1, p. 190.

**Tin plate industry.—Report on, in 1900.**—"The American Tin Plate Company was incorporated under the laws of New Jersey on January 6, 1899. Its authorized capital is \$20,000,000 of 7 per cent cumulative preferred stock and \$30,000,000 of common stock. Of this, \$18,000,000 of preferred and \$28,000,000 of common stock has been issued. . . . It is made clear by the evidence of all the witnesses that the tin-plate industry in the United States has been built up practically since the McKinley tariff of 1890, which raised the duty on tin plates from 1 to 2.2 cents per pound. Without the protection, all the witnesses agree, the industry could not have been profitably established. Having once been established, it was able to submit to the reduction of the duty to 1.2 cents by the Wilson tariff of 1894, and is now sufficiently protected by the duty of 1.5 cents under the Dingley tariff of 1897."—*Ibid.*, pt. 1, pp. 174, 187.

1900.—Definition of the term "industrial combination" formulated at the census bureau.—Statistics as collected in 1900.—"The officials of the Census Office, in order to prevent misconceptions and insure consistency in the plan and system of tabulation, formulated the following definition of the term 'industrial combination': 'For the purpose of the Census, the rule has been adopted to consider no aggregation of mills an industrial combination, unless it consists of a number of formerly independent mills which have been brought together into one company under a charter obtained for that purpose. We therefore exclude from this category many large establishments comprising a number of mills, which have grown up, not by combination with other mills, but by the erection

of new plants or the purchase of old ones.' . . . So far as can be ascertained from the data in the Census Office, the number of these industrial consolidations is 183. They control 2203 separate plants, scattered throughout the United States, 2029 being active and 174 idle during the census year. For 56 of the idle plants no returns could be obtained, making the total number of reporting plants 2147. The 183 combinations extend to almost all lines of industry, producing articles of luxury, materials essential to the upbuilding and growth of the country, and even the very necessities of life. Fully 50 per cent of these combinations were chartered just prior to or during the census year; and it is noteworthy that the epidemic of industrial consolidation, as far as the so-called monopolies are concerned, has been practically confined to the past four years. It is evident, therefore, that the disease—if it be regarded as such—

JOHN PIERPONT MORGAN

has spread very rapidly. Naturally enough, iron and steel, with 69 combinations, heads the list. The number of reporting plants engaged in this industry is 460, and the capital invested, consisting of land, buildings, machinery, tools and implements, and cash and sundries, is valued at \$348,000,000.—W. R. Merriam, "Trusts" in the light of census returns (*Atlantic Monthly*, Mar., 1902).

1901.—Climax of consolidation in steel industries.—Formation of the United States Steel Corporation.—In February, 1901, the climax was reached in movements of industrial combination, so far as concerns the production and greater uses of iron and steel, by the formation of one gigantic corporation, to embrace not only the companies named above, but to purchase the enormous interests of the Carnegie Company outright, and to take in several organizations of more than considerable magnitude besides. The combination was effected by the firm of J. P. Morgan & Co., New York, as "syndicate managers," and an official statement of its essential terms was published

in a circular from that firm on March 2, addressed to the stockholders of the Federal Steel Company, National Steel Company, National Tube Company, American Steel and Wire Company of New Jersey, American Tin Plate Company, American Steel Hoop Company, American Sheet Steel Company, to whom the following announcement was made: "The United States Steel Corporation has been organized under the laws of the State of New Jersey, with power, among other things, to acquire the outstanding preferred stocks and common stocks of the companies above named, and the outstanding bonds and stock of the Carnegie Company. A syndicate, comprising leading financial interests throughout the United States and Europe, of which the undersigned are managers, has been formed by subscribers to the amount of \$200,000,000, (including among such subscribers the undersigned and many large stockholders of the several companies,) to carry out the arrangement hereinafter stated, and to provide the sum in cash and the financial support required for that purpose. Such syndicate, through the undersigned, has made a contract with the United States Steel Corporation, under which the latter is to issue and deliver its preferred stock and its common stock and its five per cent. gold bonds, in consideration for stocks of the above named companies and bonds and stock of the Carnegie Company and the sum of \$25,000,000 in cash. The syndicate has already arranged for the acquisition of substantially all the bonds and stock of the Carnegie Company, including Mr. Carnegie's holdings. The bonds of the United States Steel Corporation are to be used only to acquire bonds and 60 per cent. of the stock of the Carnegie Company. The undersigned, in behalf of the syndicate, and on the terms and conditions hereinafter stated, offer, in exchange for the preferred stocks and common stocks of the companies above named, respectively, certificates for preferred stock and common stock of the United States Steel Corporation, upon the basis stated." Details relating to the terms and the procedure of exchange are then given, and several statements of public interest are made, among them these: "The authorized issue of capital stock of the United States Steel Corporation presently provided for in said contract is \$850,000,000, of which one-half is to be seven per cent. cumulative preferred stock and one-half is to be common stock. The company will also issue its five per cent. gold bonds to an aggregate amount not exceeding \$304,000,000. In case less than all of the bonds and stock of the Carnegie Company or less than all of the stocks of the other companies above referred to shall be acquired, the amounts of bonds and stocks to be issued will be reduced as provided in said contract. The forms of the new bonds and of the indenture securing the same, and of the certificates for the new preferred and common shares, and the entire plan of organization and management of the United States Steel Corporation, shall be determined by J. P. Morgan & Co. Every depositor shall accept in full payment and exchange for his deposited stock the shares of the capital stock of the United States Steel Corporation, to be delivered at the rates above specified, in respect of the stock by him so deposited; and no depositor or holder of any receipt issued hereunder shall have any interest in the disposition of any other of the shares of stock, or of the bonds of the United States Steel Corporation, by it to be issued and delivered to or for account of the syndicate or of any proceeds thereof. All shares of the United States Steel Corporation de-

liverable to or for account of the syndicate, which shall not be required for the acquisition of the stock of the Carnegie Company or for delivery to depositors under the terms of this circular, are to be retained by and belong to the syndicate. . . . It is proper to state that J. P. Morgan & Co. are to receive no compensation for their services as syndicate managers beyond a share in any sum which ultimately may be realized by the syndicate." Subsequently the American Bridge Company and the Lake Superior Consolidated Iron Mines were taken into consolidation, and, on April 1, 1901, the United States Steel Corporation filed with the secretary of state at Trenton, New Jersey, amended articles of incorporation increasing its authorized capital stock to \$1,100,000,000. The stock was equally divided into 7 per cent cumulative preferred stock and common stock. The total was greater by \$250,000,000 than the amount stated in the circular issued by J. P. Morgan & Co., on March 2, as "presently provided for," and with the 5 per cent gold bonds, not exceeding \$304,000,000, brought the security issues of the great steel combination up to \$1,404,000,000.

1901-1903.—*Question of Federal control and regulation.—Urgency of President Roosevelt for effective legislation.*—In his first message to Congress, three months after his succession to the presidency, President Roosevelt expressed his mind frankly and clearly on the then increasing demand in the country for more stringent measures of government, to control and regulate the exercise of the power which great aggregations of incorporated capital have created in recent times. In part, he then said: "There have been abuses connected with the accumulation of wealth; yet it remains true that a fortune accumulated in legitimate business can be accumulated by the person specially benefited only on condition of conferring immense incidental benefits upon others. . . . Much of the legislation directed at the trusts would have been exceedingly mischievous had it not also been entirely ineffective. In accordance with a well-known sociological law, the ignorant or reckless agitator has been the really effective friend of the evils which he has been nominally opposing. All this is true; and yet it is also true that there are real and grave evils, one of the chief being over-capitalization because of its many baleful consequences; and a resolute and practical effort must be made to correct these evils. There is a widespread conviction in the minds of the American people that the great corporations known as trusts are in certain of their features and tendencies hurtful to the general welfare. . . . In the interests of the public, the Government should have the right to inspect and examine the workings of the great corporations engaged in interstate business. . . . When the Constitution was adopted, at the end of the eighteenth century, no human wisdom could foretell the sweeping changes, alike in industrial and political conditions, which were to take place by the beginning of the twentieth century. At that time it was accepted as a matter of course that the several States were the proper authorities to regulate so far as was then necessary, the comparatively insignificant and strictly localized corporate bodies of the day. The conditions are now wholly different and wholly different action is called for. I believe that a law can be framed which will enable the National Government to exercise control along the lines above indicated: profiting by the experience gained through the passage and administration of the Interstate-Commerce Act. If, however, the judgment of the Congress is that it lacks the con-

stitutional power to pass such an act, then a constitutional amendment should be submitted to confer the power."—*President's message to Congress, Dec. 3, 1901.*

In the following summer, during a tour which he made through some of the New England states the President gave prominence to the same subject in his addresses, emphasizing the necessity of Federal legislation to arm the general government with more effective authority for regulating the action of corporations engaged in interstate trade. In speaking at Providence, he said: "Those great corporations containing some tendency to monopoly, which we have grown to speak of rather loosely as trusts, are the creatures of the State, and the State not only has the right to control them, but is in duty bound to control them wherever the need for such control is shown. There is clearly a need of supervision—need to exercise the power of regulation on the part of the representatives of the public, wherever, as in our own country at the present time, business corporations become so very strong, both for beneficent work and for work that is not always beneficent. . . . The conditions are complicated, and we find it difficult to frame national legislation which shall be adequate, while as a matter of practical experience State action has proved entirely insufficient, and in all human probability cannot or will not be made sufficient, to meet the needs of the case. Some of our States have excellent laws—laws which it would be well indeed to have enacted by the national legislature. But the wide differences in these laws, even between adjacent States, and the uncertainty of the power of enforcement result practically in altogether insufficient control. I believe that the nation must assume this power of control by legislation, and if it becomes evident that the constitution will not permit needed legislation, then by constitutional amendment. The immediate need of dealing with trusts is to place them under the real, not nominal, control of some sovereign to which, as its creature, the trusts shall owe allegiance, and in whose courts the sovereign's orders may with certainty be enforced. That is not the case with the ordinary so-called 'trust' today, for the trust is a large State corporation, generally, doing business in other States also, and often with a tendency to monopoly. Such a trust is an artificial creature not wholly responsible to or controllable by any legislature, nor wholly subject to the jurisdiction of any one court. Some governmental sovereign must be given full power over these artificial and very powerful corporate beings. In my judgment this sovereign must be the national government. When it has been given full power, then this full power can be used to control any evil influence, exactly as the government is now using the power conferred upon it under the Sherman Anti-Trust law. Even when the full power has been conferred it would be highly undesirable to attempt too much or to begin by stringent legislation. The mechanism of modern business is as delicate and complicated as it is vast, and nothing would be more productive of evil to all of us, and especially to those least well off in this world's goods, than ignorant meddling with this mechanism, and, above all, if the meddling was done in a spirit of class or sectional rancor. . . . The first exercise of that power should be the securing of publicity among all great corporations doing an interstate business. The publicity, though non-inquisitorial, should be real and thorough as to all important facts with which the public has concern. The full light of day is

a great discourager of evil. Such publicity would by itself tend to cure the evils of which there is just complaint, and where the alleged evils are imaginary, it would tend to show that such is the case. When publicity is attained it would then be possible to see what further should be done in the way of regulation. . . . I think the national administration has shown its firm intention to enforce the laws as they now stand on the statute books without regard to persons, and I think that good has come from this enforcement. I think, furthermore, that additional legislation should be had, and can be had, which will enable us to accomplish much more than has been accomplished along these same lines."—Theodore Roosevelt, *Address at Providence, Aug. 23, 1902 (New York Tribune, Aug. 24, 1902)*.

In his next message to Congress [Dec. 2, 1902], President Roosevelt renewed his urgency for the needed legislation. A year later, when the president addressed his message to the next Congress, at the opening of its first session, he was able to say: "The Congress has created the Department of Commerce and Labor, including the Bureau of Corporations, with for the first time authority to secure proper publicity of such proceedings of these great corporations as the public has the right to know. It has provided for the expediting of suits for the enforcement of the Federal anti-trust law; and by another law it has secured equal treatment to all producers in the transportation of their goods, thus taking a long stride forward in making the effective work of the Interstate Commerce Commission."—*President's message to Congress, Dec. 7, 1903*.

1901-1906.—Summary of governmental action against corporate wrongdoers, by Elihu Root.—**Legislation.**—**Litigation.**—**Court decisions.**—"The act creating the bureau of corporations [see U. S. A.: 1903 (February)], the act expediting the trial of trust cases, the anti-rebate act, the act for the regulation of railroad rates, have made possible redress which was impossible before. Under the direction of two successive Attorney Generals of the first order of ability, sincerity and devotion, in hundreds of courts, incessant warfare has been waged and is being waged under the federal laws against corporate wrongdoers. The Northern Securities Company, which sought to combine and prevent competition between two great continental railroads, has been forced to dissolve by the judgment of the Supreme Court of the United States. [See RAILROADS: 1901-1905.] The methods of the Beef Trust in combining to suppress competition in the purchase of livestock and the sale of meat have been tried and condemned, and the trust has been placed under injunction to abandon these practices by judgment of the Supreme Court. The combination of paper manufacturers in the territory from Chicago to the Rocky Mountains has been dissolved by the judgment of the Supreme Court, and the combination has been abandoned, and the price of white paper in that territory has gone down 30 per cent. The Retail Grocers' Association in this country has been dissolved by decree of the court. The elevator combination in the West has been dissolved in like manner. The salt combination west of the Rocky Mountains has been dissolved by decree of the court. The Wholesale Grocers' Association in the South, the meat combination and the lumber combination in the West, the combination of railroads entering the city of St. Louis to suppress competition between the bridges and ferries reaching that city; the Drug Trust, which suppresses competition all

over the country, are being vigorously pressed in suits brought by the federal government for their dissolution. The salt combination has been indicted and convicted and fined for failing to obey the judgment of dissolution. The Beef Trust has been indicted for failing to obey the injunction against them, and have been saved so far only by a decision that they had secured temporary immunity by giving evidence against themselves. One branch of the Tobacco Trust is facing an indictment of its corporations and their officers in the federal court in New York, and the other branches are undergoing investigation. The lumber combination in Oklahoma is under indictment. The Fertilizer Trust, a combination of thirty-one corporations and twenty-five individuals to support and fix prices, has been indicted, the indictments have been sustained by the courts, and the combination has been dissolved. The ice combination of the District of Columbia is facing criminal trial. Special counsel are investigating the coal combination, and special counsel are investigating the Standard Oil combination. Three of the causes won in the Supreme Court of the United States have furnished decisions of the utmost importance. In the Tobacco Trust case of *Hale agt. Henkel*, the Supreme Court denied the claim of the trust corporations to be exempt under the Constitution from furnishing testimony against themselves by the production of their books and papers before a federal grand jury. Thus, the protection of secrecy for corporate wrongdoing is beaten down. In the Northern Securities case the Supreme Court held that a wrong accomplished by means of incorporating in accordance with the express provision of the New Jersey statute was just as much a violation of federal law as if there had been no incorporation. Thus, the state rights defence of protection from favoring state statutes is beaten down. In the Beef Trust case the Supreme Court held that, although the business of manufacture was carried on within the limits of a single state, yet the purchase of the raw material in different states and the sale of the finished product in different states brought the business within the interstate commerce clause of the Constitution and gave the federal government authority over it. Thus, the defence that the state alone can deal with manufacturing corporations, however widespread their business, is beaten down. The obstacles to the enforcement of the federal anti-trust act thus removed are obstacles which stood in the way of all proceedings, and they had to be cleared away before any proceedings of the same character against the same classes of corporations could be successfully maintained. They have been removed, not by newspaper headlines and denunciation, but by skill, ability, and energy of the highest order. After the Elkins anti-rebate law was passed by Congress in 1903 it was supposed, and the Interstate Commerce Commission reported, that the railroads had substantially abandoned giving rebates. Their good resolutions do not seem, however, to have lasted. The struggle for business enabled the shippers soon to secure a renewal of rebates or by ingenious devices advantages equivalent to rebates. Thereupon the Department of Justice began active prosecutions for the enforcement of the law. Fifty-three indictments have been found against hundreds of defendants and covering many hundreds of transactions. There have been fourteen criminal convictions. Fourteen individuals have been fined, to the gross amount of \$66,125. Nine corporations have been fined to the amount of \$253,000. Thirty-five indictments are

ready for trial in the regular order upon the court calendar. The original statute provided only for punishment by fine. Last winter it was amended by providing punishment by imprisonment, and, if the fines imposed under the original law shall not prove to have stopped the practice, we shall see whether fear of the penitentiary under the amendment will not do so. Under this statute also it was necessary to sweep away defences which stood as barriers to general prosecution, and in the New York, New Haven & Hartford Railroad case, decided by the Supreme Court February 19 of this year, and the Milwaukee Refrigerator Transit case, decided in the Seventh Circuit on May 31 of this year, the courts have held that the substance and not the form is to control in the application of the statute, and that, however the transaction may be disguised, an unlawful discrimination can be reached and punished. The way is therefore cleared for all other prosecutions. The Railroad Rates act, which was the subject of such excited discussion during the last session of Congress, has already justified itself. Since the passage of the act, less than five months ago, there have been more voluntary reductions of rates by our railroads than during the entire nineteen years of the previous life of the Interstate Commerce Commission. On the single day of the 29th of August, 1906, two days before the act went into force, over five thousand notices of voluntary reduction of rates were filed with the Interstate Commerce Commission by the railroads of the United States."—Elihu Root, *Speech at Utica, Nov. 1, 1906* (*New York Tribune, Nov. 2, 1906*).

1903-1906.—Beef trust suits and investigations.—United States vs. Swift & Company et al.—Commissioner Garfield's investigation.—Indictment of Armour & Company and others.—Immunity decision of Judge Humphrey.—Fines for receiving rebates from railways.—In the case known as that of the United States vs. Swift & Co. et al., the defendants were seven corporations, one copartnership, and twenty-three other persons (commonly styled "the Beef Trust"), charged with violations of the anti-trust law, by combination in restraint of the trade which they conducted, namely, the buying of live stock, slaughtering the same in different states and selling the meats thus produced. It was affirmed by the government that they, together, controlled about sixty per cent of the total volume of that trade in the country, and that if the alleged combination among them did not exist they "would be and remain in competition with each other"; but that by such "unlawful combination and conspiracy" they were directing and requiring their agents (1) not to bid against one another in the live-stock markets of the different states; (2) to bid up prices for a few days so as to induce cattlemen to send their stock to the stock-yards; (3) to fix prices at which they would sell, and hence, when necessary, to restrict shipments of meat; (4) to establish a uniform rule of credit to dealers and to keep a blacklist; (5) to make uniform and improper charges for cartage; and (6) to obtain less than lawful rates from the railways to the exclusion of all competitors. The case, on motion for injunction, was tried first in the Circuit Court of the northern district of Illinois, Judge Peter S. Grosscup. The opinion of the court, given April 18, 1903, held that, under the definition of the term by the Supreme Court in the Trans-Missouri Freight Association case (see RAILROADS: 1800-1902), "there can be no doubt that the agreement of the defendants to refrain from bidding against

each other in the purchase of cattle is combination in restraint of trade; so also their agreement to bid up prices to stimulate shipments, intending to cease from bidding when the shipments have arrived. The same result," continued the judge, "follows when we turn to the combination of defendants to fix prices upon and restrict the quantities of meat shipped to their agents or their customers. Such agreements can be nothing less than restriction upon competition, and, therefore, combination in restraint of trade; and thus viewed, the petition, as an entirety, makes out a case under the Sherman Act. . . . The demurrer is overruled, and the motion for preliminary injunction granted." On appeal, the case went to the Supreme Court, where it was argued in January, 1905, and decided on the 30th of the same month. The opinion of the court, rendered by Justice Holmes, with no dissent, affirmed, but modified, the decree of injunction issued by Judge Grosscup; the aim of the modifications being to give more definiteness to the decree. "The defendants," said Justice Holmes, for example, "cannot be ordered to compete, but they properly can be forbidden to give directions or to make agreements not to compete. The injunction follows the charge. No objection was made on the ground that it is not confined to the places specified in the bill. It seems to us, however, that it ought to set forth more exactly the transactions in which such directions and agreements are forbidden. The trade in fresh meat referred to should be defined somewhat as it is in the bill, and the sales of stock should be confined to sales of stock at the stock-yards named, which stock is sent from other States to the stock-yards for sale or is bought at those yards for transport to another State."—*Federal anti-trust decisions, 1900-1906, v. 2*, prepared and edited by J. A. Finch, by direction of the attorney-general (*Washington: Government Printing Office, 1907*).

On March 7, 1904, the House of Representatives adopted a resolution requesting the secretary of commerce and labor to "investigate the causes of the low prices of beef cattle in the United States since July 1st, 1903, and the unusually large margins between the prices of beef cattle and the selling prices of fresh beef, and whether the same conditions have resulted in whole or in part from any contract, combination, in the form of trust or otherwise, or conspiracy, in restraint of commerce among the several States and Territories or with foreign countries; also, whether said prices have been controlled in whole or in part by any corporation, joint stock company, or corporate combination engaged in commerce among the several States or with foreign nations; and, if so, to investigate the organization, capitalization, profits, conduct and management of the business of such corporations, companies, and corporate combinations, and to make early report of his findings according to law." In compliance with this resolution, the commissioner of corporations, Mr. James R. Garfield, went to Chicago in April and began the requested investigation, which was prosecuted throughout most of the ensuing year. "The inquiries of the Bureau of Corporations were naturally concerned chiefly with the six great concerns which, by the injunction of 1902, were grouped together, and which were popularly considered as the Beef Trust. The 'Big Six,' in the approximate order of their magnitude as indicated by the number of animals slaughtered, are: Swift & Co., with seven large plants; Armour & Co., and the Armour Packing Company, which have the same stockholders, and which together operate five pack-

ing-houses; the National Packing Company, with eight comparatively large plants and two or three minor ones; Morris & Co., operating three plants; the Cudahy Packing Company, with three plants in the middle West and a minor one at Los Angeles; and the Schwarzschild & Sulzberger Company, operating three plants. [See BIG FIVE.] Nearly all of the important packing-houses of these six companies are situated in the eight great livestock markets,—Chicago, Kansas City, South Omaha, East St. Louis, South St. Joseph, Fort Worth, South St. Paul, and Sioux City." As for the National Packing Company, it grew, apparently, out of an abortive scheme for the consolidation of the other five concerns which was rumored in 1902. "Shortly prior to the formation of this company the Armour interests had acquired control of the G. H. Hammond Company and the Omaha Packing Company, the Swifts had secured the Anglo-American Provision Company and the Fowler Packing Association, and the Morris family had become dominant in the United Dressed Beef Company of New York. The National Packing Company, organized in 1903, took over the control of the various corporations thus previously acquired by the three packing interests named, and has since absorbed two or three other smaller concerns. The directorate of the National Company consist almost wholly of representatives of the Armour, Swift, and Morris companies. Aside from this community of interest, the bureau finds that there is no important inter-ownership of securities among the six leading packing companies. The 'Big Six' are by no means the only slaughterers of cattle in the United States. They, with a few minor affiliated concerns, killed 5,521,697 cattle in 1903, while, from the best available data, the Bureau of Corporations computes the total slaughter of the country at about 12,500,000. But the proportion of 45 per cent. thus indicated by no means measures the full economic significance of the six great packers. Their importance lies in the fact that they are the only concerns which do an extensive business in shipping dressed beef. . . . The 'Big Six' kill about 98 per cent. of the cattle slaughtered at the eight leading Western markets above named."—E. D. Durand, *Beef industry and the government investigation (American Review of Reviews, Apr., 1905)*.—Early in March, 1905, just before the adjournment of Congress, his report of it, in part, was transmitted by the president to Congress. The following summary of important facts set forth in the extended report was published in *The Outlook* of the following week: "The report as sent to Congress deals with the prices of cattle and dressed beef, the margins between such prices, and the organization, conduct, and profits of the corporations engaged in the beef-packing business. In some respects the conclusions presented are distinctly favorable to the packers; in others, quite as unfavorable. It appears that the profits of the six great companies whose operations were covered by the investigation were very much smaller during the years 1902 and 1903 than the public had been led, suppose,—that, in fact, for a part of that period the business was conducted at an actual loss. The percentage of profit on the gross volume of business during the years 1902-4 was comparatively low. That realized by Swift & Co. is placed at two per cent. This, however, we repeat, is the percentage on total sales, which is a very different thing from profit on the investment. It is a well-known fact that the actual capitalization of the packing companies is very

much less than the annual volume of business. From statements made by the six companies to the Bureau of Corporations it appears that their gross business is not less than \$700,000,000 per year, while their nominal capitalization is only \$88,000,000, exclusive of \$5,000,000 bonds of Swift & Co. On the other hand, it is practically impossible, as the report shows, to determine accurately just what proportion of the total investment represents plants and properties concerned with the beef industry exclusively. Still, it is obvious that Swift & Co.'s net profit of two per cent. on their sales would amount to very much more than two per cent. on their investment. The report makes an approximate estimate of twelve per cent. On one other count the report is favorable to the companies. It declares that they are apparently not overcapitalized. This conclusion, it is true, is robbed of some of its exculpatory force when the private-car system is taken into consideration. It is shown that the companies' profits on refrigerator cars, revived from mileage paid by the railroads, has ranged from 14 to 22 per cent. The report gives clear and definite information as to the trust's field of operations. It shows that the six companies slaughtered in 1903 only about 45 per cent. of all the cattle killed in that year, but that these companies slaughter nearly 98 per cent. of all the cattle killed in the leading Western packing centers, and that they control a large percentage of the trade in beef in many large cities—75 per cent. in New York, 85 per cent. in Boston, 95 per cent. in Providence, and in a number of other important cities from 50 to 90 per cent. In all these centers of population the consumer is now paying more for meats than ever before, while the cattle-grower on the Western plains is receiving less for his beeves. These two facts are doubtless capable of explanation, but the published results of the investigation ordered by Congress throw little light on the matter."

Soon after the publication of the report of the Bureau of Corporations a special federal grand jury at Chicago began the investigation of charges brought by the attorney-general of the United States against five of the corporations engaged in the meat-packing business and seventeen of their officials. An indictment was returned by the grand jury on July 1, 1905, charging, in a number of counts, persistent violation of the injunction laid on these corporations and their officials by Judge Grosscup with affirmation by the Supreme Court, and continued combination in restraint of trade,—by requiring their purchasing agents to refrain from bidding in good faith against one another; by agreements that fixed the prices of beef; by restricting sales to maintain prices, etc. On the trial of the indictment, which was begun on January 29, and concluded on March 21, 1906, the defendants claimed immunity, under that clause of the fifth amendment to the constitution of the United States which reads: "Nor shall any person be compelled in any criminal case to be a witness against himself." Their claim for immunity under this constitutional prescription was founded on the fact that "upon the lawful requirement of the Commissioner of Corporations" they "had furnished evidence, documentary and otherwise, of and concerning the matters charged in the indictment"; and that a section of the act creating the Department of Commerce and Labor provides that persons testifying or producing evidence before the commissioner shall be entitled to the immunities conferred by the act in relation to testimony before

the Interstate Commerce Commission of Feb. 11, 1893. Judge Humphrey, of the United States district court, before whom the case was tried, sustained the plea in his charge to the jury, so far as concerned the individual defendants, saying: "Under the law of this case, the immunity pleas filed by the defendants will be sustained as to the individual defendants, the natural persons, and denied as to the corporations, the artificial persons, and your verdict will be in favor of the defendants as to the individuals, and in favor of the Government as to the corporations." The same Federal grand jury at Chicago which returned the indictments dealt with in the case mentioned above brought another indictment against four men in the employ of one of the meat-packing companies, who were accused of unlawfully combining and agreeing to solicit rebates for their corporation from the Michigan Central, the Chicago, Rock Island and Pacific, the Grand Trunk Western, the Lehigh Valley, the Boston and Maine, and the Mobile and Ohio railroads. It was charged that the defendants conspired with one another in presenting to the railroad companies pretended claims for damages which were in fact claims for rebates. They were brought for trial before Judge Humphrey in September, 1905, and pleaded guilty. The judge then pronounced sentence on them as follows: "Punishment for this offense as fixed by Congress has a wide range, giving the Court unusual latitude, ranging from a nominal fine without imprisonment to a heavy fine and two years' imprisonment, all in the discretion of the Court. I am disposed to consider this case with reasonable moderation. The sentence of the Court in the case of the defendant Weil will be a fine of \$10,000 and costs, and commitment to the county jail until the fine is paid, and in the cases of Todd, Skipworth, and Cusey a fine of \$5,000 and costs, with the same provision in regard to payment."

1904.—Views contained in party platforms. See U. S. A.: 1904 (May-November).

1904-1909.—Standard Oil Company.—Federal government investigation of its methods of business.—Criminal prosecutions for violation of the law against rebates.—Fine of \$29,000,000 and its annulment.—Acquittal of the company.—After a dozen years or more of slight oil production in Kansas, that state became quite suddenly, in 1904, one of the important sources of petroleum supply. The Standard Oil Company had taken care to be prepared for whatever development might occur, and had organized its operations in this western field under the name of the Prairie Oil and Gas Company, of Kansas. Its refineries were ready to furnish a market to the Kansas producers of crude oil, and they had no other. Independent enterprises in oil refining were made quite impossible, and the Prairie Oil and Gas Company was complete master of the situation. The Kansas oil producers were soon writhing under its dictation of prices and rules of dealing, as the Pennsylvanians had been years before, and the Kansas legislature came promptly to their rescue. In the winter of 1904-1905 it passed five vigorous acts; authorizing the establishment of a state oil refinery; making pipe lines common carriers within the state; placing them under the jurisdiction of the state board of railroad commissioners; fixing maximum rates for the transportation of oil by freight or pipe line; and, finally, prohibiting discrimination between localities in the sale of any commodities. Furthermore, the anti-trust laws of the state

were brought into action against the Standard Oil Company and the railroads accused of giving it special rates and privileges. At the same time, the Kansas situation was brought to the attention of Congress and the Federal executive. On motion of a Kansas representative, the lower House of Congress, in February, adopted a resolution calling on the president for an investigation of the methods of business pursued by the Standard Oil Company. The desired investigation was conducted in the following year by Commissioner Garfield, the head of the Bureau of Corporations, and his report was communicated to Congress on May 5, 1906, with an accompanying special message, by the president. Nothing of the detail of facts in the report can be given here; but the conclusions drawn from them by the commissioner were summed up by him, as follows: "Upon the request of its attorney, all the essential facts discovered by this Bureau were presented to the company at the close of the investigation, and an exhaustive statement relating thereto was made by its chief traffic officer. There was no denial of the facts found, but explanations of particular situations were offered, and it was urged that the facts did not show any violation by the Standard of the letter or spirit of the interstate-commerce law. A most careful review of the facts and the explanations leads to the following conclusions: The Standard Oil Company has habitually received from the railroads, and is now receiving, secret rates and other unjust and illegal discriminations. During 1904 the Standard saved about three-quarters of a million dollars through the secret rates discovered by the Bureau of Corporations, and of course there may be other secret rates which the Bureau has not discovered. This amount represents the difference between the open rates and the rates actually paid. Many of these discriminations were clearly in violation of the interstate-commerce law, and others, whether technically illegal or not, had the same effect upon competitors. On some State business secret rates were applied by means of rebates. These discriminations have been so long continued, so secret, so ingeniously applied to new conditions of trade, and so large in amount as to make it certain that they were due to concerted action by the Standard and the railroads.

"The Standard Oil Company is receiving unjust discriminations in open rates. The published rates from the leading Standard shipping points are relatively much lower than rates from the shipping points of its competitors. The advantage to the Standard over its competitors from such open discriminations is enormous, probably as important as that obtained through the secret rates. If an unfair discrimination be obtained by one shipper through a device which in itself is seemingly not prohibited by law, that fact shows that the law is defective and should be strengthened; it does not show that the discrimination is proper or just."—*Report of the commissioner of corporations on the transportation of petroleum, May 2, 1906, Letter of submittal, pp. xxi-xxv* (50th Congress, 1st Session House of Representatives, Document no. 812).

Consequent on the information secured by this investigation, criminal proceedings against the Standard Oil Company in its various state organizations were instituted in 1906-1907. The number and character of the indictments found in these cases are set forth in tabular form, in an article on "The Oil Trust and the Government," by Francis Walker, published in the *Political Science Quarterly*, March, 1908. The following

statement of them is summarized from that table:

In the northern district of Illinois, Aug. 27, 1906, against the Standard Oil Company of Indiana, 1903 and 134 indictments on shipments over the Chicago and Alton railway, from Whiting, Indiana, to East St. Louis, Illinois, and from Chappell, Illinois, to St. Louis, Missouri.

In the same district, same date, against same Company, 2124 and 220 indictments on shipments over the Chicago, Burlington and Quincy railway, from Whiting to East St. Louis and St. Louis.

In the same district, same date, against same company, 1318 and 597 indictments on shipments over the Chicago and Eastern Illinois and the Evansville and Terre Haute railways, from Whiting to Evansville.

In the same district, same date, against same company, 103 indictments, on shipments over the Chicago and Eastern Illinois and the Evansville and Terre Haute railways from Whiting, via Grand Junction, Tennessee, to various points in the South.

In the eastern division of the western district of Tennessee, Oct. 16, 1906, against the Standard Oil Company of Indiana, 1524 indictments, on shipments over the Illinois Central and Southern railways, from Evansville, via Grand Junction, to various points.

In the eastern district of Missouri, Nov. 18, 1906, against the Waters-Pierce Oil Company, seventy-six indictments, on shipments over the St. Louis, Iron Mountain and Southern railway, to various points.

In the western district of Louisiana, Jan. 28, 1907, against the Waters-Pierce Oil Company, thirty-two indictments, on shipments over the St. Louis, Iron Mountain and Southern railway, to various points.

In the western district of New York, August 10, 1907, against the Vacuum Oil Company, twenty-three indictments, on shipments from Olean to Vermont.

In the western district of New York, Aug. 24, 1906, against the Standard Oil Company of New York, twenty-three and 123 indictments, on shipments from Olean to Vermont.

In the same district, Aug. 9, 1907, against same company, 188 and forty indictments, on shipments from Olean, New York, to Burlington, Vermont, over New York Central and Rutland and Vermont Central railways.

In same district, same date, against the Vacuum Oil Company, 188 and forty indictments on shipments from Olean to Burlington and to Rutland and Burlington.

In same district, Sept. 6, 1907, against the Standard Oil Company of New York, fifty-four indictments, on shipments from Olean and Rochester to points in Vermont. The most notable of these criminal prosecutions has been the one described first in the list above. The opening chapter of its history is sketched as follows by Francis Walker, in the article already referred to: "The only important case which, up to December, 1907, had come to trial, was the indictment against the Standard Oil Company of Indiana for accepting a secret rate on shipments over the Chicago and Alton Railway, from Whiting Indiana, to East St. Louis, Illinois, and from Chappell, Illinois, to St. Louis, Missouri. The published rate on this traffic was eighteen cents per hundred pounds (as far as East St. Louis, a bridge toll of one and a half cents being added on shipments to St. Louis); while the rate paid by the Standard Oil Company of Indiana, during the period of about three years

covered by the indictment and for many years before, was only six cents per hundred pounds. On this rate, the Standard had transported, as charged in the indictment, 1903 carloads of oil, each carload being made the subject of a distinct count and separate proof. The trial of this case began in Chicago, on March 4, 1907. . . . The jury returned a verdict of guilty on 1462 counts, on April 14, 1907: a considerable number of counts, namely 441, were thrown out on technical grounds. . . . The court held . . . that the unlawful rate was made on a carload basis, and that each carload unlawfully transported constituted a distinct offence. In considering the amount of the fine to be levied, the court demanded information from the officials of the Standard Oil Company regarding the net earnings and dividends of the chief holding company of the trust—the Standard Oil Company of New Jersey. Their attendance and testimony were obtained only by writ of subpoena; and it was admitted that the net profits during the years 1903 to 1905 (when these rebates existed) amounted to \$81,336,994, \$61,570,110, and \$57,459,356 respectively. . . . The court adjudged, on August 3, 1907, that the defendant should pay the maximum penalty and fined the Standard Oil Company \$20,000 for each offence, that is, for each of the 1462 counts in the indictment upon which conviction was obtained. The total fine, therefore, amounting to \$29,240,000."—F. Walker, *Oil trust and the government (Political Science Quarterly, Mar., 1908)*.

On a writ of error the case went now to the United States Circuit Court of Appeals for the Seventh Circuit, where it was argued at the April session, 1908, and the opinion, by Judge Peter S. Grosscup, circuit judge, delivered on the 22d of the following July. In his opinion the district court was held to have erred in deciding that each single carload of oil was to be dealt with as a separate offence, and that it reasoned erroneously in determining the fine imposed. On this latter point Judge Grosscup said: "Briefly stated, the reason of the trial court for imposing this sentence was because, after conviction and before sentence, it was brought out on an examination of some of the officers and stockholders of the Standard Oil Company of New Jersey, that the capital stock of the Standard Oil Company of Indiana, the defendants before the court, was principally owned by the New Jersey corporation, a corporation not before the court—the trial court adding (upon no evidence however to be found in the record, and upon no information specially referred to) that in concessions of the character for which the defendant before the court had been indicted, tried, and convicted, the New Jersey corporation was not a 'virgin' offender. Is a sentence such as this, based on reasoning such as that, sound? Passing over the fact that no word of evidence or other information supporting the trial court's comment is to be found in the record, would the comment, if duly proven, justify a sentence such as this—one that otherwise would not have been imposed? Can a court, without abuse of judicial discretion, wipe out all the property of the defendant before the court, and all the assets to which its creditors look, in an effort to reach and punish a party that is not before the court—a party that has not been convicted, has not been tried, has not been indicted even? Can an American judge, without abuse of judicial discretion, condemn any one who has not had his day in court? . . . The judgment of the District Court is reversed and the case remanded with instructions to grant

a new trial, and proceed further in accordance with this opinion." The government failed in attempts to secure a rehearing before the Appellate court, as well as in an application for the reviewing of the case by the Supreme Court. On the new trial to which the case was remanded Judge Landis, whose judgment had been set aside, declined to sit, and Judge A. B. Anderson, of Indianapolis, was called to Chicago to occupy his bench. The trial was opened on Feb. 23, 1909. On March 2 Judge Anderson sustained the motion of the defense that the government must proceed on the theory that there were thirty-six alleged offences—that is, that each settlement on which an alleged rebate was paid instead of each carload, constituted a separate offence. This made it impossible to claim a penalty beyond \$720,000, being at the rate of \$20,000 for each offence. But even that was put out of the question by the ultimate decision of the judge, that the law, as laid down by the United States Court of Appeals, required him to direct the jury to find the Standard Oil Company not guilty on the charge of accepting rebates from the Chicago and Alton railroad. This instruction he gave on March 10, thus bringing the case to an end. The outcome in this case was said to mean that all but two of the pending indictments against the Standard Oil Company of Indiana, as recapitulated above, are void and would be abandoned by the government. The two cases not affected are cases involving the shipment of 1915 carloads of oil from Whiting, Indiana, to Evansville, Indiana, via Dolton junction, over the Chicago and Eastern Illinois railroad. On March 15, five days after the acquittal of the company in Illinois, a fine of \$20,000 was imposed upon it by the United States district court of the western district of New York, on one of the indictments founded on shipments from Rochester and Olean to points in Vermont. Previously, the New York Central railroad had paid a heavy fine for granting rebates on those shipments. Numerous state prosecutions, under state laws in Missouri, Texas, Minnesota, Ohio, and elsewhere, had been assailing the monopolistic corporation simultaneously with the proceedings of the general government against it, and some of them with greater seriousness of effect than the Federal prosecutors had accomplished. The more important of these were in Texas, against the subsidiary Waters-Pierce Oil Company of Missouri, and in Missouri, against that company in association with the Standard of Indiana, and with another of the same trust family. The Texas suit, after making its slow way through the state courts and to the United States Supreme Court, came to its conclusion early in 1909, with the result of a fine of \$1,623,500, and the exclusion of the company from business in the state. The suit in Missouri, as decided at about the same time by the Supreme Court of the state, resulted in an order for the dissolution of the Waters-Pierce Company and for the perpetual exclusion of the other companies, chartered elsewhere, from operations within the state. The outcome of this vindication of the law of the state is understood to have been an arrangement under which the business of the Waters-Pierce Company is taken over by a new company, the stock of which is held by trustees approved by the Supreme Court of the state and acting as officers of the court.

1904-1911.—Movement to break political power\* of trusts. See NEW JERSEY: 1904-1911.

1905-1906.—Tobacco trust case of Hale vs. Henkel.—Denial by the Supreme Court of the claim of corporations to be exempt from the

production of books and papers before a grand jury.—A proceeding begun by the government of the United States, in the spring of 1905, to ascertain the lawfulness or unlawfulness of the methods of business pursued by the so-called tobacco trust, was embarrassed by the refusal of a witness to give evidence for which he was summoned before the grand jury of the Circuit Court of the United States for the southern district of New York. The case pending was between the United States and the American Tobacco Company and MacAndrews & Forbes Company. The witness, Hale, was secretary and treasurer of the MacAndrews & Forbes Company. He refused to answer any questions that were put to him concerning the business of that company, or to produce any of the books, accounts, contracts, correspondence, etc., that were demanded, being advised by counsel that he was under no legal obligation to do so, and that the evidence given or produced by him might tend to incriminate himself. He was held to be in contempt of court and was committed to the custody of the United States Marshal. Being then, on a writ of *habeas corpus*, brought before another judge of the same court, after a hearing, the writ was discharged and he was remanded to custody (June 18, 1905). An appeal to the Supreme Court followed, which was argued in the early days of January, 1906, and decided on the following March 12. The decision of the court, rendered by Justice Brown, was on two issues which it found to be presented in the case: the first involving "the immunity of the witness from oral examination; the second the legality of his action in refusing to produce the documents called for by the *subpoena duces tecum*." The witness justified his refusal to answer questions, "1st upon the ground that there was no specific 'charge' pending before the grand jury against any particular person; 2d that the answers would tend to criminate him." On the first point the court found it "entirely clear that under the practice in this country, at least, the examination of witnesses need not be preceded by a presentment or indictment formally drawn up, but that the grand jury may proceed, either upon their own knowledge or upon the examination of witnesses, to inquire for themselves whether a crime cognizable by the Court has been committed." As to the plea of an apprehended self-incrimination, the court held that the witness was protected by the act which provides that no person shall be prosecuted on account of anything concerning which he may testify or produce evidence. But it was further insisted that while the immunity statute may protect individual witnesses it would not protect the corporation of which the appellant was the agent and representative. "This is true," says the court, "but the answer is that it was not designed to do so. The right of a person under the Fifth Amendment to refuse to incriminate himself is purely a personal privilege of the witness. It was never intended to permit him to plead the fact that some third person might be incriminated by his testimony, even though he were the agent of such person."

On the second issue in the case, the substance of the decision is in the following passages from it: "Having already held that, by reason of the immunity act of 1903, the witness could not avail himself of the Fifth Amendment, it follows that he cannot set up that Amendment as against the production of the books and papers, since in respect to these he would also be protected by the immunity act. . . . We are of the opinion that there is a clear distinction in this particular be-

tween an individual and a corporation, and that the latter has no right to refuse to submit its books and papers for an examination at the suit of the State. . . . The individual may stand upon his constitutional rights as a citizen. He is entitled to carry on his private business in his own way. . . . Among his rights are a refusal to incriminate himself, and the immunity of himself and his property from arrest or seizure except under a warrant of the law. . . . Upon the other hand, the corporation is a creature of the State. It is presumed to be incorporated for the benefit of the public. . . . Its rights to act as a corporation are only preserved to it so long as it obeys the laws of its creation. There is a reserved right in the Legislature to investigate its contracts and to find out whether it has exceeded its powers. . . . The defense amounts to this: That an officer of a corporation, which is charged with a criminal violation of the statute, may plead the criminality of such corporation as a refusal to produce its books. To state this proposition is to answer it. While an individual may lawfully refuse to answer incriminating questions unless protected by an immunity statute, it does not follow that a corporation, vested with special privileges and franchises, may refuse to show its hand when charged with an abuse of such privileges." Taking note of the fact that the franchises of the corporation in this case were derived from one of the states, the court proceeds to say: "Such franchises, so far as they involve questions of inter-State commerce, must also be exercised in subordination to the power of Congress to regulate such commerce, and in respect to this the General Government may also assert a sovereign authority to ascertain whether such franchises have been exercised in a lawful manner, with due regard to its own laws. . . . The powers of the General Government in this particular, in vindication of its own laws, are the same as if the corporation had been created by an act of Congress." Justices Harlan and McKenna dissented from some of the views set forth in the opinion of the majority, as declared by Justice Brown, but concurred in the final judgment, which affirmed the order of the Circuit Court, remanding the prisoner to the custody of the Marshal. Justice Brewer and the chief justice dissented from the conclusions relative to corporations, and from the judgment, holding that "the order of the Circuit Court should be reversed and the case remanded with instructions to discharge the petitioner, leaving the grand jury to initiate new proceedings not subject to the objections to this."—*Federal anti-trust decisions, 1000-1906*, prepared and edited by J. A. Finch by direction of the attorney-general, v. 2, p. 874 (Washington: Government printing office, 1907).

1906-1910.—Standard Oil Company.—Suit of the government for its dissolution.—Decree for its dissolution by the Circuit Court.—Appeal to the Supreme Court.—Entirely distinct from the criminal prosecutions of the Standard Oil Company by the United States government, as reviewed above was a suit begun in November, 1906, in the United States Circuit Court for the eastern division of Missouri. The former actions were to penalize the company for violations of the Elkins Act, by the procuring of railway rebates. The later suit was to dissolve the combination in restraint of trade which the company was alleged to be, and therefore illegally existing, in the view of the Sherman anti-trust law. The complaint was directed against the parent organization, known as the Standard Oil Company of New Jersey, with

its various subsidiary corporations. It was also directed against seven individuals namely, John D. Rockefeller, William Rockefeller, Henry M. Flagler, Henry H. Rogers (now deceased), John D. Archbold, Oliver H. Payne, and Charles M. Pratt. The main company, its branches, and these individuals were charged in the complaint with having entered into an agreement, combination, and conspiracy to restrain trade and commerce among the several states, to monopolize the trade in petroleum, both in its purchase and its shipment and transportation by pipe-line steamships and by rail, also in the manufacture and refining of petroleum. One of the evidences of its monopoly adduced by the government was the enormity of its earnings which were summarized thus: The Standard Oil trust and the Standard Oil Company, on an investment of \$69,024,480, had earned up to the end of 1906, \$838,783,783. Adding the estimated profits of 1907 and 1908, we have substantially, the brief states, a billion dollars earned by this company in twenty-seven years, with an original investment of about \$60,000,000. The United States asked for a perpetual injunction, and for the dissolution of the Standard Oil combination. Hearings were held in New York, Washington, Chicago, Cleveland, and St. Louis, about four hundred witnesses being examined. It was not until Apr. 5, 1906, that the case reached the stage of argument, before Judges Walter H. Sanborn, Willis Van Devanter, William C. Hook and Elmer B. Adams, constituting the United States Circuit Court at St. Louis. The decision of the court was announced on the following November 20, the four judges concurring in the opinion, written by Judge Sanborn, which held the Standard Oil Company to be an illegal corporation and decreed its dissolution. Appeal from the decree was taken to the Supreme Court where it was preceded by the appeal of the tobacco trust from a similar decree involving substantially the same questions. On motion of the government the cases were advanced on the docket and decisions were handed down in due time. See below: 1911: Supreme Court decisions in Standard Oil and tobacco trust cases.

1907.—Chief existing combinations.—Their operation through stock ownership.—"Passing the matter of railroad combinations, as to which it may be said that through stock ownership the control of all American lines is now concentrated in seven groups of parent properties, we are chiefly concerned with the practical use that has been made of the new corporate power by the largest and strongest of our manufacturing and industrial enterprises.

"The United States Steel Corporation, organized under the laws of New Jersey, with a capital stock of \$1,100,000,000 owns a majority of the stock of eleven subsidiary companies, and controls industries scattered over the entire country under different styles and corporate names. This corporation owns or manages 213 manufacturing and transportation plants and forty-one mines located in eighteen different States; it has more than 1,000 miles of railroad tracks to ore, coke and manufacturing properties, and a lake fleet of 112 vessels. This stock ownership gives it control of hundreds of millions of capital that is not represented by its own billion dollars of stock.

"The Amalgamated Copper Company, incorporated in New Jersey, has no asset whatever except the stocks of other corporations. It owns all the stock of four operating companies and a controlling interest in seven others, and has taken

them over by an issue of \$155,000,000 of its own stock.

"The American Smelting and Refining Company, organized under the laws of New Jersey, controls the business of thirteen corporations, in which it either owns the entire stock or a majority interest. Associated with it are the American Linseed Company, the National Lead Company and the United Lead Company, and they together control twenty-eight concerns and ninety-three affiliated corporations.

"The Standard Oil Company, incorporated in New Jersey, with a capital stock of \$110,000,000, controls, directs and manages more than seventy corporations through its possession of a majority of their stock. Some of these companies own stock in still other corporations, and all together the combine operates more than 400 separate and distinct properties, thus monopolizing 90 per cent. of the export oil trade and 84 per cent. of the domestic trade. The market value of its capitalization is about \$650,000,000, and all this vast property was brought together under one head without the payment of a single dollar of cash, the whole consolidation being effected through the issue of stock in the holding company in payment of stock in the companies that are held.

"The United Gas Improvement Company, incorporated in Pennsylvania, owns stock in thirty corporations doing the character of business for which it was organized, and in addition to this is interested in numerous street railway properties, including the New York City surface railways. With it is allied the Public Service Corporation of New Jersey and the Rhode Island Securities Company, which last named owns all the stock of the Rhode Island Company, which again has leased for 999 years several of the most important railroad companies doing business in that State. The power of this corporation, through this system of stock ownership, is scarcely calculable, and the value of properties controlled would equal hundreds of millions, although its own capital stock is but \$36,000,000.

"The American Tobacco Company, organized under the laws of New Jersey, with a capital stock of \$40,000,000, practically controls the whole market through its ownership of the stock of innumerable other corporations.

"The International Harvester Company, incorporated in New Jersey, with a capital stock of \$120,000,000, while probably not a holding company, maintains most, if not all, the corporations which it has bought out, and they are operated as if they were distinct and competing concerns.

"The American Sugar Refining Company, incorporated in New Jersey, with a common stock of \$40,000,000 controls fifty-three other corporations.

"The American Telegraph and Telephone Company, incorporated in New York, with a capital stock of \$250,000,000 controls, through stock ownership, thirty-five subsidiary corporations.

"The Western Union Telegraph Company owns stock in twenty-four other corporations; the Distillers' Security Company owns 90 per cent. of the stocks of the Distilling Company of America, and has acquired ninety-three plants, representing 60 per cent. of the industry; the Philadelphia Rapid Transit Company owns the stock of twelve elevated and street railway companies; the Brooklyn Rapid Transit Company owns the stock of seven others; the Metropolitan Securities Company of New York owns the stock of many traction companies, and the controlling interest in others;

the Inter-State Railways of New Jersey own all the stock of the United Power and Transportation Company, which latter company controls the capital and franchises of about forty other projected companies in New Jersey and Pennsylvania; while the International Mercantile Marine Company of New Jersey owns a majority of the shares of many of the most important steamship companies whose vessels cross the Atlantic Ocean.

"These are but a few instances of the promotion of combinations through stock ownership."—W. H. Ellis, attorney-general of Ohio, *Paper read at national conference on trusts and combinations, Chicago, Oct. 22, 1907.*

1907.—National conference on the trust question, invited by the National Civic Federation.—An assembly at Chicago, of delegates from all parts of the country, purporting to voice all interests, was brought about by the invitation of the National Civic Federation, in October, 1907, for a thorough discussion of the questions which troubled the country and confused its attitude toward trusts and combinations, as subjects of regulation by law. There had been a similar conference at Chicago in 1899, at the call of the civic federation of that city; but no common ground of agreement could then be found. The conference of 1907 held nine sessions, extending over four days. It adopted and presented to Congress and the president, resolutions pointing out "the necessity of legislation which shall render more secure the benefits already gained and better meet the changed conditions which have arisen during a long period of active progress, both in the enforcement of statute law and in the removal of grave abuses in the management of railroads and corporations."—*Proceedings of the National Conference on Trusts and Combinations, Chicago, Oct. 22-25, 1907 (New York: National Civic Federation, 1908).*

1907.—Corporation commission established in Oklahoma. See OKLAHOMA: 1907-1910.

1907-1909.—Theft of the sugar trust.—In the fall of 1907 disclosures were made to the government which led to an investigation of the methods whereby imports of raw sugar for the American Sugar Refining Company, known commonly as the sugar trust, were weighed for the payment of customs duties, at the company's docks in Williamsburgh and Jersey City. The result of the investigation was to prove that this enormously wealthy corporation had practiced systematic theft against the government. Several ingenious inventions of trickery with the weighing scales had been employed at the sugar docks prior to 1904, but the crowning one appears to have been brought to use in that year. "This," said the *New York Evening Post* of Apr. 29, 1900, in a full rehearsal of the story of the sugar trust larcenies, "consisted of a thin steel corset spring, which was inserted through a hole drilled in the uprights or stanchions supporting the scales. If inserted at a time when there was a load on the platform, its pressure against the walking beam of the scale resulted in creating a false balance, and in making the load appear considerably lighter than it really was. This little device proved to be so satisfactory for the purposes for which it was designed that it was fitted to all the seventeen government scales at the Havemeyer & Elder refinery. Holes were drilled in the stanchions of each of the scales—hence the 'case of the seventeen holes' to which Mr. Stimson called attention. So successful was the operation of this mechanism that it was used constantly down to the very day. November 20,

1907, when a United States Treasury agent found it in use. The method of use was simple. The scales were placed with the stanchions in a dark corner, next to the wall, and close beside this stanchion sat the company's checker, whose ostensible duty it was to record in a little book the weight of each load as it was read off to him by the government weigher standing at the other end of the scale. The checker's really important duty seems to have been, however, to manipulate the steel spring through the hole in the stanchion, so that on each truck load, the company which employed him was saved the payment of duty on some fourteen pounds of sugar. Evidence was adduced at the subsequent trial to show that the company considered this special service on the part of its checkers worthy of additional compensation. For although there were seventeen scales, all of which could be used for this purpose, practically all the weighing was done on six, and the six reliable checkers who, year in and year out, operated the little steel springs, all received extra pay in their weekly pay envelopes for this service." Consequent on the discovery of these facts, "several indictments were found against the Sugar Trust's employees, and with that discovery as a basis the government began to work up its case. . . . When the government came to work up its case and to fix approximately the amount out of which it had been defrauded, it was found possible to present a piece of evidence which so thoroughly clinched the case that defence, when it came to be made, was so weak as to be negligible. This evidence consisted of a tabulation comparing the weights of sugar on which duty was paid and the weights for which the company paid the planters between the time the first cargo of sugar of December, 1901, arrived at the refinery and the discovery of the fraud in November, 1907. It took a score or more of accountants working steadily for six months to complete the tabulation, but when it was finished the astonishing corroborative story it told made it well worth all the time and trouble expended. Never was there a better example of the deadly parallel. For every entry the weights on which duties were levied was set alongside of the weights for which the company paid the planters." The first result of the proceedings of the government against the sugar trust was a pecuniary settlement with it, concerning which the following official statement was given out at Washington, by Attorney-General Wickersham, on Apr. 29, 1909: "The Attorney-General, with the concurrence of the Secretary of the Treasury, has just approved a settlement between the American Sugar Refining Company and the United States Government of all the claims which the latter has against it arising out of the fraudulent weighing on the docks of its refineries at Brooklyn and Jersey City. In making this settlement the sugar company pays in full the recent judgment for the penalty in the amount of \$134,411.03, which was awarded against it by the jury in the case tried in the federal court last March, with interest, and agrees to take no appeal from the judgment. In addition to this, it pays into the United States treasury \$2,000,000 more, representing the duties which have been unpaid during the last twelve years, owing to the fraudulent practices; \$1,230,088.07 of this amount has already been paid in under protest to Collector Loeb on his reliquidation, as a result of the trial above mentioned, of the duties upon the cargoes entered at the Havemeyer & Elder refineries between the years 1901 and 1907, when the

frauds were discovered. The sugar company abandons its protests on these payments and gives up its right to appeal from Mr. Loeb's reliquidation and in addition to this pays into the United States treasury the above judgment and over \$760,000 more to cover the duties unpaid at the Havemeyer & Elder docks prior to 1907 and at the Jersey City refinery between 1896 and 1906. This settlement with the sugar company in nowise affects the criminal prosecution of the individuals who are responsible for the perpetration of these frauds, and such prosecutions will be pressed to a finish by the government." Soon after this settlement with the government by the sugar trust for shortage in payment of duties, the firm of Arbuckle Brothers made a similar settlement, paying \$605,573.19. A few days after the above announcement of a pecuniary settlement with the American Sugar Refining Company, the grand jury of the circuit court in the New York District presented indictments against Oliver Spitzer, who was superintendent on the company's docks, Thomas Kehoe, Eugene M. Voelker, Edward A. Boyle, J. R. Coyle, J. M. Halligan, Jr., and Patrick J. Hennessy. In November, further indictments were found against these employees of the company, and James F. Bendernagel, general superintendent of the Williamsburgh refinery for many years past, was arrested on an indictment found by the same grand jury. The trial of the accused, in the United States District Court, was opened on November 30. Late in December, convictions were secured against the weighers and checkers indicted. Oliver Spitzer, superintendent of the company's docks, turned states' evidence and was granted immunity from prosecution. (In the case of James F. Bendernagel the jury twice disagreed and the charge was nolle. Evidence brought out at the trial in December, 1910, led to the arrest, indictment and conviction of Ernest H. Gerbracht, general superintendent of the American Sugar Refining Company. On Jan. 17, 1910, Charles R. Heike, secretary and treasurer of the American Sugar Refining Company, was arraigned before Judge Hough in the criminal branch of the United States Circuit Court, charged with making false entries and conspiring to defraud the government. Heike was convicted and sentenced to pay a fine of \$5,000 and spend eight months in prison. The case was appealed and in due time came before the Supreme Court for decision. In January, 1913, the court affirmed the conviction in the lower court. President Taft, however, commuted the prison sentence on Mar. 2, 1913.)

1907-1909.—Suit of the government against the tobacco trust.—Decree of circuit court restraining the combined companies from interstate and foreign trade.—Report of commissioner of corporations on tobacco trust.—On July 10, 1907, the government began suit at New York against the so-called tobacco trust. The defendants in the case included sixty-five corporations and twenty-seven individuals, the principals, however, being six companies, namely, the American Tobacco Company, the British-American Tobacco Company, the Imperial Tobacco Company, the American Snuff Company, the American Cigar Company, and the United American Cigarette Company. Of these the parent organization, dominating all the others, is the American Tobacco Company, which began the finally gigantic combination in a small way in 1800. The object sought in the government's suit was an injunction to restrain the combination as such from engaging in interstate and foreign trade, or for the appointment of re-

ceivers to take the management of the business concerned. The case was argued before the Second Circuit Court of the United States in May, 1908, and the decision of the court was announced on the following November 7, Judges Lacombe, Noyes, and Coxe agreeing and Judge Ward dissenting. The court found that an injunction should issue against some, but not all, of the principal defendants, to prevent the continuance of their violation of the Sherman anti-trust law. It acquitted the trust, however, of the charge of dishonest and oppressive practices, and it denied the application for receiverships. The final decree of the court was filed on Dec. 15, 1908. Appeals to the Supreme Court of the United States were taken, both by the government and by the defendants and the case was decided in due time. (See below: 1911: Supreme Court decisions, etc.) Parts of an elaborate report on the organization of the tobacco combination were published in February, 1909, by the commissioner of corporations, Herbert Knox Smith. It showed the combination to be composed of "the American Tobacco Company and its three great subsidiary combinations, the American Snuff Company, the American Cigar Company, and the British-American Company, besides eighty-two other subsidiary concerns doing business in the United States, Porto Rico, and Cuba. The combination represents a total net capitalization of over \$316,000,000. A very small group of ten stockholders controls 60 per cent. of the outstanding voting stock of the American Tobacco Company, through which company the entire combination is controlled." A list of the subsidiary companies controlled, "including over twenty hitherto secretly controlled, so-called 'bogus independent concerns,'" is given in the report. It is shown also that the combination is practically the only important exporter of tobacco manufactures from this country. In 1891 the combination controlled 89 per cent of the business of cigarette manufactures, and this proportion practically is maintained. In cigars its output increased from 4 per cent of the business in 1897 to 14.7 per cent in 1906; while in manufactured tobacco (chewing, smoking, fine-cut, and snuff) "the combination's output increased from 7 per cent of the total in 1891 to 77 per cent in 1906. Finally, in 1906, the combination controlled of these separate products, respectively, plug, 82 per cent; smoking, 71 per cent; fine-cut, 81 per cent, and snuff, 96 per cent." In the year 1906 the combination used in the manufacture of its various products nearly 300,000,000 pounds of leaf tobacco. The report adds: "An idea of the absorption of competing plants and of the changes through combination within the last decade may be had from the fact that in 1897 the combination had ten plants, each producing over 50,000 pounds of manufactured tobacco or snuff per year, while there were 243 independent plants of the same class. In 1906, on the other hand, the combination had 45 plants of this class, and independent manufacturers 140. Especially conspicuous has been the absorption of the large plants. In 1897 the combination had eight plants, each producing over 1,000,000 pounds of these products per year, while its competitors had forty-six such plants. In 1906 the combination had thirty-four plants of this size, and independent concerns only seventeen."—See also KENTUCKY: 1905-1909.

1907-1912.—Suit to dissolve the alleged anthracite coal combination.—The following statements were made in an associated press dispatch from Philadelphia, Mar. 8, 1909: "Testimony of

the Government in its suit against the anthracite coal-carrying railroads and several coal companies, to dissolve a so-called Trust agreement, alleged to be existing among them, has been filed in the Circuit Court of the United States for the Eastern District of Pennsylvania. Suit was begun here on June 12, 1907, and in the course of three months all the defendants made answer, denying the allegations of the Government. Subsequently, the court appointed an examiner to take testimony, and a great part of last year was taken up in hearing witnesses, sessions being held mainly in Philadelphia and New York. The Government closed its case in New York several weeks ago, having taken more than its allotted time, and the next move will be for the Government to file a motion apportioning a certain amount of time for the defendant companies to present their witnesses for examination. Much of the testimony thus far has been documentary, and it is believed this will be the case with the defendants. After all the testimony is filed with the court for review, arguments will be had on the case." Not until Dec. 16, 1912, did the Supreme Court decide that the evidence presented by the government was not sufficient to establish the existence of an anthracite coal trust. However, it found that the existing railroads had purchased a majority of the stock of the Temple Iron Company in order to prevent the construction of a new road into the anthracite region. For this reason it ordered a dissolution of the interests controlling that company.

For the proceedings under the Commodity clause of the Hepburn Act, and the decision of the United States Supreme Court, see COMMODITY CLAUSE OF THE HEPBURN ACT; RAILROADS: 1887-1906; 1908-1909.

1908-1909.—Question of amending the Sherman anti-trust law.—Action of the National Civic Federation.—The resolutions adopted at the national conference of 1907 on the trust question, as summarized above, were duly presented to Congress at its next session, and to the president, with results which were stated at the annual meeting of the National Civic Federation in December, 1908, by its President, the Hon. Seth Low, as follows: "When these resolutions were presented to the two Houses, the Conference Committee was asked to submit a definite Bill in legislative form to carry out its proposals. . . . The Executive Committee of the Federation took the matter up. The result of its action was the preparation of a Bill, which was submitted in due time to Congress, and which became the subject of numerous hearings before the Judiciary Committees both of the House and of the Senate. Without changing the law, certain restraints of trade, if not disapproved in advance by some government authority, might be assured freedom from prosecution. The hearings before the Congressional Committees made it evident that no relief from the embarrassments caused by the Sherman Anti-Trust Law can be looked for along this line of procedure. . . . The mercantile classes favor amendments to the law which, instead of forbidding all restraints of trade, will forbid only unreasonable restraints of trade; and which will provide amnesty for the past, (1) on the theoretical ground that what has been done has often been done without any realization that it was contrary to the law; and (2) on the practical ground that to attempt to rip up what has already been done will destroy the industry of the country. The representatives of organized la-

bor, on the other hand, ask to be omitted altogether from the provisions of the Sherman Act. . . . These being the terms of the problem, it is apparent, on the face of things, that the effort to amend the Sherman Anti-Trust Law in any effective way is beset by difficulties at every turn. . . . The whole subject is made infinitely difficult by the Constitutional limitations upon the power of Congress, which have led the United States Supreme Court to decide, in effect, that Congress can regulate inter-State commerce, but cannot regulate the corporation that does it; because the corporation that does inter-State commerce is a creature of the State and not of the United States. The separate States, on the other hand, can regulate the corporations that do inter-State commerce, because they create them; but the States cannot regulate the inter-State commerce that is done, because under the United States Constitution, inter-State commerce is under National control. It cannot be too clearly apprehended that the effect of this situation is, that neither sovereignty—neither the National sovereignty nor the State sovereignty—can regulate both the agent that does inter-State commerce and the inter-State commerce that is done."

1909.—Forbidden to contribute to politics. See U. S. A.: 1907 (January).

1909.—Threatened combination to control the water power of the country.—Dissolution of a paper-making combination.—Merger of telephone and telegraph corporations.—Sugar trust settles conspiracy charge.—Illegality of a trust invalidates a debt to it.—Speaking at the National Irrigation Congress, convened at Spokane, Washington, in August, 1909, the national forester, Gifford Pinchot, declared that, notwithstanding the contradictions issued by the parties in interest, a gigantic combination was forming to seize the sources of the country's water power, and be in a position later to dominate all industry. "There could be no better illustration," he said, "of the eager, rapid, unwearyed absorption by capital of the rights which belong to all the people than the Water Power Trust, not yet formed, but in rapid progress of formation. This statement is true, but not unchallenged. We are met at every turn by the indignant denial of the water power interests. They tell us that there is no community of interest among them, and yet they appear year after year at these Congresses by their paid attorneys, asking for your influence to help them remove the few remaining obstacles to their perpetual and complete absorption of the remaining water powers. They tell us it has no significance that the General Electric interests are acquiring great groups of water powers in various parts of the United States, and dominating the power market, in the region of each group. And whoever dominates power, dominates all industry. . . . The time for us to agitate this question is now, before the separate circles of centralized control spread into the uniform, unbroken, nation-wide covering of a single gigantic Trust. There will be little chance for mere agitation after that. No man at all familiar with the situation can doubt that the time for effective protest is very short." The same warning has been given by others who are in a position to speak with knowledge, and heed has been given to them by the government. The annual report of the secretary of the interior, the Honorable Richard A. Ballinger, made public Nov. 28, 1909, contained the following important announcement: "In anticipation of new legislation by Congress to prevent the acquisition of power sites on the public domain

by private persons or corporations with the view of monopolizing or adversely controlling them against the public interest, there have been temporarily withdrawn from all forms of entry approximately 603,355 acres, covering all locations known to possess power possibilities on unappropriated lands outside of national forests. Without such withdrawals these sites would be enterable under existing laws, and their patenting would leave the general government powerless to impose any limitations as to their use. If the Federal government desires to exercise control or supervision over water-power development on the public domain, it can only do so by limitations imposed upon the disposal of power and reservoir sites upon the public lands, the waters of the streams being subject to State jurisdiction in their appropriation and beneficial use. I would, therefore, advise that the Congress be asked to enact a measure that will authorize the classification of all lands capable of being used for water-power development, and to direct their disposal, through this department. . . . Unreasonable or narrow restrictions beyond the necessity of public protection against monopoly, or extortion in charges, will, of course, defeat development and serve no useful purpose. The statute should, therefore, while giving full protection against the abuses of the privileges extended, so far as consistent, encourage investment in these projects; and it must always be borne in mind that excessive charges for the franchise will fall upon the consumer. Legislation of this character proceeds upon the theory that Congress can impose such contractual terms and conditions as it sees fit in the sale or use permitted of government lands so long as such limitations do not conflict with the powers properly exercised by the State wherein they may be situated."

By a decree of the United States Circuit Court, Judge Hough, at New York, in May, 1909, the Fiber and Manila Association, a combination of twenty-five paper manufacturers, located in many parts of the country, East and West, was adjudged to be an illegal combination in restraint of trade, and perpetually enjoined from further operations in such combination. The members were enjoined further from fixing prices or the qualities that shall be manufactured or to maintain any pool or fund made up of contributions from its members. Counsel for the association announced that no appeal would be made.

Announcement of one of the most important financial mergers of recent years was made Nov. 16, 1909, when the American Telephone and Telegraph Company disclosed its acquirement of control of the Western Union Telegraph Company. "The American Telephone and Telegraph Company has obtained the control of a substantial minority interest in the shares of the Western Union Telegraph Company," was the wording of the official statement, but it became known that sufficient voting rights of other stock had been obtained to give the telephone interests control of the telegraph company. According to a statement issued on May 1, 1909, the total capital and outstanding interest-bearing obligations of the American Telephone and Telegraph Company and allied systems was \$502,475,400. This amount included capital stock aggregating \$361,636,800, subdivided as follows: American Telephone and Telegraph company, \$208,393,500; associated operating companies in the United States and Canada, about thirty-five in number, \$142,674,400; associated holding and manufacturing companies, \$10,668,900.

The Western Union Telegraph Company has a capitalization of \$125,000,000 in stock and \$40,000,000 in bonds.

While the American Sugar Refining Company, in the spring of 1909, was being forced to make good to the government its defrauding of the Custom House, it was being compelled, at the same time, to indemnify a competitor in business. The Pennsylvania Sugar Refining Company, whose refinery had been established by Adolph Segal, of Philadelphia, in 1903, became financially embarrassed, and accepted a loan of \$1,250,000, from a person who acted secretly in the transaction for the American Sugar Refining Company. The loan was made on terms which gave the lender control of a majority of the stock of the Pennsylvania Sugar Refining Company, and Adolph Segal found, when too late, that the real lender was the sugar trust. It used its power to shut down the plant, which was said to be the most perfect of its kind, and the Pennsylvania Company was wrecked. It brought a suit for damages to the amount of \$30,000,000, inflicted upon it in contravention of the anti-trust law. Before the trial ended, negotiations were opened which resulted (June 8, 1909) in a settlement of the claim outside of court. The settlement was said to involve a cash payment by the American Company to the Pennsylvania Company of \$750,000, the cancellation of the \$1,250,000 loan made by the trust to Adolph Segal, of Philadelphia, and the return of securities given by Segal as collateral for the loan. (An appeal was taken to the Supreme Court, but in December, 1912, the indictments were dismissed on motion of the government, since the evidence necessary to convict was excluded by reason of the statute of limitations.)

In a suit brought by the Continental Wall Paper Company to recover a debt, payment of which was resisted on the ground that the company was an illegal combination in restraint of trade, the Supreme Court of the United States, on Feb. 1, 1909, affirmed a judgment of the circuit court of appeals which had dismissed the suit. The case was so decided by a bare majority of one. The opinion of the majority, delivered by Justice Harlan, held that a judgment in favor of the company would give effect to agreements constituting the illegal combination. "Upon the whole case," said Justice Harlan, "and without further citation of authority, we adjudge upon the admitted facts that the combination represented by the plaintiff in this case was illegal under the anti-trust act of 1890; is to be taken as one intended, and which would have the effect, directly to restrain and monopolize trade among the several states and with foreign states; and that the plaintiff cannot have a judgment for the amount of the account sued on because such a judgment would, in effect, be in aid of the execution of agreements constituting that illegal combination. We consequently hold that the circuit court of appeals properly sustained the third defense in the case and rightly dismissed the suit." In the dissenting opinion by Justice Holmes and others it was set forth that "whenever a party knows that he is buying from an illegal trust, and still more when he buys at a price that he thinks unreasonable, but is compelled to pay in order to get the goods he needs, he knows that he is doing an act in furtherance of the unlawful purpose of the trust, which always is to get the most it can for its wares. But that knowledge makes no difference, because the policy of not furthering the purposes of the trust is less important than the policy of preventing people from getting other

people's property for nothing when they purport to be buying it."

1910.—Special message of President Taft on legislation touching "trusts."—A special message, recommendatory of legislation on the two subjects of interstate commerce and the combinations called "trusts," was addressed to Congress by President Taft on Jan. 7, 1910. It had been expected that the executive would advise amendments to the Sherman anti-trust law, so-called, but he did not. On the contrary he favored the policy of leaving that law untouched, on the ground that its defects have been cured already to a great extent by judicial decisions, and that it is safer and better for the business interests of the country to trust the law to the gradual molding which the courts are giving it, than to undertake amendments which would start a new series of judicial interpretations. But the president's conclusions on this point were supplemented by the advocacy of an enactment to provide for the federal chartering of corporations engaged in interstate commerce, as a means of substituting continuous regulation of such organizations for the spasmodic and disturbing investigations which the government is now compelled frequently to institute.

In part, the president's discussion of these questions is as follows:—

"To the suggestion that this proposal of Federal incorporation for industrial combinations is intended to furnish them a refuge in which to continue industrial abuses under Federal protection, it should be said that the measure contemplated does not repeal the Sherman anti-trust law, and is not to be framed so as to permit the doing of the wrongs which it is the purpose of that law to prevent, but only to foster a continuance and advance of the highest industrial efficiency without permitting industrial abuses. . . . A Federal compulsory license law, urged as a substitute for a Federal incorporation law, is unnecessary except to reach that kind of corporation which, by virtue of the considerations already advanced, will take advantage voluntarily of an incorporation law, while the other State corporations doing an interstate business do not need the supervision or the regulation of a Federal license and would only be unnecessarily burdened thereby. The attorney-general, at my suggestion, has drafted a Federal incorporation bill embodying the views I have attempted to set forth, and it will be at the disposition of the appropriate committees of Congress."

1910.—Corporation tax introduced. See **TARIFF**: 1910: United States.

1910-1912.—Investigation of the beef trust.—An investigation of the business methods of the great meat-packing concerns at Chicago, by the grand jury of the United States District Court, Judge K. M. Landis presiding, was begun on Jan. 24, 1910. Indictments were returned against ten officials of Swift & Company, Armour & Company, and Morris & Company, under a penal provision of the Sherman Act. After a trial lasting more than three months the officials were acquitted on Mar. 26, 1912. The jurors balloted three times, four voting for conviction on the opening ballot. The total cost of the prosecution was \$600,000, one-sixth of which was borne by the government.

1911.—Agreement with the New York Clearing House. See **MONEY AND BANKING**: Modern period: 1907-1910.

1911.—Supreme Court decisions in Standard Oil and tobacco trust cases.—"On May 15 the United States Supreme Court declared the Stand-

ard Oil Company to be a combination in restraint of trade and ordered its dissolution within six months. The full bench concurred in the opinion which was prepared by the chief justice (White) and which affirmed the decree issued by the lower court in November, 1909. In reaching this conclusion the chief justice expressed the view that the Sherman Act prohibits contracts and combinations only when they unreasonably or unduly restrain interstate trade and commerce or unreasonably restrict competition. From this position Justice Harlan dissented sharply, remarking that this application of 'the rule of reason' had been expressly excluded by the court fifteen years before. . . . In obedience to the decree of the court the Standard Oil Company announced to its stockholders of record September 1 (1911) that the shares of the thirty-three subsidiary corporations would be distributed to them pro rata by the first of December."—C. H. Hayes and E. M. Sait, *Record of political events (Political Science Quarterly, Dec., 1911)*.—The public, however was by no means convinced that the power of the great oil combination was effectually curbed. The following voices the conviction of many even at that time: "As a result of these decisions and orders the Standard Oil Company has now been broken into thirty-eight companies. These companies are not to have common officers or directors. The stock of the Standard was not widely distributed and the new companies have common owners. The officers of seven of the more important new companies remain in the same quarters which the Standard Oil Company before occupied, 26 Broadway. President Taft announced that the plan of the administration in prosecuting trusts is to secure 'a decree of disintegration by which competition between its parts shall be restored and preserved.' Will this result be reached in the case of the Standard Oil Company? Will the officers of the seven large companies in different rooms of 26 Broadway really compete in prices? That this will occur has been widely doubted by the public from the outset, and on February 29, 1912, it was announced that the Waters-Pierce Company of Texas had alleged that the disintegrated companies are combining, and this company had instituted an investigation in order to show the facts. Also the 'Street' evidently does not take the Standard Oil decision seriously. When the case was in the courts, the stock gradually declined and reached a low level of 585. After the decision was rendered which finally dissolved the company, Standard Oil stock again rose until 600 was reached, more than 300 points higher than when the company was under attack. Apparently the men who know believe that the decision of the court will not be sufficiently destructive to reduce the great profits which the Standard has enjoyed and which will now go to the constituent companies."—C. R. Van Hise, *Concentration and control (1912)*, pp. 182-183. "On May 29 the Supreme Court ordered the dissolution of the American Tobacco Company on the ground that its monopoly of the industry and the acts by which it acquired the monopoly amounted to undue and unreasonable restraint of trade. Six months were allotted the company in which to make plans to create out of the elements now composing it a new condition, which shall be honestly in harmony with and not repugnant to the law." Justice Harlan again argued against applying the test of reasonableness and declined to consider the reorganization and continuance of the company under any guise whatever. On May 31 the company's stock fell 70 points on the New York Stock Exchange. . . . Tentative plans for reorganization

into fourteen independent companies were announced by the American Tobacco Company in October. On October 31 Attorney-General Wickersham pronounced them unsatisfactory but later agreed to certain modifications. The circuit court of New York approved the modified plans on November 8, 1911."—C. H. Hayes and E. M. Sait, *Record of political events (Political Science Quarterly, Dec., 1911)*.—"The outstanding securities, bonds, preferred and common stock, of the American Tobacco Company were found to aggregate \$223,168,250. The tobacco business, which was by far the larger part of the business of the company, was divided among three companies, the American Tobacco Company, having a capitalization of \$53,408,499; Liggett & Myers Tobacco Company, having a capitalization of \$67,447,499; and the P. Lorillard Company, having a capitalization of \$47,552,501. Thus these three companies together have a capitalization of \$168,408,499, which constitutes 70 per cent. of the entire business of the original company and leaves but 30 per cent. of the assets to be distributed among the other eleven companies. One small subsidiary company, the Amsterdam Supply Company, which was a purchasing agency, was dissolved and the assets transferred into cash and distributed to the share-holders. A number of companies, including the Conley Foil Company, the MacAndrews & Forbes Company, the American Snuff Company, the American Stogie Company, and the American Cigar Company, each were required to divide into not less than two companies each, or to convert their assets into cash. Further the restrictive arrangements which had been made by the American Tobacco Company with foreign companies were abrogated. The fourteen companies are enjoined from cooperating in business in any way; they must not occupy the same offices; they cannot hold the stock of one another, or even stock in companies in which other companies hold stock. Each company must do business in its own house, and the products of each must bear the firm name. For five years they are enjoined from having common officers or directors or the same sales agents. The stock of the American Tobacco Company was, in a manner like that of Standard Oil, distributed proportionally to his holdings to each stockholder of the fourteen companies. There were twenty-nine men who held a dominating position in the old corporation and they in like manner hold a dominating position in the three new companies into which the chief assets of the old company have been divided. It is the opinion of the Attorney-General [Wickersham] that the disintegration ordered will accomplish the objects of the law, and will effectually prevent the recurrence of the agreements which, in the past, have resulted in a monopolistic situation. He says that 'the natural tendency of men to compete with one another will operate and the fact that there is community of stockholding cannot prevent that natural tendency.' . . . In the opinion of Mr. Louis Brandeis, one of the counsel for the independent companies, the order to disintegrate the American Tobacco Company will prove to be a farce. He says that not only was the tobacco business distributed among three companies, but the part of the business which was assigned to each company was such as to give them substantial monopoly for important lines of business assigned to them. Mr. Felix H. Levy, another of the attorneys of the independent companies, says the plan of disintegration 'is a sham and a subterfuge.' Mr. Samuel Untermyer says, 'They have simply changed its clothes; that

is all; and they have not made a very complete change at that.' As a matter of fact, we now have fourteen tobacco combinations which have the sanction of the courts instead of one that did not. It is notable that after the order was given by the Supreme Court to dissolve the corporation, the stock of the American Tobacco Company fell to \$390 per share; but that after the decision of the Circuit Court as to the kind of disintegration which was to take place, the common stock rose to as high a price as ever before in the history of the company, with the exception of a single day, \$529 per share. This is the result of more than four years' litigation which cost the independent companies and the American company vast sums of money, and the government as large or larger sums, all of which will ultimately be paid by the public. There remains to be mentioned the most notable feature of the tobacco decision. The Supreme Court . . . took on the function of giving an order to the lower court to do administrative work, of a kind which has usually been done by a commission, and for which a commission is much better adapted. When the order was executed as directed, the members of the disintegrated trust had the advantage of having the sanction of the law. The administrative work of the court in disintegrating the American Tobacco Company, already severely criticized and generally believed to be futile, is one of the best evidences of the lack of adaptation of the courts to the handling of the complex administrative problems of great concentration in industry."—C. R. Van Hise, *Concentration and control* (1912), pp. 184-187.

ALSO IN: R. L. Raymond, *Standard Oil and Tobacco cases* (*Harvard Law Review*, Nov., 1911, pp. 31-58).—F. B. Kellogg, *Results of Standard Oil decision*, (*American Review of Reviews*, June, 1912, pp. 728-730).

1911.—Du Pont Powder Company dissolved.—The prominence given to the decisions in the Standard Oil and tobacco cases has tended to obscure many of the important points developed in minor cases in the inferior courts. In the Circuit Court of the United States for the District of Delaware an opinion handed down on June 12, 1911, in *United States of America vs. E. I. du Pont de Nemours & Company*, discussed the possibility of a combination escaping the condemnation of the Anti-Trust Act by merely assuming a form not obnoxious to the provisions of the act. The decision read in part as follows: "The recent decisions of the Supreme Court make it clear that a combination cannot escape the condemnation of the anti-trust act merely by the form it assumes or by the dress it wears. It matters not whether the combination be 'in the form of a trust or otherwise,' whether it be in the form of a trade association or a corporation, if it arbitrarily uses its power to force weaker competitors out of business or to coerce them into a sale to or union with the combination, it puts a restraint upon interstate commerce and monopolizes or attempts to monopolize a part of that commerce in a sense that violates the anti-trust act. The record of the case now before us shows that from 1872 to 1902, a period of thirty years, the purpose of the trade associations had been to dominate the powder and explosives trade in the United States, by fixing prices, not according to any law of supply and demand, for they arbitrarily limited the output of each member, but according to the will of their managers. It appears, further, that although these associations were not always strong enough to control absolutely the prices of explosives, their purpose to do so was

never abandoned. Under the last of the trade association agreements—the one dated July 1, 1896, and which was in force until June 30, 1904—the control of the combination was firmer than it had before been. Succeeding the death of Eugene du Pont in January, 1902, and the advent of Thomas Coleman Du Pont and Pierre S. du Pont, the attempt was made to continue the restraint upon interstate commerce and the monopoly then existing by vesting, in a few corporations, the title to the assets of all the corporations affiliated with the trade association, then dissolving the corporations whose assets had been so acquired, and binding the few corporations owning the operating plants in one holding company, which should be able to prescribe policies and control the business of all the subsidiaries without uncertainties attendant upon a combination in the nature of a trade association. That attempt resulted in complete success. Much the larger part of the trade in black and smokeless powder and dynamite in the United States is now under the control of the combination supported by the 28 defendants above named. That combination is the successor of the combination in existence from 1896 to June 30, 1904. It is a significant fact that the trade association, organized under the agreement of July 1, 1896, was not dissolved until June 30, 1904. It had been utilized until that date by Thomas Coleman du Pont, Pierre S. du Pont and Alfred I. du Pont in suppressing competition and thereby building up a monopoly. Between February, 1902, and June, 1904, the combination had been so completely transmuted into a corporate form that the trade association was no longer necessary. Consequently, the trade association was dissolved and the process of dissolving the corporations whose capital stocks had been acquired, and concentrating their physical assets in one great corporation, was begun. Before the plan had been fully carried out this suit was commenced. The proofs satisfy us that the present form of combination is no less obnoxious to the law than was the combination under the trade association agreement, which was dissolved on June 30, 1904. The 28 defendants are associated in a combination which, whether the individual defendants were aware of the fact or not, has violated and still plans to violate both section 1 and section 2 of the anti-trust act. . . . Our power is defined in the fourth section of the anti-trust act. That section invests us 'with jurisdiction to prevent and restrain violation' of the act. The same section provides that the petition may contain a prayer that the violation of law therein alleged 'shall be enjoined or otherwise prohibited' It is our purpose, as it is our duty, to exert the power thus conferred on us to the extent necessary to 'prevent and restrain' further violations of the act. In other words, the relief we can give in this proceeding is preventive and injunctive only. If our decree, limited to that purpose, shall necessitate a discontinuance of present business methods, it is only because those methods are illegal. The incidental results of a sweeping injunction may be serious to the parties immediately concerned, but, in carrying out the command of the statute, which is as obligatory upon this court as it is upon the parties to this suit, such results should not stay our hand; they should only challenge our care that our decree be no more drastic than the facts of the case and the law demand. The dissolution of more than sixty corporations since the advent of the new management in 1902, and the consequent impossibility of restoring original conditions in the explosive trade, narrows the field of

operation of any decree we may make. It should not make the decree any the less effective, however. In the Standard Oil case Mr. Chief Justice White said: 'It may be conceded that ordinarily where it was found that acts had been done in violation of the statute, adequate measure of relief would result from restraining the doing of such acts in the future. *Swift v. United States*, 106 U. S. 375. But in a case like this, where the condition which has been brought about in violation of the statute, in and of itself, is not only a continued attempt to monopolize but also a monopolization, the duty to enforce the statute requires the application of broader and more controlling remedies.'—W. S. Stevens, *Industrial combinations and trusts*, pp. 424-428.

1911-1915.—Struggle of the Federal government against trusts. See U.S.A.: 1911-1915.

1912.—Investigation of United States Steel Corporation.—Testimony of James A. Farrell.—At the hearings before the committee on investigation of the United States Steel Corporation during the second session of the Sixty-second Congress in 1912, the question of supervision of corporations by governmental agencies received special consideration. James A. Farrell, president of the United States Steel Corporation, taking the position that it is not practicable for the government to fix even maximum prices for commodities or wages for labor, suggested as a remedy for the evils of monopoly, government supervision to the extent of compelling a policy of publicity on the part of the manufacturers and of granting the opportunity for agreements on prices between them. He said in part: "I believe that it is important for the Government to assume the power of such supervision of corporations engaged in interstate traffic as will result in full and clear publicity of their general operations, their receipts and expenditures and profits and losses, in order to protect investors and the people generally. . . . Such publicity as I have in mind is along the lines of the information that has been freely and fully given out by the United States Steel Corporation in its annual reports and frequent statements. . . . When it might appear to the Government board of supervision, either on their own initiative, or from the complaint of any considerable body of consumers, that prices in any line of industry are unreasonably high, they should be empowered to make inquiry into the facts, to call upon manufacturers to disclose their profits, and to determine and indicate to manufacturers their opinion as to the reasonableness of their price, subject, if necessary, to review by the courts as to any contention that prices were confiscatory. Likewise, when, in the opinion of any body of manufacturers, it should appear necessary, in order to prevent destructive competition, the lowering of wages, the impairment of plants, throwing workmen out of employment, and other similar evils through reduction of prices to levels which would not permit efficient plants to operate at a fair profit, it should be permissible for manufacturers or the owners of plants to enter into agreement as to such reasonable prices as might be necessary to prevent such results. To avoid the possibility of such manufacturers agreeing on excessive prices there would be the remedy of the opportunity of appeal by consumers to the Government board of supervision, and the consequent publicity, which would act as a restraint upon manufacturers from fixing excessive prices; penalties, such as forfeiture of Federal incorporation or other suitable means of redress could be enforced, if necessary, to dissuade manufacturers from main-

taining prices adjudged to be either excessive or ruinously low. . . . I do not believe in the repeal of the Sherman Act, but I believe the Sherman Act should be amended so as to enable manufacturers to know what they can do. We do not know now what we can do. . . . As the Sherman law is designed to prohibit monopoly, which would inevitably result from destructive competition, driving the weaker competitors out of business, it should be equally clear that it should permit such agreements among manufacturers as to prices as would enable them to avoid the destructive competition which is impliedly prohibited."—W. S. Stevens, *Industrial combinations and trusts*, pp. 561-563.

Also in J. A. Fitch, *United States Steel Corporation and labor (Annals of the American Academy of Political and Social Science, July, 1912, pp. 10-19)*.

1912-1914.—Enforcement of Sherman Act.—Numerous convictions.—Between 1912 and 1914 prosecutions and convictions under Sherman Act were unusually numerous. On Nov. 18, 1912, the Supreme Court held that the so-called bathtub trust was a combination in restraint of trade and ordered its dissolution. The individuals and corporations involved in the trust were convicted of criminal conspiracy and fines aggregating \$51,000 were imposed. On Feb. 13, 1913, twenty-nine officials of the National Cash Register Company, including the president, J. H. Patterson, were found guilty of criminal conspiracy under the Anti-Trust Act. Sentences of imprisonment for terms varying from three months to a year were imposed at Cincinnati. An order for the dissolution of the Union Pacific and Southern Pacific railroad merger was issued by the Supreme Court in December, 1912. The plan for the dissolution was approved on June 28, 1913, and provided that \$38,000,000 of Southern Pacific stock should be exchanged for \$42,000,000 of Baltimore and Ohio stock and the remaining \$88,000,000 of Southern Pacific stock should be sold by a trustee under restrictions. In a number of cases the department of justice was able to secure the voluntary dissolution of corporations which had been threatened with Federal prosecution. Notable among these were the American Telephone and Telegraph Company which in December, 1913, agreed to dispose of its Western Union stock, the New York, New Haven and Hartford railroad which relinquished control of the Boston and Maine in January, 1914, and the American Thread Company which agreed to dissolve on June 8, 1914. Not all the dissolutions were voluntary, however. On August 12, the United States District Court at Saint Paul found that the International Harvester Company was a monopoly in restraint of trade and ordered its dissolution.

1914.—Commodity clause decision. See COMMODITY CLAUSE OF THE HEPBURN ACT.

1914.—Federal Trade Commission and Clayton Act.—"By Act of Congress approved September 26, 1914, a non-partisan Federal commission was created, which is directed to 'prevent persons, partnerships, or corporations, excepting banks and common carriers subject to the acts to regulate commerce, from using unfair methods of competition in commerce.' To carry out the provisions of this act, the Federal Trade Commission composed of five members appointed by the President, is empowered to conduct hearings in any city of the United States. If unfair methods are shown, the commission shall direct the offenders to desist therefrom, and may apply to the U. S. Circuit

Court of Appeals for the enforcement of its orders. The commission is also empowered to enforce compliance with certain sections of the Clayton Act; to conduct investigations into business practice and management; to investigate the enforcement of decrees under the Sherman Act; and to investigate and report to Congress on foreign trade combinations. Maximum penalties of imprisonment for six months, a fine of \$1,000 or both, are provided for refusal to testify before the commission, falsification of evidence, and failure to submit required reports. . . . The Clayton Law which was approved October 15, 1914, is further entitled: 'An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes.' The provisions of the law that apply to trusts may be summarized as follows: 'It shall be unlawful for any person to discriminate in price between different purchasers of commodities, except where such discrimination merely allows for differences in quality, in quantity sold, or in selling and transportation costs, or is made in good faith to meet competition (sec. 2). No corporation shall acquire the whole or part of the stock or other share capital of any other corporation "where the effect of such acquisition may be to substantially lessen competition" between the two corporations, "or to restrain such commerce in any section or community," or tend to create a monopoly. This shall not prevent corporations from holding such stock simply for investment, its voting power not being used to lessen competition, or from forming legitimate subsidiary corporations (sec. 7). After two years from the approval of this Act, no person shall at the same time be a director or employee of more than one bank or trust company which has deposits, capital, surplus, and undivided profits aggregating more than \$5,000,000; and no person at the same time shall be a director in any two or more corporations engaged in commerce, any one of which has capital, surplus, and undivided profits aggregating more than \$1,000,000 (sec. 8). After two years from the approval of this act, no common carrier shall deal in the securities or supplies, or make any construction or maintenance contracts to the amount of more than \$50,000 in any one year, with any other corporation, when the common carrier has as one of its officials, or its agent in the particular transaction, any person who is an officer or agent or has a substantial interest in the corporation with which the business is done—unless the contract is awarded through competitive bidding, under the rules of the Interstate Commerce Commission (sec. 10). Any person who shall be injured in his business or property by reason of anything forbidden in the anti-trust laws may sue in a district court of the United States, and may recover threefold the damages sustained by him, and the cost of the suit (sec. 4). A decree rendered against the defendant in a suit brought by the United States under the anti-trust laws shall be *prima facie* evidence in any suit brought by any other party against the defendant; and the statute of limitations shall not run against any private right of action under the anti-trust laws during the pendency of a Federal suit under these laws based in whole or in part upon any matter essential to the private suit (sec. 5). Whenever a corporation violates any of the penal provisions of the anti-trust laws, such violation shall be deemed to be that of the individual directors, officers, or agents who have authorized or done the violating acts, under penalty of fine up to \$5,000, and imprisonment up to one year, or both (sec. 14). Any per-

son shall be entitled to sue in a Federal Court for injunctive relief against threatened immediate and irreparable loss or damage by a violation of the anti-trust laws (sec. 16). No injunction shall be granted by Federal judges in any labor dispute, unless necessary to prevent irreparable injury to property; and no injunction shall prohibit any person from quitting work, or from peacefully advising or persuading others to quit. No injunction shall forbid any person to cease to patronize or to employ any party to a labor dispute, or by peaceful and lawful means to recommend, advise, or persuade others so to do. No injunction shall forbid persons to assemble peaceably in a lawful manner, and for lawful purposes, or from doing anything, which might lawfully be done in the absence of the dispute, by any party to the dispute (sec. 20).'

"The Clayton Law prohibits specifically new holding company operations, interlocking directorates and price discriminations, while the Federal Trade Commission Act declares unfair methods of competition to be unlawful. The whole tenor of both acts is toward preventing control of so large a proportion of an industry by any combination that it becomes a menace to competitive conditions. Clearly the anti-monopoly mind of the American people is here expressed in large capitals. . . . The key section which emphasizes the anti-monopoly spirit is Section 7 of the Clayton Act: 'That no corporation engaged in commerce shall acquire, directly or indirectly, the whole or part of the stock or other share capital of another corporation also engaged in commerce where the effect of such acquisition may be to substantially lessen competition between the corporation whose stock is so acquired and the corporation making the acquisition, or to restrain such commerce in any section or community, or tend to create a monopoly of any line of commerce.' This excerpt from that section records the extreme legislation against corporate combination. No horizontal combination, big or little, is possible under this act for it is inconceivable that one of two competitors should acquire the other's stock and yet not disturb the competition between them. Strict construction of this Section 7 would prevent any further corporate combinations in the United States. It was an act of grace that closed the section with the saving clause that 'nothing contained in this section shall be held to affect or impair any right heretofore legally acquired.' This seems to say that such Trusts as have before September-October, 1914, succeeded in getting past the previous anti-trust barriers are to be tolerated as they are, but this act creates a stone wall barrier to stop them from any further combination growth and to prevent altogether the advance of any new combinations. It will be interesting to observe once more the penetrability of an impenetrable legislative wall if the evolutionary strength of the combination movement in the United States is not yet spent. Sections 6 and 20 of the Clayton Act make of it an American Magna Charta for organized labor in the thought of labor leaders. Section 6 exempts labor, agricultural, and horticultural organizations from being 'held or construed to be illegal combinations or conspiracies in restraint of trade, under the anti-trust laws.' Section 20 apparently sets limits to the use of the injunction against labor organizations. The frequent salting of the phraseology of the latter section with such ambiguous terms as 'peaceful,' 'peaceably,' 'peacefully,' 'lawfully,' 'lawful means,' 'lawful manner' and 'lawful purposes' raises question in the mind of

the lay reader whether limits set are not far more apparent than real. None the less organized labor sees its will written into an anti-trust statute of 1914 in clear contrast to the defeat of the proposed amendment similar to Section 6 of the Clayton Act during the original debates on the Sherman Act."—J. W. Jenks, *Trust problem*, pp. 206, 271-275.—See also CLAYTON ANTI-TRUST ACT; U.S.A.: 1914 (September).

Durand, *Trust problem*.—Idem, *Trust legislation of 1914 (Quarterly Journal of Economics, Nov., 1914, pp. 72-97)*.—A. A. Young, *Sherman Act and the new anti-trust legislation (Journal of Political Economy, Mar., 1915, pp. 201-220; Apr., 1915, pp. 305-326; May, 1915, pp. 417-436)*.

1915-1920.—Recent anti-trust decisions.—**Changing attitude of the courts.**—The period between 1915 and 1920 witnessed the reversal by the Supreme Court of decisions handed down by inferior Federal courts previous to 1915. On June 14, 1915, the Supreme Court refused to review the decision of the Circuit Court of Appeals, which had reversed the lower court in the case of the twenty-eight officials of the National Cash Register Company. By this refusal to review the government lost its case under the criminal clauses of the Sherman Act. The department of justice experienced a further disappointment when the court ordered that the International Harvester case be reargued in October, 1915. On August 24, 1915, the United States district court at Buffalo held that the Eastman Kodak Company was an illegal corporation within the meaning of the Sherman Act. Appeal from the decision was taken in the usual manner to the Supreme Court and the case was still pending in 1920. The government failed to establish its case against the Quaker Oats Company on Apr. 21, 1916, in the Circuit Court of Appeals at Chicago. The court held that the company was not a combination in restraint of trade. During 1917 the government's action against certain coal combines resulted in the trial of fifty-five coal operators and 108 corporations in New York City. The defendants were charged with combining in an illegal manner to fix the price of smokeless and semi-bituminous coal in the Virginia and West Virginia districts. The verdict was an acquittal for the accused. After losing in the lower courts the government won its case against the Lehigh Valley Railroad company by a unanimous decision of the Supreme Court on Dec. 6, 1920. The opinion, written by Justice Clarke, was a severe indictment of the practices of the Lehigh Coal Combine. It declared that the railroad company had adopted a policy of controlling the mining and transportation of anthracite coal before the anti-trust law was enacted, and after it was enacted, continued the policy with increasing energy. The company sought to evade the law by the organization of the Lehigh Valley Coal Sales Company. As a result of the decree the Lehigh Valley Railroad Company, the Lehigh Valley Coal Company, the Lehigh Valley Coal Sales Company, Coxe Brothers and Company, Inc., the Delaware, Susquehanna & Schuylkill Railroad Company must sever their interlocking directorates and establish themselves as independent industrial units.

1915-1920.—Steel corporation decisions.—"The action of the United States District Court for the District of New Jersey in the case of *United States v. The United States Steel Corporation* and others, handed down by the court in question on June 3 (1915) adds another to the series of important

court decisions intended to interpret and illustrate the meaning of the Sherman law, and will rank with the decisions of the Supreme Court of the United States in the Tobacco and Oil cases. The suit in question was instituted during the Taft administration (1911) and has been in course of prosecution for about three years. The present decision is a complete and thorough review of the immense mass of material relating to the steel industry, which has been collected by government bureaus, congressional committees, and court officers for several years past. In passing upon the great volume of data placed before it, the court states the questions at issue as follows: First: Was the Steel Corporation, when this bill was filed in 1911, prejudicing the public interests by unduly restricting competition or unduly obstructing the course of the steel and iron trade between the states or with foreign nations? . . . Second: Did the Steel Corporation, when it was formed in 1901, either by intent of those forming it, or by inherent nature of that company's contemplated acts, prejudice the public interest by unduly restricting competition or unduly obstructing the course of the steel and iron trade, interstate or foreign? . . . The two questions thus put are taken up for careful analysis and two distinct classes of conclusions are arrived at by the majority and minority of the court, both, however, uniting in the opinion that the application of the government for a dissolution order should be dismissed. In brief, the conclusion of the majority of the court is that, as to the defendants, it is apparent that the bill should be dismissed. Concerning the principal relief sought against the corporation and its subsidiaries, the opinion is expressed that the government has not made out a case that should be followed by a decree of dissolution and that sufficient reasons have not been afforded to justify the court in awarding an injunction against the further continuance of the concern in its present form. The minority of the court reaches the conclusions that the organizers of the Steel Corporation (1) intended to create a monopoly and to restrain trade, and (2) combined with others and attempted to monopolize trade within the meaning of the Sherman Act. Further it is held that the Steel Corporation itself (1) neither attempted nor possessed the power alone to do the unlawful things intended by its formation, but (2) unlawfully combined with others to restrain trade by controlling prices. For many reasons, the view is then arrived at that, whatever remedy there may be against the organizers of the corporation for acts violative of the statute, certainly in this proceeding a decree of dissolution cannot be awarded against the corporation for the unlawful intent, and the unsuccessful efforts of its organizers to violate the law. . . . The court's decision, in both the majority and minority opinions, is thus positive and distinct in its findings that various methods were resorted to by the Steel Corporation and its affiliated concerns for the purpose of restraining and interfering with competition, but the opinion is clearly held that these efforts were not sufficiently successful to warrant the drastic action demanded by the government in its dissolution petition. The position taken by the court has, however, been somewhat hastily received by the business world as a defense of the Steel Corporation, with the result that renewed activity in various kinds of shares was witnessed on the stock exchange immediately after the verdict was announced."—*Washington Notes (Journal of Political Economy, July, 1915, pp. 723-724)*.—An appeal from the above decision was taken to the Supreme Court by the govern-

ment and a decision was handed down on Mar. 1, 1920. By a four to three vote the court held that the United States Steel Corporation was not a trust within the meaning of the Sherman Act. The majority opinion stressed the fact that no overt acts violative of the Sherman act had been committed and that, while the corporation was in a position to dominate the trade, the evidence did not show that it had done so. Finally, it was held that to order the dissolution asked by the government would involve the risk of great disturbance to the financial and economic structure and would menace the public interest, which deserves first consideration. The dissent of Justices Clark, Pitney and Day was vigorous, alleging that the majority opinion was contradictory to the decisions in the Standard Oil and tobacco trust cases. The decision is not generally considered as committing the court to a definite policy, since neither Justice McReynolds nor Justice Brandeis took part in it. The former was attorney-general when the government was prosecuting the case and the latter had in 1911, before being appointed to the bench, stated that he considered the steel corporation a trust within the meaning of the Sherman Act. Moreover, it is thought the decision will have its effect upon the course of the attorney-general's office in subsequent cases.

1918-1921.—Webb-Pomerene Act.—Its results. "The Webb-Pomerene Act approved April 10, 1918, exempts from the provisions of the Sherman Law contracts, agreements or combinations among persons or corporations doing business in the United States for the purpose of conducting export business only. This act specifically states that its provisions must not be used 'artificially or intentionally' to affect domestic business. It also confers jurisdiction upon the Federal Trade Commission to supervise the conduct of export associations and their members, and applies the rule against unfair methods of competition to the conduct of export associations as related to American competitors in foreign markets. The Webb-Pomerene Law directly repeals the Sherman Law in so far as export business is concerned."—R. C. Butler, *Sherman anti-trust law and readjustment* (*Annals of the American Academy of Political and Social Science*, Mar. 1919, p. 223).—"The act presumes that manufacturers can be associated in their foreign business and yet remain competitors in their domestic business. It requires a kind of trade duplicity. Part of this duplicity is a pure fiction and part is based on sound economic principles. In so far as the Webb bill presumes that foreign business can be carried on without affecting domestic business, it is an anomaly; but so far as it presumes that foreign business requires the continued support of a large producing organization, it is absolutely sound. In this it is merely copying what European nations have already done in building up their foreign commerce. And without this support our rapidly expanding foreign trade would be stifled by the very anxiety of the small producers to preserve their existence at least under the necessarily competitive conditions of the domestic market. In other words, some kind of organized and united effort must take place in order to enable American manufacturers to export their merchandise in competition with the organized and united efforts of European exporting organizations. But whether the problem is to be solved by combinations among export houses themselves, which carry many lines into a few highly developed markets, or by combinations of manufacturers carrying a single product into many markets, only the future developments of

commerce can tell."—A. S. Dewing, *Financial policy of corporations*, v. 4, p. 68.—"On June 30, 1921, there were 48 such export associations doing business, including in their membership about 1,000 plants and factories scattered over forty-one states. During 1920, despite the great handicaps on exportation, imposed by economic conditions, goods valued at approximately \$221,000,000 were exported by such associations. Among the commodities handled by these organizations were steel, copper, cement, lumber, food-stuffs, locomotives, textile and foundry material, paper, tanning materials, paint, furniture, office equipment, and general merchandise. Some of these associations, such as the Consolidated Steel Corporation and the Copper Export Association which are strongly financed and control a large percentage of the supply available for export, have quickly become very powerful factors in our export trade."—F. D. Jones, *Trade association activities and the law*, pp. 223-224.—The Federal Trade Commission in its annual report, 1921, stated the intention of Congress to limit the activities of such associations in regard to restraining trade within the United States, destroying the business of others in foreign trade or artificially or intentionally increasing prices to the home consumer. In the meantime, "in 1910, to strengthen American business in foreign fields, the Edge Act, authorizing the formation of banking corporations to do an exclusive foreign banking business was enacted. The purpose of this law was to afford agencies through which long-term credits could be financed in export trade and through which foreign securities could also be handled. Under the provisions of the law, not less than five persons may form such banking corporations to engage in international banking or financial operations. . . . Restrictions are provided as to the amount to be invested in any one corporation. . . . Such an institution can not carry on any part of its business in the United States except such as in the judgment of the Federal Reserve Board is incidental to its foreign business. . . . A majority of the shares of the stock of the corporation must be owned by American citizens or by concerns, the controlling . . . interest in which is owned by citizens of the United States."—*Ibid.*, pp. 234-236.

1919-1923.—Recent significant legislation and suits affecting: Meat combination.—Agricultural producers.—Building industry.—Vaudeville interests.—Coffee and sugar markets.—A consent decree of December, 1919, possibly influenced by a prospective dissolution suit under the Sherman Act materially affected the business of the Big Five (Swift and Company, Armour and Company, Morris and Company, Wilson and Company and Cudahy Packing Company). (See BIG FIVE.) The court's decree was entered on Feb. 27, 1920, and provided for a cessation of the most obnoxious practices of the beef combination, restricting them to wholesale trade in meat, poultry, eggs, butter and cheese. "Under an act of Congress passed in 1921 [Packers and Stockyards Act], the regulation of the competitive acts of the meat packers, with reference to transactions not only in meat and meat products, but also in dairy products, poultry and eggs, is taken from the Commission and placed under the direction of the Department of Agriculture. The prohibitions of this act are much more severe than the Federal Trade Commission Act. An anomalous situation, however, is created. Manufacturers and distributors of dairy products, poultry and eggs are subject to the jurisdiction of the Commission; meat packers engaged also in handling these products are subject only

to the jurisdiction of the Department of Agriculture."—F. D. Jones, *Trade association activities and the law*, p. 18.—See also FOOD REGULATION: 1921-1922.—The Capper-Volstead Act, "an act to authorize association of producers of agricultural products," approved Feb. 18, 1922, restricts members to a single vote, prohibits dividends in excess of eight per cent per annum and provides that the association shall not deal in the products of non-members to an amount greater in value than such as are handled by it for members.

The consent decree signed in New York City early in 1923 by Judge Knox of the Federal district court, concerning the Gypsum Industries Association dissolved that association as such and purported to formulate a code of principles setting forth what trade associations may and may not do under the Sherman anti-trust law. The virtual "letting off" of this combine which was one of those exposed by the Lockwood Committee in its investigation into the building trades of New York City and the fact that in the opinion of Samuel Untermyer and others it "prohibits the members from doing nothing that is not already prohibited by existing law" discounts such an evaluation of the decree in many minds. Late in the year the existence of a "vaudeville trust" was alleged by Shubert Advanced Vaudeville, Inc., when they announced the preparation of papers to be filed in the Federal district court against the Keith vaudeville interests, demanding \$10,050,000 damages and making accusations of restraint of trade. "A rather surprising legal action brought by the Department of Justice [in 1923] which had for its aim the suppression of the New York Coffee and Sugar Exchange. This matter, although decided against the Government in the lower courts, is soon to come up for hearing on appeal. If the lower court's judgment is affirmed New York will remain the world's chief sugar market, an advantage gained during the war. Although the first effects of this action were violent, they soon wore off; the aftermath continued for months.

"With prices rising as a result of natural causes, and with the public becoming alarmed at the prospect of paying much more for sugar than it had been accustomed to for nearly three years, the Government delivered its coup."—*New York Evening Post*, Oct. 27, 1923.

1921-1923.—Recent trend toward mergers.—Survey of several combinations.—Tobacco.—Wool.—Automobiles.—Steel.—The continuation of a trend toward industrial combination that has been going on ever since the recovery of business from the 1920-1921 depression is evidenced in such a series of organizations as the Bethlehem-Midvale merger, the Anaconda-Chile copper merger, Kennecott-Cooper's acquisition of the Utah Copper Company; the Tobacco Products Corporation's plan to take over control of the Porto Rican-American Tobacco Company; the amalgamation of nine companies manufacturing matches into the Federal Match Corporation, and Armour and Company's completed arrangements for the purchase of the physical assets of Morris & Company, in spite of the objections of the secretary of agriculture. The *New York Evening Post* is quoted as believing that many companies "after experiencing the price deflation of 1920-21 and with depleted resources are in no position to carry on competition of the old-fashioned bludgeoning sort. There is reason to believe that the present movement has by no means run its course. . . . Whether as a result of the present trend toward industrial combination we shall have a recrudescence of the so-called 'trust

problem' of past decades can not of course be stated at this time but it appears hardly possible. A higher plane of business ethics, greater publicity in corporate transactions, and the more certain attitude of the Government toward undue restriction of competition all argue against the repetition on a large scale of the objectionable practices of two or three decades ago."—*New York Evening Post*, Mar. 17, 1923.—In October, 1923, announcement was made in the daily papers of the acquisition by the American Tobacco Company of the manufacturing properties of the Tobacco Products Corporation, including equipment and supplies for a period of ninety-nine years. This is considered the largest transaction effected in recent years in the tobacco industry. Successful combination in the American wool industry is significant when compared with the ups and downs of cotton combinations in this country and with the absence of combinations in the woolen trade of foreign countries. The American Woolen Company "has been able to maintain, improve and extend its organization, until it is of prime importance in the American wool-manufacturing industry. It has established and maintained a high measure of efficiency and its labor and marketing policies have been a driving force in the industry. While the exact measure of its financial success is, and seemingly must remain problematical, still it has never been in danger of dissolution or reorganization, and by a conservative management in the distribution of its profits and in the building of its mammoth new plants, as well as by the fortunate acquisition of new capital just before the crisis of 1920, it has been able to consolidate its financial position and make its future promise further success."—A. H. Cole, *Neglected chapter in the history of combinations: American wool manufacture* (*Quarterly Journal of Economics*, May, 1923, p. 472).—"The General Motors Corporation is the outstanding combination in the automobile industry. It has already secured control of the various companies necessary for its efficient operation and any further extensive additions by it are unlikely. The recent development of the Durant Motors, Inc., is based primarily upon the personal reputation and skill of Mr. Durant and the successful completion of the project depends largely upon his efforts. The companies combined are new, except the Locomobile Company, and their ability to withstand competition is yet to be determined. . . . The competitive situation in the industry warrants the conclusion that, except in the case of the Ford Motor Company, no company has either complete or monopoly power. The presence of numerous strong and active competitors and the peculiar character of the demand for automobiles indicates little possibility of the development of monopoly power by any one company or group of companies. The Ford Motor Company produces approximately 95 per cent of the cars in its class, and therefore has a virtual monopoly of its field. Its tremendous resources and its manufacturing efficiency are all factors which should assist it in maintaining this position against possible competitors."—C. C. Edmonds, *Tendencies in the automobile industry* (*American Economic Review*, Sept., 1923).—That the Steel Corporation has not ceased to maintain a position to dominate the trade during the three years following on the Supreme Court's favorable decision is evidenced by the following descriptions of its assets and earnings: "Let us consider the size and strength of the Steel Corporation. Its total assets are listed at \$2,430,000,000. Its gross volume of business during 1920 was \$1,755,000,000.

It owns 145 steel works, approximately 800,000 acres of coal and coke properties, 993 miles of railway, 1470 locomotives, and 112 steamers. In addition to these large holdings, the Corporation is represented in many other industries. . . . The policies of the Corporation are determined by a Board of Directors, composed of thirteen members in 1921, and a Finance Committee of six members. The total number of stockholders is over 100,000, but a majority of the stock is held by less than 2 per cent of the stockholders. The vast majority of the stockholders take no active part whatever in determining policies. Actual control is in the hands of the thirteen directors, six of whom are also members of the Finance Committee."—K. Page, *United States Steel Corporation (Atlantic Monthly, May, 1922)*.—"Judging from the action of the stock market, Wall Street has been greatly impressed by the Steel Corporation's earnings and dividend policy. Certainly the corporation's ability to earn over \$48,000,000 in the third quarter of the year, and at a time when business was falling off and the twelve-hour day was being eliminated, was a distinct surprise to most observers. An appreciable decrease from the showing of the second quarter, when activity was at its height and when the corporation earned \$48,800,000, was looked for. Declaration of an extra dividend of one-quarter of 1 per cent on the common stock was an even greater surprise; it was, in fact, wholly unexpected."—*New York Evening Post, Nov. 1, 1923*.

## INTERNATIONAL

**General survey.**—"The advantages of quantity production, which brought about the concentration of industries within certain countries, and the profits accruing from a limitation of competition on the home market, have given rise to understandings between great national industries. The development of international competition has brought about in certain industries similar understandings concerning the markets of the whole world, providing either for a division of the territory or for a determination of the general basis of contracts, especially prices and rates. The former type of understanding has been applied in particular in the steel industry for certain important items like rails and structural steel, and in the plate-glass and explosives industries. The second type has been applied in ocean transportation, where shipping rings have become a characteristic feature, declared to be necessary to the interests of the shippers themselves, in order to ensure the operation of regular lines with dates of sailing well distributed between the several companies, and a greater stability in rates."—A. Viallate, *Economic imperialism and international relations during the last fifty years, p. 99*.—"Macrosty says that 'rails, tubes, nails, screws, sewing thread, bleaching powder, borax, nitrates, and tobacco are to a greater or less degree brought under international control, while at least till lately, dynamite was so controlled, and repeated efforts have been made similarly to syndicate the whole steel trade.' The

forces which have produced such international combinations are the same as those which have resulted in those confined to one country, the maintenance of prices, division of territories, and limitation of production. Perhaps the most important of these combinations is the International Rail Syndicate, which was formed in 1883 between Great Britain, Germany, and Belgium. Under this agreement England was awarded 66 per cent of the business afterwards reduced to 63½ per cent; Germany 27, afterwards 29 per cent; and Belgium 7, afterwards 7½ per cent. Later this pool was broken up with a fall of prices, but in 1904 it got together again on a different basis, that of division of territory. In 1905 the United States was taken into the arrangement. Also, there have been international combinations for a number of other iron and steel products. . . . Oil is one of the businesses in which the international combination and coöperation have gone far, in some places there being union, in others division of territory. As we have already seen the American Tobacco Company made an agreement with the Imperial Tobacco Company under which each was to respect the home territory of the other, and a combination company was created, the British-American Tobacco Company, through which the two handled their foreign business. The nitrate combination regulates prices and output. Some businesses have become international by one of the great companies buying other companies in the same business, or establishing branches in foreign countries. The latter applies to a number of the greater companies of the United States, illustrated by the Westinghouse Company."—C. R. Van Hise, *Concentration and control, pp. 222-223*.

**Transatlantic shipping companies.**—**Agreements with the British government.**—**Control of commodities.**—Announcement was made in October, 1902, of the incorporation on the 1st of that month, under a New Jersey charter, of the International Mercantile Marine Company, with a capital of \$120,000,000, and an issue of 4½ per cent bonds to the amount of \$75,000,000. The combination included the American, the Red Star, the White, the Atlantic Transport, the Leyland and the Dominion lines. Both American and British capitalists were represented in the board of directors, the former in the majority. Several partners in the firm of J. Pierpont Morgan & Company, were included, and Mr. Morgan was understood to be the architect of the combination; but he did not appear personally in its organization. The first step towards such a shipping combination had been taken sixteen years before, when the British Inman steamship line was taken over by the International Navigation company, made up of Americans, at the head of whom was Clement A. Griscom, of Philadelphia. "The British Government promptly withdrew the liberal subsidy which it had been paying to the Inman liners; but Mr. Griscom and his comrades brought the *New York* and *Paris* beneath the Stars and Stripes, built the *St. Louis* and *St. Paul*, secured a subsidy from the United States and gave the first-class British lines a most formidable competitor. Indeed, commercial rivalry in high grade ships on the North Atlantic soon became too keen to permit of reasonable dividends and Mr. Griscom found British ship-owners in a responsive mood when he broached anew the great idea of an international combination. This union was made all the easier by the fact that meanwhile another important British steamship concern, the Leyland line, had been acquired by Mr. J. Pierpont Morgan in the spring of 1901. This line, itself the fruit of several con-

solidations, controlled the largest British tonnage in the North Atlantic trade. It owned no fast mail ships, no greyhounds. But it did possess forty or fifty good, useful steamships of moderate speed, many of them of large tonnage, and fit for passengers as well as freight. The main Leyland service lay between Boston or New York on this side, and Liverpool or London on the other, and the business of the company had been so profitable for a long term of years that its shares were quoted at a handsome premium. Mr. Morgan paid a generous price for his maritime investment. It is said that he gave £14 10s. for each £10 share, or a bonus of 45 per cent. But amazement at Mr. Morgan's 'liberality' ceased when the next stage in the great, far-sighted negotiations was unfolded. This was the dramatic uniting of the Leyland line with the American and Red Star lines of the International Navigation Company, and the Atlantic Transport line, another British steam fleet owned by American capital. Later still it transpired that the famous White Star line of fast mail, passenger, and freight ships and the smaller but excellent Dominion line were embraced in the huge consolidation. The White Star was one of the two lines—the Cunard was the other—which performed the British mail service between Queenstown and New York. Its fleet included the great liners *Oceanic* and *Celtic*, the swift *Teutonic* and *Majestic*, and the favorite *Britannic* and *Germanic* which had held ocean records in their day, together with a considerable number of large and efficient freighters. The American purchase of the White Star line was long disputed, and when it was finally confirmed, something like consternation seized the British press and people, for the White Star fleet had been regarded as distinctively a British institution as the Bank of England. Its fast ships received not only the mail pay of the post-office, but the subventions of the Admiralty, and were enrolled on the 'merchant cruiser' list.—W. L. Marvin, *Great ship "combine"* (*American Review of Reviews*, Dec., 1902).—The anxieties with which the combination was regarded at first in Great Britain were allayed materially by Gerald Balfour, president of the board of trade, who made public, in a speech at Sheffield, the terms of an arrangement that had been made by the government with the Cunard Company, on one hand, and the combination on the other. The Cunard Company, he said, "pledged themselves to remain in every respect a British company, managed by British directors—the shares not to be transferred to any but British subjects. Their ships were to be officered by British officers. They also engaged to construct two vessels of twenty-four to twenty-five knots which, as well as the entire Cunard fleet, the Admiralty would have the right to charter or purchase at any time on terms fixed in the agreement. The money for the construction of the fast steamers would be advanced to the company at the rate of 2¾ per cent. interest, while in lieu of the present Admiralty subvention—£28,000 a year for the contingent use of three ships—the company would receive £150,000 a year. With Mr. Pierpont Morgan, the head of the Shipping Combination, who had shown the utmost readiness to meet the wishes of His Majesty's Government, it had been agreed that the British companies in the Combination should remain British, not merely in name but in reality. The majority of their directors were to be British subjects. All their ships now flying the British flag were to continue to fly it, and at least one-half of those hereafter to be built for the Combination would likewise fly British colours, be

commanded by British officers, and manned in reasonable proportion by British sailors. On the other hand, the combined companies would continue to be treated, as heretofore, on a footing of equality with other British companies in respect of any services, whether postal, or military, or naval, which His Majesty's Government might require from the British mercantile marine. It had been further stipulated that in the event of the Combination pursuing a policy hostile to our mercantile marine or to British trade, the King's Government should have the right to terminate the agreement."

Struggle for oil concessions.—Causes of hostility.—Need for international machinery.—"Chester Concession."—Struggle to control Levantine oil market.—"Whereas so often happens, trusts are international in character and the world markets are apportioned out amongst the various firms . . . [the check of healthy foreign competition] is no longer operative. . . . The oil industry is of such a nature that there is a national tendency toward monopoly. . . . The desire to make profit safer by being sure not only of supplies but also of storage and trading facilities has resulted in the formation of trusts with worldwide interests and of international importance. Thus the Standard Oil Co. . . . has sought for new oil bearing areas in Mexico and South America, in Rumania, Russia, Czecho-Slovakia, Mesopotamia, Palestine, and Persia. The same is true of the Royal Dutch Shell (the result of the union of big companies of Holland and England) and of the Anglo-Persian Co. . . . Towards the end of 1920 there was a possibility of serious friction and even open hostility between America and England, solely because the American oil companies resented the fact that combines composed largely of British capital and staffed by Englishmen, had managed to acquire possession of a large number of the richest petroliferous areas. To balance what was considered an unfair advantage over their own nationals, the United States government began to cancel many of the concessions held by the British in Mexico and South America. . . . The first political cause of hostility was the conclusion in April, 1920, of the San Remo agreement between France and England, which provided for joint political action with regard to oil development in Mesopotamia, Galicia, Rumania, Asia Minor, etc. It was agreed that in Mesopotamia the French should take over the 25 per cent share formerly held by the Germans in the Turkish Petroleum Co. (of which the remaining shares were held (50 per cent by the Anglo-Persian Co.) of which the British government is the largest share holder) and 25 per cent by the Royal Dutch Shell combine (which is largely British). The American government immediately protested on behalf of the Standard Oil Co. and as a result of that intervention gained for the company a concession in Palestine. . . . In a like way the fear of one oil trust that another might rival it in supplies resulted in the breakdown of . . . [the Genoa] conference [1922]. . . . A problem which is international in scope can be dealt with only by machinery which is international in nature. The Economic Section of the League of Nations seems a very suitable body to take upon itself full investigation of the activities of all outer national combines and make recommendations as to what should be done. The recommendations of the League are not necessarily ratified by the respective governments, but publicity would be of the greatest value, and would make clear the issues on which action might be taken."—G. Williams,
