July 6, 1798. Statute II, Chap. lxvi.—An Act respecting Alien Enemies.

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever there shall be a declared war between the United States and any foreign nation or government, or any invasion or predatory incursion shall be perpetrated, attempted, or threatened against the territory of the United States, by any foreign nation or government, and the President of the United States shall make public proclamation of the event, all natives, citizens, denizens, or subjects of the hostile nation or government, being males of the age of fourteen years and upwards, who shall be within the United States, and not actually naturalized, shall be liable to be apprehended, restrained, secured and removed, as alien enemies. And the President of the United States shall be, and he is hereby authorized, in any event, as aforesaid, by his proclamation thereof or other public act, to direct the conduct to be observed, on the part of the United States, towards the aliens who shall become liable as aforesaid; the manner and degree of the restraint to which they shall be subject, and in what cases, and upon what security their residence shall be permitted, and to provide for the removal of those, who, not being permitted to reside within the United States, shall refuse or neglect to depart therefrom; and to establish any other regulations which shall be found necessary in the premises and for the public safety: Provided, that aliens resident within the United States, who shall become liable as enemies, in the manner aforesaid, and who shall not be chargeable with actual hostility, or other crime against the public safety, shall be allowed for the recovery, disposal, and removal of their goods and effects, and for their departure, the full time which is, or shall be stipulated by any treaty, where any shall have been between the United States and the hostile nation or government, of which they shall be natives, citizens, denizens, or subjects; and when no such treaty shall have existed, the President of the United States may ascertain and declare such reasonable time as may be consistent with the public safety, and according to the dictates of humanity and national hospitality.

Sect. 2. And be it further enacted, That after any proclamation shall be made as aforesaid, it shall be the duty of the several courts of the United States, and of each state, having criminal jurisdiction, and of the several judges and justices of the courts of the United States, and they shall be, and are hereby respectively, authorized upon complaint, against any alien or alien enemies, as aforesaid, who shall be resident and at large within such jurisdiction or district, to the danger of the public peace or safety, and contrary to the tenor or intent of such proclamation, or other regulations which the President of the United States shall and may establish in the premises, to cause such alien or aliens to be duly apprehended and convened before such court, judge or justice; and after a full examination and hearing on such complaint,

and sufficient cause therefor appearing, shall and may order such alien or aliens to be removed out of the territory of the United States, or to give such sureties for their good behaviour, or to be otherwise restrained, conformably to the proclamation or regulations which shall or may be established as aforesaid, and may imprison, or otherwise secure such alien or aliens, until the order which shall and may be made, as aforesaid, shall be performed.

Sect. 3. And be it further enacted, That it shall be the duty of the marshal of the district in which any alien enemy shall be apprehended, who by the President of the United States, or by the order of any court, judge or justice, as aforesaid, shall be required to depart, and to be removed, as aforesaid, to provide therefor, and to execute such order, by himself or his deputy, or other discreet person or persons to be employed by him, by causing a removal of such alien out of the territory of the United States; and for such removal the marshal shall have the warrant of the President of the United States, or of the court, judge or justice ordering the same, as the case may be.

Approved July 6, 1798.

—*Statutes at Large of the United States* (edition of 1850), v. 1, p. 577.

The text of the Sedition Act is as follows:

JULY 14, 1798. Chap. lxxiv.—An Act in addition to the act, entitled "An Act for the punishment of certain crimes against the United States."

Section 1. Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That if any persons shall unlawfully combine or conspire together, with intent to oppose any measure or measures of the government of the United States which are or shall be directed by proper authority, or to impede the operation of any law of the United States, or to intimidate or prevent any person holding a place or office in or under the government of the United States, from undertaking, performing or executing, his trust or duty; and if any person or persons, with intent as aforesaid, shall counsel, advise, or attempt to procure any insurrection riot, unlawful assembly, or combination, whether such conspiracy, threatening, counsel, advice or attempt shall have the proposed effect, or not, he or they shall be deemed guilty of a high misdemeanor, and on conviction before any court of the United States having jurisdiction thereof, shall be punished by a fine not exceeding five thousand dollars and by imprisonment during a term not less than six months nor exceeding five years; and further at the discretion of the court may be holden to find sureties for his good behavior in such sum, and for such time, as the said court may direct.

Sect. 2. And be it further enacted, That if any person shall write, print, utter, or publish, or shall cause or procure to be written printed, uttered or published or shall knowingly and willingly assist or aid in writing, printing, uttering or publishing any false, scandalous and malicious writing or writings against the government of the United States, or either house of the Congress of the United States, or the President of the United States, with intent to defame the said government, or either house of the said Congress, or the said President, or to bring them or either of them, into contempt or disrepute; or to excite against them, or either, or any of them, the hatred of the good people of the United States, or to stir up sedition within the United States, or to excite any unlawful combina-

tions therein, for opposing or resisting any law of the United States, or any act of the President of the United States, and one in pursuance of any such law, or of the powers in him vested by the constitution of the United States, or to resist, oppose or defeat any such law or act, or to aid, encourage or abet any hostile designs of any foreign nation against the United States, their people or government, then such person being thereof convicted before any court of the United States having jurisdiction thereof, shall be punished by a fine not exceeding two thousand dollars, and by imprisonment not exceeding two years.

Sect. 3. And be it further enacted and declared, That if any person shall be prosecuted under this act, for the writing or publishing any libel aforesaid, it shall be lawful for the defendant, upon the trial of the cause, to give in evidence in his defence, the truth of the matter contained in the publication charged as a libel. And the jury who shall try the cause, shall have a right to determine the law and the fact, under the direction of the court, as in other cases.

Sect. 4. And be it further enacted, That this act shall continue and be in force until the third day of March, one thousand eight hundred and one, and no longer: Provided that the expiration of the act shall not prevent or defeat a prosecution and punishment of any offence against the law, during the time it shall be in force.

Approved July 14, 1798.

"There has been a general effort on the part of biographers to clear their respective heroes from all responsibility for these ill-fated measures. The truth is, that they had the full support of the congressmen and senators who passed them, of the President who signed them, and of all the leaders in the States, who almost all believed in them; and they also met with very general acceptance by the party in the North. Hamilton went as far in the direction of sustaining the principles of these laws as any one. He had too acute a mind to believe with many of the staunch Federalist divines of New England, that Jefferson and Madison were Marats and Robespierres, and that their followers were Jacobins who, when they came to power, were ready for the overthrow of religion and society, and were prepared to set up a guillotine and pour out blood in the waste places of the federal city. But he did believe, and so wrote to Washington, after the appearance of the X. Y. Z. letters that there was a party in the country ready to 'new model' the constitution on French principles, to form an offensive and defensive alliance with France, and make the United States a French province. He felt, in short, that there was a party in America ready for confiscation and social confusion. A year later, in 1790, he wrote to Dayton, the speaker of the national House of Representatives, a long letter in which he set forth very clearly the policy which he felt ought to be pursued. He wished to give strength to the government, and increase centralization by every means, by an extension of the national judiciary, a liberal system of internal improvements, an increased and abundant revenue, an enlargement of the army and navy, permanence in the laws for the volunteer army, extension of the powers of the general government, subdivision of the States, as soon as practicable, and finally a strong sedition law, and the power to banish aliens. This was what was termed at that day a 'strong and spirited' policy; it would now be called repressive, but by whatever

name it is designated, it was the policy of Hamilton, and is characteristic of both his talents and temperament. Except as to the subdivision of States, it was carried out pretty thoroughly in all its main features by the Federalists. The alien and sedition laws, although resisted in Congress, did not much affect public opinion at the elections which immediately ensued, and the Federalists came into the next Congress with a large majority."—H. C. Lodge, *Alexander Hamilton*, ch. 9.—"The different portions of the country were affected according to the dominant political opinion. Where the Federalists were strong political feeling bore them headlong into prosecutions under the new powers. In the Republican States a sense of injury and danger went hand in hand, and the question of the hour was how to repel the threatening destruction. Mr. Jefferson did not fail to see that the great opportunity for his party had come. His keen political sagacity detected in an instant the fatal mistake the administration had made, and he began at once to look about him for the best means to turn his opponents' mistake to his own advantage. Naturally he felt some delicacy in appearing too forward in assailing a government of which he himself was the second in office. Nevertheless he lent himself willingly to the task of organizing, in a quiet way, a systematic assault upon these laws of Congress, and at once opened a correspondence calculated to elicit the best judgment of his coadjutors and gradually drew out a programme of action. Virginia was by no means unanimous in reprobating these laws. She had a large and influential body of Federalists. . . . But the influence of Jefferson was paramount and the result of Jeffersonian principles soon appeared on every hand. Meetings were held in many of the counties upon their county court days at which were adopted addresses or series of resolutions condemning or praying for the repeal of these laws. . . . New York, New Jersey, and Pennsylvania sent petitions of appeal to Congress. . . . But it was in Kentucky that the greatest resistance was evoked. The feeling in that State was, indeed, little short of frenzy, and a singular unanimity was displayed even in the most extreme acts and sentiments. This grew out of no passing passion. It was based upon the most vigorous elements in her character as a people. Kentucky was at this time somewhat apart from the rest of the Union. . . . Her complaints, just and unjust, had been many, but hitherto she had not gained the nation's ear. But the time was now ripe for her to assert herself."—E. D. Warfield, *Kentucky Resolutions of 1798*, ch. 1.—The famous Kentucky Resolutions, substantially drafted by Jefferson, as he acknowledged fifteen years afterwards, but introduced in the Legislature of Kentucky by John Breckenridge, on November 8, 1798, were adopted by that body, in the lower branch on the 10th and in the upper on the 13th. Approved by the Governor on the 16th, they were immediately printed and copies officially sent to every other state and to members of Congress. They were as follows:

I. Resolved, that the several states composing the United States of America, are not united on the principle of unlimited submission to their General Government; but that by compact under the style and title of a Constitution for the United States and of amendments thereto, they constituted a General Government for special purposes, delegated to that Government certain definite powers, reserving each state to itself, the residuary mass

of right to their own self Government; and that whensoever the General Government assumes undelegated powers, its acts are unauthoritative, void, and are of no force: That to this compact each state acceded as a state, and is an integral party, its co-states forming as to itself, the other party: That the Government created by this compact was not made the exclusive or final judge of the extent of the powers delegated to itself; since that would have made its discretion, and not the constitution, the measure of its powers; but that as in all other cases of compact among parties having no common judge, each party has an equal right to judge for itself, as well of infractions as of the mode and measure of redress.

II. Resolved, that the Constitution of the United States having delegated to Congress a power to punish treason, counterfeiting the securities and current coin of the United States, piracies and felonies committed on the High Seas, and offences against the laws of nations, and no other crimes whatever, and it being true as a general principle, and one of the amendments to the Constitution having also declared, "that the powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people," therefore also the same act of Congress passed on the 14th day of July, 1798, and entitled "An act in addition to the act entitled an act for the punishment of certain crimes against the United States"; as also the act passed by them on the 27th of June, 1798, entitled "An act to punish frauds committed on the Bank of the United States" (and all other their acts which assume to create, define, or punish crimes other than those enumerated in the constitution) are altogether void and of no force, and that the power to create, define, and punish such other crimes is reserved, and of right appertains solely and exclusively to the respective states, each within its own Territory.

III. Resolved, that it is true as a general principle, and is also expressly declared by one of the amendments to the Constitution that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively or to the people"; and that no power over the freedom of religion, freedom of speech, or freedom of the press being delegated to the United States by the Constitution, nor prohibited by it to the states, all lawful powers respecting the same did of right remain, and were reserved to the states, or to the people: That thus was manifested their determination to retain to themselves the right of judging how far the licentiousness of speech and of the press may be abridged without lessening their useful freedom and how far those abuses which cannot be separated from their use, should be tolerated, rather than the use be destroyed; and thus also they guarded against all abridgement by the United States of the freedom of religious opinions and exercises, and retained to themselves the right of protecting the same, as this state by a Law passed on the general demand of its Citizens, had already protected them from all human restraint or interference; and that in addition to this general principle and express declaration, another and more special provision has been made by one of the amendments to the Constitution which expressly declares that "Congress shall make no law respecting an Establishment of religion, or prohibiting the free exercise thereof, or abridging the freedom of speech, or of the press," thereby guard-

ing in the same sentence and under the same words, the freedom of religion, of speech and of the press, inasmuch, that whatever violates either, throws down the sanctuary which covers the others, and that libels, falsehoods, and defamation, equally with heresy and false religion are withheld from the cognizance of federal tribunals. That therefore the act of the Congress of the United States passed on the 14th day of July, 1798, entitled "An act in addition to the act for the punishment of certain crimes against the United States," which does abridge the freedom of the press, is not law, but is altogether void and of no effect.

IV. Resolved, that alien friends are under the jurisdiction and protection of the laws of the state wherein they are; that no power over them has been delegated to the United States, nor prohibited to the individual states distinct from their power over citizens; and it being true as a general principle, and one of the amendments to the Constitution having also declared, that "the powers not delegated to the United States by the Constitution nor prohibited by it to the states are reserved to the states respectively or to the people," the act of the Congress of the United States passed on the 22d day of June, 1798, entitled "An act concerning aliens," which assumes power over alien friends not delegated by the Constitution, is not law, but is altogether void and of no force.

V. Resolved, that in addition to the general principle as well as the express declaration, that powers not delegated are reserved, another and more special provision inserted in the Constitution from abundant caution has declared, "that the migration or importation of such persons as any of the states now existing shall think proper to admit, shall not be prohibited by the Congress prior to the year 1808." That this Commonwealth does admit the migration of alien friends described as the subject of the said act concerning aliens; that a provision against prohibiting their migration, is a provision against all acts equivalent thereto, or it would be nugatory; that to remove them when migrated is equivalent to a prohibition of their migration, and is therefore contrary to the said provision of the Constitution, and void.

VI. Resolved, that the imprisonment of a person under the protection of the Laws of this Commonwealth on his failure to obey the simple order of the President to depart out of the United States, as is undertaken by the said act entitled "An act concerning aliens," is contrary to the Constitution, one amendment to which has provided that "no person shall be deprived of liberty without due process of law," and that another having provided "that in all criminal prosecutions the accused shall enjoy the right to a public trial by an impartial jury, to be informed of the nature and cause of the accusation, to be confronted with the witnesses against him, to have compulsory process for obtaining witnesses in his favour, and to have the assistance of counsel for his defence," the same act undertaking to authorize the President to remove a person out of the United States who is under the protection of the Law, on his own suspicion, without accusation, without jury, without public trial without confrontation of the witnesses against him without having witnesses in his favour, without defence, without counsel, is contrary to these provisions also of the Constitution, is therefore not law but utterly void and of no force. That transferring the power of judging any person who is under the protection of the laws, from the

Courts to the President of the United States, as is undertaken by the same act concerning Aliens, is against the article of the Constitution which provides, that "the judicial power of the United States shall be vested in Courts, the Judges of which shall hold their offices during good behaviour," and that the said act is void for that reason also; and that it is further to be noted, that this transfer of Judiciary powers is to that magistrate of the General Government who already possesses all the Executive, and a qualified negative in all the Legislative power.

VII. Resolved, that the construction applied by the General Government (as is evinced by sundry of their proceedings) to those parts of the Constitution of the United States which delegate to Congress a power to lay and collect taxes, duties, imposts, and excises; to pay the debts, and provide for the common defence and general welfare of the United States, and to make all laws which shall be necessary and proper for carrying into execution the powers vested by the Constitution in the Government of the United States, or any department thereof, goes to the destruction of all the limits prescribed to their power by the Constitution—That words meant by that instrument to be subsidiary only to the execution of the limited powers, ought not to be so construed as themselves to give unlimited powers, nor a part so to be taken, as to destroy the whole residue of the instrument: That the proceedings of the General Government under colour of these articles, will be a fit and necessary subject for revisal and correction at a time of greater tranquillity, while those specified in the preceding resolutions call for immediate redress.

VIII. Resolved, that the preceding Resolutions be transmitted to the Senators and Representatives in Congress from this Commonwealth, who are hereby enjoined to present the same to their respective Houses, and to use the best endeavours to procure at the next session of Congress, a repeal of the aforesaid unconstitutional and obnoxious acts.

IX. Resolved lastly, that the Governor of this Commonwealth be, and is hereby authorised and requested to communicate the preceding Resolutions to the Legislatures of the several States, to assure them that this Commonwealth considers Union for specified National purposes, and particularly for those specified in their late Federal compact, to be friendly to the peace, happiness, and prosperity of all the states: that faithful to that compact, according to the plain intent and meaning in which it was understood and acceded to by the several parties, it is sincerely anxious for its preservation: that it does also believe, that to take from the states all the powers of self government, and transfer them to a general and consolidated Government, without regard to the special delegations and reservations solemnly agreed to in that compact, is not for the peace, happiness, or prosperity of these states: And that therefore, this Commonwealth is determined, as it doubts not its Co-states are, tamely to submit to undelegated and consequently unlimited powers in no man or body of men on earth: that if the acts before specified should stand, these conclusions would flow from them; that the General Government may place any act they think proper on the list of crimes and punish it themselves, whether enumerated or not enumerated by the Constitution as cognizable by them: that they may transfer its cognizance to the President or any other person,

who may himself be the accuser, counsel, judge, and jury, whose suspicions may be the evidence, his order the sentence, his officer the executioner, and his breast the sole record of the transaction: that a very numerous and valuable description of the inhabitants of these states, being by this precedent reduced as outlaws to the absolute dominion of one man and the barrier of the Constitution thus swept away from us all, no rampart now remains against the passions and the power of a majority of Congress, to protect from a like exportation or other more grievous punishment the minority of the same body, the Legislatures, Judges, Governors, and Counsellors of the states, nor their other peaceable inhabitants who may venture to reclaim the constitutional rights and liberties of the states and people, or who for other causes, good or bad, may be obnoxious to the views or marked by the suspicions of the President, or be thought dangerous to his or their elections or other interests public or personal; that the friendless alien has indeed been selected as the safest subject of a first experiment: but the citizen will soon follow, or rather has already followed; for already has a Sedition Act marked him as its prey: that these and successive acts of the same character, unless arrested on the threshold, may tend to drive these states into revolution and blood, and will furnish new calumnies against Republican Governments, and new pretexs for those who wish it to be believed that man cannot be governed but by a rod of iron: that it would be a dangerous delusion were a confidence in the men of our choice to silence our fears for the safety of our rights: that confidence is everywhere the parent of despotism: free government is founded in jealousy and not in confidence; it is jealousy and not confidence which prescribes limited Constitutions to bind down those whom we are obliged to trust with power: that our Constitution has accordingly fixed the limits to which and no further our confidence may go; and let the honest advocate of confidence read the Alien and Sedition Acts, and say if the Constitution has not been wise in fixing limits to the Government it created, and whether we should be wise in destroying those limits? Let him say that the Government is if it be not a tyranny, which the men of our choice have conferred on the President, and the President of our choice has assented to and accepted over the friendly strangers, to whom the mild spirit of our Country and its laws had pledged hospitality and protection: that the men of our choice have more respected the bare suspicions of the President than the solid rights of innocence, the claims of justification, the sacred force of truth, and the forms and subsistence of law and justice. In questions of power then let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution. That this Commonwealth does therefore call on its Co-states for an expression of their sentiments on the acts concerning Aliens, and for the punishment of certain crimes herein-before specified, plainly declaring whether these acts are or are not authorized by the Federal Compact? And it doubts not that their sense will be so announced as to prove their attachment unaltered to limited Government, whether general or particular, and that the rights and liberties of their Co-states will be exposed to no dangers by remaining embarked on a common bottom with their own: That they will concur with this Commonwealth in considering the said acts so palpably against the Constitution as to amount to an un-

disguised declaration, that the compact is not meant to be the measure of the powers of the General Government, but that it will proceed in the exercise over these states of all powers whatsoever: That they will view this as seizing the rights of the states and consolidating them in the hands of the General Government with a power assumed to bind the states (not merely in cases made federal) but in all cases whatsoever, by laws made, not with their consent, but by others against their consent: That this would be to surrender the form of Government we have chosen, and to live under one deriving its powers from its own will, and not from our authority; and that the Co-states recurring to their natural right in cases not made federal, will concur in declaring these acts void and of no force, and will each unite with this Commonwealth in requesting their repeal at the next session of Congress.

In the month following this declaration from Kentucky, on December 21, Virginia affirmed substantially the same threatening doctrine, more temperately and cautiously set forth in resolutions drawn by Madison as follows:

Resolved, that the General Assembly of Virginia doth unequivocally express a firm resolution to maintain and defend the constitution of the United States, and the constitution of this state against every aggression, either foreign or domestic, and that they will support the government of the United States in all measures warranted by the former.

That this Assembly most solemnly declares a warm attachment to the union of the states, to maintain which, it pledges all its powers; and that for this end it is their duty to watch over and oppose every infraction of those principles which constitute the only basis of that union, because a faithful observance of them can alone secure its existence, and the public happiness.

That this Assembly doth explicitly and peremptorily declare that it views the powers of the Federal Government, as resulting from the compact, to which the states are parties; as limited by the plain sense and intention of the instrument constituting that compact; as no farther valid than they are authorized by the grants enumerated in that compact, and that in case of a deliberate, palpable and dangerous exercise of other powers not granted by the said compact, the states who are parties thereto have the right, and are in duty bound to interpose for arresting the progress of the evil, and for maintaining within their respective limits, the authorities, rights and liberties appertaining to them.

That the General Assembly doth also express its deep regret that a spirit has in sundry instances, been manifested by the Federal Government, to enlarge its powers by forced constructions of the constitutional charter which defines them; and that indications have appeared of a design to expound certain general phrases (which having been copied from the very limited grant of powers in the former articles of confederation were the less liable to be misconstrued), so as to destroy the meaning and effect of the particular enumeration, which necessarily explains and limits the general phrases; and so as to consolidate the states by degrees into one sovereignty, the obvious tendency and inevitable consequence of which would be to transform the present republican system of the United States into an absolute, or at best a mixed monarchy.

That the General Assembly doth particularly protest against the palpable and alarming infractions of the Constitution, in the two late cases of the "Alien and Sedition Acts," passed at the last session of Congress, the first of which exercises a power nowhere delegated to the Federal Government; and which by uniting legislative and judicial powers to those of executive, subverts the general principles of free government, as well as the particular organization and positive provisions of the federal constitution: and the other of which acts, exercises in like manner a power not delegated by the constitution, but on the contrary expressly and positively forbidden by one of the amendments thereto; a power which more than any other ought to produce universal alarm, because it is levelled against the right of freely examining public characters and measures, and of free communication among the people thereon, which has ever been justly deemed the only effectual guardian of every other right.

That this state having by its convention which ratified the federal constitution, expressly declared, "that among other essential rights, the liberty of conscience and of the press cannot be cancelled, abridged, restrained or modified by any authority of the United States," and from its extreme anxiety to guard these rights from every possible attack of sophistry or ambition, having with other states recommended an amendment for that purpose, which amendment was in due time annexed to the constitution, it would mark a reproachful inconsistency and criminal degeneracy, if an indifference were now shown to the most palpable violation of one of the rights thus declared and secured, and to the establishment of a precedent which may be fatal to the other.

That the good people of this commonwealth having ever felt and continuing to feel the most sincere affection to their brethren of the other states, the truest anxiety for establishing and perpetuating the union of all, and the most scrupulous fidelity to that constitution which is the pledge of mutual friendship, and the instrument of mutual happiness: The General Assembly doth solemnly appeal to the like dispositions of the other states, in confidence that they will concur with this commonwealth in declaring, as it does hereby declare, that the acts aforesaid are unconstitutional, and that the necessary and proper measures will be taken by each for co-operating with this state, in maintaining unimpaired the authorities, rights, and liberties, reserved to the states respectively, or to the people.

That the Governor be desired to transmit a copy of the foregoing resolutions to the executive authority of each of the other states, with a request, that the same may be communicated to the legislature thereof.

And that a copy be furnished to each of the Senators and Representatives, representing this state in the Congress of the United States.

In later years, after Calhoun and his school had pushed these doctrines to their logical conclusion, Madison shrank from the result, and endeavored to disown the apparent meaning of what Jefferson had written and he had seemed to endorse in 1798. He denounced Nullification and Secession as "twin heresies," and denied that they were contained or implied in the resolutions of 1798—either those adopted in Kentucky or the responsive ones written by himself for the legislature of Virginia. The Kentucky Resolutions of 1798 were followed in 1799 by another series, in which the right of a sovereign state to nullify obnoxious laws of the

Federal government was no longer asserted by implication, but was put into plain terms—as follows: "That the principle and construction, contended for by sundry of the state legislatures, that the general government is the exclusive judge of the extent of the powers delegated to it, stop not short of despotism,—since the discretion of those who administer the government, and not the Constitution, would be the measure of their powers: That the several states who formed that instrument, being sovereign and independent, have the unquestionable right to judge of the infraction; and, That a nullification, by those sovereignties, of all unauthorized acts done under color of that instrument, is the rightful remedy." It was Mr. Madison's desire to cast on these resolutions of 1799, with which Jefferson had nothing to do, the odium of the nullification doctrine, and to remove the stigma from the resolutions of 1798, in which the word "nullification" makes no appearance; "neither that," pleaded Madison, "nor any equivalent term." But, when Madison made this plea, in 1830, "it was not then generally known, whether Mr. Madison knew it or not that one of the resolutions and part of another which Jefferson wrote to be offered in the Kentucky legislature in 1798 were omitted by Mr. Nicholas [to whom Jefferson had entrusted them], and that therein was the assertion . . . 'where powers are assumed which have not been delegated, a nullification of the act is the rightful remedy.' The next year, when additional resolutions were offered by Mr. Breckenridge, this idea in similar, though not in precisely the same language, was presented [as quoted above]. . . . In 1832, this fact, on the authority of Jefferson's grandson and executor, was made public; and further, that another declaration of Mr. Jefferson's in the resolution not used was an exhortation to the co-States 'that each will take measures of its own for providing that neither these acts nor any others of the general government, not plainly and intentionally authorized by the Constitution, shall be exercised within their respective territories.'"—S. H. Gay, *James Madison*, ch. 15.—"The publication of the Kentucky resolutions . . . was instantly followed by a new crop of remonstrances and petitions from the people. . . . Such memorials as reached the House were sent to a committee who, late in February, reported. . . . The report closed with three resolutions, and these were: that it was not in the interest of the public good to repeal either the Alien Law, or the Sedition Law, or any of the laws respecting the army, the navy, or the revenue of the United States. On the twenty-fifth of February the House being in Committee of the Whole, the three resolutions were taken up one by one" and adopted. "The House then agreed to the action of the committee on each of the three resolutions. The Federal party was now at the height of its prosperity and power. It controlled the Senate. It controlled the House. Outwardly it was great and powerful, but within that dispute had begun which, in a few short months, drove Pickering and M'Henry from the Cabinet, split the party in twain, and gave to the country the strange spectacle of staunch and earnest Federalists wrangling and contending and overwhelming each other with abuse."—J. 1799.—Death of Washington.—A great sorrow fell upon the country, with a shock of surprise, in the last month of the year. Washington was stricken with a suddenly fatal disease, and died after an illness of two days. On December 12 he seemed to be in perfect health, but exposed himself to a cold rain that day, in a long ride about his estate. The next day he had a slight sore throat, and in the night he suffered difficulty in breathing, which followed a severe chill. Physicians were called on the morning of the 14th, who bled him copiously, according to the medical practice of that day. His struggle for breath increased steadily, and he knew that it meant death, facing the prospect with great calmness and thoughtfully arranging his affairs. He was conscious to the end, which came about ten o'clock that night. It is now understood that Washington's disease (which the physicians then called quinsy) was what is known as acute œdematous laryngitis, which might have been overcome by an operation of tracheotomy.—H. C. Lodge, *George Washington*, v. 2, ch. 6.

1800.—General state of the country at the opening of the nineteenth century.—“About ninety-five per cent. of the inhabitants lived in villages or the open country. The Atlantic coast region was one vast stretch of forests and farms. On the river-banks near the coast, and in the south in particular, much of the land had been cleared for cultivation; in the interior the cleared patches were smaller. . . . The great planters of the south dominated the communities in which they lived; they were most numerous along the coasts where the lands were richest. They were people of education, and their ideals were broader than those

of the men of the interior. Many of them were Republicans on philosophical grounds and because they favored France; but the majority were Federalists. All of them, whatever their politics, were aristocrats in their social ideals. In the middle states the medium class and small farmers constituted the mass of the population. They were less isolated than the dwellers in the interior parts of the south, for the forest had yielded more of itself to the aggression of the settler. Distances from the large seaports were not so great, and roads were tolerable. Education was somewhat more advanced, churches were more numerous, ideals were less provincial. In New England the forest had disappeared to a much larger extent, chiefly because of the lumber and ship-building industries. Villages were grouped along the edges of the bays, sounds, and various small streams; and around them lay the little farms upon which, with much labor, the food of the community was raised. The country was thickly settled compared with other sections, roads were better, houses were more attractively built, and the educational spirit was more generally developed than anywhere else in the country. Towns were placed chiefly on the sea-coast and at the heads of navigation of the rivers. Commerce was their only support; for the days of the manufacturing towns had not yet come. The larger places attracted the foreign commerce. The smaller towns looked to the larger ones, sending thither the products which they had gathered from the surrounding communities and distributing the imported goods which they received from the seaports. [See also COMMERCE: Commercial Age: 1820-1920.] Most of the towns were north of the Potomac. In 1790 Richmond, the largest town in Virginia, numbered 3761; and Norfolk, Petersburg, and Alexandria were the only other towns in the state with a population of two thousand or more. In North Carolina, Charleston had a population of about fifteen thousand, and was the centre of a large trade in rice and slaves. . . . Boston, long one of the most remarkable of colonial cities, showed signs of lagging. Its population increased from eighteen thousand in 1790 to twenty-five thousand in 1800. This is accounted for partly because of the restrictions brought about by the Revolution, and partly because it had no such monopoly of trade in its neighborhood as Philadelphia and New York. Its opportunity came when it became the fiscal centre of New England manufacturing; but the day for that had not yet arrived. One of the remarkable features of town development in the period was the growth of Baltimore. Long a sleepy colonial community, it had suddenly awakened to great activity. Its population in 1790 was thirteen thousand; and in 1800, through the development of the Susquehanna Valley, it had reached twenty-six thousand five hundred. In size and in trade it then surpassed Boston. . . . The Ohio was already bordered with towns. From Pittsburg floating westward one came to Wheeling, Marietta, Belpre, Gallipolis, Limestone, Columbia, Newport, Cincinnati, and Louisville. Farther down on the Mississippi were New Madrid and Natchez. . . . Cincinnati, on the north side of the river, looked out into hostile territory, till Wayne's victory in 1794 removed that danger. In 1795 came the treaty with Spain, by which the navigation of the Mississippi was secured. Nothing now stood in the way of the dreams of the westerners. Whatever might trouble the east, they had the simple task of developing the vast country which was opened to them. The confidence and tumultuous

joy with which they proceeded marked the future character of the people. Never did American frontier shift more quickly and happily into civilized communities than in the rich plains on each side of the Ohio."—J. S. Bassett, *Federalist system, 1789-1801*, pp. 165-169, 175-176.

1800.—Extent of voting reforms.—Secret ballot. See AUSTRALIAN BALLOT: 1882-1916.

1800.—Convention with France and French Spoliation Claims incident to it.—"Although we did not consider ourselves at war with France, we were fighting her. The policy of isolation had been in part deviated from. Were we going to give it up wholly by becoming the ally of England, and so be enmeshed in the general European conflict? There were many circumstances that rendered such an event probable and many men who desired it. The new British minister, Liston, proved pleasing. He won confidence at once, in 1797, by helping to disclose a project of William Blount, senator from Tennessee, for a joint expedition of frontiersmen and the British fleet to seize Louisiana and put it under the control of Great Britain. Impeached by the House of Representatives, Blount resigned to escape conviction, and was promptly elected governor of his state; his plan serves to show how minds in the West were turning. Since Spain was loath to live up to the treaty of 1795, it was becoming doubtful whether that settlement would prove permanent; Great Britain, therefore, in becoming the enemy of Spain, became the natural friend of the frontiersman. . . . In Paris the negotiations, having the good will of Talleyrand and of the rising Bonaparte, progressed rapidly. On September 30, 1800, a convention was concluded. This agreement was generally satisfactory on points relating to navigation. It laid down the French view, which was also the American, with regard to free ships making free goods, and also with regard to contraband. In one point, however, we were obliged to accept the French view, as Jay had accepted the English,—namely, the provision that neutral goods on enemies' vessels might be seized. The chief difficulty lay in the American demand that indemnity be paid for illegal condemnations by the French, on which were based nearly twenty-three hundred sound claims [spoliation claims], and the French demand for the execution of the treaties of 1778 and 1788. The commissioners finally decided to leave these questions for future negotiation 'at a convenient time,' the treaties meanwhile to be inoperative. This proposal the United States Senate amended by the provision that the convention should remain in force for eight years. . . . Thus were disposed of forever the treaties which constituted our first 'entangling alliance.' The advantage that accrued to the nation is obvious. The justice of thus exchanging private claims for national gain has since then many times engaged the attention of Congress, but these particular 'French Spoliation Claims' became henceforth a domestic problem. The end thus arrived at is to be attributed not only to Adams's decision to make peace, but to his willingness . . . to make war. The brief brush with France had, moreover, brought other results. . . . Spain at length, and reluctantly, in March, 1798, evacuated her posts between the Yazoo and the thirty-first parallel, and the United States for the first time actually possessed in full the boundaries awarded her by the peace of 1783. To the achievements noted at the close of Washington's administration, therefore, the Adams administration added that of meeting the most acute crisis that had yet confronted the nation, and of emerging from

it with the fundamental policy of neutrality still intact, and relieved from treaty of complications. It left the affairs of the nation in a condition superficially satisfactory and actually strong."—C. R. Fish, *American diplomacy*, pp. 134, 138-139.—Spoliations committed by the French in the Revolutionary and Napoleonic Wars subsequently to the year 1800, were indemnified under the provisions of the treaty for the Louisiana purchase (see LOUISIANA: 1798-1803); under the treaty with Spain in 1819, and under a later treaty with France which was negotiated in Andrew Jackson's most imperative manner in 1831. These do not enter into what have become historically specialized as the French Spoliation Claims. The claims were finally settled at the end of the century.

1800-1801.—Fourth presidential election.—Significance.—In 1800 "Adams, whom Dr. Franklin aptly described as 'always an honest man, often a wise one, but sometimes and in some things

absolutely out of his senses,' was approaching the end of his term as President, and public attention was absorbed in the task of choosing a successor. . . . At the time of Adams's election, a sectional feeling, destined in the future to work so much evil, had already been developed; and he in consequence received from States south of the Potomac but two electoral votes. New York had given him her twelve, yet the entire majority over his competitor was but three in all the colleges. The national parties were not unequally matched in the State; and it was evident that, could its vote be diverted to Jefferson in the next contest, his victory would be assured. Hence, strenuous efforts were made to accomplish this end, and for months society was like a seething caldron. The trouble with France had, for the moment, swelled the numbers of the Federalists, and closed up their ranks; but the capricious course of the President, and the violent disruption of the cabinet, rent them asunder."—W. Whitelock, *Life and times of John Jay*, ch. 22.—"The Jeffersonian Republicans . . . faithfully represented the interests and aspirations of their rural constituency. The abundance of good farm land and the consequent ease of acquiring a livelihood relieved the farmers and planters of the need of governmental tariffs and other financial assistance in their economic life, and caused them to envisage government merely as a sublimated policeman whose sole function was to preserve peace and good order. Hamilton's ingenious scheme of a national bank, tariff system, and complete financial reorganization seemed to them pure class legislation, officious intrusions into a domain of interests where in private citizens could best work out their own salvation. As they watched the Federalists at work, they became embittered against a government which appeared to be working in the interests of a strongly-organized minority; they devised a doctrine of state rights as their strongest bulwark against federal encroachments; and, confident in their numerical superiority, they exalted democracy—control by the majority—as the only proper government for a free people. Their attacks on the entrenched moneyed interests brought to their support the workmen of the towns, as yet an unimportant though growing element of the population. Without the prestige of Washington and the disorganized state of the opposition party, it is doubtful if the Federalists could have retained power as long as they did. With his death they quickly succumbed to the democratic tide."—A. M. Schlesinger, *New viewpoints in American history*, pp. 56-57.—"As the presidential campaign of 1800 approached, it was evident that the election would be bitterly contested. The Federalists had a large majority in Congress, elected during the war fever of 1798. . . . [But], the tireless propaganda of the vice President [Jefferson] and his party managers had begun to bear fruit. A strong Republican majority flourished in New York. . . . [In 1798] Thomas McLean carried the state of Pennsylvania against his Federal opponent. . . . In Massachusetts the vote for the Republican candidate for governor rose from 8,000 in 1797 to over 17,000 in 1800. . . . The Federalist majority in the legislature of Vermont was reduced in the election of 1800 from over 100 to 34. New England still remained in the Federalist column, but the grip of the old aristocracy was loosened. . . . The Federalists labored under severe difficulties. In the exciting days of 1798, Congress had authorized a direct tax of \$2,000,000 on lands, dwellings, and

slaves, supplemented by new stamp duties and a loan of \$5,000,000. . . . [In 1799] the loan was reduced to \$3,500,000. But, falling revenues had reduced the revenue by \$1,000,000, while the expenses of government mounted from \$6,000,000 in 1797 to \$9,300,000 in 1799. The effect of the direct taxes was already beginning to be felt. John Fries, an auctioneer in Pennsylvania, led a riot against [the window tax]. . . . The Republicans made capital out of the economic situation. . . . Monroe scored the government for 'preparing for a war which does not exist.' . . . Their situation was strengthened when the offers of conciliation came from France and Adams appointed his second commission. In February, 1800, enlistments were suspended, and the next month the army was disbanded. Nothing that the Federalist Congress could have done would have contributed more to the success of the Republicans than these acts. . . . Political intrigue was added to frenzied electioneering. Pennsylvania was a Republican state, but the Federalists, who had a majority in the upper House, refused to concur in the choice of electors by joint ballot until they were assured of seven of the fifteen electoral votes of the state. In New York, Aaron Burr, by the cleverest arts of the political manager, had secured the election of a Republican delegation from New York City to the legislature in the spring of 1800. This insured a majority in the new legislature (which was to choose the presidential electors) for Jefferson and Burr. Hamilton then wrote a letter to Governor Jay begging him to reconvene the old legislature and have it hastily pass a law providing for the choice of the New York electors by districts, so that at least four or five of its electoral votes might be saved for the Federalists. 'No scruples of delicacy and propriety,' wrote Hamilton, 'ought to hinder the taking of a legal and constitutional step to prevent an atheist in religion and a fanatic in politics from getting possession of the helm of state.' The honorable governor filed the letter away with the simple endorsement, 'Proposing a measure for party purposes which it would not become me to adopt.' New York's vote went to Jefferson, and with it the election. The immense significance of the election of 1800 in our history has often been overlooked. . . . The triumph of Jefferson at the polls was the indorsement of a process of political education, which had been going on, under his chief leadership, for a decade—an education in democracy. The Federalists were without faith in the people. For them government belonged by right to 'the rich, the well-born, and the able,' whom the people were to 'venerate.' . . . The suffrage was narrowed by property qualifications and religious tests. In New England 'magistrates were often chosen by one-twentieth of the legal voters.' The few families who assumed leadership during the Revolution had acquired 'an unrepudiated ascendancy,' which made them 'regard any opposition as actual rebellion against the reigning powers.' They refused to recognize the Republicans as a legitimate party, calling them 'insurgents,' . . . [tempted] 'to wish to manage the affairs of the nation,' instead of submitting themselves to those who were 'over them in the Lord.' As against this debasing doctrine of tutelage the Republicans vindicated the principles of the Declaration of Independence. 'There was a time in this country,' wrote a Republican journalist, 'when God had created all men equal . . . but the new creation of Federalism

... has created four or five hundred gentlemen having entire right to rule and reign.' The Jeffersonian doctrine of 'the cherishment of the people' conceived of the government . . . as the people itself acting in its political capacity. It necessitated the greatest diffusion of power among a progressively educated body of citizens. . . . The people should be roused to 'an universal attention to the duty of election.' A jealous watch on their rulers was their only guarantee of freedom. Their liberties were too precious to delegate to an aristocracy. The propagation of this democracy was the Jeffersonian campaign, and the election of 1800 was but its culmination. The enormous growth of the vote even in New England, out of all proportion to the growth in population, was a witness to the progress of the Jeffersonian ideal, for the figures show that the Republican vote was not taken away from the Federalists but was rather added to theirs. . . . The people woke to their privileges and responsibilities. [See also SUFFRAGE, MANHOOD: United States: 1800-1864.] 'Now the Revolution of 1776 is complete,' said the *Aurora* on the morning after the election. Since 1800 no political party in our land . . . has made its appeal to any less comprehensive electorate than the whole body of American freemen."—D. S. Muzzev, *The United States of America*, v. 1, pp. 202-203.—"Jefferson and Burr had received the same electoral vote [73. Adams received 65.] Every Republican had intended Jefferson for President and Burr for second place; but, under the clumsy provisions of the Constitution the election between these two was now left to the old House of Representatives, in which the Federalists had their expiring war majority. Accordingly the Federalists planned to create a deadlock and prevent any election until after March 4. Then they could . . . elect the presiding officer of the old Senate as President of the country. Jefferson wrote at the time that they were kept from this attempt only by definite threats that it would be the signal for the Middle States [Virginia and Pennsylvania] to arm and call a convention to revise the Constitution."—W. M. West, *Story of American democracy, political and industrial*, pp. 333-334.—"When the house came to act, Jefferson had eight of the sixteen states and Burr had six, two being divided. Then Hamilton showed that moral quality which raised him in crises above party. He disliked Jefferson, but believed him better than Burr, whom he well knew to be faithless to promises. Through his efforts the federalist representatives from Vermont, Delaware and Maryland were induced to refrain from voting, and on the thirty-sixth ballot, February 17, 1801, Jefferson received the votes of ten states and was declared president-elect. Burr never forgave Hamilton his part in the election, and, although vice-president, was thenceforth an ill-disposed partner in the republican administration. This situation, which caused so much anxiety at the time, was responsible for the adoption of the twelfth amendment, 1804 [see below: 1802-1804], by which electors voted specifically for president and vice-president."—J. S. Bassett, *Short history of the United States*, pp. 290-291.—The new president was inaugurated with a simplicity which comported with his surroundings in the unfinished state of the capital. "At twelve o'clock, March 4, 1801 . . . [he] left his lodgings and walked across the square to the partly finished Capitol. In this progress he was accompanied by the secretaries of the navy and treasury, who represented the outgoing administration, some notable personages, and a few political friends,

while the militia from the neighborhood furnished an escort. As he ascended the steps of the Capitol, a discharge of artillery was made. . . . Entering the Senate chamber, he took the vice-president's chair. On one side was Aaron Burr, the new vice-president, on the other was John Marshall, the new chief justice of the supreme court of the United States [who had taken office only a month before.] It was an interesting group, doubly interesting indeed, because probably in the whole country there could not have been found three men who more thoroughly detested and distrusted one another than Thomas Jefferson, John Marshall and Aaron Burr."—E. Channing, *Jeffersonian system, 1801-1811*, pp. 3-4.—"With all his outward simplicity the Virginian magnate and man of letters, though he might be a Republican, could not in himself be a true embodiment of democracy. He was the friend of the people, but not one of them. . . . The desired day had come when the philosopher was to govern. The words of the address which Jefferson . . . read in a very low voice, are the expression by its great master and archetype of the republican idea which has hitherto reigned supreme in the mind of the American people. These words are monumental, 'Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce, and honest friendship with all nations, entangling alliances with none; the support of the State governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against anti-republican tendencies, the preservation of the general government in its whole constitutional vigour, as the sheet-anchor of our peace at home and safety abroad; a jealous care of the right of election by the People; a mild and safe correction of abuses which are lopped by the sword of revolution where peaceable remedies are unprovided; absolute acquiescence in the decisions of the majority, the vital principle of republics, from which there is no appeal but to force, the vital principle and immediate parent of despotism; a well-disciplined militia, our best reliance in peace and for the first movements in war, till regulars may relieve them; the supremacy of the civil over the military authority; economy in the public expense, that labour may be lightly burdened; the honest payment of our debts, and sacred preservation of the public faith; encouragement of agriculture, and of commerce as its handmaid, the diffusion of information, and arraignment of all abuses at the bar of public reason; freedom of religion, freedom of the press, and freedom of person under the protection of the "habeas corpus," and trial by jurors impartially selected;— these principles form the bright constellation which has gone before us and guided our steps through an age of revolution and reformation.' Jefferson's wand was the pen. Yet he is strangely apt to fall into mixed metaphors and even into platitudes. This address had not escaped criticism."—Goldwin Smith, *United States*, ch. 3.—"Jefferson had reached the presidential chair at a most fortunate moment. . . . The prospect of a speedy peace in Europe promised effectual and permanent relief from those serious embarrassments to which, during war on the ocean, American commerce was ever exposed from the aggressions of one or all of the belligerents. The treasury was fuller, the revenue more abundant than at any previous period. Commerce was flourishing, and the pecuniary prosperity of the country very great. All the responsibility of framing institutions, laying taxes, and providing for debts, had fallen on the ousted administration.

Succeeding to the powers and the means of the Federal government without sharing any of the unpopularity at the expense of which they had been attained, and ambitious not so much of a splendid as of a quiet and popular administration, the new president seemed to have before him a very plain and easy path. . . . To the offices of Secretary of State, Secretary of the Treasury, and Attorney General, left vacant by the resignation of the late incumbents, Jefferson nominated James Madison, Henry Dearborn, and Levi Lincoln, the latter an early leader of the opposition in Massachusetts. . . . As the Senate stood at present, still containing, as it did, of the members present a majority of Federalists, Jefferson did not think proper to make any further nominations; but, soon after the adjournment, he appointed as Secretary of the Treasury Albert Gallatin, all along the financial member of the opposition. . . . The Navy Department, after being refused by Chancellor Livingston, was given to Robert Smith, brother of the Baltimore member of Congress. Livingston, however, having reached the age of sixty, and being obliged, under a Constitutional provision, to vacate the chancellorship of New York, consented to accept the embassy to France. . . . Habersham was continued as post-master-general for some six months, . . . but he presently gave way to Gideon Granger, a leader of the Connecticut Republicans."—R. Hildreth, *History of the United States, 2d series, ch. 16* (v. 2, or v. 5 of whole work).—He "made less than twenty removals for political reasons, mostly of marshals and district attorneys. The rest of the removals of his time were for misconduct in office. On March 4, 1801, there were 385 officials who were subject to removal by the president. Of these 183 were still in office March 4, 1805. On the other hand, when it fell to Jefferson's lot to appoint a full set of commissioners of bankruptcy under the act of 1801, he distributed them impartially between Republicans and Federalists."—E. Channing, *Jeffersonian system, 1800-1801*, pp. 9, 11, 17.—"The federal offices were held by Federalists almost to a man. He hoped he would have to make only a few removals; any other course would expose him to the charge of inconsistency after his complacent statement that there was no fundamental difference between Republicans and Federalists. But his followers thought otherwise; they wanted the spoils of victory and they meant to have them. Slowly and reluctantly Jefferson yielded to pressure, justifying himself as he did so by the reflection that a due participation in office was a matter of right. . . . Once removals were decided upon, Jefferson drifted helplessly upon the tide. For a moment, it is true, he wrote hopefully about establishing an equilibrium and then returning 'with joy to that state of things when the only questions concerning a candidate shall be: Is he honest? Is he capable? Is he faithful to the Constitution?' That blessed expectation was never realized. By the end of his second term, a Federalist in office was as rare as a Republican under Adams."—A. Johnson, *Jefferson and his colleagues (Chronicles of America)*, p. 22.

1800-1803.—Treaty of San Ildefonso.—Effect of news of treaty, in 1801, upon Jefferson's policy.—Importance to Mississippi river.—Settlements in Mississippi valley.—Fears of probable effect of French possession of Louisiana.—Appointment of Monroe as special envoy to France.—"Americans could put up with the exclusion from the lower Mississippi and the Gulf, so long as that territory was in the hands of weak and declining Spain. European wars and treaties now began, however, to have far reaching effects, extending to the New World; for in 1795 and 1796 the French government began to urge upon Spain the transfer of the former French province of Louisiana; and actually secured the cession of the Spanish end of the island of San Domingo. No progress was made until 1800, when Napoleon's representative courteously suggested that 'the court of Spain will do then at once a wise and a great act if it calls France to the defence of its colonies by adding Louisiana to them, and by replacing in their hands this outpost of its richest possession in the New World.' Yet some consideration had to be offered even by the world-conquering power, and France proposed to make the son-in-law and daughter of the king of Spain king and queen of the new realm of Etruria. Upon this basis was concluded the Treaty of San Ildefonso, of October, 1800, by which Louisiana was ceded to France, 'with the same extent that it now has in the hands of Spain and that it had when France possessed it, and such as it should be in conformity with the treaties entered into between Spain and other states.'"—A. B. Hart, *Foundations of American foreign policy, pp. 186-187*.—"Jefferson was an expansionist. His interest in the country west of the Alleghenies, and even in the great wilderness beyond the Mississippi, was constant from the earliest days of the republic. It was he who drafted the Ordinance of 1784 . . . [and] in the famous Northwest Ordinance, had set the impress of his genius on a policy of territorial government which was to endure for a century. . . . He regarded the English settlements on the Atlantic coast as 'the nest from which America north and south was to be peopled' and foresaw a republic of a hundred million in the great western continent. He had not been in the presidency ten weeks before news came from our minister in London, Rufus King, of [the Treaty of San Ildefonso]. The circumstance was inauspicious for several reasons. It meant the establishment of the strongest and richest of the European countries as a colonial power on our borders. . . . It meant the substitution of the restless and unpredictable ambition of Napoleon Bonaparte in the Western Hemisphere for the supine and dilatory policy of the court of Spain. It meant the control of the Mississippi, through the possession of New Orleans, by a power no more friendly than Spain to the United States, but infinitely more able to paralyze our commerce on the great river. Since the few thousands of pioneers had followed Boone, Sevier, Harrod, and Robertson across the mountains in the days of the Confederation, our Western settlements had grown apace. The opening of the nineteenth century saw some 50,000 farmers established in the rich bottom lands along the Ohio River and its northern tributaries. A hundred thousand immigrants had beaten the buffalo paths and Indian trails of Tennessee into pack roads and begun clearing the hickory

**THE UNITED STATES**

SHOWING ITS TERRITORIAL DEVELOPMENT FROM THE FOUNDATION OF THE GOVERNMENT TO THE END OF THE NINETEENTH CENTURY.

- ORIGINAL TERRITORY OF THE UNITED STATES BY THE PEACE OF PARIS 1783
- PROVINCE OF LOUISIANA ACQUIRED FROM FRANCE BY PURCHASE 1803 THE NORTH WESTERN BOUNDARY OF LOUISIANA EXTENDED TO THE ROCKY MOUNTAINS THE SOUTHERN BOUNDARY WAS ADJUSTED WITH GREAT BRITAIN BY TREATY OF 1818 AND THE REMAINDER OF THE WESTERN BOUNDARY WAS ARRANGED WITH SPAIN BY TREATY OF 1819
- FLORIDA ACQUIRED FROM SPAIN BY TREATY OF 1819 WEST FLORIDA HAD BEEN OCCUPIED BY U.S. SINCE 1810
- REPUBLIC OF TEXAS ADMITTED TO THE UNION IN 1845 THE WESTERN BOUNDARY OF TEXAS REMAINED IN DISPUTE WITH MEXICO UNTIL THE MEXICAN WAR
- THE OREGON TERRITORY OCCUPIED BY U.S. SINCE 1804 ACQUIRED BY TREATY WITH GREAT BRITAIN 1818-1846
- TERRITORY ACQUIRED FROM MEXICO BY TREATY OF GUADALUPE HIDALGO 1848
- THE GADSDEN PURCHASE ACQUIRED FROM MEXICO 1853

and sycamore forests for their corn and tobacco, their hogs and cattle. Over 200,000 had gone into Kentucky. The outlet for the increasing products of all this 'back country' was the great river. 'The Mississippi is everything to them,' wrote Madison in 1802; 'it is the Hudson, the Potomac, the Delaware, and all the navigable rivers of the Atlantic coast formed into one.' . . . The custom house books of 1802 showed exports from the port of New Orleans of over \$3,000,000 of sugar, \$1,000,000 of cotton, 200,000 lbs. of tobacco, nearly 10,000 bbl. of flour, besides large amounts of cordage, cider, apples, bacon, pork, and lead. Most of the articles, except the sugar and cotton, came from the settlements up the river, Kentucky and Tennessee alone sending over \$1,600,000 of produce through the port. Out of 267 vessels clearing from New Orleans in the year 1802 there were 158 American as against 104 Spanish. Seagoing ships had even begun to build at Pittsburgh and had successfully made the trip from the upper Ohio to Liverpool. The attachment of the Western states of the Union depended on the guarantee of their commerce, and this guarantee depended on the control of the Mississippi. If the river was not in our hands, at least it must be in the hands of a power with whom we could deal on equal terms."—D. S. Muzzey, *United States of America*, v. 1, pp. 212-214.—That Jefferson well knew the gravity of the situation created by the retrocession, and the importance for the future of the nation with which it was freighted, is clearly shown by his correspondence at this time. In a letter to Livingstone, dated Apr. 18, 1802, he wrote "It completely reverses all the political reverses of the U. S. and will form an epoch in our political course. . . . There is on the globe one single spot, the possessor of which is our natural and habitual enemy. . . . It is New Orleans, through which the produce of three-eighths of our territory must pass to market, and from its fertility it will ere long yield more than half of our whole produce and contain more than half our inhabitants. France placing herself in that door assumes to us the attitude of defiance. Spain might have retained it quietly for years. . . . Her possession of the place would be hardly felt by us. . . . But the day that France takes possession of New Orleans . . . seals the union of two nations who in conjunction can maintain exclusive possession of the ocean. From that moment we must marry ourselves to the British fleet and nation. We must turn all our attentions to a maritime force. . . . This is not a state of things we seek or desire. It is one which this measure, if adopted by France, forces on us. . . . If France considers Louisiana however as indispensable for her views, she might perhaps be willing to look about for arrangements which might reconcile it to our interests. If anything could do this it would be the ceding to us the island of New Orleans and the Floridas. . . . Every eye in the U. S. is now fixed on this affair of Louisiana. . . . Perhaps nothing since the Revolutionary war has produced more uneasy sensations through the body of the nation.' To Monroe, on January 13, 1803, he wrote 'On the event of this mission [Monroe's to France] depends the future destinies of this republic,' and again, in a letter of February 1, 1803, to Dupont de Nemours, he said 'He [Monroe] goes . . . to aid in the issue of a crisis the most important the U. S. have ever met since their independence, and which is to decide their future character and career. . . . The use of the Mississippi is so indispensable that we cannot hesitate

one moment to hazard our existence for its maintenance.' [Yet at this time he had no idea of the possibility of obtaining anything except the Floridas and New Orleans, and with them the mouth of the Mississippi].—*Old South Leaflets*, v. 6, pp. 50-51, 53-55.—On Oct. 16, 1802, the right of deposit, granted by the treaty with Spain of 1795, was withdrawn. [See DEPOSIT, RIGHT OF.] The West was thrown into a ferment, and the opposition naturally enough seized upon the situation as a means of promoting their own advancement. This made decided action immediately necessary, and in January, 1803, the president nominated James Monroe as envoy extraordinary to act with H. R. Livingstone and Charles Pinckney at Madrid in an effort to achieve the purchase of New Orleans and the Floridas. In his letter to Livingstone, of February 3, 1803, announcing the appointment, he said, "The opposition raised the cry of war, were intriguing in all the quarters to exasperate the Western inhabitants to arm and go down on their own authority and possess themselves of New Orleans."—*Old South Leaflets*, v. 6, pp. 50, 58.

1801.—Appointment of John Marshall to be chief justice of the Supreme Court.—His constitutional decisions.—On Jan. 31, 1801, near the close of the term of President Adams, the latter appointed John Marshall, who had been secretary of state in his cabinet since the previous May, to be chief justice of the Supreme Court. It was a memorable appointment, the most memorable, perhaps, that has ever been made by official and not popular selection, in America, since Washington was appointed to the command of the continental army. Its result was to place the new, uninterpreted, plastic constitution of the Federal republic under the hands of a master, during thirty-four years of the period in which it hardened into practical, determined law. It decided the character of the constitution, and by that decision the great instrument was made a bond of nationality, firm, strenuous and enduring. "The abilities of the new Chief Justice were recognized by the profession and the public at the time of his appointment, but the attractive qualities of his heart and his kindly manners soon caused respect and reverence to ripen into affection. Perhaps no American citizen except Washington ever conciliated so large a measure of popularity and public esteem. . . . In surveying the results of the labors of thirty-four years recorded in thirty-two volumes of reports, it is obvious that it was in the decision of cases involving international and constitutional law that the force and clearness of the Chief Justice's intellect shone most conspicuous. Such was the ready assent of his colleagues on the bench to his supremacy in the exposition of constitutional law, that in such causes a dissenting opinion was almost unknown. Having had occasion to discuss and thoroughly study the Constitution, both in the Virginia convention which adopted it and afterward in the legislature, he had preconceived opinions concerning it, as well as perfect familiarity with it. But in the hot contest waging between the friends of a strict and those of a liberal construction of its language, he wished to take no part. He stated that there should be neither a liberal nor a strict construction, but that the simple, natural, and usual meaning of its words and phrases should govern their interpretation. In the case of *Gibbons v. Ogden*, in which he is called upon to define the true rule of construction of the United States Constitution regarding the

rights of the States and the rights and powers of the general government, he studiously avoids each extreme, steering safely in the middle course. He lays down his own rule thus clearly and definitely:—“This instrument contains an enumeration of powers expressly granted by the people to their government. It has been said that these powers ought to be construed strictly; but why ought they to be so construed? Is there one sentence in the Constitution which gives countenance to this rule? In the last of the enumerated powers, that which grants expressly the means for carrying all others into execution, Congress is authorized to make all laws that shall be necessary and proper for the purpose. But this limitation on the means which may be used is not extended to the powers which are conferred, nor is there one sentence in the Constitution which has been pointed out by the gentlemen of the bar, or which we have been able to discern, that prescribes this rule. We do not therefore think ourselves justified in adopting it. If they contend only against that enlarged construction which would extend words beyond their natural and obvious import, we might question the application of the term but should not controvert the principle. If they contend for that narrow construction which, in support of some theory not to be found in the Constitution, would deny to the government those powers which the words of the grant, as usually understood, import, and which are consistent with the general views and objects of the instrument; for that narrow construction which would cripple the government, and render it unequal to the objects for which it is declared to be instituted, and to which the powers given, as fairly understood, render it competent; then we cannot perceive the propriety of this strict construction, nor adopt it as a rule by which the Constitution is to be expounded.’ . . . Marshall’s dictum that there must be neither a strict nor a liberal construction of the Constitution, but that the natural meaning of the words must govern, was undoubtedly sound and wise. . . . Jefferson and Hamilton, in a different department of public life from Marshall, had duties and obligations correspondingly different from his. They might properly try to make the Constitution mean what it seemed to them for the public welfare that it should mean. Marshall could not consider any such matter; he had only to find and declare what it did mean, what its words actually and properly declared, not what they might possibly or desirably be supposed or construed to declare. This was the real force and the only real force of his foregoing assertion. As an abstract statement of his function it was impregnable. But, as with most broad principles, the difficulty lay in the application of it to particular cases. The constitutional questions which came before Marshall chiefly took the form of whether or not the Constitution conferred some power or authority upon Congress, or upon the Executive. . . . The decision must be yes or no; the authority did or did not rest in the government. It was easy to talk about the natural and proper meaning of the words; but after all it was the question at issue; did they (not could they) say yes, or did they (not could they) say no, to the special authority sought to be exercised. Now it is one thing, to be impartial and another to be colorless in mind. Judge Marshall was impartial and strongly possessed of the judicial instinct or faculty. But he was by no means colorless. . . . Believing that the Constitution intended to create and did create a national government,

and having decided notions as to what such a government must be able to do, he was subject to a powerful though insensible influence to find the existence of the required abilities in the government. . . . The great majority of his decisions were in accordance with Federalist principles of construction and of policy. The Republicans all denounced him as a Federalist, even of an extreme type.”—A. B. Magruder, *John Marshall*, ch. 10.—See also SUPREME COURT: 1789-1835.

1801.—Treaty with France ratified.—“When the envoys [sent to France by President Adams (see above: 1800: Convention with France)], met in Paris a change had occurred in the French government. The strong hand and wise head of Napoleon had replaced the corrupt and foolish Directory. The policy of nursing a French interest in America, which for seven years had been followed by Republican leaders in Paris, was now abandoned. The relations between the two nations were put upon the grounds of national dignity and national interests. No trouble was discovered in making such an agreement as secured neutrality and reasonable protection to commerce. When Davie returned late in 1800 with the completed treaty he was received with satisfaction. The Republicans were pleased because it brought assurances of peace with France. The Federalists found in it the consolation that the old treaties of 1778 were superseded. It was, in fact, a blessing that we had peace, and that we were no longer bound to another nation by so embarrassing an arrangement as our old French alliance; but the repeal of the old treaty cost us the spoliation claims, for Napoleon insisted that both should stand or fall together. The Senate hesitated: it ratified for eight years, and reserved our right to indemnity; but the matter was prolonged till the Federalists were out of office, and December 19, 1801, the treaty was ratified with indemnity left out. The claims have never been paid by France.”—J. S. Bassett, *Federalist system*, pp. 250-251.—Adams, himself proposed for his epitaph the words: “Here lies John Adams, who took upon himself the responsibility of peace with France in 1800.”

ALSO IN: D. S. Muzzey, *United States of America*, v. 1, pp. 183-184.

1801.—Domestic and foreign policy.—“The Federalist legislation of recent years which had most angered the Republican opposition were the Alien and Sedition acts, the Naturalization Act, and the Judiciary Act. Of these, the Alien and Sedition acts had expired by limitation. The new Congress repealed the Naturalization Act, substituting in its place the law of 1795, which required a five years’ period of residence for citizenship in place of the fourteen demanded by the law of 1798. With regard to the Judiciary Act, the question of its repeal raised several interesting points. The act of 1801 had provided for the organization of a new set of federal courts midway between the supreme court and the district courts, with judges, attorneys, and marshals of their own. What especially angered the Repub-

ficians in the new judiciary system was the fact that under it recourse to the federal courts would be more easy. The federal jurisdiction would be extended at the expense of the state courts. The repeal was carried, however, by one vote in the Senate and only after a most acrimonious discussion in the House. The most important event of the session was the establishment of a new financial policy. Jefferson argued very strongly for economy, and Gallatin outdid his chief in this respect. In his comments on the draught of Jefferson's first message, Gallatin insisted strongly on three things. These were, first, the payment of seven millions each year on the interest and principal of the national debt; second, on every possible reduction of taxation which could be made; third, on Congress making specific appropriations, and on a simplification of the organization and workings of the treasury and the spending departments. . . . Hamilton, in his report of 1789, had estimated the national debt, including arrears of interest and state debts to be assumed, at \$76,000,000 in round numbers. On January 1, 1802, the debt stood at over \$80,000,000, and on January 1, 1803, the net debt was given by Gallatin as \$77,000,000. That year saw the payment of \$15,000,000 for Louisiana, which was made by means of a loan. In the same year, however, over five and a half millions were paid on account of the principal of the debt. From that time until 1810, there was a steady decrease in the amount of the national debt, until in 1810 it stood at a little over \$53,000,000, the decrease in eight years being almost exactly \$27,500,000, in the face of the \$15,000,000 paid for Louisiana and the money doled out most ungraciously by Gallatin on the navy. In November, 1801, Gallatin estimated the revenue for the next year at \$10,600,000. Of this he proposed to use \$3,600,000 in payment of the interest, and of more than \$3,500,000 to pay the current expenses of the government, including the army and the navy. These figures are the best justification of Gallatin's remarkable financial achievement. For it cannot be denied that, when the interest on the national debt required nearly one-third of the revenue, it was time to take effective measures to relieve the country of so great a burden. The only possible way to accomplish this result, which Gallatin so much desired, was to pursue a steady and prolonged career of economy; and to do that it was absolutely necessary that the country should remain at peace with all the nations. . . . Until the debt was paid, he was disposed to follow the old precept of turning the other cheek to the smiter. When the debt is paid then will be the time to build ships—and not before. When the new Congress assembled, Nathaniel Macon was chosen speaker of the House. . . . The committee on ways and means had been first appointed in 1796, on motion, of Gallatin, when the Republicans were in control of the House but not of the executive department, in order to wrench from the Federalist secretary of the treasury a portion of the control of the national finances. John Randolph . . . now became chairman of the most important committee. . . . Sending for the secretaries of war and of the navy, he secured from them pledges of economy which made Gallatin give his consent to the repeal of all internal taxes. The result showed that Gallatin was right in his lack of faith in naval economy. It also showed that Randolph was right in his faith in the redundancy of the national revenues. For Gallatin, with characteristic caution, had underestimated his receipts, while giving his

expenditures at very nearly their correct figure. In this way went the internal revenue system, and with it about one-quarter of the patronage of the federal government. . . . As to the third point noted above. Gallatin deliberately asked Congress to curtail his own power by making appropriations for specific purposes. He also secured the simplification of the service to bring about greater direct responsibility to himself as the head of the treasury department."—E. Channing, *Jeffersonian system, 1801-1811*, pp. 25, 27-32.—"Jefferson found the foreign relations of the United States pacific and prosperous, as never before, upon his accession; a state of affairs which President Adams had procured at the cost of disruption in his party and the bitterest personal humiliation. . . . The First Consul promptly assented to the French Convention as modified in our United States, on the further understanding that American spoliation claims should be thereby relinquished; and final ratifications were exchanged between France and the United States accordingly. [See above: 1801.] Peaceful relations having been restored, Livingston [who had been appointed minister (see above: 1800-1808)], sailed for France, while Pichon, . . . had already arrived at Washington, bearing the credentials of a French chargé. The conduct of Great Britain at the outset of Jefferson's administration was friendly to the United States, and British cruisers in the West Indies were ordered to treat American vessels with consideration. In a modest way a national military school was opened at West Point, the headquarters of the engineer corps; and thus was initiated a permanent academy, such as Washington had recommended in his final message to Congress, though by no means upon the scale projected by Hamilton. By way of naval reduction Congress stopped the building of six seventy-fours, for which timber had been collected under an act of the preceding Congress, and reduced the appropriation for the improvement and increase of the navy to a quarter of a million dollars. By the sale of unnecessary ships under that former act our present navy had already been brought down to thirteen vessels. . . . At this session the House made keen scrutiny into the financial methods and expenditures of the late administration. No corruption or scandalous mismanagement appeared; . . . the administration of John Adams, if slack in some respects, had certainly been an honest one. . . . In confirmation of the peaceful state of our foreign relations, the President, before this session closed, communicated the good news that a definite adjustment had been made with Great Britain over the British debts claimed under the Jay treaty. The gross sum of £600,000, or \$2,664,000, as a final satisfaction of these debts, was appropriated by Congress accordingly, this amount being payable by the United States in three annual instalments. Eventually the awards made to American merchants for illegal captures footed up to about \$6,000,000; so that the United States won solid advantage, in the end, from a treaty which had been execrated almost as bitterly as the Stamp Act."—J. Schouler, *History of the United States of America under the constitution*, v. 2, pp. 17, 24, 27.

1802.—Admission of Ohio to the Union. See NORTHWEST TERRITORY OF THE UNITED STATES.

1802-1803.—Increase in navy.—"In the short session of 1802-1803 many signs proved that the revolution had spent its force, and that a reaction was at hand. Congress showed no eagerness to adopt the President's new economies, and dis-

missed with silence, almost contemptuous, his scheme for building at Washington a large dry-dock in which the navy should be stored for safety and saving. The mint was continued by law for another five years, and twenty thousand dollars were quietly appropriated for its support. Instead of reducing the navy, Congress decided to build four sixteen-gun brigs and fifteen gunboats, and appropriated ninety-six thousand dollars for the brigs alone. The appropriation of two millions as a first instalment toward paying for New Orleans and Florida was another and a longer stride in the old Federalist path of confidence in the Executive and liberality for national objects. The expenditure for 1802, excluding interest on debt, was \$3,737,000. Never afterward in United States history did the annual expenditure fall below four millions. The navy in 1802, cost \$915,000; never afterward did it cost less than a million."—H. Adams, *History of the United States of America*, v. 2, p. 77.

1802-1804.—Land cessions of Georgia annexed to Mississippi territory. See *MISSISSIPPI*: 1798-1804.

1802-1804.—Twelfth Amendment to the constitution.—"A month before the counting of the electoral vote, in 1797, a resolution was offered to amend the Constitution so as to direct the electors to designate their choice for President and Vice-President, . . . [thus providing evidence] that the public mind was not at rest on the subject. . . . Meanwhile the Presidential election of 1800 had occurred, its results were known and the first case of a failure to choose a President had arisen. . . . On the twelfth of April, 1802, DeWitt Clinton, in the Senate, submitted an amendment that the persons voted for as President or Vice-President, 'be particularly designated.' . . . [The debate on the amendment in both House and Senate was stormy.] States' rights, State sovereignty, the Constitution a compact between the States, the dangers of intrigue and corruption incident to an election, the merits of three over five and of five over three, . . . the use and uselessness of the office of Vice-President; the public will; the danger of innovations on the Constitution, all were touched on and the vote was taken. . . . The casting vote of Nathaniel Macon, the Speaker, carried the amendment. On the following day the twelfth of December [1803], the Senate concurred. Its progress through the State legislatures was rapid. On the twenty-fifth of September [1804], James Madison, the Secretary of State proclaimed that the amendment had been ratified by three-fourths of the States and it became a part of the Constitution. [See U. S. A., *CONSTITUTION OF*.] Its adoption may be said to have completed the Constitution as a piece of eighteenth century work."—F. N. Thorpe, *Constitutional history of the United States*, v. 2, pp. 299, 304, 327-328.

1803.—Louisiana Purchase.—Its constitutional and political aspects.—"Monroe sailed for France in the middle of January, 1803, while the Federalists in Congress were trying to embarrass Jefferson and outbid the administration in popularity with the Western settlers by advocating the immediate seizure of Louisiana by force. But relief in the tense situation came neither from Livingston's entreaties nor from Monroe's inducements, but from Napoleon himself. . . . On the very day that Monroe landed at Havre the First Consul ordered his minister of finance, Barbé-Marbois, to offer Livingston not New Orleans alone but the entire province of Louisiana for 50,000,000

francs. Livingston who had been trying in vain to persuade Napoleon to sell a part of Louisiana, was dumbfounded by this offer of the whole. He and Monroe discussed the matter with Marbois (who set the price at 100,000,000 francs instead of 50,000,000 as he had been ordered), and after some haggling they agreed on the figure of 60,000,000, together with the assumption of claims by the United States [French Spoliation Claims, (see above: 1800: Convention with France)] to an amount not exceeding 20,000,000 francs, making the total price 80,000,000 francs, or some \$14,500,000. The three negotiators set their names to the treaty on May 2, 1803, and as they rose to shake hands Livingston remarked: 'We have lived long, but this is the noblest work of our whole lives. From this day the United States take their place among the powers of the first rank.' When the Louisiana treaty reached Washington, in midsummer, it was Jefferson's turn to be surprised. He had sent Monroe to purchase New Orleans with West Florida if possible, for not more than \$10,000,000. Now came a bill half again as large for the whole of Louisiana—a tract which doubled the area of the United States. [See also OREGON: 1790-1805; TEXAS: 1690-1806.] There was no doubt that this was an excellent bargain; but aside from the charge imposed on the government (a charge exceeding our total annual revenue), there were points in the treaty to give an advocate of strict construction much uneasiness. . . . Jefferson himself was the first to admit that he had 'done an act beyond the Constitution.' He prepared an amendment to submit to Congress, so that the states' might ratify the purchase through their legislatures or conventions. But before the meeting of Congress, Monroe advised him from Paris that Napoleon might change his mind if there were any delay in the ratification of the treaty and the appropriation of the purchase money by Congress. The Federalist minority in Congress objected to the treaty from every point of view; it contravened the Constitution by giving the port of New Orleans advantages not shared by other ports of the country; it usurped the power of Congress by regulating trade; the payment of so large a sum of money to a belligerent nation was virtually a breach of neutrality; the title of France to the province of Louisiana was not clear; and all that we had bought at this huge price was 'the authority to make war on Spain.'"—D. S. Muzzey, *United States of America*, v. 1, pp. 215-217.—"Hamilton shared Jefferson's view, that the purchase of Louisiana was a question of the greatest, and even of vital, importance for the Union. His opposition on other occasions to the policy of the administration, and his personal enmity to the president, did not prevent his lending him a helping hand in this matter when an opportunity offered. The great majority of the Federalists opposed this increase of the territory of the Union with as much decision as Hamilton advocated it. They showed in their attitude towards this question a shortsightedness which would have been astonishing even among the doctrinaires of the opposite party."—H. von Holst, *Constitutional and political history of the United States*, v. 1, pp. 183-185.—"Mr. Jefferson belonged to the school of strict construction, and was in fact its leader and apostle. . . . Under a construction of the Constitution as strict as he had been insisting upon, it was plain that the government would have no power to acquire foreign territory by purchase, and that any attempt in that direction would be usurpation. . . . To give the necessary authority an

amendment of the Constitution would be essential, and amendment would be a slow process which might not be accomplished in time to meet the emergency. The case would be complicated by the fact that if the territory was acquired a considerable population would be brought into the Union and thus made citizens by a process of naturalization not contemplated by the Constitution. Mr. Madison, the Secretary of State, agreed with the President in his views. To use Mr. Jefferson's words, 'The Constitution has made no provision for our holding foreign territory; still less for incorporating foreign nations into our Union.' But under circumstances so imperative he thought the political departments of the government should meet the emergency by consummating the purchase, and 'then appeal to the nation for an additional article in the Constitution approving and confirming an act which the nation had not previously authorized.' He did not conceal from himself, however, that in so doing ground would be occupied which it would be difficult to defend, and he proceeds to say: 'The less that is said about any constitutional difficulty the better. Congress should do what is necessary in silence. I find but one opinion as to the necessity of shutting up the Constitution for some time.' Mr. John Quincy Adams held similar views. . . . But it is difficult to conceive of any doctrine more dangerous or more distinctly antagonistic to the fundamental ideas of the American Union than the doctrine that the Constitution may be 'shut up' for a time in order that the government may accomplish something not warranted by it. The political immorality was obvious and glaring; more so in the case of the apostle of strict construction than it could have been if advanced by any other statesman of the day. . . . But Mr. Jefferson's political mistake was scarcely greater than that committed by his opponents: and, indeed, from a party standpoint it was no mistake whatsoever, but a bold measure of wise policy. . . . The purchase, according to the Federal view of the Constitution, was perfectly legitimate. . . . But the Federalists in general took narrow and partisan views, and in order to embarrass the administration resorted to quibbles which were altogether unworthy the party which had boasted of Washington as its chief and Hamilton as the exponent of its doctrines. . . . The Federal leaders did not stop at cavils; they insisted that the unconstitutional extension of territory was in effect a dissolution of the Union, so that they were at liberty to contemplate and plan for a final disruption."—Judge T. M. Cooley, *Acquisition of Louisiana (Indiana Historical Society Pamphlets, no. 3)*.—The result of the debates on the Louisiana treaty, in the Senate and the House, "decided only one point. Every speaker, without distinction of party, agreed that the United States government had the power to acquire new territory, either by conquest or by treaty; the only difference of opinion regarded the disposition of this territory after it was acquired. Did Louisiana belong to the central government at Washington, or to the States? . . . Whether the government at Washington could possess Louisiana as a colony or admit it as a State, was a difference of no great matter if the cession were to hold good; the essential point was that for the first time in the national history all parties agreed in admitting that the government could govern. . . . Even in 1804 the political consequences of the act were already too striking to be overlooked. Within three years of his inauguration Jefferson bought a foreign colony without

its consent and against its will, annexed it to the United States by an act which he said made blank paper of the Constitution; and then he who had found his predecessors too monarchical, and the Constitution too liberal in powers,—he who had nearly dissolved the bonds of society rather than allow his predecessor to order a dangerous alien out of the country in a time of threatened war,—made himself monarch of the new territory, and wielded over it, against its protests, the powers of its old kings. Such an experience was final; no century of slow and half-understood experience could be needed to prove that the hopes of humanity lay thenceforward, not in attempting to restrain the government from doing whatever the majority should think necessary, but in raising the people themselves till they should think nothing necessary but what was good."—H. Adams, *History of the United States of America, v. 2, ch. 4-6*.—"The Senate immediately ratified the treaty by a vote of 24 to 7, and a few weeks later the House voted the funds in the form of an issue of \$11,250,000 in 6 per cent stock. There was no doubt of the popularity of the Louisiana Purchase. There were grave irregularities in the transaction. Napoleon had not yet fulfilled his part of the treaty of San Ildefonso with Spain when he sold us Louisiana, and the Spanish authorities were still in command at New Orleans. Moreover, Napoleon had promised Spain never to transfer the province to a foreign power, and the French Constitution forbade the First Consul to alienate any of the land of the Republic. . . . But we took the ground that the delinquencies of France toward Spain could not invalidate the good faith of our dealing with France; and Spain, after a first violent protest, acquiesced in the transaction—with her own interpretation of the boundaries of Louisiana. These boundaries, even in the limited form finally fixed by the treaty of 1819 with Spain, inclosed a magnificent domain extending from the Gulf of Mexico to the Canadian border and from the Mississippi to the Rockies. Fourteen states or parts of states have been made from that domain, in which the value of the farm lands alone a century after the purchase was more than a thousand times as great as the price paid for the whole province. The white inhabitants of this domain increased from 50,000 in 1804 to 20,000,000 in 1914. In abundance and variety of products it is the richest developed area in the world. And the original cost of its 875,000 square miles was about three cents an acre! On November 30, 1803, Louisiana was finally handed over to the French intendant Laussat by the Spanish authorities at New Orleans, and twenty days later the French tricolor was hauled down and the Stars and Stripes were raised in its place."—D. S. Muzzey, *The United States of America, v. 1, pp. 217-218*.—"Brief as was the French occupation it continued long enough for Laussat to publish a new code of French law which reproduced many of the principles of the Code Napoléon. The principal result of this speed in giving laws to a province which was already sold was to make more confused than before the confusion of the combined French law of the old regime and the Spanish laws of the Indies."—E. Channing, *Jeffersonian system, 1800-1811, pp. 81, 82*.—"The significance of the Mississippi Valley was clearly seen by Jefferson. . . . The acquisition of Louisiana was a recognition of the essential unity of the Mississippi Valley the French engineer Collot reported to his government after an investigation in 1796: 'All the positions on the left [east] bank of the Mississippi

. . . without the alliance of the Western states are far from covering Louisiana . . . when two nations possess, one the coasts and the other the plains, the former must inevitably embark or submit. From thence I conclude that the Western States of the North American republic must unite themselves with Louisiana and form in the future one single compact nation; or else that colony to whatever power it shall belong will be conquered or devoured.' The effect of bringing political unity to the Mississippi Valley by the Louisiana Purchase was profound. It was the decisive step of the United States on an independent career as a world power, free from entangling foreign alliances . . . not only was the nation set on an independent path in foreign relations; its political system was revolutionized, for the Mississippi Valley now opened the way for adding State after State, swamping the New England section and its federalism. The doctrine of strict construction had received a fatal blow at the hands of its own prophet."—F. J. Turner, *Frontier in American history*, pp. 188-189.—See also LOUISIANA: 1803-1804; MISSOURI: 1803-1812.

1803.—Report on British impressment of seamen from American ships.—"In England . . . the navy was manned to a considerable extent by persons who were forced into the service by a process known as impressment. The discipline on British naval ships was harsh, the conditions as to food and clothing were undesirable, and the labor required was arduous. . . . British seamen fled from English ships and embarked on American vessels. It is impossible to state how many sailors of English, Scottish, and Irish birth were serving on American merchant-ships; the number is given in contemporary writings as high as thirty or forty thousand, which is doubtless a gross exaggeration. . . . The peace of Amiens in 1802 found the question of impressment undecided between England and America; the renewal of the conflict between England and France witnessed a revival of the activity of the English press gangs and of the forcing American citizens, both native-born and naturalized, to the decks of the English-men-of-war."—E. Channing, *Jeffersonian system, 1801-1811*, pp. 172-173.—See also EXPATRIATION.—"In consequence of a resolution of the Senate, calling upon the President for information respecting the violation of the national flag, and the impressment of American seamen, he communicated to that body a letter from the Secretary of State, specifying all the cases of impressment which had come to the knowledge of that Department. The Secretary had no information of the violation of the national flag, except in the . . . aggression of Morocco. It appeared, by this report, that 43 citizens of the United States had been impressed by

the British, of whom 12 had protections. Ten were natives of the British dominions, and 17 of other countries, none of whom were stated to have been naturalized. Thus a practice which, even within the British dominions, violates the dearest rights of personal liberty, and which their courts have never ventured to justify, and which is excused and acquiesced in on the plea of necessity, was unhesitatingly exercised by British navy officers on board of American vessels."—G. Tucker, *History of the United States*, v. 2, ch. 12.—"When the captain of a British frigate overhauled an American merchant-vessel for enemy's property or contraband of war, he sent an officer on board who mustered the crew, and took out any seamen whom he believed to be British. The measure, as the British navy regarded it, was one of self-protection. If the American government could not or would not discourage desertion, the naval commander would recover his men in the only way he could. Thus a circle of grievances was established on each side. . . . The growth of American shipping stimulated desertions from the British service to the extent of injuring its efficiency; and these desertions in their turn led to a rigorous exercise of the right of impressment. To find some point at which this vicious circle could be broken was a matter of serious consequence to both countries, but most so to the one which avowed that it did not mean to protect its interest by force. Great Britain could have broken the circle by increasing the pay and improving the condition of her seamen; but she was excessively conservative, and the burdens already imposed on her commerce were so great that she could afford to risk nothing. . . . Conscious of her own power, she thought that the United States should be first to give way. Had the American government been willing to perform its neutral obligations strictly, the circle might have been broken without much trouble; but the United States wished to retain their advantage, and preferred to risk whatever England might do rather than discourage desertion, or enact and enforce a strict naturalization law, or punish fraud. The national government was too weak to compel the States to respect neutral obligations, even if it had been disposed to make the attempt. The practice of impressment brought the two governments to a deadlock on an issue of law. No one denied that every government had the right to command the services of its native subjects, and as yet no one ventured to maintain that a merchantship on the high seas could lawfully resist the exercise of this right; but the law had done nothing to define the rights of naturalized subjects or citizens. The British government might, no doubt, impress its own subjects; but almost every British sailor in the American service carried papers of American citizenship, and although some of these were fraudulent, many were genuine. The law of England, as declared from time out of mind by every generation of her judges, held that the allegiance of a subject was indefeasible, and therefore that naturalization was worthless. The law of the United States, as declared by Chief Justice Ellsworth in 1799, was in effect the same."—H. Adams, *History of the United States of America during the first administration of Thomas Jefferson*, v. 2, pp. 336-338.—"Great Britain was clearly in the wrong. She ought to have kept her seamen by increasing their pay and putting an end to the grievances which produced the mutiny of the *Nore*. In heartlessly neglecting to render the service just to the common sailor, and at the same

time making a brutal use of impressment, aristocratic government showed its dark side. It is true that impressment was conscription in a coarse form, and that the extreme notion of indefeasible allegiance still prevailed. But the practice, however lawful, was intolerable, and its offensiveness was sure to be aggravated by the conduct of British commanders full of the naval pride of their nation and perhaps irritated by the loss of their crews; for it is not denied that many British seamen were seduced from the service and that the American marine, both mercantile and national, was largely manned in this way."—Goldwin Smith, *United States*, ch. 3.—See also below: 1804-1809.

1803-1804.—Federalist secession movement.—“The rising spirit of Republicanism and the increasing popularity of the Administration cast the Federalist leaders into the deepest gloom. The annexation of Louisiana was regarded as a mortal blow, since it imperiled the ascendancy of New England in the Union, and New England was the stronghold of Federalism. At the beginning of the year 1804, most of the Federalist members of Congress from New England were agreed in thinking that a crisis was approaching. Democracy was about to triumph over the forces of law and order. The only question was how to save their section, where the ravages of Jacobinism could yet be stayed. There was but one answer, from the point of view of Senator Timothy Pickering. The people of the Eastern States could not reconcile their habits, views and interests with those of the South and West: therefore, let them withdraw from the Union and form a Northern Confederation. Plumer, of New Hampshire, and Tracy and Griswold of Connecticut, were in hearty agreement with this view. Pickering then put his project before the members of the coterie of Federalists in Massachusetts, which was generally known as the ‘Essex Junto.’”—A. Johnson, *Union and democracy*, p. 163.—“The justifying causes to those who entertained . . . [the project] were, that the annexation of Louisiana to the Union transcended the constitutional powers of the government of the United States; that it created, in fact, a new confederacy, to which the States, united by the former compact, were not bound to adhere; that it was oppressive to the interests and destructive to the influence of the Northern section of the Confederacy, whose right and duty it therefore was to secede from the new body politic, and to constitute one of their own. It was lamented that one inevitable consequence of the annexation of Louisiana to the Union would be to diminish the relative weight and influence of the Northern section; that it would aggravate the evil of the slave representation; and endanger the Union itself, by the expansion of its bulk, and the enfeebling extension of its line of defence against foreign invasion.”—C. F. Robertson, *Louisiana purchase in its influence upon the American system* (*Papers of the American Historical Association*, v. 1, pp. 262-263).—“Aaron Burr was sounded by those most earnest in this business. The silent

but persistent determination of Jefferson's friends to force him into retirement produced bitter feuds in New York, where the Vice-President had a nest of young followers gaping in vain for office. . . . George Clinton, the new nominee for the Vice-Presidency, having declined a re-election as Governor of New York, Burr was put forward as a candidate. His Republican opponents proposed the Chancellor, John Lansing. It was an earnest State canvass, and Burr knew he was politically ruined unless he won. The Federalists of that State were thought to hold the balance of power. Before Congress adjourned, therefore, the Eastern separatists conferred with Burr, who, with real or feigned interest, listened to their project of dismemberment; but they could not win King or Hamilton to their views, and for the present the New York and New England confederacy awaited events, its projectors hoping for Burr's election, but perceiving no way to promote it. Burr's political disaster, followed by Hamilton's tragic death, nipped the Eastern confederacy plot in its present development like an early frost. Except for a later growth from the same root, this extravagant scheme was scarcely worth historical notice.”—J. Schouler, *History of the United States of America under the constitution*, v. 2, pp. 69, 74.

1803-1805.—Relations with Great Britain.—Conventions.—“The ten years ending in 1805, with Jefferson's first term, marking well enough the life of Jay's Treaty, had been singularly harmonious so far as the relations between the United States and Great Britain were concerned, especially during the years of our quasi conflict with France. The British had acted arbitrarily every now and then, but most of the matters in dispute had been smoothed out or arranged by Rufus King, one of the most effective representatives the United States has ever had at London. Before leaving his post in 1803, he negotiated three conventions. One of these, as to impressments, at the last moment failed of acceptance at London. A second was actually signed, but being ratified only in part by the Senate was refused further consideration by the British government. The third convention put an end to the long drawn out contest over the payment of debts due by Americans to British creditors. This provided that the United States should pay a lump sum of nearly three million dollars in satisfaction of all these claims and further provided that the amount that had been awarded by a commission under Jay's Treaty to Americans for British spoiliations should likewise be paid. According to Oliver Wolcott, this convention was ratified by the President and Senate because claims amounting to eight and a half million dollars had been filed by British creditors against inhabitants of the State of Virginia. With the ending of this acrimonious dispute, there would seem to have been good ground for continuing harmonious relations between the two countries. It fell out otherwise, for British ship-owners brought an ever-increasing pressure upon the ministry to put an end to the growing American commerce that seemed to them to be jeopardizing their financial prosperity.”—E. Channing, *History of the United States*, v. 4, pp. 353-354.

1804.—Fifth presidential election.—Thomas Jefferson, Democratic Republican, was re-elected by the vote of 162 electors in the college, against

14 voting for Charles C. Pinckney, Federalist. George Clinton was chosen vice president. "In this election the former rule of the Union was so far changed that Presidential electors in the several States were chosen by the people rather than by the local legislature; a practice henceforth established by Republican precedent, together with that of voting for electors by general list instead of by districts. Uniformity could not be compelled, however, as each State used its own discretion, under the sanction of our Federal constitution, and might vary its own course at pleasure."—J. Schouler, *History of the United States of America under the constitution*, v. 2, p. 70.

1804-1805.—Impeachment and trial of Judge Chase.—"The case of *Marbury v. Madison* was decided on February 24, 1803, and therefore fell between two other events which were immediately of almost as great importance in the struggle now waxing over the judiciary. The first of these was the impeachment of Judge Pickering of the New Hampshire District Court, which was suggested by the President on the 3rd of February [1803, immediately before the first meeting of the Supreme Court after over a year of suspension] and voted by the House on the 18th. of February; the other was an address which Justice Chase delivered on the 2nd of May to a Baltimore grand jury, assailing the repeal of the Judiciary Act and universal suffrage and predicting the deterioration of 'our republican Constitution.'"—E. S. Corwin, *John Marshall and the constitution*, p. 71.—In the closing hours of the session of Congress which expired March 4, 1803, proceedings of impeachment were begun for the removal from the bench of Judge Pickering, new United States district judge of New Hampshire, who had become mentally incapable of discharging the duties of his office. The trial was held in March, 1804. The judge was declared "guilty as charged," and removed from office. "By the Federalists, the attack on Judge Pickering was taken as the first of a series of impeachments, intended to revolutionize the character of the courts, but there is nothing to prove that this was then the intention of the majority."—H. Adams, *John Randolph*, ch. 4.—"The decision in *Marbury's* case [see SUPREME COURT: 1780-1835] naturally exasperated Jefferson; but the chief-justice knew the point beyond which he could not go in asserting the jurisdiction of his court, and was content to leave the matter as it stood. *Marbury* never applied for the mandamus in the court below. The opinion in the case of *Marbury and Madison* was allowed to sleep, and its language was too guarded to furnish excuse for impeachment; but while the President was still sore under the discourtesy of Marshall's law, another member of the Supreme Bench attacked him in a different way. If one judge in the United States should have known the peril in which the judiciary stood, it was Samuel Chase of Maryland, who had done more than all the other judges to exasperate the democratic majority. His overbearing manners had twice driven from his court the most eminent counsel of the circuit; he had left the bench without a quorum in order that he might make political speeches for his party; and his contempt for the popular will was loudly expressed. In the cases of *Fries* and *Callender* in 1800, he had strained

the law in order to convict for the government; . . . That he was not impeached after the change of administration proved the caution of the Republican party; but by this neglect Congress seemed to have condoned his old offences."—H. Adams, *History of the United States of America*, v. 2, pp. 147-148.—"Just after the close of the February [1803] term of the Supreme Court, Chase had gone upon his circuit, and May second addressed the Grand Jury at Baltimore. The charge was much in his old-time style. It began with matters appertaining to the jury and ended with matters appertaining to politics. He could not, he said, suffer the jury to go to their chamber without a few words on the welfare and prosperity of the country. Not constitutions, but well-secured rights, made a people free and happy. All history taught that a monarchy might be free, that a republic might be enslaved. Where laws were made without respect to classes, where justice was meted out alike to rich and poor, where wealth gave no protection to violence, and where the property and person of every man were quite secure, there the people were indeed free. Such was the present condition of the United States. Where laws were partial, arbitrary, and uncertain; where there was one kind of justice for the rich man, and another kind of justice for the poor man, where property was no longer safe, and where the person was open to insult without redress by law, there the people were not free, whatever form of government they possessed. To this situation he greatly feared the United States were going. The repeal of the Federal Judiciary Act, the sweeping away of sixteen circuit judges, the changes in the State Constitution of Maryland, the establishment of universal suffrage, the proposal to reform the State judiciary, were signs not to be mistaken. They would, in his opinion, surely and quickly destroy all protection to property, all security to personal liberty, and sink the country into a mobocracy, the worst kind of government known to man. So much of the charge as related to politics at once found its way into the columns of the American and the Anti-Democratic, of Baltimore, and the National Intelligencer, of Washington, and was read by Jefferson. . . . Not a moment did he hesitate what to do. The factious judge should be impeached, and impeached by Joseph Nicholson . . . [a representative from Maryland, and the man who had the management of the Pickering impeachment in hand. On May 13, 1803, in a letter to Nicholson, the president asked: "Ought this seditious and official attack on the principles of our Constitution and the proceedings of a state go unpunished?" and added: "The question is for your consideration, for myself it is better I should not interfere."] Nicholson, however, was advised to have nothing to do with the matter. When Congress met, the impeachment was moved, but it was moved by John Randolph. He, too, thought the language of the Baltimore charge was no ground for impeachment, and went back to the conduct of Chase in the trial of John Fries. He reminded the House, that, at the last session of Congress, a member from Pennsylvania had, in his place, stated facts regarding the official conduct of Judge Chase, which he thought the House was bound to notice. . . . The statement of facts referred to was made in the course of a debate on the Judiciary Bill [when John Smilie of Pennsylvania affirmed that Chase was obnoxious to the people because of his attitude during the trial of John Fries]. When this statement was made the

session, Randolph said, was too far gone to take up the charges. But he had since looked into them; he believed them to be true, and, so believing, moved for a committee of investigation."

—J. B. McMaster, *History of the people of the United States*, v. 3, pp. 168, 171.—"The impeachment of Justice Chase is a landmark in American history, because it was here that the Jeffersonian republicans fought their last aggressive battle, and, wavering under the shock of defeat, broke into factions which slowly abandoned the field and forgot their discipline. That such a battle must one day be fought for the control of the Judiciary was from the beginning believed by most republicans who understood their own principles. Without controlling the Judiciary, the people could never govern themselves in their own way; and although they might, over and over again, in every form of law and resolution, both state and national, enact and proclaim that theirs was not a despotic but a restricted government, which had no right to exercise powers not delegated to it, and over which they, as States, had absolute control, it was none the less certain that Chief Justice Marshall and his associates would disregard their will, and would impose upon them his own. The people were at the mercy of their creatures. The Constitutions of England, of Massachusetts, of Pennsylvania, authorized the removal of an obnoxious judge on a mere address of the legislature, but the Constitution of the United States had so fenced and fortified the Supreme Court that the legislature, the Executive, the people themselves, could exercise no control over it. A judge might make any decision, violate any duty, trample on any right, and if he took care to commit no indictable offence he was safe in office for life. On this license the Constitution imposed only one check: it said that all civil officers should be removed from office 'on impeachment for, and conviction of treason, bribery, or other high crimes and misdemeanors.' This right of impeachment was as yet undefined, and if stretched a little beyond strict construction it might easily be converted into something for which it had not been intended. . . . Judge Chase's offences were serious. The immediate cause of impeachment, his address to the grand jury at Baltimore on the 2d May, 1803, proved that he was not a proper person to be trusted with the interpretation of the laws. In his address he said that those laws were rapidly destroying all protection to property and all security to personal liberty. . . . Perhaps Randolph might have acted more wisely had he followed Mr. Jefferson's hint to rely on this article [founded on the Baltimore address] alone, which in the end came nearer than any other to securing conviction. . . . The articles of impeachment which Randolph presented to the House on March 26, 1804, and which were, he claimed, drawn up with his own hand, rested wholly on the theory of Chase's criminality; they contained no suggestion that impeachment was a mere inquest of office. But when Congress met again, and, on December 3, the subject came again before the House, it was noticed that two new articles, the fifth and sixth, had been quietly interpolated, which roused suspicion of a change in Randolph's plan. . . . No one could doubt that Randolph and his friends, seeing how little their ultimate object would be advanced by a conviction on the old charges, inserted these new articles in order to correct their mistake and to make a foundation for the freer use of impeachment as a political weapon. The behavior of Giles and his

friends in the Senate strengthened this suspicion. He made no concealment of his theories, and labored earnestly to prevent the Senate from calling itself a court, or from exercising any functions that belonged to a court of law."—H. Adams, *John Randolph*, ch. 4-6.—The doctrine of impeachment which Giles (senator from Virginia) and John Randolph maintained, in connection with the trial of Judge Chase, and which seems to have been acquiesced in by the majority of their party, is reported by John Quincy Adams from a conversation to which he was a listener. In Mr. Adams' "Memoirs," under date of December 21, 1804, the incident is related as follows: "There was little business to do [in the Senate], and the adjournment took place early. Sitting by the fireside afterwards, I witnessed a conversation between Mr. Giles and Mr. Israel Smith, on the subject of impeachments; during which Mr. John Randolph came in and took part in the discussion. Giles labored with excessive earnestness to convince Smith of certain principles, upon which not only Mr. Chase, but all the other Judges of the Supreme Court, excepting the one last appointed, must be impeached and removed. He treated with the utmost contempt the idea of an 'independent' judiciary—said there was not a word about such an independence in the Constitution, and that their pretensions to it were nothing more nor less than an attempt to establish an aristocratic despotism in themselves. The power of impeachment was given without limitation to the House of Representatives; the power of trying impeachments was given equally without limitation to the Senate; and if the Judges of the Supreme Court should dare, as they had done, to declare an act of Congress unconstitutional, or to send a mandamus to the Secretary of State, as they had done, it was the undoubted right of the House of Representatives to impeach them, and of the Senate to remove them, for giving such opinions, however honest and sincere they may have been in entertaining them. Impeachment was not a criminal prosecution; it was no prosecution at all. The Senate sitting for the trial of impeachments was not a court, and ought to discard and reject all process of analogy to a court of justice. A trial and removal of a judge upon impeachment need not imply any criminality or corruption in him. Congress had no power over the person, but only over the office. And a removal by impeachment was nothing more than a declaration by Congress to this effect: You hold dangerous opinions, and if you are suffered to carry them into effect you will work the destruction of the nation. We want your offices, for the purpose of giving them to men who will fill them better. In answer to all this, Mr. Smith only contended that honest error of opinion could not, as he conceived, be a subject of impeachment. And in pursuit of this principle he proved clearly enough the persecution and tyranny to which those of Giles and Randolph inevitably lead. It would, he said, establish 'a tyranny over opinions,' and he traced all the arguments of Giles to their only possible issue of rank absurdity. In all this conversation I opened my lips but once, in which I told Giles that I could not assent to his definition of the term impeachment."—J. Q. Adams, *Memoirs* (C. F. Adams, ed., v. 1, pp. 322-323).—The trial of Judge Chase was opened on Feb. 9, 1805, and ended on the 23rd. By votes ranging from fifteen to thirty-four (the total number of senators being thirty-four), he was acquitted on each of the charges—a result attributed considerably to the offensive and

incapable manner in which the prosecution had been conducted by John Randolph.—J. Schouler, *History of the United States of America*, v. 2, p. 77.

1804-1805.—Jefferson's plans of national defense.—His gunboat fleet.—Jefferson's views as to the measures required for national defense, in the disturbed foreign relations of the country, were indicated in his message to Congress, when it assembled in November, 1804, but were afterwards communicated more fully to Mr. Nicholson, of Maryland, chairman of the committee to which the subject was referred. "Concerning fortification, he remarks that the plans and estimates of those required for our principal harbours, made fifty millions of dollars necessary for their completion. It would require 2,000 men to garrison them in peace, and 50,000 in war. When thus completed and manned, they would avail but little, as all military men agree that when vessels might

was thought would be sufficient to put every harbour into a respectable state of defence. Congress, neither fulfilling the wishes of the President, nor altogether resisting them, gave the President the means of partially trying his favourite scheme, by the appropriation of 60,000 dollars. . . . The scheme was vehemently assailed by his adversaries in every form of argument and ridicule, and was triumphantly adduced as a further proof that he was not a practical statesman. The officers of the navy were believed to be, with scarcely any exception, opposed to the system of gunboats, especially those who were assigned to this service. . . . It was like compelling a proud man to give up a fine richly caparisoned charger for a pair of panners and a donkey. To stem the current of public opinion, which so far as it was manifested, set so strong against these gunboats, and to turn it in their favour, Mr. Jefferson prevailed on Paine,

WILLIAM CLARK

MERIWETHER LEWIS

pass a fort without tacking, though it may annoy, it cannot prevent them. Two modes of effecting the same object might be 'adopted in aid of each other.' 1. Heavy cannon on travelling carriages, with militia trained to the management of them. 2. Floating batteries or gunboats. There were, he estimated, fifteen harbours in the United States needing and deserving defence. They would require 250 gunboats. The cost of these had been estimated at 2,000 dollars each, but he puts it down at 4,000, amounting in all to 1,000,000 dollars. Such of them as were kept under a shelter, ready to be launched, when wanted, would cost nothing more than an inclosure, or sentinel; those that were afloat, with men enough to take care of them, about 2,000 dollars a year each; and those fully manned for action about 8,000 dollars a year. He thought twenty-five of the second description enough, when France and England were at war. When at war ourselves, some of the third description would be required, the precise number depending on circumstances. There were ten then built and building, and fifteen more it

who had since his return been addressing the people of the United States on various topics, through the newspapers, to become their advocate. . . . The public [however] pinning its faith on experienced men, remained incredulous; and when, soon afterwards, many of the new marine were driven ashore in a tempest, or were otherwise destroyed, no one seemed to regard their loss as a misfortune, and the officers of the navy did not affect to conceal their satisfaction: nor has any attempt been since made to replace them. . . . The error of Mr. Jefferson was not, as his enemies charged, in adopting a visionary scheme of defence, but in limiting his views from a motive of economy, to the protection of the harbours, and in leaving his country's commerce and seamen, on the ocean, defenceless."—G. Tucker, *Life of Thomas Jefferson*, v. 2, ch. 8.

1804-1805.—Expedition of Lewis and Clark across the continent.—Pike's explorations.—"When Jefferson became president he appointed [Meriwether] Lewis as his private secretary, and it was not long before they had contrived a new

scheme for an exploration on a much larger scale than anything hitherto contemplated. In January, 1803, in the crisis of the excitement over the withdrawal of the right of deposit, Jefferson sent a message to Congress adverting to the ignorance which prevailed concerning the Indians of the Missouri, which was undesirable in view of 'their connection with the Mississippi and consequently with us.' He therefore proposed that an intelligent officer, with ten or twelve chosen men taken from the ranks of the army, should explore even to the western ocean. . . . The president nowhere alludes in so many words to the fact that he was proposing to Congress to authorize him to send a detachment of the United States army into the territory of a friendly state; but he seems to recognize the equivocal character of the enterprise by suggesting that Congress pass a bill appropriating the sum asked for to extend the external commerce of the United States. . . . The Louisiana purchase came in the nick of time to save . . . [him] from violating the code of international ethics. . . . The command of the expedition which was set on foot in consequence of the favorable action of Congress was given to Meriwether Lewis, William Clark being joined with him. . . . The expedition was carried on under the articles of war; months . . . were devoted to hardening the men to rigid discipline. . . . In May 1804, the expedition left its winter quarters on the bank of the river Du Bois. . . . There were forty-five persons in all, in three boats. . . . The amount of game, large and small, was prodigious; until the mountains were reached the expedition was abundantly supplied with food. . . . In the whole course of their upward journey their one unpleasant experience was with a band of the Sioux, [but] . . . no open attack was made. . . . [Some 1,600 miles upstream] near the site of Bismarck, North Dakota, they came to a permanent village of the Mandans where they passed the winter, wrote up their journals and observations with assiduous care [and obtained all possible information from officials of the Hudson Company and from the natives]. At this place they happened upon an Indian squaw, the so-called Bird Woman, who belonged to one of the mountain tribes and had been kidnapped years before. She and her husband [Chaboneau], accompanied the expedition when it set forth in the spring of 1805."—E. Channing, *Jeffersonian system, 1801-1811*, pp. 87-89.—Before proceeding on his journey, Lewis sent a detachment down the river with reports. Then, early in April, 1805, "the explorers, now numbering thirty-two, again began to urge their boats up the river, for their last year's labors had brought them no more than half-way to their first objective, its source. No more Indian purveyors or pilots: their own rifles were the sole reliance for food. Many a wigwam, but no Indian, was espied for four months and four days after they left their winter camp. It was through the great Lone Land that they groped their dark and perilous way. In twenty days after the spring start they arrived at the Yellowstone, and in thirty more they first sighted the Rocky Mountains. Making the portage at the Great Falls cost them a month of vexatious delay. Rowing on another month brought them on August 12 to a point where one of the men stood with one foot each side of the rivulet, and 'thanked God that he had lived to bestride the Missouri, heretofore deemed endless.' They dragged their canoes; however, up the rivulet for five days longer. . . . A mile further they stood on the great divide, and drank of springs which sent their water to the

Pacific. But meantime they had been ready to starve in the mountains. Their hunters were of the best, but they found no game. . . . It was not till August 13 that, surprising a squaw so encumbered with papposes that she could not escape, and winning her heart by the gift of a looking-glass and painting her cheeks, they formed friendship with her nation, one of whose chiefs proved to be a brother of their Bird-woman. Horses were about all they could obtain of these natives, streams were too full of rapids to be navigable, or no timber fit for canoes was within reach. So the party, subsisting on horse-flesh, and afterwards on dog-meat, toiled on along one of the worst possible routes. Nor was it till the 7th of October that they were able to embark in logs they had burned hollow, upon a branch of the Columbia, which, after manifold portages and perils, bore them to its mouth and the goal of their pilgrimage, late in November. Its distance from the starting-point, according to their estimate, was 4,134 miles."—*Nation*, Oct. 26, 1803.—This expedition provided one of the best grounds of claim to possession of the Oregon country.—See also IDAHO: 1804-1811; OREGON: 1790-1805.—"In 1805 Jefferson had, for a second time, made part of the small army useful in the interest of scientific exploration: Lieutenant Zebulon Pike, with a small army, and under great difficulties traced the Mississippi from St. Louis to its source, and afterward explored the headwaters of the Arkansas and Red Rivers."—W. M. West, *Story of American democracy, political and industrial*, p. 405, footnote.—See also MINNESOTA: 1805-1867.

1804-1809.—Difficulties with Great Britain.—Neutral rights.—Right of search.—Impressment.—Blockade by orders in council and the Berlin and Milan decrees.—Embargo and Non-intercourse.—The need for strong national defences seemed to be on the increase. After a short interlude, war between England and France had again broken out, and it was evident that in spite of the desire for peace, the country might at any time be drawn into the struggle. For a time, after 1803, almost the whole carrying trade of Europe was in American hands. "The merchant flag of every belligerent, save England, disappeared from the sea. France and Holland absolutely ceased to trade under their flags. Spain for a while continued to transport her specie and her bullion in her own ships protected by her men-of-war. But this, too, she soon gave up, and by 1806 the dollars of Mexico and the ingots of Peru were brought to her shores in American bottoms. It was under our flag that the gum trade was carried on with Senegal; that the sugar trade was carried on with Cuba; that coffee was exported from Caracas; and hides and indigo from South America. From Vera Cruz, from Carthage, from La Plata, from the French colonies in the Antilles, from Cayenne, from Dutch Guiana, from the Isles of France and Reunion, from Batavia and Manilla, great fleets of American merchantmen sailed for the United States, there to neutralize the voyage and then go on to Europe. They filled the warehouses at Cadiz and Antwerp to overflowing. They glutted the markets

of Embden and Lisbon, Hamburg and Copenhagen with the produce of the West Indies and the fabrics of the East, and, bringing back the products of the looms and forges of Germany to the New World, drove out the manufactures of Yorkshire, Manchester, and Birmingham. But this splendid trade was already marked for destruction. That Great Britain should long treat it with indifference was impossible. . . . She determined . . . to destroy it, and to destroy it in two ways: by paper blockades and by admiralty decisions. In January, 1804, accordingly, Great Britain blockaded the ports of Guadeloupe and Martinique. In April her commander at Jamaica blockaded Curaçoa. In August she extended the blockade to the Straits of Dover and the English Channel."—J. B. McMaster, *History of the people of the United States*, v. 3, pp. 225-226.—"The issue of direct trade was decided adversely to the contention of the United States, in the test case of the ship 'Essex,' in May, 1805, by the first living authority in England on maritime national law, Sir William Scott. Resting upon the Rule of 1756 [see RULE OF 1756], he held that direct trade from belligerent colonies to Europe was forbidden to neutrals, except under the conditions of the relaxing Orders [in Council] of 1798 and 1803; but the privilege to carry to their own country having been by those extended, it was conceded, in accordance with precedent, that products thus imported, if they had complied with the legal requirements for admission to use in the importing country, thenceforth had its nationality. . . . United States shippers, therefore, were at liberty to send even to France French colonial products which had been thus Americanized. The effect of this procedure upon the articles in question was to raise their price at the place of final arrival, by all the expense incident to a broken transit: . . . With the value thus enhanced upon reaching the continent of Europe, the British planter, carrier, and merchant, might hope that British West India produce could compete. . . . In the cases brought before Sir William Scott, however, it was found that the duties paid for admission to the United States were almost wholly released, by drawback, on re-exportation; so that the articles were brought to the continental consumer relieved of this principal element of cost. He therefore ruled that they had not complied with the conditions of an actual belligerent character; and that the carriage to Europe was by direct voyage, not interrupted by an importation. The vessels were therefore condemned. Messrs. Monroe and Pinkney, who were appointed jointly to negotiate a settlement of the trouble wrote that 'the British commissioners did not hesitate to state that their wish was to place their own merchants on an equal footing in the great markets of the continent with those of the United States, by burthening the intercourse of the latter with severe restrictions.' The wish was allowable; but the method, the regulation of American commercial movement by British force, resting for justification upon a strained interpretation of a contested belligerent right, was naturally and accurately felt to be a re-imposition of colonial fetters upon a people who had achieved their independence. Mr. Monroe, who was minister to England when this interesting period began, had gone to Spain on a special mission in October, 1804, shortly after his announcement, . . . that 'American commerce was never so much favored in time of war.' 'On no principle or pretext, so far, has more than one of our vessels been condemned.' Upon his return in July, 1805, he found in full progress the seizures, the legality

of which had been affirmed by Sir William Scott. . . . In January, 1806, Pitt died; and the ministry which succeeded was composed largely of men recently opposed to him in general principles of action. In particular, Mr. Fox, . . . became Secretary for Foreign Affairs. His good dispositions towards America were well known, and dated from the War of Independence. To him Monroe wrote that under the recent measures 'about one hundred and twenty vessels had been seized, several condemned, all taken from their course, detained, and otherwise subjected to heavy losses and damages.' The American envoy was sanguine of a favorable issue; but the British Secretary had to undergo the experience, . . . that in the complications of political life a broad personal conviction has often to yield to the narrow logic of particular conditions. It is clear that the measures would not have been instituted, had he [Fox] been in control; but as it was, the American representative demanded not only their discontinuance, but a money indemnity. . . . In 1806 the Administration determined to constitute an extraordinary mission, for the purpose of 'treating with the British Government concerning the maritime wrongs which have been committed, and the regulation of commercial navigation between the parties.' For this object Mr. William Pinkney, of Maryland, was nominated as colleague to Monroe, and arrived in England on June 24. The points to be adjusted by the new commissioners were numerous, but among them two were made pre-eminent,—the question of colonial trade, . . . and that of impressment of seamen from American vessels. These were named by the Secretary of State as the motive of the recent Act [the Non-Importation Act] prohibiting certain importations. To understand the real gravity of this dispute, it is essential to consider candidly the situation of both parties, and also the influence exerted upon either by long-standing tradition. The British Government did not advance a crude claim to impress American seamen. What it did assert, and was enforcing, was a right to exercise over individuals on board foreign merchantmen, upon the high seas, the authority which it possessed on board British ships there, and over all ships in British ports. The United States took the ground that no such jurisdiction existed, unless over persons engaged in the military service of an enemy; and that only when a vessel entered the ports or territorial waters of Great Britain were those on board subject to arrest by her officers. There, as in every state, they came under the law of the land. The British argument in favor of this alleged right may be stated in the words of Canning. Writing to Monroe, September 23, 1807, he starts from the premise, then regarded by many even in America as sound, that allegiance by birth is inalienable. . . . 'That the exercise of this right involves some of the dearest interests of Great Britain, your Government is ready to acknowledge. . . . It is needless to repeat that these rights existed in their fullest force for ages previous to the establishment of the United States of America as an independent government; and it would be difficult to contend that the recognition of that independence can have operated any change in this respect.' Whether the foundation of the alleged right was solidly laid in reason, or not, it rested on alleged prescription, indorsed by a popular acceptance and suffrage which no ministry could afford to disregard at a time when the manning of the Royal Navy was becoming a matter of notorious and increasing difficulty. . . . Public opinion in the United States

was by no means united in support of the position then taken by Jefferson and Madison, as well as by their predecessors in office, proper and matter-of-course as that seems to-day. Many held, and asserted with vehemence, that the British right existed, and that an indisputable wrong was committed by giving the absentees shelter under the American flag. The claim advanced by the United States Government, and the only one possible to it under the circumstances, was that when outside of territorial limits a ship's flag and papers must be held to determine the nation, to which alone belonged jurisdiction over every person on board, unless demonstrably in the military service of a belligerent. The United States did not refuse to recognize, distinctly if not fully, the embarrassment under which Great Britain labored by losing the services of her seamen at a moment of such national exigency; and it was prepared to offer many concessions in municipal regulations, in order to exclude British subjects from American vessels. Various propositions were advanced looking to the return of deserters and to the prevention of enlistments; coupled always with a renunciation of the British claim to take persons from under the American flag. Various expedients for attaching to the individual documentary evidence of birth were from time to time tried; but the heedless and inconsequent character and habits of the sailor of that day, and the facility with which the papers, once issued, could be transferred or bought, made any such resource futile. The United States was thus driven to the position enunciated in 1792 by Jefferson, then Secretary of State: 'The simplest rule will be that the vessel being American shall be evidence that the seamen on board of her are such.' If this demand comprehended, as it apparently did, cases of arrest in British harbors, it was clearly extravagant, resembling the idea proceeding from the same source that the Gulf Stream should mark the neutral line of United States waters; but for the open sea it formulated the doctrine on which the country finally and firmly took its stand."—A. T. Mahan, *Sea power in its relations to the War of 1812*, v. 1, pp. 101-120.—See also EXPATRIATION.—"The American commissioners were instructed to insist upon three concessions in the treaty which they were to negotiate: restoration of trade with enemies' colonies, indemnity for captures made since the *Essex* decision, and express repudiation of the right of impressment. In return for these concessions, they might hold out the possible repeal of the Non-Importation Act! . . . The mission was . . . doomed from the outset, and nothing more need be said of it than that in the end, to secure any treaty at all, Monroe and Pinkney broke their instructions and set aside the three ultimata. What they obtained in return seemed so insignificant and doubtful, and what they paid for even these slender compensations seemed so exorbitant, that the President would not even submit the treaty to the Senate. . . . Jefferson thought it best 'to let the negotiation take a friendly nap'; but Madison, who felt that his political future depended on a diplomatic triumph over England, drafted new instructions for the two commissioners, hoping that the treaty might yet be put into acceptable form. It was while these new instructions were crossing the ocean that the *Chesapeake* struck her colors."—A. Johnson, *Jefferson and his colleagues (Chronicles of America)*, pp. 147, 149.—"In the early months of 1807, some French frigates had run up Chesapeake Bay to escape a British squadron. Relying on what Jefferson pleasantly termed the hospitality

of the United States, these British men-of-war dropped anchor in Lynnhaven Bay, near Cape Henry, where they could watch the passage through the capes. From one of these British vessels a boat crew of common seamen made their escape to Norfolk. Just at this time the new frigate *Chesapeake*, which had been partially fitted out at the navy yard of Washington for service in the Mediterranean, dropped down to Hampton Roads to receive her complement of guns and provisions for a three years' cruise. On June 22, the *Chesapeake* passed out through the capes, preceded by the *Leopard*, a British frigate of fifty guns. When they were well out on the high seas, the *Leopard* drew alongside the *Chesapeake* and signaled that she had a message for Commodore Barron. This message proved to be an order from Admiral Berkeley at Halifax, instructing commanders of British vessels who fell in with the *Chesapeake* to search her for deserters. The American commander denied that he had deserters on board and refused to allow the search. Almost immediately the *Leopard* approached with her gun decks cleared for action. Unaware of his danger Commodore Barron had not called his crew to quarters. The *Leopard* opened fire and poured three broadsides into the helpless American vessel, killing three men and wounding eighteen others. After fifteen minutes Barron hauled down his flag to spare his crew from needless sacrifice, and suffered the British commander to search the dismantled *Chesapeake*. Four alleged deserters were found and taken away, three of whom subsequently were proved to be American citizens. The *Leopard* then returned to the squadron off Cape Henry, while the *Chesapeake* limped back to Hampton Roads. . . . Had the President chosen to go to war at this moment, he would have had a united people behind him. But Thomas Jefferson was not a martial character. His proclamation ordering all armed British vessels out of American waters and suspending intercourse with them if they remained, was so moderate in tone as to seem almost pusillanimous. John Randolph called it an apology. Instead of demanding unconditional reparation for this outrage, Madison instructed Monroe to insist upon an entire abolition of impressments as 'an indispensable part of the satisfaction.' The astute Canning, who had become Foreign Secretary in the new Portland Ministry, took advantage of this confusion of issues to evade the demand for reparation until popular passion in the United States had subsided. It was not until November [1807] that Canning took active measures. He then sent a special commissioner to the United States."—A. Johnson, *Union and democracy*, pp. 184, 186.—"The moment had come to adopt a policy. Submission and war were equally distasteful to Jefferson, and fortified by his persistent belief that our commerce was indispensable to both belligerents, he recommended that the United States bring them to terms by cutting off that commerce altogether. Every member of his cabinet agreed with him. On December 17, 1807, he sent a message to Congress urging an embargo on all the foreign commerce of the United States. The Senate immediately passed the bill by a vote of 22 to 6, and four days later the House concurred by a vote of 82 to 44. Most of the state legislatures approved the embargo. In January, Congress appropriated \$1,000,000 for the defense of ports and harbors, in March it empowered the president to call on 100,000 militia to serve six months; in April it increased the regular army by 6,000 men. Altogether the military expenses reached about

\$4,000,000."—D. S. Muzzey, *United States of America*, v. 1, pp. 240-241.

Meantime the measures used by Napoleon in his efforts to crush the maritime power of England and destroy her commerce with the continent created a difficult position for the American statesmen who were endeavoring to keep the peace. "The strenuousness of his purpose brought Napoleon face to face with the actual problems of enforcing his System. . . . For certain it was that the continental cordon was somehow being penetrated between Antwerp and Altona. But the imperial attention was still further focused upon this . . . region by the English seizure of Heligoland as an entrepôt for colonial goods and the coincident modification of the blockade of the North Sea littoral. . . . The result was an imperial decree of 13 or 14 October promulgated in the Hanse ports a fortnight later, and matched by a very similar Dutch decree issued about 17 October [1806] for the district of the Dollart to the Ems. For this significant October decree in the absence of an official version we are dependent chiefly upon the preliminary directions given Gaudin in the Emperor's letter of 13 October. . . . Forty days later (23 November), at Milan, Napoleon issued a decree for France whose five articles with very slight verbal changes are a repetition . . . of the October edict. The outstanding provisions of the Hanse decree, of its Dutch counterpart, and its French replica, are those which order the confiscation of every ship with its cargo without distinction, which for any reason may have touched in England. They likewise required not only the sworn statement of the shipmaster and the delivery of all ship's papers on arrival, but also verification of the captain's declaration by the examination of every sailor and passenger on board. Proof of false declarations entailed not only the confiscation for touching in England but heavy fines as well. An outstanding aspect of these measures is their emphasis upon the extra-continental significance of the Continental System, for manifestly all these restrictions bore hardly upon the neutral shippers, especially the Americans. In fact, this Fontainebleau legislation was frankly confirming the disclosures of the weeks preceding that the Berlin decree, issued ostensibly as a retaliatory act in championship of neutral rights, was to be, in reality, a commercial measure for French military and economic purposes, bearing hardest of all upon the neutrals. This new revelation of the animus of the Continental System had come partly as the result of pressure from the American government for an authoritative statement of the imperial policy. . . . [Interpretations of the decree favorable to America had been made in December, 1807, and in March and May, 1808.] Consequently Armstrong could write on 7 July to Monroe at London that it was 'admitted by both ministerial and judicial authority that this Decree did not infract the provisions of the treaty of 1800 between the United States and France.' [But, when Armstrong appealed to Talleyrand in August for an interpretation of the Spanish version of the decree] the Emperor had already ordered the strict enforcement of articles 7 and 8 of the decree whereby entry in France was refused to any ship which touched in England. . . . Obviously this strict interpretation seemed to neutral governments a portentous reversal of policy. Announced to Armstrong about 24 September, it was to serve indirectly—by the publication of a warning sent through Consul Bourne to American traders at Amsterdam—as the spur to the adoption of fresh

retaliatory orders by England. While, reported to Jefferson with Champagny's confirmation, and with the exemplification of its injustice in the case of the *Horizon*, it was to prove yet another direct cause of the American Embargo. . . . Directly following the issuance of the Milan decree of 17 December 1807, there was a sequestration of neutral shipping in French ports. At first, but for only a few days, American ships escaped this. Immediately upon the inclusion of these ships in the general embargo the American minister protested strenuously, and he was destined to continue his reclamations for many weary months thereafter. At first Napoleon's reply was an effort to browbeat the United States into adhesion to the Milan decree and into war upon England, but he immediately realized his mistake and altered his tactics by seeking to bribe the United States into an alliance. This change of tactics was coincident with the discussion by the Council of Administration of the Interior regarding the amelioration of the decrees of November 1806 and December 1807 by a new navigation policy. But just before the critical council of 14 February 1808, news had reached Napoleon of the American Embargo Act. Therefore 'though the proposition was supported by the whole weight of the council he became highly indignant and declared that these decrees should suffer no change, and that the Americans should be compelled to take the positive character either of allies or of enemies.' A month's efforts through Lafayette, Marbois, Talleyrand Fouché, Cretet, and Champagny brought a half promise of relaxation in favor of the United States from Napoleon. But this he almost immediately retracted and when, early in April, at Bordeaux, he learned of the disastrous effect of the American Embargo upon his West Indian possessions he was not slow in finding a plausible mode of retaliation. The result was the so-called Bayonne decree—a letter to Gaudin dated 17 April at Bayonne which used the Embargo as a plea for sequestering all American vessels in imperial or dependent ports on the grounds that there could be no Americans in Europe after the Embargo; therefore so-called Americans were only masked English ships. Armstrong's protests were in vain against this reasoning which had sufficient basis of facts to bear the super-structure of sophistry. . . .

"[By the close of 1808 objection was made by the United States to the licence system, the belligerents' policy of trade by exception.] In the selection of mutually acceptable neutral flags three shifts of policy can be recognized during the period of inaugurating the French licence experiment. These shifts are coincident with three corresponding changes in American relations with the two belligerents. This marked influence of American relations is logical, since, as the one true neutral of importance, the United States had the first right to profit by any relaxations of the anti-commercial system. This recognition of American claims had been the basis of Decrès's September 1808 report and had been the view generally held since 1806 by Napoleon's ministers. It might be inferred from the decree of 16 February, issued coincidentally with the decision in favor of licences, that Napoleon had adopted the view of Decrès, for by the decree American vessels were to be freed at once from the general embargo, and apparently before those of other nations. But a few days later conditions were attached to the release with the American minister protested were not an open discrimination against the United States but were equivalent to issuing French licences for American vessels to

sail the high seas. Not improbably the change of conditions for releasing American vessels was influenced by the arrival of news from the United States of the probable adoption of a non-intercourse act affecting trade with England and France. Undoubtedly such news, as well as Armstrong's open objections to anything like licences for American ships, militated against allowing the use of the United States flag in the exceptional traffic contemplated."—F. E. Melvin, *Napoleon's navigation system, a thesis*, pp. 34-39, 70-72, 101.—"The policy of the United States during the period of the Continental System is an example of the type which, in the course of an economic war to the knife, seeks to maintain neutrality to the uttermost and to take all the consequences of that attitude, without, it is true, the support of either external military power or an efficient internal administration. Down to the close of 1807 this policy brought with it a unique development of American shipping and foreign trade, especially the carrying trade. But when the commercial war became more intense in 1807, it made a complete right-about-face and led to the second great self-blockade caused by the Continental System; and finally, when this became quite untenable, it drove the American Union into the very war which its leading men had done everything in their power to avert. . . . The increased severity in the British treatment of neutrals, went back especially to the new interpretation of 'broken voyages' in the *Essex* case in the summer of 1805, and in April, 1806, it had occasioned. . . . [an] American counter-measure in the form of the Non-importation Act, which prohibited the importation, both from England and from other countries, of most of the main groups of British industrial products, excluding, however, cotton goods. But the American law did not enter into force until November 15, and was suspended at the close of the year, so that it turned out to be nothing more than a threat. The Berlin decree of November 21, 1806, immediately led the American envoy in Paris to address an inquiry to the French minister of the marine, Vice Admiral Decrès, as to the interpretation of the new law at sea. In the absence of the Emperor the answer was favourable, and consequently there was no immediate occasion for uneasiness on the part of America. . . . Nor was any great alteration made in this respect by the first British Order in Council of January, 1807, owing to its restricted range. Accordingly, during the greater part of the year 1807 American trade and shipping continued not merely to flourish, but even to grow. . . . But the turning-point. . . . was made with the authentic interpretation of the law which Napoleon, as the sole final authority, gave to his Berlin decree, whereby it came to apply also to the sea. Then followed the new British Orders in Council of November and Napoleon's Milan decree of December. . . . All this set going the great American series of counter-measures, which also, so far as they concerned Great Britain, were affected by the. . . . '*Chesapeake Affair*' of June, 1807. . . . But what gave the principal impulse to the American commercial, or rather anti-commercial, intervention was not the measures of Great Britain, but rather those of France, that is to say, the new adaptation of the Berlin decree, which brought it about that a stranded American vessel, the *Horizon*, had that part of its cargo which was of British origin declared fair prize. However, the new Orders in Council were known in the United States (in fact, though not officially) when on December 22, 1807, Congress and the

President enacted the Embargo Act, which is one of the most interesting legislative products of the period. . . . An embargo was laid on all vessels lying in American ports and bound for foreign ports. The only exceptions were foreign vessels, which were allowed to depart after being informed of the enactment of the law; and vessels in the American coasting trade were to give security that the cargo should be discharged in an American port. Almost at the same time the Non-importation Act, . . . [was put into force]. Under the pressure of the unreasonable procedure of both the combatants, the American government thus sought to cut off at a blow the abnormally large trade and shipping that the United States had until then enjoyed. In principle the policy was impartial, inasmuch as it was intended, on the one hand, to deprive Great Britain of American cotton and grain, as well as of sales on the American markets, and, on the other hand, to put an end to the colonial trade from which France and Spain and their colonies derived equal advantages, and also to the importation of the industrial products of the European Continent into America. Although the measure was thus indisputably two-sided, the simultaneous enforcement of the one-sided Non-importation Act gave the policy the appearance of being directed distinctly against Great Britain. That country, indeed, had touched on a particularly tender point by imposing duties on the goods which compulsorily passed through its territories, inasmuch as both the United States and the British opposition put it on a level with the taxation of American trade which in the preceding generation had given the final impulse to the Declaration of Independence by 'the old thirteen.' President Jefferson's motive seems to have been partly the bias of the plantation owners, emphasized by his physiocratic tendency toward regarding agriculture as the highest work of man and his grave distrust of everything which departed from agriculture. To begin with, at least, he undoubtedly considered, as the American historian, Channing, says, 'that to put an end to, let us say, three quarters of the commerce of the United States would be a blessing, albeit somewhat in disguise.' But evidently this, like most of the measures of the different powers in the commercial war, was also a measure of reprisal, an endeavour to compel the embittered belligerents to be reasonable. In fact, unlike the majority of their own measures, it was a sincere attempt in that direction. It seems also as if the Embargo Act was a means of saving the great American merchant fleet, the largest next to that of Great Britain, from the extinction which must otherwise have been the almost necessary consequence of the Berlin and Milan decrees and of the Orders in Council. Thus, for instance, a large ship-owner in Maryland stated that of fifteen vessels which he had dispatched during the bare four months between September 1 and the enactment of the Embargo Act, only three had arrived at their destination, while two had been captured by the French and the Spaniards, one had been seized at Hamburg, and nine had been taken to England. However, it is rather an academic question what the effect of the Embargo Act would have been had it been obeyed, for nothing was further from reality."—E. F. Heckscher, *Continental system (Carnegie Endowment for International Peace, pp. 127-131)*.—Under the Embargo Act "a vessel engaged in the coasting-trade was to give bonds to double the value of its cargo to land the same within the limits of the United States. Discretionary power was given to the presi-

dent to suspend these restrictions as to any vessels at his will and pleasure. . . . Many ship-owners preferred to keep their vessels in service and run the risk of loss. This they accomplished by directing their captains, so far as they could reach them, not to enter an American port. . . . The ink was scarcely dry on the signatures to the embargo act before it became necessary to pass a supplementary act requiring coasting and fishing vessels to give bonds to reland their cargoes in the United States (January 8, 1808), under heavy penalties for both owner and master. The news of the actual issue of the orders in council and of the Milan Decree, coupled with continued evasions of the law, induced Congress to pass a second supplementary act (March 12, 1808), extending the operation of the embargo act to all vessels. . . . From this time on foreign vessels were to be allowed to prosecute the coasting-trade only on giving bonds not to take their cargo to foreign ports. Fishing-vessels were also included in the scope of the act, and it was extended with a view to the prevention of exportation by land. [Efforts to overcome the difficulty of enforcing the embargo culminated in the Enforcement Act of 1809. This was followed by the Non-Intercourse Act which repealed the Embargo Act.]—E. Channing, *Jeffersonian system, 1800-1811*, pp. 214, 215.—See also below: 1808; EMBARGO: Definition; First American embargoes.—“As the year 1808 drew towards its close, it became increasingly evident that the desired pressure was not being exerted upon Great Britain. Jefferson and Madison thought that this failure was due to the lax enforcement of the embargo in America. Gallatin, while agreeing with them, wished to declare war. The embargo policy was producing unlooked for and undesirable results in compelling administrative officials to exercise powers that were not authorized by the Constitution or by the laws. Collectors had forbidden the loading of vessels and had refused to issue clearances without any legal authority and only on instructions from the Secretary. Gallatin even offered to finance a war for one year without resorting to loans or new taxations. Jefferson and Madison preferred to make one more trial with the embargo and the Enforcement Act of January, 1809, was passed. This gave Gallatin the power he needed to make it impossible to ship goods outside of the United States. It authorized collectors to seize merchandise or other movable property which was apparently on the way to the frontier, to refuse permits to load merchandise on vessels, and to detain them almost at will,—it conferred upon them almost the same kind of power that had been so strongly reprobated in Otis's arguments against the Writs of Assistance.”—E. Channing, *History of the United States*, v. 4, pp. 381-382.—See also above: 1803; below: 1808-1810; 1810-1812; 1812 (June-October); (September-November); CONTINENTAL SYSTEM; FRANCE: 1806-1810; TARIFF: 1808-1824.

1806-1807.—Aaron Burr's filibustering scheme.—His arrest and trial.—Aaron Burr had lost all his friends in the political controversy surrounding the election of 1800 and by his efforts to obtain the presidency in 1801. In 1804 the vice president was a candidate for the governorship of New York, but was defeated, as he had been in 1801, by the efforts of Alexander Hamilton. In revenge, he challenged Hamilton to a duel on Weehawken Heights, in which he shot to kill, and Hamilton fell mortally wounded. Burr, “after his duel with Gen. Hamilton, and after the term of his office as vice-president had expired, . . . seemed to be left alone, and abandoned by all political parties. The state of public feeling in New York was such, after the death of Hamilton, that his presence in that city could not be endured. In New-Jersey he had been indicted by a grand jury for murder. Thus situated, his ambitious, active and restless spirit rendered his condition intolerable to himself. On the 22nd March, but a few days after he left forever the presidency of the United States senate, he wrote to his son-in-law, Mr. Joseph Alston, that he ‘was under ostracism. In New York,’ said he, ‘I am to be disfranchised, and in New-Jersey to be hanged. Having substantial objections to both, I shall not, for the present, hazard either, but shall seek another country.’ Accordingly, early in May, he left Philadelphia for the western country, and arrived at Lexington, in Kentucky, on the 20th of that month. After travelling with great rapidity through that state, he directed his course to Nashville, in Tennessee, and from thence he journeyed through the woods to Natchez. From Natchez he went by land to New-Orleans, where he arrived on the 25th June, 1805. At that time, Gen. Wilkinson was in that city, or in its neighborhood, and commanded the United States troops stationed there. It does not appear that he remained long in New-Orleans, but soon again returned to Lexington, in Kentucky, by the way of Nashville. He was at Cincinnati, and at several places in Ohio, but in a very short time made his appearance at St. Louis, in Missouri, and from thence he travelled to Washington, at which place he arrived on the 29th day of November. These immense journies he performed in a little more than six months; before the great western rivers were rendered navigable by steam, and when the roads were badly constructed; and through a considerable part of the country traversed by him there were no roads at all. His movements were veiled in mystery, and all men wondered what could be the motive which induced these extraordinary journies. From January, 1806, to the month of August following, he spent his time principally in Washington and Philadelphia; but, in the month of August, he again set his face towards the west, and was soon afterwards found in Kentucky. About this time boats were provided, provisions and munitions of war were collected, and men were gathering at different points on the Ohio and Cumberland rivers. Government now began to be alarmed. Mr. Tiffin, governor of Ohio, seized the boats and their cargo and Burr was arrested in Kentucky; but no sufficient proof appearing against him he was discharged. On the 23d January, 1807, Mr. Jefferson sent a message to congress, accompanied by several affidavits, in which he gave the history of Burr's transactions, so far as they had come to the knowledge of the administration. The message stated that, on the 21st of October, Gen. Wilkinson wrote to the president that, from

a letter he had received from Burr, he had ascertained that his objects were, a severance of the union on the line of the Allegany mountains, an attack upon Mexico, and the establishment of an independent government in Mexico, of which Burr was to be the head. That to cover his movements, he had purchased, or pretended to have purchased, of one Lynch, a tract of country claimed by Baron Bastiop, lying near Natchitoches, on which he proposed to make a settlement. That he had found, by the proceedings of the governor and people of Ohio and Kentucky, that the western people were not prepared to join him; but notwithstanding, there was reason to believe that

in the first instance, agreed to be his accomplice; that, as their operations progressed, he began seriously to doubt of success, and then communicated his knowledge of the affair to the government, in order to save himself, and perhaps obtain a reward. . . . That Burr himself was deceived by Wilkinson, there can be not doubt. . . . But there was other evidence besides that of Wilkinson, against Burr, which has never been explained. . . . If his object was merely an attack upon Mexico, why did he not openly avow it, when charged and indicted for treason against his country? . . . Again, unless Col. William Eaton, the man who had then recently so gallantly distinguished himself

SCENE OF THE DUEL BETWEEN AARON BURR AND ALEXANDER HAMILTON  
Weehawken, New Jersey, July 11, 1804

he intended, with what force he could collect, to attack New-Orleans, get the control of the funds of the bank, seize upon the military and naval stores which might be found there, and then proceed against Mexico. The president assured congress that there was no reason to apprehend that any foreign power would aid Col. Burr. A considerable part of the evidence going to show that Burr entertained criminal designs, depended on the affidavit of Wilkinson. It is not my intention to examine into the proofs of the guilt or innocence of Burr, further than to remark, that from the character of the vain, vamping and unprincipled Wilkinson, as before and since developed, no dependence can safely be placed upon his statements, unless supported by strong circumstances, or other evidence; and I believe it will not at this day be doubted, that if Burr plotted treason, Wilkinson,

on the Barbary coasts, has perjured himself, Burr did form a treasonable plot against his country. Col. Eaton, on the 26th January, deposed, in open court, held before Judge Cranch and others, at Washington, that during the preceding winter (1806), Burr called upon him, and, in the first instance, represented that he was employed by the government to raise a military force to attack the Spanish Provinces in North America, and invited Eaton to take a command in the expedition; that Eaton, being a restless, enterprising man, readily acceded to the proposal; that Burr made frequent calls upon him, and in his subsequent interviews complained of the inefficiency and timidity of the government, and, eventually, fully developed his project; which was to separate the western states from the union, and establish himself as sovereign of the country. . . . Burr did not suc-

ceed in collecting and organizing a force on the western waters; but, on the 1st day of March, he was discovered wandering alone in the Tombigbee country, near the line of Florida."—J. D. Hammond, *History of political parties in the State of New York*, v. 1, ch. 12.—Burr's scheme, whatever it may have been, would probably have fallen through earlier than it did, were it not for the aid which he received from Herman Blennerhassett, an Irishman who had established himself on an island in the Ohio, not far from Scioto. Burr first met Blennerhassett in the summer of 1805, when, on his way to Cincinnati, he landed on the island. He saw in Blennerhassett a ready tool for his ambition, and in furtherance of his plans exercised his undoubted charm to make his host his most devoted adherent. Blennerhassett's "lands, his fortune, his life, everything that was his was laid at the feet of Burr. He gave money, he bought supplies, he built boats, he wrote in behalf of the cause. . . . [Blennerhassett's island figured largely at the trial of Burr. To prove him guilty of treason, it was necessary to prove his presence at the assemblage of men, for a treasonable design' which was held on the island.] In the opinion of Marshall, the indictment charged Burr with levying war against the United States. To make good the accusation, the overt act must be proved . . . by the testimony of two witnesses. There was not, however, even one witness. Indeed it was admitted by everybody that Burr was not on the island . . . was not within the jurisdiction of Virginia when the thirty men gathered at the home of Blennerhassett. . . . The indictment of high misdemeanor charged Burr with having on December 10, 1806, on Blennerhassett's Island, began a military expedition against the King of Spain. But Burr was not on the island on the day named."—J. B. McMaster, *History of the people of the United States*, v. 3, pp. 61, 85.—"The trial of the indictment against Burr, for treason, occupied many weeks, but he was finally acquitted by the jury, without swearing any witness in his defence. . . . The acquittal seems to have been on technical grounds. . . . After his acquittal, Col. Burr appears still to have persevered in the project of making an effort to detach Mexico from the Spanish government. On the 7th of June, 1808, he sailed from New-York for Europe, it would seem in the hope of engaging the British government to fit out an expedition against Mexico, in which he would take a part. In this he was entirely unsuccessful. His application to the French government was equally vain and useless. He spent four years wandering about in Europe."—J. D. Hammond, *History of political parties in the state of New York*, v. 1, ch. 12.—Wilkinson's culpability seems to have been at least as great as Burr's. Moreover, he appears to have been in receipt of a pension from the king of Spain.—See also **BLANNERHASSETT'S ISLAND**.

1806-1812.—Cumberland Road.—First national work of internal improvement.—"In 1806 the United States began the Cumberland Road, its first work of the kind; but it was intended to open

up the public lands in Ohio and the country west, and was nominally paid for out of the proceeds of those public lands. Just as the embargo policy was taking effect, Gallatin, encouraged by the accumulation of a surplus in the Treasury, brought in a report, April 4, 1808, suggesting the construction of a great system of internal improvements: it was to include coastwise canals across the isthmuses of Cape Cod, New Jersey, upper Delaware and eastern North Carolina; roads were to be constructed from Maine to Georgia, and thence to New Orleans, and from Washington westward to Detroit and St. Louis. He estimated the cost at twenty millions, to be provided in ten annual instalments."—A. B. Hart, *Formation of the Union*, sect. 121.—See also **CUMBERLAND ROAD**.

1807.—Abolition of slave-trade.—Measure in Congress.—Significance of Southern action.—By the terms of the constitution, Congress was deprived of power to interfere with the importation of slaves before the year 1808, but no longer. The time now approached when that restraint would cease, and the president in his annual message brought the subject to notice. "It was referred to a committee of which Mr. Early of Georgia was the chairman. There was no difference of opinion as to the prohibition of the traffic, or at least no expression of any; but the practical details of the law, the penalties by which it was to be enforced, and, above all, the disposition to be made of such negroes as might be brought into the country in violation of it, gave rise to violent and excited debates. The committee reported a law prohibiting the slave-trade after the 31st of December, 1807, imposing certain penalties for its breach, and providing that all negroes imported after that date should be forfeited. The object of this provision undoubtedly was to obtain directly what the Constitution only gave indirectly and by implication,—the sanction of the government of the United States to the principle of slaveholding, by making it hold and sell men as property. . . . It having been moved that the words 'shall be entitled to his or her freedom' should be inserted after the word 'forfeited,' a furious fight ensued over this amendment. The Southern members resisted it, on the ground that the emancipation of the imported Africans would increase the number of free negroes, who, as Mr. Early affirmed, 'were considered in the States where they are found in considerable numbers as instruments of murder, theft, and conflagration.' And so craftily was this proposition of forfeiture to the government qualified, that its drift was not at first discerned by the Northern members. For, strong as was their disapprobation of slavery in the abstract, they felt no disposition to expose their Southern brethren to all the horrors of insurrection which it was assumed would follow the multiplication of free negroes. Indeed, Mr. Early candidly said, that, if these negroes were left free in the Southern States, not one of them would be alive in a year. And although the Federalists as a party, and Mr. Quincy eminently among them, regarded the political element of slavery as full of dangers to the future of the nation, these opinions had worked no personal and social alienation between Northern and Southern men. . . . Mr. Quincy at first opposed striking out the forfeiture clause, on the ground that this was the only way in which the United States could get the control of the Africans, so as to dispose of them in the manner most for their own interest. . . . These views in-

fluenced a majority of the Northern members until the question of the final passage of the bill approached. At last they came to a sense of the disgrace which the forfeiture of the negroes to the government, and the permission to it to sell them as slaves if it so pleased, would bring upon the nation, and the whole matter was recommitted to a committee of one from each State. . . . This committee reported a bill providing that such imported negroes should be sent to such States as had abolished slavery, there to be bound out as apprentices for a term of years, at the expiration of which they should be free. This bill produced a scene of great and violent excitement on the part of the slaveholders. Mr. Early declared that the people of the South would resist this provision with their lives! . . . The final settlement was by a bill originating in the Senate, providing that, though neither importer nor purchaser should have a title to such negroes, still the negroes should be subject to any regulation for their disposal that should be made by the States into which they might be brought. The design of the slaveholding party to make the United States recognize the rightfulness of property in man was thus avoided, but it was at the cost of leaving the imported Africans to the tender mercies of the Slave States. The fact that the slaveholders were greatly incensed at the result, and regarded it as an injury and an affront, does not make this disposition of these unfortunates any the less discreditable to Congress or the nation."—E. Quincy, *Life of Josiah Quincy*, ch. 5.—See also SLAVERY: 1792-1807.

1808.—Effects of the embargoes.—"The embargo was an experiment in politics well worth making. In the scheme of President Jefferson's statesmanship, non-intercourse was the substitute for war,—the weapon of defence and coercion which saved the cost and danger of supporting army or navy, and spared America the brutalities of the Old World. Failure of the embargo meant in his mind not only a recurrence to the practice of war, but to every political and social evil that war had always brought in its train. In such a case the crimes and corruptions of Europe, which had been the object of his political fears, must, as he believed, sooner or later teem in the fat soil of America. To avert a disaster so vast, was a proper motive for statesmanship, and justified disregard for smaller interests. . . . Everywhere, on all occasions, he proclaimed that embargo was the alternative to war. The question next to be decided was brought by this means into the prominence it deserved. Of the two systems of statesmanship, which was the most costly,—which the most efficient? . . . The economical was less serious than the moral problem. The strongest objection to war was not its waste of money or even of life; for money and life in political economy were worth no more than they could be made to produce. A worse evil was the lasting harm caused by war to the morals of mankind, which no system of economy could calculate. . . . Yet even on that ground the embargo had few advantages. The peaceable coercion which Jefferson tried to substitute for war was less brutal, but hardly less mischievous, than the evil it displaced. The embargo opened the sluice-gates of social corruption. Every citizen was tempted to evade or defy the laws. . . . If the cost of the embargo was extravagant in its effects on the Constitution, the economy, and the morals of the nation, its political cost to the party in power was ruinous. War could have worked no more violent revolution. The trial was too severe for human

nature to endure. At a moment's notice, without avowing his true reasons, President Jefferson bade foreign commerce to cease."—H. Adams, *History of the United States of America*, v. 2, pp. 272-273, 276-277.—"The dread of war, radical in the Republican theory, sprang not so much from the supposed waste of life or resources as from the retroactive effects which war must exert upon the form of government; but the experience of a few months showed that the embargo as a system was rapidly leading to the same effects. . . . Personal liberties and rights of property were more directly curtailed in the United States by embargo than in Great Britain by centuries of almost continuous foreign war. . . . While the constitutional cost of the two systems was not altogether unlike, the economical cost was a point not easily settled. No one could say what might be the financial expense of embargo as compared with war. Yet Jefferson himself in the end admitted that the embargo had no claim to respect as an economical measure. . . . As the order was carried along the seacoast, every artisan dropped his tools, every merchant closed his doors, every ship was dismantled. American produce—wheat, timber, cotton, tobacco, rice—dropped in value or became unsalable; every imported article rose in price; wages stopped; swarms of debtors became bankrupt; thousands of sailors hung idle round the wharves trying to find employment on coasters, and escape to the West Indies or Nova Scotia. A reign of idleness began; and the men who were not already ruined felt that their ruin was only a matter of time. The British traveller, Lambert, who visited New York in 1808, described it as resembling a place ravaged by pestilence:—"The port indeed was full of shipping, but they were dismantled and laid up; their decks were cleared, their hatches fastened down, and scarcely a sailor was to be found on board. Not a box, bale, cask, barrel, or package was to be seen upon the wharves." . . . In New England, where the struggle of existence was keenest, the embargo struck like a thunderbolt, and society for a moment thought itself at an end. Foreign commerce and shipping were the life of the people,—the ocean, as Pickering said, was their farm. The outcry of suffering interests became every day more violent, as the public learned that this paralysis was not a matter of weeks, but of months or years. . . . The belief that Jefferson, sold to France, wished to destroy American commerce and to strike a deadly blow at New and Old England at once, maddened the sensitive temper of the people. Immense losses, sweeping away their savings and spreading bankruptcy through every village, gave ample cause for their complaints. Yet in truth, New England was better able to defy the embargo than she was willing to suppose. She lost nothing except profits which the belligerents had in any case confiscated; her timber would not harm for keeping, and her fish were safe in the ocean. The embargo gave her almost a monopoly of the American market for domestic manufactures; no part of the country was so well situated or so well equipped for smuggling. . . . The growers of wheat and live stock in the Middle States were more hardly treated. Their wheat, reduced in value from two dollars to seventy-five cents a bushel, became practically unsalable. . . . The manufacturers of Pennsylvania could not but feel the stimulus of the new demand; so violent a system of protection was never applied to them before or since. Probably for that reason the embargo was not so unpopular in Pennsylvania as elsewhere, and Jeffer-

son had nothing to fear from political revolution in this calm and plodding community. The true burden of the embargo fell on the Southern States, but most severely upon the great State of Virginia. Slowly decaying, but still half patriarchal, Virginia society could neither economize nor liquidate. Tobacco was worthless; but 400,000 negro slaves must be clothed and fed, great establishments must be kept up, the social scale of living could not be reduced, and even bankruptcy could not clear a large landed estate without creating new encumbrances in a country where land and negroes were the only forms of property on which money could be raised. Stay-laws were tried, but served only to prolong the agony. With astonishing rapidity Virginia succumbed to ruin, while continuing to support the system that was draining her strength."—H. Adams, *History of the United States of America*, v. 2, ch. 12.—"The year of the embargo was critical in the economic history of the United States. . . . But if the embargo offered small comfort to commerce, it gave a wholly new impetus to manufactures. And herein lies the explanation of a sudden prosperity enjoyed by certain commercial cities at the very time when their sisters and rivals were most depressed. It was not that their shipping was less hit, but rather that their opportunities for a transfer of capital to manufactures were greater. This seems to have been especially true of the commercial cities of Pennsylvania and Maryland, doubtless in part because of the great demand for manufactured articles arising from the rapidly developing Trans-Allegheny region. Baltimore is an example of a commercial city suddenly enlarging the field of its interests. The Baltimore newspapers during the year of the embargo have numerous advertisements of and other references to rapidly expanding manufactures. But Philadelphia is a more conspicuous example of a commercial city—she had something like a twelfth of the shipping tonnage of the United States—able, in spite of the gloom among the purely mercantile elements, to develop a prosperity which was the wonder of the times. Even the opposition press was obliged to concede a measure of prosperity. 'The embargo,' declares the *United States Gazette* of October 8, 1808, 'has as yet produced comparatively little inconvenience in this city and its neighborhood. During the last winter, we began to suffer from the domiciliary visits of labourers, in *forma pauperis*, who could not find employment and were obliged to beg; but, generally, the stores, laid in by poor men before the embargo, were sufficient "to keep want from their doors" until the spring opened; since when, the unexampled improvements in our city have given constant employment to eight or ten thousand of them.' . . . Philadelphia was, in fact, thanks to manufactures and in spite of commerce, in the midst of a wholly unprecedented boom. [Manufacture flourished in woolen and cotton goods, household furnishings, including carpets, chemicals, lead and iron.] As Charles Jared Ingersoll summarized it, 'Who that walks the streets of Philadelphia and sees, notwithstanding a twelve months stagnation of trade, several hundred substantial and elegant houses building, and the labouring community employed at good wages, who reads at every corner advertisements for workmen for factories of glass, of shot, of arms, of hosiery and coarse cloths, of pottery and many other goods and wares; who finds that within the last year rents have risen one-third and that houses are hardly to be had at these prices; that land is worth, as Mr. Brougham observes, much more

than it is in Middlesex; in a word, who perceives, wherever he goes, the bustle of industry and the smile of content; who, under such circumstances, that is not too stupid to perceive, and too prejudiced to believe when he does perceive, can doubt the solid capital of this country?' (C. J. Ingersoll, *View of the rights and wrongs, power and policy of the United States of America*, p. 49, pub. 1808.)—Nicholas Biddle, also, tho he has less to say about the embargo and its effects than one would expect from so important a man of affairs, confirms Ingersoll's estimate of Philadelphia prosperity. Writing to a friend in Paris, he says, 'You would scarcely recognize Philadelphia, so much has it grown and improved. . . . As for politics, our actual position is not the most agreeable. The embargo presses heavily on the people, but it has been put in execution without difficulty, and as the people is very sane, the session of Congress soon to meet will be peaceably awaited. In spite of this the embargo appears to have wrought some change in New England, where the elections have terminated in favor of the Federalists.' (Nicholas Biddle Papers, Library of Congress, v. 1, 1775-1809; Nicholas Biddle to M. de la Grange, September 26, 1808.) In Philadelphia, as elsewhere, the ruin of powerful commercial interests brought a real and somewhat widespread distress. But in Philadelphia, much more than in many other localities subject to similar commercial losses, men found compensation, and frequently much more than compensation in the development of a large scale industrialism. On this basis was reared the superstructure of building operations which made Philadelphia the wonder of the times, and at least one great commercial city toward which Jefferson could point for the vindication of his system."—L. M. Sears, *Philadelphia and the embargo of 1808* (*Quarterly Journal of Economics*, Feb., 1921, pp. 354-359).—See also EMBARGO: First American embargoes.—"From the days of the embargo to the present time it has been the duty of every student of this epoch in our history to examine carefully into the question of whether the embargo could have been enforced, and of its effects, so far as it had any, upon the different section of the United States and upon the belligerents. It is practically impossible with the material at present at the disposal of historical students to come to any conclusion as to the first branch of this inquiry. It is necessary, however, to consider the subject with some care in view of the statements which were made at the time and have been repeated over and over again since those days. We are told, for example, of ships rotting at the wharves of Salem and Boston, of grass growing in the streets of those once-thriving seaports, of the prostration of commerce of New York and Pennsylvania. Moreover, it is often stated that the ruin of the Virginia aristocracy dates back to embargo days. The truth as to these matters may be doubtful; it is certain as anything can be that the ideas conveyed in the assertions just given, and in many which are substantially similar, have no foundation in fact, so far as the truth is known or could be known to any one who made them. As to the ships rotting at the wharves, the policy of commercial restriction continued at most for four years, in which time no self-respecting ship-owner would permit his ship to rot at the wharf or anywhere else. Moreover, a considerable portion of New England vessels never tied up at an American wharf so long as they were likely to be kept there. The wharves were at no time deserted, judging from Gallatin's statement that ten million

dollars were collected in duties in the twelve months ending September 30, 1808, six million dollars in the succeeding twelve months, and twelve million dollars in 1810. As to the Virginia side of the case, facts and figures are almost lacking. The conditions of Virginia life forbade any such supposition as that which even so calm a writer as Mr. Adams permitted himself to make. It is doubtless true, although not susceptible of absolute proof, that Virginia society was already honey-combed with extravagance and debt. Its ruin was already begun; the embargo, so far as it operated to instil ideas of economy into the heads of those whom Josiah Quincy termed the 'lordlings of Virginia,' was a positive benefit. As to Pennsylvania and New York, commerce had ceased to be the most important industry of Pennsylvania, for manufacturing had already taken its place. New York, doubtless, suffered from the embargo as much as any seaport of the country; but even as to that place there had been gross exaggeration. The truth of the matter seems to be that the Federalists seized upon this occasion to place their opponents on the defensive, and succeeded in so doing. The opposition to the embargo in New England was mainly political. The defence of the embargo in Virginia was mainly political."—E. Channing, *Jeffersonian system, 1801-1811*, pp. 216-219.—See also TARIFF: 1808-1824.—"Our passion," said Jefferson, 'is peace.' He not only recoiled as a philanthropist from bloodshed, but as a politician he with reason dreaded military propensities and sabre sway. . . . Alone among all statesmen he tried to make war without bloodshed by means of an embargo on trade. . . . It is not the highest of his titles to fame in the eyes of his countrymen, but it may be not the lowest in the court of humanity, that he sacrificed his popularity in the attempt to find a bloodless substitute for war. His memory recovered from the shock and his reign over American opinion endured."—Goldwin Smith, *United States: An outline of political history, 1492-1871*, ch. 3.

1808.—Sixth presidential election.—Jefferson succeeded by Madison.—"In anticipation of Jefferson's retirement there had been . . . no little dispute and lively canvassing as to the next incumbency of the presidential chair. . . . Upon Madison, it was generally considered that Jefferson had fixed his personal preference. . . . But Madison had many political enemies in the Republican ranks among Virginians themselves. . . . Monroe was the growing favorite. Republicans in Congress, who, from one cause or another, had become disaffected to the Secretary of State, made their new choice manifest. The Quids [see QUIDS], having courted Monroe by letter when he was abroad, crowded about him when he passed through Washington on his way home, just as the Embargo became a law. . . . Monroe hesitated, unwilling to make a breach; and rather than hazard the Republican cause, or the future prospects of their favorite, his more temperate friends took

him off the list of candidates, so that at the usual Congressional caucus, held at the capital, Madison was nominated almost unanimously for President, and George Clinton for Vice-President. But out of 139 Republican Senators and Representatives only 89 were present at this caucus, some being sick or absent from the city, and other keeping away because dissatisfied. Clinton had been a disappointed candidate, as well as Monroe, for the highest honors. . . . His ambition was pursued beyond the caucus, notwithstanding his renomination as Vice-President, until the friends of Madison, who had profited by the diversion among competitors, threatened to drop Clinton from the regular ticket unless he relinquished his pretensions to a higher place than that already assigned him. Meantime the schismatic Republicans had united in

JAMES MADISON

protesting to the country against Congressional dictation, at the same time pronouncing that the caucus which had nominated Madison was irregularly held. This open letter was signed by 17 Republican members of Congress. . . . Unfortunately for their influence in the canvass, however, they could not agree as to whether Monroe or Clinton should head the ticket. Objectionable, moreover, as the Congressional caucus might be, many more Presidential terms elapsed before other nominating machinery superseded it. National delegates, the national congress or convention of a party, was an idea too huge as yet for American politics to grasp in these days of plain frugality. . . . Harassed with foes within and without, with dissensions among the friends of rival candidates for the succession, with an odious and profitless measure to execute, against which citizens employed both cunning and force, it seemed, at one time, as if the administration party would go down in the fall elections. But Jefferson's wonderful popu-

larity and the buoyancy of Republican principles carried the day. The regular Presidential ticket prevailed, not without a diminished majority."—J. Schouler, *History of the United States of America*, v. 2, ch. 6, sect. 2.—James Madison, Democratic Republican, was elected, receiving 122 votes in the Electoral College; George Clinton, of the same party, receiving 6, and Charles C. Pinckney, Federalist, 47. George Clinton was chosen vice president. "Several state legislatures voted addresses to Jefferson asking him to serve for a third term. After some hesitation, Jefferson replied to these advances that he was old and infirm and also felt that eight years continuance in office of one president was all that the constitution would bear. Successive re-elections would lead to a life of tenure, and that, in no long time, to hereditary succession. It is probable that Jefferson was fixed in his resolution to retire at the end of his second term by the growing difficulties of the situation, which could be better met, perhaps, by a younger man; but a feeling that the democratic principle of rotation in office demanded a new candidate undoubtedly had much to do with his decision. Whatever the precise reason may have been, Jefferson's action, following on that of Washington, established the period of eight years as the maximum length for the tenure of the presidential office."—E. Channing, *Jeffersonian system, 1801-1811*, pp. 220-221.

ALSO IN: H. Adams, *History of the United States of America*, v. 5, pp. 1-4.

1808-1810.—Substitution of non-intercourse for embargo.—Delusive conduct of Napoleon.—"The strong political contest over the embargo and the successful evasions of the law induced the Republicans in Congress to pass a third supplementary act extending the operations of the law to all craft which went on the water, even rowboats. Collectors were given extraordinary power to seize vessels and suspicious collections of food-stuffs and other possible cargoes. Notwithstanding every effort that the president could make, it was impossible to enforce the embargo under the existing law. In November, 1808, almost at the time of the presidential election, Congress went over the subject of commercial warfare for the fourth time. Those who were opposed to the administration argued for the abandonment of the policy. Jefferson's supporters were not united in its defence, for it was hard to see what effect the embargo had as yet exerted upon either of the belligerents. The speeches which were made in the House and in the Senate had more to do with politics than with the industrial situation. There is a great deal of assertion in them and very little reference to tangible fact. The debate ended in the passage of a fifth embargo measure which is known as the enforcing act as it was drawn 'more effectually to enforce the embargo.' Under this act the collectors of the several ports and of the stations on the internal boundaries were given despotic power."—E. Channing, *Jeffersonian system, 1801-1811*, pp. 219-220.—"The hopelessness of the struggle against the disregard of the law by the Americans themselves finally led the President and Congress to give it up, and that, too, shortly after the passing of the Enforcement Act in January, 1809. The fact is that this law gave rise to disturbances and to a still greater feeling of irritation in the shipping states, so much the more so as the insurrection in Spain in the late summer of 1808 seemed to open up new and bright prospects to American trade. The result was a new and famous law, the Nonintercourse Act, passed on

March 1, 1809. That law repealed the Embargo Act as a complete all-round self-blockade, and limited the embargo so as to make it apply only to the two sets of belligerents, Great Britain and France; but by way of compensation it was made, if possible, still more strict against them. Over and above the prohibition of American trade and shipping contained in the Embargo Act, which remained in force with regard to those two countries, all British and French vessels, all goods shipped from Great Britain and France, and all goods produced there, were now forbidden to enter American ports as from May 20, 1809. The substitution of the two-sided prohibition for the one-sided Non-importation Act . . . gave a really consistent expression to an impartial policy of reprisals. The intention was to provide an outlet for American trade which could make the measure feasible without blunting the edge of its task as a measure of reprisal; and it was thus, practically speaking, a rationalization of the Embargo Act. . . . The natural result was a considerable recovery in American foreign trade, in the first place with the more or less neutral places, such as the Hanse Towns, Altona, and especially Tönning in Schleswig and probably Gothenburg. The trade with England continued to go chiefly to Canada and Nova Scotia, and also, especially for cotton, *via* Amelia Island in the St. Mary's River and thence to Europe in British bottoms. . . . Cotton went also *via* Lisbon, Cadiz, the Azores or other permitted ports, while persons who had no reputation to lose made shipments direct to Liverpool."—E. F. Heckscher, *Continental system (Carnegie Endowment for International Peace, pp. 136-138)*.—"On April 21, 1809, immediately upon the rather unexpected conclusion of a liberal and satisfactory diplomatic arrangement with Erskine, the British minister in Washington, the non-intercourse act was suspended as to Great Britain; and foreign trade, long dormant, suddenly sprang into excessive activity. This happy truce was short-lived. Erskine had effected his arrangement by a deliberate and almost defiant disregard of Canning's instructions; and his acts were promptly disavowed by his government. His recall was followed by a renewal of non-intercourse under a presidential proclamation of August 9, 1809. But notwithstanding the disavowal of Erskine, the British Government had made an apparent concession to the United States by the adoption of new orders in council which revoked the stringent prohibitions of the orders of 1807, and substituted a paper blockade of all ports and places under the government of France—a distinction which, on the whole, was perhaps without any important difference. France, on the other hand, entered upon a course of further aggressions. Louis Bonaparte was driven from his kingdom of Holland because he refused to attack neutral commerce, and all American ships found lying at Amsterdam were seized. Finally, by the decree of Rambouillet, every American ship found in any French port was confiscated and ordered sold. England and the United States thus seemed for the moment to be slowly drawing together in the presence of a common enemy, when suddenly the whole situation of affairs was changed by the formal announcement on August 5, 1810, of the Emperor's intended revocation of the decrees of Berlin and Milan, such revocation to take place on the first day of the following November, provided the British Government revoked their orders in council, or (and this was the important provision) the United States caused their rights to

be respected. This promise, as Napoleon had privately pointed out a few days before, committed him to nothing; but it was accepted with all seriousness on the part of the United States. In reliance upon the imperial word, commercial intercourse with Great Britain—which had been once more resumed in May, 1810—was for the third time suspended. This, it was thought, was 'causing American rights to be respected'; and although the condemnation of American ships went on without a pause in every continental port, the Government of the United States clung with the strongest pertinacity to the belief that Napoleon's declarations were sincere. The practical effect of all this was to bar the door against any possible settlement with Great Britain. Commerce was now permanently suspended; there was a long list of grievances to be redressed, and negotiation was exhausted."—G. L. Rives, ed., *Selections from the correspondence of Thomas Barclay*, ch. 6.—See also *TARIFF: 1808-1824*.

1809.—Territory of Indiana created. See *ILLINOIS: 1809-1839*.

1809.—Smith and Gallatin in cabinet.—Financial status of the country.—Trade under Non-intercourse Act.—Unpreparedness of navy.—"Naturally, to Madison, the first thing and the most important, in the existing state of world politics, was the filling of the position of Secretary of State which had been made vacant by his own elevation to the presidency. He designated Gallatin for this most critical office and found himself confronted by the Smiths, John Randolph of Roanoke, William Branch Giles, and their scanty but devoted bands of followers in both Houses of Congress. Year after year, Gallatin had charged Robert Smith with extravagance and waste in the administration of the navy. There was, no doubt, much inefficiency in that department, especially in the navy yards; but the Mediterranean cruises show that the vessels themselves were kept fully up to the mark when away from home. The Smiths and their allies pointed to the fact of Gallatin's foreign birth as being distinctly against his having the management of the international relations of the United States. After a struggle Madison gave way. Gallatin retained his old post; Robert Smith became Secretary of State, and for a few months there was a reasonable amount of harmony. In June, however, it came to Senator Samuel Smith's ears that Gallatin had accused the commercial firm of which he was the head with indefensible financial transactions with the Navy Department, while his brother Robert was in charge. Gallatin's explanations were rather lame and betrayed considerable ignorance of the course of actual commercial transactions,—the breach between the Smiths and Gallatin was irreparable. For John Randolph, it was quite enough that Gallatin had advocated justice for the Yazoo men; but just why Giles broke with the administration is not clear. The feud between the two sets of politicians affected Gallatin's later career most unfortunately and had an influence upon the course of American history."—E. Channing, *History of the United States*, v. 4, pp. 403-404.—"In November, 1809 . . . [the state department] stood helpless in the face of intolerable insults from all the European belligerents. Neither the diplomatic nor the consular system was better than

a makeshift, and precisely where the Government felt most need of ministers,—at Copenhagen, Stockholm, Berlin, and St. Petersburg,—it had no diplomatic and but few consular agents, even these often of foreign allegiance. The Treasury, hitherto the only successful Executive department, showed signs of impending collapse. . . . The accounts for the year ending September 30 showed that while the receipts had amounted to \$9,300,000, the actual expenses had exceeded \$10,000,000. The deficit of \$1,300,000, as well as reimbursements of debt to the amount of \$6,730,000, had been made good from the balance in the Treasury. The new fiscal year began with a balance of only \$5,000,000. . . . Gallatin threatened to resign. . . . Intended merely as a makeshift, the Non-intercourse Act of March 1, 1809, had already proved more mischievous to America than to the countries it purported to punish. While the great commercial nations—France, England, and the United States—were forcing trade into strange channels or trying to dam its course, trade took care of itself in defiance of war and prohibitions. As one coast after another was closed or opened to commerce, countries whose names could hardly be found on the map—Papenburg, Kniphausen, Tönningen—became famous as neutrals, and their flags covered the sea, because England and France found them convenient for purposes of illegitimate trade. The United States had also their Papenburg. Amelia Island and the St. Mary's River, which divided Florida from Georgia, half Spanish and half American waters, became the scene of a trade that New York envied. . . . The Non-intercourse Act prohibited French and British merchandise; but in disregard of the prohibition such goods were freely sold. . . . Erskine's arrangement, short as it was, brought in a fresh and large supply; custom-house oaths were cheap; custom-house officials did not inquire closely whether cloth was made in England, France, Holland, or Germany, or whether rum, sugar and coffee came from St. Kitt's or St. Bart's. . . . The Non-intercourse Act was not a bad law, . . . but it had few or no defenders even among those who obeyed it. . . . The government lost its revenue, the shipping lost much of its freight, the people paid double prices on imports and received half-prices for their produce; industry was checked, speculation and fraud were stimulated, while certain portions of the country were grievously wronged. Especially in the Southern States all articles produced for exchange were depressed to the lowest possible value, while all articles imported for consumption were raised to extravagant rates. Gallatin best knew how much the Non-intercourse Act or any other system of commercial restriction weakened the Treasury. . . . He faced an indefinite future of weakness and waste, with a prospect of war at the end; but this was not the worst. His enemies who were disposed to destroy, were skilful enough to invent the means of destruction. . . . The Treasury which had till that time sustained the Republican party through all its troubles, stood on the verge of disaster. From the military and naval departments nothing had ever been expected; but their condition was worse than their own chiefs understood. The machinery of both broke down as Madison took control. The navy consisted of a few cruisers and a large force of gunboats. Neither were of immediate use; but a considerable proportion of both were in active service. . . . No sooner had Paul Hamilton succeeded Robert Smith at the navy depart-

ment than the new secretary became aware that his predecessor had wasted a very large sum of money. . . . At least the navy contained as good officers and seamen as the world could show, and no cruisers of their class were likely to be more efficient than the frigates commanded by Rodgers, Bainbridge, and Decatur, provided they could escape a more numerous enemy; but the army was worthless throughout, and its deficiency in equipment was a trifling evil compared with the effects of political influence on its organization. . . . Among a thousand obstacles to any satisfactory reform in the military service, the most conspicuous if not the most fatal was General Wilkinson . . . whose character and temper divided the army into two hostile camps. Wade Hampton, the next general officer in rank, regarded Wilkinson with extreme contempt, and most of the younger officers who were not partisans of Jefferson shared Hampton's prejudice; but July 4, 1808, a military court of inquiry formally acquitted Wilkinson of being a Spanish pensioner."—H. Adams, *History of the United States of America*, v. 5, pp. 163-164, 166-168.

1809-1810.—Feeling of discontent and nascent ideas of disunion.—Foreign trade.—Rise of manufactures in New England.—“The outlook [in 1809] was more discouraging than at the beginning of any previous Administration. . . . The Legislature of Massachusetts, having issued its Address to the People, adjourned; and a few days afterward the people, by an election which called out more than ninety thousand votes, dismissed their Republican governor. . . . New Hampshire effected the same revolution. Rhode Island followed. In New York the Federalists carried the Legislature, as they did also in Maryland. Even in Pennsylvania, although nothing shook the fixed political character of the State, the epidemic of faction broke out. While the legislatures of Massachusetts and Connecticut declared Acts of Congress unconstitutional, and refused aid to execute them, the legislature of Pennsylvania authorized Governor Snyder to resist by armed force a mandate of the Supreme Court; and when the United States marshal attempted to serve process on the person of certain respondents at the suit of Gideon Olmstead, he found himself stopped by State militia acting under orders. . . . [But] dark as the prospect was both within and without, Madison could safely disregard dangers on which most rulers had habitually to count. His difficulties were only an inheritance from the old Administration, and began to disappear as quickly as they had risen. . . . As yet, the Union stood in no danger. The Federalists gained many votes; but these were the votes of moderate men who would desert their new companions on the first sign of a treasonable act, and their presence tended to make the party cautious rather than rash. John Henry, the secret agent of Sir James Craig, reported with truth to the governor-general that the Federalists leaders at Boston found disunion a very delicate topic, and that ‘an unpopular war . . . can alone produce a sudden separation of any section of the country from the common head.’ On the people of New England other motives more directly selfish began to have effect. The chief sources of their wealth were shipping and manufactures. The embargo destroyed the value of the shipping after it had been diminished

by the belligerent edicts; the repeal of the embargo restored the value. . . . The shipping . . . showed that Gottenburg, Riga, Lisbon, and the Spanish ports in America were markets almost as convenient as London or Havre for the sale of American produce. . . . Massachusetts owned more than a third of the American registered tonnage, and the returns for 1809 and 1810 proved that her profits were great. The registered tonnage of Massachusetts employed in foreign trade was . . . 310,000 tons in 1807 before the embargo; in 1809 it rose again to 324,000; in 1810 it made another leap to 352,000 tons. The coasting trade employed in 1807 about 90,000 tons of Massachusetts shipping . . . and it averaged 110,000 tons for the two years [1809 and 1810]. Such rapid and general improvement in shipping proved that New England had better employment than political factiousness to occupy the thoughts of her citizens; but large as the profits on freights might be, they hardly equalled the profits on manufactures. In truth, the manufactories of New England were created by the embargo, which obliged the whole nation to consume their products or to go without. . . . When the embargo was imposed in 1807, only fifteen [cotton] mills with about eight thousand spindles were in operation. . . . These eight thousand spindles, representing a capital of half a million dollars, were chiefly in or near Rhode Island. . . . Within less than two years the number of spindles was increased, or arrangements were made for increasing it, from eight thousand to eighty thousand. Nearly four million dollars of capital were invested in mills, and four thousand persons were in their employ, or expected soon to be employed in them. . . . Besides these mills, which were worked mostly by water but partly by horse-power, the domestic manufacture of cotton and linen supplied a much larger part of the market. Two thirds of the clothing and house-linen used in the United States outside of the cities was made in farm-houses, and nearly every farmer in New England sold some portion of the stock woven every year by the women of the household. Much of this coarse but strong flaxen material . . . was sent to the Southern States. While the cotton and linen industries of the North became profitable, the manufactures of wool lagged little behind. William Whittemore . . . [reported in 1809 that] ‘since the obstructions to our foreign trade, the manufactures of our country have increased astonishingly. . . . The demand for wool and cotton cards the present season has been twice as great as it has been any year preceding.’ Scarcity of good wool checked the growth of this industry, and the demand soon roused a mania among farmers for improving the breed of sheep. Between one hundred and three hundred per cent of profit attended all these industries, and little or no capital was required. All the Northern and Eastern States shared in the advantages of this production, for which Virginia with the Western and Southern States paid; but in the whole Union New England fared best. Already the development of small industries had taken place, which, by making a varied aggregate, became the foundation and the security of Yankee wealth. Massachusetts taxed her neighbors on many small articles of daily use. . . . As though this were not more than enough, Virginia gave the Northern shipowners the whole freight on Southern produce, two thirds of which in one form or another went into the hands of New England shipbuilders, shippers, and merchants. Slowly the specie capital

of the union drifted towards the Banks of Boston and New Haven, until, . . . the steady drain of specie eastward bankrupted the other States and the national government. Never, before or since, was the country so racked to create and support monopolies as in 1808, 1809, and 1810, . . . under the system of the President who began his career by declaring that if he could prevent the government from wasting the labors of the people under the pretence of protecting them, they must become happy."—H. Adams, *History of the United States of America*, v. 5, pp. 12-19.—See also INDUSTRIAL REVOLUTION: United States; TARIFF: 1808-1824.

1810.—Third census.—The total population of the United States in 1810 was 7,215,791 (being an increase of nearly 36½ per cent. over the population shown in 1800), classed and distributed as follows:

North

	White.	Free black.	Slave.
Connecticut . . . . .	255,279	6,453	310
Illinois . . . . .	11,501	613	168
Indiana . . . . .	23,890	393	237
Maine . . . . .	227,736	969	....
Massachusetts . . . . .	465,303	6,737	....
Michigan . . . . .	4,618	120	24
New Hampshire . . . . .	213,390	970	....
New Jersey . . . . .	226,861	7,843	10,851
New York . . . . .	918,699	25,333	15,017
Ohio . . . . .	228,861	1,899	....
Pennsylvania . . . . .	786,804	22,492	795
Rhode Island . . . . .	73,314	3,609	108
Vermont . . . . .	216,963	750	....
	3,653,219	78,181	27,510

1810.—Unrest in Florida.—Desire for annexation.—Independence of West Florida declared. See FLORIDA: 1798-1810.

1810-1812.—Continued provocation from England and France.—“War of 1812” against Great Britain declared.—“The policy of commercial restriction belonged fully as much to Madison as to Jefferson. He still believed in its efficacy, although, perhaps, the best way to operate it had not been discovered. The Non-intercourse Act would expire by limitation early in 1810. Whether it should be continued or what should take its place became the leading subject for debate. Nathaniel Macon [formerly speaker of the House]

. . . was now appointed chairman of the House committee on foreign affairs. On December 19, 1809, he reported to the House a bill which had been drawn by Gallatin and had been agreed to by the cabinet, including Robert Smith. The bill continued the impartial exclusion of both French and British national ships, and admitted French and British merchandise only when imported from their place of origin in vessels wholly American. . . . The bill passed the House, but in the Senate the Smith faction, joining with the Federalists, amended it by striking out the clause relating to importation. The House insisted upon the original bill, and the measure fell through. A few days later Macon reported another bill from his committee, which is always known as Macon's bill No. 2, although Macon was not the author of the first bill and was hostile to the second. The latter measure repealed the Non-intercourse Act of March, 1809, and authorized the president to prohibit commerce with the other nation in case either Great Britain or France should, before March 3, 1810, recede from its policy of war on neutrals. . . . The bill was passed . . . thus re-establishing freedom of commerce until one or other of the belligerents should withdraw its decree or decrees.”—E. Channing, *Jeffersonian system, 1801-1811*, pp. 243-245.—“The conduct of France had meanwhile been no less offensive than that of Great Britain. On all sorts of pretexts American ships were seized in the harbors and waters controlled by French power. A spirited remonstrance on the part of Armstrong, the American Minister, was answered by the issue of the Rambouillet Decree in May, 1810, ordering the sale of American vessels and cargoes seized, and directing like confiscation of all American vessels entering any ports under the control of France. This decree was designed to stop the surreptitious trade that was still being carried on between England and the continent in American bottoms. When it failed in accomplishing that end, Napoleon instructed his Minister of Foreign Affairs, Champagny, to inform the American Minister that the Berlin and Milan Decrees revoked, and would cease to have effect on November 1, 1810, if the English would revoke their Orders in Council, and recall their new principles of blockade, or if the United States would ‘cause their rights to be respected by the English,’—in the first place restore the non-intercourse act as to Great Britain. . . . The British government, being notified of this by the American Minister, declared on September 29 that Great Britain would recall the Orders in Council when the revocation of the French decrees should have actually taken effect, and the commerce of neutrals should have been restored. . . . Madison, . . . leaning toward France, as was traditional with the Republican party, and glad to grasp even at the semblance of an advantage, chose to regard the withdrawal of the Berlin and Milan Decrees as actual and done in good faith, and announced it as a matter of fact on November 1, 1810. French armed ships were no longer excluded from American ports. [See also FRANCE: 1806-1810.] On February 2, 1811, the non-importation act was revived as to Great Britain. In May the British Court of Admiralty delivered an opinion that no evidence existed of the withdrawal of the Berlin and Milan Decrees, which resulted in the condemnation of a number of American vessels and their cargoes. Additional irritation was caused by the capture, off Sandy Hook, of an American vessel bound to France, by some fresh

cases of search and impressment, and by an encounter between the American frigate *President* and the British sloop *Little Belt*, which fired into one another, the British vessel suffering most. But was American commerce safe in French ports? By no means. . . . Outrages on American ships by French men-of-war and privateers went on as before. . . . The pretended French concession was, therefore, a mere farce. Truly, there were American grievances enough. Over 900 American ships had been seized by the British, and more than 550 by the French. . . . By both belligerents the United States had been kicked and cuffed like a mere interloper among the nations of the earth, who had no rights entitled to respectful consideration. Their insolence seemed to have been increased by the irresolution of the American government, the distraction of counsel in Congress, and the division of sentiment among the people. . . . But . . . young Republican leaders came to the front to interpret the 'national spirit and expectation.' They totally eclipsed the old chiefs by their dash and brilliancy. Foremost among them stood Henry Clay; then John C. Calhoun, William Lowndes, Felix Grundy, Langdon Cheves, and others. They believed that, if the American Republic was to maintain anything like the dignity of an independent power, and to preserve, or rather regain, the respect of mankind in any degree,—ay, its self-respect,—it must cease to submit to humiliation and contemptuous treatment; it must fight,—somebody who had wronged or insulted it. The Republicans having always a tender side for France, and the fiction of French concessions being accepted, the theory of the war party was that, of the two belligerents, England had more insolently maltreated the United States. Rumors were spread that an Indian war then going on, and resulting in the battle of Tippecanoe on November 7, 1811, was owing to English intrigues. Adding this to the old Revolutionary reminiscences of British oppression, it was not unnatural that the national wrath should generally turn against Great Britain. . . . Not only the regular army was increased, but the President was authorized to accept and employ 50,000 volunteers. Then a bill was introduced providing for the building of ten new frigates. . . . The war spirit in the country gradually rose, and manifested itself noisily in public meetings, passing resolutions, and memorializing Congress. It was increased in intensity by a sensational 'exposure,' a batch of papers laid before Congress by the President in March, 1812. They had been sold to the government by John Henry, an Irish adventurer, and disclosed a confidential mission to New England, undertaken by Henry in 1809 at the request of Sir James Craig, the governor of Canada, to encourage a disunion movement in the Eastern States. This was the story. Whatever its foundation, it was believed, and greatly increased popular excitement." On April 4, the President signed a bill laying an embargo on commerce with Great Britain for ninety days. "All over the country the embargo was understood as meaning an immediate preparation for war. . . . In May, 1812, President Madison was nominated for reelection by the congressional caucus. It has been said that he was dragged into the war policy by Clay and his followers with the threat that, unless he yielded to their views, another candidate for the presidency would be chosen. This Clay denied, and there was no evidence to discredit his denial. Madison was simply swept into the current by the impetuosity of Young America. . . . On June 1 the President's war mes-

sage came. On June 18 a bill in accordance with it, which had passed both Houses, was signed by the President, who proclaimed hostilities the next day. Thus Young America, led by Henry Clay, carried their point. But there was something disquieting in their victory. The majority they commanded in Congress was not so large as a majority for a declaration of war should be. In the House, Pennsylvania and the states south and west of it gave 62 votes for the war, and 32 against it; the states north and east of Pennsylvania gave 17 yeas and 32 nays,—in all 79 for and 49 against war. This showed a difference of sentiment according to geographical divisions. Not even all the Republicans were in favor of war. . . . Nor were the United States in any sense well prepared for a war with a first-class power."—C. Schurz, *Life of Henry Clay*, v. 1, ch. 5.—"The American declaration of war against England, July 18, 1812, annoyed those European nations that were gathering their utmost resources for resistance to Napoleon's attack. Russia could not but regard it as an unfriendly act, equally bad for political and commercial interests. Spain and Portugal, whose armies were fed largely if not chiefly on American grain imported by British money under British protection, dreaded to see their supplies cut off. Germany, waiting only for strength to recover her freedom, had to reckon against one more element in Napoleon's vast military resources. England needed to make greater efforts in order to maintain the advantages she had gained in Russia and Spain. Even in America, no one doubted the earnestness of England's wish for peace; and if Madison and Monroe insisted on her acquiescence in their terms, they insisted because they believed that their military position entitled them to expect it. . . . Castlereagh did not abandon the hope of peace until Jonathan Russell [chargé d'affaires], August 24, reported to him the concessions which the President required antecedent to negotiation,—the stoppage of impressments, dismissal of impressed seamen, indemnity for spoliations, and abandonment of paper blockades. The British secretary intimated that he thought these demands, as conditions precedent to an armistice, somewhat insulting; and in conversation he explained to Russell that such concessions would merely cost the Ministry their places without result. . . . Russell then proposed an informal understanding,—adding of his own accord, without authority from his Government, a proposal, afterward adopted by Congress, that the United States should naturalize no more British seamen. . . . [This was refused.] The correspondence closed September 19, and Russell left England; but not until October 13, after learning that the President had refused to ratify the armistice made by Prevost with Dearborn, did the British government order general reprisals,—and even this order closed with a proviso that nothing therein contained should affect the previous authority given to Admiral Sir John Borlase Warren to arrange a cessation of hostilities."—H. Adams, *History of United States of America*, v. 7, pp. 1-4.

1810-1860.—Agricultural revolution in New

England.—*Influence of railroads.—Western competition.*—"The half-century before the Civil War was, for the farmers of southern New England, a period of great stress. For two or three generations they had been engaged in well-stabilized, self-sufficient agriculture. Then came the development of New England manufactures and the rise of new factory villages and towns which, by creating a new demand for food-stuffs and raw materials, opened a market at the farmers' very doors. Because of the inherent inflexibility of the agricultural industry, the first steps in the transition to commercial agriculture were slow. . . . The changes in agricultural technic and in the social life of the rural folk which did result, however, from . . . two great, new forces, the home market and western competition, were so great and far-reaching that they may well be called an agricultural revolution. . . . The distinguishing characteristic of farm-life [prior to this epoch] was its economic self-sufficiency. Being unable to sell his products, the farmer was unable to buy from outside. Consequently each farm was . . . an economic microcosm, producing for itself practically everything that it consumed. . . . [Of course there was not an entire absence of trade, but] in general, . . . farming was carried on not as a business, but for the satisfaction of the needs of the farm family. In the half-century 1810-1860 there took place in New England an industrial revolution, comparable in its significance and in many of its characteristics to the Industrial Revolution in England of the last half of the eighteenth century. On this side of the Atlantic, as on that, power machinery replaced hand-tools, and the processes of manufacture were transferred from the farmhouses and shops of craftsmen to factories. Railroads, furnishing the cheap transportation essential to industrial changes, . . . assisted in breaking down the isolation of rural communities. . . . Increase in population was accompanied by urban concentration. . . . [Moreover], the new population was a non-agricultural population . . . [and] now for the first time . . . [the farmers] had a market for their products, and that market, moreover, was a home market. . . . One of the earliest and most widespread effects of the new market was an increased interest in agricultural improvement. A new spirit was stirring among the farmers. They began to feel that they were living in a period of great changes, and they were unwilling to lag behind the age. At just this time . . . [agricultural societies first founded in Pittsfield in 1811] spread into practically every county in southern New England in the next fifteen years, . . . stimulating competition by annual cattle shows and exhibitions of agricultural produce. But their success is also explained by the skill with which they satisfied, in their annual gatherings, the farmer's deep-lying need for more social contacts, for closer relations with others in the community. The immediate practical results of the new spirit were not revolutionary. Most farmers continued on about the same lines, doing somewhat better what they had for many years been doing rather poorly. There was, however, in the first quarter of the century the important change from wooden to cast-iron ploughs which took place with spectacular rapidity . . . [and which] made possible the substitution on the farm of horses for oxen as draft animals. . . . To summarize: the home market was the dominant influence affecting New England agriculture from 1810 to 1840. The new market opportunities stimulated a new spirit in

the farmers, leading to the introduction of important technical changes; also, specialized, commercial agriculture was developed in well-defined areas. The second influence . . . [outside competition, chiefly from the West, was made possible by the coming of the railroads]. The influence of the railroads was twofold. In the first place, the trunk-lines laid down between 1830 and 1850, such as the Boston and Albany and the lines running northward from Long Island Sound, brought in wool, wheat, and pork at prices so low as to discourage home production. . . . The railroads [also] brought in the cheaper wools of Michigan, Ohio and Illinois at a transportation cost of only two or three cents a pound. The inevitable effect was the decline of wool prices in New England and the rapid abandonment of sheep-raising. . . . [The check on cattle-raising, by the introduction of cheap beef from the West, was also very pronounced.] The full extent of the effects of cheap transportation on New England are not revealed in its effects on specialized agriculture alone. A large proportion of the farmers never went in for specialties. They felt the stimulating effects of the new market, and responded by attempting to increase production in the lines of general farming. . . . But even the general farmers could not remain unaffected by outside competition. . . . The agricultural revolution brought great changes in household economy. In fact the best evidence of the extent and rapidity of the transition from self-sufficient to commercial agriculture is to be found in the decay of the household industries. At the beginning of the nineteenth century, the typical New England farmer was still clad in homespun cloth made from wool sheared from his own sheep, spun, dyed, and woven in his own home by the women of his household. Many other articles of household furnishing such as blankets, towels, and sheets were made by these overworked women. Before the Civil War, however, the household textile industry was transferred entirely to the new factories. . . . The transfer of the textile industry from farmhouses to factories was an interlocking feature of both the industrial and the agricultural revolutions in New England. Until now the change has been studied chiefly with reference to the growth of manufactures; but from the standpoint of the history of the rural people it is hardly of less importance. The significance of the decay of the household manufactures can hardly be exaggerated. . . . As self-sufficient farming declined there went with it long-established habits and traditions, not only in the method of getting a living, but also in ways of thinking and of living. . . . The problem of finding new employment for the farm women was solved . . . by their leaving the farms and taking employment in the rapidly growing urban centres, either in factories, or as school teachers, or in domestic service . . . by the introduction of new industrial occupations in the home. We know how important was the migration of the farmers' daughters to Lowell, Lawrence, and Fall River in the years around 1840, furnishing an indispensable labor force for the new factories, . . . but we are concerned here chiefly with those who stayed on the farms. The employments to which the latter now turned their attention were the sewing of shoes, the plaiting and sewing of straw and palm-leaf hats and bonnets, and the production of men's ready-to-wear clothing. . . . The organization of production was what is known to economists as the commission system, a transitional stage between household and factory production. . . . In the making of shoes, the

most important of these domestic manufactures, the men were also employed. The most depressing and disastrous of all the hindrances to progress in agriculture . . . was the wholesale desertion of the farms by the younger generation. Not only the farmers' daughters, but their sons as well, were leaving their homes throughout this period to seek their fortunes as clerks and factory operatives in the growing urban communities. The boys who wanted to pursue agriculture went West, although the lure of that region was not nearly as strong as in the generation before 1820. . . . Besides having the idea that farming was bound to be unprofitable, the younger generation was oppressed with a growing sense of social inferiority to the city population. . . . The tendency to leave the farms deprived the farmers of their only available labor force, at a time when cheap and reliable labor was particularly necessary if they were to

TECUMSEH

take full advantage of the new market opportunities. But the ultimate effects of the rural exodus were of greater importance. The best human material was selected out of the country; the best brains and the boldest spirits went to the cities."—P. W. Bidwell, *Agricultural revolution in New England*, pp. 683-697, 700-701.—See also AGRICULTURE: Modern: United States: 1833-1860.

1811.—General Harrison's campaign against Tecumseh and his league.—Battle of Tippecanoe.—"During the interval between the Tripolitan war and the war of 1812, one noticeable campaign was made against the Indians. The operation took place in 1811, under General William H. Harrison, governor of Indiana Territory, and was directed against the Shawnees and other tribes which adhered to Tecumseh. This chief, with his brother, known as 'the Prophet,' had been engaged since 1806 in planning a species of crusade against

the whites, and had acquired great influence among the northwestern Indians. For the previous two years Harrison's suspicions had been aroused by reports of Tecumseh's intrigues, and attempts had been made from time to time to negotiate with him, but without satisfactory results. In the summer of 1811 it was decided to strike a decisive blow at the Indians, and in the autumn Harrison, with a regiment of regulars under Colonel Boyd, and a force of militia, marched upon Tecumseh's town, situated on the Tippecanoe River. On the 7th of November the Indians, in Tecumseh's absence, attempted to surprise Harrison's camp, but in the battle which followed they were driven off, and presently abandoned their town, which Harrison burned. The invading force then retired. The importance of the expedition was largely due to the military reputation which Harrison acquired by it."—J. R. Soley, *Wars of the United States (Narrative and critical history of the United States, v. 7, ch. 6)*.

1812.—Opposition of Federalists to the war.—"Unfortunately for the Federalists, while they were wholly right in many of their criticisms on the manner in which the war came about, they put themselves in the wrong as to its main feature. We can now see that in their just wrath against Napoleon they would have let the nation remain in a position of perpetual childhood and subordination before England. No doubt there were various points at issue in the impending contest, but the most important one, and the only one that remained in dispute all through the war, was that of the right of search and impressment. . . . We have . . . Cobbett's statement . . . [that] great numbers of Americans have been impressed, . . . 'and are now in our navy. . . . That many of these men have died on board our ships, that many have been worn out in the service, there is no doubt.' . . . In 1806 the merchants of Boston had called upon the general government to 'assert our rights and support the dignity of the United States.' . . . Yet it shows the height of party feeling that when, in 1812, Mr. Madison's government finally went to war for these very rights, the measure met with the bitterest opposition from the whole Federalist party, and from the commercial States generally. A good type of the Federalist opposition on this particular point is to be found in the pamphlets of John Lowell [who] . . . wrote under the name of 'A New England Farmer.' In spite of the protests offered half a dozen years before by his own neighbors, he declared the whole outcry against impressment to be a device of Mr. Madison's party. . . . He argued unflinchingly for the English right of search, called it a 'consecrated' right, maintained that the allegiance of British subjects was perpetual, and that no residence in a foreign country could absolve them. . . . While such a man, with a large party behind him, took this position,

it must simply be said that the American republic had not yet asserted itself to be a nation. Soon after the Revolution, when some one spoke of that contest to Franklin as the war of independence, he said, 'Say rather the war of the Revolution; the war for independence is yet to be fought.' The war of 1812 was just the contest he described. To this excitement directed against the war, the pulpit very largely contributed, the chief lever applied by the Federalist clergy being found in the atrocities of Napoleon. . . . The Federalist leaders took distinctly the ground that they should refuse to obey a conscription law to raise troops for the conquest of Canada; and when that very questionable measure failed by one vote in the Senate, the nation may have escaped a serious outbreak. . . . It might, indeed, have been far more dangerous than the Hartford Convention of 1814 [see below: 1814 (December): Hartford Convention], which was, after all, only a peaceable meeting of some two dozen men, with George Cabot at their head—men of whom very few had even a covert purpose of dissolving the Union, but who were driven to something very near desperation by the prostration of their commerce and the defencelessness of their coast."—T. 1812 (June-October).—Rioting at Baltimore.—Opening of actual hostilities and unreadiness of the nation.—Hull's disastrous campaign and surrender, at Detroit.—"It was perhaps characteristic of the conduct of the war, that the first blood spilled should be American blood, shed by Americans. . . . In the night of June 22d, three days after the proclamation of war, a mob in Baltimore sacked the office of the 'Federal Republican,' edited by Alexander Hanson, because he had opposed the war policy. The mob also attacked the residences of several prominent Federalists, and burned one of them. Vessels in the harbor, too, were visited and plundered. About a month later Hanson resumed the publication of his paper, and in the night of July 26th the mob gathered again." This time they were resisted and one was killed; whereupon the authorities seized Hanson and his friends and lodged them in jail. "The rioters, thus encouraged by those whose business it was to punish them, attacked the jail next night, murdered General Langan [one of Hanson's defenders], injured General [Henry] Lee so that he was a cripple for the rest of his life, and beat several of the other victims and subjected them to torture. The leaders of the mob were brought to trial, but were acquitted! In this state of affairs, the war party in the country being but little stronger than the peace party, the youngest and almost the weakest of civilized nations went to war with one of the oldest and most powerful."—R. Johnson, *History of the War of 1812-15*, ch. 2.—"The first attempt of the war party to secure the legislation needed to carry out the policy adopted in the resolutions of the committee on foreign relations showed how difficult it was to transform the old partisan inertia into warlike energy. A bill introduced into the

Senate by Giles raised the number of men to be added to the regular army from ten thousand, proposed by the House committee, to twenty-five thousand. . . . After some sparring between the Houses, the Senate bill finally became a law June 26, 1812. . . . The next measure, for a volunteer force of fifty thousand men, presumably to come from the state militia, but to be put under the control of the United States and thus to be available for service outside the United States, as in Canada or in Florida, revealed the progress the Republicans were making towards the exercise of the broadest sovereign powers by the United States. This measure became a law February 6, but when the third plan, the naval programme, was presented, the Republicans held back. Cheves's request for seven million five hundred thousand dollars for the construction of twelve seventy-fours and twenty frigates staggered the House, which had a traditional, almost innate, prejudice against the navy, . . . and the scheme for new vessels was defeated by a majority of only three votes. Aggressive action at sea must thenceforth be confined to the little navy then in service, and to the volunteer, or privateer, navy which would spring up after the declaration of war."—K. C. Babcock, *Rise of American nationality*, pp. 56-57.—"The regular army of the United States numbered only 6,000 men . . . [but in addition to the 25,000 men provided for by the act of June 26] the President was empowered to call for 50,000 volunteers, and to use the militia to the extent of 100,000. Henry Dearborn, of Massachusetts, was made a major-general and appointed to command the land forces. Against the thousand vessels and 144,000 sailors of the British navy, the Americans had 20 war-ships and a few gunboats, the whole carrying about 300 guns. But these figures taken alone, are deceptive; since a very large part of the British force was engaged in the European wars, and the practical question was, what force the United States could bring against so much as England could spare for operations on the high seas and on this side of the Atlantic. In that comparison, the discrepancy was not so great, and the United States had an enormous element of strength in her fine merchant marine. Her commerce being temporarily suspended to a large degree, there was an abundance both of ships and sailors, from which to build up a navy and fit out a fleet of privateers. Indeed, privateering was the business that now offered the largest prizes to mariners and ship-owners. . . . War with Great Britain being determined upon, the plan of campaign that first and most strongly presented itself to the Administration was the conquest of the British provinces on our northern border. . . . In planning for the invasion of Canada, the Administration counted largely upon a supposed readiness of the Canadians to throw off their allegiance to Great Britain and join with the United States. . . . [These expectations] were completely disappointed. In the preceding February, William Hull, Governor of the Territory of Michigan, who had rendered distinguished service in the Revolution, had been made a brigadier-general and placed in command of the forces in Ohio, with orders to march them to Detroit, to protect the Territory against the Indians, who were becoming troublesome. In June he was in command of about 2,000 men, in northern Ohio, moving slowly through the wilderness. On the day when war was declared, June 18th, the Secretary of War wrote him two letters. The first, in which the declaration was not mentioned, was despatched by a special messenger, and reached General Hull

on the 24th. The other informed him of the declaration of war, but was sent by mail to Cleveland, there to take its chance of reaching the General by whatever conveyance might be found. The consequence was, that he did not receive it till the 2d of July. But every British commander in Canada learned the news several days earlier. Hull arrived at Detroit on the 5th of July and set about organizing his forces. On the 9th he received from the War Department orders to begin the invasion of Canada by taking possession of Malden, 15 miles below Detroit, on the other side of the river, if he thought he could do so with safety to his own posts. He crossed on the 12th, and issued a proclamation to the Canadians." He found the enemy too strongly fortified at Malden to be prudently assaulted with raw troops and without artillery. "So it was decided to defer the attack, and in a few days came the news that, on the declaration of war, a force of over 600—British and Indians—had promptly moved against the American post at Michilimackinac—on the rocky little island of Mackinaw, commanding the strait between Lake Huron and Lake Michigan—and the garrison of 61 officers and men capitulated on the 16th of July. This disaster to the Americans roused the Indians to renewed hostility against them, while it proportionately disheartened Hull, and seems to have been the first step in the breaking down of his courage. After a few skirmishes, he recrossed to Detroit on the 7th of August. Meanwhile the British Colonel Proctor had arrived at Malden with reinforcements, and on Hull's withdrawal to Detroit he threw a force across the river to intercept his supplies. This force consisted of a small number of British regulars and a considerable number of Indians commanded by the famous Tecumseh." Two considerable engagements occurred between this force and detachments sent out to meet an expected supply train. In the first, the Americans were badly beaten; in the second, they drove the enemy to their boats with heavy loss; but the supply train was not secured. "During this gloomy state of things at Detroit, a bloody affair took place on ground that is now within the city of Chicago. Fort Dearborn stood at the mouth of Chicago River, and was occupied by a garrison of about 50 soldiers, with several families. Captain Nathan Heald, commanding the post, had been ordered by General Hull to abandon it and remove his force to Detroit." To conciliate the neighboring Indians who professed friendliness, he promised to give them all the property in the fort which he could not carry; but before making the delivery to them he foolishly destroyed all the arms, the gunpowder and the liquors. Enraged by this proceeding, which they considered a trick, the savages pursued Captain Heald's small party, waylaid them among the Sand-hills on the lake shore, and massacred the greater part, twelve children included. The scalps which they took were sold to Colonel Proctor, "who had offered a premium for American scalps." The same day on which this occurred, August 15, "the British General Isaac Brock, who had arrived at Malden a few days before and assumed command there, formally demanded the surrender of Detroit. . . . Said Brock in his letter: 'It is far from my intention to join in a war of extermination; but you must be aware that the numerous bodies of Indians who have attached themselves to my troops will be beyond my control the moment the contest commences.' . . . Brock's force, according to his own testimony, numbered 1,330 men, including 600 Indians, and he had also two ships of war. Hull had

present for duty about 1,000 men. Brock sent a large body of Indians across the river that night, at a point five miles below the fort, and early in the morning crossed with the remainder of his troops, and at once marched on the place." On the approach of the attacking force Hull offered to surrender. "The articles of capitulation were drawn up, and the American general surrendered, not merely the fort and its garrison, but the whole Territory of Michigan, of which he was Governor. . . . Hull's officers were incensed at his action, and he was subsequently court-martialled, convicted of cowardice, and condemned to death; but the President pardoned him, in consideration of his age and his services in the Revolution. . . . Subsequent investigations, if they do not exonerate General Hull, have at least greatly modified the blame attached to him."—R. Johnson, *History of the War of 1812-15*, ch. 2.

1812 (September-November).—Beginning of hostilities on the New York frontier.—Battle of Queenstown Heights.—"To put Dearborn [who commanded in the northern department] in a condition to act with effect, Governor Tompkins [of the state of New York] made the greatest efforts to get out the New York quota of militia. The Democratic Legislature of Vermont voted to add to the pay of their militia in service as much as was paid by the United States. At the same time they passed a stringent drafting law, and offered \$30 bounty to volunteers. By the co-operating exertions of these states and of the war department, some 3,000 regulars and 2,000 militia were presently assembled on Lake Champlain, under Dearborn's immediate command. Another force of 2,000 militia was stationed at different points along the south bank of the St. Lawrence, their left resting on Sackett's Harbor. A third army was collected along the Niagara River, from Fort Niagara to Buffalo, then a village of a thousand or two inhabitants, in the midst of a newly-settled district. This latter force of nearly 6,000 men, half regulars and volunteers and half militia, was under the immediate command of Major-general Van Rensselaer, a Federalist. . . . The first skirmishes on the New York frontier grew out of attempts, not unsuccessful, made principally from Ogdensburg, a new but much the largest village on the American side of the St. Lawrence, to intercept the British supplies proceeding upward in boats. The militia officer in command at Ogdensburg was General Jacob Brown. A Pennsylvanian by birth, a Quaker by education, while employed as a teacher in the city of New York, some newspaper essays of his had attracted the attention of Alexander Hamilton, to whom, during the quasi war of '98, he became military secretary. Removing afterward to the new settlements of Northwestern New York, his enterprise had founded the flourishing village of Brownsville, not far from Sackett's Harbor. . . . His success in repulsing a British force of 700 men, which attempted to cross from Prescott to attack Ogdensburg, laid the foundation of a military reputation which soon placed him at the head of the American army. There had been built on Lake Ontario, out of the gun-boat appropriations, but

by a fortunate improvement upon Jefferson's model, a sloop of war of light draft, mounting 16 guns. This vessel, called the *Oncida*, just before the breaking out of the war had been furnished with a regular-bred commander and crew. She was attacked shortly after at Sackett's Harbor by five British vessels, three of them larger than herself, but manned only by lake watermen. By landing part of her guns, and establishing a battery on shore, she succeeded, however, in beating them off. Hull's failure having shown how important was the control of the lakes, a judicious selection was made of Captain Chauncey, hitherto at the head of the New York Navy Yard, to take command on those waters. Along with Henry Eckford as naval constructor, and soon followed by ship-carpenters, naval stores, guns and presently by parties of seamen, he was sent to Sackett's Harbor [September, 1812], then held by a garrison of 200 regulars. That newly-settled region could supply nothing but timber; every thing else had to be transported from Albany at vast expense. . . . A 24-gun ship was at once commenced; for immediate use, Chauncey purchased six of the small schooners employed in the then infant commerce of the lake, which, though very ill adapted for war, he armed with four guns each. With these and the *Oncida* he put out on the lake, and soon [November 8] drove the British ships into Kingston. . . . While thus employed, Chauncey had sent Lieutenant Elliot to Buffalo, with a party of seamen, to make arrangements for a force on the upper lakes. Elliot, soon after his arrival, succeeded in cutting out [October 9] from under the guns of Fort Erie, nearly opposite Buffalo, two British vessels just arrived from Detroit. One, the late *Adams*, which the British had armed and equipped, grounded, and it became necessary to destroy her. The other, the *Caledonia*, of two guns, was brought off, and became the nucleus of the naval force of Lake Erie. Elliott also purchased several small schooners lying in the Niagara River; but they, as well as the *Caledonia*, lay blockaded at Black Rock [now a part of the city of Buffalo], the passage into the lake being commanded by the guns of Fort Erie. The troops along the Niagara frontier, highly excited by Elliott's exploit, demanded to be led against the enemy; and, under the idea that the British village of Queenstown, at the foot of the falls [a few miles below] might furnish comfortable winter quarters for a part of his troops, Van Rensselaer resolved to attack it."—R. Hildreth, *History of the United States (Second series, v. 3, ch. 25)*.—"The Niagara River, 35 miles long, which conducts the waters of the upper lakes through Erie into Ontario, constituted an important military frontier in such a war; its banks sparsely settled, and the crossing a narrow one. Below the roaring cataracts had assembled another little army, supplied in great measure by regiments of the New York quota, Major-General Van Rensselaer, of the militia of that State, a prominent Federalist, being in command. Hull's sudden surrender left Brock free to confront this second adversary with a moderate force from the Canada side, not without feeling uncertain as to where the American blow would be struck. By October Van Rensselaer had 6,000 men, half of them regulars; and, yielding to the impatience of his volunteers had the public press, he gave orders to cross the river from Lewiston to Queenston. High bluffs arose on either side. There were not boats enough provided to carry more than half the advance party at a time. Too much reliance was placed upon militia, while regulars won the laurels. Wool, a young captain, and Lieu-

tenant-Colonel Scott did gallant work on Queenston Heights; and General Brock, the conqueror of Detroit, fell mortally wounded; but reinforcements crossed too slowly, and with the green militia dreading death, many of the reserve pleading legal exemption from service in an enemy's country, their deserted comrades on the Canada side, unable to return, were forced to surrender. Van Rensselaer, whose advance had been premature, resigned in disgust, leaving a less capable but more pretentious officer, of Virginia birth, General Alexander Smyth, to succeed him. . . . By the 27th of November Smyth had concentrated at Black Rock, near Buffalo, a fair army, 4,500 troops, comprising, in addition to the regulars, volunteer regiments from Maryland, Pennsylvania, and New York; the last under the command of General Porter. . . . The big moment approached; but, notwithstanding the sonorous promise of 'memorable to-morrows,' and an embarkation to the music of 'Yankee Doodle,' one or two shivering attempts were made to land on the opposite shore, and then the volunteers were dismissed to their homes, and regulars ordered into winter-quarters. . . . Porter having openly charged Smyth with cowardice, the two crossed to Grand Island to fight a duel, and then shook hands. . . . But the country could not be reconciled to such generalship, and Smyth was presently cashiered."—J. Schouler, *History of the United States, v. 2, ch. 8, sect. 2*.

1812 (November).—Seventh presidential election.—James Madison was re-elected, receiving in the electoral college 128 votes, against 80 cast for DeWitt Clinton, Federalist. Elbridge Gerry was elected vice president.

1812-1813.—Possession of West Florida taken from the Spaniards. See FLORIDA: 1811-1813.

1812-1813.—Indifference to the navy at the beginning of the war.—Its efficiency and its early successes.—"The young leaders of the war party in congress looked to successes on land and territorial conquest, and had an indifference to the field which the ocean afforded. And yet the triumphs of our young fleet in the Revolution, the alarm which John Paul Jones excited in English homes, and, later, the brilliant achievements in the Mediterranean, the heroes of which were still in the prime of their service, might have inspired better counsel. Madison's cabinet were said to have without exception opposed the increase and use of our navy; indeed, somewhat after Jefferson's idea in imposing the embargo—to save our vessels by laying them up. The advice of Captains Charles Stewart and William Bainbridge, who happened to be in Washington at the time of the declaration of war, determined Madison to bring the navy into active service. One of the chief causes of the war being the impressment of our seamen, it seems to-day surprising that their ardor in defense of 'Free Trade and Sailors' Rights,'—the cry under which our greatest triumphs were won—should have been either passed by or deprecated."

—J. A. Stevens, *Second war with Great Britain* (*Magazine of American History*, May-June, 1893). —“Although Commodore Preble died in 1807, the credit of the later war belongs more to him than to any other one man. It was not only that he formed many of the individual officers who won the victories of 1812-15,—for Hull, Decatur, Bainbridge, Macdonough, Porter, Lawrence, Biddle, Chauncey, Warrington, Charles Morris and Stewart were all in his squadron,—but he created in the navy the professional spirit or idea, which was the main quality that distinguished it from the army in the war with Great Britain. At the outbreak of the war there were 18 vessels in the navy, ranging from 44-gun frigates to 12-gun brigs. There were also 176 gunboats, on which a large sum of money had been expended, but which were of no use whatever. . . . Immediately after the declaration of war, the frigates in commission in the home ports, together with two of the sloops, put to sea as a squadron under Commodore John Rodgers. They fell in with the English frigate ‘Belvidera,’ but she got away from them. . . . Three weeks later, the ‘Constitution,’ under Captain Hull, sailed from Annapolis. Soon after leaving the Chesapeake she came upon a British squadron of one sixty-four and four frigates, and then ensued the famous three days’ chase, in the course of which, by a marvel of good seamanship and good discipline, the American frigate escaped. After a short respite in Boston, Hull set out again, and on the 19th of August he fought and captured the ‘Guerrière,’ Captain Dacres, in an engagement lasting about an hour. . . . In the next action, in October, the sloop ‘Wasp,’ Captain Jacob Jones, captured the English brig ‘Frolic,’ of approximately the same force. The relative loss of English and Americans was again five to one. Both vessels were soon after taken by a seventy-four. Later in the same month, another frigate action took place, the ‘United States,’ under Decatur, capturing the ‘Macedonian.’ . . . Shortly after this capture, a cruise in the Pacific was projected for a squadron to be composed of the ‘Constitution,’ ‘Essex,’ and ‘Hornet.’ The ‘Essex’ failed to meet the other vessels at the rendezvous off the coast of Brazil, and went on the Pacific cruise alone [having great success]. The ‘Constitution,’ now commanded by Bainbridge, met the frigate ‘Java,’ near Brazil, on the 20th of December. The antagonists were more nearly matched than in the previous frigate actions, but the fight, lasting a little over an hour, resulted in the total defeat and surrender of the ‘Java,’ with a loss of 124 to the Americans’ 34. The ‘Java’ was a wreck, and could not be taken into port, and Bainbridge returned home. Two months later, February 24, 1813, the ‘Hornet,’ commanded by Lawrence, met the ‘Peacock’ off the Demerara, and reduced her in fifteen minutes to a sinking condition, while the ‘Hornet’s’ hull was hardly scratched. The English sloop sank so quickly that she carried down part of her own crew and three of the ‘Hornet’s’ who were trying to save them. The casualties, apart from those drowned, were 5 in the ‘Hornet’ and 38 in the ‘Peacock.’ . . . The moral effect in England of these defeats was very great. . . . In March, 1813, Admiral Sir John Warren assumed the command of the British squadron on the American coast. Although rather past his prime, his defects were more than compensated by the activity of his second in command, Rear-Admiral Cockburn, who during this summer and the next kept the coasts of Chesapeake Bay in a continuous state of alarm by successful raids, in which much

valuable property was destroyed. [See also MARYLAND: 1812-1814.] Among the more important of the actions of 1813 were the capture and destruction (in part) of Havre de Grace, Md., early in May, and an attack on the village of Hampton, Va., on the 25th of June. ‘Acts of rapine and violence’ on the part of the invading forces characterized the latter attack, which excited intense indignation throughout the country. . . . In the summer of 1813 occurred the first serious reverse of the navy during the war. On the 1st of June the frigate ‘Chesapeake,’ Captain James Lawrence, sailed from Boston to engage the ‘Shannon,’ which was lying outside, waiting for the battle. The two ships were nearly matched in guns and men, what slight difference there was being in favor of the ‘Chesapeake’; but the crew of the latter had been recently shipped and was partly composed of disaffected men, and Lawrence had had no time to discipline them. The engagement was short and decisive. Ranging up alongside of the ‘Shannon,’ whose crew had been brought to the highest state of efficiency by Captain Broke their commander, the ‘Chesapeake’ at the first fire received a severe injury in the loss of several of her officers. Falling foul of the ‘Shannon’ she was effectually raked, and presently a boarding party, led by Captain Broke, got possession of her deck. The great mortality among the officers [including Captain Lawrence, who had received a mortal wound just before his ship was boarded, and whose dying appeal, ‘Don’t give up the ship,’ became the battle cry of the American navy during the remainder of the war], and the want of discipline in the crew, resulted in a victory for the boarders. The battle lasted fifteen minutes only, and the ‘Chesapeake’ was carried as a prize to Halifax. During the summer the naval war on the ocean continued with varying fortunes, two important actions being fought. The brig ‘Argus,’ Captain Allen, after a successful voyage in the Irish Sea, in which many prizes were taken and destroyed, was captured by the English brig ‘Pelican,’ on the 14th of August. Early in September the brig ‘Enterprise,’ commanded by Lieutenant Burrows, captured the English brig ‘Boxer,’ near Portland, Me.”—J. R. Soley, *Wars of the United States* (*Narrative and critical history of the United States*, v. 7, ch. 6).—See also REVENUE CUTTER SERVICE, UNITED STATES.—“George Canning, speaking in open Parliament . . . said that the loss of the ‘Guerriere’ and the ‘Macedonian’ produced a sensation in the country scarcely to be equalled by the most violent convulsions of Nature. ‘Neither can I agree with those who complain of the shock of consternation throughout Great Britain as having been greater than the occasion required. . . . It cannot be too deeply felt that the sacred spell of the invincibility of the British navy was broken by those unfortunate captures.’ Of all spells that could be cast on a nation, that of believing itself invincible was perhaps the one most profitably broken; but the process of recovering its senses was agreeable to no nation, and to England, at that moment of distress, it was . . . as painful as Canning described. . . . After all had been said, the unpleasant result remained that in future British frigates, like other frigates, could safely fight only their inferiors in force. What applied to the ‘Guerriere’ and ‘Macedonian’ against the ‘Constitution’ and ‘United States,’ where the British force was inferior, applied equally to the ‘Frolic’ against the ‘Wasp,’ where no inferiority could be shown. The British newspapers thenceforward admitted what America wished to prove, that, ship for ship, British were

no more than the equals of Americans. Society soon learned to take a more sensible view of the subject, but as the first depression passed away a consciousness of personal wrong took its place. The United States were supposed to have stabbed England in the back at the moment when her hands were tied, when her existence was in the most deadly peril and her anxieties were most heavy. England never could forgive treason so base and cowardice so vile. That Madison had been from the first a tool and accomplice of Bonaparte was thenceforward so fixed an idea in British history that time could not shake it. Indeed, so complicated and so historical had the causes of war become that no one even in America could explain or understand them, while Englishmen could see only that America required England as the price of peace to destroy herself by abandoning her naval power, and that England preferred to die fighting rather than to die by her own hand. The American party in England was extinguished: no further protest was heard against the war; and the British people thought moodily of revenge. This result was unfortunate for both parties, but was doubly unfortunate for America, because her mode of making the issue told in her enemy's favor. The same impressions which silenced in England open sympathy with America, stimulated in America acute sympathy with England. Argument was useless against people in a passion, convinced of their own injuries. Neither Englishmen nor Federalists were open to reasoning."—H. Adams, *History of the United States of America*, v. 7, pp. 6-8.

1812-1813.—Harrison's northwestern campaign.—Winchester's defeat.—Perry's naval victory on Lake Erie.—Battle of the Thames and death of Tecumseh.—Recovery of Detroit and Michigan.—"Great was the indignation of the West, great the mortification of our whole people on learning that, instead of capturing Upper Canada at the first blow, we had lost our whole Michigan Territory. The task now was to retake Detroit under a competent commander. Ohio and Kentucky went on filling rapidly their quotas, while urging the administration to march them under Harrison. The President . . . proposed that Monroe should go to the scene, as a volunteer, if not to command; but Monroe restrained his first military ardor, as was prudent, and Winchester, of Tennessee, another of the recent brigadiers, and a revolutionary veteran, was selected. The selection, however, gave umbrage to the Kentuckians, whose State government had already made Harrison a brevet major-general of militia. The hero of Tippecanoe was finally assigned to the chief command of the Western army, Madison countermanding his first orders. Harrison's route for Detroit was by way of Fort Wayne, and Fort Defiance to the falls of the Maumee. But it was late in the fall [October 1812] before the new military arrangements could be completed; . . . and, except for the destruction of a few Indian villages on the way, the deeds of prowess were reserved for a winter campaign. . . . The winter expedition of the Northwest army . . . [was] retarded by a disaster which overtook Winchester's command near the Maumee Rapids. . . . The design was that he should . . . when weather per-

mitted, cross the frozen Detroit, and fall suddenly upon Malden. Winchester not only pushed on incautiously to his first destination, but, with a design more humane than prudent, undertook to protect against a British and Indian raid the alarmed inhabitants of Frenchtown [now Monroe, Michigan], a place 30 miles nearer Malden. Here [January 22, 1813] he was overpowered by the enemy, which fell upon the American force suddenly at daybreak, with yells and a shower of bombshells and canister. Winchester having been taken prisoner, Colonel Proctor, the British commander, extorted from him the unconditional surrender of all his troops, some 700 in number, as the only means of saving them from the tomahawk and scalping-knife. . . . Our sick and wounded . . . the British commander shamefully abandoned to their fate. . . . Officers and men, many of them the flower of Kentucky, perished victims of barbarities . . . abhorrent to civilized warfare, of which the British Colonel Proctor and Captain Elliott were not innocent. Besides the American loss in prisoners at the sad affair of the Raisin, nearly 200 were killed and missing. Hearing at the Upper Sandusky of Winchester's intended movement, Harrison had pressed to his relief with reinforcements, but fugitives from Frenchtown brought the melancholy tidings of disaster; and Harrison fell back to the Rapids, there to strengthen the post known as Fort Meigs, and go into winter quarters. The terms of many of his troops having now expired, the Northwestern army was for many months too feeble to begin a forward movement. But Harrison possessed the unabated confidence of the West, and, promoted to be one of the new major-generals, he received, through the zealous co-operation of Ohio and Kentucky, whose people were inflamed to take vengeance, enough volunteer reinforcements [in May] to relieve Fort Meigs [which was twice besieged in 1813 by British and Indians] from Proctor's investment in the spring, and at length the quota requisite for resuming the offensive; other frontier plans of the War Department having long deranged his own in this quarter. The splendid co-operation of an American flotilla on Lake Erie opened the way to Detroit and victory. For that memorable service Commodore Chauncey had detailed an aspiring young naval officer, Captain Oliver H. Perry, of Rhode Island. Our little lake squadron was tediously constructed at Presqu' Isle (now Erie). When all at last was ready [in August, 1813], Perry, who had long chafed in spirit while the British fleet hovered in sight like a hawk, sailed forth to dispute the supremacy of the broad inland waters. His heavier vessels were floated over the bar not without difficulty. After conferring at Sandusky upon the combined plan of operations with General Harrison, from whom he received a small detail of soldiers to act as marines and supply vacancies in his crews, he offered battle to Barclay, the British commander,—the latter, a veteran in naval experience, who had served under Nelson at Trafalgar. Barclay had lain idly for several weeks at Malden, in hopes of procuring additional sailors, purposely avoiding an action meanwhile. But Proctor's army having now run short of provisions, longer delay was inexpedient. At sunrise on September 10th Perry descried the approaching British fleet from his look-out, a group of islands off Sandusky. Ten miles to the north of this locality, which was known as Put-in-bay, the two squadrons at noon engaged one another. . . . In officers and men the fleets were about equally matched; there were 6 British vessels to

the American 9, but the former carried more guns, and were greatly superior for action from a distance. . . . Our flag-ship, the Lawrence, exposed to the heaviest of the British cannonade, became terribly battered, her decks wet with carnage, her guns dismantled. Undismayed by this catastrophe, Perry dropped into a little boat with his broad pennant and banner, and crossed to his next largest vessel, the Niagara, the target for 15 minutes of a furious fire while being rowed over. Climbing the Niagara's deck, and hoisting once more the emblems of commander, our brave captain now pierced the enemy's line with his new flag-ship, followed by his smaller vessels, and, gaining at last that advantage of a close engagement which for nearly three hours had eluded him, he won the fight in eight minutes. The colors of the Detroit, Barclay's flag-ship, struck first, three others followed the example, and two of the British squadron attempting to escape were overtaken and brought back triumphantly. 'We have met the enemy and they are ours,' was Perry's laconic dispatch to Harrison; . . . 'two ships, two brigs, one schooner, and one sloop.' . . . Barclay lay dangerously wounded, and his next in command died that evening. . . . To Harrison's expectant army, augmented by 3,500 mounted Kentuckians, whom Governor Shelby led in person, the word of advance was now given. . . . Perry's flotilla, aided by the captured vessels, presently landed the American troops on the Canada side. Proctor had already begun the retreat, having first dismantled the fort at Malden and burned the barracks. Harrison pursued him beyond Sandwich, covered by the flotilla, until near a Moravian town, up the river Thames [some thirty miles east of Lake St. Clair], the enemy was overtaken, with Tecumseh's braves. Here, upon well-chosen ground, the British made a final stand [October 5], but at the first impetuous charge of our cavalry their line broke, and only the Indians remained to engage in a desperate hand-to-hand fight. Among the slain was the famous Tecumseh, dispatched, as tradition asserts, by the pistol of Colonel Johnson, a Kentucky officer prominent in the battle. Proctor himself escaped in a carriage with a few followers, incurring afterwards the royal reprimand. . . . The baleful British and Indian alliance was broken up by these victories, while Detroit, Michigan, and all that Hull had lost, and a fair portion of Upper Canada besides, passed into American control. Among American generals in this war Harrison enjoyed the rare felicity of having fully accomplished his undertakings."—J. Schouler, *History of the United States*, v. 2, ch. 8, sect. 2, ch. 9, sect. 1.—"The victory of Lake Erie was most important, both in its material results and in its moral effect. It gave us complete command of all the upper lakes, prevented any fears of invasion from that quarter, increased our prestige with the foe and our confidence in ourselves, and ensured the conquest of Upper Canada; in all these respects its importance has not been overrated. But the 'glory' acquired by it most certainly has been estimated at more than its worth. . . . The simple truth is, that, where on both sides the officers and men were equally brave and skilful, the side which possessed the superiority in force, in the proportion of three to two, could not well help winning. . . . Though we find nine guns less, yet, at a broadside, they threw half as much metal again as those of our antagonist."—T. Roosevelt, *Naval War of 1812*, ch. 6.—A history of the war, written from the Canadian point of view, tells the story of the battle

as follows:—On reaching Lake Erie, Captain Barclay "found no adequate supplies there of any kind; and by that time Captain Perry, of the American Navy, . . . had made considerable progress in getting together a flotilla at Presqu'île, which, however, so long as Barclay's vessels could blockade the port, was unable to come over the bar into deep water in face of his guns. But the naval assistance sent from England had not arrived in time to be of the service it would have been earlier in the war in securing and maintaining superiority upon the waters of Lakes Ontario and Erie; and henceforth the words 'Too late' are for Great Britain written large upon the naval operations of this war. What men could do the naval officers and those under them did, but they, as well as British and Canadian interests, were sacrificed to earlier procrastination. . . . At last Captain Barclay felt it necessary to relax the blockade of Presqu'île on Lake Erie, in order to sail to Long Point on that lake, and there meet some expected supplies (which did not, however, arrive at the time anticipated). Perry at once took advantage of his absence to cross the bar, place guns on board his largest vessel, and come out with his flotilla upon the lake. When Barclay, therefore, sailed back to renew the blockade, he was obliged instead to take refuge from the stronger American squadron in the port of Amherstburg. His position now was worse than before, because no supplies could reach him safely over the waters of the lake, even from Long Point; but he worked strenuously to complete the Detroit, his flagship, just launched, placing on board of her some guns from the land forts, and at last, feeling (to use the words of Sir George Prevost) 'compelled from circumstances of imperious necessity to seek the superior forces of the enemy,' he sailed out to bring Perry to battle. He had six vessels mounting sixty-three guns, to Perry's nine mounting fifty-four only, but the latter's guns were of far superior power. At this time not a day's flour was in store for his men, who were on half-allowance, and his equipment was in several respects infamously bad. His crew numbered among them over 200 soldiers, chiefly obtained from Proctor, 85 Canadian-lake men, and only 50 seamen, some of whom had come up but three days before. In the battle which ensued (September 10, 1813) the American flagship was obliged, early in the action to strike her flag, Perry removing to another vessel, and victory then hung in the balance, but in the end the American squadron, skilfully commanded by Perry, was triumphant, and the British flotilla was practically destroyed, Captain Barclay being severely wounded, and most of his superior officers placed *hors de combat*. The British loss was about 135, the American 123."—C. W. Robinson, *Canada and Canadian defence*, pp. 56-57, 60-62.

1813.—Difficulties in administration.—Changes in army leadership.—“Besides the alarming difficulties which rose partly from failure of military calculations at home and abroad, but chiefly from want of national experience in the business of war, other annoyances surrounded the President, and could not fail to make him wish for peace. Armstrong had not been six weeks in the War Department before he set the members of Administration at odds. The factious days of Robert Smith returned, and the President found the task of maintaining discipline as great in the Cabinet as it was in the army. . . . Monroe was the first to resent Armstrong's proceedings. . . . Already Monroe had surrendered the War Department to him, with the expectation that if any one was to have general command of the armies in the field, Monroe was to be the man. Down to the time when Armstrong took control, the idea was universal that the next campaign was to be fought by Monroe. . . . As acting Secretary of War, Monroe had urged Congress to increase the number of major-generals; and after Armstrong took charge of the Department Congress passed the Act of February 24, 1813, authorizing the increase. February 27 the nominations were sent to the Senate. . . . Monroe said, in effect, that he would have the command in chief or nothing. Armstrong said, in effect, that he meant to be commander-in-chief himself. The new major-generals were James Wilkinson, Wade Hampton, William R. Davy of South Carolina, Morgan Lewis of New York, William Henry Harrison of Indiana Territory, and Aaron Ogden of New Jersey. The command of the Northern army was left to Dearborn, and as the world knew Dearborn's incompetence to conduct a campaign, no one was surprised to learn that Armstrong meant to conduct it as Secretary of War, at the army headquarters in the field, performing the duties of lieutenant-general. . . . The first effect of Armstrong's administration was to turn Monroe into a vindictive enemy; the second was to alienate Gallatin.”—H. Adams, *History of the United States*, v. 7, pp. 34-37, 39.

1813 (March-May).—Offer of mediation by Tsar of Russia.—Acceptance and appointment of Adams, Bayard and Gallatin as commissioners.—Financial arrangements.—“Gallatin's abstract ideas were those of 1801,—simplicity, economy, and purity. Financiering—the providing of money for wasteful expenditure—was his abhorrence. ‘I cannot consent to act the part of a mere financier,’ he wrote to Jefferson in 1809; ‘to become a contriver of taxes, a dealer of loans, a seeker of resources for the purpose of supporting useless haubles of increasing the number of idle and dissipated members of the community, of fattening contractors, pursers, and agents, and of introducing in all its ramifications that system of patronage, corruption, and rottenness which you so justly execrate.’ These words were meant to apply only to a state of peace, but they applied equally well to a state of war from the moment war became useless. In the beginning of Madison's second term, no man of intelligence denied that the war had failed; that its avowed objects could not be gained; that every month of war increased the danger of disunion, brought national bankruptcy nearer, and fastened habits of extravagance and corruption on

the country. From his post at the Treasury, Gallatin could see better than most men the dangers both financial and political, engendered by the war, while his acquaintance with European affairs showed him the need of rapid diplomacy. Armstrong represented everything antagonistic to Gallatin; his methods were arbitrary and underhand; his political training was that of the New York school, tempered by personal contact with the court of Napoleon; from him economy could hardly be expected. . . . Into this embroglio of national and personal difficulties Daschkoff, the Russian *chargé* at Washington, suddenly dropped the Czar's offer to mediate a peace [which had been made to John Quincy Adams in St. Petersburg, by Count Romanzoff, as early as September, 1812]. Of its prompt acceptance, under such circumstances, no one could doubt, and on this point the Administration was united. Daschkoff's letter bore date March 8, and Monroe's reply was sent March 11, 1813. [To aid in negotiation the president and his advisers determined to send two special envoys to the aid of John Adams then at St. Petersburg. The choice fell on John A. Bayard, of Delaware, a Federalist, and on Gallatin, who asked for the appointment himself.] . . . Gallatin's exceptional fitness for the task outweighed all objections. The President consented to appoint him; and Monroe, who had from the first attached himself to Gallatin, acquiesced, although he saw the consequences to the Cabinet and the Treasury. . . . Before he could depart . . . [Gallatin] was obliged to complete the necessary financial arrangements for the coming year. . . . First in importance was the loan of sixteen million dollars. March 12, subscription books were opened in all the principal towns, and the public was invited to take the whole amount at seven per cent interest, to be reduced to six per cent at the end of thirteen years. About four million dollars were offered on these terms, . . . and after an active negotiation between Gallatin and three or four capitalists of New York and Philadelphia,—John Jacob Astor, Stephen Girard, David Parish,—the remainder of the loan was provided. . . . The bargain was completed April 7 [1813]. At that moment the Treasury was empty, and could not meet the drafts of the other departments; but with sixteen millions in hand, five millions of Treasury notes, and an estimated revenue of something more than nine millions, Gallatin collected about thirty million dollars, and April 17 wrote to the Secretaries of War and Navy, allotting to the one thirteen millions and a quarter, to the other four and a half millions, which could not be exceeded without the consent of Congress.”—H. Adams, *History of United States of America*, v. 7, pp. 40-45.—Having thus finished his work, Gallatin sailed with Bayard on his mission in May, 1813.

1813 (April-July).—Burning of Toronto.—Capture of Fort George.—“The American fleet on Lake Ontario had been increased, and in 1813 controlled the lake. General Sheaffe had succeeded Brock as Governor as well as commander of the forces. Some 600 troops were in York [now Toronto], the capital. York had about 1,000 inhabitants, and was not regarded as of strategic importance. The Americans, however, set sail from Sackett's Harbour with 16 sail and 2,500 men to attack it. The enemy landed [April 27] to the west of the town, and General Sheaffe evacuated the works, and retired down the Kingston Road. The Americans invested the town, and though skirmishing took place, had an easy victory. The land force was under General Pike, an officer well

known as having, when a lieutenant, explored the sources of the Mississippi. Just as the Americans had well filled the fort, the powder magazine exploded with violence, killing and wounding about 250. General Pike, struck in the breast by a flying stone, died soon after. The Americans, contrary to the articles of surrender, shamefully burnt the town, and retired from York on the 2nd of May, 1813. While the squadron was absent, Sackett's Harbour was attacked by a strong force. The garrison seemed to be on the point of surrendering the fort, when Sir George Prevost, to the surprise of all, ordered a retreat. Little York taken, Commodore Chauncey then crossed the lake to Fort George at the mouth of the Niagara River. General Vincent commanded the fort. Twenty-four of Hull's guns frowned from its bastions. Its defender had 1,340 men. The American army on the Niagara frontier numbered 6,000. Chauncey had eleven war-vessels and 900 seamen. On the 27th of May . . . Vincent drew his men out about a mile from the fort and awaited the attack. He was overpowered and retired, having lost nearly 450 soldiers. The Canadian force retired to a strong position, 'Beaver Dams,' twelve miles from Niagara on the heights, having given up Fort Erie and Chippewa and blown up Fort George. Vincent had now 1,600 men, and with these he retired to Burlington Heights, near the present city of Hamilton. An American army of 2,500 men followed General Vincent to Stoney Creek. On the night of the 8th of June, Colonel Harvey of the British force, with upwards of 750 men, fell stealthily on the sleeping American army, scattered the troops, killed many, captured the American generals Chandler and Winder, and about 100 men, along with guns and stores. The adventurers then retired to their camp. The scattered American soldiers reassembled in the morning and retired in a disorderly manner down the country to Fort George. Vincent now followed the retreating army and reoccupied Beaver Dams. One of his outposts was held by Lieutenant Fitzgibbon and 30 men. Smarting with defeat, the American general sought to surprise this station as a basis for future attacks. He secretly despatched Colonel Boerstler with nearly 700 men to capture it. A wounded militiaman, living within the lines at Queenston, heard by chance of the expedition. . . . The alarm was given [by Laura Secord, the militiaman's wife, who traveled twenty miles through the forest, at night] and that night the men lay on their arms. Early next morning the American party came, but an ambuscade had been prepared for them, and after severe fighting 542 men surrendered into the hands of some 260. General Dearborn soon after retired from the command of the American army, to be succeeded by General Boyd. British parties captured Fort Schlosser and Black Rock on the Niagara River at this time, though at the latter place with the loss of Colonel Bishopp, the idol of his men. Colonel Scott, in command of troops on board Commodore Chauncey's fleet, again scoured Lake Ontario. Landing at Burlington Heights on the 31st of July, they did nothing more than reconnoitre the works and depart. Afterwards the second attack on York was made and the barracks burnt. After this a trial of strength took place between Sir James Yeo's fleet, now sent forth from Kingston Harbour, and Chauncey's squadron. The Americans lost two vessels in a squall, and two were captured by the British, but the result between the two fleets was indecisive."—G. Bryce, *Short history of the Canadian people*, ch. 8, sect. 5.

1813 (October–November).—Abortive expedition against Montreal.—“While Perry and Harrison were . . . reclaiming our lost ground on Lake Erie and in the northwest, Armstrong was preparing to carry out his favorite plan of a descent on Kingston and Montreal. When he accepted the post of Secretary of War, he transferred his department from Washington to Sackett's Harbor, so that he might superintend in person the progress of the campaign. . . . Although Wilkinson had superseded Dearborn, as commander-in-chief of this district in July, he did not issue his first orders to the army till the 23d of August. . . . General Wade Hampton, who had been recalled from the fifth military district to the northern frontier, encamped with his army, 4,000 strong, at Plattsburg, on Lake Champlain. The plan finally adopted by the Secretary was, to have Wilkinson drop down the St. Lawrence, and without stopping to attack the English posts on the river, form a junction with General Hampton, when the two armies should march at once on Montreal. These two Generals were both Revolutionary officers, and consequently too advanced in years to carry such an expedition through with vigor and activity. Besides, a hostile feeling separated them, rendering each jealous of the other's command. . . . Chauncey, in the mean time, after an action with Yeo, in which both parties claimed the victory, forced his adversary to take refuge in Burlington Bay. He then wrote to Wilkinson that the lake was clear of the enemy, and reported himself ready to transport the troops down the St. Lawrence. The greatest expectations were formed of this expedition. The people knew nothing . . . [of a quarrel which had occurred] between Wilkinson and Hampton, and thought only of the strength of their united force. . . . While Wilkinson was preparing to fulfill his part of the campaign, Hampton made a bold push into Canada on his own responsibility. Advancing from Plattsburg, he marched directly for St. John, but finding water scarce for his draft cattle, owing to a severe drought, he moved to the left, and next day arrived at Chateaugay Four Corners, a few miles from the Canada line. Here he was overtaken by an order from Armstrong, commanding him to remain where he was, until the arrival of Wilkinson. But jealous of his rival, and wishing to achieve a victory in which the honor would not be divided, he resolved to take upon himself the responsibility of advancing alone. Several detachments of militia had augmented his force of 4,000, and he deemed himself sufficiently strong to attack Prevost, who he was told had only about 2,000 ill assorted troops under him. He therefore gave orders to march, and cutting a road for 24 miles through the wilderness, after five days great toil, reached the British position. Ignorant of its weakness, he dispatched Colonel Purdy at night by a circuitous route to gain the enemy's flank and rear and assail his works, while he attacked them in front. Bewildered by the darkness, and led astray by his guide, Colonel Purdy wandered through the forest, entirely ignorant of the whereabouts of the enemy or of his own. General Hampton, however, supposing that he had succeeded in his attempt, ordered General Izard to advance with the main body of the army, and as soon as firing was heard in the rear to commence the attack in front. Izard marched up his men [October 26] and a skirmish ensued, when Colonel De Salaberry, the British commander, who had but a handful of regulars un-

der him, ordered the bugles, which had been placed at some distance apart on purpose to represent a large force, to sound the charge. The ruse succeeded admirably, and a halt was ordered. The bugles brought up the lost detachment of Purdy, but suddenly assailed by a concealed body of militia, his command was thrown into disorder and broke and fled. Disconcerted by the defeat of Purdy, Hampton ordered a retreat, without making any attempt to carry the British intrenchments. . . . Hampton, defeated by the blasts of a few bugles, took up his position again at Four Corners, to wait further news from Wilkinson's division. The latter having concentrated his troops at Grenadier Island, embarked them again the same day that Hampton advanced, against orders, towards Montreal. Three hundred boats, covering the river for miles, carried the infantry and artillery, while the cavalry, 500 strong, marched along the bank. . . . They were two weeks in reaching the river. Wilkinson, who had been recalled from New Orleans, to take charge of this expedition, was prostrated by the lake fever, which, added to the infirmities of age, rendered him wholly unfit for the position he occupied. General Lewis, his second in command, was also sick. . . . General Brown led the advance of this army of invasion, as it started for Montreal, 180 miles distant. . . . When it reached the head of the long rapids at Hamilton, 20 miles below Ogdensburg, Wilkinson ordered General Brown to advance by land and cover the passage of the boats through the narrow defiles, where the enemy had established block houses. In the mean time the cavalry had crossed over to the Canadian side and, with 1,500 men under General Boyd, been despatched against the enemy, which was constantly harassing his rear. General Boyd, accompanied by Generals Swartwout and Covington as volunteers, moved forward in three columns. Colonel Ripley advancing with the 21st Regiment, drove the enemy's sharpshooters from the woods, and [November 11] emerged on an open space, called Chryster's Field, and directly in front of two English regiments. Notwithstanding the disparity of numbers this gallant officer ordered a charge, which was executed with such firmness that the two regiments retired. Rallying and making a stand, they were again charged and driven back. . . . At length the British retired to their camp and the Americans maintained their position on the shore, so that the flotilla passed the Saut in safety. This action [called the battle of Chryster's Farm, or Williamsburg] has never received the praise it deserves—the disgraceful failure of the campaign having cast a shadow upon it. The British, though inferior in numbers, had greatly the advantage in having possession of a stone house in the midst of the field. . . . Nearly one-fifth of the entire force engaged were killed or wounded. . . . The army, however, still held its course for Montreal. Young Scott, who had joined the expedition at Ogdensburg, was 15 miles ahead, clearing, with a detachment of less than 800 men, the river banks as he went. Montreal was known to be feebly garrisoned, and Wilkinson had no doubt it would fall an easy conquest. He therefore sent forward to Hampton to join him at St. Regis, with provisions. Hampton, in reply, said, that his men could bring no more provisions than they wanted for their own use, and informed him, in short, that he should not co-operate with him at all, but make the best of his way back to Lake Champlain. On receiving this astounding news, Wilkinson called a council of war, which reprobated in strong terms

the conduct of Hampton, and decided that in consideration of his failure, and the lateness of the season, the march should be suspended, and the army retire to winter quarters. This was carried into effect, and Wilkinson repaired to French Mills, on Salmon river, for the winter, and Hampton to Plattsburg."—J. T. Headley, *Second war with England*, v. 1, ch. 13.—A Canadian history of the war gives their reason for not pursuing the American troops down the river. "The British force in Boyd's rear was only a thousand strong; but, as it included every human element engaged in the defence of Canada, it has a quite peculiar interest of its own. Afloat, it included bluejackets of the Royal Navy, men of the Provincial Marine, French-Canadian voyageurs, and Anglo-Canadian boatmen from the trading-posts, all under a first-rate fighting seaman, Captain Mulcaster, R. N. Ashore, under a good regimental leader, Colonel Morrison—whose chief staff officer was [John] Harvey, of Stoney Creek renown—it included Imperial regulars, Canadian regulars of both races, French-Canadians and Anglo-Canadian militiamen, and a party of Indians. Early on the 11th Brown had arrived at Cornwall with his two thousand Americans, Wilkinson was starting down from Williamsburg in boats with three thousand more, and Boyd was starting down ashore with eighteen hundred. But Mulcaster's vessels pressed in on Wilkinson's rear, while Morrison pressed in on Boyd's. Wilkinson then ordered Boyd to turn about and drive off Morrison, while he hurried his own men out of reach of Mulcaster, whose armed vessels could not follow down the rapids. Boyd thereupon attacked Morrison, and a stubborn fight ensued at Chryster's Farm. The field was of the usual type: woods on one flank, water on the other, and a more or less flat clearing in the centre. Boyd tried hard to drive his wedge in between the British and the river. But Morrison foiled him in manœuvre; and the eight hundred British stood fast against their eighteen hundred enemies all along the line. Boyd then withdrew, having lost four hundred men; and Morrison's remaining six hundred effectives slept on their hard-won ground. Next morning the energetic Morrison resumed his pursuit. But the campaign against Montreal was already over. Wilkinson had found that Hampton had started back for Lake Champlain while the battle was in progress; so he landed at St. Regis, just inside his own country, and went into winter quarters at French Mills on the Salmon river."—W. Wood, *War with the United States: A chronicle of 1812* (M. Wrong and H. H. Langton, ed., *Chronicles of Canada Series*, pp. 129-131).

1813 (December).—Retaliatory devastation of the Niagara frontier.—Fort Niagara surprised.—Burning of Buffalo.—"The withdrawal of troops from the Niagara frontier to take part in Wilkinson's expedition left the defence of that line almost entirely to militia, and the term for which the militia had been called out expired on the 6th of December. The next day General George McClure, who had been left in command at Fort George, found himself at the head of but 60 effective men, while the British General Drummond had brought up to the peninsula 400 troops and 70 Indians—released by the failure of Wilkinson's expedition—and was preparing to attack him. Mc-

clure thereupon determined to evacuate the fort, as the only alternative from capture or destruction, and remove his men and stores across the river to Fort Niagara. He also determined to burn the village of Newark, that the enemy might find no shelter. The laudable part of this plan was but imperfectly carried out; he failed to destroy the barracks, and left unharmed tents for 1,500 men, several pieces of artillery, and a large quantity of ammunition, all of which fell into the hands of Drummond's men. But the inexcusable part—the burning of a village in midwinter, inhabited by noncombatants who had been guilty of no special offence—was only too faithfully executed. The inhabitants were given twelve hours in which to remove their goods, and then the torch was applied, and not a house was left standing. This needless cruelty produced its natural result; Drummond determined upon swift and ample retaliation. In the night of December 18th, just one week after the burning of Newark, he threw across the Niagara a force of 550 men. They landed at Five Mile Meadows, three miles above Fort Niagara, and marched upon it at once, arriving there at four o'clock in the morning. . . . The sentries were seized and silenced before they could give any alarm, and the main gate was found standing wide open, so that the British had only to walk straight in and begin at once the stabbing which had been determined upon. The guard in the south-east block-house fired one volley, by which the British commander, Colonel Murray, was wounded, and a portion of the invalids made what resistance they could. A British lieutenant and five men were killed, and a surgeon and three men wounded. . . . On the same morning, General Riall, with a detachment of British troops and 500 Indians, crossed from Queenstown." Lewiston, Youngstown, Tuscarora and Manchester (now Niagara Falls) were plundered and burned, and the houses and barns of farmers along the river, within a belt of several miles, were destroyed. The two villages of "Buffalo and Black Rock were sacked and burned, and no mercy was shown. . . . Truly, an abundant revenge had been taken for the burning of Newark. . . . On New Year's day of 1814 the settlers along the whole length of the Niagara—those of them who survived—were shivering beside the smouldering embers of their homes."—R. Johnson, *History of the War of 1812-15*, ch. 9.—The Canadian story of the retaliatory measures follows: "On the Niagara frontier the Americans, as the season for active operations drew towards a close, did little but raid the Canadian border, and, on December 10, burning the small town of Niagara, retired to their own bank of that river. This burning of Niagara and turning the inhabitants out of their homes when snow was on the ground was done upon the official pretext that 'the frontier (American) must be protected by destroying such Canadian villages in its front as would best shelter the enemy in winter,' and it is only necessary to allude to it here because this action with respect to an undefended town, together with the burning of buildings at York, and of houses, farms, etc., on the border, caused an extremely bitter feeling throughout Canada, and led to subsequent retaliatory measures on the part of the British both on the American bank of the Niagara River, and elsewhere on the theatre of war outside Canada, such as on the Delaware and at Washington. Towards the middle of December, 1813, General Sir Gordon Drummond . . . assumed command on the Niagara frontier,

and, crossing the river, took the American post of Fort Niagara by storm (December 19), which remained from that time to the close of the war (in December, 1814) in British occupation. Afterwards, moving thence along the northern bank of the Niagara, he burnt or destroyed Lewiston, Black Rock, Buffalo, with much of the shipping there, and Fort Schlosser. In the direction of Lake Champlain also the British had succeeded, towards the close of July and early in August, in destroying a quantity of stores at Plattsburg and some of the enemy's smaller vessels on the lake."—C. W. Robinson, *Canada and Canadian defences*, p. 64.

1813-1814.—British blockade of the Atlantic coast.—"The blockade of the Atlantic coast was enforced by British vessels from the beginning of the year 1813. At first they were inclined to spare the coast of New England, which they supposed to be friendly to Great Britain, but this policy was soon abandoned, and the whole coast was treated alike. Groups of war-vessels were stationed before each of the principal sea-ports, and others were continually in motion along the coast, from Halifax on the north to the West Indies. Early in 1813, they took possession of the mouth of Chesapeake Bay as a naval station, and the American Government ordered all the lights to be put out in the neighboring light-houses. The Atlantic coast was thus kept in a state of almost constant alarm, for the British vessels were continually landing men at exposed points to burn, plunder, and destroy. . . . In 1813, the defenceless towns of Lewes, Havre de Grace, and Hampton (near Fortress Monroe) were bombarded, and Stonington, Conn., in 1814; and a number of smaller towns were burned or plundered. Attacks on New York and other larger cities were prevented only by fear of torpedoes, by means of which the Americans had nearly blown up one or two British ships which ventured too near New York. . . . Maine, as far as the Penobscot River, was seized by the British in 1814, and was held until the end of the war."—A. Johnston, *History of the United States for schools*, sect. 384-386.

1813-1814 (August-April).—Creek War.—General Jackson's first campaign.—"The great Indian chief Tecumseh had been trying for years to unite all the red men against the whites. There would have been an Indian war if there had been no war with England, but the latter war seemed to be Tecumseh's opportunity. Among the southwestern Indians he found acceptance only with the Creeks, who were already on the verge of civil war, because some wanted to adopt civilized life, and others refused. The latter became the war party, under Weatherford [Red Eagle], a very able half-breed chief. The first outbreak in the Southwest, although there had been some earlier hostilities, was the massacre of the garrison and refugees at Fort Mims, at the junction of the Alabama and Tombigbee rivers, August 30, 1813. There were 553 persons in the fort, of whom only 5 or 6 escaped. . . . The result of the massacre at Fort Mims was that Alabama was almost abandoned by whites. Terror and desire for revenge took possession of Georgia and Tennessee. September 25th the Tennessee Legislature voted to raise men and money to aid the people of Mississippi territory against the Creeks." Andrew Jackson, one of the two major-generals of the Tennessee militia,

was then confined to his bed by a wound received in a recent fight with Thomas H. Benton and Benton's brother. "As soon as he possibly could, Jackson took the field. Georgia had a force in the field under General Floyd. General Claiborne was acting at the head of troops from Louisiana and Mississippi. This Indian war had a local character and was outside the federal operations, although in the end it had a great effect upon them. . . . The Creek war was remarkable for three things: (1) the quarrels between the generals, and the want of concert of action; (2) lack of provisions; (3) insubordination in the ranks. . . . On three occasions Jackson had to use one part of his army to prevent another part from marching home, he and they differing on the construction of the terms of enlistment. He showed very strong qualities under these trying circumstances. . . . In the conduct of the movements against the enemy his energy was very remarkable. So long as there was an enemy unsubdued Jackson could not rest, and could not give heed to anything else. [See also LOUISIANA: 1813-1815.] . . . At the end of March [1814] Jackson destroyed a body of the Creeks at Tohopeka, or Horse-Shoe Bend, in the northeast corner of the present Tallapoosa County, Alabama. With the least possible delay he pushed on to the last refuge of the Creeks, the Hickory Ground, at the confluence of the Coosa and Tallapoosa, and the Holy Ground a few miles distant. The medicine men, appealing to the superstition of the Indians, had taught them to believe that no white man could tread the latter ground and live. In April the remnant of the Creeks surrendered or fled to Florida, overcome as much by the impetuous and relentless character of the campaign against them as by actual blows. Fort Jackson was built on the Hickory Ground. The march down through Alabama was a great achievement, considering the circumstances of the country at the time. . . . The Creek campaign lasted only seven months. In itself considered, it was by no means an important Indian war, but in its connection with other military movements it was very important. Tecumseh had been killed at the battle of the Thames, in Canada, October 5, 1813. His scheme of a race war died with him. The Creek campaign put an end to any danger of hostilities from the southwestern Indians, in alliance either with other Indians or with the English. . . . This campaign . . . was the beginning of Jackson's fame and popularity, and from it dates his career. He was 47 years old. On the 31st of May he was appointed a major-general in the army of the United States, and was given command of the department of the South. He established his headquarters at Mobile in August, 1814."—W. G. Sumner, *Andrew Jackson as a public man*, ch. 2.

1813-1871.—Early school laws.—Child welfare legislation. See CHILD WELFARE LEGISLATION: 1813-1871.

1814.—Embargo and its effect.—British trade.—Growing dissatisfaction in New England.—Repeal of Non-intercourse Act and embargo.—"As the war went on, New England found new cause for the assertion of the principle of State rights and nullification. Her coast east of Montauk Point had neither been blockaded nor molested by the British, and a brisk trade with Europe had in consequence been carried on. But Congress to stop this laid an embargo in 1813, which fell chiefly on New England (for the rest of our coast was already under British blockade), and set that region once more aflame. Thirty-two towns in

Massachusetts immediately petitioned the General Court for relief. Various are the forms, said the joint committee of the House and Senate, in which the people have expressed their feelings, but the tone of and spirit in all are the same. They all discover an ardent attachment to the union of these States, and all express a reverence for the national Constitution; but they are all stamped with the melancholy conviction that the basis of that union has been destroyed by a neglect of its principles, and that the durability of the Constitution has been impaired by a perversion and abuse of its powers. After due consideration of their petitions, the committee resolved that the Embargo Act was not constitutional; that the people of Massachusetts had always enjoyed the right of sailing from port to port within the limits of the Commonwealth and of fishing along its coasts; that the power of prohibiting the exercise of their rights was never delegated to Congress; and that all laws passed by the General Government and intended to have such an effect 'are therefore unconstitutional and void.'—J. B. McMaster, *History of the people of the United States*, v. 5, p. 411.—"An embargo was laid by Congress on December seventeen [1813] and immediately every foreign food product rose to a fabulous price. Sugar was then sold at fifty cents a pound. For hyson tea by the chest four dollars a pound was offered and refused. At Alexandria salt sold by the quantity at five dollars a bushel. At Portsmouth a case of English hardware, mostly awl-blades and tacks, which cost two hundred pounds sterling, sold at auction for five thousand dollars. Everybody who had money to spare made haste to buy something and held it for a rise in price. Never since revolutionary days had the country experienced such a fever of speculation. Against this the people cried out lustily. They were willing, they said, to pay high prices when such were the result of the pressure of the enemy, but they were not willing to have the embargo, a measure taken to injure the enemy, used to injure and plunder the people of the United States. In Philadelphia the feeling was so strong that the citizens formed non-consumption associations, each member of which pledged himself not to buy coffee at more than twenty-five cents, nor sugar at more than twenty cents a pound; not to use articles made in foreign lands if similar goods were made in America, and not to consume any tea not already in the country. This new restrictive measure, the last of the many embargoes, went into force on the seventeenth of December [1813]. That it was really aimed against Great Britain no sane man could believe. The ports of Russia and Prussia, of Denmark and Sweden, of Spain, and of the countries of South America, were at that moment open to her commerce. That she could, in spite of this, be distressed by shutting the few ports of the United States which she still left unblockaded, was preposterous. All these ports were in New England. To them came, in considerable numbers, the merchant ships of Spain and Sweden, and British ships under Swedish flags, with cargoes of Spanish wool and Muscovado sugar, Campeachy Logwood, Havana segars, cocoa, hides, and Lisbon salt. From New England, again, as well known, went out no inconsiderable part of the supplies on which the British troops in Canada and in the West Indies subsisted. That Boston and Salem should enjoy all this trade, while Philadelphia and Baltimore were deprived of their usual share of it by a rigorous blockade, and should enjoy it as the reward of downright hostility to the war, was too much for Republican patience.

Justly indignant that such a traffic should go on openly, Madison undertook to stop it, and early in December made it the subject of a special message. In it he complained that the laws relating to trade and commerce had produced a state of things most helpful to the enemy and most hurtful to the United States. British products and fabrics daily came into the ports in neutral ships, and in British ships disguised as neutrals by false papers and flags. American products daily went out of the ports to supply the armies of the enemy in distant lands. Nay, the very fleets and troops that infested the coast, harried the shores, and sacked the towns, and the very armies against which his fellow-citizens were contending in Canada, obtained from the United States supplies of food which could not be had elsewhere. . . . He would therefore suggest, as a remedy, that an embargo be laid at once, and that articles known to be derived almost entirely from Great Britain be excluded from the ports, even when brought in neutral vessels. To this the House readily consented. The Senate was less hasty; but on the afternoon of December seventeenth a bill laying an embargo was signed. . . . Long before that time news of what was coming had gone abroad, and all neutral ships in the ports of New England that could possibly do so had put to sea. It was well they did, for the law embargoed every merchant ship, cleared or not cleared, within the jurisdiction of the United States, unless each one of its officers and each one of its crew was a subject of a nation in amity with the United States. Had Madison been a little more patient, had he waited but three weeks longer, the embargo in all probability would not have been even proposed; for, on the thirtieth of December, before it had gone into force along the frontier and on the gulf coast, the British flag of truce *Bramble*, forty-two days out from Plymouth, reached Annapolis with newspapers and a despatch. The despatch was from Lord Castlereagh, and informed Monroe that, while Great Britain could not accept the mediation of Russia, she would willingly treat with the United States directly at Gothenburg or London. The newspapers were from London, and contained information which startled the whole country and aroused the wildest desire for peace. . . . Soon after this the ship *Ann-Alexander*, from Liverpool, entered Boston with newspapers as late as December twenty-fifth containing long accounts of the surrender of Dantzic, of the overtures of peace made by the allies, and of their acceptance by Napoleon. Again the commercial cities were full of excitement. . . . Under the influence of these popular rejoicings, of the hope for peace, and of the changed conditions of Europe, men who were earnest supporters of the administration began to question the wisdom of the embargo. It was right, they admitted, that the shameful trade New England was carrying on with the enemy should be stopped. But now that a fair trade would soon be opened with Holland, with Germany, and perhaps with France, was it just to punish honest men for the sins committed by rogues? . . . Such a policy was distressing to America and the subject of derision in England, which had the markets of Europe at her command. But even before such reasoning the administration could not bear to yield, for New England was every day growing more hostile, more defiant. To the people of that section the embargo was a blow directly at them. They met it accordingly, and from the moment the fall of Bonaparte seemed assured, their leaders, their representatives, their press, their town meetings, began seriously

to discuss the propriety of withdrawing from all share in the war and making their own terms with England. . . . Though the new trade restriction applied with equal force to every port in the United States, it fell with especial severity on those of Massachusetts. The blockade which, during 1813, extended from Rhode Island to New Orleans, had long since stopped all coasting south of Cape Cod. Trade by sea with the Southern States was not, therefore, affected by the embargo. But from Boston to Eastport there had gone on, as usual, a legitimate and proper coasting trade, and this in one moment was destroyed. Ships from Nantucket, from Eastport, from Portland, from any port in Maine that happened to be at Salem or Boston or New Bedford on the fatal day when the law went into operation, were stopped and their crews left, hundreds of miles from home, to shift as best they could. Early in January, as a consequence, the roads from Boston to Maine were dotted with bands of sailors, on foot, with packs on their backs, begging their way homeward. . . . Yet, strange as it may seem, the members of Congress who resisted any modification and finally voted against the repeal of the embargo were the Federalists from New England. The Constitution, they argued, gives Congress no power to prevent trade by sea between towns and cities in the same State, nor between the ports of one State and those on the seacoast or navigable rivers of an adjoining State. The law imposing the embargo is therefore unconstitutional. But when a resolution was offered to instruct the Committee on Foreign Relations to report a bill repealing it, the House refused to even consider the motion. An effort was then made to secure a slight modification, in order that ships away from home when the embargo was laid might be permitted to return. . . . To Congress it could surely make no difference whether the ships were tied to the wharves of one port or another; but to those who owned and to those who sailed the ships it was a matter of very serious importance where they were embargoed. This seemed so reasonable that, when a resolution was moved to bid the committee inquire into the expediency of permitting coasting vessels absent on December seventeenth to return to the ports where the voyage began, the House consented, though almost every Federalist present voted No. . . . [Motions were introduced] to suspend the embargo during the negotiations for peace; to inquire into the expediency of repeal; but the House seemed determined that, as the administration had asked for the measure, the administration must propose its repeal, and refused to consider the motions. To accept this situation was hard indeed; but, as every newspaper that found its way to our shores from England confirmed the first reports of the signal victories of the allies, Madison yielded, and on March thirty-first asked for the repeal both of the embargo and the Non-importation Act, which had been in force against Great Britain since 1811. . . . Lest so sudden a change of policy should be ruinous to the manufactures the restrictive system had produced, he further suggested that the double duties on imports, which were to expire one year after peace with Great Britain, should be continued till two years after that event, and, that the banks might not be embarrassed, he asked that the exportation of specie be forbidden. So much as concerned the embargo and the Non-intercourse Act was quickly reported on by the Committee on Foreign Relations, and a repealing act presented. . . . On April fourteenth it was signed by Madison

and became law at once."—J. B. McMaster, *History of the people of the United States*, v. 4, pp. 222-230.—See also EMBARGO: First American embargoes.

1814 (July-September).—On the Niagara frontier.—Chippewa.—Lundy's Lane.—Fort Erie.—"Both parties seemed to have selected [the Niagara frontier] . . . as the principal theatre on which to display their military prowess in the year 1814. Lieutenant General Drummond, governor of Upper Canada, concentrated the forces of that province at fort George, and retained the possession of Niagara. The American Generals Smyth, Hampton, Dearborn, and Wilkinson, under whose auspices the campaigns of 1812 and 13, on the Canada border, were conducted, had retired from that field; and General Brown was appointed major general, and, with the assistance of Brigadiers Scott and Ripley, designated to the command of the Niagara frontier. He left Sackett's Harbour in May, with a large portion of the American troops. . . . On his arrival at Buffalo, calculating upon the co-operation of the Ontario fleet, he determined on an attempt to expel the British from the Niagara peninsula. With this view he crossed the river on the 3d of July. . . . On the same day he invested fort Erie, and summoned it to surrender, allowing the commandant two hours to answer the summons. At five in the afternoon the fort surrendered, and the prisoners, amounting to 137, were removed to Buffalo. On the morning of the fourth General Scott advanced with his brigade and corps of artillery, and took a position on the Chippewa plain, half a mile in front of the village, his right resting on the river, and his front protected by a ravine. The British were encamped in force at the village. In the evening General Brown joined with him with the reserve under General Ripley, and the artillery commanded by Major Hindman. General Porter arrived the next morning, with the New York and Pennsylvania volunteers, and a number of Indians of the six nations. . . . At four in the afternoon, General Porter advanced, taking the woods in order to conceal his approach, and . . . met the whole British force approaching in order of battle. General Scott, with his brigade and Tower's artillery, met them on the plain, in front of the American encampment, and was directly engaged in close action with the main body. General Porter's command gave way. . . . The reserve were now ordered up, and General Ripley passed to the woods in left of the line to gain the rear of the enemy; but before this was effected, General Scott had compelled the British to retire. Their whole line now fell back, and were eagerly pursued. . . . The British left 200 dead on the ground. . . . The American loss was 60 killed, and 268 wounded and missing. After the battle of Chippewa, the British retired to fort George; and General Brown took post at Queenston, where he remained some time, expecting reinforcements. . . . On the 20th, General Brown advanced with his army towards fort George, drove in the outposts, and encamped near the fort, in the expectation that the British would come out and give him battle. On the 22d, he returned to his former position at Queenston; here he received a letter from General Gaines, informing him that the heavy guns, and the rifle regiment, which he had ordered from Sackett's harbour, together with the whole fleet, were blockaded in that port, and no assistance was to be expected from them. On the 24th, he fell back to Chippewa, and on the 25th received intelligence that the enemy having received large reinforcements from Kingston, were advancing upon

him. The first brigade under General Scott, Tower's artillery, all the dragoons and mounted men, were immediately put in motion on the Queenston road. On his arrival at the Niagara cataract, General Scott learned that the British were in force directly in his front, separated only by a narrow piece of wood. Having despatched this intelligence to General Brown, he advanced upon the enemy, and the action commenced at six o'clock in the afternoon. . . . The British artillery had taken post on a commanding eminence, at the head of Lundy's lane, supported by a line of infantry, out of the reach of the American batteries. This was the key of the whole position; from hence they poured a most deadly fire on the American ranks. It became necessary either to leave the ground, or to carry this post and seize the height. The latter desperate task was assigned to Colonel Miller . . . [who] at the point of the bayonet, carried the artillery and the height. The guns were immediately turned upon the enemy; General Ripley now brought up the 23d regiment, to the support of Colonel Miller; the first regiment was rallied and brought into line, and the British were driven from the hill. . . . The British rallied under the hill, and made a desperate attempt to regain their artillery, and drive the Americans from their position, but without success; a second and third attempt was made with the like result. General Scott was engaged in repelling these attacks, and though [severely wounded] . . . continued at the head of his column, endeavouring to turn the enemy's right flank. The volunteers under General Porter, during the last charge of the British, precipitated themselves upon their lines, broke them, and took a large number of prisoners. General Brown . . . [was also badly wounded and] consigned the command to General Ripley. At twelve o'clock, both parties retired from the field to their respective encampments, fatigued and satiated with slaughter. . . . General Ripley, on the 25th, fell back to Fort Erie."—S. Perkins, *History of the late war*, ch. 17.—The battle of Lundy's Lane is claimed by all Canadian historians as a decided British victory. "Early in July [1814], General Brown, commanding the American force, crossed the river from Buffalo with two strong brigades, occupied Fort Erie, which surrendered with its small garrison of under 200 men, and advanced by Queenston upon Chippewa, the British retiring, but disputing the ground. Brown now wrote . . . to Chauncey, urging him to co-operate with him, and the correspondence illustrates the difficulty experienced during the war in arranging combined action between the naval and military forces. . . . Brown still advancing, Sir Gordon Drummond hastily came up from York, and moved forward, though inferior in strength, to oppose him; and one of the most closely contested and sanguinary battles of the war was now fought at Lundy's Lane [July 25, 1814]. The contest was continued until after dark, and both sides lost severely; but the Americans could not drive the British back, and the next day, destroying their heavy baggage, they retreated towards Fort Erie. This British victory was a soldiers' battle of desperate downright fighting with the bayonet, and a most determined courage was shown on both sides. Drummond now endeavoured to carry Fort Erie, which the enemy had occupied, by storm (August 15); but, failing, invested it for some time. . . . Chauncey yet again in the autumn recovered the ascendancy on Lake Ontario; but finally lost it to Yeoo on October 10, by the launch of the British ship *St. Lawrence*, of 100 guns, at Kingston, which

greatly strengthened Yeo's fleet. In the end the Americans blew up the works at Fort Erie [November 5, 1814], and retired across the Niagara. No decisive naval battle had been fought on the waters of Lake Ontario when the peace put an end to hostilities. . . . The Americans term this battle 'Bridgewater,' and have occasionally claimed it as a victory themselves, perhaps because they were not driven from their ground in the battle itself (though they evacuated it afterwards), and also took some guns in it, which were subsequently recovered. Roosevelt says frankly as to this battle: 'Lundy's Lane, though reflecting as much honour on the Americans as on the British, was for the former a defeat and not a victory.'—C. W. Robinson, *Canada and Canadian defence*, pp. 79-81.—'Fort Erie was a small work with two demi-bastions; one upon the north and the other upon the south front. It was built of stone, but was not of sufficient strength to resist ordnance heavier than the field artillery of that day. Ripley at once commenced to strengthen the position. Fortunately, General Drummond delayed his advance for two days, giving the Americans an opportunity of which they industriously availed themselves. . . . General Drummond appeared before the fort, on the 3d of August, with a force of 5,350 men. . . . During the following fortnight several skirmishes occurred in front of Fort Erie, in one of which the gallant Colonel Morgan was killed. General Drummond, having been still further reinforced, determined not to wait for the slow results of a siege, but to carry the place by assault. At two o'clock in the morning of the 3d of August, the British army moved to the attack in three columns . . . [and a determined attempt to take the fort was made; but did not achieve success]. On the 28th [of August Brigadier General Gaines who was in command of the American forces] was wounded by a shell, which fell into his quarters, and General Ripley again assumed the command, but was soon superseded by General Brown, who had recovered from the wound received at Lundy's Lane. General Porter, by dint of superhuman efforts, gathered a considerable body of militia at Buffalo, to reinforce the fort. . . . Notwithstanding the victory . . . and the reinforcements brought by Porter, the American army at Fort Erie was in a very dangerous situation. Their foe was daily increasing in number, and three new batteries were thrown up, whose fire was rapidly making the position untenable. . . . Under the pressure of this great necessity, General Porter planned a sortie, which was submitted to General Brown; who approved it, and ordered it to be carried out. . . . By this enterprise, altogether the most brilliant military event which occurred on this frontier during the war, all of the enemy's guns in position were made useless, and their intrenchments destroyed. We took 385 prisoners, including 11 commissioned officers, and killed or wounded 600 men. Our own loss was 510. . . . Four days after this, General Drummond raised the siege, and fell back to Fort George.'—W. Dorsheimer, *Buffalo during the War of 1812* (*Buffalo Historical Society Publications*, v. 1).

1814 (August-September).—Capture and burning of Washington.—Attempt against Bal-

timore.—'The blockade of Chesapeake Bay, which was maintained with more or less vigor after February, 1813, so that Maryland's export trade of four million five hundred thousand dollars in 1811 fell to two hundred and thirty-eight thousand dollars in 1814, did no positive damage to the cities on the bay beyond the stoppage of their commerce. . . . In the Chesapeake the British commanders might attack Baltimore, destroying its shipping, and could hope to annihilate the flotilla of gunboats commanded by Captain Barney, which blockaded the Patuxent River. They were, however, most strongly attracted by the capital of the nation, for the dispersion of the great officers of the government and the suspension of administration are not only in themselves serious calamities, but they have a great moral effect upon any people. . . . Therefore, by the rules of war and of political strategy, the Chesapeake expedition in itself was wise and proper, though some of its incidents cannot be justified on any grounds. The preparations of the United States to meet the invasion of the British were ridiculously inadequate. The hostile fleet had been in full command of the Chesapeake for nearly a year and a half, yet there was neither fortification of consequence nor army of appreciable size or efficiency for the protection of the capital. Though the cabinet had discussed the defence of Washington in early July, there was not a fort, a breastwork, a trench, or a battery, even on paper. The officer in command, General W. H. Winder, appointed for political rather than military reasons, was worse than useless, the very incarnation of incompetency. . . . [Early in August Rear-Admiral Cockburn's blockading squadron had been joined in the Potomac by the fleet of Vice-Admiral Cochrane, who took command. A few days later he was joined by General Ross who came from Bermuda with 4,000 troops.] The news of the landing of General Ross at Benedict, in Maryland, August 19, created a panic at Washington. To meet four thousand British veterans, requisitions for militia were hastily sent to the neighboring states, and all the troops in the vicinity were ordered out. . . . The Americans selected Bladensburg as the place where opposition should be made to the advance of the enemy, and thither flowed an absurd array of secretaries, clerks, cabinet officers, the president himself, regulars, militia, and four hundred sailors from Barney's little fleet. . . . It was the presence of Barney's fighting sailors which alone dignifies the field of Bladensburg with the name of battle. Posted on a hill-side a mile from the village, along the route of the British towards Washington, under the independent command of Barney, and quite undismayed alike by the flight of their friends and the advance of their enemies, they made a fine, firm resistance, until the British got in their rear, when they were compelled to give up the struggle, leaving their wounded commander a prisoner. . . . The British troops marched directly from Bladensburg to Washington, camping just outside the city on the evening of August 24. A detachment of soldiers under orders burned the Capitol and department buildings, while another body proceeded to burn the White House. . . . A third conflagration took place at the navy-yard, where the buildings and vessels were burned by order of the secretary of the navy. While the burning of the Capitol and other public buildings in Washington was a piece of pure, unmitigated vandalism, deliberately committed by high officers in the British service . . . the administration of Madison cannot escape the severest censure for

its ridiculous unpreparedness for defense. The British officer, Gleig, was right in saying that the capture of Washington 'was owing more to the faults of the Americans themselves, than to any other cause.' . . . Having accomplished their purposes at the capital, destroying public property estimated to have been worth more than one million five hundred thousand dollars, the British promptly withdrew to their fleet at Benedict without firing a single musket at their enemy; thus the Washington campaign was completed in a little more than a week, from landing to re-embarkation. The officials and people of Washington filtered back, while part of the American army turned towards Baltimore."—K. C. Babcock, *Rise of American nationality*, pp. 134-140.—On the night of the 25th the British withdrew, returning as they came; but on the 29th their frigates, ascending the Potomac, arrived at Alexandria and plundered that city heavily. "Within less than a fortnight after the re-embarkation of Ross's army, the British fleet, spreading vast alarm as it ascended the Chesapeake, appeared off the Patapsco [September 12]. . . . A landing was effected the next day at North Point, on the northern shore of that estuary, some eight miles up which was Fort M'Henry, an open work only two miles from Baltimore, commanding the entrance into the harbor, which found, however, its most effectual protection in the shallowness of the water. The defense of the city rested with some 10,000 militia. . . . A corps of 3,000 strong had been thrown forward toward North Point. As Ross and Cockburn, at the head of a reconnoitering party, approached the outposts of this advanced division, a skirmish ensued, in which Ross was killed. . . . The fleet, meanwhile, opened a tremendous cannonade on Fort M'Henry; but . . . at such a distance as to render their fire ineffectual. It was under the excitement of this cannonade that the popular song of the 'Star Spangled Banner' was composed, the author [Francis Scott Key] being then on board the British fleet, whither he had gone to solicit the release of certain prisoners, and where he was detained pending the attack. An attempt to land in boats also failed; and that same night, the bombardment being still kept up, the British army, covered by rain and darkness, retired silently to their ships and re-embarked."—R. Hildreth, *History of the United States*, v. 6, pp. 510-520.

1814 (September).—Prevost's invasion of New York—Macdonough's naval victory on Lake Champlain.—Lake Champlain, "which had hitherto played but an inconspicuous part, was now to become the scene of the greatest naval battle of the war. A British army of 11,000 men under Sir George Prevost undertook the invasion of New York by advancing up the western bank of Lake Champlain. This advance was impracticable unless there was a sufficiently strong British naval force to drive back the American squadron at the same time. Accordingly, the British began to construct a frigate, the *Confiance*, to be added to their already existing force, which consisted of a brig, two sloops, and 12 or 14 gun-boats. The Americans already possessed a heavy corvette, a schooner, a small sloop, and 10 gun-boats or row-galleys; they now began to build a large brig, the *Eagle*, which was launched about the 16th of August. Nine days later, on the 25th, the *Confiance* was launched. The two squadrons were

equally deficient in stores, etc.; the *Confiance* having locks to her guns, some of which could not be used, while the American schooner *Ticonderoga* had to fire her guns by means of pistols flashed at the touchholes (like Barclay on Lake Erie). Macdonough and Downie were hurried into action before they had time to prepare themselves thoroughly; but it was a disadvantage common to both, and arose from the nature of the case, which called for immediate action. The British army advanced slowly toward Plattsburg, which was held by General Macomb with less than 2,000 effective American troops. Captain Thomas Macdonough, the American commodore, took the lake a day or two before his antagonist, and came to anchor in Plattsburg harbor. The British fleet, under Captain George Downie, moved from Isle-aux-Noix on Sept. 8th, and on the morning of the 11th sailed into Plattsburg harbor." The American force consisted of the ship *Saratoga*, Captain Macdonough, the brig *Eagle*, the schooner *Ticonderoga*, the sloop *Preble*, and ten row-galleys, or gunboats mounting one or two guns each—"in all, 14 vessels of 2,244 tons and 882 men, with 86 guns throwing at a broadside 1,194 lbs. of shot, 480 from long, and 714 from short guns. The force of the British squadron in guns and ships is known accurately, as most of it was captured." It consisted of the frigate *Confiance*, the brig *Linnet*, the sloops *Chubb* and *Finch* and twelve gunboats—"in all, 16 vessels, of about 2,402 tons, with 937 men, and a total of 92 guns, throwing at a broadside 1,192 lbs., 660 from long and 532 from short pieces. . . . Young Macdonough decided to await the attack at anchor in Plattsburg Bay, with the head of his line so far to the north that it could hardly be turned. . . . The morning of September 11th opened with a light breeze from the northeast. . . . As the English squadron stood bravely in, young Macdonough, who feared his foes not at all, but his God a great deal, knelt for a moment, with his officers, on the quarter-deck; and then ensued a few minutes of perfect quiet." The fierce battle which followed lasted about two hours and a half, with terribly destructive effects on both sides . . . [and resulted in victory for Macdonough]. The British commander, Downie, was killed early in the action. . . . The effects of the victory were immediate and of the highest importance. Sir George Prevost and his army [which had arrived before Plattsburg on the 6th, and which, simultaneously with the naval advance, had made an unsuccessful attack on the American defensive works, at the mouth of the Saranac, held by General Alexander Macomb] at once fled in great haste and confusion back to Canada, leaving our northern frontier clear for the remainder of the war; while the victory had a very great effect on the negotiations for peace. In this battle the crews on both sides behaved with equal bravery, and left nothing to be desired in this respect; but from their rawness they of course showed far less skill than the crews of most of the American and some of the British ocean cruisers. . . . Macdonough in this battle won a higher fame than any other commander of the war, British or American. He had a decidedly superior force to contend against, the officers and men of the two sides being about on a par in every respect; and it was solely owing to his foresight and resource that we won the victory. He forced the British to engage at a disadvantage by his excellent choice of position, and he prepared beforehand for every possible contingency. . . . Down to the time of the Civil War he is the greatest

figure in our naval history."—T. Roosevelt, *Naval War of 1812*, ch. 8.

1814 (December).—Hartford Convention.—"The commercial distress in New England, the possession by the enemy of a large part of the District of Maine, the fear of their advance along the coast, and the apparent neglect of the Federal Government to provide any adequate means of resistance, had led the Legislature of Massachusetts, in October, to invite the other New England States to send delegates to Hartford, Connecticut, 'to confer upon the subject of their public grievances.' Delegates [twenty-six in number] from Massachusetts, Rhode Island and Connecticut, and from parts of Vermont and New Hampshire, met at Hartford in December and remained in session for three weeks. In their report to their State Legislatures they reviewed the state of the country, the origin and management of the war, and the strong measures lately proposed in Congress, and recommended several Amendments to the Constitution, chiefly with intent to restrict the powers of Congress over commerce, and to prevent naturalized citizens from holding office. In default of the adoption of these Amendments, another convention was advised, 'in order to decide on the course which a crisis so momentous might seem to demand.' This was the famous Hartford Convention. The peace which closely followed its adjournment removed all necessity or even desire for another session of it. Its objects seem to have been legitimate. But the unfortunate secrecy of its proceedings, and its somewhat ambiguous language, roused a popular suspicion, sufficient for the political ruin of its members, that a dissolution of the Union had been proposed, perhaps resolved upon, in its meetings. Some years afterward those concerned in it were compelled in self-defense to publish its journal, in order to show that no treasonable design was officially proposed. It was then, however, too late, for the popular opinion had become fixed. Neither the Federal party which originated, nor the Federalist politicians who composed, the assembly, were ever freed from the stigma left by the mysterious Hartford Convention."—A. Johnston, *History of American politics*, ch. 8.—The language of the report of the Hartford Convention "was so skillfully selected that it cannot be said with certainty whether the convention deduced from the nature of the Union a positive right in the individual states to withdraw from the Union, or whether it claimed only a moral justification for revolution. It was prudent enough in the declaration of its position on the constitutional question not to venture beyond vague, double-meaning expressions, except so far as it could appeal to its opponents. But it went just far enough to repeat almost verbatim the declaration of faith laid down in the Kentucky resolutions of 1798. If the members of the convention, and those in sympathy with them, were 'Maratists,' they could claim that they had become so in the school of Madison and Jefferson."—H. von Holst, *Constitutional and political history of the United States*, v. 1, p. 268.

1814 (December).—Treaty of Peace concluded at Ghent.—The offered mediation of the czar was declined by England. The latter power preferred to negotiate directly with the United States, and presently made proposals to that effect, intimating her readiness "to send Commissioners to Göttingen, for which place Ghent was afterwards substituted, to meet American Commissioners and settle terms of pacification. The United States renewed the powers of Messrs. Adams, Bayard, and Gallatin, . . . and added Jonathan Russell, then Minister to Sweden, and Henry Clay. England deputed Lord Gambier, an Admiral, Dr. Adams, a publicist, and Mr. Goulbourn, a member of Parliament and Under Secretary of State. These eight gentlemen accordingly met in Ghent on August 7, 1814. It was upwards of four months before an agreement was reached. . . . The eight were certainly an odd assemblage of peacemakers. The ill-blood and wrangling between the opposing Commissions were had enough, yet hardly equalled the intestine dissensions between the American Commissioners themselves. . . . The British first presented their demands, as follows: 1. That the United States should conclude a peace with the Indian allies of Great Britain, and that a species of neutral belt of Indian territory should be established between the dominions of the United States and Great Britain, so that these dominions should be nowhere conterminous, upon which belt or barrier neither power should be permitted to encroach even by purchase, and the boundaries of which should be settled in this treaty. 2. That the United States should keep no naval force upon the Great Lakes, and should neither maintain their existing forts nor build new ones upon their northern frontier; it was even required that the boundary line should run along the southern shore of the lakes; while no corresponding restriction was imposed upon Great Britain, because she was stated to have no projects of conquest as against her neighbor. 3. That a piece of the province of Maine should be ceded, in order to give the English a road from Halifax to Quebec. 4. That the stipulations of the treaty of 1783, conferring on English subjects the right of navigating the Mississippi, should be now formally renewed. The Americans were astounded; it seemed to them hardly worth while to have come so far to listen to such propositions." But, after long and apparently hopeless wrangling, events in Europe rather than in America brought about a change of disposition on the part of the British government; instructions to the commissioners were modified on both sides, and, quite to their own surprise, they arrived at agreements which were formulated in a treaty and signed, Dec. 24, 1814. "Of the many subjects mooted between the negotiators scarcely any had survived the fierce contests which had been waged concerning them. The whole matter of the navigation of the Mississippi, access to that river, and a road through American territory, had been dropped by the British; while the Americans had been well content to say nothing of the Northeastern fisheries [see FISHERIES: 1814-1818], which they regarded as still their own. The disarmament on the lakes and along the Canadian border, and the neutralization of a strip of Indian territory, were yielded by the English. The Americans were content to

have nothing said about impressment; nor was any one of the many illegal rights exercised by England formally abandoned. The Americans satisfied themselves with the reflection that circumstances had rendered these points now only matters of abstract principle, since the pacification of Europe had removed all opportunities and temptations for England to persist in her previous objectionable courses. For the future it was hardly to be feared that she would again undertake to pursue a policy against which it was evident that the United States were willing to conduct a serious war. There was, however, no provision for indemnification. Upon a fair consideration, it must be admitted that, though the treaty was silent upon all the points which the United States had made war for the purpose of enforcing, yet the country had every reason to be gratified with the result of the negotiation."—J. T. Morse, *John Quincy Adams*, pp. 75-96.—"Instead of wearing themselves out over impracticable, perhaps impossible, questions, the commissioners turned their attention to the northern boundary between the two countries, and it was by them forever settled, and in such manner as to give the United States the foundation for its future greatness. . . . The victory of the American diplomats at Ghent was two-fold: first, they secured the benefits desired without enumerating them—even to a greater extent than if the benefits had been enumerated; and second, if they had insisted upon an enumeration of the benefits obtained, it is apparent they would have periled the entire treaty and lost all."—T. Wilson, *Treaty of Ghent* (*Magazine of American History*, Nov., 1888).—See also ARBITRATION, INTERNATIONAL: Modern: 1814.

Following is the text of the treaty:

Article I. There shall be a firm and universal peace between His Britannic Majesty and the United States, and between their respective countries, territories, cities, towns, and people, of every degree, without exception of place or persons. All hostilities, both by sea and land, shall cease as soon as this treaty shall have been ratified by both parties, as hereinafter mentioned. All territory, places, and possessions whatsoever, taken by either party from the other during the war, or which may be taken after the signing of this treaty, excepting only the islands hereinafter mentioned, shall be restored without delay, and without causing any destruction or carrying away any of the artillery or other public property originally captured in the said forts or places, and which shall remain therein upon the exchange of the ratifications of this treaty, or any slaves or other private property. And all archives, records, deeds, and papers, either of a public nature or belonging to private persons, which, in the course of the war, may have fallen into the hands of the officers of either party, shall be, as far as may be practicable, forthwith restored and delivered to the proper authorities and persons to whom they respectively belong. Such of the islands in the Bay of Passamaquoddy as are claimed by both parties, shall remain in the possession of the party in whose occupation they may be at the time of the exchange of the ratifications of this treaty, until the decision respecting the title to the said islands shall have been made in conformity with the fourth article of this treaty. No disposition made by this treaty as to such possession of the islands and territories claimed by both parties shall, in any manner whatever, be construed to affect the right of either.

Art. II. Immediately after the ratification of

this treaty by both parties, as hereinafter mentioned, orders shall be sent to the armies, squadrons, officers, subjects and citizens of the two Powers to cease from all hostilities. And to prevent all causes of complaint which might arise on account of the prizes which may be taken at sea after the said ratifications of this treaty, it is reciprocally agreed that all vessels and effects which may be taken after the space of twelve days from the said ratifications, upon all parts of the coast of North America, from the latitude of twenty-three degrees north to the latitude of fifty degrees north, and as far eastward in the Atlantic Ocean as the thirty-sixth degree of west longitude from the meridian of Greenwich, shall be restored on each side: that the time shall be thirty days in all other parts of the Atlantic Ocean north of the equinoctial line or equator, and the same time for the British and Irish Channels, for the Gulf of Mexico, and all parts of the West Indies; forty days for the North Seas, for the Baltic, and for all parts of the Mediterranean; sixty days for the Atlantic Ocean south of the equator, as far as the latitude of the Cape of Good Hope; ninety days for every other part of the world south of the equator; and one hundred and twenty days for all other parts of the world, without exception.

Art. III. All prisoners of war taken on either side, as well by land as by sea, shall be restored as soon as practicable after the ratifications of this treaty, as hereinafter mentioned, on their paying the debts which they may have contracted during their captivity. The two contracting parties respectively engage to discharge, in specie, the advances which may have been made by the other for the sustenance and maintenance of such prisoners.

Art. IV. Whereas it was stipulated by the second article in the treaty of peace of one thousand seven hundred and eighty-three, between His Britannic Majesty and the United States of America, that the boundary of the United States should comprehend all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries, between Nova Scotia on the one part, and East Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean, excepting such islands as now are, or heretofore have been, within the limits of Nova Scotia; and whereas the several islands in the Bay of Passamaquoddy, which is part of the Bay of Fundy, and the Island of Grand Menan, in the said Bay of Fundy, are claimed by the United States as being comprehended within their aforesaid boundaries, which said islands are claimed as belonging to His Britannic Majesty, as having been, at the time of and previous to the aforesaid treaty of one thousand seven hundred and eighty-three, within the limits of the Province of Nova Scotia: In order, therefore, finally to decide upon these claims, it is agreed that they shall be referred to two Commissioners to be appointed in the following manner, viz: One Commissioner shall be appointed by His Britannic Majesty, and one by the President of the United States, by and with the advice and consent of the Senate thereof; and the said two Commissioners so appointed shall be sworn impartially to examine and decide upon the said claims according to such evidence as shall be laid before them on the part of His Britannic Majesty and of the United States respectively. The said Commissioners shall meet at St. Andrews, in the Province of New Brunswick, and shall have power to adjourn to

such other place or places as they shall think fit. The said Commissioners shall, by a declaration or report under their hands and seals, decide to which of the two contracting parties the several islands aforesaid do respectively belong, in conformity with the true intent of the said treaty of peace of one thousand seven hundred and eighty-three. And if the said Commissioners shall agree in their decision, both parties shall consider such decision as final and conclusive. It is further agreed that, in event of the two Commissioners differing upon all or any of the matters so referred to them, or in the event of both or either of the said Commissioners refusing, or declining, or wilfully omitting to act as such, they shall make, jointly or separately, a report or reports, as well to the Government of His Britannic Majesty as to that of the United States, stating in detail the points on which they differ, and the grounds upon which their respective opinions have been formed, or the grounds upon which they, or either of them, have so refused, declined, or omitted to act. And His Britannic Majesty and the Government of the United States hereby agree to refer the report or reports of the said Commissioners to some friendly sovereign or State, to be then named for that purpose, and who shall be requested to decide on the differences which may be stated in the said report or reports, or upon the report of one Commissioner, together with the grounds upon which the other Commissioner shall have refused, declined or omitted to act, as the case may be. And if the Commissioner so refusing, declining or omitting to act, shall also wilfully omit to state the grounds upon which he has so done, in such manner that the said statement may be referred to such friendly sovereign or State, together with the report of such other Commissioner, then such sovereign or State shall decide *ex parte* upon the said report alone. And His Britannic Majesty and the Government of the United States engage to consider the decision of such friendly sovereign or State to be final and conclusive on all the matters so referred.

Art. V. Whereas neither that point of the highlands lying due north from the source of the river St. Croix, and designated in the former treaty of peace between the two Powers as the northwest angle of Nova Scotia, nor the northwesternmost head of Connecticut River, has yet been ascertained; and whereas that part of the boundary line between the dominions of the two Powers which extends from the source of the river St. Croix directly north to the above mentioned northwest angle of Nova Scotia, thence along the said highlands which divide those rivers that empty themselves into the river St. Lawrence from those which fall into the Atlantic Ocean to the northwesternmost head of Connecticut River, thence down along the middle of that river to the forty-fifth degree of north latitude; thence by a line due west on said latitude until it strikes the river Iroquois or Cataraguay, has not yet been surveyed: it is agreed that for these several purposes two Commissioners shall be appointed, sworn, and authorized to act exactly in the manner directed with respect to those mentioned in the next preceding article, unless otherwise specified in the present article. The said Commissioners shall meet at St. Andrews, in the Province of New Brunswick, and shall have power to adjourn to such other place or places as they shall think fit. The said Commissioners shall have power to ascertain and determine the points above mentioned, in conformity with the provisions of the said treaty of peace of one thousand seven hundred and eighty-

three, and shall cause the boundary aforesaid, from the source of the river St. Croix to the river Iroquois or Cataraguay, to be surveyed and marked according to the said provisions. The said Commissioners shall make a map of the said boundary, and annex to it a declaration under their hands and seals, certifying it to be the true map of the said boundary, and particularizing the latitude and longitude of the northwest angle of Nova Scotia, of the northwesternmost head of Connecticut River, and of such other points of the said boundary as they may deem proper. And both parties agree to consider such map and declaration as finally and conclusively fixing the said boundary. And in the event of the said two Commissioners differing, or both or either of them refusing, declining, or wilfully omitting to act, such reports, declarations, or statements shall be made by them, or either of them, and such reference to a friendly sovereign or State shall be made in all respects as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

Art. VI. Whereas by the former treaty of peace that portion of the boundary of the United States from the point where the forty-fifth degree of north latitude strikes the river Iroquois or Cataraguay to the Lake Superior, was declared to be "along the middle of said river into Lake Ontario, through the middle of said lake, until it strikes the communication by water between that lake and Lake Erie, thence along the middle of said communication into Lake Erie, through the middle of said lake until it arrives at the water communication into the Lake Huron, thence through the middle of said lake to the water communication between that lake and Lake Superior"; and whereas doubts have arisen what was the middle of the said river, lakes, and water communications, and whether certain islands lying in the same were within the dominions of His Britannic Majesty or of the United States: In order, therefore, finally to decide these doubts, they shall be referred to two Commissioners, to be appointed, sworn, and authorized to act exactly in the manner directed with respect to those mentioned in the next preceding article, unless otherwise specified in this present article. The said Commissioners shall meet, in the first instance, at Albany, in the State of New York, and shall have power to adjourn to such other place or places as they shall think fit. The said Commissioners shall, by a report or declaration, under their hands and seals, designate the boundary through the said river, lakes and water communications, and decide to which of the two contracting parties the several islands lying within the said rivers, lakes, and water communications, do respectively belong, in conformity with the true intent of the said treaty of one thousand seven hundred and eighty-three. As both parties agree to consider such designation and decision as final and conclusive. And in the event of the said two Commissioners differing, or both or either of them refusing, declining, or wilfully omitting to act, such reports, declarations, or statements shall be made by them, or either of them, and such reference to a friendly sovereign or State shall be made in all respects as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

Art. VII. It is further agreed that the said two last-mentioned Commissioners, after they shall have executed the duties assigned to them in the preceding article, shall be, and they are hereby, authorized upon their oaths impartially to fix and determine, according to the true intent of the said

treaty of peace of one thousand seven hundred and eighty-three, that part of the boundary between the dominions of the two Powers which extends from the water communication between Lake Huron and Lake Superior, to the most north-western point of the Lake of the Woods, to decide to which of the two parties the several islands lying in the lakes, water communications, and rivers, forming the said boundary, do respectively belong, in conformity with the true intent of the said treaty of peace of one thousand seven hundred and eighty-three; and to cause such parts of the said boundary as require it to be surveyed and marked. The said Commissioners shall, by a report or declaration under their hands and seals, designate the boundary aforesaid, state their decision on the points thus referred to them, and particularize, the latitude and longitude of the most northwestern point of the Lake of the Woods, and of such other parts of the said boundary as they may deem proper. And both parties agreed to consider such designation and decision as final and conclusive. And in the event of the said two Commissioners differing, or both or either of them refusing, declining, or wilfully omitting to act, such reports, declarations, or statements shall be made by them, or either of them, and such reference to a friendly sovereign or State shall be made in all respects as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

Art. VIII. The several boards of two Commissioners mentioned in the four preceding articles shall respectively have power to appoint a Secretary, and to employ such surveyors or other persons as they shall judge necessary. Duplicates of all their respective reports, declarations, statements and decisions and of their accounts, and of the journal of their proceedings, shall be delivered by them to the agents of His Britannic Majesty and to the agents of the United States, who may be respectively appointed and authorized to manage the business on behalf of their respective Governments. The said Commissioners shall be respectively paid in such manner as shall be agreed between the two contracting parties, such agreement being to be settled at the time of the exchange of the ratifications of this treaty. And all other expenses attending the said Commissions shall be defrayed equally by the two parties. And in the case of death, sickness, resignation or necessary absence, the place of every such Commissioner, respectively, shall be supplied in the same manner as such Commissioner was first appointed, and the new Commissioner shall take the same oath of affirmation, and do the same duties. It is further agreed between the two contracting parties, that in case any of the islands mentioned in any of the preceding articles, which were in the possession of one of the parties prior to the commencement of the present war between the two countries, should, by the decision of any of the Boards of Commissioners aforesaid, or of the sovereign or State so referred to, as in the four next preceding articles contained, fall within the dominions of the other party, all grants of land made previous to the commencement of the war, by the party having had such possession, shall be as valid as if such island or islands had, by such decision or decisions, been adjudged to be within the dominions of the party having had such possession.

Art. IX. The United States of America engage to put an end, immediately after the ratification of the present treaty, to hostilities with all the tribes or nations of Indians with whom they may be

at war at the time of such ratification; and forthwith to restore to such tribes or nations, respectively, all the possessions, rights and privileges which they may have enjoyed or been entitled to in one thousand eight hundred and eleven, previous to such hostilities: Provided always that such tribes or nations shall agree to desist from all hostilities against the United States of America, their citizens and subjects, upon the ratification of the present treaty being notified to such tribes or nations, and shall so desist accordingly. And His Britannic Majesty engages, on his part, to put an end immediately after the ratification of the present treaty, to hostilities with all the tribes or nations of Indians with whom he may be at war at the time of such ratification, and forthwith to restore to such tribes or nations respectively all the possessions, rights and privileges which they may have enjoyed or been entitled to in one thousand eight hundred and eleven, previous to such hostilities: Provided always that such tribes or nations shall agree to desist from all hostilities against His Britannic Majesty, and his subjects, upon the ratification of the present treaty being notified to such tribes or nations, and shall so desist accordingly.

Art. X. Whereas the traffic in slaves is irreconcilable with the principles of humanity and justice, and whereas both His Majesty and the United States are desirous of continuing their efforts to promote its entire abolition, it is hereby agreed that both the contracting parties shall use their best endeavors to accomplish so desirable an object.

Art. XI. This treaty, when the same shall have been ratified on both sides, without alteration by either of the contracting parties, and the ratifications mutually exchanged, shall be binding on both parties and the ratifications shall be exchanged at Washington, in the space of four months from this day, or sooner if practicable. In faith whereof we, the respective Plenipotentiaries, have signed this treaty, and have thereunto affixed our seals. Done, in triplicate, at Ghent, the twenty-fourth day of December, one thousand eight hundred and fourteen.

1814.—Last fighting at sea.—Exploits of *Old Ironsides*.—"During the latter part of the war, as might have been foreseen, there was little opportunity for American frigates to show that they could keep up the fame they had so gloriously won. The British were determined that none of them that ventured out to sea should escape; and by stationing a squadron, which their great resources enabled them to do, before each port where a frigate lay, they succeeded in keeping it cooped up and inactive. . . . The 'Adams,' which had been a 28-gun frigate, but which was now a corvette, managed to slip out from Washington in January, 1814, under the command of Charles Morris. . . . Six months were passed in cruising, part of the time off the Irish coast, but with no great success." Returning home, the "Adams" went ashore at the mouth of the Penobscot, but was got off, much injured, and was taken up the river for repairs. An English expeditionary force pursued the crippled vessel, and her commander was forced to set her on fire. "At this time the 'Constitution' [*Old*

*Ironsides*, as she was popularly called] was . . . lying at Boston, watched by a squadron of the enemy. She had proved a lucky ship, . . . and her present captain, Charles Stewart, who had been one of Preble's lieutenants at Tripoli, was certainly a man well fitted to make the most of any chance he had. The frigate had been in port since April, at first repairing, and later unable to get out owing to the presence of the enemy's squadron." In December, however, the *Constitution* contrived to give the blockaders the slip and made her way across the Atlantic to the neighborhood of Madeira, where she fought and captured, at one time, two British war vessels—the corvette *Cyana* of twenty-two guns, and the sloop *Levant*, of twenty guns. A few days afterwards, as the *Constitution*, with her two prizes, was lying at anchor in Port Praya, Cape de Verde islands, Captain Stewart sighted, outside, no less than three ships of the very blockading squadron which he had slipped away from at Boston, and which had pursued him across the ocean. He made his escape from the port, with both his prizes, in time to avoid being hemmed in, and speedily outsailed his pursuers. The latter, giving up hope of the *Constitution*, turned their attention to one of the prizes and succeeded in recovering her. "The only other frigate that left port in the last year of the war was less fortunate than the 'Constitution.' This was the 'President,' now under Commodore Decatur. She was at New York, and for some time had lain at anchor off Staten Island watching for an opportunity to pass the blockading squadron." On a stormy night in January, 1815 (after the treaty of peace had been actually signed at Ghent, but before news of it had reached America), he made the attempt, but was discovered and chased by four of the blockading ships. After a race which lasted from dawn until nearly midnight, and a running fight of two hours, Decatur found escape to be impossible and surrendered his ship.—J. R. Soley, *Boys of 1812*, ch. 17.

1814.—Economic state of nation at close of war.—"The United States, with a proper currency and untouched resources, should have found no serious difficulty in borrowing thirty or even fifty millions a year in 1814; but they were in reality on the verge of bankruptcy, although the national resources were probably ample. . . . The first and fatal blow to the Treasury was the loss of the Bank of the United States, which left the government without financial machinery or a sound bank-note circulation. The next blow, almost equally severe, was the loss of the Massachusetts and Connecticut banks, which were the strongest in the Union. Whether the responsibility for the loss rested on the Executive, Congress, or the two States might be a subject for dispute; but whoever was responsible, the effect was ruinous. . . . The New England banks were financial agents of the enemy. The bank capital of Massachusetts including Maine was about twelve and a quarter million dollars; that of Connecticut exceeded three millions. The whole bank capital of New England reached eighteen millions, or nearly one third of the paid bank capital of the whole country, if Pitkin's estimate was correct. That nearly one third of the national resources should be withdrawn from the aid of government was serious enough; but in reality the loss was much greater, for New England held a still larger proportion of the specie on which the bank circulation of other States depended. The

system of commercial restrictions was responsible for thus, at the most critical moment of the war, throwing the control of the national finances into the hands of the Boston Federalists. Against the protests of the Federalists, manufactures had been forced upon them by national legislation until New England supplied the Union with articles of necessary use at prices practically fixed by her own manufacturers. From the whole country specie began to flow toward Boston as early as the year 1810, and with astonishing rapidity after the war was declared. The British blockade stimulated the movement, and the embargo of December, 1813, which lasted till April, 1814, cut off every other resource from the Southern and Western States. Unable longer to send their crops even to New England for a market, they were obliged to send specie, and they soon came to the end of their supply. . . . No one knew how much specie the country contained. Gallatin afterward estimated it at seventeen million dollars, and of that amount the banks of New England in 1814 probably held nearly ten millions. The Massachusetts banks, with seven millions in specie, had a bank-note circulation of less than three millions. The Middle, Southern, and Western States must have had a bank-note circulation approaching forty millions in paper, with seven or eight millions in specie to support it, while the paper was constantly increasing in quantity and the specie constantly diminishing. Bank paper, as was believed, could not with safety exceed the proportion of three paper dollars to every specie dollar in the bank vaults; but the banks in 1814 beyond New England were circulating at least four paper dollars to every silver or gold dollar, and in many cases were issuing paper without specie in their possession. Already the banks of New England were pressing their demands on those of New York, which in their turn called on Philadelphia and Baltimore. The specie drained to New England could find its way back only by means of government loans, which New England refused to make in any large amount. On the other hand, Boston bought freely British Treasury notes at liberal discount, and sent coin to Canada in payment of them. Probably New England lent to the British government during the war more money than she lent to her own. The total amount subscribed in New England to the United States loans was less than three millions. This situation was well understood by Congress. In the debate of February, 1814, the approaching dangers were repeatedly pointed out. The alarm was then so great that the Committee of Ways and Means reported a bill to incorporate a new national bank with a capital of thirty million dollars, while Macon openly advocated the issue of government paper, declaring that 'paper money never was beat.' Congress after a diffuse debate passed only a loan bill for twenty-five millions, and an Act for the issue of five million interest-bearing Treasury notes, leaving with the President the option to issue five millions more in case he could not borrow it. The legislation was evidently insufficient, and satisfied no one. 'You have authorized a loan for twenty-five millions,' said Grundy in the debate of April 2, 'and have provided for the expenditure of so much money. Where is the money?' Without attempting to answer this question, April 18 Congress adjourned."—H. Adams, *History of the United States of America during the second administration of James Madison*, v. 7, pp. 386-390.

1814-1849.—Settlement of the middle West.—Road building.—New England emigration.—Black Hawk War.—"New Purchase."—"For sev-

SIGNING OF THE TREATY OF GHENT IN THE OLD CARTHUSIAN MONASTERY, DEC. 24, 1814

Left to Right: Baker, William Adams, Coulbarn, Gambier, John Quincy Adams, Gallatin, Dallas, Bayard, Hughes, Clay, Russell

(After painting by Forestier)

eral years the unsettled conditions on the frontiers had restrained any general migration thither from the seaboard States. But within a few months after the proclamation of peace the tide again set westward, and with an unprecedented force. Men who had suffered in their property or other interests from the war turned to Indiana and Illinois as a promising field in which to rebuild their fortunes. The rapid extinction of Indian titles opened up vast tracts of desirable land, and the conditions of purchase were made so easy that any man of ordinary industry and integrity could meet them. Speculators and promoters industriously advertised the advantages of localities in which they were interested, boomed new towns, and even loaned money to ambitious emigrants. The upshot was that the population of Indiana grew from twenty-five thousand in 1810 to seventy thousand in 1816, when the State was admitted to the Union. Illinois filled with equal rapidity, and attained statehood only two years later. Then the tide swept irresistibly westward across the Mississippi into the great regions which had been acquired from France in 1803. As late as 1812 the Territory of Missouri, comprising all of the Louisiana Purchase north of the present State of Louisiana, had a population of only twenty-two thousand, including many French and Spanish settlers and traders. But in 1818 it had a population of more than sixty thousand, and was asking Congress for legislation under which the most densely inhabited portion should be set off as the State of Missouri. Thus the Old Northwest was not merely losing its frontier character and taking its place in the nation on a footing with the seaboard sections; it was also serving as the open gateway to a newer, vaster, and in some respects richer American back country. In the main, southern Indiana and Illinois—as well as the trans-Mississippi territory—drew from Kentucky, Tennessee, Virginia and the remoter South. North of the latitude of Indianapolis and St. Louis the lines of migration led chiefly from New England, New York, and Pennsylvania. But many of the settlers came, immediately or after only a brief interval, from Europe. The decade following the close of the war was a time of unprecedented emigration from England, Scotland, Ireland, and Germany to the United States; and while many of the newcomers found homes in the eastern States, where they in a measure offset the depopulation caused by the westward exodus, a very large proportion pressed on across the mountains in quest of the cheap lands in the undeveloped interior. During these years the western country was repeatedly visited by European travelers with a view to ascertaining its resources, markets, and other attractions for settlers; and emigrating thither was powerfully stimulated by the writings of these observers, as well as by the activities of sundry founders of agricultural colonies. . . . 'These favorable accounts,' wrote Adlard Welby, an Englishman who made a tour of inspection through the West in 1819, 'aided by a period of real privation and discontent in Europe, caused emigration to increase ten-fold; and though various reports of unfavorable nature soon circulated, and many who had emigrated actually returned to their native land in disgust, yet still the trading vessels were filled with passengers of all ages and descriptions, full of hope, looking forward to the West as to a land of liberty and delight—a land flowing with milk and honey.' After the dangers from the Indians were overcome, the main obstacle to western development was the lack of means of easy and cheap transportation. The settler found it difficult to reach the region

which he had selected for his home. Eastern supplies of salt, iron, hardware and fabrics and food-stuffs could be obtained only at great expense. The fast-increasing products of the western farms—maize, wheat, meats, livestock—could be marketed only at a cost which left a slender margin of profit. The experiences of the late war had already proved the need of highways as auxiliaries of national defense. It required a month to carry goods from Baltimore to central Ohio. None the less, even before the War of 1812, hundreds of transportation companies were running four-horse freight wagons between the eastern and western States; and in 1820 more than three thousand wagons—practically all carrying western products—passed back and forth between Philadelphia and Pittsburgh, transporting merchandise valued at eighteen million dollars. . . .

"In 1808 Secretary Gallatin had presented to Congress a report calling for an outlay on internal improvements of two million dollars of federal money a year for ten years; and in 1811 the Government had entered upon the greatest undertaking of its kind in the history of the country. This enterprise was the building of a magnificent highway known to the law as the Cumberland Road. . . . Its course was lined with hospitable farm-houses and was dotted with fast-growing villages and towns. . . . Throughout the spring and summer months there was a steady westward stream of emigrants; hardly a day failed to bring before the observer's eye the creaking canvas-covered wagon of the home-seeker. . . . The conquest of the steamboat was speedy and complete. . . . Vessels regularly ascended the navigable tributaries of the greater streams in quest of cargoes, and while craft of other sorts did not disappear, the great and growing commerce of the river was revolutionized. After 1815 New England emigration rose to astonishing proportions, and an increasing number of homeseekers passed—directly or after a sojourn in the Lower Lake country of New York—into the Northwest. The opening of the Erie Canal in 1825 made the westward journey easier and cheaper. The routes of travel led to Lakes Ontario, thence by natural stages into other portions of northern Ohio, Indiana, and Illinois, and eventually into southern Michigan and Wisconsin. Not until after 1830 did the stalwart homeseekers penetrate north of Detroit; the great stretches of prairie between Lakes Erie and Michigan, and to the south—left quite untouched by Southern pioneers—satisfied every desire of these restless farmers from New England. For a long time Southerners determined the course of history in the Old Northwest. They occupied the field first, and they had the great advantage of geographical proximity to their old homes. Furthermore, they lived more compactly; the New Englanders were not only spread over the broader prairie stretches of the north, but scattered to some extent throughout the entire region between the Lakes and the Ohio. But by the middle of the century not only had the score of northern counties been inundated by the 'Yankees' but the waves were pushing far into the interior, where they met and mingled with the counter-current. Both Illinois and Indiana became, in a preëminent degree, melting-pots in which was fused by slow and sometimes painful processes an amalgam which Bryce and other keen observers have pronounced the most American thing in America."—F. A. Ogg, *Old Northwest*, pp. 160-167, 176-177.—"Between 1820 and 1840 the population of Ohio increased from 581,295 to 1,519,467; that of Indiana from 147,178 to 685,866; of Illinois,

from 55,211 to 476,183; and of Michigan, from 8,896 to 212,267. This growth in the population denotes a corresponding extension in the cultivated farm area, though statistics showing this were not yet gathered for the census. While some of those who joined in the westward movement took up land for speculative purposes, the majority had the distinct purpose of becoming farmers. During this period the tide of settlement pushed out beyond the forest belt, which clothed the whole eastern section as far as Ohio and which made the task of the settler in that region so laborious, and reached the treeless prairies of the West. The cost of preparing the soil for cultivation here was certainly less than half what it had been in those sections where the forest had first to be cleared away.—E. L. Bogart, *Economic history of the United States*, p. 267.—“The Black Hawk War opened a new chapter in the history of the northwest. The soldiers carried to their homes stories of the richness and attractiveness of the northern country, and the eastern newspapers printed not only detailed accounts of the several expeditions but highly colored descriptions of the charms of the region. Books and pamphlets by the score helped to attract the attention of the country. The result was a heavy influx of settlers, many of them coming all the way from New England and New York, others from Pennsylvania and Ohio. Lands were rapidly surveyed and placed on sale, and surviving Indian hunting-grounds were purchased. Northern Illinois filled rapidly with thrifty farming population, and the town of Chicago became an entrepot. [See also ILLINOIS: 1832.] Further north, Wisconsin had been organized, in 1836, as a Territory, including not only the present State of that name but Iowa, Minnesota, and most of North and South Dakota. . . . To recount the successive purchases by which the Government freed Iowa soil from Indian domination would be wearisome. The Treaty of 1842 with the Sauks and Foxes is typical. After a sojourn of hardly more than a decade in the Iowa country, these luckless folk were now persuaded to yield all their lands to the United States and retire to a reservation in Kansas. . . . The ‘New Purchase’ was thrown open to settlers in the following spring; and the opening brought scenes of a kind destined to be reenacted scores of times in the great West during succeeding decades—the borders of the new district lined, on the eve of the opening, with encamped settlers and their families ready to race for the best claims; horses saddled and runners picked for the rush; a midnight signal from the soldiery, releasing a flood of eager land-hunters armed with torches, axes, stakes, and every sort of implement for the laying out of claims with all possible speed; by daybreak, many scores of families ‘squating’ on the best pieces of ground which they had been able to reach; innumerable disputes, with a general readjustment following the intervention of the government surveyors. The marvelous progress of the upper Mississippi Valley is briefly told by a succession of dates. In 1838 Iowa was organized as a Territory; in 1846 it was admitted as a State; in 1848 Wisconsin was granted statehood; and in 1849 Minnesota was given territorial organization with boundaries extending westward to the Missouri.”—F. A. Ogg, *Old Northwest*, pp. 205-208.

1815.—Final war with the Algerines and suppression of their piracies. See BARBARY STATES: 1815.

1815 (January).—Jackson’s victory at New

Orleans.—In October of the last year “dispatches from the American envoys abroad announced that 12,000 to 15,000 British troops would leave Ireland early in September for New Orleans and Mobile. Intelligence reached Washington, December 9th, by way of Cuba, that the British Chesapeake force, under Admiral Cochrane, had united at Jamaica with these other troops, and all were ready to sail for the mouths of the Mississippi. ‘Hasten your militia to New Orleans,’ now urged Monroe upon the Executives of Tennessee, Kentucky, and Georgia; ‘do not wait for this government to arm them; put all the arms you can find into their hands; let every man bring his rifle or musket with him; we shall see you paid.’ . . . Great results had been expected by Great Britain from the secret expedition fitted out against Louisiana. . . . Fifty British vessels, large and small, bore 7,000 British land troops—comprising the invading force from the Chesapeake and a veteran reinforcement from England—across the Gulf of Mexico from Jamaica to the ship channel near the entrance of Lake Borgne, thus approaching New Orleans midway between the Mississippi River and Mobile Bay. Here the fleet anchored; and, after dispersing a meagre flotilla of American gunboats, which opposed their progress in vain, the invaders took full possession of Lake Borgne, and, by means of lighter transports, landed troops upon a lonely island at the mouth of the Pearl River, which served as the military rendezvous. Crossing thence to the northwestern end of Lake Borgne, a sparsely-settled region, with plantations and sugar-works, half of this invading army, by the 23d [December], struck the Mississippi at a point within nine miles of New Orleans. Not a gun had been fired since the trifling engagement with the American flotilla. The British believed their near approach unknown, and even unsuspected, in the city; they meant to capture it by an assault both brilliant and sudden. . . . But Jackson had received his instructions in good season, and from the 2d of December New Orleans had been, under his vigilant direction, a camp in lively motion.” Martial law was proclaimed; “free men of color were enrolled; convicts were released to become soldiers; the civic force was increased to its utmost. Jackson inspected and strengthened the defences in the vicinity, erecting new batteries. . . . With his newly arrived volunteers from neighboring States, quite expert, many of them, in the use of the rifle and eager for fight, Jackson found himself presently at the head of 5,000 effective men, less than 1,000 of whom were regulars.” With a portion of these, supported by one of the two armed vessels on the river, he boldly attacked the enemy, on the evening of the 23rd, but accomplished little more than to demonstrate the energy of the defence he was prepared to make. On the 28th the English (having previously destroyed one of the troublesome vessels in the river, the *Carolina*, with hot shot) returned the attack, but did not break the American lines. Then General Pakenham, the English commander, brought up heavy guns from the fleet, and soon convinced General Jackson that cotton bales, which the latter had piled up before his men, were too light and too combustible for breastworks against artillery; but the lesson proved more useful than otherwise, and the British batteries were answered with fully equal effect by an American cannonade. “Pakenham’s last and boldest experiment was to carry Jackson’s lines by storm on both sides of the river; and this enterprise, fatal, indeed, to those who conceived it, gives immortal date to the 8th of January,—the

day on which the battle of New Orleans was fought. Four days before this momentous battle, over 2,000 Kentucky militia, under General Adair, arrived at New Orleans, ready soldiers, but miserably equipped. Of their number 700 were marched to the front. Pakenham's army, swelled by a body of reinforcements, commanded by General Lambert, another of Wellington's officers, now consisted in all of 10,000 troops, the flower of British veterans. On the day of the battle Jackson had only half as many soldiers on the New Orleans side of the river, and of these the greater part were new recruits under inexperienced officers. On the opposite bank General Morgan, with about 1,500 men, among them detachments of Kentuckians and Louisiana militia, had entrenched himself in expectation of an assault. Jackson had penetrated the enemy's design, which was to make the main attack upon his lines, while a lesser force crossed the Mississippi to drive Morgan up the bank. Jackson's grand defences, extending for a mile and a half from the Mississippi, along his ditch or canal, to an impassable cypress swamp, consisted of earthworks, a redoubt next the river to enfilade the ditch, and eight batteries, all well mounted. The schooner Louisiana and Commander Patterson's marine battery across the river protected this line. Another intrenchment had been thrown up a mile and a half in the rear, as a rallying-point in case of need. There was a third line just below the city. . . . The morning fog rolled away on the 8th of January. Pakenham, under the fire of a battery he had erected during the night, advanced with the main body of British troops to storm Jackson's position." The Americans, behind their breastworks, withheld their fire until the storming columns were 200 yards away, and then poured volley on volley into the approaching mass of men. "This, with the steady fire from the American batteries all along the line, as the foe advanced over a large bare plain, made hideous gaps in the British ranks, throwing them into utter confusion. It was a fearful slaughter. Dead bodies choked the ditch and strewed the plain. Gallant Highlanders flung themselves forward to scale the ramparts only to fall back lifeless. Soldiers who had served under Wellington in Spain broke, scattered, and ran. Of the four British generals commanding, Pakenham was killed, Gibbs mortally wounded, Keane disabled by a shot in the neck; only Lambert remained. Thornton, across the river, had driven Morgan from his lines meantime, and silenced Patterson's battery; but this enterprise might have cost him dearly, had he not in season received orders from Lambert to return instantly. In this battle the British lost not less than 2,600, all but 500 of whom were killed or wounded; while only 8 were killed and 13 wounded on the American side. Having buried his dead presently under a flag of truce, Lambert, whom this calamity had placed in command, retreated hastily under cover of the night, abandoning the expedition. Re-embarking at Lake Borgne, and rejoining the fleet, he next proceeded to invest Fort Bowyer, at the entrance of Mobile Bay, only to learn, after its little garrison had surrendered, that a treaty of peace [signed December 24, 1814, two weeks before the battle of New Orleans was fought] annulled the conquest. . . . Rude and illiterate as he was, Jackson showed at New Orleans the five prime attributes of military genius: decision, energy, forethought, dispatch, skill in employing resources."

1815-1820.—Rise of nationalism.—Reaction to sectionalism.—"The dominant tone of this dawn-ing period was nationalism. The nation was to be made great and rich and free; sectional interests and ambitions were to be merged in the greater national purpose. . . . Under the leadership of John Marshall, the Supreme Court handed down an imposing series of decisions restricting the powers of the States and throwing open the flood-gates for the expansion of national functions and activities. Statesmen of all sections put the nation first in their plans and policies as they had not always done in earlier days. John C. Calhoun was destined shortly to take rank as the greatest of sectionalists. Nevertheless, between 1815 and 1820 he voted for protective tariffs, brought in a great bill for internal improvements, and won from John Quincy Adams praise for being 'above all sectional . . . prejudices more than any other statesman, of this union' with whom he 'had ever acted.' The differences between the nationalist and state rights schools were, however, deep-rooted—altogether too fundamental to be obliterated by even the nationalizing swing of the war period; and in a brief time the old controversy of Hamilton and Jefferson was renewed on the former lines. The pull of political tradition and of sectional interest was too strong to be resisted. In the commercial and industrial East tradition and interest supported, in general, the doctrine of broad national powers; and the same was true of the West and Northwest. The South, however, inclined to limited national powers, large functions for the States, and such construction of the Constitution as would give the benefit of the doubt in all cases to the States. The political theory current south of the Potomac and the Ohio made of state rights a fetish. Yet the powerful sectional reaction which set in after 1820 against the nationalizing tendency had as its main impetus the injustice which the Southern people felt had been done to them through the use of the nation's larger powers. They objected to the protective tariff as a device which not only brought the South no benefit but interfered with its markets and raised the cost of certain of its staple supplies. They opposed internal improvements at national expense because of their consolidating tendency, and because few of the projects carried out were of large advantage to the Southern people. They regarded the National Bank as at best useless; and they resisted federal legislation imposing restrictions on slavery as prejudicial to vested rights in the peculiar institution. After 1820 the pendulum swung rapidly back toward particularism. State rights sentiment was freely expressed by men, both Southern and Northern, whose views commanded respect; and in more than one state—notably in Ohio and Georgia—bold actions proclaimed this sentiment to be no mere matter of academic opinion."—F. A. Ogg, *Reign of Andrew Jackson (Chronicles of America Series, v. 20, pp. 138-141)*.

1815-1860.—Industrial transition.—Increase in manufacturing.—Foreign and domestic trade.—Shipping.—Monetary system.—Influence of free land.—Grain trade.—Cotton.—Beginning of cat-

the industry.—“Upon the conclusion of peace it was expected that things would return to what the same status as before. Importations of foreign commodities grew greatly: in 1814 they were but \$13,000,000 and in 1816, \$147,000,000. The pent up goods of English manufacturers were fairly poured into the country, where they were sold at low prices and on long credit. American merchants and consumers welcomed this stream of European luxuries and foreign wares, but to the manufacturers these enormous importations meant disaster if not ruin. At first, however, agriculture and commerce found such large foreign demand for their products that the complaint of the manufacturer was unheard amid the general rejoicing. Short crops abroad created a demand for our agricultural staples, while the increased imports and exports furnished remunerative business for American shipping. The true state of affairs was concealed by the high prices resulting from a disordered currency, but in 1818 the currency bubble was pricked and prices fell rapidly to a normal level. At the same time the position of both agriculture and shipping was made less secure; the English corn law of 1815 raised the duty and virtually excluded American grain from that market, while our commerce was prevented from expanding by the commercial restrictions imposed upon it by England, France, Holland, and other European countries. As the foreign market was cut off there grew up a demand for the development of a home market; it was seen that we must be more self-contained. At the same time the struggling manufacturers were demanding protection against foreign importations. . . . The period was distinctly one of ‘industrial transition’; the use of machinery, which characterizes the modern system of manufactures, spread gradually. . . . The patents for new inventions showed the same tendency to industrial efficiency: in the period 1790-1811, these had averaged 77 a year, from 1812 to 1817 they were 192 while in 1830 they reached a total of 544. There was also a considerable development of companies, incorporated and otherwise, for the prosecution of various industrial enterprises, a clear sign of the growth of capitalism. In 1824 the capital authorized to manufacturing companies in seven States amounted to \$55,289,500. Two years later the amount of capital invested in manufactures in the United States was estimated at \$156,500,000. . . . But not merely was the period one of industrial development; the nation was rapidly becoming economically independent and was almost self-sufficing. In 1834 the total value of all commodities manufactured annually in the United States was calculated at \$325,000,000, while that of imported goods—with the exception of tea, coffee, wines, and spices, which the United States did not produce—was less than \$50,000,000. Within the country the factory system of manufacture had spread by 1840 from the textile to miscellaneous industries, and begun steadily to force from the market the home-made products with which every community had hitherto chiefly supplied itself. This is seen in the growth of the proportion of the population engaged in manufactures. In 1787 Tench Coxe had estimated that less than one eighth of the population was engaged in manufactures, fisheries, navigation, and trade; the census of 1820 returned 13.7 per cent. of the working population as engaged in manufacturing and the mechanic arts; in 1840 the percentage was 17.1. It is impossible to give any complete statement of the growth of manufactures during this period, as no adequate statistics were collected until 1850.

The census of 1820 was so defective that Congress never authorized its publication, while in 1830 the enumeration of manufactures was altogether omitted. In 1820 the value of manufactures was given as \$52,766,535, and in 1830 as \$112,645,466, for ten States out of twenty-eight; but both fell far short of the mark. For 1840 the census reported manufactures to the amount of \$483,278,215. . . . We shall perhaps get a clearer idea of the development of manufactures during this period if we trace in more detail the history of the three most important manufacturing industries in the United States at this time—cotton, woolen, and iron. During the war, as we have seen, many cotton factories had been established [see above: 1810-1860] and the industry gave employment to considerable capital and labor. This industry, and particularly the factory method of production, received a great impetus from the introduction of the power loom in 1814. . . . Immediately after the war, the immense importation of foreign goods seriously embarrassed the cotton manufacturers, but partly as a result of protection granted by successive acts from 1816 on, and partly from other causes, the industry soon became profitable again. By 1824 cotton manufacturing was firmly established; its further development was one of steady growth. In that year Webster stated, ‘In some sort of fabrics we are already exporting, and the products of our factories are at this moment in the South American markets.’ . . . From the beginning, the cotton industry led all other manufactures in the amount of capital invested, the number of persons employed, and the value of the product. In 1830 the United States was second only to England in the amount of cotton consumed, and exceeded by England and France alone in the number of spindles. The industry was early localized in the New England States, especially Massachusetts; three fourths of all the cotton goods produced in 1840 were turned out by New England mills. . . . The woolen manufacture, like that of cotton, had received a considerable stimulus during the restrictive period, 1808-1815, although it had been hampered, unlike the cotton industry, by the lack of a sufficient supply of domestic wool, and by taxes on the imported raw material. The value of factory-made woolen goods is said to have . . . [reached] \$19,000,000 in 1815. After this date woolen manufacturers, in common with others, had to meet the competition of large and cheap English importations. With only moderate protection from the earlier tariff laws, the manufacture steadily progressed after a few years, and by 1828 was firmly established. The development was very similar to that of cotton, which led the way; indeed the textile machinery introduced in the cotton industry was speedily transferred to the other branches of textile production. There was noticeable also the same concentration of the woolen industry in New England. . . . After the conclusion of peace successive tariff measures granted considerable protection to the iron industry, and by 1824 the pig iron product probably exceeded 100,000 tons annually. As long as pig iron was smelted with charcoal the United States, with its inexhaustible forests at the waters edge, had a great advantage, and during the colonial days had exported considerable pig iron to England. But the use of bituminous coal, the invention in 1837 of the hot-air blast, and improved machinery, had reduced the cost in England below the expense of producing charcoal iron in this country. As the forests were cut down and wood became scarcer the cost of production kept increasing. The iron

furnaces were necessarily small affairs and produced from two to four tons a day. About 1840 the iron trade in this country was revolutionized by the substitution of anthracite coal for charcoal. . . . Upon the conclusion of the Napoleonic wars in 1815, the European countries renewed their own carrying-trade in large part and thus deprived our shipowners of the lucrative business they had enjoyed for almost two decades before. With the growing production of cotton, however, for which there was an insatiable foreign demand, the loss of other forms of freight was partially made good. But as equivalent return cargoes could not easily be secured, ship-building languished for some twenty-five years. . . . The capital of the country was being invested during this period in manufactures, internal improvements, and the development of our internal resources, which offered larger returns than the carriage of ocean freight. The high tariff, too, which imposed duties upon the materials entering into ship-building, considerably increased the cost of construction and equipment; and at the same time, by stimulating our domestic industries, reduced the amount of foreign commerce to be transported. About 1830, moreover, England began to increase her shipping and to bid vigorously for the ocean-carrying trade. . . . During this period a new step was taken in shipping legislation by the establishment of reciprocal liberty of commerce. By the act of March 3, 1815, all the discriminating duties imposed by former laws, both on the tonnage of foreign vessels and on the goods imported in them, were repealed in the case of any foreign nation which should abolish its countervailing duties against us. In accordance with this act, a commercial treaty with England of July 3, 1815, provided among other things for equality of duties and treatment and no discrimination between England and the United States. But England kept her West Indian ports closed to our vessels after the treaty as before, and we soon retaliated by new discriminating duties. In 1830 England agreed to open these ports and we removed many of the restrictions upon British commerce. As a result our imports from the British West Indies increased from \$1901 in that year to \$2,965,585 in 1840. To meet the absolute prohibition of those States which simply closed their ports to us . . . the coasting trade was again forbidden to other nations, and ships engaged in foreign trade, unless two thirds manned by American sailors, were taxed fifty cents a ton. But in this act also the door was left open for repeal in the case of foreign nations which should remove their restrictions upon our vessels, and in 1828 another act provided for reciprocity with foreign nations in the indirect or carrying trade. Treaties were accordingly negotiated, which provided for 'reciprocal liberty,' with France in 1822, Prussia in 1828, and in subsequent years with Hamburg, Bremen, Lubeck, Norway and Sweden, Austria, Russia, Portugal, Holland, Belgium, and Switzerland. Commercial treaties were also signed with most of the Central and South American States. . . . After 1818 there was a steady decline in our foreign commerce until about 1830, due to tariff legislation, the development of manufactures and of our internal resources, the passage of the English corn laws, and protective tariff legislation of European countries. In the early thirties, however, the great development in the production of cotton, which now constituted over one half of our total exports, the growth of the west, and the large investments of foreign capital in our system of internal improvements, combined to raise our foreign

commerce to over \$300,000,000 for the year 1836, the highest figure yet reached. The panic of 1837 and the resulting depression reduced our foreign trade to \$125,000,000 in 1843, but between 1847 and 1860, with the brief exception of the year 1857, in which a second panic occurred, the foreign trade of the United States reached the highest point it had ever attained. In 1861 our imports were \$353,616,119, and our exports \$333,576,057, or a total of \$687,802,176. . . . Large as was our foreign commerce, our internal trade was growing still more rapidly. The condition of the country was well stated by Secretary Robert J. Walker, in his treasury report for 1847-8, in which he said: 'The value of our products exceeds three thousand millions of dollars. Our population doubles once in every twenty-three years, and our products quadruple in the same period. Of this \$3,000,000,000 only about \$150,000,000 are exported abroad, leaving \$2,850,000,000 at home, of which at least \$500,000,000 are annually interchanged between the several States of the Union.' Of the exports, cotton constituted about one half, while gold bullion, agricultural products, and manufactured articles made up about one third of the total. The major part of the export trade was carried on from New York, New Orleans, Boston, Baltimore, Mobile, Charleston, and Philadelphia, in the order named. . . . Ever since 1820 the tonnage of vessels in the domestic trade had equaled that in foreign trade, and after 1860 it greatly exceeded the latter. It is impossible to say just how this traffic was divided between the coasting and inland trade, but each branch was expanding. There was a profitable coastwise trade between northern and southern ports, carried on by northern vessels, which carried New England manufactures, boots and shoes, dry-goods, fish, and other commodities to the South, to an amount of over \$100,000,000 a year. In return they brought back cargoes of southern staples, cotton and tobacco, and also food stuffs, hay, and similar commodities, both for export and for domestic consumption. The falling off of foreign commerce was amply compensated by the growth of domestic commerce, which provided an outlet for American vessels. Here the sailing vessel was able to hold its own against the steamer. Opportunity for longer voyages was given when the rush to the California gold fields began; this was held to be coastwise trade and was consequently restricted to American vessels and brought in large, though temporary, profits. The building of the Chesapeake and Albemarle Canal, which was completed in 1860, reduced the dangers of the perilous voyage round Cape Hatteras, and by so much aided the coasting trade. . . . The inland trade was undoubtedly more important than either the foreign or the coastwise trade. . . . The shipment of agricultural produce from northern farms to southern plantations, with smaller return cargoes of sugar, molasses, West India fruits, etc., gave rise to a flourishing trade on the western rivers. After 1840, when the railroads first began to invade the West, a steadily growing share of the river trade was diverted to the quicker route. In 1845 it was estimated that of the produce of the Mississippi valley shipped to the seaboard one half found its way to market via the canals and railroads to the Atlantic coast. Of the receipts at New Orleans but 18 per cent. consisted of western produce in 1845, as compared with over 60 per cent. at the beginning of the century. The great expansion of cotton culture throughout the Southwest, however, prevented any falling off in the total New Orleans trade. . . . The lake trade did not develop

until after the building of canals, which afforded an outlet from the interior to the lakes; but after 1840 there was a great increase. . . . That branch of internal commerce which consisted in the exchange of goods between the East and the West grew somewhat more slowly, but ultimately far outstripped the others. At first most of the movement was of manufactured goods from the East to the West, which were paid for, not by agricultural exports from the latter section, but by transfer of credits upon the South. Not until the forties did western produce find its way in large quantities to the eastern seaboard. Thus, to take a typical illustration, the agricultural exports of Ohio grew from the equivalent of 544,000 bushels of wheat in 1835 to 3,800,000 in 1840, and 12,200,000 in 1851. . . . Little gold or silver was as yet mined in the United States, and the excessive issue of bank-notes had prevented the accumulation of any large stock of specie in the country. Coins were nevertheless always to be found in the commercial centers of the country. They consisted for the most part of a heterogeneous collection of foreign coins, often clipped and mutilated. Spanish dollars and subdivisions thereof formed the bulk of the metallic money. No American silver dollars were coined from 1806 to 1836, and gold had disappeared from circulation under the ratio of 1792, which undervalued it. Gold had recently been discovered in North Carolina and Georgia in sufficient quantity to make it appear likely that the domestic monetary needs of the people might be supplied from this source. By the acts of 1834 and 1837 the ratio between gold and silver was changed from fifteen to one to sixteen to one. . . . As this slightly overvalued gold, it came rapidly into circulation again in place of silver, and silver coins began to disappear. The lack of subsidiary silver was a serious disadvantage in retail trade, and doubtless contributed to the demand for a larger supply of banknotes. Under the circumstances some form of paper money would seem to have been unavoidable. After 1840 the silver dollar was rarely seen in circulation, and after the gold discoveries of 1848 even the fractional coins disappeared. When the smaller coins were withdrawn the inconvenience became so great that Congress passed the law of 1853, debasing the fractional coins in order to keep them in circulation by decreasing the amount of pure silver in each. . . . Accordingly the smaller coins remained in circulation, though silver dollars practically disappeared from use. Gold coins of course became general. . . . After the end of the United States Bank in 1836 the government for some years deposited its funds in selected State banks; but in so doing it was exposed to all the dangers and inconveniences connected with an inadequately regulated system of banking. It therefore instituted the plan of caring for its own funds, temporarily in 1840 and permanently in 1846, by means of the so-called independent or sub-treasury system. . . . It would not use [the banks] . . . as fiscal agents nor deposit government revenues with them; nor would it receive bank-notes in payments to itself. . . . [The sub-treasuries should] collect all the revenue in specie, and make all disbursements in cash through its own officials. By using specie exclusively it would ensure the presence of a large amount of coin in the country and would lessen the demand for bank-notes. At the same time it was expected that the banks, since they would no longer receive government deposits, would not be able to expand their circulation so greatly as they had done. This hard money policy of the

government would thus effectively hold the banks in check and act as a regulator of the currency. An official investigation of the independent treasury system made in 1855 showed that both these results had been secured, and also that it prevented losses to the government and gave to the treasury better control of its funds. Down to the period of the Civil War it proved safe, economical, and effective. . . . It is almost impossible to exaggerate the influence which the vast western expanse of free land has had upon the economic history of the United States. . . . This abundance of land has greatly simplified economic and social problems and has acted as a safety-valve in times of depression and panic. . . . With the extension of the cultivated area the production of the cereals increased enormously; most of it, however, found a market in the growing Southwest, and the lake grain trade did not begin to expand until the end of this period. As corn did not stand transportation very well, it was converted into whisky or hogs, and sold in the form of salt pork, hams, bacon, etc. Some cattle were also fattened on corn and driven over the mountains to the Atlantic seaboard. With the opening of the Erie Canal in 1825, an outlet was afforded to the grain of the West. Wheat began to displace corn as the chief money crop of the northern lake region, and became the breadstuff of the northern population. The center of wheat production was still in western New York, however, and its export from the West did not become important until after the building of railroads. As late as 1835 Ohio was the only State in the West exporting grain direct to the Atlantic coast. The first shipments of grain from Chicago consisted of 78 bushels of wheat in 1838, while the first shipment from Wisconsin was not made until three years later. Corn and live stock remained the principle products of the Ohio valley, and were shipped down the Mississippi to the cotton plantations of the South. In 1840, when this crop first appeared in the census, the production of Indian corn amounted to 377,531,87 $\frac{1}{2}$  bushels, and of wheat to 84,823,272 bushels. In New England attention began for the first time on a large scale to be directed to the cultivation of fruit, which up to that time had been very poor, and to market gardening; by 1840 the capital invested in these branches was almost \$3,000,000 and the annual returns somewhat more. . . . One of the most important events in the agricultural history of this period was the rise of cotton to first place among the products of the South. It passed tobacco in 1803 and has ever since led all other southern agricultural staples. . . . The wasteful system of land killing was practised even more extensively in the cultivation of cotton than in the case of the cereals; one piece of land was cultivated continuously until it was exhausted, when it was abandoned and a new tract cleared. As the slaves could be trusted only with heavy and crude tools, the introduction of improved agricultural machinery in southern agriculture was rendered impossible. The use of slaves in cotton culture had also the effect of concentrating the industry on large plantations rather than of scattering it over small farms. . . . Tobacco was cultivated in the northern tier of slave States, and by much the same methods that had prevailed during the colonial period. In Virginia and Kentucky there also grew up a considerable stock-raising industry, especially of horses and mules, for which there was a strong demand on the cotton plantations. . . . The cattle industry of the United States has always flourished on frontier, and during this

period made steady progress in the West. The first fat cattle that ever crossed the Alleghanies were driven from Ohio to Baltimore in the spring of 1805. This proved the beginning of a profitable trade, and until the railroads began to transport them directly to the eastern market, western cattle were fattened on corn in Ohio during the winter months and then driven eastward in the spring. About 1832-36 a general interest in the improvement of live stock began to be manifested by farmers, largely as a result of the exhibitions at county fairs which had begun about 1810, but were now revived and improved. . . . The economic position of the American farmer during this period was one of increasing prosperity, interrupted only temporarily by banking troubles, by panics, or by crop failures. The building of internal improvements was furnishing sections of the country with better means of transportation and affording access to markets. The spread of cotton culture brought in large profits to southern planters and provided an outlet for northern produce, while the growth of manufactures contributed also to the development of a home market. The life of the settlers in the new West was not very different from that of the early colonists in the eastern States. A rude abundance of the necessaries of life was everywhere to be found, and a generous hospitality was remarked by travelers as a characteristic of the people. . . . American farming was still characterized by the wasteful and exhausting methods of cropping without fertilizing that prevailed in colonial times. This was caused partly by the fertility of the soil and the abundance of free land, and partly by the unsettled nature of farming and the unwillingness to sink capital in improvements."—E. L. Bogart, *Economic history of the United States*, pp. 165-171, 222-223, 226-220, 243-244, 246, 263, 269-273.—See also COMMERCE: Commercial Age: 1820-1920.

1816.—Eighth presidential election.—James Monroe, Democratic Republican, was elected over Rufus King, Federalist, receiving 183 out of 217 votes cast in the Electoral College. Daniel D. Tompkins was chosen vice president. "Opposition to the War of 1812 proved fatal to the Federal party, which ceased to exist as a national party with the close of Mr. Madison's administration. Not only did the odium of opposing the war tend to annihilate that party, but the questions upon which the two parties differed were, in a great measure, settled or disposed of by the war; others, relating to the general interests of the country, such as a tariff, internal improvements, the chartering of a national bank, erecting fortifications, etc., taking their place, and finding advocates and opponents in both the old parties. Candidates for President and Vice-President were then selected by the respective parties by what was termed a Congressional caucus. Mr. Monroe was placed in nomination for President by a caucus of the Republican members of Congress, Daniel D. Tompkins, of New York, being nominated by the same caucus for Vice-President. Mr. Crawford, of

Georgia, was Mr. Monroe's competitor, and fell but few votes behind him in the caucus. Rufus King was the candidate of the Federal party, or what there was left of it, against Mr. Monroe. The latter received 183 electoral votes, the former 34. No President ever encountered less opposition during his four or eight years' service than Mr. Monroe. Parties and the country seemed to be tired of contention, and desirous to enjoy repose. A most able cabinet was selected, consisting of Mr. J. Q. Adams as Secretary of State; William H. Crawford, Secretary of the Treasury; John C. Calhoun, Secretary of War; Smith Thompson, Secretary of the Navy; and William Wirt, Attorney-General."—N. Sargent, *Public men and events, 1817-1853*, v. 1, ch. 1.—"Remembering only the almost unopposed election and second election of Mr. Monroe, we are apt to think of him as the natural and easy choice of the people. As a matter of fact he was not a great favorite with Republican politicians. He was first nominated by a narrow majority. . . . Numerous meetings were held in

JAMES MONROE

various parts of the country to protest against the caucus system, the most noteworthy of which, perhaps, was held in Baltimore, in which meeting Roger B. Taney, afterward Chief Justice, took a most prominent part. The nomination being made, the presidential election was practically decided. There was no canvass, worthy of the name."—E. Stanwood, *History of presidential elections*, ch. 9.

1816-1817.—Opening of the question of internal improvements.—"The passage of the bank bill in 1816 was to give the United States a million and a half of dollars. Calhoun, therefore, came forward, Dec. 23, 1816, with a bill proposing that this sum be employed as a fund 'for constructing roads and canals and improving the navigation of water-courses.' 'We are,' said he, 'a rapidly—I was about to say a fearfully—growing country. . . . This is our pride and danger, our weakness and our strength.' The constitutional question he settled with a phrase: 'If we are restricted in the use of our money to the enumerated powers, on what principle can the purchase of Louisiana be justified?' The bill passed the House by 86 to 84;

it was strongly supported by New York members, because it was expected that the general government would begin the construction of a canal from Albany to the Lakes; it had also large support in the South, especially in South Carolina. In the last hours of his administration Madison vetoed it. His message shows that he had selected this occasion to leave to the people a political testament; he was at last alarmed by the progress of his own party, and, like Jefferson, he insisted that internal improvements were desirable, but needed a constitutional amendment. The immediate effect of the veto was that New York, seeing no prospect of federal aid, at once herself began the construction of the Erie Canal, which was opened eight years later."—A. B. Hart, *Formation of the Union (Epochs of American history, sect. 121)*.—"Mr. Monroe came out, in his first message to Congress, coinciding, on this point, with Mr. Madison's veto. It is due to both of them, however, to say that they were the advocates of internal improvement, and recommended an amendment of the constitution with that view. Nevertheless, Mr. Madison, by his veto, had dashed the cup from the lips to the ground, as he went out of office; and Mr. Monroe coming in, at least for four years, probably for eight—it proved to be eight—broke the cup in advance, so that it could not be used during his term of office, without an amendment of the constitution. . . . Three presidents successively, Mr. Jefferson, Mr. Madison, and Mr. Monroe, had officially expressed their opinion adverse to a power vested in Congress by the constitution for projects of internal improvement, as contemplated by the measures proposed. Not satisfied with these decisions, Mr. Clay and his friends were instrumental in having a resolution brought forward, in the fifteenth Congress, declaring that Congress had power, under the constitution, to make appropriations for the construction of military roads, post-roads, and canals. . . . The resolution declaring the power to be vested in Congress by the constitution, to make appropriations for the construction of military roads, post-roads, and canals, was adopted by a vote of 90 to 75; and the principle involved has been practically applied by acts of Congress, from that time to the present."—C. Colton, *Life, correspondence, and speeches of Henry Clay, v. 1, ch. 10*.

1818-1819.—Negotiations with Spain.—Acquisition of Florida.—Adams' support of Jackson.—Payment of claims against Spain.—"The correspondence between the department of state and the Spanish government, following the Seminole War, was keyed remarkably high. When the Spanish minister at Washington, Don Luis de Onís . . . received official notice from Florida of the high-handed acts of Jackson, he made a sharp and spirited protest to the president, demanding not merely the restoration of the forts and other property of Spain, reparation for the insult, and the disavowal of Jackson's conduct, but the inflicting of 'suitable punishment on the author of such flagrant disorder.' He announced, in addition, the suspension of all pending negotiations until 'the one satisfaction which is admissible in the present case is granted.' In negotiations which followed from August until late November, 1818, the French minister, M. Hyde de Neuville, was conscientiously carrying out with good effect his avowed instructions to do everything to preserve peace between the United States and Spain. . . . The culmination of these diplomatic discussions was reached in Secretary Adams's great despatch to Minister Erving at Madrid, dated November 28, 1818. This was in the nature of an ultimatum to Spain, and reviewed at length the conduct of Spanish officials in Florida, the assaults on the peace, property, and lives of Americans in Georgia and Alabama, the refusal of Spain to fulfill treaties, her aiding and abetting theft and sale of stolen property, and her toleration of such men as Nichols, Arbuthnot, and Ambrister. Adams offered, on behalf of the United States, to restore the places captured, when Spain could guarantee an adequate force for fulfilling treaty obligations, and continued: 'but the President will neither inflict punishment nor pass censure upon Gen. Jackson for that conduct, the motives for which were founded in the purest patriotism.' . . . He then proceeded to present the counter-demands of the president of the United States. . . . Added to this were demands for the punishment of the Spanish governor and commandant for neglect of duty, and for indemnities for the charges of the war on the Indians. There was no mistaking such language as this. In the nature of the case, however much her government or her minister at Washington might protest and promise, Spain could not comply with the requirements laid down by Adams for an efficient government in Florida. . . . Nothing remained, then, but to accept the other alternative and endeavor by treaty to secure settlement of all pending difficulties. . . . A 'treaty of amity, settlements, and limits' was finally concluded and signed at [Washington] . . . February 22, 1819, by which Spain ceded the Floridas. The transactions covered both that part which the United States had occupied for seven or eight years . . . and that part which had been relinquished to Spain after two invasions by an army of the United States. By just what title the United States finally held West Florida, it would be hard to determine. . . . As a matter of fact, the United States did not have any valid claim to western Florida before 1819, and did have title to the great territory known as Texas; but the seizure of the smaller province disabled the

United States from pushing too hard for the greater empire. . . . Accordingly, the new boundary excluded Texas. . . . The 'two high contracting parties' reciprocally renounced all claims for damages or injuries to themselves or their citizens up to the time of the signing of the treaty; but in order to protect the just claims of her citizens against Spain, which she had long been pressing, the United States undertook to make satisfaction for these claims to an amount not exceeding five million dollars. Hence it is frequently erroneously stated that the United States paid Spain five million dollars for Florida, whereas the money was really handed over to American claimants.'"—K. C. Babcock, *Rise of American nationality, 1811-1819*, pp. 282-287.

1818-1819.—Dartmouth College case. See COMMON LAW: 1819; UNIVERSITIES AND COLLEGES: 1754-1769.

1818-1821.—First bitter conflict concerning slavery.—Missouri Compromise, on the admission of Missouri to the Union.—"On March 6, 1818, a petition was presented in the House of Representatives praying that Missouri be admitted as a state. A bill authorizing the people of Missouri to form a state government was taken up in the House on February 13, 1819, and Tallmadge of New York moved, as an amendment, that the further introduction of slavery should be prohibited, and that all children born within the said state should be free at the age of twenty-five years. Thus began the struggle on the slavery question in connection with the admission of Missouri, which lasted, intermittently, until March, 1821. No sooner had the debate on Tallmadge's proposition begun than it became clear that the philosophical anti-slavery sentiment of the revolutionary period [see SLAVERY: 1776-1808] had entirely ceased to have any influence upon current thought in the South. The abolition of the foreign slave-trade had not, as had been hoped, prepared the way for the abolition of slavery or weakened the slave interest in any sense. On the contrary, slavery had been immensely strengthened by an economic development making it more profitable than it ever had been before. The invention of the cotton-gin by Eli Whitney, in 1793 [see above: 1793: Whitney's cotton gin], had made the culture of cotton a very productive source of wealth. In 1800 the exportation of cotton from the United States was 19,000,000 pounds, valued at \$5,700,000. In 1820 the value of the cotton export was nearly \$20,000,000, almost all of it the product of slave labor. The value of slaves may be said to have at least trebled in twenty years. The breeding of slaves became a profitable industry. Under such circumstances the slave-holders arrived at the conclusion that slavery was by no means so wicked and hurtful an institution as their revolutionary fathers had thought it to be. . . . On the other hand, in the Northern States there was no such change of feeling. Slavery was still, in the nature of things, believed to be a wrong and a sore. . . . The amendment to the Missouri bill, providing for a restriction with regard to slavery, came therefore in a perfectly natural way from that Northern sentiment which remained still faithful to the traditions of the revolutionary period. And it was a great surprise to most Northern people that so natural a proposition should be so fiercely resisted on the part of the South. It was the sudden revelation of a change of feeling in the South which the North had not observed in its progress. 'The discussion of this Missouri question has betrayed the secret of their souls,' wrote John Quincy Adams. The slave-holders watched with apprehen-

sion the steady growth of the Free States in population, wealth, and power. In 1790 the population of the two sections had been nearly even. In 1820 there was a difference of over 600,000 in favor of the North in a total of less than ten millions. In 1790 the representation of the two sections in Congress had been about evenly balanced. In 1820 the census promised to give the North a preponderance of more than 30 votes in the House of Representatives. As the slave-holders had no longer the ultimate extinction, but now the perpetuation, of slavery in view, the question of sectional power became one of the first importance to them, and with it the necessity of having more Slave States for the purpose of maintaining the political equilibrium at least in the Senate. A struggle for more Slave States was to them a struggle for life. This was the true significance of the Missouri question. The debate was the prototype of all the slavery debates which followed in the forty years to the breaking out of the civil war. . . . The dissolution of the Union, civil war, and streams of blood were freely threatened by Southern men, while some anti-slavery men declared themselves ready to accept all these calamities rather than the spread of slavery over the territories yet free from it. . . . On February 16, 1819, the House of Representatives adopted the amendment restricting slavery, and thus passed the Missouri bill. But the Senate, eleven days afterwards, struck out the anti-slavery provision and sent the bill back to the House. A bill was then passed organizing the Territory of Arkansas, an amendment moved by Taylor of New York prohibiting the further introduction of slavery there having been voted down. . . . Thus slavery was virtually fastened on Arkansas. But the Missouri bill failed in the fifteenth Congress. The popular excitement steadily increased. The sixteenth Congress met in December, 1819. In the Senate the admission of Missouri with slavery was coupled with the admission of Maine, on the balance-of-power principle that one free state and one slave state should always be admitted at the same time. An amendment was moved absolutely prohibiting slavery in Missouri, but it was voted down. Then Mr. Thomas, a Senator from Illinois, on January 18, 1820, proposed that no restriction as to slavery be imposed upon Missouri in framing a state constitution, but that in all the rest of the country ceded by France to the United States north of 36° 30', this being the southern boundary line of Missouri, there should be neither slavery nor involuntary servitude. This was the essence of the famous Missouri Compromise, and, after long and acrimonious debates and several more votes in the House for restriction and in the Senate against it, this compromise was adopted. By it the slave power obtained the present tangible object it contended for; free labor won a contingent advantage in the future. . . . Clay has been widely credited with being the 'father' of the Missouri Compromise. As to the main features of the measure this credit he did not deserve. So far he had taken a prominent but not an originating part in the transaction." But, at the next session of Congress, when the Missouri question was unexpectedly reopened, and as threateningly as ever, Clay assumed a more important part in connection with the final settlement of it. "The bill passed at the last session had authorized the people of Missouri to make a state constitution without any restriction as to slavery. The formal admission of the state was now to follow. But the Constitution with which Missouri presented herself to Congress not only recognized slavery as existing there; it provided

also that it should be the duty of the legislature to pass such laws as would be necessary to prevent free negroes or mulattoes from coming into or settling in the state." This provoked a new revolt on the part of the Northern opponents of slavery, and it was only through Clay's exertions as a pacificator that Missouri was conditionally admitted to the Union at length (March 3, 1820), the condition being that "the said state shall never pass any law preventing any description of persons from coming to or settling in the said state who now are, or hereafter may become, citizens of any of the states of this Union. [The legislature of Missouri gave its assent, as required, to this 'fundamental condition,' and the 'compromise' became complete.]"—C. Schurz, *Life of Henry Clay*, v. 1, ch. 8.—"The immediate contest was not over the question of the prohibition of slavery in the Territories. The great struggle lasted for nearly three years, but the final proposition which closed the controversy and which prohibited slavery in almost all the then Federal territory was probably not debated more than three hours. It was accepted without discussion by the great bulk of the advocates of Missouri's free admission. Very few slavery extensionists questioned the right and power of Congress to prevent the spread of slavery to the Territories. That question, in the minds of those who opposed restriction in Missouri, was incidental to the question of the right of Congress to impose conditions upon a State. Incidentally the question of slavery in the Territories came up in the case of Arkansas, a country south of Missouri, in which slavery was already a fact. The restrictionists themselves recognized the fact that the plain, simple issue of limiting the area of human slavery would be strengthened by bringing it before the country unincumbered with the question of imposing conditions on a State, though most of them never wavered in their belief that conditions might be imposed. On the one hand it was only Southern zealots who denied to Congress the power to prohibit slavery in the Territories; on the other hand many in the North who opposed slavery believed that Congress might not impose conditions upon a State. In the cabinet of Monroe, in which sat Wirt, Crawford, and Calhoun, it was unanimously agreed that Congress had power to prohibit slavery in the Territories. But John Quincy Adams, also a member of that cabinet, who hated slavery with all the strength of his soul, thought it was unconstitutional to bind a State by conditions. . . . The struggle and the compromise afford the first clear demarcation between the sections. From this time the equilibrium of political power was a matter of first concern to a section of States and to a powerful political interest. Mason and Dixon's line is extended toward the west, and now marks a political division. The slave States were now, and for the first time, clearly separated from the free. A geographical line dividing the sections was established."—J. A. Woodburn, *Historical significance of the Missouri Compromise (Report of American Historical Association, 1893, pp. 289-294)*.—See also MISSOURI: 1819-1820.

1819.—Land credit system.—Panic.—"The speculative reaction that immediately followed the war, when the long-pent-up crops of cotton found a market at the extraordinary price of nearly thirty cents a pound, and as high as seventy-eight dollars per acre was bid for government land in the offices of the southwest [brought about a panic in 1819.] The policy of the government fostered reckless purchases of public land. In the critical times of the closing years of the war, the treasury agreed to accept the notes of state banks in payment for lands, on condition that these banks should resume specie payment; and then the banks, while taking only nominal steps towards resumption, loaned their paper freely to the settlers and speculators who wished to invest in the public domain. Under the credit system already mentioned, the pioneer was tempted to exhaust his funds in making his first partial payment, and to rely upon loans from some 'wild cat' bank wherewith to complete the purchase of the hundred and sixty acres, the smallest tract offered under the terms of the law; planters, relying equally on the state banks, bought great tracts of land at absurd prices; speculators, tempted by the rapid rise in land values and by the ease of securing loans, purchased large quantities in the hope of selling before it became necessary to complete their payment. On the seaboard, extravagance abounded as a reaction from the economies of war times, imported manufactures found a ready market, and the domestic factories were in distress. While state banks greatly multiplied and expanded their circulation freely to meet the demands of borrowers, the United States Bank not only failed to check the movement, but even contributed to it. After a dance of speculation, the bank, in the summer of 1818, was facing ruin, and it took drastic means to save itself. Its measures compelled the state banks to redeem their notes in specie or close their doors. By the spring of 1819 the country was in the throes of a panic. State-bank issues were reduced from one hundred million dollars in 1817 to forty-five millions in 1819. Few banks in the south and west were able to redeem their notes in specie before 1822; but they pressed their debtors harshly. Staple productions fell to less than half of their former price; land values declined fifty to seventy per cent.; manufacturers were in distress; laborers were out of work; merchants were ruined. . . . From the beginning of our history the frontier had been a debtor region, always favorable to an expansion of the currency and to laws to relieve the debtor class. It was not the continuation of an old practice when the western legislatures in this time of stringency attempted measures of relief for their citizens. . . . The distress brought about by the panic of 1819, the popular antagonism to banks in general, and especially to the Bank of the United States, as 'engines of aristocracy,' oppressive to the common people, and the general discontent with the established order, . . . produced a movement comparable to the populistic agitation of our own time."—F. 1820.—Ninth presidential election.—In the presidential election of 1820, "Monroe like Washington was re-chosen President by a vote practically unanimous. One, however, of the 232 electoral votes cast was wanting to consummate this exceptional honor; for a New Hampshire elector, with a boldness of discretion which, in our days and especially upon a close canvass, would have condemned him to infamy, threw away upon John Quincy Adams the vote which belonged like those of his colleagues to Monroe, determined, so it is said, that no later mortal should stand in Washington's shoes. Of America's Presidents elected by virtual acclamation history furnishes but these two examples; and as between the men honored by so unapproachable a tribute of confidence, Monroe entered upon his second term of office with less of real political opposition than Washington."—J. Schouler, *History of the United States, v. 3, ch. 10, sect. 2.*—Daniel D. Tompkins was re-elected vice president.

1820.—Fourth census.—The total population was 9,638,191 (an increase exceeding 33 per cent. over that of 1810), classed as follows:

1823.—Enunciation of the Monroe Doctrine.—One lasting mark of distinction was given to the administration of President Monroe by the importance which came to be attached to his enunciation of the principle of policy since known as the "Monroe Doctrine." This was simply a formal and official statement of the national demand that foreign nations shall not interfere with the affairs of the two American continents. "There has been a good deal of dispute as to the real authorship of this announcement, Charles Francis Adams claiming it for his father, and Charles Sumner for the English statesman Canning. Mr. Gilman, however, in his . . . memoir of President Monroe, has shown with exhaustive research that this doctrine had grown up gradually into a national tradition before Monroe's time, and that he merely formulated it, and made it a matter of distinct record. The whole statement is contained in a few detached passages of his message of December 2, 1823."—T. W. Higginson, *Larger history of the United States, ch. 16.*—"At a cabinet meeting May 13, 1818, President Monroe propounded several questions on the subject of foreign affairs, of which the fifth, as recorded by J. Q. Adams, was this: 'Whether the ministers of the United States in Europe shall be instructed that the United States will not join in any project of interposition between Spain and the South Americans, which should not be to promote the complete independence of those provinces; and whether measures shall be taken to ascertain if this be the policy of the British government, and if so to establish a concert with them for the support of this policy.' He adds that all these points were discussed, without much difference of opinion. On July 31, 1818, Rush had an important interview with Castlereagh in respect to a proposed mediation of Great Britain between Spain and her colonies. The cooperation of the United States was desired. Mr. Rush informed the British minister that 'the United States would decline taking part, if they took part at all, in any plan of pacification, except on the basis of the independence of the colonies.' 'This,' he added, 'was the determination to which his government had come on much deliberation.' . . . Gallatin writes to J. Q. Adams, June 24, 1823, that before leaving Paris, he had said to M. Chateaubriand on May 13, 'The United States would undoubtedly preserve their neutrality provided it were respected, and avoid every interference with the politics of Europe. . . . On the other hand, they would not suffer others to interfere against the emancipation of America.' . . . After Canning had proposed to Rush (September 19, 1823) that the United States should cooperate with England in preventing European interference with the Spanish-American colonies, Monroe consulted Jefferson as well as the cabinet, on the course which it was advisable to take, and with their approbation prepared his message. . . . Enough has been quoted to show that Mr. Sumner is not justified in saying that the 'Monroe doctrine proceeded from Canning,' and that he was 'its inventor, promoter, and champion, at least so far as it bears against European intervention in American affairs.' Nevertheless, Canning is entitled to

high praise for the part which he took in the recognition of the Spanish republics, a part which almost justified his proud utterance, 'I called the New World into existence to redress the balance of the Old.'—D. C. Gilman, *James Monroe*, ch. 7.—See also MONROE DOCTRINE.

1824.—Protective tariff, called the "American system." See TARIFF: 1808-1824.

1824.—Tenth presidential election.—No choice by the people.—Election of John Quincy Adams by the House of Representatives.—"In 1823, as the Presidential election approached, the influences to control and secure the interests predominating in the different sections of the country became more active. Crawford of Georgia, Calhoun of South Carolina, Adams of Massachusetts, and Clay of Kentucky, were the most prominent candidates. In December, Barbour of Virginia was superseded, as Speaker of the House of Representatives, by Clay of Kentucky; an event ominous to the hopes of Crawford, and to that resistance to the tariff and to internal improvements which was regarded as dependent on his success. The question whether a Congressional caucus, by the instrumentality of which Jefferson, Madison, and Monroe had obtained the Presidency, should be again held to nominate a candidate for that office, was the next cause of political excitement. The Southern party, whose hopes rested on the success of Crawford, were clamorous for a caucus. The friends of the other candidates were either lukewarm or hostile to that expedient. Pennsylvania, whose general policy favored a protective tariff and public improvements, hesitated. . . . But the Democracy of that state . . . held meetings at Philadelphia, and elsewhere, recommending a Congressional caucus. This motion would have been probably adopted, had not the Legislature of Alabama, about this time nominated Andrew Jackson for the Presidency, and accompanied their resolutions in his favor with a recommendation to their representatives to use their best exertions to prevent a Congressional nomination of a President. The popularity of Jackson, and the obvious importance to his success of the policy recommended by Alabama, fixed the wavering counsels of Pennsylvania, so that only three representatives from that state attended the Congressional caucus, which was soon after called, and which consisted of only 60 members, out of 261, the whole number of the House of Representatives; of which Virginia and New York, under the lead of Mr. Van Buren, constituted nearly one half. Notwithstanding this meagre assemblage, Mr. Crawford was nominated for the Presidency. . . . But the days of Congressional caucuses were now numbered. [See CAUCUS: United States: 1804-1828.] The people took the nomination of President into their own hands [and John Quincy Adams and Henry Clay were brought into the field]. . . . The result of this electioneering conflict was that, by the returns of the electoral colleges of the several states, it appeared that none of the candidates had the requisite constitutional majority; the whole number of votes being 261—of which Andrew Jackson had 99, John Quincy Adams 84, William H. Crawford 41, and Henry Clay 37. [The popu-

lar vote cast as nearly as can be determined, was: Jackson, 153,544; Adams, 108,740; Crawford, 46,618; Clay, 47,136.] For the office of Vice-President, John C. Calhoun had 180 votes, and was elected. . . . Of the 84 votes cast for Mr. Adams, not one was given by either of the three great Southern slaveholding states. Seventy-seven were given to him by New England and New York. The other seven were cast by the Middle or recently admitted states. The selection of President from the candidates now devolved on the House of Representatives, under the provisions of the constitution. But, again, Mr. Adams had the support of none of those slaveholding states, with the exception of Kentucky, and her delegates were equally divided between him and General Jackson. The decisive vote was, in effect, in the hands of Mr. Clay, then Speaker of the House, who cast it for Mr. Adams; a responsibility he did not hesitate to assume, notwithstanding the equal division of the Kentucky delegation, and in defiance of a resolution passed by the Legislature of that state, declaring their preference for General Jackson. On the final vote Andrew Jackson had 7 votes, William H. Crawford 4, and John Quincy Adams 13; who was, therefore, forthwith declared President of the United States for four years ensuing the 4th of March, 1825."—J. Quincy, *Memoir of the life of John Quincy Adams*, ch. 6-7.—The new administration "stood upon the same political basis as that of Mr. Monroe. It was but a continuance of the same party ascendancy. It looked to no change of measures, and to no other change of men than became inevitably necessary to supply the vacancies which the accidents of political life had created. . . . The country . . . indulged the hope of a prosperous career in the track which had been opened by Mr. Madison, and so successfully pursued by Mr. Monroe. Less confidently, however, it indulged the hope of a continuance of that immunity from party contention and exasperation which had characterized the last eight years. The rising of an opposition was seen, at the very commencement of this administration, like a dark cloud upon the horizon, which gradually spread towards the zenith, not without much rumbling of distant thunder and angry flashes of fire."—J. P. Kennedy, *Memoirs of the life of William Wirt*, v. 2, ch. 10.—"Monroe was the last President of the Virginian line [see VIRGINIA DYNASTY], John Quincy Adams the last [for many years] from New England. The centre of power was passing from the east to the west. Adams was a genuine New Englander of the Puritan stock, austere moral, from his boyhood laboriously self-trained, not only staid but solemn in his teens, intensely self-conscious, ever engaged in self-examination, the punctual keeper of a voluminous diary, an invariably early riser, a daily reader of the Bible even in the White House, scrupulously methodical and strictly upright in all his ways; but testy, unconciliatory, unsympathetic, absolutely destitute of all the arts by which popularity is won. His election does the highest credit to the respect of the electors for public virtue unadorned. The peculiar features of his father's character were so intensified in him that he may be deemed the typical figure rather than his father. In opinions he was a Federalist who having broken with his party on the question of foreign relations and the embargo had been put out of its pale but had retained its general mould. As he was about the last President chosen for merit, not for availability, so he was about the last whose only rule was not party but the public service. So strictly did he

observe the principle of permanency and purity in the Civil Service, that he refused to dismiss from office a Postmaster-General whom he knew to be intriguing against him. The demagogic era had come but he would not recognize its coming. He absolutely refused to go on the stump, to conciliate the press, to do anything for the purpose of courting popularity and making himself a party. His obstinacy was fatal to his ambition but is not dishonourable to his memory."—Goldwin Smith, *United States*, ch. 4.—"There was this sharp and doubtful struggle for the presidency, with its closing appeal to the managing politicians of the House, just shock enough, just thrill and zest enough of direct challenge and open contest, to bring the hidden lines of party to the surface. The four years of Mr. Adams' administration completed their disclosure, and changed the whole face of politics. The new President was undeniably the choice of a minority of the nation. He seemed to the impatient men of the new generation to be holding the government arbitrarily back from the touch of renewal and of democratization which they were eagerly waiting to give it. . . . Social changes had come upon the nation thick and fast with the passing away of that first age, in which the government had been set up and had received its life and structure, and radical political changes had inevitably followed in their train. In the gathering host of new States at the west there could be nothing but levels of privilege: no special class, trained and preferred for government, as in New England and the South, but universal manhood suffrage; and the example of the West had reacted powerfully upon the East. There, too, social change was touching affairs with the touch of transformation. . . . New industries raised new classes, to rank with the merchants and the lawyers of the older order. The quick, incessant initiative of individuals broke the lines between class and class so often athwart that they became at last confused and lost. The suffrage was inevitably widened in the East, as in the West; and with the number of voters the number of those who played a managing and organizing and originative part in politics also increased. Every right, as far as might be every function of politics, was thrown open to every man. Nine out of the fifteen States which took part in the second election of General Washington chose their electors through their legislatures; only six gave the people any direct part in the choice. In the election just decided by the vote of the House, on the contrary, the electors had been chosen by the direct vote of the people in eighteen out of the twenty-four States of the Union. Before another presidential election came around every State except Delaware and South Carolina had adopted the same popular system. It was the pulse of these changes that now beat in affairs. A new democracy stood eager for its triumph. . . . It was tired of the 'Virginia dynasty' that had ruled it, as if by prescriptive privilege, since the century opened, and was infinitely impatient of Mr. Adams as its heir and successor. . . . The new impulse of the time craved a hero rather than a statesman. No one knew or asked General Jackson's opinions. His friends put him forward, not as a thinker or even as an organizer of parties, but simply as a man, whom the nation could trust: a man with rugged strength enough to break the old order of politics, now grown artificial, and inaugurate a new, under which the people, whose child and type he was, should come to their own. That was the significance of the ninety-nine electoral

votes cast for General Jackson in 1825."—W. Wilson, *History of the American people*, v. 3, pp. 269-272, 274.

1824-1825.—Visit of Lafayette.—One of the most deeply interesting events of the year 1824 was the arrival in the country of the honored Lafayette, companion of Washington and friend of the American republic in its struggle for independence. He came on the invitation of the national government and was entertained as its guest. "He arrived at Staten Island on Sunday, 15th of August, 1824, accompanied by his son, George Washington Lafayette, and his son-in-law, M. Le Vasseur. Here he remained until Monday, and was then met and welcomed by a distinguished

JOHN QUINCY ADAMS

committee from New York, who escorted him to that city. . . . The arrival of Lafayette was an event which stirred the whole country; everybody was anxious to see him, and every State and city in the Union extended an invitation to him to visit such State or city; and he did so, being everywhere received with the most enthusiastic manifestations of love and respect. . . . He spent a little over a year in the United States, traveling most of the time. . . . Having visited every portion of the United States and received the affectionate homage of the people, General Lafayette returned to Washington, where he became in fact 'the Nation's Guest' at the Presidential mansion. Soon after the meeting of Congress, in December, 1824, a bill was reported by a joint committee of the two Houses granting to him a township of land and the sum of \$200,000, which became a law."—N. Sargent, *Public men and events*, 1817-1853, v. 1, pp. 89-91.

1825-1828.—Opposition to the administration.—Question of internal improvements.—Reconstruction of parties.—Democrats and National Republicans.—The inaugural address of President Adams "furnished a topic" against him, and "went to the reconstruction of parties on the old line of strict, or latitudinous, construction of the constitution. It was the topic of internal national improvement by the federal government. The address extolled the value of such works, considered the constitutional objections as yielding to the force of argument, expressed the hope that every speculative (constitutional) scruple would be solved in a practical blessing; and declared the belief that, in the execution of such works, posterity would derive a fervent gratitude to the founders of our Union and most deeply feel and acknowledge the beneficent action of our government. The declaration of principles which would give so much power to the government . . . alarmed the old republicans, and gave a new ground of opposition to Mr. Adams's administration, in addition to the strong one growing out of the election in the House of Representatives. . . . This new ground of opposition was greatly strengthened at the delivery of the first annual message, in which the topic of internal improvement was again largely enforced, other subjects recommended which would require a liberal use of constructive powers, and Congress informed that the President had accepted an invitation from the American States of Spanish origin, to send ministers to their proposed Congress on the Isthmus of Panama [see COLUMBIA: 1826]. It was, therefore, clear from the beginning that the new administration was to have a settled and strong opposition. . . . There was opposition in the Senate to the confirmation of Mr. Clay's nomination to the State department, growing out of his support of Mr. Adams in the election of the House of Representatives, and acceptance of office from him; but overruled by a majority of two to one."—T. H. Benton, *Thirty years' view*, v. 1, ch. 21—"It was a bitter thing to bear, . . . [Mr. Jackson's] supporters found, to see Mr. Adams preferred before him, and Mr. Clay's support given, out of the West itself, to the candidate of an eastern minority,—so bitter that they protested in their anger against the constitution itself, which made the thing possible: against any law, though it were the fundamental law of the land, which could thus restrain and defeat 'the will of the people.' Their bitterness turned to malice when Mr. Adams asked Mr. Clay to become Secretary of State under the new administration and Mr. Clay consented. There was here, they said, palpable evidence of a bargain, . . . 'a coalition,' exclaimed John Randolph, with bitter jest, 'unheard of until now, of the Puritan and the blackleg.' The charge was shown to be absolutely groundless. There had been no previous understanding whatever between Mr. Adams and Mr. Clay. But they were facing men who in the vehemence of their passion believed what they chose, and whose leader was as im-

placable and as obstinate in error as he was honest and direct in action. General Jackson had been bred by the rough processes of the frontier; had been his own schoolmaster and tutor; had made himself a lawyer by putting his untaught sagacity and sense of right to the test in the actual conduct of suits in court, as he had made himself a soldier by taking the field in command of frontier volunteers as unschooled as himself in discipline and tactics. There was a certain natural grace and sweetness in the man when he was at ease, and an impressive dignity always. 'General Jackson's manners are more presidential than those of any of the candidates,' wrote a leading member of the House who was his opponent. 'He is grave, mild, and reserved. . . . But his nature was compact of passion. His prejudices, once fixed were ineradicable. He believed with all the terrible force that was in him, when once engaged in any public matter, that those who were with him were his friends and the country's, those who were against him enemies of the country as well as of himself. It had needed such a striking personality as this to bring parties to a head. They took form rapidly enough when he came upon the field. The coalition between Mr. Adams and Mr. Clay had been not only incorrupt, but an arrangement to be looked for in the nature of things. Mr. Clay stood in all his thought for the same principles of liberal construction in applying the constitution and for the same purposes of legislative action in furthering national interests that Mr. Adams frankly avowed and earnestly advocated: protective tariffs, internal improvements; the deliberate building up and binding together of the nation. General Jackson's friends, on the contrary, were found for the most part among the men who had reacted against this new programme, in which every principle and purpose of the old Federalists seemed revived, and who were harking back to the principles upon which the Republican party of Mr. Jefferson had been founded: a scrupulous limitation of the powers of the federal government, a studious regard for the separate powers of the several States, a democratic diffusion of power throughout the body politic. . . . Whether General Jackson definitely or consciously held their views or not they did not stop to ask. What was of moment to them was, that he stood in the eyes of the whole nation an unmistakable type of the unsophisticated man of the people. His instincts, they felt sure, could be trusted to make and keep him a partisan of popular privilege and local self-government. And so parties formed: *National Republicans*, as they began to call themselves [later known as Whigs] turned to Mr. Clay and Mr. Adams for leadership, while all 'Democrats' of the older type turned to those who pressed the candidacy of General Jackson. . . . The four years Mr. Adams was President yielded, accordingly scarcely a single important measure of legislation or of policy. . . . Hitherto the President had been always the real leader of the government. His messages had in no small degree constituted the programmes of party action, in Congress hardly less than in executive policy. Now, of a sudden, they counted almost for nothing. Mr. Adams was treated as if he were the leader of a faction. Congress seldom vouchsafed so much as a respectful consideration to his suggestions. . . . Mr. Adams performed his duties with the diligence, the intelligence, the high-minded regard for principle that had always characterized him. No man of his generation was better acquainted than he with the field of foreign policy, still here and there

perplexed and ominous; and he applied himself like a statesman to the settlement of every question that was likely to affect either the trade or the peace of the country. His successful treaties of commerce nearly equalled in number those of all the preceding Administrations put together. But in the chief matter of all he failed, and his opponents noted that alone. In 1815 Mr. Monroe, then Secretary of State, had succeeded in obtaining from England the right of trade with the British West Indies, in which, the ports once open, American merchants and skippers easily gained a virtual monopoly; but in 1825, when that agreement lapsed, England changed her policy, opened the West Indian ports to all the world on terms which put the United States at a disadvantage, and, because the United States did not, within a year set, accept the new arrangement, flatly refused so much as to open the matter again for negotiation (1826). Congress, not Mr. Adams, had been at fault; but the country, . . . remembered only that he failed to secure the invaluable West Indian trade. The party contests of those barren years of divided counsel turned chiefly upon the tariff question of internal improvements. Mr. Adams was an avowed advocate of internal improvements upon a national scale, conceived and carried forward in accordance with . . . such a scheme as Mr. Gallatin had long ago conceived and advocated. . . . But the new 'Democrats' made that impossible. Money in very liberal sums was voted from time to time for specific works of general or local utility, but the idea of a system of national improvements undertaken by the federal government had to be given up. The tariff was another matter. The systematic protection of domestic industries, once undertaken, could not be kept squared with its object or maintained in good repair without frequent alterations and adjustments. . . . The result was the tariff of 1828."—W. Wilson, *History of the American people*, v. 3, pp. 274-282.—See also **TARIFF: 1828**.—"In October, 1825, the Tennessee Legislature nominated Jackson for the Presidency in 1828, and Jackson accepted the nomination. Crawford's continued ill-health compelled his adherents to look elsewhere for a candidate, and they gradually united upon Jackson. At first the resulting coalition was known as 'Jackson Men,' but, as they began to take the character of a national party, they assumed the name of Democrats, by which they have since been known. They maintained the strict constructionist principles of the Republican party, though the Crawford faction in the South went further, and held the extreme ground of the Kentucky Resolutions of 1799."—A. Johnston, *History of American politics*, ch. 11.

1828.—Eleventh presidential election.—Triumph of Jackson and the new democracy.—"The campaign was conducted, on both sides, on very

ruthless methods. Niles said it was worse than the campaign of 1798. Campaign extras of the 'Telegraph' were issued weekly, containing partisan material, refutations of charges against Jackson, and slanders on Adams and Clay. The Adams party also published a monthly of a similar character. The country was deluged with pamphlets on both sides. These pamphlets were very poor stuff, and contain nothing important on any of the issues. They all appeal to low tastes and motives, prejudices and jealousies. . . . In September, 1827, the Tammany General Committee and the Albany 'Argus' came out for Jackson, as it had been determined, in the programme, that they should do. A law was passed for casting the vote of New York in 1828 by districts. The days of voting throughout the country ranged from October 31st to November 19th. The votes were cast by the Legislature in Delaware and South Carolina; by districts in Maine, New York, Maryland, Tennessee; elsewhere, by general ticket. Jackson got 178 votes to 83 for Adams. The popular vote was 648,273 for Jackson; 508,064 for Adams. Jackson got only one vote in New England. . . . For Vice-President, Richard Rush got all the Adams votes; Calhoun [who was elected] got all the Jackson votes except 7 of Georgia, which were given to William Smith of South Carolina. General Jackson was therefore triumphantly elected President of the United States, in the name of reform, and as the standard-bearer of the people, rising in their might to overthrow an extravagant, corrupt, aristocratic, federalist administration, which had encroached on the liberties of the people, and had aimed to corrupt elections by an abuse of federal patronage. Many people believed this picture of Adams's administration to be true. Andrew Jackson no doubt believed it. . . . Perhaps no administration, except that of the elder Adams, is under such odium. There is not, however, in our history any administration which, upon a severe and impartial scrutiny, appears more worthy of respectful and honorable memory. Its chief fault was that it was too good for the wicked world in which it found itself. In 1836 Adams said, in the House, that he had never removed one person from office for political causes, and that he thought that was one of the principal reasons why he was not reelected."—W. G. Sumner, *Andrew Jackson as a public man*, ch. 5.—"In this election there was a circumstance to be known and remembered. Mr. Adams and Mr. Rush were both from the non-slaveholding, General Jackson and Mr. Calhoun from the slaveholding States, and both large slave owners themselves, and both received a large vote (73 each) in the free States—and of which at least 40 were indispensable to their election. There was no jealousy, or hostile or aggressive spirit in the North at that time against the South!"—T. H. Benton, *Thirty years' view*, v. 1, ch. 38.—"General Jackson's friends had reason to be satisfied. The effect they had wrought was indeed dramatic, revolutionary. They had cut a line of cleavage between epoch and epoch in the history of the country. They had broken, once for all, the 'Virginian dynasty,' 'the succession of Secretaries,' the leadership of trained and trusted men; had set aside every tradition of national politics; and had begun the administration of the executive office of the Union afresh upon their own plan. They had not indeed, won secure control of either house of Congress. . . . But the whole atmosphere of affairs, the whole tone of the government changed, nevertheless, with the coming in of General Jackson. The new nation,

its quality subtly altered, its point of view insensibly shifted by the movement into the West, had smiled with some degree of patient complacency upon Mr. Monroe, and had endured John Quincy Adams, but now for the first time chose after its own kind and preferred General Jackson. It was a second democratization of the government. And yet it differed radically from the first, which Mr. Jefferson had so shrewdly contrived. . . . Mr. Jefferson had indeed expressed the greatest alarm 'at the prospect of seeing General Jackson President.' 'He is,' he said, 'one of the most unfit men I know of for the place. He has had very little respect for laws or constitutions, and is, in fact, an able military chief. His passions are terrible. He has been much tried since I knew him, but he is a dangerous man.' And had Mr. Jefferson lived to witness the result, he would hardly have altered his judgment. He had stood, for all he was, so full of democratic doctrine, for conservative ways of political growth. . . . General Jackson professed to be of the school of Mr. Jefferson himself; and what he professed he believed. There was no touch of the charlatan or the demagogue about him. The action of his mind was as direct, as sincere, as unsophisticated as the action of the mind of an ingenuous child, though it exhibited also the sustained intensity and the range of the mature man. . . . He was in fact what his partisans loved to call him, a man of the people, of the common people. Mr. Jefferson was only a patron of the people: appealed to the rank and file, believed in them, but shared neither their tastes nor their passions. Moreover, the effective rank and file of the nation had changed since his day of ascendancy. Step by step, one State following another, the old restrictions upon the suffrage, taken for granted in Jefferson's time, had been removed, until in almost every part of the Union the men of the masses had become the stuff of politics. These men Jackson really represented, albeit with a touch of the knight and chivalrous man of honour about him; . . . and the people knew it; felt that an aristocratic order was upset, and that they themselves had at last come to their own. It must have seemed so in very fact at their President's inauguration. Washington filled with crowds come out of every quarter of the Union. All ceremony was overridden, all decorum cast aside. It seemed as if the place were in the possession of a good-natured mob, bent upon no serious mischief, but not to be restrained, not to be forbidden even the drawing rooms of the White House or the committee rooms and chambers of the Capitol. There was scarcely room enough in the streets for the passage of the procession which accompanied General Jackson to the place of inauguration. So great a crowd rushed, unbidden, into the White House, when General Jackson came to it from the Capitol, that he was himself forced against the wall of the reception chamber by its pressure, and was secured against serious danger only by a number of gentlemen linking arms and forming themselves into a barrier. Everywhere it was proclaimed that the people had come into possession of the government; that the domination of professional statesmen and politicians had been thrown off: that the rank and file were the victors, and that to the victors belonged 'the spoils of the enemy.'—W. Wilson, *History of the American people*, v. 4, pp. 1-5.

ALSO IN: J. S. Bassett, *Andrew Jackson*, pp. 375-405.

1828-1833. — Nullification doctrine of South

Carolina. — Webster-Hayne debate. — Compromise tariff. — President Jackson's proclamation. — Passage of Nullification Ordinance. — Before President Jackson's first year in the office had drawn to a close, he was faced with the question of nullification which arose over opposition, by the Southern states, to the tariff, known as the "tariff of abominations." (See TARIFF: 1828.) "It happened most unfortunately that the hard times that began in 1818 and lasted over into the twenties impelled the Northern manufacturers to appeal to Congress again for assistance in the shape of increased protection to their industries. This movement resulted in the Tariff Act of 1824. It was not a high tariff in any way, but it was the first truly protective tariff in our history. The attitude of the Southerners may be gathered from the fact that of the fifty-six or fifty-eight members of the House of Representatives from Virginia and North Carolina and the five Cotton States to the southward, only one—Johnson of Virginia, from the Monongahela District—voted for it. In 1827, a convention of the Friends of Domestic Industry met at Harrisburg in Pennsylvania and called for more protection. This in turn excited the South Carolinians to renewed agitation, and the State legislature adopted a report and resolutions declaring that the Constitution of the United States was 'a compact between the people of the different States with each other, as separate, independent sovereignties,' and the view that the Constitution emanated from the people as a whole was a dangerous doctrine. Georgia and North Carolina also protested against the protective system. The actual passage of the Tariff of Abominations in 1828 gave the signal for more radical demonstrations."—E. Channing, *History of the United States*, v. 5, pp. 418-419.—"In May, 1828, a meeting of the South Carolina delegation in Congress was held in Washington, at the rooms of General Hayne, one of the Senators of that State, to concert measures against the tariff and the protective policy which it embodied. From the history of the times, and the disclosures subsequently made, it is apparent that some violent things were said at this meeting, but it broke up without any definite plan. In the course of the following summer, there were many popular meetings in South Carolina, largely attended, at which the tariff of 1824 was treated as an act of despotism and usurpation, which ought to be openly resisted. . . . They occasioned anxiety and regret among the friends of the Union throughout the country, though nothing more. But, in the autumn, the Legislature of South Carolina adopted . . . [the] 'Exposition and Protest,' which gave form and substance to the doctrines, which thenceforward became known as 'Nullification.' In order to understand them, however, as a theory of the Federal Constitution, it is necessary to state the theory to which they are opposed, and to overthrow which they were brought forward. The Government of the United States, under the Constitution, had hitherto been administered upon the principle that the extent of its powers is to be finally determined by its supreme judicial tribunal, not only when there is any conflict of authority between its several departments, but also when the authority of the whole Government is denied by one or more of the States. . . . Aside from the authority of [the Virginia and Kentucky resolutions of 1798]—an authority that was doubtful, because their interpretation was not clear—there had been no important assertion of the principle that a State can determine for its citizens whether they are to obey

an act of Congress, by asserting its unconstitutional character, and that the right to do this is implied as a right inherent in a State, under the Constitution, and results from the nature of the Government. This, however, was what the advocates of nullification now undertook to establish. The remedy which they sought, against acts which they regarded as usurpations, was not revolution, and not the breaking up the Union, as they claimed; but it was a remedy which they held to exist within the Union, and to have been contemplated by the people of the States when they established the Constitution. . . . Although the Legislature of South Carolina had thus propounded a theory of resistance, and held that there was then a case in the tariff which would justify a resort to it, no steps were yet taken toward the immediate exercise of the asserted power."—G. T. Curtis, *Life of Daniel Webster*, v. 1, ch. 16.—"John C. Calhoun now comes to the front. In earlier years he had advocated internal improvements and protection to industry and had sponsored the act chartering the second Bank of the United States. Apparently during Monroe's administration, he had seen nothing wrong in these policies; but now he took charge of the rhetorical campaign and used his great powers of analysis and of literary expression to put the best face possible upon the proposition that a State could refuse obedience to an act of Congress and at the same time not be in a condition of rebellion. . . . Calhoun wrote the report of the committee of the State legislature on Governor Taylor's message which was adopted in December, 1828, and made public early in 1829. For a time, his authorship was kept secret, probably because it might have seemed ill-fitting for the Vice-President to affix his name to a document justifying the annulment of an act of Congress. . . . The nullification doctrine, as one finds it in the 'Exposition' of 1828 and in Calhoun's speech on the Force Bill in 1833, rests on the assumption that the people of each State was sovereign at the time of the ratification of the Constitution and, in ratifying that instrument, acted in its separate and sovereign capacity. The Constitution, therefore, was a compact to which each State was a party and each one of them had a right to judge of its infractions and to interpose to maintain the rights of the people of the State within its limits. The general government is only 'the joint agent of two distinct sovereignties' and the Union is 'a union of States as communities, and not a union of individuals' and there is no immediate connection between individuals and the general government. It followed, therefore, that the people of a State in its sovereign capacity could declare an act of the federal government null and void and not binding on it, and could by legislative action protect the citizens of that State against the federal government. The scene of action now shifts to Washington and centres about the person of Daniel Webster."—E. Channing, *History of the United States*, v. 5, pp. 419-420.

"In 1830 the question of nullification came up on the floor of Congress as an incident to a debate upon the disposition of the national domain. Senator Foote of Connecticut had introduced a resolution, the spirit of which was to limit the sales of the public lands. Nothing important came of the resolution, but the debate brought forth a distinct statement by powerful champions of the North and of the South upon the constitutional principles upon which the two sections were to diverge. The champion of the South was Senator Hayne of South Carolina. Calhoun could not take the floor,

for at the time he was Vice-President and therefore the presiding officer of the Senate. It has been said that Hayne was 'Calhoun's sword and buckler, and that he returned to the contest refreshed each morning by nightly communions with the Vice-President, drawing auxiliary supplies from the well-stored arsenal of his powerful and subtle mind.'"—S. E. Forman, *Our republic*, p. 272.—In the great debate which occurred in the Senate, in January, 1830, the doctrine of nullification received for the first time a discussion which sank deep into the mind of the nation. Hayne in his first speech (on the resolutions) made an attack on New England which drew out Webster in vindication, and then, when the South Carolinian replied, he boldly and broadly set forth the nullifying theory which his State had accepted from the sophistical brain of John C. Calhoun. It received its refutation then and there, in Webster's final speech. "The effect of this speech upon the country, that immediately followed its de-

JOHN C. CALHOUN

livery, it is not easy for us at the present day to measure. . . . Vast numbers of Mr. Webster's speech were . . . published and circulated in pamphlet editions, after all the principal newspapers of the country had given it entire to their readers. The popular verdict, throughout the Northern and Western and many of the Southern States was decisive. A great majority of the people of the United States, of all parties, understood, appreciated, and accepted the view maintained by Mr. Webster of the nature of the Constitution, and the character of the government which it establishes."—G. T. Curtis, *Life of Daniel Webster*, v. 1, ch. 16.—"The Webster-Hayne debate in January, 1830, placed the two theories of the union definitely before the nation. People everywhere were taking sides, and it began to be asked on which the President would be found. Within three months of the famous debate the question was answered. . . . April 13th was Jefferson's birthday, long observed by democrats for renewing their devotion to party principles. As the day approached in 1830, the South Carolina group pre-

pared to take a prominent part in its celebration. Their object, says Van Buren very plausibly, was two-fold; (1) to get the sympathy of Virginia by exalting Jefferson and by stressing the relation of their own doctrine to the resolutions of 1798, and (2) to please Georgia, long opposed to South Carolina, by praising her position in the affair of the Cherokees, itself a kind of nullification."—J. S. Bassett, *Life of Andrew Jackson*, v. 2, pp. 554-555.—"At this time Jackson was in sympathy with the Van Buren faction . . . and it was decided that he should give such a toast as would show his disapproval of Calhoun's theories. He arose at the feast with this sentiment, 'Our federal union, it must be preserved!' . . . Calhoun, who was next called on, tried to retrieve the situation by giving as his toast, 'The union, next to our liberty most dear! May we all remember that it can only be preserved by respecting the rights of the states and distributing equally the benefits and burthens of the union!' But the words of the president were most significant. They indicated that he would not be brought into the general Southern movement which the nullifiers planned."—J. S. Bassett, *Short history of the United States*, p. 401.

"Since the tariff was the cause of most of the irritation, Congress, in 1832, wishing to placate the nullifiers, overhauled the Tariff of Abominations, reducing some of the obnoxious duties, especially those on plantation supplies. [See TARIFF: 1832.] But inasmuch as the reductions were not accompanied by any important modification of the protective system the South was not placated. Upon the passage of the act the members of Congress from South Carolina drew up a formal protest declaring 'that all hope of relief from Congress was irrevocably gone, that protection must henceforth be regarded as the settled policy of the country, and that the people of South Carolina must decide whether their rights and liberties were to be tamely surrendered without a struggle or transmitted undiminished to their posterity.' South Carolina was ready for a struggle. She immediately prepared for a practical application of Calhoun's doctrine of 'interposition.'"—E. S. Forman, *American republic*, pp. 282-283.—"The governor, an ardent nullifier, called a meeting of the legislature, which quickly ordered an election for a convention to meet on November 19th . . . in order that the intended programme might be completed before the meeting of congress in December, 1832. Now appeared the effects of the powerful efforts of Calhoun. Nearly the whole state turned to his doctrine, and, November 24th, the convention passed the famous nullification ordinance. This instrument declared the tariff laws of 1828 and 1832 unconstitutional and not binding on the state, it prohibited appeals to the supreme court of the United States in cases arising under this ordinance, it ordered all state officials except members of the legislature to take an oath to obey the ordinance, and it fixed February 1, 1833, as the day when it would go into operation. It closed with a threat that an attempt of the federal government to oppose its enforcement would absolve South Carolina from allegiance to the union and leave it a separate sovereign state."—J. S. Bassett, *Life of Andrew Jackson*, v. 2, p. 563.—"With the Ordinance the convention issued two addresses, one to the people of South Carolina, and the other to the peoples of the other Commonwealths. . . . The one to the people of South Carolina contained the theory of nullification, as elaborated by Calhoun, and the justification of its employment in the existing situation.

It closed with an appeal to their love of liberty and a demand of obedience. The address to the peoples of the several Commonwealths contained an announcement of the passage of the nullifying Ordinance, the theory upon which it was based, an assertion of the unconstitutionality of the protective tariff, and its oppression upon the people of South Carolina, and a declaration of the spirit and feeling of the convention, and of the people it represented, toward the Union, the Constitution and the people of the manufacturing Commonwealths. . . . In a message of November 27th, Governor Hamilton communicated to the legislature of the Commonwealth the Ordinance of Nullification and recommended the enactment of measures by that body for the execution of the Ordinance. On December 13, the new Governor, Colonel Hayne, who has resigned his seat in the Senate in order that Mr. Calhoun, who had himself resigned the vice-presidency, might be made South Carolina's representative in the Senate, or, as the South Carolinians now considered it, South Carolina's ambassador to the Government of the United States, pronounced his inaugural address before the legislature, dedicating himself to the service of the Commonwealth in the execution of her Ordinance of Nullification. The legislature immediately passed the acts required by the convention and recommended by the Governor [namely the Replevin Act, an act to provide for the event of the employment of military power by the Federal government and a test act]."—J. W. Burgess, *Middle period*, pp. 223-224.—"Some preparation, although little, was made for a conflict of arms"; nor was there any certain show of readiness in other Southern states to stand by South Carolina in the position she had taken. "President Jackson's annual message, which went to Congress on December 4, 1832, was remarkably quiet in tone," and neither alarmed the nullifiers nor gave confidence to the friends of the Union; but "six days later, on December 10, came out Jackson's famous proclamation against the nullifiers, which spoke thus: 'The Constitution of the United States forms a government, not a league. . . . Our Constitution does not contain the absurdity of giving power to make laws, and another power to resist them. To say that any state may at pleasure secede from the Union is to say that the United States are not a nation.' He appealed to the people of South Carolina, in the tone of a father, to desist from their ruinous enterprise; but he gave them also clearly to understand that, if they resisted by force, the whole power of the Union would be exerted to maintain its authority. All over the North, even where Jackson had been least popular, the proclamation was hailed with unbounded enthusiasm. . . . The nullifiers in South Carolina received the presidential manifesto apparently with defiance. The governor of the state issued a counter-proclamation. Calhoun resigned the vice-presidency, and was immediately sent to the Senate to fight the battle for nullification there." The president, now thoroughly roused, called on Congress for extraordinary powers to meet the emergency, and the Force Bill was passed to give the president power to execute the tariff laws by force if necessary. But, at the same time, while they showed this bold front to the nullifiers, Congress and the executive began to prepare a retreat from the ground they had held on the tariff. Henry Clay took the field again, in the exercise of his peculiar talents for compromise, and the result was the nearly simultaneous passage (February 26 and 27, 1833) through Congress of the "Force Bill" and of a compromise

tariff bill, which latter provided for a graduated reduction of the duties year by year, until 1842, when they should stand at 20 per cent., as a horizontal rate, with a large free-list. "The first object of the measure was attained: South Carolina repealed her nullification ordinance. . . . But before long it became clear that, beyond the repeal of the nullification ordinance, the compromise had settled nothing. The nullifiers strenuously denied that they had in any sense given up their peculiar doctrine."

—C. Schurz, *Life of Henry Clay*, v. 2, ch. 14.—

"The theory of nullification, as set forth by Calhoun, even now, after it has received the benefit of careful study and able expounding by historians, is not clear. He always avowed a loyalty to the Union, but the arguments by which he sought to demonstrate that nullification was compatible with the existence of the Union, and indeed a guarantee of its perpetuity, did not occasion much solicitude to the majority of his party. But no one at the North understood the fallacy of his reasoning or the real end and aim of his party more clearly than did the Union men of his state. They reasoned simply. Said the Camden, S. C. 'Gazette': 'We know of only two ways, under our government, to get rid of obnoxious legislation. We must convince a majority of the nation that a given enactment is wrong and have it repealed in the form prescribed by the constitution, or resist it extraconstitutionally by the sword. . . . But this everlasting cant of devotion to the Union, accompanied by a recommendation to do those acts that must necessarily destroy it, is beyond patient endurance from a people not absolutely confined in their own mad-houses.' . . . A fact . . . that historians have failed to lay any stress upon, and that nevertheless deserves some notice, is the holding of a state convention of the Union party of South Carolina immediately after the nullification convention had completed its work. It was the last important action of that party in the state. Randell Hunt, who presented the first resolutions, epitomized the views of the convention and the question it should consider in three sentences: 'That the Union party acknowledges no allegiance to any government except that of the United States. That in referring this resolution to the general committee they be instructed to inquire whether it is not expedient to give a military organization to the Union party throughout the state. Whether it will not be necessary to call in the assistance of the general government for maintaining the laws of the United States against the arbitrary violence which is threatened by the late convention.' The resolutions which were adopted declared that the ordinance of nullification violated the constitution of the United States and had virtually destroyed the Union, since by preventing the general government from enforcing its laws within the boundaries of the state, it made the state a sovereignty paramount to the United States. They denounced the provisions of the ordinance as tyrannical and oppressive, and the test oath as especially incompatible with civil liberty, in that it disfranchised nearly half the citizens of the state. . . . They concluded by declaring the continued opposition of the signers to the tariff, and their determination to protect themselves against intolerable oppression. The resolutions were signed by all the members of the convention, about 180 in number. In point of fact, the Unionists were not disposed to favor any compromise measures, and looked rather with disfavor upon Mr. Clay's bill, as a measure which was being forced upon the country. . . . The Unionist party . . . never was an active force

in the state again, but the bold spirit which had actuated its members was manifested later, when the struggle for state sovereignty was more widespread; and some of the most intrepid Union men of the South in the civil war were those who had fled from South Carolina years before, when the nullification party had triumphed."—G. Hunt, *South Carolina during the nullification struggle* (*Political Science Quarterly*, June, 1891).—The following is the text of the "Ordinance to nullify certain acts of the Congress of the United States, purporting to be laws laying duties and imposts on the importation of foreign commodities," adopted by the state convention of South Carolina on Nov. 24, 1832:

"Whereas the Congress of the United States by various acts, purporting to be acts laying duties and imposts on foreign imports, but in reality intended for the protection of domestic manufactures, and the giving of bounties to classes and individuals engaged in particular employments, at the expense and to the injury and oppression of other classes and individuals, and by wholly exempting from taxation certain foreign commodities, such as are not produced or manufactured in the United States, to afford a pretext for imposing higher and excessive duties on articles similar to those intended to be protected, hath exceeded its just powers under the constitution, which confers on it no authority to afford such protection, and hath violated the true meaning and intent of the constitution, which provides for equality in imposing the burdens of taxation upon the several States and portions of the confederacy: And whereas the said Congress, exceeding its just power to impose taxes and collect revenue for the purpose of effecting and accomplishing the specific objects and purposes which the constitution of the United States authorizes it to effect and accomplish, hath raised and collected unnecessary revenue for objects, unauthorized by the constitution. We, therefore, the people of the State of South Carolina, in convention assembled, do declare and ordain, and it is hereby declared and ordained, that the several acts and parts of acts of the Congress of the United States, purporting to be laws for the imposing of duties and imposts on the importation of foreign commodities, and now having actual operation and effect within the United States, and, more especially, an act entitled 'An act in alteration of the several acts imposing duties on imports,' approved on the nineteenth day of May, one thousand eight hundred and twenty-eight, and also an act entitled 'An act to alter and amend the several acts imposing duties on imports,' approved on the fourteenth day of July, one thousand eight hundred and thirty-two, are unauthorized by the constitution of the United States, and violate the true meaning and intent thereof and are null, void, and no law, nor binding upon this State, its officers or citizens; and all promises, contracts, and obligations, made or entered into, or to be made or entered into, with purpose to secure the duties imposed by said acts, and all judicial proceedings which shall be hereafter had in affirmation thereof, are and shall be held utterly null and void. And it is further ordained, that it shall not be lawful for any of the constituted authorities, whether of this State or of the United States, to enforce the payment of duties imposed by the said acts within the limits of this State; but it shall be the duty of the legislature to adopt such measures and pass such acts as may be necessary to give full effect to this ordinance, and to prevent the enforcement and arrest the operation of the said acts and parts of acts of the Con-

gress of the United States within the limits of this State, from and after the 1st day of February next, and the duty of all other constituted authorities, and of all persons residing or being within the limits of this State, and they are hereby required and enjoined to obey and give effect to this ordinance, and such acts and measures of the legislature as may be passed or adopted in obedience thereto. And it is further ordained, that in no case of law or equity, decided in the courts of this State, wherein shall be drawn in question the authority of this ordinance, or the validity of such act or acts of the legislature as may be passed for the purpose of giving effect thereto, or the validity of the aforesaid acts of Congress, imposing duties, shall any appeal be taken or allowed to the Supreme Court of the United States, nor shall any copy of the record be permitted or allowed for that purpose; and if any such appeal shall be attempted to be taken, the courts of this State shall proceed to execute and enforce their judgments according to the laws and usages of the State, without reference to such attempted appeal, and the person or persons attempting to take such appeal may be dealt with as for a contempt of the court. And it is further ordained, that all persons now holding any office of honor, profit, or trust, civil or military, under this State (members of the legislature excepted), shall, within such time, and in such manner as the legislature shall prescribe, take an oath well and truly to obey, execute, and enforce this ordinance, and such act or acts of the legislature as may be passed in pursuance thereof, according to the true intent and meaning of the same; and on the neglect or omission of any such person or persons so to do, his or their office or offices shall be forthwith vacated, and shall be filled up as if such person or persons were dead or had resigned; and no person hereafter elected to any office of honor, profit, or trust, civil or military (members of the legislature excepted), shall, until the legislature shall otherwise provide and direct, enter on the execution of his office, or be in any respect competent to discharge the duties thereof until he shall, in like manner, have taken a similar oath; and no juror shall be empanelled in any of the courts of this State, in any cause in which shall be in question this ordinance, or any act of the legislature passed in pursuance thereof, unless he shall first, in addition to the usual oath, have taken an oath that he will well and truly obey, execute, and enforce this ordinance, and such act or acts of the legislature as may be passed to carry the same into operation and effect, according to the true intent and meaning thereof. And we, the people of South Carolina, to the end that it may be fully understood by the government of the United States, and the people of the co-States, that we are determined to maintain this our ordinance and declaration, at every hazard, do further declare that we will not submit to the application of force on the part of the federal government, to reduce this State to obedience; but that we will consider the passage, by Congress, of any act authorizing the employment of a military or naval force against the State of South Carolina, her constitutional authorities or citizens; or any act abolishing or closing the ports of this State, or any of them, or otherwise obstructing the free ingress and egress of vessels to and from the said ports, or any other act on the part of the federal government, to coerce the State, shut up her ports, destroy or harass her commerce, or to enforce the acts hereby declared to be null and void, otherwise than through the civil tribunals of the coun-

try, as inconsistent with the longer continuance of South Carolina in the Union; and that the people of this State will henceforth hold themselves absolved from all further obligation to maintain or preserve their political connection with the people of the other States; and will forthwith proceed to organize a separate government, and do all other acts and things which sovereign and independent States may of right do. Done in convention at Columbia, the twenty-fourth day of November, in the year of our Lord one thousand eight hundred and thirty-two, and in the fifty-seventh year of the declaration of the independence of the United States of America."—See also SOUTH CAROLINA: 1828-1833.

1829.—Appointments to cabinet.—Kitchen cabinet.—Introduction of "spoils system."—"Jackson was, as no President before him, the choice of the masses. His popular vote in 1824 revealed not only his personal popularity but the growing power of the democratic elements in the nation, and his defeat in the House of Representatives only strengthened his own and the people's determination to be finally victorious. The untrained, self-willed, passionate frontier soldier came to power in 1828 as the standard bearer of a mighty democratic uprising which was destined before it ran its course to break down oligarchical party organizations, to liberalize state and local governments, and to turn the stream of national politics into wholly new channels. It was futile for men of the old school to protest and to prophesy misfortune for the country under its new rulers. The people had spoken, and this time the people's will was not to be denied. Still haggard from his recent personal loss [in the death of his wife, who died in December, 1828], the President-elect set out for Washington, at the middle of January, 1829. . . . Duff Green, one of the party managers, proposed that a great cavalcade should meet the victor at Pittsburgh and escort him by relays to the capital. On Van Buren's advice the plan was abandoned. But as the party passed along the National Road toward its destination it was accorded an ovation which left nothing to be desired as an evidence of the public favor. . . . The men with whom the Executive-elect was daily closeted were Major Lewis and Senators Eaton and White. Van Buren . . . was ably represented, however, by James A. Hamilton, a son of Alexander Hamilton, to whose correspondence we owe most of what we know about the laying of the plans for the new Administration. The most pressing question was the personnel of the Cabinet. Upon only one appointment was Jackson fully determined when he reached Wash-

ington: Van Buren was to be Secretary of State. . . . The appointments were kept secret until one week before the inauguration, when they were announced in the party organ at the capital, Duff Green's *United States Telegraph*. Everywhere the list caused consternation. Van Buren's was the only name of distinction in it; and only one of the appointees had had experience in the administration of national affairs. Hamilton pronounced the group 'the most unintellectual Cabinet we ever had.'—F. A. Ogg, *Reign of Andrew Jackson (Chronicles of America Series, v. 20, pp. 113-118)*.—"Much thought had been bestowed upon the composition of the Cabinet, and some of the President's warmest supporters urged that he should make use of the group as a council of state, after the manner of his predecessors. Jackson's purposes, however, ran in a different direction. . . . He saw no reason why these men, some of whom were primarily the friends of Calhoun, should be allowed to supplant old confidants like Lewis. Let them, he reasoned, go about their appointed tasks as heads of the administrative departments, while he looked for counsel withersoever he desired. Hence the official Cabinet fell into the background, and after a few weeks the practice of holding meetings was dropped. As advisers on party affairs and on matters of general policy the President drew about himself a heterogeneous group of men which the public labeled the 'Kitchen Cabinet.'"—F. A. Ogg, *Reign of Andrew Jackson (Chronicles of American Series, v. 20, pp. 129-130)*.—Major Lewis, one of the Tennessee friends of General Jackson, who accompanied him to Washington and was persuaded to remain, with his residence at the White House; General Duff Green, editor of the *United States Telegraph*; Isaac Hill, editor of the *New Hampshire Patriot*, and Amos Kendall, late editor of a Jackson paper in Kentucky, but a native of Massachusetts:—"these were the gentlemen . . . who, at the beginning of the new administration, were supposed to have most of the President's ear and confidence, and were stigmatized by the opposition as the Kitchen Cabinet."—J. Parton, *Life of Andrew Jackson, v. 3, ch. 16*.—See also CABINET, KITCHEN.—After the breach between Jackson and Calhoun, Duff Green adhered to the latter. The *Globe* newspaper was then founded, to be the organ of the administration, and Francis P. Blair, called from Kentucky to undertake the editorship, acquired at the same time Duff Green's vacated seat in the Kitchen cabinet.—J. Schouler, *History of the United States, v. 3, p. 501*.—"The establishment of the 'Globe,' the rupture with Calhoun, and the breaking up of the first cabinet had inaugurated a bitter war between the two rival papers, though really between the President and Mr. Calhoun, in consequence of which there were rich revelations made to the public."—N. Sargent, *Public men and events, 1817-1853, v. 1, p. 186*.—"A favorite theme of the Jackson forces during the late campaign was the abuses of the patronage, and the General came into office fully convinced that an overhauling of the civil service would be one of the greatest contributions that he could make to his country's welfare. . . . He believed that short terms and rapid rotation made for alertness and efficiency. He felt that one man had as much right to public office as another, and he was so unacquainted with the tasks of administration as to suppose all honest citizens equally capable of serving their fellowmen in public station. . . . Shortly after the election Major Lewis wrote to a friend that the General was 'resolved on making a pretty clean sweep of the depart-

ments.' . . . If a complete overturn was ever really contemplated, the plan was not followed up; and it is more than possible that it was Van Buren who marked off the limits beyond which it would not be expedient to go. None the less, Jackson's removals far exceeded those made by his predecessors. Speaking broadly, the power of removal had never yet been exercised in the Federal Government with offensive partizanship. Even under Jefferson, when the holders of half of the offices were changed in the space of four years, there were few removals for political reasons. No sooner was Jackson in office, however, than wholesale proscription began. The axe fell in every department and bureau, and cut off chiefs and clerks with equal lack of mercy. Age and experience counted rather against a man than in his favor, and rarely was any reason given for removal other than that some one else wanted the place. . . . The Post-Office Department and the Customs Service were

ANDREW JACKSON

purged with special severity. The sole principle on which the new appointees were selected was loyalty to Jackson. Practically all were inexperienced, most were incompetent, and several proved dishonest. 'There has been,' wrote the President in his journal a few weeks after the inauguration, 'a great noise made about removals.' Protest arose not only from the proscribed and their friends, but from the Adams-Clay forces generally, and even from some of the more moderate Jacksonians. 'Were it not for the outdoor popularity of General Jackson,' wrote Webster, 'the Senate would have negatived more than half his nominations.' As it was, many were rejected; and some of the worst were, under pressure, withdrawn. On the general principle the President held his ground. 'It is rotation in office,' he again and again asserted in all honesty, 'That will perpetrate our liberty,' and from this conviction no amount of argument or painful experience could shake him. . . . No more unfortunate step was ever taken by an American President; the task

of undoing the mischief has been long and laborious. Yet the spoils system was probably an inevitable feature of the rule of the people; at all events, it was accepted by all parties and sanctioned by public sentiment for more than half a century."—F. A. Ogg, *Reign of Andrew Jackson (Chronicles of American Series, v. 20, pp. 124-128)*.—See also CIVIL SERVICE REFORM: United States: 1828-1885.

1829-1832.—Rise of abolitionists.—"Between the years 1829 and 1832 took place a remarkable series of debates in Virginia on the subject of slavery, brought about by dissatisfaction with the State constitution and by the Nat Turner massacre, in which a number of slaves had risen against their masters. In these debates the evils of slavery were exposed as clearly as they were afterwards by the Abolitionists, and with an outspoken freedom which, when indulged in by Northern men, was soon to be denounced as treasonable and incendiary. These Southern speakers were silenced by the Slave Power. But there were men in the North who thought the same and who would not be silenced. Chief among these was William Lloyd Garrison. He had begun his memorable career by circulating petitions in Vermont in 1828 in favor of emancipation in the District of Columbia. Having joined Lundy in Baltimore in editing the 'Genius of Universal Emancipation,' he had suffered ignominy in the cause, in a Southern jail; drawing from persecution and hardship only new inspiration, he began the publication of the 'Liberator' at Boston in January, 1831. In the following year, under his leadership, was formed the New England Anti-Slavery Society, which placed itself on the new ground that immediate, unconditional emancipation, without expatriation, was the right of every slave and could not be withheld by his master an hour without sin. In March, 1833, the 'Weekly Emancipator' was established in New York, with the assistance of Arthur and Lewis Tappan, and under the editorship of William Goodell. In the same year appeared at Haverhill, Mass., a vigorous pamphlet by John G. Whittier, entitled 'Justice and Expediency, or Slavery considered with a View to its Rightful and Effectual Remedy, Abolition.' Nearly simultaneously were published Mrs. Lydia Maria Child's 'Appeal in Behalf of that Class of Americans called Africans,' and a pamphlet by Elizur Wright, Jr., a professor in the Western Reserve College, on 'The Sin of Slavery and its Remedy.' These publications and the doctrines of the 'Liberator' produced great excitement throughout the country."—B. Tuckerman, *William Jay and the constitutional movement for the abolition of slavery, ch. 3*.—The *Liberator* "was a weekly journal, bearing the names of William Lloyd Garrison and Isaac Knapp as publishers. Its motto was, 'Our Country is the World, Our Countrymen are Mankind,' a direct challenge to those whose motto was the Jingo cry of those days, 'Our Country, right or wrong!' It was a modest folio, with a page of four columns, measuring fourteen inches by nine and a quarter. . . . The paper had not a dollar of capital. It was printed at first with borrowed type. Garrison and Knapp did all the work of every kind between them, Garrison of course doing the editorials. That he wrote them can hardly be said: his habit was often to set up without manuscript. . . . The publishers announced in their first issue their determination to go on as long as they had bread and water to live on. In fact, they lived on bread and milk. . . . Garrison apologizes for the meagreness of the editorials, which, he says, he has but six hours, and those at midnight, to compose, all the rest of his time and

the whole of that of his companion being taken up by the mechanical work. . . . It was against nothing less than the world, or at least the world in which he lived, that this youth of twenty-six, with his humble partner, took up arms. Slavery was at the height of its power. . . . The salutatory of the 'Liberator' avowed that its editor meant to speak out without restraint. 'I will be as harsh as truth and as uncompromising as justice. On this subject I do not wish to think or speak or write with moderation. No! No! Tell a man whose house is on fire to give a moderate alarm; tell him to moderately rescue his wife from the hands of the ravisher; tell the mother to gradually extricate her babe from the fire into which it has fallen—but urge me not to use moderation in a cause like the present. I am in earnest—I will not equivocate—I will not excuse—I will not retreat a single inch—and I will be heard.' This promise was amply kept. . . . In private and in his family he was all gentleness and affection. Let it be said, too, that he set a noble example to controversial editors in his fair treatment of his opponents. Not only did he always give insertion to their replies, but he copied their criticisms from other journals into his own. Fighting for freedom of discussion, he was ever loyal to his own principle. What is certain is that the 'Liberator,' in spite of the smallness of its circulation, which was hardly enough to keep it alive, soon told. The South was moved to its centre. The editorials probably would not have caused much alarm, as the slaves could not read. What was likely to cause more alarm was the frontispiece, which . . . represented an auction at which 'slaves, horses and other cattle' were being offered for sale, and a whipping-post at which a slave was being flogged. In the background was the Capitol at Washington, with a flag inscribed 'Liberty' floating over the dome. . . . On seeing the 'Liberator' the realm of slavery bestirred itself. A Vigilance Association took the matter in hand. First came fiery and bloodthirsty editorials; then anonymous threats; then attempts by legal enactment to prevent the circulation of the 'Liberator' at the South. The Grand Jury of North Carolina found a true bill against Garrison for the circulation of a paper of seditious tendency, the penalty for which was whipping and imprisonment for the first offence, and death without benefit of clergy for the second. The General Assembly of Georgia offered a reward of five thousand dollars to any one who, under the laws of that State, should arrest the editor of the 'Liberator', bring him to trial, and prosecute him to conviction. The South reproached Boston with allowing a battery to be planted on her soil against the ramparts of Southern institutions. Boston felt the reproach, and showed that she would gladly have suppressed the incendiary print and perhaps have delivered up its editor; but the law was against her, and the mass of the people, though wavering in their allegiance to morality on the question of slavery, were still loyal to freedom of opinion. . . . It was just at this time that the South and its clientage at the North were thrown into a paroxysm of excitement by the Bloody Monday, as Nat Turner's rising at Southampton was called. The rising was easily suppressed, and Virginia saw, as Jamaica has since seen, how cruel is the panic of a dominant race. Not the slightest connection of the outbreak with Northern abolitionism was traced. That Garrison or any one connected with him ever incited the slaves to revolt, or said a word intentionally which could lead to servile war, seems to be utterly untrue. His preach-

ing to the slaves, on the contrary, was always patience, submission, abstinence from violence, while in his own moral code he carried non-resistance to an extreme. Moreover his championship held out hope, and what goes to insurrection is despair."—Goldwin Smith, *William Lloyd Garrison*, pp. 60-65. —"Mr. Emerson once said, 'Eloquence is dog-cheap in anti-slavery meetings.' . . . On the platform you would always see Garrison; with him was . . . Sam May. Stephen S. Foster was always there. . . . Parker Pillsbury, James Buffum, Arnold Buffum, Elizur Wright, Henry C. Wright, Abigail Kelley, Lucy Stone, Theo. D. Weld, the sisters Grimké, from South Carolina; John T. Sargent, Mrs. Chapman, Mrs. Lydia M. Child, Fred Douglas, Wm. W. Brown and Francis Jackson. The last was a stern Puritan, conscientious, upright, clear-minded, universally respected. Edmund Quincy also was there, and he never spoke without saying something that had a touch of wit as well as of logic. Oliver Johnson . . . was one of the very first members of the Society. Theodore Parker, Samuel J. May, John Pierpont, Chas. L. Stearns, Chas. L. Redwood, Geo. Thompson (another wonderfully eloquent man), and, above all, Wendell Phillips."—J. F. Clarke, *Anti-slavery days*, ch. 3.—See also SLAVERY: 1828-1832; RACE PROBLEMS: 1705-1895.

1829-1833.—Incorporation of schools for blind. See EDUCATION: Modern developments: 20th century: Education for the deaf, blind, and feeble-minded: Blind.

1830.—Fifth census.—The total population was 12,866,020 (being about 33½ per cent. more than in 1820), classed and distributed as follows:

North			
	White	Free black	Slave
Connecticut . . . . .	289,603	8,047	25
Illinois . . . . .	155,061	1,637	747
Indiana . . . . .	339,399	3,629	3
Maine . . . . .	398,263	1,100	2
Massachusetts . . . . .	603,359	7,048	1
Michigan . . . . .	31,346	261	32
New Hampshire . . . . .	268,721	604	3
New Jersey . . . . .	300,266	18,303	2,254
New York . . . . .	1,873,663	44,870	75
Ohio . . . . .	928,320	9,568	6
Pennsylvania . . . . .	1,309,900	37,930	403
Rhode Island . . . . .	93,621	3,561	17

In the decade between 1820 and 1830 the immigrant arrivals in the United States, as officially recorded, numbered 143,439, of which 75,803 were from the British islands. Prior to 1821, there is no official record of immigration.

1831-1836.—Early anti-slavery petitions.—"It was in the session of 1831-32, that the first mutterings of the petition storm were heard. On December 12th, 1831, Mr. John Quincy Adams presented, in the House of Representatives, fifteen petitions from sundry inhabitants of Pennsylvania, the chief prayer of all of which was for abolition of slavery in the District of Columbia. Mr. Adams said that he would give no countenance to that prayer, but that there was a prayer in the petitions for the abolition of the slave trade in the District, which, he thought, might properly be considered, and he moved the reference of the petitions, for this purpose, to the regular committee of the House for the District. . . . The committee on the District reported, on December 19th, that as the District was composed of cessions of territory from Maryland and Virginia, it would, in the opinion of the members of the committee, be unwise, if not unjust, for Congress to interfere in the question of the relation of slave to master in the District, until Virginia and Maryland should take steps to eradicate the evil from their respective territories. This report seemed to settle the question for the session, and no more petitions appeared in either House. . . . It was first in the session of 1833-34, that petitions for the abolition of slavery in the District from others than Quakers, presumably from the members of the new anti-slavery societies, appeared in both Houses of Congress. Those presented in the Senate were referred to the committee of the Senate for the District, and nothing more was heard of them. Those presented in the House of Representatives were dealt with in the same manner. . . . At length, in the session of 1835-36, the storm broke in all its fury, in both the Senate and the House. It began in the House, December 16th, 1835, upon the presentation of a petition, containing the usual prayer in regard to slavery in the District, by Mr. Fairfield, of Maine. Mr. Cramer, of New York, moved to lay the petition on the table, and the motion was voted. Mr. Fairfield immediately presented another petition of like purport, and himself moved that it be laid upon the table. Mr. Boon, of Indiana, asked that the petition be read, which was done. Thereupon Mr. Slade, of Vermont, moved that it be printed. This meant, of course, that Mr. Slade was determined to have the slavery question agitated in Congress, if he could. Upon him rather than upon Mr. Adams rests the honor, or the blame, whichever it may be, of provoking the excitement over the Abolition petitions, and of upholding the right of petition in the most extreme degree. The House first voted to lay the petition on the table. The Speaker, Mr. James K. Polk, then put Mr. Slade's motion to print. Whereupon Mr. Slade attempted to debate the whole question of slavery in the District under the motion. The Speaker ruled that the contents

of the petition could not be debated under the motion to print. Mr. Vanderpoel, of New York, then moved to lay Mr. Slade's motion on the table, and the House voted to do so by a large majority. . . . Evidently the House thought that, in receiving and hearing the petitions and then laying them on the table, it had found the solution of the question, which neither encroached upon the power of the House over its rules of procedure, nor opened the way for anti-slavery agitation in Congress."—J. W. Burgess, *Middle period*, pp. 252-258.—"The first petitions presented to Congress for the abolition of slavery, at least the first to attract attention, were presented by Mr. Dickson, from the Canandaigua district, New York, who addressed the House in support of the prayer of the petitioners. Perhaps his speech, more than the petition he presented, served to stir up a feeling on the part of Southern men, and to cause other and numerous similar petitions to be gotten up at the North and sent to Congress."—N. Sargent, *Public men and events, 1817-1853*, v. 1, pp. 294-295.—See also SLAVERY: 1828-1832.

1832.—Twelfth presidential election.—Re-election of General Jackson.—General Jackson, renominated by his party almost without question, was re-elected over three competitors, the popular vote being as follows: Andrew Jackson, Democrat, 687,502; Henry Clay, National Republican, 530,189; William Wirt, Anti-Masonic, 33,108; John Floyd (voted for only in South Carolina, where electors were chosen by the legislature). The vote in the Electoral College stood: Jackson, 219, Clay 49, Floyd 11, Wirt 7. Martin Van Buren was elected vice president. "This election is notable for several reasons. It marks the beginning of the system of national nominating conventions; it gave Jackson a second term of office, in which he was to display his peculiar qualities more conspicuously than ever; it compacted and gave distinct character to the new Democratic party; and it practically settled directly the fate of the Bank of the United States, and indirectly the question of nullification. Jackson was easily re-elected, for he had established a great popularity, and the opposition was divided. A new party came into the field, and marked its advent by originating the national nominating convention. This was the Anti-Masonic party." (See NEW YORK: 1826-1832.) Both the Democratic and the National Republican parties adopted the invention of the Anti-Masons, and made their nominations for the first time by the agency of great national conventions.—W. Wilson, *Division and reunion, 1829-1880*, p. 62.

1833.—Beginning of penny papers. See PRINTING AND THE PRESS: 1830-1833.

1833-1836.—President Jackson's overthrow of the United States Bank.—Removal of deposits.—"The torrents of paper-money issued during the revolutionary war, which sunk in value to nothing, converted the old prejudice against paper promises-to-pay into an aversion that had the force of an instinct. To this instinctive aversion, as much as to the constitutional objections urged by Mr. Jefferson and his disciples, was owing the difficulty experienced by Alexander Hamilton in getting his first United States bank chartered. Hence, also, the refusal of Congress to recharter that bank in 1811. Hence the unwillingness of Mr. Madison to sanction the charter of the second bank of the

United States in 1816. But the bank was chartered in 1816, and went into existence with the approval of all the great republican leaders, opposed only by the extreme Jeffersonians and by the few federalists who were in public life. . . . But, long before General Jackson came into power, the bank appeared to have lived down all opposition. In the presidential campaign of 1824 it was not so much as mentioned, nor was it mentioned in that of 1828. . . . At the beginning of the administration of General Jackson, the Bank of the United States was a truly imposing institution. Its capital was thirty-five millions. The public money deposited in its vaults averaged six or seven millions; its private deposits, six millions more; its circulation, twelve millions; its discounts, more than forty millions a year; its annual profits, more than three millions. Besides the parent bank at Philadelphia, with its marble palace and hundred clerks, there were 25 branches in the towns and cities of the Union. . . . Its bank-notes were as good as gold in every part of the country. . . . The bank and its branches received and disbursed the entire revenue of the nation. . . . There . . . [was] a tradition in Washington . . . that General Jackson came up from Tennessee to Washington, in 1829, resolved on the destruction of the Bank of the United States, and that he was only dissuaded from aiming a paragraph at it in his inaugural address by the prudence of Mr. Van Buren. . . . General Jackson had no thought of the bank until he had been President two months. He came to Washington expecting to serve but a single term, during which the question of re-chartering the bank was not expected to come up. The bank was chartered in 1816 for twenty years, which would not expire until 1836." But, in 1829, the influence of Isaac Hill, one of the so-called "Kitchen Cabinet" [see CABINET, KITCHEN] at Washington, involved the irascible president in an endeavor to bring about the removal of Jeremiah Mason, a political opponent, who had been appointed to the presidency of the branch of the United States Bank at Portsmouth, New Hampshire. "The correspondence began in June and ended in October. I believe myself warranted in the positive assertion, that this correspondence relating to the desired removal of Jeremiah Mason was the direct and real cause of the destruction of the bank."—J. Parton, *Life of Andrew Jackson*, v. 3, ch. 20.—"As soon as the issue between him and the Bank of the United States was declared, Jackson resolved that the bank must be utterly destroyed. The method was suggested by Kendall and Blair, of the Kitchen cabinet. It was to cripple the available means of the bank by withdrawing from it and its branches the deposits of public funds. In the message of December, 1832, Jackson had expressed his doubt as to the safety of the government deposits in the bank, and recommended an investigation. The House, after inquiry, resolved on March 2, by 109 to 46 votes, that the deposits were safe. The bank was at that period undoubtedly solvent, and there seemed to be no reason to fear for the safety of the public money in its custody. But Jackson had made up his mind that the bank was financially rotten; that it had been employing its means to defeat his reelection; that it was using the public funds in buying up members of Congress for the purposes of securing a renewal of its charter, and of breaking down the administration; and that thus it had become a dangerous agency of corruption and a public enemy. Therefore the public funds must be withdrawn, without regard to consequences. But the law pro-

vided that the public funds should be deposited in the Bank of the United States or its branches, unless the Secretary of the Treasury should otherwise 'order and direct,' and in that case the Secretary should report his reasons for such direction to Congress. A willing Secretary of the Treasury was therefore needed. In May, 1833, Jackson reconstructed his Cabinet for the second time. . . . For the Treasury Department Jackson selected William J. Duane of Philadelphia, who was known as an opponent of the bank. Jackson, no doubt expected him to be ready for any measure necessary to destroy it. In this he was mistaken. Duane earnestly disapproved of the removal of the deposits as unnecessary, and highly dangerous to the business interests of the country. . . . A majority of the members of the Cabinet thought the removal of the deposits unwise. . . . In the business community there seemed to be but one voice about it. The mere rumor that the removal of the deposits was in contemplation greatly disturbed the money market. But all this failed to stagger Jackson's resolution. . . . The Cabinet, with the exception of the Secretary of the Treasury, bowed to Jackson's will. But Duane would not shelter himself behind the President's assumed responsibility to do an act which, under the law, was to be his act. He also refused to resign. If he had to obey or go, he insisted upon being removed. Jackson then formally dismissed him, and transferred Roger B. Taney from the attorney generalship to the treasury. Benjamin F. Butler of New York, a friend of Van Buren, was made Attorney General. Taney forthwith ordered the removal of the deposits from the Bank of the United States; that is to say, the public funds then in the bank were to be drawn out as the government required them, and no new deposits to be made in that institution. The new deposits were to be distributed among a certain number of selected state banks, which became known as the 'pet banks.' . . . The money market became stringent. Many failures occurred. The general feeling in business circles approached a panic. [But the very disturbance was charged upon the bank, itself; the people rallied to the support of their favorite, 'Old Hickory,' and when the national charter of the bank expired, in March, 1836, there was no hope of its renewal. It obtained a charter from the state of Pennsylvania, and continued business as a state institution until it went to pieces in the general commercial shipwreck of 1837-1841.]"—C. Schurz, *Life of Henry Clay*, v. 2, ch. 15.—See also MONEY AND BANKING: Modern: 1817-1833.

ALSO IN: W. G. Sumner, *Andrew Jackson as a public man*, ch. 11-14.—T. H. Benton, *Thirty years' view*, v. 1, ch. 40, 56, 64-67, 77, 92-111.—M. St. C. Clarke and D. A. Hall, *History of the Bank of the United States*.

1834.—Organization of the Whig party.—The largest section of the opposition to the Jacksonian democracy "was organized in 1834 as the Whig party. According to the 'Whig Almanac' for 1838, the party as then constituted comprised: (1) Most of those who, under the name of National Republicans, had previously been known as supporters of Adams and Clay, and advocates of the American system [of tariff-protection]; (2) Most of those who, acting in defence of what they deemed the assailed or threatened rights of the States, had been stigmatized as Nullifiers, or the less virulent State Rights' men, who were thrown into a position of armed neutrality towards the administration by the doctrines of the proclamation of 1832 against South Carolina; (3) A ma-

majority of these before known as Anti-Masons; (4) Many who had up to that time been known as Jackson men, but who united in condemning the high-handed conduct of the Executive, the immolation of Duane, and the subserviency of Taney; (5) Numbers who had not before taken any part in politics, but who were now awakened from their apathy by the palpable usurpations of the Executive and the imminent peril of our whole fabric of constitutional liberty and national prosperity.' It was not to be expected that a party composed of such various elements would be able to unite on one candidate with heartiness; and, as the event proved, it was necessary that some time should elapse before anything like homogeneity could be given to the organization. Nullification was not popular among the Whigs of the North, nor did the State Rights' people of South Carolina and other States care about the war on the bank and the removal of the deposits."—E. Stanwood, *History of presidential elections*, ch. 14.—"It was now felt instinctively that, in the existing struggle between the parties actually arrayed against each other, and in the principles and doctrines of those who were in power, there was a peculiar fitness in the revival of a term which, on both sides of the Atlantic, had been historically associated with the side of liberty against the side of power. The revival of the name of Whigs was sudden, and it was a spontaneous popular movement. In progress of time, it enabled the public men who were leading the opposition to the party of the Administration to consolidate an organization of distinct political principles, and to strengthen it by accessions from those who had found reason to be dissatisfied with the opinions prevailing among the friends of the President."—G. T. Curtis, *Life of Daniel Webster*, v. 1, p. 499.

1834.—Legislation to secure better organization of Indian territory. See OKLAHOMA: 1830-1844.

1835.—Exclusion of anti-slavery literature from the mails.—"It was during the Twenty-third Congress, 1835, that the abolition of slavery, especially in the District of Columbia, may be said to have begun to move the public mind at the North. . . . The labors of the enemies of slavery, or 'Abolitionists,' had commenced, and by indefatigable men who believed they were serving God and the cause of humanity, and consequently it was with them a labor of conscience and duty, with which nothing should be allowed to interfere. Instead of petitions to Congress, they now sent large boxes of tracts, pamphlets, and various publications which the Southern people denominated 'incendiary,' to the postoffice at Charleston, South Carolina, and other cities, to be distributed, as directed, to various persons. This increased the complaints and inflammatory articles in the Southern papers. The publications thus sent were stopped in the postoffice, and the postmasters addressed the head of the department, Amos Kendall, on the subject, who replied that though the law authorized the transmission of newspapers and pamphlets through the mail, yet the law was intended to promote the general good of the public, and not to injure any section; and intimated that, such being the effect of these publications at the South, postmasters would be justified in withholding them."—N. Sargent, *Public men and events, 1817-1853*, v. 1, pp. 294-295.

ALSO IN: A. B. Hart, *Slavery and abolition*, pp. 286-288.—A. Kendall, *Autobiography*, pp. 645 ff.

1835-1837.—Inflation of credits.—Land sales and speculation.—Great collapse.—"When the

United States Bank lost the government deposits, late in 1833, they amounted to a little less than \$10,000,000. On January 1, 1835, more than a year after the state banks took the deposits, they had increased to a little more than \$10,000,000. But the public debt being then paid and the outgo of money thus checked, the deposits had by January 1, 1836, reached \$25,000,000, and by June 1, 1836, \$41,500,000. This enormous advance represented the sudden increase in the sales of public lands which were paid for in bank paper, which in turn formed the bulk of the government deposits. . . . The increase in the sales of public lands was the result of all the organic causes and of all the long train of events which had seated the fever of speculation so profoundly in the American character of the day. . . . The increase of government deposits was only fuel added to the flames. The craze for banks and credits was unbounded before the removal of the deposits had taken place, and before their great increase could have had serious effect. . . . The insanity of speculation was in ample though unobserved control of the country while Nicholas Biddle [president of the United States Bank] still controlled the deposits, and was certain to reach a climax whether they stayed with him or went elsewhere."—E. M. Shephard, *Martin Van Buren*, ch. 8.—"Most of the settlers who moved before 1815 had not purchased their land at the public land offices, but had settled in regions like Kentucky or Tennessee, which had never come under the land system, or on land held under earlier titles, as in Ohio. . . . Between 1815 and 1820 the sales of the land offices were very large as a result of the speculative movement of that period, but a recent writer estimates that at the latter date 'not more than a fourth at most, of the men who were engaged in the westward movement,' were affected by the system regulating the sale of public lands. The use of the public domain as a source of revenue, the two dollar minimum, and the credit system were early denounced by the western men, but any change was resisted by representatives of the eastern States. . . . [But] the possibility of using the public lands as an agency of social reform gradually dawned upon the workingmen, and they began to demand, in their papers and conventions, that speculation should stop and the public domain be opened to the people. Land reform became an important issue in the platforms of organized labor. . . . The early policy of the government, of land sales for the sake of revenue, gradually gave way to the second, and what has proved to be the permanent, policy respecting the public lands. This is the system of land grants for actual settlement in small lots suitable for cultivation. By the act of April, 1820, sale for credit was abandoned and the price reduced to \$1.25 an acre, while the minimum tract to be sold to one individual was reduced to eighty acres. For the next ten years the sales of public land were very steady, averaging about 1,000,000 acres yearly. The introduction of the steamboat upon western waters, the extension of cotton culture through the Southwest, the greater demand for agricultural produce due to the growth in population, all led to a steady demand for land for actual cultivation and settlement. Nevertheless, in December, 1827, the Secretary of the Treasury reported that while more than 261,000,000 acres of land had been added to the public domain, since the organization of the government but 10,000,000 acres had been sold to individuals. . . . Western lands . . . [however, steadily increased in value], and as credit and money became easier under the

speculative fever of the time, they seemed a favorable object of investment to those who were seeking an easy and rapid increase of wealth. Paper villages were laid out, lands were sold at greatly enhanced prices, often fifty times their original cost, and speculation was fanned to a fever heat. The sales of public lands swelled rapidly, amounting to 3,856,278 acres for the year 1833, and to the enormous figure of 20,074,871 acres for 1836. The sales of 1834-36, of 40,000,000 acres, exceeded all that had been sold before. Nor was the speculation confined to western lands; owing to the extension of cotton culture due to the increasing demand for, and the consequent advance in the price of, cotton—from a maximum of 13½ cents a pound in 1833 to 20 cents in 1835—the value of southern plantations and city real estate rose enormously. The coal lands of Pennsylvania and the manufacturing cities of the East felt a similar impetus. Thus the assessed value of real estate in New York City rose from \$143,732,425 in 1835 to \$233,742,303 in 1836, and in Mobile from \$4,000,000 in 1834 to \$27,000,000 in 1837. After the panic of 1837 these values fell even more rapidly. . . . The settlement of the fertile country about the Great Lakes proceeded rapidly after the construction of the Erie and other canals had provided an outlet to the Atlantic ports for western produce."—E. Bogart, *Economic history of the United States*, pp. 264-266.—"In spite of the abolitionist agitation, labor unrest, and growing political opposition, the country seemed to be extremely prosperous as Jackson's term approached its close. The national debt was completely extinguished at the beginning of the year 1835. The revenues from the compromise tariff of 1833 were ample. The sale of public lands, encouraged by the low government price of \$1.25 an acre, with easy extension of credit and abundant issue of notes by the state banks, and stimulated by hopes of rapid development and huge profits in the exploitation of railroads and canals, rose from \$4,887,000 in 1834 to \$14,757,000 in 1835 and over \$24,000,000 in 1836. At the opening of the last named year the balance in the Treasury exceeded \$32,000,000. There seemed to be no way of stopping the income, for the tariff was fixed by the compromise for half a dozen years to come, and the price of lands could not be further lowered without prejudice to those who had already bought. Various schemes for the disposal of the surplus were brought forward, and in the end Clay's long-cherished project of a distribution of the surplus among the states in the ratio of their population was passed by Congress and signed by Jackson on June 23, 1836. Under the Distribution Act about \$18,000,000 was deposited with the States before the panic of 1837 came to change the surplus into a deficit. The American people were living in a fool's paradise in the middle thirties, building air castles of fortune overnight. Land values were immensely inflated; hundreds of banks recklessly chartered by state legislatures were flooding the country with their unsecured notes. The states (especially the new states of the West) were vying with one another in grandiose schemes for canals, railroads, and land improvements, incurring huge debts for public works which they fatuously believed would free them, with the rush of population, from the burdens of taxation. . . . The first shock of this fictitious prosperity came from President Jackson. On July 11, 1836, he ordered the Secretary of the Treasury to publish the Specie Circular, forbidding the land agents, and the deposit banks to receive anything but gold and silver

after August 15 in payment for the sales of public land. Thus by a stroke of the pen the government deprived of their validity that vast mass of state bank notes which the deposit banks had been freely receiving in payment for public lands and reissuing as loans for the purchase of more lands."—D. S. Muzzey, *The United States of America*, v. 1, pp. 391-395.—"The distribution of the surplus among the states by the law of 1836 was the last and in some respects the worst of the measures which aided and exaggerated the tendency to speculation. By this bill, all the money above \$5,000,000 in the treasury on January 1, 1837, was to be 'deposited' with the states in four quarterly installments commencing on that day. . . . From the passage of the deposit bill in June, 1836, until the crash in 1837, this superb donation of thirty-seven millions was before the enraptured and deluded vision of the country. Over nine millions and a quarter to be poured into 'improvements' or loaned to the needy,—what a luscious prospect! The lesson is striking and wholesome, and ought not to be forgotten, that, when the land was in the very midst of these largesses, the universal bankruptcy set in. During 1835 and 1836 there were omens of the coming storm. Some perceived the rabid character of the speculative fever. William L. Marcy, governor of New York, in his message of January, 1836, answering the dipsomaniac cry for more banks, declared that an unregulated spirit of speculation had taken capital out of the state; but that the amount so transferred bore no comparison to the enormous speculations in stocks and in real property within the state. . . . The warning was treated contemptuously; but before the year was out the federal administration also became anxious, and the increase in land sales no longer signified to Jackson an increasing prosperity. . . . So Jackson proceeded with his sound defense of the famous specie circular, long and even still denounced as the 'causa causans' of the crisis of 1837. By this circular, issued on July 11, 1836, the secretary of the treasury had required payment for public lands to be made in specie, with an exception until December 15, 1836, in favor of actual settlers and actual residents of the state in which the lands were sold. . . . Jackson's specie circular toppled over the house of cards, which at best could have stood but little longer. . . . An insignificant part of the sales had been lately made to settlers. They were chiefly made to speculators. . . . Of the real money necessary to make good the paper bubble promises of the speculators not one tenth part really existed. Banks could neither make their debtors pay in gold and silver, nor pay their own notes in gold and silver. So they suspended. The great and long concealed devastation of physical wealth and of the accumulation of legitimate labor by premature improvements and costly personal living, became now quickly apparent. Fancied wealth sank out of sight."—E. M. Shepard, *Martin Van Buren*, ch. 8.—Van Buren "was hardly at home before the panic of 1837 was upon the country. The Specie Circular of July, 1836, which drew money from the East to pay for Western lands, and the distribution of the surplus revenue, by which nearly nine millions must be transferred quarterly from locality to locality were undoubtedly two immediate causes. But behind both was a long series of land speculation, Western booming, extravagant expenditures, with general over-confidence and some disastrous crop failures. All the New York banks but three suspended specie payment on May 10th, and the banks else-

where immediately followed their example. Since by law the government could receive only specie and the notes of specie-paying banks, and since the small amount of specie was largely in hiding, the government, though out of debt through Jackson's rigid policy, had not enough money to transact its business. Much of what it had on hand was locked up in banks which could not withstand the tide of depression. A further embarrassment was due to the fact that government funds could legally be deposited only in banks which paid specie for their notes, and the administration was thus forced to care for its funds, since none of the banks met this requirement. . . . Many democrats began to say that the circular ought to be rescinded at least temporarily. Van Buren [a "hard money man"] withstood the demand, much to the gratification of Jackson, who watched him closely. Business men turned to the expedient of private money. Various public and private corporations issued their tokens of credit; and one of the striking resources was several kinds of copper medals the size of a cent which passed as such generally. . . . Though Van Buren would not rescind the Specie Circular [and required the business of the post-office to be on a specie basis], he called congress in extra session for the first Monday in September. It seemed a good opportunity to adopt Jackson's cherished policy of a 'complete divorce of the Government from all banks,' both as to currency and as to the deposit function. He recommended, therefore, the issue of ten millions of interest-bearing treasury notes, to be receivable with specie for government dues, and he also suggested the creation of a series of sub-treasury offices to hold and pay out public funds without recourse to banks."—J. S. Bassett, *Life of Andrew Jackson*, v. 2, pp. 723-725.—"In the future, according to this plan, all moneys, as they came in, should be deposited in the treasury at Washington, in the vaults of the mints at Philadelphia, New Orleans, or Dahlonega, or in subsidiary treasuries in the principal importing cities where vaults would be built. The Whigs fought the scheme with all their strength, but in 1840 there was a sufficient administration majority in Congress to pass the acts necessary to establish the Independent Treasury system. [See INDEPENDENT TREASURY.] There were several weak points in the plan. While the necessary vaults were being constructed, it would have been perfectly feasible to deposit the federal monies in the vaults of existing banks where they could be held and drawn upon by the government without being in any way made the basis of loans. The act forbade the treasury officials to make any use whatever of the existing banking institutions. They could not receive the notes of any of them or receive payment in the form of drafts on them."—E. Channing, *History of the United States*, v. 5, p. 461.

1836.—Atherton gag.—"At this time [1835-

1836], the Northern abolitionists sent petitions to Congress for the abolition of slavery in the District of Columbia. They contended that as this territory was under the control of the United States' Government, the United States was responsible for slavery there; and that the Free States were bound to do what they could to have slavery brought to an end in that District. But the Slave States were not willing to have anything said on the subject, so they passed what was called a 'gag' law in the House of Representatives, and ruled that all petitions which had any relation to slavery should be laid on the table without being debated, printed or referred. John Quincy Adams opposed this rule resolutely, maintaining that it was wrong and unconstitutional. . . . He continued to present petitions, as before, for the abolition of slavery in the District. When the day came for petitions he was one of the first to be called upon; and he would sometimes occupy nearly the whole hour in presenting them, though each one was immediately laid on the table. One day he presented 511."—J. F. Clarke, *Anti-slavery days*, p. 45.—The gag-law has sometimes taken the name of the Atherton gag from its New Hampshire author.—W. C. Bryant and S. H. Gay, *Popular history of the United States*, v. 4, p. 338.—See also CENSORSHIP: United States; ILLINOIS: 1831-1837.

1836.—Jackson's administration reviewed.—"What of the administration as a whole? Parton's view is as follows: 'I must avow explicitly the belief that, notwithstanding the good done by General Jackson during his presidency, his elevation to power was a mistake on the part of the people of the United States. The good which he effected has not continued, while the evil which he began remains.' Sumner, in commenting on 'Jackson's modes of action in his second term,' says: 'We must say of Jackson that he stumbled along through a magnificent career, now and then taking up a chance without really appreciating it; leaving behind him disturbed and discordant elements of good and ill just fit to produce turmoil and disaster in the future.' Later he adds: 'Representative institutions are degraded on the Jacksonian theory just as they are on the divine-right theory, or on the theory of the democratic empire. There is not a worse perversion of the American system of government conceivable than to regard the President as the tribune of the people.' The view of von Holst may be inferred from the following passages: 'In spite of the frightful influence, in the real sense of the expression, which he exercised during the eight years of his presidency, he neither pointed out nor opened new ways to his people by the superiority of his mind, but only dragged them more rapidly onward on the road they had long been traveling, by the demoniacal power of his will.' The meaning of the bank struggle is thus defined: 'Its significance lay in the elements which made Jackson able actually and successfully to assert his claims, in conflict both with the constitution and with the idea of republicanism, to a position between Congress and the people as patriarchal ruler of the republic.' Elsewhere he tells us that the 'curse of Jackson's administration' is that it weakened respect for law; that 'the first clear symptom' of 'the decline of a healthy political

spirit' was the election and re-election of Jackson to the presidency; that his administration paved a 'broad path for the demoralizing transformation of the American democracy'; and that 'his "reign" receives the stamp which characterizes it precisely from the fact that the politicians knew how to make his character with its texture of brass, the battering-ram with which to break down the last ramparts which opposed their will.' According to Parton, Sumner, and von Holst, as I understand them, the net result of Jackson's influence upon the American people was to hasten their progress toward political ruin. I think this conclusion erroneous. The gravest accusation against Jackson is, that his influence undermined respect for law. It is plausibly argued that, since he himself was impatient of authority, his example must have stimulated lawlessness in his followers. It may be urged, in reply, that the history of the country does not support the charge. The worst exhibitions of general lawlessness which have disgraced the United States were the antiabolitionist mobs of Jackson's own day—for which he was not responsible. Since then, the American people, in spite of the demoralizations of the war and reconstruction periods, have steadily grown in obedience to law. . . . It is a curious circumstance that the relation of Jackson to sectionalism has received very little attention; and yet the growth of sectionalism, i. e., the tendency to divide the Union into two portions, politically separate and independent, is the fact which, from the Missouri Compromise of 1820 to the ordinances of secession in 1860, gives our political history its distinctive character. The one important question concerning Jackson, as indeed concerning every public man during the forty years which precede the Civil War, is: What did he do towards saving the Union from sectionalism? . . . Jackson came before the country as a disciple of Jefferson, and therefore as a believer in state rights. There was, it is true, much in his temper and situation which favored centralization; nevertheless, he was an honest, though moderate and somewhat inconsistent Jeffersonian, and he won and retained the confidence of the state-rights element in the democratic party. Moreover, he identified himself with the newly enfranchised and poorer citizens just rising to political self-consciousness. In these ways, his following came to include a large majority of his fellow-citizens, and, what was of the utmost importance, by far the larger proportion of those whose political character and opinions were as yet plastic. . . . Jackson became, to a degree never realized by any other man in our history, the trusted leader and teacher of the masses. . . . This intimate relation to the people, and this unparalleled power over the people, Jackson used to impress upon them his own love of the Union and his own hatred of sectionalism. . . . His character was altogether national. It is easy to think of Calhoun as a southerner and a South Carolinian; but it would not be easy to think of Jackson as belonging to Tennessee or to the border states. The distribution of his support in the election of 1832 is instructive. New Hampshire, New York and Pennsylvania, as well as Tennessee, Georgia, Missouri, were Jackson's states. He was not looked upon as the representative of any particular section. His policy as President showed no trace of sectionalism. Its aim was the welfare of the masses irrespective of section. To him state lines had little meaning; sectional lines, absolutely none. There is another way in which he rendered great though unconscious service to the cause of national

unity: he made the government, hitherto an unmeaning abstraction, intelligible and attractive to the people. . . . The chief value, then, of Jackson's political career, was its educational effect. His strong conviction of the national character of the Union, his brave words and acts in behalf of the rights of the Union, sank deep into the hearts of followers and opponents."—A. D. Morse, *Political influence of Andrew Jackson (Political Science Quarterly, June, 1886)*.—"In his inaugural address, Jackson declared that with foreign nations it would be his aim 'to preserve peace and to cultivate friendship on fair and honorable terms, and in the adjustment of any differences that may exist or arise to exhibit the forbearance becoming a powerful nation rather than the sensibility belonging to a gallant people.' The same sentiment was more pithily put in his first annual message, where he stated it to be his 'settled purpose to ask nothing that is not clearly right and to submit to nothing that is wrong.' . . . That he would mingle, with extraordinary skill, in his conduct of diplomatic business, tact, forbearance, and firmness, few could foresee. Several important questions were pending in 1829. Ever since the close of the war for independence, the United States had coveted the lucrative direct trade with the British West Indies. . . . [Adams had failed to come to an arrangement with the British government on the subject. (See above: 1825-1828.) Jackson took it up early in his administration, and McLane, his first minister to Great Britain, was instructed to apply for a reopening of the trade.] . . . The move was adroitly followed up, . . . and on October 5 Jackson was able to announce by proclamation that the trade was open. . . . The settlement of pending claims against France was more difficult. These claims had their origin in the injury wrought to American commerce by the arbitrary orders and decrees of France during the Napoleonic Wars [see above: 1800: Convention with France], and ever since 1815 had been the subject of negotiation. The claims of the United States, however, had been met by counterclaims of France on account of alleged violation of the 'most favored nation' privilege accorded by the eighth article of the treaty of 1803, for the cession of Louisiana. . . . [Jackson instructed W. C. Rives, the minister to France to open negotiations. The accession of Louis Philippe gave an opportunity and on] July 4, 1831, a treaty was concluded by which France agreed to pay to the United States, in full satisfaction of the claims of American citizens, twenty-five million francs, payment to be made in six annual instalments, beginning one year from the exchange of ratifications of the treaty. . . . [The treaty was unpopular in France, however, and appropriations for payment were refused. In his annual message in 1834 the president recommended reprisals, and Livingston, who had been sent out as minister in 1834, withdrew in 1835. In January 1836 a special message again urged reprisals.] January 27, 1836, Great Britain offered to mediate. The offer was accepted, and on February 25 the British minister had the satisfaction of informing the secretary of state that the 'frank and honorable manner' in which Jackson had expressed himself had removed the 'difficulties' which had interfered with the execution of the treaty of 1831. On May 10, Jackson was able to appraise Congress that four instalments of the indemnity had been paid. In the session of 1834-1835 claims to the amount of five million dollars, arising from alleged depredations of France on American commerce prior to 1800, were presented to Congress. . . . A bill for

the relief of the claimants passed the Senate January 28, 1835, but was not acted on by the House. The 'French spoliation claims,' as they were called, were brought before Congress from time to time until 1885, when provision for their examination by the court of claims was finally made. Claims against other European countries, similar in origin and character to those against France, were also prosecuted, and in some cases settled, during Jackson's administrations. . . . Jackson's limitations as a diplomatist were offset, in the popular estimation, by the general success of his policy. No international questions of the first order arose during his administrations, and the personnel of the diplomatic service was not distinguished; but a number of important differences, some of them of long standing, were adjusted and respect for the United States appreciably enhanced. Towards powerful states Jackson used frowns or smiles as best suited his mood, while weak states like Mexico were treated with scant regard; but there was unceasing watchfulness over American interests and a jealous care for national honor and standing."—W. MacDonald, *Jacksonian democracy*, pp. 200-205, 208-209, 217.

1836.—Independence of Texas recognized. See TEXAS: 1836-1845.

1836.—Thirteenth presidential election.—Martin Van Buren chosen.—"As Vice-president, Van Buren was at the side of Jackson during his second term as President. It was the period of the first experiment in producing panics; of reckless expansions of the currency; of extravagant speculation; of an accumulating surplus revenue; of the last struggles of the Bank of the United States for the continuance of its powers. There was not a difficult question on which Jackson did not open his mind to the Vice-president with complete and affectionate confidence. He . . . [was often] heard to narrate incidents illustrating the prompt decision and bold judgment of his younger friend; and in those days of vehement conflicts between the power of the people and interests embodied against that power, the daring energy of the one was well united with the more tranquil intrepidity of the other. How fully this was recognized by the people appears from the action of the Democratic party of the Union. In May, 1835, it assembled in convention at Baltimore, and by a unanimous vote placed Van Buren in nomination as their candidate for the Presidency."—G. Bancroft, *Martin Van Buren*, ch. 5.—"For the taking of the vote, the convention adopted the famous [Democratic party] 'two-thirds rule,' under which each state was to be entitled, in the nomination of a candidate for the vice-presidency, to a number of votes equal to the number to which it would be entitled in the electoral college under the new apportionment; two-thirds of the whole number of votes in the convention to be necessary to a choice. So skillfully had the plans been laid, and so powerful was the influence of Jackson, that Van Buren received on the first ballot 208 votes out of 283. No platform was adopted by the convention. In the campaign that followed, violent abuse of the candidates was mingled with spectacular appeals to the voters. Each party had its newspaper organs, to which great importance was attached. Clay insisted on keeping to the front

the tariff and the bank, hoping thereby to divide the Jackson forces in Pennsylvania, which favored the bank, in Ohio and Kentucky, which favored protection, and in the south, which opposed both. Of the two issues, that of the bank turned out to be the most potent; for while the merits of a banking policy could never afford sufficient ground for party divergence among the masses, the attempt to force a recharter gave Jackson a powerful weapon against his enemies. The veto of the bank-charter bill, in July, 1832, together with the inability of Congress to pass the bill over the veto, afforded convincing popular proof that the institution was the menace to the country that Jackson had claimed, and that Jackson was the champion to be relied upon to destroy it. The struggle, accordingly, was between Jackson and the bank, and the anti-administration leaders showed little political wisdom in affecting to believe that in such a contest the people would not side with Jackson."—W. MacDonald, *Jacksonian democracy*, pp. 195-196.—"The Democracy of the Union supported Van Buren with entire unanimity. Out of two hundred and eighty-six electoral votes he received one hundred and seventy; and, for the first time, the Democracy of the North saw itself represented in the Presidential chair. Electoral votes were given for Van Buren without regard to geographical divisions: New York and Alabama, Missouri and Maine, Virginia and Connecticut, were found standing together. His election seemed friendly to the harmony and the perpetuity of the Union."—G. Bancroft, *Martin Van Buren*, ch. 5.—Van Buren received a clear majority of the popular vote cast at the election, namely, 762,678, against 735,651 cast in opposition, but divided between four Whig candidates, namely, William H. Harrison, who received 73 electoral votes, Hugh L. White, who received 26, Daniel Webster who received 14, and Willie P. Mangum, who received 11. Richard M. Johnson was chosen vice president.

1837.—Introduction of the subtreasury system.—"When the banks went down, they had the government deposits: this was in May, 1837. Van Buren's administration was only two months old. The President was a warm admirer of Jackson, and had formally announced that he would continue his predecessor's policy with respect to the management of the deposits. But the 'experiment' had suddenly culminated. The government deposits were not in its control, and could not be regained; their transfer from one part of the country to another had ceased. . . . Once more, therefore, the government was confronted with a grave question touching its deposits and the circulating medium. It now essayed a brand-new experiment. This was nothing less than keeping the deposits itself, and transferring and paying them as occasion required; while the people were left to regulate the currency themselves. This was a very wide departure from any former policy. The mode proposed of keeping the public deposits may be briefly described. The treasury building at Washington was to constitute the treasury of the United States, and the public money was to be kept within its vaults. The mint at Philadelphia, the branch at New Orleans, the new custom-houses in New York and Boston, were also to contain branch treasury vaults. Places were also to be prepared at Charleston, St. Louis, and elsewhere. The treasury of the United States at Washington, and the treasurers of the mints at

Philadelphia and New Orleans, were to be 'receivers-general,' to keep the public money. . . . At the extra session of Congress in 1837, the Executive recommended the sub-treasury experiment. Congress refused to try it, although a majority in both Houses belonged to the same political party as the President. Nevertheless, the system was continued, without legislative sanction, until 1840, when Congress finally passed a bill legalizing the measure. At the presidential election in 1840 a party revolution occurred, and the sub-treasury system, which had formed a prominent issue in the campaign, was unqualifiedly condemned by the people. Congress repealed the law, and passed a bill creating another national bank," which President Tyler vetoed. (See below: 1841.) "Thus the keeping of the public money remained in the hands of the government officials, without legislative regulation, until the passage of the sub-treasury bill, in 1846. The system established at that time has been maintained ever since."—A. S. Bolles, *Financial history of the United States, 1789-1860*, bk. 3, ch. 2.

1837-1840.—Anti-slavery petitions in the Senate.—Calhoun's resolutions forcing the issue.—Fifth gag rule.—"The movements for and against slavery in the session of 1837-'38 deserve to be noted, as of disturbing effect at the time; and as having acquired new importance from subsequent events. Early in the session a memorial was presented in the Senate from the General Assembly of Vermont, remonstrating against the annexation of Texas to the United States, and praying for the abolition of slavery in the District of Columbia—followed by many petitions from citizens and societies in the Northern States to the same effect; and, further, for the abolition of slavery in the Territories—for the abolition of the slave trade between the States—and for the exclusion of future slave States from the Union. . . . The question which occupied the Senate was as to the most judicious mode of treating these memorials, with a view to prevent their evil effects: and that was entirely a question of policy, on which senators disagreed who concurred in the main object. Some deemed it most advisable to receive and consider the petitions—to refer them to a committee—and subject them to the adverse report which they would be sure to receive; as had been done with the Quakers' petitions at the beginning of the government. Others deemed it preferable to refuse to receive them. The objection raised to this latter course was, that it would mix up a new question with the slavery agitation which would enlist the sympathies of many who did not co-operate with the Abolitionists—the question of the right of petition. . . . Mr. Clay, and many others were of this opinion; Mr. Calhoun and his friends thought otherwise; and the result was, so far as it concerned the petitions of individuals and societies, what it had previously been—a half-way measure between reception and rejection—a motion to lay the question of reception on the table. This motion, precluding all discussion, got rid of the petitions quietly, and kept debate out of the Senate. In the case of the memorial from the State of Vermont, the proceeding was slightly different in form, but the same in substance. As the act of a State, the memorial was received; but after reception was laid on the table. Thus all the memorials and petitions were disposed of by the Senate in a way to accomplish the two-fold object, first, of avoiding discussion;

and, next, condemning the object of the petitioners. . . . Every memorial and petition had been disposed of according to the wishes of the senators from the slaveholding States; but Mr. Calhoun deemed it due to those States to go further, and to obtain from the Senate declarations which should cover all the questions of federal power over the institution of slavery. For that purpose, he submitted a series of resolves—six in number—which derive their importance from their comparison, or rather contrast, with others on the same subject presented by him in the Senate ten years later. . . . The six resolutions of this period ('37-'38) undertook to define the whole extent of the power delegated by the States to the federal government on the subject of slavery; to specify the acts which would exceed that power; and to show the consequences of doing anything not authorized to be done—always ending in a dissolution of the Union. The first four of these related to the States; about which, there being no dispute, there was no debate. The sixth, without naming Texas, was prospective, and looked forward to a case which might include her annexation; and was laid upon the table to make way for an express resolution from Mr. Preston on the same subject. The fifth related to the territories, and to the District of Columbia, and was the only one which excited attention, or has left a surviving interest. It was in these words: 'Resolved that the intermeddling of any State, or States, or their citizens, to abolish slavery in this District, or any of the territories, on the ground or under the pretext that it is immoral or sinful, or the passage of any act or measure of Congress with that view, would be a direct and dangerous attack on the institutions of all the slave-holding States.' The dogma of 'no power in Congress to legislate upon the existence of slavery in territories' had not been invented at that time. . . . The resolve went upon 'the existence of the power, and deprecated its abuse.' Mr. Clay offered an amendment, in the nature of a substitute, consisting of two resolutions, the first of which was in these words: "That the interference by the citizens of any of the States, with the view to the abolition of slavery in this District, is endangering the rights and security of the people of the District; and that any act or measure of Congress, designed to abolish slavery in this District, would be a violation of the faith implied in the cessions by the States of Virginia and Maryland—a just cause of alarm to the people of the slaveholding states—and have a direct and inevitable tendency to disturb and endanger the Union.' The vote on the final adoption of the resolution was: [yeas 37, nays 8]. . . . The second resolution of Mr. Clay applied to slavery in a territory where it existed, and deprecated any attempt to abolish it in such territory, as alarming to the slave States, and as violation of faith towards its inhabitants, unless they asked it; and in derogation of its right to decide the question of slavery for itself when erected into a State. This resolution was intended to cover the case of Florida, and ran thus: 'Resolved that any attempt of Congress to abolish slavery in any territory of the United States in which it exists would create serious alarm and just apprehension in the States sustaining that domestic institution, and would be a violation of good faith towards the inhabitants of any such territory who have been permitted to settle with, and hold, slaves therein; because the people of any such territory have not asked for the abolition of slavery therein; and because, when any such territory shall be admitted

into the Union as a State, the people thereof shall be entitled to decide that question exclusively for themselves.' And the vote upon it was—[yeas 35, nays 9]. . . . The general feeling of the Senate was that of entire repugnance to the whole movement—that of the petitions and memorials on the one hand, and Mr. Calhoun's resolutions on the other. The former were quietly got rid of, and in a way to rebuke, as well as to condemn their presentation. . . . The resolutions could not so easily be disposed of, especially as their mover . . . 'desired to make the question, on their rejection or adoption, a test question.'—T. H. Benton, *Thirty years' view*, v. 2, ch. 33.

- 1840.—Fourteenth presidential election.—Log-cabin and Hard-cider campaign.—Before the Sub-treasury Bill was passed "the presidential campaign of 1840 was being conducted. Van Buren's

nomination by his party was easily secured in a convention in Baltimore, May 4, 1840. Several states had named candidates for the vice-presidency, and the convention thought it best to refrain from deciding between them. It was probably expected that the choice would at last fall to the Senate. A platform strong in Jacksonian principles was adopted as the ground on which the country should continue to manifest its confidence in the existing administration. The whigs approached the election in high spirits. The long period of financial stringency, the inability of the democrats to unite on a positive remedy, and the many opponents of Van Buren in his party indicated that the democrats would have strong opposition. Clay saw the situation and had high hopes. It seemed that his opportunity was at last at hand. The convention was called at Harrisburg, December 4, 1839. As the time approached, a strong anti-Clay opposition appeared within the party. He was a mason, he had spoken against the abolitionists, and he was already twice defeated for the presidency. The opponents of Clay were well led by Thurlow Weed, party manager in the important state of New York. . . . Harrison was finally named in the convention. John Tyler, of Virginia, deeply attached to the defeated leader, was nominated for vice-president."—J. S. Bassett, *Short history of the United States*, pp. 433-434.—"The campaign of 1840 marks the final disappearance from American politics of all avowed belief in aristocracy. The two parties rivalled each other in proclaiming devotion to the will of the people; and the Whigs won because their clamor was the loudest and because the Democrats were discredited in the panic of '37. The Whig candidate was William Henry Harrison, the victor of Tippecanoe. An opponent referred to him contemptuously as a rude frontiersman fit only to live in a log cabin and drink hard cider. The Whigs turned this slur in effective ammunition. They had no official platform, and their candidate for Vice President, Tyler, was a Statesrights Democrat who happened to be Hostile to Van Buren. But they swept the country in a 'Hurrah Boys' campaign [known as the "Log Cabin and Hard Cider campaign"] for 'Tippecanoe and Tyler too'—the chief features being immense mass meetings in the country and torchlight processions in the cities, with both sorts of entertainments centering round log cabins and barrels of cider."—W. M. West, *Story of American democracy, political and industrial*, p. 475.—William Henry Harrison, Whig, was elected president, over Martin Van Buren, Democrat, and James G. Birney, candidate of the "Liberty party." The popular vote cast was: Harrison 1,275,016, Van Buren 1,129,102, Birney 7,069. The electoral vote stood: Harrison 234, Van Buren 60, Birney none. John Tyler was elected vice president. "If one could imagine a whole nation declaring a holiday or season of rollicking for a period of six or eight months, and giving themselves up during the whole time to the wildest freaks of fun and frolic, caring nothing for business, singing, dancing, and carousing night and day, he might have some faint notion of the extraordinary scenes of 1840. It would be difficult, if not impossible, otherwise to form even a faint idea of the universal excitement, enthusiasm, activity, turmoil, and restlessness which pervaded the country during the spring, summer, and fall of that memorable year. Log cabins large enough to hold crowds of people were built in many places. Small ones, decorated with coon-skins, were mounted on wheels and used in processions. . . . Meetings were everywhere, and every day, held

in neighborhoods, school-houses, villages, towns, counties, cities, States, varying in number from ten to one hundred thousand; and wherever there was a gathering there were also speaking and singing. . . . Farmers with big teams and wagons, would leave their fields and travel ten, twenty, or thirty miles, accompanied by their families and neighbors, to attend a convention or a barbecue and listen to distinguished orators. Crowds on the road, multitudes in big wagons drawn by four, six, or eight horses, made the welkin ring with their log-cabin songs. . . . The entire population seemed to be absorbed in the great duty of electing General Harrison and thus changing the government. . . .

'What has caused this great commotion, motion, motion,

Our country through?

It is the ball a rolling on

For Tippecanoe and Tyler too,

For Tippecanoe and Tyler too.' . . . The popularity of no one man could have produced such a universal outpouring of the people from day to day for weeks and months unceasingly, abandoning everything else, and giving time and money unstintedly to carry the election. General Harrison was but the figure-head,—the representative of the Whig party for the time being. Few had ever heard of him. . . . As to his fitness for the presidency, the people knew nothing and cared nothing. A change in the government was what they desired and were determined to have."—N. Sargent, *Public men and events*, v. 2, pp. 107-110.

1840.—Sixth census.—The total population was 17,069,453 (exceeding that of 1830 by nearly 33 per cent.), classed and distributed as follows:

North			
	White.	Free black.	Slave.
Connecticut . . . . .	301,856	8,105	17
Illinois . . . . .	472,254	3,598	331
Indiana . . . . .	678,698	7,165	3
Iowa . . . . .	42,924	172	16
Maine . . . . .	500,438	1,355	...
Massachusetts . . . . .	729,030	8,669	...
Michigan . . . . .	211,560	707	...
New Hampshire . . . . .	284,036	537	1
New Jersey . . . . .	351,588	21,044	674
New York . . . . .	2,378,800	50,027	4
Ohio . . . . .	1,502,122	17,342	3
Pennsylvania . . . . .	1,676,115	47,854	64
Rhode Island . . . . .	105,587	3,238	5
Vermont . . . . .	291,218	730	...
Wisconsin . . . . .	30,749	185	11
	<u>9,557,005</u>	<u>170,728</u>	<u>1,129</u>
South

Tennessee . . . . .	640,627	5,524	183,059
Virginia . . . . .	740,858	49,852	449,087
	<u>4,632,530</u>	<u>215,575</u>	<u>2,486,326</u>

The number of immigrants arriving in the United States between 1830 and 1840, according to official reports, was 599,125, of whom 283,191 were from the British Islands, and 212,497 from other parts of Europe.—See also CENSUS: United States.

1840-1841.—McLeod case. See CANADA: 1840-1841.

1841.—Settlement of Massachusetts.—Rhode Island boundary dispute. See RHODE ISLAND: 1841.

1841.—Death of President Harrison.—Breach between President Tyler and the Whig party which elected him.—“The rejoicing of the Whigs was soon turned to mourning. Five weeks after the old hero of Tippecanoe had spoken his inaugural address before the enthusiastic crowd gathered at the eastern front of the Capital, his body was lying in state beneath its majestic dome. How far Harrison would have succeeded, had he lived, in controlling and guiding the Whigs, is a matter of conjecture. . . . Both Clay and Webster towered above him, and . . . made slight concealment of their opinion of his ‘mediocrity.’ . . . Clay declined a place in the cabinet, preferring to direct the administration from his place in the Senate; but a full half of the cabinet officers were filled with men of his recommendation—Ewing (Treasury), Badger (Navy), and Crittenden (Attorney-General). Webster, given the choice of positions after Clay’s declination, took the portfolio of State, and brought his follower Francis Granger into the cabinet as Postmaster-General. The President appears to have been allowed to elect his Secretary of War (James K. Bell) without interference from the giants.”—D. S. Muzzey, *United States of America*, v. 1, p. 403.—“One of his last acts was to call congress in extra session for May 31, 1841. When it met, Tyler was president. Tyler now found himself at the head of a party with which he had little sympathy. He believed in state rights, opposed a bank and a high tariff, and had only left the democratic fold because he resented the towering methods of Jackson. His nomination had been made without the slightest expectation that he would ever be in a position to veto a bill which the whigs had carried through congress. . . . [When the extra session began Clay took charge of the situation like a military commander.] He offered a resolution specifying what work the extra session should perform, the chief features being: the repeal of the sub-treasury act, the incorporation of a bank, the enactment of a higher tariff law, and the distribution of the proceeds of land sales. . . . Tyler was very cautious, but he was also stubborn, and Clay’s dashing assumption of power aroused him.”—J. S. Bassett, *Short history of the United States*, p. 435.—The bill to abolish the sub-treasury “was passed by both Houses and signed by the President. A bill to incorporate ‘The Fiscal Bank of the United States’ was passed by both Houses. . . . It was vetoed by the President. . . . An effort to pass the bill over the veto did not receive a two-thirds majority. The Whig leaders, anxious to prevent a party disaster, asked from the President an outline of a bill which he would sign. After consultation with the Cabinet, it was given, and passed by both Houses. September 9th the President vetoed this bill also, and an attempt to pass it over the veto did not receive a two-thirds majority. The action of the President, in vetoing a bill drawn according to his own suggestions, and thus apparently provoking a contest with the party which had elected him, roused the unconcealed indignation of the Whigs. The Cabinet, with one

exception [Daniel Webster, secretary of state, who remained in President Tyler’s cabinet until May, 1843, in order that he might conclude the north-eastern boundary negotiations], at once resigned. The Whig members of Congress issued Addresses to the People, in which they detailed the reforms designed by the Whigs and impeded by the President, and declare that ‘all political connection between them and John Tyler was at an end from that day forth.’ . . . The President filled the vacancies in the Cabinet by appointing Whigs and Conservatives. His position was one of much difficulty. His strict constructionist opinions, which had prevented him from supporting Van Buren, would not allow him to approve a National Bank, and yet he had accepted the Vice-Presidency from a party pledged to establish one. The over hasty declaration of war by the Whigs put a stop to his vacillations, and compelled him to rely upon support from the Democrats. But only a few members of Congress, commonly known as ‘the corporal’s guard,’ recognized Tyler as a leader.”—A. Johnston, *History of American politics*, ch. 15, sect. 2-4.

1841-1844.—Negotiations with Texas.—British influence in Texas.—Effect on action of administration.—Annexation of Texas.—By far the most important measure of the Tyler administration was the annexation of Texas. After the defeat of Santa Anna, in 1836, Texas had appealed to the United States for annexation. But, in spite of his anxiety for the territory, and the fact that he had already made two attempts to buy it from Mexico, and the added influence of the vote of Congress to recognize the independence of the republic, Jackson then refused to take the necessary steps. “Texas had made the preservation of slavery one of the grounds of revolution, and if annexed it would be slave territory. The question immediately became a sectional one. Calhoun and the South urged that this vast region be acquired without delay. John Quincy Adams and Webster both made speeches on the other side. Jackson was hending all his energies to carry the election of Van Buren and perpetuate his policy against the bank; and he was unwilling to jeopardize party harmony. . . . [He advised Congress against recognition] but in February, 1837, when it seemed that England was about to grant recognition, he changed his attitude. . . . During Van Buren’s administration the annexation of Texas was held in abeyance. The South desired it, but the North was sure to object, and the question was too dangerous to party harmony to be taken up as long as it could be avoided. . . . After 1838, Texas ceased to offer herself where there was no prospect that she would be accepted.”—J. S. Bassett, *Short history of the United States*, pp. 422, 438.—“In spite of the repulse which the Texan government had suffered in its attempt at annexation, it was first to indicate the desire of returning to the subject. In December, 1841, when Sam Houston became for the second time president of the republic, he immediately sent James Reily as *chargé d’affaires* to Washington, with instructions to ascertain whether the United States was indisposed to negotiate further relative to annexation. Anson

Jones, secretary of state under Houston, says that this was done with little hope of a favorable answer; and the Texan authorities were therefore not disappointed on learning from Reily that his efforts had met with no encouragement. March 25, 1842, he wrote Jones from Washington, saying, 'I would rather die than to remain here. . . . You can see from my official letter that nothing can be done here in the way of any negotiation for Texas.' Shortly afterwards his request to be relieved was granted, and his place was taken by Isaac Van Zandt, who was instructed to keep his government advised, so far as he might be able, of the feeling relative to annexation, both in Congress and among the people of the United States. This indifference of the United States government was suddenly changed to marked anxiety. . . . [By her negotiations with France and England], Texas had finally struck the key-note of the policy that was to win where humble and filial petition had failed. . . . The uneasiness thus awakened at Washington was much increased by reports that began to reach the government concerning a proposed use of British influence in Texas towards the abolition of slavery. One of these reports came through a private letter from 'a citizen of Maryland,' said to have been Duff Green, a friend of Calhoun. Benton asserts that the letter was intended for public use, and was paid for out of the contingent fund of the state department. Whether this be true or not, the story was sensational. It was to the effect that S. P. Andrews, of Houston, Texas, was seeking to get the support of the British government for a plan to abolish slavery in the republic by indemnifying the slave-holders. . . . According to the 'citizen of Maryland' who gave the Texan minister at London as his authority, that government had agreed to guarantee interest on a loan for the purpose, to be repaid with Texan lands, if the government of the republic would abolish slavery. Upshur, the United States secretary of state, who must be regarded as speaking for President Tyler, credited the tale and thought the plan was a vast and deep-laid scheme on the part of England to abolish slavery throughout America . . . and to acquire a dominant influence in the councils of Texas and a monopoly of the Texas trade. A more real danger that he foresaw was the possibility of friction from a Texas without slavery and beyond the limits of the Union, yet adjacent to the slave state of Louisiana. On August 8, 1843, he wrote W. S. Murphy, the United States *chargé* in Texas, telling of the report and his fears, and asking for further information. Murphy's reply, based on the statements of several citizens who had conversed with Andrews after his return from England, went to confirm the story which had reached Upshur. . . . January 25, 1843, Ashbel Smith, the Texan minister to England and France, wrote Isaac Van Zandt, the *chargé* of the republic at Washington, that in July, 1842, a person having relations with the British government had inquired of Smith whether Texas would be willing to abolish slavery if equivalent advantages were offered by England to Texas; and whether it might not be possible to divide the republic into two states, with the Colorado as the boundary between them, the eastern to be slave-holding and the western to be free. The man who made these propositions said that he did it with the knowledge of the Earl of Aberdeen, the English minister of foreign affairs. . . . Putting all things together, it seems certain that the information possessed by the department of state at Washington in the summer of 1843 was such as to

lead to the conclusion that British influence was working strongly in Texas, and that it was one aim of Great Britain to secure the abolition of slavery in that republic."—G. P. Garrison, *Westward extension*, pp. 109-114.—On Upshur's sudden death in 1844, Calhoun, who succeeded him as secretary of state, negotiated a treaty by which Texas became American territory. Its public lands were to be surrendered, but on the other hand its public indebtedness of \$10,000,000 was to be assumed by the United States.—See also TEXAS: 1836-1845.

1842.—Victory of John Quincy Adams in defending Right of Petition.—"John Quincy Adams, now representative from Massachusetts and formerly indifferent to slavery, crowned his long public life with its chief glory by standing forth as the unconquerable champion of the right of petition,—which he insisted, meant that his constituents and others had not merely the right to send petitions to the Congressional waste-paper basket, but the right to have their petitions read and considered. Tireless, skillful, indomitable, unruffled by tirades of abuse, quick to take advantage of all parliamentary openings, Adams wore out his opponents and roused the country."—W. M. West, *Story of American democracy, political and industrial*, pp. 488-489.—"Jan. 21, 1842, Mr. Adams presented a petition from 45 citizens of Haverhill, Mass., praying for the dissolution of the Union, and moved it be referred to a select committee, with instructions to report why the petition should not be granted. There was at once great excitement and members called out, 'Expel him,' 'Censure him.' After a good deal of fruitless endeavor to accomplish something, the House adjourned, and forty or fifty slaveholders met to decide what kind of resolutions should be presented to meet the case. Thomas F. Marshall of Kentucky was selected by this caucus from Congress to propose the resolutions, which were to the effect that for presenting such a petition to a body each of whom had taken an oath to maintain the Constitution, Mr. Adams was virtually inviting them to perjure themselves, and that therefore he deserved the severest censure. Marshall supported this with a very violent speech. Mr. Wise followed in another. Then Mr. Adams arose and asked the clerk to read the first paragraph of the Declaration of Independence, being the one which recognizes the right of every people to alter or abolish their form of Government when it ceases to accomplish its ends. He said that those who believed that the present Government was oppressive had the right (according to the Declaration of Independence, on which the whole of our national unity reposes), to petition Congress to do what they believed was desirable; and all that Congress could properly do would be to explain to them why such an act could not be performed. . . . Mr. Adams had on his desk a great many books and references prepared for his use by some anti-slavery gentlemen then in Washington; after he had gone on for some time with his speech he was asked how much more time he would probably occupy. He replied 'I believe Mr. Burke took three months for his speech on Warren Hastings' indictment. I think I may probably get through in ninety days, per-

haps in less time.' Thereupon they thought it just as well to have the whole thing come to an end and it was moved that the matter should be laid on the table. Mr. Adams consented, and it was done."—J. F. Clarke, *Anti-slavery days*, pp. 57-59.—The objectionable rule, which had been passed in 1836 (see above: 1836: Atherton gag) was finally repealed in 1844, after it had done effective injury to the cause of slavery.

1842.—Tariff Act. See TARIFF: 1842: United States.

1842.—Ashburton Treaty with England.—Settlement of northeastern boundary questions.—"It was arranged in December by the Peel ministry that Lord Ashburton should be sent to Washington as a special minister from Great Britain, with full powers to settle the boundary, and all other pending disputes with the United States. . . . Ashburton, formerly Alexander Baring, of the eminent banking firm of Baring Brothers, and a son of its original founder, was now an old man, who . . . aspired only to bring these two countries to more friendly terms. Like his father before him, he had tact and plain good sense, and understood well the American character, having married here during his youth. Lord Ashburton arrived early the next April, and on the 13th of June [1842] entered upon the duties of his mission. Maine and Massachusetts, the States most interested in the disputed boundary, sent commissioners of their own to yield an assent in this branch of the business. The whole business as conducted at our capital had an easy and informal character. Webster and Lord Ashburton represented alone their respective governments; no protocols were used, nor formal records; and the correspondence and official interviews went on after a friendly fashion in the heat of summer, and while Congress was holding its long regular session. . . . [This Washington or Ashburton Treaty] bore date of the day [August 9] when it was formally signed. It passed by the Oregon or north-western boundary, a point on which harmony was impossible, and this was the most pregnant omission of all; it passed by the 'Caroline' affair; it ignored, too, the 'Creole' case. . . . Nor, on the other side, were the debts of delinquent States assumed by the United States, as many British creditors had desired. Mutual extradition in crimes under the law of nations, and the delivery of fugitives from justice, were stipulated. But the two chief features of this treaty were; a settlement of the boundary between Great Britain and the United States on the north-east, extending westward beyond the great lakes, and a cruising convention for the mutual suppression of the slave-trade. As to the northeast territory in dispute, which embraced some 12,000 square miles, seven-twelfths, or about as much as the King of the Netherlands had awarded, were set off to the United States; Great Britain taking the residue and securing the highlands she desired which frowned upon the Canadian Gibraltar, and a clear though circuitous route between Quebec and Halifax. Our government was permitted to carry timber down the St. John's River, and though becoming bound to pay Maine and Massachusetts \$300,000 for the strip of territory relinquished to Great Britain, gained in return Rouse's Point, on Lake Champlain, of which an exact survey would have deprived us. By the cruising convention clause, which the President himself bore a conspicuous part in arranging, the delicate point of 'right of search' was avoided; for instead of trusting Great Britain as the police of other nations for suppressing the African slave-trade, each nation

bound itself to do its full duty by keeping up a sufficient squadron on the African coast. It so happened that Great Britain, by softening the old phrase 'right of search' into 'right of visitation,' had been inducing other nations to guarantee this police inspection of suspected slave vessels. In December, 1841, ambassadors of the five great European powers arranged in London a quintuple league of this character. But France, hesitating to confirm such an arrangement, rejected that league when the Ashburton treaty was promulgated, and hastened to negotiate in its place a cruising convention similar to ours on the slave-trade suppression; nor was the right of search, against which America had fought in the war of 1812, ever again invoked, even as a mutual principle, until by 1862 the United States had grown as sincere as Great Britain herself in wishing to crush out the last remnant of the African traffic. This cruising convention, however, left the abstract question of search untouched, and in that light Sir Robert Peel defended himself in Parliament. The Ashburton treaty was honorable, on the whole, for each side; what it arranged was arranged fairly, and what it omitted was deferred without prejudice. . . . So satisfactory, in fine, was the treaty, despite all criticism, that the Senate ratified it by more than a three-fourths vote, and at a time, too, when the Whig Congress was strongly incensed against the administration, and Webster had made bitter enemies."—J. Schouler, *History of the United States*, v. 4, ch. 17, pp. 400-403.—See also AFRICAN SQUADRON; MAINE: 1841-1842.—Webster retained office for some months after the ratification of his treaty. But when, in 1843, he saw the administration leaning towards annexation of Texas, to which he was strongly opposed, he resigned. His place was taken by Upshur of Virginia, who was in favor of annexation.

1842.—Recognition of independence of Hawaiian islands. See HAWAIIAN ISLANDS: Discovery and early history.

1844.—Fifteenth presidential election.—Choice of James K. Polk.—The Texas treaty of annexation had been held in committee in the Senate "till the national conventions of the two parties should declare themselves. Both conventions met in Baltimore, in May, to name candidates and avow policies. The Whigs were unanimous as to who should be their candidate: it could be no one but Henry Clay. Among the Democrats there was a very strong feeling in favor of the renomination of Van Buren. But both Clay and Van Buren had been asked their opinion about the annexation of Texas, both had declared themselves opposed to any immediate step in that direction, and Van Buren's declaration cost him the Democratic nomination. He could have commanded a very considerable majority in the Democratic convention, but he did not command the two-thirds majority required by its rules, and James K. Polk of Tennessee became the nominee of his party." (See also TENNESSEE: 1834-1856.) Polk had been speaker of the House of Representatives, and was honorably though slightly known to the country. The only new issue presented in the party "platforms" was offered by the Democrats in their resolution demand-

ing "the reoccupation of Oregon and the reannexation of Texas, at the earliest practicable period"; and this proved the makeweight in the campaign. [Polk was the first "dark horse" to be nominated for president. (See ELECTIONS, PRESIDENTIAL: United States: Work of the nominating conventions.)] . . . The 'Liberty Party,' the political organization of the Abolitionists, commanded now, as it turned out, more than 60,000 votes. . . . Had the 'Liberty' men in New York voted for Clay, he would have been elected."—W. Wilson, *Division and reunion, 1820-1880, ch. 6, sect. 73*.—Polk received of the popular votes, 1,337,243, against 1,299,062 cast for Henry Clay, Whig, and 62,300 cast for James G. Birney, candidate of the Liberty party. The electoral vote was: Polk, 170; Clay, 105; Birney, 0. George M. Dallas was elected vice president.

Also in: C. Schurz, *Henry Clay, v. 2, pp. 242-268*.—G. P. Garrison, *Westward extension, pp. 135-140*.—E. Stanwood, *History of the presidency, pp. 200-225*.

1844.—Statistical bureau created. See STATISTICS: Statistical work in the United States.

1844.—Treaty of peace and commerce with China. See CHINA: 1839-1844.

1845.—Preserving the equilibrium between free and slave states.—Admission of Iowa and Florida.—"The free State of Iowa, which had framed a constitution in the autumn of 1844 . . . was asking for admission. Some makeweight must be found before this application could be complied with. This . . . [was discovered] in an old constitution, framed by the Territory of Florida five years before. Though Florida was greatly deficient in numbers, and her constitution was very objectionable in some of its features, they seized this occasion to press its claims, and to make its admission a condition precedent to their consent that Iowa should be received. The House Committee on Territories reported in favor of the admission of the two in a single measure. In the closing hours of the XXVIIIth Congress the bill came up for consideration. . . . The constitution of Florida not only expressly denied to the legislature the power to emancipate slaves, but gave it the authority to prevent free colored persons from immigrating into the State, or from being discharged from vessels in her ports. [All attempts to require an amendment of the Florida constitution in these particulars before recognizing that ill-populated territory as a State, were defeated, and the bill admitting Florida and Iowa became a law on the 3d of March, 1845.]"—H. Wilson, *History of the rise and fall of the slave power in America, v. 2, ch. 1*.—See also IOWA: 1839-1844; 1846; FLORIDA: 1838-1845.

1845.—Polk's cabinet meetings.—President Polk's diary shows that meetings of his cabinet were held twice a week. This was probably the origin of the custom of regular meetings.

1845-1846.—Oregon boundary question and its settlement.—In 1844 resentment over the neglect to push the claims to Oregon "was expressed with steadily increasing volume throughout the United States, but especially in the West, and was accompanied by shrill demands that the American claim to the whole of the Oregon territory should be effectively asserted. In the presidential cam-

paign of 1844 the Democrats united this demand with that for the annexation of Texas. 'Fifty-four forty or fight' was the alliterative slogan that embodied the jingoistic feeling as to Oregon. The Democratic convention recorded in the party platform its conviction 'that our title to the whole of the territory of Oregon is clear and unquestionable; that no portion of the same ought to be ceded to England or any other power.' With all due allowance for the insincerities and bluster of campaign declamation, the election of Polk on such a platform, together with the popular feeling exhibited during the canvass, gave strong evidence that the time was at hand for a definitive settlement of the long-standing question. The inaugural address of the new President, in March, 1845, made the matter perfectly clear. Polk declared it his duty to 'assert and maintain by all constitutional means the right of the United States to that portion of our territory which lies beyond the Rocky Mountains.' This declaration attracted much attention in Great Britain, where it was regarded as a bellicose claim to the whole of Oregon. Sir Robert Peel, the prime minister, as well as the leader of the opposition and other political chieftains, felt called upon to make public counter-declarations that British claims to the region would be sustained at all hazards. While this little flurry of long-range defiance was in progress, with the embellishments that the newspapers were able to add, a more significant element in the general situation showed itself in the unusually large numbers that assembled in western Missouri to join the annual trek over the Oregon Trail. The character of these emigrants was as a whole excellent, and their purpose of making homes for themselves in the distant territory was guaranteed by the large numbers of women and children in every party. To look after the interests of these people, both on their long progress across the plains and mountains and in their new homes, was a most obvious duty of a government that made any pretensions to efficiency. Polk's secretary of state, Buchanan, took up the Oregon question with Pakenham, the British minister at Washington, in the summer of 1845. Negotiations as to the northwestern boundary of the United States had been carried on at intervals ever since the purchase of the Louisiana territory in 1803 gave the United States a definite interest in the region. Diplomacy had exhausted all the arguments based on discovery, exploration, treaty, and occupation, without leaving any possibility that either the British or the American Government could exclude the other entirely from the tract in dispute. Division of the territory had been proposed by both sides, the Americans offering the extension of the parallel of forty-nine degrees from the Rocky Mountains to the Pacific, the British insisting on the Columbia River from the point at which its northern branch was intersected by the same parallel. Near the close of Tyler's administration an offer of arbitration by the British was declined. When Buchanan resumed negotiations in July, 1845, he again offered forty-nine degrees to the Pacific, explaining that while President Polk believed in American claim to the whole region was valid, he felt precluded by the acts of his predecessors from insisting on it without first trying what they had been willing to concede. Pakenham here made a grave tactical error. Without consulting his government he rejected the proposal, in terms so peremptory and ill-advised as to give great offence to the President. Polk promptly revealed a spirit that he had not

been supposed to possess. Against the almost tearful protests of the timid Buchanan he practically broke off negotiations by directing the secretary to withdraw his offer and to refrain from all further consideration of the question until some definite proposal should be received from Great Britain. This position the President maintained unflinchingly despite repeated efforts of Pakenham to induce a renewal of the offer; for Lord Aberdeen had disapproved of his course in rejecting it, and Pakenham was left in a very uncomfortable position. In his message to Congress in December, 1845, Polk confirmed his uncompromising attitude by revealing the whole situation, claiming that the conciliatory policy of the United States had been flouted by Great Britain, and calling upon Congress for legislation to sustain the right to all Oregon, and to protect its citizens who should settle therein. As against the policy of Great Britain he propounded two dogmas that must prevail in relation to America: first, that there must be no interference by European powers with the independent action of the nations on this continent; second, that no new colony shall be established by any European power in North America. These principles he considered to be implicit in the celebrated dicta of President Monroe twenty-two years earlier, which he cited and reaffirmed. Polk's immediate application of his principles was, of course, to Texas and Oregon. If any portion of the people of this continent should wish to join with the United States, no European power shall interfere to prevent the union; further, 'no future European colony or dominion shall, with our consent, be planted or established on any part of the North American continent.' As the first of these expressions referred unmistakably to Aberdeen's diplomatic activities in Texas, so the second, through the indefinite extension of Monroe's doctrine implied . . . , referred no less clearly to Oregon. This belligerent pronouncement of Polk was naturally the prelude to a long season of warlike feeling and hostile recrimination on both sides of the Atlantic. As the treaty of 1827 provided for the termination of the joint occupation of Oregon by one year's notice from either government, Polk asked Congress for authority to give the necessary notice. After debates lasting all through the winter, the authority was given, and Great Britain was duly notified in April of 1846. Long before this date, however, a way had been found for the resumption of diplomatic discussion of the question. Polk stiffly maintained his old position, but consented to take the advice of the Senate on any proposal that should come from Great Britain. The offer duly came of the forty-ninth parallel, reserving to the British Vancouver Island and the navigation of the Columbia River. On the advice of the Senate Polk accepted this; the treaty was signed June 15, 1846, and went into effect in August."—W. A. Dunning, *British empire and the United States*, pp. 128-133.—See also OREGON: 1818-1846; 1846-1855; BRITISH COLUMBIA: 1577-1846.

1845-1846.—Slavery question in the Democratic party.—Hunkers and Barnburners.—Wilmot Proviso.—"With Polk's accession and the Mexican war, the schism in the Democratic ranks over the extension of American slave territory became plainer. Even during the canvass of 1844 a circular had been issued by William Cullen Bryant, David Dudley Field, John W. Edmonds, and other Van Buren men, supporting Polk, but urging the choice of congressmen opposed to annexation. Early in the new administration the division of

New York Democrats into 'Barnburners' and 'Old Hunkers' appeared. The former were the strong pro-Van Buren, anti-Texas men, or 'radical Democrats,' who were likened to the farmer who burned his barn to clear it of rats. The latter were the 'northern men with southern principles,' the supporters of annexation, and the respectable, dull men of easy consciences, who were said to hanker after the offices. The Soft Hunkers were less friendly to slavery. The Barnburners were led by men of really eminent ability and exalted character: Silas Wright, then governor, Benjamin F. Butler, John A. Dix, chosen in 1845 to the United States senate, Azariah C. Flagg, the famous comptroller, and John Van Buren, the ex-president's son. . . . Daniel S. Dickinson and William L. Marcy were the chief figures in the Hunker ranks. Polk seemed inclined, at the beginning, to favor, or at least to placate, the Barnburners. . . . Jackson's death in June, 1845, deprived the Van Buren men of the tremendous moral weight which his name carried, and which might have daunted Polk. It perhaps also helped to loosen the weight of party ties on the Van Buren men. After this the schism rapidly grew. In the fall election of 1845 the Barnburners pretty thoroughly controlled the Democratic party of the state [of New York] in hostility to the Mexican war, which the annexation of Texas had now brought. Samuel J. Tilden of Columbia county, and a profound admirer of Van Buren, became one of their younger leaders."—E. M. Shepard, *Martin Van Buren*, ch. 11.—In the slang nomenclature which New York politics have always produced with great fertility Hard-Shell and Soft-Shell were terms often used instead of Hunker and Barnburner. "Polk announced to Congress (May 11, 1846), 'War exists, and, notwithstanding all our efforts to avoid it, exists by the act of Mexico!' Congress accepted the pretext and adopted the war. Abolitionists again talked secession. But, outside New England . . . [the war was popular]. As soon as the war with Mexico began, the President had asked Congress for a grant of two million dollars to enable him to negotiate to advantage. It was understood that this money was to be used as a first payment in satisfying Mexico for territory to be taken from her. To this 'Two-Million Dollar Bill' in the House of Representatives, David Wilmot, a Pennsylvania Democrat, secured an amendment providing that slavery should never exist in any territory (outside Texas) to be so acquired. Northwestern Democrats voted almost solidly for this 'Wilmot Proviso,' partly from real reluctance to see slavery extended, partly to punish Polk and the Slave Power for betraying the Northwest in the Oregon matter. The session expired (August 1846) before a vote was reached in the Senate, where the Slave Power had now rallied.—W. M. West, *Story of American democracy, political and industrial*, pp. 496-497.—In 1847 the proviso was added to an appropriation bill for \$3,000,000 which the president asked to be employed in negotiating a treaty with Mexico. The proviso was added in the House, but defeated in the Senate, and the bill was then passed without it. Time and again it was added to bills in the House. Abraham Lincoln said he voted for it no less than forty-two times. "Upon this proviso the modern Republican party was formed eight years later; upon it, fourteen years later, Abraham Lincoln was chosen president; and upon it began the war for the Union, out of which came the vastly grander and unsought beneficence of complete emancipation."—E. M. Shepard, *Martin Van Buren*, ch. 11.

1847.—Calhoun's policy of agitation, forcing the slavery issue upon the North.—"On Friday, the 10th of February [1847], Mr. Calhoun introduced into the Senate his new slavery resolutions, prefaced by an elaborate speech, and requiring an immediate vote upon them. They were in these words: 'Resolved, That the territories of the United States belong to the several States composing this Union, and are held by them as their joint and common property. Resolved, That Congress, as the joint agent and representative of the States of this Union, has no right to make any law, or do any act whatever, that shall directly, or by its effects, make any discrimination between the States of this Union, by which any of them shall be deprived of its full and equal right in any territory of the United States acquired or to be acquired. Resolved, That the enactment of any law which should directly, or by its effects, deprive the citizens of any of the States of this Union from emigrating, with their property, into any of the territories of the United States, will make such discrimination, and would, therefore, be a violation of the constitution, and the rights of the States from which such citizens emigrated, and in derogation of that perfect equality which belongs to them as members of this Union, and would tend directly to subvert the Union itself. Resolved, That it is a fundamental principle in our political creed, that a people, in forming a constitution, have the unconditional right to form and adopt the government which they may think best calculated to secure their liberty, prosperity, and happiness; and that, in conformity thereto, no other condition is imposed by the federal constitution on a State, in order to be admitted into this Union, except that its constitution shall be republican; and that the imposition of any other by Congress would not only be in violation of the constitution, but in direct conflict with the principle on which our political system rests.' These resolutions, although the sense is involved in circumlocutory phrases, are intelligible to the point, that Congress has no power to prohibit slavery in a territory, and that the exercise of such a power would be a breach of the constitution, and leading to the subversion of the Union. . . . Mr. Calhoun demanded the prompt consideration of his resolutions, giving notice that he would call them up the next day and press them to a speedy and final vote. He did call them up, but never called for the vote, nor was any ever had. . . . In the course of this year, and some months after the submission of his resolutions in the Senate denying the right of Congress to abolish slavery in a territory, Mr. Calhoun wrote a letter to a member of the Alabama Legislature, which furnishes the key to unlock his whole system of policy in relation to the slavery agitation, and its designs, from his first taking up the business in Congress in the year 1835, down to the date of the letter; and thereafter. The letter was in reply to one asking his opinion 'as to the steps which should be taken' to guard the rights of the South. . . . It opens with this

paragraph: 'I am much gratified with the tone and views of your letter, and concur entirely in the opinion you express, that instead of shunning, we ought to court the issue with the North on the slavery question. I would even go one step further, and add that it is our duty—due to ourselves, to the Union, and our political institutions, to force the issue on the North. We are now stronger relatively than we shall be hereafter, politically and morally. Unless we bring on the issue, delay to us will be dangerous indeed. . . . Had the South, or even my own State backed me, I would have forced the issue on the North in 1835, when the spirit of abolitionism first developed itself to any considerable extent. It is a true maxim, to meet danger on the frontier, in politics as well as war. Thus thinking, I am of the impression, that if the South act as it ought, the Wilmot Proviso, instead of proving to be the means of successfully assailing us and our peculiar institution, may be made the occasion of successfully asserting our equality and rights, by enabling us to force the issue on the North. Something of the kind was indispensable to rouse and unite the South. On the contrary, if we should not meet it as we ought, I fear, greatly fear, our doom will be fixed. It would prove that we either have not the sense or spirit to defend ourselves and our institutions.'"—T. H. Benton, *Thirty years' view*, v. 2, ch. 167-8.

1847-1848.—Dispute over organization of new territories.—"The persistence of the advocates of the Wilmot proviso aroused equal insistence on the part of Calhoun, Davis and other Southern leaders that no restriction of slavery in the new territory should be allowed by Congress. Oregon was anxiously waiting for territorial organization in the summer of 1846, and President Polk urged in his messages of August and December that Congress proceed to the task. But when the House passed a bill which extended the anti-slavery provision of the Northwest Ordinance to Oregon (January 16, 1847), the Senate tabled it. There was no intention in the mind of the Southern senators of carrying slavery into Oregon. What they objected to in the bill was the power to exclude slavery from Oregon. When the ratification of the treaty of Guadalupe-Hidalgo in the summer of 1848 made New Mexico and California American soil, Polk urged the prompt organization of a territorial government for these provinces also. An attempt was made to settle the whole matter by the so-called Clayton Compromise of July, 1848, according to which Oregon was to have complete territorial government with representation in Congress, while California and New Mexico were to be administered by a governor, a secretary and judges of the Supreme Court. The question of slavery was left to the Oregon legislature, but the governments of New Mexico and California were forbidden to pass any laws 'respecting the prohibition or establishment of African slavery—such being referred to the United States Courts' . . . [a scheme which Thomas Corwin said 'does not enact a law; it only enacts a lawsuit']. This measure the Senate passed after an all-night battle (July 27), but the House tabled it. Finally, in August 1848, the Senate so far receded from its position as to sanction the bill for the organization of Oregon, including the restriction of slavery. But California and New Mexico still remained unorganized."—D. S. Muzzey,

*United States of America, v. 1, pp. 440-441.*—“California and New Mexico were free; and, . . . ‘by the laws of nations, the laws of all conquered countries remain until changed by the conqueror’ . . . [yet] Calhoun denied that the laws of Mexico could keep slavery out of New Mexico and California. ‘As soon as the treaty between the two countries is ratified’ said he, ‘the sovereignty and authority of Mexico in the territory acquired by it become extinct, and that of the United States is substituted in its place carrying with it the constitution, with its overriding control over the laws and insitutions of Mexico inconsistent with it.’ . . . Calhoun must be judged by the fruits of his two favorite dogmas, the extreme states-rights theory of 1832, and the slavery-extension doctrine of 1848. The two thoroughly disseminated through the South, became prime elements of political faith. Their working forced her onward, and induced a proud, high-spirited people to battle for an idea utterly condemned at the tribunal of modern civilization.”—J. F. Rhodes, *History of the United States from the Compromise of 1850, v. 1, pp. 94-95.*—See also CALIFORNIA: 1846-1847.

1848.—Free Soil convention at Buffalo and its nominations.—The “Barnburner” Democrats of New York, or Free Soilers as they began to be called, met in convention at Utica, February 16, 1848, and chose delegates to the approaching national Democratic Convention at Baltimore. In April the Barnburner members of the Legislature issued an elaborate address, setting forth the Free Soil principles of the Democratic fathers. The authors of the address were afterwards known to be Samuel J. Tilden and Martin and John Van Buren. The national Democratic Convention assembled in May, 1848. “It offered to admit the Barnburner and Hunker delegations together to cast the vote of the State. The Barnburners rejected the compromise as a simple nullification of the vote of the State, and then withdrew. Lewis Cass was nominated for president, the Wilmot proviso being thus emphatically condemned. For Cass had declared in favor of letting the new territories themselves decide upon slavery. The Barnburners, returning to a great meeting in the City Hall Park at New York, cried ‘The lash has resounded through the halls of the Capitol!’ and condemned the cowardice of northern senators who had voted with the South. . . . The delegates issued an address written by Tilden, fearlessly calling Democrats to independent action. In June a Barnburner convention met at Utica,” which named Van Buren for the Presidency and called a national convention of all Free Soilers to meet at Buffalo, August 9, 1848. “Charles Francis Adams, the son of John Quincy Adams, presided at the Buffalo convention; and in it Joshua R. Giddings, the famous abolitionist, and Salmon P. Chase, were conspicuous. To the unspeakable horror of every Hunker there participated in the deliberations a negro, the Rev. Mr. Ward. Butler [Benjamin F., of New York], reported the resolutions in words whose inspiration is still fresh and ringing. . . . At the close were the stirring and memorable words: ‘We inscribe on our banner, Free Soil, Free Speech, Free Labor, and Free Men; and under it we will fight on and fight ever, until a triumphant victory shall reward our exertions.’ Joshua Leavitt of Massachusetts, one of the ‘blackest’ of abolitionists, reported to the convention the name of Martin Van Buren for president.” The nomination was acclaimed with enthusiasm, and

Charles Francis Adams was nominated for vice-president. “In September, John A. Dix, then a Democratic senator, accepted the Free-soil nomination for governor of New York. The Democratic party was agbast. The schismatics had suddenly gained great dignity and importance. . . . The Whigs had in June nominated Taylor, one of the two heroes of the Mexican war. . . . The anti-slavery Whigs hesitated for a time; but Seward of New York and Horace Greeley in the New York Tribune finally led most of them to Taylor, rather than, as Seward said, engage in ‘guerrilla warfare’ under Van Buren. . . . This launching of the modern Republican party was, strangely enough, to include in New York few besides Democrats.”—E. M. Shepard, *Martin Van Buren, ch. 11.*—“The Buffalo Convention was one of the more important upheavals in the process of political disintegration which went steadily on between the years 1844, when the ‘Birneyites’ deprived Henry Clay of the electoral vote of New York, and 1856, when the Whig party disappeared, and the pro-slavery Democracy found itself confronted by the anti-slavery Republican organization of the North. In 1848, though the Whig party was already doomed, its time had not yet come. The Free Soil movement of 1848 was, therefore, premature; and moreover, as the result afterwards showed, there was something almost ludicrous in a combination of ‘Conscience Whigs’ of Massachusetts, in revolt over the nomination of the slave-owning General Taylor, with the ‘Barnburning’ Democrats of New York, intent only upon avenging on Cass the defeat of Van Buren. None the less the Free Soil movement of 1848 clearly foreshadowed the Republican uprising of 1856, and of the men who took part in the Buffalo convention an unusually large proportion afterwards became prominent as political leaders.”—C. F. Adams, *Richard Henry Dana, v. 1, ch. 7.*

1848-1849.—Sixteenth presidential election.—Inauguration and death of General Taylor.—In the presidential election of 1848, the Democratic party put forward as its candidate Lewis Cass; the Whigs named General Zachary Taylor, who had no politics and who, according to J. F. Rhodes, had never voted. No resolutions were adopted by the Whigs, and no address issued. “The candidate was the platform”; the Free Soil party placed Martin Van Buren in nomination. That the Whig party should again have set aside its distinguished leader, Henry Clay, caused great grief among his devoted followers and friends. “But there were those in it who had grown gray in waiting for office under the banner of Mr. Clay, and whose memories were refreshed with what was effected by the éclat of military glory under General Jackson. It was hard, and might seem ungrateful, to abandon a great and long-trying leader. But the military feather waved before their eyes, and they were tempted. . . . It needed a leader, or a few leaders to give the signal of defection; and they

were not wanting. One after another of the great names of the party fell off from Mr. Clay and inclined to General Taylor; and when the national Whig Convention met at Philadelphia, in June, 1848, to nominate a candidate for the Presidency, the first ballot showed that seven out of twelve of the Kentucky delegation, against the expectations and wishes of their constituency, had deserted Mr. Clay, and gone over to General Taylor. The influence of this fact was great—perhaps decisive. For if Mr. Clay's own State was against him, what could be expected of the other States? On the fourth ballot General Taylor had 52 majority, and was declared the nominee. . . . In November following, General Taylor was elected President of the United States, and Millard Fillmore Vice-President. As in the case of General Harrison, who died in thirty days after his inauguration, so in the case of General Taylor . . . he died in sixteen months after he had entered on the duties of his office."—C. Colton, *Life, correspondence and speeches of Henry Clay*, v. 3, ch. 4.—The popular vote cast at the election was, for Taylor, 1,360,099; Cass, 1,220,544; for Van Buren, 291,263. The electoral vote was, for Taylor, 163; for Cass, 127; for Van Buren, none. Millard Fillmore, elected vice president, succeeded to the presidency on the death of General Taylor, July 9, 1850.—O. O. Howard, *General Taylor*, ch. 21-24.

1848-1854.—Progress toward disunion.—Influence of immigration on feeling of nationalism.—“The next session (1848-1849) was a short one. The House passed a bill to organize the territory of California without slavery, but the senate refused to concur. Various other propositions on the same subject were made, but none were acceptable. In this session as in the former, Polk urged that the whole question be settled by extending the Missouri Compromise to the Pacific, and some favored the idea. Probably the South would have accepted it, but the North was aroused, and was determined to check the spread of slavery, so that Polk's suggestion was not adopted. While this subject was being discussed, Northern members brought in a bill to forbid the slave trade in the District of Columbia. It passed the house, but was reconsidered and tabled. The Southern members were aroused, and replied by asking for a committee to prepare a more effective fugitive slave law. The request was not granted, but it served to call the attention of the country to a concrete grievance of the South. The Southern congressmen in an address described the growth of discrimination, and soon afterwards the southern legislatures passed resolutions of similar nature. Northern legislature replied by demanding the exclusion of slavery from the territories. On March 4, 1849, congress adjourned after three months of bitter debate, in which no progress was made toward removing the sectional differences. Threats of disunion were freely uttered by Southerners, and before adjournment they organized a committee which sent forth an address on the position of the South. It reviewed the rise of opposition to slavery, arraigned the aggressive spirit of the North on the question, declared the South was denied a fair share of the territory it had done so much to conquer in the recent war, and called on all Southern people to stand as a unit in resistance of the treatment it received.”—J. S. Bassett, *Short history of the United States*, p. 453.—“The people at large were convinced that

a crisis was at hand in the slavery question and that it must be met. Our country threatened to separate into warring factions. The very protestations of orators North and South in their utter devotion to our priceless Union show how great the danger to that Union was. At the North the principle of the Wilmot Proviso was gaining converts with each rejection by Congress. Its advocates were determined that the acquisitions of the Mexican War should bring no profit to slavery. The abolitionists redoubled their efforts, planting new societies, establishing newspapers and debating clubs, and circulating a great amount of propagandist literature and pictures. Legislatures and conventions in the free states passed scores of resolutions upholding the Proviso, and petitions for its adoption poured in upon Congress in an unbroken stream.”—D. S. Muzzey, *United States of America*, v. 1, p. 443.—“Until 1842 there had never been so many as a hundred thousand immigrants in a single year; but . . . by 1849 there were two hundred and ninety-seven thousand coming in within a twelvemonth, the tide rising steadily from year to year. . . . Their coming, thousands upon thousands, their ceaseless movement into the West, their stir as of an invading host, subtly gave new impulse to the general movement and resettlement of the population, already afoot of its own accord: to the opening of new lands, the diversification of industry, the quick growth of a nation always making and to be made. Until now the country had been developed for the most part only by men out of the old homes of the first settlers and by natural increase of its own people. Now there was added this power of increase and subtle impulse of change from without. . . . Statesmen found themselves obliged to accommodate affairs to a day of new forces, which escaped them and dominated all they did. Whether it came by immigration or by natural increase, growth of population meant the augmentation, not of sectional, but of national forces. The slave-holding States, though their number included Missouri and Arkansas, which shared the growth of the frontier, showed, even with Texas added, an increase of but little more than two millions in the decade, while the rest of the country saw nearly four millions added to its strength. . . . Though the southern politicians talked only of constitutional rights, and seemed to fight only for the extension of slavery, southern merchants held conventions to plan railways to the Pacific and debated measures for linking their trade with the expanding West. Their thoughts ran eagerly and with a certain enthusiasm upon the great future of the nation, in which they wished to take their part. Their plans were made upon the scale of the continent; they spoke in the spirit of the new age, and sought their right rôle in the general development. And yet there was in all that they said and urged an unmistakable note also of apprehension. They wished to take part, and yet began to fear that they could not. They spoke of the nation, and of their duty and their opportunity in it; but the nation of their thought was not a nation which could easily be united in joint efforts of business. It was a nation sectionalized and divided by social and economic contrasts too gross and obvious to be overlooked; a nation whose several regions showed interests diverse and separate, hardly to be reconciled. This they saw, some vaguely, some with painful clearness, and a deep uneasiness grew upon them more and more from year to year. The spirit and the power of the time were turned against them. And the issues

which made their place apart a fact, not of speculation but of certainty, were mightily hastened by every force afoot in the life of the country as it grew. It became evident almost at once that Congress could not avoid or even postpone its choice with regard to slavery in the new territories seized from Mexico. . . . So long ago as 1843 John Quincy Adams, who thirty-five years before had left the Federalists because they talked of dissolving the Union, had joined with other Whigs in declaring that the addition of Texas to the South would bring about and justify disunion. Mr. Garrison, the leader of the abolitionists, had proposed in 1845 that Massachusetts should lead in a movement to withdraw from the Union, and had won very hearty applause for the suggestion from an anti-annexation convention. The masses of the people, it is true, did not heed these things; the counsels of sober statesmen were not seriously affected by them. But almost every northern State demanded, through its legislature, the adoption of the Wilmot proviso, and every southern State protested against it, in tones not to be mistaken. The southern men, to whose demands Mr. Calhoun gave the touch of final definiteness which only words of precision such as he used could give, now denied outright the power of the federal government to exclude slaves, the legitimate property of southern settlers, from the Territories of the United States. . . . The air was full of disquieting rumors as to what the southerners meant to do should Congress set that principle aside: how they meant to shut their ports against the North and turn all their arts and all their power towards building up an alliance, at once political and economic, with the West: how in the last resort they meant to secede from the Union altogether."—W. Wilson, *History of the American people*, v. 4, pp. 132-134, 137-138.

The total population was 23,191,876, nearly 36 per cent. greater than in 1840. The remnant of slavery in the northern States which appears in this census, still lingering in New Jersey, was not quite extinguished in the succeeding decade. The classification and distribution of population was as in above tables.

The immigration in the decade preceding this census had risen to 1,713,251 in number of persons, 1,047,763 coming from the British Islands (mostly from Ireland), and 549,739 from other parts of Europe.—See also CENSUS: United States.

1850 (March).—California and the Fugitive Slave law.—Henry Clay's proposed compromise.—Webster's "7th of March" speech.—"When Polk's final Congress adjourned in the spring of 1849 without having made any provision for the government of the territory acquired from Mexico, Senator Benton advised the Californians to form a government for themselves. There was pressing need for such action. Gold had been discovered in the Sacramento Valley in January, 1848, and the next year saw the swarming of the 'forty-niners' into California. . . . [A] convention met at Monterey, September 3, 1849, and framed a state constitution, excluding slavery by a unanimous vote, although one-third of the members were from the Southern states. When Congress met in December, California, its population grown from 6,000 to over 80,000, was asking admission to the Union as a free state. The people of New Mexico, meanwhile, had petitioned for organization as a non-slaveholding territory, claiming land to the east of the Rio Grande over which Texas had extended her authority. President Taylor, although a Southerner and a slave-owner, became convinced on a visit to the New England states, in the summer of 1849, that the South was the aggressor. He met the threats from South Carolina, Virginia and Mississippi in the spirit of Andrew Jackson. He would answer the first overt act with a blockade of the Southern ports and call for volunteers from the free states. If necessary, he said, he 'would pour out his blood for the defense of the Union.' He was much under the influence of Senator Seward of New York, the leader of the anti-slavery Whigs. While not an advocate of the Wilmot Proviso himself, the President let it be known that he would do nothing

to encourage the program of the Southern radicals. . . . His own plan was to admit California at once as a free state and establish territorial governments in New Mexico and Deseret (Utah) without any provision regarding slavery, leaving the people the choice when they should be ready for statehood. The latter doctrine was known as 'popular sovereignty,' later nick-named 'squatter sovereignty,' because it left the formation of communities with or without slavery to the people who 'squatted' or settled, on the land while it was still the public territory of the nation without the power of a state to determine is municipal law by a regular constitution. The origin of the doctrine is generally ascribed to Lewis Cass, who elaborated it in a letter to a certain Mr. Nicholson of Nashville in December, 1847; but the principle had been discussed two years earlier in connection with the admission of the territory of Florida to statehood."—D. S. Muzzev, *United States of America*, v. 1, pp. 444-446.—"One day toward the close of January [January 29, 1850], Henry Clay rose from his chair in the Senate Chamber, and waving a roll of papers, with dramatic eloquence and deep feeling, announced to a hushed auditory that he held in his hand a series of resolutions proposing an amicable arrangement of all questions growing out of the subject of slavery. Read and explained by its author this plan of compromise was to admit California, and to establish territorial governments in New Mexico, and the other portions of the regions acquired from Mexico, without any provisions for or against slavery—to pay the debt of Texas and fix her western boundary—to declare that it was 'inexpedient' to abolish slavery in the District of Columbia, but 'expedient' to put some restrictions on the slave trade there, to pass a new and more stringent fugitive slave law, and to formally deny that Congress had any power to obstruct the slave trade between the States. Upon this plan of compromise and the modifications afterward made in it, began that long debate, since become historic, which engrossed the attention of Congress and the country for eight weary months."—F. W. Seward, *Seward at Washington, 1846-1861*, ch. 16.—"Clay's speech in support of his resolutions was made February 5 and 6, 1850. He was seventy-three years of age and in feeble health; but he now faced the Senate once more, after an absence of eight years, with the prestige of long-acknowledged political leadership and the confidence of one who had been looked to for advice and had been trustfully followed by the rank and file of his party in many a similar crisis. Beginning with a few words relative to the importance of the occasion, he went on to say that Congress and the state legislatures were 'twenty-odd furnaces in full blast in generating heat, and passion, and intemperance, and diffusing them throughout the whole extent of this broad land'; and expressed his anxiety to restore 'concord, harmony, and peace.' If Congress sought to overthrow slavery in the state, his voice would be for war, and the slave states would have the good wishes of all who loved justice and truth; but no sympathy would be extended them in a war 'to propagate wrongs' in the territory acquired from Mexico. Appealing to the men of the North, he cried: 'What do you want?—What do you want?—you who reside in the free States. Do you want that there shall be no slavery introduced into the territories acquired by the war with Mexico? Have you not your desire in California? And in all human probability you will have it in New Mexico also. What more do you want? You

have got what is worth more than a thousand Wilmot provisos. You have nature on your side—facts upon your side—and this truth staring you in the face that there is no slavery in those territories.' The abolition of the slave-trade in the District of Columbia Clay regarded as no concession, but as something on which both sides should unite. As to the failure to execute the fugitive-slave law, he thought the South had 'serious cause of complaint against the free States'; but disunion would furnish no remedy for any southern grievance. He was 'directly opposed to any purpose of secession, of separation'; he thought there was 'no right on the part of one or more of the States to secede'; in the Union he meant 'to stand and die.'"—G. P. Garrison, *Westward extension*, p. 322.—"At the outset, many of those who had threatened 'Disunion,' opposed 'Clay's Compromise,' because it did not go far enough, while the 'Wilmot Proviso' men were equally resolute in opposing it, because it went too far. Seward with many other Northern Whigs, adhered to the 'President's Plan' [which simply favored the admission of California and New Mexico under constitutions which he had invited their people to frame], as being a much more just and speedy way of solving the problem. Avowing himself unterrified by the threats of 'Disunion,' he insisted that neither 'Compromise' nor the 'Fugitive Slave Law' was necessary, and that it was both the right and the duty of Congress to admit the Territories as free States, to abolish slavery in the District of Columbia, and the slave trade between the States. Southern feeling was predominant in the Senate Chamber, as it had been for many years. Neither of the two great parties was opposed to slavery, and the recognized leaders of both were men of Southern birth. . . . Mr. Clay's resolutions, unsatisfactory as they were, to anti-slavery men, at first met with objections from Southern members. One 'deeply regretted the admission that slavery did not exist in the territories.' Several would 'never assent to the doctrine that slaveholders could not go there, taking their property with them.' Some questioned the validity of the Mexican decree, abolishing slavery in New Spain, and doubted the constitutionality of any attempt on the part of Congress to exclude it. Prognostications and threats of 'disunion' were freely made. On the other hand, there began to be signs of a growing disposition, on the part of many Northern men, to give up the 'Proviso' for the sake of peace; and to follow the lead of Mr. Clay. Conservative Southern Whigs were quite ready to meet these half way. Seward's position was regarded as 'ultra' by both classes; and it not unfrequently happened that, on questions in the Senate relating to slavery, only three Senators, Seward, Chase, and Hale, would be found voting together, on one side, while all the other Senators present were arrayed against them, on the other. Newspapers, received from all parts of the country, showed that elsewhere, as well as at the capital, the proposed compromise was an engrossing topic. Great meetings were held at the North in support of it. State Legislatures took ground, for and against it. Fresh fuel was added to the heated discussion by a new 'Fugitive Slave Law,' introduced by Senator Mason of Virginia, and by the talk of Southern Conventions, and 'Secret Southern Caucuses.' . . . March was an eventful month. Time enough had elapsed for each Senator to receive, from the press and people of his State, their response, in regard to Clay's proposed compromise. Resolutions pro and con

had come from different Legislatures. . . . Each of the leaders in senatorial debate felt that the hour had come for him to declare whether he was for or against it. . . . Mr. Calhoun, though in failing health, obtained the floor for a speech. Everybody awaited it with great interest, regarding him as the acknowledged exponent of Southern opinion. . . . An expectant throng filled the Senate Chamber. His gaunt figure and attenuated features attested that he had risen from a sick bed; but his fiery eyes and unshaken voice showed he had no intention of abandoning the contest. In a few words he explained that his health would not permit him to deliver the speech he had prepared, but that 'his friend the Senator behind him (Mason) would read it for him.' Beginning by saying that he had 'believed from the first that the agitation of the subject of slavery would, if not prevented by some timely and effective measure, end in "disunion,"'—the speech opposed Clay's plan of adjustment; attacked the President's plan; adverted to the growing feeling that the South could not remain in Union 'with safety and honor'; pointed out the gradual snapping, one after another, of the links which held the Union together, and expressed the most gloomy forebodings for the future.—F. W. Seward, *Seward at Washington, 1846-1861, ch. 16.*

On March 7, 1850, Webster delivered his speech, "not as a Massachusetts man, nor as a northern man, but as an American, and a member of the Senate of the United States." The first and longer part was an historical review of the slavery question, and an argument maintaining the proposition, as he afterwards stated it in a few words, that there is "not a square rod of territory belonging to the United States the character of which, for slavery, or no slavery is not already fixed by some irrevocable law." The concluding part of his speech contained the passages which caused most grief among and gave most offense to his friends and admirers at the North. They are substantially comprised in the quotations following,—together with his eloquent declamation against the thought of secession: "Mr. President, in the excited times in which we live, there is found to exist a state of crimination and recrimination between the North and South. There are lists of grievances produced by each; and those grievances, real or supposed, alienate the minds of one portion of the country from the other, exasperate the feelings, and subdue the sense of fraternal affection, patriotic love, and mutual regard. I shall bestow a little attention, Sir, upon these various grievances existing on the one side and on the other. I begin with complaints of the South. I will not answer, further than I have, the general statements of the honorable Senator from South Carolina, that the North has prospered at the expense of the South in consequence of the manner of administering this government, in the collecting of its revenues, and so forth. These are disputed topics, and I have no inclination to enter into them. But I will allude to other complaints of the South, and especially to one which has in my opinion just foundation; and that is, that there has been found at the North, among individuals and among legislators, a disinclination to perform fully their constitutional duties in regard to the return of persons bound to service who have escaped into the free States. In that respect, the South, in my judgment, is right, and the North is wrong. Every member of every Northern legislature is bound by oath, like every other officer in the country, to support the Constitution of the United States;

and the article of the Constitution which says to these States that they shall deliver up fugitives from service is as binding in honor and conscience as any other article. No man fulfils his duty in any legislature who sets himself to find excuses, evasions, escapes from this constitutional obligation. I have always thought that the Constitution addressed itself to the legislatures of the States or to the States themselves. It says that those persons escaping to other States 'shall be delivered up,' and I confess I have always been of the opinion that it was an injunction upon the States themselves. When it is said that a person escaping into another State, and coming therefore within the jurisdiction of that State, shall be delivered up, it seems to me the import of the clause is, that the State itself, in obedience to the Constitution, shall cause him to be delivered up. That is my judgment. I have always entertained that opinion, and I entertain it now. But when the subject, some years ago, was before the Supreme

DANIEL WEBSTER

Court of the United States, the majority of the judges held that the power to cause fugitives from service to be delivered up was a power to be exercised under the authority of this government. I do not know, on the whole, that it may not have been a fortunate decision. My habit is to respect the result of judicial deliberations and the solemnity of judicial decisions. As it now stands, the business of seeing that these fugitives are delivered up resides in the power of Congress and the national judicature, and my friend at the head of the Judiciary Committee has a bill on the subject now before the Senate, which with some amendments to it, I propose to support, with all its provisions, to the fullest extent. And I desire to call the attention of all sober-minded men at the North, of all conscientious men, of all men who are not carried away by some fanatical idea or some false impression, to their constitutional obligations. I put it to all the sober and sound minds at the North as a question of morals and a question of conscience. What right have they, in their legislative capacity or any other capacity, to endeavor to get round this Constitution, or to embarrass the free exercise of the rights secured by the Constitu-

tion to the persons whose slaves escape from them? None at all; none at all. Neither in the forum of conscience, nor before the face of the Constitution, are they, in my opinion, justified in such an attempt. . . . I repeat, therefore, Sir, that here is a well-founded ground of complaint against the North, which ought to be removed, which it is now in the power of the different departments of this government to remove; which calls for the enactment of proper laws authorizing the judicature of this government, in the several States, to do all that is necessary for the recapture of fugitive slaves and for their restoration to those who claim them. . . . Complaint has been made against certain resolutions that emanate from legislatures at the North, and are sent here to use, not only on the subject of slavery in this District, but sometimes recommending Congress to consider the means of abolishing slavery in the States. I should be sorry to be called upon to present any resolutions here which could not be referable to any committee or any power in Congress; and therefore I should be unwilling to receive from the legislature of Massachusetts any instructions to present resolutions expressive of any opinion whatever on the subject of slavery, as it exists at the present moment in the States, for two reasons: first, because I do not consider that the legislature of Massachusetts has anything to do with it; and next, because I do not consider that I, as her representative here, have anything to do with it. It has become, in my opinion, quite too common; and if the legislatures of the States do not like that opinion, they have a great deal more power to put it down than I have to uphold it; it has become in my opinion quite too common a practice for the State legislatures to present resolutions here on all subjects and to instruct us on all subjects. There is no public man that requires instruction more than I do, or who requires information more than I do, or desires it more heartily; but I do not like to have it in too imperative a shape. . . . Then Sir, there are the Abolition societies, of which I am unwilling to speak, but in regard to which I have very clear notions and opinions. I do not think them useful. I think their operations for the last twenty years have produced nothing good or valuable. At the same time, I believe thousands of their members to be honest and good men, perfectly well-meaning men. They have excited feelings; they think they must do something for the cause of liberty; and, in their sphere of action, they do not see what else they can do than to contribute to an Abolition press, or an Abolition society, or to pay an Abolition lecturer. I do not mean to impute gross motives even to the leaders of these societies, but I am not blind to the consequences of their proceedings. I cannot but see what mischiefs their interference with the South has produced. And is it not plain to every man? Let any gentleman who entertains doubts on this point recur to the debates in the Virginia House of Delegates in 1832, and he will see with what freedom a proposition made by Mr. Jefferson Randolph for the gradual abolition of slavery was discussed in that body. Every one spoke of slavery as he thought; very ignominious and disparaging names and epithets were applied to it. The debates in the House of Delegates on that occasion, I believe, were all published. They were read by every colored man who could read, and to those who could not read, those debates were read by others. At that time Virginia was

not unwilling or afraid to discuss this question, and to let that part of her population know as much of the discussion as they could learn. That was in 1832. As has been said by the honorable member from South Carolina, these Abolition societies commenced their course of action in 1835. It is said, I do not know how true it may be, that they sent incendiary publications into the slave States; at any rate, they attempted to arouse, and did arouse, a very strong feeling; in other words they created great agitation in the North against Southern slavery. Well, what was the result? The bonds of the slaves were bound more firmly than before, their rivets were more strongly fastened. Public opinion, which in Virginia had begun to be exhibited against slavery, and was opening out for the discussion of the question, drew back and shut itself up in its castle. I wish to know whether any body in Virginia can now talk openly as Mr. Randolph, Governor McDowell, and others talked in 1832, and sent their remarks to the press? We all know the fact, and we all know the cause; and everything that these agitating people have done has been not to enlarge, but to restrain, not to set free, but to bind faster, the slave population of the South. Again, Sir, the violence of the Northern press is complained of. The press violent! Why, Sir, the press is violent everywhere. There are outrageous reproaches in the North against the South, and there are reproaches as vehement in the South against the North. Sir, the extremists of both parts of this country are violent; they mistake loud and violent talk for eloquence and for reason. They think that he who talks loudest reasons best. And this we must expect, when the press is free, as it is here, and I trust always will be. . . . Well, in all this I see no solid grievance, no grievance presented by the South, within the redress of the government, but the single one to which I have referred; and that is, the want of a proper regard to the injunction of the Constitution for the delivery of fugitive slaves. There are also complaints of the North against the South. I need not go over them particularly. The first and gravest is, that the North adopted the Constitution, recognizing the existence of slavery in the States, and recognizing the right, to a certain extent, of the representation of slaves in Congress, under a state of sentiment and expectation which does not now exist; and that, by events, by circumstances, by the eagerness of the South to acquire territory and extend her slave population, the North finds itself, in regard to the relative influence of the South and the North, of the Free States and the slave States, where it never did expect to find itself when they agreed to the compact of the Constitution. They complain, therefore, that, instead of slavery being regarded as an evil, as it was then, an evil which all hoped would be extinguished gradually, it is now regarded by the South as an institution to be cherished, and preserved, and extended; an institution which the South has already extended to the utmost of her power by the acquisition of new territory. Well, then, passing from that, every body in the North reads; . . . and the newspapers, some of them, . . . are careful to spread about among the people every reproachful sentiment uttered by any Southern man bearing at all against the North; every thing that is calculated to exasperate and to alienate; and there are many such things, as every body will admit, from the South, or some portion of it, which are disseminated among the reading people; and they do exasperate, and alienate,

and produce a most michievous effect upon the public mind at the North. Sir, I would not notice things of this sort appearing in obscure quarters; but one thing has occurred in this debate which struck me very forcibly. An honorable member from Louisiana addressed us the other day on this subject. . . . Why, Sir, he took pains to run a contrast between the slaves of the South and the laboring people of the North, giving the preference, in all points of condition, and comfort, and happiness, to the slaves of the South. The honorable member, doubtless, did not suppose that he gave any offence, or did any injustice. . . . But does he know how remarks of that sort will be received by the laboring people of the North? Why, who are the laboring people of the North? They are the whole North. . . . Let me say, Sir, that five sixths of the whole property of the North is in the hands of the laborers of the North; they cultivate their farms, they educate their children, they provide the means of independence. . . . There is a more tanglibe and irritating cause of grievance at the North. Free blacks are constantly employed in the vessels of the North, generally as cooks or stewards. When the vessel arrives at a Southern port, these free colored men are taken on shore, by the police or municipal authority, imprisoned, and kept in prison till the vessel is again ready to sail. This is not only irritating, but exceedingly unjustifiable and oppressive. Mr. Hoar's mission, some time ago, to South Carolina, was a well-intended effort to remove this cause of complaint. The North thinks such imprisonments illegal and unconstitutional; and as the cases occur constantly and frequently, they regard it as a great grievance. Now, Sir, so far as any of these grievances have their foundation in matters of law, they can be redressed, and ought to be redressed; and so far as they have their foundation in matters of opinion, in sentiment, in mutual crimination and recrimination, all that we can do is to endeavor to allay the agitation, and cultivate a better feeling and more fraternal sentiments between the South and the North. Mr. President, I should much prefer to have heard from every member on this floor declarations of opinion that this Union could never be dissolved, than the declaration of opinion by any body, that, in any case, under the pressure of any circumstances, such a dissolution was possible. I hear with distress and anguish the word 'secession,' especially when it falls from the lips of those who are patriotic, and known to the country, and known all over the world, for their political services. Secession! Peaceable secession! Sir, your eyes and mine are never destined to see that miracle. The dismemberment of this vast country without convulsion! The breaking up of the foundations of the great deep without ruffling the surface! Who is so foolish, I beg every body's pardon, as to expect to see any such thing? Sir, he who sees these States, now revolving in harmony around a common centre, and expects to see them quit their places and fly off without convulsion, may look the next hour to see the heavenly bodies rush from their spheres, and jostle against each other in the realms of space, without causing the wreck of the universe. There can be no such thing as a peaceable secession. Peaceable secession is an utter impossibility. Is the Great Constitution under which we live, covering this whole country, is it to be thawed and melted away by secession, as the snows on the mountain melt under the influence of a vernal sun, disappear almost unobserved, and run off? No, Sir! No, Sir! I will not state

what might produce the disruption of the Union; but, Sir, I see as plainly as I see the sun in heaven what that disruption itself must produce; I see that it must produce war, and such a war as I will not describe, in its twofold character. Peaceable secession! Peaceable secession! The concurrent agreement of all the members of this great republic to separate! A voluntary separation, with alimony on one side and on the other. Why, what would be the result? Where is the line to be drawn? What States are to secede? What is to remain American? What am I to be? An American no longer? Am I to become a sectional man, a local man, a separatist, with no country in common with the gentlemen who sit around me here, or who fill the other house of Congress? Heaven forbid? Where is the flag of the republic to remain? Where is the eagle still to tower? or is he to cower, and shrink, and fall to the ground? Why, Sir, our ancestors, our fathers, and our grandfathers, those of them that are yet living amongst us with prolonged lives, would rebuke and reproach us; and our children and our grandchildren would cry out shame upon us, if we of this generation should dishonor these ensigns of the power of the government and the harmony of that Union which is every day felt among us with so much joy and gratitude. . . . Sir, nobody can look over the face of this country at the present moment, nobody can see where its population is the most dense and growing, without being ready to admit, and compelled to admit, that ere long the strength of America will be in the Valley of the Mississippi. Well, now, Sir, I beg to inquire what the wildest enthusiast has to say on the possibility of cutting that river in two, and leaving free States at its source and on its branches, and slave States down near its mouth, each forming a separate government? . . . To break up this great government! To dismember this glorious country! To astonish Europe with an act of folly such as Europe for two centuries has never beheld in any government or any people! No, Sir! No, Sir! There will be no secession! Gentlemen are not serious when they talk of secession."—Daniel Webster, *Works*, v. 5, p. 324.—"The conservative reaction which Mr. Webster endeavored to produce came and triumphed. Chiefly by his exertions the compromise policy was accepted and sustained by the country. The conservative elements everywhere rallied to his support, and by his ability and eloquence it seemed as if he had prevailed and brought the people over to his opinions. It was a wonderful tribute to his power and influence, but the triumph was hollow and short-lived. He had attempted to compass an impossibility. Nothing could kill the principles of human liberty, not even a speech by Daniel Webster, backed by all his intellect and knowledge, his eloquence and his renown. The anti-slavery movement was checked for the time, and pro-slavery democracy, the only other positive political force, reigned supreme. But amid the falling ruins of the Whig party, and the evanescent success of the Native Americans, the party of human rights revived; and when it rose again, taught by the trials and misfortunes of 1850, it rose with a strength which Mr. Webster had never dreamed of."—H. C. Lodge, *Daniel Webster*, ch. 9.—"A public meeting in Faneuil Hall condemned the action of Webster. Theodore Parker, who was one of the principal speakers, said: 'I know no deed in American history done by a son of New England to which I can compare this but the act of Benedict Arnold. . . . The only reasonable way

in which we can estimate this speech is as a bid for the presidency.' In the main, the Northern Whig press condemned the salient points of the speech. . . . Whittier, in a song of plaintive vehemence called 'Ichabod,' mourned for the 'fallen' statesman whose faith was lost, and whose honor was dead. . . . This was the instant outburst of opinion; but friends for Webster and his cause came with more deliberate reflections. . . . When the first excitement had subsided, the friends of Webster bestirred themselves, and soon testimonials poured in, approving the position which he had taken. The most significant of them was the one from eight hundred solid men of Boston, who thanked him for 'recalling us to our duties under the Constitution,' and for his 'broad national and patriotic views.' The tone of many of the Whig papers changed, some to positive support, others to more qualified censure. The whole political literature of the time is full of the discussion of this speech and its relation to the compromise. It is frequently said that a speech in Congress does not alter opinions; that the minds of men are determined by set political bias or sectional considerations. This was certainly not the case in 1850. Webster's influence was of the greatest weight in the passage of the compromise measures, and he is as closely associated with them as is their author. Clay's adroit parliamentary management was necessary to carry them through the various and tedious steps of legislation. But it was Webster who raised up for them a powerful and much-needed support from Northern public sentiment. At the South the speech was cordially received; the larger portion of the press commended it with undisguised admiration. . . . On the 11th of March, Seward spoke. . . . When Seward came to the territorial question, his words created a sensation. 'We hold,' he said, 'no arbitrary authority over anything, whether acquired lawfully or seized by usurpation. The Constitution regulates our stewardship; the Constitution devotes the domain (i. e. the territories not formed into States) to union, to justice, to defence, to welfare, and to liberty. But there is a higher law than the Constitution, which regulates our authority over the domain, and devotes it to the same noble purposes. The territory is a part, no inconsiderable part, of the common heritage of mankind, bestowed upon them by the Creator of the Universe. We are his stewards, and must so discharge our trust as to secure in the highest attainable degree their happiness.' This remark about 'a higher law,' while far inferior in rhetorical force to Webster's 'I would not take pains uselessly to reaffirm an ordinance of Nature nor to re-enact the will of God,' was destined to have transcendent moral influence. A speech which can be condensed into an aphorism is sure to shape convictions. These, then, are the two maxims of this debate; the application of them shows the essential points of the controversy."—J. F. Rhodes, *History of the United States from the Compromise of 1850, v. 1, ch. 2*.—In the political controversies which accompanied and followed the introduction of the Compromise measures, the Whigs who supported the Compromise were called "Silver-Grays," or "Snuff-Takers," and those who opposed it were called "Woolly-Heads," or "Seward-Whigs."

1850 (April-September).—Clay's last compromise.—Fugitive slave law as passed.—On April 17, "a select committee of the Senate, headed by Mr. Clay, reported a bill consisting of 39 sections, embodying most of the resolutions which had been discussed. From its all-comprehensive nature it

was called the Omnibus Bill. The points comprehended in the omnibus bill were as follows: 1st. When new states formed out of Texas present themselves, it shall be the duty of Congress to admit them; 2d. The immediate admission of California, with the boundaries which she has proposed; 3d. The establishment of territorial governments for Utah and New Mexico, without the Wilmot proviso; 4th. The combination of points 2 and 3 in one bill; 5th. The excision from Texas of all New Mexico, rendering therefor a pecuniary equivalent; 6th. The enactment of a law for the effectual rendition of fugitive slaves escaping into the free states; 7th. No interference with slavery in the District of Columbia, but the slave trade therein should be abolished, under heavy penalties. This bill was discussed until the last of July, and then passed by the Senate, but it had been so pruned by successive amendments that it contained only a provision for the organization of a territorial government for Utah. In this condition it was sent to the House. There, as a whole, the bill was rejected, but its main heads were passed in August as separate bills, and were designated the compromise measures of 1850, and, in their accepted shape, required: (1) Utah and New Mexico to be organized into territories, without reference to slavery; (2) California to be admitted as a free state; (3) \$10,000,000 to be paid to Texas for her claim to New Mexico; (4) fugitive slaves to be returned to their masters; and (5) the slave trade to be abolished in the District of Columbia. The compromises were received by the leaders of the two great parties as a final settlement of the vexed questions which had so long troubled Congress and agitated the country, but the storm was only temporarily allayed. In accordance with these measures California became a state of the Union September 9, 1850. The most important feature of this bill, in its bearing upon future struggles and conflicts, was the fugitive slave law. . . . In the midst of the discussion of these topics occurred the death of the President, July 9, 1850, one year and four months after his inauguration. . . . Mr. Fillmore was inaugurated on the 10th of July, 1850. He departed from the policy of his predecessor, organized a new cabinet, used his influence in favor of the compromise measures [and gave his signature to the Fugitive Slave Law]."—W. R. Houghton, *History of American politics, ch. 15*.—"It was apparent to every one who knew anything of the sentiments of the North that this law could not be executed to any extent. Seward had truly said that if the South wished their runaway negroes returned they must alleviate, not increase, the rigors of the law of 1793; and to give the alleged fugitive a jury trial, as Webster proposed, was the only possible way to effect the desired purpose. If we look below the surface we shall find a strong impelling motive of the Southern clamor for this harsh enactment other than the natural desire to recover lost property. Early in the session it took air that a part of the game of the disunionists was to press a stringent fugitive slave law, for which no Northern man could vote; and when it was defeated, the North would be charged with refusing to carry out a stipulation of the Constitution. Douglas stated in the Senate that while there was some ground for complaint on the subject of surrender of fugitives from service, it had been greatly exaggerated. The excitement and virulence were not along the line bordering on the free and slave States, but between Vermont and South Carolina, New Hampshire and Alabama, Connecticut and Louisiana. Clay gave vent to his

astonishment that Arkansas, Louisiana, Georgia, and South Carolina, States which very rarely lost a slave, demanded a stricter law than Kentucky, which lost many. After the act was passed Senator Butler, of South Carolina, said: 'I would just as soon have the law of 1793 as the present laws, for any purpose, so far as regards the reclamation of fugitive slaves;' and another Southern ultra never thought it would be productive of much good to his section. Six months after the passage of the law, Seward expresses the matured opinion 'that political ends—merely political ends—and not real evils, resulting from the escape of slaves, constituted the prevailing motives to the enactment.'—J. F. Rhodes, *History of the United States from the Compromise of 1850*, v. 1, ch. 2.—'The fugitive-slave law was to make the citizens of the Free States do for the slave-holders what not a few of the slave-holders were too proud to do for themselves. Such a law could not but fail. But then it would increase the exasperation of the slave-holders by its failure, while exasperating the people of the Free States by the attempts at enforcement. Thus the compromise of 1850, instead of securing peace and harmony, contained in the most important of its provisions the seeds of new and greater conflicts. One effect it produced which Calhoun had clearly predicted when he warned the slave-holding states against compromises as an invention of the enemy: it adjourned the decisive conflict until the superiority of the North over the South in population and material resources was overwhelming.'—C. Schurz, *Life of Henry Clay*, v. 2, ch. 26.—See also HIGHER LAW DOCTRINE.

The following is the complete text of the Fugitive Slave law:

An act to amend, and supplementary to, the Act entitled "An Act respecting Fugitives from Justice, and Persons escaping from the Service of their Masters," approved February twelfth, one thousand seven hundred and ninety-three.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the persons who have been, or may hereafter be, appointed commissioners, in virtue of any act of Congress, by the Circuit Courts of the United States, and who, in consequence of such appointment, are authorized to exercise the powers that any justice of the peace, or other magistrate of any of the United States, may exercise in respect to offenders for any crime or offence against the United States, by arresting, imprisoning, or bailing the same under and by virtue of the thirty-third section of the act of the twenty-fourth of September seventeen hundred and eighty-nine, entitled "An Act to establish the judicial courts of the United States," shall be, and are hereby, authorized and required to exercise and discharge all the powers and duties conferred by this act.

Sect. 2. And be it further enacted, That the Superior Court of each organized Territory of the United States shall have the same power to appoint commissioners to take acknowledgments of

bail and affidavits, and to take depositions of witnesses in civil causes, which is now possessed by the Circuit Court of the United States; and all commissioners who shall hereafter be appointed for such purposes by the Superior Court of any organized Territory of the United States, shall possess all the powers, and exercise all the duties, conferred by law upon the commissioners appointed by the Circuit Courts of the United States for similar purposes, and shall moreover exercise and discharge all the powers and duties conferred by this act.

Sect. 3. And be it further enacted, That the Circuit Courts of the United States, and the Superior Courts of each organized Territory of the United States, shall from time to time enlarge the number of commissioners, with a view to afford reasonable facilities to reclaim fugitives from labor, and to the prompt discharge of the duties imposed by this act.

Sect. 4. And be it further enacted, That the commissioners above named shall have concurrent jurisdiction with the judges of the Circuit and District Courts of the United States, in their respective circuits and districts within the several States, and the judges of the Superior Courts of the Territories, severally and collectively, in term-time and vacation; and shall grant certificates to such claimants, upon satisfactory proof being made, with authority to take and remove such fugitives from service or labor, under the restrictions herein contained, to the State or Territory from which such persons may have escaped or fled.

Sect. 5. And be it further enacted, That it shall be the duty of all marshals and deputy marshals to obey and execute all warrants and precepts issued under the provisions of this act, when to them directed; and should any marshal or deputy marshal refuse to receive such warrant, or other process, when tendered, or to use all proper means diligently to execute the same, he shall, on conviction thereof, be fined in the sum of one thousand dollars, to the use of such claimant, on the motion of such claimant by the Circuit or District Court for the district of such marshal; and after arrest of such fugitive, by such marshal or his deputy, or whilst at any time in his custody under the provisions of this act, should such fugitive escape, whether with or without the assent of such marshal or his deputy, such marshal shall be liable, on his official bond, to be prosecuted for the benefit of such claimant, for the full value of the service or labor of said fugitive in the State, Territory, or District whence he escaped: and the better to enable the said commissioners, when thus appointed, to execute their duties faithfully and efficiently, in conformity with the requirements of the Constitution of the United States and of this act, they are hereby authorized and empowered, within their counties respectively, to appoint, in writing under their hands, any one or more suitable persons, from time to time, to execute all such warrants and other process as may be issued by them in the lawful performance of their respective duties; with authority to such commissioners, or the persons to be appointed by them, to execute process as aforesaid, to summon and call to their aid the bystanders, or posse comitatus of the proper county, when necessary to insure a faithful observance of the clause of the Constitution referred to, in conformity with the provisions of this act; and all good citizens are hereby commanded to aid and assist in the prompt and efficient execution of this law, whenever their services may be required, as aforesaid, for that purpose; and said warrants shall

run, and be executed by said officers, anywhere in the State within which they are issued.

Sect. 6. And be it further enacted, That when a person held to service or labor in any State or Territory of the United States, has heretofore or shall hereafter escape into another State or Territory of the United States, the person or persons to whom such service or labor may be due, or his, her, or their agent or attorney, duly authorized, by power of attorney, in writing, acknowledged and certified under the seal of some legal officer or court of the State or Territory in which the same may be executed, may pursue and reclaim such fugitive person, either by procuring a warrant from some one of the courts, judges, or commissioners aforesaid, of the proper circuit, district, or county, for the apprehension of such fugitive from service or labor, or by seizing and arresting such fugitive, where the same can be done without process, and by taking, or causing such person to be taken, forthwith before such court, judge, or commissioner, whose duty it shall be to hear and determine the case of such claimant in a summary manner; and upon satisfactory proof being made, by deposition or affidavit, in writing, to be taken and certified by such court, judge, or commissioner, or by other satisfactory testimony, duly taken and certified by some court, magistrate, justice of the peace, or other legal officer authorized to administer an oath and take depositions under the laws of the State or Territory from which such person owing service or labor may have escaped, with a certificate of such magistracy or other authority, as aforesaid, with the seal of the proper court or officer thereto attached, which seal shall be sufficient to establish the competency of the proof, and with proof, also by affidavit, of the identity of the person whose service or labor is claimed to be due as aforesaid, that the person so arrested does in fact owe service or labor to the person or persons claiming him or her, in the State or Territory from which such fugitive may have escaped as aforesaid, and that said person escaped, to make out and deliver to such claimant, his or her agent or attorney, a certificate setting forth the substantial facts as to the service or labor due from such fugitive to the claimant, and of his or her escape from the State or Territory in which such service or labor was due, to the State or Territory in which he or she was arrested, with authority to such claimant, or his or her agent or attorney, to use such reasonable force and restraint as may be necessary, under the circumstances of the case, to take and remove such fugitive person back to the State or Territory whence he or she may have escaped as aforesaid. In no trial or hearing under this act shall the testimony of such alleged fugitive be admitted in evidence; and the certificates in this and the first [fourth] section mentioned, shall be conclusive of the right of the person or persons in whose favor granted, to remove such fugitive to the State or Territory from which he escaped, and shall prevent all molestation of such person or persons by any process issued by any court, judge, magistrate, or other person whomsoever.

Sect. 7. And be it further enacted, That any person who shall knowingly and willingly obstruct, hinder, or prevent such claimant, his agent or attorney, or any person or persons lawfully assisting him, her, or them, from arresting such a fugitive from service or labor, either with or without process as aforesaid, or shall rescue, or attempt to rescue, such fugitive from service or labor, from the custody of such claimant, his or her agent or attorney, or other person or persons lawfully assist-

ing as aforesaid, when so arrested, pursuant to the authority herein given and declared; or shall aid, abet, or assist such person so owing service or labor as aforesaid, directly or indirectly, to escape from such claimant, his agent or attorney, or other person or persons legally authorized as aforesaid; or shall harbor or conceal such fugitive, so as to prevent the discovery and arrest of such person, after notice or knowledge of the fact that such person was a fugitive from service or labor as aforesaid, shall, for either of said offences, be subject to a fine not exceeding one thousand dollars, and imprisonment not exceeding six months, by indictment and conviction before the District Court of the United States for the district in which such offence may have been committed, or before the proper court of criminal jurisdiction, if committed within any one of the organized Territories of the United States; and shall moreover forfeit and pay, by way of civil damages to the party injured by such illegal conduct, the sum of one thousand dollars, for each fugitive so lost as aforesaid, to be recovered by action of debt, in any of the District or Territorial Courts aforesaid, within whose jurisdiction the said offence may have been committed.

Sect. 8. And be it further enacted, That the marshals, their deputies, and the clerks of the said District and Territorial Courts, shall be paid, for their services the like fees as may be allowed to them for similar services in other cases; and where such services are rendered exclusively in the arrest, custody, and delivery of the fugitive to the claimant, his or her agent or attorney, or where such supposed fugitive may be discharged out of custody for the want of sufficient proof as aforesaid, then such fees are to be paid in the whole by such claimant, his agent or attorney; and in all cases where the proceedings are before a commissioner, he shall be entitled to a fee of ten dollars in full for his services in each case, upon the delivery of the said certificate to the claimant, his or her agent or attorney; or a fee of five dollars in cases where the proof shall not, in the opinion of such commissioner, warrant such certificate and delivery, inclusive of all services incident to such arrest and examination, to be paid, in either case, by the claimant, his or her agent or attorney. The person or persons authorized to execute the process to be issued by such commissioners for the arrest and detention of fugitives from service or labor as aforesaid, shall also be entitled to a fee of five dollars each for each person he or they may arrest and take before any such commissioner as aforesaid, at the instance and request of such claimant, with such other fees as may be deemed reasonable by such commissioner for such other additional services as may be necessarily performed by him or them; such as attending at the examination, keeping the fugitive in custody, and providing him with food and lodging during his detention, and until the final determination of such commissioner; and, in general, for performing such other duties as may be required by such claimant, his or her attorney or agent, or commissioner in the premises, such fees to be made up in conformity with the fees usually charged by the officers of the courts of justice within the proper district or county, as near as may be practicable, and paid by such claimants, their agents or attorneys, whether such supposed fugitives from service or labor be ordered to be delivered to such claimants by the final determination of such commissioners or not.

Sect. 9. And be it further enacted, That, upon affidavit made by the claimant of such fugitive, his agent or attorney, after such certificate has

been issued, that he has reason to apprehend that such fugitive will be rescued by force from his or their possession before he can be taken beyond the limits of the State in which the arrest is made, it shall be the duty of the officer making the arrest to retain such fugitive in his custody, and to remove him to the State whence he fled, and there to deliver him to said claimant, his agent, or attorney. And to this end, the officer aforesaid is hereby authorized and required to employ so many persons as he may deem necessary to overcome such force, and to retain them in his service so long as circumstances may require. The said officer and his assistants, while so employed, to receive the same compensation, and to be allowed the same expenses, as are now allowed by law for transportation of criminals, to be certified by the judge of the district within which the arrest is made, and paid out of the treasury of the United States.

Sect. 10. And be it further enacted, That when any person held to service or labor in any State or Territory, or in the District of Columbia, shall escape therefrom, the party to whom such service or labor shall be due, his, her, or their agent or attorney, may apply to any court of record therein, or judge thereof in vacation, and make satisfactory proof to such court, or judge in vacation, of the escape aforesaid, and that the person escaping owed service or labor to such party. Whereupon the court shall cause a record to be made of the matters so proved, and also a general description of the person so escaping, with such convenient certainty as may be; and a transcript of such record, authenticated by the attestation of the clerk and of the seal of the said court, being produced in any other State, Territory, or district in which the person so escaping may be found, and being exhibited to any judge, commissioner, or other officer authorized by the law of the United States to cause persons escaping from service or labor to be delivered up, shall be held and taken to be full and conclusive evidence of the fact of escape, and that the service or labor of the person escaping is due to the party in such record mentioned. And upon the production by the said party of other and further evidence if necessary, either oral or by affidavit, in addition to what is contained in the said record of the identity of the person escaping, he or she shall be delivered up to the claimant. And the said court, commissioner, judge, or other person authorized by this act to grant certificates to claimants of fugitives, shall, upon the production of the record and other evidences aforesaid, grant to such claimant a certificate of his right to take any such person identified and proved to be owing service or labor as aforesaid, which certificate shall authorize such claimant to seize or arrest and transport such person to the State or Territory from which he escaped: Provided, That nothing herein contained shall be construed as requiring the production of a transcript of such record as evidence as aforesaid. But in its absence the claim shall be heard and determined upon other satisfactory proofs, competent in law.

Approved, September 18, 1850.

—U. S. Statutes at large, IX. 462-465.

1850 (June).—Nashville Convention.—“It is highly probable that the Compromise of 1850 postponed secession for a decade. By the advice of Calhoun a convention of Southern delegates had been called to meet at Nashville, Tennessee, in June. A number of radicals were determined to use the Nashville meeting for the publication of an

ultimatum to the North. They believed that the moment for secession had come. But the strong pleas for union in the Senate and the reference of the Compromise measures to a mixed committee tempered the disunion sentiment in the South. A few weeks before the convention met, the *National Intelligencer*, the administration organ at Washington, canvassed the Southern press and found but 50 out of 300 newspapers in the slave states in favor of a radical program at Nashville—and of these 50 many were ‘luke-warm’ and ‘backing down.’ The great majority of the people of the South favored waiting for the results of the debates on the Compromise before taking action. When, therefore, the Nashville convention met in June, only nine states were represented . . . [Virginia, South Carolina, Georgia, Florida, Alabama, Mississippi, Texas, Arkansas and Tennessee. North Carolina and Maryland were opposed to the conventions and sent no representatives], and 100 of the 176 delegates were from Tennessee. A small minority denounced compromise of any sort and declared that secession was inevitable; but the majority, after reasserting the doctrine that Congress had no power to exclude slavery from the territories of the United States and asking for the extension of the Missouri Compromise line to the Pacific, . . . [voted to adjourn until after the session of Congress]. A mere rump convention of 59 radical members reassembled after the passage of the Compromise. . . . It urged the adoption of a policy of social and commercial boycott of the North. The South as a whole, however, accepted the Compromise heartily. Virginia, which had been ready to advise secession if the Wilmot proviso passed, declared herself satisfied and advised her sister state of South Carolina to ‘desist from any meditated secession on her part.’ The Missouri legislature condemned the Nashville convention as ‘tending to foment discord, and alienate one part of the confederation from the other.’ A convention in Georgia declared that it would abide by the Compromise as a ‘permanent adjustment of the sectional controversy.’”—D. S. Muzzey, *United States of America*, v. 1, pp. 454-455.—“Maryland, said a Baltimore journal, is for a quiet settlement of differences. Whoever thinks she will take part, either with the North or the South, in any measure having the slightest tendency to dissolve the Union makes a great mistake. She will not be driven from her adhesion to the Union by threats from any quarter. She knows its value and will not send delegates to a Northern or Southern convention to deliberate on the propriety of separating the States. Maryland wants no representatives in a Southern convention. No man has a right to pledge her. . . . A North Carolina paper was opposed to the convention because the purpose of it was unknown, because it could do no good, and must end in mischief or nothing. . . . So few delegates attended the Newbern and Charlotte conventions that they were not organized.”—J. B. McMaster, *History of the people of the United States*, pp. 34-35.

1850-1851.—Hülsemann Letter.—Kossuth in America.—In July, 1850, Daniel Webster became secretary of state in the cabinet of President Fillmore and retained that post until his death, in October, 1852. “The best-known incident of this period was that which gave rise to the famous ‘Hülsemann letter.’ President Taylor had sent an agent to Hungary to report upon the condition of the revolutionary government, with the intention of recognizing it if there were sufficient grounds for doing so. When the agent arrived, the revo-

lution was crushed, and he reported to the President against recognition. These papers were transmitted to the Senate in March, 1850. Mr. Hülsemann, the Austrian Chargé, thereupon complained of the action of our administration, and Mr. Clayton, then Secretary of State, replied that the mission of the agent had been simply to gather information. On receiving further instructions from his government, Mr. Hülsemann rejoined to Mr. Clayton, and it fell to Mr. Webster to reply, which he did on December 21, 1850. The note of the Austrian Chargé was in a hectoring and highly offensive tone, and Mr. Webster felt the necessity of administering a sharp rebuke. 'The Hülsemann letter,' as it was called, was, accordingly dispatched. It set forth strongly the right of the United States and their intention to recognize any de facto revolutionary government, and to seek information in all proper ways in order to guide their action. . . . Mr. Webster had two objects. One was to awaken the people of Europe to a sense of the greatness of this country, the other to touch the national pride at home. He did both. . . . The affair did not, however, end here. Mr. Hülsemann became very mild, but he soon lost his temper again. Kossuth and the refugees in Turkey were brought to this country in a United States frigate. The Hungarian hero was received with a burst of enthusiasm that induced him to hope for substantial aid, which was, of course, wholly visionary. The popular excitement made it difficult for Mr. Webster to steer a proper course, but he succeeded, by great tact, in showing his own sympathy, and, so far as possible, that of the government for the cause of Hungarian independence and for its leader without going too far. . . . Mr. Webster's course, . . . although carefully guarded, aroused the ire of Mr. Hülsemann, who left the country, after writing a letter of indignant farewell to the Secretary of State."—H. C. Lodge, *Daniel Webster*, ch. 10.

1850-1860.—Economic conditions.—Railroad construction.—Growth of cities.—Progress of mining.—Agricultural development.—Immigration.—Panic of 1857.—Discovery of petroleum.—“From the excitement occasioned in foreign and domestic affairs by the subject of slavery in the decade of the fifties the mistaken impression must not be formed that the people of the United States at this time talked and thought of little else. The development of the ever receding frontier in the West was a matter of general concern. . . . The central government in the first half of the century refused any considerable aid to public improvements, and . . . the states themselves went heavily into the work, only to repent later of their policy. Congress began to change its course slowly after 1848, not at first by constructing public improvements itself but by giving its aid to the states, with the requirement that the states in turn assist the private companies engaged in improvements. . . . Thousands of acres of ‘swamp lands’ and ‘saline lands’ (were bestowed on the states) to be used as the states might direct. . . . In the decade from 1850 to 1860 the total value of all farm property, which in 1850 was \$3,900,000,000, doubled; the annual cotton crop, which amounted to 2,100,000 bales in 1850, almost doubled in the same interval, while the annual corn crop of 590,000,000 bushels, and that of wheat, which reached 100,000,000 bushels in 1850, increased approximately fifty per cent. Railroad construction

went on in every section. [See also RAILROADS: 1850-1860.] . . . The growth of the western cities was magical. Chicago which had been founded as a fort in the Indian country in 1804 . . . (in) 1860 numbered 109,000 inhabitants, and in this year . . . by lakes, canals and railroads, it shipped 11,000,000 bushels of wheat. This phenomenal advance was an index of the growth of the entire Northwest. . . . New York City . . . increased in wealth and population. The development of the country's mineral resources kept pace with the general progress. In 1810 the average annual production of gold was \$2,000, in 1820 \$73,000, in 1830 \$564,000, in 1840 \$1,000,000, and in 1850, two years after the opening of the California mines, \$50,000,000. In the decade from 1850 to 1860 the annual production of gold averaged \$55,000,000. This large addition to the wealth of the country worked mightily for prosperity. . . . From 1850 to 1860 the annual production of coal and of pig iron, both excellent indices of general prosperity, especially along manufacturing lines, advanced, the one from 6,000,000 tons to 13,000,000 tons, and the other from 560,000 to 820,000 tons. . . . Agricultural development [see AGRICULTURE: Modern: United States: 1833-1860], the building of new railroads and cities, and the progress in the mining industries created an unusual demand for laborers, which in turn induced an increase in immigration. . . . In 1820, 8,000 immigrants arrived from Europe, 23,000 came in 1830, 84,000 in 1840, and 370,000 in 1850. Each year of the fifties saw an increase, until in 1854 the number reached 425,000. In the decade 1850-1860, 2,700,000 immigrants, mostly Irish, Germans, and English, entered the United States, the Irish generally settling in the manufacturing centers of the East or seeking work on the canals and railroads, and the Germans and the English finding their way to the agricultural sections of the Middle West. Almost all the newcomers cast their fortunes with the Northern States, for to the independent artisans and laborers of Europe competition with enforced black labor was unattractive. [See also IMMIGRATION AND EMIGRATION: United States: 1790-1860.] . . . The swelling tide of prosperity which set in during the forties continued up to within a few weeks after President Buchanan took his seat, and then suddenly receded in the financial panic of 1857. Thousands lost their fortunes and other thousands their work. It was the panic of 1837 over again on a somewhat smaller scale, brought about by the same general set of causes. In their prosperity and in the abundance of money after the discoveries of gold in California, men had speculated too heavily in public lands, in railroads, in city real estate, in mineral-bearing lands, and in many other lines of investment. They had gone too far and the inevitable crash overtook them. . . . While the people were gradually recovering from the effects of this panic, providential discoveries of new mineral deposits brought encouragement to the whole nation. Petroleum or crude oil was found in a drilled well at Titusville, Pennsylvania, in 1859. The first well was not a flowing well, but the oil was pumped from it at the rate of twenty-five barrels per day, which was equal to a daily income of \$1000. Soon the Funk well, the first flowing well, was struck. . . . Along Oil Creek in Pennsylvania, where the discoveries were made, Oil Creek, Franklin, Titusville, and other towns sprang up out of the wilderness, and fifty million gallons of oil were soon produced annually. Similar discoveries were made in other parts of the country.”—E. D. Fite, *History of United States*, pp. 338-339.

1852.—Appearance of the Know Nothing, or American party.—“A new party had by this time risen to active importance in American politics. It appeared in 1852, in the form of a secret, oath-bound organization, of whose name, nature, and objects nothing was told even to its members until they had reached its higher degrees. Their consequent declaration that they knew nothing about it gave the society its popular name of Know Nothings. It accepted the name of the American Party. Its design was to oppose the easy naturalization of foreigners [see also IMMIGRATION AND EMIGRATION: United States: 1835-1915], and to aid the election of native-born citizens to office. Its nominations were made by secret conventions of delegates from the various lodges, and were voted for by all members under penalty of expulsion in case of refusal. At first, by endorsing the nominations of one or other of the two great parties, it decided many elections. After the passage of the Kansas-Nebraska Bill, the Know Nothing organization was adopted by many Southern Whigs who were unwilling to unite with the Democracy, and became, for a time, a national party. It carried nine of the State elections in 1855, and in 1856 nominated Presidential candidates. After that time its Southern members gradually united with the Democracy, and the Know Nothing party disappeared from politics.”—A. Johnston, *History of American politics*, ch. 18, sect. 4.—“On July 5-6, 1852, the Know-Nothing party held a national convention at Trenton, New Jersey, at which thirty-one delegates representing nine states—Pennsylvania, New Jersey, New York, Massachusetts, Illinois, Ohio, Maryland, Virginia, and Georgia—were present. After adopting resolutions setting forth the principles of Americanism, and after changing the name of the party by dropping the word ‘native,’ the convention nominated Daniel Webster of Massachusetts for President, and George C. Washington of Montgomery County, Maryland, for Vice-President. The permanent president of the convention was Jacob Broom of Philadelphia, and one of its most active members was Dr. Reynell Coates of Camden, New Jersey. On learning of his nomination through the public prints, Washington, who had been a member of Congress for four terms and who was a grandnephew of General Washington, declined the nomination, and Dr. Reynell Coates was chosen to fill the vacancy. Webster neither accepted nor declined, and his name remained at the head of the ticket until his death on October 24. Three days later the national executive committee of the American party nominated Jacob Broom to take Webster’s place. . . . At the election on November 2, the ticket of the American party received 1670 votes in Pennsylvania, 831 votes in New Jersey, and 184 votes in Massachusetts. If it received any votes in other states, they were so few and scattering that no record was made of them in collections of returns.”—C. O. Paullin, *National ticket of Broom and Coates, 1852 (American Historical Review, July, 1920, pp. 689-691)*.

1852.—Seventeenth presidential election.—

Franklin Pierce.—“The question of slavery, in its comprehensive bearings, formed the turning point in the presidential canvass of 1852. . . . The national democratic convention which nominated Mr. Pierce, unanimously adopted a platform approving the compromise of 1850 as the final decision of the slavery question. The whig party were widely divided on the question of acquiescence in the compromise measures, and still more at variance in regard to the claims of rival candidates for the presidency. Mr. Seward’s friends in the free states united in the support of General Scott, who had, to a considerable extent, stood aloof from the agitations of the last few years. On the other hand, the exclusive supporters of the compromise, as a condition of party allegiance, were divided between Millard Fillmore, at that time acting president, and Daniel Webster, secretary of state. The whig convention met in Baltimore on the 17th of June, 1852, two weeks after the democratic convention, and nominated General Scott as their candidate for president. A large majority of the delegates from New York, and a considerable number from other states, maintained their opposition to the test resolutions which were proposed by the other branch of the party. These resolutions, however, were adopted, and a platform was thus established resembling, in its main features, that of the democrats. . . . Supported by several advocates of this new platform on the ground of his personal popularity, General Scott received the nomination. He was, however, regarded with great suspicion by a large number of whigs in the slaveholding states. . . . Many ardent friends of the compromise . . . refused to rally around General Scott, distrusting his fidelity to the compromise platform; while a large number of the whigs of the free states, through aversion to the platform, assumed a neutral position or gave their support to a third candidate. Another portion of the whig party nominated Mr. Webster, who died [October 24, 1852], not only refusing to decline the nomination, but openly avowing his disgust with the action of the party.”—G. E. Baker, *Memoir of William H. Seward (Seward’s Works, v. 4)*.—“The Democratic convention was held, first, on June 1, 1852, at Baltimore. It was a protracted convention, for it did not adjourn until the 6th of the month, but it was not very interesting. . . . After a short contest, the two-thirds rule was adopted by an overwhelming majority. The struggle over the nomination was protracted. On the first ballot, General Cass had 116; James Buchanan, 93; William L. Marcy, 27; Stephen A. Douglas, 20; Joseph Lane, 13; Samuel Houston, 8; and there were 4 scattering. The number necessary to a choice was 188. . . . On the twenty-ninth trial, the votes were: for Cass, 27; for Buchanan, 93; for Douglas, 91; and no other candidate had more than 26. At this point Cass began to recover his strength, and reached his largest number on the thirty-fifth trial, namely, 131. On that same ballot, Virginia gave 15 votes to Franklin Pierce. Mr. Pierce gained 15 more votes on the thirty-sixth trial; but at that point his increase ceased, and was then slowly resumed, as the weary repetition of balloting without effect went on. The forty-eighth trial resulted as follows: for Cass, 73; for Buchanan, 28; for Douglas, 33; for Marcy, 90; for Pierce, 55; for all others, 8. The forty-ninth trial was the last. There was a ‘stampede’ for Pierce, and he received 282 votes to 6 for all others. Ten candidates were voted for as a candidate for the vice-presidency. . . . On the second ballot, William R. King of Alabama was unanimously nominated. . . . The anti-slavery

organization, the Free Soil Democrats, though a much less important political factor than they had been four years earlier, held their convention in Pittsburg on August 11. Henry Wilson of Massachusetts presided. John P. Hale of New Hampshire was nominated for President, and George W. Julian of Indiana for Vice-President. . . . The canvass was not a very spirited one. All the early autumn elections were favorable to the Democrats, and the result in November was a crushing defeat of the Whigs in the popular vote and one still more decisive in the electoral vote. . . . The popular and electoral votes were as follows. [Popular vote: Franklin Pierce, 1,601,274; Winfield Scott, 1,386,580; John P. Hale, 155,825. Electoral vote: Pierce, 254; Scott, 42.]—E. Stanwood, *History of presidential elections*, ch. 18.

1852.—Appearance of "Uncle Tom's Cabin," and its effect.—"Of the literary forces that aided in bringing about the immense revolution in public sentiment between 1852 and 1860, we may affirm with confidence that by far the most weighty was the influence spread by [Harriet Beecher Stowe's story "Uncle Tom's Cabin"]. This story, when published [1851-1852] as a serial in the 'National Era,' an anti-slavery newspaper at Washington, attracted little attention, but after it was given to the world in book form in March, 1852, it proved the most successful novel ever written. The author felt deeply that the Fugitive Slave law was unjust, and that there was cruelty in its execution; this inspired her to pour out her soul in a protest against slavery. She thought that if she could only make the world see slavery as she saw it, her object would be accomplished; she would then have induced people to think right on the subject. . . . The effect produced by the book was immense. Whittier offered up 'thanks for the Fugitive Slave law; for it gave occasion for Uncle Tom's Cabin.' Longfellow thought it was one of the greatest triumphs in literary history, but its moral effect was a higher triumph still. Lowell described the impression which the book made as a 'whirl of excitement.' Choate is reported to have said: 'That book will make two millions of abolitionists.' Garrison wrote the author: 'All the defenders of slavery have let me alone and are abusing you.'—J. F. Rhodes, *History of the United States from 1850, v. 1, pp. 278-280*.—Writing only nine months after the publication of "Uncle Tom's Cabin," C. F. Briggs, in *Putnam's Monthly Magazine*, said: "Never since books were first printed has the success of Uncle Tom been equalled; the history of literature contains nothing parallel to it, nor approaching it; it is, in fact, the first real success in bookmaking, for all other successes in literature were failures when compared with the success of Uncle Tom. . . . Don Quixote was a popular book on its first coming out, and so was Gil Blas, and Richardson's Pamela, and Fielding's Tom Jones, and Hannah More's Cælebs, and Gibbon's Decline and Fall; and so were the Vicar of Wakefield, and Rasselas, and the Tale of a Tub, and Evelina, the Lady of the Lake, Waverley, the Sorrows of Werther, Childe Harold, the Spy, Pelham, Vivian Grey, Pickwick, the Mysteries of Paris, and Macaulay's History. These are among the most famous books that rose suddenly in popular esteem on their first appearance, but the united sale of the whole of them, within the first nine months of their publication, would not equal the sale of Uncle Tom in the same time. . . . It is but nine months since this Iliad of the blacks, as an

English reviewer calls Uncle Tom, made its appearance among books, and already its sale has exceeded a million of copies; author and publisher have made fortunes out of it, and Mrs. Stowe, who was before unknown, is as familiar a name in all parts of the civilized world as that of Homer or Shakspeare. Nearly 200,000 copies of the first edition of the work have been sold in the United States. . . . The book was published on the 20th of last March, and on the 1st of December there had been sold 120,000 sets of the edition in two volumes, 50,000 copies of the cheaper edition in one, and 3,000 copies of the costly illustrated edition. . . . They [the publishers] have paid to the author \$20,300 as her share of the profits on the actual cash sales of the first nine months. But it is in England where Uncle Tom has made his deepest mark. . . . We know of twenty rival editions in England and Scotland, and that millions of copies have been produced. . . . We have seen it stated that there were thirty different editions published in London, within six months of the publication of the work here. . . . Uncle Tom was not long in making his way across the British Channel, and four rival editions are claiming the attention of the Parisians, one under the title of 'le Père Tom,' and another of 'la Case de l'Oncle Tom.'—*Uncle Tom-itudes (Putnam's Monthly Magazine, Jan., 1853)*.—"In May, 1852, Whittier wrote to Garrison: 'What a glorious work Harriet Beecher Stowe has wrought. Thanks for the Fugitive Slave Law. Better for slavery that that law had never been enacted, for it gave occasion for Uncle Tom's Cabin.' . . . Macaulay wrote, thanking her for the volume. . . . Four years later [he] wrote to Mrs. Stowe: 'I have just returned from Italy, where your fame seems to throw that of all other writers into the shade. There is no place where Uncle Tom, transformed into Il Zio Tom, is not to be found.' From Lord Carlisle she received a long and earnest epistle, in which he says he felt that slavery was by far the 'topping' question of the world and age, and that he returned his 'deep and solemn thanks to Almighty God, who has led and enabled you to write such a book.' The Rev. Charles Kingsley . . . sent his thanks, saying: 'Your book will do more to take away the reproach from your great and growing nation than many platform agitations and speechifyings.' Said Lord Palmerston, 'I have not read a novel for thirty years; but I have read that book three times, not only for the story, but for the statesmanship of it.' Lord Cockburn declared: 'She has done more for humanity than was ever before accomplished by any single book of fiction.' Within a year Uncle Tom's Cabin was scattered all over the world. Translations were made into all the principal languages, and into several obscure dialects, in number variously estimated from twenty to forty. The librarian of the British Museum . . . made a collection which is unique and very remarkable in the history of books. American visitors may see there thirty-five editions (Uncle Tom's Cabin) of the original English, and the complete text, and eight of abridgments and adaptations. Of translations into different languages there are nineteen, viz.: Armenian, one; Bohemian, one; Danish, two distinct versions; Dutch, one; Flemish, one; French, eight distinct versions, and two dramas; German, five distinct versions, and four abridgments; Hungarian, one complete version, one for children, and one versified abridgment; Illyrian, two distinct versions; Italian, one; Polish, two distinct versions; Portuguese, one; Roman, or modern Greek, one; Russian, two distinct versions; Spanish, six distinct versions; Swedish, one; Wal-

lachian, two distinct versions; Welsh, three distinct versions."—Mrs. F. T. McCray, *Uncle Tom's Cabin* (*Magazine of American history*, Jan., 1890).—See also AMERICAN LITERATURE: 1830-1890.

1853-1854.—Kansas-Nebraska Bill.—Repeal of the Missouri Compromise.—Doctrine of "Squatter sovereignty."—"The admission of California into the Union, and the organization of the territories of Utah, New Mexico, and Minnesota, reduced that part of our country without government to the vast region bounded by the Rocky Mountains on the West, British America on the North, Minnesota, Iowa, Missouri and Arkansas on the East, and Texas and New Mexico on the South. In the southeast corner of this splendid domain were the reservations where dwelt the Indians removed from the States East of the Mississippi. . . . Thus closed to settlement, and lying along the entire western border of Missouri and Arkansas, they formed a barrier checking the advancing tide of population so effectually that the most populous counties in Missouri were those on its western border. That such a state of things could long continue, that the country west of Missouri. . . . could remain permanently without organized government, was not to be expected. . . . Indeed, as time passed attempts to break through the barrier were made again and again. Within seven years the legislature of Missouri memorialized Congress to set up government in the region west of the State; Douglas introduced a bill to organize Nebraska; citizens of the frontier town of Parkville petitioned Congress to extinguish the Indian titles, organize Nebraska, and open it to settlement; the Wyandotte Indians sent a territorial delegate to Washington; the House passed a bill organizing Nebraska; Benton dragged the issue into his campaign for the Senate in 1853; the Wyandottes organized a territorial government, elected a provisional governor and council and delegate to Congress, and in 1854 a convention of delegates from Missouri, Iowa, and Nebraska met at St. Joseph and demanded the early extinguishment of Indian titles, and the establishment of territorial government in Nebraska as necessary to secure protection to the Pacific Railroad and shelter to the thousands of emigrants annually crossing the plains, and declared in favor of leaving the question of slavery 'to be settled by the citizens of the territory when they form a State government.' ["Popular sovereignty."] . . . Clearly the time for action had come, and on the opening day of the session Senator Dodge of Iowa gave notice that he would introduce a bill providing for territorial government in Nebraska. That another struggle in Congress over slavery was now at hand, that it was the direct result of the Benton-Atchison feud in Missouri, and that, in the course of it, the question of the right of the people in the territory to decide the issue of slavery would play an important part was pointed out by the Washington correspondents of the press, North and South, East and West. They were right, and when Douglas reported the bill on the fourth of January, 1854, it provided that, when admitted as a State or States, Nebraska, or any portion of it, should be received into the Union with or without slavery, as their constitutions might prescribe. With the bill came a report setting forth that the amendments which the com-

mittee deemed it a duty to recommend were those which affirmed and proposed to carry into practical operation in Nebraska the principles established by the compromise measures of 1850, so far as applicable to the territory. These great measures . . . were designed to establish certain great principles which, by withdrawing the question of slavery from the halls of Congress and from the arena of politics and leaving it with those most concerned and alone responsible for its consequence, would afford a remedy for existing evils and avoid for all time to come the perils of slavery agitation. These great principles were: that all questions of slavery in the territories and in the new States formed from them were left to the decision of the people residing therein; that all cases involving title to slaves and questions of personal freedom were referred to the jurisdiction of the local tribunal with the right of appeal to the Supreme Court of the United States; and that the act for the return of fugitives from labor was to be as faithfully executed in the territories as in the States. The bill as it came from the printer contained twenty sections. But three days later a new edition appeared with twenty-one sections, and this twenty-first section set forth that, in order to avoid all misconception, it was declared to be the true intent and meaning of the act, as far as slavery was concerned, to carry into practical operation in the territory the great principles established by the compromise measures of 1850. The three principles mentioned in the report were then restated and made a part of the bill. . . . As thus presented the bill merely reaffirmed the doctrine of non-intervention, and left untouched the question whether the restriction imposed by the compromise of 1820 was, or was not, repealed by the compromise of 1850. But Senator Dixon of Kentucky announced that when the bill came up for consideration he would move an amendment expressly repealing the Missouri Compromise. . . . On Monday, the twenty-third of January, accordingly, Douglas called up his bill and offered a substitute which cut the territory into Kansas and Nebraska, and declared the slavery restriction laid on the Louisiana purchase by the Missouri Compromise 'superseded by the principles of the legislation of 1850, commonly called the compromise measures,' and no longer operative. . . . The purpose of Douglas was not to declare openly and frankly in his bill that the slavery prohibition of the act of 1820 was repealed, but to claim that it had already been repealed by the compromise measures of 1850. From this position Chase sought to drive him, and early in February opened an attack on the fourteenth section. . . . [See part of statute below.] Walker pointed out that the repeal of the restriction laid on slavery in 1820 would revive the old French law legalizing slavery in all the Louisiana purchase. To quiet this fear Badger of South Carolina announced that . . . he would move an amendment which should read, 'provided that nothing herein shall be construed to revive or put in force any law or regulation which may have existed prior to the act of the sixth of March, 1820, either protecting, establishing, prohibiting, or abolishing slavery.' . . . The bill, thus amended, was reported to the Senate, and at five o'clock on the morning of March fourth, after a session of seventeen hours, the vote was taken on its passage. The yeas were 37 and the nays 14. . . . A bill to organize Nebraska had been introduced into the House late in December, and on the last day of January Richardson reported from the Committee on Territories what was in substance the Kansas-Nebraska bill

of Douglas, and this was still in Committee of the Whole when, on the seventh of March, the Senate bill came down for concurrence. On the twenty-seventh it was referred to the Committee of the Whole, where it slumbered till the eighth of May. The whole North, from Maine to Wisconsin, was then in commotion. . . . A Southern editor declared he had never known such unanimity of sentiment at the North on any question affecting the rights of the South as there prevailed in opposition to the repeal of the compromise of 1820. From mass meetings, from political conventions, from anti-slavery societies, churches, presbyteries, ministers, and clergymen of every denomination, from yearly meetings of the Friends, from the clergymen of the Northwestern States, from those of different denominations in and about the city of New York, from three thousand and fifty clergymen scattered over the New England States, from men of all sorts and conditions, came to Congress hundreds of petitions, memorials, resolutions, remonstrances. . . . The press of the North . . . was vigorously denouncing the Nebraska bill. In some hundred newspapers which we have looked over, said a New York editor, the expression of indignant disapproval is almost unanimous. It is a perfect chain of condemnation. . . . In Ohio forty-one were against and thirteen for it; in Indiana two were for it; in Illinois but one defended it; in Wisconsin eleven were against the bill, and four Democratic journals were for it. In the South a host of journals repudiated the bill as forsaking the position, long held in that section, that Congress had no power to meddle with slavery in any way anywhere. The Nebraska bill is a surrender of the very ground for which the South fought in 1850. Congress has no power to legislate slavery into nor out of a territory; but this bill gives to the people of the territory a power Congress does not possess. Southern support of such a position is a repudiation of that of 1850. . . . In this excited state of the public mind the struggle over Kansas-Nebraska opened in the House. . . . Every expedient that could be used was used to prevent a vote. . . . When Tuesday came the special order on the Pacific Railroad bill was laid aside and the debate was allowed to run till Saturday, when, as had been agreed, it closed and filibustering by offering amendments began. . . . [On May 22 the bill passed the House by a vote of one hundred and thirteen to one hundred. It quickly passed the Senate and on May 30 Pierce signed it and made it law.] The final blow, said a Washington journal, was inflicted on the venerable Missouri Compromise on Thursday night last, and the ancient Pacifier of the Country, the Hater of Discord, the Friend of the Union, was dispatched in the Senate House a little after midnight. Had it been demanded by any section, public meeting, association, county, town, or hamlet in the whole country, the sacrifice might be justified. But it was uncalled for, unnecessary."—J. B. McMaster, *History of the people of the United States*, v. 3, pp. 192-196, 199-201, 203-205.—See also KANSAS: 1854-1850.

An event in Boston at this time showed how strongly the tide had set against slavery. On May 24, 1854, a runaway slave named Anthony Burns was arrested. Richard H. Dana, Theodore Parker and Charles L. Ellis defended him in vain. An attempt at rescue and an offer to buy his freedom also failed; but the services of a revenue cutter were required to take him to Virginia, "and to this Burns was taken one afternoon in June. . . . The passage of the Kansas-Nebraska bill left the party

leaders in the free States divided in their opinions as to what was best to do. But the people in the free States had already made up their minds, and a call for a new and distinctly Northern party was sweeping over the land."—J. B. McMaster, *History of the people of the United States*, v. 3, pp. 208-209.—"The Democrats [had] . . . won in the elections because the Whigs had suffered hopeless division of opinion and had already in fact fallen asunder upon the question of slavery. The Democrats alone, with their chief strength at the South, kept their organization and their power of united action. Men who could not act with them now looked for a party, and yet feared to form one which should bring the sections face to face and fight the slavery question out. And yet they could not trust that question into the background or forget it. Territories were always making and to be made. That unresting host forever moving upon the western plains and rivers must presently be told what Congress meant itself to do, or let them do, with regard to the use and ownership of slaves. Root-and-branch opponents of slavery were very actively and aggressively making opinion against it without too tenderly considering either the politicians who wanted to think of something else or the merchants and manufacturers who dreaded to see peace and trade disturbed. . . . To every man who looked thoughtfully upon the face of affairs the slavery question obviously stalked obtrusive at the front of all policy, despite compromises and evasions. It was the southerners, besides, who seemed always to force the fighting. Whether the question were the reception of a petition against the continuance of the slave trade in the District of Columbia or the acquisition and government of new territory or the admission of a state into the Union, they let no opportunity go by to make known their claims and rights under the constitutional arrangement. They saw with the keen insight of those who lose that the game of growth and extending power went steadily against them. They valued the Union as dearly as the men of the North, were bent upon its preservation as earnestly and honorably as their compatriots of any section; but they were convinced . . . that its preservation depended upon the maintenance of an equilibrium between the sections, and they were determined, with Mr. Calhoun, to make their fight now, while yet there was a chance to win. They waged it, accordingly, like men suspiciously on guard in the face of a subtle enemy, and upon occasion deeply irritated even their friends with their noisy and ceaseless protests, driving their enemies to a like watchfulness and aggression."—W. Wilson, *History of American people*, v. 4, pp. 159-160, 164-165.—"Since the year 1844 there had existed a bitter factional contest in the Democratic Party in Missouri. One faction, comprising the conservatives on the slavery question and those with free-soil sympathies, was led by Col. Thomas H. Benton. The other faction included the radical proslavery men, led by David R. Atchison and James S. Green, who looked to John C. Calhoun for inspiration. After several years of plotting and strife, the Atchison wing of the party succeeded in 1850 in preventing Benton's reelection to the Senate. According to the reckoning of his enemies, this defeat should have annihilated Benton politically, but herein they miscalculated. . . . It was an important, if not the leading, part in Col. Benton's plan of campaign in 1853 so to associate the organization of Nebraska Territory and the construction of the railroad from St. Louis across Missouri to the Pacific that the people of Missouri

should look upon the establishment of the territorial government as indispensable to the success of the railroad."—P. O. Ray, *Genesis of the Kansas-Nebraska Act (Annual Report of American Historical Association, 1914, pp. 262-263)*.—The following is the text of the most important provisions of the act to organize Nebraska and Kansas:

AN ACT TO ORGANIZE THE TERRITORIES OF  
NEBRASKA AND KANSAS.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That all that part of the Territory of the United States included within the following limits, except such portions thereof as are hereinafter expressly exempted from the operations of this act, to wit: beginning at a point in the Missouri River where the fortieth parallel of north latitude crosses the same; thence west on said parallel to the east boundary of the Territory of Utah, on the summit of the Rocky Mountains; thence on said summit northward to the forty-ninth parallel of north latitude; thence east on said parallel to the western boundary of the territory of Minnesota; thence southward on said boundary to the Missouri River; thence down the main channel of said river to the place of beginning, be, and the same is hereby, created into a temporary government by the name of the Territory of Nebraska; and when admitted as a State or States, the said Territory, or any portion of the same, shall be received into the Union with or without slavery, as their constitution may prescribe at the time of their admission. . . .

Sect. 9. (The section relates to the judicial system of the Territory.) . . . Writs of error, and appeals from the final decisions of said Supreme Court (of the Territory), shall be allowed, and may be taken to the Supreme Court of the United States, in the same manner and under the same regulations as from the circuit courts of the United States, where the value of the property, or the amount in controversy, to be ascertained by the oath or affirmation of either party, or other competent witness, shall exceed one thousand dollars; except only that in all cases involving title to slaves, the said writs of error, or appeals shall be allowed and decided by the said Supreme Court, without regard to the value of the matter, property, or title in controversy; . . . *Provided*, That nothing herein contained shall be construed to apply to or affect the provisions of the "act respecting fugitives from justice, and persons escaping from the service of their masters," approved February twelfth, seventeen hundred and ninety-three, and the "act to amend and supplementary to the aforesaid act," approved September eighteen, eighteen hundred and fifty. . . .

Sect. 10. *And be it further enacted*, That the provisions of an act entitled "An act respecting fugitives from justice, and persons escaping from the service of their masters," approved February twelve, seventeen hundred and ninety-three, and the provisions of the act entitled "An act to amend, and supplementary to, the aforesaid act," approved September eighteen, eighteen hundred and fifty, be, and the same are hereby, declared to extend to and be in full force within the limits of said Territory of Nebraska. . . .

Sect. 14. *And be it further enacted*, . . . That the Constitution, and all laws of the United States which are not locally inapplicable, shall have the same force and effect within the said Territory of Nebraska as elsewhere within the United States,

except the eighth section of the act preparatory to the admission of Missouri into the Union, approved March sixth, eighteen hundred and twenty, which, being inconsistent with the principle of non-intervention by Congress with slavery in the States and Territories, as recognized by the legislation of eighteen hundred and fifty, commonly called the Compromise Measures, is hereby declared inoperative and void; it being the true intent and meaning of this act not to legislate slavery into any Territory or State, not to exclude it therefrom, but to leave the people thereof perfectly free to form and regulate their domestic institutions in their own way, subject only to the Constitution of the United States: *Provided*, That nothing herein contained shall be construed to revive or put in force any law or regulation which may have existed prior to the act of sixth March, eighteen hundred and twenty, either protecting, establishing, prohibiting, or abolishing slavery. . . .

Sect. 19. *And be it further enacted*, That all that part of the Territory of the United States included within the following limits, except such portions thereof as are hereinafter expressly exempted from the operations of this act, to wit, beginning at a point on the western boundary of the State of Missouri, where the thirty-seventh parallel of north latitude crosses the same; thence west on said parallel to the eastern boundary of New Mexico; thence north on said boundary to latitude thirty-eight; thence following said boundary westward to the east boundary of the Territory of Utah, on the summit of the Rocky Mountains; thence northward on said summit to the fortieth parallel of latitude; thence east on said Parallel to the western boundary of the State of Missouri; thence south with the western boundary of said State to the place of beginning, be, and the same is hereby, created into a temporary government by the name of the Territory of Kansas; and when admitted as a State or States, the said Territory, or any portion of the same, shall be received into the Union with or without slavery, as their Constitution may prescribe at the time of their admission. . . .

[Sections 27, 28, and 32 apply to the Territory of Kansas the provisions of sections 9, 10, and 14, respectively.]

—(*U. S. Statutes at Large, X., 277-290.*)

Senator Douglas's explanation of the reasons on which he grounded his Kansas-Nebraska Bill is given in a report made by Lieutenant-Colonel Cutts, of conversations held by him with the senator in 1859, and taken down in writing at the time, in the exact language of Douglas. "There was," said Senator Douglas, "a necessity for the organization of the Territory, which could no longer be denied or resisted. . . . Mr. Douglas, as early as the session of 1843, had introduced a bill to organize the Territory of Nebraska, for the purpose of opening the line of communication between the Mississippi Valley and our possessions on the Pacific Ocean, known as the Oregon country, and which was then under the operation of the treaty of joint occupation, or rather nonoccupation, with England, and was rapidly passing into the exclusive possession of the British Hudson's Bay Fur Company, who were establishing posts at every prominent and commanding point in the country. . . . Mr. Douglas renewed the introduction of his bill for the organization of Nebraska Territory, each session of Congress, from 1844 to 1854, a period of ten years, and while he had failed to secure the passage of the act, in conse-

quence of the Mexican war intervening, and the slavery agitation which ensued, no one had objected to it upon the ground that there was no necessity for the organization of the Territory. During the discussions upon our Territorial questions during this period, Mr. Douglas often called attention to the fact that a line of policy had been adopted many years ago, and was being executed each year, which was entirely incompatible with the growth and development of our country. It had originated as early as the administration of Mr. Monroe, and had been continued by Mr. Adams, General Jackson, Mr. Van Buren, Harrison, and by Tyler, by which treaties had been made with the Indians to the east of the Mississippi River, for their removal to the country bordering upon the States west of the Mississippi or Missouri Rivers, with guaranties in said treaties that the country within which these

STEPHEN ARNOLD DOUGLAS

Indians were located should never be embraced within any Territory or State, or subjected to the jurisdiction of either, so long as grass should grow and water should run. These Indian settlements, thus secured by treaty, commenced upon the northern borders of Texas, or Red River, and were continued from year to year westward until when, in 1844, Mr. Douglas introduced his first Nebraska Bill, they had reached the Nebraska or Platte River, and the Secretary of War was then engaged in the very act of removing Indians from Iowa, and settling them in the valley of the Platte River, with similar guaranties of perpetuity, by which the road to Oregon was forever to be closed. It was the avowed object of this Indian policy to form an Indian barrier on the western borders of Arkansas, Missouri, and Iowa, by Indian settlements, secured in perpetuity by a compact that the white settlements should never extend westward of that line. This policy originated in the jealousy, on the part of the Atlantic States, of the growth and expansion

of the Mississippi Valley, which threatened in a few years to become the controlling power of the nation. . . . This restrictive system received its first check in 1844, by the introduction of the Nebraska Bill, which was served on the Secretary of War, by its author, on the day of its introduction, with a notice that Congress was about to organize the Territory, and therefore he must not locate any more Indians there. In consequence of this notice, the Secretary (by courtesy) suspended his operations until Congress should have an opportunity of acting upon the bill; and inasmuch as Congress failed to act that session, Mr. Douglas renewed his bill and notice to the Secretary each year, and thus prevented action for ten years, and until he could procure action on the bill. . . . When Congress assembled at the session of 1853-'54, in view of this state of facts, Mr. Douglas renewed his Nebraska Act, which was modified, pending discussion, by dividing into two Territories, and became the Kansas-Nebraska Act. . . . The jealousies of the two great sections of the Union, North and South, had been fiercely excited by the slavery agitation. The Southern States would never consent to the opening of those Territories to settlement, so long as they were excluded by act of Congress from moving there and holding their slaves; and they had the power to prevent the opening of the country forever, inasmuch as it had been forever excluded by treaties with the Indians, which could not be changed or repealed except by a two-third vote in the Senate. But the South were willing to consent to remove the Indian restrictions, provided the North would at the same time remove the Missouri restriction, and thus throw the country open to settlement on equal terms by the people of the North and South, and leave the settlers at liberty to introduce or exclude slavery as they should think proper." The same report gives a distinction which Senator Douglas drew between "Popular Sovereignty" and "Squatter Sovereignty," as follows: "The name of Squatter Sovereignty was first applied by Mr. Calhoun, in a debate in the United States Senate in 1848, between himself and General Cass, in respect to the right of the people of California to institute a government for themselves after the Mexican jurisdiction had been withdrawn from them, and before the laws of the United States had been extended over them. General Cass contended that in such a case the people had a right, an inherent and inalienable right, to institute a government for themselves and for their own protection. Mr. Calhoun replied that, with the exception of the native Californians, the inhabitants of that country were mere squatters upon the public domain, who had gone there in vast crowds, without the authority of law, and were in fact trespassers as well as squatters upon the public lands, and to recognize their right to set up a government for themselves was to assert the doctrine of 'Squatter Sovereignty.' The term had no application to an organized Territory under the authority of Congress, or to the powers of such organized Territory, but was applied solely to an unorganized country whose existence was not recognized by law. On the other hand, what is called 'Popular Sovereignty' in the Territories, is a phrase used to designate the right of the people of an organized Territory, under the Constitution and laws of the United States, to govern themselves in respect to their own internal polity and domestic affairs."—S. A. Douglas, *Brief treatise upon constitutional and party questions* (reported by J. M. Cutts), pp. 86-92, and

123-124.—“The repeal of the Missouri Compromise was the beginning of the end. . . Throughout the North the conviction grew that Union and slavery could not exist much longer together. On the 4th of July, 1854, Garrison publicly burned a copy of the Constitution of the United States with the words, ‘The Union must be dissolved!’ He represented only an extreme sentiment. But the people at large began to calculate the value of this Union for which so many sacrifices had been made. Slavery became odious to many persons hitherto indifferent to the subject, on the ground that it persistently and selfishly placed the Union in peril.”—B. Tuckerman, *William Jay and the constitutional movement for the abolition of slavery*, ch. 7.—“No act more fateful in character ever passed the Congress of the United States, for it set in motion the train of political changes which led straight to the Civil War. It was the direct cause of a radical alteration of northern political feeling, of the total failure of the compromising or Union policy of 1850, and of the destruction of both the national parties. The suddenness of its introduction, the recklessness of its disturbance of the territorial situation, were such as to make an instant powerful impression; and the members of Congress who passed it realized, when the session finally ended in August, that they had begun a political revolution whose end no man could foresee.”—T. C. Smith, *Parties and slavery, 1850-1850*, pp. 107-108.

1854-1855.—Solidification of anti-slavery sentiment in the North.—Birth of the new Republican party.—“Upon parties, the sudden anger which swept the north in 1854 produced revolutionary effects. At the opening of the year the Democratic party controlled the federal government and most of the state governments north and south, and was loyally supported in each section. . . That the Free Democratic [Free Soil] party should ever supplant it as the rival of the Democrats was beyond the bounds of probability, for the third party was weakened by its radicalism and discredited by its habit of coalitions in nearly every state for the sake of gaining office. All calculations based on previous experience were upset, however, by the craze of anger and excitement over the repeal of the Missouri Compromise. The Whig party, paralyzed by differences between its northern and

southern wings, could reap no advantage from the blunder of the Pierce administration, for most of its northern members, turning in despair from the old organization as something stale and inadequate, welcomed the opportunity to unite with anti-slavery Democrats and Free-Soilers in order to administer a stunning rebuke to the party in power. The more radical anti-slavery men favored a sectional northern party formed to combat the south and the extension of slavery. Others desired not so much a new anti-southern as a new anti-democratic organization. It was an opportunity when a great leader, a man of the Clay or Webster stamp, was needed to assume control; or in default of such a personality, a group of men able to direct public action. No such leaders appeared, however, and the new forces worked themselves out at random in the several states, with the result that the political tornado which now blew the Whig party to fragments left chaos in its place. . . The region where the desire for a new anti-slavery organization proved strongest was the ‘Old Northwest.’ There Whiggery was less popular, for the party had been in a minority for years and the name had little of the social prestige which attached to it in the east and south. Consequently the opponents of the Kansas-Nebraska bill were able in these states to form a coalition in the summer of 1854. In Michigan a state mass convention at Jackson nominated, on July 6, a mixed ticket of Whigs, Democrats, and Free-Soilers, and adopted a new name, that of Republicans. Their resolutions, the first Republican party platform, placed the new body squarely on anti-slavery grounds by declaring slavery a ‘moral, social and political evil,’ denouncing the repeal of the Missouri Compromise as ‘an open and undisguised breach of faith,’ demanding the repeal of the Kansas-Nebraska act and the fugitive-slave law, and pledging the party to act under the name Republican ‘against the schemes of an aristocracy the most revolting and the most repressive the earth has ever witnessed.’ In Wisconsin, Ohio, and Indiana similar ‘people’s’ conventions met July 13, the anniversary of the Northwest Ordinance, brought about a union of anti-slavery elements, and organized for the fall campaign. Their enthusiasm, the vigor of their resolutions, and the promptness with which the Whig and Free Soil parties vanished in these states revealed the deep feeling aroused by the repeal of the Missouri Compromise. In the two other western states the same result was attained by Whig and Free Soil fusion. In Iowa, the Free Democratic party withdrew its own ticket and indorsed Grimes, the Whig candidate for governor, who ran on an anti-Nebraska platform. In Illinois, an attempt to form an anti-Nebraska party proved abortive, since the movement fell into the hands of radical Free-Soilers, . . . yet the elements of opposition finally managed to unite on a state ticket. In congressional nominations . . . in nearly every district in the north the opponents of the administration . . . [united] upon a distinctly anti-Nebraska candidate. In this way there appeared the beginnings of a purely sectional northern party, whose controlling sentiment was indignation towards the south and a determination to oppose the extension of slavery by restoring the Missouri Compromise, or by some new means of effectual restriction. This movement, however, although the logical outcome of the crisis, failed in the eastern states owing to two obstacles. . . The conservative elements of the Whig party in the states east of Ohio refused to abandon their ranks. The Whig

state convention of Massachusetts, while declaring itself 'unalterably opposed to the extension of slavery over one foot of territory now free,' resolved 'that the Whig party of Massachusetts, ever true to liberty, the Constitution, and the Union, needs not to abandon its organization or change its principles.' . . . In two eastern states, New York and Vermont, the anti-Nebraska men adopted the Whig ticket; elsewhere they let it alone. The only eastern state where the Republican party as such was successfully formed was Maine, where a coalition of Free-Soilers and Temperance Democrats adopted the name. In Massachusetts a convention was called to form the party but it proved almost a fiasco. These hesitating movements of undecided Whigs were rendered unimportant by a totally unexpected political phenomenon which suddenly burst upon the scene. In the spring of 1854 it began to be rumored that a new secret political society was spreading everywhere, and by summer it was evident that this body, whose members affected ignorance of its name, principles, or officers, was going to play a strong part in the coming elections. The 'Order of the Star-Spangled Banner' had been in existence since 1850 as one of several societies opposed to the influence of foreigners and Catholics in politics. . . . Soon riots began between the Catholic Irish and the 'Know-Nothings,' as the members of the secret orders were commonly called, and the year 1854 was marked by tumults of alarming proportions in New York and other large cities. . . . Of course this movement had no connection with the Kansas Nebraska excitement; yet it was undeniably hostile to the party which contained within its ranks the Germans and Irish. Accordingly, when the wrath over the repeal of the Missouri Compromise spread like wildfire over the north, thousands of men who burned to rebuke the Pierce administration, but saw no hope in the conservative Whig organization, found this new, aggressively American order ready to receive them. . . . Other similar orders flourished, and by the end of the summer of 1854 the anti-Nebraska excitement was paralleled by a new and unexpected anti-foreign agitation. . . . When the elections came off, the results of the year of excitement became visible. In the north-west, where the opposition was united in an anti-Nebraska or Republican fusion, it carried every state except Illinois; but in the eastern states the confusion of parties almost defied description. Voters were confronted with three or even four tickets: Republican, anti-Nebraska, Peoples', Fusion, Know-Nothing, Free Soil, Whig, Democratic, 'Hard' and 'Soft' Democrat, anti-Maine Law or 'Rum' Democrat, and Temperance candidates. The Republican or Whig-Free-Soil-Temperance fusion carried Maine, Vermont, and, by a narrow margin, New York; but these successes were cast into the shadow by the astoundingly sudden rise of the Know-Nothings. This hitherto unknown party, with no public campaign at all, cast over one-quarter of the total vote in New York, more than two-fifths in Pennsylvania, and nearly two thirds in Massachusetts [see MASSACHUSETTS: 1854-1865], electing every state officer and nearly every member of the legislature. In other states great numbers of the candidates elected as Republicans or anti-Nebraska men were also Know-Nothings, and the effect of the rebuke to the Pierce administration was almost lost sight of in the general amazement over the rise of the new order."—T. C. Smith, *Parties and slavery, 1850-1850*, pp. 100-111, 116, 118-119.—"Long before November it was evi-

dent that the political revolution among the people of the North was thorough, and that the election day was anxiously awaited merely to record the popular verdict already decided. The influence of this result upon parties, old and new, is perhaps best illustrated in the organization of the Thirty-fourth Congress, chosen at these elections during the year 1854, which witnessed the repeal of the Missouri Compromise. . . . The influence of politics during the interim [between the election of a new congress and its first meeting] needs always to be taken into account. In this particular instance this effect had, if anything, been slightly reactionary, and the great contest for the Speakership during the winter of 1855-6 may therefore be taken as a fair manifestation of the spirit of politics in 1854. The strength of the preceding House of Representatives, which met in December, 1853, had been: Whigs, 71; Free-soilers, 4; Democrats, 159—a clear Democratic majority of 84. In the new Congress there were in the House, as nearly as the classification could be made, about 108 anti-Nebraska members, nearly 40 Know-Nothings, and about 75 Democrats; the remaining members were undecided. The proud Democratic majority of the Pierce election was annihilated."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 1, ch. 20.

1855-1856.—Long contest for speakership of the House.—Election of Speaker Banks, Republican.—J. R. Giddings's account.—"In the midst of . . . increasing [political] excitement, the ill-fated American party tore itself to pieces upon the unavoidable issue. The first proof of its fatal weakness appeared in a contest for the speakership of the House of Representatives, which delayed the conduct of all public business from the meeting of Congress in December, 1855, until the end of February, 1856. The regular administration Democrats numbered only seventy-five in place of the one hundred and fifty-nine who controlled the previous Congress, and their candidate was Richardson. The opposition, elected in the political whirlwind of 1854, was too heterogeneous to combine. The largest single group comprised about one hundred and seventeen Americans, leaving about forty 'straight' Republicans and a number of independents. But of the Know-Nothing plurality, only about forty could be held together in support of Fuller, of Pennsylvania, the avowedly American candidate. Nearly all the rest joined the

Republicans [in which the Free Soil party had begun to merge] in voting for Banks, of Massachusetts, who had just abandoned the Know-Nothing party for the Republican. For weeks, running into months, the tripartite struggle went on, in an irregular running debate, mainly on the Kansas issue, interrupted with ballotings for speaker."—T. C. Smith, *Parties and slavery, 1850-1859*, p. 145.—J. R. Giddings in his "History of the Rebellion," tells the story of the struggle as follows: "The President of the United States sent his annual message to the Senate on the 31st December. . . . Aware that this was intended to exert an influence against the Republicans, the author at once objected to receiving it, as it was an attempt to introduce a new practice—for up to that time no President had ever presumed to thrust his message upon an unorganized body—and that it could not constitutionally be received by members until a Speaker were elected. But a majority voted to receive it. The next attempt was to read it to the House; but it was again objected that it was not addressed to members in their disorganized condition, but was addressed to the Senate and House of Representatives, which had not then been organized. This objection was sustained, and although they had received the message, they refused to read it. The new year found the House unorganized, with the President's message lying upon the Clerk's desk unopened and unread. One ballot was taken. A motion was next made to take up and read the President's message; but, after debate, the motion was laid on the table. Members now began to make arrangements for continuing the contest indefinitely. . . . In many Republican districts the people met in public conventions and passed resolutions approving the action of their Representatives, made provisions for their members to draw on their local banks for such funds as they deemed necessary for defraying expenses at Washington. . . . Some State Legislatures made appropriations from their State funds. Soon as the republican party became consolidated, its members became more confident. Those of greatest experience assured their friends that as the President, officers of government, and the army and navy must go without pay until the House should be organized, the pressure would soon be so great upon the Democratic party that they would be compelled to submit to the election of a Republican Speaker. Some State Legislatures passed resolutions sustaining the action of their Representatives, declaring the issue involved to be the extension or non-extension of slavery."—J. R. Giddings, *History of the Rebellion*, ch. 26.—"January 12, 1856, the three candidates explained their views. Banks insisted that Congress had both the power and the duty to prohibit slavery in the territories; Fuller denied that either Congress or the territorial legislature had any power except to protect slavery; while Richardson stood on Douglas' ground that, whether Congress had the right to prohibit slavery or not, it rested with the territorial government to afford protection. Incessant attempts at coalition between Democrats and southern Know-Nothings, and between Republicans and all other anti-Nebraska men, were fruitless. The House in exhaustion voted to elect by a plurality, and Banks was chosen, February 2, by 103 votes to 100 for Aiken, of South Carolina. This victory ended a long period of suspense; the defeated southerners acquiesced in the result, and the House was finally ready for business."—T. C. Smith, *Parties and slavery, 1850-1859*, p. 146.

1855-1860.—Walker's filibustering in Nicaragua. See NICARAGUA: 1855-1860.

1856.—Disappearance of Know-Nothings as a political force.—Effect of struggle for Kansas.—In February, 1856, a few days after the election of Banks as speaker, "the Know-Nothing party, shattered as a congressional group, also broke into pieces as a political organization. February 18 a national council of the order met at Philadelphia, modified the party platform . . . and condemned the Pierce administration for reopening sectional agitation by the repeal of the Missouri Compromise. No such attempt to befoe the issue could prevent a crisis when the nominating convention of the American party assembled four days later in the same place. The anti-slavery northern members refused to be bound by the platform just adopted by the order, and demanded that no candidates be nominated who were not in favor of interdicting slavery north of 36° 30' by congressional action. When this proviso was laid on the table, at once a score of members withdrew. . . . More members seceded [on the nomination of Fillmore] and joined the earlier bolters in a call for a national convention of all 'Americans opposed to the establishment of slavery in any of the territory which was covered by the Missouri Compromise,' at New York in June. . . . By the end of February, 1856, the results of the Kansas excitement were visible in the definite failure of the American party and the practical certainty that the Republican party would take its place in the north. The presidential election was to be contested by a northern sectional party, long dreaded by all conservatives; and the outcome must depend largely on the course of events in Kansas and the way in which Congress and the administration dealt with them. The situation was highly critical, increasing in tension with every week. When Congress was ready for action, the Kansas situation presented a threefold problem: the policy of the federal government towards the territory; the attitude which parties should take on the pressing question; and the effect of the controversy on the election of a president, vice-president, and congressmen. By this time Pierce had definitely committed himself. . . . [On] March 17, Douglas introduced a bill for the settlement of Kansas affairs in the form of an enabling act for the election of a constitutional convention, and advocated it in a powerful speech. . . . This bill and the speech . . . meant that Douglas and Pierce and their associates recognized the difficulties of the existing situation to the extent of being willing to provide an opportunity for the people of the territory to vote on the slavery problem. The anti-Nebraska opposition, however, was not ready to abandon the Kansas question to the Pierce administration, and met Douglas's plan by advocating the admission of Kansas under the Topeka constitution. When the application of the Topeka legislature was brought to Washington by Lane, the Free State leader, it was done in such a bungling manner as to enable the Democrats to handle the memorial without mercy; but the efficiency of the Republicans in debate was such as to put the administration on the defensive. Hale, Sumner, Seward, and Wade were now joined by Trumbull, of Illinois, Harlan, of Iowa, and Wilson, of Massachusetts, and they made a series of severe attacks upon the pro-slavery party in Kansas. . . . In the House the Kansas question took the form of a struggle for the seat of a congressional delegate, which was contested by Whitfield and Reeder;

and after a month of heated discussion the matter was shelved for a time by the appointment of a special committee to visit Kansas and report on the conduct of elections in the territory."—T. C. Smith, *Parties and slavery, 1850-1859*, pp. 146-149, 152-154.—"During the first months of 1856 the attention of the country was divided between the proceedings of Congress and occurrences in Kansas. All through the cotton States meetings were held to promote interest in a counter colonization movement. But the results were not commensurate with the agitation, as the South did not have the money to embark extensively upon the enterprise. Nevertheless, Colonel Buford . . . sold his slaves to provide money for . . . [a company of men to go to Kansas] and many other Southerners did likewise and contributed money raised from the sale of their jewelry, even women entering with zeal and sacrifice upon the undertaking. . . . While the South was strongly stirred by what it regarded as an attempt on the part of the North to steal from it a lawful opportunity to establish slavery in Kansas, the North, on its part, resented the effort put forth by the South to frustrate the crusade for the conquest of Kansas in the interest of freedom. As an effect of the organization of the Emigrant Aid Society of New England there had sprung up throughout the country 'Kansas Leagues,' organized to promote the purpose which that society was furthering. The next step . . . was an attempt to crystallize the feeling of the North as expressed in . . . numerous leagues. . . . The pro-slavery leaders, determined to arrest the flood of Northern emigration, laid an embargo on Missouri River, . . . steamers were searched, free State merchandise confiscated, and travellers for Kansas whose explanations were not deemed satisfactory were arrested and sent down the river. But the blockade of the Missouri would not stop all the avenues of approach—Iowa and Nebraska were available. . . . [The political conditions in Kansas were so grave as to constitute actual civil war throughout 1856 when the presidential election was impending. (See KANSAS: 1854-1859).] In those conditions are to be found the germs of the social conflict which was to constitute the grave problem of the Buchanan administration."—E. W. Sikes and W. M. Keener, *Growth of the nation, 1837-1860* (*History of North America*, v. 13, pp. 392-393, 400, 403).

ALSO IN: C. Sumner, *Works*, v. 4, pp. 125-342.

1856.—Refusal to sign the Declaration of Paris. See PARIS, DECLARATION OF.

1856.—Senator Sumner's speech on "The Crime against Kansas," and the assault upon him by Brooks of South Carolina.—"Almost simultaneously with the attack on Lawrence (see KANSAS: 1854-1859), an episode in Congress stirred popular feeling to the depths. On May 19 [during a debate on affairs in Kansas], Sumner delivered a speech in the Senate which, in the tension of the time, fairly drove southern members to fury. It was entitled 'The Crime against Kansas,' and very nearly merited the name he attached to it—'the most thorough philippic ever uttered in a legislative body.' Sumner was a high-minded philanthropist, utterly incapable of understanding an opponent, and to him the attempt to make Kansas a slave state was something inconceivably repulsive. On this occasion he freed his mind with almost hyperbolic language in a speech as offensive and insulting to the south as the fertile imagination of the author could possibly make it. Mixed in were personalities as contemptuous

and sneering as could be uttered in the Senate, aimed at Douglas and especially at Butler, of South Carolina, who had made a savage attack on Sumner two years before, which had not been forgotten. Douglas rose on the spot and repaid Sumner's attack with vituperation of equal bitterness and scorn; but southern leaders, when insulted, felt that they needed a different sort of satisfaction, for in their eye Sumner had put himself so far below the plane of decency as to be worthy only of such chastisement as one would give to a dog or an impudent slave."—T. C. Smith, *Parties and slavery, 1850-1859*, pp. 156-157.—"Two days after this exciting debate (May 22d) when the Senate at the close of a short session adjourned, Sumner remained in the Chamber, occupied in writing letters. Becoming deeply engaged, he drew his arm-chair close to his desk, bent over his writing, and while in this position was approached by Brooks, a representative from South Carolina and a kinsman of Senator Butler. Brooks, standing before and directly over him, said: 'I have read your speech twice over carefully. It is a libel on South Carolina and Mr. Butler, who is a relative of mine.' As he pronounced the last word, he hit Sumner on the head with his cane with the force that a dragoon would give to a sabre-blow. Sumner was more than six feet in height and of powerful frame, but pinned under the desk he could offer no resistance, and Brooks continued the blows on his defenceless head. The cane broke, but the South Carolinian went on beating his victim with the butt. The first blows stunned and blinded Sumner, but instinctively and with powerful effort he wrenched the desk from its fastenings, stood up, and with spasmodic and wildly directed efforts attempted unavailingly to protect himself. Brooks took hold of him, and, while he was reeling and staggering about, struck him again and again. The assailant did not desist until his arm was seized by one who rushed to the spot to stop the assault. . . . The injury received by Sumner was much more severe than was at first thought by his physicians and friends. . . . [He] was not able to enter regularly again on his senatorial career until December, 1859. . . . The different manner in which the North and the South regarded this deed is one of the many evidences of the deep gulf between these two people caused by slavery. . . . When Brooks returned to South Carolina he received an enthusiastic welcome. He was honored as a glorious son of the Palmetto State, and making him the present of a cane was a favorite testimonial. . . . At the North the assault of Brooks was considered brutal and cowardly; at the South, his name was never mentioned without calling him gallant or courageous, spirited or noble. . . . A committee was appointed by the House which took a large amount of evidence, and the majority reported a resolution in favor of the expulsion of Brooks. On this resolution, the vote was 121 to 95; but as it required two thirds, it was not carried. Only three Southern representatives publicly condemned the assault; only one voted to expel Brooks. After the decision by the House, Brooks made a speech, which he ended by resigning his place as representative. His district re-elected him almost unanimously; there were only six votes against him."—J. F. Rhodes, *History of the United States from the Compromise of 1850*, v. 2, ch. 7.

1856.—Granting of passports started. See STATE, DEPARTMENT OF, UNITED STATES: 1790-1009.

1856.—Eighteenth presidential election.—Buchanan made president.—"The presidential cam-

paign of . . . 1856, showed a striking disintegration and re-formation of political groups. Nominally there were four parties in the field: Democrats, Whigs, Native Americans or Know-Nothings, and Republicans. The Know-Nothings . . . were of little account as a national organization, for they stood upon an issue hopelessly insignificant in comparison with slavery. Already many had gone over to the Republican camp; those who remained nominated as their candidates Millard Fillmore and Andrew J. Donelson. The Whigs were the feeble remnant of a really dead party, held together by affection for the old name; too few to do anything by themselves, they took by adoption the Know-Nothing candidates. The Republican party, . . . differing on other matters, united upon the one doctrine, which they accepted as a test: opposition to the extension of slavery. They nominated John C. Fremont and William L. Dayton, and made a platform whereby they declared it to be 'both the right and the duty of Congress to prohibit in the Territories those twin relics of barbarism, polygamy and slavery.' . . . In this Convention 110 votes were cast for Lincoln for the second place on the ticket. . . . In the Democratic party there were two factions. The favorite candidate of the South was Franklin Pierce, for reelection, with Stephen A. Douglas as a substitute or second choice; the North more generally preferred James Buchanan, who was understood to be displeased with the repeal of the Missouri Compromise. The struggle was sharp, but was won by the friends of Buchanan, with whom John C. Breckenridge was coupled. The campaign was eager, for the Republicans soon developed a strength beyond what had been expected and which put the Democrats to their best exertions. The result was: popular vote, Democrats [Buchanan] 1,838,169, Republicans [Fremont] 1,341,264, Know-Nothings and Whigs [Fillmore] 874,534; electoral vote, Democrats 174, Republicans 114, Know-Nothings and Whigs, 8. Thus James Buchanan became President of the United States, March 4, 1857. . . . Yet, while the Democrats triumphed, the Republicans enjoyed the presage of the future; they had polled a total number of votes which surprised every one; on the other hand, the Democrats had lost ten States which they had carried in 1852 and had gained only two others, showing a net loss of eight States; and their electoral votes had dwindled from 254 to 174."—J. T. Morse, Jr., *Abraham Lincoln*, v. 1, ch. 4.—"The result was a victory for the conservatives, or 'reactionaries,' as we should perhaps say. The solid South voted for Buchanan; and Pennsylvania, Indiana, Illinois, and California were found in the same column. Fremont received the support of a solid East and all the Northwest except the states just mentioned. The fear of radicalism and the distrust of men of great wealth everywhere had defeated the young Republicans."—W. E. Dodd, *Expansion and conflict*, pp. 246-247.

1857.—Dred Scott Decision.—"The next contribution to the history of the struggle for Kansas was to come from an entirely new quarter. The

new President indicated, in his inaugural, whence it was to come, if not what it was to be. He said: 'A difference of opinion has arisen in regard to the point of time when the people of a Territory shall decide this question'—the question of slavery—"for themselves. This is, happily, a matter of but little practical importance. Besides it is a judicial question, which legitimately belongs to the Supreme Court of the United States, before whom it is now pending, and will, it is understood, be speedily and finally settled.' The President referred to the Dred Scott case, which had been twice argued before the Supreme Court, and decision upon which, it was understood, would be published to the world in a few days. . . . There were, indeed, two Dred Scott cases, one in the courts of Missouri, and one in the United States courts, but they had no connection with each other. . . . The facts in the two cases were, however, the same. One Dr. Emerson, the owner of Dred Scott, had taken Dred [in 1834] as his slave, into Illinois, a Commonwealth in which slavery was forbidden, and then into the Louisiana territory above the latitude thirty-six degrees and thirty minutes, where slavery was prohibited by the Congressional Act of 1820; had allowed Dred [in 1836] to marry in the free territory; had purchased the woman he married; . . . and had taken . . . him back to Missouri, with his wife and a child born to them on free territory, and held them as slaves in Missouri. Dr. Emerson's return to Missouri was in 1838. In 1844 the Doctor died, leaving Dred and his wife and child to Mrs. Emerson. According to the statement of facts recited by the Chief Justice of the United States, Dr. Emerson sold Dred and his family to a Mr. Sandford, a citizen of New York, the defendant in the case before the Supreme Court. . . . [The] first suit was brought in one of the inferior courts of Missouri, and was decided in Dred's favor. Mrs. Emerson appealed the case to the supreme court of Missouri, and two of the three judges upon that bench held that the condition of slavery reattached to the negro upon his being brought back into Missouri, and reversed the decision of the lower court. While the case in the Missouri courts was in progress Mrs. Emerson made over the control of the Scotts to . . . Mr. Sandford, . . . who hired them out to residents of Missouri. It was then, and for this reason, that Dred appealed to Roswell M. Field for his powerful aid in bringing [a] suit against Sandford in the Courts of the United States . . . [which] was begun before the case in the Missouri court was concluded. . . . The court ordered the jury to find for the defendant [and] judgment was rendered in his favor in the month of April, 1854. Mr. Field then carried the case to the Supreme Court of the United States, upon a writ of error, and secured the services of . . . Montgomery Blair, for the negro. Mr. Blair undertook the management of the case at Washington, and, like Mr. Field, gave his time and labor without pecuniary reward. The court costs incurred by Dred in both cases were paid by Taylor Blow, son of the man who sold Dred to Doctor Emerson. . . . The case was argued twice with great learning before the Supreme Court, and the decision finally reached was virtually acquiesced in by seven of the nine Justices. [Each member of the court read a decision], although Justice Nelson did not give his assent to any part of the opinion except that which decided that, on the return of Dred to Missouri with his master, any effect upon his slavery, which the taking of

him into . . . [free territory] might have had, disappeared. This seemed to Justice Nelson sufficient to the decision of the case, and he was unwilling to go farther, but some of his brethren, especially Justice Wayne, thought that the entire record of the case in the Circuit Court was brought up for examination by the Supreme Court, and that the Supreme Court ought to decide every point contained in the record."—J. W. Burgess, *Middle period, 1817-1858*, pp. 447-448, 450-452.—The arguments and the sentiments in the opinion given by Judge Taney, which gave most offense to the conscience and the reason of the country were the following: "The question is simply this: Can a negro, whose ancestors were imported into this country, and sold as slaves, become a member of the political community formed and brought into existence by the Constitution of the United States, and as such become entitled to all the rights, and privileges, and immunities, guaranteed by that instrument to the citizen? One of which rights is the privilege of suing in a court of the United States in the cases specified in the Constitution. It will be observed, that the plea applies to that class of persons only whose ancestors were negroes of the African race, and imported into this country, and sold and held as slaves. The only matter in issue before the court, therefore, is whether the descendants of such slaves, when they shall be emancipated, or who are born of parents who had become free before their birth, are citizens of a State, in the sense in which the word citizen is used in the Constitution of the United States. . . . The words 'people of the United States' and 'citizens' are synonymous terms, and mean the same thing. They both describe the political body who, according to our republican institutions, form the sovereignty, and who hold the power and conduct the Government through their representatives. They are what we familiarly call the 'sovereign people,' and every citizen is one of this people, and a constituent member of this sovereignty. The question before us is, whether the class of persons described in the plea in abatement compose a portion of this people, and are constituent members of this sovereignty? We think they are not, and that they are not included, and were not intended to be included, under the word 'citizens' in the Constitution, and can therefore claim none of the rights and privileges which that instrument provides for and secures to citizens of the United States. On the contrary, they were at that time considered as a subordinate and inferior class of beings, who had been subjugated by the dominant race, and, whether emancipated or not, yet remained subject to their authority, and had no rights or privileges but such as those who held the power and the Government might choose to grant them. It is not the province of the court to decide upon the justice or injustice, the policy or impolicy, of these laws. The decision of that question belonged to the political or law-making power. . . . In discussing this question, we must not confound the rights of citizenship which a State may confer within its own limits, and the rights of citizenship as a member of the Union. It does not by any means follow, because he has all the rights and privileges of a citizen of a State, that he must be a citizen of the United States. He may have all of the rights and privileges of the citizen of a State, and yet not be entitled to the rights and privileges of a citizen in any other State. . . . The question then arises, whether the provisions of the Constitution, in relation to the per-

sonal rights and privileges to which the citizen of a State should be entitled, embraced the negro African race, . . . who had then or should afterwards be made free in any State; and to put it in the power of a single State to make him a citizen of the United States, and endue him with the full rights of citizenship in every other State without their consent? . . . The court think the affirmative of these propositions cannot be maintained. And if it cannot, the plaintiff in error could not be a citizen of the State of Missouri, within the meaning of the Constitution of the United States, and, consequently, was not entitled to sue in its courts. It is true, every person, and every class and description of persons, who were at the time of the adoption of the Constitution recognised as citizens in the several States, became also citizens of this new political body; but none other. . . . It becomes necessary, therefore, to determine who were citizens of the several States when the Constitution was adopted. And in order to do this, we must recur to the Governments and institutions of the thirteen colonies, when they separated from Great Britain and formed new sovereignties, and took their places in the family of independent nations. We must inquire who, at that time, were recognised as the people or citizens of a State, whose rights and liberties had been outraged by the English Government; and who declared their independence, and assumed the powers of Government to defend their rights by force of arms. In the opinion of the court, the legislation and histories of the times, and the language used in the Declaration of Independence, show that neither the class of persons who had been imported as slaves, nor their descendants, whether they had become free or not, were then acknowledged as a part of the people, nor intended to be included in the general words used in that memorable instrument. It is difficult at this day to realize the state of public opinion in relation to that unfortunate race, which prevailed in the civilized and enlightened portions of the world at the time of the Declaration of Independence, and when the Constitution was framed and adopted. . . . They had for more than a century before been regarded as beings of an inferior order, and altogether unfit to associate with the white race, either in social or political relations; and so far inferior that they had no rights which the white man was bound to respect; and that the negro might justly and lawfully be reduced to slavery for his benefit. He was bought and sold, and treated as an ordinary article of merchandise and traffic, whenever a profit could be made by it. This opinion was at that time fixed and universal in the civilized portion of the white race." Finally, having, with great elaboration, decided the question of citizenship adversely to Dred Scott and all his kind, the court proceeded to obliterate the anti-slavery provision of the Missouri Compromise, which constituted one of the grounds on which Dred Scott claimed his freedom. "It is the opinion of the court," wrote Chief Justice Taney, "that the act of Congress which prohibited a citizen from holding and owning property of this kind in the territory of the United States north of the line therein mentioned, is not warranted by the Constitution, and is therefore void; and that neither Dred Scott himself, nor any of his family, were made free by being carried into this territory; even if they had been carried there by the owner, with the intention of becoming a permanent resident. We have so far examined the case, as it

stands under the Constitution of the United States, and the powers thereby delegated to the Federal Government. But there is another point in the case which depends on State power and State law. And it is contended, on the part of the plaintiff, that he is made free by being taken to Rock Island, in the State of Illinois, independently of his residence in the territory of the United States; and being so made free, he was not again reduced to a state of slavery by being brought back to Missouri. Our notice of this part of the case will be very brief; for the principle on which it depends was decided in this court, upon much consideration, in the case of Strader et al. v. Graham, reported in 10th Howard, 82. In that case, the slaves had been taken from Kentucky to Ohio, with the consent of the owner, and afterwards brought back to Kentucky. And this court held that their status or condition, as free or slave, depended upon the laws of Kentucky, when they were brought back into that State, and not of Ohio; and that this court had no jurisdiction to revise the judgment of a State court upon its own laws. This was the point directly before the court, and the decision that this court had no jurisdiction turned upon it, as will be seen by the report of the case. So in this case. As Scott was a slave when taken into the State of Illinois by his owner, and was there held as such, and brought back in that character, his status, as free or slave, depended on the laws of Missouri, and not of Illinois. . . . Upon the whole, therefore, it is the judgment of this court, that it appears by the record before us that the plaintiff in error is not a citizen of Missouri, in the sense in which that word is used in the Constitution; and that the Circuit Court of the United States, for that reason, had no jurisdiction in the case, and could give no judgment in it. Its judgment for the defendant must, consequently, be reversed, and a mandate issued, directing the suit to be dismissed for want of jurisdiction."—*Report of the decision of the Supreme Court of the United States in the case of Dred Scott vs. John F. A. Sandford (Howard's Reports, v. 19).*—"It was not many weeks before it became entirely manifest that the cause of slavery had lost immensely by the decision, and the cause of free-soilism had gained in the same degree. Justice Curtis had demonstrated that the decision had cast the responsibility for the further extension of slavery upon the nation, and the nation now began to show its resolution to meet its responsibility by acquitting itself of any participation in this great wrong, in the only manner now left to it, that is, by preventing it. The nation could no longer deceive itself with the idea that it could stand neutral. The Court had actually swept away the dogma of 'popular sovereignty' in the Territories. The nation must now neither prohibit, nor allow the Territorial governments to prohibit, slavery within the Territories, as the decision would have it, or the nation must itself prohibit it, as the dissenting opinion would have it. When these alternatives were distinctly recognized as necessary and exhaustive, it did not take the nation long to decide which course it must pursue."—J. W. Burgess, *Middle period, 1817-1858*, pp. 458-459.

1858.—Lincoln-Douglas debate in Illinois.—Lincoln's estimate of Dred Scott decision.—"Early in 1858 the worst of the panic was over, the Lecompton scheme was defeated [see KANSAS: 1854-1859], and there was a breathing space in which the politicians had time to think of the presidential election of 1860. To the shrewdest man it seemed that fortune favored Douglas. Much of the enthusiasm of 1856 had subsided. The Kansas-Nebraska law did not seem quite so bad now that it was evident that popular sovereignty did not mean the establishment of slavery in a territory. Douglas's opposition to the Lecompton constitution had brought him the goodwill of many of the conservative republicans, . . . and it was even whispered in some quarters that Northern democrats and republicans might unite to make him president. . . . Two years of peace, it was believed, would go far to remove the sectional strife, and if Douglas could be supported in 1860 by the South, the Northern democrats and the conservative republicans, what might he not expect to do? . . . We are now to see how his prospects were blighted by Abraham Lincoln. Douglas's term in the senate expired in 1859, and his party in state convention nominated him to succeed himself."—J. S. Bassett, *Short history of the United States*, pp. 499-500.—To oppose Douglas, the Republican state convention chose Abraham Lincoln, who had come to the front during the Kansas discussions. "There was of course no surprise in this for Mr. Lincoln. He had been all along led to expect it, and with that in view had been earnestly and quietly at work preparing a speech in acknowledgment of the honor about to be conferred on him. . . . Before delivering his speech he invited a dozen or so of his friends over to the library of the State House, where he read and submitted it to them. After the reading he asked each man for his opinion. Some condemned and not one endorsed it. . . . Each man attacked it in his criticism. I was the last to respond. Although the doctrine announced was rather rank, yet it suited my views, and I said, 'Lincoln, deliver that speech as read and it will make you President.' At the time I hardly realized the force of my prophecy. Having patiently listened to these various criticisms from his friends . . . he answered all their objections substantially as follows: 'Friends, this thing has been retarded long enough. The time has come when these sentiments should be uttered; and if it is decreed that I should go down because of this speech, then let me go down linked to the truth—let me die in the advocacy of what is just and right.' The next day, the 17th, the speech was delivered just as we had heard it read. [The part of this famous speech which made the most profound impression and gave rise to the most discussion was contained in the following sentences: 'If we could first know where we are, and whither we are tending, we could better judge what to do, and how to do it. We are now far into the fifth year since a policy was initiated

with the avowed object and confident promise of putting an end to slavery agitation. Under the operation of that policy, that agitation has not only not ceased, but has constantly augmented. In my opinion, it will not cease until a crisis shall have been reached and passed. "A house divided against itself cannot stand." I believe this government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided. It will become all one thing, or all the other. Either the opponents of slavery will arrest the further spread of it, and place it where the public mind shall rest in the belief that it is in the course of ultimate extinction; or its advocates will push it forward till it shall become alike lawful in all the States, old as well as new, North as well as South. Have we no tendency to the latter condition? Let any one who doubts carefully contemplate that now almost complete legal combination—piece of machinery, so to speak—compounded of the Nebraska doctrine and the Dred Scott decision. Let him consider not only what work the machinery is adapted to do, and how well adapted; but also let him study the history of its construction, and trace, if he can, or rather fail, if he can, to trace the evidences of design and concert of action among its chief architects, from the beginning.] . . . Lincoln had now created in reality a more profound impression than he or his friends anticipated. Many Republicans deprecated the advanced ground he had taken, the more so as the Democrats rejoiced that it afforded them an issue clear and well-defined. Numbers of his friends distant from Springfield, on reading his speech, wrote him censorious letters; and one well-informed co-worker predicted his defeat, charging it to the first ten lines of the speech. These complaints, coming apparently from every quarter, Lincoln bore with great patience. To one complainant who followed him into his office he said proudly, 'If I had to draw a pen across my record, and erase my whole life from sight, and I had one poor gift or choice left as to what I should save from the wreck, I should choose that speech and leave it to the world unerasable.' Meanwhile Douglas had returned from Washington to his home in Chicago . . . [where at a public reception on July 9] he delivered from the balcony of the Tremont House a speech intended as an answer to the one made by Lincoln in Springfield. Lincoln was present at this reception, but took no part in it. The next day, however, he replied. . . . Leaving Chicago, Douglas passed on down to Bloomington and Springfield, where he spoke on the 16th and 17th of July respectively. On the evening of the latter day Lincoln responded again in a most effective and convincing effort. The contest now took on a different phase. Lincoln's Republican friends urged him to draw Douglas into a joint debate, and he accordingly sent him a challenge on the 24th of July. . . . On the 30th Douglas finally accepted the proposition to 'divide time, and address the same audiences,' naming seven different places, one in each Congressional district, outside of Chicago and Springfield, for joint meetings. The places and dates were, Ottawa, August 21; Freeport, August 27; Jonesboro, September 15; Charleston, September 18; Galesburg, October 7; Quincy, October 13; and Alton, October 15."—W. H. Herndon and J. W. Weik, *Lincoln, the true story of a great life*, v. 2, ch. 13.—At Freeport Lincoln asked: "Can the people of a United States Territory, in any lawful way, against the

wishes of any citizen of the United States, exclude slavery from its limits, prior to the formation of a state constitution?" If Douglas answered No, he would deny his pet doctrine of popular sovereignty; if he answered Yes, he would antagonize the dominant politicians of the South, led by Jefferson Davis, who maintained that the only power that could deal with slavery was the municipal law of a state, and furthermore he would set the local authority of the territory above the Supreme Court which had declared slavery legal in all the territories of the United States by the Dred Scott decision. Douglas answered the question in the affirmative and tried to wriggle out of the trap by declaring that although slavery might be 'legal' in a territory, it could not actually exist for a day or an hour where the people enacted legislation 'unfriendly' to it. That was the famous 'Freeport Doctrine.'"—D. S. Muzzey, *United States of America*, v. 1, pp. 510-511.—See also FREEPORT DOCTRINE.—"During the canvass Mr. Lincoln, in addition to the seven meetings with Douglas, filled thirty-one appointments made by the State Central Committee, besides speaking at many other times and places not previously advertised. . . . The election took place on the second of November, and while Lincoln received of the popular vote a majority of over 4,000, yet the returns from the legislative districts foreshadowed his defeat. In fact, when the Senatorial election took place in the Legislature, Douglas received 54 and Lincoln 46 votes—one of the results of the lamentable apportionment law then in operation."—W. H. Herndon and J. W. Weik, *Lincoln, the true story of a great life*, v. 2, ch. 13.

1859.—John Brown's attack on slavery in Virginia.—Tragedy at Harper's Ferry.—A repercussion of the conflict in Kansas was heard from Virginia when "on the 17th of October, 1859, this country was bewildered and astounded while the fifteen Slave States were convulsed with fear, rage, and hate, by telegraphic dispatches from Baltimore and Washington, announcing the outbreak, at Harper's Ferry, of a conspiracy of Abolitionists and negroes, having for its object the devastation and ruin of the South, and the massacre of her white inhabitants. . . . As time wore on, further advices, with particulars and circumstances, left no room to doubt the substantial truth of the original report. An attempt had actually been made to excite a slave insurrection in Northern Virginia, and the one man in America to whom such an enterprise would not seem utter insanity and suicide, was at the head of it. [This was John Brown, of Osawatomie, who had been fight-

Maps prepared specially for the NEW LARNED under direction of the editors and publishers.

ing slavery and the border ruffians in Kansas (see Kansas: 1854-1859) for five years, and had now changed his field.]—H. Greeley, *American conflict*, v. 1, ch. 20.—“Brown himself states that he became an abolitionist during the War of 1812, through witnessing the maltreatment of a colored boy, a slave. It is not surprising, with his intensity of character, that as early as 1839 he had decided upon some such course as was taken in 1859. He seems to have kept this steadily in view and to have looked upon his whole family as instruments in the cause. . . . [He was very active in the struggle for Kansas, for which he was supplied with arms.] May 8, 1858, found Brown (known for some time for safety as Shubel Morgan) at Chatham, Canada, with eleven young white associates and one colored man whom he attached to himself and who had been with him in Kansas and elsewhere. At Chatham, by these men and thirty-four colored persons, was adopted an extraordinary ‘Provisional Constitution and Ordinance for the people of the United States,’ which was written in January, 1858, at the house of Frederick Douglass, in Rochester, a paper in itself a witness of the abnormality of the mind of the author. . . . Suspicions of Brown’s intentions reached Senator Henry Wilson from Forbes [an English adventurer]. . . . A letter to Dr. Howe from Wilson caused the committee, of which Stearns was chairman, to write Brown, May 14, 1858, not to use the arms furnished him for any other purpose than the defence of Kansas. . . . May 31 found Brown back in Boston in consultation with Smith, Stearns, Howe, Parker, Higginson, and Sanborn. Here, notwithstanding the danger of publicity, Higginson protested against delay, regarding ‘any postponement as simply abandoning the project.’ But all the others of the committee were against him, Sanborn writing him, May 18: ‘Wilson, as well as Hale and Seward, and God knows how many more, have heard about the plot from Forbes. To go on in the face of this is mere madness.’ . . . Brown wandered in many places until July, 1859, when he appeared in the rough, semi-mountainous country of the upper Potomac, immediately on the highway, and six miles north from Harper’s ferry, where he rented for a year a small place known as the Kennedy farm, on which were two houses. Thither he transported by degrees all his arms and gathered together his twenty-one followers (five of whom were colored). . . . Except John Brown and his son, Owen, they ranged in age from eighteen to twenty-eight. Only five of the whites were over twenty-four years of age; one was not yet nineteen; three were Brown’s sons. Brown’s pretence of looking for a better climate and for a location for raising sheep, imposed upon the unsophisticated neighbors, and no suspicions seem to have been roused by the presence and the going to and fro in this secluded district of a number of strangers, who wandered freely over the mountains of the vicinity. . . . An anonymous letter dated at Cincinnati, August 20, 1859, to the secretary of war, gave full information of the intended movement, but received no attention. It indicated so clearly Brown’s movements that it was evident later that it had been written by one thoroughly informed. . . . Sunday, October 16, the party was assembled in an all-day council at the Kennedy farm, the ‘constitution’ was read for the benefit of four newcomers, commissions for newly made officers made out, and orders given detailing the movement, which Brown had decided should be that evening. . . . The invading procession left the Kennedy farm at eight o’clock.

Brown, with his wagon and party, having captured the bridge watchman, went on to the armory [at Harper’s Ferry, where from 100,000 to 200,000 stands of arms were usually stored], forced the door, and seized the watchman. The several stations assigned were occupied by eleven o’clock. A shot fired at a relief bridge watchman gave the alarm. The stoppage of an eastward-bound train at midnight at first suggested to the passengers a strike among the arsenal workmen; at daylight it was allowed to proceed. . . . Brown himself seeing the conductor across the bridge, as he ‘had no intention of interfering with the comfort of passengers or hindering the United States mails.’ With daylight, October 17, came a four-horse wagon-load of Colonel Washington’s slaves. Washington himself . . . [who] had been ordered to give in charge to Anderson (a colored man) the historic sword, and a pair of pistols from Lafayette . . . was brought in his own carriage to the armory, where he was kept as a prisoner, as were several other neighboring slave-owners. The Washington wagon and fourteen slaves were sent to the Kennedy farm to assist in removing the arms to the Virginia school-house. . . . The countryside being now aroused, men with arms of all sorts poured into the village. Militia began to arrive from all the neighboring and some of the more distant towns, and desultory fighting began with a number of casualties on either side. At nightfall Brown held the engine-house with four men and ten prisoners, his son Oliver dead and another son, Watson, dying. Six others were dead, three wounded, and one a prisoner. At eleven in the evening a company of United States marines arrived from Washington, accompanied by Colonel Robert E. Lee, of General Scott’s staff, who took over the command. At seven the next morning (Tuesday, October 18) Lieutenant J. E. B. Stuart was sent by Lee, under a flag of truce, to demand an unconditional surrender. . . . The failure to obtain a surrender was followed by an assault by the marines, in which the door was battered in, with the loss of one man. Brown received a bayonet wound and several severe sword-cuts in the mêlée. Owen Brown and six others escaped. After Brown was brought out he revived and talked earnestly in response to various questions. His conversation bore the impression of the conviction that whatever he had done to free slaves was right, and that in the warfare in which he was engaged he was entitled to be treated as a prisoner of war. Brown’s prisoners all testified to their lenient treatment, and Colonel Washington spoke of him as a man of extraordinary coolness and nerve. Brown and the other prisoners, to whom were added two captured later, were transferred to the county jail at Charlestown. . . . Brown’s trial began October 25, two Virginia lawyers, Lawson Botts and C. J. Faulkner, being assigned to his defence. These gentlemen were replaced later by S. Chilton, of Washington; H. Griswold, of Cleveland, Ohio, and a young Boston lawyer, G. E. Hoyt. The indictment was, first, for conspiring with negroes to produce insurrection; second, for treason to the commonwealth of Virginia; and third, for murder. October 31 he was found guilty, and was hanged December 2. All of the other prisoners in turn suffered the same punishment. Brown’s conduct throughout his imprisonment and trial was of great dignity and reserve, and commanded respect and sympathy. He appeared in court wounded and ill and in a cot. . . . Governor Wise himself gave high praise to Brown. Thousands of letters poured

in upon him urging Brown's pardon. Many threatened; others deemed the execution ill-advised. Wise's message to the legislature, written after Brown's death, gave good reasons for not taking such advice. . . . The South, under the circumstances, was much calmer than might have been expected. This was due in part, no doubt, to a reassurance because the blacks failed to rise, and showed evident loyalty to their masters. Their attitude justified much of what the South had so long upheld as to the contentment of the slaves; and this, with a removal of much of the fear which had hung over the section since Nat Turner's insurrection in 1831, nurtured a satisfaction which did much to offset the indignation which was poured out abundantly upon Brown's northern abettors and upon the many who proclaimed him a martyr. Motions in both houses of the Massachusetts legislature to adjourn on the day of Brown's execution, though lost, . . . rankled in the southern mind, as did also meetings in many parts of the North prompted by ill-advised fanaticism. The strength and extent of this spirit was illustrated by Theodore Parker's belief that 'No American has died in this century whose change of earthly immortality is worth half so much as John Brown's.' Parker was also one who could say, 'I should like of all things to see an insurrection of slaves. It must be tried many times before it succeeds, as at last it must,' an expression which was the outcome of his own full knowledge as to what was brewing. Of this the others of the Boston secret committee, Parker, Stearns, Higginson, Howe, and Sanborn, as already shown on the authority of the last, also had full information, as had Gerrit Smith, with the exception, perhaps, of the exact place at which Brown was to strike. Brown's funds were supplied by these men."—F. E. Chadwick, *Causes of the Civil War, 1859-1861*, pp. 69, 74-75, 77-85.

1860.—Slavery concentrated in the South.—Concentration of slavery in the South had been gradual. "After the . . . War [of Independence], commerce generally was controlled by the states, all of which but those in the far south forbade the slave trade. There were vast unsettled regions in the Carolinas and Georgia, and it was thought they must have negroes to develop them. But . . . by 1798 each of these states had forbidden further importations. The constitution . . . declared that congress could not prohibit the trade before 1808. Meanwhile, a movement for emancipation had swept over the entire North. In this section were few slaves, and the opponents of the institution needed only to organize the non-slaveholders, . . . to carry laws for emancipation. Vermont led the way in 1777 by declaring slavery illegal . . . and New Hampshire did the same in . . . 1784. In each state the few slaveholders could only convert their slaves into servants for wages or sell them out of reach of the state's jurisdiction. The Massachusetts constitution of 1780 declared that 'all men are born free and equal.' . . . In others the cause of freedom encountered greater opposition, but its advocates had recourse to the legislatures. Their request for emancipation by state statutes was met with argument that to free the slaves was to confiscate property. After struggles of varying length, they carried each Northern state but one for gradual emancipation. . . . The first victory of this kind was in Pennsylvania . . . in 1780. Connecticut and Rhode Island followed in 1784, New York in 1790, and New Jersey in 1804. . . . [In] New York . . . in 1817 . . . a law was carried for complete emancipation after 1827. Delaware alone of the Northern states retained slavery, and here

it was safe until the end of the civil war. The movement for freedom was felt south of the Mason and Dixon line and was strong in Virginia, where Jefferson, Washington, and many leading men wished to rid the state of an unprofitable form of labor and of the presence of an alien and undeveloped element of the population. But here was encountered a more serious obstacle than had yet appeared. The small proportion of blacks in the North involved no menace to the civilization there, were they slave or free. But the people of Virginia knew not what to do with a great mass of freed blacks. To leave them masters of their own actions in the white population seemed to invite trouble, and to send them to Africa, which many thought the only proper accompaniment of emancipation, was so expensive that it was out of the question. . . . At this time [1796] the invention of the cotton gin had begun to have its effect on slavery, making a great demand for slaves in the states to the southward. . . . Thus the seaboard states settled down to a free and a slave section. . . . West of the mountains . . . by the Northwest Ordinance the Ohio divided slavery from freedom between the Mississippi and the Alleghenies. Then came the Missouri Compromise line for the Louisiana purchase; but eventually the matter no longer admitted of compromise."—J. S. Bassett, *Short history of the United States*, pp. 350-351.—"The effect of this 'three-fifths' clause was greatly to weaken instead of strengthening the political power of the States in which Slavery existed. For very soon, the number of slaves in the Southern States was considerably increased by accessions from the Northern States. The acts of these Northern States . . . abolishing the Institution within their limits, were generally prospective in their character. Under the operation of these acts, humane as they were, the slaves in these States were to some extent, to what is not and never will be exactly known, brought South, and sold before the period fixed for their final emancipation. Less than half, it is believed by some, in point of fact, ever became free under these acts. . . . This is the way in which many of them, at least, found a resting-place in the more Southern States."—A. H. Stephens, *Constitutional view of the late war between the states*, v. 2, p. 102.—"During the period from 1815 to 1860 slavery concentrated itself in the South. . . . In the Middle States there were . . . 1816 in 1860. Of the latter number 1798 were in Delaware. Much was said about the cruelty of masters towards slaves. It is hard to separate this question from the feeling engendered by the bitter discussion of . . . parties. Slavery is always a hard institution, and the negro, being . . . submissive by nature, invited severe treatment to induce him to labor hard and refrain from evil conduct. Whipping was used freely, because the masters felt it was the punishment most effective with him. Some masters were benevolent, some were severe and careless of the interests of their slaves, but the typical master considered his slave from the standpoint of efficiency, and fed and clothed him, restrained him from the enervating vices, cared for him in sickness, and afforded him religious instruction with the object of making him a sound, moral, and docile laborer. He did not promote his intellectual development or his sense of self-dependence, since such a course would have made the slave wish for freedom. The iron law of slavery was that nothing should be afforded the slave which would weaken the hold of slavery as an institution. The antislavery agitation in the North, by arousing the feeling of the masters, led them to revise the slave codes, and

laws now appeared on Southern statute books forbidding slaves to be taught to read and write, prohibiting their assemblage without the presence of a white man, establishing patrols to keep them from traveling the roads without written permission, and restricting them in many other ways. The first three decades of the century constitute the mildest stage of American slavery. At that time the negro had made a real advance in rudimentary civilization over African barbarism, and the harsher reaction of 1830-1860 had not begun. During this intermediate period there were indications that an ameliorating process had begun. The best Southern opinion openly regretted slavery, manumission was encouraged in the press and on the platform, negroes were taught to read the Bible, and a superior class was forming within the race. In most of the Southern states we hear of negro ministers who preached to congregations of whites and blacks, and in one state at least—North Carolina—was a negro schoolmaster who fitted for the university the sons of the leading white people. Whatever hope was in this softening of slavery into a milder form of service was destroyed by the resentment of the whites against Northern interference. There had always been in the South men who believed a rigid regimen of slaves was necessary, but they were overruled by the more benevolent element. Utilizing the popular resentment against the agitation, they now became the majority, overrode the minds of the rising generation that by 1860 there remained hardly anything of the gentler measures but the fact that slaves were members of the white churches and listened to sermons by white ministers.”—J. S. Bassett, *Short history of the United States*, pp. 460-471.

1860.—Southern view of slavery.—Effect of division in churches.—The state of opinion and feeling on the subject of slavery to which the people of the southern states had arrived in 1860 is set forth with brevity and distinctness in Claiborne's "Life of General Quitman," which was published that year: "In the early stages of African slavery in the South," says the writer, "it was by many considered an evil, that had been inflicted upon the country by British and New England cupidity. The Africans were regarded as barbarians, and were governed by the lash. The very hatred of the 'evil' forced upon us was, in a measure, transferred to the unhappy victims. They were treated with severity and no social relations subsisted between them and the whites. By degrees slavery began to be considered 'a necessary evil,' to be got rid of by gradual emancipation, or perhaps not at all, and the conditions of the slave sensibly improved. The natural sense of justice in the human heart suggested that they had been brought here by compulsion, and that they should be regarded not as savages, but as captives, who were to be kindly treated while laboring for their ultimate redemption. The progress of anti-slavery sentiment in the Northern States (once regarded by the South as a harmless fanaticism), the excesses it has occasioned, and the unconstitutional power it claims, at length prompted a general and searching inquiry into the true status of the negro. The moment that the Southern mind became convinced, that slavery, as it exists among us, instead of being a moral, social, and political evil, is a moral, social, and political good, and is the natural condition of the negro, as ordained by Providence, and the only conditions in which he can be civilized and instructed, the condition of the Southern slave underwent a thorough change. As a permanent fixture, as a hereditary heirloom, as a human being

with an immortal soul, intrusted to us by God for his own wise purposes, his value increased, and his relation to his owner approximated to the relation of guardian and ward. Interest taught us that it would be wise to cherish what was to be the permanent means of production and profit, and religion exacted the humane and judicious employment of the 'talent' committed to our care. Thus the most powerful influences that sway the heart and the judgment are in operation for the benefit of the slave, and hence his present comfortable and constantly ameliorating condition. It is due, almost solely, to the moral convictions of the slaveholder. Our laws protect the slave in life and limb, and against cruel and inordinate punishment. Those laws are rigorously applied, though rarely necessary for public opinion, more formidable than law, would condemn to execration and infamy the unjust and cruel master. Since these convictions in regard to slavery have been adopted almost unanimously in the South, the value of negroes has quadrupled. This, however, is in some measure an evil, because the tendency is to concentrate the slaves in the hands of the few, who are able to pay the extraordinary rates now demanded. It would be better for the commonwealth, and give additional solidity to our system of domestic servitude, if every family had an interest in it, secured, to a limited extent, against liability for debt. It should constitute in the South, if practicable, a part of every homestead, and then interest, and household tradition, and the friendly, confidential, and even affectionate relations that in the present state of public feeling prevail between master and slave, would unite all men in its defense. Neither land, nor slaves, which are here more valuable than land, should, by either direct or indirect legislation, be concentrated in few hands. Every citizen should have, if possible, that immediate interest in them which would make him feel that, in defending the commonwealth and its institutions, he is defending his own inheritance."—J. F. H. Claiborne, *Life and correspondence of John A. Quitman*, v. 1, ch. 4.—See also MISSOURI: 1860-1861; TENNESSEE: 1860.—"Up to . . . [1824] the sentiment seemed to be well nigh universal in the Tennessee Conference [of the Methodist Episcopal church] that slavery was a great moral evil, a curse to the Church, and slave-holding a sin. . . . In 1844 the General Conference met in New York. . . . Two cases came before that body involving the moral right to hold persons in bondage. The first was that of Francis A. Harding, who had been suspended by the Baltimore Conference from the office of Minister for refusing to manumit five slaves belonging to his wife at the time of their marriage, and which by the laws of Maryland remained the property of the wife after marriage. . . . On appeal to the General Conference, the action of the Baltimore Conference in suspending Mr. Harding from the ministry was affirmed by a vote of 117 to 56. A still more noted case [which] came up for consideration in this Conference . . . was that of Bishop James O. Andrew, of Georgia. He had become, contrary to his will, the owner of two slaves. In addition to these, on a second marriage, he found himself interested in some slaves belonging to his wife. Unwilling to occupy this position, he had the slaves secured to his wife by a trust deed, divesting himself of all interest in them. But he was still the owner of two others, one received by will, and the other inherited from his first wife. . . . Under these circumstances the fol-

lowing preamble and resolution were passed by an affirmative vote of 111 and a negative vote of 69: . . . 'Whereas, Bishop Andrew has become connected with slavery, by marriage and otherwise. . . . Resolved, That it is the sense of this General Conference that he desist from the exercise of the office so long as this impediment remains.' . . . [This] decision was a most unfortunate one. It immediately led to a division of the Church into two bodies, separated by a geographical line, and holding widely antagonistic views on the great and all-absorbing question of slavery. Up to this time no religious denomination, having a sure foothold in the South, except the Quakers, had perhaps been so steadfastly opposed to slavery as the Methodist. . . . Now the whole matter was changed. With one voice that denomination condemned the action of the conference in suspending Bishop Andrew from office. Almost at once the minds of Southern members, under the influence of this wrong as they esteemed it, changed from a state of opposition to slavery, or of mild indifference, to its open advocacy. . . . By this decision of the General Conference, every Methodist slave owner felt that the same intolerant spirit of the majority in the North which had stricken down the great Bishop Andrew might soon be directed against him and his property also. The result was a universal cry for separation. Thus one bond which held the Union together was rudely snapped asunder. This was to the Southern people what the repeal of the Missouri Compromise was to the Northern people ten years later. Then, a few years later, followed the split in the Presbyterian and in the Baptist Churches on the same subject, and their division into separate bodies according to geographical lines. And thus other bonds were severed, and the minds of men became prepared for the secession of the Southern States."—O. P. Temple, *East Tennessee and the Civil War*, pp. 100-104.

1860 (April-November).—Nineteenth presidential election.—Division of the Democratic party.—Four candidates in the field.—Victory for freedom in the choice of Abraham Lincoln.—"Mr. J. W. Fell, a politician of Pennsylvania, says that after the debates of 1858 [with Douglas] he urged Lincoln to seek the Republican nomination for the presidency in 1860. Lincoln, however, replied curtly that men like Seward and Chase were entitled to take precedence, and that no such 'good luck' was in store for him. . . . In the winter of 1850-60 sundry 'intimate friends,' active politicians of Illinois, pressed him to consent to be mentioned as a candidate. He considered the matter over night and then gave them the desired permission, at the same time saying that he would not accept the vice-presidency. . . . With the opening of the spring of 1860 the several parties began the campaign in earnest. The Democratic Convention met first, at Charleston, April 23; and immediately the line of disruption opened. Upon the one side stood Douglas, with the moderate men and nearly all the Northern delegates, while against him were the advocates of extreme Southern doctrines, supported by the administration and by most of the delegates from the 'Cotton States.' The majority of the committee appointed to draft the platform were anti-Douglas men; but their report was rejected, and that offered by the pro-Douglas minority was substituted, 165 yeas to 138 nays. Thereupon the delegations of Alabama, Mississippi, Florida, and Texas, and sundry delegates from other

States, withdrew from the Convention, taking away 45 votes out of a total of 303. Those who remained declared the vote of two thirds of a full Convention, i. e., 202 votes, to be necessary for a choice. Then during three days 57 ballots were cast, Douglas being always far in the lead, but never polling more than 152½ votes. At last, on May 3, an adjournment was had until June 18, at Baltimore. At this second meeting contesting delegations appeared, and the decisions were uniformly in favor of the Douglas men, which provoked another secession of the extremist Southern men. A ballot showed 173½ votes for Douglas out of a total of 191½; the total was less than two thirds of the full number of the original Convention, and therefore it was decided that any person receiving two thirds of the votes cast by the delegates present should be deemed the nominee. The next ballot gave Douglas 181½. Herschel V. Johnson of Georgia was nominated for vice-president. On June 28, also at Baltimore [after a meeting and adjournment from Richmond, June 11], there came together a collection composed of original seceders at Charleston, and of some who had been rejected and others who had seceded at Baltimore. Very few Northern men were present, and the body in fact represented the Southern wing of the Democracy. . . . It promptly nominated John C. Breckenridge of Kentucky and Joseph Lane of Oregon, and adopted the radical platform which had been reported at Charleston. These doings opened, so that it could never be closed, that seam of which the thread had long been visible atwart the surface of the old Democratic party. . . . In May the Convention of the Constitutional Union party met, also at Baltimore. This organization was a sudden outgrowth designed only to meet the present emergency. . . . The party died, of necessity, upon the day when Lincoln was elected, and its members were then distributed between the Republicans, the Secessionists, and the Copperheads. John Bell, of Tennessee, the candidate for the presidency, joined the Confederacy; Edward Everett, of Massachusetts, the candidate for the vice-presidency, became a Republican. The party never had a hope of electing its men; but its existence increased the chance of throwing the election into Congress; and this hope inspired exertions far beyond what its own prospects warranted. On May 16 the Republican Convention came together at Chicago, where the great 'Wigwam' had been built to hold 10,000 persons. . . . Many candidates were named, chiefly Seward, Lincoln, Chase, Cameron, Edward Bates of Missouri, and William L. Dayton of New Jersey. Primarily the contest lay between Seward and Lincoln. . . . Upon the third ballot . . . it stood:—Seward, 180; Lincoln, 231½; Chase, 24½; Bates, 22; Dayton, 1; McLean, 5; Scattering, 1. . . . Before the count could be announced, a delegate from Ohio transferred four votes to Lincoln. This settled the matter; and then other delegations followed, till Lincoln's score rose to 354. . . . Later in the day the convention nominated Hannibal Hamlin of Maine, on the second ballot, by 367 votes for the vice-presidency. . . . Almost from the beginning it was highly probable that the Republicans would win. . . . The only contrary chance was that no election might be made by the people, and that it might be thrown into Congress."—J. T. Morse, Jr., *Abraham Lincoln*, v. 1, ch. 6.—At the popular election, the votes were: Lincoln, 1,866,452 (free states vote, 1,840,022, slave states vote, 26,430); Douglas, 1,375,157 (free states vote, 1,211,632, slave states vote, 163,525); Breckenridge,

847,953 (free states vote, 277,082, slave states vote, 570,871); Bell, 590,631 (free states vote, 74,658, slave states vote, 515,973). In the Electoral College, the four candidates were voted for as follows: Lincoln, 180; Breckenridge, 72; Bell, 39; Douglas, 12.—E. Stanwood, *History of presidential elections*, ch. 20.—"The South gave every evidence that secession would follow the election of Lincoln, and when the Maine campaign indicated that Lincoln would surely be chosen, Douglas gave up his canvass in the Northwest and went South in the hope of saving the Union by urging the leaders there that secession would mean war. In Virginia, North Carolina, and Alabama he foretold plainly the awful consequence of secession. But the lower South paid little heed; their leaders, Rhett and Yancey, were ready to take the first steps to disrupt the Union upon the receipt of news that the Democrats had lost the election. To them Lincoln was not only a democrat who believed in the equality of men before the law; he was also a 'black Republican,' the head of a sectional party whose platform bespoke sectional interests and the isolation of the South. . . . Thus the blunders of Douglas and Chase in 1854 had started the dogs of sectional warfare, and now a solid North confronted a solid South, with only two or three undecided buffer States, like Maryland and Missouri between them."—W. E. Dodd, *Expansion and conflict*, pp. 264-265.

Nicolay, and J. Hay, *Abraham Lincoln*, v. 2, ch. 13-16.—J. F. Rhodes, *History of the United States from 1850*, v. 2, ch. 11.—J. W. Draper, *Civil War in America*, v. 1, ch. 26-31.

1860 (November-December).—Secession of South Carolina.—"Though the South had voted as a unit for Buchanan in 1856 and her leaders had long acted in concert on important matters, the election of Lincoln by a 'solid' North was regarded by most owners of slaves as a revolutionary act; and the Southern reply to the challenge was secession. . . . Jefferson Davis, who had formerly talked freely of that 'last remedy' of minority interests, advised against the movement; and everywhere North and South men of great wealth, as well as the poorer people, who must always bear the heaviest burdens of war, deprecated and warned against the application of a remedy which all sections had at one time or another declared right and lawful. As men came nearer to the application of their 'rightful' remedy, the older and cooler heads urged the leaders of South Carolina not to withdraw from the national confederation. Republicans like Seward and Weed and Lincoln exerted themselves to the utmost to dissuade the Southern radicals; all the influence of the Bell and Everett party was cast into the same side of the scales; and Congress, when it assembled in December, 1860, was pressed from every possible angle to arrange some compromise which would satisfy the angry element in the lower South. Even Republicans of the more radical type offered to do anything, except assent to the further expansion of slavery in the Territories, in order to prevent the formation of a Southern Confederacy and the expected paralysis of business. Nothing availed. South Carolina, under the leadership of Robert Barnwell Rhett, called a state convention which met in Columbia, but adjourned to Charleston, and on December 20 severed all connection with the National

Government and recalled her Representatives in Congress."—W. E. Dodd, *Expansion and conflict*, pp. 268-270.—"Shortly before the election, on the 5th of October, 1860, Governor Gist of South Carolina dispatched a circular letter marked 'Confidential' by special messengers to the governors of the Cotton States, in which he said that if a majority of Lincoln electors were chosen, South Carolina would call a convention, and, with any prospect of others following, she would secede. He wished to learn by his proposed convention what coöperation could be expected from other States. On the 18th of October the Governor of North Carolina wrote in reply to this circular that his State would regard Lincoln's election as a sufficient cause for disunion; and on the 25th of October the Governor of Alabama wrote that he thought his State would secede if two or more States set the example. The Governor of Mississippi, on the 26th of October, wrote that 'if any State moves, I think Mississippi will go with her.' The Governor of Louisiana wrote: 'I shall not advise the secession of my State, and I will add that I do not think the people of Louisiana will ultimately decide in favor of that course.' The Governor of Georgia, October 31, ventured his opinion that his people would wait for some overt act Florida was 'ready to wheel into line with the gallant Palmetto State or any other State or States.'"—J. Bigelow, *Retrospections of an active life*, v. 1, p. 295.—"Alabama, Florida, Mississippi, Louisiana, and Texas were now soon enrolled among the seceded States. Tennessee, North Carolina, Virginia, Arkansas, Kentucky, Maryland, Missouri, and Delaware still stood firm, despite all the efforts essayed to shake their constancy. It is indeed true, as Mr. Greeley has deliberately recorded, that after the secession 'conspiracy had held complete possession of the Southern mind for three months, with the Southern members of the cabinet, nearly all the Federal officers, most of the governors and other state functionaries, and seven eighths of the prominent and active politicians pushing it on, and no force exerted against nor in any manner threatening to resist it, a majority of the slave states, with two thirds of the free population of the entire slaveholding region, was openly and positively adverse to it, either because they regarded the alleged grievances of the South as exaggerated if not unreal, or because they believed that those wrongs would rather be aggravated than cured by disunion.'"—H. S. Foote, *War of the Rebellion*, ch. 15.

The following is the South Carolina Ordinance of Secession, adopted Dec. 20, 1860:

An Ordinance to dissolve the Union between the State of South Carolina and other States united with her under the compact entitled "The Constitution of the United States of America."

We, the People of the State of South Carolina, in Convention assembled, do declare and ordain, and it is hereby declared and ordained. That the Ordinance adopted by us in Convention, on the twenty-third day of May, in the year of our Lord one thousand seven hundred and eighty-eight, whereby the Constitution of the United States of America was ratified, and also, all Acts and parts of Acts of the General Assembly of this State, ratify-

ing amendments of the said Constitution, are hereby repealed; and that the union now subsisting between South Carolina and other States, under the name of "The United States of America," is hereby dissolved.

The Declaration of Causes, promulgated by the convention December 24, is as follows:

Declaration of the immediate causes which induce and justify the secession of South Carolina from the Federal Union:

The People of the State of South Carolina, in Convention assembled, on the 26th day of April, 1852, declared that the frequent violations of the Constitution of the United States, by the Federal Government, and its encroachments upon the reserved rights of the States, fully justified this State in then withdrawing from the Federal Union; but in deference to the opinions and wishes of the other slaveholding States, she forbore at that time to exercise this right. Since that time, these encroachments have continued to increase, and further forbearance ceases to be a virtue. And now the State of South Carolina having resumed her separate and equal place among nations, deems it due to herself, to the remaining United States of America, and to the nations of the world, that she should declare the immediate causes which have led to this act. In the year 1765, that portion of the British Empire embracing Great Britain, undertook to make laws for the government of that portion composed of the thirteen American Colonies. A struggle for the right of self-government ensued, which resulted, on the 4th July, 1776, in a Declaration, by the Colonies, "that they are, and of right ought to be, free and independent States; and that, as free and independent States, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent States may of right do." They further solemnly declared that whenever any "form of government becomes destructive of the ends for which it was established, it is the right of the people to alter or abolish it, and to institute a new government." Deeming the Government of Great Britain to have become destructive of these ends, they declared that the Colonies "are absolved from all allegiance to the British Crown, and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved." In pursuance of this Declaration of Independence, each of the thirteen States proceeded to exercise its separate sovereignty; adopted for itself a Constitution, and appointed officers for the administration of government in all its departments—Legislative, Executive and Judicial. For purposes of defence, they united their arms and their counsels; and, in 1778, they entered into a League known as the Articles of Confederation, whereby they agreed to intrust the administration of their external relations to a common agent, known as the Congress of the United States, expressly declaring, in the first article, "that each State retains its sovereignty, freedom and independence, and every power, jurisdiction and right which is not, by this Confederation, expressly delegated to the United States in Congress assembled." Under this Confederation the War of the Revolution was carried on, and on the 3d September, 1783, the contest ended, and a definitive Treaty was signed by Great Britain, in which she acknowledged the Independence of the Colonies in the following terms: "Article 1.—His Britannic

Majesty acknowledges the said United States, viz: New Hampshire, Massachusetts Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina and Georgia, to be free, sovereign and independent States; that he treats with them as such; and for himself, his heirs and successors, relinquishes all claims to the government, propriety and territorial rights of the same and every part thereof." Thus were established the two great principles asserted by the Colonies, namely, the right of a State to govern itself; and the right of a people to abolish a Government when it becomes destructive of the ends for which it was instituted. And concurrent with the establishment of these principles, was the fact, that each Colony became and was recognized by the mother Country as a free, sovereign and independent State. In 1787, Deputies were appointed by the States to revise the Articles of Confederation, and on 17th September, 1787, these Deputies recommended, for the adoption of the States, the Articles of Union, known as the Constitution of the United States. The parties to whom this Constitution was submitted, were the several sovereign States; they were to agree or disagree, and when nine of them agreed, the compact was to take effect among those concurring; and the General Government, as the common agent, was then to be invested with their authority. If only nine of the thirteen States had concurred, the other four would have remained as they were—separate sovereign States, independent of any of the provisions of the Constitution. In fact, two of the States did not accede to the Constitution until long after it had gone into operation among the other eleven; and during that interval, they each exercised the functions of an independent nation. By this Constitution, certain duties were imposed upon the several States, and the exercise of certain of their powers was restrained, which necessarily implied their continued existence as sovereign States. But, to remove all doubt, an amendment was added, which declared that the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people. On 23d May, 1788, South Carolina, by a Convention of her people, passed an Ordinance assenting to this Constitution, and afterwards altered her own Constitution, to conform herself to the obligations she had undertaken. Thus was established, by compact between the States, a Government, with defined objects and powers, limited to the express words of the grant. This limitation left the whole remaining mass of power subject to the clause reserving it to the States or to the people, and rendered unnecessary any specification of reserved rights. We hold that the Government thus established is subject to the two great principles asserted in the Declaration of Independence; and we hold further, that the mode of its formation subjects it to a third fundamental principle, namely: the law of compact. We maintain that in every compact between two or more parties, the obligation is mutual; that the failure of one of the contracting parties to perform a material part of the agreement, entirely releases the obligation of the other; and that where no arbiter is provided, each party is remitted to his own judgment to determine the fact of failure, with all its consequences. In the present case, that fact is established with certainty. We assert, that fourteen of the States have deliberately refused for years past to fulfil

their constitutional obligations, and we refer to their own Statutes for the proof. The Constitution of the United States, in its 4th Article, provides as follows: "No person held to service or labor in one State, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up, on claim of the party to whom such service or labor may be due." This stipulation was so material to the compact, that without it that compact would not have been made. The greater number of the contracting parties held slaves, and they had previously evinced their estimate of the value of such a stipulation by making it a condition in the Ordinance for the government of the territory ceded by Virginia, which now composes the States north of the Ohio river. The same article of the Constitution stipulates also for rendition by the several States of fugitives from justice from the other States. The General Government, as the common agent, passed laws to carry into effect these stipulations of the States. For many years these laws were executed. But an increasing hostility on the part of the non-slaveholding States to the Institution of Slavery has led to a disregard of their obligations, and the laws of the General Government have ceased to effect the objects of the Constitution. The States of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, Pennsylvania, Illinois, Indiana, Michigan, Wisconsin and Iowa, have enacted laws which either nullify the Acts of Congress or render useless any attempt to execute them. In many of these States the fugitive is discharged from the service or labor claimed, and in none of them has the State Government complied with the stipulation made in the Constitution. The State of New Jersey, at an early day, passed a law in conformity with her constitutional obligation; but the current of anti-slavery feeling has led her more recently to enact laws which render inoperative the remedies provided by her own law and by the laws of Congress. In the State of New York even the right of transit for a slave has been denied by her tribunals; and the States of Ohio and Iowa have refused to surrender to justice fugitives charged with murder, and with inciting servile insurrection in the State of Virginia. Thus the constitutional compact has been deliberately broken and disregarded by the non-slaveholding States, and the consequence follows that South Carolina is released from her obligation. The ends for which this Constitution was framed are declared by itself to be "to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity." These ends it endeavored to accomplish by a Federal Government, in which each State was recognized as an equal, and had separate control over its own institutions. The right of property in slaves was recognized by giving to free persons distinct political rights, by giving them the right to represent, and burthening them with direct taxes for three-fifths of their slaves; by authorizing the importation of slaves for twenty years; and by stipulating for the rendition of fugitives from labor. We affirm that these ends for which this Government was instituted have been defeated, and the Government itself has been made destructive of them by the action of the non-slaveholding States. Those States have assumed the right of deciding upon the propriety of our

domestic institutions; and have denied the rights of property established in fifteen other States and recognized by the Constitution; they have denounced as sinful the institution of Slavery; they have permitted the open establishment among them of societies, whose avowed object is to disturb the peace and to claim the property of the citizens of other States. They have encouraged and assisted thousands of our slaves to leave their homes; and those who remain, have been incited by emissaries, books and pictures to servile insurrection. For twenty-five years this agitation has been steadily increasing, until it has now secured to its aid the power of the Common Government. Observing the forms of the Constitution, a sectional party has found within that article establishing the Executive Department, the means of subverting the Constitution itself. A geographical line has been drawn across the Union, and all the States north of that line have united in the election of a man to the high office of President of the United States whose opinions and purposes are hostile to slavery. He is to be entrusted with the administration of the Common Government because he has declared that "Government cannot endure permanently half slave, half free," and that the public mind must rest in the belief that Slavery is in the course of ultimate extinction. This sectional combination for the subversion of the Constitution, has been aided in some of the States by elevating to citizenship, persons, who, by the Supreme Law of the land, are incapable of becoming citizens; and their votes have been used to inaugurate a new policy, hostile to the South, and destructive of its peace and safety. On the 4th March next, this party will take possession of the Government. It has announced, that the South shall be excluded from the common Territory; that the Judicial Tribunals shall be made sectional, and that a war must be waged against slavery until it shall cease throughout the United States. The Guaranties of the Constitution will then no longer exist; the equal rights of the States will be lost. The slaveholding States will no longer have the power of self-government, or self-protection, and the Federal Government will have become their enemy. Sectional interest and animosity will deepen the irritation, and all hope of remedy is rendered vain, by the fact that public opinion at the North has invested a great political error with the sanctions of a more erroneous religious belief. We, therefore, the people of South Carolina, by our delegates, in Convention assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, have solemnly declared that the Union heretofore existing between this State and the other States of North America, is dissolved, and that the State of South Carolina has resumed her position among the nations of the world, as a separate and independent State; with full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent States may of right do.

1860 (December).—President Buchanan's surrender.—Annual message.—In the great emergency with which the country was now faced, the president showed the essential weakness of his character. "Buchanan denied the right of secession, and acknowledged that it was his duty to enforce the laws in South Carolina in so far as he was able. November 17 he asked for an opinion of his attorney-general. . . Attorney-General Black, as sound a jurist as ever advised a Presi-

dent, replied in three days to his request. 'You can now,' he wrote Buchanan, 'if necessary, order the duties to be collected on board a vessel inside of any established port of entry. . . . Your right to take such measures as may seem to be necessary for the protection of the public property is very clear.' . . . [Of the cabinet, Cass, Black and Holt urged that troops should be sent to hold the forts in the South, but Cobb, Thompson and Floyd, all three of whom were secessionists, persuaded the president that such an action would drive the other southern states to secede.] That to garrison the Southern forts would have increased the irritation of South Carolina and would have driven the other cotton States onward in the path of secession, as the defenders of the President maintain, is possible. On the other hand . . . it must be borne in mind that this matter of plain executive duty had not in November become confounded in the Southern mind with the coercion of a State, as it did two months later. . . . He had been so long under Southern domination that he could not throw it off. Common prudence required that he should keep in his cabinet none but staunch Union men; this test would have resulted in the retirement of Cobb and Thompson, and probably a reconstruction of the whole cabinet in the middle of November, such as took place late in December and in January. According to Floyd's diary, a difference developed itself in cabinet meeting as early as November 10, on the question of the South's submission to Lincoln's election and the right of secession, in which dispute Cobb, Thompson, and Floyd ranged themselves on one side, and Cass, Toucey, Black, Holt, and the President on the other. At a time when a plan of resolute action should have been the daily and nightly thought of Buchanan, he sat himself down to write an essay on constitutional law, which he sent to Congress as his annual message."—J. F. Rhodes, *History of the United States from the Compromise of 1850*, v. 3, pp. 128, 130-131.—"The President informed Congress that 'the long-continued and intemperate interference of the Northern people with the question of slavery in the Southern States has at last produced its natural effect.' . . . The President found that the chief grievance of the South was in the enactments of the Free States known as 'personal liberty laws' [designed to protect free citizens, black or white, in their right to trial by jury, which the fugitive slave law denied to a black man claimed as a slave]. . . . Very likely these enactments, inspired by an earnest spirit of liberty, went in many cases too far, and tended to produce conflicts between National and State authority. That was a question to be determined finally and exclusively by the Federal Judiciary. . . . After reciting the statutes which he regarded as objectionable and hostile to the constitutional rights of the South, and after urging their unconditional repeal upon the North, the President said: 'The Southern States, standing on the basis of the Constitution, have a right to demand this act of justice from the States of the North. Should it be refused, then the Constitution, to which all the States are parties, will have been willfully violated. . . . In that event, the injured States, after having used all peaceful and constitutional means to obtain redress, would be justified in revolutionary resistance to the government of the Union.' . . . Mr. Buchanan proceeded to argue ably and earnestly against the assumption by any State of an inherent right to secede from the government at its own will and pleasure. But he

utterly destroyed the force of his reasoning by declaring that, 'after much serious reflection' he had arrived at 'the conclusion that no power has been delegated to Congress, or to any other department of the Federal Government, to coerce a State into submission which is attempting to withdraw, or has actually withdrawn,' from the Union. . . . Under these doctrines the Government of the United States was shorn of all power to preserve its own existence. This construction was all that the extremists of the South desired."—J. G. Blaine, *Twenty years in Congress*, v. 1, ch. 10.

1860 (December).—Vain concessions and humiliations of the North proposed.—Crittenden compromise.—"During this critical month of December [1860], Congress, to whose shoulders Buchanan would willingly have shifted the responsibility of the executive, was busy with plans for the reconciliation of the sections. An able committee of thirteen was appointed in the Senate, including Davis, Douglas, Wade, and Seward. The venerable J. J. Crittenden of Kentucky, the successor of Henry Clay, presented a scheme of compromise [subsequently known as the Crittenden Compromise] consisting of six unamendable amendments to the Constitution and four resolutions. The proposed amendments, besides protecting slavery in the states where it was legal, sanctioning the domestic slave trade, and guaranteeing payment by the United States government for escaped slaves, revived the 36° 30' line of the Missouri Compromise and forbade the interference by Congress with slavery south of that line. The resolutions called for the faithful execution of the Fugitive-Slave Law, the repeal of the Personal-Liberty Acts, and the enforcement of the laws against the African slave trade. The committee met on December 21, the day that the news of the secession of South Carolina reached Washington. Throughout the North there was a lively hope that the Crittenden Compromise might be adopted, especially in the financial and commercial circles, where there was much anxiety for the safety of large sums of money invested in the South. It is fairly certain that if a popular referendum had been taken on the Compromise it would have been adopted. But the committee could not agree. Davis voted with Seward against the restoration of the 36° 30' line. The Republican members, supported by Lincoln, who wrote 'Entertain no proposition for a compromise in regard to the extension of slavery,' voted steadily in the negative. Their furthest concession was that slavery should not be disturbed in the slave states. On December 31 the committee reported that it had not been able to agree on any general plan of adjustment. A committee of thirty-three in the House met with no better success. Its only fruit was the recommendation of a constitutional amendment making slavery inviolable in the state where it was established by law. The amendment passed both Houses by the necessary two-thirds vote, but only two states took pains to ratify it. . . . Texas was the only state in which the convention submitted the secession ordinance to the people for a referendum; and the figures of the popular vote (37,794 to 11,235), contrasted with the vote in the convention (166 to 7) and with the large popular vote cast for the Unionist candidates Bell and Douglas in the November election, tempt one to speculate on the truth of the frequent statement that the people of the South were far ahead of their leaders in the desire for

independence. The adoption of the Crittenden Compromise by Congress or of a Jacksonian policy in the White House might have halted secession at the borders of South Carolina, though it is doubtful whether more than a brief postponement of the ultimate appeal to arms could have been accomplished. The difference between the sections was beyond any device of constitutional machinery to compose. There could be no enduring peace in our land until slavery was banished. Lincoln was right about 'the house divided.' Two civilizations confronted each other across Mason and Dixon's line, each convinced that it stood for the welfare of man and enjoyed the blessing of God; each convinced that the other was aggressive, faithless, and accursed. They no longer understood each other's language. Words like 'honor,' 'right,' 'freedom,' 'citizen,' meant different things to each section. The South asked the North to call an institution right which the North believed to be wrong. The North seemed to cast stigma on the highest society of the South by regarding slavery as a blot on civilization and the slaveholder as a deliberate sinner. The South accused the North of being sectional and at the same time demanded that it should mind its own business and cease to 'meddle' with an institution which the North looked on as a national disgrace. Inconsistency, misunderstanding, and passion ruled."—D. S. Muzzey, *United States of America*, v. 1, pp. 525-528.

1860 (December).—Major Anderson at Fort Sumter.—Floyd's activities in the War Department.—Cabinet rupture.—Loyalty reinstated in the national government.—"In November, 1860, the fortifications of Charleston Harbor consisted of three works—Castle Pinckney, an old-fashioned, circular brick fort, on Shute's Folly Island, and about one mile east of the city; Fort Moultrie, on Sullivan's Island, still farther to the east, . . . and lastly, Fort Sumter, an unfinished fortification, named after General Thomas Sumter, the famous partisan leader of the Revolution. . . . The entire force of the United States troops in these fortifications was composed of two weak companies of artillery under command of Major Robert Anderson, and a few engineer employees under Captain John G. Foster. Of these a sergeant and squad of men were stationed at Castle Pinckney for the care of the quarters and the guns; a similar handful were at Sumter; while most of the little force were at Moultrie, where Anderson had his headquarters. . . . On the files of the Engineer Department I found a letter, . . . dated as early as November 24, 1860, from Captain Foster to Colonel De Russy, then the chief of the engineer corps, in which the captain states that, at the request of Major Anderson, he has, in company with that officer, made a thorough inspection of the forts in the harbor; that, in the opinion of Anderson, one additional company of artillery should at once be sent to garrison Castle Pinckney. . . . Upon the back of the letter is the simple but significant indorsement, in his own hand-writing, 'Return to Governor Floyd.' . . . On November 30, Captain Foster again writes to Colonel De Russy, saying: 'I think that more troops should have been sent here 'to guard the forts, and I believe that no

serious demonstration on the part of the populace would have met such a course.' On this is indorsed: 'Colonel Cooper says this has been shown to the Secretary of War. H. G. W.' . . . On December 2, application was made by Captain Foster for the small supply of four boxes of muskets and sixty rounds of cartridge per man, to arm the few civilians or hired laborers who constituted the engineer corps. These arms and ammunition were in the United States arsenal at Charleston, a building which still had a Federal keeper, and over which still floated the Federal flag. On this application is the following indorsement also in General Wright's handwriting: 'Handed to adjutant-general, and by him laid before the Secretary of War on the sixth of December. Returned by adjutant-general on the seventh. Action deferred for the present. See Captain Foster's letter of December 4.' . . . [On December 17, Captain Foster] . . . went to Charleston and took from the Federal arsenal forty muskets, with which to arm his laborers. Early on the morning of the 19th, he received a telegram from Secretary Floyd, directing him instantly to return the arms to the arsenal. On the next day, the 20th, the South Carolinians decided, in State convention, to secede, and proclaimed their State an independent sovereignty. . . . 'Few ventured to breast the storm. [But among these few was James L. Pettigrew, of Charleston, the greatest lawyer of his state] who, when his minister first dropped from the service the prayer for the President of the United States. rose in his pew . . . and slowly and with distinct voice repeated: 'Most humble and heartily we beseech Thee with Thy favor to Behold and bless Thy servant, the President of the United States.' Then, placing his prayerbook in the rack, and drawing his wife's arm within his own, he left the church, nor entered it again until his body was borne there for burial. To their honor be it said that . . . the Carolinians respected his sincerity and candor, and never molested him.'—S. L. Woodford, *Story of Fort Sumter (Personal recollections of the War of the Rebellion, pp. 259-266)*.—'From *Floyd's* private diary, which was found, it is plain that the Southern members of the Cabinet at Washington were in active correspondence with the Committee at Charleston, even to the length of arranging for the immediate purchase and delivery of muskets, and that this was done before any of the members of the Cabinet resigned.'—J. Formby, *American Civil War, p. 41*.—'Intent upon separation from the Union and the formation of a Slaveholding Confederacy, South Carolina swiftly proceeded to carry out a programme agreed upon. It elected three commissioners, December 22, 1860, Robert W. Barnwell, James H. Adams, and James L. Orr, who should negotiate with President Buchanan for the delivery to the State of all Federal property within its limits, including forts, magazines and lighthouses. The partnership having been dissolved, South Carolina hastened to divide the property among the partners. The South Carolina Congressmen had had interviews with Buchanan relative to the matter of the occupation of the forts in Charleston harbor and interpreted the president's words as a promise that he would not change the status there without due notice to them. But on the 26th, Major Anderson, in command at Fort Moultrie, dismantled that stronghold and retired with his force to Fort Sumter as the more defensible fort. The act enraged the secessionists in Charleston and persuaded them that Buchanan's words was untrustworthy.

The truth is that Anderson had removed strictly for military reasons and at his own instance, and to the demands of Governor Pickens replied, 'I cannot and will not go back.' The governor at once ordered the State troops to take possession of Fort Moultrie and the palmetto flag was raised over it. Jefferson Davis and his fellow-secessionists from other Southern States were not yet retired from Congress and upon receipt of the news from Charleston, Davis, and others, accompanied by Trescott, the assistant secretary of state and the go-between in the programme of negotiation, called upon Buchanan to expostulate. Davis accused the president of precipitating bloodshed. Buchanan, amazed at the news, declared that Anderson's course was 'against my policy.' Next day the president received the South Carolina commissioners, not as officials, but as private gentlemen. Out of the interview arose the expected: that the commissioners asserted one thing and the president understood another. The national element at the North was becoming impatient at the president's course; the South convinced herself that he had promised one thing and done another, and the North blamed him for doing nothing. One conclusion is safe—that he did not comprehend the gravity of the situation. Civil war was upon the country and the president did not know it. South Carolina interpreted Major Anderson's removal to Fort Sumter as an act of war and the North interpreted Buchanan's course as an act of cowardice. At heart, Buchanan inclined to accede to the demands of the commissioners and prepared a favorable reply to them. This was on the 29th. He submitted it to a divided Cabinet; Stanton, recently made attorney-general, and Black, secretary of state, counselled against it; if it should be issued, Black determined to resign. The secretary would not longer support a policy of *non possumus*, and so informed the president. Buchanan confessing his weakness by the act, handed his proposed answer over to Black, requesting him to modify it as he thought best. The secretary rewrote the memorandum and converted it into a state paper of national character, attacked and refuted the whole secession theory and concluded with the entreaty that Major Anderson be at once supported by the army and navy, else he could see nothing before the country but disaster and ruin.'—F. N. Thorpe, *Civil War, national view (History of North America, v. 15, pp. 221-222)*.—On December 29, three days after Anderson had transferred his command to Fort Sumter, Floyd resigned. Howell Cobb had resigned the Treasury Department previously, on the 10th. A few days later, January 8, Jacob Thompson withdrew from the Interior Department. Loyal men now replaced these secessionists in the cabinet. Joseph Holt of Kentucky took the place of Floyd in the War Department; John A. Dix of New York succeeded Cobb in the treasury, and the place of Thompson was not filled. Edwin M. Stanton entered the cabinet as attorney-general, taking the place of Jeremiah S. Black who became secretary of state. General Cass had held the State Department until December 12, when he, too, resigned, but for reasons opposite to those of Floyd and Cobb. He left the government because it would not reinforce the Charleston forts.—Based on E. McPherson, *Political history of the United States during the Great Rebellion, p. 28*.—Fort Sumter was still held by national forces. "Stimulated by his secretary's memorandum [see above: 1860 (December): Major Anderson, etc.], Bucha-

nan refused to withdraw Anderson; he would reinforce Anderson, but first the commissioners should know his decision. On the second day of the new year their reply was received: the whole story is told in the endorsement which the president ordered with the return of their letter to them: 'This paper, just presented to the President, is of such a character that he declines to receive it.' Even Buchanan was stirred. 'It is now all over,' he said to the secretary of war, Holt; 'reinforcements must be sent.' It was decided to send the man-of-war, *Brooklyn*, with adequate reinforcements and supplies, to Anderson, but the president and General Scott, fearing lest the ship might not be able to get over the bar at Charleston, at last, and unwillingly, changed their plans and dispatched the *Star of the West*, a chartered, side-wheel steamer of light draft, and leaving Sandy Hook with two hundred men and supplies, she lay off Charleston harbor, January 8th. Her coming was awaited, as Governor Pickens had been kept informed of her departure from New York. While yet two miles from Fort Sumter she was fired on from Morris Island and struck once. The *Star of the West* was merely a transport and was unarmed. Discovering no signs of aid or support from Fort Sumter and having yet to run past Fort Moultrie, the captain of the transport, fearing serious injury and convinced that he could not reach Sumter, . . . hastened back to New York. . . . Abortive as the president's attempt to reinforce Anderson had proved, it tended to strengthen him at the North as it also tended to strengthen secession at the South. Buchanan reorganized his Cabinet, John A. Dix becoming secretary of the treasury, the Northern members, Black, secretary of state, Stanton, attorney-general, and Dix, now giving it a national cast, not wholly to Buchanan's liking. . . . During the last two months of his administration, House and Senate became theatres of a strange political drama; Davis and the lesser representatives from the South now freely, ardently and aggressively holding forth on the right of secession and announcing the impending dissolution of the Union. . . . Even at this late hour in the movement of events, Northern men, and such as Seward, of New York, could not see the impending outburst of civil war and continued talking of compromise. . . . Even Lincoln favored a constitutional amendment which would forbid Congress to interfere with slavery in the States. In these closing days of Buchanan's administration no man in Congress who had the ear of the public demanded interference with slavery in the slaveholding States."—F. N. Thorpe, *Civil War, national view (History of North America, v. 15, pp. 223-224)*.

1860-1861 (December-February).—Seizure of arms, arsenals, forts, and other public property by seceding states.—Surrender of army by Twiggs.—"Directly after Major Anderson's removal to Fort Sumter, the Federal arsenal in Charleston, containing many thousand stand of arms and a considerable quantity of military stores, was seized by the volunteers, now flocking to that city by direction of the State authorities; Castle Pinckney, Fort Moultrie, and Sullivan's Island were likewise occupied by them, and their defenses vigorously enlarged and improved. The Custom-House, Post-Office, etc., were likewise appropriated, with-

out resistance or commotion. . . . Georgia having given [January 2, 1861] a large popular majority for Secession [see GEORGIA: 1861], her authorities immediately took military possession of the Federal arsenal at Augusta, as also of Forts Pulaski and Jackson, commanding the approaches by sea to Savannah. North Carolina had not voted to secede, yet Gov. Ellis simultaneously seized the U. S. Arsenal at Fayetteville, with Fort Macon, and other fortifications commanding the approaches to Beaufort and Wilmington. . . . In Alabama, the Federal arsenal at Mobile was seized on the 4th, by order of Gov. Moore. It contained large quantities of arms and munitions. Fort Morgan, commanding the approaches to Mobile, was likewise seized, and garrisoned by State troops. . . . In Louisiana, the Federal arsenal at Baton Rouge was seized by order of Gov. Moore on the 11th. Forts Jackson and St. Philip, commanding the passage up the Mississippi to New Orleans, and Fort Pike, at the entrance of Lake Pontchartrain, were likewise seized and garrisoned by State troops. The Federal Mint and Custom-House at New Orleans were left untouched until February 1st, when they, too, were taken possession of by the State authorities. . . . In Florida, Fort Barrancas and the Navy Yard at Pensacola were seized by Florida and Alabama forces on the 13th; Commander Armstrong surrendering them without a struggle. He ordered Lieut. Slemmer, likewise, to surrender Forts Pickens and McRae; but the intrepid subordinate defied the order; and, withdrawing his small force from Fort McRae to the stronger and less accessible Fort Pickens, announced his determination to hold out to the last. He was soon after besieged therein by a formidable volunteer force; and a dispatch from Pensacola announced that 'Fort McRae is being occupied and the guns manned by the allied forces of Florida, Alabama, and Mississippi.' . . . The revenue cutter Cass, stationed at Mobile, was turned over by Capt. J. J. Morrison to the authorities of Alabama at the end of January. The McClellan, Capt. Breshwood, stationed on the Mississippi below New Orleans, was, in like manner, handed over to those of Louisiana. Gen. Dix had sent down a special agent to secure them, but he was too late. The telegraph dispatch whereby Gen. Dix directed him, 'If any person attempts to haul down the American flag, shoot him on the spot,' sent an electric thrill through the loyal heart of the country."—H. Greeley, *American conflict, v. 1, ch. 26*.—"Since the middle of the preceding year the Governors of the Southern States had been increasing the strength of their State Militia, drilling it, and appointing to commands officers whom they could trust. Also, since December, the seizure of United States property in Southern States had been going on; but, with two exceptions, the Southern officers in the old service loyally handed over their charges to their successors, before resigning their commissions, where a successor could be appointed, or until turned out by force. These exceptions were Major-General Twiggs, a veteran of the Mexican War, and Captain G. Magruder, of the Navy: the former surrendered the military posts in Texas, where he was in command [and therewith gave the Confederates command of Texas and the Mexican frontier]; the latter, property in his charge at Norfolk, Virginia. Twiggs was made a Major-General in the Confederate service, and commanded at New Orleans, till succeeded by Lovell at the end of the year; Captain Magruder is not mentioned again."—J. Formby, *American Civil War, p. 49*.—"The defensive fortifications located within the seceding

States were some 30 in number, mounting over 3,000 guns, and having cost at least \$20,000,000. Nearly all these had been seized and appropriated by the Confederates before Mr. Lincoln's inauguration, with the exception of Fortress Monroe (Virginia), Fort Sumter (South Carolina), Fort Pickens (Florida), and the fortresses on Key West and the Tortugas, off the Florida coast."—H. Greeley, *American conflict*, v. 1, ch. 26.

1861.—Condition of the navy.—Absence of navy on Confederate side.—Effect of unpreparedness for war.—Purchase of munitions in Europe.—Effect of blockade.—"Some have thought the navy, rather than the army, was the right arm of the government in crushing the Confederacy. Its brilliant efficiency was felt from the first under the leadership especially of the assistant secretary, Captain Gustavus V. Fox. At the outbreak almost no proper ships were available. The list of vessels numbered ninety, but of these fifty were of the old pattern and only useful as supply or store ships. Of the forty ships in commission, some antiquated and some modern, by far the greater number were scattered widely. Of the forty steamers which alone, as it soon appeared, could perform the duty demanded, nearly half were not ready. The home squadron comprised only twelve vessels, of which seven were steamers, and the three of these in northern waters practically constituted the only trustworthy force. As to men, the unpreparedness was no less marked. The complement for the navy had been 7000; in March, 1861, but 207 men were at hand in the depots at the disposal of the government for crews. Officers abounded, but they were in great part sailors of the old school, deep in the ruts of tradition and routine, their fire smouldering under their white hair. In 1845, George Bancroft, secretary of the navy, founded the academy at Annapolis, from which a stream of well-trained young men had poured into the service; but only about a dozen of the younger lieutenants were Annapolis men, who were kept down in lower grades. Three hundred and twenty-two naval officers from the South resigned, many taking service with the Confederacy. Fortunately for the Union, the unpreparedness of the North was set over against complete destitution in naval equipment on the side of the South—not only lack of ships and of crews to man them, but also of workshops, arsenals, and dock-yards for their construction; nor, if these could have been supplied, were there mechanics competent for such labors. . . . To be valid, according to the law of nations, the blockade must be effective, and the rehabilitation of the navy was pressed forthwith. In Lincoln's first call for forces, eighteen thousand sailors were included. To supply the need for officers in the junior grade, the upper classes at Annapolis were assigned to active service. As soon as it could be managed, a system of promotions was arranged by which the aged and incapable in the upper grades were retired and the service vitalized by young blood. . . . Meantime the government was buying or chartering every craft that could be put to use, from a coal-barge to an ocean-liner; the navy-yards and private establishments were driven night and day in build-

ing, and forges and machinshops were employed in the making of engines and armaments. It was early recognized that the naval warfare was certain to be various in character. Not only must ships be provided for the blockade, but craft suitable for the inland streams, cruisers also to pursue the commerce-destroyers, whose activity began early, and heavy ships to deal with fortresses."—J. K. Hosmer, *Appeal to arms, 1861-1863*, pp. 35-37.—"If, in 1861, either side could have struck swiftly and with all its force, the story of the war would have been different. The question of relative strength was in reality a question of munitions. Both powers were glaringly unprepared. Both had instant need of great supplies of arms and ammunition, and both turned to European manufacturers for aid. . . . In the supreme American crisis, agents of both North and South hurried to Europe in quest of munitions. On the Northern side the work was done chiefly by the three ministers, Charles Francis Adams, at London; William L. Dayton, at Paris; and Henry S. Sanford, at Brussels; by an able special agent, Colonel George L. Schuyler; and by the famous banking-house of Baring Brothers, which one might almost have called the European department of the United States Treasury. . . . That the Confederate Government acted even more promptly than the Union Government appears from a letter of Sanford to Seward in May: 'I have vainly expected orders,' he complains, 'for the purchase of arms for the Government, and am tempted to order from Belgium all they can send over immediately. . . . Meanwhile the workshops are filling with orders from the South. . . . It distresses me to think that while we are in want of them, Southern money is taking them away to be used against us.' At London, Adams took it upon himself to contract for arms in advance of instructions. He wrote to Seward: 'Aware of the degree to which I exceed my authority in taking such a step, nothing but a conviction of the need in which the country stands of such assistance and the joint opinion of all the diplomatic agents of the United States . . . in Paris, has induced me to overcome my scruples.' How real was the necessity of which this able diplomat was so early conscious, is demonstrated at every turn in the papers of the War Department. . . . Curiously enough, not only the Confederacy but various States of the North were more expeditious in this all-important matter than Cameron and the War Department. Schuyler's first dispatch from London gives this singular information: 'All private establishments in Birmingham and London are now working for the States of Ohio, Connecticut, and Massachusetts, except the London Armory, whose manufacture is supposed to go to the Rebels, but of this last fact I am not positively informed. I am making arrangements to secure these establishments for our Government, if desirable after the present State contracts expire. On the Continent, Messrs. Dayton and Sanford . . . have been making contracts and agreements of various kinds, of which you are by this time informed.' Soon afterward, from Paris, he made a long report detailing the difficulties of his task, the limitations of the existing munitions plants in Europe, and promising among other things those '48,000 rifles from the French government arsenals' for which, in the letter already quoted, the War Department yearned. . . . The last word on the problem of munitions, which was so significant a factor in the larger problem, is the report of the United States Ordnance Office for the first year of the war. It shows that between April,

1861, and June, 1862, the Government purchased from American manufacturers somewhat over 30,000 rifles, and that from European makers it purchased 726,000. From these illustrations it is therefore obvious that the true measure of the immediate strength of the American contestants in 1861 was the extent of their ability to supply themselves from Europe; and this, stated more concretely, became the question as to which was the better able to keep its ports open and receive the absolutely essential European aid. Lincoln showed his clear realization of the situation when he issued, immediately after the first call for volunteers . . . [the] proclamation blockading the Southern coasts. Whether the Northern people at the time appreciated the significance of this order is a question. Amid the wild and vain clamor of the multitude in 1861, with its conventional and old-fashioned notion of war as a thing of trumpets and glittering armies, the North seems wholly to have ignored its fleet; and yet in the beginning this resource was its only strength. The fleet was small, to be sure, but its task was at first also small. There were few Southern ports which were doing a regular business with Europe, and to close these was not difficult. As other ports opened and the task of blockade grew, the Northern navy also increased. Within a few months, to the few observers who did not lose their heads, it was plain that the North had won the first great contest of the war. It had so hampered Southern trade that Lincoln's advantage in arming the North from Europe was ten to one. At the very time when detractors of Lincoln were hysterical over the removal of Frémont, when Grimes wrote to Fessenden that the country was going to the dogs as fast as imbecility could carry it, this great achievement had quietly taken place. . . . [After the seizure of Port Royal in November], while the open Northern ports received European munitions without hindrance, it was a risky business getting munitions into the ports of the South. Only the boldest traders would attempt to 'run the blockade,' to evade the Federal patrol ships by night and run into a Southern port."—N. W. Stephenson, *Abraham Lincoln and the Union (Chronicles of America Series, v. 29, pp. 168-175)*.—See also NAVY DEPARTMENT, UNITED STATES: System since 1842: REVENUE CUTTER SERVICE.

1861 (January-February).—Secession of Georgia, Mississippi, Florida, Louisiana, Alabama and Texas.—Opposition of Alexander H. Stephens, in Georgia.—"On the 9th day of January, 1861, the State of Mississippi seceded from the Union. Alabama and Florida followed on the 11th day of the same month; Georgia on the 20th; Louisiana on the 26th; and Texas on the 1st of February. [See also ALABAMA: 1861; GEORGIA: 1861; LOUISIANA: 1850-1861; FLORIDA: 1861 (January).] Thus, in less than three months after the announcement of Lincoln's election, all the Cotton States . . . had seceded from the Union,

and had, besides, secured every Federal fort within their limits, except the forts in Charleston harbor, and Fort Pickens, below Pensacola, which were retained by United States troops."—E. A. Pollard, *First year of the war, ch. 1*.—The secession of Georgia was powerfully but vainly opposed by the foremost citizen of that state, Alexander H. Stephens, whose speech before the legislature of Georgia, in protest against the disruption of the Union, had been one of the notable utterances of the time. "Shall the people of the South," asked Mr. Stephens, "secede from the Union in consequence of the election of Mr. Lincoln to the Presidency of the United States? My countrymen, I tell you frankly, candidly, and earnestly, that I do not think that they ought. In my judgment, the election of no man, constitutionally chosen to that high office, is sufficient cause for any State to separate from the Union. It ought to stand by and aid still in maintaining the constitution of the country. To make a point of resistance to the government, to withdraw from it because a man has been constitutionally elected, puts us in the wrong. We are pledged to maintain the constitution. Many of us have sworn to support it. Can we, therefore, for the mere election of a man to the presidency, and that, too, in accordance with the prescribed forms of the constitution, make a point of resistance to the government, without becoming the breakers of that sacred instrument ourselves, by withdrawing ourselves from it? Would we not be in the wrong? Whatever fate is to befall this country, let it never be laid to the charge of the people of the South, and especially to the people of Georgia, that we were untrue to our national engagements. Let the fault and the wrong rest upon others. . . . The election has been constitutionally held. Were we to make a point of resistance to the government and go out of the Union on that account, the record would be made up hereafter against us. But it is said Mr. Lincoln's policy and principles are against the constitution, and that, if he carries them out, it will be destructive of our rights. Let us not anticipate a threatened evil. If he violates the constitution, then will come our time to act. Do not let us break it because, forsooth, he may. If he does, that is the time for us to strike. I think it would be injudicious and unwise to do this sooner. I do not anticipate that Mr. Lincoln will do anything to jeopardize our safety or security, whatever may be his spirit to do it; for he is bound by the constitutional checks which are thrown around him, which at this time render him powerless to do any great mischief. . . . The House of Representatives is largely in a majority against him. In the very face and teeth of the heavy majority which he has obtained in the northern States, there have been large gains in the House of Representatives to the conservative constitutional party of the country, which here I will call the national democratic party, because that is the cognomen it has at the North. . . . Is this the time, then, to apprehend that Mr. Lincoln, with this large majority in the House of Representatives against him, can carry out any of his unconstitutional principles in that body? In the Senate he will also be powerless. There will be a majority of four against him. . . . Mr. Lincoln will be compelled to ask of the Senate to choose for him a cabinet, if the democracy of that party chose to put him on such terms. He will be compelled to do this, or let the government stop, if the national democratic men (for that is their name at the North), the conservative men in the

Senate, should so determine. Then how can Mr. Lincoln obtain a cabinet which would aid him, or allow him to violate the constitution? Why then, I say, should we disrupt the ties of this Union when his hands are tied—when he can do nothing against us?”—A. H. Stephens, *Speech against secession, Nov. 14, 1860* (H. Cleveland, ed., *Alexander H. Stephens in public and private*).—But when in spite of his exertions, Georgia seceded, Stephens lent his voice to the undertaking which he had proved to be without excuse. (See below: 1861 [March]: Surrender, etc.) During this period the president-elect felt keenly his enforced inaction. “Mr. Lincoln observed that each State, as she went out of the Union, prepared to defend her course if necessary. On November 18, Georgia appropriated \$1,000,000 to arm the State, and in January she seized Forts Pulaski and Jackson and the United States arsenal. Louisiana appropriated all the federal property in her borders, even to the mint and custom-house and the money they contained. Georgia, Florida, Alabama, and Mississippi were not behind in their seizures, and when the new government was formed at Montgomery, it promptly took up the question of defending its life. Mr. Lincoln was not only obliged to sit inactive and watch this steady dissolution of the Union, but he was obliged to see what was still harder—that the administration which he was to succeed was doing nothing to check the destructionists. Indeed, all through this period proof accumulated that members of Mr. Buchanan’s cabinet had been systematically working for many months to disarm the North and equip the South. The quantity of arms sent quietly from Northern arsenals were so great that the citizens of the towns from which they went became alarmed. . . . And when, in December, the citizens of Pittsburgh, Pennsylvania, found that 123 cannon had been ordered South from the arsenal there, they made such energetic protests that President Buchanan was obliged to countermand the order of his Secretary of War. . . . [In January 1861 Lincoln said to Judge Gillespie]: ‘I would willingly take out of my life a period in years equal to the two months which intervene between now and my inauguration to take the oath of office now.’ ‘Why?’ I asked. ‘Because every hour adds to the difficulties I am called upon to meet, and the present administration does nothing to check the tendency toward dissolution. I, who have been called to meet this awful responsibility, am compelled to remain here, doing nothing to avert it or lessen its force when it comes to me.’ . . . ‘Joe,’ he said [to the judge], as he was about to leave me, ‘I suppose you will never forget that trial down in Montgomery County, where the lawyer associated with you gave away the whole case in his opening speech. I saw you signalling to him, but you couldn’t stop him. Now, that’s just the way with me and Buchanan. He is giving away the case, and I have nothing to say, and can’t stop him. Good-night.’”—I. M. Tarbell, *Life of Abraham Lincoln, v. 1, pp. 388-389, 406-407*.

1861 (February).—Adoption of a constitution for “The Confederate States of America.”—Election of a president and vice president.—On Feb. 4, 1861, concurrently with the meeting of the “peace conference” at Washington “a convention of six seceding states, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Florida, was held at Montgomery, Alabama. They were represented

by 42 persons. Measures were taken for the formation of a provisional government. After the vote on the provisional Constitution was taken, Jefferson Davis was elected President, and Alexander H. Stephens Vice-President of the Confederacy for the current year. The inauguration of Mr. Davis took place on February 18th. Both were shortly after re-elected permanently for six years. . . . The permanent Constitution adopted on March 11, for ‘The Confederate States of America,’ the title now assumed, was modeled substantially on that of the United States. It was remarked that, after all, the old Constitution was the most suitable basis for the new Confederacy. Among points of difference must be noticed that the new instrument broadly recognized, even in its preamble, the contested doctrine of state-rights. . . . At this time Virginia was receiving an annual income of \$12,000,000 from the sale of slaves. . . . Notwithstanding this, the Ordinance of Secession did not pass the Virginia Convention until some weeks subsequently (April 17).”—J. W. Draper, *History of the American Civil War, v. 1, ch. 32*. “The Constitution of the Confederate States . . . declared in the preamble that ‘We, the people of the Confederate States, each State acting in its sovereign and independent character, in order to form a permanent federal government, establish justice, insure domestic tranquillity, and secure the blessings of liberty to ourselves and our posterity—invoking the favor and guidance of Almighty God—do ordain and establish this Constitution for the Confederate States of America.’ In article I, section 8, in which are specified the powers of Congress, it is stated: ‘The Congress shall have power—(1) To lay and collect taxes, imposts, and excises, for revenue necessary to pay the debts, provide for the common defence, and carry on the government of the Confederate States; but (and this is the significant passage) no bounties shall be granted from the treasury; nor shall any duties or taxes on importations from foreign nations be laid to promote or foster any branch of industry’ Finally, the question of slavery was dealt with in a manner that characterized the attitude of the South throughout the years preceding the movement toward secession. Article IV contains the following declarations: Section 2, (1) ‘The citizens of each State shall have the right of transit and sojourn in any State of this Confederacy, with their slaves and other property; and the right of property in said slaves shall not be thereby impaired.’ . . . (3) ‘No slave escaping or lawfully carried into another [state] shall, in consequence of any law or regulation therein, be discharged from such service or labor; but shall be delivered up on claim of the party to whom such slave belongs.’ Section 3, . . . (3) ‘The Confederate State may acquire new territory. In all such territory, the institution of negro slavery, as it now exists in the Confederate States shall be recognized and protected by Congress and by the territorial government.’ The first Cabinet consisted of Robert Toombs, of Georgia, secretary of state; Christopher G. Memminger, of South Carolina, secretary of the treasury; Leroy Pope Walker, of Alabama, secretary of war; Stephen R. Mallory, of Florida, secretary of the navy; Judah P. Benjamin, of Louisiana, attorney-general; John H. Reagan, of Texas, postmaster-general. . . . The day after the adoption of the Provisional Constitution, or February 9th, the Confederate Congress declared: ‘That all laws of the United States of America in force and in use in the Confederate States of America on the first day of November

last, and not inconsistent with the Constitution of the Confederate States, be and the same are hereby continued in force until altered or repealed by the Congress."—W. R. Garrett and R. A. Halley, *Civil War from a Southern standpoint (History of North America, v. 14, pp. 16-18)*.—"In the Executive department, the Constitution provided, in accordance with the early agreement of the Convention of 1787, that the President should be elected for six years and be ineligible. A seat upon the floor of either House of Congress might be granted to the principal officer in each of the Executive departments with the privilege of discussing any measures appertaining to his department. The President was empowered to remove at pleasure the principal officer in each of the Executive departments and all persons connected with the diplomatic service. To give entire control of Cabinet officers and of foreign ministers was considered to be necessary for the proper discharge of the President's duties and for the independence of his department. All other civil officers could be removed when their services were unnecessary, or for dishonesty, inefficiency, misconduct, or neglect of duty, but the removals in such cases, with the reasons therefor, were to be reported to the Senate, and no person rejected by the Senate could be reappointed the same office during the recess of the Senate. The President was empowered, while approving portions of an appropriation bill, to disapprove particular items, as in other like cases of veto. . . . The Judicial department was permitted to remain substantially as it was in the old Government. The only changes were to authorize a tribunal for the investigation of claims against the Government, the withholding from the Federal Courts jurisdiction of suits between citizens of different States, and the enactment of a wise provision that any judicial or other Federal officer, resident and acting solely within the limits of any State, might be impeached by a vote of two thirds of both branches of the Legislature thereof. . . . Uniform laws of naturalization and bankruptcy were authorized, but bankruptcy could not affect debts contracted prior to the passage of the law. A two-thirds vote was made requisite to appropriate money unless asked and estimated for by some one of the heads of the departments. . . . To admit new States required a vote of two thirds of each House, the Senate voting by States. Upon the demand of any three States, legally assembled in their several conventions, Congress could summon a convention to consider amendments to the Constitution, but the convention was confined in its action to propositions suggested by the States making the call. . . . 'The importation of negroes of the African race was forbidden, and Congress was required to pass laws effectually to prevent it.'"—J. L. M. Curry, *Southern states of the American Union, ch. 13*.—Alexander H. Stephens, in his "Constitutional view of the late war between the states," says that a majority of the states were looking to Georgia for the president, and the Georgia delegation had unanimously agreed to present Robert Toombs, who would have been acceptable. But a rumor got currency that Georgia would put forward Howell Cobb, whereupon the other states took up Davis, and united upon him. It was generally understood, says Mr. Stephens, that Davis "did not desire the office of President. He preferred a military position, and the one he desired above all others was the chief command of the army."—A. H. Stephens, *Constitutional view of the war between the states, v. 2, pp. 328-333*.

ALSO IN: R. B. Rhett, *Confederate government*

*at Montgomery (Battles and leaders of the Civil War, v. 1, pp. 99-111)*.—Jefferson Davis, *Rise and fall of the Confederate government, v. 1, pt. 3, ch. 5, and appendix K*.

"To foreign eyes, glancing hastily across the Atlantic, the Northern government seemed no surer of continued existence than the Southern. . . . While Lincoln was delivering his inaugural, the Confederate flag was waving for the first time above the Confederate Capitol at Montgomery. . . . A commission, of which William L. Yancey was chief, was created to proceed at once to Europe and seek recognition and alliance; the confederated States at once turned over to the new government public buildings and other property seized from the United States, including the mint at New Orleans with half a million dollars of national coinage. One utterance above all others at the South at this time demands notice: the address of Alexander H. Stephens, vice-president of the Confederacy, on March 21st, at Savannah, Georgia, on the new constitution which he had sworn to support. 'It amply secures all our ancient rights, franchises, and liberties. All the great principles of Magna Charta are retained in it. No citizen is deprived of life, liberty or property, but by the judgment of his peers under the laws of the land. The great principle of religious liberty, which was the honor and pride of the old Constitution, is still maintained and secured. Some changes have been made. . . . They form great improvements upon the old Constitution. . . . The question of building up class interests, or fostering one branch of industry to the prejudice of another under the exercise of the revenue power, which gave us so much trouble under the old Constitution, is put at rest forever under the new. We allow the imposition of no duty with a view of giving advantage to one class of persons, in any trade or business, over those of another.'"—F. N. Thorpe, *History of North America, v. 15, pp. 228-229*.—"On the third day after my inauguration at Montgomery, an officer of extensive information and high capacity was sent to the North, to make purchases of arms, ammunition, and machinery; and soon afterward another officer was sent to Europe, to buy in the market as far as possible, and, furthermore, to make contracts for arms and munitions to be manufactured. Captain (after Admiral) Semmes, the officer who was sent to the North, would have been quite successful but for the intervention of the civil authorities, preventing the delivery of the various articles contracted for. The officer who was sent to Europe, Major Huse, found few serviceable arms upon the market; he however, succeeded in making contracts for the manufacture of large quantities, being in advance of the agents sent from the Northern Government for the same purpose. . . . Captain Semmes had also been directed to seek for vessels which would serve for naval purposes, and, after his return, reported that he could not find any vessels which in his judgment were, or could be made, available for our uses. The Southern officers of the navy who were in command of United States vessels abroad . . . brought the vessels they commanded into the ports of the North, and, having delivered them to the authorities of the United States Government, generally tendered their resignations, and repaired to the States from which they had been commissioned in the navy."—Jefferson Davis, *Rise and fall of the Confederate government, v. 1, pp. 311, 313*.

1861 (February).—Peace convention.—The time which elapsed between the organization of the Confederacy and the outbreak of war has been called the "period of hesitancy," during which each side hesitated to commence hostilities, and efforts were still being made to avert them. On January 19, before the Confederate convention was held, the General Assembly of Virginia had adopted resolutions inviting "representatives of the several States to assemble in a Peace Convention at Washington, which met on the 4th of February. It was composed of 133 Commissioners, many from the border States, and the object of these was to prevail upon their associates from the North to unite with them in such recommendations to Congress as would prevent their own States from seceding and enable them to bring back six of the cotton States which had already seceded." On February 15, a committee of the convention reported certain proposed amendments to the constitution which "were substantially the same with the Crittenden Compromise. [See above: 1860 (December): Vain concessions.] . . . The following is a copy: 'In all the present territory of the United States north of the parallel of thirty-six degrees and thirty minutes of north latitude, involuntary servitude, except in punishment of crime, is prohibited. In all the present territory south of that line, the status of persons held to involuntary service or labor, as it now exists, shall not be changed; nor shall any law be passed by Congress or the Territorial Legislature to prevent the taking of such persons from any of the States of this Union to said territory, nor to impair the rights arising from said relation; but the same shall be subject to judicial cognizance in the Federal courts, according to the course of the common law. When any Territory north or south of said line, within such boundary as Congress may prescribe, shall contain a population equal to that required for a member of Congress, it shall, if its form of government be republican, be admitted into the Union on an equal footing with the original States, with or without involuntary servitude, as the Constitution of such State may provide.'—F. Bancroft, *Final efforts at compromise (Political Science Quarterly, Sept., 1861)*.—"Ex-president Tyler presided, and the debates were in secret. Threshing over the old straw, they at last advised a constitutional amendment somewhat less favorable to the South than Crittenden's. It was opposed by Virginia and other Southern states. As no one thought it would either satisfy the slave states still in the union or conciliate those which had seceded, the recommendation came to inglorious defeat in the senate. Thus ended the period of hesitation and doubt between the election and the inauguration of Lincoln. Buchanan, indecisive by nature, brought up to believe in the theory of state rights, bound to the South by long years of political and personal association, and unwilling to shoulder the responsibilities of a situation which his enemies had created, came at last to the end of his term without an actual resort

to force. His successor, whose election had precipitated the crisis, must decide what the future would bring forth. The actuality of secession alarmed the business interests and conservative men of the north; and many republicans who flouted the threat of secession in the preceding November now felt that they had gone too far. Such persons turned to Seward, whom they considered the real republican leader. They thought Lincoln inexperienced, and were pleased when it was said that Seward would be secretary of state. Thus, powerful influences worked to make the senator from New York think that he alone could save the country. He was not an idealist, and he seems to have concluded that he must invent some plan by which the South could be conciliated and the seceding states brought back."—J. S. Bassett, *Short history of the United States*, p. 514.—On the Confederate side "President Davis was careful to fill the Cabinet and other important posts with men who represented all phases of opinion, with former rivals and even decided opponents of the cause he represented. So cautious and considered was this program of the new administration that ardent secessionists declared before the fall of Fort Sumter that a reunion with the older Federal Government was the object. And the mild and conciliatory attitude of William H. Seward, who was considered as a sort of acting president during the winter of 1860-61, strengthened this feeling in the South. The Southern commissioners whom Davis sent to Washington to negotiate with the Federal Government on the subjects of boundaries between the two countries, the division of the public debt, and the surrender of forts within Confederate territory were great favorites in the old national capital. A friendly attitude toward the new South still further found expression in the New York *Tribune*, supposed to speak for Republicans in general, in the Albany *Journal*, Thurlow Weed's paper, and even in the New York *Times*, Seward's organ. . . . Nationalist sentiment was strong in the North, but not strong enough to make men positive and decided in their actions. President-elect Lincoln expressed this state of the public mind in his inaugural, when he said that he would faithfully execute the laws unless the people, his rightful masters, should refuse their support, and he showed it still more clearly when he adopted the policy of delay in determining the status of Fort Sumter which his predecessor had so long followed."—W. E. Dodd, *Expansion and conflict*, pp. 271-272.

1861 (February).—Urgency of South Carolina for the reduction of Fort Sumter before inauguration of President Lincoln.—"I am perfectly satisfied," wrote Governor Pickens of South Carolina to Howell Cobb, "President of the Provisional Congress" of the Confederacy, in a letter dated Feb. 13, 1861, "that the welfare of the new confederation and the necessities of the State require that Fort Sumter should be reduced before the close of the present administration at Washington. If an attack is delayed until after the inauguration of the incoming President of the United States, the troops now gathered in the capital may then be employed in attempting that which, previous to that time, they could not be spared to do. They dare not leave Washington now and do that which then will be a measure too inviting to be resisted. Mr. Lincoln cannot do more for this State than Mr. Buchanan has done. Mr. Lincoln will not concede what Mr. Buchanan has refused. Mr. Buchanan has placed his refusal upon grounds which determine his reply to six States, as com-

INAUGURATION OF PRESIDENT LINCOLN, MARCH 4, 1861

pletely as to the same demand if made by a single State. If peace can be secured, it will be by the prompt use of the occasion, when the forces of the United States are withheld from our harbor. If war can be averted, it will be by making the capture of Fort Sumter a fact accomplished during the continuance of the present administration, and leaving to the incoming administration the question of an open declaration of war. Such a declaration, separated, as it will be, from any present act of hostilities during Mr. Lincoln's administration, may become to him a matter requiring consideration. That consideration will not be expected of him, if the attack on the fort is made during his administration, and becomes, therefore, as to him, an act of present hostility. Mr. Buchanan cannot resist, because he has not the power. Mr. Lincoln may not attack, because the cause of the quarrel will have been, or may be, considered by him as past. Upon this line of policy I have acted, and upon the adherence to it may be found, I think, the most rational expectation of seeing that fort, which is even now a source of danger to the State, restored to the possession of the State without those consequences which I should so deeply deplore."—*Official records of the War of the Rebellion*, v. 1, p. 256.

1861 (February-March).—Inauguration and inaugural address of President Lincoln.—"Lincoln left Springfield February 11, timed to reach Washington February 23. The journey 'embraced two weeks of official reception by committees, mayors, governors, and legislatures . . . and imposing processions and miles of spectators.' It was an ovation which indicated that the tide of northern feeling was rapidly rising, and that there would be no want of support to the incoming president. As he was leaving Springfield he made a short and touching address at the railway station, fine in thought, and in diction such as made Lincoln one of the great masters of our language. 'I now leave,' he said, 'not knowing when or whether ever I may return, with a task before me greater than that which rested upon Washington. Without the assistance of that Divine Being who ever attended him, I cannot succeed. With that assistance, I cannot fail. Trusting in Him who can go with me, and remain with you, and be everywhere for good, let us confidently hope that all will yet be well. To His care commending you, as I hope in your prayers you will commend me, I bid you an affectionate farewell.' The next day, February, 12, addressing the legislature at Indianapolis, he defined 'coercion' and 'invasion,' and gave a hint of the trend of his intention. . . . It is clear that in his view the federation of the United States had become a nation, and that it was for the preservation of nationality that he was about to struggle. . . . In Cincinnati, February 12, he repeated a phrase of his speech made in the same city September 17, 1859, addressed more particularly to Kentuckians, and now having a much weightier meaning: 'We mean to treat you, as near as we possibly can, as Washington, Jefferson, and Madison treated you. We mean to leave you alone, and in no way to interfere with your institutions; to abide by all and every compromise of the Constitution.' Between this date and his arrival in Washington he made twenty-four speeches, some of but a few words. His route included Columbus, Pittsburg, Cleveland, Buffalo, Albany, New York, Trenton, Philadelphia, and Harrisburg, and in each of the capitals of the states through which

he passed he addressed the legislatures. The last hours of Lincoln's journey were complicated by a sudden announcement of a plot to assassinate him as he passed through Baltimore in the night. Against his will, and conscious of the probable effect upon the public, he was induced to leave the party and travel the short remainder of the journey incognito. The step was justified by warnings which, whether well or ill based, were so authoritative as to leave no other proper course. No untoward incident occurred, and at six o'clock on the morning of February 23 Lincoln reached Willard's Hotel in Washington. . . . The inaugural address should have assured the country that no mistake had been made in the selection of its new president; it stands among the glories of Anglo-Saxon literature and thought, a witness to the possibilities of democracy."—F. E. Chadwick, *Causes of the Civil War, 1859-1861*, pp. 282-285. —"To the anxious, listening country . . . [the president's] speeches on the journey to Washington were disappointing. Perhaps this strangely sensitive mind felt too powerfully the fatefulness of the moment and reacted with a sort of lightness that did not really represent the real man. Be that as it may, he was never less convincing than at that time. . . . The fourth of March arrived, and with it the end of Lincoln's blundering. One good omen for the success of the new Administration was the presence of Douglas on the inaugural platform. He had accepted fate, deeply as it wounded him. . . . By one of those curious little dramatic touches with which chance loves to embroider history, the presence of Douglas became a gracious detail in the memory of the day. Lincoln, worn and awkward, continued to hold his hat in his hand. Douglas, with the tact born of social experience, stepped forward and took it from him without exposing Lincoln's embarrassment. The inaugural address which Lincoln now pronounced had little similarity to those unfortunate utterances which he had made on the journey to Washington. The cloud that had been over him, whatever it was, had lifted. Lincoln was ready for his great labor. The inaugural contained three main propositions. Lincoln pledged himself not to interfere directly or indirectly with slavery in the States where it then existed; he promised to support the enforcement of the fugitive slave law; and he declared he would maintain the Union. . . . Gentle as was the phrasing of the inaugural, it was perfectly firm, and it outlined a policy which the South would not accept, and which, in the opinion of the Southern leaders, brought them a step nearer war. Wall Street held the same belief, and as a consequence the price of stocks fell."—N. W. Stephenson, *Abraham Lincoln and the Union (Chronicles of America Series, v. 29, pp. 98-100)*.

The following is the full text of the inaugural address, from Lincoln's *Complete works*:

"Fellow-Citizens of the United States: In compliance with a custom as old as the government itself, I appear before you to address you briefly, and to take, in your presence, the oath prescribed by the Constitution of the United States to be taken by the President 'before he enters on the

execution of his office.' I do not consider it necessary, at present, for me to discuss those matters of administration about which there is no special anxiety or excitement. Apprehension seems to exist among the people of the southern states, that, by the accession of a republican administration, their property and their peace and personal security are to be endangered. There has never been any reasonable cause for such apprehension. Indeed, the most ample evidence to the contrary has all the while existed and been open to their inspection. It is found in nearly all the published speeches of him who now addresses you. I do but quote from one of those speeches, when I declare that 'I have no purpose directly or indirectly, to interfere with the institution of slavery in the states where it exists. I believe I have no lawful right to do so, and I have no inclination to do so.' Those who nominated and elected me did so with full knowledge that I had made this and many similar declarations, and had never recanted them. And, more than this, they placed in the platform, for my acceptance, and as a law to themselves and to me, the clear and emphatic resolution which I now read: 'Resolved, That the maintenance inviolate of the rights of the states, and especially the right of each state to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of power on which the perfection and endurance of our political fabric depend, and we denounce the lawless invasion by armed force of the soil of any state or territory, no matter under what pretext, as among the gravest of crimes.' I now reiterate these sentiments; and in doing so I only press upon the public attention the most conclusive evidence of which the case is susceptible, that the property, peace, and security of no section are to be in any wise endangered by the now incoming administration. I add, too, that all the protection which, consistently with the Constitution and the laws, can be given, will be cheerfully given to all the states when lawfully demanded, for whatever cause—as cheerfully to one section as to another. There is much controversy about the delivering up of fugitives from service or labor. The clause I now read is as plainly written in the Constitution as any other of its provisions: 'No person held to service or labor in one state under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.' It is scarcely questioned that this provision was intended by those who made it for the reclaiming of what we call fugitive slaves; and the intention of the law-giver is the law. All members of Congress swear their support to the whole Constitution—to this provision as much as to any other. To the proposition, then, that slaves whose cases come within the terms of this clause 'shall be delivered up,' their oaths are unanimous. Now, if they would make the effort in good temper, could they not, with nearly equal unanimity, frame and pass a law by means of which to keep good that unanimous oath? There is some difference of opinion whether this clause should be enforced by national or by state authority; but surely that difference is not a very material one. If the slave is to be surrendered, it can be of but little consequence to him or to others by which authority it is done. And should any one, in any case, be content that this

oath shall go unkept on a merely unsubstantial controversy as to how it shall be kept? Again, in any law upon this subject, ought not all the safeguards of liberty known in civilized and humane jurisprudence to be introduced, so that a free man be not, in any case, surrendered as a slave? And might it not be well at the same time to provide by law for the enforcement of that clause in the Constitution which guarantees that 'the citizens of each state shall be entitled to all privileges and immunities of citizens in the several states'? I take the official oath today with no mental reservations, and with no purpose to construe the Constitution or laws by any hypercritical rules. And while I do not choose now to specify particular acts of Congress as proper to be enforced, I do suggest that it will be much safer for all, both in official and private stations, to conform to and abide by all those acts which stand unrepealed, than to violate any of them, trusting to find impunity in having them held to be unconstitutional. It is seventy-two years since the first inauguration of a President under our National Constitution. During that period, fifteen different and greatly distinguished citizens have in succession administered the executive branch of the Government. They have conducted it through many perils, and generally with great success. Yet, with all this scope of precedent, I now enter upon the same task, for the brief constitutional term of four years, under great and peculiar difficulty. A disruption of the Federal Union, heretofore only menaced, is now formidably attempted. I hold that in the contemplation of universal law and of the Constitution, the union of these states is perpetual. Perpetuity is implied, if not expressed, in the fundamental law of all national governments. It is safe to assert that no government proper ever had a provision in its organic law for its own termination. Continue to execute all the express provisions of our National Constitution, and the Union will endure forever, it being impossible to destroy it except by some action not provided for in the instrument itself. Again, if the United States be not a government proper, but an association of states in the nature of a contract merely, can it, as a contract, be peaceably unmade by less than all the parties who made it? One party to a contract may violate it—break it, so to speak; but does it not require all to lawfully rescind it? Descending from these general principles, we find the proposition that in legal contemplation the Union is perpetual, confirmed by the history of the Union itself. The Union is much older than the Constitution. It was formed, in fact, by the Articles of Association in 1774. It was matured and continued by the Declaration of Independence in 1776. It was further matured, and the faith of all the then thirteen states expressly plighted and engaged that it should be perpetual, by the Articles of Confederation, in 1778. And finally, in 1787, one of the declared objects for ordaining and establishing the Constitution was 'to form a more perfect Union.' But if the destruction of the Union by one or by a part only of the states be lawfully possible, the Union is less perfect than before the Constitution, having lost the vital element of perpetuity. It follows from these views that no state, upon its own mere motion, can lawfully get out of the Union; that resolves and ordinances to that effect are legally void; and that acts of violence within any state or

states against the authority of the United States are insurrectionary or revolutionary, according to circumstances. I therefore consider that, in view of the Constitution and the laws, the Union is unbroken; and, to the extent of my ability, I shall take care, as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the states. Doing this I deem to be only a simple duty on my part; and I shall perform it so far as practicable, unless my rightful masters, the American people, shall withhold the requisite means, or in some authoritative manner direct the contrary. I trust this will not be regarded as a menace, but only as the declared purpose of the Union that it will constitutionally defend and maintain itself. In doing this there needs to be no bloodshed or violence, and there shall be none unless it be forced upon the national authority. The power confided to me will be used to hold, occupy, and possess the property and places belonging to the Government, and to collect the duties and imposts; but beyond what may be necessary for these objects there will be no invasion, no using of force against or among the people anywhere. Where hostility to the United States in any interior locality shall be so great and universal as to prevent competent resident citizens from holding the federal offices, there will be no attempt to force obnoxious strangers among the people for that object. While the strict legal right may exist in the Government to enforce the exercise of these offices, the attempt to do so would be so irritating, and so nearly impracticable withal, that I deem it better to forego, for the time, the uses of such offices. The mails, unless repelled, will continue to be furnished in all parts of the Union. So far as possible, the people everywhere shall have that sense of perfect security which is most favorable to calm thought and reflection. The course here indicated will be followed, unless current events and experience shall show a modification or change to be proper; and in every case and exigency my best discretion will be exercised according to circumstances actually existing, and with a view and a hope of a peaceful solution of the national troubles, and the restoration of fraternal sympathies and affections. That there are persons, in one section or another, who seek to destroy the Union at all events, and are glad of any pretext to do it, I will neither affirm nor deny; but if there be such, I need address no word to them. To those, however, who really love the Union, may I not speak? Before entering upon so grave a matter as the destruction of our national fabric, with all its benefits, its memories, and its hopes, would it not be wise to ascertain precisely why we do it? Will you hazard so desperate a step, while there is any possibility that any portion of the ills you fly from have no real existence? Will you, while the certain ills you fly to are greater than all the real ones you fly from—will you risk the commission of so fearful a mistake? All profess to be content in the Union if all constitutional rights can be maintained. Is it true, then, that any right, plainly written in the Constitution, has been denied? I think not. Happily the human mind is so constituted that no party can reach to the audacity of doing this. Think, if you can, of a single instance in which a plainly written provision of the Constitution has ever been denied. If, by the mere force of numbers, a majority should deprive a minority

of any clearly written constitutional right, it might, in a moral point of view, justify revolution—certainly would if such a right were a vital one. But such is not our case. All the vital rights of minorities and of individuals are so plainly assured to them by affirmations and negations, guarantees and prohibitions in the Constitution, that controversies never arise concerning them. But no organic law can ever be framed with a provision specifically applicable to every question which may occur in practical administration. No foresight can anticipate, nor any document of reasonable length contain, express provisions for all possible questions. Shall fugitives from labor be surrendered by national or by state authority? The Constitution does not expressly say. May Congress prohibit slavery in the Territories? The Constitution does not expressly say. Must Congress protect slavery in the Territories? The Constitution does not expressly say. From questions of this class spring all our constitutional controversies, and we divide upon them into majorities and minorities. If the minority will not acquiesce, the majority must, or the Government must cease. There is no other alternative; for continuing the Government is acquiescence on one side or the other. If a minority in such case will secede rather than acquiesce, they make a precedent which, in turn, will divide and ruin them; for a minority of their own will secede from them whenever a majority refused to be controlled by such minority. For instance, why may not any portion of a new Confederacy, a year or two hence, arbitrarily secede again, precisely as portions of the present Union now claim to secede from it? All who cherish disunion sentiments are now being educated to the exact temper of doing this. Is there such perfect identity of interests among the states to compose a new Union as to produce harmony only, and prevent renewed secession? Plainly, the central idea of secession is the essence of anarchy. A majority held in restraint by constitutional checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people. Whoever rejects it, does, of necessity, fly to anarchy or to despotism. Unanimity is impossible; the rule of a minority, as a permanent arrangement, is wholly inadmissible; so that, rejecting the majority principle, anarchy or despotism, in some form, is all that is left. I do not forget the position assumed by some that constitutional questions are to be decided by the Supreme Court, nor do I deny that such decisions must be binding in any case upon the parties to a suit, as to the object of that suit, while they are also entitled to very high respect and consideration in all parallel cases by all other departments of the Government; and while it is obviously possible that such decision may be erroneous in any given case, still the evil effect following it, being limited to that particular case, with the chance that it may be overruled and never become a precedent for other cases, can better be borne than could the evils of a different practice. At the same time the candid citizen must confess that if the policy of the Government upon vital questions affecting the whole people is to be irrevocably fixed by decisions of the Supreme Court, the instant they are made, in ordinary litigation between parties in personal actions, the people will have ceased to be their own rulers, having

to that extent practically resigned their Government into the hands of that eminent tribunal. Nor is there in this view any assault upon the Court of Judges. It is a duty from which they may not shrink, to decide cases properly brought before them, and it is no fault of theirs if others seeks to turn their decisions to political purposes. One section of our country believes slavery is right and ought to be extended, while the other believes it is wrong and ought not to be extended. This is the only substantial dispute. The fugitive-slave clause of the Constitution, and the law for the suppression of the foreign slave-trade, are each as well enforced, perhaps, as any law can ever be in a community where the moral sense of the people imperfectly supports the law itself. The great body of the people abide by the dry legal obligation in both cases, and a few break over in each. This, I think, cannot be perfectly cured; and it would be worse in both cases after the separation of the sections than before. The foreign slave-trade, now imperfectly suppressed, would be ultimately revived, without restriction, in one section, while fugitive slaves, now only partially surrendered, would not be surrendered at all by the other. Physically speaking, we cannot separate; we cannot remove our respective sections from each other, nor build an impassable wall between them. A husband and wife may be divorced, and go out of the presence and beyond the reach of each other; but the different parts of our country cannot do this. They cannot but remain face to face; and intercourse, either amicable or hostile, must continue between them. Is it possible, then, to make that intercourse more advantageous or more satisfactory after separation than before? Can aliens make treaties easier than friends can make laws? Can treaties be more faithfully enforced between aliens than laws can among friends? Suppose you go to war, you cannot fight always; and when, after much loss on both sides and no gain on either, you cease fighting, the identical old questions as to terms of intercourse are again upon you. This country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing government, they can exercise their constitutional right of amending it, or their revolutionary right to dismember or overthrow it. I cannot be ignorant of the fact that many worthy and patriotic citizens are desirous of having the National Constitution amended. While I make no recommendation of amendments, I fully recognize the rightful authority of the people over the whole subject, to be exercised in either of the modes prescribed in the instrument itself; and I should, under existing circumstances, favor, rather than oppose, a fair opportunity being afforded the people to act upon it. I will venture to add that to me the convention mode seems preferable, in that it allows amendments to originate with the people themselves, instead of only permitting them to take or reject propositions originated by others not especially chosen for the purpose, and which might not be precisely such as they would wish to either accept or refuse. I understand a proposed amendment to the Constitution—which amendment, however, I have not seen—has passed Congress, to the effect that the Federal Government shall never interfere with the domestic institutions of the states, including that of persons held to service. To avoid misconstruction of what I have said, I depart from

my purpose not to speak of particular amendments, so far as to say that, holding such a provision to now be implied constitutional law, I have no objection to its being made express and irrevocable. The Chief Magistrate derives all his authority from the people, and they have conferred none upon him to fix terms for the separation of the states. The people themselves can do this also if they choose, but the Executive, as such, has nothing to do with it. His duty is to administer the present government as it came to his hands, and to transmit it unimpaired by him to his successor. Why should there not be a patient confidence in the ultimate justice of the people? Is there any better or equal hope in the world? In our present differences is either party without faith of being in the right? If the Almighty Ruler of Nations, with his eternal truth and justice, be on your side of the North, or on yours of the South, that truth and that justice will surely prevail by the judgment of this great tribunal, the American people. By the frame of the Government under which we live, this same people have wisely given their public servants but little power for mischief; and have with equal wisdom provided for the return of that little to their own hands at very short intervals. While the people retain their virtue and vigilance, no administration, by any extreme of wickedness or folly, can very seriously injure the Government in the short space of four years. My countrymen, one and all, think calmly and well upon this whole subject. Nothing valuable can be lost by taking time. If there be an object to hurry any of you, in hot haste, to a step which you would never take deliberately, that object will be frustrated by taking time; but no good object can be frustrated by it. Such of you as are now dissatisfied still have the old Constitution unimpaired, and on the sensitive point, the laws of your own framing under it; while the new administration will have no immediate power, if it would, to change either. If it were admitted that you who are dissatisfied hold the right side in the dispute, there still is no single good reason for precipitate action. Intelligence, patriotism, Christianity, and a firm reliance on Him who has never yet forsaken this favored land, are still competent to adjust, in the best way, all our present difficulty. In your hands, my dissatisfied fellow-countrymen, and not in mine, is the momentous issue of civil war. The Government will not assail you. You can have no conflict without being yourselves the aggressors. You have no oath registered in heaven to destroy the Government, while I shall have the most solemn one to 'preserve, protect, and defend it.' I am loth to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break, our bonds of affection. The mystic cords of memory, stretching from every battle-field and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature."

1861 (March).—President Lincoln and his cabinet.—Secretary Seward.—"Lincoln preferred that his cabinet should be representative rather than harmonious. William H. Seward, of New York, secretary of state, had been a Whig and was now leader of the conservative Republicans. Salmon P. Chase, of Ohio, secretary of the treas-

ury, had been a Democrat and now represented the more radical Republicans. Simon Cameron, of Pennsylvania, secretary of war, stood with Chase. Edward Bates, of Missouri, attorney-general, voiced the loyal sentiment of the border states; Gideon Welles, of Connecticut, secretary of the navy, the more conservative New England ideas; Caleb B. Smith, of Indiana, secretary of the interior, a noted stump-speaker, those of the West. Montgomery Blair, of Maryland, postmaster-general—who, with his father and brother, Francis P. Blair, senior and junior constituted the 'Blair family,' an able and widely influential trio—like Bates, stood for border-state ideas. A little later we shall see Lincoln taking into his cabinet Edwin M. Stanton, a Democrat and outspoken personal calumniator. At the Chicago convention, Seward, Chase, Cameron, and Bates had been rivals of Lincoln for the nomination."—J. K. Hosmer, *Appeal to arms, 1861-1863*, pp. 21-23, 95.—"Explain Lincoln by any theory you will, his personality was the keystone of the Northern arch; subtract it, and the arch falls. The popular element being a complex and powerful as it was, how could the presiding statesman have mastered the situation if he had not been of so peculiar a sort that he could influence all these diverse and powerful interests, slowly, by degrees, without heat, without the imperative note, almost in silence, with the universal, enfolding irresistibility of the gradual things in nature, of the sun and the rain. Such was the genius of Lincoln—all but passionless, yet so quiet that one cannot but believe in the great depth of his nature."—N. W. Stephenson, *Abraham Lincoln and the Union (Chronicles of America Series, v. 20, p. 136)*.—"Disappointed at not being President and equally disturbed at the prospect of civil war, but still inclined to large and sanguine hopes . . . [Seward] was rather anxious to take things out of Lincoln's hands and very anxious to serve his country as the great peacemaker. Indirect negotiations now took place between him and the Southern Commissioners, who of course could not be officially recognised, through the medium of two Supreme Court Judges. . . . Seward was quite loyal to Lincoln and told him in a general way what he was doing; he was also candid with Campbell and his friends, and explained to them his lack of authority, but he talked freely and rashly of what he hoped to bring about. Lincoln gave Seward some proper cautions and left him all proper freedom. . . . The upshot of the matter is that the decision of the Government was delayed by negotiations which, as it ought to have known, could come to nothing, and that the Southern Government and the Commissioners, after they had got home, thought they had been deceived in these negotiations. Discussions were still proceeding as to Fort Sumter when a fresh difficulty arose for Lincoln, but one which enabled him to become henceforth master of his Cabinet. . . . Upon April 1 [Seward] sent to Lincoln 'Some Thoughts for the President's Consideration.' In this paper, after deploring what he described as the lack of any policy so far, and defining, in a way that does not matter, his attitude as to the forts in the South, he proceeded thus: 'I would demand explanations from Great Britain and Russia and send agents into Canada, Mexico, and Central America, to raise a vigorous spirit of independence on this continent against European intervention, and if satisfactory explanations are not received

from Spain and France, would convene Congress and declare war against them.' In other words, Seward would seek to end all domestic dissensions by suddenly creating out of nothing a dazzling foreign policy. But this was not the only point, even if it was the main point; he proceeded: 'Either the President must do it' (that is the sole conduct of this policy) 'himself, or devolve it on some member of his Cabinet. It is not my especial province. But I neither seek to evade nor assume responsibility.' . . . In his brief reply Lincoln . . . pointed out that the policy so far, as to which Seward had complained, was one in which Seward had entirely concurred. As to the concluding demand that some one man, and that man Seward, should control all policy, he wrote, 'If this must be done, I must do it. When a general line of policy is adopted, I apprehend there is no danger of its being changed without good reason, or continuing to be a subject of unnecessary debate; still, upon points arising in its progress I wish, and suppose I am entitled to have, the advice of all the Cabinet.' Seward . . . was one of the ablest men in America, only at that moment strained and excited beyond the limits of his good sense. Lincoln's quiet answer sobered him then and for ever after. He showed a generous mind; he wrote to his wife soon after: 'Executive force and vigour are rare qualities; the President is the best of us.'—Lord Charnwood, *Abraham Lincoln (Makers of the nineteenth century, pp. 210-211)*.

1861 (March).—Surrender of Alexander H. Stephens to secession.—His "corner-stone" speech at Savannah.—The following is from a speech made by Alexander H. Stephens at Savannah, on the evening after the secession of Georgia, which he had opposed, but to which he now yielded himself without reserve. It is a speech that became famous on account of its bold declaration that slavery formed the "cornerstone" of the New Confederacy. "The new constitution," said Stephens, "has put at rest, forever, all the agitating questions relating to our peculiar institution—African slavery as it exists amongst us—the proper status of the negro in our form of civilization. This was the immediate cause of the late rupture and present revolution. Jefferson, in his forecast, had anticipated this, as the 'rock upon which the old Union would split.' He was right. What was conjecture with him, is now a realized fact. But whether he fully comprehended the great truth upon which that rock stood and stands may be doubted. The prevailing ideas entertained by him and most of the leading statesmen at the time of the formation of the old constitution, were that the enslavement of the African was in violation of the laws of nature; that it was wrong in principle, socially, morally, and politically. It was an evil they knew not well how to deal with, but the general opinion of the men of that day was that, somehow or other in the order of Providence, the institution would be evanescent and pass away. This idea, though not incorporated in the consti-

tution, was the prevailing idea at that time. The constitution, it is true, secured every essential guarantee to the institution while it should last, and hence no argument can be justly urged against the constitutional guarantees thus secured, because of the common sentiment of the day. Those ideas, however, were fundamentally wrong. They rested upon the assumption of the equality of races. This was an error. It was a sandy foundation, and the government built upon it fell when the 'storm came and the wind blew.' Our new government is founded upon exactly the opposite idea; its foundations are laid, its cornerstone rests upon the great truth, that the negro is not equal to the white man; that slavery—subordination to the superior race—is his natural and normal condition. This, our new government, is the first, in the history of the world, based upon this great physical, philosophical and moral truth. This truth has been slow in the process of its development, like all other truths in the various departments of science. It has been so even amongst us."—A. H. Stephens, *Speech in Savannah, Mar. 21, 1861* (H. Cleveland, ed., *Alexander H. Stephens in public and private*).

1861 (March).—On the verge of war.—"In spite of the critical situation in Charleston harbor and the perplexity of the administration at Washington; in spite of the failure of the congressional committees to agree on a plan of conciliation; in spite of the rapid secession of the cotton states in January and the formation of a Southern Confederacy at Montgomery, Alabama, on the fourth of February, 1861; in spite of the fact that the *Star of the West*, . . . flying the American flag at her masthead, had been fired upon and turned back by the batteries of Charleston harbor,—the great majority of the citizens of both sections refused to believe that the gates of the temple of Janus were really to be thrown open. War was a horrid thought. The country was prosperous, and a hundred projects of industrial enterprise and social reform were stirring in the American mind. However severe the temporary setback of the panic of 1857, there was no effect of it visible in 1860. Our population during the decade had increased from 23,191,876 to 31,443,322.—a gain of 35.59 per cent. The increase in the city population was 78.62 per cent. The farm, to be sure, still maintained its lead over the factory in 1860, when our agricultural products were valued at \$1,913,000,000 (as much as farm products and manufactures combined in 1850), with manufactures running a very close second at \$1,885,862,000."—D. S. Muzey, *United States of America, v. 1, p. 529*.—"Both the President and Congress formally announced that it was a struggle for the maintenance of the Union and not a war on behalf of the slaves. It was well that this position was taken, else the North might have broken into impotent factions. The East hated the South and warred upon their ancient rivals, the planters; the border States owned slaves, disliked the Republican party, and feared the purposes of those in power; while the West loved the Union, held the negro in contempt, and was committed to the party in power on the smallest possible margin. . . . The people of the North were not willing to invade the sister States of the South for any other cause than to restore the Union. Wealthy bankers, industrial leaders, and railway magnates might be kept together on a platform of enlarging the area of their operations, but

never on a program which proposed the confiscation of billions of dollars' worth of property, which the slaves represented."—W. E. Dodd, *Expansion and conflict, pp. 289-290*.—"The anti-slavery men who were abolitionists were little more numerous in 1860 than they had been in 1840, and those who spoke for the Republicans vehemently disclaimed all alliance or sympathy with them. But, though they did not mean to lay the axe to the root of the tree [they] . . . did mean to gird it about and let it die where it stood, as one of the senators from Louisiana passionately told them. They meant by law and force to keep slavery from getting any growth or outlet whatever. They meant also to nullify, if they could not repeal, the laws whose adoption the constitution commanded for the apprehension and return of runaway slaves, and put the whole system of slavery, so far as they might within the formal limits of the fundamental law, beyond the recognition or countenance of federal statute. Their creed and their actions alike were compounded of hostility towards the South; and the challenge of their success was direct and unmistakable. Men of southern mettle could not disregard or decline it. Pride and self-vindication seemed the more imperatively to command that it should be accepted by the southerners because of what their opponents had said, with sneer and taunt and bitter detraction, about the system of slavery, which they maintained and stood for. . . . The system of slavery necessarily deprived the South of a body of small, yeomen farmers; but small farms abounded, nevertheless. A great majority of the southern farmers owned no slaves at all. . . . It was the accusation of moral guilt in the matter of slavery that stung the southern men most intolerably. . . . Many a thoughtful man amongst them saw with keen disquietude how like an incubus slavery lay upon the South; how it demoralized masters who were weak, burdened masters who were strong, and brought upon all alike enormous, hopeless economic loss. . . . That very fact, their very consciousness that they exercised a good conscience in these matters, made them the more keenly sensitive to the bitter attacks made upon them at the North, the more determined now to assert themselves, though it were by revolution, when they saw a party whose chief tenet seemed to be the iniquity of the South, about to take possession of the federal government. They had the inevitable haughty pride of a privileged class. Probably not more than one white man out of every five in the South was a slave holder; not more than half had even the use or direction of slaves. Hundreds of the merchants, lawyers, physicians, ministers who were the natural ruling spirits of the towns owned none. But the men who were slave owners were the masters of politics and of society. Their sensibilities were for all practical purposes the sensibilities of the South; and for close upon forty years now it had seemed as if at every turn of the country's history those sensibilities must be put upon the rack."—W. Wilson, *History of the American people, v. 4, pp. 190, 192, 194-195, 197, 199*.—"Slavery, so called, or that legal subordination of the black race to the white, which existed in all but one of the States, when the Union was formed, and in fifteen of them when the war began, was unquestionably the occasion of the war, the main exciting proximate cause on both sides, on the one as well as the other, but it was not the real cause,

the 'Cause causes' of it. That was the assumption on the part of the Federal authorities, that the people of the several States were . . . citizens of the United States, and owed allegiance to the Federal Government, as the absolute Sovereign power over the whole country, consolidated into one Nation. The war . . . grew out of different and directly opposite views as to the nature of the Government of the United States, and where, under our system, ultimate Sovereign power or Paramount authority properly resides. Considerations connected with the legal status of the Black race in the Southern States, and the position of several of the Northern States toward it, together with the known sentiments and principles of those just elected to the two highest offices of the Federal Government (Messrs. Lincoln and Hamlin), as to the powers of that Government over this subject, and others which threatened, as was supposed, all their vital interests, prompted the Southern States to withdraw from the Union, for the very reason that had induced them at first to enter into it: that is, for their own better protection and security. Those who had the control of the Administration of the Federal Government, denied this right to withdraw or secede. The war was inaugurated and waged by those at the head of the Federal Government, against these States, to prevent their withdrawal from the Union. On the part of these States, which had allied themselves in a common cause, it was maintained and carried on purely in defense of this great Right, claimed by them, of State Sovereignty and Self-government, which they with their associates had achieved in their common struggle with Great Britain, under the Declaration of 1776, and which, in their judgment, lay at the foundation of the whole structure of American free Institutions."—A. H. Stephens, *Constitutional view of the late war between the states*, v. 1, pp. 28-30.—"The war should not be so depicted as to imply that the North and the South differed and quarrelled about the same things. That was not the fact. The questions presented to the men of the North were not the same as those with which their Southern contemporaries had to deal. . . . Mr. Trescott, Assistant Secretary of State in Mr. Buchanan's administration, in his account of the discussions in the Cabinet in the autumn of 1860, gives a forcible picture of this fundamental difference when he is describing the position of his immediate chief, General Cass, then Secretary of State: Not recognizing any right in a State to secede except as a revolutionary measure, he would have resisted the attempt at the commencement, and, as the sworn officer of the United States, he would have done his utmost to preserve its integrity. 'I speak to Cobb,' he would say, 'and he tells me he is a Georgian; to Floyd, and he tells me he is a Virginian; to you, and you tell me you are a Carolinian. I am not a Michigander; I am a citizen of the United States!' Such radical differences as these actually existed among the representative statesmen of the country in the year 1860, however difficult it may be for the present generation to appreciate the fact. It is not possible to exaggerate the importance of these conceptions of political duty; for they directly affected the attitude of every man towards the questions of the day. If a man held that his State was his country, it was his duty, if he proposed to be a patriotic citizen, to serve under the flag of his State. . . . The attitude

. . . which the seceding States assumed towards the States which remained in the Union was that of foreign nations, as one by one they adopted their ordinances of secession, and withdrew their Senators and Representatives from Congress. And there can be no reasonable doubt that when, in any State, the ordinance of secession had been adopted, the people of that State—or the great majority of them at least—felt that their allegiance was now due solely to their State; and even those persons who had strongly and earnestly opposed the secession movement . . . felt themselves none the less bound loyally to serve their State, now that it had seceded. . . . They were not, in their own opinion, rebels at all; they were defending their States—that is, the nations to which they conceived themselves to belong—from invasion and conquest. . . . The attitude of the South was from the beginning one of resistance to the uttermost; it was, in fine, the attitude of a nation, repelling invasion, dismemberment, conquest. . . . It is of the first importance that we should recognize the grounds of this well-nigh universal feeling among the Southern people, if we would understand the causes of the unanimity and devotion with which they, for four long years, withstood the armies of the United States. The populations of the States which remained in the Union, though of many different minds during the winter of 1860 and 1861, were yet, after the war had fairly commenced, substantially agreed upon a policy of active interference. Without concerning themselves to dispute the truth of the contention that the original thirteen States were, when they adopted the Constitution, thirteen independent nations, the Northern people were very certain that in 1861 at any rate the United States constituted but one nation. They were not very clear as to the legal or the political effect on a State of an ordinance of secession, but they were very clear indeed that the United States Government lost none of its jurisdiction by reason of such an act having passed a State legislature. The feeling that they were citizens of a great country, inheritors of a noble history, charged with the important task of preserving intact the great republic of the world, inspired the people of the North with a determination to maintain the integrity of the nation, at any cost."—J. C. Ropes, *Story of the Civil War, 1861-1865*, pt. 1, pp. iii-iv, 3-5.—"When . . . war broke out in 1861, the last of the framers of the constitution had been a score of years in his grave; but evidence is conclusive that until the decennium between 1830 and 1840 the belief was nearly universal that in case of a final, unavoidable issue, sovereignty resided in the State, and to it allegiance was due. . . . But it naturally came to pass that in many of the States a generation grew up, dating from the War of 1812, who, gravitating steadily and more and more strongly to nationality, took a wholly different view of allegiance. For them Story laid down the law; Webster was their mouthpiece; at one time it looked as if Jackson was to be their armed exponent. They were, moreover, wholly within their right. The sovereignty was confessedly divided; and it was for them to elect. The movements of both science and civilization were behind the nationalists. The railroad obliterated State lines, while it unified the nation. What did the foreign immigrants, now swarming across the ocean care for States? They knew only the nation. Brought up in

Europe, the talk of State sovereignty was to them foolishness. Its alphabet was incomprehensible. . . . Then the inevitable issue arose; and it arose over African slavery; and slavery was sectional. The States south of a given line were arrayed against the States north of that line. Owing largely to slavery, and the practical exclusion of immigrants because thereof, the States of the South had never undergone nationalization at all to the extent those of the North had undergone it. The growing influence and power of the national government, the sentiment inspired by the wars in which we had been engaged, the rapidly improving means of communication and intercourse, had produced their effects in the South; but in degree far less than in the North. Thus the curious result was brought about, when, at last, the long-deferred issue confronted the country. . . . Those who believed in national sovereignty constituted the conservative majority, striving for the preservation of what then was,—the existing nineteenth-century nation,—while those who passionately adhered to State sovereignty, treading in the footsteps of the fathers, had become eighteenth-century reactionists. Legally, each had a right on his side. The theory of a divided sovereignty had worked itself out to its logical consequence . . . and every man had to 'speak or die.' In the North the situation was simple. State and Nation stood together. The question of allegiance did not present itself, for the two sovereignties merged. It was otherwise in the South; and there the question became, not legal or constitutional, but practical. The life of the nation had endured so long, the ties and ligaments had become so numerous and interwoven, that, all theories to the contrary notwithstanding, a peaceable secession from the Union—a virtual exercise of State sovereignty—had become impossible. . . . That after seventy years of union and nationalization, a peaceable and friendly taking to pieces was possible, is now, as then it was, scarcely thinkable. . . . In other words, practical Secession was revolution theoretically legal. . . . Lee, with intuitive common-sense, struck the nail squarely on the head when amidst the Babel of discordant tongues he wrote to his son: 'It is idle to talk of secession'; the national government as it then was 'can only be dissolved by revolution.' That struggle of dissolution might be longer and fiercer,—as it was,—or shorter, and more wordy than blood-letting,—as the seceding States confidently believed would prove to be the case,—but a struggle there would be. Historically, such were the conditions to which natural processes of development had brought the common country at the mid-decennium of the century."—C. F. Adams, *Studies, military and diplomatic, 1775-1885*, pp. 297, 299-302.

1861 (March-April).—Opening of hostilities by attack on Fort Sumter.—President Lincoln's statement of the circumstances.—His first difficulties.—Attitude of border states.—"The Cabinet of Buchanan had been undecided, that of Lincoln was for a whole month equally undecided. Men hoped to avoid what all feared, civil war; and it is to the credit of both sections and both cabinets that they hesitated to commit the overt act which was to set free the 'dogs of war.' . . . Conservative members of Congress, John J. Critten-

den, Stephen A. Douglas, William H. Seward, and others, labored . . . [to avert the threatened strife]. It is acknowledged by all that a popular referendum would have brought an overwhelming mandate to let the 'departing sisters go in peace,' or to accept the former Southern demand of a division of the western territory from Kansas to the Pacific along the line of 36° 30'. But stiff-backed Republicans like Senator Chandler, of Michigan, Charles Sumner, and Secretary Chase were unwilling to throw away the results of a victory constitutionally won, even to avoid a long and bloody war. And these men brought all the influence they could command to bear upon the President and his Cabinet during the early days of April. They contended that every moment of delay increased the likelihood of Southern success. . . . At last President Lincoln yielded, and a relief expedition was ordered to Fort Sumter on April 6, where Major Robert Anderson and his garrison had bravely and cautiously maintained their difficult situation in the face of any angry Southern sentiment for nearly four months. This was recognized as a warlike move; and Secretary Seward was so much opposed to it and, the Southerners contended, so sacredly bound not to allow its departure, that he interfered with the expedition, by sending orders, signed by himself for the President, intended to thwart the move."—W. E. Dodd, *Expansion and conflict*, pp. 272-274.—The president's delay of action in the case of Fort Sumter was mainly due, on the political side of the question, to the state of things in the border states—especially in Virginia. "There were fifteen slave states . . . [but] at the time of the inauguration, only seven of these fifteen—less than a majority—had revolted. The cotton states alone had followed the lead of South Carolina out of the Union. Such a confederacy could not hope to live a year, and would be obliged to find its way back into the Union upon some terms. In the meantime, two or three conventions in the border states [Virginia, Apr. 4, and Missouri, March], delegated freshly from the people, had voted distinctly and decidedly not to secede. [Kentucky and Tennessee had refused even the call of conventions; while North Carolina, Feb. 28, and Arkansas, Mar. 18, of the states farther south, had voted secession down.] The affairs of the confederacy were really in a very precarious condition when Mr. Lincoln came into power. . . . It became Mr. Lincoln's policy so to conduct affairs as to strengthen the Union feeling in the border states [see also BORDER STATES, and to give utterance to no sentiment and to do no deed which should drive these states toward the confederacy. . . . [The Confederate Congress] passed a measure for the organization of an army, on the 9th of March, and on the 12th two confederate commissioners—Mr. Forsyth of Alabama and Mr. Crawford of Georgia—presented themselves at the State Department at Washington for the purpose of making a treaty with the United States. . . . The President would not recognize them, but sent to them a copy of his Inaugural, as the embodiment of the views of the government. . . . In the meantime [April 8] Lieutenant Talbot, on behalf of Mr. Lincoln, was having interviews with Governor Pickens of South Carolina and with General Beauregard, in command of the confederate forces there, in which he informed them that provisions would be sent to Fort Sumter, peaceably if possible,—otherwise by force. . . . [Talbot was refused permission to visit Anderson in the fort.] The wisdom of Mr.

Lincoln's waiting became evident at a day not too long delayed. Fort Pickens . . . was quietly reinforced [April 12], when the vessels which carried the relief [to Sumter] were dispatched, Mr. Lincoln gave official information to General Beauregard that provisions were to be sent to Major Anderson in Fort Sumter, by an unarmed vessel. He was determined that no hostile act on the part of the government should commence the war, for which both sides were preparing; although an act of open war had already transpired in Charleston harbor. . . . [On January 9, two months before the president's inauguration, the *Star of the West*, sent down with provisions and reinforcements for Anderson, had been driven off.]"—J. G. Holland, *Life of Lincoln*, ch. 18.—"Major Anderson, who held the fort with a small Federal garrison, was a friend of Jefferson Davis, and was keenly alive to the seriousness of his situation, and while his superiors were in doubt, he

time 5,000 Confederate troops, under Beauregard, lay around the place. Davis still delayed, giving conditional orders to Beauregard; and Beauregard acted in the same spirit when he sent Roger A. Pryor and three other aides to the fort to get definite assurance on the point of Federal surrender. But when Anderson, on the night of April 12, gave assurance that on April 15 he would give up his post if he should not receive contrary orders from Washington prior to that time, the four aides of General Beauregard who had been sent to the fort gave notice to the Confederate artillery commander, without consulting superior authority, that the answer was not satisfactory, and the fatal shelling began. On the next day Anderson and his men, finding the walls of the fort falling about them, surrendered. The war had begun."—W. A. Dodd, *Expansion and conflict*, pp. 274-275.—"Major Anderson saluted his flag with fifty guns, and with his command, was

BOMBARDMENT OF FORT SUMTER

maintained the status of things as they were when the negotiations began. But the authorities of South Carolina forbade the sending of fresh supplies of provisions to his men after April 6, and, as there was but a limited amount on hand, it was only a matter of weeks before he must evacuate, if neither the North nor the South decided what should be done. April 15 was the day which he set for giving up his post for the lack of sustenance. If he moved away peacefully, there would be no war, and such was the hope of Seward and the moderates of the North, who thought that a friendly reconstruction would be the result of continued delay. Jefferson Davis, who was informed daily of every move that was made in Washington, determined to let Anderson quietly evacuate Fort Sumter, having assurances from Seward that no supplies would be sent. In this he was supported by the unanimous opinion of his Cabinet until on April 9, when General P. G. T. Beauregard, who commanded the troops gathering at Charleston, telegraphed that the Federal Government had given formal notice that assistance would be sent to the starving garrison. At this

conveyed to the fleet outside, to be taken to New York."—J. C. Ropes, *Story of Civil War*, pt. 1, p. 85.—"The circumstances under which the first blow of the Civil War was struck by the Confederacy at Charleston were recited by President Lincoln, in his message to Congress, at the special session convened July 4, 1861: "On the 5th of March (the present incumbent's first full day in office), a letter of Major Anderson, commanding at Fort Sumter, written on the 28th of February and received at the War Department on the 4th of March, was by that department placed in his hands. This letter expressed the professional opinion of the writer that reinforcements could not be thrown into that fort within the time for his relief, rendered necessary by the limited supply of provisions, and with a view of holding possession of the same, with a force of less than 20,000 good and well-disciplined men. This opinion was concurred in by all the officers of his command, and their memoranda on the subject were made inclosures of Major Anderson's letter. The whole was immediately laid before Lieutenant-General Scott, who at once concurred with

Major Anderson in opinion. On reflection, however, he took full time, consulting with other officers, both of the army and the navy, and at the end of four days came reluctantly but decidedly to the same conclusion as before. He also stated at the same time that no such sufficient force was then at the control of the government. . . . In a purely military point of view, this reduced the duty of the administration in the case to the mere matter of getting the garrison safely out of the fort. It was believed, however, that to so abandon that position, under the circumstances, would be utterly ruinous; that the necessity under which it was to be done would not be fully understood; that by many it would be construed as a part of a voluntary policy; that at home it would discourage the friends of the Union, embolden its adversaries, and go far to insure to the latter a recognition abroad; that, in fact, it would be our national destruction consummated. This could not be allowed. Starvation was not yet upon the garrison, and ere it would be reached Fort Pickens might be reinforced. This last would be a clear indication of policy, and would better enable the country to accept the evacuation of Fort Sumter as a military necessity. An order was at once directed to be sent for the landing of the troops from the steamship 'Brooklyn' into Fort Pickens. This order could not go by land, but must take the longer and slower route by sea. The first return news from the order was received just one week before the fall of Fort Sumter. The news itself was that the officer commanding the 'Sabine,' to which vessel the troops had been transferred from the 'Brooklyn,' acting upon some quasi armistice of the late administration (and of the existence of which the present administration, up to the time the order was despatched, had only too vague and uncertain rumors to fix attention), had refused to land the troops. To now reinforce Fort Pickens before a crisis would be reached at Fort Sumter was impossible—rendered so by the near exhaustion of provisions in the latter-named fort. In precaution against such a conjuncture, the government had, a few days before, commenced preparing an expedition as well adapted as might be to relieve Fort Sumter, which expedition was intended to be ultimately used, or not, according to circumstances. The strongest anticipated case for using it was now presented, and it was resolved to send it forward. As had been intended in this contingency, it was also resolved to notify the governor of South Carolina that he might expect an attempt would be made to provision the fort; and that, if the attempt should not be resisted, there would be no effort to throw in man, arms, or ammunition, without further notice, or in case of an attack upon the fort. This notice was accordingly given; whereupon the fort was attacked and bombarded to its fall, without even awaiting the arrival of the provisioning expedition. It is thus seen that the assault upon and reduction of Fort Sumter was in no sense a matter of self-defense on the part of the assailants."—Abraham Lincoln, *Complete works*, v. 2, pp. 56-57.

1861 (April).—President Lincoln's call to arms.—Mighty uprising of the North.—Response of governors.—"The effect produced by the capture of Fort Sumter was instantaneous and universal throughout the North. No one who did not witness the patriotic enthusiasm of that moment can form any conception of it. It was, in truth, simply magnificent. The Northern public trembled with indignation at the news of the unprovoked attack on Anderson's little garrison, of the outrage committed in compelling the flag of the country to be lowered from the ramparts of Fort Sumter. The sentiment of the people was strong, and outspoken beyond measure; it was also universal. . . . The Northern people felt that their forbearance had been despised, that their toleration had been repaid by violence, and that the time for action had come. They were ready for war, and for war to the bitter end. President Lincoln, who, with his marvellous sagacity for divining the sentiment of the country, did not need to wait until it had been expressed through the ordinary organs of public opinion, instantly saw his opportunity."—J. C. Ropes, *Story of Civil War, 1861-1865*, pp. 90-91.—"By the next morning (Sunday April 14) the news of the close of the bombardment and capitulation of Sumter was in Washington. In the forenoon, at the time Anderson and his garrison were evacuating the fort, Lincoln and his Cabinet, together with sundry military officers, were at the Executive Mansion, giving final shape to the details of the action the Government had decided to take. A proclamation, drafted by himself, copied on the spot by his secretary, was concurred in by his Cabinet, signed, and sent to the State Department to be sealed, filed, and copied for publication in the next morning's newspapers. The document bears date April 15 (Monday), but was made and signed on Sunday." It was as follows:

"Whereas the laws of the United States have been for some time past and now are opposed, and the execution thereof obstructed, in the States of South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas, by combinations too powerful to be suppressed by the ordinary course of judicial proceedings, or by the powers vested in the marshals by law: Now, therefore, I, Abraham Lincoln, President of the United States, in virtue of the power in me vested by the Constitution and the laws, have thought fit to call forth, and hereby do call forth, the militia of the several States of the Union, to the aggregate number of seventy-five thousand, in order to suppress said combinations, and to cause the laws to be duly executed. The details for this object will be immediately communicated to the State authorities through the War Department. I appeal to all loyal citizens to favor, facilitate, and aid this effort to maintain the honor, the integrity, and the existence of our National Union, and the perpetuity of popular government; and to redress wrongs already long enough endured. I deem it proper to say that the first service assigned to the forces hereby called forth will probably be to repossess the forts, places, and property which have been seized from the Union; and in every event the utmost care will be observed, consistently with the objects aforesaid, to avoid any devastation,

any destruction of or interference with property, or any disturbance of peaceful citizens in any part of the country. And I hereby command the persons composing the combination aforesaid to disperse and retire peacefully to their respective abodes within twenty days from date. Deeming that the present condition of public affairs presents an extraordinary occasion, I do hereby, in virtue of the power in me vested by the Constitution, convene both Houses of Congress. Senators and Representatives are therefore summoned to assemble at their respective chambers, at twelve o'clock noon, on Thursday the fourth day of July next, then and there to consider and determine such measures as, in their wisdom, the public safety and interest may seem to demand. In witness whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed. Done at the city of Washington, this 15th day of April, in the year of our Lord one thousand eight hundred and sixty-one, and of the Independence of the United States the eighty-fifth. Abraham Lincoln. By the President: William H. Seward, Secretary of State."

—Abraham Lincoln, *Complete works*, v. 2, p. 34.

"In view of the subsequent gigantic expansion of the civil war, eleventh-hour critics continue to insist that a larger force should have been called at once. They forget that this was nearly five times the then existing regular army; that only very limited quantities of arms, equipments, and supplies were in the Northern arsenals; that the treasury was bankrupt; and that an insignificant eight million loan had not two weeks before been discounted nearly six per cent. by the New York bankers, some bids ranging as low as eighty-five. They forget that the shameful events of the past four months had elicited scarcely a spark of war feeling; that the loyal States had suffered the siege of Sumter and firing on the 'Star of the West' with a dangerous indifference. They forget the doubt and dismay, the panic of commerce, the division of counsels, the attacks from within, the sneers from without—that faith seemed gone and patriotism dead. Twenty-four hours later all this was measurably changed. . . . War sermons from pulpits; war speeches in every assemblage; tenders of troops; offers of money; military proclamations and orders in every newspaper; every city radiant with bunting; every village-green a mustering ground; war appropriations in every legislature and in every city or town council; war preparations in every public or private workshop; gun-casting in the great foundries, cartridge-making in the principal towns; camps and drills in the fields; parades drum, flags, and bayonets in the streets; knitting, bandage-rolling and lint-scraping in nearly every household. . . . Within the space of a month the energy and intelligence of the country were almost completely turned from the industries of peace to the activities of war."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 4, ch. 4-5.—"In intelligence no army, except perhaps the Athenian, can have ever equalled or approached that of the North. Most of the soldiers carried books and writing materials in their knapsacks, and mail bags heavily weighted with letters were sent from every cantonment. . . . In wealth, in the means of providing the weapons and ammunitions of war, the North had an immense advantage, which, combined with that of numbers, could not fail, if, to use Lincoln's homely phrase, it 'pegged away,' to tell in the end. It was also vastly superior in mechanical invention; which

was destined to play a great part, and in mechanical skill; almost every Yankee regiment was full of mechanics, some of whom could devise as well as execute. In artillery and engineering the North took the lead from the first, having many civil engineers, whose conversion into military civil engineers was easy. The South, to begin with, had the contents of Federal arsenals and armouries. . . . But when these resources were exhausted, replacement was difficult, the blockade having been established, though extraordinary efforts in the way of military manufacture were made. To the wealthy North, besides its own factories, were opened the markets of England and the world. Of the small regular army the Confederacy had carried off a share, with nearly half the regular officers. The South had the advantage of the defensive, which, with long-range muskets and in a difficult country, was reckoned in battle as five to two. The South had the superiority of the unity, force, and secrecy which autocracy lends to the operations of war. On the side of the North these were comparatively wanting."—Goldwin Smith, *United States*, ch. 5.—"In six of the eight slave-labor states included in the call, the president's proclamation and the requisition of the secretary of war "were treated by the authorities with words of scorn and defiance. The exceptions were Maryland and Delaware. In the other States, disloyal Governors held the reins of power. 'I have only to say,' replied Governor Letcher of Virginia, 'that the militia of this State will not be furnished to the powers at Washington for any such purpose as they have in view. Your object is to subjugate the Southern States, and a requisition made upon me for such an object—an object, in my judgment, not within the province of the Constitution or the Act of 1795—will not be complied with. You have chosen to inaugurate civil war, and, having done so, we will meet it in a spirit as determined as the Administration has exhibited toward the South.' Governor Ellis, of North Carolina, answered:—Your dispatch is received, and if genuine, which its extraordinary character leads me to doubt, I have to say in reply, that I regard the levy of troops, made by the Administration for the purpose of subjugating the States of the South, as in violation of the Constitution, and a usurpation of power. I can be no party to this wicked violation of the laws of the country, and to this war upon the liberties of a free people. You can get no troops from North Carolina.' Governor Magoffin, of Kentucky, replied:—Your dispatch is received. I say emphatically that Kentucky will furnish no troops for the wicked purpose of subduing her sister Southern States.' Governor Harris, of Tennessee, said:—Tennessee will not furnish a single man for coercion, but 50,000, if necessary, for the defense of our rights, or those of our Southern brethren.' Governor Rector, of Arkansas, replied: 'In answer to your requisition for troops from Arkansas to subjugate the Southern States, I have to say that none will be furnished. The demand is only adding insult to injury.' . . . Governor Jackson, of Missouri, responded: 'There can be, I apprehend, no doubt that these men are intended to make war upon the seceded States. Your requisition, in my judgment, is illegal, unconstitutional, and revolutionary in its objects, inhuman and diabolical and cannot be complied with. Not one man will the State of Missouri furnish to carry on such an unholy

crusade.' . . . Governor Hicks, of Maryland, appalled by the presence of great dangers, and sorely pressed by the secessionists on every side, hastened, in a proclamation, to assure the people of his State that no troops would be sent from Maryland unless it might be for the defense of the National Capital, and that they (the people) would, in a short time, 'have the opportunity afforded them, in a special election for members of the Congress of the United States, to express their devotion to the Union, or their desire to see it broken up.' Governor Burton, of Delaware, made no response until the 26th, when he informed the President that he had no authority to comply with his requisition. At the same time he recommended the formation of volunteer companies for the protection of the citizens and property of Delaware, and not for the preservation of the Union. . . . In the seven excepted Slave-labor States in which insurrection prevailed, the proclamation and the requisition produced hot indignation, and were assailed with the bitterest scorn. . . . Even in the Free-labor States, there were vehement opposers of the war policy of the Government from its inception." But, speaking generally, "the uprising of the people of the Free-labor States in defense of Nationality was a sublime spectacle."—B. J. Lossing, *Field book of the Civil War*, v. 1, ch. 14.

1861 (April).—The South at the opening of the war.—"The popular excitement and enthusiasm . . . in the South equaled that which marked the early stages of the French Revolution. Party lines and class distinctions disappeared. Two hundred thousand volunteers offered their services to Jefferson Davis; confederate and state bonds to meet the expense of the war were taken at par wherever there was surplus money; men met at their court-houses to drill without the call of their officers; and women, even more enthusiastic than the men, urged their 'guardians and protectors' to the front to meet and vanquish a foe who threatened to invade the Southern soil. Armories were quickly constructed in a country which knew little of the mechanic arts; guns and ammunition were ordered from Europe and from Northern manufacturers as fast as trusty agents could make arrangements; shipbuilding was resorted to on the banks of the sluggish rivers; and machinists and sailors were imported from the North and from England to guide the amateurish hands of the South. Before midsummer four hundred thousand Southerners were in arms or waiting to receive them. Colonel Robert E. Lee, accounted the first soldier of the country, was made a general in the new army. Joseph E. Johnston, Albert Sidney Johnston, Pierre G. T. Beauregard, and others accepted with confidence the commissions of the South, and set hundreds of younger men, trained at West Point or at the Virginia Military Institute, to drilling and organizing the armies rapidly gathering at strategic points along the frontier, which extended from Norfolk, Virginia, to the eastern border at Kansas. The planters had at last made good their threat, and the aristocratic society of the South was welded together more firmly than it had ever been before. Their leaders frankly stated to the world that their . . . billions of negro property was of more importance to them than any federal union which threatened the value of that property by narrowing the limits of its usefulness. The negroes

knew a great war was beginning and that they were the objects of contention; but long discipline and a curious pride in the prowess of their masters kept them at their lowly but important tasks. They boasted that their masters could 'whip the world in arms.' Of insurrections and the massacre of the whites, which at one time had been a nightmare to the ruling classes of the South, there was no rumor. And throughout the four years of war the slaves remained faithful and produced by their steady, if slow, toil the food supplies both for the people at home and for the armies at the front. The small slaveholder was the most enthusiastic and resolute secessionist and supporter of the Confederacy. He was just rising in the world, and anything which barred the upward way was denounced as degrading and insulting. A larger class of Southerners who joined with measured alacrity the armies of defense were the small farmers of the hills and poor eastern counties: but the 'sand-hillers' and 'crackers,' the illiterate and neglected by-products of the planter counties, were not minded to volunteer, though under pressure they became good soldiers because they dreaded the prospect of hordes of free negroes in the South more than they did the guns of the North. Small farmers and landless whites all felt the necessity of holding the slaves in bondage, and thus a society of sharp class distinctions, openly acknowledged by all, was moulded into a solid phalanx by the proposed invasion of the South and the almost certain liberation of the slaves. Moreover, the churches of the South, including the Catholics in New Orleans, Charleston, and elsewhere, were now at the height of their power. Planters, farmers, and the so-called 'poor whites' acknowledged the importance of religious faith and discipline; and the leaders of the churches, from the bishops of the Episcopalians to the humble pastors of negro congregations freely gave their blessings to slavery and urged their membership to heroic sacrifice for the common cause."—W. E. Dodd, *Extension and conflict*, pp. 276-278.—"In resources the South were even more inferior to the North than in population, for they had next to no manufacturing power, and their people did not take to this work. Their railway repair shops, etc., were mostly worked by Northerners, who went back before war broke out, so that the South were even worse off than they seemed to be, and could not use to the best advantage the works that they had, to keep their railways in repair during the War. At the beginning of it there were no works in the country which could roll a 2½ inch plate, cast a gun, or make a marine engine, except the Tredegar Works at Richmond; and, when the Confederacy started, Virginia had not seceded. There were also works at Atlanta (Georgia), at Selma (Alabama), and at New Orleans; but when this latter city was taken, their difficulties, especially of railroad repair, increased very much. In Virginia there were lead works at Wytheville, salt works at Saltville, and a good leather industry at Lynchburg. The Confederates were in need of everything for the equipment of an army and navy, having, as the agricultural section of the community, left all manufactures to the North. Even in the State Armories there were very few efficient arms. . . . It was said of *General Gorgas*, the chief Ordnance Officer, that he created an Ordnance Department out of nothing. . . . The worst drawback, though, was the inability to build a marine engine. . . . With two exceptions,

all the vessels that they built or armoured failed through want of engine-power, and one of these did so from bad armour. The difficulty of supply dogged the footsteps of all Confederate generals. It has been well said that they were often unjustly blamed for not following up a success, since people did not consider that every battle pretty well exhausted their stock of ammunition, the replenishing of which was most difficult: in the matter of supplies they had to live from hand to mouth."—J. Formby, *American Civil War*, pp. 59-60.

1861 (April).—Secession of Virginia. See VIRGINIA: 1861 (January-June).

1861 (April).—Activity in Virginia and Maryland.—Peril of national capital.—Attack on Massachusetts volunteers in Baltimore.—“At once, on receiving news of the fall of Sumter, Lincoln issued a call for seventy-five thousand men for three months, the small number and short term not at all indicating that he failed to appreciate the gravity of the crisis, but following an old law by which he thought himself limited. Washington, beset by busy foes within and without, must first be made secure. The drums beat in every town and village, and the rush to arms of the young men was universal. Only Massachusetts, however, was ready on the instant. Governor John A. Andrew, ‘our Merry Andrew,’ had for some months been incurring ridicule by what was regarded as his absurd attention to the equipment and drill of the state militia. At Lincoln’s call he had ready five thousand men, for three thousand of whom arms were at hand; and within a day of the receipt of the cry from Washington the Sixth regiment mustered on Boston Common and [on April 17] started to the rescue.”—J. K. Hosmer, *Appeal to arms, 1861-1863*, p. 31.—“The seceders, on their side, had not lost a moment in Virginia. They were in possession of Richmond, where the convention was in session. . . . The workshops and arsenal of Harper’s Ferry, situated at the confluence of the Potomac and the Shenandoah, were only guarded by a detachment of 64 dismounted dragoons; and the Virginia volunteers, assembled in the valleys of the Blue Ridge, were ready to take possession of them as soon as the ordinance for the secession of Virginia should furnish them a pretext. . . . On the morning of the 18th [April], a portion of them were on their march, in the hope of seizing the prey which was to be of so much value to the future armies of the Confederacy. But Lieutenant Jones, who was in command at Harper’s Ferry, had been informed of the approach of the Confederate troops under the lead of Ashby—a chief well known since; notwithstanding their despatch, they only arrived in sight of Harper’s Ferry in time to see from a distance a large conflagration that was consuming the workshops, store-houses, and the enormous piles of muskets heaped in the yards, while the Federal soldiers who had just kindled it were crossing the Potomac on their way to Washington. . . . During the last few days the authorities of Virginia had been making preparations for capturing the Norfolk [or Gosport] arsenal (navy-yard). That establishment possessed a magnificent granite basin, construction docks, and a dépôt of artillery with more than 2,000 guns; a two-decked vessel was on the stocks, two others, with a three-decker, three frigates, a steam sloop, and a brig, lay dismantled

in the port; the steam frigate Merrimac was there undergoing repairs; the steam sloop Germantown was in the harbor ready to go to sea, while the sailing sloop Cumberland was lying to at the entrance of the port. . . . Commodore McCauley, the Federal commandant, . . . [thought it necessary to sink all the vessels in the harbor except the Cumberland. As they were sinking, reinforcements arrived from Washington, under Captain Paulding, who superseded McCauley in command. But they came too late. Captain Paulding could do nothing except hastily destroy as far as possible the sinking ships and the arsenal buildings, and then retreat.] The Confederates found abundant resources in artillery and ‘material’ of every description in Norfolk; the fire was soon extinguished, the docks repaired, and they succeeded in raising the Merrimac, which we shall see at work the following year. Fort Monroe had just been occupied by a small Federal garrison. Its loss would have been even more disastrous to the Federal cause than that of the Norfolk navy-yard and arsenal, because the Confederates, instead of having to cover Richmond, would have been able to blockade Washington by sea and besiege it by land. . . . The example of Virginia fired the enthusiasm of the secessionists everywhere, and they applied themselves to the task of drawing into the conflict those slave States which were still hesitating.”—Comte de Paris, *History of the Civil War in America*, v. 1, bk. 2, ch. 4.—“The only approach by rail to Washington was through Baltimore where the strong feeling for secession was vented in threats that Northern troops, bent on the invasion of the South, would not be permitted to pass through its streets. The Colonel of the Sixth [Massachusetts], being informed in Philadelphia of the situation, timed his arrival in Baltimore for the morning (April 19). . . . [Seven companies were driven rapidly through the city from the Philadelphia to the Washington station, but] meanwhile an angry mob had collected, torn up the railroad and erected a barricade to dispute the passage of the rest of the regiment. Informed of this the captains of the four remaining companies decided that they must march to the station; but before they had started, up came the mob, carrying a secession flag and threatening that, if an attempt were made to march through the streets, every ‘white nigger’ of them would be killed. . . . As the soldiers stepped forward, they received a volley of brick-bats and pavingstone from the mob; a hundred yards farther on they came to a bridge which had been partially demolished. . . . In their growing rage, . . . the [mob] fired pistol shots into the ranks, and one soldier fell dead. The captain gave the order ‘fire’; a number of the mob fell. The mayor of Baltimore arrived and placed himself at the head of the column. . . . [As his presence failed to allay the tumult, he left his place], but the four companies marched on, fighting their way through to their comrades, aided by the city marshal with fifty policemen who covered their rear. In the Baltimore and Ohio cars . . . the regiment received a volley of stones which so infuriated one of the soldiers that he fired and killed a prominent citizen, a mere looker-on. Finally the train got away and reached Washington late in the afternoon. Of the regiment four had been killed and thirty-six wounded. The casualties in the mob were larger. In Baltimore the excitement was intense. ‘The streets are red with Maryland blood’ are the marshal’s

words. . . . So great was the commotion that a part of the State and city military was called out; citizens volunteered, and, after being more or less adequately furnished with arms, were enrolled for the purpose of defence under the direction of the board of police. In Monument Square a mass-meeting assembled, whose sentiment was decidedly opposed to any attempt to coercion of the Confederate States."—J. F. Rhodes, *History of the Civil War, 1861-1865*, pp. 18-19.—See also MARYLAND: 1860-1864.—"A thousand Pennsylvania volunteers, unarmed, who had arrived on the train with the Massachusetts troops, were sent back, by the advice of the governor, to the Susquehanna River. To avoid further bloodshed through the transit of troops through the city, the local authorities caused the bridges to be burned on the railroad's connection with Harrisburg and the North—the Philadelphia, Wilmington and Baltimore, and the Northern Central. The National and State governments then agreed that troops should be taken round Baltimore and not through it. . . . Harper's Ferry was abandoned by the Federal commander on the 18th, after he had destroyed the arsenal and the armory, and on the 20th, the Gosport navy-yard, with vast stores of supplies, was abandoned to the Confederates—both acts of haste and panic and crippling the national government. Already the administration had been considering the choice of an assistant to General Scott who should assume active command of the Union army; Lincoln and the secretary of war were anxious to give the command to Robert E. Lee, but General Lee, making no definite reply to the proposition when presented to him, and unwilling to draw his sword against Virginia, his native State, accepted its commission as commander in chief of its forces offered him by its convention, and on April 20 resigned his commission in the United States army. Meanwhile, volunteers were assembling all over the North, organizing in the large cities and at the county seats, eager to be sent to Washington. That city was in grave danger. . . . It is not strange that Lincoln exclaimed, 'Why don't they come? Why don't they come,' when, on the 23rd of April the capital was still unprotected and only the Sixth Massachusetts and the Pennsylvania volunteers had yet arrived and Beauregard's army might at any moment be marching up Pennsylvania avenue. The machinery of war was not yet sufficiently in motion North or South to make possible an effective attack on either the National or the Confederate Capital. On the 27th, 10,000 New York and Massachusetts troops arrived and Washington was considered safe."—F. N. Thorpe, *Civil War, a national view (History of North America, v. 150, pp. 238-239, 241)*.

1861 (April: South Carolina).—Monarchical cravings.—Intensity of the Carolinian hatred of New England and the North.—An interesting result of the hatred which had been growing up between the North and the South was noted by William H. Russell who was famous in his day as a correspondent of *The Times* (London). He spent some time in South Carolina at the begin-

ning of the war, and described the state of feeling there in a letter from Charleston, written at the end of April: "Nothing I could say," he wrote, "can be worth one fact which has forced itself upon my mind in reference to the sentiments which prevail among the gentlemen of this State. I have been among them for several days. I have visited their plantations, I have conversed with them freely and fully, and I have enjoyed that frank, courteous and graceful intercourse which constitutes an irresistible charm of their society. From all quarters have come to my ears the echoes of the same voice. . . . That voice says, 'If we could only get one of the royal race of England to rule over us, we should be content.' Let there be no misconception on this point. That sentiment, varied in a hundred ways, has been repeated to me over and over again. There is a general admission that the means to such an end are wanting, and that the desire cannot be gratified. But the admiration for monarchical institutions on the English model, for privileged classes, and for a landed aristocracy and gentry, is undisguised and apparently genuine. With the pride of having achieved their independence is mingled in the South Carolinians' hearts a strange regret at the result and consequences, and many are they who 'would go back tomorrow if we could.' An intense affection for the British connection, a love of British habits and customs, a respect for British sentiment, law, authority, order, civilization, and literature, preëminently distinguish the inhabitants of this State, who, glorying in their descent from ancient families on the three islands, whose fortunes they still follow; and with whose members they maintain not unfrequently familiar relations, regard with an aversion of which it is impossible to give an idea to one who has not seen its manifestations, the people of New England and the population of the Northern States, whom they regard as tainted beyond cure by the venom of 'Puritanism.' Whatever may be the cause, this is the fact and the effect. 'The State of South Carolina was,' I am told, 'founded by gentlemen.' It was not established by witch-burning Puritans, by cruel persecuting fanatics, who implanted in the North the standard of Torquemada, and breathed into the nostrils of their newly-born colonies all the ferocity, blood-thirstiness, and rabid intolerance of the Inquisition. . . . 'We could have got on with these fanatics if they had been either Christians or gentlemen,' says [one], 'for in the first case they would have acted with common charity, and in the second they would have fought when they insulted us; but there are neither Christians nor gentlemen among them!' 'Any thing on earth!' exclaims [another], 'any form of government, any tyranny or despotism you will; but'—and here is an appeal more terrible than the adjuration of all the Gods—'nothing on earth shall ever induce us to submit to any union with the brutal, bigoted blackguards of the New England States, who neither comprehend nor regard the feelings of gentlemen! Man, woman and child, we'll die first.'"—W. H. Russell, *Letter to The Times* (London), April 30, 1861.

1861 (April-May).—Proclamation by the Confederate president.—President Lincoln's proclamation of a blockade of Southern ports.—Proclamation of British neutrality.—On April 17, two days after President Lincoln's call for troops, Jefferson Davis, the chief of the Confederacy, published a counter-proclamation, giving notice of the intention of the government at Mont-

gomery to issue letters of marque to privateers. It was as follows:

"Whereas, Abraham Lincoln, the President of the United States has, by proclamation announced the intention of invading this Confederacy with an armed force, for the purpose of capturing its fortresses, and thereby subverting its independence, and subjecting the free people thereof to the dominion of a foreign power; and whereas it has thus become the duty of this Government to repel the threatened invasion, and to defend the rights and liberties of the people by all the means which the laws of nations and the usages of civilized warfare place at its disposal; Now, therefore, I, Jefferson Davis, President of the Confederate States of America, do issue this my Proclamation, inviting all those who may desire, by service in private armed vessels on the high seas, to aid this Government in resisting so wanton and wicked an aggression, to make application for commissions or Letters of Marque and Reprisal, to be issued under the Seal of these Confederate States. And I do further notify all persons applying for Letters of Marque, to make a statement in writing, giving the name and a suitable description of the character, tonnage, and force of the vessel, and the name and place of residence of each owner concerned therein, and the intended number of the crew, and to sign said statement and deliver the same to the Secretary of State, or to the Collector of any port of entry of these Confederate States, to be by him transmitted to the Secretary of State. And I do further notify all applicants aforesaid that before any commission or Letter of Marque is issued to any vessel, the owner or owners thereof, and the commander for the time being, will be required to give bond to the Confederate States, with at least two responsible sureties, not interested in such vessel, in the penal sum of five thousand dollars; or if such vessel be provided with more than one hundred and fifty men, then in the penal sum of ten thousand dollars, with condition that the owners, officers, and crew who shall be employed on board such commissioned vessel, shall observe the laws of these Confederate States and the instructions given to them for the regulation of their conduct. That they shall satisfy all damages done contrary to the tenor thereof by such vessel during her commission, and deliver up the same when revoked by the President of the Confederate States. And I do further specially enjoin on all persons holding offices, civil and military, under the authority of the Confederate States, that they be vigilant and zealous in discharging the duties incident thereto; and I do, moreover, solemnly exhort the good people of these Confederate States as they love their country, as they prize the blessings of free government, as they feel the wrongs of the past and these now threatened in aggravated form by those whose enmity is more implacable because unprovoked, that they exert themselves in preserving order, in promoting concord, in maintaining the authority and efficacy of the laws, and in supporting and invigorating all the measures which may be adopted for the common defence, and by which, under the blessing of Divine Providence, we may hope for a speedy, just, and honorable peace. In testimony whereof, I have hereunto set my hand, and caused the Seal of the Confederate States to be affixed, this seventeenth day of April, 1861. By the President, (Signed) Jefferson Davis. R. Toombs, Secretary of State.

"The response was a second proclamation by President Lincoln, announcing a blockade of the ports of the Confederacy, and warning all persons who should accept and act under the proposed letters of marque that they would be held amenable to the laws against piracy. This proclamation was as follows:

"Whereas an insurrection against the government of the United States has broken out in the States of South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas, and the laws of the United States for the collection of the revenue cannot be effectually executed therein conformably to that provision of the Constitution which requires duties to be uniform throughout the United States: And whereas a combination of persons engaged in such insurrection have threatened to grant pretended letters of marque to authorize the bearers thereof to commit assaults on the lives, vessels, and property of good citizens of the country lawfully engaged in commerce on the high seas, and in waters of the United States: And whereas an executive proclamation has been already issued requiring the persons engaged in these disorderly proceedings to desist therefrom, calling out a militia force for the purpose of repressing the same, and convening Congress in extraordinary session to deliberate and determine thereon: Now, therefore, I, Abraham Lincoln, President of the United States, with a view to the same purposes before mentioned, and to the protection of the public peace, and the lives and property of quiet and orderly citizens pursuing their lawful occupations, until Congress shall have assembled and deliberated on the said unlawful proceedings, or until the same shall have ceased, have further deemed it advisable to set on foot a blockade of the ports within the States aforesaid, in pursuance of the laws of the United States, and of the law of nations in such case provided. For this purpose a competent force will be posted so as to prevent entrance and exit of vessels from the ports aforesaid. If, therefore, with a view to violate such blockade, a vessel shall approach or shall attempt to leave either of the said ports, she will be duly warned by the commander of one of the blockading vessels, who will indorse on her register the fact and date of such warning, and if the same vessel shall again attempt to enter or leave the blockaded port, she will be captured and sent to the nearest convenient port, for such proceedings against her and her cargo, as prize, as may be deemed advisable. And I hereby proclaim and declare that if any person, under the pretended authority of the said States, or under any other pretense, shall molest a vessel of the United States, or the persons or cargo on board of her, such person will be held amenable to the laws of the United States for the prevention and punishment of piracy. In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington, this nineteenth day of April, in the year of our Lord one thousand eight hundred and sixty-one, and of the independence of the United States the eighty-fifth. Abraham Lincoln. By the President: William H. Seward, Secretary of State."—Abraham Lincoln, *Complete works*, v. 2, pp. 35-36.

Apparently on unofficial information of these announcements, indicating a state of civil war in the United States, the government of Great

Britain made haste to declare neutrality between the belligerents, thus placing the insurgent Confederacy on an exactly equal footing with the United States so far as a foreign recognition might do so. The queen's proclamation was as follows:

"Whereas, We are happily at peace with all Sovereigns, Powers, and States; And whereas hostilities have unhappily commenced between the Government of the United States of America and certain States styling themselves 'the Confederate States of America'; And whereas we, being at peace with the Government of the United States, have declared our Royal determination to maintain a strict and impartial neutrality in the contest between the said contending parties; We, therefore, have thought fit, by and with the advice of our Privy Council, to issue this our Royal Proclamation: And we do hereby strictly charge and command all our loving subjects to observe a strict neutrality in and during the aforesaid hostilities, and to abstain from violating or contravening either the laws and statutes of the realm in this behalf, or the laws of nations in relation thereto, as they will answer to the contrary at their peril." After reciting the language of certain statutes which forbid the subjects of Her Majesty to engage, without leave and license from the Crown, in any foreign military or naval service, or to furnish or equip any ship or vessel for service against any state with which Her Majesty is not at war, the Proclamation proceeds as follows: "Now, in order that none of our subjects may unwarily render themselves liable to the penalties imposed by said statute, we do hereby strictly command, that no person or persons whatsoever do commit any act, matter or thing whatsoever, contrary to the provisions of the said statute, upon pain of the several penalties by the said statute imposed, and of our high displeasure. And we do hereby further warn all our loving subjects, and all persons whatsoever entitled to our protection, that if any of them shall presume, in contempt of this Royal Proclamation, and of our high displeasure, to do any acts in derogation of their duty as subjects of a neutral sovereign, in the said contest, or in violation or contravention of the law of nations in that behalf—as, for example and more especially, by entering into the military service of either of the said contending parties as commissioned or non-commissioned officers or soldiers, . . . or by fitting out, arming, or equipping, any ship or vessel to be employed as a ship-of-war, or privateer, or transport, by either of the said contending parties; or by breaking, or endeavoring to break, any blockade lawfully and actually established by or on behalf of either of the said contending parties; or by carrying officers, soldiers, despatches, arms, military stores or materials, or any article or articles considered and deemed to be contraband of war according to the law of modern usage of nations, for the use or service of either of the said contending parties, all persons so offending will incur and be liable to the several penalties and penal consequences by the said statute, or by the law of nations, in that behalf imposed or denounced. And we do hereby declare that all our subjects and persons entitled to our protection who may misconduct themselves in the premises will do so at their peril and of their own wrong, and that they will in no wise obtain any protection

from us against any liability or penal consequences."

In the complaint of the United States subsequently submitted to the Tribunal of Arbitration at Geneva, the facts attending this proclamation of neutrality were set forth as follows: "Before any armed collision had taken place, there existed an understanding between Her Majesty's Government and the Government of the Emperor of the French, with a view to securing a simultaneous and identical course of action of the two Governments on American questions. . . . The fact that it had been agreed to by the two Governments was communicated to Mr. Dallas, by Lord John Russell, on the first day of May 1861. There was nothing in the previous relations between Great Britain and the United States which made it necessary for Her Majesty's Government to seek the advice or to invite the support of the Emperor of the French in the crisis which was threatened. . . . When the news of the bloodless attack upon Fort Sumter became known in Europe, Her Majesty's Government apparently assumed that the time had come for the joint action which had been previously agreed upon; and, without waiting to learn the purposes of the United States, it announced its intention to take the first step by recognizing the insurgents as belligerents. The President's Proclamation, which has since been made the ostensible reason for this determination, was issued on the 10th of April, and was made public in the Washington newspapers of the morning of the 20th. . . . It is absolutely certain that no full copy of the text of the Proclamation could have left Washington by the mails of the 19th, and equally certain that no copy could have reached New York from Washington after the 19th for several days. On the 20th the steamer Canadian sailed from Portland, taking the Boston papers of that day, with the imperfect copy of the Proclamation, in which the clause in regard to the collection of the revenue was suppressed. This steamer arrived at Londonderry on the 1st of May, and the 'Daily News' of London, of the 2d of May, published the following telegraphic items of news: 'President Lincoln has issued a Proclamation, declaring a blockade of all the ports in the seceded States. The Federal Government will condemn as pirates all privateer-vessels which may be seized by Federal ships.' The Canadian arrived at Liverpool on the 2d of May, and the 'Daily News,' of the 3d, and the 'Times,' of the 4th of May, published the imperfect Boston copy of the Proclamation. . . . No other than the Boston copy of the Proclamation appears to have been published in the London newspapers. It is not likely that a copy was received in London before the 10th, by the Fulton from New York. It was on this meager and incorrect information that the advice of the British Law Offices was based, upon which that Government acted. . . . On the 5th of May the steamship Persia arrived at Liverpool with advices from New York to the 25th of April. Lord John Russell stated on Monday, the 6th of May, in a communication to Lord Cowley, 'that Her Majesty's Government received no dispatches from Lord Lyons by the mail which has just arrived [the *Persia*] the communication between Washington and New York being interrupted.' In the same dispatch Lord Cowley is informed 'that Her Majesty's Government cannot hesitate to admit that such Confederacy is entitled to be considered as a belligerent, and as such invested

with all the rights and prerogatives of a belligerent,' and he is instructed to invite the French Government to a joint action, and a line of joint policy with the British Government, toward the United States."—*Case of the United States before the Tribunal of Arbitration at Geneva* (42nd Congress, 2nd session, Senate Executive Document 31, pp. 24-27).—"In the war for the Union of 1861-5 a recognition of the belligerency of the Confederate States by Great Britain was made by the proclamation of neutrality of the Queen of England under date of May 13, 1861. The French declaration of neutrality was issued June 10, 1861, and that of Spain on June 17, these being followed shortly afterward by the other maritime powers. The recognition by Great Britain of the belligerency of the Southern States was received with great disfavor by the government and people of the Northern States as being untimely and precipitous and as an evidence of unfriendliness. Time has softened the feelings which were aroused by this act of Great Britain—the first nation to announce recognition of the belligerency of the Southern States and its intention to observe neutrality in the Civil War just begun. From a legal point of view, and from the point of view of international law, it is difficult not to concede that the action of Great Britain was one of obligation under the circumstances and not one of unfriendliness. In the correspondence between our minister to Great Britain, Mr. Charles Francis Adams, and Earl Russell, then the British foreign minister, in 1868, the question was fully discussed and there is strong ground in the position taken by Earl Russell. 'He referred,' says Mr. Dana, 'to the extent of the territory, population, and resources of the rebellion; the existence of its completely organized state and general governments, its unequivocal determination to treat as war, by sea and land, any acts of authority which the United States, on the other hand, had equally determined to exert; the long antecedent history and preparations for this revolution and the certainty of the magnitude and extent of the war and its rapid development whenever it should begin, and also, in consequence, that it would require the instant decision of maritime questions by neutral vessels of war and merchantmen alike. Hence he argued that it was necessary for England to determine at once, upon facts and probabilities whether she would permit the right of search and blockade as acts of war, and whether the letters of marque and public ships of the rebels, which might appear at once in many parts of the world, should be treated as pirates or lawful belligerents.' Earl Russell further asserted 'that the proclamation of President Lincoln establishing a blockade under date of April 19, 1861, was itself a recognition and the first recognition of the state of belligerency of the Confederate States.' As to the particular question of the precipitate nature of the Queen's proclamation, he says that 'it was, on the contrary, your own government which, in assuming the belligerent right of blockade, recognized the Southern States as belligerents. Had they not been belligerents, the armed ships of the United States would have had no right to stop a single British ship upon the high seas.'"—C. H. Stockton, *Outlines of international law*, pp. 83-84.—See also ALABAMA CLAIMS.

1861 (April-May: Maryland).—Ending of trouble in Baltimore and the state.—General Butler in the field.—"The Eighth Massachusetts at once followed the Sixth, with Brigadier-General Benjamin F. Butler, a man long prominent as a lawyer . . . and as an ultra-Democratic politician, who now came forward into national prominence. . . . During the war we shall find him very much in the foreground—adroit, unprincipled, and unbiased, in embarrassing situations full of expedients, occasionally most helpful, sometimes blundering badly. . . . But when he led the Eighth Massachusetts he did it valiantly and well. Finding Baltimore blocked, it made its way by steamer to Annapolis, meeting there the full and handsomely appointed Seventh regiment of New York. Thence over a railroad whose track and machinery were largely destroyed, through hard work and ingenious shifts, the 'dandies' of the Seventh and the 'drudges' of the Eighth fraternizing cordially, they reached Washington within a day or two, putting an end to all apprehension. Soon a revulsion took place in the sentiment of Maryland. Under the lead of the loyal Governor Hicks, sentiment for the Union manifested itself strongly. By a large majority Union congressmen were elected. The sober second thought was fatal to secession. Baltimore grew quiet, and, receiving a Federal garrison, submitted without a murmur to the passage of troops. These now poured forward in answer to Lincoln's call in great numbers, and Washington became a camp."—J. K. Hosmer, *Appeal to arms, 1861-1863*, pp. 32-33.—"On the 5th of May General Butler sent two regiments to occupy the Relay House, within nine miles of Baltimore. On the 9th a force of 1,200 Pennsylvania troops and regulars, ordered forward by General Patterson from Philadelphia, were landed near Fort McHenry, under the guns of a United States vessel, and marched through the city. On the night of the 13th, General Butler . . . [who was placed in command of the 'department of Annapolis,' comprising about twenty miles on each side of the railway as far as Bladensburg], with about 1,000 men, including the Massachusetts Sixth, entered the place and took a commanding position on Federal Hill, which was afterwards permanently fortified."—B. J. Lossing, *Field book of the Civil War*, v. 1, ch. 18.—See also MARYLAND: 1860-1864.

1861 (May).—Call for additional volunteers.—On May 3 the president issued a call for forty additional regiments of volunteers, directed an increase of the regular army by ten regiments, and ordered the enlistment of 18,000 seamen—acts subsequently legalized by Congress.

1861 (May).—Exportation of cotton from the Confederacy, excepting through its seaports, prohibited.—On May 21, 1861, the Congress of the Confederate States passed an act declaring that "from and after the 1st day of June next, and during the existence of the blockade of any of the ports of the Confederate States of America by the Government of the United States, it shall not be lawful for any person to export any raw

cotton or cotton yarn from the Confederate States of America except through the seaports of the said Confederate States."

1861 (May).—Secession of North Carolina. See NORTH CAROLINA: 1861 (January-May).

1861 (May).—General Butler at Fortress Monroe and his "contrabands."—First military thrust at slavery.—General Butler was commissioned as major-general of volunteers on May 16, and on the 20th he was ordered to the command at Fortress Monroe. He arrived at the fortress on the 22nd and assumed the command. "On the evening of the second day after his arrival at the post, the event occurred which will for ever connect the name of General Butler with the history of the abolition of slavery in America. Colonel Phelps's visit to Hampton [the previous day] had thrown the white inhabitants into such alarm that most of them prepared for flight, and many left their homes that night, never to see them again. In the confusion three negroes escaped, and, making their way across the bridges, gave themselves up to a Union picket, saying that their master, Colonel Mallory, was about to remove them to North Carolina to work [on fortifications while their families were left in Hampton]. . . . They were brought to the fortress, and the circumstance was reported to the general in the morning. . . . He needed laborers. He was aware that the rebel batteries that were rising around him were the work chiefly of slaves, without whose assistance they could not have been erected in time to give him trouble. He wished to keep these men. The garrison wished them kept. . . . He pronounced the electric words, 'These men are Contraband of War; set them at work.' 'An epigram,' as Winthrop remarks, 'abolished slavery in the United States.' The word took; for it gave the country an excuse for doing what it was longing to do. . . . On Sunday morning, eight more negroes came in. . . . They continued to come in daily, in tens, twenties, thirties till the number of contrabands in the various camps numbered more than 900. A commissioner of negro affairs was appointed, who taught, fed and governed them." General Butler reported his action to the government, and on May 30 the secretary of war wrote to him: "Your action in respect to the negroes who came within your lines, from the service of the rebels, is approved. . . . While . . . you will permit no interference, by persons under your command, with the relations of persons held to service under the laws of any state, you will, on the other hand, so long as any state within which your military operations are conducted remain under the control of . . . armed combinations, refrain from surrendering to alleged masters any persons who come within your lines." "So the matter rested for two months, at the expiration of which events revived the question."—J. Parton, *General Butler in New Orleans*, ch. 6.

1861 (May: Virginia).—First advance of Union troops across the Potomac.—Death of Ellsworth at Alexandria.—"Already 'Confederate' pickets were occupying Arlington Heights and the Virginia shore of the Long Bridge, which spans the Potomac at Washington City; and engineers had been seen on those heights selecting eligible positions for batteries. . . . The General-in-chief was not persuaded to allow an immediate invasion of Virginia. Orders were at once issued [May 23] for the occupation of the shores of the Potomac opposite, and also the city of Alexandria, nine miles below, by National troops.

General Mansfield was in command of about 13,000 men at the Capital. . . . The troops [began to leave Washington about midnight and] moving by land and water reached Alexandria at about the same time. The National frigate Pawnee was lying off the town, and her commander had already been in negotiation for the evacuation of Alexandria. . . . A detachment of her crew, bearing a flag of truce [was] fired upon by some Virginia sentries, who instantly fled from the town. . . . [A detachment of the New York Fire Zouave Regiment, under Colonel Ellsworth], ignorant of any negotiations, advanced to the center of the city, and took possession of it in the name of his Government, while the column under Wilcox marched to the Station of the Orange and Alexandria Railway, and seized it, with much rolling stock. They there captured a small company (thirty-five men) of Virginia cavalry, under Captain Ball. . . . [The Confederate flag had for some days been flying over the Marshall House and] Ellsworth went in person to take it down. When descending an upper staircase with it, he was shot by Jackson. . . . Ellsworth fell dead, and . . . [Jackson] met the same fate an instant afterward, at the hands of Francis E. Brownwell, of Troy, who, with six others, had accompanied his commander to the roof of the house. . . . His [Ellsworth's] death produced great excitement throughout the country. It was the first of note that had occurred in consequence of the National troubles, and the very first since the campaign had actually begun, a few hours before."—B. J. Lossing, *Field book of the Civil War*, v. 1, ch. 20.

1861 (June: Virginia).—Fight at Big Bethel.—"Major-General Butler and staff arrived at Fortress Monroe Wednesday afternoon, May 22. . . . [On the Confederate side] Colonel Magruder—late Colonel in the U. S. service, and an officer of much distinction as an obstinate combatant—was placed in command . . . of the Peninsula. . . . Troops rapidly poured into Butler's department, and he soon found himself in a condition to act on the offensive. Magruder's scouts and cavalry greatly annoyed the [Union camps]. . . . They had also seized several Union men. These raids became so frequent and annoying that a night attack [under Brigadier-General Pierce of the Massachusetts troops] was concerted upon their positions at Little Bethel and Big Bethel—the latter, near the north branch of Back River, where it was understood Magruder's outposts were throwing up strong works. . . . Approaching the enemy's position at Big Bethel, it was found that their guns commanded all points of approach. . . . Lieutenant-Colonel Washburne had . . . arranged for a flank movement which with a combined attack from the front, must have ended the struggle; but the order for retreat was given before the movement could be executed. . . . The Federal loss was 14 killed, 49 wounded and five missing. Among the killed were . . .

Major Theodore Winthrop, Secretary and Aid to General Butler, and First-Lieutenant John T. Greble, of the United States regular artillery, Second regiment."—O. J. Victor, *History of the Southern Rebellion*, v. 2, div. 4, ch. 18.

1861 (June-July: West Virginia).—General McClellan's campaign in the mountains.—Rich Mountain and Carrick's Ford.—"Although some thousands of West Virginians had volunteered to fight for the Union, none of them were encamped on the soil of their State until after the election held [May 23] to ratify or reject the Ordinance of Secession. [See VIRGINIA: 1861 (January-June).] . . . The Virginians who volunteered were mustered in and organized at Camp Carlile, in Ohio, opposite Wheeling, under the command of Colonel Kelly, himself a Virginian. George B. McClellan, who had been appointed a Major-General and assigned to the command of the Department of the Ohio, remained at Cincinnati, his home. Three days after the election aforesaid, he issued from that city a spirited address 'To the Union men of Western Virginia.' . . . A brief and stirring address to his soldiers was issued simultaneously with the above; and, both being read to those in Camp Carlile that evening, the First Virginia, 1,100 strong. Colonel Kelly, crossed to Wheeling early next morning, closely followed by the Sixteenth Ohio, Colonel Irvine. The Fourteenth Ohio, Colonel Steedman, crossed simultaneously, and quietly occupied Parkersburg, the terminus of the northwestern branch of the Baltimore and Ohio road."—H. Greeley, *American conflict*, v. 1, ch. 32.—"Both sides sent officers into this district, to gain control and raise men, Colonel Kelley at Wheeling, and Colonel Porterfield at Beverly. The latter promptly attacked the railway, to protect which, McClellan, in whose district West Virginia had been placed, sent a small force, and Porterfield retired to Philippi, where he was surprised and routed on June 3rd; this action had the greatest political value, for it reassured the waverers in the district which the Confederates had overrun, more than three-quarters of West Virginia. The Union force was strengthened to protect Unionists better, and put down Secession; the Confederates sent Generals Garnett and Wise to repair their loss, on which McClellan took the command himself, and drove them from the mountain passes which they were holding at Laurel Hill and Rich Mountain, on July 10th and 11th. Part of their force surrendered, while Garnett fought a rear-guard action at Carrick's Ford, on the Cheat River, in which he was killed and his trains lost. These little campaigns had great military and political results, that of Rich Mountain being decisive, for, though operations went on for some time longer under Rosecrans, after McClellan went to Washington, the Confederates, even under Lee, never regained the ground lost, and the year ended with their being forced out of the great Kanawha Valley, leaving the new State controlled by the Union side."—J. Formby, *American Civil War*, pp. 87-88.—See also WEST VIRGINIA: 1860-1861.

1861 (July: Virginia).—Seat of Confederate government transferred to Richmond. See VIRGINIA: 1861 (July).

1861 (July: Virginia).—On to Richmond.—First battle of Bull Run, or Manassas.—"The Southern Government having inclined to the defensive policy as that upon which they should act, their first object was to prevent an advance of any Federal force into Virginia. Early in the month of May troops were assembled in Richmond, and pushed forward toward the northeastern boundary of the State, to a position known as Manassas Junction. . . . It is here that a railroad from Alexandria, another from Staunton up the valley and through Manassas Gap, and another from Gordonsville unite. At Gordonsville the railroad from Richmond and the line from East

GEORGE BRINTON MCCLELLAN

Tennessee unite. As a point for concentration none more eligible exists in northeastern Virginia. The advantages for fortification are naturally such that the place can be rendered impregnable. Here the centre of the northern force of the Southern army was posted, with the left wing pushed forward to Winchester [under the command of General Joseph E. Johnston, with the Union General Patterson opposed to him] and the right extended to the Potomac, and sustained by heavy batteries which served to blockade the river. The Federal force, the advance of which was assembled at Washington for the defence of that city against any attack by the Southern troops, was posted on the Virginia side of the Potomac, on Arlington Heights, which were strongly fortified. Their right was pushed some distance up the Potomac, and chiefly on the Maryland side, while their left occupied Alexandria. The armies of both sides consisted of raw militia hastily brought together, and of volunteers who for the first time had put on the uniform, and taken up the weapons of the soldier. On both sides the

 SCALE OF MILES,

THE MATTHEWS-NORTHROP CO., BUFFALO, N. Y.

forces were constantly accumulating. On the morning of June 27th, the consolidated report of Gen. Mansfield, commanding the Department of Washington, gives the number of troops in that city and vicinity. The privates, including regulars and volunteers present for duty, numbered 22,846 men. The grand aggregate of the force, including officers, etc., present and absent, was 34,160 men. The force of Gen. Patterson, commanding in Maryland above Washington, and also on the Virginia side of the Potomac, on the 28th of June, was returned, embracing officers and men enlisted and present for duty, 15,923. Of these about 550 were reported as sick."—W. J. Tenney, *Military and naval history of the Rebellion*, p. 67.—"The return of Johnston's [Confederate] army for June 30th showed his total force present for duty to have been 10,654; but this includes some troops which, though assigned to his army, did not join him till after July 3d. . . . A prime object of Johnston in taking post at Winchester was, that he might be enabled to join the army at Manassas in case of need. On June 2d, only a week after Johnston's arrival at Harper's Ferry, Beauregard had reached Manassas and assumed command. He and Johnston at once communicated with each other, and agreed in their views of the importance of mutual support. . . . As soon as Johnston ascertained . . . that McClellan [from West Virginia] was not moving on Romney and Winchester, the feasibility of this movement to Manassas at the right time became greater. The only problem then remaining was to so time it as to arrive just long enough before the impending battle to take part in it, and not so long as to cause, by the news of his arrival, a corresponding transfer of Patterson. . . . It was for the purpose of gaining as much start as possible on Patterson that Johnston had retired to Winchester, instead of remaining opposite the Northern force at Martinsburg. He kept his cavalry well out, in order to be informed as promptly as possible of the slightest change in Patterson's position. Meanwhile the grand Federal advance upon Manassas had commenced."—R. M. Hughes, *General Johnston*, pp. 47-51.—The advance from Washington, which began on July 16, and which resulted in the grievous defeat of the Union forces at Bull Run, or Manassas, on Sunday, July 21, was undertaken to appease the impatient, ignorant clamor of Northern newspapers, and in opposition to the judgment and the plans of General Scott, who was then at the head of the National army. The cry "On to Richmond" was taken up by congressmen and senators, and the pressure on the government became too strong to be resisted. General Irwin McDowell had been recently placed in command of the army intended for the field, with General Mansfield commanding the troops in Washington. "McDowell was laboring at a great disadvantage—drilling and preparing his troops as best he could—under the heavy pressure from the North to deliver battle to the enemy in his front. Secretary Chase was the champion, in the Cabinet, of the intense feeling in the North that the war should be pushed at once, with a vigor that would end it soon. . . . There is no doubt that General Scott was weakened with the administration, for the reason that he did not believe in the prevailing opinion that a few days would crush the rebellion; and the more the old hero insisted, or faithfully stood by his views, the more it antagonized the opinion of those who hoped and said it would end speedily. At the Cabinet meeting a week before, General Hamilton says: 'General Montgomery Blair said he would march

to Richmond with 10,000 men, armed with lathes.' 'Yes,' said General Scott, 'as prisoners of war. . . . On the Sunday preceding the battle of Bull Run, Scott directed me, his military secretary, to say to McDowell that he wished him to dine with him without fail. At the dinner, at which General McDowell appeared, General Scott used every possible argument to dissuade General McDowell from fighting the first battle of Bull Run under the then existing condition of public affairs. . . . He then begged General McDowell to go to Secretary Chase, his kinsman, and aid him (General Scott) in preventing a forward movement at that moment; one of the arguments used by General Scott being that the Union sentiment of the South had been surprised by the suddenness and promptitude of the movement in favor of secession; that he (General Scott) was well advised that the Union sentiment was recovering itself, and gaining head in the South; that from the moment blood was shed the South would be made a unit. General McDowell regretted that he could not agree with General Scott in his views, and arose and retired. . . . In the course of the succeeding week General McDowell reported to General Scott his proposed plan of battle. . . . After General McDowell had gone through a detailed statement of his plan, and had finished, General Scott remarked, "General McDowell, that is as good a plan of battle as I ever saw upon paper." General McDowell said in reply: "General Scott, the success of this whole plan depends upon General Patterson holding General Johnston in check at Winchester." General Scott remarked that General Johnston was a very able soldier, that he had a railroad at his command with which to move his troops, and if General McDowell's plan of battle, which had just been presented to him, depended upon General Patterson holding General Johnston in check, his plan was not worth the paper it was drawn upon.' That ended that interview."—J. H. Stine, *History of the Army of the Potomac*, pp. 7-10.—In order to understand the position of the opposing forces prior to the battle of Bull Run, or Manassas, which was now impending, it is necessary to go back a little. "During May, the Confederates had erected some batteries on the coast and in the creeks and river mouth, which occasionally exchanged shots with the Union gunboats, since Lee's policy as commander in Virginia, was rather to block the Potomac than take Baltimore, as the wilder spirits urged, and to hold Manassas Junction against the base which the North had seized at Alexandria. The commander there also drew his attention to the strategic importance of the junction with the railway from the Shenandoah Valley, which was at this time thought to be of primary importance, being a great food-producing district not worked by slave labour, with a large white population enthusiastically Southern in feeling. It was bounded by mountain ranges, and of a size which could be held by a medium force; it lay between the main portion of Virginia and West Virginia, just across the mountains; but West Virginia was strongly Unionist, and had formed itself into a provisional State, repudiating the authority of the Governor of Virginia. If therefore the North could control the Valley, not only would the Confederates be deprived of a district, from which they drew large supplies of both men and food, but of an excellent line of attack, and further, West Virginia would be cut off, which would be a first step in General Scott's policy of severing from the Confederacy one district after another, till it fell.

Harper's Ferry, at the mouth of the Shenandoah, was supposed to be of immense strength and great strategical importance, and even Lee, who knew it well, seems to have shared this view; but when, after being seized by the Confederates in April, Joseph Johnston was ordered to hold it against any attempt to recapture by a force under Patterson, his trained judgment instantly appraised it at its true value, and he reported to Davis that to make it safe would take many more men than it was worth, with the certainty of heavy loss if attacked, and obtained permission to retire up to the Valley to Winchester. Johnston's opponent, Patterson, was a veteran of the Mexican War, with a creditable record, but too old for active service. He was ordered to guard Washington from an attack via Harper's Ferry and cover the Baltimore and Ohio Railway, to which was afterwards added the duty of holding Johnston fast in the Valley. McDowell was appointed to command the force for the defence of the Capital, and hold fast troops which might go to strengthen Johnston, at this time, a rôle secondary to Patterson's. Other forces on both sides were a small one under Butler, based on Fort Munroe in the Peninsula of Virginia, opposed by Magruder, who, with small numbers, ably handled, beat him in a skirmish at Big Bethel on June 10th [see above: 1861 (June: Virginia)] and a Confederate force under Huger, . . . guarding the south bank of the James, by Norfolk Navy Yard. A Union train under Schenck was ambushed at Vienna on June 17th. When Richmond became the Confederate Capital, however, on June 1st, the strategical balance changed entirely; Manassas became of primary importance as the approach to it, and was reinforced, Beauregard being sent to take command, while McDowell's rôle was changed from defensive to offensive. He told General Scott that he could manage Beauregard if Johnston were held off, and was promised that this should be done, Patterson being ordered to hold the latter fast, or at all events to neutralize any move he might make, by following close on his heels. The small Confederate successes had been made the most of, and they were confident, while the North were rather depressed, and badly wanted a success on their side to counterbalance them. On the Confederate side, the military operations were directed by Davis, with advice from Cooper and Lee, not an ideal arrangement—any one of them could have done better. Beauregard was kept well informed of McDowell's movements by his agents in Washington, so bided his time confidently; and Johnston, who had retired to Winchester before Patterson's much stronger force, was watching him closely, and covering the Manassas Gap Railway. With Davis' consent, Beauregard had arranged a plan of joint action with Johnston, that the latter should join him on the field if McDowell advanced. As the time for the move drew nearer, Scott reiterated his orders to Patterson to act vigorously, and hold his opponent fast by an attack, but he kept asking for reinforcements to enable him to do so (though he had 18,000 men to Johnston's 9,000 or 10,000), hesitating, and calling councils of war. A Southern lady living in Washington informed Beauregard the moment McDowell moved, and he warned Johnston. This army at Manassas was the only one that the Confederates ever called the Army of the Potomac, and was some 22,000 strong, with 27 guns. Johnston brought with him 8,000 or 9,000 men of his Army of the Shenandoah, with 20 guns, and McDowell's command was from 30,000 to 33,000

strong, with 49 guns. It seems that reinforcements were sent to Patterson at the last minute, which, had they gone to McDowell, would have turned the scale, and that, when Johnston slipped away, he left 22,000 Union troops idle, 'observing' the 1,000 or 1,500 Confederates remaining to bluff them under the brilliant Magruder, who carried out his task to perfection. This large force was no danger to the Confederacy, and had to retreat as the result of the battle of Bull Run. It is but fair to Patterson to say that the loss of men from the termination of their three months' service was a very serious difficulty, which also affected McDowell to a less extent, in the very presence of the enemy. McDowell's plan of battle was to turn the enemy's left, force him from his position, and break the Manassas Gap Railway—that is, cut him off from Gainesville on his left rear, which would prevent Johnston's troops from joining; but the Confederates made haste, while he delayed, wasted several days, and made a useless reconnaissance in force against the Confederate left at Blackburn's Ford, which brought on a bigger action than he intended, and, before the main battle was fought, Johnston had arrived with half his army. This action unduly depressed the one side and elated the other, but, while it made Beauregard expect a frontal attack, it showed McDowell that this would not do, for his adversary was well posted behind a small stream, which had difficult banks in places. Two Union divisions were to make a wide turning movement round the Confederate left, with Tyler's strong division to threaten this part of their line in front and hold it fast, at first by a demonstration only. A sufficient force was left to hold the Confederates to their main position along the stream, and was to try to prevent them from sending help to their left, when turned. On the other side, Johnston took command as senior officer, but adopted Beauregard's plan, to make a converging attack on Centreville, McDowell's base, and crush him before Patterson could come up. McDowell, however, spoilt their plan by attacking first. Their left was very weak, and, when the turning movement was discovered, the danger was imminent, for half of Johnston's army was not up, and the attack was aimed at the most vulnerable point; but the officer commanding the extreme left, *Colonel Evans*, was an able man, and took perhaps the boldest and most effective step of the whole War to meet the danger. He soon recognized that Tyler, with all his strength, would not use it at this time (though his orders were to make a strong demonstration), while the stopping of the turning column at a distance was of vital importance, to let the expected reinforcements come up and give them room to act. Although he commanded but two battalions (of ten companies each) and two guns, he left four companies only to face Tyler, and moved away with the rest to strike at the coming column, sending word of what he was doing to the senior officer commanding the left of the line. Of course he could not, with his tiny force, stop the enemy, but he delayed them seriously on Matthews Hill, while a strong Confederate line was being formed on the Henry Hill, about a mile in rear. To gain a little more time, a brigade and a battery were sent to his support, but at last this weak line was forced back, and Tyler also began to move, on the flank. The new line on Henry Hill was not ready when the Union batteries opened fire from Matthews Hill, and the bringing back of the troops from that advanced position caused much confusion; but all were

rallied, and the line formed, under cover of the inflexible steadiness of Jackson's brigade, which earned him his nickname of 'Stonewall.' During the morning, the Confederate generals had had several pieces of information: first, that their own attack on Centreville was late in starting; next, that McDowell had been too quick for them, and was attacking; and then, when they essayed to change their plan, and turn his left, holding on with their own, that the Union attack was so serious that they would want every man they had to stop it. They instantly took up the new conditions so as to bring every available man to the critical point, where Beauregard took charge, Johnston directing the whole battle. Some fresh men came up from Richmond to strengthen the line on the front of Henry Hill, but after a while it was forced back to the rear crest: it had now become evident that McDowell was throwing his whole weight in here, and that nothing was to be feared from his left, so the right and centre were denuded to the utmost, only making a small demonstration, while every man who could be spared went to the left. McDowell . . . now had to attack

loss, 387 killed, 1,582 wounded, 13 missing, total 1,982. There was no general pursuit, for the winners were as much demoralized by victory as the losers by defeat, both sides being composed of raw troops with little discipline. But for this, McDowell's plan, which was good, might have succeeded; some think that Johnston, with a brigade of regulars, could have marched to Washington, which was panic-stricken. The action of the commanders on both sides is worth noting: Major-General McDowell, a major in the old army, remembered the Major, but forgot the General, and went forward into the thick of the fight, where he was only in the way of his subordinates, and could not control the battle or look after his reserves, of which he had plenty idle; while the Johnston-Beauregard combination was most happy, for they took their places so as to direct the battle to the best advantage. . . . Thus ended the first great collision. The North settled down for a long war, the three months' service, just expiring, was changed to three years' service, and Congress took powers to raise half a million men: military operations practically ceased for a time. McCl-

JOSEPH E. JOHNSTON

across the open at close quarters, which was not in favour of the rifled guns, as against smooth-bores. Two of his batteries were pushed forward, and wrecked by the Confederate fire, a furious fight took place round them, the Confederate reserves came up from their right, and Kirby Smith's brigade, from the railway, attacked the Union flank: this turned the scale, and the Union troops were driven off the hill. McDowell formed a new line on the other side of Young's Branch, but now to stave off defeat, no longer to win: the Confederates advanced against it in front, while Early's brigade, from reserve, which had marched round, struck it in flank: the battle was won, and McDowell's men finally broke and retreated. At first they moved in good order, followed only by artillery fire, but on reaching Club Run the retreat degenerated into panic, and they never stopped till they reached Washington, twenty miles away. The officer commanding the Union left had been able to stop the Confederate demonstration there, but troops were sent back to the base at Centreville in error, where the reserve lay idle, under a worse than incompetent commander, while the battle was being lost for want of it. Each side had about 18,000 men engaged, the Unionists 24 guns, the Confederates 21. Union loss, 460 killed, 1,124 wounded, 1,312 missing—total 2,896. Confederate

lan was sent for from West Virginia to take command, and commanded the Union Army of the Potomac from July 27th to October 31st, during which time he raised its strength to 134,000 men. Patterson was not employed again. On the Confederate side, Johnston established himself at Manassas, but the [Southern] people thought the War over, and crowds left his army. In answer to his appeals for reinforcements, to cross into Maryland in rear of Washington, President Davis replied that men were wanted everywhere, and he could not send any."—J. Formby, *American Civil War*, pp. 81-87.—"To the South, Bull Run was a Pyrrhic victory. It relieved Virginia of the pressure of the invasion; it proved to the world that the attitude of the Confederacy was something more than the reckless revolt of a small section; but it led the Government to indulge vain hopes of foreign intervention, and it increased the universal contempt for the military qualities of the Northern soldiers. . . . Despite their skill with the rifle, their hunter's craft, and their dashing horsemanship, the first great battle had been hardly won. The city-bred Northerners, unused to arms and uninvited to hardship, had fought with extraordinary determination; and the same want of discipline that had driven them in route to Washington had dissolved the victorious Confederates

into a tumultuous mob."—G. F. R. Henderson, *Stonewall Jackson and the American Civil War*, pp. 194-198.

1861 (July).—Separation of West Virginia from Virginia.—Union sympathies. See VIRGINIA: 1861 (January-June).

1861 (July).—Congress in special session.—Indemnifying acts.—Public debt.—Loans.—"The Thirty-seventh Congress met, responding to the president's call, in special session, July 4, 1861. Diminished by about one-third through the absence of members from the seceding states, it was strongly Republican in character; and the Democrats present were in great part heartily loyal. James G. Blaine, a capable judge, describes the Congress in both houses as being extremely able. . . . Naturally, a Congress so infused with . . . unanimity accomplished in the short session of twenty-nine working days, an amount of business which surpassed all previous records. The message of Lincoln comparable in clear and calm wisdom with the inaugural, was listened to respectfully and its suggestions heeded. Such of Lincoln's acts as had seemed to lack constitutional sanction were all approved. Seventy-six bills were passed, all but four relating to the war. A resolution of prime importance was that offered by Crittenden, of Kentucky, to the effect that the war was waged simply 'to defend and maintain the supremacy of the Constitution and to preserve the Union,' and not 'for the purpose of overthrowing established institutions,' which was passed, July 22, by large majorities in both Houses. Strong anti-slavery men, however, were not content, Sumner, Thaddeus Stevens, and Owen Lovejoy refraining from voting. Before the meeting of Congress, Chase, secretary of the treasury, could do little. Though the treasury had never before been subject to such demands, no methods could be used excepting those specifically authorized by legislation—namely, taxes, time loans, and treasury notes, besides the delayed settlement of accounts. The credit of the government was low, so much so that early in the year it had been obliged to pay twelve per cent. for money borrowed. The public debt had risen to \$76,000,000. Chase, therefore, had great embarrassment to face when, April 2, he borrowed \$8,000,000, and, on May 21, \$7,000,000—at six per cent.—the bonds soon falling in the market, sometimes as low as 85. With the meeting of Congress, July 4, 1861, came the opportunity to better the situation. Chase recommended increased taxation, that might add about \$30,000,000 to the annual revenue, of which sum \$20,000,000 was to be raised by a direct tax and an income tax of three per cent. He favored, too, an extensive scheme of confiscations, which Congress adopted, but during 1861 little money was realized from them. Congress at the same time authorized the secretary to contract loans to the amount of \$250,000,000, the securities having the form of bonds

and interest-bearing notes. Chase retained in office John J. Cisco, the assistant treasurer in New York, a man much respected in financial circles, and through him he sought to establish cordial relations with the banks of the great cities. These [banks] readily accepted, in July, a loan of \$50,000,000 at seven and three-tenths per cent. interest, and a few weeks later a second loan of the same amount on the same terms; a later attempt was less successful, \$50,000,000 being borrowed at six per cent., but the notes standing decidedly below par, in the neighborhood of 92."—J. K. Hosmer, *Appeal to arms, 1861-1863*, pp. 63-65.—See also LEGAL TENDER CASES; MONEY AND BANKING; Modern: 1861-1864; DEBTS, PUBLIC: United States before the World War.

1861 (July).—Enlistment of volunteers authorized by Congress.—The enlistment of 500,000 volunteers was authorized by acts of Congress passed July 22 and 25.

1861 (July-September: Missouri).—Sigel's retreat from Carthage.—Death of Lyon at Wilson's Creek.—Siege of Lexington.—Frémont in command.—The governor of Missouri, Jackson, was favorable to secession. "He had, however, a resolute antagonist in Francis P. Blair, Jr., a man of extraordinary physical and moral courage. . . . Between him and the governor, there ensued [from May to September] four months of political and martial manœuvring, but Blair won in the end and Missouri remained in the Union."—J. F. Rhodes, *History of the Civil War, 1861-1865*, p. 33.—After his defeat (see MISSOURI: 1861) Governor Jackson and his followers fled west from Booneville to Warsaw on the Osage, first, and thence into Vernon county, where they were joined, July 3, by General Sterling Price. "Their united force is stated by Pollard, at 3,600. Being pursued by Lyon, they continued their retreat next day, halting at 9 P. M., in Jasper County, 23 miles distant. Ten miles hence, at 10 A. M. next morning, they were confronted by a Union force 1,500 strong, under Col. Franz Sigel, who had been dispatched from St. Louis by the Southwestern Pacific road, to Rolla, had marched thence to Springfield, and had pushed on to Mount Vernon, Lawrence County, hoping to prevent a junction between Jackson and some forces which his Brigadiers were hurrying to his support. . . . Sigel found the Rebels, halted after their morning march, well posted, vastly superior in numbers and in cavalry, but inferior in artillery, which he accordingly resolved should play a principal part in the battle. In the cannonade which ensued, he inflicted great damage on the Rebels and received very little, until, after a desultory combat of three or four hours, the enemy resolved to profit by their vast superiority in cavalry by outflanking him, both right and left. This compelled Sigel to fall back. . . . The retreat was made in perfect order . . . to Carthage, and through that town to Sarcoxie, some fifteen miles eastward. . . . Sigel, now outnumbered three or four to one, was constrained to continue his retreat, by Mount Vernon, to Springfield; where Gen. Lyon, who had been delayed by lack of transportation, joined and out-ranked him on the 10th."—H. Greeley, *American conflict*, v. 1, ch. 35.—"The month of August came, and found General Lyon at Springfield, hoping to receive re-enforcements; but the battle of Bull Run had occurred, and rendered it impossible to send him aid. Major General Fremont had been appointed [July 9] to the command of the Western Department, and had reached St. Louis (July 25). Meantime Confederate troops were pouring over the southern frontier of Missouri, and Lyon, find-

ing that they were advancing upon him in two columns, determined to strike before he should be overwhelmed by the combined Louisiana, Missouri, Arkansas, and Texas troops. His force did not exceed 5,500, his antagonist had more than 12,000. . . . Moving out of Springfield on a very dark night (August 9-10), and having ordered Sigel, with 1,200 men and six guns, to gain the enemy's rear by their right, he was ready, as soon as day broke, to make an attack on their front [on Wilson's creek]. But the disparity of force was too great. Sigel was overwhelmed. He lost five out of his six guns, and more than half his men. The attack in front was conducted by Lyon in person with very great energy. His horse was shot under him; he was twice wounded, the second time in the head. In a final charge he called to the Second Kansas Regiment, whose colonel was at that moment severely wounded, 'Come on, I will lead you,' and in so doing was shot through the heart. After the death of Lyon the battle was still continued,

JOHN CHARLES FRÉMONT

their artillery preserving the national troops from total defeat. News then coming of Sigel's disaster, a retreat to Springfield, distant about nine miles, was resolved on. . . . After this action, the Confederate commanders, McCulloch and Price, quarreling with each other, and unable to agree upon a plan for their campaign, the former returned to Arkansas, the latter advanced from Springfield toward Lexington. Here he found a national force of about three thousand (2,780) under Colonel Mulligan. Attempts were made by General Fremont to re-enforce Mulligan, but they did not succeed. Meantime the assailing forces were steadily increasing in number, until they eventually reached 28,000, with 13 pieces of artillery. They surrounded the position and cut off the beleaguered troops from water. They made repeated assaults without success until [September] 20th, when they contrived a movable breastwork of hemp-bales, which they rolled before them as they advanced, and compelled Mulligan, who had been twice wounded, to surrender unconditionally. On receiving news of this disaster, Fremont at once left St. Louis with the intention of attacking Price,

but that general instantly retreated, making his way back to the southwest corner of the state, where he rejoined McCulloch and his Confederate troops."—J. W. Draper, *History of the American Civil War*, v. 2, ch. 47.

1861 (July-November).—McClellan's rise to the chief command.—Creation of the army of the Potomac.—Reorganization of the western armies.—"Immediately after the battle of Bull Run, Major General McClellan was assigned to the command of the Military Department of Washington and Northeastern Virginia. Lieutenant General Scott retained his command as general in chief of the American army, until the end of October. 'I found,' says General McClellan in his report, 'no army to command—a mere collection of regiments cowering on the banks of the Potomac, some perfectly raw, others dispirited by the recent defeat. Nothing of any consequence had been done to secure the southern approaches to the capital by means of defensive works; nothing whatever had been undertaken to defend the avenues to the city on the northern side of the Potomac. The number of troops in and around the city was about 50,000 infantry, less than 1,000 cavalry, 650 artillerymen, with nine imperfect field batteries of 30 pieces.' . . . General McClellan at once commenced the organization of the great army authorized by Congress. His views of the military position and appropriate military conduct were, for the most part, accepted, and such was the patriotism of the people, the resolution of Congress, the energy of the executive, that the Army of the Potomac had reached, on October 27th, a strength of . . . 168,318. It was the general's opinion that the advance upon the enemy at Manassas should not be postponed beyond the 25th of November. It was his desire that all the other armies should be stripped of their superfluous strength, and, as far as possible, every thing concentrated in the force under his command. On the 31st of October, General Scott, having found his bodily infirmities increasing, addressed a letter to the Secretary of War requesting to be placed on the retired list. . . . His desire was granted. An order was simultaneously issued appointing General McClellan commander-in-chief under the President. This change in his position at once produced a change in General McClellan's views. Hitherto he had undervalued the importance of what was to be done in the West. He had desired the Western armies to act on the defensive. Now he wished to institute an advance on East Tennessee, and capture Nashville contemporaneously with Richmond. . . . In preparation for this, the Department of the West was reorganized. On the day following that of McClellan's promotion, Fremont was removed from his command. His department was subdivided into three: (1.) New Mexico, which was assigned to Colonel Canby; (2.) Kansas, to General Hunter; (3.) Missouri, to General Halleck. To General Buell was assigned the Department of the Ohio, and to General Rosecrans that of West Virginia. The end of November approached, and still the Army of the Potomac had not moved. The weather was magnificent, the roads excellent. . . . Winter at last came, and nothing had been done. . . . Considering the military condition of the nation when General McClellan undertook the for-

mation and organization of the great Army of the Potomac, the time consumed in bringing that force into a satisfactory condition was far from being too long. . . . From the resources furnished without stint by Congress McClellan created that army. Events showed that his mental constitution was such that he could not use it on the battlefield. . . . There probably never was an army in the world so lavishly supplied as that of the Potomac before the Peninsular expedition. General McDowell, who knew the state of things well, declared, in his testimony before the Congressional Committee on the Conduct of the War, 'There never was an army in the world supplied as well as ours. I believe a French army of half the size could be supplied with what we waste.'—J. W. Draper, *History of the American Civil War*, v. 2, ch. 44, 49.—'Some persons, who ought to have known better, have supposed that in organizing the Army of the Potomac I set too high a model before me and consumed unnecessary time in striving to form an army of regulars. This was an unjustifiable error on their part. I should, of course, have been glad to bring that army to the condition of regulars, but no one knew better than myself that, with the means at my command, that would have been impossible within any reasonable or permissible time. What I strove for and accomplished was to bring about such a condition of discipline and instruction that the army could be handled on the march and on the field of battle, and that orders could be reasonably well carried out. . . . In spite of all the clamor to the contrary, the time spent in the camps of instruction in front of Washington was well bestowed, and produced the most important and valuable results. Not a day of it was wasted. The fortifications then erected, both directly and indirectly, saved the capital more than once in the course of the war, and enabled the army to manœuvre freely and independently. . . . No other army we possessed could have met and defeated the Confederate Army of Northern Virginia. And, with all the courage, energy, and intelligence of the Army of the Potomac, it probably would not have been equal to that most difficult task without the advantage it enjoyed during its sojourn in the camps around Washington.'—G. B. McClellan, *McClellan's own story*, ch. 6.

Swinton, *Campaigns of the Army of the Potomac*, ch. 3.

1861 (August).—Act of Congress freeing slaves employed in the service of the Confederates.—In August, Congress passed an "Act to confiscate property used for insurrectionary purposes." As originally framed, it only confiscated "any property used to employed in aiding, abetting or promoting insurrection, or resistance to the laws," which would not include slaves. A new section was added, declaring that "whenever hereafter during the present insurrection against the Government of the United States, any person held to labor or service under the law of any State shall be required or permitted by the person to whom such labor or service is due to take up arms against the United States, or to work in or upon any fort, dock, navy-yard, armory, intrenchment or in any military or naval service whatever against the Government of the United States, the person to whom such service or labor is due shall

forfeit his claim thereto." The law further provided that, "whenever any person shall seek to enforce his claim to a slave, it shall be a sufficient answer to such claim, that the slave had been employed in the military or naval service against the United States contrary to the provisions of this Act."—J. G. Blaine, *Twenty years of Congress*, v. 1, p. 342.

1861 (August: North Carolina).—Hatteras expedition.—"General Wool relieved General Butler Aug. 16th, 1861, of the command at Fortress Monroe. Butler was detailed to active duty. The War and Navy Departments having arranged the first of a series of expeditions against the Southern coast, the command of the land forces was conferred upon Butler—Commodore S. H. Stringham directing the naval arm. Materials for the adventure were rapidly gathered at Fortress Monroe from the date of August 16th to the 26th, on which day the fleet took its departure. . . . Not until the vessels were at sea were any but the directors of the enterprize aware of the point of attack. Forts Hatteras and Clark commanded the entrance to the Sounds of Pamlico and Albemarle, whose waters were a great rendezvous for traders running the blockade. . . . Fort Hatteras was an exceedingly formidable battery. It was nearly surrounded by water, and was only approached by a circuitous and narrow neck of land. . . . The secrecy and rapidity of preparation by the Federals caught the rebels somewhat unprepared for the attack. . . . The bombardment opened Wednesday morning, at ten o'clock, preparatory to the landing of the land forces on the beach above Fort Hatteras. . . . A heavy surf rolled in upon the treacherous sands. After infinite labor, and the beaching of three small boats, the landing was suspended for the day. Those already on shore—315 in number—were safe under the guns of the fleet. . . . The bombardment continued during the entire first day. No land assault was attempted. Fort Hatteras replied with great vigor, but with little avail. . . . On the morning of the 20th, the cannonade opened early. A cloudless sky and a clear sea blessed the cause of the assailants. During the night a transport heavily laden with troops reinforced the fort, running down the Sound which was yet open. Fort Clark was occupied by the Federal forces. . . . The conflict soon raged with extreme vigor on both sides. At eleven o'clock the Confederate flag fluttered uneasily a moment—then ran down the halyards and a white flag was slowly run to the peak. . . . Articles of capitulation were signed on board the flag-ship Minnesota. Butler then landed and took formal possession of the largest fortification. The number of prisoners surrendered was 615, who were all placed on the Minnesota. In four days time they were in New York harbor. . . . The first design, it would appear, was to destroy the forts, stop up the channel with old bulks, and to return, temporarily at least, to Fortress Monroe with the entire force; but the place proved to be so strong that Butler left Weber and Hawkins' commands in possession."—O. J. Victor, *History of the Southern Rebellion*, v. 2, div. 5, ch. 11.

ALSO IN: D. Ammen, *Navy in the Civil War: Atlantic coast*, ch. 8.

1861 (August-October: Missouri).—Frémont's premature proclamation of freedom to runaway slaves.—Lincoln's modification.—Change of command.—Butler's expedient of declaring runaway

slaves to be contraband of war, "did not settle what should be done with runaways whose masters, though residents of seceded States, were loyal to the Union. The War Department decided that they should be held until the end of the war, when probably there would be made 'just compensation to loyal masters.' This first stage of Lincoln's policy rested upon the hope that the Union might be restored without prolonged war."—N. W. Stephenson, *Abraham Lincoln and the Union (Chronicles of America Series, v. 29, p. 185)*.—"The difficulty . . . could not be solved by an epigram. 'Contrabands' or fugitive slaves came continually within the lines of the Union armies, and the question how to dispose of them became a grave one for the President. Having carefully thought out a policy, he sent the following instructions to Butler to serve as a guide for his and other commands: the general should not interfere with the reclamation of fugitive slaves who had escaped from masters in the Union slave States but, in accordance with the Confiscation act, he should respect no claim for negroes who had been employed in the military service of the Confederacy. In spite of the murmurs of the abolitionists and some radical Republicans, a large majority of the Northern people had already acquiesced in this policy as a wise temporary expedient, when General Frémont opened the question afresh by his proclamation in Missouri. Frémont . . . [had] been made a major-general and been placed in command of the Western department, which included Missouri. . . . He was supposed to have military talent, and his appointment to a command was very popular with earnest Republicans. . . . The first months in his headquarters at St. Louis showed Frémont to be utterly unfit for a responsible command. . . . He was deaf to the entreaties of well-informed Union citizens for an order to reënforce a capable general [Lyon], who was actively engaged in the field. Distrusted by men of worth and influence in Missouri, flattered by speculators, it is little wonder that the charge was made that the department of Missouri was managed for the purpose of making private fortunes rather than for the country's weal. Such was the posture of affairs on the evening of August 29. . . . Next day he issued [a proclamation freeing the slaves] . . . declaring the slaves of all persons in the State of Missouri, taking up arms against the United States, freemen. . . . Lincoln learned through the newspapers of Frémont's proclamation and of his 'bureau of abolition,' set up for the purpose of issuing deeds of manumission to slaves. Although this major-general of two months' standing . . . had, on a sudden impulse, assumed to solve a question which the President, his Cabinet and Congress were approaching only in a careful and tentative manner, Lincoln's letter to Frémont of September 2, sent by a special messenger, was as full of kindness as of wisdom. 'The liberating slaves of traitorous owners,' he wrote, 'will alarm our Southern Union friends and turn them against us; perhaps ruin our rather fair prospect for Kentucky. Allow me, therefore, to ask that you will, as of your own motion, modify that paragraph so as to conform to the' Confiscation act of Congress. 'This letter is written in a spirit of caution and not of censure.' Frémont was unwilling to retract the provision objected to and asked that the President should openly direct him to make the correction: this Lincoln cheerfully did by public order [dated September 11]."—J. F. Rhodes, *History of the Civil War, 1861-1865, pp. 49-52*.—"Complications in the personal relations of General Fremont and Colonel F. P. Blair, under

whose personal and family influence General Frémont had received his position, occurred at an early day. It was a very unhappy quarrel, and it is quite likely that there was blame upon both sides, though it occurred between men equally devoted to the sacred cause of saving the country to freedom and justice. . . . General Fremont at length took the field in person. On the 8th of October he left Jefferson City for Sedalia. As he advanced with his forces, Price retreated, until it was widely reported that he would give battle to the national forces at Springfield. Just as Fremont was making ready to engage the enemy, he was overtaken by an order relieving him of his command. He was succeeded by General Hunter; but Hunter's command was brief, and was transferred at an early day to General Halleck."—J. G. Holland, *Life of Abraham Lincoln, ch. 20*.—"Frémont's proclamation stirred the anti-slavery sentiment of the country to its utmost depths, receiving enthusiastic recommendation from many States. . . . [But] Lincoln had such a hold upon the people that he carried with him an efficient public opinion and, after due waiting, proceeded to the next step. He never had any thought of removing Frémont on account of his proclamation; but he felt that the mismanagement and corruption in Missouri must be corrected. Proceeding with caution, he sent to St. Louis Montgomery Blair and Meigs, the Quartermaster-General of the Army, and later Secretary Cameron and Adjutant-General Thomas: the four made a thorough and candid investigation. . . . [Montgomery Blair recommended Frémont's removal for inefficiency and Cameron's and Thomas's conclusions made it imperative.] These two reported that Frémont 'was incompetent and unfit for his extensive and important command' and that he had 'around him in his staff persons directly and indirectly concerned in furnishing supplies.' On October 24, the President issued the order for his removal."—J. F. Rhodes, *History of the Civil War, 1861-1865, pp. 53-54*.

1861 (August-December: West Virginia).—Rosecrans against Lee.—Battles of Carnifex Ferry and Cheat Summit.—"The successes of McClellan at Laurel Hill and Rich Mountain, had caused the Confederate General Wise to fall back to Lewisburg in the valley of the Greenbrier River, in order to protect his right flank against the possible advance of McClellan southward. After Bull Run, and the call of McClellan to Washington, the Confederate President resolved to make another attempt to occupy Western Virginia. He sent General John B. Floyd to reinforce Wise and assume command in the Kanawha Valley, and General Robert E. Lee to take command of the remnants of Garnett's forces at Valley Mountain and to exercise superior direction of the campaign in all Western Virginia. Lee soon saw that he must give up operating so far to the north as Valley Mountain, in order to maintain communication with Floyd and Wise, on the head waters of the Kanawha. He, therefore, moved southward, and took position in the upper part of the Greenbrier Valley in front of the defiles of Cheat Mountain. General Rosecrans, who had succeeded McClellan in command of the Federal forces, had retired with the main body of his troops to Clarksburg . . . leaving the single brigade of General J. J. Reynolds to guard the passes of Cheat and

Greenbrier Mountains. Floyd began the offensive movement. His forces greatly outnumbered those of General Cox in front of him, and he easily compelled the Federals to fall back upon New River, the south branch of the Kanawha. He then left General Wise with a sufficient force to hold Cox's little army in check, and marched northward to Carnifex Ferry on the Gauley River, with the purpose of intercepting any reinforcements coming from Rosecrans at Clarksburg; . . . surprised the Seventh Ohio regiment at Cross Lanes, a few miles from the Ferry, and scattered it, after inflicting great loss upon it. This little battle took place on the morning of the 26th of August, and after his success, Floyd proceeded to fortify the heights about Carnifex Ferry in order to be able to resist any force coming from the North. So soon as Rosecrans learned of Floyd's movements, he set out from Clarksburg with about ten thousand men, and, in about a week, he appeared before Floyd's intrenchments. This was the 10th of September. Rosecrans immediately ordered Benham's brigade to assault the works. The Federals

with his artillery, the main road eastward over the Alleghanies. Reynolds, having been reinforced, attempted to dislodge him by an assault upon his works, October 3d, but failed. General Lee had, meanwhile, proceeded southward, and had joined Floyd and Wise, assuming command of the entire force of about twenty thousand men. He did not, however, attempt to meet Rosecrans, although his army was much superior in point of numbers to the Federal force. He sent a small detachment across New River to Chapmanville, where, on the 25th of September, they were surprised and routed by a small body of Federals. In addition to these discouragements in the field, General Lee had to deal with the quarrel between Floyd and Wise, which was presently appealed to Richmond, with the result that Wise was withdrawn from his command. Lee himself was recalled a little later, and sent to South Carolina, and a part of the army about Lewisburg was marched into the Shenandoah Valley, to reinforce General Stonewall Jackson at Winchester. Floyd made one more effort to regain the Kanawha Valley, but

PHILIP HENRY SHERIDAN

ULYSSES SIMPSON GRANT

WILLIAM TECUMSEH SHERMAN

were repulsed with considerable loss, and before McCook's brigade could come to their assistance, darkness intervened, and the battle was suspended. During the night, Floyd, who had only about two thousand men, and had asked aid from Wise in vain, slipped away. He retired to Sewell's Mountain and took up a strong position there. Rosecrans did not, however, follow. His troops were tired out by the hundred miles march from Clarksburg, and their exertions in the battle. He had . . . cleared the Kanawha Valley, and seemed to feel that he had accomplished all that was practicable or necessary at the moment. So soon as General Lee learned of Rosecrans's march to the Kanawha Valley, he resolved to capture the passes into the middle section of Western Virginia held by the single brigade of General Reynolds. On the 11th of September, he advanced northward from Huntersville with nearly ten thousand men. . . . On the 15th, he made a feeble attack upon Cheat Mountain, which was vigorously and successfully repelled. Lee now drew his forces back into the valley of the Greenbrier, leaving General H. R. Jackson with a single brigade to guard the passes through the Alleghanies into Eastern Virginia against Reynolds. Jackson intrenched himself on Buffalo Hill, from which he could command,

accomplished nothing more serious than inflicting annoyance upon the Federal supply trains. He was finally driven back into the mountains about the middle of November. And the expulsion of the Confederates from Huntersville, in the Greenbrier Valley, a month later, closed the campaign in Western Virginia, and left this section in the hands of the Federals."—J. W. Burgess, *Civil War and the constitution, 1850-1865, v. 1, pp. 255-258.*

1861 (September-November: On the Mississippi).—General Grant's first battle, at Belmont.—In August, General Ulysses S. Grant, who had been serving for a few weeks in Missouri, first as colonel of the 21st Illinois Regiment, and later as a brigadier-general, was assigned by General Frémont to "the command of the district of south-east Missouri, embracing all the territory south of St. Louis, in Missouri, as well as all southern Illinois." On September 4th he established his headquarters at Cairo, Illinois, and the next day, having learned from a scout that the rebels were preparing to seize Paducah, at the mouth of the Tennessee river, he placed a couple of regiments

of troops and a light battery on board of steamers: and occupied the place on September 6, telegraphing meanwhile for orders, but not waiting for them. His movement anticipated the enemy by a few hours, only, and secured command of the Tennessee, the importance of which was afterward demonstrated by Grant, himself, when he moved on Forts Henry and Donelson. In his "Memoirs" General Grant says: "From the occupation of Paducah up to the early part of November, nothing important occurred with the troops under my command. I was reinforced from time to time and the men were drilled and disciplined preparatory for the service which was sure to come. By the 1st of November I had not fewer than 20,000 men. . . . About the 1st of November I was directed from department headquarters to make a demonstration on both sides of the Mississippi River with the view of detaining the rebels within their lines. Before my troops could be got off, I was notified from the same quarter that there were some 3,000 of the enemy on the St. Francis River about 50 miles west, or South-west, from Cairo, and was ordered to send another force against them. I dispatched Colonel Oglesby at once with troops sufficient to compete with the reported number of the enemy. On the 5th word came from the same source that the rebels were about to detach a large force from Columbus to be moved by boats down the Mississippi and up the White River, in Arkansas, in order to reinforce Price, and I was directed to prevent this movement if possible." To carry out these orders, General Grant directed a demonstration to be made from Paducah towards Columbus, while, at the same time, he conveyed some 3,000 troops down the river, in steamers, and attacked a camp of rebels at Belmont, immediately opposite Columbus. The battle was a severe one. "The officers and men engaged at Belmont were then under fire for the first time. Veterans," says General Grant, "could not have behaved better than they did up to the moment of reaching the rebel camp. . . . The moment the camp was reached our men laid down their arms and commenced rummaging the tents to pick up trophies. Some of the higher officers were little better than the privates. They galloped about from one cluster of men to another and at every halt delivered a short eulogy upon the Union cause and the achievements of the command." The result was a rallying of the defeated confederates and a reinforcement from Columbus which forced the Unionists to retire with haste. "Our loss at Belmont was 485 killed, wounded and missing. . . . The two objects for which the battle of Belmont was fought were fully accomplished. The enemy gave up all idea of detaching troops from Columbus. . . . If it had not been fought, Colonel Oglesby would probably have been captured or destroyed with his 3,000 men. Then I should have been culpable indeed."—U. S. Grant, *Personal memoirs*, v. 1, ch. 19-20.

1861 (October; Virginia).—Confederate project for the invasion of the North vetoed by Jefferson Davis.—"Between the 4th of August and the 15th of October more than 110 regiments and thirty batteries, comprising at least 100,000 men, were added to the forces in Washington and its neighborhood, and there appeared to be no limit to the resources and patriotism of the North. Moreover, the Northern troops were so well provided for in all respects, owing to the immense resources

at the disposal of the United States Government, that there was every reason to expect in the spring of 1862 a decidedly improved condition in health and vigor, in self-confidence, and in all soldierly qualities, on the part of the soldiers. The army at Manassas, on the other hand, owing to the straitened means of the Confederate Government, was barely kept comfortable in the matter of clothing and shelter, and its chief officers looked forward with undisguised apprehension to the coming winter. . . . It was easy for any one instructed in military matters to see that if the Federal authorities would only be content to defer active operations until the patriotic levies of the North should have learned 'the trade of the soldier,' . . . the Federal general would enter on the next campaign with all those chances of success which attend largely superior numbers, better arms and equipment, and a sound and thorough organization of his army. Such in fact was the view of the situation taken by the sagacious officer who commanded the lately victorious army at Manassas Junction, Joseph E. Johnston. In his opinion his two corps commanders, Beauregard . . . and G. W. Smith . . . entirely concurred. They saw that some thing must be done to break up this constantly increasing Federal army while it was yet in the process of formation. The Confederate generals, determined to urge their views upon the President of the Southern Confederacy. Mr. Davis responded at once to their expressed wish for a conference upon the military situation, and he reached Manassas on September 30, 1861. The conference was held the next day. The generals strongly advised Mr. Davis to reinforce the army at Manassas so that they might cross the Potomac, cut the communications of Washington with the North and carry the war into the enemy's country. . . . But President Davis decided that he could not furnish the required reinforcement without 'a total disregard of the safety of other threatened positions.' The project was therefore dropped, and no further attempt was made during the ensuing autumn and winter to interfere with the uninterrupted development of the Federal army at and near Washington in organization and efficiency. . . . It is altogether probable that the Confederate army was at that time decidedly the superior of its antagonist in many important respects. It had the prestige of victory. . . . We may fairly say therefore, that an invasion of the North, undertaken in October, 1861, held out a very fair promise of a successful result for the Confederate arms."—J. C. Ropes, *Story of the Civil War, 1861-1865*, ch. 10.—By tabulating accounts in the daily papers received from Washington "we always knew quite accurately the strength of the enemy's army. Why the . . . [Federals], by similar obvious methods, did not, also, always know our strength, remains a mystery. But McClellan had a bureau under Pinkerton to estimate for him, from the reports of spies, prisoners, and deserters, and implicitly believed, by preference, the most absurd and impossible of all their reports. As an illustration may be taken his report in October, 1861, in which he estimates the Confederate army on the Potomac as 'not less than 150,000 strong, well-drilled and equipped, ably commanded and strongly entrenched.' In fact, the Confederate army at the time was only about 40,000 strong. It was very poorly drilled and wretchedly equipped, and it had, practically, no intrenchments whatever. And although it numbered able officers among its generals, it was badly commanded, in that it was not organized into divisions, and could not have

been well handled either on a march or in action. McClellan, though unfit to command in battle, had no superior in organizing an army to take the field as a thoroughly fit machine, able to concentrate its energies wherever needed. By the end of October he might easily have advanced upon the Confederates with a force three to one in numbers and twice better armed and organized. . . . And as so good a fighting machine of American soldiers would do hard fighting, even without a general at their head, as was abundantly shown by McClellan's subsequent career, it is entirely possible that the Confederates may owe their escape from a defeat in November, 1861, as much to yarns spun by their deserters as to their own impudent attitude in the field."—E. P. Alexander, *American Civil War*, pp. 55-56.

1861 (October: Virginia).—Ball's Bluff, or Leesburg.—"By the end of October, 138,000 men were under arms near Washington, and public opinion demanded an advance, but McClellan was not ready. October 21, at Ball's Bluff [or Leesburg], 2,000 men, who had been incautiously thrown across the Potomac, were surrounded and half of them lost. One of the slain was Colonel Baker, of California, an officer of much promise, whose death was deeply regretted. The blow caused profound sorrow in the North, but McClellan did nothing to retrieve it."—J. S. Bassett, *Short history of the United States*, p. 545.—"Measured by subsequent battles, the casualties at Ball's Bluff were not large; but the death of Colonel Baker . . . and the loss to New York, Massachusetts and Pennsylvania of some of the 'very pride and flower of their young men' caused a profound feeling of discouragement all over the North; still there was little tendency to impute this disaster to McClellan, although it occurred in his department. The victory greatly elated the Confederate soldiers."—J. F. Rhodes, *History of the Civil War, 1861-1865*, p. 59, footnote.—The troops engaged in this affair were commanded by General Stone, under whom were Colonel Devens of the 15th Massachusetts, Colonel Lee of the 20th Massachusetts, Colonel (Senator) Edward D. Baker, Lieutenant-Colonel Learned and Colonel Coggeswell. "In connection with the disaster, a great wrong seems to have been done to General Stone. Accused of disloyalty, he was arrested, but on no specific charge, imprisoned for six months, denied a trial, and set free without explanation. He went abroad, and for many years was Chief of the General Staff to the Khedive of Egypt."—J. G. Blaine, *Twenty years of Congress*, v. 1, ch. 17.

1861 (October-December: South Carolina-Georgia).—Blockade of eastern coast.—Hilton Head, or Port Royal.—"The navy was organized in three squadrons. The North Atlantic Squadron, which was authorized to operate to the southern line of North Carolina, was placed under the command of Captain L. M. Goldsborough. The South Atlantic Squadron was placed under the command of Captain S. F. Du Pont. And the Gulf Squadron was entrusted to the command of Captain W. W. McKean. By the 1st of December (1861), the navy had been increased to two hundred and sixty-four war-ships, carrying two thousand five hundred and fifty-seven guns, and manned by over twenty thousand seamen. . . . Among the Confederates the preparations were by no means so earnest, active, and productive."—F. N. Thorpe, *Civil War, national view (History of North America*, v. 15, pp. 237-238).—"A marked feature of the year was the series of land and naval expeditions sent by the United

States against the Southern seacoast points. Following the success of the Hatteras expedition of the previous year a great undertaking was projected. Port Royal in South Carolina was the finest harbor on the southern Atlantic coast, a wide estuary formed by the junction of Broad and Port Royal Rivers and Archer's Creek and their *débouchure* into the Atlantic. The harbor is about half way between Charleston and Savannah, having interior water communications with both cities. It was in the richest agricultural district in South Carolina, the most important seat of the production of the famous sea island cotton. . . . Fifty vessels, including transports, had sailed from Hampton Roads, October 29, 1861, the naval command being assigned to Commodore S. F. Dupont and the army of 22,000 troops in transports being under the command of acting Major-General Thomas W. Sherman. The expedition was two months in preparation and sailed with sealed orders, but though every effort had been made to keep its destination secret, the information reached the Confederate secretary of war. He promptly telegraphed to the governor of South Carolina and the commander at Hilton Head where to expect it. . . . Forts Beauregard and Walker, guarding the eastern and western entrances to the harbor, were occupied in November, 1861, their small garrisons having retired before the combined attack of the entire fleet of gunboats, and thus the United States troops gained the first permanent foothold on the soil of South Carolina. [This battle was called Hilton Head] by the Federals. On the first day of January, 1862, a combined attack of the land and naval forces was made on Port Royal. Every ferryboat and flat procurable was put in readiness, and 3,000 men with their horses were sent from the island to the Port Royal ferry, where it was thought the Confederates were trying to shut in the Federal troops by obstructing Coosaw River and Whale Branch. The combined attack of the land and naval forces accomplished the purpose of the expedition, the Confederates retiring with little resistance. This success at Port Royal enabled the Federals to penetrate all the sounds, rivers, inlets, and bays between the sea islands and the mainland of South Carolina and Georgia, where the Confederates had established earthworks without having the men or the guns to arm them. Expeditions were sent through the sounds all the way down to Fernandina, and, without the means of effectually opposing them, the Confederates retired. . . . Soon the . . . [Federals] were in possession of the whole coast southward from Port Royal, except Savannah."—W. R. Garrett and R. A. Halley, *Civil War from a Southern standpoint (History of North America*, v. 14, pp. 317-318).—"The occupation of most of the islands in the vicinity of the St. Helena group was the natural consequence of the victory of Hilton Head. It was effected gradually before the end of the year [1861]. Among all the points of the coast which the Federals had thus seized without striking a blow, thanks to the prestige of their success, the most important was Tybee Island, at the entrance of the Savannah River. Situated on the right bank of the mouth of that river, . . . where the lighthouse stands, Tybee Island enabled the Federals, as soon as they became masters of it, to obstruct the passage of the blockade-runners on their way to the great mart of Savannah. At the end of the year, Dupont's fleet, supported by detachments from Sherman's army, was in possession of the five large

bays of North Edisto, St. Helena, Port Royal, Tybee, Warsaw, and the whole chain of islands which forms the coast of Carolina and Georgia between those bays."—Comte de Paris *History of the Civil War in America*, v. 1, bk. 4, ch. 3.

1861 (November).—Trent Affair.—Arrest of Mason and Slidell.—“On the 8th of November, 1861, Captain Charles Wilkes, of the U. S. steamer San Jacinto, intercepted on the ocean H. B. M. mail packet boat Trent, having on board four emissaries bound for England. Having boarded the Trent, an officer of the San Jacinto . . . [arrested] Mason, Slidell, McFarland and Eustis, and transferred them to the San Jacinto. The Trent then proceeded on her voyage. Captain Wilkes conveyed his captives to Boston, where

JAMES MURRAY MASON

they were consigned to Fort Warren, then a receptacle for political prisoners. “When this transaction became known to the British government immediate preparations were made for war. In the United States the act was hailed as a victory. The Secretary of the Navy publicly applauded Captain Wilkes, and the House of Representatives did the same. The Secretary of State, upon whom the chief responsibility in the matter rested, saw more clearly than others, that a breach of international law had been committed by the commander of the San Jacinto. The President coincided with Mr. Seward, and it was at once resolved to restore the rebel captives to the protection of the British flag.”—G. E. Baker, *Biographical memoir of William H. Seward* (*Seward's works*, v. 5, pp. 10-11).—In his diplomatic correspondence under the caption “Diary or Notes on the War,” Secretary Seward wrote: “November, 30, 1861.—Captain Wilkes, in the Steamer San Jacinto, has boarded a British colonial steamer, and taken from her deck two insurgents who were proceeding to Europe on an errand of treason against

their own country. Lord Lyons has prudently refrained from opening the subject to me, as, I presume, waiting instructions from home. We have done nothing on the subject to anticipate the discussion, and we have not furnished you with any explanations. We adhere to that course now, because we think it more prudent that the ground taken by the British government should be first made to us here, and that the discussion, if there must be one, shall be had here. In the capture of Messrs. Mason and Slidell on board a British vessel, Captain Wilkes having acted without any instructions from the government, the subject is therefore free from the embarrassment which might have resulted if the act had been specially directed by us. . . . January 20, 1862.—We have reason to be satisfied with our course in the Trent affair. The American people could not have been united in a war which, being waged to maintain Captain Wilke's act of force, would have practically been a voluntary war against Great Britain. At the same time it would have been a war in 1861 against Great Britain for a cause directly the opposite of the cause for which we waged war against the same power in 1812.” In a despatch to Lord Lyons, British minister, Mr. Seward had written: “If I decide this case in favor of my own government, I must disavow its most cherished principles, and reverse and forever abandon its essential policy. The country cannot afford the sacrifice. If I maintain those principles, and adhere to that policy, I must surrender the case itself. It will be seen, therefore, that this government could not deny the justice of the claim presented to us in this respect upon its merits. We are asked to do to the British nation just what we have always insisted all nations ought to do to us. . . . By the adjustment of the present case upon principles confessedly American, and yet, as I trust, mutually satisfactory to both of the nations concerned, a question is finally and rightly settled between them, which, heretofore exhausting not only all forms of peaceful discussion, but also the arbitrament of war itself, for more than half a century alienated the two countries from each other.”—W. H. Seward, *To Lord Lyons*, Dec. 26, 1861 (*Works*, v. 5, *Diplomatic history of the war*, pp. 308-309).—See also TRENT AFFAIR.

Fairfax, *Captain Wilkes's seizure of Mason and Slidell (Battles and leaders of the Civil War*, v. 2, pp. 135-142).—J. F. Rhodes, *History of the Civil War, 1861-1865*, pp. 72-83.—J. W. Burgess, *Civil War and the constitution*, pp. 271-273.

1861 (December).—Creation of Congressional Committee on the Conduct of the War.—Its work.—Service in publicity.—“At Washington, December 9, was constituted an important joint ‘committee on the Conduct of the War,’ consisting of Wade, Chandler and Andrew Johnson, from the Senate, and Julian, Covode, Gooch, and Odell from the House—a committee of radical tone headed by an impetuous man. It played a great part thenceforth throughout the war. Its zeal often outran its discretion, sometimes with unfortunate, even appalling, results; but it was laborious and well-purposed, and sometimes accomplished good.”—J. K. Hosmer, *Appeal to arms, 1861-1863*, p. 80.—“The functions and activities of the committee divide themselves roughly into two divisions—the investigative and the recommendatory or advisory. . . . Most of the investigations of military affairs were made in the East:

the most systematic related to the Army of the Potomac. . . . The battles and campaigns investigated in this connection were as follows: the Peninsula campaign and the battles incident to it, the second battle of Manassas and the Pope campaign, and the Maryland campaign of McClellan. At the same time with these investigations, an inquiry was made into the disasters at Bull Run and Ball's Bluff. Investigations of the battles of Fredericksburg, Chancellorsville, and Gettysburg were made, and the last two were accompanied with searching examinations of the military administrations of Generals Hooker and Meade. Later, testimony was taken respecting the battle of Petersburg and . . . the Crater. Thorough investigations were made of the Bed River and Fort Fisher expeditions. Testimony was taken . . . on a large number of expeditions, battles, and . . . detached military operations; the campaigns of General Rosecrans [the Hatteras Inlet, Port Royal and Burnside expeditions], the battle at Fort Donelson; the capture of New Orleans; the invasion of New Mexico; the Accomack expedition; the battle of Winchester; the *Monitor* and the *Merrimac*, the operations against Charleston; the operations in the Gulf Department; and the battle of Cedar Mountain. Notably important investigations [and reports] relating more directly to the civil aspects of the war or to the work of supplying the army may be grouped as follows: heavy ordnance, light-draught monitors, . . . treatment of Confederate soldiers in Union prisons, the paymaster's department, the administration of the quartermasters located in New York and Philadelphia, ice contracts, returning slaves to their 'rebel' owners, trade regulations as applied on the Mississippi River, trade in military districts, 'protecting rebel property,' treatment of wounded from Front Royal, the convalescent camp at Alexandria, and the Sherman-Johnston terms of surrender. One of the most interesting investigations of the committee was that of the Western Department or Missouri during the Frémont régime, which evidenced their peculiar partizan politics and their radicalism. Another such inquiry was made of the administration of General Steele in Arkansas. . . . Much of the activity of the committee as a conciliar body took the form of suggestions, advice and intrigue. . . . Investigations of governmental inefficiency and of what may be termed scandals occurred in the cases of light-draught monitors, ice contracts, heavy ordnance, employment of disloyal persons in government work, hospitals and the treatment of wounded and illicit trade with the Confederates. . . . That they [the committee] made mistakes, as in overrating Hooker, in underestimating McClellan, in blaming Franklin, and in misinterpreting Meade, may be granted, although they certainly had testimony, to substantiate their conclusions. In defense, it may be contended that the committee succeeded in their aims; that they brought speed and energy into the conduct of the war; that they ferreted out abuses and put their fingers down heavily upon governmental inefficiency; and that they labored, for a time at least, to preserve a balance and effect a co-operation between the legislative and executive departments. That the committee were not experts, nor men of the highest rank of statesmanship, nor of lofty character, are arguments *ad hominem* rather than *ad institutum*. They were partizans, but they were men of energy; they were often rash and impetuous, but their hearts were in the struggle . . . [and] there was

still their great service in giving publicity, in some cases pitiless publicity, to faulty military and questionable political transactions."—W. W. Pierson, Jr., *Committee on the Conduct of the Civil War* (*American Historical Review*, Apr., 1918, pp. 560-562, 573-576).

1861-1862.—Financing of Confederate government.—"The history of the first year of Confederate foreign affairs is interwoven with the history of Confederate finance. During that year the South became a great buyer in Europe. Arms, powder, cloth, machinery, medicines, ships, a thousand things had all to be bought abroad. To establish the foreign credit of the new Government was the arduous task of the Confederate Secretary of the Treasury, Christopher G. Memminger. The first great campaign of the war was not fought by armies. It was a commercial campaign fought by agents of the Federal and Confederate govern-

JOHN SLIDELL

ment and having for its aim the cornering of the munitions market in Europe. In this campaign the Federal agents had decisive advantages: their credit was never questioned, and their enormous purchases were never doubtful ventures for the European sellers. In some cases their superior credit enabled them to overbid the Confederate agents and to appropriate large contracts which the Confederates had negotiated but which they could not hold because of the precariousness of their credit. And yet, all things considered, the Confederate agents made a good showing. In the report of the Secretary of War in February, 1862, the number of rifles contracted for abroad was put at 91,000, of which 15,000 had been delivered. The chief reliance of the Confederate Treasury for its purchases abroad was at first the specie in the Southern branch of the United States Mint and in Southern banks. The former the Confederacy seized and converted to its own use. Of the latter it lured into its own hands a very large proportion by what is commonly called 'the fifteen million loan'—an issue of eight per cent bonds

authorized in February, 1861. Most of the specie seems to have been taken out of the country by the purchase of European commodities. A little, to be sure, remained, for there was some gold still at home when the Confederacy fell. But the sum was small. In addition to this loan Memminger also persuaded Congress on August 19, 1861, to lay a direct tax—the 'war tax,' as it was called—of one-half of one per cent on all property except Confederate bonds and money. As required by the Constitution this tax was apportioned among the States, but if it assumed its assessment before April 1, 1862, each State was to have a reduction of ten per cent. . . . What the States did, as a rule, was to assume their assessment, agree to pay it into the Treasury, and then issue bonds to raise the necessary funds, thus converting the war tax into a loan. The Confederate, like the Union, Treasury . . . had recourse to the perilous device of paper money, the gold value of which was not guaranteed. Beginning in March, 1861, it issued under successive laws great quantities of paper notes, some of them interest bearing, some not. It used these notes in payment of its domestic obligations. The purchasing value of the notes soon started on a disastrous downward course, and in 1864 the gold dollar was worth thirty paper dollars. . . . The depreciation of these notes left governmental clerks without adequate salaries and soldiers without the means of providing for their families. During most of the war, women and other non-combatants had to support the families or else rely upon local charity organized by state or county boards. . . . Long before all the evils of paper money were experienced, the North, with great swiftness, concentrated its naval forces so as to dominate the Southern ports, which had trade relations with Europe. The shipping ports were at once congested with cotton to the great embarrassment of merchants and planters. Partly to relieve them, the Confederate Congress instituted in May, 1861, what is known today as 'the hundred million loan.' It was the first of a series of 'produce loans.' The Treasury was authorized to issue eight per cent bonds, to fall due in twenty years, and to sell them for specie or to exchange them for produce or manufactured articles. In the course of the remaining months of 1861 there were exchanged for these bonds great quantities of produce including some 400,000 bales of cotton. . . . The effects of the blockade were felt at the ends of the earth. India became an exporter of cotton. Egypt also entered the competition."—N. W. Stephenson, *Day of the Confederacy (Chronicles of America Series, v. 30, pp. 47-51, 56-57)*.

1861-1862 (December-March: Virginia).—Protracted inaction of McClellan.—Plan of campaign and its frustration by Confederate evacuation of Centreville.—"The country had a right to expect an offensive movement. Inasmuch as McClellan was apt to underestimate the number as well as the fighting quality of his soldiers, his 76,000 'disposable for an advance' could likely enough have been increased to 100,000. But at this time he could not have handled 100,000 men. It is doubtful if any other general in the Union army could have done so. Long after the war, Grant referred to the 'vast and cruel responsibility' devolving upon McClellan at the outset and added 'if McClellan had gone into the war as Sherman, Thomas or Meade, had fought his way along and up, I have no reason to suppose that he would not have won as high a distinction as any of us.'"—J. F. Rhodes, *History of the Civil War,*

1861-1865, p. 62.—"McClellan had his shortcomings, as events proved; but in one respect he was very strong. He lacked the bulldog tenacity of Grant, the strategy of Sherman, the impetuous dash of Stonewall Jackson; but as a military organizer he was superior to them all. When he took control of the army it was a great disorganized mass, untrained, discouraged, but possessing the one supreme virtue—patriotism. In four months McClellan had made of this crude mass a trained, disciplined, and organized army equal to any that ever trod American soil. No such work had been done on this side of the Atlantic since the days of Steuben at Valley Forge. 'Had there been no McClellan,' said General Meade in after years, 'there could have been no Grant; the army made no essential improvement under any of his successors.'"—H. W. Elson, *History of the United States of America, v. 4, p. 179*.—An investigation into the cause of delay in the movements of the troops was one of the earliest activities of the Committee on the Conduct of the War, which reported in part as follows: "When Congress assembled . . . in the beginning of December, 1861, so successful had been the exertions of the authorities, and so zealously had the people responded to their country's call, that the consolidated morning reports, furnished your committee by the adjutant general of the army showed that, exclusive of the command of General Dix, at Baltimore, the army of the Potomac consisted of about 185,000 men. During the time this large army had been collecting and organizing, nothing of importance had transpired in connection with it, except the closing of the navigation of the Potomac by the rebels, which your committee treat of more at length in another part of this report, and the melancholy disaster of Ball's Bluff, which it made the subject of a separate report. The weather during the fall season, and for some weeks after the convening of Congress, continued unusually favorable for active military operations. . . . From the testimony before your committee is appeared that the army of the Potomac was well armed and equipped, and had reached a high state of discipline by the last of September or the first of October. The men were ready and eager to commence active operations. The generals in command of the various divisions were opposed to going into winter quarters, and the most of them declared they had no expectation of doing so. . . . Early in December an order had been issued from headquarters prohibiting the commanders in the front from examining any persons who should come into our lines from the direction of the enemy; but all such persons were to be sent, without examination, to the headquarters of the army. Restrictions were also placed upon the movements of scouts. The result was, that the generals examined appeared to be almost entirely ignorant of the force of the enemy opposed to them, having only such information as they were allowed to obtain at headquarters. The strength of the enemy was variously estimated at from 70,000 to 210,000 men. Those who formed the highest estimate based their opinion upon information received at headquarters. . . . Subsequent events have proved that the force of the enemy was below even the lowest of these estimates, and the strength of their fortifications very greatly overestimated. . . . The estimate of the force necessary to be left in and around Washington to act entirely on the defensive, to render the capital secure against any attack of the enemy, as stated by the witnesses examined upon

that point, was from 50,000 to 80,000 men, leaving 100,000 or upwards that could be used for expeditions at other points. . . . The subject of the obstruction of the navigation of the Potomac naturally demanded the consideration of your committee. . . . As was well urged by the Navy Department, the whole question amounted simply to this: Would the army co-operate with the navy in securing the unobstructed navigation of the Potomac, or, by withholding that co-operation at that time, permit so important a channel of communication to be closed. After repeated efforts, General McClellan promised that 4,000 men should be ready at a time named to proceed down the river. . . . The troops did not arrive, and the Navy Department was informed of the fact by Captain Craven. Assistant Secretary Fox, upon inquiring of General McClellan why the troops had not been sent according to agreement, was informed by him that his engineers were of the opinion that so large a body of troops could not be landed. . . . Captain Fox replied that the landing of the troops was a matter of which the Navy Department had charge. . . . It was then agreed that the troops should be sent the next night. Captain Craven was again notified, and again had his flotilla in readiness for the arrival of the troops. But no troops were sent down at that time, nor were any ever sent down for that purpose. Captain Fox, in answer to the inquiry of the committee as to what reason was assigned for not sending the troops according to the second agreement, replied that the only reason, so far as he could ascertain, was, that General McClellan feared it might bring on a general engagement. . . . Upon the failure of this plan of the Navy Department, the effective vessels of the Potomac flotilla left upon the Port Royal expedition. The navigation of the river was almost immediately thereafter closed, and remained closed until the rebels voluntarily evacuated their batteries in the March following, no steps having been taken, in the meantime, for reopening communication by that route. On the 19th of January, 1862, the President of the United States, as commander-in-chief of the army and navy, issued orders for a general movement of all the armies of the United States, one result of which was the series of victories at Fort Henry, Fort Donelson, &c., which so electrified the country and revived the hopes of every loyal man in the land. After this long period of inaction of the army of the Potomac, the President of the United States, on the 31st of January, 1862, issued the following order: . . . 'Ordered, That all the disposable force of the army of the Potomac, after providing safely for the defence of Washington, be formed into an expedition for the immediate object of seizing and occupying a point upon the railroad southwestward of what is known as Manassas Junction; all details to be in the discretion of the general-in-chief, and the expedition to move before or on the 22d day of February next. Abraham Lincoln.' To this order General McClellan wrote an elaborate reply of the same date, objecting to the plan therein indicated as involving 'the error of dividing our army by a very difficult obstacles (the Occoquan), and by a distance too great to enable the two portions to support each other, should either be attacked by the masses of the enemy, while the other is held in check.' He then proceeded to argue in favor of a movement by way of the Rappahannock or Fortress Monroe, giving the prefer-

ence to the Rappahannock route. He stated that 30 days would be required to provide the necessary means of transportation. He stated that he regarded 'success as certain, by all the chances of war,' by the route he proposed, while it was 'by no means certain that we can beat them (the enemy) at Manassas.' . . . A council of war, held in February, 1862, . . . the first, so far as your committee have been able to ascertain, ever called by General McClellan, and then by direction of the President, was composed of twelve generals. . . . To them was submitted the question whether they would indorse the line of operations which General McClellan desired to adopt. The result of the deliberation was a vote of eight to four in favor of the movement by way of Annapolis, and thence down the Chesapeake bay, up the Rappahannock, landing at Urbana, and across the country to Richmond. . . . Before the movement by way of Annapolis could be executed, the enemy abandoned their batteries upon the Potomac, and evacuated their position at Centreville and Manassas [removing what stores they could and burning the remainder], retiring to the line of the Rappahannock. When General McClellan, then in the city of Washington, heard that the enemy had evacuated Manassas, he proceeded across the river and ordered a general movement of the whole army in the direction of the position lately occupied by the enemy. The enemy moved on the morning of the 10th of March, the greater part of it proceeding no further than Fairfax Court-House. A small force of the army proceeded to Manassas and beyond to the line of the Rappahannock, ascertaining that the enemy had retired beyond that river and destroyed the railroad bridge across it. . . . On the 13th of March General McClellan convened at Fairfax Court-House a council of war, consisting of four of the five commanders of army corps (General Banks being absent), and informed them that he proposed to abandon his plan of movement by way of the Rappahannock, and submitted to them instead a plan of movement by way of the York and James rivers."—*Report of Joint Committee on the Conduct of the War; 37th Congress, 3rd Session, House of Representatives, pt. 1, pp. 6-12.*—"December was the fifth month that General McClellan had been in command of the greatest army ever brought together on this continent. It was impossible to convince the country that a longer period of preparation was necessary before this army could be led against one inferior in numbers, and not superior in discipline or equipment. . . . McClellan reported to the Secretary of War, that Johnston's army, at the end of October, numbered 150,000 and that he would therefore require, to make an advance movement with the Army of the Potomac, a force of 240,000. Johnston's report of that date shows an effective total of 41,000 men. . . . Aware that his army was less than one-third as strong as the Union forces, Johnston contented himself with neutralizing the army at Washington, passing the time in drilling and disciplining his troops, who, according to his own account, were seriously in need of it. He could not account for the inactivity of the Union army. Military operations, he says, were practicable until the end of December; but he was never molested."—J. G. Nicolay and J. Hay, *Abraham Lincoln, v. 5, ch. 9.*—McClellan says, "It certainly was not till late in Nov., 1861, that the Army of the Potomac was in any condition to move, nor even then were they capable of assaulting entrenched

positions. By that time the roads had ceased to be practicable for the movement of armies, and the experience of subsequent years proved that no large operations could be advantageously conducted in that region during the winter season. Any success gained at that time in front of Washington could not have been followed up and a victory would have given us the barren possession of the field of battle, with a longer and more difficult line of supply during the rest of the winter. If the Army of the Potomac had been in condition to move before winter, such an operation would not have accorded with the general plan I had determined upon after succeeding General Scott as general in command of the armies."—G. B. McClellan, *McClellan's own story*, pp. 199-200.

1861-1862 (December-April: Virginia).—Jackson's first campaign in the Shenandoah valley.—Battle of Kernstown.—"Soon after the battle of Bull Run Stonewall Jackson was promoted to major-general, and the Confederate Government having on the 21st of October, 1861, organized the Department of Northern Virginia, under command of General Joseph E. Johnston, it was divided into the Valley District, the Potomac District, and Aquia District, to be commanded respectively by Major-Generals Jackson, Beauregard, and Holmes." In November, Jackson's force was about 10,000 men. "His only movement of note in the winter of 1861-62 was an expedition at the end of December to Bath and Romney, to destroy the Baltimore and Ohio railroad and a dam or two near Hancock, on the Chesapeake and Ohio canal. . . . In March Johnston withdrew from Manassas, and General McClellan collected his army of more than 100,000 men on the Peninsula. . . . Jackson's little army in the Valley had been greatly reduced during the winter from various causes, so that at the beginning of March he did not have over 5,000 men of all arms available for the defense of his district, which began to swarm with enemies all around its borders, aggregating more than ten times his own strength. Having retired up the Valley, he learned that the enemy had begun to withdraw and send troops to the east of the mountains to cooperate with McClellan. This he resolved to stop by an aggressive demonstration against Winchester, occupied by General Shields, of the Federal army, with a division of 8,000 to 10,000 men. A little after the middle of March, Jackson concentrated what troops he could, and on the 23d he occupied a ridge at the hamlet of Kernstown, four miles south of Winchester. Shields promptly attacked him, and a severe engagement of several hours ensued, ending in Jackson's repulse about dark, followed by an orderly retreat up the Valley to near Swift Run Gap in Rockingham county. The pursuit was not vigorous nor persistent. Although Jackson retired before superior numbers, he had given a taste of his fighting qualities that stopped the withdrawal of the enemy's troops from the Valley. The result was so pleasing to the Rich-

mond government and General Johnston that it was decided to reinforce Jackson by sending General Ewell's division to him at Swift Run Gap, which reached him about the 1st of May."—J. D. Imboden, *Stonewall Jackson in the Shenandoah (Battles and leaders of the Civil War, v. 2, pp. 282-285)*.—"The losses at Kernstown were: Union, 118 killed, 450 wounded, twenty-two missing=590; Confederate, eighty killed, 375 wounded, 263 missing=718."—N. Kimball, *Fighting Jackson at Kernstown (Battles and leaders of the Civil War, v. 2, p. 307, footnote)*.

1861-1863.—President Lincoln's suspension of the writ of habeas corpus.—On April 27, 1861, President Lincoln issued the following order "To the Commanding General, Army of the United States"—at that time, General Scott: "You are engaged in suppressing an insurrection against the laws of the United States. If at any point on or in the vicinity of any military line which is now or which shall be used between the city of Philadelphia and the city of Washington you find resistance which renders it necessary to suspend the writ of habeas corpus for the public safety, you personally, or through the officer in command at the point at which resistance occurs, are authorized to suspend that writ." On July 2 another order was issued in exactly the same language, except that it gave authority to suspend the writ at "any point on or in the vicinity of any military line . . . between the city of New York and the city of Washington." On October 14 a third order to General Scott declared: "The military line of the United States for the suppression of the insurrection may be extended so far as Bangor, Maine. You and any officer acting under your authority are hereby authorized to suspend the writ of habeas corpus in any place between that place and the city of Washington." On December 2 a specific order to General Halleck, commanding in the department of Missouri, authorized the suspension of the writ within the limits of his command; and a similar order, long previously, had specially empowered the commander of the forces of the United States on the coast of Florida to do the same. On September 24, 1862, a general proclamation by the president subjected to martial law "all rebels and insurgents, their aiders and abettors within the United States, and all persons discouraging volunteer enlistments, resisting militia drafts, or guilty of any disloyal practice affording aid and comfort to rebels against the authority of the United States"; and suspending the writ of habeas corpus "in respect to all persons arrested, or who are now, or hereafter during the rebellion shall be, imprisoned in any fort, camp, arsenal, military prison, or other place of confinement, by any military authority, or by the sentence of any court martial or military commission." On March 3, 1863, the authority of the president to suspend habeas corpus (which some thought questionable) was confirmed by act of Congress; and on September 15 in that year another general proclamation was issued, referring to the act and declaring a suspension of the writ "throughout the United States, in the cases where, by the authority of the President of the United States, military, naval, and civil officers of the United States, or any of them, hold persons under their command, or in their custody, either as prisoners of war, spies, or aiders or abettors of the enemy, or officers, soldiers, or seamen enrolled or drafted or mustered or

enlisted in, or belonging to, the land or naval forces of the United States, or as deserters therefrom, or otherwise amenable to military law, or the rules and articles of war, or the rules or regulations prescribed for the military or naval service by authority of the President of the United States; or for resisting a draft, or for any other offense against the military or naval service."—Abraham Lincoln, *Complete works*, v. 2, pp. 38, 45, 54, 85, 93, 239, 406.—"Whether it is the President or Congress that has power under the constitution to suspend the privilege of the writ of habeas corpus was a burning question during the civil war. . . . The case of John Merryman . . . was the first to come up for judicial inter-pretation. Merryman lived near Baltimore, and appears to have been suspected of being captain of a secession troop, of having assisted in destroying railroads and bridges for the purpose of preventing troops from reaching Washington, and of obstructing the United States mail. By order of General Keim of Pennsylvania he was arrested at night in his own house, and taken to Fort McHenry at that time in command of General George Cadwallader. Taney, who was then chief justice of the United States, granted a habeas corpus, but Cadwallader refused to obey it, saying that the privilege had been suspended by the President. On the return of the writ, the Chief Justice filed an opinion denying that the President had any power to suspend habeas corpus and affirming that such power rested with Congress alone. Lincoln continued to arrest and imprison without any regard to this opinion, and indeed was advised by his Attorney-General that he was not bound to notice it. . . . The writ of habeas corpus was . . . not suspended by Congress until the rebellion was half over. In other words, Lincoln suspended it for two years of his own accord and without authority from any one; for two years he made arrests without warrants and held men in prison as long as he pleased. . . . There are few things in American history more worthy of discussion than the power exercised by Lincoln in those two years. It was absolute and arbitrary and, if unauthorized, its exercise was a tremendous violation of the constitution. Whether it was justifiable and necessary is another matter. If it was unconstitutional and yet necessary in order to save the Union, it shows that the constitution is defective in not allowing the government the proper means of protecting itself. That Lincoln used this power with discretion and forbearance there is no doubt. He was the most humane man that ever wielded such authority. He had no taste for tyranny, and he knew the temper of the American people. But, nevertheless, injustice was sometimes done. His subordinates had not always their master's nature."—S. G. Fisher, *Suspension of habeas corpus during the War of the Rebellion (Political Science Quarterly, Sept., 1888)*.—The view which President Lincoln himself entertained, and under which he assumed and exercised authority to suspend the writ of habeas corpus, was submitted to Congress in his first message, when it convened in special session, July 4, 1861. He said: "Soon after the first call for militia, it was considered a duty to authorize the commanding general in proper cases, according to his discretion, to suspend the privilege of the writ of habeas corpus, or, in other words, to arrest and detain, without resort to the ordinary processes and forms of law, such individuals as he might deem dangerous to the public safety. This

authority has purposely been exercised but very sparingly. Nevertheless, the legality and propriety of what has been done under it are questioned, and the attention of the country has been called to the proposition that one who has sworn to 'take care that the laws be faithfully executed' should not himself violate them. Of course some consideration was given to the questions of power and propriety before this matter was acted upon. The whole of the laws which were required to be faithfully executed were being resisted and failing of execution in nearly one third of the States. Must they be allowed to finally fail of execution, even had it been perfectly clear that by the use of the means necessary to their execution some single law, made in such extreme tenderness of the citizen's liberty that, practically, it relieves more of the guilty than of the innocent, should to a very limited extent be violated? To state the question more directly, are all the laws but one to go unexecuted, and the government itself go to pieces lest that one be violated? Even in such a case, would not the official oath be broken if the government should be overthrown, when it was believed that disregarding the single law would tend to preserve it? But it was not believed that this question was presented. It was not believed that any law was violated. The provision of the Constitution that 'the privilege of the writ of habeas corpus shall not be suspended, unless when, in cases of rebellion or invasion, the public safety may require it,' is equivalent to a provision—is a provision—that such privilege may be suspended when, in case of rebellion or invasion, the public safety does require it. It was decided that we have a case of rebellion, and that the public safety does require the qualified suspension of the privilege of the writ which was authorized to be made. Now it is insisted that Congress, and not the executive, is vested with this power. But the Constitution itself is silent as to which or who is to exercise the power; and as the provision was plainly made for a dangerous emergency, it cannot be believed the framers of the instrument intended that in every case the danger should run its course until Congress could be called together, the very assembling of which might be prevented, as was intended in this case, by the rebellion. . . . Whether there shall be any legislation upon the subject, and if any, what, is submitted entirely to the better judgment of Congress."—Abraham Lincoln, *Complete works*, v. 2, pp. 59-60.—Congress gave tacit approval to this view of the president's powers by passing no act on the subject until nearly two years afterwards, as shown above.

1861-1864.—Effect of war on the constitution.—Growth of presidential powers.—"The relative force of Federal and State action, when in conflict, was a question that had been sedulously avoided. . . . The Congress and . . . [Buchanan's] Administration came to an end on the fourth of March. How did the constitutional question stand then? Had any advance been made toward an answer to the vexed question of sovereignty? . . . An emasculated national sovereignty had been proclaimed by the Executive; a vigorous State sovereignty had been actively asserted by seven of the commonwealths of the Union; and no position whatever had been assumed by the Federal Legislature. . . . Mr. Lincoln's inaugural address was extremely moderate in tone. His policy, as outlined, was not distinguishable from that of

his predecessor. The constitutional perpetuity of the Union was his central proposition, and from this were deduced the nullity of all State ordinances of secession, and the necessity of enforcing the laws in all the States. But while, like Buchanan, Lincoln announced his intention of preserving the *status quo* till time should sooth excited passions, the right to 'coerce a State' was not even alluded to. . . . Under the impulse of actual hostilities, however, the contempt of the President for the State-sovereignty doctrine assumed a decidedly aggressive form. His message to Congress at the opening of a special session on July 4th contained a severe denunciation of the dogma. The time had come for assuming a position that should at least be clear and intelligible at the present moment; and the President accordingly planted himself unequivocally on the theory of national sovereignty. As his definition of 'sovereignty' he accepted this—a political community without a political superior. 'Tested by this,' he said, 'no one of our States, except Texas, ever was a sovereignty. And even Texas gave up the character on coming into the Union. . . . The States have their *status* in the Union, and they have no other legal *status*.' . . . The question presented to the Administration by the commencement of hostilities was, 'Has this Government the power to preserve its authority over all its territory?' The answer of the old school of constitutional lawyers, was 'Yes, so far as is conferred by the Constitution and the laws'; but the answer we derive from the actual conduct of the war is, 'Yes,' without qualification. Immediately upon the fall of Sumter, the assertion of the new doctrine began. Before the assembling of Congress, July 4th, six distinct proclamations were issued by the Presidents calling into play forces deemed necessary to the preservation of the nation. The calling out of the militia was based upon the law of 1795. Buchanan had declined to consider this law as applicable to the present circumstances. His delicacy, however, was a phase of his scruples about coercing a State, scruples entirely foreign to his successor. . . . It was no extraordinary stretch of construction for Lincoln to act in accordance with the plain terms of the statute. His proclamation avoided any reference to the State governments. And the theory of mere individual uprising was rounded out by including the governors of the seceded States in his call for troops. Four days after the call for volunteers, the President's purpose of ignoring the connection of the State governments with the rebellion was put to a severe test in his proclamation of a blockade of the ports of the cotton States. He was obliged to speak of 'the pretended authority' of those States, but only to declare that persons under such authority molesting United States' vessels would be treated as pirates. This assumption by the Executive of the right to establish a blockade was rather startling to conservative minds. It seemed like a usurpation of the legislative power to declare war. For blockade is an incident of actual warfare, and involves the recognition of belligerent rights. The constitutionality of the President's action, however, was affirmed by the Supreme Court in the Prize Cases, and hence, Congress having acquiesced, it has the sanction of all three departments of the Government. Accordingly, the President, as commander-in-chief, can determine, without reference to Congress, the time when an insurrection has attained the proportions of a war, with all the consequences to persons

and property that such a decision entails. . . . A further action of the President previous to the meeting of Congress was the call for the enlistment of forty thousand volunteers, and the increase of the regular army by over twenty thousand men, and the navy by eighteen thousand. With reference to these measures, Mr. Lincoln himself resigned all claim to constitutionality. 'Whether strictly legal or not,' he says, 'they were ventured upon under what appeared to be a popular demand and a public necessity, trusting then as now that Congress would readily ratify them. It is believed that nothing has been done beyond the constitutional competency of Congress.' . . . The remaining subject dealt with in the President's proclamations, was the suspension of the writ of Habeas Corpus. . . . [See above: 1861-1863.] Justice Taney's opinion [on this subject] took strong ground against the constitutionality of the President's act. . . . But to have awaited the meeting and action of Congress in the present case might have been to sacrifice the Government. Lincoln therefore availed himself of the latitude of construction possible by the wording of the clause. Attorney-General Bates sustained the President in an elaborate opinion. . . . In the interval between April 12th and July 4th, 1861, a new principle thus appeared in the constitutional system of the United States, namely that of a temporary dictatorship. All the powers of government were virtually concentrated in a single department, and that the department whose energies were directed by the will of a single man. . . . At the outbreak of the insurrection, then, two distinct courses lay open for the Government to pursue. It could elect to repress the uprising by the civil power, through process of the courts, with the military arm as the marshal's *posse*. . . . The insurgents then would be subject to treatment like ordinary criminals. Or, on the other hand, the rebels could be recognized as belligerents and subdued by the exertion of military power alone. In the latter case, the insurgents would seem to be entitled to the treatment which public law secures to armed public enemies. But the question early arose, could not the Government follow both courses at the same time, and be guided in its dealings with the rebels by public law or by constitutional law, at its discretion? Could it not, for example, hang as traitors rebels taken in battle as prisoners of war? . . . [Such a penalty could not be enforced. There were too many Northern prisoners in Southern hands.] The course of the Administration in reference to the exchange of prisoners and other matters was dictated by the same reasoning. It was decided to secure all the advantages which flowed from the exercise of the war power by the Government, while not conceding belligerent rights to those against whom that power was employed. . . . The developments of the conflict led to the working out of a policy, which, without attributing official recognition to the Confederate Government, sanctioned the doctrine that, as regarded individuals in the insurrectionary districts, the United States Government had the rights of both sovereign and belligerent."—W. A. Dunning, *Constitution of the United States in Civil War and Reconstruction, 1860-1867*, pp. 7, 13, 15-16, 20-24, 28-20.

1861-1865.—**Commerce between North and South throughout the war.**—"For seven months after the confederacy had launched on its career as an independent power, no action had been taken by Congress or the President toward laying down a policy concerning commercial intercourse between the North and South in the Mississippi Valley. It is true that the secretary of the treasury, Chase, on May 2, 1861, issued a set of rules . . . which were designed to prevent munitions of war from reaching the confederacy; but they were feeble in their operation and in no way declared a general policy for the United States. On July 13, Congress acted by declaring that all commercial intercourse should cease with the insurrectionary regions whenever the President should by proclamation so order; but . . . [with the] proviso: 'That the President may in his discretion, license and permit commercial intercourse with any such part of said State or section . . . as he, in his discretion, may think most conducive to the public interest'—such intercourse to be carried out under rules laid down by the secretary of the treasury. With this clear mandate the President refrained from acting until August 16, when he issued a proclamation declaring all commercial intercourse with the insurrectionary regions at an end 'without the special license and permission of the President, through the Secretary of the Treasury.' . . . At no time during the four years of the war did the government settle down to a policy of absolute non-intercourse with the confederacy. . . . In 1863, the power to grant permits was restricted to special agents residing in the larger cities, and no permit could be allowed to run for a longer period than one month. . . . After the fall of Vicksburg and Port Hudson, the entire course of the Mississippi river was freed from obstructions and soon trade under certain restrictions was allowed through the whole river system. The most flagrant violation of the rules occurred daily. Colonel Lafayette C. Baker, chief of the national detective police, said, 'It seems incredible that in the midst of the most tragical scenes that war has ever created, the very arena of conflict should be the busy field of mercenary and lawless trade.' . . . The theoretical policy of complete non-intercourse by 1863 began to disintegrate gradually through treasury regulations until by the beginning of 1865 there was almost unrestricted trade and wild speculation. The entering wedge was the division of the occupied area into 'special agencies' which in turn were divided into numerous trade districts. Under presumably strict regulations private traders were allowed to set up trade stores, to take in a certain monthly allowance ostensibly for the civilian population, and to take out unlimited amounts. . . . Memphis was the center of a truly gigantic traffic directly with the confederacy. A federal army officer charged that 'Memphis has been of more value to the Southern Confederacy since it fell into Federal hands than Nassau.' . . . The federal government at no time ever had a well-balanced, unified policy regarding trade with the confederacy. There were too many departments trying to determine the proper relations and the method of their execution.

This led to a maze of rules which baffled the best minds in their solution, and made possible the rise of a most reprehensible trade of immense proportions. At no time did the trade regulations for the interior approach in effectiveness the naval blockade of southern ports. In effect, the United States alone was trading with a people whose commerce was shut off from all other foreign nations. There can be but little doubt that the confederacy did get immense amounts of war material through the lines; and that the military campaigns in the Mississippi valley were at times seriously involved in and hindered by trade with the confederates."—E. M. Coulter, *Commercial intercourse with the Confederacy in the Mississippi valley, 1861-1865* (*Mississippi Valley Historical Review*, Mar., 1919, pp. 379-380, 382-387, 395).

1862 (January-February: **Kentucky-Tennessee).**—**First breaking of the Confederate line.—Grant's capture of Fort Henry and Fort Donelson.**—"At the beginning of the new year the Union armies were over 660,000 strong, backed by a fleet of 212 vessels. McClellan lay quiet upon the Potomac all winter, drilling, organizing, disciplining the Army of the Potomac. In his front was Joe Johnston, with a much smaller force, pushing forward with equal energy the schooling of his soldiers. The Western generals were more active. Albert Sidney Johnston, perhaps the most promising Southern officer, was in command in the West, with headquarters at Bowling Green. Buell lay in Johnston's front, having superseded Sherman, whose 'crazy' suggestion that 250,000 men would be required for operations on the Western field had lost him the confidence of his superiors. . . . [In eastern Kentucky the] Confederate Humphrey Marshall had been creating more or less political trouble, and General Garfield was sent against him with some 2,000 men. Marshall somewhat outnumbered Garfield; but in a vigorous January campaign [beginning at Paintsville, January 7, and] culminating at Prestonburg [January 10], Garfield quite dispersed his forces, and drove him into the mountains."—T. A. Dodge, *Bird's-eye view of our Civil War*, ch. 6.—"At the beginning of the year 1862 the Confederates held the southern part of Kentucky, the line between the opposing forces passing through Mill Springs, Bowling Green, Fort Henry on the Tennessee, and Columbus on the Mississippi. To break this line and push it farther south, and if possible to rescue the Unionists of eastern Tennessee, was the first object of the Federal armies. Accordingly General W. H. Halleck, who now commanded in the West, sent General George H. Thomas with some ten thousand men to open a way. [Thomas met a force of about five or six thousand men under General F. K. Zollicoffer, who had retreated from his post in advance of Cumberland Gap, at the extreme right of the Confederate line. The two forces, which were about equal in strength, came into collision at Mill Springs, in central Kentucky, where Zollicoffer was killed early in the action, and the Confederate command devolved upon General George B. Crittenden.] A desperate battle ensued. The Confederates fought bravely during the day, but they were completely routed, and at night they fled toward Nashville. . . . [This battle, known variously as Mill Springs, Fishing Creek and Logan Cross Roads, was the first substantial

Union Victory in the West.] The way was now open to eastern Tennessee; but owing to the scarcity of provisions and the badness of the roads, the project was given up, and Thomas rejoined Buell. Kentucky was now occupied by three armies, with another at Cairo, Ill., hovering on its border and about to enter the state. General Albert Sidney Johnston, then reputed the ablest commander of the South, held an army at Bowling Green [which Thomas's advance had the effect of turning], and General Leonidas Polk, the Episcopal bishop of Louisiana, who was also a soldier and a graduate of West Point, commanded a force at Columbus. Opposed to these were a Union army at Louisville under General Don Carlos Buell and the army at Cairo under General U. S. Grant, . . . [who was supported by gun boats]. Western Kentucky is traversed by two parallel rivers that empty into the Ohio near together. . . . These two rivers, which were navigable for hundreds of miles, furnished the southern armies with invaluable means of transportation, and the Union commanders conceived the idea that the evacuation of Kentucky could best be forced by operating up these two rivers. General A. S. Johnston was now the commander of all the Confederate armies west of the mountains, except in the extreme South. He saw too late that while the Mississippi had been strongly guarded by heavy batteries—at Columbus, Island No. 10, Memphis, and Vicksburg—the two inland rivers had been neglected. Two small forts, Henry and Heman, on the Tennessee, were . . . quickly strengthened, and also a far more formidable one on the Cumberland—Fort Donelson. In order to protect Nashville, Johnston, at the beginning of February, made the fatal blunder of dividing his force of thirty thousand men, placing fourteen thousand in Kentucky to watch Buell and sending sixteen thousand to Fort Donelson.”—H. W. Elson, *History of the United States of America*, v. 4, pp. 160-163.—“Halleck's first task as commander of the Western armies was to penetrate the Confederate line of defense. This could be done by breaking its centre or by turning one of its flanks. The former appeared most feasible to Grant, and Commodore Foote, who commanded the naval forces. Under instructions from Halleck, seven of the gunboat flotilla, with Grant's 17,000 men in reserve, moved up the Tennessee river to attack Fort Henry and essay the value of gun-boats in amphibious warfare. Grant landed below the fort, and Foote then opened fire upon it. Tilghman, in command, foreseeing its capture, was shrewd enough to send off the bulk of his force to Fort Donelson. He himself made a mock defense with a handful of men, surrendering the fort after the garrison was well on its way. Without the twin citadel of Donelson [distant about eleven miles, southeastwardly, on the Cumberland river], however, Fort Henry was but a barren triumph, for no column could advance up the Tennessee river while this garrison threatened its flank. It was here that Grant earned his first laurels as a stanch soldier, by compelling, after a stubborn fight, the surrender of this second fortress with its entire garrison. Every effort had been made by Johnston to hold the place. He must here fight for the possession of Nashville. Fort Donelson was strongly fortified and garrisoned. Grant moved against it from Fort Henry with 15,000 men, 5,000 less than the enemy. The ground is difficult; the troops are green. But reinforcements and the fleet come to Grant's assistance. The fort is fully invested, under great difficulties from severity of weather

and the inexperience of the men. Happily there is not much ability in the defense. Floyd, the senior officer, determines to cut his way out. He falls heavily upon Grant's right, held by McClelland and backed by Wallace, thinking to thrust them aside from the river and to escape over the road so won. A stubborn resistance defeats this sortie, though but narrowly. A general assault is ordered, which effects a lodgment in the works. Divided responsibilities between Floyd, Buckner, and Pillow weaken the defense so as to operate a surrender. Our loss was 2,300. The Confederates captured were over 15,000 men.”—T. A. Dodge, *Bird's-eye view of our Civil War*, ch. 6.—The capture of Forts Henry and Donelson had split “the Confederate line of defense in two and rendered its further maintenance an utter impossibility. With the Tennessee and Cumberland rivers in Federal possession it was manifestly absurd to think of maintaining a line of defense which those rivers traversed. The success of Grant had completely ended all possibility of coöperation between the eastern and western wings of that defensive line. The forces west of the Tennessee and those east of that river must henceforth act independently and rather hopelessly, or else they must retire to a new line farther south upon which coöperation might be possible. It was decided to retire. Bowling Green was evacuated and the Federal General Buell instantly occupied it. A little later Nashville was evacuated by the Confederates in behalf of a less exposed position. It was at the same time determined to withdraw from Columbus all the forces assembled there except a garrison sufficient to work the guns, and to defend the point for a time with the aid of Commodore Hollins's gunboats in the Mississippi. The new line of defense adopted by the Confederates was the Memphis and Charleston railroad, running through southern Tennessee and northern Mississippi, Alabama, etc. This line presented no natural advantages of defense, but it covered the most vitally important railroad communications of the Confederacy. Furthermore it will be observed that this line of defense lies almost exactly midway between the Ohio River and the Gulf of Mexico. In other words, under Grant's energetic aggressiveness, the Federal control had been pushed from the Ohio river nearly half way to the gulf. The process of ‘splitting the Confederacy in two,’ was already well advanced at the beginning of the spring of 1862. . . . By making himself master of the two rivers he had completely destroyed the Confederate line and scheme of defense. He had completely cut off that part of the Confederate force which had its headquarters at Bowling Green from that part of it whose chief seat was at Columbus. So complete was this severance, . . . that General Albert Sydney Johnston sent General Beauregard at once to command the western force as a separate army with specific instructions to act upon his own judgment, bearing in mind that coöperation between the two forces was no longer possible.”—G. C. Eggleston, *History of the Confederate War*, v. 1, pp. 309-312.—“It was a great victory for the North, a blow from which the South never recovered. The Mississippi River as far as northern Mississippi was lost, together with the western half of the state of Tennessee. This disaster, together with the loss of Roanoke Island on the North Carolina coast, awakened the South from its fool's paradise. The people realized, with a sudden shock, that the war was only beginning, that the North, so far from conceding Southern independence, was about to put forth gigantic

efforts to crush secession. The passive defensive was crumbling everywhere: Europe made no move toward intervention. It was evident that the Confederacy must make a great and united effort if it would save itself."—H. J. Eckenrode, *Jefferson Davis, president of the South*, p. 167.

1862 (January-March: Missouri-Arkansas).—**Expulsion of Confederates from Missouri.—Battle of Pea Ridge.**—"After the battle of Wilson's Creek the preceding August, the operations in southern Missouri were disturbed on the one side by the removal of Frémont, and on the other by a dispute between the Confederate commanders, Price and McCulloch. At length General Samuel R. Curtis was put in command of the Union forces [numbering about 12,000] west of the Mississippi, and General Early Van Dorn of the Confederate forces [which under Price had retreated from Missouri]. The two armies met in northern Arkansas. The Confederate forces, though outnumbering the enemy, became divided during the battle, and this fact, together with the death of General McCulloch, gave the victory to the army of Curtis, whose ablest subordinate was General Sigel. [The rout of the Confederate army was complete.] Van Dorn then led his forces eastward to join the main Confederate army at Corinth, but did not reach that point till after the battle of Shiloh. The status of Missouri on the subject of secession was settled at Pea Ridge [or Elkhorn in the Ozark mountains]. No longer was there any fear that the state would join the Confederacy. The battle of Pea Ridge was conspicuous in one respect—it was the only important battle of the war in which Indians played a part. In this battle some thirty-five hundred Indians under General Albert Pike fought on the Confederate side; but their methods of warfare differed so greatly from those of the white men that the aid was little felt."—H. W. Elson, *History of the United States of America*, v. 4, pp. 173-174.—"Curtis had saved his army from surrender, and Missouri from another invasion, but at a terrible cost. He reported a loss of nearly fifteen hundred, and estimated the Confederate loss at a higher, though not definite, figure. Van Dorn reported his loss at eight hundred, and estimated the Federal loss at two thousand. . . . He also reported that he went into the battle with only fourteen thousand men, while he estimated the Federal force at about twenty thousand."—J. W. Burgess, *Civil War and the constitution, 1859-1865*, v. 1, p. 311.

ALSO IN: R. Johnson, *Short history of the War of Secession*, ch. 6.—W. Baxter, *Pea Ridge and Prairie Grove*.—O. J. Victor, *History of the Southern Rebellion*, v. 3, pp. 56-71.—*Official Records, series 1*, v. 8, pp. 189-330.

1862 (January-April: North Carolina).—**Burnside's expedition to Roanoke and capture of Newbern and Beaufort.**—"Early in January, the waters of North Carolina were invaded by a joint naval and military expedition sailing from Hampton Roads under commands of Flag-officer Goldsborough and General Burnside. The naval force, consisting of nineteen vessels with somewhat over fifty guns, being mostly of heavy calibre, were in waiting at Hatteras Inlet by January 28, 1862, and were joined by the army branch February 5th. On the morning of the 7th, this

fleet entered Croatan Sound and engaged in battle about noon. With the coming of darkness the battle ended. Troops were landed as Ashby's Harbor in the afternoon and night to the number of 10,000. On the morning of February 8th the Federal ships withheld their fire until the troops had attacked the fortifications. At the end of the engagement the Confederates retired. . . . [The command on the north of the island, 2,500 strong, was compelled to surrender]. In the naval battle at Elizabeth City, February 10th, the Confederate fleet was destroyed or captured by fourteen Federal gunboats which dashed impetuously upon it, . . . [and part of the town was burned]. Newbern, at the junction of Trent and Neuse Rivers, was taken March 13th [with guns and stores]. But the capture of Roanoke Island was a most serious loss to the Confederacy. It was the key to the rear defences of Norfolk; it permitted access to Albemarle and Currituck Sounds, to eight rivers and two railroads. It guarded more than four-fifths of Norfolk's supply of corn, pork, and forage. Its capture by the Federals cut off General Huger's command from all its most efficient transportation and endangered the very existence of the army, as well as the navy yard at Gosport, and threatened to cut off Norfolk from Richmond and both from railroad communication with the South Atlantic States. It lodged the enemy in a harbor safe from the storms of Hatteras, gave him a rendezvous and a large rich range of supplies, and the command of the seaboard from Oregon inlet to Cape Henry. [This expedition brought General Ambrose E. Burnside into the light]."—W. K. Garrett and R. A. Halley, *Civil War from a Southern standpoint*, pp. 318-319.—"Fort Macon, which commands the entrance of Beaufort Harbor, . . . was bombarded [on April 25] by three steamers and three shore batteries; the former, however, in the course of an hour and a half, were compelled to withdraw. But the shore batteries, continuing their attack, silenced the guns of the garrison, and, in the course of the afternoon compelled the surrender of the fort. In connection with this expedition some operations of minor importance occurred. . . . The chief result, however, was the closure of the ports and suppression of commerce. General Burnside's forces were eventually, for the most part withdrawn. They were taken to Alexandria, and joined the army of General Pope."—J. W. Draper, *History of the American Civil War*, v. 2, ch. 59.

1862 (February-April: Georgia-Florida).—**Siege and capture of Fort Pulaski.—Temporary occupation of Florida.—Discouragement of Unionists.**—The blockade of Fort Pulaski in Georgia may be dated from February 22. Preparations were then made on Tybee island to bombard it. Most of the work had to be done in the night. The work was carried on under the supervision of General Gillmore, who was in chief command, and on April 9 eleven batteries, containing an aggregate of thirty-six guns, were in readiness to open fire. General David Hunter, who had just succeeded General Sherman in command of the department, arrived at Tybee on the evening of April 8. At sunrise, on the morning of April 10, Hunter sent Lieutenant J. H. Wilson to the fort, with a summons to the commander of the garrison to surrender. The latter refused,

saying: "I am here to defend this fort, not to surrender it." At a few minutes after eight o'clock the batteries opened fire, and at the end of thirty hours the garrison surrendered. In reporting the capture, General Hunter wrote: "The whole armament of the fort . . . [has] fallen into our hands; also 360 prisoners, of whom the officers will be sent North by the first opportunity that offers. The result of this bombardment must cause, I am convinced, a change in the construction of fortifications as radical as that foreshadowed in naval architecture by the conflict between the Monitor and Merrimac. No works of stone or brick can resist the impact of rifled artillery of heavy caliber." "By this victory, won on the first anniversary of the fall of Fort Sumter [April 12], the port of Savannah was sealed against blockaderunners. The capture of Fort Jackson above, and of the city, would have been of little advantage to the Nationals then, for the forces necessary to hold them were needed in more important work farther down the coast. While Gillmore and Viele were besieging Fort Pulaski, Commodore Dupont and General Wright were making easy conquests on the coast of Florida." Fort Clinch, on Amelia island, Fernandina, Jacksonville, St. Augustine, and other places, were abandoned by the Confederates on the approach of the Federal forces. But these conquests proved rather unfortunate than otherwise. "At first, the hopes they inspired in the breasts of the Union people developed quite a widespread loyalty. A Union convention was called to assemble at Jacksonville on the 10th of April, to organize a loyal State Government, when, to the dismay of those engaged in the matter, General Wright prepared to withdraw his forces, two days before the time when the convention was to meet. . . . In consequence, . . . very little Union feeling was manifested in Florida during the remainder of the war."—B. J. Lossing, *Field book of the Civil War, v. 2, ch. 12.*

1862 (February-April: Tennessee).—Advance up river.—Battle of Shiloh, or Pittsburg Landing.—"By the end of February, 1862, Major-General Halleck commanded all the armies in the valley of the Mississippi, from his headquarters in St. Louis. These were, the Army of the Ohio, Major-General Buell, in Kentucky; the Army of the Tennessee, Major-General Grant, at Fords Henry and Donelson; the Army of the Mississippi, Major-General Pope; and that of General S. R. Curtis, in Southwest Missouri. He posted his chief of staff, General Cullum, at Cairo, and me [General Sherman] at Paducah, chiefly to expedite and facilitate the important operations then in progress up the Tennessee and Cumberland Rivers. . . . General Buell had also followed up the rebel army, which had retreated hastily from Bowling Green to and through Nashville. . . . On the 21st General Grant sent General Smith with his division to Clarksville, 50 miles above Donelson, toward Nashville, and on the 27th went himself to Nashville to meet and confer with General Buell, but returned to Donelson the next day." Orders sent by General Halleck to Grant did not reach the latter, and a supposed disobedience occurred which caused him to be hastily relieved from his command, which was transferred to General C. F. Smith, on March 4. "In the mean time several of the gunboats, under Captain Phelps, United States Navy, had gone up the Tennessee as far as Florence, and on their return had reported a strong Union feeling among the people along the river. On the 10th of March, having received

the necessary orders from General Halleck, I embarked my division at Paducah. . . . I . . . steamed up the Tennessee River, following the two gunboats, and, in passing Pittsburg Landing, was told by Captain Gwin that, on his former trip up the river, he had found a rebel regiment of cavalry posted there, and that it was the usual landing-place for the people about Corinth, distant 30 miles. I sent word back to General Smith that, if we were detained up the river, he ought to post some troops at Pittsburg Landing. We went on up the river cautiously, till we saw Eastport and Chickasaw, both of which were occupied by rebel batteries and a small rebel force of infantry. We then dropped back quietly to the mouth of Yellow River, a few miles below," where the troops were landed and an attempt made to push out and destroy the Memphis and Charleston railroad; but heavy rains had so swollen all the streams that the expedition was foiled and returned. "During the night of the 14th, we dropped down to Pittsburg Landing, where I found Hurlbut's division in boats. Leaving my command there, I steamed down to Savannah, and reported to General Smith in person, who saw in the flooded Tennessee the full truth of my report; and he then instructed me to disembark my own division, and that of General Hurlbut, at Pittsburg Landing; to take positions well back, and to leave room for his whole army; telling me that he would soon come up in person, and move out in force to make the lodgment on the railroad, contemplated by General Halleck's orders. . . . Within a few days, Prentiss's division arrived and camped on my left, and afterward McClelland's and W. H. L. Wallace's divisions, which formed a line to our rear. . . . General C. F. Smith remained back at Savannah, in chief command, and I was only responsible for my own division. . . . We were all conscious that the enemy was collecting at Corinth, but in what force we could not know, nor did we know what was going on behind us. On the 17th of March, General U. S. Grant was restored to the command of all the troops up the Tennessee River, by reason of General Smith's extreme illness, and because he had explained to General Halleck satisfactorily his conduct after Donelson; and he too made his headquarters at Savannah, but frequently visited our camps. . . . From about the 1st of April we were conscious that the rebel cavalry in our front was getting bolder and more saucy."—W. T. Sherman, *Memoirs, v. 1, ch. 10.*—"At Corinth, Mississippi, lay a Confederate force under General Beauregard. General Albert Sidney Johnston formed a plan to unite his force with that of Beauregard and attack Grant, with the hope of being able to crush him before the arrival of Buell. The union of the two Confederate armies was effected, and on the morning of April 3d they began their march against Grant. . . . On the afternoon of the 4th there was some sharp skirmishing within about six miles of the Union army. Yet Grant and Sherman did not seem to anticipate any attack. . . . On the morning of April 6th . . . Sherman and McClelland were forced back; Hurlbut, who with Prentiss and W. H. L. Wallace held so stubbornly the position called by the Confederates the 'Hornet's Nest,' was at last forced back to Pittsburg Landing; [W. H. L.] Wallace, after giving the order to his division to retire, fell mortally wounded; and still later Prentiss, whose command had been the first to feel the shock of the battle in the early morning . . . was forced

to surrender in person with about 2,200 officers and men. . . . The greater part of Grant's army had now been routed and driven entirely from the field . . . and the Union camps were in possession of the Confederates, with a rich spoil of artillery and military stores of every description. But General Albert Sidney Johnston had been killed, and Beauregard, thinking the victory complete, and that in the morning he could finish up what was left of Grant's army, stopped the fight."—J. T. Derry, *Story of the Confederate States*, pp. 158-161.—"On Sunday morning, the 6th, early, there was a good deal of picket-firing, and I . . . saw the rebel lines of battle in front coming down on us as far as the eye could reach. All my troops were in line of battle, ready, and the ground was favorable to us. . . . In a few minutes the battle of 'Shiloh' began with extreme fury, and lasted two days. . . . Personally I saw General Grant, who with his staff visited me about 10 A. M. of the 6th, when we were desperately engaged. . . . He came again just before dark, and described the last assault. . . . which he had repelled by a heavy battery collected under Colonel J. D. Webster and other officers, and he was convinced that the battle was over for that day. He ordered me to be ready to assume the offensive in the morning, saying that, as he had observed at Fort Donelson at the crisis of the battle, both sides seemed defeated, and whoever assumed the offensive was sure to win. General Grant also explained to me that General Buell had reached the bank of the Tennessee River opposite Pittsburg Landing, and was in the act of ferrying his troops across at the time he was speaking to me. About half an hour afterward General Buell himself rode up to where I was. . . . Buell said that Nelson's, McCook's and Crittenden's divisions of his army, containing 18,000 men, had arrived and could cross over in the night, and be ready for the next day's battle. I argued that with these reinforcements we could sweep the field. Buell seemed to mistrust us, and repeatedly said that he did not like the looks of things, especially about the boat-landing, and I really feared he would not cross over his army that night, lest he should become involved in our general disaster. . . . Buell did cross over that night, and the next day we assumed the offensive and swept the field, thus gaining the battle decisively. . . . [Beauregard] afterwards reported his entire loss as 10,699. Our aggregate loss, made up from official statements, shows 1,700 killed, 7,405 wounded, 3,022 prisoners, aggregate, 12,217, of which 2,167 were in Buell's army, leaving for that of Grant 10,050. . . . The battle of Shiloh, or Pittsburg Landing, was one of the most fiercely contested of the war. On the morning of April 6, 1862, the five divisions of McClelland, Prentiss, Hurlbut, W. H. L. Wallace, and Sherman, aggregated about 32,000 men. We had no intrenchments of any sort, on the theory that as soon as Buell arrived we would march to Corinth to attack the enemy. The rebel army, commanded by General Albert Sidney Johnston, was, according to their own reports and admissions 45,000 strong."—W. T. Sherman, *Memoirs*, v. 1, ch. 10.—"The results of the battle of Shiloh were not all military. Incorrect accounts were circulated throughout the North; those who had seen only what occurred at the rear misrepresented the actions at the front; others, who were in a single part of the field, attempted to give accurate descriptions of the whole, which they had no opportunities of knowing. General Buell

and some of his officers, arriving late and seeing only the fugitives at the Landing, thought and said that the entire army of the Tennessee was overwhelmed and disgraced; and for a long while the country was ignorant whether or not a great disaster had occurred. Rumors were industriously spread that Sherman had been surprised, that Prentiss was captured early in the morning, and in his shirt; that Grant was drunk, and that Buell was purposely dilatory. The country believed many of these rumors, and in the West especially, the outcry was fierce. The newspapers took up the theme; congressmen and politicians, some of them doubtless with pure intentions, and believing that they were seeking the best interests of the country, beset the President to relieve Grant from command, and the fame that arose from Donelson was obscured by the unmerited odium of Shiloh. Even Grant's military superiors seemed affected by the clamor. General Halleck, removing his headquarters to the field, superseded Grant, who was left second in command, it is true, but was quite ignored in all the operations of the next two months."—A. Badeau, *Military history of Ulysses S. Grant*, v. 1, pp. 99-100.

ALSO IN: U. S. Grant, *Personal memoirs*, ch. 23-25.—W. P. Johnston, *Life of General Albert Sidney Johnston*, ch. 30-35.—U. S. Grant, D. C. Buell, and others, *Shiloh (Battles and leaders of the Civil War)*, v. 1.—*Official Records*, series 1, v. 10.

1862 (March).—President Lincoln's proposal of compensated emancipation.—"As early as March, 1862, Lincoln proposed the gradual abolishment of all slavery with compensation for the slave-owners and Congress adopted his recommendation. This offer was made during the military successes of the North and though, as a practical measure, there was no expectation that any but Union border slave States would avail themselves of it, the offer was open to all."—J. F. Rhodes, *History of the Civil War*, pp. 150-151.—The proposal was made in a special message to Congress, in which the President said: "Fellow-citizens of the Senate and House of Representatives: I recommend the adoption of a joint resolution by your honorable bodies, which shall be substantially as follows: Resolved, That the United States ought to cooperate with any State which may adopt gradual abolishment of slavery, giving to such State pecuniary aid, to be used by such State, in its discretion, to compensate for the inconveniences, public and private, produced by such change of system. If the proposition contained in the resolution does not meet the approval of Congress and the country, there is the end; but if it does command such approval, I deem it of importance that the States and people immediately interested should be at once distinctly notified of the fact, so that they may begin to consider whether to accept or reject it. The Federal Government would find its highest interest in such a measure, as one of the most efficient means of self-preservation. The leaders of the existing insurrection entertain the hope that this government will ultimately be forced to acknowledge the independence of some part of the disaffected region, and that all the slave States north of such part will then say, 'The Union for which we have struggled being already gone, we now choose to go with the Southern section.' To deprive them of this hope substantially ends the rebellion; and the initiation of emancipation completely deprives them of it as to all the States initiating it. The point is not that all the States

tolerating slavery would very soon, if at all, initiate emancipation; but that while the offer is equally made to all, the more Northern shall, by such initiation, make it certain to the more Southern that in no event will the former ever join the latter in their proposed confederacy. I say 'initiation' because, in my judgment, gradual and not sudden emancipation is better for all. . . . In the annual message last December, I thought fit to say, 'The Union must be preserved, and hence all indispensable means must be employed.' I said this not hastily, but deliberately. War has been made, and continues to be, an indispensable means to this end. A practical re-acknowledgment of the national authority would render the war unnecessary, and it would at once cease. If, however, resistance continues, the war must also continue; and it is impossible to foresee all the incidents which may attend and all the

ate state might have received at least four hundred dollars apiece for all its slaves. The message was not cordially received . . . but the resolution asked for was passed. Thereupon Lincoln, March 10, convened at the White House the border-state delegates, and besought them to accept compensated emancipation. 'I do not speak of emancipation at once, but of a decision at once to emancipate gradually.' Thirty members of Congress listened to the appeal, but only a minority favored it. . . . Blaine declares that the border-state men were becoming doubtful of Union success, and preferred to keep their slaves, rather than part with them for bonds which would soon be valueless. . . . Lincoln encountered here one of his greatest defeats, and probably it was well. Compensation on so vast a scale could hardly have been made, and colonization has never been found practicable. . . . In March, also, Arnold, of Illinois,

NAVAL COMBAT BETWEEN THE "MONITOR" AND "MERRIMAC"

Hampton Roads, March 9, 1862

(Engraved by John C. McRae from the drawing by William Momberger)

ruin which may follow it. Such as may seem indispensable, or may obviously promise great efficiency, toward ending the struggle, must and will come. The proposition now made, though an offer only, I hope it may be esteemed no offense to ask whether the pecuniary consideration tendered would not be of more value to the States and private persons concerned than are the institution and property in it, in the present aspect of affairs? . . . In full view of my great responsibility to my God and to my country, I earnestly beg the attention of Congress and the people to the subject. Abraham Lincoln, Washington, March 6, 1862."—Abraham Lincoln, *Complete works*, v. 2, pp. 129-130.—Emancipation with compensation "Lincoln urged at length, would be a measure not only just, but economical. The cost of this war for less than eighty-seven days would pay for all the slaves in Delaware, Maryland, District of Columbia, Kentucky, and Missouri. By its terms the offer was made of general application. Had the South, in that time of Union successes, succumbed and embraced the offer, each Confeder-

introduced a bill making 'freedom national and slavery sectional,' which resulted in an act, June 19, prohibiting slavery 'in the present territories of the United States, and in any that shall hereafter be acquired.' This the president did not sign until its language had been modified to suit border-state sentiment."—J. K. Hosmer, *Appeal to arms, 1861-1863*, pp. 206-207.

ALSO IN: J. G. Blaine, *Twenty years of Congress*, v. 1, p. 447.—H. Wilson, *History of the rise and fall of the slave power in America*, v. 3, ch. 23.—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 5, ch. 12.

1862 (March).—Battle of the *Monitor* and the *Merrimack*.—"As early as May 8, 1861, the Confederate Secretary of the Navy wrote, 'I regard the possession of an iron-armored ship as a matter of the first necessity;' and in July, he gave an order to raise the steam frigate *Merrimack* (one of the ships partially burned and sunk when the Gosport navy-yard was destroyed) and convert her into an ironclad; this was accomplished as rapidly as could be expected under the imperfect

manufacturing and mechanical conditions in the South. By an act of August 3, 1861, the United States Congress constituted a naval board; four days later the Navy Department advertised for plans and offers of iron-clad steamboats 'of light draught suitable to navigate the shallow rivers and harbors of the Confederate States.' John Ericsson submitted a plan which was rejected but, on the persuasion of a friend, he went to Washington and demonstrated 'to the entire satisfaction of the board' that his 'design was thoroughly practical and based on sound theory.' His proposal was accepted and Secretary Welles told him to begin the construction forthwith without awaiting the execution of the formal contract, inasmuch as the knowledge of the progress on the *Merrimac* had impressed the naval people with the necessity for speed [and with the danger of having the blockade of Norfolk broken]. Ericsson's ironclad was the *Monitor*; her keel was laid on October 25, 1861; she was launched on January 30, 1862, and on March 6 left New York for Fort Monroe."—J. F. Rhodes, *History of the Civil War*, pp. 111-112.—"The design provided for a hull not more than 2 ft. above the water, and with a flat bottom, that the draught might not exceed 10 ft. The sides, to a short distance below the water line, were protected with 4-in. plates. In the centre of the deck was built a circular turret, revolving on a central spindle, and protected with 8 in. of iron. Inside the turret were mounted two 11-in. smooth bore guns, pointing through port holes. They could thus fire in any direction without turning the vessel, an obvious advantage not only on the open sea but especially in narrow waters, for which she was more intended. Such was the famous 'Monitor,' a name given by Ericsson to his creation to admonish the leaders of the Southern Rebellion, and to be also a monitor to the Lords of the Admiralty in England, suggesting to them doubts as to the propriety of their building four broadside ironclads at three and a half million dollars each."—S. Eardley-Wilmot, *Development of navies*, ch. 4.—"The Confederate ironclad was completed shortly before the *Monitor*. Her arrival in Hampton Roads was immediately followed by her destruction of the *Congress*, a frigate of fifty guns, and the *Cumberland*, a sloop of twenty-four guns. The Union [blockading] fleet was at her mercy. As the *Merrimac* drew twenty-two feet she returned to Sewell's Point, just at evening, her officers not venturing to make the channel on a falling tide; they planned to return next morning and destroy the remainder of the fleet, including the *Minnesota* and several powerful men of war. News of the disaster alarmed Lincoln and his Cabinet; the Union navy was powerless before the *Merrimac*; she could enter and bombard every Northern port at her pleasure. Amidst the anxiety the *Monitor*, which had made the voyage down from New York in bad weather, steamed into Hampton Roads toward evening of the 8th and took a position from which she could defend the *Minnesota*. The *Merrimac* returned to the attack, early on the morning of the 9th: the *Monitor* interposed and began firing. The two iron-clads then joined battle. Save a slight indentation of the *Merrimac's* plates, she received no damage, but she was leaking; the *Monitor* was uninjured; a few men on the *Merrimac* were wounded by the concussion, and Lieutenant John L. Worden, commander of the *Monitor*, was blinded by a Confederate shot which struck the *Monitor's* sight-hole, directly. This injury to her commander put her out of

action for a few minutes, and the *Merrimac's* commander, Buchanan, interpreting the cessation of the firing as a sign of defeat, and fearing lest his ship might sink, she was leaking so badly, ran her ashore. The *Monitor* had saved more than the Union fleet; she had demonstrated that the *Merrimac* and vessels like her could be met on equal terms. More than this, the conflict, the first between iron-clads, sounded the knell of wooden ships of war; yet, at the time of the encounter, the world did not grasp the significance of it all. A fleet of monitors was immediately constructed and the blockade of Southern ports became more complete as the war progressed."—F. N. Thorpe, *Civil War: A national view (History of North America, pp. 262-263)*.—On the evacuation of Norfolk by the Confederates, in May, 1862, the *Merrimac* was destroyed. The following December the *Monitor* went down in a storm at sea while on her way to Charleston, and only a few of her crew were saved.

1862 (March).—Amendment of the military code.—Officers forbidden to surrender fugitive slaves.—"As the formal orders of the government regarding the treatment of slaves who sought refuge near the armies were not always executed, Congress determined to give them a legal sanction; and on the 25th of February and the 13th of March both the Senate and the House of Representatives introduced a new article in the military code, prohibiting officers, at the risk of dismissal, from interfering to restore fugitive slaves to their masters. Notwithstanding the powers with which the government was thus armed, great difficulty was experienced in applying this law in those regiments whose commanders openly professed their sympathies in favor of slavery."—Comte de Paris, *History of the Civil War in America, v. 2, p. 733*.

1862 (March).—Results of the first year of the war.—"The first year of the Civil War had passed. The firing on the *Star of the West*, and on Fort Sumter, the attack on the Northern regiments by the mob in Baltimore; the long delay in protecting the capitol; the retirement of General Scott and the succession of General McClellan, and the wearisome waiting for McClellan to attack the Confederacy were anxious events of the early part of the year. In the West the Confederacy had been forced southward: Forts Henry and Donelson taken; the regeneration of Missouri; the partial regeneration of Arkansas; Kentucky and Tennessee quite cleared of Confederate armies; Island No. 10 at the North and New Orleans at the South taken; McClellan with an army of more than 100,000 well drilled troops approaching Richmond; Washington secure; and the great Army of the West, directed by Halleck, converging upon Corinth. The North was rejoicing; the South, desponding. And Congress had made all Federal soil free soil and had begun the process of emancipation, by the confiscation act, in the Confederate States themselves. And last of all, the national government offered to compensate

slave owners who would free their slaves. The North was trying to convince itself that the war would soon be over and Secretary Stanton had issued a general order to stop recruiting. Lincoln had the confidence of the North as never before: a thousand acts of wisdom and kindness endeared him to the plain people; and out in the West, Lincoln had found a man, who also came from Illinois—who was a general and who would fight.”—F. N. Thorpe, *Civil War: A national view (History of North America, v. 15, pp. 267-268)*.—McClellan was still preparing to move against Richmond.

1862 (March-April: On the Mississippi).—New Madrid and Island Number Ten.—On the surrender of Fort Donelson to General Grant, Columbus, on the Mississippi, was hastily abandoned by the Confederates, who fell back to Island Number Ten, thirty miles below, where strong works had been erected. “At the very moment when Grant and Buell were winning the costly victory around Shiloh Church, events were taking place a hundred and fifty miles to the northwest on the line of the Mississippi of a far more satisfactory character to the Federal arms. After the victory at Donelson and the evacuation of Columbus, Halleck had ordered General John Pope to proceed to Cairo, and organize an expedition against the Confederate forces at New Madrid and Island Number Ten, to which places, . . . about one-half of the Confederates from Columbus had retired. On the 21st of February, Pope went from Cairo up the Mississippi to Commerce on the Missouri bank, having decided that it was best to assemble his land force for the attack on New Madrid there, and march thence from that point. By the end of the month he had collected an army of twenty thousand men, and had set his column in motion for the march through the dismal Mingo swamp. . . . In five days it was accomplished, and on the 3rd of March the entire force deployed in front of New Madrid [which was evacuated by the Confederates on March 7th].” —J. W. Burgess, *Civil War and the constitution, 1859-1865, v. 1, p. 313*.—“Flag-officer Foote was in command of the river squadron. After capturing New Madrid, Missouri, on the opposite shore, a terrible bombardment was opened . . . [on Island Number Ten] with little effect. Next they cut a canal twelve miles long across the peninsula made by the bend of the river, so as to get the transports below the enemy’s works, and forced the surrender of the island on the 7th of April, with its whole force and military stores. This loosened the grasp of the Confederacy on the Mississippi from Cairo to Memphis.”—H. W. Elson, *History of the United States of America, v. 4, p. 173*.—“There is no question that this bloodless triumph was planned and executed with remarkable ability. It stood out in bold contrast with the bloody barren victory which was at the same time being won at Pittsburg Landing [Shiloh]. . . . It must not, however, be forgotten that except for the repulse of the Confederates at Pittsburg Landing all that had been won by the victories at Mill Springs and Fort Donelson would have been lost again, and perhaps also, all that had been won at Pea Ridge and Island Number Ten. Had the Confederates been successful at Shiloh, they would probably have been able to reoccupy Tennessee and Arkansas, and Southern Kentucky and Missouri. As it was, the re-establishment of the Federal Supremacy over these four important Commonwealths was made secure and substantially permanent by this great, though costly and appar-

ently indecisive, victory. . . . The campaign of the spring of 1862 in the departments west of the Alleghanies had thus been highly successful to the Federals, and had brought to the front the men who were destined to play the chief rôles in the future conduct of the war, Halleck, Grant, and Sherman.”—J. W. Burgess, *Civil War and the constitution, 1859-1865, v. 1, pp. 317, 320*.—“In the years since 1862, Island Number 10 . . . has disappeared. The river, constantly wearing at its upper end, has little by little swept away the whole. . . . On the other shore a new Number Ten has risen.”—A. T. Mahan, *Navy in the Civil War: The gulf and inland waters, ch. 2*.

Also in: J. D. Champlin, Jr., *Young folks history of the War for the Union, ch. 16*.

1862 (March-May: Virginia).—Peninsular campaign.—McClellan before Yorktown.—“McClellan, who had failed to take advantage of the demoralization in Richmond after the fall of Donelson, was further delayed by the performance of the *Merrimac*, but, on the assurance that the Navy Department would hold the iron-clad in check by the *Monitor* and other war vessels, he proceeded to the execution of his plan, a plan over which he and the president had differed from the first. The president desired the advance to be made directly over land, while McClellan proposed to go by water, to Fort Monroe and advance on Richmond up the peninsula. . . . [Lincoln yielded, but lacking sufficient confidence in McClellan to give him supreme authority, the president relieved him of the command of all military departments except the Potomac (March 11) and directed the organization of the army into four corps, naming the corps commanders himself. Through a misunderstanding with McClellan as to the force necessary to cover Washington, he withheld from him McDowell’s corps of 35,000 men in order to insure the safety of the capital. He had previously detached from the army of the Potomac a division to 10,000 and sent it to Frémont who had, owing to the pressure of the radicals upon Lincoln, been unfortunately entrusted with a command in the Shenandoah mountains.”—J. F. Rhodes, *History of the Civil War, 1861-1865, pp. 124-125*.—“When Manassas had been abandoned by the enemy [see above: 1861-1862 (December-March: Virginia)] and he had withdrawn behind the Rapidan, . . . the enemy was . . . in position to reach Richmond before we could do so. The alternative remained of making Fort Monroe and its vicinity the base of operations. The plan first adopted was to commence the movement with the First Corps as a unit, to land north of Gloucester and move thence on West Point; or, should circumstances render it advisable, to land a little below Yorktown to turn the defenses between that place and Fort Monroe. . . . As transports arrived very slowly, especially those for horses, and the great impatience of the Government grew apace, it became necessary to embark divisions as fast as vessels arrived, and I decided to land them at Fort Monroe, holding the First Corps to the last, still intending to move it in mass to turn Gloucester. On the 17th of March the leading division embarked at Alexandria. The campaign was undertaken with the intention of taking some 145,000 troops, to be increased by a division of 10,000 drawn from the troops in the vicinity of Fort Monroe. . . . On the 12th of March I learned that there had appeared in the daily papers the order relieving me from the general command of all the armies and confining my

authority to the Department of the Potomac. I had received no previous intimation of the intention of the Government in this respect. . . . On my arrival at Fort Monroe on the 2d of April, I found five divisions of infantry, Sykes's brigade of regulars, two regiments of cavalry, and a portion of the reserve artillery disembarked. Another cavalry regiment and a part of a fourth had arrived, but were still on shipboard; comparatively few wagons had come. . . . The best information obtainable represented the Confederate troops around Yorktown as numbering at least 15,000, with about an equal force at Norfolk; and it was clear that the army lately at Manassas, now mostly near Gordonsville, was in position to be thrown promptly to the Peninsula. . . . On my arrival at Fort Monroe I learned, in an interview with Flag-officer Goldsborough, that he could not protect the James as a line of supply, and that he could furnish no vessels to take an active part in the reduction of the batteries at York and Gloucester or to run by and gain their rear. He could only aid in the final attack after our land batteries had essentially silenced their fire. I thus found myself with 53,000 men in condition to move, faced by the conditions of the problem just stated. Information was received that Yorktown was already being reinforced from Norfolk, and it was apprehended that the main Confederate army would promptly follow the same course. I therefore determined to move at once with the force in hand, and endeavor to seize a point—near the Halfway House—between Yorktown and Williamsburg, where the Peninsula is reduced to a narrow neck, and thus cut off the retreat of the Yorktown garrison and prevent the arrival of reinforcements. The advance commenced on the morning of the 4th of April, and was arranged to turn successively the intrenchments on the roads; the result being that, on the afternoon of the 5th, the Third Corps was engaged with the enemy's outposts in front of Yorktown and under the artillery fire of the place. The Fourth Corps came upon Lee's Mills and found it covered by the unfordable line of the Warwick, and reported the position so strong as to render it impossible to execute its orders to assault. Thus all things were brought to a stand-still, and the intended movement on the Halfway House could not be carried out. Just at this moment came a telegram, dated the 4th, informing me that the First Corps [McDowell's] was withdrawn from my command. Thus, when too deeply committed to recede, I found that another reduction of about 43,000 . . . diminished my paper force to 92,000, instead of the 155,000 on which the plans of the campaign had been founded, . . . which reduced the numbers actually available for battle to some 67,000 or 68,000. . . . In our front was an intrenched line, apparently too strong for assault, and which I had now no means of turning, either by land or water. . . . Whatever may have been said afterward, no one at the time—so far as my knowledge extended—thought an assault practicable without certain preliminary siege operations. . . . We were thus obliged to resort to siege operations in order to silence the enemy's artillery fire, and open the way to an assault. All the batteries would have been ready to open fire on the 5th, or, at latest, on the morning of the 6th of May; . . . but during the night of the 3d and 4th of May the enemy evacuated his positions. . . . Meanwhile, on the 22d of April, Franklin's division of McDowell's corps had joined me by

water, in consequence of my urgent calls for reinforcements. . . . [and, May 7th] disembarked near West Point and took up a suitable position to hold its own and cover the landing of reinforcements."—G. B. McClellan, *Peninsular campaign (Battles and leaders, v. 2, pp. 160-187)*. —General Joseph E. Johnston, who assumed command of the Confederate forces on the Peninsula, April 17, says in his "Narrative": "I went to the Peninsula as soon as possible, reaching General Magruder's headquarters early in the morning. . . . That officer had estimated the importance of at least delaying the invaders until an army capable of coping with them could be formed; and opposed them with about a tenth of their number, on a line of which Yorktown, intrenched, made the left flank. This boldness imposed upon the Federal general, and made him halt to besiege instead of assailing the Confederate position. This resolute and judicious course on the part of General Magruder was of incalculable value. It saved Richmond, and gave the Confederate Government time to swell that officer's handful to an army. . . . The arrival of Smith's and Longstreet's divisions increased the army on the Peninsula to about 53,000 men, including 3,000 sick. . . . I could see no other object in holding the position than that of delaying the enemy's progress, to gain time."—J. E. Johnston, *Narrative of military operations, ch. 4-5*.

ALSO IN: J. C. Palfrey, *Siege of Yorktown (Massachusetts Military Historical Society Papers, v. 1, pp. 31-92)*.—Comte de Paris, *History of the Civil War in America, v. 2, bk. 1, ch. 1*.

1862 (March-June).—Appointment of military governors in Tennessee, North Carolina, and Louisiana.—"By the Union victories in the spring of 1862 very considerable areas of territory in States in rebellion came under the control and occupation of the Union armies. . . . The sudden change from Confederate to Federal authority involved everywhere either a serious derangement or total cessation of the ordinary administration of local civil law, and the displacement from the occupied territory of State governments and State officials who claimed to be exercising functions under ordinances of secession, and yielding obedience to the self-styled Confederate States. A similar displacement had occurred in Virginia and in Missouri during the year 1861, but in those States prompt remedies were available," by means of popular movements, through delegated conventions, which . . . reinstated loyal state governments in operation. The courses pursued in Virginia and Missouri were not practicable, however, in other cases, and "a substitute was found in the appointment of military governors to represent and exert such State and local authority as the anomalous conditions made practicable, and as the supreme military necessities might allow. The first of these appointments occurred in Tennessee. Nashville, the capital, having been evacuated about February 23, 1862, President Lincoln nominated, and the Senate confirmed, Andrew Johnson (March 4, 1862) as military governor with the rank of brigadier-general. . . . Conforming to this precedent, Mr. Lincoln, through the Secretary of War, appointed Edward Stanley military governor of North Carolina, 'with authority to exercise and perform, within the limits of that State, all and singular the powers, duties and functions pertaining to the office of military governor (including the power to establish all necessary offices and tribunals, and suspend the writ of habeas corpus) during the pleas-

ure of the President, or until the loyal inhabitants of that State shall organize a civil government in conformity with the Constitution of the United States.' . . . In like manner, soon after news was received of the successes in the Gulf, Colonel G. F. Shepley (of the 12th Maine Infantry) of Butler's army was appointed military governor of Louisiana, this selection being made because General Butler had already designated him to act as mayor of the city of New Orleans, and it was thought best to combine both functions in the same individual."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 6, ch. 16.

1862 (April: On the Mississippi).—Farragut's passage of the lower forts and capture of New Orleans.—"On the Gulf side, the retention of Fort Pickens by Union forces from the beginning had put Pensacola harbor under Federal control. The blockade, at first deemed impracticable, within a year of its establishment was throttling the

ADMIRAL FARRAGUT

foreign commerce which was vital to the Confederacy. On the Atlantic scarcely any important ports were left except Charleston and Wilmington; and before the thresholds of these places lay, night and day, the fierce and watchful wardogs of the Union. Nevertheless, up to April, 1862, the Gulf ports of Mobile, New Orleans, Galveston, and Matagorda still remained to the Confederacy. How long could these maintain themselves? This swift and easy repossession of the southern coast-line by the Union, however important, lacked the wholesale excitement of great and bloody battles and was a game little appreciated. But in the midst of it came an incident dramatic and startling in the highest degree, its hero being a naval officer, Davis Glasgow Farragut."—J. K. Hosmer, *Appeal to arms, 1861-1863*, p. 114.—To "four Union victories in the west within a few months (Donelson, Pea Ridge, Shiloh, and Island Number Ten,—five, if we include that of Thomas at Mill Springs) another must be added, the most important of them all, the opening of the mouth of the Mississippi and the capture of the greatest

seaport of the South. . . . From the spring of 1861 there had been a few Federal vessels along the gulf coast for the purpose of enforcing the blockade; now an attempt was to be made to get control of the lower Mississippi, but no serious attempt to open the great mid-continent water-way was made till the spring of 1862. The object was to sever the Confederacy in twain, to cut off the supplies to the Confederate armies from Texas, Arkansas, and Louisiana, and to get possession of the cannon foundries of New Orleans. General B. F. Butler, was put in command of the land force, thirteen thousand strong, and the fleet of bomb vessels and frigates accompanying Farragut's squadron were commanded by Captain Porter."—H. W. Elson, *History of the United States of America*, v. 4, pp. 174-175.—Gustavus V. Fox, the assistant secretary of the navy, "proposed that an armed fleet should run by Forts St. Philip and Jackson [situated on opposite sides of the river, about seventy-five miles below the city], after which, as the navigation of the river was not difficult, the great city would be at their mercy. He won the approval of his chief, and the two broached the plan in conference with the President, McClellan and Commander David D. Porter, . . . [the latter of whom] suggested that the naval fleet be accompanied by a mortar flotilla, which would reduce the forts before the passage was made. . . . Farragut was summoned to Washington, where he learned from Fox the object of the expedition, the number of vessels he should command, and the plan of attack. He entered into the affair with enthusiasm, had no doubt the fleet could run by the forts, but had little faith in the bombardment by the mortar flotilla, . . . but was willing to give it a trial."—J. F. Rhodes, *History of the Civil War, 1861-1865*, pp. 118-119.—"On February 2d, 1862, Farragut sailed for the Gulf, in the sloop-of-war Hartford, . . . a wooden screw-steamer, full ship-rigged, and of 1,900 tons burthen. She was of comparatively light draught, and, therefore, well suited to the service she was called upon to perform. . . . The Hartford arrived at her rendezvous, Ship Island, 100 miles north-northeast of the mouth of the Mississippi, on February 20th. A military force, to co-operate with Farragut's fleet, was sent out, under General B. F. Butler, and arrived at Ship Island on March 25th."—E. Shippen, *Naval battles*, ch. 41.—"By the middle of April [1862], Farragut with six ships and twelve gunboats and Porter with a mortar flotilla of nineteen schooners and six armed steamships . . . were before Fort Jackson and St. Philip. On April 18 the bombardment of Fort Jackson by the mortar boats began and continued for two days, inflicting considerable damage, but not sufficient to compel the Confederates to entertain the idea of surrender. [On the night of the 20th Farragut sent a force to remove a heavy chain which obstructed the passage opposite Fort Jackson. This was partly done, and he gave instructions to run the forts on the 24th. About 2 o'clock A. M. signal was made to get under way.] As the fleet advanced, they fired at the forts which quickly returned the fire. [Fire rafts were set adrift through the fleet] and the Confederate gun-boats and two iron-clad rams took part in this contest; but most of these were destroyed. 'At length the fire slackened,' wrote Farragut, 'the smoke cleared off, and we saw to our surprise that we were above the forts.' As he had divined, the passage of the forts compelled the evacuation of New Orleans by the Confederate military force and its sur-

render, and furthermore, since the enemy's communications were now severed, the surrender of the forts."—J. F. Rhodes, *History of the Civil War, 1861-1865*, pp. 119-123.—"It was a terrible disaster to the Confederacy. The fall of Donelson broke our centre in the West. The fall of New Orleans yet more sorely punished the vanity of the Confederates; annihilated their powers, in Louisiana; broke up their routes to Texas and the Gulf; closed their access to the richest grain and cattle country in the South; gave to the enemy a new base of operations; and, more than anything else, staggered the confidence of Europe in the fortunes of the Confederacy. And yet these disasters were very far from deciding the war. A train of Confederate victories was to follow them, and the attention of the world was now to be fixed upon the campaign in Virginia."—E. A. Pollard, *Lost cause: A new Southern history of the War of the Confederates*, pp. 254-255.—"Thus was accomplished a feat in naval warfare which had no precedent, and which is still without a parallel except the one furnished by Farragut himself, two years later, at Mobile. Starting with 17 wooden vessels, he had passed with all but 3 of them, against the swift current of a river but half a mile wide, between two powerful earth-works which had long been prepared for him, his course impeded by blazing rafts, and immediately thereafter had met the enemy's fleet of 15 vessels, two of them iron-clad, and either captured or destroyed every one of them. And all this with a loss of but one ship from his own squadron."—L. Farragut, *Life of Farragut*, ch. 18-19.—"General Lovell, who was in command at New Orleans, had come down the river in a steamboat to observe the operations and was very nearly captured; he hastened back to the city to withdraw his forces. When the news spread through the streets the Federal fleet had passed the forts and had destroyed the Confederate flotilla, a strange scene followed; a scene impossible, perhaps, in any other American city under parallel circumstances. The brave, active, fighting men of New Orleans were far away in the armies of the South; but they had left behind a slinking swarm of human vermin. . . . These, when they saw a hopeless panic seize the good people of the city, poured forth from their dens and began an indiscriminate pillaging of houses, shops, and storage-sheds. Thus while the better class of citizens were frantically setting fire to the cotton (some 12,000 bales) the cut-throats and ruffians, the hardened women and even the lawless children, were raging from place to place, back and forth, here and there, wildly plundering and aimlessly destroying. . . . All the public materials, consisting of army supplies, were heaped up in the middle of the streets and burned. General Lovell withdrew his soldiers on the evening of the 24th, leaving the city at the mercy of the Federal fleet, which at 1 o'clock on the following day steamed up the river and anchored in the middle of the stream not far from the foot of Canal street. . . . The mob which lately had been committing such foul deeds, now swayed back and forth in the streets, hooting, yelling and cursing, urging the people to resist the landing of the Federals. Commodore Farragut demanded the formal surrender of the city, but the mayor was powerless. He could not surrender the city while the people were controlled by an unreasoning mob. Consequently, on the 29th a detachment under command of Fleet Captain H. H. Bell was sent ashore to take possession of the public buildings."—M. Thompson, *Story of Louisiana*, ch. 11.

Mahan, *Admiral Farragut*, ch. 7.—*Official Records, series 1, v. 6*.—D. D. Porter, *Naval history of the Civil War*, p. 185.—C. C. Chesney, *Essays in military biography*, p. 167.

1862 (April-May: Alabama).—General Mitchel's expedition.—When the operations which resulted in the battle of Shiloh (see above: 1862 [February-April: Tennessee]) were being carried out, one division of Buell's army which was commanded by General Ormsby M. Mitchel was detached and sent southward through northern Alabama. "General Mitchel performed his part of the grand movement southward with the most wonderful vigor and success. With the engines and cars captured at Bowling Green, his troops had entered Nashville. He was sent forward, and occupied Murfreesboro when the Confederates abandoned it in March. After he parted with the more cautious Buell at that place, on the moving of the army southward at the close of [March 28, 1862], his own judgment was his guide, and his was practically an independent command. . . . On the 4th of April he was at Shelbyville, . . . Tennessee, at the terminus of a short railway branching from that which connects Nashville with Chattanooga. This was almost sixty miles from Nashville, and there he made his deposit of supplies. At that point he struck across the country with a supply-train sufficient for only two days' provisions, in the direction of Huntsville, making forced marches all the way. On the 10th he left Fayetteville, in London County, Tennessee, crossed the State line the same day, and entered Northern Alabama. . . . Mitchel had pushed on with his cavalry to within eight miles of Huntsville, the capture of which and the seizure of the Memphis and Charleston railway there was the chief object of his rapid march. There he halted for his artillery and infantry to come up, that he might prepare for striking a decisive blow."—B. J. Lossing, *Pictorial history of the Civil War in the United States of America*, v. 2, pp. 265-266.—At an early hour on April 11 he entered the town, taking it completely by surprise. "Before the close of the day 100 miles of the Memphis and Charleston railroad were in his possession, stretching in one direction as far as Stevenson, and in the other as far as Decatur. . . . From Decatur he pushed on at once to Tusculumbia. Thus, without the loss of a single life, General Mitchell placed his army midway between Corinth and Chattanooga, prevented the destruction of a fine bridge at Decatur, opened communication with General Buell, and also the navigation of the Tennessee. The occupation of Huntsville also cut off all communication between the east and west by the Memphis and Charleston railroad. . . . This extension of General Mitchell's lines to hold the railroad rendered his situation precarious. Soon the enemy began to gather in force and threaten him. . . . He was raised to the rank of a major-general, and ordered to report directly to the [war] department, and his force was constituted an independent corps. But he got no reinforcements. He was left in such a condition that he at first hardly had anything to report but that he had been gradually driven from those positions, the gaining of which had made him a major-general. [Subsequently he advanced upon Chattanooga; but that important position was not secured. A little later

General Mitchell was transferred to Port Royal, South Carolina.]—W. J. Tenney, *Military and naval history of the Rebellion*, ch. 15.

1862 (April-May: Tennessee-Mississippi).—**Bloodless conquest of Corinth.**—“General Halleck arrived at Pittsburg landing on the 11th of April and immediately assumed command in the field. On the 21st General Pope arrived with an army 30,000 strong, fresh from the capture of Island Number Ten in the Mississippi River. He went into camp at Hamburg landing five miles above Pittsburg. Halleck had now three armies: the Army of the Ohio, Buell commanding; the Army of the Mississippi, Pope commanding; and the Army of the Tennessee. His orders divided the combined force into the right wing, reserve, centre, and left wing. . . . I [General Grant] was named second in command of the whole, and was also supposed to be in command of the right wing and reserve. . . . Preparations were at once made upon the arrival of the new commander for an advance on Corinth. . . . Corinth was a valuable strategic point for the enemy to hold, and consequently a valuable one for us to possess ourselves of. . . . On the 30th of April the grand army commenced its advance from Shiloh upon Corinth. The movement was a siege from the start to the close. The National troops were always behind intrenchments, except of course the small reconnoitring parties sent to the front to clear the way for an advance. Even the commanders of these parties were cautioned, ‘not to bring on an engagement.’ . . . For myself, I was little more than an observer. Orders were sent direct to the right wing or reserve, ignoring me, and advances were made from one line of intrenchments to another without notifying me. My position was so embarrassing in fact that I made several applications during the siege to be relieved. . . . Beauregard published his orders for the evacuation of Corinth on the 26th of May and fixed the 29th for the departure of his troops, and on the 30th of May General Halleck had his whole army drawn up prepared for battle and announced in orders that there was every indication that our left was to be attacked that morning. Corinth had already been evacuated and the National troops marched on and took possession without opposition. Everything had been destroyed or carried away. The Confederate commander had instructed his soldiers to cheer on the arrival of every train, to create the impression among the Yankees that reinforcements were arriving. There was not a sick or wounded man left by the Confederates, nor stores of any kind. Some ammunition had been blown up—not removed—but the trophies of war were a few Quaker guns, logs of about the diameter of ordinary cannon, mounted on wheels and wagons and pointed in the most threatening manner towards us. The possession of Corinth by the National troops was of strategic importance, but the victory was barren in every other particular. . . . After the capture of Corinth a movable force of 80,000 men, besides enough to hold all the territory acquired, could have been set in motion for the accomplishment of any great campaign for the suppression of the rebellion. In addition to this fresh troops were being raised to swell the effective force. But the work of depletion commenced.”—U. S. Grant, *Personal memoirs*, v. 1, ch. 26.

1862 (April-June).—**Abolition of slavery in the District of Columbia and in the territories.**—“In the constituency back of the administration in 1862, four elements may be distinguished: (1) the anti-slavery Republicans, of whom, in the cabinet, Chase was the type; (2) the moderate Republicans, for whom stood Seward; (3) the War Democrats, whose standard-bearer had been Douglas, and for whom [stood Stanton now secretary of war]; (4) the loyal border-state men, who expected that their slave-holding would be safeguarded, for whom stood Bates and Montgomery Blair. In Congress, too, each of these four elements was represented, and Lincoln’s difficult task was so to steer that the elements should not fall apart, but combine their powers under his leadership for the saving of the country. . . . When Congress convened for its second session, December 2, 1861, public opinion had greatly changed, a change reflected in the legislative action which was forthwith taken. A bill to reaffirm the Crittenden resolution of the previous summer was set aside by a vote of 71 to 65, a rift now opening widely between the Republicans and Democrats; and a few days later the second great step of Congress towards an anti-slavery policy was initiated by the introduction in the Senate, on December 16, by Henry Wilson, of Massachusetts, of a bill abolishing slavery in the District of Columbia. This was recognized, indeed proclaimed, to be the entering-wedge; slavery everywhere must go. The president’s message, at the opening, had . . . stated the three cardinal points of his own theory of emancipation: (1) that it should be voluntary on the part of the loyal slave states; (2) that compensation should be made to the slave-owners; (3) that colonization of the freed negroes should take place. Wilson’s bill provided for a moderate compensation, and also for colonization, adopting the president’s suggestions, and became the object of earnest though temperate debate during the ensuing months. Though much was said, slavery being a constant target, it was significant that no man ventured a word in its defence; the attempt was to save it on other grounds than its merits. Senate and House were equally industrious. Prominent in the Senate were Morrill, Sumner, Wilson, Garrett Davis, John Sherman, and Hale; in the House, Thaddeus Stevens, Owen Lovejoy, and Riddle; and, on the opposing side, Clement L. Vallandigham and Crittenden. The bill passed April 16 was readily signed by the president, in harmony with those recommendations a million dollars was appropriated for compensation to owners, and one hundred thousand dollars to assist in colonization. Lincoln, in a message March 6, asked for a joint resolution ‘that the United States ought to cooperate with any State which may adopt gradual abolishment of slavery, giving to each State which may adopt gradual abolishment, pecuniary aid, etc.’—J. K. Hosmer, *Appeal to arms, 1861-1863*, pp. 202, 204-205.—“Lincoln was not an adept in finance and left this department to his Secretary of the Treasury who, in spite of mistakes and some personal failings made a good finance minister. In diplomatic matters Lincoln’s hand may be traced and generally for good. He was a hard student in the art of war and through untoward circumstances and miserable failures, groped his way to the correct method of conducting large military operations. But from the first he handled the slavery question with scarcely a

flaw. The action of Congress during the spring and early summer of 1862 indicated the progress of public sentiment since the first shot at Sumter. The Republicans, in neither of their national platforms, had deemed it prudent to demand the abolition of slavery in the District of Columbia but, in April, Congress enacted this, providing at the same time for compensation to the loyal owners of slaves, which was duly made."—J. F. Rhodes, *History of the Civil War, 1861-1865*, p. 149.

1862 (May).—Passage of the Homestead Act.—"The homestead bill, or the granting of free homes from and on the public domain, became a national question in 1852. The Free Soil Democracy, at Pittsburgh, Pa., August 11, 1852, in National Convention, nominated John P. Hale, of New Hampshire, and George W. Julian, of Indiana, for President and Vice-President, and adopted the following as the 12th plank or resolution in their platform: "That the public lands of the United States belong to the people, and should not be sold to individuals, nor granted to corporations, but should be held as a sacred trust for the benefit of the people, and should be granted in limited quantities, free of cost, to landless settlers." Thereafter it became a national question. It was a serious innovation and would cause an almost entire change in the settlement laws. Instead of the public lands being sold for cash, for profit, or being taken, first, under the pre-emption system, which eventuated in cash purchases, they were to be given to actual settlers who would occupy, improve, and cultivate them for a term of years, and then receive a patent free of acreage charges, with fees paid by the homesteader sufficient to cover cost of survey and transfer of title. . . . The rich and fertile lands of the Mississippi Valley were fast filling up with settlers. Agricultural lands in the Middle States, which, after the year 1824, were bought for \$1.25 per acre, now sold at from \$50 to \$80 per acre. Former purchasers of these Government lands in the Middle, Western, and Southern States, were selling their early purchases for this great advance, and moving west, to Iowa, Wisconsin, Minnesota, and Missouri, and there again taking cheap Government lands under the pre-emption laws. The western emigration caused a rush—a migration of neighborhoods in many localities of the older Western States . . . and there was a demand for homes on the public lands, and a strong pressure for the enactment of a law which should confine locators to small tracts, and require actual occupation, improvement, and cultivation. A fierce political battle now ensued, beginning in 1854, and continuing until 1862, the year of the passage of the law. The demand of the settlers was incessant and constant." Galusha A. Grow, of Pennsylvania, made himself the special champion of the measure in Congress. On February 1st, 1859, a bill embodying its principles was carried in the House, but was not permitted to reach a vote in the Senate. The slaveholding interest was almost solidly against it. In March, 1860, a similar bill was again passed by the House. The Senate substituted a bill granting homesteads to actual settlers at twenty-five cents per acre, instead of free of cost, which was passed by the House, but vetoed by President Buchanan. Then came the Civil War, absorbing all minor questions, and nearly two years went by before the law which opened the public lands freely to all actual set-

tlers was adopted. It became a law by the signature of President Lincoln on May 20, 1862. The following are the essential provisions of the act: "That any person who is the head of a family, or who has arrived at the age of twenty-one years, and is a citizen of the United States, or who shall have filed his declaration of intention to become such, as required by the naturalization laws of the United States, and who has never borne arms against the United States Government or given aid and comfort to its enemies, shall, from and after the first January, eighteen hundred and sixty-three, be entitled to enter one quarter-section or a less quantity of unappropriated public lands, upon which said person may have filed a pre-emption claim, or which may, at the time the application is made, be subject to pre-emption at one dollar and twenty-five cents, or less, per acre; or eighty acres or less of such unappropriated lands, at two dollars and fifty cents per acre, to be located in a body, in conformity to the legal subdivisions of the public lands, and after the same shall have been surveyed: Provided, That any person owning or residing on land may, under the provisions of this act, enter other land lying contiguous to his or her said land, which shall not, with the land so already owned and occupied, exceed in the aggregate one hundred and sixty acres. . . . That the person applying for the benefit of this act shall, upon application to the register of the land office in which he or she is about to make such entry, make affidavit before the said register or receiver that he or she is the head of a family, or is twenty-one or more years of age, or shall have performed service in the Army or Navy of the United States, and that he has never borne arms against the Government of the United States or given aid and comfort to its enemies, and that such application is made for his or her exclusive use and benefit, and that said entry is made for the purpose of actual settlement and cultivation, and not, either directly or indirectly, for the use or benefit of any other person or persons whomsoever; and upon filing the said affidavit with the said register or receiver, and on payment of ten dollars, he or she shall thereupon be permitted to enter the quantity of land specified: Provided, however, That no certificate shall be given or patent issued therefor until the expiration of five years from the date of such entry; and if, at the expiration of such time, or at any time within two years thereafter, the person making such entry—or if he be dead, his widow; or in case of her death, his heirs or devisee; or in case of a widow making such entry, her heirs or devisee, in case of her death—shall prove by two credible witnesses that he, or she, or they have resided upon or cultivated the same for the term of five years immediately succeeding the time of filing the affidavit aforesaid, and shall make affidavit that no part of said land has been alienated, and that he has borne true allegiance to the Government of the United States; then, in such case, he, she, or they, if at that time a citizen of the United States, shall be entitled to a patent, as in other cases provided for by law: And provided, further, That in case of the death of both father and mother, leaving an infant child or children under twenty-one years of age, the right and fee shall inure to the benefit of said infant child or children; and the executor, administrator, or guardian may, at any time within two years after the death of the surviving parent, and in accordance with the laws of the State in which such children for the time being have their domicile, sell said land for the

benefit of said infants, but for no other purpose; and the purchaser shall acquire the absolute title by the purchaser, and be entitled to a patent from the United States, on payment of the office fees and sum of money herein specified. . . . That if, at any time after the filing of the affidavit, . . . and before the expiration of the five years aforesaid, it shall be proven, after due notice to the settler, to the satisfaction of the register of the land office, that the person having filed such affidavit shall have actually changed his or her residence, or abandoned the said land for more than six months at any time, then and in that event the land so entered shall revert to the Government.' . . . This original homestead act has been amended several times. . . . The principal amendments were in the nature of extension of its privileges, and the limit of 80 acres of land of the double minimum class, \$2.50 per acre, within certain road limits, has since been done away with by acts of March 3, 1879, July 1, 1879, and June 15, 1880; there now being but one class of agricultural lands, so far as regards the minimum quantity in homestead entries. The act of June 8, 1872, was known as the soldiers' and sailors' homestead act. It gave honorably discharged soldiers and sailors from the Army and Navy of the United States lands under the homestead act in any locality, and deducted from the five years' residence which was required to make title their term of service in the Army and Navy during the war of the Rebellion. One year's residence and cultivation, however, were necessary. . . . The soldiers' additional homestead provision was to give those soldiers who had had the benefit of the homestead act, to the extent of a quantity under 160 acres, an additional amount, so as to make their allowance 160 acres."—T. Donaldson, *Public domain*, ch. 27.

1862 (May).—General Hunter's emancipation order rescinded by President Lincoln.—"Lincoln measured the steps forward with discretion and kept the determination of the slavery question entirely in his own hands. On May 9, General Hunter [Major-General David Hunter] who commanded the Department of the South [with headquarters at Hilton Head, South Carolina], issued an order declaring free all the slaves in South Carolina, Florida and Georgia. [At the same time he declared martial law in these states.] Lincoln heard of the emancipation order a week later through the newspapers and at the same time received a letter from Chase, saying that in his judgment the order should be suffered to stand. The President replied to his Secretary: 'No commanding general shall do such a thing upon my responsibility, without consulting me,' and on May 10 he issued a proclamation declaring Hunter's order void. ["Whether it be competent for me," he wrote, "as Commander-in-Chief of the Army and Navy, to declare the slaves of any State or States free; and whether at any time, or in any case, it shall have become a necessity indispensable to the maintenance of the Government, to exercise such supposed power, are questions which, under my responsibility, I reserve to myself, and which I cannot feel justified in leaving to the decision of commanders in the field."] In this proclamation he made an earnest appeal to the people of the Union border Slave States to give freedom gradually to their slaves and accept the compensation preferred them by himself and Congress. 'I do not argue,' he said, 'I beseech you to make arguments for yourselves. You cannot, if you would, be blind to the signs of the times.'"—J. F. Rhodes, *History of the Civil War, 1861-1865*, p. 150.

1862 (May: South Carolina).—Employment of freed negroes as armed soldiers.—The negroes within the Union lines in South Carolina, at Hilton Head and elsewhere, were placed under the charge, at first, of agents appointed by the Treasury Department; but disagreements arose between these agents and the military authorities, and the former were recalled. "These several agents had been replaced by a superior officer of the staff, General Saxton, who was himself placed under the orders of General Hunter with the rank of a military commander. By this action the government at Washington sustained Hunter in his conflict with the agents of the Treasury Department—a conflict originating in very serious causes, for it affected the question of slavery in its most vital points. . . . Mr. Cameron [secretary of war] had authorized General Sherman to organize the negroes into squads and companies. The latter had at first only been employed in manual labor, such as the construction of forts, roads and wharves; but Hunter, on taking Sherman's place, saw that he could give a much wider interpretation to the Secretary's instructions. He substituted muskets for the pick-axes used by the detachments of negro laborers organized by his predecessors, and, instead of making them dig the earth, he had them taught military exercises. Nor did he stop here; but wishing to increase the number of these new soldiers, he gathered all the adult negroes residing on the adjoining islands at Hilton Head on the 12th of May, in order to induce them to enter the military service. . . . The civil agents complained bitterly of the trouble this measure had created among the people entrusted to their charge, and thence sprung the quarrel which Mr. Lincoln cut short by deciding in favor of Hunter. The protection granted to fugitive slaves was the first logical consequence of the war; their enrolment in the Federal armies was the second. As untimely and impolitic as was the proclamation by which Hunter had taken upon himself to free the slaves outside of his jurisdiction, the creation of the first negro regiment was an act skilfully conceived. It was essentially a military act; it raised and ennobled the freedman by entrusting him with arms; its legality was unquestionable from the moment that the President approved of it, for there was no law to prevent him from enlisting colored volunteers. In short, it showed to the Confederates that the Washington government was determined not to allow itself to be any longer paralyzed by the vain hope of reconciliation. . . . But notwithstanding the success of this first experiment, considerable time elapsed before the Federal government concluded to follow Hunter in this direction."—Comte de Paris, *History of the Civil War in America*, v. 2, bk. 7, ch. 3.

1862 (May: Virginia).—Peninsular campaign: Battle of Williamsburg and the slow advance to the Chickahominy.—On the evacuation of the Confederate works at Yorktown on May 3, 1862, "our columns followed on in pursuit, McClellan remaining in Yorktown, busy with questions of transportation. The enemy under Longstreet had awaited our approach at Williamsburg. Hooker first attacked, having been brought to a stand by a work known as Fort Magruder, and kept up a

heavy pounding all the forenoon [May 5]. Kearny came to his rescue when Hooker's men were all but spent. Hancock moved around the enemy's left, seized some abandoned redoubts, and made a brilliant diversion. But there was no coöperation in our attack; no one on the field was in supreme command, and the day was fruitlessly spent in partial blows. The enemy retreated at night. Our loss was 2,200; theirs in all probability less."

—T. A. Dodge, *Bird's-eye view of our Civil War*, ch. 11.—"Gen. Johnston says ["Narrative," p. 124]: 'We fought for no other purpose than to hold the ground long enough to enable our baggage-trains to get out of the way of the troops. This object was accomplished without difficulty. There was no time during the day when the slightest uncertainty appeared.' He also says that Longstreet's and Hill's divisions slept on the field; that what deserves to be called fighting ceased two hours before dark, yet the Confederates held the field until the next morning, when they resumed their march. . . . There may be a little rose-color about these statements, but the substantial facts seem to be accurately stated. . . . Gen. McClellan made no pursuit after Williamsburg, for reasons which he who will may find stated in his Report; and we may pass on with the single additional remark that the battle of Williamsburg was unnecessary, for the position might have been turned by a movement by our right. This was actually accomplished by Hancock, after Hooker had met with all his heavy loss; and it might as well have been done before as after. . . . The three weeks which followed the battle of Williamsburg were so devoid of incident that it seems to be sufficient to say that the Confederates moved up the Peninsula in two columns. The right column, composed of the divisions of Smith and Magruder, followed the road by New Kent Court House, and in three marches reached the Baltimore Cross Roads, 19 miles from Barhamsville. The left column, composed of the divisions of Longstreet and D. H. Hill, reached in the same number of marches the Long Bridges. The army remained five days in this position, facing to the east. . . . The iron-clad Virginia [better known as the *Merrimac*] was destroyed on, or just before the 14th of May. This event opened the James River to our navy; and, to be ready to meet an advance up that river as well as from the direction of West Point, the Confederate forces were ordered to cross the Chickahominy on the 15th May. On the 17th their army encamped about three miles from Richmond, in front of the line of redoubts constructed in 1861. . . . During this period the weather was generally fine, cool and breezy, but gradually tending towards heat. . . . McClellan sent out cavalry reconnaissances from Williamsburg on the 5th and 7th May. . . . The advance of the main body began on the 8th; and on the 10th headquarters were at Roper's Church, 19 miles from Williamsburg, with all the troops which had arrived by land, except Hooker's, in the vicinity of that place. . . . By the 15th, headquarters, and the divisions of Franklin Porter, Sykes, and Smith, reached Cumberland on the Pamunkey. . . . On the 19th of May, headquarters and the corps of Porter and Franklin moved to Tunstall's Station on the railroad, five miles from White House. On the 20th, Casey's division forded the Chickahominy, where Bottom's Bridge had been, and occupied the opposite heights. Bottom's Bridge was immediately rebuilt. . . . On the 22d, headquarters moved to

Cold Harbor. On the 24th, we carried the village of Mechanicsville, but the enemy destroyed the bridge on which the Mechanicsville Turnpike crossed the river. On the same day our left advance secured a position at Seven Pines, the point of junction of the Nine-Mile Road with the Williamsburg road, which last road crosses the Chickahominy at Bottom's Bridge. . . . It is difficult to account for, or justify the slowness of McClellan's march. The distance from Williamsburg to the middle of a line drawn from Bottom's Bridge to Cold Harbor, measuring by the road, is about 40 miles. That from West Point to the same point, measuring in the same way, is considerably less. One might almost say that, in the three weeks which McClellan took to accomplish this distance, he might have marched his army all the way in order of battle, bridging streams, felling trees, making roads, and supplying his army as he advanced. 'I had hoped,' he says, 'by raid movements to drive before me, or capture, the enemy on the Peninsula, open the James River and press on to Richmond, before he should be materially re-enforced.' What was there to hinder his making the attempt? Instead of that he followed him at the average rate of rather less than two miles a day."—F. W. Palfrey, *After the fall of Yorktown (Massachusetts Military Historical Society Papers, v. 1, pp. 95-114)*.

ALSO IN: J. E. Johnston, *Narrative of military operations, ch. 5.—Report of Joint Commission on the conduct of the War, 38th Congress, 2d session, v. 1.—Official Records, series 1, v. 11, pt. 1.* —J. F. Rhodes, *History of the Civil War, pp. 126-127.*

1862 (May: Virginia).—Evacuation of Norfolk by Confederates.—Destruction of the *Merrimac*.—The Federal fleet "with the supply ships passing up the York seized White House Landing, twenty miles from Richmond, and made it a base of supplies for the army which was thrown out to the Chickahominy, ten miles from the city. This was the situation on May 16. The Federal advance into the interior [together with Burnside's successes and captures in North Carolina] made Norfolk unsafe for the confederates, and they evacuated it, destroying the ram *Virginia (Merrimac)*, which they could not remove. This left the federal fleet without opposition in these waters, and it ascended the James to Drury's Bluff, six miles from Richmond. Here it encountered strong batteries, beyond which it did not go. A coöperating land force could have taken this position, but McClellan was on the York, which allowed him to keep his army between the Confederates and Washington."—J. S. Bassett, *Short history of the United States, p. 546.*

ALSO IN: H. Greeley, *American conflict, v. 2, p. 127.*

1862 (May: Virginia).—Peninsular campaign: Fair Oaks or Seven Pines.—"While the operations . . . [under Jackson] had been going on in the Shenandoah Valley [see below: 1862 (May-June: Virginia)] Johnston had leisurely fallen back to the neighborhood of Richmond, followed, still more leisurely, by McClellan. Between May 20th and 24th, Keyes's corps, the 4th, crossed the Chickahominy by the ford near Bottom's Bridge, which the enemy had destroyed. The 3d corps soon followed, under Heintzelman, and the bridge was immediately rebuilt. The other three corps, the 2d, 5th, and 6th, took position on the north side of the Chickahominy, the 5th under Fitz John Porter, in advance, then the 6th under

Franklin, then the 2d under Sumner. Trestle-bridges were immediately commenced, and rapidly pushed to completion, to establish free communication between these corps and the 3d and 4th corps, under Heintzelman and Keyes. . . . The Government refused to allow McDowell to join McClellan by water, and insisted on his marching on Richmond by way of the Richmond and Fredericksburg Railroad. This obliged McClellan, when he approached Richmond, to take up a position on both sides of the Chickahominy, so that he might extend his right wing to co-operate with McDowell's advancing column; and now, although McDowell had been sent off to the Shenandoah Valley, McClellan made no change in his arrangements. The base of the army was established at White House, on the Pamunkey, up to which point that river was navigable for vessels bringing supplies and from thence the Richmond and York River Railroad was made use of to convey them to the army. . . . Johnston, as we need hardly say, had kept himself informed of McDowell's movements. . . . As soon as he found that McDowell had moved off to the Valley, he . . . [devoted himself to the] project of destroying the two Federal corps, the 3d and 4th, which McClellan had pushed across the Chickahominy and had caused to take position within a few miles of Richmond. Of these troops, the 4th corps, under Keyes, was in the advance. Casey's division occupied some rifle-pits and a redoubt about three quarters of a mile west of Seven Pines, a tavern on the Williamsburg Stage road. The other division, under Couch, was a little to the right and rear of Casey's. Heintzelman's corps, the 3d, had not advanced much beyond the Chickahominy. In fact Hooker's division was guarding White Oak Bridge and the passes of White Oak Swamp lying to the southward, and the division of Kearney was at Bottom's Bridge. Kearny was more than five miles from Casey's advanced line, and Hooker more than seven miles from it. Each of these four divisions numbered about 8500 men. It is apparent that General Heintzelman, who was in command of both corps, had not sufficiently concentrated the force at his disposal."—J. C. Ropes, *Story of the Civil War, pt. 2, pp. 133-134, 137-138.*—"Johnston selected the divisions of Gens. Longstreet, Huger, G. W. Smith, D. H. Hill, and Whiting. His plan was that Gens. Hill and Longstreet should advance by the road to Williamsburg and make the attack in front, and that Gen. Huger should move on the road to Charles City and attack in flank the troops assailed by Gens. Hill and Longstreet. Gen. Smith was ordered to the junction of the New Bridge Road and the Nine Mile Road, and to be in readiness to fall on the right flank of Gen. Keyes and to cover the left of Gen. Longstreet. The forces of Gens. Hill, Longstreet, and Smith were in position early on the morning of Saturday, May 31, and waited until afternoon for Gen. Huger to get into position. Prince de Joinville . . . thus describes ('Campagne de l'Armée du Potomac, Mars-Juillet, 1862') the scenes which followed this attack: 'At the moment it was thus attacked the Federal army occupied a position having the form of a V. The base of the V is at Bottom's Bridge. . . . The left arm stretches toward Richmond, with this railroad and the road from that city to Williamsburg. There stood the left wing, composed of four divisions echeloned, one behind the other, between Fair Oaks and Savage stations, and encamped in the woods on both sides of the road. The other arm of the

V, the right, follows the left bank of the river; that is the right wing. There are these five divisions and the reserve. Should one desire to communicate from one extremity to the other of those two wings, going by Bottom's Bridge, the way is very long, not less than 12 or 15 miles. In an air line the distance, on the contrary, is very trifling, but between the two arms of the V flows the Chickahominy. . . . It was against the left wing of the army that every effort of the enemy was directed. That wing had its outposts at Fair Oaks station, on the York river railroad, and at a place called Seven Pines, on the Williamsburg road. . . . About one o'clock in the afternoon, the weather being dark and gloomy, a very spirited fusilade is heard. The pickets and sentries are violently driven in; the woods which surround Fair Oaks and Seven Pines are filled with clouds of the enemy's sharpshooters. The troops rush to arms and fight in desperation; but their adversaries' forces constantly increase, and their losses do not stop them. The redoubt of the Seven Pines is surrounded, and its defenders die bravely. . . . Meanwhile Heintzelman rushes to the rescue with his two divisions. As at Williamsburg, Kearney arrives in good time to reestablish the fight. Berry's brigade, of this division, composed of Michigan regiments and an Irish battalion, advances firm as a wall into the midst of the disordered mass which wanders over the battle field, and does more by its example than the most powerful reinforcements. . . . At 6 o'clock in the evening—new actors appear on the scene. Gen. Sumner, who has succeeded in passing the Chickahominy, with Sedgwick's division, over the bridge constructed by his troops . . . arrived suddenly on the left flank of the column with which the enemy is endeavoring to cut off Heintzelman and Keyes. . . . At nightfall [the Federals] valiantly led by Gen. Sumner in person, throw themselves upon the enemy at the point of the bayonet, and drive him furiously, with frightful slaughter and fear, back as far as Fair Oaks Station. Night put an end to the combat. On both sides nothing was known of the result of the battle but what each one had seen with his own eyes. . . . [Sumner, however, had saved the day.] The river rose suddenly . . . and continued to swell with rapidity, carrying away the new bridges, tearing up and sweeping off the trees which formed the planking of Sumner's bridges, and covering the entire valley with its overflowing waters. Nothing could cross.'"—W. J. Tenney, *Military and naval history of the Rebellion, ch. 19* (quoting Prince de Joinville's "*Campagne de l'Armée du Potomac*").—"About seven o'clock [of the 31st] General Johnston was severely wounded, and Major-General Gustavus W. Smith succeeded him in the command of the Confederate army. But before this happened, Johnston had announced to his officers that the battle was over for the day. . . . [On the morning of June 1 General G. W. Smith] desired to continue the battle. He ordered Longstreet, whose troops had been so successful the day before, to renew the engagement, and to direct his attack towards the north, that is, towards the railroad, instead of pushing farther east, towards Bottom's Bridge. . . . Longstreet's performance of his orders on this morning of June 1st was singularly lacking in energy and dash. . . . [His] appeals for help induced General Smith to send orders to the troops which were stationed along the upper Chickahominy to march to Longstreet's assistance; but . . . he remained

quiet with Whiting's division until he should hear what Longstreet could accomplish on the right when these fresh troops had reached him. General McClellan arrived on the ground early in the forenoon, but made no changes in the dispositions of the Federal forces and gave no orders looking to an attack. About two o'clock in the afternoon General Lee arrived at General Smith's headquarters, and in compliance with an order of President Davis, assumed command of the Confederate army. He allowed the troops to remain where they were during the remainder of the day, and in the night withdrew them to their former positions in the immediate neighborhood of Richmond. . . . The net result of the battle, in spite of . . . captured trophies, was undoubtedly favorable to the Federal arms. The retirement of the Confederates to their original positions was naturally interpreted by the Federal troops as an acknowledgement either of defeat, or inability to make a sustained and successful resistance in the open field to the advance of the United States forces. The morale of the Federal army had been on the whole heightened. . . . It remained for General McClellan to utilize the force at his disposal, to lead this large army of brave men, all of whom were devoted to him, to the achievement of the success which it would seem was really at this period of the campaign within his grasp. . . . In spite of the example which had been so recently afforded him of the treacherous character of the Chickahominy River, General McClellan made no immediate preparations for transferring his army to the James. He employed his troops in building bridges to connect the wings of his army. These bridges had to be long enough to cross not only the Chickahominy itself, but the bogs and marshes through which it flowed, and their construction was a task of no ordinary labor and difficulty. It was, moreover, aggravated by the bad weather which prevailed during the first half of June. It consumed nearly three weeks; and during these weeks the army made no forward movement of any consequence."—J. C. Ropes, *Story of the Civil War*, pt. 2, pp. 149-151, 156-159.

1862 (May-June: Virginia).—Stonewall Jackson's second campaign in the Shenandoah valley.—Winchester.—Cross Keys.—Port Republic.—Before the opening of the Peninsular campaign, Lincoln, losing his fears for Washington's safety, ordered McDowell to Fredericksburg, and thence to the aid of McClellan, with whom he was to cooperate in the attack on Richmond. "After numerous delays, the time of advance of this column was at length fixed for the 26th of May, a date closely coincident with the arrival of the Army of the Potomac on the Chickahominy. The head of McDowell's column had already been pushed eight miles south of Fredericksburg; and McClellan, to clear all opposition from his path, sent forward Porter's corps to Hanover Junction, where he had a sharp encounter with a force of the enemy under General Branch, whom he repulsed with a loss of 200 killed and 700 prisoners, and established the right of the Army of the Potomac within fifteen miles, or one march, of

McDowell's van. McDowell was eager to advance, and McClellan was equally anxious for his arrival."—W. Swinton, *Campaigns of the Army of the Potomac*, p. 123.—On May 24, the order for McDowell's advance "was reversed on account of unexpected developments in the Shenandoah Valley. This region furnishes a safe approach to Harper's Ferry, sixty miles from the capital and seventy-five from Baltimore. Stonewall Jackson was in its lower part with 17,000 men, watched by Banks with 10,000 near Strasburg, and Frémont with 15,000 in the mountains to the westward,—all within easy distance. Besides these there were 700 men at Harper's Ferry. Milroy, under Frémont, stood with 3,000 men at McDowell, 25 miles west of Staunton, so that if Jackson advanced on Banks, Milroy might close in on his rear."—J. S. Bassett, *Short history of the United States*, pp. 546-547.—"While McClellan dallied before Richmond, Robert E. Lee planned, and Stonewall Jackson conducted, a series of manœuvres in the course of which, playing on Lincoln's anxiety for Washington, they succeeded in bringing to naught the plan for the reinforcement by McDowell of the Army of the Potomac. On May 8, Jackson defeated a detachment of Frémont's, sending this word to Richmond, 'God blessed our arms with victory.' Having bigger game in sight than Frémont's army, he retraced his steps for the purpose of cooperating with Ewell in an attack upon Banks in the Shenandoah Valley; when he made this junction he had 17,000 men. . . . [With these he began a campaign which was truly Napoleonic.] On May 23, he swooped upon a detachment of Bank's Force at Front Royal and put it to rout, capturing a large part of it. Banks himself was then at Strasburg with 6,800; but next day, fearing that his retreat would be cut off, he 'ran a race' with Jackson to Winchester. The pursuit was hot, but the fighting of his rearguard prevented his capture, and he reached Winchester first. During these two days, however, Jackson had produced big results. . . . Reinforcements were ordered to Banks from Baltimore; Harper's Ferry sent him a portion of its garrison. Until May 24, the faulty disposition of the Union forces was largely due to orders from the War Department, in Stanton's name. Now the President . . . directed Frémont to move into the Shenandoah Valley to a point in Jackson's rear. . . . [Although McClellan urged that the reason for Jackson's activity was to prevent reinforcements from reaching him,] Lincoln suspended the order which had been given McDowell to unite with McClellan and instructed him to send 20,000 men to the Shenandoah Valley to assist Frémont in the capture of Jackson. . . . At daybreak, on Sunday, May 25, Jackson routed Banks at Winchester, gave hot pursuit to the 'mass of disordered fugitives' was at one time on the point of destroying the entire force and finally drove them across the Potomac river."—J. F. Rhodes, *History of the Civil War, 1861-1865*, pp. 127, 129.—"Jackson continued the pursuit as far as Halltown, within two miles of Harper's Ferry, where he remained till the 30th [at the moment that Johnston was preparing to attack McClellan], when, finding heavy forces converging on his rear, he began a retrograde movement up the Valley." McDowell moved from the east and Frémont from the west in a converging movement on Strasburg. "The two columns moved rapidly; they had almost effected a junction on the 31st, but that very day Jackson, falling back from

Harper's Ferry, slipped between the two, and made good his retreat up the Valley. . . . The pursuers did their best; they pushed on, Frémont following in the path of Jackson up the Valley of the Shenandoah; while McDowell sent forward Shields' division by the lateral Luray Valley, with a view to head him off when he should attempt to break through the gaps of the Blue Ridge." On June 8th Ewell's division of Jackson's army "repulsed Frémont, while Jackson held Shields in check. Early next morning, drawing in Ewell and concentrating his forces, Jackson threw himself across the river, burned the bridge to prevent Frémont from following; fell upon Shields' advance, consisting of two brigades under General Tyler, and repulsed him, capturing his artillery. The former of these affairs figures in history as the battle of Cross Keys, and the latter as the battle of Port Republic. In this exciting month's campaign, Jackson made great captures of stores and prisoners; but this was not its chief result. Without gaining a single tactical victory he had yet achieved a great strategic victory; for by skilfully manœuvring 15,000 men he succeeded in neutralizing a force of 60,000. [Rhodes and Henderson give figures as 17,000 and 40,000.] It is perhaps not too much to say that he saved Richmond."—W. Swinton, *Campaigns of the Army of the Potomac*, pp. 122-128.

1862 (May-July: On the Mississippi).—First undertakings against Vicksburg.—"After his capture of New Orleans, Farragut had proceeded up the river, receiving the surrender of Baton Rouge, the capital of Louisiana, [Natchez], and other towns; but on the 18th of May his progress had been stopped at Vicksburg, 400 miles above New Orleans by water and 400 below Memphis. The position of that town was such that it could not be taken without the coöperation of a larger land force than Butler was able to spare, and so it became necessary to wait for the fall of Corinth. But after that event, as before it, Halleck dawdled instead of striking. On the 28th of June Farragut's fleet ran past the guns of Vicksburg without serious damage and effected a junction with that of Commodore Davis just above the town. Nothing could be done without an army, and Farragut asked Halleck for troops, but could not get any. Precious time was thus slipping away, while the enemy was putting every minute to good use. General Van Dorn, detached from the army which Beauregard had withdrawn to Tupelo, made all haste to Vicksburg, taking Breckinridge and his division along with him, and worked day and night building fortifications and collecting cannon. Moreover, so far from losing heart on account of their crushing naval defeats at New Orleans and Memphis, the undaunted Confederates were making ready to attack the victors upon their own element. Fifty miles up the Yazoo river, . . . they were building a formidable ironclad ram. . . . This famous ram, the Arkansas, was built like the Merrimac, though smaller in size, and if her engines had been sufficiently powerful, she might have wrought fearful havoc to the Federal fleet. At her first appearance, on the 15th of July, she attacked and put to flight the Tyler and Carondelet, and, running under the friendly guns of Vicksburg, where

Commander William Porter, with the Essex, tried in vain to destroy her, she became a perpetual menace to . . . [the Federal] ships. By the end of July, as no troops could be obtained . . . Davis withdrew his ships 300 miles up the river to Helena, while Farragut returned to New Orleans. The energetic Van Dorn at once sent Breckinridge with 6,000 men and the Arkansas to recover Baton Rouge and bring back the state government, besides securing the mouth of Red river. The capital was defended by a detachment of 4,000 of Butler's troops, with the ram Essex and a couple of gunboats. In the fight which occurred on the 5th of August at one o'clock in the morning, the Confederate troops were repulsed with a loss of 500 men, the machinery of the Arkansas broke down, and when she was attacked by the Essex, her commander ran her ashore, landed his crew, set her on fire, . . . turned her adrift. . . . Nothing daunted, however, by this reverse, Van Dorn seized and fortified the village of Port Hudson, a few miles above Baton Rouge but below the mouth of Red river. By thus holding Vicksburg and Port Hudson, the Confederates controlled the 250 miles of river between them, and through the Red river obtained their supplies from the trans-Mississippi region as promptly and securely as ever. Corinth had fallen on the 29th of May and Memphis on the 6th of June. Halleck had 100,000 men elated with success, while his adversary, Beauregard, had 50,000 dispirited by a long series of reverses. At any time between the first of June and the middle of July a force of 20,000 men coöperating with the fleets of Farragut and Davis, which were ready and waiting for them, might easily have taken Vicksburg and saved a whole year of anxious and arduous work in this quarter. . . . But Halleck's mind was not large enough to take in the whole theatre of war between the Mississippi and the Alleghanies. Thus far the advance of the Union armies from Fort Donelson up the Tennessee river to Corinth had operated directly to open the Mississippi river by taking its fortified places in flank; and with New Orleans now in our possession, nothing but the occupation of Vicksburg was necessary to complete the conquest. But in this vast theatre of war, there was another region that needed to be looked after; there was another strategic point scarcely less important than Vicksburg. This was the mountain fastness of Chattanooga, commanding eastern Tennessee."—J. Fiske, *Mississippi valley in the Civil War*, pp. 137-141.—Farragut "in compliance with orders from Mr. Welles, had abandoned his contest with the Vicksburg works on the 20th of July, and made down stream for New Orleans, whence he proceeded with his squadron to carry on operations along the coast of Texas, where the chief posts were (for the time) recovered to the Union by his detachments in the course of a few weeks. 'All we want,' he wrote on the 15th of October, 'is a few soldiers to hold the places and we will soon have the whole coast. It is a more effectual blockade to have the vessels inside instead of outside.'"—C. C. Chesney, *Essays in military biography*, pp. 169-171.

1862 (May-December: Louisiana).—New Orleans under General Butler.—The army which accompanied Farragut's naval expedition against

New Orleans, to assist its operations and to occupy the city and the lower Mississippi region when taken, was placed under the command of General Benjamin F. Butler. It consisted nominally of 18,000 men, but is said to have actually mustered less than 14,000. It was composed of regiments which had been raised by Butler in New England especially for the enterprise, his preparations having commenced as early as September, 1861. These troops were partly gathered at Ship island, in the gulf, some time before Farragut made ready his fleet; the remainder were at the rendezvous in good time, and the whole were in waiting, on board transports, at the passes, when Farragut carried his fleet past Forts Jackson and St. Philip. "General Butler . . . brought his forces into the rear of St. Philip, Porter keeping up a bombardment. On the 27th of April the garrison had become so demoralized as to refuse to fight any longer. The forts were therefore surrendered on the next day. . . . On the 1st of May New Orleans was formally occupied by United States troops. The loss on the national side in achieving this great victory was 40 killed and 177 wounded. . . . General Butler now entered on the difficult task of governing New Orleans. Its population, though greatly diminished to strengthen the Confederate armies in the Border States—a cause of bitter complaint to the inhabitants—still numbered about 140,000. Almost one half of it was of foreign birth. . . . By firmness, strict yet considerate, he controlled the municipal authorities; by severity he put down the mob. He was a terror to tricky tradesmen, a benefactor to the starving poor. He cleaned the streets, enforced sanitary regulations, and kept out yellow fever. He put an effectual stop to the operations of Confederate agents, who were illicitly obtaining supplies for their cause. . . . He arrested Mumford, the person who had hauled down the national flag at the Mint [where it had been raised by one of Farragut's officers before the arrival of the troops], brought him before a military commission, convicted and executed him." This execution of Mumford (by hanging) drew from the Confederate President, Davis, a proclamation denouncing Butler as "an outlaw and common enemy of mankind"; directing that, if captured, he should be immediately hung; declaring the commissioned officers of his command "not entitled to be considered as soldiers engaged in honorable warfare, but as robbers and criminals"; and ordering that "no commissioned officer of the United States taken captive shall be released on parole before exchange until the said Butler shall have met with due punishment for his crimes." "Some women of New Orleans, relying on the immunity of their sex, gratified their animosity by insulting national officers in public places. One of them ventured so far as to spit in the face of an officer who was quietly walking in the street. Hereupon was issued 'General Order No. 28' [known as 'the Woman Order,' which gave notice that] . . . 'hereafter, when any female shall, by word, gesture, or movement, insult or show contempt for any officer or soldier of the United States, she shall be regarded and held liable to be treated as a woman of the town plying her vocation.' . . . The feeling of personal hatred to Butler grew daily more and more intense. He was accused of improper tampering with the banks, speculating in sequestered property, and, through the agency of his brother, carrying on illegal but profitable transactions in sugar and cotton. In

South Carolina a reward of \$10,000 had been offered for his assassination. Throughout the Confederacy he received an ignominious surname, and was known as 'Butler the Beast.' The government felt constrained to send a commission to New Orleans to investigate his transactions. Its conclusion was that he had evidently acted 'under a misapprehension, to be referred to the patriotic zeal which governs him.' [In December General Butler was recalled and General Banks was sent to take his place].—J. W. Draper, *History of the American Civil War*, v. 2, ch. 52.

1862 (June: On the Mississippi).—Capture of Memphis.—Naval fight before the city.—After the evacuation of Corinth by Beauregard, "Fort Pillow, 40 miles above Memphis, was no longer of any account, for the Union army could take it from the rear. The Confederates, therefore, spiked the guns, burned their barracks and what supplies they could not take away; and the Confederate gunboats went down the river to Memphis, where several of the boats had been built. . . . [Commodore Montgomery who commanded the Confederate fleet had eight vessels.] . . . The Union fleet is at anchor three miles above the city. 'Drop down below the city and see if you can discover the Confederate fleet,' is the order to the captain of the Jessie Benton. We sweep around the majestic bend of the river and behold the city. The first rays of the sun are gilding the spires of the churches. A crowd of people is upon the levee—men, women, and children—who have come out to see the Union fleet sent to the bottom. . . . Suddenly a vessel with a black cloud of smoke rolling from the chimneys shoots into the stream. It is the Little Rebel, Commodore Montgomery's flag-ship. One by one the other vessels follow, forming in two lines of battle. . . . 'Round to; head down stream; keep in line with the flagship,' was the order which we on board the Jessie Benton carried to each boat on the line. In an hour's time the Confederate fleet was annihilated. . . . It is not known how many men were lost on the Confederate side, but probably from 80 to 100. Colonel Ellet was the only one injured on board the Union fleet. . . . The victory opens the Upper Mississippi from Cairo to Vicksburg."—C. C. Coffin, *Drumbeat of the nation*, ch. 10.

1862 (June: Virginia).—Peninsular campaign: McClellan fortifying and Lee preparing for a bold attack.—"The strength of the Confederate force was always greatly overestimated by McClellan, and his frequent and urgent calls for reinforcements exposed his want of confidence in his own strength. General Lee [who took command of the Confederate army June 1, General Johnston being disabled], knowing this uneasy, insecure feeling of his antagonist, and McDowell's force, which had always been a thorn in his side, being about this time withdrawn from Fredericksburg for the support of Banks and Shields in the Valley, prepared . . . to assume the offensive. He conceived the bold plan of crossing the Chickahominy, and, attacking the Federal right wing, to force it back and seize McClellan's line of communication with his base of operations. This plan being successfully executed, the Federal

general would be compelled to save his army as best he could by retreat. Preparatory to the execution of this plan General J. E. B. Stuart was ordered to make a reconnoissance in the rear of the Federal position. This officer, with a force of about 1,000 cavalry, executed his instructions with great boldness and success. He made the entire circuit of the Federal army and gained much important information, . . . captured many prisoners and destroyed Federal stores to the value of \$7,000,000. . . . His design being confirmed by Stuart's successful reconnoissance, Lee proceeded to organize a force requisite for the accomplishment of his proposed enterprise. The troops that could be conveniently spared from North Carolina, South Carolina and Georgia were ordered to Richmond. . . . At the same time General Jackson was ordered to withdraw secretly from the Valley and proceed with such expedition as would enable him to reach Hanover Junction by the afternoon of the 25th of June. In order to mask his designs from the Federals, Lee directed Whiting's division and Lawton's brigade to proceed to Staunton, apparently with the view of reinforcing Jackson, but really under orders to return immediately and join that general on the 25th at Hanover Junction. This movement further strengthened McClellan in his opinion of Lee's vastly superior force, and completely blinded him in regard to the real intentions of that general. General Lee determined to attack the Federal right wing on the morning of the 26th of June."—A. L. Long, *Memoirs of Robert E. Lee*, p. 169.—"The coöperation of Jackson's command being evidently essential to the success of . . . [Lee's movements] the first thing to be done was to reinforce it so that that active officer might be able to dispose definitely of the Federal troops which had forced him to retreat from Winchester to Port Republic. . . . [In all he received some 25,000 men which raised the Confederate force in Virginia to about 90,000 men] about the 11th of June. . . . However, it appearing certain that the Federal troops in the Valley had retired and given up further operations for the time being, Jackson was ordered on the 16th to make arrangements for uniting his force with the main army as soon as he could. . . . On June 17th, Jackson, with his accustomed promptness, put his troops in march towards Richmond, leaving his cavalry and one battery near Harrisonburg. His command consisted of . . . perhaps 25,000 men in all. Preceding his command, and riding on horseback the last fifty miles for fear of being recognized as a passenger on the train . . . he attended a council of war in Richmond on the afternoon of the 23d. . . . Here he was informed that another plan had been decided on. The four commands of Longstreet, Jackson, and the Hills, accompanied by Stuart's cavalry, were to operate on McClellan's communications on the north side of the Chickahominy, while the divisions of Magruder and Huger were to hold the lines in front of Richmond on the south side of the Chickahominy."—J. C. Ropes, *Story of the Civil War*, pt. 2.—*Campaign of 1862*, pp. 164-166.

1862 (June-July: Virginia).—Peninsular campaign: Seven Days' Battle and retreat.—Mechanicsville.—Gaines' Mill.—Savage Station.—Glendale.—Malvern Hill.—"Since the battle of Fair Oaks the Second Corps (Sumner) had remained on the right bank of the Chickahominy, where it had been followed the month of June by

the Sixth Corps (Franklin). So that only the Fifth Corps (Porter) remained on the left bank, recently reinforced by McCall's division. All the efforts of the enemy were made there, and there the great seven days' contest commenced. On the 26th of June, A. P. Hill, preceding Jackson by twenty-four hours, endeavored to force the passage of Beaver Dam Creek, defended by the Pennsylvanians under McCall. He was repulsed with considerable loss on the Mechanicsville road. But, during the night, Porter was compelled to fall back to a position more tenable against a force become much superior to his own, Jackson and Longstreet having united against his lines. On the 27th, then, the Fifth Corps, with about 25,000 men, was assailed by 70,000 Confederates on Gaines' Mill Heights, and defended itself there obstinately, until our own cavalry came fatally to the enemy's aid. Unskilfully handled and roughly repulsed, it fell back in disorder on our lines, where it put everything into confusion. . . . The Confederates, coming on at the charge, finished the overthrow, and the Fifth Corps would have been destroyed if the coming of the night had not enabled our decimated troops to cross to the right bank of the Chickahominy, destroying the bridges behind them. [This battle, called Gaines' Mill by the Federals, was named Cold Harbor, or Chickahominy, by the Confederates.] . . . As soon as Porter had crossed safely on the 28th, the general retreat commenced. Keyes crossed White Oak swamp first, and took position to protect the passage of the immense army trains and the great herds of cattle. Then, on the 29th, after having repulsed a cavalry attack, he continued his way towards the James, where he arrived on the 30th at the same time that Porter reached Haxall's Landing. Much less favored, the three other corps suspended their march only to fight and ceased to fight only to march. But all this was done without any general system, in the absence of superior supervision, and of orders in accordance with circumstances. On the 29th the enemy crossed the Chickahominy to unite all his force on the right bank; Franklin advised Sumner, and the two, acting together, fell back on Savage Station, where they took up position, with the intention, aided by Heintzelman, of repelling the dangerous attack which menaced them. But Heintzelman, adhering to his general instructions, after destroying the material of the railroad, the provisions, munitions of war, arms and baggage that there was neither time nor means of carrying away, hastened to cross White Oak swamp, uncovering Sumner's left. The latter learned of the retreat of the Third Corps only from a furious attack by the enemy on the very side which he believed protected by Heintzelman. He did not the less sustain the shock with an unshakable solidity, and fought all the afternoon with four divisions without being broken at any point. The enemy, worn out by the useless attacks, retired at nightfall. Then only did he receive any news from McClellan, under the form of an order to Sumner to fall back, along with Franklin, to the other side of White Oak Swamp, abandoning our general hospitals at Savage Station, and the 2,500 sick and wounded in them. On the morning of the 30th, Jackson presented himself, to cross the swamp after us. He found the bridge destroyed, and endeavored to force a passage at several points. He was everywhere repulsed and kept in check the whole day by the obstinate resistance of Franklin, while farther on,

towards the James, Longstreet was held by Heintzelman and McCall, who prevented him from cutting our army in two at Glendale. This was not done without hard fighting. The Confederates, arriving by the New Market road at a right angle to the Quaker road, which was our line of march, struck, in the first place, the Pennsylvania reserves, broke their line, outflanking it on the right and on the left, captured a battery of artillery, and pushed resolutely on through that dangerous breach. They then struck Hooker's division, which threw them obliquely on Sumner's Corps. Soon afterward, Kearney occupied the vacant space, and, as on the evening before, the sun set with the rebels unsuccessful. [This day's battle is variously named after Glendale, New Market, Frazier's Farm, and Nelson's Farm.] But the same evening, Franklin, left without orders, and seeing his position was becoming more and more dangerous, abandoned White Oak swamp and fell back towards the James. At that news, which was promptly sent to him from several directions Heintzelman sent in vain to headquarters to ask for instructions. Left to his own devices, he concluded that the wisest course was to follow the retrograde movement, and retreated with his corps. Sumner still remained, and, seeing himself alone and without support, he decided, in his turn, to do as the others had done. On the morning of the 31st, he arrived on the Malvern Heights, where the three corps, the Second, Third, and Sixth, found themselves united, not, as has been benevolently said, by the wise combinations of General McClellan, but by the fortunate inspiration of the commanders, who had received no orders to that effect. 'At daylight,' said General Sumner, in his testimony before the Congressional committee, 'I called on General McClellan, on the banks of the James. He told me that he had intended that the army should hold the position it had the night before, and that no order for retreat had been sent; but that, since the rest of the army had fallen back, he was glad that I had done the same.' It was found that the plateau of Malvern Hill was admirably formed for a defensive position. General Humphreys . . . traced a formidable line with the left resting at Haxall's Landing on the James, where it was protected by the gunboats, while the right was thrown back on some fields covered with thick woods, and cut up by marshy streams. The summits and slopes of the plateau were bristling with cannon, sweeping the plain over the head of our infantry deployed in front of them. In that position, the army awaited a last attack. The enemy played there his last card, and lost the game. . . . He tried his fortune and gave battle July 1. On every point his columns were thrown back in disorder, crushed in every attack by the double fire of artillery and infantry. Dash was not enough now. On this occasion, the enemy was compelled to acknowledge himself beaten and incapable of pursuing us any further. But our men were slow to believe in success. On receiving the order a few hours later, after night had put an end to the contest, to retire to Harrison's Landing, they naturally concluded that we were not strong enough to hold out long against the enemy. . . . Worn out by fatigue and fighting, exhausted by privations and by vigils, discouraged, and suspecting that it was not fortune alone that had betrayed them, they dragged themselves along without order . . . during that last night march, which had all the character of a rout."—R de

1862 (June-October: Tennessee-Kentucky).—Ineffective dispersion of Western armies.—Failure to secure Chattanooga and Vicksburg.—Bragg's invasion of Kentucky.—Race for Louisville.—Battle of Perryville.—End of Buell's campaign.—"We left the Federals in possession of Corinth and Memphis, the army of Beauregard disappearing in the depths of semi-tropical forests where the Tombigbee takes its source, and Montgomery's ships lying at the bottom of the Mississippi. [See above: 1862 (April-May; Tennessee-Mississippi); (June: On the Mississippi).] The part to be played by the Federal fleets was fully laid out; Farragut, by ascending the river, and Davis, by descending it, were to endeavor to join hands and destroy all the obstacles which still obstructed its course. . . . [The army at Corinth] had allowed Beauregard to escape at the very moment when it felt sure of crushing him; but it could yet strike some decisive blows either to eastward or westward, the Confederates being nowhere sufficiently numerous to make any strong opposition. Eastward, Mitchell had forced open the way to Chattanooga and approached the gap which opens south-east of that town [see above: 1862 (April-May: Alabama)]. . . . He was master of the passes of the Tennessee, and the Federals, stationed at Corinth, could reach Chattanooga much more speedily than their adversary encamped at Tupelo. . . . [Everything] was in favor of prompt and vigorous action. But Halleck divided his army, and notwithstanding the resources he had at his disposal, allowed his adversaries to forestall him everywhere. . . . The army of the Ohio left Corinth on the 10th of June, and Buell was ordered to proceed with it in the direction of Chattanooga, where Mitchell was beginning to be sorely pressed; but this movement was slowly executed. Sherman, at the head of his own division and that of Hurlbut, proceeded toward Memphis, dropping detachments of troops as far as Holly Springs to cover his left flank."—Comte de Paris, *History of the Civil War in America*, v. 2, bk. 2, ch. 3.—"Next after Richmond and Vicksburg, the mountain fastness of Chattanooga was the most important strategic point in the Southern Confederacy. It was the centre of great lines of railroad radiating in every direction to the Mississippi, the Ohio, the Atlantic Ocean, and the Gulf of Mexico. Situated at the lower end of that huge mountain defile known as East Tennessee, . . . it guards the only avenue by which Virginia can be approached directly from the southwestern states. Its possession by a Federal army would practically isolate Virginia and North Carolina on the one hand, and lop off Mississippi and Alabama on the other; and by opening the way into the interior of Georgia would throw what was left of the war entirely into the Atlantic region. Its possession by the Confederates gave them control of eastern Tennessee, enabled them easily to move reinforcements between Virginia and the West, and was a perpetual men-

ace to middle Tennessee and Kentucky. Besides this great strategic importance, Chattanooga had its peculiar political value. . . . This whole area of the Alleghanies was a loyal area, and to clear it of Confederate armies, as had already been done in West Virginia, was to set it free. Thus political and military reasons combined to make Chattanooga the great objective point of the Army of the Cumberland, as Vicksburg was the goal of the Army of the Tennessee, and as Richmond was the goal of the Army of the Potomac. . . . In the summer of 1862 . . . Chattanooga might have been seized and held. As the Federals had that spring concentrated all their forces west of the Alleghanies for the great movement upon Corinth, so the Confederates had gathered together all their strength to oppose them, and Chattanooga was left well-nigh defenceless, so that a single Federal brigade was able to begin bombarding it. After the fall of Corinth, the prize of Chattanooga was for him that should move quickest. Buell might have taken it, had not Halleck insisted upon his employing the precious hours in mending a railroad."—J. Fiske, *Mississippi valley in the Civil War*, pp. 248-251.—"The rebuilding of the Mobile Railway, which had been completely destroyed by the enemy, was a considerable undertaking. Begun on the 9th of June, it was only finished on the 26th. The Confederates had profited by this delay. The new general-in-chief, Braxton Bragg [who had superseded Beauregard, had boldly divided his army and abandoned the position of Tupelo, which Halleck still believed him to occupy. He had determined to cover at once . . . Chattanooga and Vicksburg. He proceeded toward the first with all the old army of Johnston, consisting of the corps of Hardee and Polk, as rapidly as the difficulties of communication in that portion of the Southern States allowed. He had the merit and good fortune to reach Chattanooga before Buell. It was not too soon, for a few days previous, the 7th of June, the Federal General Negley, with his single brigade and some cannon, had nearly taken possession of this city by surprise. Bragg found it of great advantage to transfer the war to the vicinity of Chattanooga. Master of this position, indeed, he could menace either Tennessee or Kentucky, Nashville or Louisville and wrest from the Federals all the conquests they had achieved during the last few months by taking them in rear. He was also drawing near Virginia."—Comte de Paris, *History of the Civil War in America*, v. 2, bk. 2, ch. 3.—"Halleck soon leaves for Washington to assume supreme control of the Union forces from the War Department. Grant is left in command of the Army of the Tennessee, Buell of the Army of the Ohio, Pope of the Army of the Mississippi. Every one is without definite instructions; there is no one head; and the Western armies are practically put upon the defensive. Rosecrans succeeds Pope, who is transferred to Virginia, and to Grant's lot now fall the armies of the Mississippi and Tennessee, 42,000 effectives, with which to keep open his communications with Buell and guard the railroad from Memphis to Decatur. While Grant and Sherman devote their energies to the line of the Mississippi, Buell is ordered to regain East Tennessee, where the loyal population is in extreme suffering. . . . [Mitchell's capture of Huntsville, and some hundred miles of the Memphis and Charleston railroad], had been full of possibilities. Had he but received the authority, he might readily have anticipated Bragg in taking possession of

Chattanooga, and have saved much subsequent blood and treasure. For this town is the key to that entire strategic field. . . . Buell supposed that Bragg would attempt to turn his right in order to obtain possession of Nashville. He therefore concentrated the bulk of his force at Murfreesboro. . . . By a sudden movement, Bragg steals a march around Buell's left, through the Sequatchie Valley [August 28], and marches straight toward Louisville, while Kirby Smith turns Cumberland Gap, defeats Nelson at Richmond, and makes for Cincinnati. . . . Thoroughly alarmed, as is also the country, Buell at once swings his left in pursuit of Bragg, while he endeavors to retain his grasp on Nashville with his right. Bragg has the shorter line and the start. But he is delayed a day or two [September 16-17] by the capture of Mumfordsville, and by scattering his forces instead of pushing home. This is a serious fault on Bragg's part. He fairly holds success in his hand, but forfeits it by this delay. After some rapid marching and manœuvring, Buell enters Louisville just ahead of his opponent. The authorities in Washington have lost all confidence in Buell. He is summarily relieved from command and Thomas appointed to succeed him. But this magnanimous soldier, though far from always agreeing with the methods of his chief, declines the proffered honor, and, at his earnest solicitation, Buell is reinstated. The Army of Ohio marches to meet Bragg, with Thomas second in command. Bragg expects to defend the line of the Kentucky and Duck rivers, but divides his forces, leaving Kirby Smith near Frankfort. Buell makes a demonstration upon Bragg's communications. After some cautious feeling, Buell comes upon Hardee with only 15,000 men, at Perryville, where, had he at once attacked, he could have punished Bragg severely for this division. But, owing to lack of water, one-half of Buell's army is distant from the field, and he in turn pays the penalty of lack of concentration. Polk joins Hardee, and the latter [October 8] falls heavily upon McCook, who holds Buell's left, and bears him back. But he cannot break the Union centre; and after a stubborn conflict Bragg retires, leaving to our forces the field. Our left has not been engaged. The loss is nearly 5,000 men on either side, a quarter of the numbers actually engaged. On being followed up, Bragg retreats through Cumberland Gap, and leaves Kentucky and Tennessee once more in our possession. His retreat ends only at Chattanooga. What Bragg expected to obtain in Kentucky was a vast accession of recruits and horses, as did Lee in Maryland. Both fell short of their calculations, though Bragg carried off a goodly train of supplies. Forgetful of what he had really done, the South was bitter in its criticism of Bragg's failure to hold Eastern Tennessee and Kentucky. . . . Halleck now insists that Buell shall undertake a campaign in East Tennessee, still occupied by the enemy. But Buell alleges the utter impossibility of subsisting his troops so far from the railroad; and again concentrates at Nashville. Here he is relieved [October 30] and Gen. Rosecrans is appointed to the command."—T. A. Dodge, *Bird's-eye view of our Civil War*, ch. 15.

1862 (July).—Prescription of Ironclad Oath. See IRONCLAD OATH.

1862 (July).—Fitting out of the rebel cruiser, *Alabama*, at Liverpool. See ALABAMA CLAIMS: 1862-1864.

1862 (July).—Confiscation of the property of Secessionists.—Exchange of prisoners.—Immediately on the assembling of Congress at its regular session in December, 1861, "Mr. Trumbull of Illinois, introduced a bill, providing that the slaves of all who take up arms against the United States should 'become forever thereafter free, any law to the contrary notwithstanding.' . . . On the 25th of February it came up for general debate, which was very extended. . . . Divergencies of views, even among those who had been most prominent and pronounced in their anti-slavery action, and the general drift of the discussion seemed to preclude any reasonable hope of agreement upon any motion or measure then before the Senate. It was therefore moved by Mr. Clark of New Hampshire to refer the whole matter, the original bill, and all motions, amendments, and substitutes, to a select committee. This, too, gave rise to a sharp debate. . . . The motion was carried by a vote of 24 to 14. . . . The committee reported 'a bill to suppress insurrection, and punish treason and rebellion'; and on the 16th of May it came up for consideration. Its main provision was that at any time after the passage of the act, the President might issue his proclamation that the slaves of persons found, in arms against the government, will be free, any law or custom to the contrary; that no slave escaping from his master shall be given up, unless the claimant proves he has not given aid or comfort to the Rebellion, and that the President shall be authorized to employ persons of African descent for the suppression of the Rebellion. . . . The bill was further debated, but did not reach a vote. In the House a substantially similar course was pursued. On the first day of the regular session Mr. Eliot of Massachusetts introduced a resolution confiscating the property and freeing the slaves of those engaged in the Rebellion. . . . A motion was finally made and carried to refer the whole subject to a select committee of seven. . . . On the 14th of May Mr. Eliot from the committee reported two bills,—the one confiscating Rebel property, and the other freeing the slaves of Rebels,—and opened the debate on 'the twin measures of confiscation and emancipation.' . . . On the 26th of May [the two bills] were brought to a vote. The first, or that providing for the confiscation of Rebel property, was passed by a strong majority. The second, or that freeing the slaves of Rebels, coming up for action, . . . [the] bill was lost by a vote of 74 to 78. That vote was, however, reconsidered and the bill was recommitted. On the 18th of June Mr. Eliot moved a substitute for the bill reported by the committee, which was accepted by the House, and the bill, as thus amended was passed by a vote of 82 to 54. The gist of this bill consisted in the provision, that all slaves of persons found in rebellion 60 days after the Presi-

dent shall issue his proclamation should be free; and the President should appoint commissioners to carry its provisions into effect. The House confiscation bill was taken up in the Senate on the 23d of June. An amendment was moved by Mr. Clark combining confiscation and emancipation. The amendment . . . was adopted on the 28th. The bill as amended was adopted by a vote of 28 to 13. The bill as thus amended was taken up in the House on the 3d of July, and the House non-concurred in the Senate's amendment. . . . A committee of conference was appointed, which reported, on the 11th, in substance the Senate amendment. The report was accepted by both bodies, . . . and the President gave it his approval on the 17th. It provided that all slaves of Rebels coming into the possession or under the protection of the government, should be deemed captives of war, and made free; that fugitive slaves should not be surrendered; that no person engaged in the military or naval service should render fugitives on pain of being dismissed from the service; and that the President might employ persons of the African race for the suppression of the Rebellion in such manner as he might deem best."—H. Wilson, *History of the rise and fall of the slave power in America*, v. 3, ch. 25.—"An important matter in the conduct of the War was settled on July 22nd, when a regular Cartel of Exchange was arranged between the two Governments. Previous to this, the Union Government, though unable in practice to treat prisoners as rebels, had refused officially to recognize them as prisoners of war, but in 1862 the Confederates held the greater number of prisoners, and the obstinacy of the North was injuring their own people. Prisoners had been exchanged before this arrangement, but the negotiations were irregular and uncertain."—J. Formby, *American Civil War*, p. 149.

1862 (July-August: Virginia).—End of the Peninsular campaign.—Army at Harrison's Landing.—Results of the seven days' fighting.—Withdrawal from the Peninsula.—"On reaching Harrison's Landing there were scarcely 50,000 men in the ranks, but on the 4th of July, when the corps commanders made their reports, it was found that the net losses of the army since the 20th of June amounted to 15,249 men, of whom 1,582 had been killed, 7,700 wounded, and 5,958 missing. This last figure comprised, besides prisoners, all the soldiers who had been left on the field of battle, whose fate, whether killed or wounded, could not be ascertained; to this number may be added, without exaggeration, 6,000 sick or lame who had gone to the hospital in consequence of the excessive fatigues of the preceding days. McClellan therefore found himself with about 84,000 men under arms, not counting those who had just joined him. The losses of Lee's army during the seven days amounted to 20,000 men, to which number must also be added at least 5,000 rendered unfit for active service by the same causes which had operated with his adversaries; this army, therefore, had undergone a diminution of 25,000 men. This was more than one-fourth of its effective force on the 26th of June. An interlude was to follow this great struggle. While McClellan was fortifying himself at Harrison's Landing, Lee, hampered like himself by the difficulty of subsisting his army, was obliged to fall back as far as the

environs of Richmond."—Comte de Paris, *History of the Civil War in America*, bk. 1, ch. 4.—"Thus were the Federal aggressive campaigns in the spring of 1862 brought to a close. McClellan, withdrawn from the neighborhood of Richmond, was resting with his army within the lines of Harrison's Landing on the James River, waiting until he should receive sufficient reinforcements to enable him again to take the offensive. Halleck, apparently satisfied with the barren success of the capture of Corinth, dispersed his fine army of more than 100,000 men, allowed the Confederates to recruit their strength without molestation. . . . For a time, both in the East and in the West, the war was at a standstill; the force of the Federal attack had apparently spent itself; an opportunity was presented to the Confederates in the West of retrieving their disasters; and the distrust which the Washington administration entertained toward McClellan made it doubtful whether he would be permitted to resume his campaign against Richmond. But before we proceed to describe the operations of the summer, we must say a word about the military situation in the North. The losses of both the contestants in the last few months had been great; but while the Confederate authorities had adopted a system of conscription for filling the gaps in their wasted battalions, the Northern Government with inexcusable fatuity had in April actually stopped recruiting, and nothing was thought of, at least in the Eastern States, in the summer of 1862, but raising new organizations. . . . The old regiments, which had acquired military discipline and knowledge of warfare by the arduous experiences of the camp, the march, and the battle-field, were actually allowed to waste away; the invaluable schools of the soldier which they furnished for the raw recruits were almost entirely neglected; few were the accessions of fresh men received by their diminished ranks; popular enthusiasm was mainly directed to the raising and equipment of brand-new regiments, none of which could possibly be of such service until months had been passed in learning the elements of military life and conduct. In some of the Western States a healthier standard prevailed; in several of them the efforts of the authorities were chiefly directed to the reinforcement of the existing organizations; and the young men who filled the gaps in the lines of the veteran battalions of Illinois and Wisconsin learned their trade in half the time which was required to make the new regiments of Pennsylvania and Massachusetts capable of efficient service in the field. Nor was this the only mistake made by the Federal Government in the summer of 1862. Levies of troops engaged to serve only for nine months were accepted; and several of the Eastern States were unwise enough to adopt this shallow scheme, and to send the flower of their fighting men into organizations which from the necessity of the case could hardly be made fit for active service until the day of their disbandment was plainly within sight."—J. C. Ropes, *Story of the Civil War*, pt. 2, pp. 218-220.—"In the East, the Union object was clear, to cover Washington and the retreat of the Army of the Potomac, and stop Lee, measures of defence, pure and simple, though the politicians should have seen that their order of importance ought to have been inverted. The same course had to be adopted in the West owing to the dispersion of Halleck's great army, which gave the Confederates a chance of invading Union soil here also; but both here and in the East they made the fatal mistake of mixing political and military objects, and expecting men to

rise with help who would not do so without it. . . . Chattanooga had now become a vital strategic point, in Missouri and Tennessee guerilla warfare was going on, and on the Mississippi things were in statu quo. . . . McClellan made his position at Harrison's Landing very strong, and there he remained for some six weeks. Lee watched him with a brigade of cavalry, and on the night of July 31st bombarded his camps: he concentrated the army nearer to Richmond, where it could act in any direction. Pope [see below: 1862 (July-August: Virginia): Beginning of Pope's campaign] had taken up his new command just at the beginning of the Seven Days' battles before Richmond, and began with an able disposition, which covered the ground well, watching both the important junctions at Gordonsville and the Shenandoah Valley. His line was along the Rappahannock, with a division at Fredericksburg to keep open the line to Aquia Creek, an isolated position, which was ordered from Washington against his wish."—J. Formby, *American Civil War*, p. 1501.—"Planted on the James, McClellan could, either by ascending this river or by seizing upon Petersburg, strike much deadlier blows at Richmond than when his army lay across the Chickahominy, far from any water communication. Such was the position of the two armies about the 7th of July. On this day the steamer coming from Fortress Monroe landed a passenger at Harrison's Landing, whose dress, as simple as his manners, did not at first attract any attention, but in whom people soon recognized President Lincoln. He had come to consult with the commander of the army of the Potomac about the measures to be adopted under those grave circumstances. . . . On the occasion of his interview with McClellan at Harrison's Landing, the latter had so thoroughly demonstrated the importance of that position that [the President] went back fully determined to allow the chief of the army of the Potomac full freedom of action. But General Halleck . . . claimed for himself, as commander-in-chief [lately so appointed], the exclusive direction of all the armies in the field, and Mr. Lincoln, conscious of his own incompetency, submitted to this new authority. [Measures taken during July for placing the army of the Potomac again upon the offensive were altered on August 3, when Halleck gave orders to McClellan to transfer his army with all possible expedition to Aquia Creek, on the Potomac, for the support of General Pope and the Army of Virginia.]"—Comte de Paris, *History of the Civil War in America*, v. 2, bk. 1, ch. 4 and bk. 3, ch. 1.—"It seems strange that it had not been realized in 1862, that the position astraddle both rivers at the junction of the James and Appomattox was the key to Richmond. For it would force Lee to hold an exterior line of such enormous length—from the Chickahominy River to the south of Petersburg, nearly 30 miles—that it could not be long maintained. As McClellan selected the York River line before the James River was opened (by the loss of Norfolk and of the ironclad *Merrimac*), he is entitled to the credit of having selected the best route available at the time. After his retreat from Richmond, he very nearly had stumbled into the key position itself. His army was recalled to Washington by the Executive, against his strong protests and appeals."—E. P. Alexander, *American Civil War*, p. 61.

1862 (July-August: Virginia).—Beginning of Pope's campaign.—Cedar Mountain or Cedar

Run.—“While McClellan was still before Richmond the Government determined to unite in one command the corps of Banks, Frémont, and McDowell, which were moving about ineffectually between Washington and the Shenandoah Valley. General John Pope, who had captured Island No. 10, was called from the West [in June] and made commander of the new organization, which was named the Army of Virginia. Frémont refused to serve under a commander who had once been his subordinate, and his corps was then given to General Franz Sigel. This army contained about thirty-eight thousand men, besides those in the fortifications of Washington. On assuming the command General Pope issued a most unfortunate general order. It had three capital defects: it boasted of his own prowess at the West, it underrated the enemy, and it contained a touch of sarcasm pointed at McClellan, with whose army his own was to cooperate. When it became evident that these two commanders could not act in harmony, or support each other heartily, the President [after the Seven Days' Battle] called General Henry W. Halleck from the West to be General-in-Chief and command them both. This appointment was probably the most serious mistake ever made by Mr. Lincoln. Halleck had an abundance of military learning, and there could be no doubt of his patriotic intentions; but in practical warfare he proved to be little more than an habitual obstructor. He had been the bane of the Western armies, preventing them from following up their victories, and he had almost driven General Grant out of service. From the day he assumed command at Washington [July 23] the troubles at the East became more complicated. McClellan had a strong position at Harrison's Landing, where if he accomplished nothing else, he was at least such a menace to Richmond that Lee dared not withdraw his army for service elsewhere. McClellan planned to cross the James and strike at Richmond's southern communications—as Grant did two years later—and for this he asked to be heavily reinforced and was promised the troops of Burnside and Hunter, which were on the Carolina coast. Lee's great desire was to get McClellan off the peninsula, so that he might move out toward Washington. To effect this he sent a detachment to bombard the National camp from the opposite side of the James; but McClellan threw across a force that swept it out of the way. Then he sent Jackson to demonstrate against Pope and create alarm at Washington. . . . Pope intended to move southward and cut off Lee's communications with the Shenandoah Valley. He began by ordering Banks to send his whole cavalry force to destroy the railroads and bridges near Gordonsville. But General John P. Hatch, commanding the cavalry, took with him artillery, infantry, and a wagon-train, and consequently his progress was so slow that Jackson reached Gordonsville before he could get there, and the plan was thwarted. Hatch was therefore relieved, and General John Buford, an able cavalry leader, succeeded to the command.”—R. Johnson, *Fight for the republic*, pp. 128-130.—“After ascertaining that the enemy were in large force under General Pope . . . Jackson applied to General Lee for reinforcements. The division of A. P. Hill was immediately sent to him, and, with this accession to his small army, Jackson . . . [advanced] on the 7th of August. Before taking this step, it was observed that he was much in prayer, but this was his custom previous to every battle. . . . Pope's army was gathering in all its strength at Culpepper Court-House, and

on the 9th of August Jackson's little army came in contact with his advance-guard about six miles from the Court-House, on the borders of a little stream called Cedar Run. Here hostilities began by a furious cannonade on both sides, lasting two hours, when, about five o'clock in the afternoon, the infantry of both armies became hotly engaged. The conflict was fierce and stubborn, but the overwhelming numbers of the enemy swept down with such impetuosity that the weaker party were forced to yield, and it looked as if it were doomed to destruction. Ewell, Early, A. P. Hill, Winder, and other commanders all fought their bravest and best—the gallant Winder receiving a mortal wound—and still they were pressed back. ‘It was at this fearful moment,’ says his late chief-of-staff, Dr. Dahney, ‘that the genius of the storm reared his head, and in an instant the tide was turned. Jackson appeared in the mid-torrent of the highway, . . . he drew his own sword (the first time in the war), and shouted to the broken troops with a voice which pealed higher than the roar of battle: “Rally, brave men, and press forward! Your general will lead you! Jackson will lead you! Follow me!” This appeal was not in vain, and the Federals, startled by this unexpected rally, were driven from the field.’ . . . This battle of Cedar Run [called Cedar Mountain by the Unionists] Jackson himself pronounced the most successful of his exploits. . . . In this battle the Confederates had between eighteen and twenty thousand men engaged, while the Federals, according to their own returns, had thirty-two thousand. Jackson, however, had one incalculable advantage over the enemy, which he gained by his promptitude in seizing and holding Slaughter Mountain—an elevation which commanded all the surrounding plains, and enabled him to overlook the whole scene of action. . . . By this victory Pope received such a blow that he was deterred from making another advance until he could gather reinforcements. . . . General Lee was convinced that McClellan was incapable of further aggression, and that the most effective way to dislodge him from the Peninsula was to threaten Washington! He therefore determined to move his army from Richmond to Gordonsville. He began his march on the 13th, and four days after, on the 17th, McClellan evacuated the Peninsula and removed his troops to the Potomac.” Pope's army was withdrawn behind the Rappahannock. “General Lee now ordered Jackson to cross the Rappahannock high up, and by a forced march go to Manassas and get in Pope's rear. . . . While a fierce artillery duel was going on across the river between A. P. Hill and the enemy, Jackson left the river-bank a few miles, and marched to the village of Jeffersonton. He was thus lost sight of by the Federals, and to Longstreet was given the task of amusing Pope by the appearance of a crossing at Warrenton Springs. Jackson was now preparing to obey Lee's order to separate himself from the rest of the army, pass around Pope to the westward, and place his corps between him and Washington at Manassas Junction.”—Mrs. M. A. Jackson, *Life and letters of General Thomas J. Jackson*, ch. 17.—See also below: 1862 (August: Virginia).

Also in: W. Allen, *Army of Northern Virginia in 1862*, ch. 20.—G. H. Gordon, *History of the campaign of the Army of Virginia*, ch. 1-3.—W. C. Bryant and S. H. Gay, *Popular history of the United States*, v. 4, ch. 19.—S. P. Chase, *Diary (Annual Report of the American Historical Association for 1902, pp. 46-62)*.

1862 (July-September: Missouri-Arkansas).—

Guerilla warfare.—“When Curtis withdrew to the Mississippi, and left Arkansas and Southern Missouri open to the operations of guerrilla bands, then numerous in the western part of the former State . . . [General J. M. Schofield, military governor of Missouri] found his forces inadequate to keep down the secessionists in his district. When Price crossed the Mississippi, early in May, he sent back large numbers of Missourians to recruit guerrilla bands for active service during the summer, and these, at the middle of July, were very numerous in the interior, and were preparing to seize important points in the State. To meet the danger, Schofield obtained authority from the Governor to organize all the militia of the State. . . . He soon had 50,000 names on his rolls, of whom nearly 20,000 were ready for effective service at the close of July, when the failure of the campaign against Richmond so encouraged the secessionists in Missouri that it was very difficult to keep them in check. Schofield's army of volunteers and militia were scattered over Missouri in six divisions, and for two months a desperate and sanguinary guerrilla warfare was carried on in the bosom of that Commonwealth, the chief theater being northward of the Missouri River, in McNeill's division, where insurgent bands under leaders like Poindexter, Porter, Cobb, and others, about 5,000 strong, were very active.” They were also aided by incursions from Arkansas, under Hughes, Coffey and other leaders. With the cooperation of General Blunt, commanding in Kansas, the Arkansas invasion was driven back. “Missouri was now somewhat relieved, but the Confederates were gathering in force in Arkansas, where they were joined by conscripts from Southern Missouri and a large number of troops from Texas. Their entire number was estimated to be 50,000 at the middle of September, with General T. C. Hindman in chief command. . . . So threatening was this gathering that Schofield took the field in person, and General Curtis succeeded him in command of the District of Missouri.” Schofield's vanguard, under General Salomon, encountered the enemy at Newtonia, September 30, and was defeated; but the Confederates retreated before the united forces of Schofield and Blunt and “were chased about 30 miles into Arkansas.”—B. J. Lossing, *Field book of the Civil War*, v. 2, ch. 20.

Also in: Comte de Paris, *History of the Civil War in America*, v. 2, bk. 4, ch. 3.

1862 (August).—Draft of militia for nine months.—By proclamation, August 4, the president ordered a draft of 300,000 militia, for nine months service unless sooner discharged.

1862 (August: Virginia).—General Pope's campaign: Stonewall Jackson's movement into the rear of the Federal army.—“By the capture of Pope's papers [effected in a raid of Stuart's cavalry to the Federal rear] Lee gained an accurate knowledge of the situation of the Federal army. Acting on it, he ordered Jackson to advance his corps to Jeffersonton and secure the bridge over the Rappahannock at Warrenton Springs. . . . Jackson, on arriving at Jeffersonton in the afternoon of the 22d, found that the bridge on the Warrenton turnpike had been destroyed by the Federals. . . . On the 23d Lee ordered Longstreet's corps to follow Jackson and mass in the vicinity of Jeffersonton. The headquarters of the army was also moved to that place. . . . General Longstreet made a feint on the position of Warrenton on the morning of the 24th, under cover of which Jackson's corps was withdrawn from the front to the vicinity of the road from Jeffersonton to the

upper fords of the Rappahannock. Jackson was then directed . . . to turn the Federal position and seize their communications about Manassas Junction. . . . It was the object of Lee to hold Pope in his present position by deluding him with the belief that it was his intention to force a passage of the river at that point, until Jackson by a flank movement could gain his rear. Longstreet, on the morning of the 25th, resumed his cannonade with increased energy, and at the same time made a display of infantry above and below the bridge. Jackson then moved up the river to a ford eight miles above; crossing at that point and turning eastward, by a rapid-march he reached the vicinity of Salem. . . . The next morning at dawn the march was resumed by the route through Thoroughfare Gap. . . . Pressing forward, still keeping the cavalry well to the right, Jackson struck the railroad at Bristoe Station late in the afternoon, where he captured two empty trains going east. After dark he sent a detachment under Stuart to secure Manassas Junction, the main dépôt of supplies of the Federal army. . . . The next morning, after effectually destroying the railroad at Bristoe, Jackson . . . moved his main body to Manassas, where he allowed his troops a few hours to refresh themselves upon the abundant stores that had been captured [there]. About 12 o'clock the sound of artillery in the direction of Bristoe announced the Federal advance. Not having transportation to remove the captured supplies, Jackson directed his men to take what they could carry off, and ordered the rest to be destroyed. General Ewell, having repulsed the advance of two Federal columns [at Bristoe Station], rejoined Jackson at Manassas. . . . Jackson retired with his whole force to Bull Run, and took a position for the night, a part of his troops resting on the battle-field of the previous year. Pope, . . . upon learning that Jackson was in his rear, . . . immediately abandoned his position on the Rappahannock and proceeded with all despatch to intercept him before he could be reinforced by Lee. His advance having been arrested on the 27th by Ewell, he did not proceed beyond Bristoe that day. Lee on the 26th withdrew Longstreet's corps from its position in front of Warrenton Springs, covering the withdrawal by a small rear-guard and artillery, and directed it to follow Jackson by the route he had taken the day before. . . . Meanwhile, nothing further had been heard from Jackson, and there was a natural anxiety in regard to his position and possible peril. . . . Under these critical circumstances General Lee made every effort to find some available route over the mountains,” and had already succeeded in doing so when his adversary saved him further trouble. “Pope . . . had ordered McDowell to retire from the Gap and join him to aid in the anticipated crushing of Jackson. McDowell did so, leaving Rickett's division to hold the Gap. In evident ignorance of the vicinity of Longstreet's corps, this force was also withdrawn during the night, and on the morning of the 29th Lee found the Gap unoccupied, and at once marched through at the head of Longstreet's column. . . . The cannonade at the Gap on the 28th had informed Jackson of Lee's proximity. He at once took a position north of the Warrenton turnpike, his left resting on Bull Run. . . . About three o'clock the Federals bore down in heavy force upon Ewell and Taliaferro, who maintained their positions with admirable firmness, repelling attack after attack until night. The loss on both sides was considerable. . . . Jackson, with barely 20,000 men, now found himself confronted by the greater part of the Fed-

eral army. Any commander with less firmness would have sought safety in retreat. But having heard the Confederate guns at Thoroughfare Gap, he knew that Lee would join him the next day. Therefore he determined to hold his position at all hazards."—A. L. Long, *Memoirs of Robert E. Lee*, ch. 11.

ALSO IN: R. L. Dabney, *Life and campaigns of General Thomas J. Jackson*.—G. H. Gordon, *History of the campaign of the Army of Virginia*, ch. 4-10.—W. B. Taliaferro, *Jackson's raid around Pope (Battles and leaders, v. 2, pp. 501-511)*.

1862 (August-September: Virginia).—End of General Pope's campaign: Groveton.—Second Bull Run.—Chantilly.—"On August 29 occurred the sanguinary battle of Groveton. Pope was anxious to crush Jackson before he could be reinforced by Longstreet, who was fast approaching. He ordered McDowell to fall back toward Gainesville, and from here he arranged his whole army in a semicircle, several miles long, to Bull Run. But Longstreet had arrived, and the battle was general all along the line—a series of heavy skirmishes rather than a pitched battle. The fight, especially in the afternoon, went against the Federals. Pope blamed Fitz-John Porter for this. He had sent Porter word to support McDowell, but, as Porter claimed, the word did not reach him till night. Pope had been worsted on this day, but he prepared for a new attack the following morning. Lee's whole army was now in his front. He imagined Lee to be in retreat, and sent McDowell to follow him; but McDowell was driven back, and Porter, who charged Jackson's right repeatedly, was driven back with great loss. The Federals were at length forced back over Bull Run toward Centreville. This battle, in which Pope was again defeated, has been called the second battle of Bull Run, as it was fought on almost the same ground as that on which the Army of the Potomac was defeated thirteen months before. Two days later another fierce battle occurred, known as the battle of Chantilly. Lee had sent Jackson around Centreville to the north, and the divisions of Hooker, Reno, and Kearney were sent against him. The Federals were at length forced to retire, and the brave General Kearney, who had lost an arm in the Mexican War and had just passed through the peninsular campaign, was among the slain. Pope now led his army back to the defense of Washington. The campaign had cost him at least fifteen thousand men; the Confederate loss was probably above ten thousand. If McClellan had failed on the peninsula, Pope, with all his glowing promises, had made a far more dismal failure. On the same day that he reached Washington he was relieved of command at his own request, and McClellan was restored to the command of the army of the Potomac."—H. W. Elson, *History of the United States of America*, v. 4, pp. 200-202.—"Pope was retired to fight Indians on the north-west frontier. The public demanded a victim for the disaster at the Second Battle of Bull Run and found him in Fitz John Porter who, in November following, was tried before a general court-martial and sentenced 'to be cashiered and to be forever disqualified from holding any office of trust or profit under the Government of the United States.' Lincoln approved the finding of the court. . . . Finally, Congress, in 1886, nearly twenty-four years after the original condemnation, passed a bill for Porter's relief which President Cleveland signed. Porter was restored to the rank of colonel of infantry in the regular army, from May 14, 1861."—F. N.

Thorpe, *Civil War: A national view (History of North America, v. 15, p. 278)*.—"The Second Battle of Bull Run . . . was a severe defeat for General Pope; but it was nothing else. It was not a rout, nor anything like a rout. . . . Lee claims to have captured in these engagements 30 pieces of artillery and 7,000 unwounded prisoners."—J. C. Ropes, *Army under Pope (Campaigns of the Civil War, v. 4, pp. 218-220)*.

ALSO IN: G. H. Gordon, *History of the campaign of the Army of Virginia*, ch. 11-13.—*The Virginia campaign of General Pope (Massachusetts Military Historical Society Papers, v. 2)*.—J. Pope, *Second battle of Bull Run (Battles and leaders, v. 2, pp. 449-494)*.—*Official Records*, series 1, v. 12, pt. 2.

1862 (September: Maryland).—Lee's first invasion: His cold reception and disappointment.—"The defeat of General Pope opened the way for movements not contemplated, probably, by General Lee, when he marched from Richmond. . . . [He] determined to advance into Maryland—the fortifications in front of Washington, and the interposition of the Potomac, a broad stream easily defended, rendering a movement in that direction unpromising. On the 3d of September, therefore, . . . General Lee moved toward Leesburg, crossed his forces near that place, and to the music of the bands playing the popular air, 'Maryland, my Maryland,' advanced to Frederick City, which he occupied on the 7th of September. . . . His object was to draw the Federal forces out of Virginia. . . . The condition of affairs in Maryland, General Lee says, 'encouraged the belief that the presence of our army, however inferior to that of the enemy, would induce the Washington Government to retain all its available force to provide for contingencies which its course toward the people of that State gave it reason to apprehend,' and to cross the Potomac 'might afford us an opportunity to aid the citizens of Maryland in any efforts they might be disposed to make to recover their liberty.' It may be said, in summing up on this point, that Lee expected volunteers to enroll themselves under his standard, tempted to do so by the hope of throwing off the yoke of the Federal Government, and the army certainly shared this expectation. . . . [Moreover] by advancing into Maryland and threatening Baltimore and Washington, he knew that he would force the enemy to withdraw all their troops from the south bank of the Potomac, where they menaced the Confederate communications with Richmond; when this was accomplished, as it clearly would be, his design was, to cross . . . the South Mountain, advance by way of Hagerstown into the Cumberland Valley, and, by thus forcing the enemy to follow him, draw them to a distance from their base of supplies, while his own communications would remain open by way of the Shenandoah Valley. . . . The Southern army was concentrated in the neighborhood of Frederick City by the 7th of September, and on the next day General Lee issued an address to the people of Maryland. . . . This address, couched in terms of . . . dignity, had little effect upon the people. Either their sentiment in favor of the Union was too strong, or they found nothing in the condition of affairs to encourage their Southern feelings. A large Federal force was known to be advancing; Lee's army, in tatters, and almost without supplies, presented a very uninviting appearance to recruits, and few joined his standard, the population in general remaining hostile or neutral. . . . Lee soon discovered that he must look solely to his own

men for success in his future movements [and] resolutely commenced his movements looking to the capture of Harper's Ferry and the invasion of Pennsylvania."—J. E. Cooke, *Life of Robert E. Lee*, pt. 5, ch. 1-2.

ALSO IN: A. L. Long, *Memoirs of Robert E. Lee*, ch. 12.

1862 (September; Maryland).—Lee's first invasion: Harper's Ferry.—South Mountain.—Antietam.—"On the 2d of September the President went to General McClellan's house in Washington, asked him to take command again of the Army of the Potomac, in which Pope's army had now been merged, and verbally authorized him to do so at once. The first thing that McClellan wanted was the withdrawal of Miles's force, 11,000 men, from Harper's Ferry—where, he said, it was useless and helpless—and its addition to his own force. All authorities agree that in this he was obviously and unquestionably right; but the marplot hand of Halleck intervened, and Miles was ordered to hold the place. . . . Miles, a worthy subordinate for such a chief, interpreted Halleck's orders with absolute literalness, and remained in the town, instead of holding it by placing his force on the heights that command it. As soon as it was known that Lee was in Maryland, McClellan set his army in motion northward, to cover Washington and Baltimore and find an opportunity for a decisive battle. He arrived with his advance in Frederick on the 12th, and met with a . . . flattering reception. [But this] was not the best fortune that befell the Union army in Frederick. On his arrival in the town General McClellan came into possession of a copy of General Lee's order, dated three days before, in which the whole campaign was laid out."—R. Johnson, *Short history of War of Secession*, ch. 12.—"Lee was hoping to place the Confederacy in a position to propose peace to the Northern government and people on the condition that the independence of the Southern States should be recognized. . . . He purposed to attack neither Washington nor Baltimore, but he probably aimed at Harrisburg and the destruction of the long bridge of the Pennsylvania railroad across the Susquehanna river, which, as communication by the Baltimore and Ohio had been severed, would leave no land communication between the eastern and western States except the railroad line along the lakes. . . . At no time during the war were Confederate prospects so bright. Kirby Smith had defeated a Union force in Kentucky, had occupied Lexington and was threatening Louisville and Cincinnati. . . . Bragg with a large army had eluded Buell, and was marching northward toward Louisville. . . . [The North was greatly alarmed. Stanton feared that communications might be cut off. The president was "sadly perplexed and distressed."] McClellan acted with energy but not with the energy that Lee or Jackson would have shown under similar circumstances. He marched his army forward, and on September 14 won the battle of South Mountain [which is known by the Confederates as the battle of Boonsboro] securing a passage over the South Mountain range to the field of Antietam. . . . He did not, however, relieve the Harper's Ferry garrison which fell without a struggle."—J. F. Rhodes, *History of the Civil War, 1861-1865*, pp. 166, 169.—Jackson and McLaws took possession of the heights commanding the town, where Miles waited to be trapped. "A bombardment the next day compelled a surrender when Jackson was about to attack. General Miles was mortally wounded by

one of the last shots. About 11,000 men were included in the capitulation, with 73 guns."—R. Johnson, *Short history of the War of Secession*, ch. 12.—"Jackson and McLaws now hastened to join the main army, which had taken a strong position [near the village of Sharpsburg] on the south bank of Antietam Creek, a little stream that flows into the Potomac above Harper's Ferry. It was evident that a battle of vast magnitude was imminent, one that must decide the issue of Lee's campaign. If Lee won, he would push northward into Pennsylvania, or strike Baltimore; if he lost, he must return to Virginia. After an artillery duel at intervals, and a sharp attack by Hooker on Lee's left wing, the two great armies bivouacked on the field for the night and sought a little rest and strength for the fearful business of the coming day. At sunrise of the 17th Hooker, who commanded the Union right, opened his cannon on the enemy's left under Jackson. Jackson answered with fury, but an enfilading fire from Hooker's batteries pressed his lines back, when he received fresh masses of troops and was about to drive Hooker from his position. Hooker was painfully wounded and was borne from the field, and Sumner crossed the creek and threw his corps into the contest. Thus for hours the Union right and the enemy in its front surged to and fro. . . . Meantime the left and center under Burnside and Porter remained inactive till afternoon, when Burnside charged upon the enemy. As evening approached the two armies ceased fighting as if by mutual consent. Both had suffered severely. More than 23,000 men lay dead or wounded on the field, divided almost equally between the two armies. This day has been pronounced the bloodiest day in American history. McClellan reported a loss of 12,640. For twenty-four hours the two armies rested, glaring at each other. McClellan meant to attack on the second day, but during the preceding night Lee escaped across the Potomac in the darkness. Antietam [also known as Sharpsburg] was a drawn battle; but in another sense it was a complete victory for McClellan, for it ended Lee's proposed invasion of the North. Lee had started north with a fine army of over 50,000 men just two weeks before; now he returned with little over half the number, having lost greatly by straggling as well as in battle. Had McClellan known that on the day after the battle Lee was nearly out of ammunition and his army was greatly disorganized, he could have overwhelmed and crushed him. His pursuit of Lee was long delayed; it should have been immediate and vigorous. He alleged that his army was short in horses, short in wagons, rations, clothing, etc.; but he should have remembered, for he certainly knew, that the retreating enemy was shorter in everything than he was."—N. W. Elson, *History of the United States of America*, v. 4, pp. 204-205.

1862 (September).—President Lincoln's preliminary Proclamation of Emancipation.—Atti-

tude of northern parties on slavery question.—“When the border States refrained from accepting the principle of compensated emancipation, Lincoln determined that he must go along without them, and that at a suitable time it would be expedient to rally the North and discourage the Confederacy by executive emancipation. The first draft of his proclamation was written early in July [immediately after he had made a final vain appeal to the border States to adopt his policy] but it was not communicated to the cabinet until towards the end of the month, after Congress had adjourned. Then it was presented for information, not for debate. The man whom Seward had accused of having neither policy nor ability to frame one, had reached his conclusion, and had announced it at his own time. Verbal amendments to the proclamation were made, but the only serious criticism came from the Secretary of State, who questioned the expediency of issuing such a proclamation after as disastrous a campaign as the Peninsula had been. Issued in July or August, it would appear as a desperate effort in a forlorn cause. Convinced by the suggestion, Lincoln withheld the proclamation and prayed for such a victory as might give it a proper appearance. When Pope collapsed at second Bull Run, his disappointment was great. When McClellan managed to check Lee at Antietam with nearly twice the latter's force, it was decided that a good-enough victory, at least the only one in sight, had been attained.”—F. L. Paxson, *American Civil War*, pp. 107-108.—“The secret of . . . [the July] conference was well kept. The radical Republicans, ignorant of the President's determination to strike at slavery when the proper time should arrive, continued their criticisms of his policy. His order of August 4 for a draft of 300,000 nine-months militia combined with the general gloom that deepened as the summer went on, to intensify this fault-finding, which culminated in The Prayer of Twenty Millions, written by Greeley and printed in the New York *Tribune* of August 20. All who supported your election, he said, and desire the suppression of the rebellion, are sorely disappointed by the policy you seem to be pursuing with regard to the slaves of rebels. ‘We require of you, as the first servant of the republic, charged especially and preeminently with this duty, that you EXECUTE THE LAWS. We think you are strangely and disastrously remiss in the discharge of your official and imperative duty with regard to the emancipating provisions of the new Confiscation act. . . . We complain that the Confiscation act which you approved is habitually disregarded by your generals, and that no word of rebuke for them has yet reached the public ear. Frémont's proclamation and Hunter's order were promptly annulled by you, while Halleck's No. 3, with scores of like tendency, have never provoked even your remonstrance. . . . I close as I began, with the statement that what an immense majority of the loyal millions of your countrymen require of you is a frank, declared, unqualified, ungrudging execution of the laws of the land, more especially of the Confiscation act.’ Lincoln did not read this open letter, which was addressed to him only through the columns of the New York *Tribune*, until August 22. He replied at once in a letter which was printed the next day in the *National Intelligencer* of Washington, and was also telegraphed to Greeley, appearing in the evening edition of the *Tribune*.”—J. F. Rhodes, *History of the United States from the Compromise of 1850*, v. 4, pp.

72-73.—The president said: “Dear Sir: I have just read yours of the 19th, addressed to myself through the New York *Tribune*. If there be in it any statements or assumptions of fact which I may know to be erroneous, I do not, now and here, controvert them. If there be in it any inferences which I may believe to be falsely drawn, I do not now and here, argue against them. If there be perceptible in it an impatient and dictatorial tone, I waive it in deference to an old friend whose heart I have always supposed to be right. As to the policy I ‘seem to be pursuing,’ as you say, I have not meant to leave any one in doubt. I would save the Union. I would save it the shortest way under the Constitution. The sooner the national authority can be restored the nearer the Union will be ‘the Union as it was.’ If there be those who would not save the Union unless they could at the same time save slavery, I do not agree with them. If there be those who would not save the Union unless they could at the same time destroy slavery, I do not agree with them. My paramount object in this struggle is to save the Union, and is not either to save or to destroy slavery. If I could save the Union without freeing any slave, I would do it; and if I could save it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone, I would also do that. What I do about slavery and the colored race, I do because I believe it helps to save the Union; and what I forbear, I forbear because I do not believe it would help to save the Union. I shall do less whenever I shall believe what I am doing hurts the cause, and I shall do more whenever I shall believe doing more will help the cause. I shall try to correct errors when shown to be errors, and I shall adopt new views so fast as they shall appear to be true views. I have here stated my purpose according to my view of official duty; and I intend no modification of my oft-expressed personal wish that all men everywhere should be free. Yours, A. Lincoln.”—Abraham Lincoln, *Complete works*, v. 2, pp. 227-228.—“On the 22nd of September, he summoned his Cabinet to announce his conclusion. It was my good fortune, on that same day, and a few hours after the meeting, to hear, from the lips of one who participated, the story of the scene. As the chiefs of the Executive Departments came in, one by one, they found the President reading a favorite chapter from a popular humorist. He was lightening the weight of the great burden which rested upon his spirit. He finished the chapter, reading it aloud. And here I quote, from the published Journal of the . . . Chief Justice, an entry, written immediately after the meeting, and bearing unmistakable evidence that it is almost a literal transcript of Lincoln's words: ‘The President then took a graver tone and said: “Gentlemen, I have, as you are aware, thought a great deal about the relation of this war to slavery; and you all remember that, several weeks ago, I read to you an order I had prepared upon the subject, which, on account of objections made by some of you, was not issued. Ever since then my mind has been much occupied with this subject, and I have thought all along that the time for acting on it might probably come. I think the time has come now. I wish it was a better time. I wish that we were in a better condition. . . . I have got you together to hear what I have written down. I do not wish your advice about the main matter, for that I have

determined for myself. This I say without intending anything but respect for any one of you. But I already know the views of each on this question. They have been heretofore expressed, and I have considered them as thoroughly and carefully as I can. What I have written is that which my reflections have determined me to say. If there is anything in the expressions I use, or in any minor matter which any of you thinks had best be changed, I shall be glad to receive your suggestions. One other observation I will make: I know very well that many others might, in this matter as in others, do better than I can; and if I was satisfied that the public confidence was more fully possessed by any one of them than by me, and knew of any constitutional way in which he

failed . . . [that the president determined to decree emancipation in the seceded states by a military order]. To Mr. Seward and myself the President communicated his purpose, and asked our views, on the 13th of July, 1862. It was the day succeeding his last unsuccessful and hopeless conference with the representatives in Congress from the border slave states, at a gloomy period of our affairs, just after the reverses of our armies under McClellan before Richmond. The time, he said, had arrived when we must determine whether the slave element should be for or against us. Mr. Seward . . . was appalled and not prepared for this decisive step, when Mr. Lincoln made known to us that he contemplated, by an executive order, to emancipate the slaves. Startled

PRESIDENT LINCOLN READING THE EMANCIPATION PROCLAMATION TO HIS CABINET,  
SEPT. 22, 1862

Left to right are: Secretaries Stanton and Chase, President Lincoln, Secretaries Welles, Smith, Seward (seated), Blair and Bates.

(After painting by F. B. Carpenter, in the National Capitol)

could be put in my place, he should have it. I would gladly yield it to him. But though I believe I have not so much of the confidence of the people as I had some time since, I do not know that, all things considered, any other person has more; and, however this may be, there is no way in which I can have any other man put where I am. I am here. I must do the best I can and bear the responsibility of taking the course which I feel I ought to take." The President then proceeded to read his Emancipation Proclamation, making remarks on the several parts as he went on, and showing that he had fully considered the subject in all the lights under which it had been presented to him. The Proclamation was amended in a few matters of detail. It was signed and published that day.—J. A. Garfield, *Works*, v. 2, pp. 538-540.—"It was after all efforts for voluntary emancipation by the states interested, with pecuniary aid from the national treasury, had

with so broad and radical a proposition, he informed the President that the consequences of such an act were so momentous that he was not prepared to advise on the subject without further reflection. . . . While Mr. Seward hesitated and had the subject under consideration, the President deliberately prepared his preliminary proclamation, which met the approval, or at least the acquiescence, of the whole Cabinet, though there were phases of opinion not entirely in accord with the proceedings. Mr. Blair, an original emancipationist, and committed to the principle, thought the time to issue the order inopportune, and Mr. Bates desired that the deportation of the colored race should be coincident with emancipation. . . . Aware that there were shades of difference among his counsellors, and hesitation and doubt with some, in view of the vast responsibility and its consequences, the President devised his own scheme, held himself alone accountable for the

act, and unaided and unassisted, prepared each of the proclamations of freedom."—G. Welles, *Lincoln and Seward*, pp. 210-212.—The preliminary or monitory Proclamation of Emancipation, issued on September 22, 1862, was as follows:

"I, Abraham Lincoln, President of the United States of America, and Commander-in-Chief of the Army and Navy thereof, do hereby proclaim and declare that hereafter, as heretofore, the war will be prosecuted for the object of practically restoring the constitutional relations between the United States and each of the States and the people hereof, in which States that relation is or may be suspended or disturbed. That it is my purpose, upon the next meeting of Congress, to again recommend the adoption of a practical measure, tending pecuniary aid to the free acceptance or rejection of all the slave States, so-called, the people whereof may not then be in rebellion against the United States, and which States may then have voluntarily adopted, or thereafter may voluntarily adopt, the immediate or gradual abolishment of slavery within their respective limits; and that the effort to colonize persons of African descent, with their consent, upon this continent or elsewhere, with the previously obtained consent of the governments existing there, will be continued. That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any State, or designated part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them, in any efforts they may make for their actual freedom. That the Executive will, on the first day of January aforesaid, by proclamation, designate the States, or parts of States if any, in which the people thereof, respectively, shall then be in rebellion against the United States; and the fact that any State, or the people thereof, shall, on that day, be in good faith represented in the Congress of the United States by members chosen thereto at elections, wherein a majority of the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such State, and the people thereof, are not then in rebellion against the United States.' Then, after reciting the language of 'An act to make an additional article of war,' approved March 13, 1862, and also sections 9 and 10 of the Confiscation Act, approved July 17, 1862, and enjoining their enforcement upon all persons in the military and naval service, the proclamation concludes: 'And I do hereby enjoin upon and order all persons engaged in the military and naval service of the United States to observe, obey and enforce, within their respective spheres of service, the acts and sections above recited. And the Executive will, in due time, recommend that all citizens of the United States, who shall have remained loyal thereto throughout the rebellion, shall, upon the restoration of the constitutional relations between the United States and the people, if that relation shall have been suspended or disturbed, be compensated for all losses by acts of the United

States, including the loss of slaves.'"—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 6, ch. 6 and 8.—"The North was taken by surprise when the emancipation proclamation appeared, and misunderstood its bearings then, as it has, generally, ever since. Slavery was not affected by the preliminary proclamation, or by the final proclamation, which appeared on January 1, in any of the border States, or in any portion of the Confederacy, not in actual resistance to the United States. Over citizens of the United States not engaged in insurrection the President could have no control, and claimed none. So far as his act had legal weight, it applied only to persons within what he designated as the rebellious area in his final proclamation. Yet so long as these remained rebellious and continued to acknowledge only the jurisdiction of the Confederate government, they could not be reached and the proclamation could not be enforced against them. After they had submitted in any portion of the area, and become peaceful, it is highly doubtful whether any act of the President sequestering their property was lawful. Only impeachment could punish him for not aiding them to recover their property, but it is hard to believe that any United States court would have decided that their title to their slaves was extinguished. The emancipation proclamation did not free the slaves; but it served notice that the war had become an attack upon slavery as well as disunion, while legal steps sanctioned the policy announced by Lincoln in less than three years."—F. L. Paxson, *American Civil War*, pp. 109-110.

1862 (September - October: Mississippi).—Union successes under Grant.—Iuka and Corinth.—In July, when Pope was ordered to Virginia, and Halleck was assigned to the command of all the armies, "Grant was directed to establish his headquarters at Corinth. Grant's jurisdiction was not, however, enlarged by the promotion of Halleck: on the contrary, the new general-in-chief first offered the command of the Army of the Tennessee to Colonel Robert Allen, a quarter-master, who declined it, whereupon it was allowed to remain under Grant. He was, however, left somewhat more independent than while Halleck had been immediately present in the field. Four divisions of his army (including Thomas's command), were within the next two months ordered to Buell, who was stretching out slowly, like a huge, unwieldy snake, from Eastport to Decatur, and from Decatur towards Chattanooga. This subtraction put Grant entirely on the defensive. He had possession of Corinth, the strategic point, but was obliged to hold the railroads from that place and Bolivar, north to Columbus . . . [his base of supplies]. He remained himself eight weeks at Corinth, narrowly watching the enemy, who, commanded by Van Dorn and Price, harassed and threatened him continually. During this time, he directed the strengthening and remodelling of the fortifications of Corinth. . . . Van Dorn at last determined to move part of his force (under Price), east of Grant, apparently with a view to crossing the Tennessee and reinforcing Bragg in the Kentucky campaign. Grant notified Halleck of the probability of such a movement, and of

his intention to prevent it. . . . On the 13th [of September], Price advanced from the south and seized Iuka, 21 miles east of Corinth. . . . Grant had called in his forces some days before to the vicinity of Corinth, . . . and when the enemy's cavalry moved towards Iuka, and cut the railroad and telegraph wires between that place and Burnsville, seven miles to the westward, Grant began his operations. Price was at Iuka, and Van Dorn four days off, to the southwest, threatening Corinth. Grant's object was to destroy Price, before the two could concentrate, and then to get back to Corinth and protect it against Van Dorn. He accordingly ordered Brigadier-General Rosecrans, whose troops were posted south of Corinth, to move by way of Rienzi, along the south side of the Memphis and Charleston Railroad, and attack Iuka from that direction; while Major-General Ord, with a force brought hurriedly from Bolivar and Jackson, was to push towards Burnsville, and from there take roads on the north side of the railroad, attacking Iuka from that quarter. . . . Rosecrans's movement was delayed, and he was attacked (September 19) in heavy force as he neared Iuka, Ord's advance having been held back waiting for him. He kept his ground, but lost in the action a battery of artillery, besides 736 men, killed and wounded. That night the enemy retreated from Iuka, over a road which Rosecrans was expected to occupy, but did not. . . . On the 2nd of October . . . [the Confederates] under Van Dorn, Price, Lovell, Villedieu, and Rust, appeared in front of Corinth. . . . On the 3rd the fighting began in earnest. Rosecrans had about 19,000 men, and the enemy had collected 38,000 for this important movement, which was to determine the possession of northern Mississippi and West Tennessee. Rosecrans pushed out about five miles, toward Chewalla, . . . but the enemy began the fight, and, on the afternoon of the 3rd, the battle turned in favor of Van Dorn. Rosecrans was driven back to his defences on the north side of Corinth, and it was found how important was the labor bestowed on these fortifications, by Grant's order, a month previous. The enemy was checked until morning; but, early on the 4th, the whole rebel army, flushed with the success of the day before, assaulted the works. . . . Again and again, they advanced to the works, but each time were received with a determination equal to their own. Once, the national troops came near giving way entirely, but Rosecrans rallied them in person, and the rebels were finally repulsed before noon, with a loss admitted by themselves to be double that of Rosecrans. The national loss was 315 killed, 1,812 wounded, and 232 prisoners and missing. Rosecrans reported the rebel dead at 1,423, and took 2,225 prisoners. . . . The repulse was complete, by 11 o'clock in the morning, but unfortunately was not followed up by Rosecrans, till the next day. The rebels, however, started off in haste and disorder immediately after the fight; and on the 5th, while in full retreat, were struck in flank, as Grant had planned, by Hurlbut and Ord, and the disaster was rendered final. This occurred early on the morning of the 5th, at the crossing of the Hatchie river, about ten miles from Corinth. . . . A battery of artillery and several hundred men were captured, and the advance was dispersed or drowned. . . . Had Rosecrans moved promptly the day before, he would have come up in the rear of Van Dorn, either as he was fighting Ord, or while attempting to pass this defile [six miles up the

stream, where Van Dorn finally made his crossing.] In either event, the destruction of the rebels must have been complete. . . . These two fights relieved the command of West Tennessee from all immediate danger."—A. Badeau, *Military history of Ulysses S. Grant*, v. 1, ch. 4.—"Satisfied that the enemy was retreating [on the 4th], I ordered Sullivan's command to push him with a heavy skirmish line, and to keep constantly feeling them. I rode along the lines of the commands, told them that, having been moving and fighting for three days and two nights, I knew they required rest, but they could not rest longer than was absolutely necessary. I directed them to proceed to their camps, provide five days' rations, take some needed rest, and be ready early next morning for the pursuit."—W. S. Rosecrans, *Battle of Corinth (Battles and leaders*, v. 2, p. 753).

1862 (October–December: Virginia).—Final removal of McClellan.—Burnside at Fredericksburg.—"Both armies [in Virginia] . . . felt the need of some repose; and, glad to be freed from each other's presence, they rested on their arms—the Confederates in the Shenandoah Valley, in the vicinity of Winchester, and the army of the Potomac near the scene of its late exploits, amid the picturesque hills and vales of Southwestern Maryland. The movement from Washington into Maryland to meet Lee's invasion was defensive in its purpose, though it assumed the character of a defensive-offensive campaign. Now that this had been accomplished and Lee driven across the frontier, it remained to organize on an adequate scale the means of a renewal of grand offensive operations directed at the Confederate army and towards Richmond. The completion of this work, including the furnishing of transportation, clothing, supplies, etc., required upwards of a month, and during this period no military movement occurred, with the exception of a raid into Pennsylvania by Stuart. About the middle of October, that enterprising officer, with twelve or fifteen hundred troopers, crossed the Potomac above Williamsport passed through Maryland, penetrated Pennsylvania, occupied Chambersburg, where he burnt considerable government stores, and after making the entire circuit of the Union army, recrossed the Potomac below the mouth of the Monocacy. He was all the way closely pursued by Pleasonton with 800 cavalry. . . . On the recrossing of the Potomac by Lee after Antietam, McClellan hastened to seize the débouché of the Shenandoah Valley, by the possession of Harper's Ferry. . . . At first McClellan contemplated pushing his advance against Lee directly down the Shenandoah Valley, as he found that, by the adoption of the line east of the Blue Ridge, his antagonist, finding the door open, would again cross to Maryland. But this danger being removed by the coming of the season of high-water in the Potomac, McClellan determined to operate by the east side of the Blue Ridge, and on the 26th his advance crossed the Potomac by a pontoon-bridge at Berlin, five miles below Harper's Ferry. By the 2nd November the entire army had crossed at that point. Advancing due southward towards Warrenton, he masked the movement by guarding the passes of the Blue Ridge, and by threatening to issue through these, he compelled Lee to retain Jackson in the Valley. With such success was this movement managed, that on reaching Warrenton on the 9th, while Lee had sent half of his army forward to Culpepper to oppose McClellan's advance in that direction, the other half was still

west of the Blue Ridge, scattered up and down the Valley, and separated from the other moiety by at least two days' march. McClellan's next projected move was to strike across obliquely westward and interpose between the severed divisions of the Confederate force; but this step he was prevented from taking by his sudden removal from the command of the Army of the Potomac, while on the march to Warrenton."—W. Swinton, *Campaigns of the Army of the Potomac*, ch. 6, sect. 2-3.—"On November 7, as he sat in his tent with his friend Burnside, he [McClellan] received a despatch from the President relieving him of the command and giving it to Burnside. Why McClellan was removed at this time the historian has no power to determine. Some attribute the removal to the inner political councils at Washington. . . . From a military standpoint, however, the removal of McClellan was a serious mistake. It is certain that he was a growing man, and that with his extreme caution and his wonderful powers of organization a great defeat of the army under him was scarcely possible. Thus closed his career as a soldier."—H. W. Elson, *History of the United States of America*, v. 4, pp. 204-206.—According to General Meade, Burnside was the "most distressed man in the army" over his promotion. He said openly that he was "not fit for the position." C. E. Norton wrote, "Burnside may be able to command one hundred thousand men in the field, but is he?" "It is dangerous to shift commanders on the eve of battle, and our cavalry had already engaged the Confederates'; it is more dangerous to change the plans of troops moving in the vicinity of the enemy. But as if impelled to do some new thing . . . the new commander of the Army of the Potomac determined upon a flank movement by his left on the north of the river towards Fredericksburg. . . . Only by movements equally wary and rapid, as well as by sure means of crossing the river, could Burnside's manœuvre possibly succeed. In this last element he counted on Halleck, and, of course, failed. The promised pontoons did not, and could scarcely have been expected to come. Arrived at Fredericksburg Burnside still might have crossed by the fords, for the water was low. And once in possession of the heights beyond the city he could afford to wait. But, slower than even his predecessor, Burnside sat down at Falmouth, on the north side of the river, while Lee, having learned of his movement, by forced marches concentrated his army on the opposite bank, and prepared to erect impregnable defences in his front. . . . Before Burnside got ready to take any active steps, Marye's Heights, back of Fredericksburg, had been crowned by a triple line of works, and Lee had brought together nearly 90,000 troops to man them. Two canals and a stone wall in front of the left, as well as open, sloping ground on both flanks, served to retain an attacking party for a long period under fire. To assault these works in front was simple madness. To turn them below necessitated the crossing of a wide and now swollen river, in the face of a powerful enemy in his immediate front. . . . To turn them above was practicable, but it was a confessed return to McClellan's plan. Burnside chose the first. Preparations for crossing were begun. The better part of three days [December 11-13] was consumed in throwing the bridges and putting over the two Grand Divisions of Franklin and Sumner, all of which was accomplished under fire. But Lee was

by no means unwilling to meet the Army of the Potomac after this fashion. Such another happy prospect for him was not apt soon again to occur. He did not dispute the crossing in force. Burnside's one chance in a hundred lay in a concentrated assault sharply pushed home before the enemy could oppose an equal force. But in lieu of one well-sustained attack, or of two quite simultaneous, Burnside frittered away this single chance by putting in Franklin on the left and Sumner on the right, without concerted action." Both assaults were bloodily repulsed. "Hooker is ordered across. Under protest, and yet Hooker lacked not stomach for a fight, he obeys the useless order, and leads his men into the slaughter pen. . . . All is in vain. Even the Army of the Potomac cannot do the impossible. The defeated troops are huddled into Fredericksburg, and gradually withdrawn across the river. Burnside was insane enough to wish to repeat the assault next day. But the counsels of his officers prevailed on him to desist. No such useless slaughter, with the exception, perhaps of Cold Harbor, occurred during our war, and 13,000 men paid the penalty. The enemy's loss was but one in three of ours."—T. A. Dodge, *Bird's-eye view of our Civil War*, ch. 21.

1862 (November).—Elections.—Opposition to war by Peace Democrats.—"The hope of Lincoln that the emancipation proclamation would consolidate the North behind him was not realized at once. Abroad, the feeling towards the United States immediately grew better, but at home his act only widened the cleavage among factions, and brought him rebuke at the congressional elections of 1862. Seward had believed in the loyal outburst after Sumter, that all party lines in the North were gone; but they were only submerged in a tide of emotion that ebbed away in the second year of the war. At best, Lincoln was supported by a temporary fusion of diverse elements. The abolitionists were the radicals among his backers and had Chase as their spokesman in the Cabinet. Seward represented the moderate Republicans who were unionists above all else. The war Democrats, who had voted for Douglas, and like him had stood by the Union, claimed McClellan as one of their number and were reached by Stanton, Secretary of War. Bates and Blair were border State Democrats, whose friends expected the Union to be maintained without damage to slavery. No single faction could control a majority in the North, and it was not certain that any single one could be spared. Yet to harmonize their interests was an almost impossible task, and more nearly broke down in the fall of 1862 than at any other time. Always among the avowed opposition were conservatives who sympathized with the South, and denied the constitutionality of coercion. 'Copperheads,' as they came to be called, they harassed the President in his every act, and varied in conduct from open support of the Confederacy to severe criticism of the policy of the administration. Lincoln was

never a good executive chief or disciplinarian. He rarely thought in terms of efficient administration. More than once he tried to save law-breakers whose friends were necessary to his policy. But the fact that he managed, in any way, to conduct the Union cause, with the sort of backing that he had, placed him at the head of the world's consummate politicians. The immediate result of the Emancipation proclamation was discouraging. Its critics shouted its supporters in the North. In the elections conservatives everywhere gained a hearing and unseated numerous Republicans. In 1860 Lincoln had carried every northern State except New Jersey. In 1862 his party was ousted in a solid tier of States north of the border;—New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, and Wisconsin. Only by a bare majority did the Republicans retain their control of Congress; and it is fair to regard the election as a general vote of censure implying lack of confidence in the administration. The backwoods lawyer, whom political manipulation had seated in the White House, had not yet convinced his country of his essential greatness. His followers were only just beginning to identify the Republican party with the Union, and to maintain that the defeat of either would involve the downfall of the other. The war, however, had to go on. McClellan was dismissed immediately after the election, and the country entered upon the darkest eight months in its history.”—F. L. Paxson, *American Civil War*, pp. 110-112.—“A portion of the northern Democracy, especially large in the Old Northwest, openly opposed the prosecution of the War by the Administration. Because of the fact that the movement demanded that the Administration stop the war, and that the membership was drawn from the old Democratic party the name the Peace Democratic Party has been given it. Breckinridge received 279,211 votes in the free states in 1860: this element was a natural nucleus of a northern party of opposition. The opponents sneeringly called its members ‘copperheads,’ or identified them with the Confederates by the common appellation of ‘butternuts.’ Fernando Wood, Mayor of New York, and his brother, Benjamin Wood, publisher of the *New York News* and a member of Congress, made themselves spokesmen of a faction of Peace Democrats in the East. . . . But the chief elements of the Peace Democrats were located in the Ohio valley, decreasing in density of numbers as the distance northward from the Ohio river increased. The evidence connects the class with the immigration stream which had moved like an overflowing flood from the South to the north side of the Ohio River. . . . The rank and file of the Copperheads were the smaller farmers and poor artisans of the region, if measured by accumulated wealth. They like the poor whites of the South saw another vision from that which the followers of Lincoln saw. The latter saw the expansion of their agricultural system across the fertile prairie of the plains balked by expanding slave areas. The former saw a black horde of freedmen, a veritable black peril, sweeping from the southland across the Ohio into the free farming regions of the Ohio Valley. All those social forces which count with a people—environment, tradition, decades of teaching from platform, press, and pulpit—were bearing their natural fruit in the Ohio Valley.”—E. J. Benton, *Movement for peace without a victory during the Civil War* (*Collections of the Western Reserve Historical*

*Society*, publication no. 99, issued December, 1918, pp. 10-11).

1862 (December: On the Mississippi).—Second attempt against Vicksburg.—General Sherman and Admiral Porter.—Miscarriage of Grant's plans.—“For ten months after October, 1862, Grant was on trial, and knew it. . . . Army contractors, whose speculations he exposed, cotton brokers, whose pernicious influence upon morale he attacked, temperance advocates who thought him dissipated, co-operated to place him under suspicion and keep him there. . . . Grant brought upon himself much of this. He was a wretched correspondent, and his military reports were brief and general, . . . and the quiet persistence with which he followed up his own counsels often left the administration in doubt as to his real intent. He bore with Dana, with a modesty unusual in major-generals, and won him for a friend. Vicksburg, Grant's first goal, would have been inconvenient in approach, even if it had not been fortified in long anticipation of attack. Set on the Mississippi, just below the Yazoo Valley and its marsh lands which protected it on the north, it was perched at the northern extremity of a long range of high bluffs. These rose directly from the water's edge, making the town almost inaccessible from the west. The guns of its forts commanded long reaches of the river, above and below, making an assault impossible. Only on the east and south-east were dry approaches available, and these were heavily entrenched. Against these Grant started in the early winter, with Memphis as his base and Holly Springs as his supply station. It was to be a joint attack on Vicksburg, like that of the early spring on Forts Henry and Donelson. Sherman was to drop down the river from Memphis, convoyed by the fleet, and try the fortifications by the water routs. Grant, meanwhile, was to march overland against the rear, to drive the defending army of Pemberton back upon his entrenchments.”—F. L. Paxson, *American Civil War*, pp. 138-310.—“Rear-Admiral Porter took command of the Mississippi squadron in October, 1862. . . . Up to this time the gun-boats had, strictly speaking, been under the control of the Army, but now all this was changed, and the Mississippi Squadron, like all the other naval forces, was brought directly under the supervision of the Secretary of the Navy. . . . The new arrangement left the commander of the squadron at liberty to undertake any expedition he thought proper, and he was not in the least hampered by any instructions from the Navy Department. . . . Before Admiral Porter left Washington he was informed by the President that General McClernand had been ordered to raise an Army at Springfield, Ill., to prosecute the siege of Vicksburg. . . . But as Vicksburg never would have been taken if it had depended on General McClernand's raising an Army sufficient for the purpose, the Admiral, immediately on his arrival at Cairo, sent a message to General Grant, at Holly Springs, Miss., informing him of McClernand's intention; that he, Porter, had assumed command of the Mississippi Squadron, and was ready to cooperate with the Army on every occasion where the services of the Navy could be useful. A few days afterwards General Grant arrived at Cairo and proposed an expedition against Vicksburg, and asking the rear-admiral, if he could furnish a sufficient force of gun-boats, to accompany it. . . . Grant had left Holly Springs with a large Army at the time

he had appointed, merely with the design of drawing Pemberton from Vicksburg and thus helping Sherman in his attack on that place. . . . Grant moved towards Granada, and everything looked well; but the Confederate General, Earl Van Dorn, dashed into Holly Springs, 28 miles in the rear of the Union Army, capturing the garrison and all their stores. At the same time General Forrest pushed his cavalry into West Tennessee, cutting the railroad to Columbus at several points between that place and Jackson. . . . Due precautions had been taken to prevent this mishap by leaving a strong force behind at Holly Springs, but the commanding officer was not on the alert and his capture was a complete surprise. In this raid of the Confederates a million dollars' worth of stores were destroyed. Under the circumstances it was impossible for Grant to continue his march on Granada, which Pemberton perceiving, the latter returned to Vicksburg in time to assist in Sherman's repulse. . . . on the 29th of December, 1862."—D. D. Porter, *Naval history of the Civil War*, ch. 24.

1862 (December).—State of the war at the end of the year.—"The close of the year 1862 found the boundaries of the Confederacy much contracted. . . . Nearly the entire Atlantic coast, except between Charleston and Savannah and one or two points in North Carolina, were lost to the Confederacy. . . . Norfolk and Yorktown were in . . . [Federal] hands. A powerful blockade operated to the South, while Grant in Mississippi and Rosecrans in Tennessee threatened communications necessary for the support of the Confederate armies. The Northern forces had closed in their lines everywhere. And yet, in the field, the advantage had not been on the side of the Union. The victories of Lee and Jackson over the mighty armies of the Federals had . . . inspired the Southern soldiers with the belief that their prowess would yet achieve Southern independence."—W. R. Garrett and R. A. Halley, *Civil War from a Southern standpoint*, p. 321.—"At the end of the year, nothing could be more uniformly gloomy than the Union prospects. In the East, the Army of the Potomac had just received another stunning blow, and was helpless for the time being; but Lee was not in a position to follow up his success, and President Davis made a fatal mistake of acting as if the war were practically ended, instead of straining every nerve to finish off his opponents. Neither Lee, Johnston, nor Bragg was deceived on this point in the least. In the West and South, Grant was helpless, his troops dispersed, and his communications destroyed; Farragut had had to retire on New Orleans, having failed in his attempt on Vicksburg, and the Confederates had strengthened their line on the Mississippi: Sherman, isolated from Grant, had just been heavily defeated before Vicksburg, and Rosecrans, at Stone's River, was driven back and beaten to his knees, but still unconquered. At sea, the blockade of Galveston was raised on January 1st, 1863, the famous *Monitor* went down in December, and the *Florida* and *Alabama* were left loose, the latter preying actively on Northern commerce."—J. Forby, *American Civil War*, pp. 179-180.

1862-1863 (December-January: Tennessee).—Bragg and Rosecrans.—Battle of Stone River, or Murfreesborough.—"The Confederate government

was greatly disappointed with the issue of Bragg's campaign. Scarcely had he reached Chattanooga when he was ordered to move northward again. Rosecrans, on assuming command of Buell's army, . . . concentrated his forces at Nashville, and there accumulated large supplies. . . . Bragg had already reached Murfreesborough on his second northward march from Chattanooga. Rosecrans had given out that it was his intention to take up his winter quarters at Nashville, and Bragg, supposing that this would be the case, sent out strong detachments of cavalry under Morgan and Forrest, the former being ordered to break Rosecrans's communications. . . . Suddenly, on the 26th of December, Rosecrans moved."—J. W. Draper, *History of the American Civil War*, v. 2, ch. 53.—"Rosecrans moved out of Nashville the day after Christmas with the intention of attacking the Confederates. For a number of days he advanced, skirmishing as he went, and finally took up a position within three miles of Murfreesborough, Tennessee, where Bragg's army had gone into winter quarters. On the last day of the year he determined to make the attack; but Bragg had resolved to take the offensive at the same time, and obtained the advantage of the initial onset. The bloody battle of Stone's [Stone] River [or Murfreesborough] ensued, wherein 41,000 Union troops were pitted against 34,000 Confederates. The Confederates won the day, but Rosecrans stubbornly maintained his ground. On January 2, 1862, Bragg again attacked the Union Army and met with repulse. On the night of the following day, his troops being somewhat demoralized, he retreated from Murfreesborough. This gave Rosecrans a chance, of which he at once availed himself, to claim the victory in the campaign. The President telegraphed to him 'God bless you.' Halleck called it one of the most brilliant successes of the war. Throughout the North it was proclaimed a victory. At last, ran the sentiment of the people, our great general has appeared. The loss on both sides was heavy and both armies were so crippled that a long time was required to repair the damage. Although the casualties of Rosecrans were the larger, the superior resources of the North inclined the balance against the Confederates, who sustained moreover the loss in morale. In 1865, however, Grant declared that 'Murfreesborough was no victory' for the North; and William T. Sherman wrote at the time that Rosecrans's 'victory of Murfreesborough is dearly bought.' If the student confines himself to the literature of this campaign alone, he will feel that the extensive claims of a victory made by the President and the people of the North were a clutching at straws; but if he looks ahead he will see that they were wiser than they knew, for he will then comprehend that to hold Tennessee Bragg needed a decisive success, and that his failure and the serious crippling of his army opened the way for the Union advance to Chattanooga the following summer. The campaigns of Perryville and Stone's River were moreover a favorable augury to the cause of the North, inasmuch as they showed that in the Army of the West an education of generals was going on, that native military talent was in the process of development. George H. Thomas, a Virginian of the same good stuff as Washington and Robert E. Lee, was serving as second in command to Buell and to Rosecrans; he joined to ability in his profession and a scrupulous loyalty to his superiors, a conviction of the justice of the cause

which, contrary to the example of his State, he had espoused. . . . Philip H. Sheridan had distinguished himself at Perryville and now did gallant work at Stone's River. The immediate result of the campaign were not sufficiently important to lift Congress and the country for more than a brief period out of the dejection into which they had fallen. Sumner, although he realized the peril, had not lost heart. 'These are dark hours,' he wrote to Lieber. 'There are senators full of despair,—not I. . . . But I fear that our army is everywhere in a bad way.'—J. F. Rhodes, *History of the Civil War, 1861-1865*, pp. 199-201. —"The enemy in retiring did not fall back very far—only behind Duck River to Shelbyville and Tullahoma—and but little endeavor was made to follow him. Indeed, we were not in condition to pursue, even if it had been the intention at the outset of the campaign. . . . The victory quieted the fears of the West and Northwest, destroyed the hopes of the secession element in Kentucky, renewed the drooping spirits of the East Tennesseans, and demoralized the disunionists in Middle Tennessee; yet it was a negative victory so far as concerned the result of the battle-field. Rosecrans seems to have planned the battle with the idea that the enemy would continue passive, remain entirely on the defensive, and that it was necessary only to push forward our left in order to force the evacuation of Murfreesboro'. . . . Had Bragg followed up with the spirit which characterized its beginning the successful attack by Hardee on our right wing—and there seems no reason why he should not have done so—the army of Rosecrans still might have got back to Nashville, but it would have been depleted and demoralized."—P. H. Sheridan, *Personal memoirs*, v. 1, ch. 12-14.

1862-1864.—Loyalty of Arkansas to Union. See ARKANSAS: 1862-1864.

1862-1864.—Great Sioux outbreak.—War on the frontier.—"After the occupation of Corinth, the military movements west of the Mississippi, except as they were involved in the Vicksburg campaigns of 1863, ceased to be an important part of the main strategy of the war. Never had they been decisive, but all along the frontier, from Sante Fé to St. Paul, there were episodes, locally interesting and more or less connected with the war. On the extreme border of Texas, the mining regions and the old communities along the Rio Grande necessitated a campaign in 1861 and 1862. Confederate forces actually possessed themselves of New Mexico and part of Arizona, only to be driven out by a combined attack from Colorado and California. In Colorado territory, an enthusiastic governor, Gilpin by name, believed he saw a conspiracy to take the Pike's Peak camps over to the Confederacy. With great vigour he enlisted the young prospectors of the territory into volunteer regiments, which certainly saved it from whatever danger threatened it. Farther north, the new State of Minnesota was afflicted towards the end of the year with a serious Indian uprising. The Sioux of the Minnesota Valley, above St. Paul, had been accumulating grievances against the United States for more than ten years before the war began. A casual frontier row in August, 1861, developed into a general attack that drove the settlers from the valley in wild distress. Nearly a thousand were slain;

others [about 2,000] were captured; and the occasion called for greater strength than Minnesota possessed. Her militia was augmented, and Pope, relieved of the Army of Virginia after the second battle of Bull Run, was sent to restore confidence on the northwest border. [Of the captured Indians, 303 were condemned to death by court-martial, 38 were hanged in December, 1862, and the remainder repressed by President Lincoln.] In Missouri, Arkansas, and Kansas, the fighting was more orderly, but had little more permanent consequence than that on the outlying frontiers of Minnesota or New Mexico. [See also DAKOTA TERRITORY: 1862-1865.] In these three States the sentiment of the population had run high through the fifties when the fight over slavery was before Congress. When war came, many entered each army; while the least reputable of either side formed guerrilla bands that plundered and murdered at pleasure. Quantrill is the most notorious of these raiders. Price, in his attack upon Missouri, and Banks, in the Red River campaign of 1864 [see below: 1864 (March-May: Louisiana)], conducted the most notable of the formal campaigns. But none of these affected the general outcome. . . . [After Vicksburg] the Mississippi became a Union river, and Confederate operations in the trans-Mississippi ceased to be important."—F. L. Paxson, *American Civil War*, pp. 132-133.

1863 (January).—Final Proclamation of Emancipation.—The immediate practical effect of the warning Proclamation of Emancipation issued by President Lincoln on September 22, 1862, "did, perhaps, more nearly answer the apprehensions of the President than the expectations of those most clamorous for it. It did, as charged, very much 'unite the South and divide the North.' The cry of 'the perversion of the war for the Union into a war for the negro' became the Democratic watchword, and was sounded everywhere with only too disastrous effect, as was plainly revealed by the fall elections with their large Democratic gains and Republican losses. Indeed, it was the opinion of Mr. Greeley that, could there have been a vote taken at that time on the naked issue, a large majority would have pronounced against emancipation. But Mr. Lincoln did not falter. Notwithstanding these discouraging votes at the North, and the refusal of any Southern State to avail itself of the proffered immunity and aid of his Proclamation of September, he proceeded, at the close of the hundred days of grace allowed by it, to issue his second and absolute Proclamation, making all the slaves of the Rebel States and parts of States forever and irreversibly free." It was in the following words:

ABRAHAM LINCOLN

(From painting by William Marshall)

Whereas, on the twenty-second day of September, in the year of our Lord one thousand eight hundred and sixty-two, a proclamation was issued by the President of the United States, containing, among other things, the following, to wit: "That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any state, or designated part of a state, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons or any of them, in any efforts they may make for their actual freedom. That the Executive will, on the first day of January aforesaid, by proclamation, designate the states and part of states, if any, in which the people thereof respectively shall then be in rebellion against the United States; and the fact that any state, or the people thereof, shall on the day be in good faith represented in the Congress of the United States, by members chosen thereto at elections wherein a majority of the qualified voters of such state shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such state, and the people thereof, are not then in rebellion against the United States." Now, therefore, I, Abraham Lincoln, President of the United States, by virtue of the power in me vested as Commander-in-Chief of the army and navy of the United States, in time of actual armed rebellion against the authority and government of the United States, and as a fit and necessary war measure for suppressing said rebellion, do, on this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and in accordance with my purpose so to do, publicly proclaimed for the full period of one hundred days from the day first above mentioned, order and designate, as the states and parts of states wherein the people thereof respectively are this day in rebellion against the United States, the following, to wit: Arkansas, Texas, Louisiana (except the parishes of St. Bernard, Plaquemines, Jefferson, St. John, St. Charles, St. James, Ascension, Assumption, Terre Bonne, Lafourche, St. Mary, St. Martin, and Orleans, including the city of New Orleans), Mississippi, Alabama, Florida, Georgia, South Carolina, North Carolina, and Virginia (except the forty-eight counties designated as West Virginia, and also the counties of Berkeley, Accomac, Northampton, Elizabeth City, York, Princess Ann, and Norfolk, including the cities of Norfolk and Portsmouth), and which excepted parts are for the present left precisely as if this proclamation were not issued. And, by virtue of the power and for the purpose aforesaid, I do order and declare that all persons held as slaves within said designated states and parts of states are and henceforth shall be free; and that the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons. And I hereby enjoin upon the people so declared to be free, to abstain from all violence, unless in necessary self-defense; and I recommend to them that, in all cases when allowed, they labor faithfully for reasonable wages. And I further declare and make known that such per-

sons of suitable condition will be received into the armed service of the United States, to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service. And upon this act, sincerely believed to be an act of justice, warranted by the Constitution, upon military necessity, I invoke the considerate judgment of mankind and the gracious favor of Almighty God. In witness whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed. Done at the city of Washington, this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and of the Independence of the United States of America the eighty-seventh. Abraham Lincoln. By the President: William H. Seward, Secretary of State.

"Though the immediate effects of the Proclamation might not have answered all that was expected of it, it was not many months before its happy influences became manifest. Its tendency from the first was to unify and consolidate the antislavery and Christian sentiment of the land, to give dignity and consistency to the conflict. . . . It strengthened, too, the cause immensely with other nations, secured the sympathy and moral support of Christendom, and diminished, if it did not entirely remove the danger of foreign intervention."—H. Wilson, *History of the rise and fall of the slave power*, v. 3, ch. 28.—"Fame is due Mr. Lincoln, not alone because he decreed emancipation, but because events so shaped themselves under his guidance as to render the conception practical and the decree successful. Among the agencies he employed none proved more admirable or more powerful than this two-edged sword of the final proclamation, blending sentiment with force, leaguely liberty with Union, filling the voting armies at home and the fighting armies in the field. In the light of history we can see that by this edict Mr. Lincoln gave slavery its vital thrust, its mortal wound. It was the word of decision, the judgment without appeal, the sentence of doom."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 6, ch. 19.

1863 (January: Arkansas).—Capture of Arkansas Post, or Fort Hindman.—Sherman withdrew his troops from the attempt against Vicksburg on January 2, and on January 4 he relinquished the command to General McClellan, who had come down the river with orders to assume it. On that same day "the expedition sailed on the same transports that had brought them from Vicksburg, convoyed by Admiral Porter's fleet of gunboats, to attack Fort Hindman, commonly known as Arkansas Post [50 miles from the mouth of the Arkansas and 117 below Little Rock]. . . . By noon on the 10th the landing was completed, and the troops were on the march to invest the post. . . . The gunboats opened a terrific fire upon the enemy during the afternoon, to distract his attention. By nightfall the troops were in position." Next morning a combined attack began, which the garrison endured until 4 o'clock P. M. when the white flag was raised. "Our entire loss in killed was 129; in wounded 831; and in missing, 17; total, 977. . . . By the surrender there fell into our

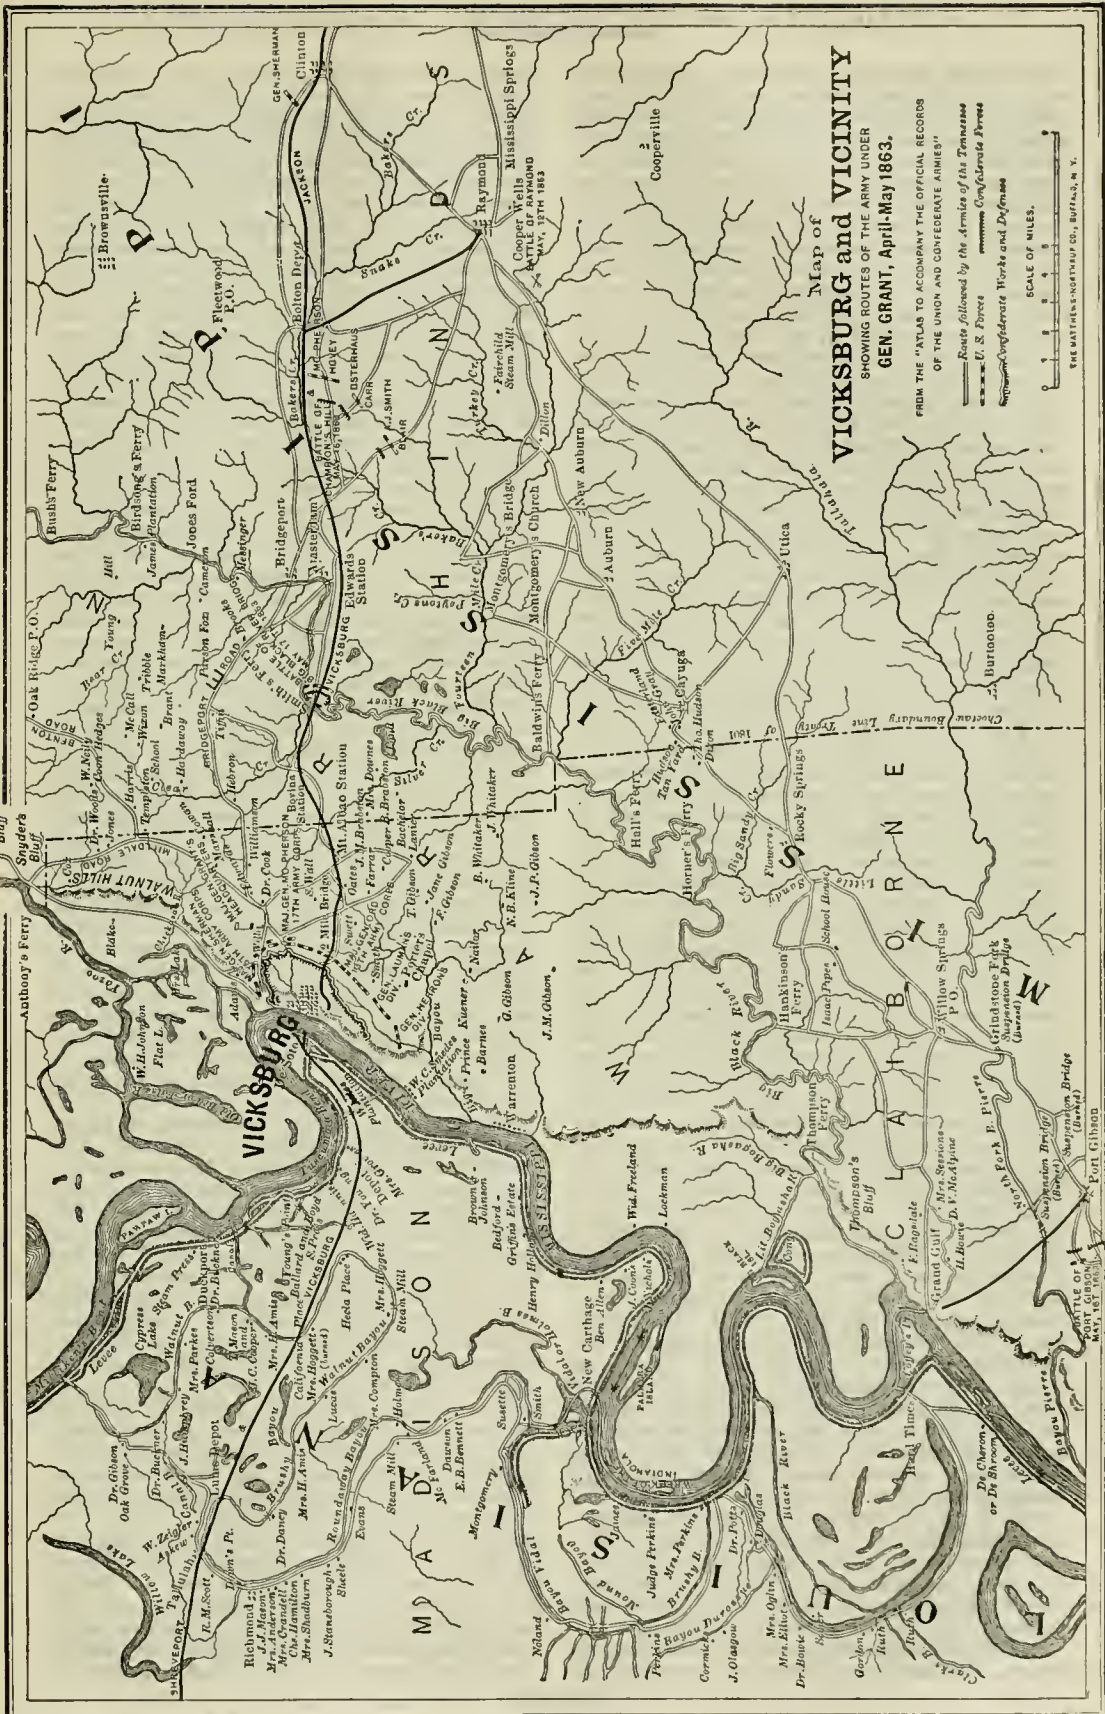

hands 5,000 men. . . . After sending the prisoners to St. Louis, having destroyed the defences and all buildings used for military purposes, on the 15th of January the troops re-embarked on the transports and proceeded to Napoleon, Arkansas, whence on the 17th . . . they returned to Milliken's Bend."—S. M. Bowman and R. B. Irwin, *Sherman and his campaigns*, ch. 7-8.

1863 (January-April: Virginia).—Command given to Hooker.—President Lincoln's letter to him.—Demoralized state of the Army of the Potomac, and its improvement.—"General Burnside retired from a position he had never sought, to the satisfaction, and, be it said to his credit, with the warm personal regard of all. Sumner, whom the weight of years had robbed of strength, but not of gallantry, was relieved at his own request; Franklin was shelved. Hooker thus became senior general officer, and succeeded to the command. No man enjoyed a more enviable reputation in the Army of the Potomac. . . . His commands so far had been limited; and he had a frank, manly way of winning the hearts of his soldiers. He was in constant motion about the army while it lay in camp; his appearance always attracted attention; and he was as well known to almost every regiment as its own commander. He was a representative man. . . . 'I have placed you [wrote the President] at the head of the Army of the Potomac. Of course, I have done this upon what appears to me to be sufficient reasons, and yet I think it best for you to know that there are some things in regard to which I am not quite satisfied with you. I believe you to be a brave and skilful soldier, which of course I like. I also believe you do not mix politics with your profession, in which you are right. You have confidence in yourself; which is a valuable, if not an indispensable quality. You are ambitious, which, within reasonable bounds, does good rather than harm; but I think that, during General Burnside's command of the army, you have taken counsel of your ambition and thwarted him as much as you could, in which you did a great wrong to the country and to a most meritorious and honorable brother-officer. I have heard, in such a way as to believe it, of your recently saying that both the army and the Government needed a dictator. Of course, it was not for this, but in spite of it, that I have given you the command. Only those generals who gain success can set up dictators. What I now ask of you is military success, and I will risk the dictatorship. The Government will support you to the utmost of its ability, which is neither more nor less than it has done or will do for all commanders. I much fear that the spirit you have aided to infuse into the army, of criticising their commander and withholding confidence for him, will now turn upon you. I shall assist you as far as I can to put it down. Neither you nor Napoleon, if he were alive again, could get any good out of an army while such a spirit prevails in it. And now, beware of rashness! Beware of rashness, but with energy and sleepless vigilance go forward, and give us victories!' . . . Hooker [who] was appointed January 26, 1863, . . . was to all the soul and embodiment of the growth and history of this weather-beaten Army of the Potomac. And the salutary changes he at once began to make,—for Hooker never lacked the power of organization—were accepted with alacrity; and a spirit of cheerful willingness succeeded speed-

ily to what had been almost a defiant obedience. The army was in a lamentably low state of efficiency. Politics mingled with camp duties; and the disaffection of officers and men, coupled with an entire lack of confidence in the ability of the Army of the Potomac to accomplish anything, were pronounced. Desertions occurred at the rate of 200 a day. . . . Hooker states that he found 2,922 officers, and 81,964 enlisted men, entered as absent on the rolls of the army, a large portion from causes unknown. . . . The testimony of all general officers of the Army of the Potomac concurs in awarding the highest praise to Hooker for the manner in which he improved the condition of the troops during the three months he was in command prior to Chancellorsville. . . . On the 30th of April the Army of the Potomac, exclusive of provost-guard, consisted of about 130,000 men under the colors,—'for duty equipped,' according to the morning report. . . . While the Army of the Potomac lay about Falmouth [opposite Fredericksburg], awaiting orders to move, Lee occupied the heights south of the Rappahannock, from Banks's Ford above to Port Royal (or Skenker's Neck), below Fredericksburg, a line some 15 miles in length as the crow flies. . . . Lee's forces numbered about 60,000 men, for duty."—T. A. Dodge, *Campaign of Chancellorsville*, ch. 3-4.

1863 (January-April: On the Mississippi).—Grant's campaign against Vicksburg.—Futile operations of the first four months.—"Grant then ordered the troops back to the Mississippi, since they were intended for the attack of Vicksburg, and took command himself. . . . The army now consisted of four Corps, the XIIIth, XVth, XVIIth, under McClernand, Sherman, Hurlbut, and McPherson, respectively. The XVIIth remained at Memphis as depot. Soon after the fall of Arkansas Post, Admiral Porter attacked the Red River, which the Confederates controlled, by sending three of his vessels down past the Vicksburg batteries, but one was sunk in action, and the others taken. On hearing of it, Farragut determined to move, came up with his fleet, and attacked Port Hudson, nominally in co-operation with Banks, but the land force was not able to take part: the ships were very severely handled, the *Mississippi* being destroyed, and only the flagship *Hartford* and one other getting past, but they were able to gain control, and close the Red River to the Confederates. Farragut then came up to the south of Vicksburg, and got into communication with Porter and Grant. To open the campaign against Vicksburg, Grant ordered the canal to be enlarged which had been cut the year before, but when he came, saw that this would be useless, as the enemy had established a battery which enfiladed it. He then tried to turn the position by the bayous of the Yazoo and its tributaries, but the distances were great, the work slow, and the Confederates forestalled and defeated all his attempts. He spent February and March in vain endeavours to turn the right flank of the defences, and then had to devise something else; but what? There seemed a choice of three plans: (1) To assault the batteries. (2) To go back to Memphis and

start afresh, along the Mississippi Central Railway. (3) To move round opposite Vicksburg, cross the river below it on the high land, and attack it in rear. The first would almost certainly be defeated. From a military point of view the second was the best, but Grant chose the third, though it was most risky, and even the supplies depended on success, because if successful it would be decisive, and political considerations forbade even the semblance of retreat. The war was at a standstill, generally, and many clamoured for his removal from command. It was the turning-point of his career. The detail of the plan was to move down the bayous to the west of the river to New Carthage, some thirty miles below Vicksburg, run the gunboats and transports past the batteries, make a combined attack on Grand Gulf, and bring the army over; then to move along the valley of the Big Black, and attack the land side of Vicksburg. The original plan appears to have been for Banks to co-operate from the South, but this was nullified by the unexpected strength of Port Hudson. The Confederate line was very long, there being several outlying works such as Fort Pemberton, up to Yazoo to the north, but the main line began at Haines' Bluff, a detached position north of the town, and ran with intervals to Grand Gulf, 30 miles away by land, 60 by water. To Port Hudson, also in Pemberton's command, the line was 200 miles long, and was held by about 50,000 effective men. . . . Fort Pemberton and Grand Gulf were the outworks of the main line: to the north stretched the Yazoo watershed, a district of swamp, tangled forest, and bayou, from where the high land receded from the Mississippi, 180 miles away, to where they met again at Vicksburg, each curving outwards till there was a breadth of some 50 miles between them in the centre. Fort Pemberton was in the middle of this almost impenetrable tangle, through which Grant vainly tried to force his way. The river front on the Vicksburg fortifications was three miles long, and the works were carried round in rear at a distance of about two miles from the town. Some nine miles back from the Mississippi ran the Big Black River, coming out by Grand Gulf, 30 miles below. There were also strong works at Warrenton on the Mississippi, a few miles south of Vicksburg. The garrison was commanded by Stevenson, the district by Pemberton. From Vicksburg a railway ran eastward, connecting it with two important lines, the New Orleans and Memphis, and the Mobile and Ohio, at Jackson and Meridian respectively. A relieving force was being assembled to the north-east, but Johnston, the Confederate commander from the Alleghanies to the Mississippi, was at this time at Tullahoma with Bragg. On the Union side, McClernand's Corps moved on March 28th, and reached New Carthage on April 20th, the gunboats passing the batteries on the 16th. The ground was swampy and the work of moving the army very slow but all were ready by the 29th, opposite Grand Gulf."—J. Formby, *American Civil War*, pp. 221-224.

1863 (February).—Proposal for mediation by France.—Influence on country.—"Greeley in his

journal advocated the mediation of a European power between the North and the South, and to further this end he held private interviews and opened a correspondence with Mercier, the French Minister, intimating that the people would welcome any foreign mediation which should look to a termination of the war. . . . An offer of mediation between the two sections from Napoleon, the Emperor of the French, was communicated on February 3, 1863, to the Secretary of State. It was declined at once by the President, the offer and response being published at the same time. Despite the rumors which had somehow prepared the public mind for this step, the actual fact that a powerful nation impelled by motives of material interest was eager to interfere in the struggle startled the people and deepened the gloom. 'The President tells me,' wrote Sumner to Lieber, 'that he now fears "the fire in the rear,"—meaning the Democracy especially at the Northwest—more than our military chances.' Governor Morton, of Indiana, telegraphed to the Secretary of War, 'I am advised that it is contemplated when the Legislature meets in this State to pass a joint resolution acknowledging the Southern Confederacy, and urging the States of the Northwest to dissolve all constitutional relations with the New England States. The same thing is on foot in Illinois.' The legislatures of these States were Democratic, having been chosen the previous autumn during the conservative reaction. Morton's grave apprehensions were far from being realized, but his legislatures quarreled with him and refused its support to his energetic measures for carrying on the war. The Republican members took his part, and the wrangle became so bitter that finally the legislature adjourned without making the necessary appropriations for the maintenance of the State government during the next two years. In Illinois, resolutions praying for an armistice and recommending a convention of all the States to agree upon some adjustment of the trouble between them, passed the House, but failed to obtain consideration in the Senate. This legislature likewise fell out with its Republican governor."—J. F. Rhodes, *History of the Civil War, 1861-1865*, pp. 201-202.

1863 (February-April: Tennessee).—Engagements at Dover and Franklin.—"The army of the Cumberland, after its victory at Murfreesborough, [see above: 1862-1863 (December-January)] did not resume the offensive for several months. The railroad from Nashville to Louisville had been greatly damaged by Morgan's raid and the line forward from Nashville to Murfreesborough also required repairing. It was with the greatest difficulty that Rosecrans guarded his extensive line of communication against the raids of the Confederate cavalry, who greatly outnumbered the mounted troops in the Federal army. . . . In February Bragg had been reinforced by Van Dorn with the bulk of the cavalry of Pemberton's army. Rosecrans vainly urged his government to send him additional cavalry, and when they turned a deaf ear to his appeals, proceeded to organise a brigade of mounted infantry. . . . After his defeat at Murfreesborough, Bragg had withdrawn his army to the railway, which branches off from the main line at Wartrace and runs to Shelbyville. . . . Bragg had also constructed a second entrenched line at Tullahoma. . . . The two armies were about twenty-five miles apart, and Bragg's second line of entrenchments about twenty miles

in the rear of his first. The operations on both sides during the first half of 1863 were of but minor importance, consisting mainly of cavalry expeditions against each others' lines of communication. [Sheridan swept down toward Shelbyville, and around toward Franklin.] Towards the end of January Bragg despatched Wheeler on an expedition against Fort Donelson, but the Confederate cavalry were repulsed [at the village of Dover], with considerable loss. In March a Federal force, some 3,000 strong [under Granger], marched from Franklin, where Rosecrans' right rested on the Nashville-Decatur Railway, to reconnoitre Van Dorn's front towards Columbia. This force suddenly found itself in the presence of 10,000 Confederate troops under Van Dorn himself. The artillery and cavalry made good their escape, but nearly all the infantry were captured. [Van Dorn abandoned his attempt to capture Franklin, and retired to Spring Hill.] In April Rosecrans organised a brigade of mounted troops for a raid against the Confederate depôts in Georgia. Though a considerable amount of damage was done, and the Round Mountain Iron-works (about thirty miles south-east of Guntersville), one of the most important manufactories of war material in the South, were destroyed, the whole brigade was eventually captured by Forrest's cavalry."—W. B. Wood and J. E. Edmonds, *History of the Civil War in the United States, 1861-1865*, pp. 274-275.

Also IN: B. J. Lossing, *Pictorial history of the Civil War*, v. 3, ch. 4.—T. B. Van Horne, *History of the Army of the Cumberland*, v. 1, ch. 18.—*Official Records*, series 1, v. 23.

1863 (March).—Conscription Act.—Nine Hundred Million Dollar Loan Act.—Opposition to Seward.—"Stanton made at least one great blunder. Though he had been three months in office, and McClellan was still inactive, there were already several successes to the credit of the Union arms. The *Monitor* and *Virginia* (*Merrimac*) had fought their famous duel, and Grant had taken Fort Donelson. The latter success broke through the long gloom of the North and caused, as Holmes wrote, 'a delirium of excitement.' Stanton rashly concluded that he now had the game in his hands, and that a sufficient number of men had volunteered. This civilian Secretary of War, who had still much to learn of military matters, issued an order putting a stop to recruiting. Shortly afterwards great disaster befell the Union arms. McClellan, before Richmond, was checked in May. Early in July, his peninsula campaign ended disastrously in the terrible 'Seven Days' Battle.' Anticipating McClellan's failure, Lincoln had already determined to call for more troops. On July 1st, he called upon the Governors of the States to provide him with 300,000 men to serve three years. But the volunteering enthusiasm—explain it as you will—had suffered a check. The psychological moment had passed. So slow was the response to the call of July 1st, that another appeal was made early in August, this time for 300,000 men to serve only nine months. But this also failed to rouse the country. A reinforcement of only 87,000 men was raised in response to this emergency call. The able lawyer in the War Department had still much to learn about men and nations. . . . If there could be such a thing as a true psychological history of the war, one of its most interesting pages would determine just how far Stanton was responsible, through his strange blunder over recruiting, for the check to enthu-

siasm among the Northern people. With this speculation there is connected a still unsolved problem in statistics. To what extent did the anti-Lincoln vote, in 1862, stand for sympathy with the South, and how far was it the hopeless surrender of Unionists who felt that their cause was lost? Though certainty on this point is apparently impossible, there can be no doubt that the opening of 1863, the Government felt it must apply pressure to the flagging spirits of its supporters. In order to reinforce the armies and to push the war through, there was plainly but one course to be followed—conscription."—N. W. Stephenson, *Abraham Lincoln and the Union (Chronicles of America Series, v. 29, pp. 152-154)*.—"After very hot and acrimonious debate for about a month, Congress, on March 3, 1863, passed a national conscription law, under which all male citizens between the ages of twenty and forty-five were enrolled to constitute the national forces, and the President was authorized to call them into service by draft as occasion might require. The law authorized the appointment of a provost-marshal-general [whose office formed a separate bureau of the War Department], and under him a provost-marshal, a commissioner, and a surgeon, to constitute a board of enrollment in each congressional district; who, with necessary deputies, were required to carry out the law by national authority, under the supervision of the provost-marshal-general. [Hitherto the troops had been raised by the states.] For more than a year past, the Democratic leaders in the Northern States had assumed an attitude of violent partisanship against the administration, their hostility taking mainly the form of stubborn opposition to the anti-slavery enactments of Congress and the emancipation measures of the President."—J. G. Nicolay, *Short life of Abraham Lincoln*, pp. 353-354—"Anyone drafted could furnish a substitute or pay three hundred dollars to the Government as an exemption. Financial legislation was equally drastic. One year before the country had been started on the road of irredeemable legal-tender paper: there was now no turning back. The maw of our voracious treasury was again clamoring to be filled. Spaulding, who spoke for the Committee of Ways and Means, . . . made it clear to the House that in the next eighteen months \$1,000,000,000 must be borrowed. The expenses of the Government were \$2,500,000 a day, Sundays included. The receipts from customs taxes and other sources would not probably exceed \$600,000, leaving the balance, a daily deficit of \$1,900,000, to be met by borrowing of some kind. Congress, in what is known as the nine hundred million dollar loan act, authorized more bonds, more Treasury notes, bearing interest, which might be made a legal tender for their face value, more non-interest bearing United States legal-tender notes and a large amount of fractional currency to replace the existing imperfect substitutes issued for silver change, silver having long since disappeared from circulation. This act gave large discretionary powers to the Secretary of the Treasury. Before the constitutional meeting of the next Congress, he might issue of the different forms of paper obligations authorized a total of \$900,000,000. Congress, in pursuance of the recommendation of the President and Secretary of the Treasury, also passed at this session an act creating National Banks, which was the nucleus of our present system. It is easier to criticise the legislative body of a democracy than to praise it. . . . As a whole the work of the Republican majority

of Congress at this session deserves high commendation. They realized that only by victories in the field could the prevailing gloom be dispelled and confidence revived and that they must show the country an agreement among themselves upon such measures as might contribute to military success. Their distrust of the President's ministers did not cease with the termination of the so-called Cabinet crisis of December. Thaddeus Stevens thought at one time of moving in a Republican caucus of the House a resolution of want of confidence in the Cabinet. The Radicals were far from being reconciled to the retention of Seward, and continued their efforts to have him removed, but, in spite of the President's firm resolve to keep him, they voted the Administration ample powers. Most of the Republicans in Congress were of the mind of John Sherman, whose views inclined for the most part to moderation. 'I cannot respect some of the constituted authorities,' he wrote to his brother the general, 'yet I will cordially support and aid them while they are authorized to administer the Government.' Military success could be obtained only by giving the President extraordinary powers, and both senators and representatives perceived the inevitable and submitted to it. . . . The country's response to the work of Congress was heard in enthusiastic 'war' or 'Union' meetings held in many cities and towns of different States. Those in New York were characteristic. Distinguished and popular Democrats addressed a 'magnificent uprising of the people' at Cooper Institute. 'Loyal National Leagues' or 'Union Leagues' were formed of which the test for membership was a brief emphatic pledge that was subscribed to by many thousands. . . . To this period belongs the organization of the Union League Clubs of Philadelphia and New York and the Union Club of Boston, the object of their formation being distinctly patriotic. 'But nothing will do for the country,' wrote Norton to Curtis—'neither Clubs nor Conscription Bills nor Banking Bills—nothing will do as much good but victories. If we take Charleston and Vicksburg we conquer—but if not?' Nevertheless, a feeling of comparative cheerfulness began to manifest itself, owing to the energy with which Congress had buckled to the task of rescuing the country from the depression which followed Fredericksburg, to the excellent reorganization of the Army of the Potomac and to the known confidence of the President and his Cabinet in ultimate success. When Congress had assembled in December, the nation's finances were at a low ebb. Many of the soldiers had not been paid for five months, and to them all the paymaster was at least three months in arrears, so that by January 7, 1863, the amount due the army and navy had probably reached the sum of sixty millions. The bonds of the government were not selling. Now all was changed. The Secretary of the Treasury had devised a plan for offering the five-twenty bonds to popular subscription through the employment of a competent and energetic general agent, who, by a system of sub-agencies, wide advertising, and other business methods, appealed to the mingled motives of the patriotism and self-interest and induced the people to lend large sums of money to the Government. An impetus was given to this process by the general character of the financial legislation of Congress, and in particular by the clause in the nine hundred million dollar loan act which limited to July 1 the privilege of exchanging legal-tender notes for five-twenty bonds.

Immediately after the adjournment of Congress the confidence of the people began to show itself through the purchase of these securities. By the end of March, Chase told Sumner that he was satisfied with the condition of the finances, and ere three more months had passed, he could see that his popular loan was an assured success. The subscriptions averaged over three million dollars a day. The Germans were likewise buying our bonds. On April 26, Sumner wrote to the Duchess of Argyll: 'The Secretary of War told me yesterday that our rolls showed eight hundred thousand men under arms—all of them paid to February 28, better clothed and better fed than any soldiers ever before. . . . Besides our army, we have a credit which is adequate to all our needs.'—J. F. Rhodes, *History of the Civil War, 1861-1865*, pp. 203-207.

ALSO IN: H. Greeley, *American conflict*, v. 2, ch. 21.

1863 (April: South Carolina).—Naval attack on Charleston.—'The engagements in which turret iron-clads had been concerned had given to the government and the public a high opinion of their offensive and defensive qualities. It seemed as if nothing could withstand the blow of their heavy shot, and no projectile penetrate their invulnerable turrets. It was supposed that a fleet of such ships could without difficulty force a passage through Charleston Harbor, in spite of its numerous defenses, and, appearing before the city, compel its surrender. . . . On the 7th of April [1863] Admiral Dupont made the experiment. He had seven Ericsson Monitors, the frigate Ironsides, partially iron-clad, and a frailer iron-clad, the Keokuk, constructed on a plan differing from that of the Monitors. . . . No ship was exposed to the severest fire of the enemy for more than forty minutes, yet in that brief period five of the iron-clads were wholly or partially disabled. In these forty minutes the battle was substantially over, the question settled. The damage inflicted on Fort Sumter was comparatively insignificant. It was Dupont's belief that, had the iron-clads been in action half an hour longer, they would all have been disabled. 'To my regret,' he says, 'I soon became convinced of the utter impracticability of taking the city of Charleston by the force under my command.' . . . The iron-clad fleet had therefore been unable to pass the first line of obstructions, or to get out of 'the first circle of fire.' The slowness of its fire was no match for the rapidity and weight of that of the forts. . . . The government, thus satisfied that its iron-clad fleet was insufficient for the forcing of Charleston Harbor and the capture of the city, now changed its purposes, restricting its attempts to a more complete blockade, the detention of a large confederate force in the vicinity by continually threatening military operations, and the destruction of Fort Sumter for the sake of a moral effect. [No further action was taken until July.]"—J. W. Draper, *History of the American Civil War*, v. 3, ch. 72.

1863 (April-May: Virginia).—Hooker's disastrous movement.—Chancellorsville.—Stonewall Jackson's last flank movement.—'Being now [April 28] fully prepared for active operations, Hooker determined to take the initiative by mov-

ing on the left of his opponent's position. By careful study of Lee's position he correctly concluded that his left was his most vulnerable point. In order to mask his real design he sent forward a force of 10,000 cavalry under General Stoneman to operate upon Lee's lines of communication with Richmond, and sent Sedgwick with a force of 30,000 men still further to mask his movement. Stoneman crossed the Rappahannock at Kelly's Ford on the 29th, and Sedgwick appeared on the 28th on the heights below Fredericksburg. These preparatory measures having been taken, Hooker proceeded to the execution of his plan. Swinton . . . tells us 'that on the afternoon of the 30th of April four corps of the Federal army had gained the position of Chancellorsville [a farmhouse on the edge of a dense thicket of second growth], where Hooker at the same time established his headquarters.' Chancellorsville is situated ten miles southwest of Fredericksburg. . . . [The] thicket extends for miles in every direction, and its wild aspect very properly suggests its name, The Wilderness. The intersection of several important roads gives it the semblance of strategic importance, while in reality a more unfavorable place for military operations could not well be found. Hooker, however, seemed well pleased with his acquisition, for on reaching Chancellorsville on Thursday night he issued an order to the troops in which he announced that 'the enemy must either ingloriously fly or come out from behind his defences and give us battle on our own ground, where certain destruction awaits him.' . . . General Lee was fully aware of the preparations that were being made by his adversary, but calmly awaited the complete development of his plans before exerting his strength to oppose him. . . . On the 28th . . . Lee ordered Jackson to concentrate his whole corps in the immediate vicinity of Fredericksburg. Early on the morning of the 29th Sedgwick crossed the Rappahannock below the mouth of Deep Run, but made no other aggressive movement on that day or the day following. On the night of the 30th, Lee was informed of Hooker's arrival at Chancellorsville. He had been previously informed of Stoneman's movements against his line of operations by General Stuart, and was now satisfied that the main attack of the enemy would come from the direction of Chancellorsville. Therefore on the morning of the 1st of May he made the necessary preparations to meet it. Accompanied by his staff, he took a position on a height where one of his batteries overlooked the Rappahannock. He there observed carefully the position of Sedgwick, while waiting for information from the direction of Chancellorsville. . . . Very soon the sound of cannon indicated that the work had begun. At the same time couriers arrived from Stuart and Anderson informing the general that the enemy were advancing on the old turnpike, the plank road, and on the river roads, and asking for reinforcements. McLaws was immediately ordered to the support of Anderson, and shortly after Jackson was ordered to follow with three of his divisions, leaving . . . a force of about 9,000 men and 45 pieces of artillery in observation of Sedgwick. When Jackson joined McLaws and Anderson a lively skirmish was in progress, in which he immediately participated. When General Lee arrived he found the Federals were being driven back to Chancellorsville. At the close of the afternoon they had retired within their lines. General Lee occupied the ridge about three-quar-

ters of a mile south-east and south of Chancellorsville. The opposing armies were hidden from each other by the intervening thicket of brushwood. . . . It was obvious that the Federal position was too formidable to be attacked in front with any hope of success; therefore Lee proceeded to devise a plan by which the position of Hooker might be turned and a point of attack gained from which no danger was apprehended by the Federal commander. . . . The execution of a movement so much in accordance with his genius and inclination was assigned to General Jackson. . . . At dawn on the morning of the 2d, Jackson's corps, 22,000 strong, was in motion, and while it was making one of the most famous flank movements on record, General Lee, with the divisions of Anderson and McLaws, with 20 pieces of artillery, a force not exceeding 12,000 men, occupied the position he had assumed the previous evening, and General Hooker, with 90,000 men, lay behind his breastworks awaiting the Confederate attack. . . . After making a circuitous march of 15 miles, Jackson reached a point on the Orange Courthouse road three miles in the rear of Chancellorsville. . . . Howard's corps was first assailed [at 6 P.M.]. This corps, being surprised, was panic-stricken and fled precipitately, and in its flight communicated the panic to the troops through which it passed. Jackson's forces followed, routing line after line, until arrested by the close of day. The rout of the Federal army was fast becoming general, and it was only saved from entire defeat by the interposition of night. When compelled to halt Jackson remarked that with one more hour of daylight he could have completed the destruction of the Federal army. This, the most famous of all Jackson's brilliant achievements, closed his military career. After his troops had halted, and while the lines were being adjusted, he rode forward with several of his staff to reconnoitre the Federal position." The party were mistaken by some of their own men for Federal horsemen and received a volley which struck down Stonewall Jackson. He was wounded in both arms by three bullets, and died from the effects eight days afterward. "Early on the morning of the 3d the attack was resumed by the Confederates with great vigor. Hooker, taking advantage of the night, had restored order in his army and strengthened his position; his troops regained courage and contested the field with great stubbornness until ten o'clock when they yielded at every point and rapidly retreated . . . within the strong line of defences which had been previously constructed to cover the road to the United States Ford. . . . While the operations above described were in progress at Chancellorsville, General Early, by skilful manœuvring, had detained Sedgwick at Fredericksburg until the 3d, when that general, by a determined advance, forced back Early, carried Marye's Heights, and proceeded toward Chancellorsville. The condition of affairs was communicated to General Lee during the forenoon. Wilcox's brigade, then at Banks's Ford, was ordered to intercept Sedgwick and retard his advance, while McLaws's division was ordered to support him. Wilcox on reaching Salem Church, six miles from Chancellorsville, encountered the Federal advance, and after a sharp conflict he repulsed it with loss. The success of Wilcox delayed Sedgwick until Anderson and McLaws could come up. The premeditated attack on Hooker being thus interrupted, Lee, on the forenoon of the 4th, repaired to the neighborhood of Fredericksburg. A

combined attack was then directed to be made by Early on the rear, while McLaws and Anderson bore down upon the front. The battle was hotly contested during the afternoon, in which the forces of Sedgwick were defeated, and were only saved from destruction by a night-passage across the Rappahannock at Banks's Ford. On the 5th Lee collected his forces at Chancellorsville to give the 'coup de grâce' to Hooker, but that general, under cover of a dark and stormy night, effected his retreat beyond the Rappahannock at the United States Ford.—A. L. Long, *Memoirs of Robert E. Lee*, ch. 14.—“On both sides the losses were very heavy; the Federals lost 17,000 and the Confederates 13,000. On the Federal side these losses were very unevenly distributed. The 1st and 5th Corps together lost less than 1,000. Sedgwick's Corps suffered most severely, losing nearly 5,000, and Sickles' Corps, which bore the brunt of the fighting on the 3rd, lost over 4,000. In the Confederate ranks the losses were more evenly distributed, though the heaviest punishment was suffered by the three divisions which accompanied Jackson on his flank march. . . . In a way the battle of Chancellorsville proved the turning-point of the war, in as much as it was won at the cost of Stonewall Jackson's life. Lee's great lieutenant breathed his last on May 10th. His loss was simply irreparable to the Confederate cause. . . . His fall converted the hard-won victory at Chancellorsville into a barren triumph. Never again after his death did Lee venture on those great flanking movements which decided two campaigns. Jackson was but thirty-nine when he died. In two short years of warfare he won for himself an abiding place among the great soldiers of all time. By his death the South suffered a loss which she never recovered.”—W. B. Wood and J. E. Edmonds, *History of Civil War in the United States, 1861-1865*, p. 211.

1863 (April-May: Mississippi).—Grierson's raid.—Reporting to headquarters at Washington, on May 5, 1863, General Hurlbut, commanding at Memphis, Tennessee, said: “As the spring opened, I was daily more and more impressed with the feasibility of a plan, long entertained, of pushing a flying column of cavalry through the length of Mississippi, cutting the Southern Railroad. By consent and approval of General Grant, I prepared a system of movements along my entire line from Memphis to Corinth for the purpose of covering this cavalry dash. At the same time General Rosecrans proposed to me to cover a movement of 1,800 cavalry from Tusculumbia down into Alabama and Georgia. . . . I commenced the movement from Corinth on the 15th [April]. . . . On the 17th, Col. B. H. Grierson, Sixth Illinois Cavalry, with his own regiment, the Seventh Illinois, and Second Iowa, moved from La Grange, by way of Pontotoc, with orders, after passing Pontotoc, to proceed straight down, throwing one regiment to the left toward Okolona, and to push for and destroy the Chunkey River Bridge and any others they could reach, and either return, or proceed to Baton Rouge, as might be found advisable. On the same day, April 17, a column of infantry

1,500 strong, and one battery, moved by railroad from La Grange to Coldwater, with orders to push rapidly between Coldwater and the Tallahatchee, and take Chalmers in flank and rear while attacked in front by three regiments, a battery, and 200 cavalry from Memphis, which left here on the 18th. . . . Grierson, on the 19th, detached the Second Iowa below Pontotoc, which fought its way gallantly back to La Grange and came home well mounted. The main cavalry column (Sixth and Seventh Illinois) proceeded, without loss or engagement, to Newton, on the Southern Mississippi Railroad, and there destroyed bridges.” It was not until May 2d that Grierson and his small force reached the Union lines at Baton Rouge. The total accomplishments of the expedition—aside from the important revelation it made of the condition of things in that region of the Confederacy—are summed up in the Colonel's report as follows: “During the expedition we killed and wounded about 100 of the enemy, captured and paroled over 500 prisoners, many of them officers, destroyed between 50 and 60 miles of railroad and telegraph, captured and destroyed over 3,000 stand of arms, and other army stores and Government property to an immense amount; we also captured 1,000 horses and mules. . . . Much of the country through which we passed was almost entirely destitute of forage and provisions, and it was but seldom that we obtained over one meal per day. Many of the inhabitants must undoubtedly suffer for want of the necessaries of life, which have reached most fabulous prices.”—*Official Records, series 1, v. 24, pt. 1, pp. 520-520*.

1863 (April-July: On the Mississippi).—Grant's campaign against Vicksburg.—Final operations.—His personal account of the siege and capture.—“Sending Sherman up the river to create a diversion on the Confederate right [see above: 1863 (January-April: On the Mississippi)], Grant put his army on transports,—river steamers of all sorts, manned mostly by volunteers from the ranks,—and, with the fleet as convoy, ran the batteries in April, through a bombardment that was more spectacular than dangerous. Until this moment, Pemberton, the favourite of Davis, who commanded at Vicksburg, had been in the dark as to the Union intention. Now the plan was clear. Reinforcements were called for and the Confederate left was prepared to drive the invader back into the swamps. ‘Joe’ Johnston, with an army in eastern Mississippi tried to help. On the last day of April, Grant put his army back on the left bank of the Mississippi, at Bruinsburg, and began his march inland and to the north.”—F. L. Paxton, *American Civil War, p. 141*.—“April 30th was spent in transporting troops across the river [to Bruinsburg]. The troops were moved out towards Port Gibson as fast as they were landed. On the 1st of May the advance met the enemy under Bowen about four miles west of Port Gibson, where quite a severe battle was fought, resulting in the defeat of the enemy who were driven from the field. On May 2d our troops moved into Port Gibson, and, finding that the bridges over Bayou Pierre were destroyed, spent the balance of the day in rebuilding and crossing them, and marching to the North Fork, where we encamped for the night. During the night we rebuilt the bridge across the North Fork, which had also been destroyed, and the next day (the 3d) pushed on, and, after considerable skirmishing, reached the Big Black, near Hankinson's Ferry, and the Mississippi at Grand Gulf. . . . Here I [General Grant] . . .

GENERAL ULYSSES S. GRANT WITH HIS STAFF  
Outside of headquarters near Richmond, Virginia, 1863

received a letter from Banks stating that he could not be at Port Hudson [Grant had intended to join Banks in attacking, before he turned against Vicksburg] for some days, and then, with an army of only 15,000 men. As I did not regard this force of as much value as the time which would be lost in waiting for it, I determined to move on to Vicksburg. The 4th, 5th, and 6th of May were spent in reconnoitering towards Vicksburg, and also in crossing Sherman's troops over to Grand Gulf. On the 7th, Sherman having joined the main body of the army, the troops across the Big Black were withdrawn, and the movement was commenced to get in position on the Vicksburg and Jackson railroad so as to attack Vicksburg from the rear. This occupied the army from the 7th to the 12th, when our position was near Fourteen Mile creek, Raymond being our right flank, our left resting on the Big Black. To obtain this position we fought the battle of Raymond. . . . As the army under Pemberton was on my left flank, and that under General Joseph E. Johnston on my right at Jackson, I determined to move the army rapidly on Jackson, capturing and destroying that place as a military depot; then turn west and destroy the army under Pemberton, or drive it back into Vicksburg. The 13th was spent in making the first of these moves. On the 14th Jackson was attacked with Sherman's and McPherson's corps. The place was taken, and all supplies that could be of service to the enemy were destroyed, as well as the railroad bridge. On the 15th the troops were faced to the west and marched towards Pemberton, who was near Edwards's Station. The next day, the 16th, we met the enemy at Champion's Hill, and, after a hard-fought battle, defeated and drove him back towards Vicksburg, capturing 18 guns and nearly 3,000 men. This was the hardest-fought battle of the campaign. On the 17th we reached the Big Black, where we found the enemy entrenched. After a battle of two or three hours' duration we succeeded in carrying their works by storm, capturing much artillery and about 1,200 men. . . . We crossed on the morning of the 18th, and the outworks of Vicksburg were reached before night, the army taking position in their front. On the 19th, there was continuous skirmishing with the enemy while we were getting into better positions. . . . At two o'clock I ordered an assault. It resulted in securing more advanced positions for all our troops, . . . where they were fully covered from the fire of the enemy, and the siege of Vicksburg began. . . . Most of the army had now been for three weeks with only five days' rations issued by the commissary. They had had an abundance of food, however, but had begun to feel the want of bread. . . . By the night of the 21st full rations were issued to all the troops. . . . I now determined on a second assault. . . . The attack was ordered to commence on all parts of the line at ten o'clock A. M. on the 22d with a furious cannonade from every battery in position. . . . The attack was gallant, and portions of each of the three corps succeeded in getting up to the very parapets of the enemy. . . . but at no place were we able to enter. . . . As soon as it was dark our troops that had reached the enemy's line and had been obliged to remain there for security all day were withdrawn, and thus ended the last assault on Vicksburg. A regular siege was now determined upon. . . . The Union force that had crossed the Mississippi river up to this time was less than 43,000 men. . . . The

enemy had at Vicksburg, Grand Gulf, Jackson, and on the roads between these places, quite 60,000 men. . . . My line was more than 15 miles long, extending from Haines's Bluff to Vicksburg, thence to Warrenton. The line of the enemy was about seven. In addition to this, having an enemy at Canton and Jackson in our rear, who was being constantly reinforced, we required a second line of defense, facing the other way. I had not troops enough under my command to man this. General Halleck appreciated the situation and, without being asked for reinforcements, forwarded them with all possible dispatch. . . . Johnston. . . . abstained from making an assault on us, because it would simply have inflicted loss on both sides without accomplishing any result. We were strong enough to have taken the offensive against him; but I did not feel disposed to take any risk of loosing our hold upon Pemberton's army, while I would have rejoiced at the opportunity of defending ourselves against an attack by Johnston."—U. S. Grant, *Siege of Vicksburg* (*Century Magazine*, Sept., 1885).—"Pemberton surrendered unconditionally, and Grant generously directed that the surrendered men should first be fed and then paroled and permitted to return to their homes. One event which belongs rather to biography than to history may perhaps be mentioned here in illustration of General Grant's delicacy of sentiment,—a trait of his character often overlooked. When it was arranged that the surrendered Confederates should march out, General Grant issued an order to forbid all demonstrations that might wound a conquered enemy's pride or sensitiveness. 'Instruct the commands,' the order read, 'to be orderly and quiet as these prisoners pass, and to make no offensive remark.'"—G. C. Eggleston, *History of the Confederate War*, v. 2, p. 167.—"The Mississippi was the great road of the West; it was the pride of the West, the symbol of greatness. If the South could hold the mighty river, the Union would be foiled everywhere: it must give up the contest. If the Union could take the river from the South, it could, sooner or later complete the conquest of the seceded states. People sensed, if they did not put in words, the supreme importance of the Mississippi in the struggle. . . . The whole lower South knew what the loss of the Mississippi meant. The cotton states began to despair while the army of Virginia was nearly as confident as ever. If the man power of the South had been sufficient to replace the losses of the summer, Gettysburg would not have been considered much more decisive than Fredericksburg, a battle it rather resembled. On the other hand, the capture of Vicksburg was the greatest success won on either side in the whole war. An army of 30,000 men; a strong fortress, the check to the Union navigation of the Mississippi; and the severance of the Confederacy—such were the fruits of Grant's memorable victory, won by audacity and resolution. The whole lower South was now at the mercy of a vigorous offensive. Vicksburg was the turning point of the struggle."—H. J. Eckenrode, *Jefferson Davis, President of the South*, pp. 207, 234-235.

1863 (May-June).—Arrest of Vallandigham.—President Lincoln to the “Copperheads.”—“The United States had never encountered cases of treason and sedition on a large scale and had had no experience in handling them. The Confederacy was to all intents a military dictatorship; in the Union the government had the Constitution always to consider. Under the Constitution, it was extremely difficult to convict of treason. There were no precedents to show how far the minority, in time of war, was to be allowed to obstruct the national purpose. Yet now, the minority showed its sympathy with the South by opposing war measures, by denouncing acts of government as illegal, and by giving secret aid directly to the Confederacy. At times it seemed as though Democratic resistance would tie the hands of Lincoln, and let the Union be broken. Lincoln faced his opponents in the rear more boldly than even his adherents always approved. Early in the war, he suspended the privilege of the writ of habeas corpus in the North, on his own authority, in order that arrests that appeared necessary to him might not be nullified by the courts. The Constitution declares that ‘The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public safety may require it.’ But it does not say who shall suspend the writ. Lincoln took the responsibility as his own; and though Congress regarded the act as an usurpation of its own authority, it passed, in 1863, a law indemnifying him in case he had violated the Constitution, and enacted general rules for the suspension in the future. Lincoln disregarded these rules when he believed it expedient. There are no exact figures to show how many persons were arrested arbitrarily in the North during the crises of the war. The number ran into the thousands and was increased by unauthorized acts of zealous subordinates and military commanders. Every conspiracy that was discovered or secret society that was brought to light, seemed to the department commander on the ground to need repression. The aggregate number of conspirators was large. Most numerous in Illinois, Indiana, and Ohio, they affected ritualistic organization, and drilled in secret when they could. Their very numbers drew their teeth. So many Union spies were in their ranks that Lincoln knew their plans as soon as they were formulated. They never had a close organization, or were more than an aggravating nuisance. Their most serious influence was in slandering the public credit, dissuading enlistment, and encouraging desertion. The draft might not have been necessary but for them. More than 2,500 deserters were returned to the ranks from Indianapolis, alone, in a single month in 1862. When the President was called upon to sign death warrants for desertion, he generally declined the duty. Only 141 men were shot or hung for this crime throughout the war, and leniency increased the trouble. But Lincoln made the excuse that has been more satisfactory to his fellow-citizens than it was to the disciplinarians of the war department: . . . The most famous arbitrary arrest was that of Clement L. Vallandigham, an Ohio lawyer and journalist, who had represented his district in Congress since 1857. From the beginning of the war Vallandigham denounced the usurpation of power by the President, and the wickedness of coercion. A brilliant speaker, with handsome figure and great courage, he led the most violent wing of the opposition.

The term ‘copperheads,’ which was bestowed upon his followers in reproach, they finally accepted with pride; and they wore the liberty-head, cut from the old copper cent, as an emblematic badge. . . . When Wade called him a traitor, he denied the charge and called its author ‘a liar, a scoundrel, and a coward.’ Through 1862, he fought the administration steadfastly. In the fall of that year, he lost his seat in Congress through a rearrangement of his district; but the military failures of the year, and the rebuke to Lincoln at the polls, encouraged him and others to keep up their opposition, and their assertions that peace, with union, was within the reach of an honest administration. In May, 1863, Vallandigham was arrested at his home in Dayton, by order of the military governor commanding in Ohio, A. E. Burnside. The latter had recently drawn the fire of the copperheads by proclaiming in a general order that ‘treason, expressed or implied, will not be tolerated in this department.’ Vallandigham had led in denouncing the order. He was arrested by troops, denied a hearing on a writ of habeas corpus by the United States court, tried before a military tribunal at Cincinnati, and condemned to imprisonment. His alleged crime had been committed in a State where ordinary courts were in regular session. The utterances on which he was condemned were highly partisan, but by no means traitorous. The action of the administration in his case, declared the Democratic governor of New York, Horatio Seymour, ‘will determine in the minds of more than one-half of the people of the loyal States whether this war is waged to put down rebellion at the South, or to destroy free institutions of the North.’ Although he doubted the wisdom of the arrest of Vallandigham, Lincoln did not disallow the verdict in his trial. He whimsically commuted the sentence from confinement to banishment within the Confederate lines, and ordered Vallandigham to be escorted thither under guard. Protesting all the way, and seeing none of the humour of the situation, the leader of the copperheads was taken by way of Murfreesboro to the front, and abandoned, under a flag of truce, within the outer line of Confederate pickets. The case of Vallandigham marks the height and decline of the activities of the copperheads. The disastrous year, 1862, convinced many that it was safe to fight the Union, and that Lincoln was tottering. It emboldened many to a freedom of speech that would have passed unnoticed in time of peace, but which now provoked the administration to a method of defence that sober lawyers have been reluctant to justify. If, however, the Constitution had been allowed to fall because of its own restrictions upon the freedom of its defenders, it would have been a sad commentary upon the effectiveness of popular government. Vallandigham in exile was more effective than Vallandigham at large. He left the Confederacy, and took up a residence at Windsor, in Ontario. His party nominated him for governor of Ohio in 1863, and he conducted his campaign from Canadian territory. The administration threw its whole influence into the campaign to defeat him, and both Unionists and copperheads were surprised when the final vote brought out a majority of more than 100,000 for his opponent. On the whole the best antidote for the teachings of the copperheads was their own speech and actions. Vallandigham was released from his pose of martyr after the election, and was per-

mitted to come home, unnoticed by the government."—F. L. Paxson, *American Civil War*, pp. 216-221.—See also below: 1864 (October): Disloyal associations in the North; CENSORSHIP: United States; COPPERHEADS.—To the New York Democrats, Lincoln said: "It is asserted in substance, that Mr. Vallandigham was, by a military commander, seized and tried 'for no other reason than words addressed to a public meeting in criticism of the course of the administration, and in condemnation of the military orders of the general.' Now, if there be no mistake about this, if this assertion is the truth and the whole truth, if there was no other reason for the arrest, then I concede that the arrest was wrong. But the arrest, as I understand, was made for a very different reason. Mr. Vallandigham avows his hostility to the war on the part of the Union; and his arrest was made because he was laboring, with some effect, to prevent the raising of troops, to encourage desertions from the army, and to leave the rebellion without an adequate military force to suppress it. He was not arrested because he was damaging the political prospects of the administration or the personal interests of the commanding general, but because he was damaging the army, upon the existence of which the life of the nation depends. He was warring upon the military, and this gave the military constitutional jurisdiction to lay hands upon him. If Mr. Vallandigham was not damaging the military power of the country, then his arrest was made on mistake of fact, which I would be glad to correct on reasonably satisfactory evidence. I understand the meeting whose resolutions I am considering to be in favor of suppressing the rebellion by military force—by armies. Long experience has shown that armies cannot be maintained unless desertion shall be punished by the severe penalty of death. The case requires, and the law and the Constitution sanction, this punishment. Must I shoot a simple-minded soldier boy who deserts, while I must not touch a hair of a wily agitator who induces him to desert? This is none the less injurious when effected by getting a father, or brother, or friend into a public meeting, and there working upon his feelings till he is persuaded to write the soldier boy that he is fighting in a bad cause, for a wicked administration of a contemptible government, too weak to arrest and punish him if he shall desert. I think that, in such a case, to silence the agitator and save the boy is not only constitutional, but withal a great mercy. If I be wrong on this question of constitutional power, my error lies in believing that certain proceedings are constitutional when, in cases of rebellion or invasion, the public safety requires them, which would not be constitutional when, in absence of rebellion or invasion, the public safety does not require them: in other words, that the Constitution is not in its application in all respects the same in cases of rebellion or invasion involving the public safety, as it is in times of profound peace and public security. The Constitution itself makes the distinction, and I can no more be persuaded that the government can constitutionally take no strong measures in time of rebellion, because it can be shown that the same could not be lawfully taken in time of peace, than I can be persuaded that a particular drug is not good medicine for a sick man, because it can be shown to not be good food for a well one. Nor am I able to appreciate the danger apprehended

by the meeting, that the American people will by means of military arrests during the rebellion lose the right of public discussion, the liberty of speech and the press, the law of evidence, trial by jury, and habeas corpus throughout the indefinite peaceful future which I trust lies before them, any more than I am able to believe that a man could contract so strong an appetite for emetics during temporary illness as to persist in feeding upon them during the remainder of his healthful life. In giving the resolutions that earnest consideration which you request of me, I cannot overlook the fact that the meeting speak as 'Democrats.' Nor can I, with full respect for their known intelligence, and the fairly presumed deliberation with which they prepared their resolutions, be permitted to suppose that this occurred by accident, or in any way other than that they preferred to designate themselves 'Democrats' rather than 'American citizens.' In this time of national peril I would have preferred to meet you upon a level one step higher than any party platform, because I am sure that from such more elevated position we could do better battle for the country we all love than we possibly can from those lower ones where, from the force of habit, the prejudices of the past, and selfish hopes of the future, we are sure to expend much of our ingenuity and strength in finding fault with and aiming blows at each other. But since you have denied me this, I will yet be thankful for the country's sake that not all Democrats have done so. He on whose discretionary judgment Mr. Vallandigham was arrested and tried is a Democrat, having no old party affinity with me, and the judge who rejected the constitutional view expressed in these resolutions, by refusing to discharge Mr. Vallandigham on habeas corpus is a Democrat of better days than these, having received his judicial mantle at the hands of President Jackson. And still more, of all those Democrats who are nobly exposing their lives and shedding their blood on the battle-field, I have learned that many approve the course taken with Mr. Vallandigham, while I have not heard of a single one condemning it. I cannot assert that there are none such."—Abraham Lincoln, *Complete works*, v. 2, pp. 349-350.—To the Ohio Democrats, the president wrote on June 29 as follows: "You claim, as I understand, that according to my own position in the Albany response, Mr. Vallandigham should be released; and this because, as you claim, he has not damaged the military service by discouraging enlistments, encouraging desertions or otherwise; and that if he had he should have been turned over to the civil authorities under the recent acts of Congress. I certainly do not know that Mr. Vallandigham has specifically and by direct language advised against enlistments and in favor of desertion and resistance to drafting. We all know that combinations, armed in some instances, to resist the arrest of deserters began several months ago; that more recently the like has appeared in resistance to the enrolment preparatory to a draft; and that quite a number of assassinations have occurred from the same animus. These had to be met by military force, and this again has led to bloodshed and death. And now, under a sense of responsibility more weighty and enduring than any which is merely official, I solemnly declare my belief that this hindrance of the military, including maiming and murder, is due to the course in which Mr. Vallandigham

has been engaged in a greater degree than to any other cause; and it is due to him personally in a greater degree than to any other one man. These things have been notorious, known to all, and of course known to Mr. Vallandigham. Perhaps I would not be wrong to say they originated with his special friends and adherents. With perfect knowledge of them, he has frequently if not constantly made speeches in Congress and before popular assemblies; and if it can be shown that, with these things staring him in the face, he has ever uttered a word of rebuke or counsel against them, it will be a fact greatly in his favor with me, and one of which as yet I am totally ignorant. When it is known that the whole burden of his speeches has been to stir up men against the prosecution of the war, and that in the midst of resistance to it he has not been known in any instance to counsel against such resistance, it is next to impossible to repel the inference that he has counseled directly in favor of it. With all this before their eyes, the convention you represent have nominated Mr. Vallandigham for governor of Ohio, and both they and you have declared the purpose to sustain the National Union by all constitutional means. But of course they and you in common reserve to yourselves to decide what are constitutional means; and, unlike the Albany meeting, you omit to state or intimate that in your opinion an army is a constitutional means of saving the Union against a rebellion, or even to intimate that you are conscious of an existing rebellion being in progress with the avowed object of destroying that very Union. At the same time your nominee for governor, in whose behalf you appeal, is known to you and to the world to declare against the use of an army to suppress the rebellion. Your own attitude, therefore, encourages desertion, resistance to the draft, and the like, because it teaches those who incline to desert and to escape the draft to believe it is your purpose to protect them, and to hope that you will become strong enough to do so. After a short personal intercourse with you, gentlemen of the committee, I cannot say I think you desire this effect to follow your attitude; but I assure you that both friends and enemies of the Union look upon it in this light. It is a substantial hope, and by consequence a real strength to the enemy. If it is a false hope and one which you would willingly dispel, I will make the way exceedingly easy. . . . It will not escape observation that I consent to the release of Mr. Vallandigham upon terms not embracing any pledge from him or from others as to what he will or will not do. I do this because he is not present to speak for himself, or to authorize others to speak for him; and because I should expect that on his returning he would not put himself practically in antagonism with the position of his friends. But I do it chiefly because I thereby prevail on other influential gentlemen of Ohio to so define their position as to be of immense value to the army—thus more than compensating for the consequences of any mistake in allowing Mr. Vallandigham to return; so that, on the whole, the public safety will not have suffered by it. Still, in regard to Mr. Vallandigham and all others, I must hereafter, as heretofore, do so much as the public safety may seem to require. I have the honor to be respectfully yours.”—*Ibid.*, pp. 362-363.—“American politics during the war form a wildly confused story, so intricate that it cannot be

made clear in a brief statement. But this central fact may be insisted upon: in the North, there were two political groups that were the poles around which various other groups revolved and combined, only to fly asunder and recombine, with all the maddening inconstancy of a kaleidoscope. The two irreconcilable elements were the ‘war party,’ made up of determined men resolved to see things through, and the ‘copperheads’ who for one reason or another united in a faithful struggle for peace at any price. Around the copperheads gathered the various and singular groups who helped to make up the ever fluctuating ‘peace party.’ It is an error to assume that this peace party was animated throughout by fondness for the Confederacy. Though many of its members were so actuated, the core of the party seems to have been that strange type of man who sustained political evasion in the old days, who thought that sweet words can stop bullets, whose programme in 1863 called for a cessation of hostilities and a general convention of all the States. . . . With these strange people in 1863 there combined a number of different types: still stranger, still less creditable visionary; . . . the avowed friends of the principle of state rights; all those who distrusted the Government because of its anti-slavery sympathies; Quakers and others with moral scruples against war; and finally, sincere legalists to whom the Conscription Act appeared unconstitutional.”—W. W. Stephenson, *Abraham Lincoln and the Union*, (*Chronicles of America series*, v. 29, pp. 156-157).

1863 (May-July: On the Mississippi).—Siege and surrender of Port Hudson.—Opening of the Great River.—The fall of Vicksburg brought in its train the surrender of Port Hudson (or Hickey’s Landing), which had been invested by Banks. “About the middle of May all the available force near the river was concentrated at Baton Rouge, to assist in the attack on Port Hudson. Thence Gen. Augur and Sherman moved to the south and east of that position, to cooperate with Gen. Banks. From Simmesport Gen. Banks moved his army to invest Port Hudson. . . . It was on the 21st of May that Gen. Banks landed, and on the next day a junction was effected with the advance of Maj.-Gen. Augur and Brig.-Gen. Sherman. . . . On the 25th, the enemy was compelled to abandon his first line of works. On the next day Gen. Weitzel’s brigade, which had covered the rear in the march from Alexandria, arrived, and on the morning of the 27th a general assault was made on the fortifications.” Port Hudson was strongly fortified and well defended by Colonel Frank Gardner. The artillery of General Banks opened fire on the 27th, and at ten o’clock the same day an assault was made, in which the colored soldiers showed much firmness and bravery. The assault failed and the losses in it were heavy. “A bombardment of the position had been made by the fleet under Admiral Farragut, for a week previous to this assault. . . . The upper batteries on the river were attacked by the Hartford and Albatross, which had run the blockade, and the lower by the Monongahela, Richmond, Genesee, and Essex. On the 14th of June, after a bombardment of several days, another assault on Port Hudson was made. . . . All the assaulting columns were compelled to fall back under the deadly fire of the enemy, and the fighting finally ceased about 11 o’clock in the

morning. The loss of Gen. Banks was nearly 700 in killed and wounded. . . . After these two attempts to reduce Port Hudson by a land assault, on the 27th of May and 14th of June, the purpose to make another was given up by Gen. Banks, until he had fully invested the place by a series of irresistible approaches. He was thus engaged in pushing forward his works when Vicksburg was surrendered [and upon hearing the news Gardner surrendered also].—W. J. Tenney, *Military and naval history of the Rebellion*, ch. 29.

1863 (June).—Call for six-months men.—A call for 100,000 men to serve six months, for the repulse of the invasion of Pennsylvania, Maryland, West Virginia, and Ohio, was issued June 15.

1863 (June).—West Virginia admitted to Union. See WEST VIRGINIA: 1863.

1863 (June: Virginia).—Lee's second movement of invasion and the inducements to it.—Northern invitation and Southern clamor.—Southern view.—After the defeat of General Hooker at Chancellorsville, for the first time there seemed to be "a possibility of inducing the Federal Government to relinquish its opposition to the establishment of a separate authority in the South. The idea of the formation of a Southern Confederacy, distinct from the old Union, had, up to this time, been repudiated by the authorities at Washington as a thing utterly out of the question; but the defeat of the Federal arms in the two great battles of the Rappahannock had caused the most determined opponents of separation to doubt whether the South could be coerced to return to the Union; and, what was equally or more important, the proclamations of President Lincoln, declaring the slaves of the South free, and placing the United States virtually under martial law, aroused a violent clamor from the great Democratic party of the North, who loudly asserted that all constitutional liberty was disappearing. This combination of non-success in military affairs and usurpation by the Government emboldened the advocates of peace to speak out plainly, and utter their protest against the continuance of the struggle, which they declared had only resulted in the prostration of all the liberties of the country. . . . A peace convention was called to meet in Philadelphia. . . . On all sides the advocates of peace on the basis of separation were heard raising their importunate voices."—J. E. Cooke, *Life of General Robert E. Lee*, pt. 6, ch. 9-12.—"For just a month the two armies remained facing each other on opposite sides of the Rappahannock. Hooker, after his costly failure at Chancellorsville, was not disposed to resume the offensive. The next move must come from Lee. It has been said that Lee's hesitation to make that move was owing to the heavy losses which he had suffered at Chancellorsville. But heavy as those losses had been, they had been made good by the arrival of Hood's and Pickett's divisions of the 1st Corps. His real reason for not moving sooner was the reluctance of his Government to abandon its defensive policy. After Chancellorsville high hopes were entertained in the Government circles at Richmond that peace would quickly ensue. It was expected that the peace party at the North . . . would soon be strong enough to force President Lincoln into rec-

ognising the independence of the South, and it was believed, too, that foreign intervention might shortly be looked for. Holding these views, President Davis and his Cabinet were not disposed to make any attempt to improve the victory just gained. A second reason which detained Lee on the south side of the Rappahannock was his weakness in cavalry. He was not willing to undertake an offensive campaign until he had gathered together a sufficient force of that arm. From a military point of view there was every reason why Lee should take the initiative. A purely defensive war, if fought out to the bitter end and converted simply into a struggle of endurance, must result disastrously to the weaker side. Only by taking great risks and winning great victories was there any chance of forcing the North into conceding peace. An invasion of the North would, as in the previous year, do much to lighten the strain upon the Confederate commissariat, and would bring home to the Northerner in visible shape the horrors of war. There was another reason, which perhaps weighed even more with the Confederate Government than with Lee. The fate of Vicksburg was trembling in the balance; an invasion of the North might possibly have the effect of recalling Grant's army from the Mississippi, and if its fall was inevitable, then it was highly desirable that some brilliant success should be gained in the East as a set-off to so heavy a blow in the West."—W. B. Wood and J. E. Edmonds, *History of the Civil War in the United States, 1861-1865*, p. 216.—"The country [Southern] was elated with the two great victories of Fredericksburg and Chancellorsville, and the people were clamorous for active operations against an enemy who seemed powerless to stand the pressure of Southern steel. The army, which had been largely augmented by the return of absentees to its ranks, new levies, and the recall of Longstreet's two divisions from Suffolk, shared the general enthusiasm; and thus a very heavy pressure was brought to bear upon the authorities and on General Lee, in favor of a forward movement, which, it was supposed, would terminate in a signal victory and a treaty of peace. Lee yielded to this view of things rather than urged it. . . . Throughout the month of May, Lee was busily engaged in organizing and equipping his forces for the decisive advance. Experience had now dictated many alterations and improvements in the army. It was divided into three 'corps d'armée,' each consisting of three divisions, and commanded by an officer with the rank of lieutenant-general. Longstreet remained at the head of his former corps, Ewell succeeded Jackson in command of Jackson's old corps, and A. P. Hill was assigned to a third corps made up of portions of the two others. . . . On the last day of May, General Lee had the satisfaction of finding himself in command of a well-equipped and admirably officered army of 68,352 bayonets, and nearly 10,000 cavalry and artillery—in all, about 80,000 men. . . . Lee began his movement northward on the 3d day of June, just one month after the battle of Chancellorsville. . . . Pursuing his design of manœuvring the Federal army out of Virginia, without coming to action, Lee first sent forward one division of Longstreet's corps in the direction of Culpepper, another then followed, and, on the 4th and 5th of June, Ewell's entire corps was sent in the same direction—A. P. Hill remaining behind on the south bank of the Rappahannock, near Fredericksburg, to watch the

enemy there, and bar the road to Richmond. These movements became speedily known to General Hooker, whose army lay north of the river near that point, and on the 5th he laid a pontoon just below Fredericksburg, and crossed about a corps to the south bank, opposite Hill. This threatening demonstration, however, was not suffered by Lee to arrest his own movements. . . . He continued the withdrawal of his troops, by way of Culpepper, in the direction of the Shenandoah Valley." On the morning of the 9th of June, "two divisions of Federal cavalry, supported by two brigades of 'picked infantry,' were sent across the river at Kelly's and Beverley's Fords, east of the court-house, to beat up the quarters of Stuart and find what was going on in the Southern camps. The most extensive cavalry fight [known as the battle of Brandy Station, or the battle of Fleetwood], probably, of the whole war, followed. . . . This reconnoissance in force . . . had no other result than the discovery of the fact that Lee had infantry in Culpepper. . . . This attempt of the enemy to penetrate his designs had not induced General Lee to interrupt the movement of his infantry toward the Shenandoah Valley. The Federal corps sent across the Rappahannock at Fredericksburg, still remained facing General Hill, and, two days after the Fleetwood fight, General Hooker moved up the river with his main body, advancing the Third Corps to a point near Beverley's Ford. But these movements were disregarded by Lee. On the same day Ewell's corps moved rapidly toward Chester Gap, passed through that defile in the mountain, pushed on by way of Front Royal, and reached Winchester on the evening of the 13th, having in three days marched 70 miles. The position of the Southern army now exposed it to very serious danger, and at first sight seemed to indicate a deficiency of soldiership in the general commanding it. In face of an enemy whose force was at least equal to his own, Lee had extended his line until it stretched over a distance of about 100 miles. . . . When intelligence now reached Washington that the head of Lee's columns was approaching the Upper Potomac, while the rear was south of the Rappahannock, the President wrote to General Hooker: 'If the head of Lee's army is at Martinsburg, and the tail of it on the plank road, between Fredericksburg and Chancellorsville, the animal must be very slim somewhere—could you not break him?' . . . It would seem that nothing could have been plainer than the good policy of an attack upon Hill at Fredericksburg, which would certainly have checked Lee's movement by recalling Longstreet from Culpepper, and Ewell from the Valley. But . . . instead of reinforcing the corps sent across at Fredericksburg and attacking Hill, General Hooker withdrew the corps, on the 13th, to the north bank of the river, got his forces together, and began to fall back toward Manassas."—J. E. Cooke, *Life of General Robert E. Lee*, pt. 6, ch. 9-12.

1863 (June-July: Pennsylvania).—Lee's invasion.—Battle of Gettysburg.—"Hooker started toward Washington. Ewell gained possession of Winchester and Martinsburg, but not of Harper's Ferry. There is a rocky and thickly wooded range of heights called the Bull Run Mountains, running from Leesburg south. As Hooker had not

occupied them but was farther to the East, Lee desired to do so, for it would give him a strong position on Hooker's flank and bring him (Lee) very near to Washington. He therefore directed his cavalry to reconnoiter in that direction. Stuart's reconnoitering party met the Union cavalry at Aldie, and after a hard battle retreated. A series of cavalry combats ensued, ending in the retreat of Stuart's cavalry behind the Blue Ridge. Hooker was strongly posted east of the Bull Run range and could not be attacked with much chance of success. As Lee could not well remain inactive or retreat, he resolved to invade Pennsylvania. This was a hazardous enterprise, for Hooker might intervene between him and Richmond. Stuart's cavalry was left to prevent this catastrophe by guarding the passes in the Blue Ridge. Stuart was also directed to harass Hooker and attack his rear should he attempt to cross the Potomac in pursuit of Lee. Lee reached Chambersburg with Longstreet's and Hill's corps. Ewell's corps was in advance at Carlisle [June 27] and York," and advance bodies of cavalry were threatening Harrisburg. The militia of Pennsylvania, New York, and Maryland were called out in force, but arms and ammunition for them were inadequate. Ewell, with Early's cavalry, reached the Susquehanna, the most northern point of the Confederate advance. He was about to attack, when General Lee, who had reached Chambersburg with Longstreet and Hill, recalled him on June 29. "On June 28th, Hooker determined to send Slocum's corps and the garrison of Harper's Ferry—the latter about 10,000 strong—to operate against Lee's rear. This was an excellent plan, but Hooker's superior, General Halleck, refused to allow him to remove the troops from Harper's Ferry; and Hooker said if he could not manage the campaign in his own way, he preferred to give up the command of the army." He was accordingly relieved and the command was given to Major-General George G. Meade, of the Fifth Corps. Meantime (June 25-27) the Union army had crossed the Potomac and advanced to Frederick, Maryland. Late in June, Stuart started with his cavalry on a raid upon Washington, but, finding it protected, moved on to Pennsylvania. Not finding Ewell at Carlisle, he followed him rapidly to Gettysburg, but arrived on July 2, with his horses in such a state that they were unfit for service. Thus Lee was deprived of his main cavalry arm when he most needed them. "On June 28th, Lee learned from a scout that the Union army was in his rear and that his communication with Richmond was seriously endangered. . . . In this emergency he concluded to threaten Baltimore. As a preliminary measure, he directed his entire army to move on Gettysburg. This he hoped would induce Meade to concentrate in his front and leave his rear free; which was precisely what Meade did do. . . . Under the impression that Lee's army was spread out along the Susquehanna from Carlisle to York, Meade threw out his own forces fan-shaped to march in that direction. . . . The advance of Hill's corps, on the morning of July 1st, struck Buford's division of Union cavalry a short distance to the west of Gettysburg, and in spite of a stout resistance forced it slowly back towards the town. The First Corps at this time was five miles south of Gettysburg. General Reynolds went to the support of Buford with the nearest division of the First Corps—Wadsworth's—and directed that the others follow. While forming this line of battle

he was killed. . . . Before the Eleventh Corps came up the enemy could have walked right over the small force opposed to them, but owing to the absence of Stuart's cavalry they had not been kept informed as to the movements Meade was making, and fearing that the whole Union army was concentrated in their front they were overcautious. There was now a lull in the battle for about an hour. The remainder of the First Corps came up and was followed soon after by the Eleventh Corps under General Schurz. About the same time the Confederate corps of General Ewell arrived and made a junction with that of Hill. General Howard assumed command of the Union forces. Repeated attacks were now made against the First Corps by Ewell from the north and Hill from the west; but the Confederate charges were successfully repulsed. . . . Ewell's attack also struck the Eleventh Corps on the right and front with great force. . . . General Meade, when he heard of Reynold's death, was 14 miles from Gettysburg at Taneytown, preparing to form line of battle along Pipe Creek. He at once sent General Hancock forward with orders to assume command of the field. Hancock, perceiving that Cemetery Ridge [about half a mile south of Gettysburg] was an admirable position for a defensive battle, determined to hold it if possible. . . . [and] directed Doubleday to send a force to Culp's Hill on the right, while he instructed Buford to parade up and down on the extreme left with his cavalry. The enemy were thus led to suppose that the Union line was a long one and had been heavily reinforced. As the losses on both sides had been tremendous, probably not exceeded for the same number of troops during the war, the enemy hesitated to advance, particularly as some movements of Kilpatrick's cavalry seemed to threaten their rear. They therefore deferred action until Meade concentrated the next day. On General Hancock's recommendation General Meade ordered his entire army to Gettysburg. . . . Most of the troops, though worn out with hard marching, arrived by midday of July 2d. The Sixth Corps had 34 miles to march and came later in the afternoon. . . . The attack as ordered by General Lee was to begin with Longstreet on the right and be made 'en échelon.' That is, as soon as Longstreet was fairly engaged, Hill's corps was to take up the fight and go in, and as soon as Hill was fairly engaged, Ewell's corps on the right was to attack. The object was to keep the whole Union line in a turmoil at once, and prevent reinforcements going from any corps not engaged to another that was fighting; but Hill did not act until Longstreet's fight was over, and Ewell did not act until Hill had been repulsed. . . . The enemy . . . failed in every attack against Meade's main line, with the exception of that portion south of Culp's Hill. Elated by the fact that he had made a lodgement there Ewell determined to hold on at all hazards and sent heavy reinforcements to make an attack in the morning. . . . So ended the battle of the second day. At day dawn [July 3] General Warren, acting for General Meade, established a cordon of troops and batteries which drove Johnson out of his position on the right. . . . Lee having failed in his attacks both on Meade's left and right had to decide at once whether he would give up the contest and retreat, or make another attempt to force the Union line. As he had been reinforced by Stuart's cavalry, and as a fresh division under Pickett was avail-

able, he determined to try to pierce the left center of the Union army and disperse the force opposed to him. To this end he directed Longstreet to form a strong column of attack to be composed of Pickett's division and Pettigrew's division and two brigades of Pender's division, under Trimble, of Hill's corps. To create confusion and prevent General Meade from sending reinforcements to the menaced point Stuart was ordered to ride around the right of the Union army and make an attack in rear. And still more to facilitate the attack 135 guns were to concentrate their fire against the Union center and disperse the forces assembled there. About 1 P. M. the terrific cannonade began and lasted for two hours, by which time the Confederate ammunition was nearly exhausted. . . . Stuart's cavalry attack proved abortive, for it was met and frustrated by two brigades of Gregg's cavalry aided by Custer's brigade, after a severe battle, which was hotly contested on both sides. Stuart's further progress was checked and he was forced to retreat. . . . Pickett formed his great column of attack and came forward as soon as the fire from the Union batteries slackened." Fresh guns had, however, been brought into position and swept the ground over which Pickett moved. His charge, one of the most desperately determined of the whole war, was heroically met by Gibbon's division of the Second corps and by part of the First corps, under the personal direction of General Hancock, who was severely wounded in the terrible conflict. Pickett was forced to retreat with the survivors of his onslaught, and "the whole plain was soon covered with fugitives; but, as no pursuit was ordered, General Lee in person succeeded in rallying them and in re-forming the line of battle. The next day, July 4th, General Lee drew back his flanks and at evening began his retreat by two routes—the main body on the direct road to Williamsport through the mountains, the other via Chambersburg, the latter including the immense train of the wounded. Gregg's division (except Huey's brigade) was sent in pursuit by way of Chambersburg, but the enemy had too much the start to render the chase effective. Kilpatrick, however, got in front of the main body on the direct route, and, after a midnight battle at Monterey, fought during a terrific thunder storm, succeeded in making sad havoc of Ewell's trains. . . . Lee concentrated his army in the vicinity of Williamsport, but as French had destroyed his pontoon bridge, and as the Potomac had risen, he was unable to cross. He therefore fortified his position. Meade did not follow Lee directly, but went around by way of Frederick. After considerable delay the Union army again confronted that of Lee and were about—under orders from President Lincoln—to make an attack, when Lee slipped away on the night of July 14th to the Virginia side of the Potomac. This ended the campaign of Gettysburg. The Union loss was 3,072 killed, 14,497 wounded, 5,434 missing. Total, 23,003. The Confederate loss was 2,502 killed, 12,700 wounded, 5,150 missing. Total, 20,451."—A. Doubleday, *Gettysburg made plain*.—On the same day that the battle of Gettysburg was won, Vicksburg had fallen, and Bragg was driven back on Chattanooga. "The summer of 1863 presented the most interesting epoch of the war. The baffling of Lee's second attempt to invade the North left the struggle in Virginia about as it had been before, except that Lee's veteran army continued to grow steadily

stronger in morale and weaker in numbers. The operations at the West, however, had been very disastrous to the Confederates. . . . Some critics, writing at a later time, have held that these conditions demanded the abandonment of the Confederate cause, and called for a suit for peace on the part of the Southerners, upon whatever terms the Federal Government might be willing to grant. Those who take this view do so, it would seem, upon inadequate conceptions of the conditions and the facts. . . . The South was still possessed of a vast area unplatted for military purposes, abounding in obstacles that might be made effective against any adversary's advance. Still more important, there remained the spirit of the army and an unconquerable determination on the part of the people. . . . It was their fixed belief that their own cause in this Confederate war was identical with that of their Revolutionary forefathers, and they would have held themselves in contempt had they shown a readier spirit of surrender than that of the earlier Americans. . . . Finally, there remained the Army of Northern Virginia, under command of Robert E. Lee. For them to have abandoned their cause while such an army under such a commander was still in the field would have been a confession of weakness and cowardice wholly beyond conception by such men. The war was not yet over. The men who were fighting it on the side of the South were still so potent in arms that in that very month of July, 1863, the Government of the United States found it necessary to resort to an enforced draft in order to raise the 300,000 men called for three months before, to reinforce armies that already outnumbered those of the South by two to one and more. So far was the Confederacy at that time from defeat and the necessity of surrender that for a space it was exceedingly uncertain whether or not the north would furnish the quotas now called for. . . . On both sides [North and South] men professed and honestly believed that their supreme concern was for the maintenance—in Mr. Lincoln's phrase—of a 'government of the people, by the people and for the people.' Yet on each side there existed, and men consented to it, a military despotism as arbitrary, as unreasoning, and as tyrannical as that of Russia itself. On either side no man could travel without permission of some provost authority which there was nowhere any power to question or any court to curb. On either side that military power which our Constitution requires to be always subordinate to the civil arm, had laid its iron hand without even the disguise of a velvet glove upon the fate and fortune and life of every citizen of a land supposed to be the freest on earth. . . . The despotism thus established at the South was more perfect and more arbitrary than that which fell upon the North because at the South there was practically no party in existence that antagonized the powers that were, while at the North there was such a party that must in some ways be reckoned with. Moreover, at the North the citizen who felt that he could not endure the despotism had at any rate the option to flee from it, and take up his residence in some foreign country . . .; while the Southerner who felt himself equally oppressed and wronged was completely shut in and compelled to submit. . . . These were the conditions of the war at midsummer, 1863, after Lee's retirement from Gettysburg, and after the loss of Vicksburg, Port Hudson and the Mississippi river

by the Confederates. They were certainly not conditions suggesting an abandonment of the struggle by either of the contestants, or at all clearly foreshadowing its end in victory for either. Anything in the way of results still remained possible. To hopeful minds on either side everything of good seemed likely to happen. So the war went on."—G. C. Eggleston, *History of the Confederate war*, v. 2, pp. 171-173, 178-180.

1863 (June-July: Tennessee).—Tullahoma campaign.—"Both Grant and Halleck were anxious that Rosecrans should advance against Bragg to prevent him sending reinforcements to Vicksburg. Rosecrans, however . . . considered that as long as he continued to occupy his lines at Murfreesborough, Bragg would keep all his army united in his front, because the possession of Middle Tennessee seemed to the Confederates of sufficient importance to justify Bragg's whole army remaining inactive, until the Army of the Cumberland should resume its advance. If, on the other hand, he succeeded in driving Bragg from his works at Shelbyville and Tullahoma, then the Confederate general would be very likely to move westwards, at any rate with part of his forces, and reinforce Johnston, who was operating against Grant's rear. . . . Bragg, for his part, was quite satisfied to remain where he was, so long as his presence there prevented Rosecrans from sending reinforcements to Grant's aid. It was not till the end of June that Rosecrans resumed his long-interrupted advance against Bragg. The movement was to be made in co-operation with an advance of the Army of the Ohio under Burnside into East Tennessee against Knoxville. If Rosecrans was slow to move, he proved himself a strategist of great ability when the campaign was actually begun. His army had been organised by an order of the War Department into three Corps, the 14th under Thomas, the 20th under McCook, and the 21st under Crittenden. In February reinforcements had reached him under General Gordon Granger, which were formed into a reserve Corps under that commander. His plan of campaign was to make a feint with Granger's Corps and most of his cavalry against Polk's force at Shelbyville, whilst the three main Corps made a flanking movement round Bragg's right by way of Manchester, a point on the branch line between McMinnville and Tullahoma, and within twelve miles of the latter place. The movement commenced on June 23rd, and met with complete success. [General Thomas, in command of the Fourteenth Corps, drove the Confederates from Hoover's Gap. General McCook, with the Twentieth Corps, took Liberty Gap, after severe fighting. The Twenty-first Corps (General Crittenden in command) met with little opposition.] In spite of the incessant rain, which rendered marching very difficult, the 14th Corps was concentrated at Manchester on

the night of the 27th. On the same day some brilliant work by the Federal cavalry on the right revealed the fact that Bragg had abandoned his lines at Shelbyville. . . . On July 1st it was discovered that Tullahoma had been evacuated, and the troops . . . were pushed to the front in vigorous pursuit. Bragg, however, safely withdrew his army, retarding the pursuit by destroying the bridges over the swollen streams. He crossed the mountains and took up a fresh position at Chattanooga on the eastern bank of the Tennessee. Rosecrans's operations so far had been brilliantly successful. In a nine days' campaign [which terminated on July 4] he had manœuvred the enemy out of two strong positions and forced him to retire behind the Tennessee. He had captured eleven guns and 1,000 prisoners, whilst his own loss only amounted to 560 in all."—W. B. Wood and J. E. Edmonds, *History of Civil War in the United States, 1861-1865*, pp. 276-277.

1863 (July: On the Mississippi).—Defence of Helena.—"One of the most brilliant of the minor victories of the war was gained at Helena, Arkansas, on the west bank of the Mississippi, on the 4th of July. General Holmes [Confederate] had asked and received permission to take that place, in the middle of June, and had mustered for that purpose an army of nearly 10,000 men. The garrison of Helena consisted of a division of the Thirteenth Corps and a brigade of cavalry numbering in all 4000 men, commanded by Major-General B. M. Prentiss. Holmes . . . assaulted at daylight with converging columns, two of which made considerable impression upon the outworks, but never reached the town. The defense of the Union troops was singularly skilful and energetic, and, after a few hours of fighting, Holmes, finding himself utterly defeated, retired at half-past ten. The little army of Prentiss was, of course, too small to pursue. The last Confederate attempt to hold the Mississippi River thus ended in a complete and most humiliating repulse."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 7, ch. 11.

1863 (July: Mississippi).—Capture and destruction of Jackson.—When Vicksburg surrendered, Johnston was hovering in the rear of Grant's army, and Sherman was watching his movements. On the very day the surrender was completed the latter marched rapidly upon Jackson, with 50,000 men, Johnston retreating before him. The city was invested on the 10th, and defended by the Confederates until the night of the 16th when they evacuated with haste. General Sherman, writing to Admiral Porter on the 19th of July, said: "We . . . have 500 prisoners, are still pursuing and breaking railroads, so that the good folks of Jackson will not soon again hear the favorite locomotive whistle. The enemy burned nearly all the handsome dwellings round about the town because they gave us shelter or to light up the ground to prevent night attacks. He also set fire to a chief block of stores in which were commissary supplies, and our men, in spite of guards, have widened the circle of fire, so that Jackson, once the pride and boast of Mississippi, is now a ruined town. State-house, Governor's

mansion, and some fine dwellings, well within the lines of intrenchments, remain untouched. I have been and am yet employed in breaking up the railroad 40 miles north and 60 south; also 10 miles east. My 10-miles break west, of last May, is still untouched, so that Jackson ceases to be a place for the enemy to collect stores and men."—*Official Records*, series 1, v. 24, pt. 3, p. 531.

1863 (July: Kentucky).—John Morgan's raid into Ohio and Indiana.—"The most famous raid of this time was that made in July by John Morgan across the Ohio River. General Buckner was then in East Tennessee, near the borders of Kentucky, getting ready to make another dash toward Louisville, and Morgan went ahead to prepare the way. He crossed the Cumberland River into Kentucky with about 3,000 mounted men, sacked Columbia, captured Lebanon with 400 prisoners, and rode on through Bardstow to Brandenburg on the Ohio River, plundering and destroying as he went. Many Kentuckians had joined him on the way, and he then had 4,000 men and ten pieces of artillery. The advance of Rosecrans's army just at that time prevented Buckner from joining him, and Morgan determined to cross into Indiana. There were two gunboats in the river, but he kept them off with his artillery while his men crossed on two captured steamboats. Morgan then rode through Indiana toward Cincinnati fighting home guards, tearing up railroads, burning bridges and mills and capturing much property. The whole State was aroused by the danger, and thousands of armed men started after the bold riders. Morgan became alarmed, and after passing around Cincinnati, almost within sight of its steeples, turned toward the Ohio to cross again into Kentucky. A large Union force was following, others were advancing on his flanks, and gunboats and steamboats filled with armed men were moving up the river to cut him off. The people aided the pursuers all they could by cutting down trees and barricading the roads to stop Morgan's march. He was so delayed by these and other things that he did not reach the Ohio until July 10th. He hoped to cross at a place called Buffington Ford, but the Union men were upon him and he had to turn and fight. After a severe battle, in which the Union troops were helped by gunboats which cut off the raiders from crossing the ford, about 800 of Morgan's men surrendered, and the rest, with Morgan himself, fled up the river fourteen miles to Belleville, where they tried to cross by swimming their horses. About 300 men had succeeded in getting over when the gunboats came up and opened fire on them. A fearful scene ensued, for it was a struggle of life and death. . . . Some got across, some were shot and some drowned. Morgan was not among the fortunate ones who escaped. With about 200 men he fled further up the river to New Lisbon, where he was surrounded and forced to surrender. This was a wonderful raid, but it did not do the Confederate cause any good. A large part of the property destroyed was private property, and this roused the anger of all the people of the Border States. . . . Morgan and some of his officers were sent to Columbus and confined in the penitentiary, from which he and six others escaped in the following November by making a hole through the bottom of their cell and digging a tunnel under the foundations of the building."—J. D. Champlin, Jr.,

1863 (July: New York).—Draft riots.—Although the opposition to the administration declared the Conscription Act to be unconstitutional, and there was some local excitement, the draft proceeded quietly until Saturday, July 11, the day appointed for the first drawing in New York City. There was little or no agitation on that day; but discussion of the first day's draft produced a violent outbreak on the Monday following. (See NEW YORK: 1863.) In his diary, under date of July 15, Gideon Welles, secretary of the navy, said: "The papers are filled with accounts of mobs, riots, burnings and murders in New York. There have been outbreaks to resist the draft in several other places. This is anarchy,—the fruit of the seed sown by the Seymours and others. In New York, Gov. Horatio Seymour is striving—probably earnestly now—to extinguish the flames he has contributed to kindle. Unless speedy and decisive measures are taken, the government and country will be imperiled. . . . Seward called on me to-day with the draft of a Proclamation for Thanksgiving on the 29th inst. With Meade's failure to capture or molest Lee in his retreat and with mobs to reject the laws, it was almost a mockery. . . . July 16th. It is represented that the mob in New York is about subdued. Why it was permitted to continue so long and commit such excess has not been explained. Governor Seymour, whose partisans constituted the rioters, and whose partisanship encouraged them, has been in New York talking nambypamby. This Sir Forcible Feeble is himself chiefly responsible for the outrage."—Gideon Welles, *Diary*, v. 1, p. 372.

1863 (July: South Carolina).—Lodgment on Morris island.—Assault on Fort Wagner.—In the South Carolina district, "attention was centered on the operations against the defences of Charleston on the south side, especially Fort Wagner on Morris Island, by the army and navy combined. . . . General Gillmore had been making preparations for it in June, and on July 6th Admiral Dahlgren came to relieve Dupont. Gillmore, a first rate engineer . . . after the failure of the naval attack on April 7th, . . . [was] consulted as to the silencing of Sumter so that the ironclads could go up the harbour. He thought that it might be done by rifled guns from Morris Island, but said that with the small force available no advance could be made against the city from the swampy islands at the mouth of the harbour against the Confederate works and forces on James Island. The army work was to be restricted to taking Morris Island and silencing Fort Sumter. . . . The creeks of the inland waters behind the coast islands communicated with the waters held by the Union fleet and were strongly fortified, where they approached Charleston. Several Union attacks here had been beaten. The Union held the coast islands, except Morris Island. By adding the little garrisons to the Port Royal force, there would be 11,000 men available; they had some 200 pound Parrott guns, and some heavy mortars. Much of the ground was deep swamp, while Battery Wagner, the principal objective, was a very strong work, which had been closed in rear during the siege, and made into a small

fort. It extended right across the island, which was a low neck in front, often awash at high tide, and all approach was over absolutely open ground, flanked by the Confederate batteries on James Island. The first move was a demonstration up Stono Inlet, when a landing was effected on Morris Island on July 10th. Next day an unsuccessful attack was made on the fort. Batteries were made, armed and opened, and another attempt made on the 18th, which was beaten by a terrible musketry fire at close range. On the first occasion, four monitors supported the attack, on the second the flagship and five monitors."—J. Formby, *American Civil War*, pp. 255-256.—General Israel Vogdes, who had fortified the southern end of the island, "under Gilmore's direction, constructed ten powerful batteries near its southern extremity. . . to protect the debarkation of the troops, and to cover their retreat in case of necessity. Most of this work was done at night, and all of it as silently as possible. . . . Alfred H. Terry's division of 4,000 and George C. Strong's brigade of 2,500 were quietly brought together on Folly Island, and on the afternoon of the 8th of July the former force was sent up the Stono to make a demonstration against James Island, while Strong's brigade was ordered to descend upon Morris Island at daybreak of the 9th. Colonel T. W. Higginson of the First South Carolina Volunteers, colored, was ordered at the same time to cut the railroad between Charleston and Savannah; a duty in which General Gillmore says he 'signally failed.' . . . Terry's feint against Stono was so imposing as to be taken for the real attack, by Beauregard, who hastily gathered together a considerable force to resist him, and paid little attention to the serious movement on the beach." The Confederate troops on Morris island, taken by surprise, were "speedily driven out of all their batteries south of Wagner, and abandoned to Gillmore three-fourths of the island, with 11 pieces of heavy ordnance. The next day he ordered Strong's brigade to assault Fort Wagner, an attempt which failed, with slight loss on each side. On the 16th Terry . . . [repulsed an attack, but] was recalled to Folly Island, the purpose of his demonstration having been accomplished. Although General Gillmore had as yet no conception of the enormous strength of Fort Wagner, the assault and repulse of the 11th of July convinced him that it could not be carried off-hand. He therefore determined, on consultation with Admiral Dahlgren, to establish counter-batteries against it. . . . By the morning of the 18th, exactly one week after the first assault." General Gillmore was ready for the second. The batteries and the fleet opened fire on the fort at noon of July 18; its defenders were soon driven from the parapets, and "in the course of the afternoon the whole work seemed to be beaten out of shape; [but, being constructed of fine quartz sand, it had suffered damage only in appearance. At twilight, the storming party, headed by Colonel Robert G. Shaw and his Fifty-fourth Massachusetts Regiment of colored troops, made a most brave and resolute assault, actually climbing the parapet of the fort, but only to leave 1500 dead, dying and wounded upon its treacherous sands. The heroic young Colonel Shaw fell dead among the foremost men; General Strong, Colonel Chatfield and Colonel Putnam were killed or mortally wounded; General Truman Seymour was wounded severely, and many other excellent officers were in the lists of the slain or the sadly disabled]."—J. 1863 (July-November: Virginia).—Meade and Lee on the Rapidan.—Bristoe Station.—Rappahannock Station.—Kelly's Ford.—Mine Run.—July 18 found the whole army of General Meade once more on the Virginia side of the Potomac. "His plan for the pursuit of Lee was not unlike that of McClellan a year before, but although he displayed much greater expedition and energy in the execution of it than were shown by his predecessor, the results, through no fault of his own, were unimportant. General French, who had taken no part in the battle of Gettysburg, had been placed in command of the Third Corps; he was an old officer of the regular army, excellent in drill, in routine, and all the every-day details of the service, but utterly unfit for an enterprise requiring great audacity and celerity. He was assigned upon this expedition to the duty of throwing his corps through Manassas Gap and attacking the flank of the enemy as he moved southward by Front Royal. Meade succeeded in getting French into the Gap in time to have broken the rebel army in two; but when he attacked, it was in so inefficient a manner, and with so small a portion of his force, that the day was wasted and the enemy made their way down the Valley to the lower gaps. This failure was a source of deep mortification to General Meade. . . . The pursuit of the enemy was not continued further. . . . The months of August and September were a period of repose for the Army of the Potomac. It was in fact in no condition to undertake active operations; a considerable body of troops had been taken from Meade for service in South Carolina, and a strong detachment had been sent to the City of New York for the purpose of enforcing the draft there. General Lee had retired behind the Rapidan for several weeks of rest; neither army was ready at that time to attack the other." Early in September Longstreet's corps was detached from Lee's army and sent west to strengthen Bragg at Chattanooga, and in the latter part of the same month about 13,000 men (Eleventh and Twelfth Corps) were taken from Meade and sent, under Hooker's command, to the same scene of pending conflict. "But even with this reduction of his command, after the return of the troops detached to the North, Meade found himself with an army of about 68,000 men; and, knowing this force to be somewhat superior to that of the enemy, he resolved to cross the Rapidan and attack him; but again, as so often happened in the history of the contending armies in Virginia, Lee had formed the project of a similar enterprise, and began its execution a day or two in advance. He had learned of the departure of two corps for the West." On October 9 "he began a flanking movement to the right of the Union line."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 9.—"Conceiving that the Confederates would move by the Warrenton pike, in order to cross Bull Run and get possession of Centreville—thus to interpose between the Federal army and Washington—Meade retired as speedily as possible. He had, in reality, the

start in the race, notwithstanding the day's loss in the return movement. . . . On the morning of the 14th, Lee advanced from Warrenton in two columns, but not by the 'pike.' The left, under Hill, moving by the turnpike to New Baltimore, was ordered to strike the railroad at Bristoe Station; the right column, under Ewell, taking a more easterly route, was directed to effect a junction at the same point. When Hill approached Bristoe, Meade's army, with the exception of Warren's corps, had passed that point. As the head of this column came up, the 5th Corps, under General Sykes, had just crossed Broad Run. Hill at once formed a line of battle to attack the rear of that corps, when Warren came up, and, by a bold onset, drove the enemy back, securing 450 prisoners and 5 guns. The National army, having won the race for position, and obtained possession of the heights of Centreville, Lee's movement was at an end, and he had but to retire to his old line again. . . . and, on the 18th, began his retrograde movement. The following day Meade commenced pursuit, with the intention of attacking the enemy on his retreat, but did not overtake him, being detained by a heavy rain storm, which so raised Bull Run as to render it unfordable. . . . On the 7th of November the whole army was put in motion toward the Rappahannock, along which river the enemy was in position at Rappahannock Station and Kelly's Ford. In two columns Meade advanced toward these points. General French, commanding the left wing—composed of the 1st, 2d and 3d Corps—was directed to cross at Kelly's Ford, while the right wing—comprising the 5th and 6th Corps, under General Sedgwick—marched upon Rappahannock Station. The 3d Corps, under Birney, led the advance on Kelly's Ford. Reaching that point, without waiting for pontoons, Birney crossed his own division by wading, carried the rifle-pits, captured 500 prisoners and prevented the enemy re-enforcing their troops at the Ford, by means of batteries which he planted on the hills that commanded the crossing. At the same time the right wing was contending against more formidable obstacles at Rappahannock Station. Early's division of Ewell's corps occupied a series of works on the north side of the river. . . . Gaining a good position, commanding the fort from the rear, Sedgwick planted his guns and opened a fierce cannonade upon the enemy's several batteries. Under cover of this fire, the temporary works were assaulted and carried at the bayonet's point. Over 1,500 prisoners, 4 guns and 8 standards were captured. Sedgwick's loss was about 300 in killed and wounded. The right column now crossed the river, without opposition, and, uniting with French's forces, advanced to Brandy Station. November 8th was lost in getting forward the trains, and in reconnoitering. Under cover of that night Lee withdrew across the Rapidan. Taking position between the Rappahannock and the Rapidan, Meade remained quietly and undisturbed for two weeks. Finding Lee indisposed for action, the Federal leader resolved once more to try and bring on a general engagement. . . . The Confederate army having gone into winter quarters, was located over a wide extent of country. . . . This separation of the enemy's corps, led Meade to hope, that, by crossing the lower fords of the Rapidan, and advancing rapidly on the plank and turnpike roads to Orange, C. H., he could concentrate his army against Ewell's corps, cripple or destroy it, and then be able to turn upon Hill, and in this way break Lee's army in

detail." But delays occurred which "frustrated the object of the movement; . . . disclosed Meade's intention to the enemy, who at once concentrated his entire force [in a strong position]. . . . In front was Mine Run, a shallow stream, but difficult to cross on account of its deep banks, the marshy nature of the ground, and the dense undergrowth with which it was flanked. . . . This was the end of a movement, which, like Hooker's advance to flank Fredericksburg, opened with fair promise of success, and, like that advance, was a failure from incidents which the situation permitted rather than asserted."—O. J. Victor, *History of the Southern Rebellion*, div. 12, v. 4, ch. 1.

ALSO IN: W. Swinton, *Campaigns of the Army of the Potomac*, ch. 10.—J. E. Cooke, *Life of General Robert E. Lee*, pt. 7.—*Official Records*, series 1, v. 29.—A. A. Humphreys, *From Gettysburg to the Rapidan*.

1863 (August: Missouri-Kansas).—Quantrell's guerrilla raid.—Sacking and burning of Lawrence.—After the fall of Vicksburg, many confederate soldiers returned from "Arkansas to their homes in Western Missouri, and under the secret orders so frequently sent from commanders in the South into that State, the guerrilla bands along the Kansas border suddenly grew in numbers and audacity. Though the whole region was patrolled almost day and night by Union detachments and scouts, a daring leader named Quantrell, who had been for some weeks threatening various Kansas towns, assembled a band of 300 picked and well-mounted followers at a place of rendezvous near the line, about sunset of August 20. His object being divined, half a dozen Union detachments from different points started in chase of him; but skilfully eluding all of them by an eccentric march, Quantrell crossed the State line, and, reaching the open prairie country, where roads were unnecessary, pushed directly for Lawrence, Kansas. [He pillaged the town and set fire to a large number of buildings before he retreated. Between 150 and 200 of the inhabitants lost their lives in the attack, and about 100 of Quantrell's men were cut off and killed in the pursuit by the Federals.]—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, p. 211.

1863 (August-September: Tennessee).—Burnside's deliverance of East Tennessee.—Union army in Knoxville.—"Ever since the Federals had become masters of Kentucky [see above: 1862 (January-February: Kentucky-Tennessee)] they had projected an expedition into East Tennessee. . . . Early in the year 1862 the Federals had taken the defile of Cumberland Gap, the principal door to East Tennessee; but drawn into pursuit of their adversaries in other directions, they had very wisely renounced proceeding beyond the gap, and shortly thereafter the Confederates had retaken the defile. In 1863 the rôle of liberator of East Tennessee was reserved for General Burnside: it was an honorable compensation accorded to the unfortunate but gallant soldier vanquished at Fredericksburg. Two divisions of the Ninth Corps designated to undertake this campaign having been, on June 4th, sent to the aid of Grant, it became necessary to commence new preparations. The scattered troops in Kentucky, several regiments recruited in that State or composed of refugees from East Tennessee, and a part of the fresh levies made in Ohio and Indiana, formed the Twenty-third Corps, under the orders of General Hartsuff. At the end of June . . . this little army was in readiness to move, when Morgan started on his

raid [and Burnside's troops were sent in the pursuit]. Six weeks were lost. It was the beginning of August. The Ninth Corps was coming back from Vicksburg. But the men, worn out by the climate, had need of rest. Burnside could not wait for them." He set out upon his movement into East Tennessee with about 20,000 men, leaving Camp Nelson, near Lexington, on August 16. The Confederate General Buckner opposed him with an equal number, including 3,000 under General Fraser at Cumberland Gap. Instead of attempting to force the passage of the gap, Burnside "determined to make a flank movement around the defile, by traversing more to the south, in the State of Tennessee, the high table-land which on that side bears the designation of Cumberland plateau. The roads which Burnside would have to cross were long and difficult to travel, and that portion of the country was little known, besides being bare of resources; but the very difficult character of the roads warranted the belief that the Confederates would be illy prepared for defence in that region. No precaution was neglected to ensure the success of this laborious and perilous march," and the success achieved was perfect. "One can understand with what joy the Federals, after eleven days of toilsome march, entered the rich valley, a kind of promised land, which stretched out before them. Public rumor had greatly exaggerated their numbers. . . . Bragg, fearing with reason lest by its flanking movements it [the division which Burnside led in person] should separate him from Buckner and then fall upon Chattanooga, had sent his lieutenant an order to evacuate Knoxville." Buckner withdrew and Burnside made a triumphal entry into Knoxville on September 3. "According to the testimony of eye-witnesses, the joy of the people was beyond description. Innumerable Federal flags which had been preserved in secret were displayed at the windows. [Fraser, who had not been withdrawn from Cumberland Gap, found himself entrapped, when, on September 9, Burnside appeared before his works, and he surrendered without a shot.]"—Comte de Paris, *History of the Civil War in America*, v. 4, bk. 1, ch. 2.

ALSO IN: A. Woodbury, *Burnside and the 9th Army Corps*, pt. 3, ch. 4-5.—T. W. Humes, *Loyal mountaineers of East Tennessee*, ch. 13.—*Official Records*, series 1, v. 30, pt. 2.—J. Fiske, *Mississippi valley in the Civil War*, p. 257.

1863 (August-September: Tennessee).—Rosecrans's advance to Chattanooga.—Evacuation by Confederates.—Battle of Chickamauga.—Since his success in the Tullahoma campaign (see above: 1863 [June-July: Tennessee]), Rosecrans had been urged from Washington to pursue his attack and dislodge the enemy from the mountains. But he delayed further movements for a month, repairing his railroad communications, asking for reinforcements, and waiting for corn to ripen for food and forage. "For a proper appreciation of the difficulties with which Rosecrans had to contend, a brief mention must be made of the topography of the region in which he was about to operate. The general course of the Alleghany Mountains is from north-east to south-west. The Cumberland Mountains form the most westerly range of the great chain, and separate the upper waters of the Cumberland and Tennessee. On the eastern bank of the latter river a succession of parallel mountain ranges confronted him. The first range, which runs parallel and very close to the river, is known as Raccoon Mountain. Parallel to this

range is Look-out Mountain, a hundred miles in length, and reaching the Tennessee about two miles south of Chattanooga. The valley between these two ranges is drained by Look-out Creek and is traversed by a railway branching off from the main line at Wauhatchie and terminating at Trenton. East of Look-out Mountain rose Missionary Ridge, some forty miles long and running up to the river above the town. These two ranges enclosed the Chattanooga Valley, drained by the Chattanooga Creek, near whose mouth the town of the same name is situated. [The name Chattanooga was popularly believed to mean 'hawk's nest.'] East of Missionary Ridge come Chickamauga Valley, drained by the West Chickamauga Creek, and Pigeon Mountain. Still further east rise Chickamauga Hill and Taylor's Ridge, drained by the Middle and East Chickamauga Creeks. Last of the series comes Chattanooga Mountain, and be-

GEORGE H. THOMAS

yond it runs the railroad from Chattanooga to Atlanta, which formed Bragg's line of supplies. From Winchester Rosecrans commenced his movement across the Cumberland Mountains. The 14th and 20th Corps reached the river near Stevenson and Bridgeport, whilst the 21st Corps moved through the Sequatchie Valley and part of it appeared opposite and above Chattanooga, thus confirming Bragg in his anticipation that the crossing would be above the town."—W. B. Wood and J. E. Edmonds, *History of the Civil War in the United States, 1861-1865*, p. 279.—"As soon as the railroad to Stevenson was in thorough repair, and a sufficiency of supplies accumulated there, Rosecrans crossed the Cumberland Mountains and descended into the valley of the Tennessee river. The more effectually to hoodwink Bragg, he kept his left wing thrown out so as to menace Chattanooga from the north; and on the 20th of August he began shelling the town from across the river. . . . Between the 29 of August and the 4th of September, still keeping up his demonstra-

tions on the left, Rosecrans moved the great bulk of his army across the river and began his march over Raccoon Mountain. . . . These movements were completed by the 8th of September. When Bragg first began to hear of them he was incredulous, but at length, on the 7th and 8th of September, taking in the situation and seeing his communications threatened, he evacuated Chattanooga and moved twenty-five miles south of Lafayette, where he covered the railroad and hoped to fall heavily upon the Federal columns as they debouched from the mountain passes. On the 9th Crittenden's corps marched from Wauhatchie into Chattanooga and took possession of that long-coveted town."—J. Fiske, *Mississippi valley in the Civil War*, pp. 261-262.—"Thus the first object of Rosecrans's campaign was accomplished; the important strategic point Chattanooga was obtained. . . . Rosecrans, believing himself perfectly secure in Chattanooga, and being convinced that Bragg was fleeing southward, did nothing to fortify himself. Taking measures to pursue his antagonist, he directed Crittenden to leave one brigade at Chattanooga as a garrison, and with the rest move forward to Ringgold. Thomas was to march to Lafayette, and McCook upon Alpine and Summer Creek. But Bragg, so far from continuing, had stopped his retreat—he was concentrating at Lafayette. He had received, or was on the point of receiving, the powerful reinforcements directed to join him. He was strictly ordered to check the farther advance of the Army of the Cumberland. . . . Rosecrans had separated three corps of his army by mountain ridges and by distances greater than those intervening between each of them and the enemy. Bragg had concentrated opposite his centre, and was holding such a position that he could attack any of them with overwhelming numbers. He had caused deserters and citizens to go into Rosecrans's lines to confirm him in the impression that the Confederates were in rapid retreat. . . . On the 11th of September, Crittenden, not stopping to fortify Chattanooga, pushed on toward Ringgold to cut off Buckner, who he had heard was coming from East Tennessee to the support of Bragg. Finding that Buckner had already passed, he turned toward Lafayette to follow him, going up the east side of the Chickamauga, but meeting a steadily increasing resistance he took alarm, and fell back across that stream at Lee and Gordon's Mills. The forces he had encountered were Cheatham's and Walker's divisions. Thomas, who had now discovered Bragg's position, directed McCook, who was advancing on Rome, to fall back instantly and connect with him. Rosecrans's troops had thus become scattered along an extended line from Lee and Gordon's Mills to Alpine, a space of about forty miles. By the 17th they were brought more within supporting distance, and on the morning of the 18th a concentration was begun toward Crawfish Spring, but it was slowly executed. At this time the two armies were confronting each other on the opposite banks of the Chickamauga, a stream which, rising at the junction of Missionary Ridge and Pigeon Mountain . . . empties into the beautiful Tennessee River above Chattanooga. In the Indian tongue Chickamauga means 'The Stagnant Stream,' 'The River of Death'—a name, . . . of ominous import. Rosecrans was on the west bank of the Chickamauga. . . . On the 18th his right was . . . at Gordon's Mills, his left near the road across from Rossville. Bragg's intention was to flank this left

and interpose between it and Chattanooga. . . . On the 18th Longstreet's troops were arriving from Virginia, and Bragg was ready . . . The battle of Chickamauga commenced on the morning of the 19th." Bragg's flanking movement, executed under General Polk, and directed against the left of Rosecrans's line, where Thomas had command, did not succeed. "The centre was then assailed and pressed back, but, having been re-enforced, it recovered its ground. Night came, and the battle was thus far indecisive. . . . The night was spent in preparation. Thomas constructed abatis and breastworks before his lines. . . . Bragg was still determined to flank the national left, and intervene between it and Chattanooga. He had ordered Polk to begin the battle as soon as it was light enough to see," but Polk delayed and it was not until ten o'clock that "Breckenridge's division, followed by Cleburne's, advanced against the breastworks of Thomas, which were mostly in Cleburne's front.

Everything depended on his firmness. . . . In the flight of the right and part of the centre from the field, Rosecrans, McCook and Crittenden were enveloped and carried away. . . . Rosecrans . . . went to Chattanooga, and thence telegraphed to Washington that his army had been beaten. Thomas still remained immovable in his position [and at a critical moment he was saved from a movement into his rear, by General Gordon Granger, who pushed to the front with some reserves]."—J. W. Draper, *History of the American Civil War*, ch. 67, v. 3.—"After dark Thomas withdrew his troops to Rossville, where a strong position was taken up. So skilfully was the retirement conducted, that Bragg was not aware of it until the following morning. Throughout the 21st Thomas held his position at Rossville Gap, in order to secure time for Rosecrans to put Chattanooga into a state of defence, and the same evening withdrew his forces unmolested into the

BATTLE OF CHICKAMAUGA, GEORGIA, SEPT. 19-20, 1863

(From a sketch by J. F. Hillen)

. . . With so much energy were these attacks made, that Thomas had to send repeatedly to Rosecrans for help. The Confederates had been gaining ground, but with these re-enforcements Thomas succeeded in driving back Cleburne with very great loss, and even in advancing on the right of Breckenridge." But, presently, by some blunder in the giving or construing of an order, one division—that of General Wood—was withdrawn from Rosecrans line and posted uselessly in the rear. "By this unfortunate mistake a gap was opened in the line of battle, of which Hindman, of Longstreet's corps, took instant advantage, and striking Davis in flank and rear, threw his whole division into confusion. . . . That break in the line was never repaired. Longstreet's masses charged with such terrible energy that it was impossible to check them. The national right and centre were dispersed, flying toward Rossville and Chattanooga. Sheridan, however, at length succeeded in rallying a considerable portion of his division, and managed to reach Thomas. On Thomas, who, in allusion to these events, is often called 'The Rock of Chickamauga,' the weight of the battle now fell.

town. . . . The fruits of the victory remained with the Confederates in the shape of some forty guns and the possession of the battlefield. But the victory itself was a barren one. It is probable that if Rosecrans, instead of returning to Chattanooga, had gone forward to Thomas and had seen for himself the condition of affairs, the order to retire to Rossville would never have been given."—W. B. Wood and J. E. Edmonds, *History of the American Civil War in the United States, 1861-1865*, p. 285.—"During the heavy fighting of the 20th, Thomas was the only general officer on the field of rank above a division commander. . . . There is nothing finer in history than Thomas at Chickamauga. All things considered, the battle of Chickamauga, for the forces engaged, was the hardest fought and the bloodiest battle of the Rebellion. . . . The largest number of troops Rosecrans had of all arms on the field during the two days' fighting was 55,000 effective men. . . . Rosecrans's losses aggregated killed, 7,687; wounded, 9,304; missing, 5,255. Total loss, 16,336. Bragg, during the battle, when his entire five corps were engaged, had about 70,000 effective

troops in line. . . His losses, in part estimated, were 2,673 killed, 16,274 wounded, and 2,003 missing, a total of 20,950. A full report of the rebel losses was never made."—H. M. Cist, *Army of the Cumberland (Campaigns of the Civil War, v. 7, ch. 11-12)*.

1863 (August-October: Arkansas-Missouri).—Breaking of Confederate authority in Arkansas.—Occupation of Little Rock by National forces.—Confederate raids into Missouri.—"After the surrender of Vicksburg, the Federal Gen. Steele was sent to Helena, with a considerable force, and instructed to form a junction with Gen. Davidson, who was moving south from Missouri, by way of Crowley's Ridge, west of the St. Francis, and with the combined force drive the Confederates south of the Arkansas River. Having effected this junction and established his depot and hospitals at Duvall's Bluff, on the White River, Gen. Steele, on the 1st of August, advanced against the Confederate army, which fell back toward Little Rock. After several successful skirmishes, he reached the Arkansas River, and threw part of his force upon the south side, to threaten the Confederate communications with Arkadelphia, their depot of supplies, and flank their position at Little Rock. Gen. Marmaduke was sent out with a cavalry force to beat the Federals back, but was completely routed. Seeing what must be the inevitable result of this movement of Gen. Steele, the Confederate Gen. Holmes destroyed what property he could, and after a slight resistance retreated with his army in great disorder, pursued by the Federal cavalry, and on the 10th of September, Gen. Steele, with the Federal army, entered the capital of Arkansas. His entire losses in killed, wounded and missing, in this whole movement, did not exceed 100. He captured 1,000 prisoners, and such public property as the Confederates had not time to destroy. The Federal cavalry continued to press the retreating Confederates southward; but a small force, which had eluded pursuit and moved eastward, attacked the Federal garrison at Pine Bluff, on the Arkansas, south of Little Rock, hoping to recapture it and thus cripple the Federals and break their communications. The attempt, which was made on the 28th of October, was repulsed with decided loss on the part of the confederates, and the same day the Federal cavalry occupied Arkadelphia, and the Confederates retreated toward the Red River. This completely restored Arkansas to the Federal authority, except a small district in the extreme southwest, and the region of Northwest Arkansas, over which the guerrilla and other irregular troops of the Confederates continued to roam, in their plundering excursions into Missouri, Kansas, and the Indian Territory. Some of these were conducted on a large scale. . . . The Confederate Gen. Cabell, collecting together as many of the guerrillas and Indians as possible, and some of the routed troops driven from Little Rock and its vicinity, started with a force variously estimated at from 4,000 to 10,000, in the latter part of September, from the Choctaw settlements of the

Indian Territory, crossed the Arkansas River east of Fort Smith, and, on the 1st of October, a detachment of his troops, under Gen. Shelby, joined Coffee at Crooked Prairie, Mo., intending to make a raid into Southwestern Missouri. This combined force, numbering 2,000 or 2,500 men, penetrated as far as the Missouri River at Booneville, but were pursued by the Missouri militia, and finally brought to a stand about eight miles southwest of Arrow Rock, on the evening of the 12th of October. Gen. E. B. Brown, who commanded the Federal troops, fought them till dark that evening, and during the night, having detached a small force to attack them in the rear, renewed the battle the next morning at eight A.M. After a sharp contest they fled, completely routed and broken up, with a loss of several hundred in killed, wounded and prisoners. They were pursued to the Arkansas line and prisoners gleaned all the way. . . . With these last convulsive throes, the active existence of the Confederate authority in Arkansas died out. On the 12th of November a meeting was held at Little Rock, to consult on measures for the restoration of the State to the Union, and was succeeded by others in different parts of the State."—W. J. Tenney, *Military and naval history of the Rebellion, ch. 36*.

1863 (August-December: South Carolina).—Siege and reduction of Fort Wagner.—Bombardment of Fort Sumter and Charleston.—After the unsuccessful assault and bloody repulse of July 18 (see above: 1863 [July: South Carolina]), General Gillmore began against Fort Wagner the operations of a regular siege. "Trenches were dug, and by the middle of August the batteries were within a quarter-mile of Wagner and within two and a half miles of Sumter. The work on these batteries had to be done mostly by night, for the forts kept up a heavy fire. Another battery was also begun in the marsh on the west side of Morris Island."—J. D. Champlin, Jr., *Young folk's history of the War for the Union, ch. 32*.—"The silencing of Sumter being the principal object, it was decided to attack it, and besiege Fort Wagner, at the same time, since Sumter was within the range of the guns mounted in the parallels for the attack of Wagner. The fire of the defence, in front and flank, was most severe, but the approaches moved forward steadily, and on August 17th the attack on Sumter began with such effect that it was soon a mass of ruins, having only one gun serviceable on the 24th.: it was reduced to an infantry outpost. Meanwhile the approaches to Wagner, aided by fire from the ships, were advancing, but the narrow neck in front was so difficult to pass that mortar fire was largely used, and the 'new Ironsides' came close in on September 5th. . . . Though the defenders' flank fire from James Island was maintained with great effect, the sap was close to the ditch on September 6th and the work was evacuated that night. This brought the fall of Battery Gregg . . . just opposite Sumter. Wagner was very strong, and practically uninjured. Fort Sumter was summoned to surrender, but [General Beauregard, who was in command in Charleston] refused, and on the 8th a boat attack was made on it, which failed. To put pressure on Charleston a sandbag battery was constructed on the swamp . . . armed with a 200-pound Parrott 'The Swamp Angel' which threw shells into the town at the then great range of 8,000 yards, but

burst after a few rounds, after which a pair of heavy mortars were put there, to attack James Island. . . . Sumter was heavily bombarded on October 26th, and at different times afterwards, to prevent guns being re-mounted. There were no more aggressive operations against the defences of Charleston."—J. Formby, *American Civil War*, pp. 256-257.

1863 (October-November: Tennessee).—Raising of the siege of Chattanooga.—"Battle above the Clouds," on Lookout Mountain.—Assault of Missionary Ridge.—Rout of Bragg's army.—After its defeat at Chickamauga the National army was practically besieged on Chattanooga. Bragg acquired strong positions on Lookout Mountain and Missionary Ridge, and was able to cut off all of Rosecrans routes of supply, except one long and difficult wagon-road. Longstreet proposed a move which would compel Rosecrans to come out and fight at a moment when the Confederates were in a stronger position than the Federal army; but the cautious Bragg preferred to sit down and try to starve him out. For a time the fates seemed to favor his project. The autumn rains came on, making the rough mountain roads almost impassable. It became more and more difficult for the Federals to move supplies through the mountains over the one road which was left to them. Army mules and horses died in large numbers for want of food, and the beleaguered army, which was almost faced with starvation, became unable to move for lack of sufficient transport. Burnside, only a hundred miles away in Eastern Tennessee, was ordered to Rosecrans's aid, but failed to move. The eleventh and twelfth corps were then detached from Meade, who was still watching Lee. These troops, under Hooker, were carried by train round through Ohio, Indiana and Kentucky and, on October 3, at the end of a week's journey, arrived at Stevenson, where headquarters were established, and means were taken to open communications with Rosecrans. Grant had been ordered, before Chickamauga was fought, to send re-inforcements to Rosecrans. Two divisions were on their way, and two others were about to follow, under command of Sherman; but news of their despatch had not yet reached the President and his advisers. Meantime, it became evident that his defeat had, for the time at least, destroyed Rosecrans's nerve, and that he was unable to extricate himself from his dilemma. On October 17 an important re-organization of the Union armies in the West was effected. "The departments of the Ohio, the Cumberland, and the Tennessee, were united under the title of Military Division of the Mississippi, of which General Grant was made commander, and Thomas superceded Rosecrans in command of the Army of the Cumberland. . . . Grant arrived at Chattanooga on the 23rd of October, and found affairs in a deplorable condition. . . . Grant's first care was to open a new and better line of supply. Steamers could come up the river as far as Bridgeport, and he ordered the immediate construction of a road and bridge to reach that point [for which Thomas had already given directions. By a clever piece of strategy, in which G. W. Smith distinguished himself, Brown's Ferry

was seized, and the river, which at this point makes a great loop, was spanned by pontoon bridges. Across the river, the hills, which dominated the road around the point of Lookout, were occupied by a strong Federal force. Hooker then brought his troops into the valley.] The enemy attempted to interrupt the work on the road; but Hooker met them at Wauhatchie, west of Lookout Mountain, and after a three-hours' action drove them off [with a loss of 416 killed and wounded, the Confederate loss being unknown]. Chattanooga was now no longer in a state of siege; but it was still seriously menaced by Bragg's army, which held a most singular position. Its flanks were on the northern ends of Lookout Mountain and Mission Ridge, the crests of which were occupied for some distance, and its centre stretched across Chattanooga valley. This line was twelve miles long, and most of it was well entrenched. Grant ordered Sherman [coming from Memphis] to join him with one corps, and Sherman promptly obeyed, but as he did considerable railroad repairing on the way, he did not reach Chattanooga till the 15th of November. Meanwhile Longstreet with 20,000 troops had been detached from Bragg's army and sent against Burnside at Knoxville. After Sherman's arrival, Grant had about 80,000 men."—R. Johnson, *Short history of the War of Secession*, ch. 20.—"My orders for battle," writes General Grant, "were all prepared in advance of Sherman's arrival, except the dates, which could not be fixed while troops to be engaged were so far away. The possession of Lookout Mountain was of no special advantage to us now. Hooker was instructed to send Howard's corps to the north side of the Tennessee, thence up behind the hills on the north side, and to go into camp opposite Chattanooga; with the remainder of the command, Hooker was, at a time to be afterwards appointed, to ascend the western slope between the upper and lower palisades, and so get into Chattanooga Valley. The plan of battle was for Sherman to attack the enemy's right flank, form a line across it, extend our left over South Chickamauga River so as to threaten or hold the railroad in Bragg's rear, and thus force him either to weaken his lines elsewhere or lose his connection with his base at Chickamauga Station. Hooker was to perform like service on our right. His problem was to get from Lookout Valley to Chattanooga Valley in the most expeditious way possible; cross the latter valley rapidly to Rossville, south of Bragg's line on Missionary Ridge, form line there across the ridge facing north, with his right flank extended to Chickamauga Valley east of the ridge, thus threatening the enemy's rear on that flank and compelling him to reinforce this also. Thomas, with the Army of the Cumberland, occupied the centre, and was to assault while the enemy was engaged with most of his forces on his two flanks. To carry out this plan, Sherman was to cross at Brown's Ferry and move east of Chattanooga to a point opposite the north end of Missionary Ridge, and to place his command back of the foot-hills out of sight of the enemy on the ridge. [Remaining in his concealed position until the time of attack, Sherman's army was then, under cover of night, to be rapidly brought back to the south side of the Tennessee, at a point where Missionary Ridge prolonged would touch the river, this being done by pontoons ready provided at a spot also concealed. The execution of the plan was delayed by heavy rains until November 23, when Burn-

side's distress at Knoxville forced Grant to begin his attack on Bragg by an advance of Thomas's army, at the center, before the flanking preparations were completed.] This movement secured to us a line fully a mile in advance of the one we occupied in the morning, and the one which the enemy had occupied to this time. The fortifications were rapidly turned to face the other way. During the following night they were made strong. We lost in this preliminary action about 1,100 killed and wounded, while the enemy probably lost quite as heavily, including the prisoners that were captured. With the exception of the firing of artillery, kept up from Missionary Ridge and Fort Wood until night closed in, this ended the fighting for the first day. . . . By the night of the 23rd, Sherman's command was in a position to move," and by daylight two divisions of his command were on the south side of the river, "well covered by the works they had built. . . . By a little past noon the bridge was completed, as well as one over the South Chickamauga . . . and all the infantry and artillery were on the south side of the Tennessee. Sherman at once formed his troops for assault on Missionary Ridge. . . . By half-past three Sherman was in possession of the height without having sustained much loss. . . . Artillery was dragged to the top of the hill by hand. . . . But now the enemy opened fire upon their assailants, and made several attempts with their skirmishers to drive them away, but without avail. Later in the day a more determined attack was made, but this, too, failed, and Sherman was left to fortify what he had gained. . . . While these operations were going on to the east of Chattanooga, [Hooker had three divisions west of Lookout Creek]. The enemy had the east bank of the creek strongly picketed and entrenched. . . . The side of Lookout Mountain confronting Hooker's command was rugged, heavily timbered, and full of chasms. . . . Early on the morning of the 24th Hooker moved Geary's division, supported by a brigade of Cruft's, up Lookout Creek, to effect a crossing. The remainder of Cruft's division was to seize the bridge over the creek, near the crossing of the railroad. . . . By noon Geary had gained the open ground on the north slope of the mountain, with his right close up to the base of the upper palisade, but there were strong fortifications in his front. The rest of the command coming up, a line was formed from the base of the upper palisade to the mouth of Chattanooga Creek. . . . Hooker's advance now made our line a continuous one. . . . The day was hazy, so that Hooker's operations were not visible to us except at the moments when the clouds would rise. But the sound of his artillery and musketry was heard incessantly. The enemy on his front was partially fortified, but was soon driven out of his works. . . . At four o'clock Hooker reported his position as impregnable. By a little after five direct communication was established, and a brigade of troops was sent from Chattanooga to reinforce him. . . . The morning of the 25th opened clear and bright, and the whole field was in full view from the top of Orchard Knob. It remained so all day. Bragg's headquarters were in full view. . . . Sherman was out as soon as it was light enough to see, and by sunrise his command was in motion." The fighting was severe for hours, and Bragg moved heavy masses of troops to resist Sherman's advance, while a division from Thomas was sent to reinforce the latter.

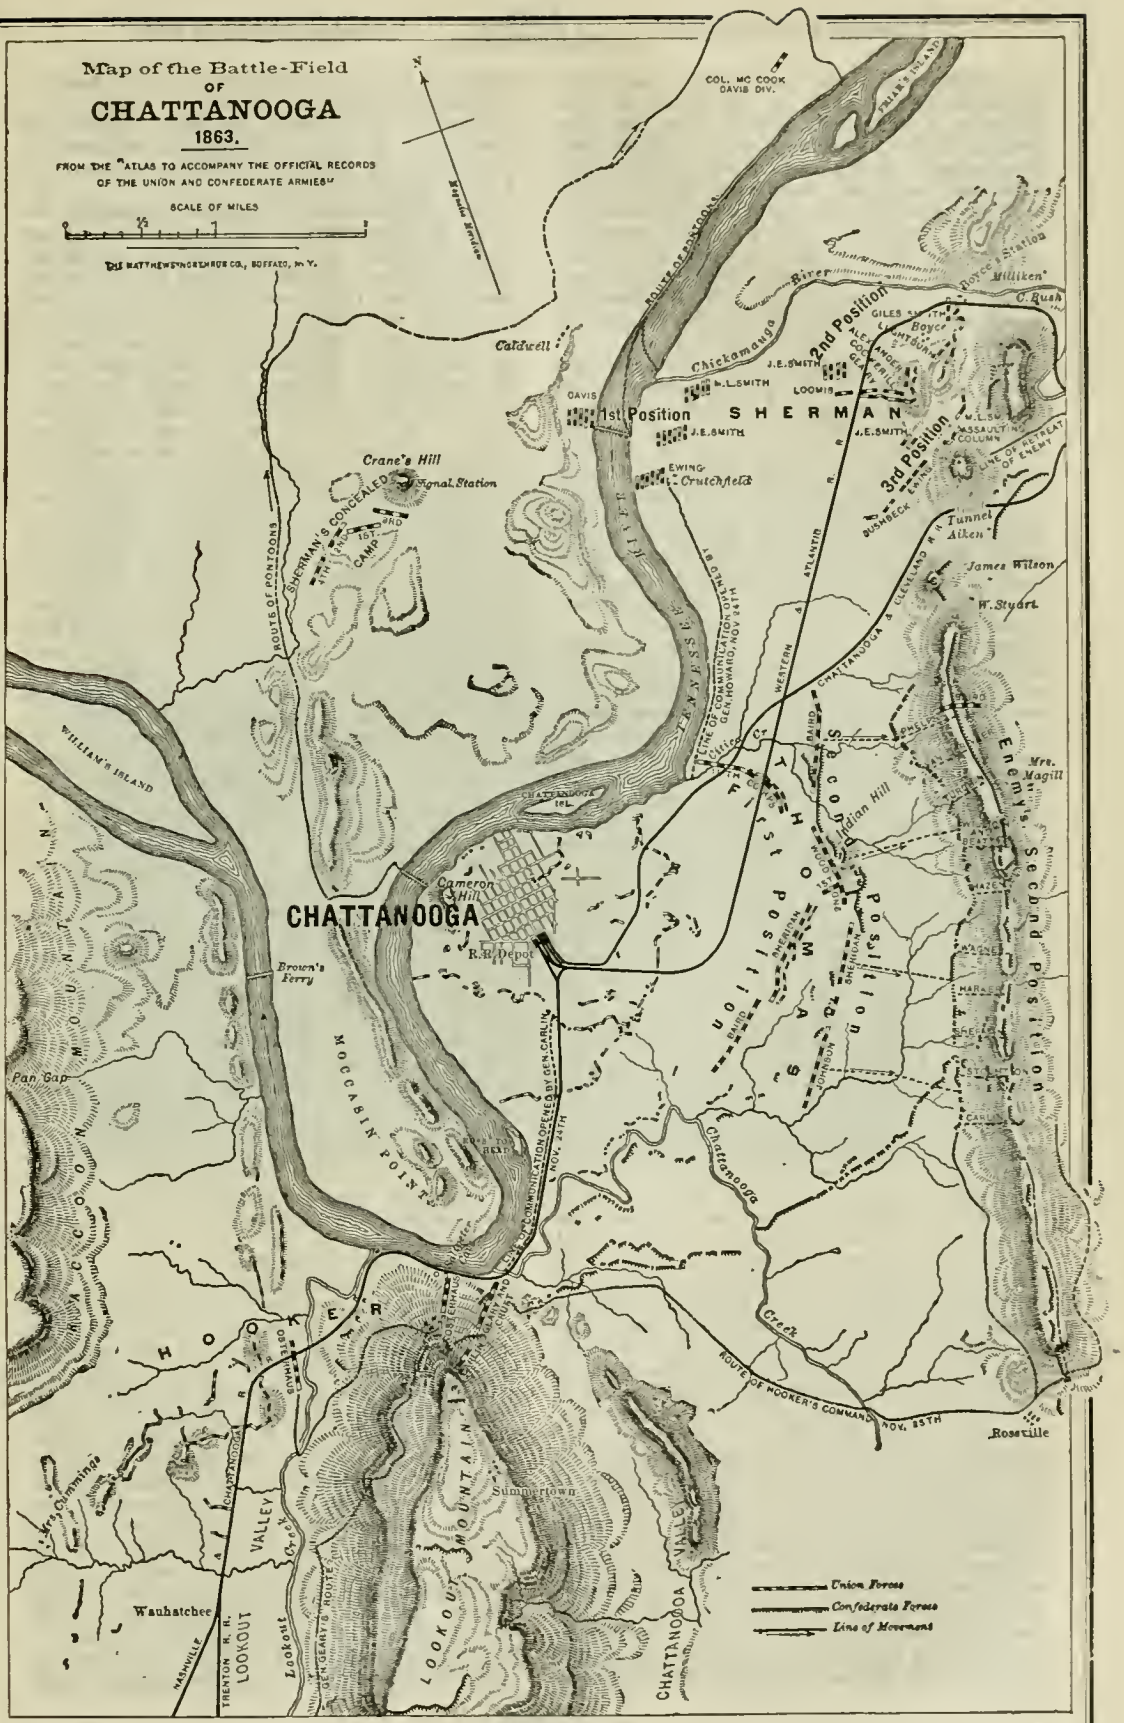

"It had now got to be late in the afternoon, and I had expected before this to see Hooker crossing the ridge in the neighborhood of Rossville and compelling Bragg to mass in that direction also. The enemy had evacuated Lookout Mountain during the night, as I expected he would. In crossing the valley he burned the bridge over Chattanooga Creek, and did all he could to obstruct the roads behind him. Hooker was off bright and early, with no obstructions in his front but distance and the destruction above named. He was detained four hours crossing Chattanooga Creek, and thus was lost the immediate advantage I expected from his forces. . . . But Sherman's condition was getting so critical that the assault for his relief could not be delayed any longer. Sheridan's and Wood's divisions had been lying under arms from early morning, ready to move the instant the signal was given. I now directed Thomas to order the charge at once." In this splendid charge the Union troops drove the Confederates from the first line of their works and then pushed on, with no further orders, to the second line, with the same success. "The retreat of the enemy along most of his line was precipitate, and the panic so great that Bragg and his officers lost all control over their men. Many were captured and thousands threw away their arms in their flight. Sheridan pushed forward until he reached the Chickamauga River at a point above where the enemy crossed. . . . To Sheridan's prompt movement the Army of the Cumberland and the nation are indebted for the bulk of the capture of prisoners, artillery, and small arms that day. . . . The enemy confronting Sherman, now seeing everything to their left giving way, fled also. . . . Hooker [pushing on to Rossville as soon as he had succeeded in getting across Chattanooga Creek] . . . came upon the flank of a division of the enemy, which soon commenced a retreat along the ridge. . . . The victory at Chattanooga was won against great odds, considering the advantage the enemy had of position."—U. S. Grant, *Personal memoirs*, v. 2, ch. 42.—Pursuit of the retreating Confederates began early in the morning of the 26th, and considerable fighting occurred on that day and the next. At Ringgold, Hooker was checked by Cleburne's division, which held an easily defended gap while the main column with its trains were moved beyond reach. In this battle at Ringgold Hooker lost sixty-five killed and 377 wounded. He took three pieces of artillery and 230 prisoners. "If Chickamauga, on account of the number of forces engaged and the heaviness of the losses suffered by either side, is reckoned the great battle of the West, Chattanooga, from the point of view of its far-reaching consequences, must be considered the most important. Desperate as had been the fighting at Shiloh, Murfreesborough, and Chickamauga, in not one of these three battles had a decisive success been won by either combatant; but at Chattanooga Bragg's army was badly beaten, and his continued presence with it as its commander rendered impossible. The Federal losses were under 6,000 in an army which numbered in round figures about 60,000. Bragg, after weakening himself by sending detachments into East Tennessee, had not more than 33,000 troops in line on November 24th and 25th. His actual losses in killed and wounded were probably considerable less than those suffered by the Federals, as his troops were mostly fighting behind entrenchments; but he lost 40 guns and over 6,000 prisoners. By his victory

at Chattanooga Grant supplemented and completed the success which he had gained earlier in the year at Vicksburg. Vicksburg cut the Confederacy in two along the line of the Mississippi; Chattanooga cut the eastern half of it in two along the line of the Alleghanies. The net result of the two campaigns was to recover the Mississippi Valley for the Union [and as events turned out, to open the way for the destruction of the Confederate arms in the Atlantic states. Chattanooga opened the door to Atlanta].—W. B. Wood and J. E. Edmonds, *History of the Civil War in the United States, 1851-1865*, pp. 293-294.

**1863 (October-December: Tennessee).—Siege of Knoxville.**—While the drama at Chattanooga was being played out, Longstreet with his division was before Knoxville, where, to his astonishment, he found a strong Union sentiment. "Burnside had by this time spread his force very widely, holding innumerable points and places southward and eastward of Knoxville by brigades and detachments; and Longstreet advancing silently and rapidly, was enabled to strike heavily [October 20] at the little outpost of Philadelphia, held by Colonel F. T. Wolford, with the 1st, 11th, and 12th Kentucky cavalry and 45th Ohio mounted infantry—in all about 2,000 men. Wolford . . . was at length obliged to cut his way out; losing his battery and 32 wagons, but bringing off most of his command, with 51 prisoners. . . . The enemy advancing resolutely yet cautiously, our troops were withdrawn before them from Lenoir and from Loudon, concentrating at Campbell's Station—General Burnside, who had hastened from Knoxville at the tidings of danger, being personally in command. Having been joined by his old (9th) corps, he was now probably as strong as Longstreet; but a large portion of his force was still dispersed far to the eastward, and he apprehended being flanked by an advance from Kingston on his left. He found himself so closely pressed, however, that he must either fight or sacrifice his trains; so he chose an advantageous position and suddenly faced the foe. . . . [In the late afternoon he] fell back to the next ridge, and again faced about; holding his position firmly till after night-fall; when—his trains having meantime obtained a fair start—he resumed his retreat, and continued it unmolested until safe within the sheltering intrenchments of Knoxville. . . . Longstreet continued his pursuit and in due time beleaguered the city [November 17,] though he can hardly be said to have invested it. . . . Bragg having been defeated by Grant before Chattanooga, and a relieving force under Sherman being close at hand—Longstreet necessarily abandoned the siege, and moved rapidly eastward unassailed to Russellville, Virginia: our entire loss in the defense having been less than 1,000; while his must have been twice or thrice that number. Sherman's advance reached the city, and Burnside officially announced the

raising of the siege, December 5th."—H. Greeley, *American conflict*, v. 2, ch. 18.

Also in: A. Woodbury, *Burnside and the 9th Army corps*, pt. 3, ch. 6.—*Official Records*, series 1, v. 31, pt. 1.—T. W. Humes, *Loyal mountaineers of East Tennessee*, ch. 14-16.

**1863 (November).—President Lincoln's address at Gettysburg.**—"By the retreat of Lee from Gettysburg and the immediate pursuit by Meade, the burial of the dead and the care of the wounded on that great battlefield were left largely to the military and local authorities of the State of Pennsylvania. Governor Andrew G. Curtin gave the humane and patriotic duty his thoughtful attention; and during its execution the appropriate design of changing a portion of the field into a permanent cemetery, where the remains of the fallen heroes might be brought together, and their last resting-place suitably protected and embellished, was conceived and begun. The citizen soldiery from seventeen of the loyal States had taken part in the conflict on the Union side, and the several Governors of these States heartily cooperated in the project, which thus acquired a National character. This circumstance made it natural that the dedication ceremonies should be of more than usual interest and impressiveness. Accordingly, at the beginning of November, 1863, when the work was approaching its completion, Mr. David Wills, the special agent of Governor Curtin, and also acting for the several States, . . . wrote the following letter of invitation to President Lincoln: 'The several States having soldiers in the Army of the Potomac, who were killed at the battle of Gettysburg, or have since died at the various hospitals which were established in the vicinity, have procured grounds on a prominent part of the battlefield for a cemetery, and are having the dead removed to them and properly buried. These grounds will be consecrated and set apart to this sacred purpose, by appropriate ceremonies, on Thursday, the 19th instant. Hon. Edward Everett will deliver the oration. I am authorized by the Governors of the different States to invite you to be present and participate in these ceremonies, which will doubtless be very imposing and solemnly impressive. It is the desire that after the oration, you, the Chief Executive of the nation, formally set apart these grounds to their sacred use by a few appropriate remarks. It will be a source of great gratification to the many widows and orphans that have been made almost friendless by the great battle here, to have you here personally; and it will kindle anew in the breasts of the comrades of these brave dead, who are now in the tented field or nobly meeting the foe in the front, a confidence that they who sleep in death on the battlefield are not forgotten by those highest in authority; and they will feel that, should their fate be the same, their remains will not be uncared-for. We hope you will be able to be present to perform this last solemn act to the soldier dead on this battlefield.' President Lincoln expressed his willingness to perform the duty requested of him. . . . At the appointed hour on the 19th a vast procession, with military music, moved to the cemetery grounds where, in the midst of a distinguished auditory, the orator of the day, Edward Everett, made an address worthy alike of his own fame and the extraordinary occasion. . . . Mr. Everett ended in a brilliant peroration, the echoes of which were lost in the long and hearty

plaudits of the great multitude, and then President Lincoln arose to fill the part assigned him in the programme. . . . Then and there the President pronounced an address of dedication so pertinent, so brief yet so comprehensive, so terse yet so eloquent, linking the deeds of the present to the thoughts of the future, with simple words, in such living, original, yet exquisitely molded, maxim-like phrases that the best critics have awarded it an unquestioned rank as one of the world's masterpieces in rhetorical art. He said: 'Four-score and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether

they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, and for the people, shall not perish from the earth.'—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 7.

1863 (December).—Union gains during 1863, and war policy.—Disunited counsels in the South.—Southern finances.—“The end of 1863 saw the positions of the two sides almost reversed, from those of the end of 1862; for the North were then beaten at all points, the only question being whether the South could maintain their advantage: now, the North had opened the

LINCOLN DELIVERING HIS ADDRESS AT THE DEDICATION OF THE GETTYSBURG BATTLEFIELD, NOV. 19, 1863

that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field, as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But, in a larger sense, we cannot dedicate—we cannot consecrate—we cannot hallow—this ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us,—that from these honored dead we take increased devotion to that cause for which

Mississippi from end to end, cutting the Confederacy in two, and had also won the battle which Lee elected to make decisive for political reasons. Though Chickamauga was a set-back, yet the battle of Chattanooga finally secured the advantage gained and placed the Union in a winning position, from which it could go forward and finish the war. The end was now in sight. . . . In the East [the Union had won] the northern half of Virginia proper; for the line of the Rapidan and Rappahannock, east of the Blue Ridge, was never again lost; in the West and South, the country as far south as the line Vicksburg-Ringgold, also the southern half of western Louisiana. . . . The year 1863 was remarkable for the first employment in the war of two weapons which, even in the opening of the twentieth century, were hardly developed, viz, the Submarine Torpedo-Boat and the Breechloading Magazine Rifle, and also for the first use of Machine Guns.”—J. Forby,

*American Civil War*, p. 274.—The government had already unified the forces in the West under Grant, who was about to be made commander-in-chief of all the forces in the field in order to produce the unity required to end the great struggle. "At this critical time, when the Federal Government was making strenuous efforts to insure unity of action and co-operation in the forthcoming campaign, the Confederate camp was distracted by divided counsels and personal jealousies. The appointment of General Bragg to the post of Commander-in-Chief near the President was not likely to commend itself to the other general officers serving either in the East or West. Furthermore, Davis was known to be prejudiced against both Joseph Johnston and Beauregard. . . . The war policy of the President also was very far from finding favour in the eyes of the best Confederate officers. . . . It was in vain that Lee and other officers had urged the advisability of concentrating all available forces for a vigorous offensive at some carefully selected point. . . . The President had refused to allow any considerable body of troops to be drawn from the garrisons in the Carolinas and along the Atlantic coast, in order to form a second army of invasion under Beauregard. . . . [A plan for a campaign in Kentucky, which was suggested by Longstreet and approved by Lee, was rejected by a Council of War in favor of a scheme, proposed by Bragg for a campaign in Tennessee.] This plan of campaign, which was approved by the President, was ultimately abandoned in consequence of Johnston's objection that he could not adequately supply his army in the mountainous country through which he would have to march before turning west for the invasion of Middle Tennessee. The net result of the Council of War was that no plan for an offensive campaign was definitely adopted, and Lee and Johnston, in command of the two principal armies of the Confederacy, were left to do the best that either could independently of the other against the superior numbers which the Federal Government was threatening to bring against the isolated forces of the enemy."—W. B. Wood and J. E. Edmonds, *History of the Civil War in the United States, 1861-1865*, pp. 309-310.—"As one looks to-day over the sources of the history of the great Civil War, it seems plain that the responsible spokesmen of the Confederacy should have made overtures to the North for peace on the basis of an indissoluble union of the warring sections in the autumn of 1863. But the Southern leader who proposed reunion at that time would have been regarded as untrue to his cause or unduly timid. Neither Jefferson Davis nor General Lee had any thought of surrender, though from the attitude of representatives of the United States it was plain that an offer to return to the Union would have been met with ample guaranties to the owners of slaves and full amnesty to those who had brought on the war. Alexander Stephens alone foresaw the outcome and began now to ask for a new national convention in which terms of restoration and permanent union should be fixed. Stephens was, however, already out of harmony with President Davis; and the State of Georgia, led by Joseph E. Brown, the Governor, and the Confederate Vice-President himself, was regarded by loyal Southerners as recalcitrant and therefore not authorized to propose solutions of the problem. The cup of Southern defeat and humiliation had not been drained to the bottom. The Confederacy owed,

at the end of the year 1863, \$1,221,000,000; the State Governments, the counties and cities, probably owed as much more. Paper money, the only medium of exchange, was fast giving way to barter. One dollar in gold was worth twenty dollars in Confederate currency. The monthly wage of a common soldier was not sufficient to buy a bushel of wheat. . . . The planters no longer produced cotton and tobacco, but supplies for 'their people' and for the armies. The annual export of cotton fell from 2,000,000 bales in 1860 to less than 200,000 in 1863, and most of this came from areas under Federal control. The yearly returns to the planters from foreign markets alone had fallen from the huge returns of 1860 to almost nothing in 1863, and with the disappearance of gold, or international money, from the South, the Governments, Confederate and State, found their system of taxation breaking down."—W. E. Dodd, *Expansion and conflict*, p. 309.

1863 (December).—President's message to Congress.—"Towards the reconstruction of the Union Lincoln had early taken tentative steps by appointing, in the spring and early summer of 1862, military governors of Tennessee, North Carolina, Arkansas, and Louisiana. Sumner, at the same time, had formulated the doctrine of 'State suicide' as a definition of the status of the seceded States. This meant that the States had ceased to exist, and that Congress had the same power over them which it had over the Territories. Lincoln did not deem it necessary to affirm or deny this thesis. Outlining his plan in his Proclamation of Amnesty and Reconstruction, and his Message of December 8, 1863, he wrote in the original draft of the message that he considered 'the discussion as to whether a State had been at any time out of the Union as vain and profitless. We know they were, we trust they shall be in the Union. It does not greatly matter whether in the mean time they shall be considered to have been in or out;' but this he did not allow to stand, deeming the admission that the States might have been out of the Union dangerous."—J. F. Rhodes, *History of the United States, from the Compromise of 1850*, v. 4, p. 484.—The proclamation of amnesty follows:

"Whereas, in and by the Constitution of the United States, it is provided that the President 'shall have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment;' and Whereas a rebellion now exists whereby the loyal State governments of several States have for a long time been subverted, and many persons have committed and are now guilty of treason against the United States; and Whereas, with reference to said rebellion and treason, laws have been enacted by Congress declaring forfeitures and confiscation of property and liberation of slaves, all upon terms and conditions therein stated, and also declaring that the President was thereby authorized at any time thereafter, by proclamation, to extend to persons who may have participated in the existing rebellion, in any State or part thereof, pardon and amnesty, with such exceptions and at such times and on such conditions as he may deem expedient for the public welfare; and Whereas the congressional declaration for limited and conditional pardon accords with well established judicial exposition of the pardoning power; and Whereas, with reference to said rebellion the President of the United States has issued several

proclamations, with provisions in regard to the liberation of slaves; and Whereas it is now desired by some persons heretofore engaged in said rebellion to resume their allegiance to the United States, and to inaugurate loyal State governments within and for their respective States: Therefore, I, Abraham Lincoln, President of the United States, do proclaim, declare and make known to all persons who have directly, or by implication, participated in the existing rebellion, except as hereinafter excepted, that full pardon is hereby granted to them and each of them, with restoration of all rights of property, except as to slaves, and in property cases where rights of third parties shall have intervened, and upon the condition that every such person shall take and subscribe an oath, and thenceforward keep and maintain said oath inviolate; and which oath shall be registered for permanent preservation, and shall be of the tenor and effect following, to wit: 'I, ———, do solemnly swear, in presence of Almighty God, that I will henceforth faithfully support, protect, and defend the Constitution of the United States, and the union of the States thereunder; and that I will, in like manner, abide by and faithfully support all acts of Congress passed during the existing rebellion with reference to slaves, so long and so far as not repealed, modified, or held void by Congress, or by decision of the Supreme Court; and that I will, in like manner, abide by and faithfully support all proclamations of the President made during the existing rebellion having reference to slaves, so long and so far as not modified or declared void by decision of the Supreme Court. So help me God.' The persons excepted from the benefits of the foregoing provisions are all who are, or shall have been, civil or diplomatic officers or agents of the so-called Confederate Government; all who have left judicial stations under the United States to aid the rebellion; all who are, or shall have been, military or naval officers of said so-called Confederate Government above the rank of colonel in the Army, or of lieutenant in the Navy; all who left seats in the United States Congress to aid the rebellion; all who resigned commissions in the Army or Navy of the United States, and afterwards aided the rebellion; and all who have engaged in any way in treating colored persons, or white persons in charge of such, otherwise than lawfully as prisoners of war, and which persons may have been found in the United States service as soldiers, seamen, or in any other capacity. And I do further proclaim, declare, and make known that whenever in any of the States of Arkansas, Texas, Louisiana, Mississippi, Tennessee, Alabama, Georgia [Virginia?], Florida, South Carolina, and North Carolina, a number of persons, not less than one tenth in number of the votes cast in such State at the presidential election of the year of our Lord one thousand eight hundred and sixty, each having taken the oath aforesaid and not having since violated it, and being a qualified voter by the election law of the State existing immediately before the so-called act of secession, and excluding all others, shall re-establish a State government which shall be republican, and in nowise contravening said oath, such shall be recognized as the true government of the State, and the State shall receive thereunder the benefits of the constitutional provision which declares that 'the United States shall guaranty to every State in this Union a republican form of government, and shall protect each of them against invasion; and, on ap-

plication of the Legislature, or the Executive (when the Legislature cannot be convened), against domestic violence.' And I do further proclaim, declare, and make known that any provision which may be adopted by such State government in relation to the freed people of such State, which shall recognize and declare their permanent freedom, provide for their education, and which may yet be consistent, as a temporary arrangement, with their present condition as a laboring, landless, and homeless class, will not be objected to by the national Executive. And it is suggested as not improper, that, in constructing a loyal State government in any State, the name of the State, the boundary, the subdivisions, the constitution, and the general code of laws, as before the rebellion, be maintained, subject only to the modifications made necessary by the conditions hereinbefore stated, and such others, if any, not contravening said conditions, and which may be deemed expedient by those framing the new State government. To avoid misunderstanding, it may be proper to say that this proclamation, so far as it relates to State governments, has no reference to States wherein loyal State governments have all the while been maintained. And for the same reason, it may be proper to further say, that whether members sent to Congress from any State shall be admitted to seats constitutionally rests exclusively with the respective Houses, and not to any extent with the Executive. And still further, that this proclamation is intended to present the people of the States wherein the national authority has been suspended, and loyal State governments have been subverted, a mode in and by which the national authority and loyal State governments may be re-established within said States, or in any of them; and, while the mode presented is the best the Executive can suggest, with his present impressions, it must not be understood that no other possible mode would be acceptable." In the message Lincoln gave his reasons for the proclamation, and explained the grounds on which he rested the policy declared in it, as follows: "On examination of this proclamation it will appear, as is believed, that nothing is attempted beyond what is amply justified by the Constitution. True, the form of an oath is given, but no man is coerced to take it. The man is only promised a pardon in case he voluntarily takes the oath. The Constitution authorizes the Executive to grant or withhold the pardon at his own absolute discretion; and this includes the power to grant on terms, as is fully established by judicial and other authorities. It is also proffered that if, in any of the States named, a State government shall be, in the mode prescribed, set up, such government shall be recognized and guaranteed by the United States, and that under it the State shall, on the constitutional conditions, be protected against invasion and domestic violence. The constitutional obligation of the United States to guarantee to every State in the Union a republican form of government, and to protect the State, in the cases stated, is explicit and full. But why tender the benefits of this provision only to a State government set up in this particular way? This section of the Constitution contemplates a case wherein the element within the State, favorable to republican government, in the Union, may be too feeble for an opposite and hostile element external to or even within the State; and such are precisely the cases with which we are now dealing.

An attempt to guarantee and protect a revived State government, constructed in whole, or in preponderating part, from the very element against whose hostility and violence it is to be protected, is simply absurd. There must be a test by which to separate the opposing elements so as to build only from the sound; and that test is a sufficiently liberal one which accepts as sound whoever will make a sworn recantation of his former unsoundness. But if it be proper to require, as a test of admission to the political body, an oath of allegiance to the Constitution of the United States, and to the Union under it, why also to the laws and proclamations in regard to slavery? Those laws and proclamations were enacted and put forth for the purpose of aiding in the suppression of the rebellion. To give them their fullest effect, there had to be a pledge for their maintenance. In my judgment they have aided, and will further aid, the cause for which they were intended. To now abandon them would be not only to relinquish a lever of power, but would also be a cruel and an astounding breach of faith. I may add at this point, that while I remain in my present position I shall not attempt to retract or modify the Emancipation Proclamation; nor shall I return to slavery any person who is free by the terms of that proclamation, or by any of the acts of Congress. For these and other reasons it is thought best that support of these measures shall be included in the oath; and it is believed the Executive may lawfully claim it in return for pardon and restoration of forfeited rights, which he has clear constitutional power to withhold altogether, or grant upon the terms which he shall deem wisest for the public interest. It should be observed, also, that this part of the oath is subject to the modifying and abrogating power of legislation and supreme judicial decision. The proposed acquiescence of the national Executive in any reasonable temporary State arrangement for the freed people is made with the view of possibly modifying the confusion and destitution which must at best attend all classes by a total revolution of labor throughout whole States. It is hoped that the already deeply afflicted people in those States may be somewhat more ready to give up the cause of their affliction, if, to, this extent, this vital matter be left to themselves; while no power of the national Executive to prevent an abuse is abridged by the proposition. The suggestion in the proclamation as to maintaining the political frame-work of the States on what is called reconstruction, is made in the hope that it may do good without danger of harm. It will save labor, and avoid great confusion. But why any proclamation now upon this subject? This question is beset with the conflicting views that the step might be delayed too long or be taken too soon. In some States the elements for resumption seem ready for action, but remain inactive, apparently for want of a rallying-point—a plan of action. Why shall A adopt the plan of B, rather than B that of A? And if A and B should agree, how can they know but that the General Government here will reject their plan? By the proclamation a plan is presented which may be accepted by them as a rallying-point, and which they are assured in advance will not be rejected here. This may bring them to act sooner than they otherwise would. The objection to a premature presentation of a plan by the national Executive consists in the danger

of committals on points which could be more safely left to further developments. Care has been taken to so shape the document as to avoid embarrassments from this source. Saying that, on certain terms, certain classes will be pardoned, with rights restored, it is not said that other classes, or other terms, will never be included. Saying that reconstruction will be accepted if presented in a specific way, it is not said it will never be accepted in any other way. The movements, by State action, for emancipation in several of the States, not included in the Emancipation Proclamation, are matters of profound gratulation. And while I do not repeat in detail what I have heretofore so earnestly urged upon this subject, my general views and feelings remain unchanged; and I trust that Congress will omit no fair opportunity of aiding these important steps to a great consummation. In the midst of other cares, however important, we must not lose sight of the fact that the war power is still our main reliance. To that power alone we can look, yet for a time, to give confidence to the people in the contested regions, that the insurgent power will not again overrun them. Until that confidence shall be established, little can be done anywhere for what is called reconstruction. Hence our chiefest care must still be directed to the army and navy, who have thus far borne their harder part so nobly and well. And it may be esteemed fortunate that in giving the greatest efficiency to these indispensable arms, we do also honorably recognize the gallant men, from commander to sentinel, who compose them, and to whom, more than to others, the world must stand indebted for the home of freedom disenfranchised, regenerated, enlarged, and perpetuated. Abraham Lincoln.”—Abraham Lincoln, *Complete works*, v. 2, pp. 442-456.

1863-1864.—Foreign complications.—“Hitherto, Washington had been very discreet about Mexico. Adroit hints not to go too far had been given Napoleon in full measure, but there was no real protest. The State Department now continued this caution and in the most polite terms declined Napoleon's offer [of mediation]. Congress, however . . . passed the first of a series of resolutions which expressed the will of the country, if not quite the will of the President, by resolving that any further proposal of mediation would be regarded by it as ‘an unfriendly act.’ Napoleon then resumed his scheming for joint intervention, while in the meantime his armies continued to fight their way until they entered Mexico City in June, 1863. The time had now come when Napoleon thought it opportune to show his hand. . . . To raise funds for the Confederacy the great Erlanger banking-house of Paris negotiated a loan based on cotton which was to be delivered after the breaking of the blockade. . . . In June an English politician of Southern sympathies, Edward Roebuck, went over to France, was received by the Emperor, and came to an understanding with him. Roebuck went home to report to the Southern party that Napoleon was ready to intervene, and that all he waited for was England's co-operation. A motion ‘to enter into negotiations with the Great Powers of Europe for the purpose of obtaining their coöperation in the recognition’ of the Confederacy was introduced by Roebuck in the House of Commons. The debate which followed was the last chance of the Southern party and, as events proved, the last chance of Napoleon. How completely the British ministry was now committed to the North appears in the

fact that Gladstone, for the Government, opposed Roebuck's motion. . . . But there were still the ironclads at Liverpool. . . . Earlier in the war, the carelessness of the British authorities had permitted the escape of ship 290, subsequently known as the Confederate commerce-destroyer, *Alabama*. The authorities did not wish to allow a repetition of the incident. But could it be shown that the Laird ships were not really for a French purchaser? It was in the course of diplomatic conversation that Mr. Adams, speaking of the possible sailing of the ships, made a remark destined to become famous: 'It would be superfluous in me to point out to your lordship that this is war.' At last, the authorities were satisfied. The ships were seized and in the end bought for the British Navy. Again Napoleon stood alone. . . . Yet he had gone too far to recede, and what he had been aiming at all along was now revealed. An assembly of Mexican notables, convened by the general of the invaders, voted to set up an imperial government. . . . And now the Government at Washington was faced with a complicated problem. What about the Monroe Doctrine? Did the Union dare risk war with France? Did it dare pass over without protest the establishment of monarchy on American soil by foreign arms? Between these horns of a dilemma, the Government maintained its precarious position during another year. Seward's correspondence with Paris was a masterpiece of evasion. He neither protested against the intervention of Napoleon nor acknowledged the authority of Maximilian. Apparently, both he and Lincoln were divided between fear of a French alliance with the Confederacy and fear of premature action in the North that would render Napoleon desperate. Just how far they comprehended Napoleon and his problems is an open question. Whether really comprehending or merely trusting to its instincts, Congress took a bolder course. Two men prove the antagonists of a parliamentary duel—Charles Sumner, chairman of the Senate Committee on Foreign Relations, and Henry Winter Davis, chairman of the corresponding committee of the House. Sumner played the hand of the Administration. Fiery resolutions demanding the evacuation of Mexico or an American declaration of war were skillfully buried in the silence of Sumner's committee. But there was nevertheless one resolution that affected history: it was a ringing condemnation of the attempt to establish a monarchy in Mexico. In the House, a joint resolution which Davis submitted was passed without one dissenting vote. When it came to the Senate, Sumner buried it as he had buried earlier resolutions. None the less it went out to the world attended by the news of the unanimous vote in the House. Shortly afterwards, the American Ambassador at Paris called upon the Imperial Foreign Secretary, M. Drouyn de L'huys. News of this resolution had preceded him. He was met by the curt question, 'Do you bring peace or war?' Again, the Washington Government was skillfully evasive. The Ambassador was instructed to explain that the resolution had not been inspired by the President and 'the French Government would be seasonably apprized of any change of policy . . . which the President might at any future time think it proper to adopt.' . . . Though Washington did not formally protest against the presence of Maximilian in Mexico, it declined to recognize his Government, and that Government continued unrecognized at Washington throughout the war."—N. W. Stephenson, *Abraham Lincoln and the Union*

1863-1864 (December-April: Tennessee-Mississippi).—Winter operations.—Sherman's Meridian expedition.—Longstreet's withdrawal from East Tennessee.—"Sherman, with the Army of Tennessee, was directed to march from Vicksburg against Meridian . . . and destroy the railroads in its vicinity. At Meridian, which is near the eastern border of Mississippi, the railroad runs east and west from Vicksburg to Montgomery, and beyond crosses the line running north and south from Mobile to the Ohio. A thorough destruction of the railway system at that point would close to the Confederates Northern Mississippi as a possible theatre of war for some considerable period. Experience had shown that a large force, if engaged in protracted operations, could not subsist far from a railway or some line of water communication. Sherman's expedition, if successful, would free the Federal authorities from any fear during the next campaign of a movement in force from Northern Mississippi either in the direction of the Mississippi or towards Nashville, and thus allow a larger force to be concentrated for the offensive movements into Georgia, which Grant and Sherman were planning. Sherman proposed to march with about 20,000 men from Vicksburg to Meridian, whilst General Sooy Smith was to move with a strong cavalry force simultaneously from Memphis and break up the Mobile and Ohio Railroad southward from Corinth, and then join Sherman at Meridian. There was a Confederate force in Mississippi under the command of Polk, but it was not strong enough to cope single-handed with Sherman's army, and the Confederate commander at Dalton was prevented from marching to Polk's aid by the consideration that Thomas at Chattanooga would then have a clear course to Atlanta. Consequently Sherman himself encountered no opposition: he reached Meridian on February 14th, and completely destroyed the railroads in the neighbourhood. Smith, however, was not so fortunate. Before he could carry out his share of the work, he had to reckon with Forrest, the ablest cavalry commander in the West. He was badly beaten and driven back to Memphis."—W. B. Wood and J. E. Edmonds, *History of the Civil War in the United States, 1861-1865*, pp. 302-303.—"When Meridian was reached its defenders were nowhere to be seen. Sherman took possession and waited for Smith. Days passed without any word coming from the cavalry column. After a week in Meridian, Sherman set the torch to the public buildings and retraced his steps toward Vicksburg. He had taken 400 prisoners, destroyed 150 miles of track, 67 bridges, 20 locomotives and 28 cars; had burned several thousand bales of cotton, a number of steam mills, and over 2,000,000 bushels of corn. Over 1,000 Union white refugees and 8,000 negroes followed in his wake. In 1866, the historian Lossing, passing through Meridian asked the Mayor of the town if Sherman had done the place much injury. 'Injury!' was the emphatic reply, 'Why, he took it away with him.'"—W. J. Abbott, *Battle-fields and victory*, ch. 1.—In East Tennessee, during the winter little was done by either army. A slight encounter occurred at Dandridge, in January, between Longstreet's forces and those of the Union General Parke. In April Longstreet was recalled by Lee, and the Ninth Corps, with Burnside again in command, went back to the army of the

Potomac.—Based on J. D. Cox, *Atlanta (Campaigns of the Civil War, v. 9, ch. 1-2)*.

1863-1864 (December-July).—President Lincoln's plan of reconstruction, and its application to Louisiana.—Opposing Congressional plan.—“The proclamation which accompanied the Annual Message of the President for 1864 embodied the first suggestions of the Administration on the important subject of reconstruction the Governments of those States which had joined in the secession movement. The matter had been canvassed somewhat extensively by the public press, and by prominent politicians, in anticipation of the overthrow of the rebellion. . . . A considerable number of the friends of the Government, in both houses, maintained that, by the act of secession, the revolted States had put themselves outside the pale of the Constitution, and were henceforth to be regarded and treated, not as members of the Union, but as alien enemies:—that their State organizations and State boundaries had been expunged by their own act; and that they were to be readmitted to the jurisdiction of the Constitution, and to the privileges of the Union, only upon such terms and conditions as the Federal Government of the loyal States might prescribe. . . . After the appearance of the President's proclamation, the movement towards reconstruction in Louisiana assumed greater consistency, and was carried forward with greater steadiness and strength. On the 8th of January a very large Free State Convention was held at New Orleans, at which resolutions were adopted indorsing all the acts and proclamations of the President, and urging the immediate adoption of measures for the restoration of the State to its old place in the Union. On the 11th, General Banks issued a proclamation, appointing an election for State officers on the 22nd of February, who were to be installed on the 4th of March, and another election for delegates to a convention to revise the Constitution of the State on the first Monday in April. The old Constitution and laws of Louisiana were to be observed, except so far as they relate to slavery. . . . Under this order, parties were organized for the election of State officers. The friends of the National Government were divided, and two candidates were put in nomination for Governor, Hon. Michael Hahn being the regular nominee, and representing the supporters of the policy of the President, and Hon. B. F. Flanders being put in nomination by those who desired a more radical policy than the President had proposed. Both took very decided ground against the continued existence of slavery within the State. . . . The election resulted in the election of Mr. Hahn. . . . [who] was inaugurated as Governor on the 4th of March. On the 15th he was clothed with the powers previously exercised by General Banks, as military governor. . . . The party which elected Governor Hahn succeeded also in electing a large majority of the delegates to the convention, which met in New Orleans on the 6th of April. On the 11th of May it adopted, by a vote of 70 to 16, a clause of the new Constitution, by which slavery was forever abolished in the State. The Constitution was adopted on the 5th of September, by a vote of 6,836 to 1,566. Great umbrage was taken at these proceedings by some of the

best friends of the cause, as if there had been an unauthorized and unjustifiable interference on the part of the President. . . . In Arkansas, where a decided Union feeling had existed from the outbreak of the rebellion, the appearance of the proclamation was the signal for a movement to bring the State back into the Union. On the 20th of January, a delegation of citizens from that State had an interview with the President, in which they urged the adoption of certain measures for the re-establishment of a legal State Government, and especially the ordering of an election for Governor. . . . Meantime, a convention had assembled at Little Rock, composed of delegates elected without any formality, and not under the authority of the General Government, and proceeded to form a new State Constitution, and to fix a day for an election. . . . The convention framed a constitution abolishing slavery, which was subsequently adopted by a large majority of the people. It also provided for the election of State officers on the day appointed for the vote upon the constitution; and the legislature chosen at that election elected two gentlemen, Messrs. Fishback and Baxter, as United States Senators, and also Representatives. These gentlemen presented their credentials at Washington. . . . The whole matter was referred to the Judiciary Committee, who . . . reported on the 27th of June that on the facts it did not appear that the rebellion was so far suppressed in Arkansas as to entitle the State to representation in Congress, and that therefore Messrs. Fishback and Baxter were not entitled to seats as Senators from the State of Arkansas. And the Senate on the next day adopted their report by a vote of 27 to 6. In the House, meanwhile, the Committee on Elections, to whom the application of the Arkansas members had been referred, reported to postpone their admission until a commission could be sent to inquire into and report the facts of the election, and to create a commission for the examination of all such cases. This proposition was, however, laid on the table, and the members were not admitted. . . . The cause of the rejection of these Senators and Representatives was, that a majority in Congress had not agreed with the President in reference to the plan of reconstruction which he proposed.” —H. J. Raymond, *Life and services of Abraham Lincoln, ch. 16*.—See also LOUISIANA: 1863-1867.—Although the President's message of December 8, 1863, had at first “received enthusiastic commendation from both conservatives and radicals, it was soon evident that the millennium had not yet arrived, and that in a Congress composed of men of such positive convictions and vehement character, there were many who would not submit permanently to the leadership of any man, least of all to that of one so reasonable, so devoid of malice, as the President. Henry Winter Davis at once moved that that part of the message be referred to a special committee of which he was chairman, and on February 15 reported a bill whose preamble declared the Confederate States completely out of the Union; prescribing a totally different method of reëstablishing loyal State governments, one of the essentials being the prohibition of slavery. Congress rejected the preamble, but after extensive debate accepted the bill, which breathed the same spirit throughout. The measure was also finally acceded to in the Senate, and came to Mr. Lincoln for signature in the closing hours of the session. He laid it aside and went on with other business, despite the

evident anxiety of several friends, who feared his failure to indorse it would lose the Republicans many votes in the Northwest. In stating his attitude to his cabinet, he said: 'This bill and the position of these gentlemen seem to me, in asserting that the insurrectionary States are no longer in the Union, to make the fatal admission that States, whenever they please, may of their own motion dissolve their connection with the Union. Now we cannot survive that admission, I am convinced. If that be true, I am not President; these gentlemen are not Congress. I have laboriously endeavored to avoid that question ever since it first began to be mooted, and thus to avoid confusion and disturbance in our own councils. It was to obviate this question that I earnestly favored the movement for an amendment to the Constitution abolishing slavery, which passed the Senate and failed in the House. I thought it much better, if it were possible, to restore the Union without the necessity of a violent quarrel among its friends as to whether certain States have been in or out of the Union during the war—a merely metaphysical question, and one unnecessary to be forced into discussion.' . . . Convinced, after fullest deliberation, that the bill was too restrictive in its provisions, and yet unwilling to reject whatever of practical good might be accomplished by it, he disregarded precedents, and acting on his lifelong rule of taking the people into his confidence, issued a proclamation on July 8, giving a copy of the bill to Congress, reciting the circumstances under which it was passed, and announcing that while he was unprepared by formal approval of the bill to be inflexibly committed to any single plan of restoration, or to set aside the free-State governments already adopted in Arkansas and Louisiana, or to declare that Congress was competent to decree the abolishment of slavery; yet he was fully satisfied with the plan as one very proper method of reconstruction, and promised executive aid to any State that might see fit to adopt it."—J. G. Nicolay, *Short life of Abraham Lincoln*, pp. 454-456.—The proclamation follows:

"Whereas, at the late session, Congress passed a bill to 'guarantee to certain States, whose governments have been usurped or overthrown, a republican form of government,' a copy of which is hereunto annexed; And whereas the said bill was presented to the President of the United States for his approval less than one hour before the sine die adjournment of said session, and was not signed by him; And whereas the said bill contains, among other things, a plan for restoring the States in rebellion to their proper practical relation in the Union, which plan expresses the sense of Congress upon that subject, and which plan it is now thought fit to lay before the people for their consideration: Now, therefore, I, Abraham Lincoln, President of the United States, do proclaim, declare, and make known, that, while I am (as I was in December last, when by proclamation I propounded a plan for restoration) unprepared, by a formal approval of this bill, to be inflexibly committed to any single plan of restoration; and, while I am also unprepared to declare that the free-State constitutions and governments already adopted and installed in Arkansas and Louisiana shall be set aside and held for nought, thereby repelling and discouraging the loyal citizens who have set up the same as to further effort, or to declare a constitutional competency in Congress to abolish

slavery in States, but am at the same time sincerely hoping and expecting that a constitutional amendment abolishing slavery throughout the nation may be adopted, nevertheless I am fully satisfied with the system for restoration contained in the bill as one very proper plan for the loyal people of any State choosing to adopt it, and that I am, and at all times shall be, prepared to give the executive aid and assistance to any such people, so soon as the military resistance to the United States shall have been suppressed in any such States, and the people thereof shall have sufficiently returned to their obedience to the Constitution and the laws of the United States, in which cases military governors will be appointed, with directions to proceed according to the bill. In testimony whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed. Done at the city of Washington, this eighth day of July, in the year of our Lord one thousand eight hundred and sixty-four, and of the independence of the United States the eighty-ninth. Abraham Lincoln. By the President: William H. Seward, Secretary of State."—Abraham Lincoln, *Complete works*, v. 2, p. 545.

1864 (January-February: Florida).—Battle of Olustee.—"The important towns on the Atlantic coast of Florida had for some time been in the Federal grasp. With the false idea that a Union sentiment existed in the interior, which might be encouraged by the advance of any army thither, Gilmore, commanding the department at Charleston, was allowed to despatch such an expedition. General Truman Seymour, a brave and experienced officer, was put in charge; he entered upon the task with misgivings, and soon met with misfortune. Florida was not ripe for a Union movement; and at Olustee, February 20, 1864, Seymour was repulsed, losing eighteen hundred and sixty men in his vain effort."—J. K. Hosmer, *Outcome of the Civil War, 1863-1865*, pp. 77-78.—"The forces were equal in numbers, about 5,500 on each side; the advantage to the Confederates [under General Joseph Finegan] was that they were in a strong position selected by themselves and ready for the fight. General J. R. Hawley, who commanded a brigade of infantry in the battle, says: 'We rushed in, not waiting for the proper full formation, and were fought in detail.' . . . Seymour's attack was constantly repulsed with heavy loss, until at nightfall he fell back to a new line. He was not pursued, and retired in good order and unmolested to Jacksonville. . . . This misadventure put an end for the moment to the attempt to occupy Florida."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 11.

1864 (February - March: Virginia).—Kilpatrick's and Dahlgren's raid to Richmond.—"Public feeling throughout the North had been greatly excited by the deplorable condition of

the prisoners of war held at Richmond. Early in the year, before the opening of the great campaign, some expeditions had been undertaken both from the Army of the Potomac and from Fortress Monroe, with the intention of relieving them. On February 27th, Custer, with 1,500 horse, had crossed the Rapidan on a feint to the west of the Confederate army, while Kilpatrick, starting on the following day, moved down on its opposite flank, by Spottsylvania Court House, to within  $3\frac{1}{2}$  miles of Richmond, passing its first and second lines of defenses [March], but being obliged to fall back from its third. Pursued by a force of the enemy, he was compelled to cross the White House Railroad and move down the peninsula. A detachment of Kilpatrick's force, 400 strong, under Colonel Ulric Dahlgren, leaving the main body at Spottsylvania, had gone to the right through Louisa and Goochland Counties, intending to cross the James River and enter Richmond from the south, while Kilpatrick attacked it on the north. But the river was found to be too deep to be forded. Dahlgren passed down the north bank to the fortifications of Richmond, forcing his way through the outer works, but being repulsed from the inner. Finding that Kilpatrick's attempt had miscarried, he moved toward King and Queen Court House; but after crossing the Mattapony at Dabney's Ferry, he fell into an ambuscade [March 3], his command being scattered, and himself killed. Under a false pretense that papers were found upon him showing an intention to set fire to Richmond, and take the lives of Davis and his cabinet, his corpse was insulted and the place of its interment concealed. At the time of his death he was but 21 years of age."—J. W. Draper, *History of the American Civil War*, v. 3, ch. 82.

1864 (March-April).—General Grant in chief command of the whole army.—His plans of campaign.—“It is worth while to note that each of the four cardinal victories which restored the supremacy of the United States government in the West was won under the leadership of Grant. Fort Donelson, Shiloh, Vicksburg, Chattanooga,—these names are the landmarks in that mighty story. If we may liken the whole war to one stupendous battle of four years' duration, it is evident that the United States was gradually defeating the Confederacy by turning its left flank. At the beginning of the year 1864 the Confederate right in Virginia still held its ground. Three years of warfare had apparently accomplished nothing. Lee was still midway between Richmond and Washington, defiant and apparently unconquerable. It was not strange that to the general who had done so much this last and most difficult problem should be entrusted. . . . In March, 1864, a bill was passed through Congress reviving the grade of Lieutenant-General, which heretofore had been held only by Washington and Scott [the latter by brevet]. Grant was promoted to this rank, and made general-in-chief of all the armies of the United States. Thus he was enabled not only to begin operation in Virginia with hands untrammelled, but also to control the whole field of war, so that a victory in Tennessee or Georgia should exert its full effect upon the situation in Virginia. . . . When Grant was made general-in-chief of the armies of the United States, Sherman succeeded him in the chief command at the West, and under Sherman were three armies with three superb commanders: The army of the Tennessee, under McPherson; the Army of the Cumberland, under

Thomas; and the Army of the Ohio, formerly under Burnside, but now commanded by Schofield. At the beginning of May, 1864, this triple army covered a line about twenty miles in length, a little south of Chattanooga: McPherson on the right, with 25,000 men, Thomas in the centre, with 60,000, and Schofield on the left with 15,000; in all 100,000 men, with 260 guns. Opposed to this force was a Confederate army of 65,000 men strongly fortified at Dalton, under command of Joseph Johnston, who among the southern generals ranked next in ability to Lee. Johnston had superseded Braxton Bragg, whom Mr. Davis had called to Richmond to be chief of his general staff.”—J. Fiske, *Mississippi valley in the Civil War*, pp. 317-319, 324.—“Grant's commission as lieutenant-general of the Army of the United States was formally presented to him by President Lincoln on the 9th of March. . . . The next day he was placed in command of all the armies by orders from the War Department; . . . [and] started West again on the evening of the 11th of March. . . . He had relinquished the purpose he had hitherto firmly held of leading the Western armies on the great campaign to Atlanta and the sea, and had decided to take the field with the Army of the Potomac. . . . Sherman at his request was promoted to command the Military Division of the Mississippi, McPherson succeeded to Sherman's command of the Department of Tennessee, and Logan was promoted to the command of McPherson's corps.” The necessary arrangements were quickly made. General Sherman assumed his enlarged command on the 18th of March, and General Grant a few days later was with the Army of the Potomac. He “established his headquarters at Culpeper Court House near the end of March, and spent a month in preparations for the great campaign which he, in common with the entire North, hoped would end the war. . . . The plan of the Lieutenant-General, as set forth in his report, was extremely simple. So far as practicable, the armies were to move together and towards one common center. Banks was to finish his operations in Louisiana [which had already begun (see below: 1864: March-May: Louisiana)], and, leaving a small garrison on the Rio Grande, was to concentrate an army of some 25,000 men, and move on Mobile. Sherman was to move simultaneously with the other armies, General Johnston's army being his objective, and the heart of Georgia his ultimate aim. Sigel, who was in command in the Shenandoah, was to move to the front in two columns, one to threaten the enemy in the Valley, the other to cut the railroads connecting Richmond with the Southwest. Gillmore was to be brought north [from Florida] with his corps, and in company with another corps, under W. F. Smith, was to form an army under General B. F. Butler to operate against Richmond south of the James. Lee's army was to be the objective point of Meade, reinforced by Burnside. As to the route by which the Army of the Potomac was to advance, Grant reserved his decision until just before he started upon his march. . . . The two armies lay in their intrenchments on both sides of the Rapidan. The headquarters . . . of Lee [were] at Orange Court House; the Army of Northern Virginia guarded the south bank of the river for 18 or 20 miles, Ewell commanding the right half, A. P. Hill the left. The formidable works on Mine Run secured the Confederate right wing, which was further protected by the tangled and gloomy thickets of the Wilderness. Longstreet

had arrived from Tennessee with two fine divisions, and was held in reserve at Gordonsville. . . . The strength of the Army of the Potomac, present for duty equipped on the 30th of April, was 122,146; this includes the 22,708 of Burnside's Ninth Corps. The Army of Northern Virginia numbered at the opening of his campaign not less than 61,953."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 13-14.—When Grant "assumed command of all the armies the situation was about this: The Mississippi River was guarded from St. Louis to its mouth. The line of the Arkansas was held, thus giving us all the Northwest north of that river. A few points in Louisiana not remote from the river were held by the Federal troops, as was also the mouth of the Rio Grande. East of the Mississippi we held substantially all north of the Memphis and Charleston railroad as far east as Chattanooga, thence along the line of the Tennessee and Holston rivers, taking in nearly all of the State of Tennessee. West Virginia was in our hands; and that part of old Virginia north of the Rapidan and east of the Blue Ridge we also held. On the sea-coast we had Fortress Monroe and Norfolk in Virginia; Plymouth, Washington, and New Berne in North Carolina; Beaufort, Folly and Morris islands, Hilton Head, Port Royal, and Fort Pulaski in South Carolina and Georgia; Fernandina, St. Augustine, Key West, and Pensacola in Florida. The balance of the Southern territory, an empire in extent, was still in the hands of the enemy. . . . In the East the opposing forces stood in substantially the same relations toward each other as three years before, or when the war began; they were both between the Federal and Confederate capital. It is true, footholds had been secured by us on the sea-coast, in Virginia and North Carolina; but beyond that, no substantial advantage had been gained by either side. Battles had been fought of as great severity as had ever been known in war, over ground from the James River and Chickahominy, near Richmond, to Gettysburg and Chambersburg, in Pennsylvania, with indecisive results, sometimes favorable to the National army, sometimes to the Confederate army. . . . The Union armies were now divided into nineteen departments, though four of them in the West had been concentrated into a single military division. The Army of the Potomac was a separate command and had no territorial limits. There were thus seventeen distinct commanders. Before this time these various armies had acted separately and independently of one another, giving the enemy an opportunity often of depleting one command, not pressed, to reinforce another more actively engaged. I determined to stop this. To this end I regarded the Army of the Potomac as the center, and all west to Memphis along the line described as our position at the time, and north of it, the right wing; the Army of the James, under General Butler, as the left wing; and all the troops south as a force in the rear of the enemy. . . . My general plan now was to concentrate all the force possible against the Confederate armies in the field. There were but two such, as we have seen, east of the Mississippi River and facing north. The Army of Northern Virginia, General Robert E. Lee commanding, was on the south bank of the Rapidan, confronting the Army of the Potomac; the second, under General Joseph E. Johnston, was at Dalton, Georgia, opposed to Sherman, who was still at Chattanooga. Besides these main armies the Confederates had to guard

the Shenandoah Valley, a great storehouse to feed their armies from, and their line of communications from Richmond to Tennessee. Forrest, a brave and intrepid cavalry general, was in the West with a large force, making a larger command necessary to hold what he had gained in Middle and West Tennessee. We could not abandon any territory north of the line held by the enemy, because it would lay the Northern States open to invasion. But as the Army of the Potomac was the principal garrison for the protection of Washington even while it was moving on Lee, so all the forces to the West, and the Army of the James, guarded their special trusts, when advancing from them as well as when remaining at them. . . . I arranged for a simultaneous movement all along the line. Sherman was to move from Chattanooga, Johnston's army and Atlanta being his objective points. Crook, commanding in West Virginia, was to move from the mouth of the Gauley River with a cavalry force and some artillery, the Virginia and Tennessee railroad to be his objective. Either the enemy would have to keep a large force to protect his communications, or see them destroyed, and a large amount of forage and provision, which he so much needed, fall into our hands. Sigel was in command in the Valley of Virginia. He was to advance up the valley, covering the North from an invasion through that channel as well while advancing as by remaining near Harper's Ferry. Every mile he advanced also gave us possession of stores on which Lee relied. Butler was to advance by the James River, having Richmond and Petersburg as his objective. . . . Sheridan . . . was assigned to the command of the cavalry corps with the Army of the Potomac."—*Personal memoirs of U. S. Grant*, v. 2, pp. 53-60.

1864 (March-May: Louisiana).—Red river expedition.—"After Vicksburg, the capture of Mobile seemed a natural and feasible sequence, but Grant and Sherman were diverted, as has been seen, to Chattanooga. Banks, in Louisiana, also would willingly have gone eastward against the only Confederate port left between Florida and Texas, but the government formed another plan. A French army was making progress in Mexico, and French intrigues were already on foot designated to affect Texas. To thwart Napoleon III, a firm hold on Texas seemed necessary; yet at the moment the North held nothing in that state. Banks was therefore ordered to Texas, where, in the fall of 1863, after a failure at Sabine Pass, he made important lodgments along the coast at Brownsville on the Mexican border, and at Matagorda Bay. It was thought in Washington that a more satisfactory point of occupation would be found in the interior, to be approached by the Red River. Banks accordingly, in 1864, much against his will, made preparations for such a campaign as the spring approached, the only season when the Red River is navigable. Meantime, the programme of the year's battles opened elsewhere. . . . Grant's policy was to avoid wasting strength in outskirt operations, and concentrate upon two main lines of effort. The campaign of Olustee came before he was in charge; and Banks's expedition up the Red River could not well be checked in March, when Grant assumed his wider duty. Divisions from the Thirteenth and Nineteenth Corps were detailed, all that could be spared after making secure the widely extended

Federal conquests in Louisiana and Texas; and in addition a fine body of ten thousand men under A. J. Smith was sent down from Vicksburg. Steele, also commanding in Arkansas, was ordered southward to co-operate; while Porter's fleet of gun-boats was to ascend the stream on the flank of the advancing army."—J. K. Hosmer, *Outcome of the Civil War, 1863-1865*, pp. 77-78.—"Fort De Russey was captured [March 14], the enemy retiring before our troops, and Alexandria and Natchitoches fell into our hands as the joint force advanced. Banks put in an appearance a week later. There was more or less skirmishing with the enemy's horse and outposts along the entire route; and near Mansfield, at Sabine Cross-Roads, the vanguard met the enemy in force. Sufficient care had not been taken to keep the several bodies concentrated. It was on Smith that the attack fell [April 8], and though this general's record for endurance is of the best, he was nevertheless badly worsted with a loss of 2,000 men out of 8,000 engaged, and some twenty guns. Retiring to Pleasant Hill, another stand was made for the possession of what had been so far gained. . . . The fleet had meanwhile reached Grand Ecore. High water was coming to an end, and Porter was obliged to return down river, to Alexandria. Here it was found that most of the vessels were of too heavy draught to pass the falls below the town; and the loss of most of them would have been certain, but for a dam and waterway ably constructed by Colonel Bailey, an engineer remarkably fertile in expedients. By means of this device the fleet was safely floated over. On the retreat, Alexandria was burned [May 15] by accident, traceable to no particular cause, though, naturally enough laid by the Confederates to our spirit of revenge."—T. A. Dodge, *Bird's-eye view of our Civil War*, ch. 31.—"We prefer not to enter into the bitter discussions to which this disastrous campaign gave rise on both sides of the line. A life-long quarrel sprang up between Kirby Smith and Taylor, between Banks and Porter, while Franklin, Charles P. Stone (Banks's chief-of-staff), and Albert L. Lee, all of whom relinquished their commands, added their quota of misunderstanding and resentment. . . . The Committee on the Conduct of the War made an investigation of the matter in the year 1865, at the time when the antagonism between Mr. Lincoln and the Radicals in relation to the subject of reconstruction had assumed an acute form. . . . The charge was made by the committee against Banks, that what he had in view was to carry out measures for the establishment of a State government in Louisiana, and to afford an egress for cotton and other products of that region, and that the attention directed to the accomplishment of these objects exerted an unfavorable influence on the expedition. . . . The honorable poverty in which General Banks has passed his subsequent life is the best answer to the reckless charges of his enemies."—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 8, ch. 11.

1864 (March-October: Arkansas-Missouri).—Last important operations in the West.—Price's raid.—"During the winter of 1863-64 the forces of Generals Steele and Blunt held the Arkansas River as a Federal line of advance. . . . During this period of inactivity, however, Steele was making

preparations for a vigorous spring campaign. It was decided that the column under General Banks and the columns under General Steele from Little Rock and Fort Smith should converge toward Shreveport, Louisiana. The Federal columns under Steele left Little Rock and Fort Smith the latter part of March, moved toward the Southern part of the State, and after some fighting and manœuvring drove General Price's forces from Camden, Arkadelphia and Washington. In the midst of these successful operations, Steele received information that Banks' army had been defeated and was retreating [see above: 1864 (March-May: Louisiana)], and that Price had received reinforcements from Kirby Smith of 5,000 infantry and a complement of artillery, and would at once assume the offensive. Not feeling strong enough to fight the combined Confederate forces, Steele determined to fall back upon Little Rock. He had scarcely commenced his retrograde movement when Smith and Price began to press him vigorously. A retreating fight was kept up for several days, until the Federal army reached Jenkins's Ferry on the Saline River," where Smith and Price made an energetic attack on the Federal army (April 30) and were repulsed with heavy loss. "After the battle of Jenkins's Ferry, instead of making preparations to attack the Federal forces at Little Rock and Fort Smith, Price commenced organizing his forces for an expedition into Missouri. . . . Price's army for the invasion of Missouri numbered some 15,000 men and 20 pieces of artillery before crossing the Arkansas River, and consisted of three divisions, commanded by Generals Fagan, Marmaduke and Shelby. . . . About the 1st of September, while strong demonstrations were being made against Fort Smith and Little Rock, Price, with his army, crossed the Arkansas River . . . at Dardanelle, and marched to the northern part of the State without opposition, and, in fact, without his movements being definitely known to General Rosecrans, who then commanded the Department of the Missouri at St. Louis," to which he had been appointed in January. At Pilot Knob, where they arrived September 26th, the Confederates were opposed by General Thomas Ewing, Jr., with a small force of 1,051 men. The fortifications at Pilot Knob were strong and Ewing held them against the vigorous attacks of Price throughout the 27th, but evacuated that night, blowing up the magazine and retreating safely. The Confederate invaders then marched on St. Louis and attacked the outer defences of the city, some miles to the south of it, but found themselves opposed by the veterans of General A. J. Smith's division, which had been opportunely stopped on its way down the Mississippi River to join Sherman. Foiled at St. Louis, Price then moved upon Jefferson City, the State capital, but was closely pursued and driven off. Advancing westward, he was met at Lexington, October 20th, by forces from Kansas, under General Blunt, but forced the latter to retire from the town, after severe fighting. Thence to Independence his progress was steadily resisted by Generals Blunt and Curtis, with volunteers and militia from Kansas. At Independence, on the 22d, Pleasonton's cavalry, of Rosecrans's army, came up and formed a junction with the forces of Curtis, and the next day they engaged Price in battle near Westport. "The opposing armies fought over an area of five or six square miles, and at some points the fighting was furious. . . . About the middle of the afternoon Price's lines began to give way, and by sundown the

entire Confederate army was in full retreat southward along the State line, closely pursued by the victorious Federal forces." At the crossing of the Marais des Cygnes River he lost ten pieces of his artillery and a large number of prisoners, including Generals Marmaduke and Cabell. "At Newtonia in south-west Missouri, on the 28th of October, Price made another stand, and was attacked by the pursuing forces . . . and finally driven from the field with heavy loss. . . . Blunt, and some of the Missouri troops, continued the pursuit to the Arkansas River, but Price did not again attempt to make a stand. . . . Most of the noted guerrilla bands followed him from the State. The 'Price raid,' as it was called in the West, was the last military operation of much consequence that took place in Missouri and Arkansas. It is certain that Price lost more than he gained in war material, and that the raid did not tend to strengthen the Confederate cause in the West."—W. Britton, *Résumé of military operations in Missouri and Arkansas, 1864-65 (Battles and leaders, v. 4)*.—"In General Price's report occurs the following summary of the campaign: 'I marched 1,434 miles, fought 43 battles and skirmishes, captured and paroled over 3,000 Federal officers and men, captured 18 pieces of artillery, 3,000 stand of small-arms, 16 stand of colors . . . and destroyed property to the cost of \$10,000,000. I lost ten pieces of artillery, 2 stand of colors, 1,000 small arms, while I do not think I lost 1,000 prisoners. . . . I brought with me at least 5,000 recruits.'"—*Editor's note to above*.

1864 (April: Tennessee).—Massacre at Fort Pillow.—After General Sherman's return from his raid to Meridian, and General William Sooy Smith's return to Memphis, the Confederate cavalry leader Forrest advanced into Tennessee, devastating the country. "He captured Jackson in that State, on the 23d of March, and moving northward, appeared before Paducah, held by Colonel Hicks with 650 men. His demand for a surrender was accompanied with a threat: 'If you surrender, you shall be treated as prisoners of war; but if I have to storm your works you may expect no quarter.' he made three assaults, and then retired, having lost 1,500 men. On the 12th of April he was at Port Pillow, which was garrisoned by 19 officers and 538 men, of whom 262 were negroes. This force was not a part of the army, but a nondescript body in process of formation. . . . It had been left in violation of Sherman's peremptory orders. The attack was made before sunrise; and after some severe fighting, Major Booth, the commanding officer of the garrison, was killed. Major Bradford, who succeeded him, drew the troops from the outer line of intrenchments into the fort and continued the contest until afternoon."—J. W. Draper, *History of the American Civil War, v. 3, ch. 74*.—"They were at first supported by a gun-boat in the river, but for some reason, . . . the boat drew off in the midst of the fight. Forrest demanded a surrender, but Bradford refused. He then carried the works by storm, when what was left of the garrison threw down their arms. The assailants now refused to spare them, and massacred them almost to the last man. They afterward sought to excuse themselves by pointing to the refusal to surrender, but this refusal was made by the Federal commander before the Confederates got into the fort. The cry of the men for quarter they chose not to consider as a surrender. The truth of the matter undoubtedly was that the Confederates were excited to this horrible deed

by the presence of negroes in the service of the United States. They recognized no duty of protecting such foes when captured, and they regarded white men when taken with them as also outlawed."—J. W. Burgess, *Civil War and the constitution, 1859-1865, v. 2, pp. 235-236*.—On the same day General Forrest dispatched a report to Assistant Adjutant General Jack, in which he states: "Have dispatched by telegraph of the capture of Fort Pillow. Arrived there on the morning of the 12th and attacked the place with the portion of McCulloch's and Bell's brigades, numbering about 1,500 men, and after a sharp contest captured the garrison and all of its stores. A demand was made for the surrender, which was refused. The victory was complete, and the loss of the enemy will never be known from the fact that large numbers ran into the river and were shot and drowned. The force was composed of about 500 negroes and 200 white soldiers (Tennessee Tories). The river was dyed with the blood of the slaughtered for 200 yards. There was in the fort a large number of citizens who had fled there to escape the conscript law. Most of these ran into the river and were drowned. The approximate loss was upward of 500 killed, but few of the officers escaping. It is hoped that these facts will demonstrate to the Northern people that negro soldiers cannot cope with Southerners." "His words have since been construed to mean a blood-thirsty antagonism to the negroes. That construction may be correct, but General Forrest himself contended to the end of his life that he meant only to point out the ease with which Southern soldiers conquered and destroyed this negro force as illustrating the inefficiency of black men in fighting white men."—G. C. Eggleston, *History of the Confederate War, v. 2, p. 220*.—"He stopped the slaughter as soon as he came up. Sherman acquits him from blame, saying that the policy, which he himself had always opposed, of raising troops from their own slaves to keep them in order in their own districts, made the Confederates 'fearfully savage'; that they became quite uncontrollable on such occasions."—J. Formby, *American Civil War, p. 302*.

Ferguson, United States Steamer Silver Cloud (Official Records, series 1, v. 32, pt. 1, pp. 571, 609-610)*.

1864 (April-May: North Carolina).—Exploits of the ram *Albatross*.—Surrender of Plymouth.—"In the squadron [of the Confederates] we were gladdened by the success of our iron-clad ram *Albatross*, which vessel, under Captain James B. Cooke, had (after overcoming innumerable difficulties) succeeded in descending the Roanoke river, April 19th [1864], and dispersing the Federal squadron off Plymouth, N. C. She sunk the steamer *Southfield*, and drove the other vessels off; and her presence led to the recapture of Plymouth by the Confederates. On the 5th of May the *Albatross* started from Plymouth with the small steamer *Bombshell* in company, on what was called a secret expedition. I think it probable the intention was to destroy the wooden men-of-war in the sounds, and then tow troops in barges to Hatteras and retake it. If this could have been done the *Albatross* would have had it all her own way, and Roanoke island, Newbern and other places would again have fallen into the

hands of the Confederates. Shortly after leaving Plymouth the Albemarle fell in with the Federal squadron, consisting of the steamers Mattabesett, Sassacus, Wyalusing, Whitehead, Miami, Ceres, Commodore Hull and Seymour—all under the command of Captain Melancton Smith, and after a desperate combat was forced to return to Plymouth.”—W. H. Parker, *Recollections of a naval officer*, p. 339.

1864 (May: Virginia).—Grant's movement on Richmond.—Battle of the Wilderness.—“The movement of the Army of the Potomac commenced early on the morning of the 4th of May, under the immediate direction and orders of Major-General Mead, pursuant to instructions. Before night the whole army was across the Rapidan—the Fifth and Sixth Corps crossing at Germanna Ford, and the Second Corps at United States' (Ely's) Ford, the cavalry under Major-General Sheridan, moving in advance,—with the greater part of its trains, numbering about 4,000 wagons, meeting with but slight opposition. The average distance traveled by the troops that day was about 12 miles. This I regarded as a great success, and it removed from my mind the most serious apprehensions I had entertained, that of crossing the river in the face of an active, large, well-appointed, and ably commanded army, and how so large a train was to be carried through a hostile country and protected. Early on the 5th, the advance corps (the Fifth, Maj. Gen. G. K. Warren commanding), met and engaged the enemy outside his intrenchments near Mine Run. The battle raged furiously all day, the whole army being brought into the fight as fast as the corps could be got upon the field, which, considering the density of the forest [see above: 1863 (April-May: Virginia)], and narrowness of the roads, was done with commendable promptness. General Burnside, with the Ninth Corps, was, at the time the Army of the Potomac moved left with the bulk of his corps at the crossing of the Rappahannock River and Alexandria railroad, holding the road back to Bull Run, with instructions not to move until he received notice that a crossing of the Rapidan was secured, but to move promptly as soon as such notice was received. This crossing he was apprised of on the afternoon of the 4th. By 6 o'clock of the morning of the 6th, he was leading his corps into action near the Wilderness tavern.”—U. S. Grant, *Official Records, series 1, v. 36, pt. 1, p. 18*.—“Grant had not expected to encounter his enemy here. He had supposed that Lee would move out of the Wilderness and choose more favorable ground upon which to receive the assaults of his enemy. Accordingly, the Federal commander had already pushed a part of his army under Hancock toward the edge of the Wilderness, hoping by a rapid march to place it between the Confederate army and the Confederate capital. No sooner, however, was Lee's assault developed than Grant saw clearly that he must fight a determined battle here on this most unsuitable ground. Lee had decided this in the obvious expectation of finding Grant unready. But readiness under all circumstances was a part and an important part of Grant's character and intellectual make-up. It was his habit of mind to take things as he found

them and to do the best he could in every case. He hurriedly called Hancock back and accepted battle in the jungle. The fighting was desperate throughout the day, and at the day's end no decisive advantage rested with either party. Lee had been fighting with only a part of his army, for the reason that Longstreet with that first corps upon which Lee always relied for the more desperate work of war did not reach position in time to take part in the struggle of that day. At nightfall it was obvious that the contest must be resumed in the morning. . . . Grant ordered an assault all along the line to be made at five o'clock in the morning [of the 6th]. Lee, still more alert struck out with his left an hour earlier. He was still weak on his right wing, for lack of Longstreet, who had not yet come up. Grant recognizing this fact, planned to hurl Hancock upon the Confederate right at the appointed hour of five o'clock in the morning. By an adroit handling of Rosser's cavalry, the Confederate managed to deceive Hancock into the belief that Longstreet was making a flank movement against the Federal left, similar to those which Jackson had made with such destructive effect in former battles. To meet this and to avoid a disaster like that which had befallen Hooker at Chancellorsville, Hancock promptly detached a considerable part of his force, and sent it to his left, thus weakening his column of attack. Nevertheless he struck hard enough to drive back the weak Confederate right for more than a mile. Then Longstreet, who had undertaken no such flanking expedition as that which Hancock had supposed came up and threw his veterans precipitately upon his foe. . . . Hancock was driven back and the losses on both sides were great, including a conspicuously large loss of officers from the lowest to the highest grade. General Wadsworth on the Federal side, and General Jenkins on the Confederate, were killed, and Longstreet himself was shot through the neck and shoulder so that he had to be carried from the field. Having thus lost his great lieutenant, General Lee went to that quarter of the field and took personal command in Longstreet's place. . . . The Confederates made an assault of desperate determination, and at one point broke through the Federal lines. . . . But the result was achieved at tremendous cost of life, and their further efforts to dislodge Hancock was bloodily repelled. By some means—probably by reason of the fierce firing on either side—a forest fire now broke out in Hancock's front, and the flames quickly communicated themselves to the log retentments of his fortifications. The heat and the smoke forced the Federals to retreat, fighting as they went against the Confederates who pursued them with fury. Sadly enough, besides the dead there were large numbers of wounded men, both Federal and Confederate, lying among the burning bushes and underbrush of that mile-wide stretch of wilderness over which the flames swept. . . . Night ended the struggle, and the men on both sides retired to their entrenchments to await the events of the morrow. On neither side was there the least suggestion of demoralization or of shrinking from the work that was yet to be done. . . . The war school had perfectly educated its pupils. The losses in these two days of fighting in the Wilderness have never been accurately ascertained, and never will be. The best estimates fix them at about 15,000 or 16,000 men on either side. These losses included, as has already been said, a remarkable number of officers

of high grade on both sides. Nothing could be more significant than this of the determination with which the battle was fought. In the strictest sense of the military term this had been a drawn battle. Neither side had overcome the other and neither had driven the other into retreat. Yet each side has claimed it as a victory upon grounds which are logical enough in themselves. The Confederates held that by checking Grant and baffling his plan of marching out of the Wilderness, and forcing Lee to fight in the open, they had accomplished a very distinct victory. The Federals held, that, as they had succeeded in placing their army securely south of the Rapidan and in a position to carry on a further campaign, . . . they were entitled to regard the general result of the two days' fight as a victory for themselves. There is no doubt whatever that at the end of this struggle the Confederates expected Grant to retire to the northern side of the river, as all his predecessors had done after similar conflicts. When the next morning dawned and Grant still stood firm in their front they were astonished to find him there. . . . In the mind of Lee there was an explanation ready and sufficient. The great Confederate general is reported to have said to his staff on that morning, 'Gentlemen, at last the Army of the Potomac has a head.'—G. C. Eggleston, *History of the Confederate War*, v. 2, pp. 230-236.

1864 (May: Virginia).—Sheridan's raid to Richmond.—"When the Army of the Potomac emerged from the Wilderness, Sheridan was sent to cut Lee's communications. This was the first of the remarkable raids of that remarkable leader, in Virginia, and, though short, was a destructive one. He took with him a greater portion of the cavalry led by Merritt, Gregg and Wilson, and, cutting loose from the army, he swept over the Po and the Ta, crossed the North Anna on the oth, and struck the Virginia Central railway at Beaver Dam Station, which he captured. He destroyed ten miles of the railway; also its rolling stock, with a million and a half of rations, and released 400 Union prisoners, on their way to Richmond from the Wilderness. There he was attacked in flank and rear by General J. E. B. Stuart and his cavalry, who had pursued him from the Rapid Anna [Rapidan], but was not much impeded thereby. He pushed on, crossed the South Anna at Ground-squirrel Bridge, and at daylight on the morning of the 11th, captured Ashland Station, on the Fredericksburg road, where he destroyed the railroad property, a large quantity of stores, and the road itself for six miles. Being charged with the duty of not only destroying these roads, but of menacing Richmond and communicating with the army of the James, . . . Sheridan pressed on in the direction of the Confederate capital, when he was confronted by Stuart at Yellow Tavern, a few miles north of Richmond, where that able leader, having made a swift circuitous march, had concentrated all of his available cavalry. Sheridan attacked him at once, and after a sharp engagement, drove the Confederates toward Ashland, on the north fork of the Chickahominy with a loss of their gallant leader, who, with General Gordon, was mortally wounded. Inspired by this success, Sheridan

pushed along the now open turnpike toward Richmond, and made a spirited dash upon the outer works. Custer's brigade carried them at that point and made 100 prisoners. As in the case of Kilpatrick's raid, so now, the second line of works were too strong to be carried by cavalry. The troops in and around the city had rallied for their defense, and in an attack the Nationals were repulsed. Then Sheridan led his command across the Chickahominy, at Meadow Bridge, where he beat off a considerable force of infantry sent out from Richmond, and who attacked him in the rear, while another force assailed his front. He also drove the foe on his front, when he destroyed the railway bridge there, and then pushed on southward to Haxall's Landing, on the James River, where he rested three days and procured supplies. Then, by way of White House and Hanover Court House [having made a circuit of Lee's army] he leisurely returned to the Army of the Potomac, which he rejoined on the 25th of May."—B. J. Lossing, *Field book of the Civil War*, v. 3, ch. 11.

1864 (May: Virginia).—Grant's movement upon Richmond: Spottsylvania Court House.—Bloody angle.—"Throughout the entire day succeeding this first great conflict [in the Wilderness], General Lee remained quiet, watching for some movement of his adversary. His success in the preliminary struggle had been gratifying, considering the great disproportion of numbers, but he indulged no expectation of a retrograde movement across the Rapidan, on the part of General Grant. He expected him rather to advance, and anxiously awaited some development of his intention. There was no indications of such a design up to the night of the 7th, but at that time, to use the words of a confidential member of Lee's staff, 'he all at once seemed to conceive the idea that his enemy was preparing to forsake his position, and move toward Hanover Junction via the Spottsylvania Court House, and, believing this, he at once detailed Anderson's division with orders to proceed rapidly toward the court-house. General Anderson commenced his march about nine o'clock at night, when the Federal column was already upon its way. A race now began for the coveted position, and General Stuart, with his dismounted sharpshooters behind improvised breastworks, harassed and impeded the Federal advance, at every step, throughout the night. This greatly delayed their march, and their head of column did not reach the vicinity of Spottsylvania Court-House until past sunrise. General Warren, leading the Federal advance, then hurried forward, followed by General Hancock, when suddenly he found himself in front of breastworks, and was received with a fire of musketry. Lee had succeeded in interposing himself between General Grant and Richmond. On the same evening the bulk of the two armies were facing each other on the line of the Po. . . . General Lee had taken up his position on the south bank of one of the four tributaries of the Mattaponi. These four streams are known as the Mat, Ta, Po, and Nye Rivers, and bear the same relation to the main stream that the fingers of the open hand do to the wrist. General Lee was behind the Po, which is next to the Nye, the northernmost of these water-courses. Both were difficult to cross, and

their banks heavily wooded. It was now to be seen whether, either by a front attack or a turning movement, General Grant could oust his adversary, and whether General Lee would stand on the defensive or attack. All day, during the 9th, the two armies were constructing breastworks along their entire fronts, and these works, from the Rapidan to the banks of the Chickahominy, remain yet [1871] in existence. On the evening of this day a Federal force was thrown across the Po, on the Confederate left but soon withdrawn; and on the 10th a similar movement took place near the same point, which resulted in a brief but bloody conflict, during which the woods took fire, and many of the assaulting troops perished miserably in the flames. The force was then recalled, and, during that night and the succeeding day, nothing of importance occurred, although heavy skirmishing and an artillery-fire took place along the lines. On the morning of the 12th, at the first dawn of day, General Grant made a more important and dangerous assault than any yet undertaken in the campaign. This was directed at a salient on General Lee's right center, occupied by Johnson's division of Ewell's corps, and was one of the bloodiest and most terrible incidents of the war. For this assault [made by three divisions of Hancock's corps] General Grant is said to have selected his best troops. These advanced in a heavy charging column, through the half-darkness of dawn, passed silently over the Confederate skirmishers, scarcely firing a shot, and, just as the first streak of daylight touched the eastern woods, burst upon the salient, which they stormed at the point of the bayonet. The attack was a complete surprise, and carried everything before it. The Southern troops, asleep in the trenches, woke to have the bayonet thrust into them, to be felled with clubbed muskets, and to find the works apparently in secure possession of the enemy before they could fire a shot. Such was the excellent success of the Federal movement, and the Southern line seemed to be hopelessly disrupted. Nearly the whole of Johnson's division were taken prisoners—the number amounting to more than 3,000—and 18 pieces of artillery fell into the hands of the assaulting column. The position of affairs was now exceedingly critical. . . . The Federal army had broken [Lee's] line; was pouring into the opening; and, to prevent him from concentrating at the point to regain possession of the works, heavy attacks were begun by the enemy on his right and left wings. It is probable that at no time during the war was the Southern army in greater danger of bloody and decisive disaster. At this critical moment General Lee acted with the nerve and coolness of a soldier whom no adverse event can shake. . . . Line of battle was promptly formed a short distance in rear of the salient then in the enemy's possession, and a fierce charge was made by the Southerners, under the eye of Lee, to regain it. . . . The word ferocious best describes the struggle which followed. It continued throughout the entire day, Lee making not less than five distinct assaults in heavy force to recover the works. The fight involved the troops on both flanks, and was desperate and unyielding. . . . The fighting only ceased several hours after dark. Lee had not regained his advanced line of works, but he was firmly rooted in an interior and straighter line, from which the Federal troops had found it impossible to dislodge him."—J. E. Cooke, *Life of General Robert E. Lee*, pt. 8, ch. 4.—"For the distance of nearly a mile, amid a cold, drenching

rain, the combatants [on the 12th, at the salient] were literally struggling across the breastworks. They fired directly into each other's faces, bayonet thrusts were given over the intrenchments; men even grappled their antagonists across the piles of logs and pulled them over, to be stabbed or carried to the rear as prisoners. . . . Never before, since the discovery of gunpowder, had such a mass of lead been hurled into a space so narrow as that which now embraced the scene of combat. . . . If any comparisons can be made between the sections involved in that desperate contest, the fiercest and deadliest fighting took place at the west angle, ever afterwards known as 'The Bloody Angle.' . . . All day the bloody work went on. . . . The trenches had more than once to be cleared of the dead, to give the living a place to stand. All day long, and even into the night, the battle lasted, for it was not till twelve o'clock, nearly twenty hours after the command 'Forward' had been given to the column at the Brown House, that the firing died down, and the Confederates, relinquishing their purpose to retake the captured works, began in the darkness to construct a new line to cut off the salient."—F. A. Walker, *History of the 2nd Army Corps*, ch. 15.—General Humphreys estimates Grant's losses in killed and wounded on the 12th at 6,020; missing, 800. Lee's losses that day in killed, wounded, and prisoners he concludes to have been between 9,000 and 10,000. His estimate of losses on the 10th is 4,100 (killed and wounded) on the Union side, and 2,000 on the Confederate side. Major General John Sedgwick, commanding the Sixth Army corps, was killed in the skirmishing of the 9th.—Based on A. A. Humphreys, *Virginia campaign of '64 and '65*, ch. 3.

ALSO IN: C. N. Galloway, *Hand to hand fighting at Spottsylvania (Battles and leaders, v. 4)*.—*Official Records*, series 1, v. 36.

1864 (May: Virginia).—Grant's movement upon Richmond: From Spottsylvania to the Chickahominy.—"The lines of Spottsylvania remained still intact, and General Grant, who might easily have turned the position and manœuvred his antagonist out of it, seemed bent on carrying it by direct attack. Accordingly, during the succeeding week [after the battle of the 12th], various movements of corps were made from flank to flank, in the endeavor to find a spot where the lines could be broken. These attempts were skillfully met at every point—the Confederates extending their line to correspond with the shiftings of the army; so that wherever attack was essayed, the enemy bristled out in breastworks, and every partial assault made was repulsed. Day by day Grant continued to throw out towards the left, in the hope of overlapping and breaking in the Confederate right flank; so that from occupying, as the army did on its arrival, a line extending four or five miles to the northwest of Spottsylvania Court-House, it had at the end of ten days assumed a position almost due east of that place, the left resting at a distance of four miles at Massaponax Church. After twelve days of effort, the carrying of the position was seen to be hopeless; and General Grant, abandoning the attempt, resolved by a turning operation to disengage Lee from a position seen to be unassailable. Preparations for this movement were begun on the afternoon of the 10th; but the enemy, observing these, retarded its execution by a bold demonstration against the Union's right. . . . This attack somewhat disconcerted the contemplated movement, and delayed it till the following night,

May 20th, when the army, moving by the left, once more took up its march towards Richmond. Before the lines of Spottsylvania the Army of the Potomac had for twelve days and nights engaged in a fierce wrestle, in which it had done all that valor may do to carry a position by nature and art impregnable. . . . The two armies once fairly on the march . . . neither . . . seems to have sought to deal the other a blow . . . and both headed, as for a common goal, towards the North Anna. . . . The advances of the 21st and 22d brought the different corps [of the Army of the Potomac], which had moved on parallel roads at supporting distance, within a few miles of the North Anna River. Resuming the march on the morning of Monday, May 23d, the army in a few hours reached the northern bank of that stream. But it was only to desecrate its old enemy planted on the opposite side." Warren's corps crossed the river at Jericho Ford without resistance, but was furiously assailed late in the afternoon and held its ground, taking nearly 1,000 prisoners. The left column, under Hancock, forced a passage in the face of the enemy, carrying a bridge by storm. But nothing was gained by these successes. "While Lee, after the passage of Hancock on the left, threw his right wing back from the North Anna, and on the passage of Warren on the right threw back to his left wing, he continued to cling with his centre to the river; so that . . . his army took up a very remarkable line in the form of an obtuse-angled triangle. . . . The game of war seldom presents a more effectual checkmate than was here given by Lee; for after Grant had made the brilliantly successful passage of the North Anna, the Confederate commander, thrusting his centre between the two wings of the Army of the Potomac, put his antagonist at enormous disadvantage, and compelled him, for the re-enforcement of one or the other wing, to make a double passage of the river. The more the position of Lee was examined, the more unpromising attack was seen to be; and after passing the two following days in reconnoissances, and destroying some miles of the Virginia Central Railroad, General Grant determined to take up a new line of advance. The withdrawal from the North Anna was begun at dark on the 26th of May, when the Second, Fifth and Sixth Corps retired by different bridges to the north bank. . . . The Second Corps held position till the morning of the 27th, when it covered the rear. From the North Anna the line of march of the army made a wide circuit eastward and then southward to pass the Pamunkey. This river is formed by the confluence of the North and South Anna; and the Pamunkey in turn uniting with the Mattaponi forms the York River, emptying into Chesapeake Bay. Thus the successful passage of the Pamunkey would not only dislodge Lee from the lines of the North and South Anna, but would bring the army in communication with a new and excellent water-base." The crossing of the Pamunkey, at and near Hanover town, was accomplished without difficulty on the 27th and 28th, "and the routes to White House, at the head of York River, being opened up, the army was put in communication with the ample supplies floated by the waters of Chesapeake Bay. Grant's new turning movement was met by a corresponding retrograde movement on the part of Lee, and as he fell back on a direct line less than half the distance of the great detour made by the Army of the Potomac, it was not remarkable that, on crossing the Pamunkey, the Confederate force was again encountered, ready to accept the gage of

battle. Lee assumed a position in advance of the Chickahominy. . . . Reconnoissances showed Lee to be in a very strong position covering the approaches to the Chickahominy, the forcing of which it was now clear must cost a great battle." —W. Swinton, *Campaigns of the Army of the Potomac*, pt. 11, ch. 3-5.—"On the 15th [May] news came from Butler and Averell. The former reported the capture of the outer works at Drury's Bluff, on the James River, and that his cavalry had cut the railroad and telegraph south of Richmond on the Danville road; and the latter, the destruction of a depot of supplies at Dublin, West Virginia, and the breaking of New River Bridge on the Virginia and Tennessee railroad. The next day news came from Sherman and Sheridan. Sherman had forced Johnston out of Dalton, Georgia, and was following him south. The report from Sheridan embraced his operations up to his passing the outer defenses of Richmond. The prospect must now have been dismal in Richmond. The road and telegraph were cut between the capital and Lee. The roads and wires were cut in every direction from the rebel capital. Temporarily that city was cut off from all communication with the outside except by courier. This condition of affairs, however, was of but short duration. . . . On this day . . . news came that Sigel had been defeated at New Market badly, and was retreating down the valley. . . . Further news from Butler reported him driven from Drury's Bluff, but still in possession of the Petersburg road. Banks had been defeated in Louisiana, relieved, and Canby put in his place. . . . All this news was very discouraging."—*Personal memoirs of U. S. Grant*, v. 2, pp. 140-142.

ALSO IN: A. Badeau, *Military history of Ulysses S. Grant*, v. 2, ch. 18-19.

1864 (May: Virginia).—Coöperative movement of the army of the James.—In the plan and arrangement of General Grant's campaign, General Butler, commanding at Fortress Monroe, was instructed "to collect all the forces of his command that could be spared from garrison duty, estimated at not less than 20,000, and operate on the south side of James River, Richmond being his objective. To his force 10,000 men from South Carolina, under Gilmore, were to be added. He was ordered to take City Point as soon as notification of movement was given, and fortify it. By this common advance from the Rapidan and Fortress Monroe the two armies would be brought into co-operation. . . . As arranged, Butler moved from Fortress Monroe on May 4th, Gilmore having joined him with the 10th Corps. The next day he occupied, without opposition, both City Point and Bermuda Hundred, his movement being a complete surprise. On the 7th he made a reconnoissance against the Richmond and Petersburg Railroad, destroying a portion of it after some fighting. On the night of the 9th he received dispatches from Washington informing him that Lee was retreating to Richmond and Grant in pursuit. He had, therefore, to act with caution, fearing that he might have Lee's whole army on his hands. On the evening of the 13th and morning of the 14th he carried a portion of the enemy's first line of defenses at Drury's Bluff, or Fort Darling. The time thus consumed from the 6th left no possibility of surprising and capturing Richmond and Petersburg, enabling, as it did, Beauregard to collect his forces in North and South Carolina, and bring them to the defense of these places. On the 16th the Confederates attacked Butler in his position in front

of Drury's Bluff, forced him back into his entrenchments between the forks of James and Appomattox Rivers [in the district called Bermuda Hundred], and, intrenching strongly in his front, not only covered the railroads and city, but completely neutralized his forces. . . . Butler's army being confined at Bermuda Hundred, most of the re-enforcements from the South were now brought against the Potomac Army. In addition to this, probably not less than 15,000 men, under Breckenridge, arrived from the Western part of Virginia. The position of Bermuda Hundred being easy to defend, Grant, leaving only enough to secure what had been gained, took from it all available forces under W. F. Smith, and joined them to the Army of the Potomac."—J. W. Draper, *History of the American Civil War*, v. 3, pp. 368, 382-385.

ALSO IN: A. A. Humphreys, *Virginia campaign of '64 and '65*, ch. 5.—*Official Records*, series 1, v. 36, pt. 2.—G. H. Vaughan-Sawyer, *Grant's campaign in Virginia*, 1864.

1864 (May: Georgia).—Sherman's movement upon Atlanta: Johnston's retreat.—Sherman now held command of the three armies of the Tennessee, the Cumberland, and the Ohio, having McPherson, Thomas and Schofield for their subordinate commanders, respectively. Joe Johnston commanding the main Confederate army in the west was at Dalton, northern Georgia, confronting Thomas at Chattanooga. "Grant and Sherman had agreed to act in concert. While the former should thrust Lee back upon Richmond, his late lieutenant was to push Johnston towards Atlanta. And Banks was to transfer his forces from New Orleans to Mobile and thence move towards and join hands with the Western armies. Sherman devoted his earliest energies to the question of transportation and railroads. Baggage was reduced to the lowest limits, the higher officers setting the example. . . . Probably no officer in such high command ever lived so entirely from hand to mouth as did Sherman and his military family during the succeeding campaign. The entire equipment of his army head-quarters would have shamed the shabbiest regimental outfit of 1861. Spring was to open with a general advance. It was agreed to put and keep the Confederates on the defensive by a policy of constant hammering. Bragg had been removed to satisfy public opinion in the South, but was nominally called to Richmond to act as Mr. Davis' chief-of-staff. Johnston, as commander of the Department, had personally undertaken to hold head against Sherman. But the fact that he possessed neither the President's good will nor that of his new adviser, militated much against a happy conduct of the campaign. Sherman's forces occupied a front sixteen miles in advance of Ringgold, just south of Chattanooga. McPherson and the Army of the Tennessee was on his right with 25,000 men and 100 guns. Thomas and the Army of the Cumberland held the centre with 60,000 men and 130 guns. Schofield and the Army of the Ohio formed the left wing. His command was 15,000 men and 30 guns. This grand total of 100,000 men and 260 guns formed an army of as good stuff as ever bore arms, and the confidence of the leader in his men and of the men in their leader was unbounded. Johnston himself foresaw the necessity of a strictly defensive campaign, to which his far from sanguine character, as well as his judgment as to what the existing conditions demanded, made him peculiarly suited. Counted after the same fashion as Sherman's army, Johnston had some 75,000 men. . . . He intrenched

every step he took; he fought only when attacked; he invited battle only when the conditions were largely in his favor. Subsequent events showed how wise beyond his critics he could be. Sherman took the measure of the intrenchments at Dalton with care, and, though he outnumbered his antagonist, preferred not to hazard an engagement at such odds when he might force one on better ground. This conduct shows in strong contrast with Grant's, when the latter first met his opponent at the same moment in Virginia. Sherman despatched McPherson towards Resaca, on the railroad in Johnston's rear, with instructions to capture the town if possible. Combined with this flanking movement, a general advance was made upon the Confederate lines, and after tactical manœuvring of several days in front of Rocky Face Ridge, Johnston concluded to retire from his stronghold. McPherson had . . . failed to seize Resaca, and at this place the Confederate army took up its new stand. . . . Sherman faced his antagonist on the line of Camp Creek in front of Resaca, with his right flank resting on the Oostanaula. From this position he operated by unintermitted tapping upon Johnston's defenses at constantly varying points, without, however, bringing on a general engagement. . . . Sherman's uniform tactics during this campaign, varied indefinitely in details, consisted, as will be seen, in forcing the centre of the army upon Johnston's lines, while with the right and left he operated upon either flank as chance or ground best offered. Johnston did not propose to hazard an engagement unless all conditions were in his favor. He attempted a stand at Adairsville, twenty miles south of Resaca, but shortly withdrew to Kingston and Cassville. Each captain manœuvred for a chance to fight, the other at a disadvantage. . . . From Cassville, Johnston retired across the Etowah. So far this campaign had been one of the manœuvres. Neither combatant had suffered material loss. Like two wrestlers, as yet ignorant of each other's strength or quickness, they were sparring for a hold. . . . The Union army was growing skillful. . . . Bridges were uniformly burned and railroads wrecked by the retreating Confederates. To save delays in rebuilding, so far as possible, trestles were fitted in the rear to a scale with interchangeable timbers, so that bridges could be constructed with a speed never before dreamed of. No sooner had the Confederates put torch to a bridge, than a new one arose as by magic, and the whistle of the locomotive always followed hard upon the heels of the army."—T. A. Dodge, *Bird's-eye view of our Civil War*, ch. 42-43.

1864 (May-June: Virginia).—Grant's movement upon Richmond: Battle of Cold Harbor.—"The passage of [the Pamunkey] had been completed on May 28, and then, after three days of marching, interspersed with the usual amount of fighting, the army found itself again confronted by Lee's main line on the Totopotomoy. The operations which followed were known as the battle of Cold Harbor. On the afternoon of May 31st, Sheridan, who was on the left flank of the army, carried, with his cavalry, a position near the old well and cross roads known as Old Cold Harbor, and, with his men, dismounted be-

hind rough breast-works, held it against Fitzhugh Lee until night. To this point, during the night, marched the vanguard of the Army of the Potomac. . . . About 9 the next day (June 1st) the head of the column reached Sheridan's position, and the cavalry was withdrawn. The enemy, who had been seriously threatening Sheridan, withdrew from our immediate front within their lines and awaited us, occupying a strong outer line of intrenchments in front of our center, somewhat in advance of their main position, which included that on which the battle of Gaines' Mill had been fought two years before. It covered the approaches to the Chickahominy, which was the last formidable obstacle we had to meet before standing in front of the permanent works of Richmond. A large detachment, composed of the Eighteenth Corps and other troops from the Army of the James, under General W. F. Smith, had disembarked at White House on the Pamunkey, and was expected to connect that morning with the Sixth Corps at Cold Harbor. A mistake in orders caused an unnecessary march and long delay. In the afternoon, however, Smith was in position on the right of the Sixth Corps. Late in the afternoon both corps assaulted. The attack was made vigorously and with no reserves. The outer line in front of the right of the Sixth and the left of the Eighteenth was carried brilliantly, and the enemy was forced back, leaving several hundred prisoners in our hands. . . . This left the well and the old tavern at Cold Harbor in our rear, and brought us in front of the most formidable position yet held by the enemy. In front of him was a wooded country, interspersed with clearings here and there, sparsely populated, and full of swamps. Before daylight the Army of the Potomac stood together once more almost within sight of the spires of Richmond, and on the very ground where, under McClellan, they had defended the passage of the river they were now endeavoring to force. On the 2d of June our confronting line, on which the burden of the day must necessarily fall, consisted of Hancock on the left, Wright in the center, and Smith on the right. Warren and Burnside were still farther to the right, their lines refused, or drawn back, in the neighborhood of Bethesda Church, but not confronting the enemy. . . . No reconnoissance had been made other than the bloody one of the evening before. Every one felt that this was to be the final struggle. No further flanking marches were possible. Richmond was dead in front. . . . The general attack was fixed for the afternoon of the 2d, and all preparations had been made, when the order was countermanded and the attack postponed until half-past four the following morning. Promptly at the hour named on the 3d of June the men moved from the slight cover of the rifle-pits, thrown up during the night. . . . No great portion of the advance could be seen from any particular point, but those of the three corps that passed through the clearings were feeling the fire terribly. Not much return was made at first from our infantry, although the fire of our batteries was incessant. The time of actual advance was not over eight minutes. In that little period more men fell bleeding as they advanced than in any other like period of time throughout the war. A strange and terrible feature of this battle was that as the three gallant corps moved on [necessarily diverging, the enemy's line forming an arc of a circle, with its concave side toward them] each was enfiladed while receiving the full force of the enemy's direct fire in front. . . . No troops

could stand against such a fire, and the order to lie down was given all along the line. At points where no shelter was afforded, the men were withdrawn to such cover as could be found, and the battle of Cold Harbor, as to its result at least, was over. . . . Shortly after midday came the order to suspend for the present all further operations, and directing corps commanders to intrench, 'including their advanced positions,' and directing also that reconnoissances be made 'with a view to moving against the enemy's works by regular approaches.' . . . [When night came some of the wounded] were brought in by volunteers from our intrenchments, but remained for three days uncared for beneath the hot summer suns and the unrefreshing dews of the sultry summer nights. . . . An impression prevails in the popular mind, and with some reason perhaps, that a commander who sends a flag of truce asking permission to bury his dead and bring in his wounded, has lost the field of battle. Hence the reluctance upon our part to ask a flag of truce. In effect it was done at last on the evening of the third day after the battle, when, for the most part, the wounded need no further care and our dead had to be buried almost where they fell."—M. T. McMahon, *Cold Harbor (Battles and leaders, v. 4)*.—"I have always regretted that the last assault at Cold Harbor was ever made. . . . At Cold Harbor no advantage whatever was gained to compensate for the heavy loss we sustained. Indeed, the advantages other than those of relative losses, were on the Confederate side. . . . This charge seemed to revive their hopes temporarily; but it was of short duration. The effect upon the Army of the Potomac was the reverse. When we reached the James River, however, all effects of the battle of Cold Harbor seemed to have disappeared."—U. S. Grant, *Personal memoirs, v. 2, ch. 55*.—*Official Records, series, 1, v. 36*.

1864 (May-June: Virginia).—Campaigning in the Shenandoah valley, and Sheridan's raid to Trevillian Station.—"In the spring of 1864, the Department of West Virginia, which included the Shenandoah Valley, was under the command of Major-General Franz Sigel. A large portion of his forces was in the Kanawha region, under Brigadier-General George Crook. . . . In opening his Virginia campaign, Lieutenant-General Grant directed Sigel to form two columns, whereof one, under Crook, should break the Virginia and Tennessee Railroad at the New River bridge, and should also, if possible, destroy the salt-works at Saltville; while the other column, under Sigel himself, proceeding up the Shenandoah Valley, was to distract attention from Crook by menacing the Virginia Central Railroad at Staunton."—G. E. Pond, *Shenandoah valley in 1864 (Campaigns of the Civil War, v. 11, ch. 2)*.—"Early in May, General Sigel entered the Valley with a force of 10,000 or 12,000 men [6,000 or 7,000, according to Pond], and proceeded to advance toward Staunton. The Valley at that time was occupied only by a small force under General Imboden, which was wholly inadequate for its defence. General Breckenridge was therefore withdrawn from South-Western Virginia to oppose Sigel. On the 15th of May, Breckenridge with a force of 3,000 men [4,600 to 5,000—Pond] encountered Sigel at Newmarket and defeated him and compelled him to retire behind Cedar Creek. The cadets of the Virginia Military Institute formed a portion of Breckenridge's division, and behaved with distinguished gallantry. . . . After the battle of Newmarket Breckenridge was withdrawn from the Valley to reinforce Lee

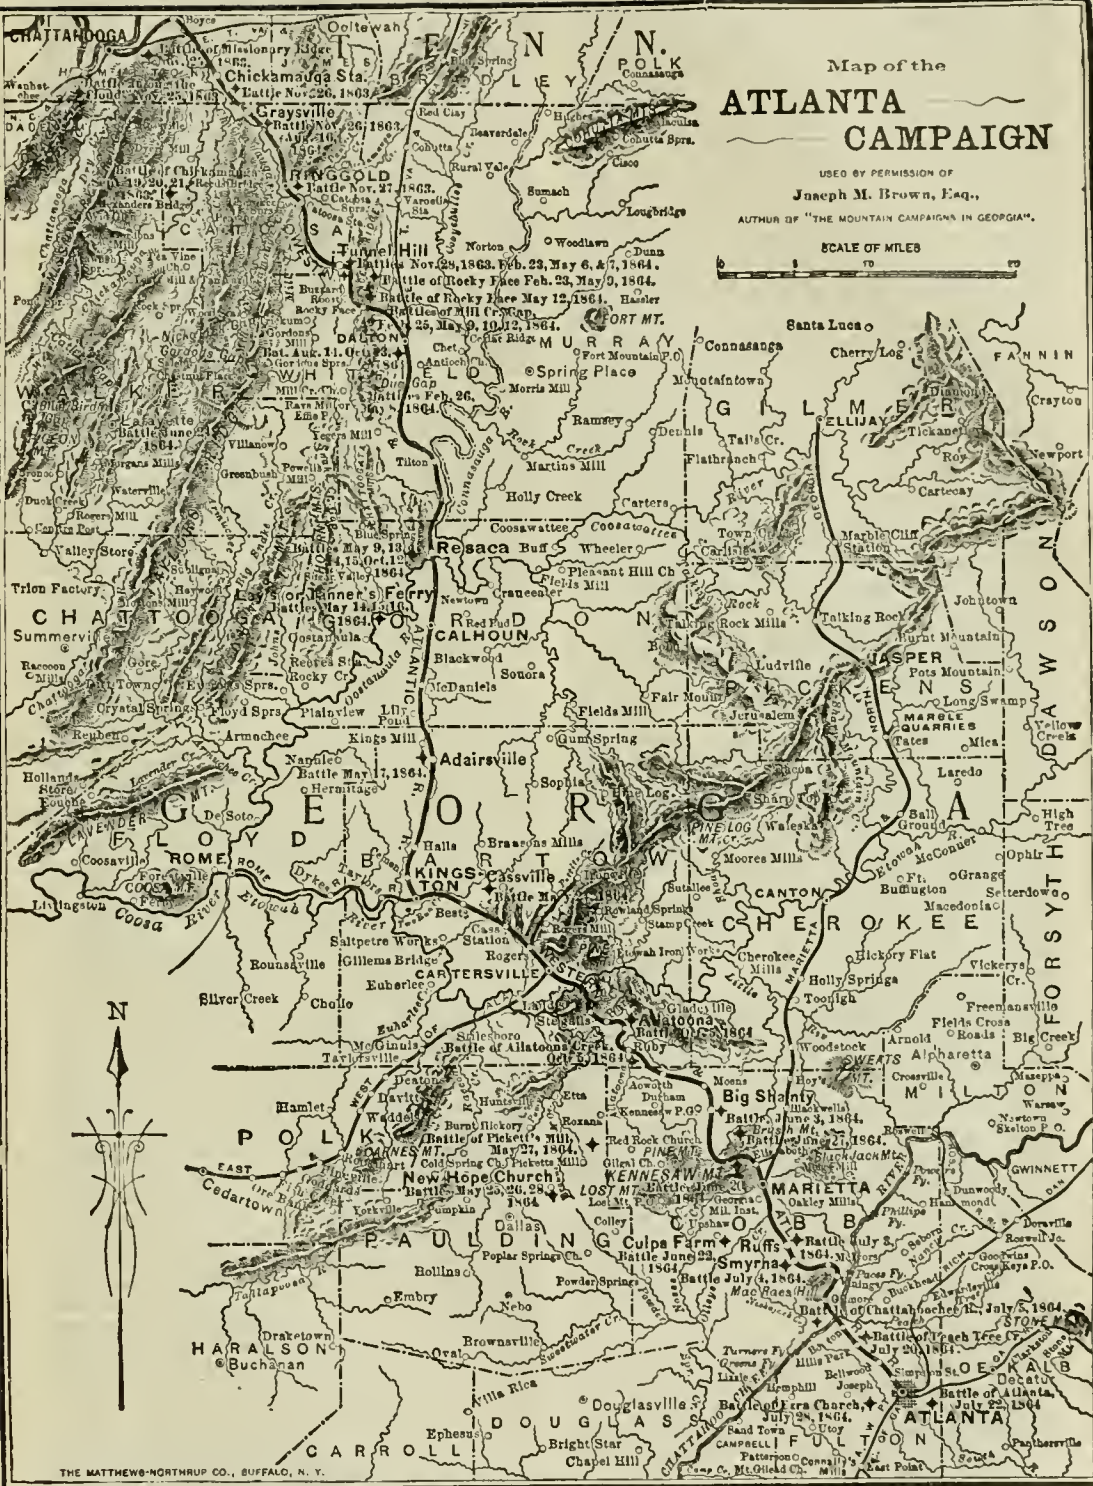

. . . in the neighborhood of Hanover Junction. In the meantime Crook and Averill had reached the Virginia and Tennessee Railroad, where they inflicted some damage, but were compelled to retire by a force sent against them by General Sam Jones. They then proceeded to join the main column operating in the Valley. After the battle of Newmarket, Sigel was relieved by General David Hunter, who was instructed by General Grant to advance upon Staunton, thence to Charlottesville, and on to Lynchburg if circumstances favored that movement. Breckenridge having been withdrawn, General W. E. Jones was ordered to the Valley to oppose Hunter, who slowly advanced, opposed by Imboden with an almost nominal force. About the 4th of June, Imboden was joined by General Jones in the neighborhood of Harrisonburg with a force of between 3,000 and 4,000 men, which he had hastily collected in Southwestern Virginia. . . . Although greatly outnumbered, he [Jones] engaged Hunter near Port Republic [at the village of Piedmont, which gives its name to the battle], where he was defeated and killed. . . . The affairs in the Valley now began to attract the attention of the commanding generals of both armies. It was evident that if Hunter could succeed in taking Lynchburg and breaking up the canal and Central Railroad, it would only be necessary to tap the Richmond and Danville and the Petersburg and Weldon railroads to complete a line of circumvallation around Richmond and Petersburg. On the 7th of June General Grant detached General Sheridan, with a large cavalry force, with instructions to break up the Central Railroad between Richmond and Gordonsville, then proceed to the James River and Kanawha Canal, break that line of communication with Richmond, and then to co-operate with Hunter in his operations against Lynchburg. About the same time General Lee sent General Breckenridge with his division, 2,500 strong, to occupy Rockfish Gap of the Blue Ridge to deflect Hunter from Charlottesville and protect the Central Railroad as far as practicable. A few days later General Early was detached by General Lee to oppose Hunter, and take such other steps as in his judgment would tend to create a diversion in favor of Richmond. General Sheridan, in compliance with his instructions, proceeded by a circuitous route to strike the railroad somewhere in the neighborhood of Gordonsville. This movement was, however, discovered by General Hampton, who, with a considerable force of cavalry encountered Sheridan on the 12th of June at Travillians [or Trevillian's] Station. After much severe and varied fighting Sheridan was defeated, and in order to escape was obliged to make a night-retreat. [In his 'Memoirs,' Sheridan claims the victory, having forced Hampton back and taken 500 prisoners; but learning that Hunter would not meet him, as expected, at Charlottesville, he turned back to re-join Grant south of Richmond]. . . . This was one of the most masterly and spirited cavalry engagements of the war. Hunter, finding Rockfish Gap occupied in force, . . . continued his march up the Valley, with the view of reaching Lynchburg by way of some one of the passes of the Blue Ridge south of the James River. In the neighborhood of Staunton he was joined by Crook and Averill, increasing his force to about 20,000 men, including cavalry and artillery. From Staunton he advanced by way of Lexington and Buchanan, burning and destroying everything that came in his way, leaving a track of desolation rarely witnessed in the course of civilized warfare." Before Hunter's ar-

rival at Lynchburg, General Early, who withdrew his corps (formerly Stonewall Jackson's, and lately commanded by Ewell), from Richmond on June 13, had reached that city and was prepared to defend it. "Hunter, finding himself unexpectedly confronted by Early, relinquished his intended attack upon the city and sought safety in a rapid night-retreat."—A. L. Long, *Memoirs of Robert E. Lee*, ch. 18.

1864 (May-September: Georgia).—Sherman's movement upon Atlanta: New Hope Church.—Kenesaw.—Peach Tree Creek.—Siege and capture of the city.—From Cassville, for reasons given in his memoirs, Johnston continued his retreat behind the next spur of mountains to Allatoona. "Pausing for a few days," writes General Sherman, "to repair the railroad without attempting Allatoona, of which I had personal knowledge acquired in 1844, I resolved to push on toward Atlanta by way of Dallas; Johnston quickly detected this, and forced me to fight him, May 25th-28th, at New Hope Church, four miles north of Dallas, with losses of 3,000 to the Confederates and 2,400 to us. The country was almost in a state of nature—with few or no roads. . . . Johnston had meantime picked up his detachments, and had received reinforcements from his rear which raised his aggregate strength to 62,000 men, and warranted him in claiming that he was purposely drawing us far from our base, and that when the right moment should come he would turn on us and destroy us. We were equally confident, and not the least alarmed. He then fell back to his position at Marietta, with Brush Mountain on his right, Kenesaw his center and Lost Mountain his left. His line of ten miles was too long for his numbers, and he soon let go his flanks and concentrated on Kenesaw. We closed down in battle array, repaired the railroad up to our very camps, and then prepared for the contest. Not a day, not an hour, not a minute was there a cessation of fire. Our skirmishers were in absolute contact, the lines of battle and the batteries but little in rear of the skirmishers; and thus matters continued until June 27th, when I ordered a general assault, with the full cooperation of my great lieutenants, Thomas, McPherson and Schofield; . . . but we failed, losing 3,000 men to the Confederate loss of 630. Still, the result was that within three days Johnston abandoned the strongest possible position and was in full retreat for the Chattahoochee River. We were on his heels; skirmished with his rear at Smyrna Church on the 4th day of July, and saw him fairly across the Chattahoochee on the 10th, covered and protected by the best line of field intrenchments I have ever seen, prepared long in advance. . . . We had advanced into the enemy's country 120 miles, with a single-track railroad, which had to bring clothing, food, ammunition, everything requisite for 100,000 men and 23,000 animals. The city of Atlanta, the gate city, opening the interior of the important State of Georgia, was in sight; its protecting army was shaken but not defeated, and onward we had to go. . . . We feigned to the right, but crossed the Chattahoochee by the left, and soon confronted our enemy behind his first line of intrenchments at Peach Tree Creek. . . . At this critical moment the Confederate Government rendered us most valuable service. Being dissatisfied with the Fabian policy of General Johnston, it relieved him, and General Hood was substituted to command the Confederate army [July 18]. Hood was known

THE MATTHEWS-NORTHTRUP CO., BUFFALO, N. Y.

to us to be a 'fighter' . . . and I confess I was pleased at this change. . . . I was willing to meet the enemy in the open country, but not behind well-constructed parapets. Promptly, as expected, General Hood sallied from his Peach Tree line on the 20th of July, about midday, striking the Twentieth Corps (Hooker), which had just crossed Peach Tree Creek by improvised bridges. The troops became commingled and fought hand to hand desperately for about four hours, when the Confederates were driven back within their lines, leaving behind their dead and wounded. These amounted to 4,796 men, to our loss of 1,710. We followed up and Hood fell back to the main lines of the city of Atlanta. We closed in, when again Hood, holding these lines with about one-half his force, with the other half made a wide circuit by night under cover of the woods and on the 22d of July enveloped our left flank 'in air,' a movement that led to the hardest battle of the campaign. He encountered the Army of the Tennessee—skilled veterans. . . . The battle raged from noon to night when the Confederates baffled and defeated, fell back within the intrenchments of Atlanta. Their losses are reported 8,490 to ours of 3,641; but among our dead was McPherson, the commander of the Army of the Tennessee. While this battle was in progress, Schofield at the center and Thomas on the right made efforts to break through the intrenchments at their fronts, but found them too strong to assault. The Army of the Tennessee was then shifted, under its new commander (Howard), from the extreme left to the extreme right, to reach if possible, the railroad by which Hood drew his supplies, when, on the 28th of July, he repeated his tactics of the 22d, sustaining an overwhelming defeat, losing 4,632 men to our 700. These three sallies convinced him that his predecessor, General Johnston, had not erred in standing on the defensive. Thereafter the Confederate army in Atlanta clung to its parapets. I never intended to assault these, but gradually worked to the right to reach and destroy his line of supplies. . . . Our extension to the right brought on numerous conflicts, but nothing worthy of note, till about the end of August I resolved to leave one corps to protect our communications to the rear, and move with the other five to a point (Jonesboro) on the railroad 26 miles below Atlanta, not fortified. This movement was perfectly strategic, was successful, and resulted in our occupation of Atlanta, on the 2d of September, 1864. The result had a large effect on the whole country, at the time, for solid and political reasons. . . . But I had not accomplished all, for Hood's army, the chief 'objective,' had escaped. Then began the real trouble. We were in possession of Atlanta, and Hood remained at Lovejoy's Station, 30 miles south-east, on the Savannah Railroad, with an army of about 40,000 veterans inured to war, and with a fair amount of wagons to carry his supplies, independent of the railroads."—W. T. Sherman et al., *Atlanta (Battles and leaders, v. 4)*.

1864 (May-November).—Twentieth presidential election.—Renomination and reëlection of Abraham Lincoln.—"Preparations for the nomination of candidates had begun to be made, as usual,

early in the spring of 1864. Some who saw most clearly the necessities of the future, had for some months before expressed themselves strongly in favor of the renomination of President Lincoln. But this step was contested with great warmth and activity by prominent members of the political party by which he had been nominated and elected four years before. Nearly all the original Abolitionists and many of the more decidedly anti-slavery members of the Republican party were dissatisfied, that Mr. Lincoln had not more rapidly and more sweepingly enforced their extreme opinions. Many distinguished public men resented his rejection of their advice, and many more had been alienated by his inability to recognize their claims to office. The most violent opposition came from those who had been most persistent and most clamorous in their exactions. And as it was unavoidable that, in wielding so terrible and so absolute a power in so terrible a crisis, vast multitudes of active and ambitious men should be disappointed in their expectations of position and personal gain, the renomination of Mr. Lincoln was sure to be contested by a powerful and organized effort. At the very outset this movement acquired consistency and strength by bringing forward the Hon. S. P. Chase, Secretary of the Treasury, a man of great political boldness and experience, and who had prepared the way for such a step by a careful dispensation of the vast patronage of his department, as the rival candidate. But it was instinctively felt that this effort lacked the sympathy and support of the great mass of the people, and it ended in the withdrawal of his name as a candidate by Mr. Chase himself. The National Committee of the Union Republican party had called their convention, to be held at Baltimore, on the 8th of June." Those who opposed Lincoln's nominations issued a call for a convention to be held at Cleveland, Ohio, on May 31. The Cleveland convention, attended by about 150 persons, put in nomination General John C. Frémont, for president, and General John Cochran, of New York, for vice president. "General Frémont's letter of acceptance was dated June 4th. Its main scope was an attack upon Mr. Lincoln for unfaithfulness to the principles he was elected to defend, and upon his administration for incapacity and selfishness. . . . He intimated that if the Baltimore convention would nominate any one but Mr. Lincoln he would not stand in the way of a union of all upon the nominee. . . . The Convention, the nomination and the letter of acceptance, fell dead upon the popular feeling [and Frémont withdrew his candidacy in September]. . . . The next form which the effort to prevent Mr. Lincoln's nomination and election took was an effort to bring forward General Grant as a candidate." But this was decisively checked by General Grant, himself. The convention at Baltimore, when it assembled on June 8, showed no hesitation in nominating Abraham Lincoln for reëlection, and it associated with him, Andrew Johnson, of Tennessee, as its candidate for vice president. The national convention of the Democratic party was held at Chicago, beginning August 29. The second resolution which it adopted in its platform declared that, "after four years of failure to restore the Union by the experiment of war . . . justice, humanity, liberty and the public welfare demand that immediate efforts be made for a cessation of hostilities, with a view to an ultimate convention of the States or other peaceable means, to the end that, at the earliest practicable moment, peace may be restored on the basis of

the Federal Union of the States." On this issue, having nominated General George B. McClellan for president, and George H. Pendleton, of Ohio, for vice president, the opponents of the war went to the country in the election, in November, and were overwhelmingly defeated. "Of all the States which voted on that day, General McClellan carried but three—New Jersey, Delaware and Kentucky."—H. J. Raymond, *Life and public services of Abraham Lincoln*, ch. 18.—The electoral vote was for Lincoln 212, for McClellan twenty-one. The popular vote cast was, for Lincoln 2,213,665, for McClellan, 1,802,237. Many of the states had made provision for taking votes of soldiers in the field, and the army vote was 116,887 for Lincoln against 33,748 for McClellan.—Based on E. Stanwood, *History of presidential elections*, ch. 21.

1864 (June).—Repeal of fugitive slave laws.—At every session of Congress from 1861 to 1864 ineffectual attempts were made in the Senate and in the House of Representatives to accomplish the repeal of the fugitive slave laws of 1793 and 1850. It was not until June of the latter year that the necessary bill was passed—by the House on the 6th, by a vote of eighty-two to fifty-seven, and by the Senate on the 22nd by twenty-seven to twelve. The president approved it on the 28th, and it became a law.—Based on H. Wilson, *History of the rise and fall of the slave power*, v. 3, ch. 29.

1864 (June).—Virginia).—Grant's movement to the south of James river.—Siege of Petersburg.

—"In consequence of the check at Cold Harbor, a restlessness was becoming general among the people, which the government in vain pretended not to notice. . . . Public opinion, shaken in its confidence, already began to listen to the sinister interpretations of the opposition journals, when, in the last half of June, it learned that the lieutenant-general had boldly crossed the James and laid siege before Petersburg. . . . This passage of the James was . . . a very fine movement, as ably executed as it was boldly conceived. It inaugurated a new phase in the campaign. . . . Henceforth, the battering not having produced the expected effect, Grant was about to try the resources of military science, and give precedence to strategic combinations. In the first place, he took his measures so well to conceal his intentions from the enemy that the latter did not recognize the character of the movement until it was already executed. Warren was ordered to occupy Lee's attention by the menace of an advance on Richmond from the direction of White Oak Swamp, while Smith (W. F.) reëmbarked from White House to return to Bermuda Hundred, and Hancock, with the Second Corps, would be transferred to the right bank of the James by a flotilla of large steamers collected at Wilcox Landing for that purpose. At the same time, a bridge of boats was thrown across a little below, where there were thirteen fathoms of water in the channel, and where the river was more than 2,000 feet broad. The Fifth and Sixth Corps crossed over on the bridge. Grant hoped to get hold of Petersburg by a 'coup de main.' If he had succeeded, the fall of Richmond would have soon followed in all probability. Unfortunately, delays occurred and

contretemps which caused the opportunity to fail and completely modified the course of events. General Smith (W. F.), after having carried the first line, which was defended by militia only, did not know how to take advantage of his first success. . . . Hancock, in his turn, debarked on the right bank, . . . and went astray in his march owing to false indications on a map which had been sent to him as correct. In short, he lost precious hours in the afternoon of June 15, and on the morning of the 16th it was too late; Lee's troops had arrived. . . . In the morning, a fresh attack, with Birney's and Gibbon's divisions, met with some success, but with no decisive results. In the afternoon, the Ninth Corps having arrived, the attempt was renewed on a greater scale, and it ended by carrying the line at sundown, after a hard fight and considerable loss. On the next morning, a new assault, always by the Second Corps, supported by the Ninth. The enemy lost more ground and a redoubt of importance. In the evening, he succeeded in surprising the intrenchments which Burnside had taken from him. All these fights were not without cost; the loss of that day alone, on our side, amounted to 4,000 men. The Confederates . . . retired [to new lines] in the following night, and during the whole of the 18th they sustained in them a series of attacks which met with no success. From that day, the siege of Petersburg was resolved upon, and regular works were begun. It must be remarked that this siege was not a siege, properly speaking. The place was never even invested. It lies 22 miles south of Richmond, on the right bank of the Appomattox, eight miles southwest of City Point, where that river empties into the James, and where the new base of supplies of the army was naturally established. So that we had turned Richmond to put ourselves across a part of the enemy's communications with the South, and directly threaten the rest. These communications were: the railroads to Norfolk, Weldon and Lynchburg, and the Jerusalem and Boydton roads, all ending at Petersburg. Besides these, the Confederate capital had only the James River Canal, to the west, and the Dansville railroad, to the south. The latter did not extend beyond the limits of Virginia, but it crossed the Lynchburg railroad at Burksville, which doubled its resources. If, then, we succeeded in enveloping Petersburg only on the right bank of the Appomattox, the population and the Confederate army would be reduced to draw all their supplies from Richmond by a single-track railroad. To accomplish that was our effort; to prevent it, the enemy's: that was the point towards which all the operations of the siege were directed for nine months. On the day on which we finally succeeded, Petersburg and Richmond fell at the same blow, and the whole structure of the rebellion crumbled with these two cities."—R. de Trobriand, *Four years with the Army of the Potomac*, ch. 28.

1864 (July).—Greeley and Jaques-Gilmore peace missions.—"The apathy and discouragement throughout the country took the shape of a yearning for peace, and this found an emphatic expression in much of the public and private writing of Horace Greeley, who in the month of July made an attempt to initiate negotiations which should bring the war to an end. On questionable authority he had received information that 'two ambassadors of Davis & Co.' were in Canada, 'with

full and complete powers for a peace.' Placing this intelligence before the President, and writing that 'our bleeding, bankrupt, almost dying country longs for peace, shudders at the prospect of fresh conscriptions, of further wholesale devastations, and of new rivers of human blood,' he urged Lincoln to make 'a frank offer . . . to the insurgents of terms which the impartial will say ought to be accepted,' and to invite 'those at Niagara [Canada] to exhibit their credentials and submit their ultimatum.' Lincoln replied: 'If you can find any person, anywhere, professing to have any proposition of Jefferson Davis in writing, for peace, embracing the restoration of the Union and abandonment of slavery, whatever else it embraces, say to him he may come to me with you.' Such a mode of prosecuting the business was not in accordance with Greeley's idea; therefore it was not until after further correspondence and some pressure from the President that he with reluctance accepted the mission and proceeded to Niagara Falls, where, on the American side of the river, he began negotiations with the Confederates in Canada. He exceeded his mandate, but ascertained that the Confederates were without authority from the Richmond government. This compelled him to ask for fresh instructions, upon which the President sent to him his private secretary, John Hay, with the famous paper of July 18: 'To Whom it may Concern: Any proposition which embraces the restoration of peace, the integrity of the whole Union, and the abandonment of slavery, and which comes by and with an authority that can control the armies now at war against the United States, will be received and considered by the Executive Government of the United States, and will be met by liberal terms on other substantial and collateral points, and the bearer or bearers thereof shall have safe conduct both ways. Abraham Lincoln.' This was transmitted to the Confederates, and stopped all further negotiations, prompting from them an indignant manifesto, and from Greeley a sad, discouraged, reproachful letter."—J. F. Rhodes, *History of the United States from the Compromise of 1850*, v. 4, pp. 513-514.—"Another negotiation—even more irregular and wholly clandestine—had simultaneously been in progress at Richmond, with a similar result. Rev. Col. James F. Jaques, 73d Illinois, with Mr. J. R. Gilmore, of New York, had, with President Lincoln's knowledge, but without his formal permission, paid a visit to the Confederate capital on a Peace errand; being allowed to pass through the lines of both armies for the purpose. Arrived in Richmond they addressed a joint letter to Judah P. Benjamin, Secretary of State, requesting an interview with President Davis, which was accorded; and a long, familiar, earnest colloquy ensued, wherein the Confederate chief presented his ultimatum in these terms: . . . 'The North was mad and blind; it would not let us govern ourselves; and so the war came; and now it must go on till the last man of this generation falls in his tracks, and his children seize his musket and fight our battle, unless you acknowledge our right to self-government. We are not fighting for Slavery, we are fighting for Independence; and that or extermination we will have.' . . . Thus it was not only incontestably settled but proclaimed, through the volunteered agency of two citizens, that the War must go on until the Confederacy should be recognized as an independent power, or till it should be utterly, finally overthrown. The knowledge of this fact was worth more than a victory to the

National cause."—H. Greeley, *American conflict*, v. 2, ch. 30.

1864 (July: Virginia-Maryland).—Early in the Shenandoah valley.—His invasion of Maryland and approach to Washington.—"When Early had forced Hunter into the Kanawha region [see above: 1864 (May-June: Virginia)], far enough to feel assured that Lynchburg could not again be threatened from that direction, he united to his own corps General John C. Breckenridge's infantry division and the cavalry of Generals J. H. Vaughn, John McCausland, B. T. Johnson and J. D. Imboden, which heretofore had been operating in southwest and western Virginia under General Robert Ransom, Jr., and with the column thus formed, was ready to turn his attention to the lower Shenandoah Valley. At Early's suggestion General Lee authorized him to move north at an opportune moment, cross the upper Potomac into Maryland and threaten Washington. . . . By rapid marching Early reached Winchester on the 2d of July, and on the 4th occupied Martinsburg, driving General Sigel out of that place the same day that Hunter's troops, after their fatiguing retreat through the mountains, reached Charlestown, West Virginia. Early was thus enabled to cross the Potomac without difficulty, when, moving around Harper's Ferry, through the gaps of the South Mountain, he found his path unobstructed till he reached the Monocacy, where Ricketts's division of the Sixth Corps, and some raw troops that had been collected by General Lew Wallace, met and held the Confederates till the other reinforcements that had been ordered to the capital from Petersburg could be brought up. Wallace contested the line of the Monocacy with obstinacy, but had to retire finally toward Baltimore. The road was then open to Washington, and Early marched to the outskirts and began against the capital the demonstrations [July 11-12] which were designed to divert the Army of the Potomac from its main purpose in front of Petersburg. Early's audacity in thus threatening Washington had caused some concern to the officials in the city, but as the movement was looked upon by General Grant as a mere foray which could have no decisive issue, the Administration was not much disturbed till the Confederates came in close proximity. Then was repeated the alarm and consternation of two years before, fears for the safety of the capital being magnified by the confusion and discord existing among the different generals in Washington and Baltimore; and the imaginary dangers vanished only with the appearance of General Wright, who with the Sixth Corps and one division of the Nineteenth Corps, pushed out to attack Early as soon as he could get his arriving troops in hand, but under circumstances that precluded celerity of movement; and as a consequence the Confederates escaped with little injury, retiring across the Potomac to Leesburg, unharassed save by some Union cavalry that had been sent out into Loudoun County by Hunter, who in the meantime had arrived at Harper's Ferry by the Baltimore and Ohio railroad. From Leesburg Early retired through Winchester toward Strasburg, but when the head of his column reached this place he found that he was being followed by General Crook with the combined troops of Hunter and Sigel only, Wright having returned to Washington under order to rejoin Meade at Petersburg. This reduction of the pur-

suing forcè tempting Early to resume the offensive, he attacked Crook at Kernstown, and succeeded in administering such a check as to necessitate this general's retreat to Martinsburg, and finally to Harper's Ferry. Crook's withdrawal restored to Early the line of the upper Potomac, so, recrossing this stream, he advanced again into Maryland, and sending McCausland on to Chambersburg, Pennsylvania, laid that town in ashes [July 30] leaving 3,000 non-combatants without shelter or food. . . . This second irruption of Early and his ruthless destruction of Chambersburg led to many recommendations on the part of General Grant looking to a speedy elimination of the confusion then existing among the Union forces along the upper Potomac, but for a time the authorities at Washington would approve none of his propositions. . . . Finally the manœuvres of Early and the raid to Chambersburg compelled a partial compliance though Grant had somewhat circumvented the difficulty already by deciding to appoint a commander for the forces in the field that were to operate against Early. On the 31st of July General Grant selected me as his commander."—P. H. Sheridan, *Personal memoirs*, v. 1, ch. 23.

1864 (July: Virginia).—Siege of Petersburg.—Failure of mine and assault.—"All this time the siege of Petersburg went steadily on, and a great mine was run under the Confederate works by the Ninth Corps. On July 30th it was to be fired and the works rushed, but Burnside made poor dispositions, and the misconduct of the officer commanding the assault completed the failure. The troops on the flanks did their best, but the attack, both here and in other places, was defeated with heavy loss, for Beauregard had detected the tunnelling and cut off the threatened point with works in the rear, posting batteries specially to deal with the attack. Though Grant sent Hancock and Sheridan, with the Second Corps and three cavalry divisions, to make a dash at Richmond, and draw troops away, this also had been guarded against."—J. Formby, *American Civil War*, pp. 337-338.—"There was some delay about the explosion of the mine, so that it did not go off until about five o'clock in the morning. When it did explode it was very successful. . . . Instantly one hundred and ten cannon and fifty mortars, . . . covering the ground to the right and left of where the troops were to enter the enemy's lines, commenced playing. Ledlie's division marched into the crater immediately on the explosion, but most of the men stopped there in the absence of any one to give directions, their commander having found some safe retreat to get into before they started. There was some delay on the left and right in advancing, but some of the troops did get in and turn to the right and left, carrying the rifle-pits. . . . There had been great consternation in Petersburg, as we were well aware, about a rumored mine that we were going to explode."—*Personal memoirs of U. S. Grant*, v. 2, pp. 202-203.—"The plan was to assault through the breach in the moment of confusion caused by the explosion, and reach a certain commanding position which had been designated, and from which the city, it was thought, could be easily captured. After a little difficulty with the fuse, the mine exploded, blowing up the fortifications above it, together with some pieces of artillery, and quite a number of men. The Federal assaulting column rushed into the opening, but as they did not ad-

vance promptly enough, the Confederates poured a murderous musketry fire upon them in their embarrassed position, and finally drove them to retreat with very heavy loss, some four to five thousand men being *hors de combat*."—J. W. Burgess, *Civil War and the constitution, 1859-1865*, v. 2, p. 256.—"Thus the great assault, by which Grant had hoped to gain possession of Petersburg and to cross to the north bank of the Appomattox, turned out a costly fiasco. The Federal loss nearly reached 4,000, whilst that of the Confederates was probably not more than 1,200. Meade requested that a Court of Enquiry should be held to examine into the causes of the disaster. The finding of the Court exonerated him, and laid the blame, where it justly belonged, upon Burnside and his divisional commanders, with the exception of Potter. . . . Ledlie was allowed to resign, and Burnside was succeeded in the command of the 9th Corps by General Parke."—W. B. Wood and J. E. Edmonds, *History of the Civil War in the United States, 1861-1865*, pp. 356-357.

Humphreys, *Virginia campaign of '64 and '65*, ch. 9.—*Report of Joint Commission on the Conduct of the War (38th Congress, 2d Session*, v. 1).

1864 (August: Virginia).—Siege of Petersburg: Weldon Road.—Reams's Station.—Dutch Gap canal.—After the failure of the attempt at Petersburg, to prevent reinforcements from being sent from Richmond to Early who was then operating in the Shenandoah valley, Grant gave orders for another move to threaten Richmond. "Hancock's corps, part of the Tenth Corps under Birney, and Gregg's division of cavalry were crossed to the north side of the James during the night of 13th-14th of August. A threatening position was maintained for a number of days, with more or less skirmishing. . . . General Meade was left in command of the few troops around Petersburg, strongly intrenched; and was instructed to keep a close watch upon the enemy in that quarter, and himself to take advantage of any weakening that might occur through an effort on the part of the enemy to reinforce the north side. There was no particular victory gained on either side; but during that time no more reinforcements were sent to the Valley. . . . While most of Lee's force was on . . . [the north] side of the river, Warren had been sent with most of the Fifth Corps to capture the Weldon railroad. . . . From our left, near the old line, it was about three miles to the Weldon railroad. A division was ordered from the right of the Petersburg line to reinforce Warren, while a division was brought back from the north side of the James River to take its place. This road was very important to the enemy. The limits from which his supplies had been drawn were already very much contracted, and I knew that he must fight desperately to protect it. Warren carried the road, though with heavy loss on both sides. He fortified his new position, and our trenches were then extended from the left of our main line to connect with his new one. Lee made repeated attempts to dislodge Warren's corps, but without success, and with heavy loss. As soon as Warren was fortified and reinforcements reached him, troops were sent south to destroy the bridges on the Weldon railroad; and with such success that the enemy had to draw in wagons, for a distance of about thirty miles, all the supplies he got thereafter from that source. It was on the 21st

that Lee seemed to have given up the Weldon railroad as having been lost to him; but along about the 24th or 25th he made renewed attempts to recapture it. Again he failed, and with very heavy losses to him as compared with ours. On the night of the 20th our troops on the north side of the James were withdrawn, and Hancock and Gregg were sent south to destroy the Weldon railroad. They were attacked on the 25th at Reams's Station, and after desperate fighting a part of our line gave way, losing five pieces of artillery. But the Weldon railroad never went out of our possession from the 18th of August to the close of the war. . . . We had our troops on the Weldon railroad contending against a large force that regarded this road of so much importance that they could afford to expend many lives in retaking it; Sherman just getting through to Atlanta with great losses of men from casualties, discharges, and detachments left along as guards to occupy and hold the road in rear of him; Washington threatened but a short time before, and now Early being strengthened in the Valley so as, probably, to renew that attempt."—*Personal Memoirs of U. S. Grant, v. 2, pp. 209, 211-213.*—"For about a month after the battle of Reams's Station there was comparative quiet along the lines of the opposing armies. . . . A strong party of colored soldiers had been set to work by General Butler on the north side of the James, under cover of a battery on that side mounting 100-pounder Parrott guns, in digging a canal across the narrow isthmus of a peninsula formed by a sharp bend in the river, called Farrar's Island. By this canal it was intended to secure a nearer base of operations against Richmond, and afford a passage for the National war vessels, by which they might flank several important works of the Confederates. [The Dutch Gap Canal, as it was called, did not prove successful, the necessary depth of water never being secured during the war, though the canal has been brought into use since.]"—B. J. Lossing, *Field book of the Civil War, v. 3, ch. 13.*

1864 (August: Alabama).—**Battle of Mobile bay.—Capture of Confederate forts and fleet.**—"Mobile was the most important port held by the Confederates on the Gulf after the fall of New Orleans and the evacuation of Pensacola. The city stands at the head of a bay which is thirty miles long and from six to fifteen miles broad. The main entrance lies between Dauphin Island on the west and Mobile Point on the east, and is nearly three miles broad. But from Dauphin Island a sand-bank runs out, narrowing the deep water channel to less than 2,000 yards. On Dauphin Island was Fort Gaines, too far distant, however, to constitute a serious obstacle to a fleet trying to enter the Bay. On Mobile Point was Fort Morgan, mounting forty heavy guns with seven others mounted in a water battery thrown up close alongside. Another entrance into the Bay from Mississippi Sound was protected by Fort Powell, mounting six guns, but was not practicable for ships of heavy draught. A line of piles had been driven in from Fort Gaines across the sand-bank to prevent any light vessel from entering, and where the line of obstructions ceased a triple line of mines extended as far as a red buoy, which was little over 200 yards from the guns on Mobile Point. This narrow passage had been left for the benefit of blockade runners, and by it

alone could a Federal fleet enter the Bay. Farragut, who had resumed the command of the Western Gulf Blockading Squadron in January, 1864, was anxious to take possession of Mobile Bay as quickly as possible. He knew that Mobile itself could not be reduced except by a considerable land force, but he also knew that the Confederates were building ironclads in the river above the city, and he wished to gain possession of the Bay before these formidable antagonists should be completed. Once in possession of the Bay he could prevent the ironclads from being brought over the Dog River Bar, and enforce the blockade more effectively than was possible from without; but to accomplish his purpose he required the coöperation of one brigade of troops to reduce the forts, after he had run past, and isolated them, and of at least one ironclad to aid his wooden vessels in their encounter with the works on Mobile Point. The task was a far harder one than that which he had so successfully surmounted two years earlier in the Lower Mississippi. Then the fall of New Orleans was inevitable, if once the fleet passed the Mississippi forts. But Mobile City was impregnable against a purely naval attack, and to maintain himself inside the Bay it was necessary for the forts commanding the entrance to be reduced. But the Government turned a deaf ear to his entreaties. The ironclads were required for blockading purposes at other points, and no land force could be spared, as the ill-fated Red River Expedition [see above: 1864 (March-May: Louisiana)] absorbed all the available troops in the Department. Meanwhile the Confederates were pushing on the construction of their great ironclad, the *Tennessee*, with all speed. She was unquestionably the most powerful war vessel ever possessed by the Confederacy. . . . By August Farragut's repeated demands for troops and ironclads had been at length answered. On the 3rd General Gordon Granger with a division of troops appeared off Dauphin Island, and four monitors had either arrived or were on the point of doing so. Two of these, the *Chickasaw* and *Winnebago*, came from the Mississippi; they carried four 11-inch guns in two turrets protected by eight and a half inches of armour. The other two, the *Tecumseh* and *Manhattan*, came from the Atlantic coast, and were larger vessels, carrying two 15-inch guns in a single turret protected by ten inches of armour. It had been intended to make a joint attack on the 4th, and on that day Granger disembarked his troops, but Farragut was unable to coöperate, as all his vessels had not yet arrived. On the morning of the 5th the fleet steamed in to attack. As at Port Hudson, the wooden vessels were lashed together in pairs. The monitors formed a starboard squadron slightly in advance of the *Brooklyn*, the leading wooden vessel."—W. B. Wood and J. E. Edmonds, *History of the Civil War in the United States, pp. 495-497.*—"At six o'clock on the morning of the 5th of August the fleet started with the flood tide. The Admiral took up his position in the port main rigging of the *Hartford*, so that he might have a good post of observation. [According to accounts given by officers who were on board the *Hartford*, Admiral Farragut climbed the rigging, after the battle began, in order to get above the thickest of the smoke, and Captain Drayton sent a man to lash him where he stood, so that, if wounded, he might not fall to the deck]. . . . Above the fort, and just beyond the obstructions, lay the Confederate ram *Tennessee* and her three attendant gunboats [commanded by Admiral Franklin Buchanan].

FARRAGUT AT MOBILE BAY

Naval victory of the Federal Fleet under Farragut in Mobile Bay, August 5, 1864

(From the painting by W. H. Overend)

. . . Soon after half-past six the *Tecumseh* [the leading monitor] fired the first two shots at Fort Morgan. For half an hour after this, the ships advanced in silence. Then the fort opened on the Brooklyn, and presently the whole line of vessels were hotly engaged. Their concentrated fire kept down that of the enemy, and all seemed at this time to be going well with the fleet. The *Tecumseh*, though all the while advancing, was now silent, reserving her fire for the *Tennessee*, which lay beyond the obstructions. Captain Craven saw the red buoy, but it seemed so close to the beach that he thought there must have been a mistake in his orders; and altering his course, he headed straight for the *Tennessee*, passing to the westward of the buoy right over the line of torpedoes. Suddenly there came a frightful explosion; . . . and she sank to the bottom of the channel. Of 120 men on board only 21 were saved. . . . From the Brooklyn, leading the main column, something was now desecrated in the water ahead which resembled torpedo-buoys, and the sloop, with the *Octorara* lashed to her side, suddenly stopped, and in a moment they were backing down on the vessels astern of them. The bows of the two ships turned, falling off towards the fort, so that they blocked up the channel. The *Hartford*, the Admiral's flag-ship, which was next astern, also stopped to prevent a collision, but she was drifting fast with the *Metacomet* toward the two vessels ahead, and the *Richmond* and *Port Royal* were close upon them, followed by the others. At that moment it seemed as if nothing could save the vessels of the fleet from being thrown into hopeless confusion, massed together as they were directly under the guns of the fort. It was in that moment, at the crisis of the battle, that the calm and dauntless spirit of the Admiral rose to its greatest height. . . . 'Captain Drayton, go ahead! Jouett, full speed!' came the command, in clear, ringing tones from the Admiral's place in the rigging. In a moment the *Hartford* had turned, and dashing with the *Metacomet* past the Brooklyn, rushed straight over the barrier. Snap, snap, went the primers of the torpedoes under the bottom of the ship,—the officers and men could hear them,—but no explosion followed, and the *Hartford* passed safely into the waters above. Meanwhile the four ships lay entangled under Fort Morgan. A collision seemed inevitable, but Captain Jenkins of the *Richmond*, . . . backed away from the others, and began a furious cannonade on the fort with the whole broadside, driving the enemy out of the water-batteries. The Brooklyn was by this means able to recover, and presently she steamed ahead, followed by the *Richmond* and the rest of the fleet. . . . No sooner was the battle with the fort over than a new battle began with the *Tennessee*. The moment that the ships had fairly entered the bay, the Confederate ram . . . came charging down the whole line, taking each vessel in turn," but doing no serious injury to any. On the arrival of the monitors, which had lagged behind, "the *Tennessee* took refuge under the guns of the fort, and the fleet rejoined the *Hartford*, now four miles up the bay." Meantime the *Hartford* and the *Metacomet* had disposed of two of the Confederate gunboats: the *Selma*, which surrendered, and the *Gaines*, which had been run ashore and set on fire. The third, the *Morgan*, took shelter, with the *Tennessee*, near the fort. "The *Hartford* had by this time come to anchor, and her crew went to breakfast. The other ships gradually joined her. But the battle was not yet over. It was now a little before nine o'clock, and suddenly the

*Tennessee* was reported approaching." In the battle which ensued, the stout iron-clad was rammed repeatedly by the *Monongahela*, the *Lackawanna*, the *Hartford* and the *Ossipee*, and pounded by the terrible guns of the monitor *Chickasaw*, until, with her commander wounded, her tiller-chains and smoke stack gone, her port shutters jammed, and her armor starting from the frame, she raised the white flag. "A few days later the forts surrendered, and Mobile, as a Confederate port, ceased to exist. The fall of the city did not come until some time afterward; indeed no immediate attempt was made upon it, for the capture of the forts and the occupation of Mobile Bay served every purpose of the Federal Government."—J. R. Soley, *Sailor boys of '61*, ch. 13.—"This great victory cost the Union fleet 335 men. . . . The losses in the . . . [Confederate] fleet were 10 killed and 16 wounded—confined to the *Tennessee* and *Selma*—and 280 prisoners taken. The loss in the forts is unknown."—L. Farragut, *Life of David Glasgow Farragut*, ch. 27.

1864 (August-October: Virginia).—Sheridan's victories in the Shenandoah valley.—Winchester.—Fisher's Hill.—Cedar Creek.—Famous ride.—"The events of July showed the urgent need of unity of command in Northern Virginia, and the lieutenant-general, in August, consolidated these four departments [of Washington, the Susquehanna, West Virginia and the Middle department] into one, named the Middle Military Division, under General Hunter. That officer, however, before entering on the proposed campaign, expressed a willingness to be relieved, and General P. H. Sheridan, who had been transferred from the Army of the Potomac to the command of the forces in the field under Hunter, was appointed in his stead." General Sheridan was appointed to the command on August 7, and took the field with an effective force (which included the Sixth and Nineteenth corps) of 40,000 men, 10,000 being cavalry. "His operations during that month and the fore part of September were mainly confined to manœuvres having for their object to prevent the Confederates from gaining the rich harvests of the Shenandoah Valley. But after once or twice driving Early southward to Strasburg, he each time returned on his path towards Harper's Ferry. General Grant had hesitated in allowing Sheridan to take a real initiative, as defeat would lay open to the enemy the States of Maryland and Pennsylvania before another army could be interposed to check him. Finding, however, while on a personal visit to General Sheridan, in the month of September, that that officer expressed great confidence of success, he authorized him to attack. At this time the Confederate force held the west bank of Opequan Creek, covering Winchester; and the Union force lay in front of Berryville, twenty miles south of Harper's Ferry. The situation of the opposing armies was peculiar: each threatened the communications of the other, and either could bring on a battle at any time. It would appear that General Early had designed assuming the offensive." He made a movement which General Sheridan was prompt to take advantage of, on the morning of September 10th, and a battle ensued—known as the battle of Winchester, but some times called the battle of Opequan Creek—

which resulted in a victory for the latter. "It is due to state that there was a great disparity in the numbers engaged—Early's force consisting of 8,500 muskets and 3,000 sabres, while Sheridan's strength was thrice that of the aggregate Confederate force. Sheridan's preponderance in horse enabled him to extend far beyond and overlap the Confederate left, and when, after several hours' of indecisive fighting between the infantry, a general advance was, at four P. M., made by the whole line, the cavalry, by an impetuous charge, carried the fortified heights: the Confederates . . . broke in confusion, retiring from the field and through Winchester, with the Union forces in pursuit. Night, however, prevented Sheridan from following up the victory, among the trophies of which were 2,500 prisoners, five pieces of artillery, and nine battle-flags. . . . After his defeat at Winchester, Early did not pause in his southward retreat till he reached Fisher's Hill, near Strasburg, 30 miles south of Winchester. This is a very defensible position, commanding the débouché of the narrow Strasburg valley between the north fork of the Shenandoah River and the North Mountain. On these obstacles Early rested his flank. In front of this position Sheridan arrived on the morning of the 22d and formed his force for a direct attack, while he sent Torbert with two divisions of cavalry by the parallel Luray Valley, to gain New Market, 20 miles in Early's rear. After much manœuvring, and several ineffectual efforts to force the position, an attack of cavalry was made from the right. Under cover of this mask a corps of infantry was moved to that flank, and by an impetuous assault carried the Confederate left resting on the North Mountain. A general attack in front then disrupted Early's whole line, and the Confederates retired in great disorder, leaving behind 16 pieces of artillery and several hundred prisoners. . . . Early's retreat was not stayed until he reached the lower passes of the Blue Ridge, whither he retired with a loss of half his army. Sheridan, after pushing the pursuit as far as Staunton, and operating destructively against the Virginia Central Railroad, returned and took position behind Cedar Creek near Strasburg. Previously to abandoning the country south of Strasburg, it was laid waste by the destruction of all barns, grain, forage, farming implements, and mills. The desolation of the Palatinate by Turenne was not more complete. On the withdrawal of Sheridan, Early, after a brief respite, and being re-enforced by Kershaw's division of infantry and 600 cavalry from Lee's army, again marched northward down the Valley, and once more ensconced himself at Fisher's Hill. Sheridan continued to hold position on the north bank of Cedar Creek. Nothing more important than cavalry combats, mostly favorable to the Federal arms, took place, until the 19th of October, when Early assumed a bold offensive that was near giving him a victory as complete as the defeat he had suffered. . . . The army was, at this time, temporarily under the command of General Wright—Sheridan being absent at Washington. The position held by the Union force was too formidable to invite open attack, and Early's only opportunity was to make a surprise. This that officer now determined on, and its execution was begun during the night of the 18th-19th of October." A flanking column, "favored by a heavy fog . . . attained, unperceived, the rear of the left flank of the Union force, formed by Crook's Corps . . . and rushed into the camp—the troops awaking only to find themselves prisoners. To rally the men in their bewilderment

was impossible, and Crook's Corps, being thoroughly broken up, fled in disorder, leaving many guns in the hands of the enemy. As soon as this flank attack was developed, Early, with his other column, emerged from behind the hills west of Cedar Creek, and crossing that stream, struck directly the troops on the right of Crook. This served to complete the disaster, and the whole Union left and centre became a confused mass, against which the Confederates directed the captured artillery (18 guns), while the flanking force swept forward to the main turnpike. Such was the scene on which the light of day dawned. The only force not yet involved in the enemy's onset was the Sixth Corps, which by its position was somewhat in rear. With this General Ricketts quickly executed a change of front, throwing it forward at right angles to its former position, and firmly withstood the enemy's shock. Its chief service, was however, to cover the general retreat which Wright now ordered, as the only practicable means of reuniting his force. . . . At the first good position between Middletown and Newtown, Wright was able to rally and reform the troops, form a compact line, and prepare either to resist further attack or himself resume the offensive. It was at this time, about half-past ten A. M., that General Sheridan arrived upon the field from Winchester ["twenty miles away"], where he had slept the previous night. Hearing the distant sounds of battle rolling up from the south, Sheridan rode post to the front, where arriving, his electric manner had on the troops a very inspiring effect. General Wright had already brought order out of confusion and made dispositions for attack. . . . A counter-charge was begun at three o'clock in the afternoon. . . . A large part of Early's force, in the intoxication of success, had abandoned their colors and taken to plundering the abandoned Federal camps. The reflux wave was as resistless as the Confederate surge had been. . . . The retreat soon became a rout. . . . In the pursuit all the captured guns were retaken and 23 in addition. The captures included, besides, near 1,500 prisoners. . . . With this defeat of Early all operations of moment in the Shenandoah forever ended, [and most of the troops on both sides were recalled to the main field of operations, at Petersburg].—W. Swinton, *Campaigns of the Army of the Potomac*, ch. 12, pt. 8.

1864 (September-October: Georgia).—Atlanta cleared of its former inhabitants.—Sherman's preparations for the march to the sea.—Hood's raid to the rear.—"During the month of September, Sherman's army remained grouped about Atlanta. . . . The Army of the Cumberland, under Major-General Thomas, held Atlanta; the Army of the Tennessee, commanded by Major-General Howard, was at East Point; and the Army of the Ohio occupied Decatur. . . . Sherman now determined to make Atlanta exclusively a military post. On the 4th of September he issued the following orders: 'The city of Atlanta belonging exclusively

for warlike purposes, it will at once be vacated by all except the armies of the United States and such civilian employes as may be retained by the proper departments of the Government.' . . . This order fell upon the ears of the inhabitants of Atlanta like a thunderbolt." To a remonstrance addressed to him by the mayor and two councilmen of the city he replied: "We must have peace, not only at Atlanta, but in all America. To secure this we must stop the war that now desolates our once happy and favored country. To stop the war, we must defeat the rebel armies that are arrayed against the laws and Constitution, which all must respect and obey. To defeat these armies, we must prepare the way to reach them in their recesses. . . . My military plans make it necessary for the inhabitants to go away, and I can only renew my offer of services to make their exodus in any direction as easy and comfortable as possible. . . . War is cruelty and you cannot refine it; and those who brought war on our country deserve all the curses and maledictions a people can pour out. . . . You might as well appeal against the thunder-storm as against these terrible hardships of war." A truce of ten days was arranged, during which "446 families were moved south, comprising 705 adults, 860 children and 70 servants, with an average of 1,651 pounds of furniture and household goods of all kinds to each family."—S. M. Bowman and R. B. Irwin, *Sherman and his campaigns*, ch. 18.—"Gen. Hood, meanwhile, kept his forces in the neighborhood of Jonesboro, receiving his supplies from the Macon road. His army numbered about 40,000 men, exclusive of the Georgia militia; and, as if to show that no immediate offensive movement was contemplated, the latter were withdrawn from him by Gov. Brown after the evacuation of Atlanta. . . . To allow their principal Southern army to rust in inactivity was not, however, the intention of the rebel authorities. . . . Something must be done, and that speedily, to arrest the progress of the Federal army, or Georgia and perhaps the Gulf States, would be irretrievably lost. . . . The whole army of General Hood, it was decided, should rapidly move in a compact body to the rear of Atlanta, and, after breaking up the railroad between the Chattahoochee and Chattanooga, push on to Bridgeport and destroy the great railroad bridge spanning the Tennessee River at that place. . . . In connection with this movement, General Forrest, confessedly their ablest cavalry officer, was already operating in Southern Tennessee."—W. J. Tenney, *Military and naval history of the Rebellion in the United States*, p. 609.—"At this time in the Shenandoah Valley the War was assuming a severer aspect than before; Grant prescribed and Sheridan carried out a policy of devastation that was new. The spirit in the West was no milder, a foretaste of what was to come appearing in an order for the destruction of Atlanta and the deportation of its people. Whatever the city contained that could be made useful to the Confederacy—factories, storehouses, machine-shops, mills—whether distinctly public property or the possessions of individuals which might be used for public purposes, was to be sacrificed. . . . the order meant a wiping out of the city; its population must go elsewhere, the Federal general undertaking no more than to conduct the exodus humanely. . . . It was, however, a time for weapons rather than words. Jefferson Davis appeared in September in the camp of Hood, to concert plans and apply incitements. Beauregard, too, who had done excellent service about Petersburg, after his successful defence of Charleston, came

once more to the West as commander-in-chief, soon making his headquarters in the familiar camp at Corinth; while leaving Hood free in the field, he was near at hand for counsel, his jurisdiction including also the region farther west and south throughout Alabama and Mississippi, over which Dick Taylor had been placed. Passing around Atlanta, Hood was presently on Sherman's communications, breaking up the railroad to Chattanooga and compelling an advance by the Federal army northward to the neighborhood of Marietta. October 5, the important position at Allatoona was in great danger; but Sherman, giving and receiving signals over the heads of the enemy, from Kennesaw Mountain, to a station eighteen miles distant, was at last assured of the arrival of the division of John M. Corse, and that Allatoona would be held. Hood made another attempt at Resaca; but the duplicates were close at hand for every part of the railroad that might be destroyed, and Colonel Wright quickly made good every loss. Hood soon marched farther west into northern Alabama, fixing himself at last near Florence, on the bank of the Tennessee River. Sherman followed, being at the end of October at Gaylesville, near the Georgia line, a point beyond which he did not pursue."—J. K. Hosmer, *Outcome of the Civil War, 1863-1865*, pp. 202-203.—"For several days subsequent to the fight at Allatoona, Gen. Sherman remained in the latter place, watching the movements of Hood. . . . Gen. Hood, however, crossing the Etowah and avoiding Rome, moved directly north, and on the 12th Stuart's corps of his army appeared in front of Resaca, the defences of which were held by Col. Weaver with 600 men and three pieces of artillery. . . . No serious attack was made upon the garrison, the enemy being more intent upon destroying the railroad toward Dalton. . . . [which they reached on the 14th]. The 14th and 15th were employed by the enemy in continuing the destruction of the railroad as far as Tunnel Hill. . . . The approach of the Federal columns now warned General Hood to move off to the west, and the 16th found him in full retreat for Lafayette, followed by General Sherman. . . . From Lafayette the enemy retreated in a southwesterly direction into Alabama through a broken and mountainous country, but scantily supplied with food for man or beast; and passing through Summerville, Gaylesville, and Blue Pond, halted at Gadsdens, on the Coosa River, 75 miles from Lafayette. Here he paused for several days, receiving a few reinforcements brought up by General Beauregard, who had on the 17th assumed command of the Confederate military division of the West. . . . General Hood still retained his special command, subject to the supervision or direction of General Beauregard, and his army, after remaining a few days in Gadsden, moved, about the 1st of November, for Warrington, on the Tennessee River, 30 miles distant. General Sherman meanwhile remained at Gaylesville, which place his main body reached about the 21st, watching the enemy's movements. . . . Hood's flanking movement, . . . had entirely failed to interrupt the Federal communications to a degree that would compel the evacuation of Atlanta."—W. J. Tenney, *Military and naval history in the United States*, ch. 45.

1864 (October).—Disloyal associations in the North.—“A large number of Democrats during the Civil War became members of a secret society which at first was called Knights of the Golden Circle but in the autumn of 1863 took the name of the Order of American Knights, continuing the use of bombastic oaths, passwords, grips and signs. . . . [It was also known as the “Mutual Protection Society,” “Circle of Honor,” or “Circle or Knights of the Mighty Host.”] Owing to certain revelations the name of the order was changed early in 1864 to the Sons of Liberty, which was generally adopted throughout the West, although some localities adhered to the designation of [Order of American Knights. Its members were also sometimes called “Butternuts,” in Illinois, Indiana, and Ohio. (See also INDIANA: 1861-1865.)] Vallandigham while still an exile was elected supreme grand commander. The organization attained its maximum membership sometime in the year 1864 which Joseph Holt, judge-advocate-general, thought might number 500,000, although measured by the Democratic vote of 1864 this was an obvious exaggeration. . . . The members for the most part looked upon the order as an efficient adjunct to the Democratic party and a counter movement to the Union Leagues which the Republicans had formed. The more extreme . . . believed that the organization might be used to resist arbitrary arrests and to interfere with the draft, and the most daring had dreams of Northwestern Confederacy which should compel the war to cease. These were willing to discuss plans of an armed rising to free the Confederate prisoners in different parts of the West who in turn should assist the Sons of Liberty in the establishment of the Northwestern Confederacy. But this scheme of rebellion and treason was confined to talk and to the taking of darkly mysterious oaths. When the time for action came, armed men did not appear. Indeed few of them wished for the military success of the Southern Confederacy. . . . The number of members of this organization in Indiana had been estimated all the way from 17,000 to 100,000. Here as in the other States the order had a military department; and the number of armed men in Ohio, Indiana and Illinois who could be mobilized for effective service was supposed by certain timid people to be very large. While many of these estimates were absurd it is true that a few Sons of Liberty had agreed to assist by force some Confederates whose base was Canada in an effort to free the prisoners of war confined . . . [in Ohio and Illinois.] Negotiations were opened with Jacob Thompson who had been sent as a commissioner to Canada by Jefferson Davis to further the interests of the Confederate States; and Vallandigham had an interview with him at Windsor. . . . [But] while smarting from his arrest, trial and banishment . . . [Vallandigham] made it clear that he could not identify himself with the Southern cause nor take any part in a war against the national or State governments. . . . The real harm which the Sons of Liberty and kindred organizations did was to discourage enlistments and to foster resistance to the draft. ‘I have not been a believer,’ wrote Halleck to Grant, August 11, 1864, ‘in most of the plots, secret societies, etc., of which we have so many pretended discoveries; but the people in many parts of the North and West now talk openly and boldly of resisting the draft. . . . Commanding generals of the departments . . . [were disturbed by] plots the magnitude and gravity of which

were exaggerated in the reports of their detectives. The despatches of the summer of 1864 reflect constant and genuine alarm; and the report of Judge-Advocate-General Joseph Holt is an example of the astounding things believed by some in authority. Holt, credulous to the extent of accepting as truth nearly all the statements of the detectives and alarmists, gave under the date of October 8, 1864, a historical account of these secret organizations in an official report to the Secretary of War. This secret order, he asserted in the summing up, is the ‘echo and faithful ally’ of the ‘rebellion.’ ‘The guilty men engaged [in these movements] after casting aside their allegiance seem to have trodden under foot every sentiment of honor and every restraint of law human and divine.’ . . . Despite the many almost crushing burdens of the summer of 1864 which might have warped the sanest mind Lincoln’s judgment was true and could not be perverted by these disclosures which to many seemed so alarming. ‘The President’s attitude,’ write Nicolay and Hay, ‘in regard to this organization [the O. A. K. or Sons of Liberty] was one of good-humored contempt.’ It was probably in view of one of the estimates that there were a hundred thousand Sons of Liberty in Indiana that Lincoln made the remark to McDonald: ‘Nothing can make me believe that one hundred thousand Indiana Democrats are disloyal.’—J. F. Rhodes, *History of the United States from the Compromise of 1850*, v. 5, pp. 317-321.—See also COPPERHEADS.

Hay, *Abraham Lincoln*, v. 8, ch. 1.

1864 (October).—St. Albans raid.—“Along the Northern border . . . the rebel agents, sent thither on ‘detached service’ by the Rebel Government, were active in movements intended to terrify and harass the people. On the 10th of October, a party of them made a raid into St. Albans, Vermont, robbing the banks there, and making their escape across the lines into Canada with their plunder, having killed one of the citizens in their attack. Pursuit was made, and several of the marauders were arrested in Canada. Proceedings were commenced to procure their extradition [which were protracted until after the close of the war]. . . . The Government received information that this affair was but one of a projected series, and that similar attempts would be made all along the frontier. More than this, there were threats, followed by actual attempts, to set fire to the principal Northern cities.”—H. J. Raymond, *Life and public services of Abraham Lincoln*, p. 611.—See also MONTREAL: 1860-1901.

1864 (October; North Carolina).—Destruction of the ram *Albemarle*.—The ram *Albemarle*, which had proved in the spring so dangerous an antagonist to the blockading vessels in the North Carolina Sounds (see above: 1864 [April-May: North Carolina]), was still lying at Plymouth, in the Roanoke river, and another attack from her was feared by the fleet. “She was finally destroyed by a brave young lieutenant, William B. Cushing,

who blew her up with a torpedo. Though only twenty years old, he was one of the most daring officers in the navy, and he had become noted for his fearlessness in the expeditions in the sounds and rivers of North Carolina. One dark night (Oct. 27) he set out from the fleet in a steam launch—a long open boat used by naval vessels—with a crew of thirteen officers and men. The launch was fitted with a torpedo which could be run out forward on the end of a long boom so as to be thrust under the vessel to be attacked. Cushing got within sixty feet of the *Albemarle* before his boat was seen. The guards then shouted the alarm, rang the boat's bell, and began firing their muskets at the launch. There was a raft of logs thirty feet wide around the *Albemarle* to protect her from just such attacks, but Cushing ran the bow of the launch upon the logs, lowered the boom so that the torpedo came right under the side of the vessel and fired it. At the same moment a shot from one of the great guns of the ram crashed through the launch and it was overwhelmed by a flood of water thrown up by the explosion of the torpedo. The Confederates called out to Cushing to surrender, but he refused, and ordering his men to save themselves as they best could, he sprang into the water amid a shower of musket balls and swam down the river. He succeeded in reaching the shore, almost exhausted, and hid himself during the next day in a swamp, where he was cared for by some negroes. From them he heard that the *Albemarle* had been sunk by his torpedo. The next night he found a small boat in a creek, paddled in it down the river, and before midnight was safe on board one of the vessels of the fleet. Only one other man of the party escaped, all the rest being either drowned or captured. The *Albemarle* being thus put out of the way, Plymouth was recaptured a few days afterward."—J. D. Champlin, Jr., *Young folks' history of the War for the Union*, ch. 33.

1864 (November: Tennessee).—Hood's advance northward.—Battle of Franklin.—When General Sherman started on his march to the sea General Thomas was left to oppose Hood. "The force Thomas had for this purpose was curiously small, considering how formidable Hood's army had been in the Atlanta Campaign, and still was. All Thomas had for immediate field service were the Fourth and Twenty-Third Corps, numbering together about 22,000 infantry, and also about 3,000 cavalry. These troops were sent to Pulaski, Tennessee, in command of General Schofield, Thomas, himself remaining at Nashville. A little after the middle of November, 1864, Hood crossed the Tennessee River and inaugurated his campaign by a flank movement. He made a rapid march upon Columbia, with the view of getting in behind Schofield, who was at Pulaski. But Schofield retired to Columbia in time to frustrate Hood's plans. The two armies remained in close proximity to each other at Columbus until November 28th, when Hood made another skillfully-planned flank movement . . . to Spring Hill, in rear of Schofield. Again Hood was foiled. . . . General Thomas at Nashville wanted the Confederates held back as long as possible, in order that he might have time to receive there his expected reinforcements of A. J. Smith's corps. It was, therefore, Schofield's duty to check Hood's advance as long as he could. . . . He started Gen-

eral Stanley, with a division of 5,000 men, and a great part of his artillery, to Spring Hill (12 miles north of Columbia) early in the morning. He put two other divisions on the road. He held one division in front of Columbia, and prevented the enemy from crossing the river during the entire day, and also that night. Stanley reached Spring Hill in time to prevent Hood from occupying that place. He skirmished and fought with Hood's advance troops at Spring Hill during the afternoon of November 29th. . . . Schofield . . . accomplished exactly what he believed he could accomplish. He held back his enemy at Columbia with one hand and fenced off the blow at Spring Hill with the other. . . . The beneficial result of all this bold management of Schofield, November 29th, was apparent the next day in the battle of Franklin. Hood fought that great battle practically without his artillery. He only had the two batteries which he took with him on his detour to Spring Hill. Those two he used. . . . But his vast supply of artillery had all been detained at Columbia too long to be of any service at the end and place it was most needed. . . . The Federal troops left Spring Hill in the night for Franklin, ten miles distant. Early in the morning of November 30th they began to arrive at Franklin, and were placed in position covering the town. Early the same morning the Confederates moved up from Spring Hill, following hard upon the rearmost of the Federals. . . . General Stanley says, in his official report: "From one o'clock until four in the evening, the enemy's entire force was in sight and forming for attack. Yet, in view of the strong position we held, and reasoning from the former course of the rebels during the campaign, nothing appeared so improbable as that they would assault." The assault was made, however, with a terrible persistency which proved the ruin of Hood's army, for it failed. "The [Federal] troops were quietly withdrawn before midnight. A silent rapid march brought them to Nashville the next morning, and weary with fighting and marching they bivouacked in the blue grass pastures under the guns of Fort Negley."—T. Speed, *Battle of Franklin (Sketches of war history, Ohio Commandery, Loyal Legion of the United States*, v. 3).—"The enemy's loss at Franklin, according to Thomas's report, was 1,750 buried upon the field by our troops, 3,800 in the hospital, and 702 prisoners besides. Schofield's loss, as officially reported, was 189 killed, 1,033 wounded, and 1,104 captured and missing."—U. S. Grant, *Personal memoirs*, v. 2, p. 255.

1864 (November).—Arizona organized as territory. See ARIZONA: 1864 (November).

1864 (November-December: Georgia).—Sherman's march to the sea.—"It was at Alatoona [see above: 1864 (September-October: Georgia)] probably, that Sherman first realized that, with the forces at his disposal, the keeping open of his line of communications with the North would be impossible if he expected to retain any force with which to operate offensively beyond Atlanta. He proposed, therefore, to destroy the roads back to Chattanooga, when all ready to move, and leave the latter place garrisoned. . . . Sherman thought Hood would follow him, though he proposed to prepare for the contingency of the latter moving the other way while he was moving south, by making Thomas strong enough to hold Tennessee and Kentucky. I

myself [writes General Grant] was thoroughly satisfied that Hood would go north, as he did. On the 2nd of November I telegraphed Sherman authorizing him definitely to move according to the plan he had proposed; that is, cutting loose from his base, giving up Atlanta and the railroad back to Chattanooga. . . . Atlanta was destroyed so far as to render it worthless for military purposes before starting, Sherman himself remaining over a day to superintend the work and see that it was well done. Sherman's orders for this campaign were perfect. Before starting, he had sent back all sick, disabled and weak men, retaining nothing but the hardy, well-inured soldiers to accompany him on his long march in prospect. . . . The army was expected to live on the country. . . . Each brigade furnished a company to gather supplies of forage and provisions for the command to which

consisted in round numbers of 60,000 men. . . . He had thoroughly purged it of all inefficient material, sending to the rear all organizations and even all individuals that he thought would be a drag upon his celerity or strength. His right wing, under Howard, consisted of the Fifteenth Corps, commanded by Osterhaus, in the absence of John A. Logan; and the Seventeenth Corps, commanded by Frank P. Blair, Jr. The left wing, commanded by Slocum, comprised the Fourteenth Corps, under Jeff. C. Davis, and the Twentieth Corps, under A. S. Williams. [He had also 5,000 cavalry under Judson Kilpatrick and sixty-five guns.] In his general orders he had not intimated to the army the object of their march. 'It is sufficient for you to know,' he said, 'that it involves a departure from our present base and a long, difficult march to a new one!'—J. G. Nicolay and J. Hay, *Abraham Lincoln*, v. 9, ch. 20.—"Communication

SHERMAN'S MARCH TO THE SEA

Sherman's Army Destroying the Railroads in Georgia.

(After painting by J. P. Fitch)

they belonged. . . . The skill of these men, called by themselves and the army 'hummers,' in collecting their loads and getting back to their respective commands, was marvellous."—U. S. Grant, *Personal memoirs*, v. 2, ch. 50.—All preparations being completed, General Sherman caused the foundries, mills and shops of every kind in Rome to be destroyed on November 10, and "started on the 12th with his full staff from Kingston to Atlanta. . . . As Sherman rode towards Atlanta that night he met railroad trains going to the rear with furious speed. He was profoundly impressed with the strange aspect of affairs: two hostile armies marching in opposite directions, each in the full belief that it was achieving a final and conclusive result in the great war. 'I was strongly inspired,' he writes, 'with a feeling that the movement on our part was a direct attack upon the rebel army and the rebel capital at Richmond, though a full thousand miles of hostile country intervened; and that for better or worse it would end the war.' The result was a magnificent vindication of this soldierly intuition. His army

with Chattanooga was broken November 12, 1864, Atlanta was left behind on the 16th. . . . To the relentlessness of the spirit in which Sherman set forth for Savannah—for he determined upon the eastward march—he gave the fullest and frankest expression: 'If the people raise a howl against my barbarity and cruelty, I will answer that war is war and not popularity-seeking. If they want peace, they and their relatives must stop the war.' To Governor Brown, of Georgia, whom he hoped to detach from the Confederacy, he sent a message that, 'If you remain inert, I will be compelled to go ahead and devastate the State in its whole length and breadth.' He telegraphed Grant, October 9: 'Until we can repopulate Georgia, it is useless for us to occupy it; but the utter destruction of its roads, horses, and people will cripple their military resources. I can make this march and make Georgia howl.' On October 19 he telegraphed to his commissary, Beckwith: 'I propose to sally forth to ruin Georgia and bring up on the sea-shore. Make all dispositions accordingly.' The formal field orders, issued November 9, were

less truculent in tone. While the army was 'to forage liberally on the country,' order was to prevail. Each brigade was to have its foraging party, properly organized and commanded by discreet officers. Soldiers were forbidden 'to enter dwellings or commit any trespass,' while taking what they might find in gardens. Corps commanders alone had power to destroy mills, houses, cotton-gins, etc. Where the army was unmolested, no destruction of such property was to be permitted; but if roads were obstructed or bushwacking occurred, 'army commanders should order and enforce a devastation more or less unsparring, according to the measure of such hostility.' . . . The army set out in perfect autumnal weather, in the highest spirits, and it soon became apparent that their enterprise was to be in the nature of a cheerful excursion, rather than a course of peril and hardship. The country teemed from an abundant harvest. Howard struck southeast towards Macon. Slocum, whom Sherman accompanied, marched towards Augusta, the diverging directions of the wings perplexing the foe as to the destination. Indeed, no effective opposition was possible for the South: a skirmish took place near Macon between Georgia troops and one brigade of the Fifteenth Corps; and the left wing was aware of the neighborhood of Wheeler on its flank with a small body of cavalry. In the main, the progress was quite unimpeded, excepting that the negroes trooped from far and near, young and old, sick and well, in a vague, childlike hope of being led into some promised land of plenty and freedom. Receiving a certain number of able-bodied men as pioneers, Sherman turned the rest back: they must patiently await the good time to come. Three hundred miles lay between Atlanta and Savannah: after a week the two wings were to rendezvous at Milledgeville. Marching from twelve to fifteen miles a day, this was easily accomplished by November 23.—J. K. Hosmer, *Outcome of the Civil War, 1863-1865*, pp. 205-209.—"Before leaving Atlanta . . . [Sherman] pointed out to one of his principal subordinates that a National army at Columbia, S. C., would end the war unless it should be routed and destroyed. Deprived of the material support of all the States but North Carolina, it would be impossible for the Confederate Government to feed its army at Richmond, or to fill its exchequer. The experience it had with the country west of the Mississippi proved that a region isolated from the rest of the Confederacy would not furnish men nor money, and could not furnish supplies; while anxiety for their families, who were within the National lines, tempted the soldiers from those States to desert, and weakened the confidence of the whole army. . . . If Sherman, therefore, should reach Columbia with an army that could resist the first onslaught of Lee, the last hope of the Confederacy would be crushed between the national forces meeting from the east and west. . . . The extent of line destroyed was enormous. From the Etowah River through Atlanta southward to Lovejoy's, for a hundred miles nothing was left of the road. From Fairburn through Atlanta eastward to Madison and the Oconee River, another hundred miles, the destruction was equally complete. From Gordon southeastwardly the ruin of the central road was continued to the very suburbs of Savannah, a hundred and sixty miles."—J. D. Cox, *March to the sea, Franklin and Nashville*, pp. 21-22, 36.—Sherman invested the city from the Savannah to the little Ogeechee river, on December 10. On the 13th, Fort McAllister, which

commanded the Ogeechee river, was stormed and taken by Hazen's division, and communication was opened with Admiral Dahlgren, and with General Foster, the Union commander at Port Royal. On the 17th, General Hardee, the Confederate commander at Savannah, refused a demand for the surrender of the city, but on the night of the 20th he escaped, with his forces, and on the 22nd General Sherman telegraphed to President Lincoln: "I beg to present to you as a Christmas gift the city of Savannah, with 150 heavy guns and plenty of ammunition; also about 25,000 bales of cotton." "So far as Europe is concerned, it is safe to assert that no other operation of the entire war was productive of a moral effect in any way comparable with that caused by the march to the sea. Indeed, coming as it did and when it did, it is not too much to say that it was an epochal event in that it marked the turning of the tide of European and especially of English opinions as respects the United States and things American. . . . One day the tidings came that the beads of Sherman's columns had emerged on the sea-coast, that they had made short work of the forces there found to oppose them, and that Savannah had fallen. The Union army and the Union navy had struck hands! The announcement seemed absolutely to take away the breath of the foreign critics,—social, military, journalistic. An undeniably original and brilliant strategic blow had been struck; an operation, the character of which could neither be ignored nor mistaken, had been triumphantly carried through to a momentous result; the thrust—and such a thrust!—had penetrated the vitals of the Confederacy."—C. F. Adams, *Studies, military and diplomatic*, pp. 262, 264-265.—"This march through the heart of Georgia so alarmed the Confederates lest either Macon or Augusta or both might be attacked that they divided their forces; and, when it finally became clear that Savannah was the point aimed at they found it impossible for various reasons to concentrate a large number of troops for defence. By December 10, the enemy was driven within his lines at Savannah, the march of 300 miles was over, the siege began. . . . Destruction was a part of the march, especially as Lee's army drew its supplies of provisions from Georgia. . . . It became of the utmost importance to sever the railroad communications between the Gulf States and Richmond and to this Sherman gave his personal attention. The bridges and trestles were burned, the masonry of the culverts blown up. In the destruction of the iron rails mechanical skill vied with native ingenuity in doing the most effective work. . . . [The rails were heated, twisted and warped] so that they were useless except as old iron and, even as such, in unmanageable shape for working in a mill. About 265 miles of railroad were thus destroyed. . . . Stations and machine shops along the line were burned. Many thousand bales of cotton and a large number of cotton gins and presses were destroyed. At Milledgeville, Sherman reported, 'I burned the railroad buildings and the arsenals; the state-house and Governor's mansion I left unharmed.' . . . In the main, the General forbore destroying private property but, in nearly all his despatches after he had reached the sea, he gloated over the destruction along the line of his march, writing from Savannah: 'We have consumed the corn and fodder in the region of the country thirty miles on either side of a line from Atlanta to Savannah as also the sweet potatoes, cattle, hogs, sheep and poultry and have also carried away more

than 10,000 horses and mules as well as a countless number of their slaves. I estimate the damage done to the State of Georgia and its military resources at \$100,000,000; at least \$20,000,000 of which has enured to our advantage and the remainder is simple waste and destruction.' . . . Various orders given from time to time show that there was not only lawless foraging but that there was an unwarranted burning of buildings. A more serious charge against these men of the Western army is pillage. Sherman admitted the truth of it as did likewise General Cox. After the campaign, Sherman heard of jewelry being taken from women and was of the opinion that these depredations were committed by parties of foragers usually called 'bummers' . . . [a name by which Cox designated habitual struggles]. But the commander and his officers sincerely desired to restrain the soldiers within civilized usage. The lofty personal character of most of the men in high command and the severity of the punishment threatened for breaches of punishment are evidence to this. . . . [To this general characterization one exception—that of Kilpatrick—must be made.] His escapades were demoralizing to the army at the time, and have since tended to give it a bad name."—J. F. Rhodes, *History of the Civil War, 1863-1865*, pp. 403-407.

1864 (December: Tennessee).—**Battle of Nashville and destruction of Hood's army.**—After the battle of Franklin (see above: 1864 [November: Tennessee]) Hood went forward to Nashville, with his badly shaken army, and invested that place. Thomas was strongly fortified, and quietly took his time to make ready before striking his audacious antagonist, unmoved by repeated demands for an advance, from the war office, the president, and General Grant. "With all just confidence in Thomas' ability, the entire North insisted on instant action, and Grant finally ordered Thomas either to move upon Hood at once or else turn over the command to Schofield. Thomas quietly replied that he would cheerfully do the latter, if directed, but would not attack Hood until he was satisfied that the time was ripe. . . . But the enemy was devastating a considerable part of Tennessee and was forcing all the young men into their ranks; and every one was fearful of a repetition of Bragg's march to Ohio in 1862. Logan was finally ordered to Nashville to supplant Thomas. But before he could reach the ground, Thomas had struck his blow. His preparations had been two weeks before substantially completed. Small detachments were at Murfreesboro', Chattanooga, and along the railroad. This latter had been, however, interrupted by Hood for a number of days. A heavy storm of sleet and ice had made the country almost impassable and would render the operations of the attacking party uncertain. Thomas had made up his mind to wait for clearing weather. Finally came sunshine and with it Thomas' advance. Hood lay in his front, with Stewart on his left, [S. D.] Lee in the centre and Cheatham on the right, while a portion of Forrest's cavalry was operating out upon his left. He had some 44,000 men, but his check and heavy losses at Franklin had seriously impaired the 'morale' of his army as well as thinned his ranks. Hood could, how-

ever, not retreat. He was committed to a death-struggle with Thomas. It was his last chance as a soldier. The Union general had placed A. J. Smith on his right, the Fourth corps in the centre, and Schofield on the left. He advanced on Hood, bearing heavily with his right, while sharply demonstrating with his left. The position of the Confederate Army had placed A. J. Smith's corps obliquely to their general line of battle, an advantage not to be neglected. Smith pushed in, later supported by Schofield, and successively capturing the field-works erected by the enemy's main line and reserves, disastrously crushed Hood's left flank. Meanwhile . . . [A. J. Wood, in command of the Fourth corps,] was making all but equal headway against Hood's right, and the first day closed with remarkable success for the amount of loss sustained. Still this was not victory. Tomorrow might bring reverse. Hood's fight promised to be with clenched teeth. Hood seriously missed Forrest, whom he had detached on a raiding excursion and without whose cavalry his flanks were naked. Cheatham he moved during the night over from the right to sustain his left, which had proved the weaker wing. On the morning of the next day he lay entrenched upon the hills back of his former line, with either flank somewhat refused. Thomas sent Wilson with his cavalry to work his way unobserved around the extreme left flank thus thrown back. At 4 P. M. a general assault was made all along the line. Upon our left, Wood's advance did not meet with success. On the right, however, A. J. Smith's onset, concentrated at the salient of Hood's left centre, proved heavy enough to break down the Confederate defense. Sharply following up his successes, allowing no breathing time to the exultant troops, Smith pushed well home, and overcoming all resistance, drove the enemy in wild confusion from the field. Meanwhile Wilson's troopers, dismounted, fell upon the Confederate flank and rear and increased the wreck tenfold. This advantage again enabled Wood to make some headway, and with renewed joint effort the rout of the enemy became overwhelming. Almost all organization was lost in Hood's army as it fled across the country towards Franklin. Pursuit was promptly undertaken, but though seriously harassed, Hood saved himself beyond the Tennessee river with the remnants of his army. Thomas' losses were 3,000 men, Hood's were never officially given, but our trophies included 4,500 prisoners and 53 guns. Thomas had settled all adverse speculation upon his slowness in attacking Hood by the next to annihilation he wrought when he actually moved upon him. No army was so completely overthrown during our war."—T. A. Dodge, *Bird's-eye view of our Civil War, ch. 58*.—The battle of Nashville "was the last, as the battle of Mill Spring was the first, of the great victories of the southwest. In each, General Thomas was in chief command. The plan and execution of both were his. As they were the only battles for which he alone bore responsibility, his chief claim to generalship must rest upon them. Without going into a decided analysis, it is enough to say that, in each, he annihilated his opponent. . . . The impression that the enemy did not fight with spirit and determination at Nashville is not sustained by the facts. It is true, the loss of life was less than in many other battles not so persistently fought. This argues the greater skill on his part, in the planning and execution of the work, so as to produce decisive result with com-

paratively little bloodshed. The capture of over 10,000 prisoners,—nearly one-third the enemy's whole force,—with seventy-two guns, is, I think, unprecedented during the war of the Rebellion, in an open field fight, between nearly equal numbers, and where the enemy had command of more than one line of retreat. . . . [It is true, Thomas did not completely cut off Hood after the battle. He had but] a single line of pursuit, which the enemy had already desolated; he had at least two formidable streams to cross before reaching the Tennessee River. It was midwinter and the weather was freezing cold; his pursuing force was scarcely superior to that of the enemy in numbers, and his pontoniers were untrained and soon became benumbed in the icy streams. Besides that, his most promising plan for the capture of Hood's army came to nought, through causes entirely beyond his control. . . . [General Steedman who had been sent to occupy the South bank of the Tennessee was detained at Murfreesboro' for nearly forty-eight hours.] . . . On the 27th his whole force was across the river, within striking distance of Hood's place of crossing, but it was just too late. The main rebel army was already over, and the rear guard crossed that night and made good its escape. . . . Next to the surrender at Appomattox, the one blow under which the Rebellion reeled and tottered to its fall was that delivered by Thomas at Nashville. When that battle ended, but a single army remained to vex the peace of the Republic. The gigantic Colossus which had so long bestrode the land henceforth had but one foot left to stand upon; the other had been crushed to pieces."—H. Stone, *Major-General George Henry Thomas* (T. F. Dwight, ed., *Critical sketches of some of the Federal and Confederate commanders, Papers of the Military Historical Society of Massachusetts, v. 10, pp. 191, 192-193, 208*).—"This battle, in its conduct, immediate results, and remote effects, takes rank with the great battles of the world. Each distinct operation was a connected part of the whole, measured and adjusted in the mind of him, who not only planned the battle, but gave it unity and force by special instructions to his corps commanders before it occurred, and during its progress. By it one of the two great armies of the Confederacy was eliminated from the final problem, and with the total overthrow of that army, the very cause which it had so long and so gallantly sustained was lost. . . . General Grant thus referred to the battle of Nashville in his 'Report of the operations of the Armies of the United States from the date of my appointment to command': 'Before the battle of Nashville I grew very impatient, over, as it appeared to me, the unnecessary delay. . . . After urging upon General Thomas the necessity of immediately assuming the offensive, I started west to superintend matters there in person. Reaching Washington City I received General Thomas' despatch announcing his attack upon the enemy, and the result as far as the battle had progressed. I was delighted. All fears and apprehensions were dispelled. I am not yet satisfied but that General Thomas immediately upon the appearance of Hood before Nashville, and before he had time to fortify should have moved out with his whole force and given him battle, instead of waiting to remount his cavalry, which delayed him until the inclemency of the weather made it impracticable to attack earlier than he did. But his final defeat of Hood was so complete, that it will be accepted as a vindication of that distinguished officer's judgment.'"—T. B. Van Horne, *Life of Major-General George H. Thomas, pp. 336, 341*.

1864-1865 (December-January: North Carolina).—Capture of Fort Fisher.—"In the latter part of 1864 two ports only, Wilmington and Charleston, remained to the Confederates. . . . The northward march of Sherman would cut off Charleston, too, so that the Confederates would have to abandon it. The National government now desired to complete its work by capturing Fort Fisher, and thus finally shutting off the Confederacy from all communication with the foreign world. The accomplishment of this task was in no wise easy. . . . The army and navy co-operated in the attempts to reduce Fort Fisher. There were more than 50 men-of-war tossing on the waves before the lowering sea-front of the work. Six thousand five hundred men were in the military force. They were in command of General B. F. Butler, whom we saw last at New Orleans. The General's active and ingenious mind conceived a plan for destroying the fort without sacrificing a single Federal soldier. They procured an old gunboat, painted it white and otherwise disguised it, so as to look like a blockade runner, stored 250 tons of gunpowder in its hold with fuses penetrating every part, ran the craft in within 1,500 feet of the works and exploded it. Butler expected that the shock would demolish the seaward face of the fort altogether, and perhaps bury the guns under great masses of sand, but in this he was mistaken, for the heavy bastions were not in the least disturbed by the shock. . . . The navy then took its turn, and for some hours the heavy vessels of Admiral Porter's fleet poured so rapid and well aimed a fire upon the work, that the garrison were driven from their guns, and only the occasional report of a heavy cannon told that the fort was still tenanted. But secure in their heavy bomb-proofs, the garrison minded the storm of shells and solid shot no more than the well-housed farmer heeds a hail-storm. It was very clear that Fort Fisher could not be taken at long range. . . . The original plan had contemplated an assault as soon as the fire of the fleet should have silenced the guns of the fort, and in pursuance of this 700 men had been landed from the army transports. But the weather was too rough to permit of landing more troops that day, and the next morning General Butler concluded that Fort Fisher was impregnable, without his men already landed, and sailed away, greatly to the disgust of the navy. This was on the 25th of December, 1864. The chagrin of the whole North over the failure of the expedition was so great that it was speedily determined to renew the attempt. January 13th saw the new Federal force, this time under command of General A. H. Terry, landing on the shore of the sandy neck of land above the fort. . . . At early dawn of the 15th the attack was begun. The ships arranged in a great semicircle poured their fire upon the fort, dismantling guns, driving the garrison to the bomb-proofs, and mowing down the stockade. A line of sharpshooters, each carrying a shovel in one hand and a gun in the other, spring forward to within 175 yards of the fort and dig pits for their protection before the

Confederates can attack them. Then the sharpshooters and the navy occupy the attention of the enemy, while Curtis's brigade dashes forward and digs a trench within 500 yards of the fort. By this time too a party of 2,000 sailors and marines has been landed from the fleet. They are to storm the sea-wall of the fort while the army attacks its landward face. Suddenly the thunder of the naval artillery is stilled. There is a moment of silence, and then the shrill scream of the whistles rises from every steamer in the fleet. It is the signal for the assault. The sailors on the beach spring to their feet and dash forward at a rapid run; they fire no shot, for they carry no guns. Cutlasses and pistols, the blue-jackets' traditional weapons, are their only arms. Toward the other side of the fort came Terry's troops. . . . The fate of the naval column is quickly determined. Upon it is concentrated the fire of the heaviest Confederate batteries, Napoleon guns, Columbiads, and rifles shotted with grape and cannister. The blue-jackets, unable to reply to this murderous fire, and seeing their companions falling fast around them, waver, halt, and fall back to the beach, throwing themselves upon

the ground to escape the enemy's missiles. But though repulsed they have contributed largely to the capture of the fort. While the chief attention of Confederates has been directed toward them, the troops have been carrying all before them on the other front. Colonel Lamb turns from his direction of the defense against the naval column to see three Union flags waving over other portions of the work. . . . The Confederates were determined, even desperate. Long after the fort was virtually in the hands of its captors they stubbornly clung to a bomb-proof. Finally they retreated to Battery Buchanan and there maintained themselves stoutly until late at night when, all hope being at an end, they surrendered themselves, and the National victory was complete."—W. J. Abbott, *Battle-fields and victory*, ch. 15.
