GETTING THE MOST FROM

AN ELECTRIC REFRIGERATOR

Place the refrigerator convenient to the outside door, the work cabinet, the sink, table, and dining room, but not too near the stove, or out in the sunshine says _____, in discussing how to get the most out of an electric refrigerator.
(name and title)

It is desirable, though not absolutely necessary to have the refrigerator on a separate circuit, and if possible the door should open away from the work space near it. The cabinet should stand from 2 to 3 inches out from the wall.

For ordinary operation it is recommended that the temperature control be set at not less than 40° F. or more than 45° F. or 50° F. When the temperature control has been set for quick freezing, it should be reset to the usual position when the freezing operation is completed, to avoid unnecessary consumption of electricity. The cooling unit should be defrosted regularly.

If you want to get the most out of the refrigerator, here are some good don'ts: Don't put hot foods into the refrigerator; don't crowd the shelves and hinder free air circulation; don't open the door unnecessarily; and don't store things in the refrigerator that do not need refrigerating such as potatoes, canned goods, and bananas.
