Name of Plant: NIKKO KOKU Kogyo.K.K. Sirako Plant.

Location: 1319, Sirako, Yamato-mati, Kita-Agati-gun, Saitama-ken

17 April, 1946.

Subject; Application for the re-opening of the closed reparation plant.

To Saitama Military Government Team.

Dear Sir.

In answer to your notification on April 13th, we have to apologize to you, first of all, for the offence against current directives, which was committed recently in this plant.

And also we request your earliest permission for the re-opening of this plant, insomuch as you may know the said offence was not a whit the result of malicious intent on our part.

In fact, we have never had even the slightest notion of violating the maintenance order. And it is also true that we have made every effort to this day to meet your expectations, whenever we are required to correct the unsatisfactory conditions in this plant.

We must admit, however, there have been in this plant-- and they are still existing--some causes which were apt to nullify the perfect maintenance of machinery. And one of them is that we are seriously destitute of mechanical experts, which was occasioned by the resignation of the talented engineers and skilled mechanics after the war.

In consequence, most of workers in this plant are wanting in the thorough technical knowledge of handling machines. And this may be the chief reason why the same faults have been reiterated in maintenance, in spite of warnings foretold several times by the investigation officials.

The re-education of workers has been the imminent problem for us. And we are trying to overcome this difficult task by newly engaging ablest engineers as their instructors.

There is still another cause of imperfect maintenance in this plant. It is that the machines themselves are mostly imperfect owing to the hardest use by the unskilled workers during the wartime. Thus even among the Class 1 machinery there may be some which are not worthy of their classification, especially when we take into consideration that the inventory was made according to the mere reports of the foremen.

However, as for the following defects revealed by your investigation, we have instantly made them right.

a. The soiled machines have been cleaned up and the rusty machine-tools burnished.

b. Motors and other attachments which were cannibalized and diverted to the other machines for the sake of convenience, have been put back to their proper places.

#84

c. As we have aforesaid, there have been much discrepancies in the classification of machinery. Even among Class 1 machinery there are some which have already been devoid of essential parts when inventoried. But these machines will be repaired before long to the satisfactory condition. There are some of Class 11 machinery which were repaired perfectly and may be included in Class 1.

d. The production of Sewing-machines has been suspended. But we are really anxious of making the said machines, because the public demand for the hitherto authorized items, such as pots and pans, cigarett lighters, buildings' hardwares and accessories of railroad cars, have been drastically minimized from unavoidable circumstances. Thus in order to keep this plant in operation we have to depend on the manufacture of Sewing-machines. It is our earnest desire, therefore, that your permit of actual production would be granted as we have succeeded in experiments.

e. The Inventory numbers have been fixed to the inventoried items. But as for E. X. machinery numbers will be marked before long, as we are making their documents.

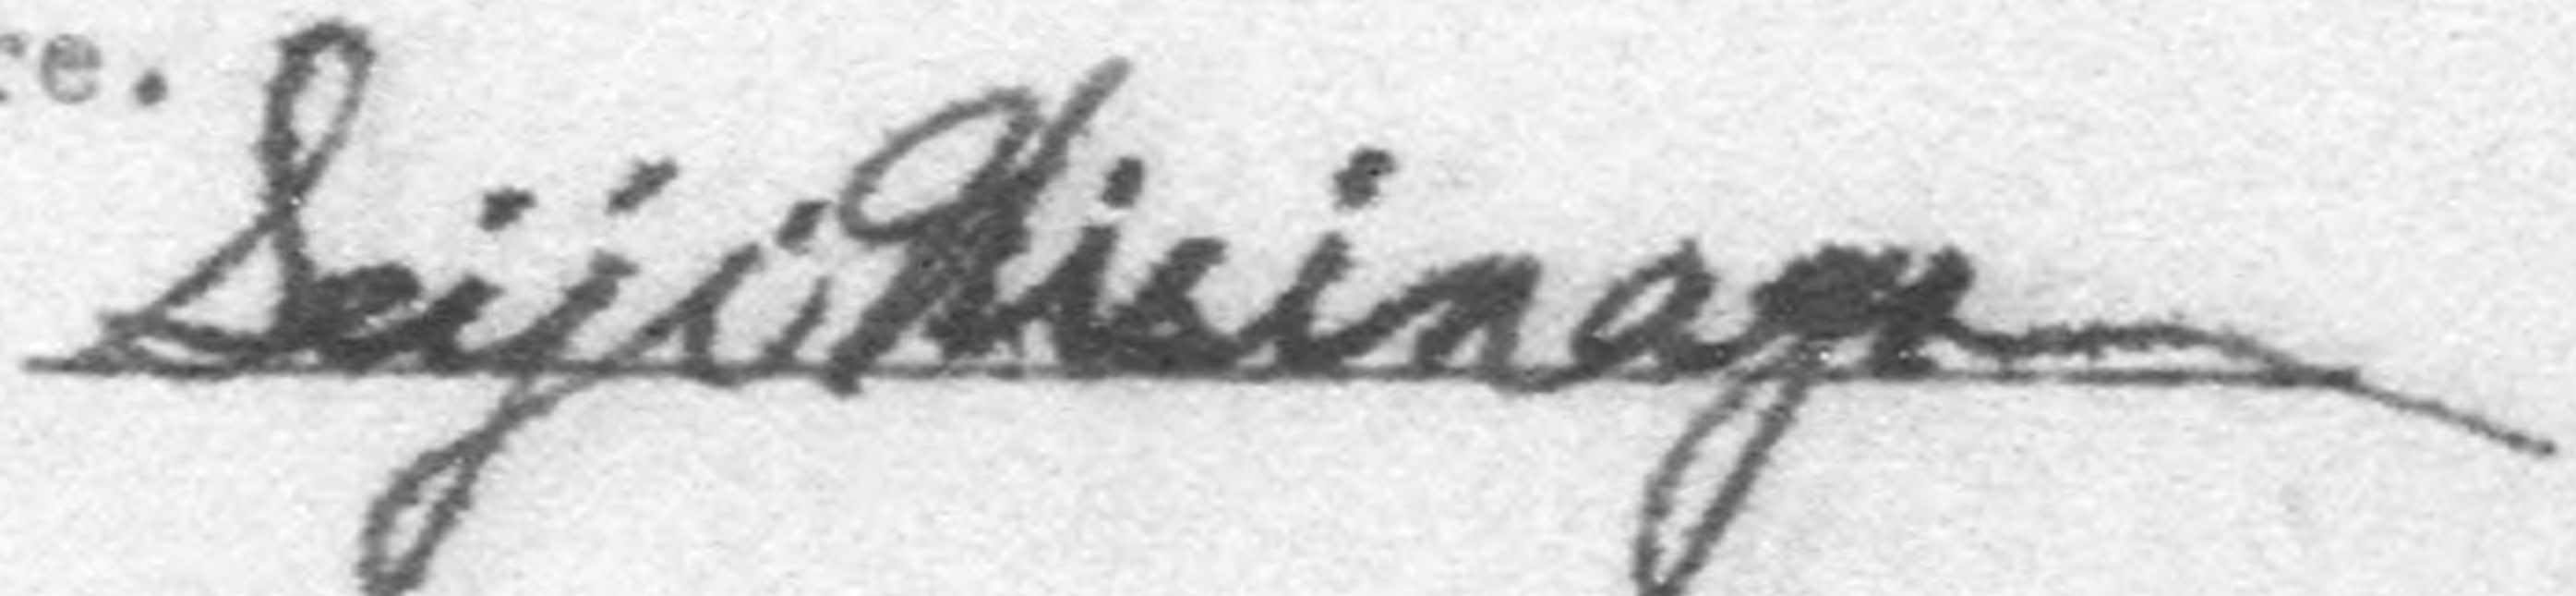

Wishing that you would grant to us a permit for the re-opening of this plant at the earliest opportunity,

Sincerely Yours.

Managing Director

Seiji Nisinaga.
