api.wikiwho.net

A service for mining changes and interactions from revisioned writing platforms.

WikiWho APIs

The APIs provide provenance and change information about the tokens a Wikipedia article consists of, for several languages. Apart from the source language edition they draw from, their specifications and usage are identical, as described below.

[WikiWho API EN](#)

[WikiWho API DE](#)

[WikiWho API EU](#)

[WikiWho API TR](#)

[WikiWho API ES](#)

Usage

For each article page, the API mirrors its current state on the Wikipedia. The API is based on the [WikiWho algorithm](#) (~95% acc.).

Currently, there is a limit of 2000 requests/day for unregistered users, and also a 60 requests/minute limit for all users.

Terminology used:

- "*Wikipedia*": A selected language version of Wikipedia. Available languages can be chosen from the top navigation bar.
- "*article (page)*": Any Wikipedia page in `namespace = 0`.
- "*(article) content*": The tokenized Wiki Markup text content of a (range of) revision(s) of an article page, not the front-end HTML (if you want that, you have to "untokenize" and appropriately parse it; the original order of tokens is retained – or take a look at the [WhoColor API](#)).
- "*token*"/"*tokenized*": The Wiki Markup text is split at (i) white spaces and (ii) certain special characters (special chars also act as tokens). E.g., tokens in "A [[house]], a boat." are "a", "[[", "house", "]]", ",", "a", "boat", "." I.e., all tokens are converted into lower-case and certain character combinations that have a specific function in Wiki Markup, such as

insights about reverts

partial reverts/undoing

why partial reverts matter

- Most revisions undoing smth. are not full reverts (~3.4:1 partial:full)
- Finding full reverts w/ "old school" identity reverts:
 - We miss ~6% of actual fully **reverting** revisions
 - 28.6% of revisions detected as fully **reverted** are actually partially reverted or not reverted at all

- Fun fact 1: 61.51% of all edits include some kind of removal or reinsertion of content
- Fun fact 2: in 14.62% of the revisions editors correct their own edits

Wikipedia:Manual of Style/Words to watch

1 Words that may introduce bias [\[edit source \]](#)

1.1 Puffery [\[edit source \]](#)

See also: *Wikipedia:Neutral point of view*

Words to watch: **legendary, great, acclaimed, iconic, visionary, outstanding, leading, celebrated, award-winning, landmark, cutting-edge, innovative, extraordinary, brilliant, hit, famous, renowned, remarkable, prestigious, world-class, respected, notable, virtuoso, honorable, awesome, unique, ...**

Shortcuts

[MOS:PUFF](#)
[WP:PEA](#)
[WP:PEACOCK](#)
[WP:FLOWERY](#)

Words such as these are often used without attribution to **promote the subject of an article**, while neither imparting nor plainly summarizing verifiable information. They are known as "peacock terms" by Wikipedia contributors.^[2] Instead of making unprovable proclamations about a subject's importance, use facts and attribution to demonstrate that importance.

- **Peacock example:**

- [Bob Dylan](#) is the defining figure of the 1960s counterculture and a brilliant songwriter.

- **Just the facts:**

- Dylan was included in *Time's 100: The Most Important People of the Century*, in which he was called "master poet, caustic social critic and intrepid, guiding spirit of the counterculture generation".^[refs 1] By the mid-1970s, his songs had been covered by hundreds of other artists.^[refs 2]

Articles suffering from such language should be rewritten to correct the problem or may be tagged with an appropriate template^[2] if an editor is unsure how best to correct them.

Puffery is an example of positively **loaded language**; negatively loaded language should be avoided just as much. People responsible for "public spending" (the neutral term) can be loaded both ways, as "the tax-and-spend politicians borrowing off the backs of our grandchildren" or "the

The screenshot shows the Wikipedia article for the 2016 UK EU membership referendum. The article text includes: "The United Kingdom European Union membership referendum, also known as the EU referendum and the Brexit referendum, took place on 23 June 2016 in the United Kingdom (UK) and Gibraltar to gauge support for the country either remaining a member of, or leaving, the European Union (EU). The referendum resulted in 51.9% of voters voting in favour of leaving the EU. The UK government initiated the official EU withdrawal process on 29 March 2017; this put the country on course to complete the withdrawal process by 30 March 2019 (unless all parties to the negotiations agree to do otherwise). Membership of the EU and its predecessors has long been a topic of debate in the United Kingdom. The country joined what were then the three European Communities, principally the European Economic Community (EEC, or "Common Market"), in 1973. A referendum on continued membership of the European Communities was held in 1975, and it was approved by 67% of voters. In 2015, in accordance with a Conservative Party manifesto commitment, the legal basis for a referendum on EU membership was established by the UK Parliament through the European Union (Member States) Act 2015." A table titled "United Kingdom European Union membership referendum" shows the results: Leave (17,410,742, 51.89%), Remain (16,141,241, 48.11%), Valid votes (33,551,983, 99.92%), Invalid or blank votes (25,359, 0.08%), Total votes (33,577,342, 100.00%), and Registered voters/turnout (46,500,001, 72.21%).

Fußball-Weltmeisterschaft 2018

Dieser Artikel beschreibt ein **aktuelles Ereignis**. Die Informationen können sich deshalb rasch ändern.

Die Endrunde der **Fußball-Weltmeisterschaft 2018** (**russisch** Чемпионат мира по футболу 2018, **englisch** 2018 FIFA World Cup) ist die **21. Austragung des bedeutendsten Turniers für Fußball-Nationalmannschaften und findet seit dem 14. Juni bis zum 15. Juli 2018^[1] in Russland statt. Als Generalprobe diente der FIFA-Konföderationen-Pokal 2017 in Russland.**

Vergabe [Bearbeiten | Quelltext bearbeiten]

→ *Hauptartikel: Vergabe der Fußball-Weltmeisterschaften 2018 und 2022*

Das Exekutivkomitee der FIFA^[2] hatte am 19. Dezember 2008 während seiner Sitzung in Tokio beschlossen, die beiden Weltmeisterschaften 2018 und 2022 gleichzeitig zu vergeben. Die Frist für die Mitgliedsverbände zur Bekundung ihres Interesses an der Ausrichtung endete am 2. Februar 2009. Für die beiden Turniere gingen elf Bewerbungen aus 13 Ländern ein. Dem 2007 modifizierten Rotationsverfahren entsprechend waren für das Turnier 2018 die Kontinentalverbände, in denen die beiden vorangehenden Weltmeisterschaften stattgefunden haben (Afrika mit Südafrika 2010 und Südamerika mit Brasilien 2014), von der Bewerbung ausgeschlossen. Bis zur Vergabe zogen sich alle nicht-europäischen Bewerber für die Weltmeisterschaft 2018 zurück und konzentrierten sich auf die Weltmeisterschaft 2022.

Den Gastgeber der WM 2018 gab die FIFA am 2. Dezember 2010 in Zürich bekannt. Russland setzte sich gegen die Gemeinschaftsbewerbungen von Spanien und Portugal, der Niederlande und Belgien sowie die Bewerbung von England durch. Bei der Wahl war eine absolute Mehrheit von zwölf Stimmen erforderlich. Bis diese erreicht wurde, schied pro Runde der Bewerber mit den wenigsten Stimmen aus.^[3]

Hand, foot, and mouth disease

How did the article viewer work for you?

the reported hair loss is anecdotal, however, it is temporary and hair growth resumes without treatment.

Minor complications due to symptoms can occur such as dehydration, due to mouth sores causing discomfort with intake of foods and fluid.^[25]

Epidemiology

Hand, foot and mouth disease most commonly occurs in children under the age of 10.^{[4][17]} It tends to occur in outbreaks during the spring, summer, and autumn seasons.^[6] This is believed to be due to heat and humidity improving spread.^[20] HFMD is more common in rural areas than urban areas; however, socioeconomic status and hygiene levels need to be considered.^[26] Poor hygiene is a risk factor for HFMD.^[27]

Outbreaks have occurred in China, Japan, Hong Kong, the Republic of Korea, Malaysia, Singapore, Thailand, Taiwan and Vietnam.^[20] HFMD most commonly affects young children under the age of 10 and more often under the age of 5, but can also affect adults with varying symptoms.^[18]

Since 1997 there have been 71 large enterovirus outbreaks reported, mostly in East and South East Asia, primarily affecting children.^[20] From the years 2008 to 2014, more than 1 million HFMD cases have been reported in China each year.^[28]

Outbreaks

• In 1998, there was an outbreak in Taiwan affecting mainly children.^[29] There were 405 severe complications and 78 children

Forschungspraktikum Computational Social Science

This web service serves to measure the influence of a user in Wikipedia. Many foreign APIs were used. Further information can be found in the Github documentation. This project was a part of a research internship in the winter term 2017/18 at the University of Koblenz-Landau in cooperation with the GESIS - Leibniz Institute for the Social Sciences. If you have any questions please do not hesitate to contact us.

Articles with the highest Conflict Rate

Conflict rate is compute as follows :

For a given article: A and editor: X, if X added/deleted a token and another editor B del/add the same token after X and X add/del it after B again, it will be count as a conflict.

For computing the conflict score, the following code is used

t1 = difference between add/del1 by A and del/add2 by B in seconds

t2 = difference between add/del2 by B and del/add3 by A in seconds

$$c_1 = \frac{\lg 3600}{\lg(t_1+2.0)}$$

$$c_2 = \frac{\lg 3600}{\lg(t_2+2.0)}$$

S = Sum of all c1 and c2 over a token

A = Actions of A in this token

$$\text{conflictscore} = \frac{S}{A}$$

this returns a value between 0 and 7.5, and the value diverges to 0, the longer the time between add / del, so changes for under 1 hour are weighted stronger.
