for us. It seems clear, however, that the Goths (both Ostrogoths and Visigoths), with all their kindred tribes, poured themselves upon Thrace and Macedonia in vaster numbers than ever. The previous movements of these nations had been probably but robber-inroads: this was a national immigration. . . . A few years earlier, so vast an irruption must inevitably have ruined the Roman Empire. But now, under Claudius, the army, once more subjected to strict discipline, had regained, or was rapidly regaining, its tone, and the Gothic multitudes, vainly precipitating themselves against it, by the very vastness of their unwieldy masses, hastened their own destruction. A great battle was fought at Naissus (Nisch, in Servia), a battle which was not a complete victory, which according to one authority was even a defeat for the Romans, but since the barbarians as an immediate consequence of it lost 50,000 men, their doubtful victory may fairly be counted as a defeat. In the next campaign they were shut up in the intricate passes of the Balkans by the Roman cavalry. Under the pressure of famine they killed and ate the cattle that drew their waggons, so parting with their last chance of return to their northern homes. . . . At length the remnants of the huge host seem to have disbanded, some to have entered the service of their conqueror as 'foederati,' and many to have remained as hired labourers to plough the fields which they had once hoped to conquer. . . . The vast number of unburied corpses bred a pestilence, to which the Emperor fell a victim. His successor Aurelian, the conqueror of Zenobia . . . made peace wisely as well as war bravely, and, prudently determining on the final abandonment of the Roman province of Dacia, he conceded to the Goths the undisturbed possession of that region [270], on condition of their not crossing the Danube to molest Moesia. [See also RUMANIA: B.C. 5th century-A.D. 1241.] Translating these terms into the language of modern geography, we may say, roughly, that the repose of Servia and Bulgaria was guaranteed by the final separation from the Roman Empire of Hungary, Transylvania, Moldavia, and Wallachia, which became from this time forward the acknowledged home of the Gothic nation. . . . For about a century (from 270 to 365) the Goths appear to have been with little exception at peace with Rome."—T. Hodgkin, *Italy and her invaders*, introduction, v. 1, ch. 3.

4th-5th centuries.—Migrations of the Goths. See EUROPE: Introduction to historic period: Migrations; also Map showing Barbaric migrations.

341-381.—Conversion to Christianity.—The introduction of Christianity among the Goths seems to have begun while they were yet on the northern side of the Danube and the Black sea. It first resulted, no doubt, from the influence of many Christian captives who were swept from their homes in Mæsia, Greece, and Asia Minor, and carried away to spend their lives in slavery among the barbarians. To these were probably added a considerable number of Christian refugees from Roman persecution, before the period of Constantine. But it was not until the time of Ulfilas, the great apostle and bishop of the Goths (supposed to have held the office of bishop among them from about 341 to 381), that the development and organization of Christianity in the Gothic nation assumed importance. Ulfilas is represented to have been a descendant of one of the Christian captives alluded to above. Either as an ambassador or as a hostage, he seems to have passed some years in his early manhood at Constantinople. There he acquired a familiar

knowledge of the Greek and Latin languages, and became fitted for his great work—the reducing of the Gothic language to a written form, with an alphabet partly invented, partly adapted from the Greek, and the translation of the Bible into that tongue. The early labors of Ulfilas among his countrymen beyond the Danube were interrupted by an outbreak of persecution, which drove him, with a considerable body of Christian Goths, to seek shelter within the Roman empire. They were permitted to settle in Mœsia, at the foot of the Balkans, round about Nicopolis, and near the site of modern Tirnova. There they acquired the name of the Gothi Minores, or Lesser Goths. From this Gothic settlement of Ulfilas in Mœsia the alphabet and written language to which he gave form have been called Mæso-Gothic. The Bible of Ulfilas—the first missionary translation of the Scriptures—with the personal labors of the apostle and his disciples, were powerfully influential, without doubt, in the Christianizing of the whole body of the Goths, and of their German neighbors, likewise. But Ulfilas had imbibed the doctrines of Arianism, or of Semi-Arianism, at Constantinople, and he communicated that heresy (as it was branded by the Athanasian triumph) to all the barbarian world within the range of Gothic influence. It followed that, when the kingdoms of the Goths, the Vandals, and the Burgundians were established in the west, they had to contend with the hostility of the orthodox or Catholic western church, and were undermined by it. That hostility had much to do with the breaking down of those states and with the better success of the orthodox Franks.—C. A. A. Scott, *Ulfilas, Apostle of the Goths*.—See also CHRISTIANITY: 238-400; FRANKS: 481-511.

**350-375 (Ostrogoths).—Empire of Ermanaric or Hermanric.**—“Ermanaric, who seems to have been chosen king about the year 350, was a great warrior, like many of his predecessors; but his policy, and the objects for which he fought, were markedly different from theirs. . . . Ermanaric made no attempt to invade the provinces of the Roman Empire; but he resolved to make his Ostrogothic kingdom the centre of a great empire of his own. The seat of his kingdom was, as tradition tells us, on the banks of the Dnieper [and it extended to the Baltic]. . . . A Roman historian compares Ermanaric to Alexander the Great; and many ages afterwards his fame survived in the poetic traditions of Germans, Norsemen and Anglo-Saxons. . . . Ermanaric was the first king since Ostrogotha who belonged to the Amaling family. . . . Henceforward the kingship of the Ostrogoths became hereditary among the descendants of Ermanaric. During this time the Visigoths appear to have been practically independent, divided into separate tribes ruled by their own ‘judges’ or chieftains; but . . . it is probable that in theory they acknowledged the supremacy of the Ostrogothic king. . . . Ermanaric died in the year 375, and the Ostrogoths were subdued by the Hunnish king Balamber. For a whole century they remained subject to the Huns.” One section of the Ostrogothic nation escaped from the Hunnish conquest and joined the Visigoths, who found a refuge on the Roman side of the Danube. The bulk of the nation bore the yoke until the death of the great Hun king, Attila, in 453, when the strife between his sons gave them an opportunity to throw it off.—H. Bradley, *Story of the Goths*, ch. 5.—“The forecast of European history which then [during the reign of Ermanaric] seemed probable would have been that a great Teutonic Empire, stretching from the Danube to the Don, would

take the place which the colossal Slav Empire now holds in the map of Europe, and would be ready, as a civilised and Christianised power, to step into the place of Eastern Rome when, in the fullness of centuries, the sceptre should drop from the nerveless hands of the Cæsars of Byzantium.”

—T. Hodgkin, *Italy and her invaders*, bk. 4, ch. 1.

**376 (Visigoths).—Admission into the Roman empire.**—“Let us suppose that we have arrived at the year (364) when the feeble and timid Valens was placed on the Eastern throne by his brother Valentinian. At that time, Ulfilas would be in the fifty-third year of his age and the twenty-third of his episcopate. Hermanric, king of the Ostrogoths, a centenarian and more, was still the most important figure in the loosely welded Gothic confederacy. His special royalty may possibly have extended over Northern Hungary, Lithuania, and Southern Russia. The ‘torpid’ Gepidæ, dwelt to the north of him, to the south and west the Visigoths, whose settlements may perhaps have occupied the modern countries of Roumania, Transylvania and Southern Hungary. The two great nations, the Ostrogoths and Visigoths, were known at this time to the Romans, perhaps among themselves also, by the respective names of the Gruthungi and Thervingi, but it will be more convenient to disregard these appellations and speak of them by the names which they made conspicuous in later history.”—H. Hodgkin, *Italy and her invaders*, introduction, ch. 3.—This was the situation of Gothia, or the Gothic empire of central Europe, when the Huns made their appearance on the scene. “An empire, formerly powerful, the first monarchy of the Huns, had been overthrown by the Siempi, at a distance of 500 leagues from the Roman frontier, and near to that of China, in the first century of the Christian era. . . . The entire nation of the Huns, abandoning to the Siempi its ancient pastures bordering on China, had traversed the whole north of Asia by a march of 1,300 leagues. This immense horde, swelled by all the conquered nations whom it carried along in its passage, bore down on the plains of the Alans, and defeated them on the banks of the Tanais in a great battle. It received into its body a part of the vanquished tribe, accompanied by which it continued to advance towards the West; while other Alans, too haughty to renounce their independence, had retreated, some into Germany, whence we shall see them afterwards pass into Gaul; others into the Caucasian mountains, where they preserve their name to this day. The Goths, who bordered on the Alans, had fertilised by their labours the rich plains which lie to the north of the Danube and of the Black Sea. More civilised than any of the kindred Germanic tribes, they began to make rapid progress in the social sciences. . . . This comparatively fortunate state of things was suddenly interrupted by the appearance of the Huns,—the unlooked-for arrival of that savage nation, which, from the moment it crossed the Borysthenes, or the Dnieper, began to burn their villages and their crops; to massacre, without pity, men, women, and children; to devastate and destroy whatever came within the reach of a Scythian horseman. . . . The great Hermanric, whose kingdom extended from the Baltic to the Black Sea, would not have abandoned his sceptre to the Huns without a struggle; but at this very time he was murdered by a domestic enemy. The nations he had subjugated prepared on every side for rebellion. The Ostrogoths, after a vain resistance, broke their alliance with the Visigoths; while the latter, like an affrighted flock of sheep,

trooping together from all parts of their vast territory to the right bank of the Danube, refused to combat those superhuman beings by whom they were pursued. They stretched out their supplicating hands to the Romans on the other bank, entreating that they might be permitted to seek a refuge from the butchery which threatened them, in those wilds of Mœsia and Thrace which were almost valueless to the empire." Their prayer was granted by the Emperor Valens, on the condition that they surrender their arms and that the sons of their chief men be given as hostages to the Romans. The great Visigothic nation was then (376) transported across the Danube to the Mœsian shore—200,000 warriors in number, besides children and women and slaves in proportion. But the Roman officers charged with the reception of the Goths were so busy in plundering the goods and outraging the daughters and wives of their guests that they neglected to secure the arms of the grim warriors of the migration. Whence great calamities ensued.—J. C. L. de Sismondi, *Fall of the Roman empire*, v. 1, ch. 3, 5.

378 (Visigoths).—Defeat and destruction of Valens.—When the Visigothic nation was permitted to cross the Danube, 376, to escape from the Huns, and was admitted into Lower Mœsia, nothing seems to have been left undone that would exasperate and make enemies of these unwelcome colonists. Every possible extortion and outrage was practised upon them. To buy food, they were driven to part, first, with their slaves, then with their household goods, and finally with their children, whom they sold. In despair, at last, they showed signs of revolt, and the fatuous Roman commander precipitated it by a murderous outrage at Marcianople (modern Shumla). In a battle which soon followed near that town, the Romans were disastrously beaten. The Visigoths were now joined by a large body of Ostrogoths, who passed the Danube without resistance, and received into their ranks, moreover, a considerable force of Gothic soldiers who had long been in the service of the empire. The open country of Mœsia and Thrace was now fully exposed to them (the fortified cities they could not reduce), and they devastated it for a time without restraint. But Valens, the emperor in the east, and Gratian in the west, exerted themselves in co-operation to gather forces against them, and for two years there was a doubtful struggle carried on. The most serious battle, that of The Willows (Ad Salices), fought in the region now called the Dobrudscha, was a victory to neither side. On the whole the Romans appear to have had some advantage in these campaigns, and to have narrowed the range of the Gothic depredations. But the host of the barbarians was continually increased by fresh reinforcements from beyond the Danube. Even their own ferocious enemies, Huns and Alans, were permitted to join their standard. Yet, in face of this fact, the folly and jealousy of the Emperor Valens led him to stake all on the chances of a battle which he made haste to rush into, when he learned that his nephew Gratian was marching to his assistance from the west. He coveted the sole honors of a victory; but death and infamy for himself and an overwhelming calamity to the empire were what he achieved. The battle was fought near Adrianople, on the 9th day of August, 378. Two-thirds of the Roman army perished on the awful field, and the body of the emperor was never found.—T. Hodgkin, *Italy and her invaders*, bk. 1, ch. 1.—See also ROME; Empire: 363-379.

Also in: E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 26.—H. Bradley, *Story of the Goths*, ch. 8.

379-382.—Settlement of the Goths by Theodosius, in Mœsia and Thrace.—"The forces of the East were nearly annihilated at the terrible battle of Adrianople: more than 60,000 Roman soldiers perished in the fight or in the pursuit; and the time was long past when such a loss could have been easily repaired by fresh levies. Nevertheless, even after this frightful massacre, the walls of Adrianople still opposed an unconquerable resistance to the barbarians. Valour may supply the place of military science in the open field, but civilised nations recover all the advantages of the art of war in the attack or defence of fortified towns. . . . The Goths, leaving Adrianople in their rear, advanced, ravaging all around them, to the foot of the walls of Constantinople; and, after some unimportant skirmishes, returned westward through Macedonia, Epirus and Dalmatia. From the Danube to the Adriatic, their passage was marked by conflagration and blood. Whilst the European provinces of the Greek empire sunk under these calamities, the Asiatic provinces took a horrible vengeance on the authors of them." The Gothic youths who had been required as hostages when the nation crossed the Danube, and those who were afterwards sold by their starving parents, were now gathered together in different cities of the Asiatic provinces and massacred in cold blood, at a given signal, on the same day and hour. By this atrocious act, all possible reconciliation with the Goths might well seem to be destroyed. The prospect was discouraging enough to the new emperor who now ascended the vacant throne of Valens (379)—the soldier Theodosius, son of Theodosius who delivered Britain from the Scots. Chosen by the Emperor Gratian to be his colleague and Emperor of the East, Theodosius undertook a most formidable task. "The abandonment of the Danube had opened the entrance of the empire, not only to the Goths, but to all the tribes of Germany and Scythia. . . . The blood of the young Goths which had been shed in Asia was daily avenged with interest over all that remained of Mœsian, Thrasian, Dalmatian, or Grecian race. It was more particularly during these four years of extermination that the Goths acquired the fatal celebrity attached to their name, which is still that of the destroyers of civilisation. Theodosius began by strengthening the fortified cities, recruiting the garrisons, and exercising his soldiers in small engagements whenever he felt assured of success; he then waited to take advantage of circumstances; he sought to divide his enemies by intrigue, and, above all, strenuously disavowed the rapacity of the ministers of Valens, or the cruelty of Julius; he took every occasion of declaring his attachment and esteem for the Gothic people, and at length succeeded in persuading them that his friendship was sincere. . . . The very victories of the Goths, their pride, their intemperance, at length impaired their energy. Fritigern, who, in the most difficult moments, had led them on with so much ability, was dead; the jealousies of independent tribes were rekindled. . . . It was by a series of treaties, with as many independent chieftains, that the nation was at length induced to lay down its arms: the last of these treaties was concluded on the 30th of October, 382. It restored peace to the Eastern empire, six years after the Goths crossed the Danube. This formidable nation was thus finally established within the boundary of the empire

of the East. The vast regions they had ravaged were abandoned to them, if not in absolute sovereignty, at least on terms little at variance with their independence. The Goths settled in the bosom of the empire had no kings; their hereditary chiefs were consulted under the name of judges, but their power was unchanged. . . . The Goths gave a vague sort of recognition to the sovereignty of the Roman emperor; but they submitted neither to his laws, his magistrates, nor his taxes. They engaged to maintain 40,000 men for the service of Theodosius; but they were to remain a distinct army. . . . It was, probably, at this period that their apostle, bishop Ulphilas, who had translated the Gospels into their tongue, invented the Mæso-Gothic character, which bears the name of their new abode."—J. C. L. de Sismondi, *Fall of the Roman empire*, v. 1, ch. 5.—See also BARBARIAN INVASIONS: 4th century.

ALSO IN: E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 26.

apparently south of what is now termed the Sulina mouth of that river."—T. Hodgkin, *Italy and her invaders*, bk. 1, ch. 4.—"At this time [395] Alaric, partly from disgust at not receiving all the preferment which he expected, and partly in the hope of compelling the government of the Eastern Empire to agree to his terms, quitted the imperial service and retired towards the frontiers, where he assembled a force sufficiently large to enable him to act independently of all authority. Availing himself of the disputes between the ministers of the two emperors, and perhaps instigated by Rufinus or Stilicho to aid their intrigues, he established himself in the provinces to the south of the Danube. In the year 395 he advanced to the walls of Constantinople; but the movement was evidently a feint. . . . After this demonstration, Alaric marched into Thrace and Macedonia, and extended his ravages into Thessaly. . . . When the Goth found the northern provinces exhausted, he resolved to invade Greece

ALARIC THE GOTH AS CONQUEROR IN ATHENS

(From painting by L. Thiersch)

395.—Alaric's invasion of Greece.—"The death of Theodosius [395] threw the administration of the Eastern Empire into the hands of Rufinus, the minister of Arcadius; and that of the Western into those of Stilicho, the guardian of Honorius. The discordant elements which composed the Roman empire began to reveal all their incongruities under these two ministers. . . . The two ministers hated one another with all the violence of aspiring ambition."—G. Finlay, *Greece under the Romans*, ch. 2, sect. 8.—"The animosity existing between Stilicho and the successive ministers of the Eastern Emperor (an animosity which does not necessarily imply any fault on the part of the former) was one most potent cause of the downfall of the Western Empire. . . . Alaric (the all-ruler) surnamed Baltha (the bold) was the Visigothic chieftain whose genius taught him the means of turning this estrangement between the two Empires to the best account. He was probably born about 360. His birth-place was the island Peuce, in the Delta of the Danube,

and Peloponnesus, which had long enjoyed profound tranquillity. . . . Thermopylæ was left unguarded, and Alaric entered Greece without encountering any resistance. The ravages committed by Alaric's army have been described in fearful terms; villages and towns were burnt, the men were murdered, and the women and children carried away to be sold as slaves by the Goths. . . . The walls of Thebes had been rebuilt, and it was in such a state of defence that Alaric could not venture to besiege it, but hurried forward to Athens. He concluded a treaty with the civil and military authorities, which enabled him to enter that city without opposition. . . . Athens evidently owed its good treatment to the condition of its population, and perhaps to the strength of its walls, which imposed some respect on the Goths; for the rest of Attica did not escape the usual fate of the districts through which the barbarians marched. The town of Eleusis, and the great temple of Ceres, were plundered and then destroyed. . . . Alaric marched unopposed

into the Peloponnesus, and, in a short time, captured almost every city in it without meeting with any resistance. Corinth, Argos, and Sparta were all plundered by the Goths." Alaric wintered in the Peloponnesus; in the following spring he was attacked, not only by the forces of the Eastern Empire, whose subjects he had outraged, but by Stilicho, the energetic minister of the Roman West. Stilicho, in a vigorous campaign, drove the Goths into the mountains on the borders of Elis and Arcadia; but they escaped and reached Epirus, with their plunder (see **ROME: Empire: 396-398**). "The truth appears to be that Alaric availed himself so ably of the jealousy with which the court of Constantinople viewed the proceedings of Stilicho, as to negotiate a treaty, by which he was received into the Roman service, and that he really entered Epirus as a general of Arcadius. . . . He obtained the appointment of Commander-in-chief of the imperial forces in Eastern Illyricum, which he held for four years. During this time he prepared his troops to seek his fortune in the Western Empire."—G. Finlay, *Greece under the Romans, ch. 2, sect. 8*.—"The birth of Alaric, the glory of his past exploits, and the confidence in his future designs, insensibly united the body of the nation under his victorious standard; and, with the unanimous consent of the barbarian chieftains, the Master-general of Illyricum was elevated, according to ancient custom, on a shield, and solemnly proclaimed king of the Visigoths."—E. Gibbon, *History of the decline and fall of the Roman empire, ch. 30*.—See also **ATHENS: 395**; **BARBARIAN INVASIONS: 395-408**; **ROME: Empire: 394-395**.

**400.**—Failure of Gainas at Constantinople.—His defeat and death. See **ROME: Empire: 400-518**.

**400-403 (Visigoths).**—Alaric's first invasion of Italy.—After Alaric had become a commissioned general of the Eastern Empire and had been placed in command of the great præfecture of Eastern Illyricum, he "remained quiet for three years, arming and drilling his followers, and waiting for the opportunity to make a bold stroke for a wider and more secure dominion. In the autumn of the year 400, knowing that Stilicho was absent on a campaign in Gaul, Alaric entered Italy. For about a year and a half the Goths ranged almost unresisted over the northern part of the peninsula. The emperor, whose court was then at Milan, made preparations for taking refuge in Gaul; and the walls of Rome were hurriedly repaired in expectation of an attack. On the Easter Sunday of the year 402 (March 10), the camp of Alaric, near Pollentia, was surprised by Stilicho, who rightly guessed that the Goths would be engaged in worship, and would not imagine their Roman fellow-Christians less observant of the sacred day than themselves. Though unprepared for battle, the barbarians made a desperate stand, but at last they were beaten. . . . Alaric was able to retreat in good order, and he soon after crossed the Po with the intention of marching against Rome. However, his troops began to desert in large numbers, and he had to change his purpose. In the first place he thought of invading Gaul, but Stilicho overtook him and defeated him heavily at Verona [403]. Alaric himself narrowly escaped capture by the swiftness of his horse. Stilicho, however, was not very anxious for the destruction of Alaric, as he thought he might some day find him a convenient tool in his quarrels with the ministers of Arcadius [the Emperor of the East]. So he offered Alaric a handsome bribe to go away from Italy [back to

Illyria]."—H. Bradley, *Story of the Goths, ch. 10*.—See also **ROME: Empire: 404-408**.

**408-410 (Visigoths).**—Alaric's three sieges and sack of Rome.—His death. See **ROME: Empire: 408-410**; **BARBARIAN INVASIONS: 408-410**.

**410-419 (Visigoths).**—Founding of the kingdom of Toulouse.—On the death of Alaric (410), his brother-in-law, Ataulphus, or Ataulfus, was chosen king by the wandering Visigothic nation, and the new king succeeded in negotiating a treaty of peace with the court at Ravenna. As the result of it, the Goths moved northwards and, at the beginning of the year 412, they passed out of Italy into Gaul. A number of usurpers had risen in the western provinces, during the five years since 407, encouraged by the disorders of the time, and Ataulphus accepted a commission from Honorius to put them down and to restore the imperial authority in southern Gaul. The commission was faithfully executed in one of its parts; but the authority which the Gothic king established was, rather, his own, than that of the imperial puppet at Ravenna. Before the end of 413, he was master of most of the Gallic region on the Mediterranean (though Marseilles resisted him), and westward to the Atlantic. Then, at Narbonne, he married Galla Placidia, sister of Honorius, who had been a prisoner in the camp of the Goths for four years, but who was gallantly wooed, it would seem, and gently and truly won, by her Gothic lover. Apparently still commissioned by the Roman emperor, though half at war with him, and though his marriage with Placidia was haughtily forbidden and unrecognized, Ataulphus next carried his arms into Spain, already ravaged by Vandals, Alans and Suevic bands. But there he was cut off in the midst of his conquest, by assassination, in August, 415. The Goths, however, pursued their career under another valiant king, Wallia, who conquered the whole of Spain and meditated the invasion of Africa; but was persuaded to give up both conquests and prospects to Honorius, in exchange for a dominion which embraced the fairest portions of Gaul. "His victorious Goths, forty-three years after they had passed the Danube, were established, according to the faith of treaties, in the possession of the second Aquitaine, a maritime province between the Garonne and the Loire, under the civil and ecclesiastical jurisdiction of Bordeaux. . . . The Gothic limits were enlarged by the additional gift of some neighboring dioceses; and the successors of Alaric fixed their royal residence at Toulouse, which included five populous quarters, or cities, within the spacious circuit of its walls. . . . The Gothic limits contained the territories of seven cities—namely; those of Bordeaux, Périgueux, Angoulême, Agen, Saintes, Poitiers, and Toulouse. Hence the district obtained the name of Septimania."—E. Gibbon, *History of the decline and fall of the Roman empire, ch. 31 (with note by Dr. W. Smith)*.—It was at the end of the year 418, that the Goths settled themselves in their new kingdom of Toulouse. The next year, Wallia died, and was succeeded by Theodoric, a valorous soldier of the race of the Balthings, who played a considerable part in the history of the next thirty years.—H. Bradley, *Story of the Goths, ch. 11-12*.

ALSO IN: T. Hodgkin, *Italy and her invaders, v. 1, bk. 1, ch. 8*.

**419-451 (Visigoths).**—Kingdom of Toulouse.—"By the peace which their king Wallia con-

cluded with Honorius (416) after the restoration of Placidia, they [the Visigoths] had obtained legal possession of the district called Aquitania Secunda, together with the territory round Toulouse, all of which allotment went by the name of Septimania or Gothia. For ten years (419-429) there had been firm peace between Visigoths and Romans; then, for ten years more (429-439), fierce and almost continued war, Theodoric, king of the Visigoths, endeavouring to take Arles and Narbonne; Aetius and his subordinate Litorius striving to take the Gothic capital of Toulouse, and all but succeeding. And in these wars Aetius had availed himself of his long-standing friendship with the Huns to enlist them as auxiliaries against the warriors of Theodoric, dangerous allies who plundered friends and enemies. [See also SICILY: 429-525.] . . . For the last twelve years (430-451) there had been peace, but scarcely friendship, between the Courts of Ravenna and Toulouse."—T. Hodgkin, *Italy and her invaders*, v. 2, bk. 2, ch. 3.—As the successor of Wallia, who died in 419, the Visigoths chose Theodoric, "who seems to have been a Balthing, though not related either to Wallia or to Atawulf. You must be careful not to confound this Visigoth Theodoric, or his son of the same name, with the great Theodoric the Amalung, who began to reign over the Ostrogoths about the year 475. Theodoric the Visigoth was not such a great man as his namesake, but he must have been both a brave soldier and an able ruler, or he could not have kept the affection and obedience of his people for thirty-two years. His great object was to extend his kingdom, which was hemmed in on the north by the Franks, . . . and on the west by another people of German invaders, the Burgunds; while the Roman Empire still kept possession of some rich cities, such as Arles and Narbonne [the first named of which Theodoric besieged unsuccessfully in 425, the last named in 437], which were temptingly close to the Gothic boundary on the south. . . . In the year 450 the Visigoths and the Romans were drawn more closely together by the approach of a great common danger. . . . The Huns . . . had, under their famous king, Attila, moved westward, and were threatening to over-run both Gaul and Italy."—H. Bradley, *Story of the Goths*, ch. 12.—See also HUNS: 451.

451 (Ostrogoths and Visigoths).—Battle of Chalons. See HUNS: 451.

453 (Ostrogoths).—Breaking the yoke of the Huns. See HUNS: 453.

453-484 (Visigoths).—Extension of the kingdom of Toulouse.—"The Visigoths were governed from 453 to 466 by Theodoric the Second, son of Theodoric the First, and grandson of Alaric. . . . The reign of Theodoric was distinguished by conquests. On the one hand he drove the Suevians as far as the extremity of Galicia. . . . On the other hand, in 462, he rendered himself master of the town of Narbon, which was delivered up to him by its count; he also carried his arms towards the Loire; but his brother Frederic, whom he had charged with the conquest of the Armorici, and who had taken possession of Chinon, was killed in 463 near Orleans, in a battle which he gave to Count Ægidius. Theodoric finally extended the dominion of the Visigoths to the Rhone; he even attacked Arles and Marseille, but he could not subjugate them. After a glorious reign of thirteen years, he was killed in the month of August, 466, by his brother Euric, by whom he was succeeded. . . . Euric . . . attacked, in 473, the province of Auvergne. . . . He conquered it in 475 and caused his possession of it to be

confirmed by the emperor Nepos. He had at that period acquired the Loire and the Rhone as frontiers; in Spain he subjected the whole of the province of Taragon. . . . He afterwards conquered Provence, and was acknowledged a sovereign in Arles and at Marseille, towards the year 480. No prince, whether civilized or barbarian, was at that period so much feared as Euric; and had he lived longer, it would undoubtedly have been to the Visigoths, and not to the Franks, that the honor would have belonged of reconstituting the Gallic provinces; but he died at Arles towards the end of the year 484, leaving an only son of tender age, who was crowned under the name of Alaric the Second."—J. C. L. S. de Sismondi, *French under the Merovingians* (tr. by Bellingham), ch. 4.

473-474 (Ostrogoths).—Invasions of Italy and Gaul.—"The Ostrogothic brother-kings, who served under Attila at the battle in Champagne, on the overthrow of the Hunnish Empire obtained for themselves a goodly settlement in Pannonia, on the western bank of the Danube. For near twenty years they had been engaged in desultory hostilities with their barbarian neighbours, with Sueses and Rugians on the north, with Huns and Sarmatians on the south. Now, as their countryman, Jornandés, tells us with admirable frankness, 'the spoils of these neighbouring nations were dwindling, and food and clothing began to fail the Goths.' . . . They clustered round their kings, and clamoured to be led forth to war—whither they cared not, but war must be. Theodemir, the elder king, took counsel with his brother Widemir, and they resolved to commence a campaign against the Roman Empire. Theodemir, as the more powerful chieftain, was to attack the stronger Empire of the East; Widemir, with his weaker forces, was to enter Italy. He did so, but, like so many of the northern conquerors, he soon found a grave in the beautiful but deathly land. His son, the younger Widemir, succeeded to his designs of conquest, but Glycerius [Roman emperor, for the moment] approached him with presents and smooth words, and was not ashamed to suggest that he should transfer his arms to Gaul, which was still in theory, and partially in fact, a province of the Empire. The sturdy bands of Widemir's Ostrogoths descended accordingly into the valleys of the Rhone and the Loire; they speedily renewed the ancient alliance with the Visigothic members of their scattered nationality, and helped to ruin yet more utterly the already desperate cause of Gallo-Roman freedom."—T. Hodgkin, *Italy and her invaders*, v. 2, bk. 3, ch. 7.

473-488 (Ostrogoths).—Rise of Theodoric.—The greater mass of the Ostrogoth nation who followed Theodemir (or Theudemir) the elder of the royal brothers, into the territories of the Eastern Empire, were rapidly successful in their adventures. The Court at Constantinople made little attempt to oppose them with arms, but bribed them to peace by gifts of money and a large cession of territory in Macedonia. "Amongst the cities which were abandoned to them was Pella, famous as the birthplace of Alexander the Great. Just after the conclusion of this treaty (in the year 474) Theudemir died, and his son Theodoric, at the age of twenty years, began his long and glorious reign as king of the Ostrogoths." Theodoric had been reared in the imperial court at Constantinople, from his eighth to his eighteenth year, his father having pledged him to the emperor as a hostage for the fulfilment of a treaty of peace. He understood, therefore, the corrupt politics of the empire and its weakness, and

he made the most of his knowledge. Sometimes at peace with the reigning powers and sometimes at war; sometimes ravaging the country to the very gates of the impregnable capital, and sometimes settled quietly on lands along the southern bank of the Danube which he had taken in exchange for the Macedonian tract; sometimes in league and sometimes in furious rivalry with another Gothic chieftain and adventurer, called Theodoric Strabo, whose origin and whose power are somewhat of a mystery—the seriousness to the Eastern Empire of the position and the strength of Theodoric and his Ostrogoths went on developing until the year 488. That year, the statesmen at Constantinople were illuminated by an idea. They

Euric had been endowed with genius and energy equal to his, it is possible that the Visigoths might have made themselves masters of the whole Western world. But there was in the kingdom one fatal element of weakness, which perhaps not even a succession of rulers like Euric could have long prevented from working the destruction of the State. The Visigoth kings were Arians; the great mass of their subjects in Gaul were Catholics, and the hatred between religious parties was so great that it was almost impossible for a sovereign to win the attachment of subjects who regarded him as a heretic." After 496, when Clovis, the king of the Franks, renounced his heathenism, professed Christianity, and was baptized by a Cath-

TOMB OF THEODORIC THE GREAT NEAR RAVENNA

As originally constructed by Theodorics' daughter in 530

proposed to Theodoric to migrate with his nation into Italy and to conquer a kingdom there. The Emperor Zeno, to whom the Roman senate had surrendered the sovereignty of the Western Roman Empire, and into whose hands the barbarian who extinguished it, Odoacer, or Odovacar, had delivered the purple robes—the Emperor Zeno, in the exercise of his imperial function, authorized the conquest to be made. Theodoric did not hesitate to accept a commission so scrupulously legal.—H. Bradley, *Story of the Goths*, ch. 14-15.

493-525 (Ostrogoths).—Theodoric in German legend. See VERONA: 493-525.

507-509 (Visigoths).—Kingdom of Toulouse overthrown by the Franks.—"If the successors of

olic bishop, the Catholics of Southern Gaul began almost openly to invite him to the conquest of their country. In the year 507 he responded to the invitation, and declared war against the Visigoths, giving simply as his ground of war that it grieved him to see the fairest part of Gaul in the hands of the Arians. "The rapidity of Clovis's advance was something quite unexpected by the Visigoths. Alaric still clung to the hope of being able to avoid a battle until the arrival of Theodoric's Ostrogoths [from his great kinsman in Italy] and wished to retreat," but the opinion of his officers forced him to make a stand. "He drew up his army on 'the field of Voclad' (the name still survives as Vouillé or Vouglé), on the banks of the Clain, a few miles south of Poitiers, and prepared to receive the attack of the Franks. The battle which followed decided the fate of

Gaul. The Visigoths were totally defeated, and their king was killed. Alaric's son, Amalaric, a child five years of age, was carried across the Pyrenees into Spain. During the next two years Clovis conquered with very little resistance, almost all the Gaulish dominions of the Visigoths, and added them to his own. The 'Kingdom of Toulouse' was no more. . . . But Clovis was not allowed to fulfil his intention of thoroughly destroying their [the Visigothic] power, for the great Theoderic of Italy took up the cause of his grandson Amalaric. The final result of many struggles between Theoderic and the Franks was that the Visigoths were allowed to remain masters of Spain, and of a strip of sea-coast bordering on the Gulf of Lyons. . . . This diminished kingdom . . . lasted just 200 years."—H. Bradley, *Story of the Goths*, ch. 12.—See also ARLES: 508-510.

ALSO IN: T. Hodgkin, *Italy and her invaders*, bk. 4, ch. 9.—W. C. Perry, *Franks*, ch. 2.—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 38.

507-711 (Visigoths).—Kingdom in Spain.—The conquests of Clovis, king of the Franks, reduced the dominion of the Visigoths on the northern side of the Pyrenees to a small strip of Roman Narbonensis, along the gulf of Lyons; but most of Spain had come under their rule at that time and remained so. Amalaric, son of Alaric II (and grandson, on the maternal side, of the great Ostrogothic king, Theoderic, who ruled both Gothic kingdoms during the minority of Amalaric), reigned after the death of Theoderic until 531, when he was murdered. He had made Narbonne his capital, until he was driven from it, in a war with one of the sons of Clovis. It was recovered; but the seat of government became fixed at Toledo. During the reign of his successor, the Franks invaded Spain (543), but were beaten back from the walls of Cæsaraugusta (modern Saragossa), and retreated with difficulty and disaster. The Visigoths were now able to hold their ground against the conquerors of Gaul, and the limits of their kingdom underwent little subsequent change, until the coming of the Moors. "The Gothic kings, in spite of bloody changes and fierce opposition from their nobility, succeeded in identifying themselves with the land and the people whom they had conquered. They guided the fortunes of the country with a distinct purpose and vigorous hand. By Leovigild (572-586) the power of the rebellious nobility was broken, and the independence and name of the Sueves of Galicia extinguished. The still more dangerous religious conflict between the Catholic population and the inherited Arianism of the Goths was put down, but at the cost of the life of his son, Hermingild, who had married a Frank and Catholic princess, and who placed himself at the head of the Catholics. But Leovigild was the last Arian king. This cause of dissension was taken away by his son Reccared (568-601), who solemnly abandoned Arianism, and embraced with zeal the popular Catholic creed. He was followed by the greater part of his Arian subjects, but the change throughout the land was not accomplished without some fierce resistance. It led among other things to the disappearance of the Gothic language, and of all that recalled the Arian days, and to the destruction in Spain of what there was of Gothic literature, such as the translation of the Bible, supposed to be tainted with Arianism. But it determined the complete fusion of the Gothic and Latin population. After Reccared, two marked features of the later Spanish character began to

show themselves. One was the great prominence in the state of the ecclesiastical element. The Spanish kings sought in the clergy a counterpoise to their turbulent nobility. The great church councils of Toledo became the legislative assemblies of the nation; the bishops in them took precedence of the nobles; laws were made there as well as canons; and seventeen of these councils are recorded between the end of the fourth century and the end of the seventh. The other feature was that stern and systematic intolerance which became characteristic of Spain. Under Sisebut (612-620), took place the first expulsion of the Jews. . . . The Gothic realm of Spain was the most flourishing and the most advanced of the new Teutonic kingdoms. . . . But however the Goths in Spain might have worked out their political career, their course was rudely arrested. . . . While the Goths had been settling their laws, while their kings had been marshalling their court after the order of Byzantium, the Saracens had been drawing nearer and nearer."—R. W. Church, *Beginning of the Middle Ages*, ch. 5.

535-553 (Ostrogoths).—Fall of the kingdom of Theoderic.—Recovery of Italy by Justinian. See ROME: Medieval city: 535-553; BARBARIAN INVASIONS: 527-553.

553 (Ostrogoths).—Disappearance from History.—"Totila and Teia, last of the race of Ostrogoth kings, fell as became their heroic blood, sword in hand, upon the field of battle. Then occurred a singular phenomenon,—the annihilation and disappearance of a great and powerful people from the world's history. . . . A great people, which had organized an enlightened government, and sent 200,000 fighting-men into the field of battle, is annihilated and forgotten. A wretched remnant, transported by Narses to Constantinople, were soon absorbed in the miserable proletariat of a metropolitan city. The rest fell by the sword, or were gradually amalgamated with the mixed population of the peninsula. The Visigoth kingdom in Gaul and Spain, which had been overshadowed by the glories of the great Theoderic, emerges into independent renown, and takes up the traditions of the Gothic name. In the annals of Europe, the Ostrogoth is heard of no more."—J. G. Sheppard, *Fall of Rome*, lect. 6.

**GOURKO, Basil**, Russian general. Chief of Russian Imperial General Staff, November, 1916-March, 1917; commander-in-chief of Western Armies, March-June, 1917, when he was dismissed by Kerensky.

**GOURNIA**, town in eastern Crete, situated about 60 miles east of Candia. It was, in ancient times, an important center of Minoan civilization. See AEGEAN CIVILIZATION: Excavations and antiquities: Cretan area.

**GOUVION SAINT-CYR, Laurent, Marquis de** (1764-1830), French marshal. He took part in the Napoleonic campaigns and later under the Bourbons held cabinet offices. Of considerable military ability, he lacked sufficient energy to be a really great commander.

**GOUZAUCOURT**, town in France, southwest of Cambrai. It was captured by the Germans in 1917 but retaken by the Allies in the following year. See WORLD WAR: 1917: I. Summary: b, 11; II. Western front: g, 12; 1918: II. Western front: o, 1.

**GOVERNMENT: Definition.**—"To define the term government broadly, . . . it might be said to be the sum total of those organizations that exercise or may exercise the sovereign powers of the state. Since all the sovereign powers of the state may be exercised through the following departments, singly or collectively, the government may be thus tabulated: 1. The legal sovereign, maker of

fundamental law; 2. The lawmaking department, making statutes; 3. The executive, from which is differentiating the 4. Administrative; 5. The judicial system, from which is separating (in the United States) 6. A special court for the authoritative interpretation of the written constitution. 7. The electorate, which is steadily increasing its powers at the expense of the three historic departments of government. Doubtless for many years to come text-books and theorists will continue to discuss the threefold division of governmental organization, but in this age of governmental differentiation it is well-nigh impossible to get a clear understanding of government unless one considers the electorate as a fourth department. Furthermore, much more exactness in theorizing would be attained by separating, mentally at least, the legal sovereign from the other departments of government. The differentiation of administration from the executive is almost an accomplished fact on the continent of Europe. The remaining specialization is peculiar to the United States of America and deserves special attention because of its political importance, for if the Supreme Court of the Federal department ultimately devotes itself only to final interpretations of the Constitution, the political party affiliations of the members of its bench will become a matter of increasing concern."—J. Q. Dealey, *State and government*, pp. 172-174.

**GOVERNORS' CONFERENCE.**—The first conference of Governors was held May 13 to 15, 1908, in the East Room of the White House. The conference was called by President Roosevelt for the purpose of discussing the conservation of natural resources. (See CONSERVATION OF NATURAL RESOURCES: United States: 1907-1910.) The second conference was held at Washington in January, 1910. At that meeting, which was most informal,

it was decided to hold annual conferences thereafter, the next to be in Frankfort and Louisville, Kentucky. The general object of the Governors' conference is "to secure the general national welfare by uniformity of State legislation upon subjects having general national interest which are not by the Constitution entrusted to Congress and the central Government. . . . There are matters in which the States have a common interest, which can best be regulated by the States themselves, and in which fairness and justice between States and individuals suggest, and even demand, practically identical statutory regulations."—*Proceedings of the third meeting of the governors of the states of the Union, 1910, pp. 4, 13.*—Among the matters which came under discussion at Louisville and Frankfort, Kentucky, Nov. 29, 30, Dec. 1, 1910, were the following: automobile reciprocity laws, conservation, direct primaries, employers' liability and workmen's compensation, income tax amendment, and woman suffrage. An address by Woodrow Wilson, then Governor-elect of New Jersey, dealt with the possibilities of the Governors' conference. A portion of his address follows: "The thing we are here trying to do is to co-ordinate and form some of these otherwise vagrant forces. It is an extra-constitutional enterprise, but natural, spontaneous, imperative, perhaps creative. If it is not constitutional in kind, according to the strict uses of that word in America, it is at least institutional. If these conferences become fixed annual events, planned for and carried forward from year to year as an habitual means of working towards common ends of counsel and co-operation, this council will at least become an institution. I do not know how better to define an institution than by saying that it is an habitual and systematic way of doing something which calls for co-operation and a certain union in action. If it grows into a dignified and permanent institution, it will be because we have found it necessary to supply some vital means of co-operation in matters which lie outside the sphere of the Federal Government, matters which the States must regulate but which they find it to their interest, and to the interest of the country as a whole, to regulate according to common principles and a very careful adaptation to conditions which no one State can control—matters in regard to which they ought to act, not necessarily alike, but with a careful regard to imperative consideration of general policy which can be differently applied but cannot safely or wisely be differently conceived. In brief, we are setting up, outside the sphere of the Federal Congress, a new instrument of political life, national in its character, scope, and intention; an instrument, not of legislation, but of opinion, exercising the authority of influence, not of law."—*Proceedings of the third meeting of the governors of the states of the Union, 1910, pp. 43-44.*—"September 12, 1911, the fourth Conference of Governors was called to order at the New Monmouth Hotel, Spring Lake Beach [New Jersey], . . . by Governor Wilson of New Jersey."—*Proceedings of the fourth meeting of the governors of the states of the Union.*—Thirty governors were present. Governor Norris, of Montana, began the discussion with a paper on "Strengthening the Power of the Executive." He was followed by the chief executive of Alabama, who addressed the conference on the same subject. Employers' liability and woman suffrage were again discussed, the latter subject being granted thirty minutes, as against three minutes at the meeting two years before. "The Right of the State to fix

intra-state traffic rates" was discussed by Governors Hadley and Aldrich. Convict labor, the inheritance tax, blue sky laws, and state control of public utilities were other important topics. The next meeting of the Governors' conference was held in Richmond, Va., in 1912. The subjects under discussion included uniformity of divorce laws, primary system, simplifications of laws, amelioration of the condition of convicts, equitable systems of taxation of property. "A committee was appointed for the purpose of preparing suitable legislation to introduce into the States a system of co-operative rural credits and land mortgage banks, similar to those which have been so successfully operated in Europe. The sixth Conference of Governors was called to order at . . . Colorado Springs, Colo., [on August 26, 1913] by Governor McGovern of Wisconsin." Governor McGovern said: "This is the sixth session of the Governors' Conference and the first session since it was permanently organized. Although it is still a very young governmental institution, it has already proved to be a source of pleasure and benefit to its members, of substantial advantage to the states from which they come, and of real good to the entire country. . . . We have no permanent officers, such as president or vice-president, but instead, a member of the Conference presides at each half-day's session. The Executive Committee, . . . under the Constitution of the Conference, has this matter in charge."—*Governors' conference, Proceedings, 1913, p. 17.*—Franklin K. Lane, Secretary of the Interior, delivered an address on the questions of the day that affected the West. Rural credit, a state department of efficiency and economy, state assumption of nomination and election expenses, distrust of states' legislatures, control of public utilities, initiative and referendum, blue sky laws, national highways, etc., were topics of discussion at this meeting. Madison, Wisconsin, was chosen as the place of the next meeting. The seventh conference heard a report from its committee on rural credits. It listened to discussions of state control of natural resources, safety and sanitation laws, extradition, laws relating to foreign corporations, and the question of submission of the governors' recommendations in bill form. Dr. Charles McCarthy, of the Legislative Reference Library in Wisconsin, spoke on the work of his department. "Twenty-six States of the Union were represented by their chief executives at the Conference of Governors in Boston, August 24-27, [1915] and eleven former Governors came too, while three members of President Wilson's Cabinet dropped in more or less informally, but always appositely, during the sessions, which were held in the historic State House. This [was] the eighth meeting of the 'House of Governors,' and the value of the Conference was never more striking than in this troublous year. . . . In the first session, when 'Governor's initiative,' the short ballot, and the co-operation of Governors in preparing State budgets were the subjects of the papers read, the discussion was lively. . . . The interest centered almost entirely on two . . . topics—the abolition of capital punishment . . . and the necessity of military preparedness. . . . Almost every Governor spoke, and every speech was in favor of adequate preparedness. . . . The following telegram was sent to President Wilson: The Governors of the several commonwealths, . . . in conference assembled, desire to tender to you an expression of their confidence and support in this hour of deep international concern, and to assure you of their readiness to follow your leadership

in all matters which you may deem best to promote the honor and maintain the peace and welfare of the nation."—*Outlook*, Sept. 8, 1915, pp. 71-73.—Thirty-two governors were present at the ninth conference, which met in Washington on December 14, 1916. Topics under discussion were: the executive budget, state administrative problems, the short ballot, water power development, capital punishment, our duty at the close of the World War, the National Guard, and the proposed waterway from the Lakes to the Gulf. Salt Lake City was chosen as the next meeting place. The twelfth conference was in December, 1920. The governors met at Harrisburg, Pa. The chief topic discussed was legislation to assist the farmer. The thirteenth conference was held at Charleston, S. C., December, 1921. The fourteenth conference met at White Sulphur Springs, W. Va., December 14-16, 1922. Prohibition and the Ku Klux Klan were among the subjects discussed at this meeting.

**GRAHAM'S DIKE.** See **ROMAN WALLS IN BRITAIN.**

**GRAIKOI.** See **HELLAS.**

**GRAIL, Holy**, traditional sacred chalice or cup used by Christ at the Last Supper. Another legend supposed it to have been the vessel used by Joseph of Arimathea to receive the dying Saviour's blood. Whether the Grail legend is of purely Christian or of pagan origin with a later Christian development is open to question. Its connection with Glastonbury is through Joseph of Arimathea, the legendary founder of that abbey.

**GRAN.** See **ESZTERGOM.**

**GRAN CHACO.**—"This tract of flat country, lying between the tropic and 29° S., extends eastward to the Parana and Paraguay, and westward to the province of Santiago del Estero. Its area is 180,000 sq. miles. About one-third belongs to Paraguay, and a small part to Bolivia, but the bulk is in the Argentine Republic. . . . The Gran Chaco is no desert, but a rich alluvial lowland, fitted for colonization, which is hindered by the want of knowledge of the rivers and their shiftings."—*American Naturalist*, v. 23, p. 799.—"In the Quitchoano language, which is the original language of Peru, they call 'chacu,' those great flocks of deer, goats, and such other wild animals, which the inhabitants of this part of America drive together when they hunt them; and this name was given to the country we speak of, because at the

time Francis Pizarro made himself master of a great part of the Peruvian empire, a great number of its inhabitants took refuge there. Of 'Chacu,' which the Spaniards pronounce 'Chacou,' custom has made 'Chaco.' It appears that, at first, they comprehended nothing under this name but the country lying between the mountains of the Cordillere, the Pilco Mayo, and the Red River; and that they extended it, in process of time, in proportion as other nations joined the Peruvians, who had taken refuge there to defend their liberties against the Spaniards."—Father Charlevoix, *History of Paraguay*, v. 1, bk. 3.—This region was discovered by Sebastian Cabot in 1527, when he entered the Parana and Paraguay rivers, just eleven years after Juan de Solis sailed into the great estuary of the Rio de la Plata. There is a remarkable contrast offered between the civilization to be found on the east bank of the Paraguay river and the primitive, uncivilized conditions which still obtain on the west bank in the Chaco region. "At night on the Chaco bank may be seen the half-naked forms of Indians as they move to and fro in the flickering light of their camp fires which but dimly illuminate their rude shelters, standing in a clearing in the dark forest which forms a background. The painted faces and plumed heads of these savages enhance the weirdness of the scene. The sounds which greet the ear are equally barbarous. A low droning chant may be heard, accompanied by the rattle of gourds, and broken only too often by the shrill cry of pain when a child, perhaps, has been cruelly murdered, and the women's voices are raised in lamentation. Yet from this bank at the same moment may be plainly heard the loud shriek of the siren of a large Brazilian passenger steamer as she nears the port of a Paraguayan town just across the river, with the bright rays of her electric light streaming from her saloons and decks, and the twinkling lights of the town dotted along the opposite bank easily distinguishable in the distance. . . . On the eastern bank of the River Paraguay we find large, modern cities with a civilization, in many cases, far in advance of some of our European towns. It is strange indeed that, with only a few miles dividing them, you see on the one bank primitive man as he was centuries ago, and on the other the highly-cultivated European, both equally ignorant of the life of the other. It seems almost incredible that, for nearly four generations, civilization and Christianity have sat facing barbarism and heathenism, and yet have stood wholly apart. No great and impassable barrier has divided the two; on the contrary, the crossing from one bank to the other is simple, and, even under the most unfavorable circumstances, a matter of only a few hours. One of the finest lines of river steamers has been plying far up the course of the River Paraguay for many years, and communication has been regularly maintained between Europe and these regions."—W. B. Grubb, *Unknown people in an unknown land*, pp. 17-18.—See also ARGENTINA: Population; PAMPAS TRIBES.

**GRANADA**, province, formerly a kingdom in southern Spain. It is bounded on the east by Murcia, on the west by Seville, on the north by Cordova and Jaén and on the south by the Mediterranean. It has an area of 4,928 square miles and an aggregate population of 545,217 (December, 1910). The city of Granada is the capital of the province. Its ancient quarters still retain some Moorish buildings of which the Alhambra is the most important. [See ALHAMBRA.] The city "was small and unimportant until the year 1012. Be-

fore that time, it was considered a dependency of Elvira (the neighboring ancient Roman city of Illiberis); but, little by little, the people of Elvira migrated to it, and as it grew Elvira dwindled into insignificance."—H. Coppée, *Conquest of Spain by the Arab-Moors*, v. 2, bk. 6, ch. 5, note.

GRAND ARMY OF THE REPUBLIC.—

"The Grand Army of the Republic was organized April 6, 1866, in Decatur, the county seat of Macon County, Illinois. Its originator was Dr. Benjamin F. Stephenson, a physician of Springfield, Illinois, who had served during the war as surgeon of the 14th Illinois Infantry. He had spent many weeks in study and plans so that the Order might be one that would meet with the general approval of the surviving comrades of the war, and thus insure their hearty co-operation. He made a draft of a ritual, and sent it by Captain John S. Phelps to Decatur, where two veterans, Messrs. Coltrin and Prior, had a printing-office. These gentlemen, with their employees, who had been in the service, were first obligated to secrecy, and the ritual was then placed in type in their office. Captain Phelps returned to Springfield with proofs of the ritual, but the comrades in Decatur were so interested in the project, that, with the active assistance of Captain M. F. Kanan and Dr. J. W. Routh, a sufficient number of names were at once secured to an application for charter, and these gentlemen went to Springfield to request Dr. Stephenson to return with them and organize a post at Decatur. The formation of a post was under way in Springfield, but not being ready for muster, Dr. Stephenson, accompanied by several comrades, proceeded to Decatur, and, as stated, on April 6, 1866, mustered post No. 1, with General Isaac C. Pugh as post commander, and Captain Kanan as adjutant. The latter gave material aid to Dr. Stephenson in the work of organizing other posts, and Dr. Routh served as chairman of a committee to revise the ritual. The title, 'The Grand Army of the Republic, U. S.' was formally adopted that night. Soon after this, post No. 2 was organized at Springfield with General Jules C. Webber as commander. . . . Nothing was done in the Eastern States about establishing posts until the opportunity was given for consultation on this subject at a national soldiers' and sailors' convention, held in Pittsburg in September, 1866, when prominent representatives

from Eastern States were obligated and authorized to organize posts. The first posts so established were posts Nos. 1 in Philadelphia, and 3 in Pittsburgh, by charters direct from the acting commander-in-chief, Dr. Stephenson; and post 2, Philadelphia, by charter received from General J. K. Proudfit, department commander of Wisconsin. A department convention was held at Springfield, Illinois, July 12, 1866, and adopted resolutions declaring the objects of the G. A. R. General John M. Palmer was elected the first Department Commander. . . . The first national convention was held at Indianapolis, Ind., November 20, 1866. . . . General Stephen A. Hurlbut, of Illinois, was elected Commander-in-Chief. General Thomas B. McKean, of New York, Senior Vice-Commander-in-Chief; General Nathan Kimball, of Indiana, Junior Vice-Commander-in-Chief; and Dr. Stephenson, Adjutant-General. The objects of the Order cannot be more briefly stated than from the articles and regulations. 1. To preserve and strengthen those kind and fraternal feelings which bind together the Soldiers, Sailors, and Marines who united to suppress the late Rebellion, and to perpetuate the memory and history of the dead. 2. To assist such former comrades in arms as need help and protection, and to extend needful aid to the widows and orphans of those who have fallen. 3. To maintain true allegiance to the United States of America, based upon a paramount respect for, and fidelity to, its Constitution and laws, to discountenance whatever tends to weaken loyalty, incites to insurrection, treason, or rebellion, or in any manner impairs the efficiency and permanency of our free institutions; and to encourage the spread of universal liberty, equal rights, and justice to all men. Article IV. defines the qualifications of members in the following terms: Soldiers and Sailors of the United States Army, Navy, or Marine Corps who served between April 12, 1861, and April 29, 1865, in the war for the suppression of the Rebellion, and those having been honorably discharged therefrom after such service, and of such State regiments as were called into active service and subject to the orders of United States general officers, between the dates mentioned, shall be eligible to membership in the Grand Army of the Republic. No person shall be eligible who has at any time borne arms against the United States. . . . The second national encampment was held in Independence Hall, Philadelphia, Pa., January 15, 1868. . . . General John A. Logan, of Illinois, was elected Commander-in-Chief. . . . That which tended most to attract public attention to the organization was the issuance of the order of General Logan early in his administration, in 1868, directing the observance of May 30th as Memorial Day. . . . At the national encampment, held May 11, 1870, at Washington, D. C., the following article was adopted as a part of the rules and regulations: "The national encampment hereby establishes a Memorial Day, to be observed by the members of the Grand Army of the Republic, on the 30th day of May annually, in commemoration of the deeds of our fallen comrades. When such day occurs on Sunday, the preceding day shall be observed, except where, by legal enactment, the succeeding day is made a legal holiday, when such day shall be observed." Memorial Day has been observed as such every year since throughout the country wherever a post of the Grand Army of the Republic has been established. In most of the States the day has been designated as a holiday."—W. H. Ward, ed., *Records of members of the Grand Army of the Republic*, pp. 6-9.—In 1890 the membership reached

a total of 409,487. On January 1, 1920, there were 4,458 posts and a total membership of 102,438.

**GRAND JURY.**—"In England and the United States . . . in all cases of serious crime use is made of what is known as a Grand Jury to conduct an inquiry and determine whether a person accused of the offense shall be put upon trial. This jury consists of a number of private individuals, usually twenty-one, who are selected from time to time to sit and examine into accusations of crime. If they deem that a *prima facie* case exists against any person they 'present' or 'indict' him. The term 'present' is used when the jury acts upon its own initiative and 'indict' when it acts upon a case brought before them by the prosecuting attorney. Persons so indicted are then placed upon trial to determine their innocence or guilt. The proceedings of the grand jury are secret and of an *ex parte* character, in that the accused need be given no opportunity to be heard or to produce witnesses in his defense."—W. F. Willoughby, *Government of modern states*, pp. 373-374.—In early England a group of freeholders were chosen to inquire into cases concerning the commission of crimes in order that prosecutions could be made in the king's name. They were called "le grand inquest," and later "the grand jury." A statute of Edward III provided for the calling of such juries. The fifth amendment to the Constitution of the United States provides that "No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger." The state constitutions have similar guarantees.

**GRAND REMONSTRANCE.**—"It was felt to be necessary to send an army into Ireland, and, if the army was to go under the king's orders, there was nothing to prevent him using it—after Ireland had been subdued—against the English

Parliament. . . . The perception of this danger led the Commons [1641] to draw up a statement of their case, known as the Grand Remonstrance. They began with a long indictment of all Charles's errors from the beginning of his reign, and, though the statements were undoubtedly exaggerated, they were adopted by the whole House. When, however, it came to the proposal of remedies, there was a great division amongst the members. The party led by Pym and Hampden, by which the Remonstrance had been drawn up, asked for the appointment of ministers responsible to Parliament, and for the reference of Church matters to an Assembly of divines nominated by Parliament. The party led by Hyde and Falkland saw that the granting of these demands would be tantamount to the erection of the sovereignty of Parliament in Church and State; and, as they feared that this in turn would lead to the establishment of Presbyterian despotism, they preferred to imagine that it was still possible to make Charles a constitutional sovereign. On November 23 there was a stormy debate, and the division was not taken till after midnight. A small majority of eleven declared against the king. The majority then proposed to print the Remonstrance for the purpose of circulating it among the people. The minority protested, and, as a protest was unprecedented in the House of Commons, a wild uproar ensued. Members snatched at their swords, and it needed all Hampden's persuasive pleadings to quiet the tumult."—S. R. Gardiner, *Student's history of England*, p. 534.—See also ENGLAND: 1641 (November).—The following is the text of "The Grand Remonstrance," with that of Petition preceding it:

Most Gracious Sovereign: Your Majesty's most humble and faithful subjects the Commons in this present Parliament assembled, do with much thankfulness and joy acknowledge the great mercy and favour of God, in giving your Majesty a safe and peaceable return out of Scotland into your kingdom of England, where the pressing dangers and distempers of the State have caused us with much earnestness to desire the comfort of your gracious presence, and likewise the unity and justice of your royal authority, to give more life and power to the dutiful and loyal counsels and endeavours of your Parliament, for the prevention of that eminent ruin and destruction wherein your kingdoms of England and Scotland are threatened. The duty which we owe to your Majesty and our country, cannot but make us very sensible and apprehensive, that the multiplicity, sharpness and malignity of those evils under which we have now many years suffered, are fomented and cherished by a corrupt and ill-affected party, who amongst other their mischievous devices for the alteration of religion and government, have sought by many false scandals and imputations, cunningly insinuated and dispersed amongst the people, to blemish and disgrace our proceedings in this Parliament, and to get themselves a party and faction amongst your subjects, for the better strengthening themselves in their wicked courses, and hindering those provisions, and remedies which might, by the wisdom of your Majesty and counsel of your Parliament, be opposed against them. For preventing whereof, and the better information of your Majesty, your Peers and all other your loyal subjects, we have been necessitated to make a declaration of the state of the kingdom, both before and since the assembly of this Parliament, unto this time, which we do humbly present to your Majesty, without the least intention to lay any blemish upon your royal person, but only to pre-

resent how your royal authority and trust have been abused, to the great prejudice and danger of your Majesty, and of all your good subjects. And because we have reason to believe that those malignant parties, whose proceedings evidently appear to be mainly for the advantage and increase of Popery, is composed, set up, and acted by the subtle practice of the Jesuits and other engineers and factors for Rome, and to the great danger of this kingdom, and most grievous affliction of your loyal subjects, have so far prevailed as to corrupt divers of your Bishops and others in prime places of the Church, and also to bring divers of these instruments to be of your Privy Council, and other employments of trust and nearness about your Majesty, the Prince, and the rest of your royal children. And by this means have had such an operation in your counsel and the most important affairs and proceedings of your government, that a most dangerous division and chargeable preparation for war betwixt your kingdoms of England and Scotland, the increase of jealousies betwixt your Majesty and your most obedient subjects, the violent distraction and interruption of this Parliament, the insurrection of the Papists in your kingdom of Ireland, and bloody massacre of your people, have been not only endeavoured and attempted, but in a great measure compassed and effected. For preventing the final accomplishment whereof, your poor subjects are enforced to engage their persons and estates to the maintaining of a very expensive and dangerous war, notwithstanding they have already since the beginning of this Parliament undergone the charge of £150,000 sterling, or thereabouts, for the necessary support and supply of your Majesty in these present and perilous designs. And because all our most faithful endeavours and engagements will be ineffectual for the peace, safety and preservation of your Majesty and your people, if some present, real and effectual course be not taken for suppressing this wicked and malignant party:—We, your most humble and obedient subjects, do with all faithfulness and humility beseech your Majesty,—

1. That you will be graciously pleased to concur with the humble desires of your people in a parliamentary way, for the preserving the peace and safety of the kingdom from the malicious designs of the Popish party:—For depriving the Bishops of their votes in Parliament, and abridging their immoderate power usurped over the Clergy, and other your good subjects, which they have perniciously abused to the hazard of religion, and great prejudice and oppression of the laws of the kingdom, and just liberty of your people:—For the taking away such oppressions in religion, Church government and discipline, as have been brought in and fomented by them:—For uniting all such your loyal subjects together as join in the same fundamental truths against the Papists, by removing some oppressions and unnecessary ceremonies by which divers weak consciences have been scrupled, and seem to be divided from the rest, and for the due execution of those good laws which have been made for securing the liberty of your subjects.
2. That your Majesty will likewise be pleased to remove from your council all such as persist to favour and promote any of those pressures and corruptions wherewith your people have been grieved, and that for the future your Majesty will vouchsafe to employ such persons in your great and public affairs, and to take such to be near you in places of trust, as your Parliament may have cause to confide in: that in your princely goodness to your people you will reject and refuse all mediation and solicitation to the contrary,

how powerful and near soever. 3. That you will be pleased to forbear to alienate any of the forfeited and escheated lands in Ireland which shall accrue to your Crown by reason of this rebellion, that out of them the Crown may be the better supported, and some satisfaction made to your subjects of this kingdom for the great expenses they are like to undergo [in] this war. Which humble desires of ours being graciously fulfilled by your Majesty, we will, by the blessing and favour of God, most cheerfully undergo the hazard and expenses of this war, and apply ourselves to such other courses and counsels as may support your real estate with honour and plenty at home, with power and reputation abroad, and by our loyal affections, obedience and service, lay a sure and lasting foundation of the greatness and prosperity of your Majesty, and your royal prosperity in future times.

The Commons in this present Parliament assembled, having with much earnestness and faithfulness of affection and zeal to the public good of this kingdom, and His Majesty's honour and service for the space of twelve months, wrestled with great dangers and fears, the pressing miseries and calamities, the various distempers and disorders which had not only assaulted, but even overwhelmed and extinguished the liberty, peace and prosperity of this kingdom, the comfort and hopes of all His Majesty's good subjects, and exceedingly weakened and undermined the foundation and strength of his own royal throne, do yet find an abounding malignity and opposition in those parties and factions who have been the cause of those evils, and do still labour to cast aspersions upon that which hath been done, and to raise many difficulties for the hindrance of that which remains yet undone, and to foment jealousies between the King and Parliament, that so they may deprive him and his people of the fruit of his own gracious intentions, and their humble desires of procuring the public peace, safety and happiness of this realm. For the preventing of those miserable effects which such malicious endeavours may produce, we have thought good to declare the root and the growth of these mischievous designs: the maturity and ripeness to which they have attained before the beginning of the Parliament: the effectual means which have been used for the extirpation of those dangerous evils, and the progress which hath therein been made by His Majesty's goodness and the wisdom of the Parliament: the ways of obstruction and opposition by which that progress hath been interrupted: the courses to be taken for the removing those obstacles, and for the accomplishing of our most dutiful and faithful intentions and endeavours of restoring and establishing the ancient honour, greatness and security of this Crown and nation. The root of all this mischief we find to be a malignant and pernicious design of subverting the fundamental laws and principles of government, upon which the religion and justice of this kingdom are firmly established. The actors and promoters hereof have been: 1. The Jesuited Papists, who hate the laws, as the obstacles of that change and subversion of religion which they so much long for. 2. The Bishops, and the corrupt part of the Clergy, who cherish formality and superstition as the natural effects and more probable supports of their own ecclesiastical tyranny and usurpation. 3. Such Councillors and Courtiers as for private ends have engaged themselves to further the interests of some foreign princes or states to the prejudice of His Majesty and the State at home. The common principles by which they

moulded and governed all their particular counsels and actions were these: First, to maintain continual differences and discontents between the King and the people, upon questions of prerogative and liberty, that so they might have the advantage of siding with him, and under the notions of men addicted to his service, gain to themselves and their parties the places of greatest trust and power in the kingdom. A second, to suppress the purity and power of religion, and such persons as were best affected to it, as being contrary to their own ends, and the greatest impediment to that change which they thought to introduce. A third, to conjoin those parties of the kingdom which were most propitious to their own ends, and to divide those who were most opposite, which consisted in many particular observations. To cherish the Arminian part in those points wherein they agree with the Papists, to multiply and enlarge the difference between the common Protestants and those whom they call Puritans, to introduce and countenance such opinions and ceremonies as are fittest for accommodation with Popery, to increase and maintain ignorance, looseness and profaneness in the people; that of those three parties, Papists, Arminians and Libertines, they might compose a body fit to act such counsels and resolutions as were most conducive to their own ends. A fourth, to disaffect the King to Parliaments by slander and false imputations, and by putting him upon other ways of supply, which in show and appearance were fuller of advantage than the ordinary course of subsidies, though in truth they brought more loss than gain both to the King and people, and have caused the great distractions under which we both suffer. As in all compounded bodies the operations are qualified according to the predominant element, so in this mixed party, the Jesuited counsels, being most active and prevailing, may easily be discovered to have had the greatest sway in all their determinations, and if they be not prevented, are likely to devour the rest, or to turn them into their own nature. In the beginning of His Majesty's reign the party began to revive and flourish again, having been somewhat damped by the breach with Spain in the last year of King James, and by His Majesty's marriage with France: the interests and counsels of that State being not so contrary to the good of religion and the prosperity of this kingdom as those of Spain; and the Papists of England, having been ever more addicted to Spain than France, yet they still retained a purpose and resolution to weaken the Protestant parties in all parts, and even in France, whereby to make way for the change of religion which they intended at home.

1. The first effect and evidence of their recovery and strength was the dissolution of the Parliament at Oxford, after there had been given two subsidies to His Majesty, and before they received relief in any one grievance many other more miserable effects followed.

2. The loss of the Rochel fleet, by the help of our shipping, set forth and delivered over to the French in opposition to the advice of Parliament, which left that town without defence by sea, and made way, not only to the loss of that important place, but likewise to the loss of all the strength and security of the Protestant religion in France.

3. The diverting of His Majesty's course of wars from the West Indies, which was the most facile and hopeful way for this kingdom to prevail against the Spaniard, to an expensful and successful attempt upon Cadiz, which was so or-

dered as if it had rather been intended to make us weary of war than to prosper in it.

4. The precipitate breach with France, by taking their ships to a great value without making recompense to the English, whose goods were thereupon imbarred and confiscated in that kingdom.

5. The peace with Spain without consent of Parliament, contrary to the promise of King James to both Houses, whereby the Palatine's cause was deserted and left to chargeable and hopeless treaties, which for the most part were managed by those who might justly be suspected to be no friends to that cause.

6. The charging of the kingdom with billeted soldiers in all parts of it, and the concomitant design of German horse, that the land might either submit with fear or be enforced with rigour to such arbitrary contributions as should be required of them.

7. The dissolving of the Parliament in the second year of His Majesty's reign, after a declaration of their intent to grant five subsidies.

8. The exacting of the like proportion of five subsidies, after the Parliament dissolved, by commission of loan, and divers gentlemen and others imprisoned for not yielding to pay that loan, whereby many of them contracted such sicknesses as cost them their lives.

9. Great sums of money required and raised by privy seals.

10. An unjust and pernicious attempt to extort great payments from the subject by way of excise, and a commission issued under the seal to that purpose.

11. The Petition of Right, which was granted in full Parliament, blasted, with an illegal declaration to make it destructive to itself, to the power of Parliament, to the liberty of the subject, and to that purpose printed with it, and the Petition made of no use but to show the bold and presumptuous injustice of such ministers as durst break the laws and suppress the liberties of the kingdom, after they had been so solemnly and evidently declared.

12. Another Parliament dissolved 4 Car., the privilege of Parliament broken, by imprisoning divers members of the House, detaining them close prisoners for many months together, without the liberty of using books, pen, ink or paper; denying them all the comforts of life, all means of preservation of health, not permitting their wives to come unto them even in the time of their sickness.

13. And for the completing of that cruelty, after years spent in such miserable durance, depriving them of the necessary means of spiritual consolation, not suffering them to go abroad to enjoy God's ordinances in God's House, or God's ministers to come to them to minister comfort to them in their private chambers.

14. And to keep them still in this oppressed condition, not admitting them to be bailed according to law, yet vexing them with informations in inferior courts, sentencing and fining some of them for matters done in Parliament; and extorting the payments of those fines from them, enforcing others to put in security of good behaviour before they could be released.

15. The imprisonment of the rest, which refused to be bound, still continued, which might have been perpetual if necessity had not the last year brought another Parliament to relieve them, of whom one died [Sir John Eliot] by the cruelty and harshness of his imprisonment, which would admit of no relaxation, notwithstanding the imminent danger of his life, did sufficiently appear by the declaration of his physician, and his re-

lease, or at least his refreshment, was sought by many humble petitions, and his blood still cries either for vengeance or repentance of those Ministers of State, who have at once obstructed the course both of His Majesty's justice and mercy.

16. Upon the dissolution of both these Parliaments, untrue and scandalous declarations were published to asperse their proceedings, and some of their members unjustly; to make them odious, and colour the violence which was used against them; proclamations set out to the same purpose; and to the great dejecting of the hearts of the people, forbidding them even to speak of Parliaments.

17. After the breach of the Parliament in the fourth of His Majesty, injustice, oppression and violence broke in upon us without any restraint or moderation, and yet the first project was the great sums exacted through the whole kingdom for default of knighthood, which seemed to have some colour and shadow of a law, yet if it be rightly examined by that obsolete law which was pretended for it, it will be found to be against all the rules of justice, both in respect of the persons charged, and the proportion of the fines demanded, and the absurd and unreasonable manner of their proceedings.

18. Tonnage and Poundage hath been received without colour or pretence of law; many other heavy impositions continued against law, and some so unreasonable that the sum of the charge exceeds the value of the goods.

19. The Book of Rates lately enhanced to a high proportion, and such merchants that would not submit to their illegal and unreasonable payments, were vexed and oppressed above measure; and the ordinary course of justice, the common birthright of the subject of England, wholly obstructed unto them.

20. And although all this was taken upon pretence of guarding the seas, yet a new unheard-of tax of ship-money was devised, and upon the same pretence, by both which there was charged upon the subject near £700,000 some years, and yet the merchants have been left so naked to the violence of the Turkish pirates, that many great ships of value and thousands of His Majesty's subjects have been taken by them, and do still remain in miserable slavery.

21. The enlargements of forests, contrary to "Carta de Foresta," and the composition thereupon.

22. The exactions of coat and conduct money and divers other military charges.

23. The taking away the arms of trained bands of divers counties.

24. The desperate design of engrossing all the gunpowder into one hand, keeping it in the Tower of London, and setting so high a rate upon it that the poorer sort were not able to buy it, nor could any have it without licence, thereby to leave the several parts of the kingdom destitute of their necessary defence, and by selling so dear that which was sold to make an unlawful advantage of it, to the great charge and detriment of the subject.

25. The general destruction of the King's timber, especially that in the Forest of Deane, sold to Papists, which was the best store-house of this kingdom for the maintenance of our shipping.

26. The taking away of men's right, under the colour of the King's title to land, between high and low water marks.

27. The monopolies of soap, salt, wine, leather sea-coal, and in a manner of all things of most common and necessary use.

28. The restraint of the liberties of the subjects

in their habitation, trades and other interests.  
29. Their vexation and oppression by purveyors, clerks of the market and saltpetre men.

30. The sale of pretended nuisances, as building in and about London.

31. Conversion of arable into pasture, continuance of pasture, under the name of depopulation, have driven many millions out of the subjects' purses, without any considerable profit to His Majesty.

32. Large quantities of common and several grounds hath been taken from the subject by colour of the Statute of Improvement, and by abuse of the Commission of Sewers, without their consent, and against it.

33. And not only private interest, but also public faith, have been broken in seizing of the money and bullion in the mint, and the whole kingdom like to be robbed at once in that abominable project of brass money.

34. Great numbers of His Majesty's subjects for refusing those unlawful charges, have been vexed with long and expensive suits, some fined and censured, others committed to long and hard imprisonments and confinements, to the loss of health in many, of life in some, and others have had their houses broken up, their goods seized, some have been restrained from their lawful callings.

35. Ships have been interrupted in their voyages, surprised at sea in a hostile manner by projectors, as by a common enemy.

36. Merchants prohibited to unlade their goods in such ports as were for their own advantage, and forced to bring them to those places which were much for the advantage of the monopolisers and projectors.

37. The Court of Star Chamber hath abounded in extravagant censures, not only for the maintenance and improvement of monopolies and other unlawful taxes, but for divers other causes where there hath been no offence, or very small; whereby His Majesty's subjects have been oppressed by grievous fines, imprisonments, stigmatisings, mutilations, whippings, pillories, gags, confinements, banishments; after so rigid a manner as hath not only deprived men of the society of their friends, exercise of their professions, comfort of books, use of paper or ink, but even violated that near union which God hath established between men and their wives, by forced and constrained separation, whereby they have been bereaved of the comfort of conversation one of another for many years together, without hope of relief, if God had not by His overruling providence given some interruption to the prevailing power, and counsel of those who were the authors and promoters of such peremptory and heady courses.

38. Judges have been put out of their places for refusing to do against their oaths and consciences; others have been so awed that they durst not do their duties, and the better to hold a rod over them, the clause 'Quam diu se bene gesserit' was left out of their patents, and a new clause 'Durante bene placito' inserted.

39. Lawyers have been checked for being faithful to their clients; solicitors and attorneys have been threatened, and some punished, for following lawful suits. And by this means all the approaches to justice were interrupted and forecluded.

40. New oaths have been forced upon the subject against law.

41. New judicatories erected without law. The Council Table have by their orders offered to bind the subjects in their freeholds, estates, suits and actions.

42. The pretended Court of the Earl Marshal

was arbitrary and illegal in its being and proceedings.

43. The Chancery, Exchequer Chamber, Court of Wards, and other English Courts, have been grievous in exceeding their jurisdiction.

44. The estate of many families weakened, and some ruined by excessive fines, exacted from them for compositions of wardships.

45. All leases of above a hundred years made to draw on wardship contrary to law.

46. Undue proceedings used in the finding of offices to make the jury find for the King.

47. The Common Law Courts, feeling all men more inclined to seek justice there, where it may be fitted to their own desire, are known frequently to foresake the rules of the Common Law, and straying beyond their bounds, under pretence of equity, to do injustice.

48. Titles of honour, judicial places, sergeantships at law, and other offices have been sold for great sums of money, whereby the common justice of the kingdom hath been much endangered, not only by opening a way of employment in places of great trust, and advantage to men of weak parts, but also by giving occasion to bribery, extortion, partiality, it seldom happening that places ill-gotten are well used.

49. Commissions have been granted for examining the excess of fees, and when great exactions have been discovered, compositions have been made with delinquents, not only for the time past, but likewise for immunity and security in offending for the time to come, which under colour of remedy hath but confirmed and increased the grievance to the subject.

50. The usual course of pricking Sheriffs not observed, but many times Sheriffs made in an extraordinary way, sometimes as a punishment and charge unto them; sometimes such were pricked out as would be instruments to execute whatsoever they would have to be done.

51. The Bishops and the rest of the Clergy did triumph in the suspensions, ex-communications, deprivations, and degradations of divers painful, learned and pious ministers, in the vexation and grievous oppression of great numbers of His Majesty's good subjects.

52. The High Commission grew to such excess of sharpness and severity as was not much less than the Romish Inquisition, and yet in many cases by the Archbishop's power was made much more heavy, being assisted and strengthened by authority of the Council Table.

53. The Bishops and their Courts were as eager in the country; although their jurisdiction could not reach so high in rigour and extremity of punishment, yet were they no less grievous in respect of the generality and multiplicity of vexations, which lighting upon the meaner sort of tradesmen and artificers did impoverish many thousands.

54. And so afflict and trouble others, that great numbers to avoid their miseries departed out of the kingdom, some into New England and other parts of America, others into Holland.

55. Where they have transported their manufactures of cloth, which is not only a loss by diminishing the present stock of the kingdom, but a great mischief by impairing and endangering the loss of that particular trade of clothing, which hath been a plentiful fountain of wealth and honour to this nation.

56. Those were fittest for ecclesiastical preferment, and soonest obtained it, who were most officious in promoting superstition, most virulent in railing against godliness and honesty,

57. The most public and solemn sermons before His Majesty were either to advance prerogative above law, and decry the property of the subject, or full of such kind of invectives.

58. Whereby they might make those odious who sought to maintain the religion, laws and liberties of the kingdom, and such men were sure to be weeded out of the commission of the peace, and out of all other employments of power in the government of the country.

59. Many noble personages were councillors in name, but the power and authority remained in a few of such as were most addicted to this party, whose resolutions and determinations were brought to the table for countenance and execution, and not for debate and deliberation, and no man could offer to oppose them without disgrace and hazard to himself.

60. Nay, all those that did not wholly concur and actively contribute to the furtherance of their designs, though otherwise persons of never so great honour and abilities, were so far from being employed in any place of trust and power, that they were neglected, discountenanced, and upon all occasions injured and oppressed.

61. This faction was grown to that height and entireness of power, that now they began to think of finishing their work, which consisted of these three parts.

62. I. The government must be set free from all restraint of laws concerning our persons and estates.

63. II. There must be a conjunction between Papists and Protestants in doctrine, discipline and ceremonies; only it must not yet be called Popery.

64. III. The Puritans, under which name they include all those that desire to preserve the laws and liberties of the kingdom, and to maintain religion in the power of it, must be either rooted out of the kingdom with force, or driven out with fear.

65. For the effecting of this it was thought necessary to reduce Scotland to such Popish superstitions and innovations as might make them apt to join with England in that great change which was intended.

66. Whereupon new canons and a new liturgy were pressed upon them, and when they refused to admit of them, an army was raised to force them to it, towards which the Clergy and the Papists were very forward in their contribution.

67. The Scots likewise raised an army for their defence.

68. And when both armies were come together, and ready for a bloody encounter, His Majesty's own gracious disposition, and the counsel of the English nobility and dutiful submission of the Scots, did so far prevail against the evil counsel of others, that a pacification was made, and His Majesty returned with peace and much honour to London.

69. The unexpected reconciliation was most acceptable to all the kingdom, except to the malignant party; whereof the Archbishop and the Earl of Strafford being heads, they and their faction began to inveigh against the peace, and to aggravate the proceedings of the states, which so increased [incensed?] His Majesty, that he forthwith prepared again for war.

70. And such was their confidence, that having corrupted and distempered the whole frame and government of the kingdom, they did now hope to corrupt that which was the only means to restore all to a right frame and temper again.

71. To which end they persuaded His Majesty to call a Parliament, not to seek counsel and advice of them, but to draw countenance and supply

from them, and to engage the whole kingdom in their quarrel.

72. And in the meantime continued all their unjust levies of money, resolving either to make the Parliament pliant to their will, and to establish mischief by a law, or else to break it, and with more colour to go on by violence to take what they could not obtain by consent. The ground alleged for the justification of this war was this,

73. That the undutiful demands of the Parliaments in Scotland was a sufficient reason for His Majesty to take arms against them, without hearing the reason of those demands, and thereupon a new army was prepared against them, their ships were seized in all ports both of England and Ireland, and at sea, their petitions rejected, their commissioners refused audience.

74. The whole kingdom most miserably distempered with levies of men and money, and imprisonments of those who denied to submit to those levies.

75. The Earl of Strafford passed into Ireland, caused the Parliament there to declare against the Scots, to give four subsidies towards that war, and to engage themselves, their lives and fortunes, for the prosecution of it, and gave directions for an army of eight thousand foot and one thousand horse to be levied there, which were for the most part Papists.

76. The Parliament met upon the 13th of April, 1640. The Earl of Strafford and Archbishop of Canterbury, with their party, so prevailed with His Majesty, that the House of Commons was pressed to yield a supply for maintenance of the war with Scotland, before they had provided any relief for the great and pressing grievances of the people, which being against the fundamental privilege and proceeding of Parliament, was yet in humble respect to His Majesty, so far admitted as that they agreed to take the matter of supply into consideration, and two several days it was debated.

77. Twelve subsidies were demanded for the release of ship-money alone, a third day was appointed for conclusion, when the heads of that party began to fear the people might close with the King, in falsifying his desires of money; but that withal they were like to blast their malicious designs against Scotland, finding them very much indisposed to give any countenance to that war.

78. Thereupon they wickedly advised the King to break off the Parliament and to return to the ways of confusion, in which their own evil intentions were most likely to prosper and succeed.

79. After the Parliament ended the 5th of May, 1640, this party grew so hold as to counsel the King to supply himself out of his subjects' estates by his own power, at his own will, without their consent.

80. The very next day some members of both Houses had their studies and cabinets, yea, their pockets searched: another of them not long after was committed close prisoner for not delivering some petitions which he received by authority of that House.

81. And if harsher courses were intended (as was reported) it is very probable that the sickness of the Earl of Strafford, and the tumultuous rising in Southwark and about Lambeth were the causes that such violent intentions were not brought to execution.

82. A false and scandalous Declaration against the House of Commons was published in His Majesty's name, which yet wrought little effect with the people, but only to manifest the impudence of those who were authors of it.

83. A forced loan of money was attempted in the City of London.

84. The Lord Mayor and Aldermen in their several wards, enjoined to bring in a list of the names of such persons as they judged fit to lend, and of the sums they should lend. And such Aldermen as refused to do so were committed to prison.

85. The Archbishop and the other Bishops and Clergy continued the Convocation, and by a new commission turned it into a provincial Synod, in which, by an unheard-of presumption, they made canons that contain in them many matters contrary to the King's prerogative, to the fundamental laws and statutes of the realm, to the right of Parliaments, to the property and liberty of the subject, and matters tending to sedition and of dangerous consequence, thereby establishing their own usurpations, justifying their altar-worship, and those other superstitious innovations which they formerly introduced without warrant of law.

86. They imposed a new oath upon divers of His Majesty's subjects, both ecclesiastical and lay, for maintenance of their own tyranny, and laid a great tax on the Clergy, for supply of His Majesty, and generally they showed themselves very affectionate to the war with Scotland, which was by some of them styled 'Bellum Episcopale,' and a prayer composed and enjoined to be read in all churches calling the Scots rebels, to put the two nations in blood and make them irreconcilable.

87. All those pretended canons and constitutions were armed with the several censures of suspension, excommunication, deprivation, by which they would have thrust out all the good ministers, and most of the well-affected people of the kingdom, and left an easy passage to their own design of reconciliation with Rome.

88. The Popish party enjoyed such exemptions from penal laws as amounted to a toleration, besides many other encouragements and Court favours.

89. They had a Secretary of State, Sir Francis Windebanck, a powerful agent for speeding all their desires.

90. A Pope's Nuncio residing here, to act and govern them according to such influences as he received from Rome, and to intercede for them with the most powerful concurrence of the foreign princes of that religion.

91. By his authority the Papists of all sorts, nobility, gentry, and clergy were convoked after the manner of a Parliament.

92. New jurisdictions were erected of Romish Archbishops, taxes levied, another state moulded within this state independent in government, contrary in interest and affection, secretly corrupting the ignorant or negligent professors of our religion, and closely uniting and combining themselves against such as were found in this posture, waiting for an opportunity by force to destroy those whom they could not hope to seduce.

93. For the effecting whereof they were strengthened with arms and munitions, encouraged by superstitious prayers, enjoined by the Nuncio to be weekly made for the prosperity of some great design.

94. And such power had they at Court, that secretly a commission was issued out, or intended to be issued to some great men of that profession, for the levying of soldiers, and to command and employ them according to private instructions, which we doubt were framed for the advantage of those who were the contrivers of them.

95. His Majesty's treasure was consumed, his revenue anticipated.

96. His servants and officers compelled to lend great sums of money.

97. Multitudes were called to the Council Table, who were tired with long attendances there for refusing illegal payments.

98. The prisons were filled with their commitments; many of the Sheriffs summoned into the Star Chamber, and some imprisoned for not being quick enough in levying the ship-money; the people languished under grief and fear, no visible hope being left but in desperation.

99. The nobility began to weary of their silence and patience, and sensible of the duty and trust which belongs to them: and thereupon some of the most ancient of them did petition His Majesty at such a time, when evil counsels were so strong, that they had occasion to expect more hazard to themselves, than redress of those public evils for which they interceded.

100. Whilst the kingdom was in this agitation and distemper, the Scots, restrained in their trades, impoverished by the loss of many of their ships, bereaved of all possibility of satisfying His Majesty by any naked supplication, entered with a powerful army into the kingdom, and without any hostile act or spoil in the country they passed, more than forcing a passage over the Tyne at Newburn, near Newcastle, possessed themselves of Newcastle, and had a fair opportunity to press on further upon the King's army.

101. But duty and reverence to His Majesty, and brotherly love to the English nation, made them stay there, whereby the King had leisure to entertain better counsels.

102. Wherein God so blessed and directed him, that he summoned the Great Council of Peers to meet at York upon the 24th of September, and there declared a Parliament to begin the 3d of November then following.

103. The Scots, the first day of the Great Council, presented an humble Petition to His Majesty, whereupon the Treaty was appointed at Ripon.

104. A present cessation of arms agreed upon, and the full conclusion of all differences referred to the wisdom and care of the Parliament.

105. At our first meeting, all oppositions seemed to vanish, the mischiefs were so evident which those evil counsellors produced, that no man durst stand up to defend them: yet the work itself afforded difficulty enough.

106. The multiplied evils and corruption of fifteen years, strengthened by custom and authority, and the concurrent interest of many powerful delinquents, were now to be brought to judgment and reformation.

107. The King's household was to be provided for:—they had brought him to that want, that he could not supply his ordinary and necessary expenses without the assistance of his people.

108. Two armies were to be paid, which amounted very near to eighty thousand pounds a month.

109. The people were to be tenderly charged, having been formerly exhausted with many burdensome projects.

110. The difficulties seemed to be insuperable, which by the Divine Providence we have overcome. The contrarieties incompatible, which yet in a great measure we have reconciled.

111. Six subsidies have been granted and a Bill of poll-money, which if it be duly levied, may equal six subsidies more, in all £600,000.

112. Besides we have contracted a debt to the Scots of £220,000, yet God hath so blessed the en-

deavours of this Parliament, that the kingdom is a great gainer by all these charges.

113. The ship-money is abolished, which cost the kingdom about £200,000 a year.

114. The coat and conduct-money, and other military charges are taken away, which in many counties amounted to little less than the ship-money.

115. The monopolies are all suppressed, whereof some few did prejudice the subject, above £1,000,000 yearly.

116. The soap £100,000.

117. The wine £300,000.

118. The leather must needs exceed both, and salt could be no less than that.

119. Besides the inferior monopolies, which, if they could be exactly computed, would make up a great sum.

120. That which is more beneficial than all this is, that the root of these evils is taken away, which was the arbitrary power pretended to be in His Majesty of taxing the subject, or charging their estates without consent in Parliament, which is now declared to be against law by the judgment of both Houses, and likewise by an Act of Parliament.

121. Another step of great advantage is this, the living grievances, the evil counsellors and actors of these mischiefs have been so quelled.

122. By the justice done upon the Earl of Strafford, the flight of the Lord Finch and Secretary Windebank.

123. The accusation and imprisonment of the Archbishop of Canterbury, of Judge Berkeley; and

124. The impeachment of divers other Bishops and Judges, that it is like not only to be an ease to the present times, but a preservation to the future.

125. The discontinuance of Parliaments is prevented by the Bill for a triennial Parliament, and the abrupt dissolution of this Parliament by another Bill, by which it is provided it shall not be dissolved or adjourned without the consent of both Houses.

126. Which two laws well considered may be thought more advantageous than all the former, because they secure a full operation of the present remedy, and afford a perpetual spring of remedies for the future.

127. The Star Chamber.

128. The High Commission.

129. The Courts of the President and Council in the North were so many forges of misery, oppression and violence, and are all taken away, whereby men are more secured in their persons, liberties and estates, than they could be by any law or example for the regulation of those Courts or terror of the Judges.

130. The immoderate power of the Council Table, and the excessive abuse of that power is so ordered and restrained, that we may well hope that no such things as were frequently done by them, to the prejudice of the public liberty, will appear in future times but only in stories, to give us and our posterity more occasion to praise God for His Majesty's goodness, and the faithful endeavours of this Parliament.

131. The canons and power of canon-making are blasted by the votes of both Houses.

132. The exorbitant power of Bishops and their courts are much abated, by some provisions in the Bill against the High Commission Court, the authors of the many innovations in doctrine and ceremonies.

133. The ministers that have been scandalous in

their lives, have been so terrified in just complaints and accusations, that we may well hope they will be more modest for the time to come; either inwardly convicted by the sight of their own folly, or outwardly restrained by the fear of punishment.

134. The forests are by a good law reduced to their right bounds.

135. The encroachments and oppressions of the Stannary Courts, the extortions of the clerk of the market.

136. And the compulsion of the subject to receive the Order of Knighthood against his will, paying of fines for not receiving it, and the vexatious proceedings thereupon for levying of those fines, are by other beneficial laws reformed and prevented.

137. Many excellent laws and provisions are in preparation for removing the inordinate power, vexation and usurpation of Bishops, for reforming the pride and idleness of many of the clergy, for easing the people of unnecessary ceremonies in religion, for censuring and removing unworthy and unprofitable ministers, and for maintaining godly and diligent preachers through the kingdom.

138. Other things of main importance for the good of this kingdom are in proposition, though little could hitherto be done in regard of the many other more pressing businesses, which yet before the end of this Session we hope may receive some progress and perfection.

139. The establishing and ordering the King's revenue, that so the abuse of officers and superfluity of expenses may be cut off, and the necessary disbursements for His Majesty's honour, the defence and government of the kingdom, may be more certainly provided for.

140. The regulating of courts of justice, and abridging both the delays and charges of lawsuits.

141. The settling of some good courses for preventing the exportation of gold and silver, and the inequality of exchanges between us and other nations, for the advancing of native commodities, increase of our manufacturers, and well balancing of trade, whereby the stock of the kingdom may be increased, or at least kept from impairing, as through neglect hereof it hath done for many years last past.

142. Improving the herring-fishing upon our coasts, which will be of mighty use in the employment of the poor, and a plentiful nursery of mariners for enabling the kingdom in any great action.

143. The oppositions, obstructions and other difficulties wherewith we have been encountered, and which still lie in our way with some strength and much obstinacy, are these: the malignant party whom we have formerly described to be the actors and promoters of all our misery, they have taken heart again.

144. They have been able to prefer some of their own factors and agents to degrees of honour, to places of trust and employment, even during the Parliament.

145. They have endeavoured to work in His Majesty ill impressions and opinions of our proceedings, as if we had altogether done our own work, and not his; and had obtained from him many things very prejudicial to the Crown, both in respect of prerogative and profit.

146. To wipe out this slander we think good only to say thus much: that all that we have done is for His Majesty, his greatness, honour and support, when we yield to give £25,000 a month for the relief of the Northern Counties; this was given to the King, for he was bound to protect his subjects.

147. They were His Majesty's evil counsellors, and their ill instruments that were actors in those grievances which brought in the Scots.

148. And if His Majesty please to force those who were the authors of this war to make satisfaction, as he might justly and easily do, it seems very reasonable that the people might well be excused from taking upon them this burden, being altogether innocent and free from being any cause of it.

149. When we undertook the charge of the army, which cost above £50,000 a month, was not this given to the King? Was it not His Majesty's army? Were not all the commanders under contract with His Majesty, at higher rates and greater wages than ordinary?

150. And have not we taken upon us to discharge all the brotherly assistance of £300,000, which we gave the Scots? Was it not toward repair of those damages and losses which they received from the King's ships and from his ministers?

151. These three particulars amount to above £1,100,000.

152. Besides, His Majesty hath received by impositions upon merchandise at least £400,000.

153. So that His Majesty hath had out of the subjects' purse since the Parliament began £1,500,000, and yet these men can be so impudent as to tell His Majesty that we have done nothing for him.

154. As to the second branch of this slander, we acknowledge with much thankfulness that His Majesty hath passed more good Bills to the advantage of the subjects than have been in many ages.

155. But withal we cannot forget that these venomous councils did manifest themselves in some endeavours to hinder these good acts.

156. And for both Houses of Parliament we may with truth and modesty say thus much: that we have ever been careful not to desire anything that should weaken the Crown either in just profit or useful power.

157. The triennial Parliament for the matter of it, doth not extend to so much as by law we ought to have required (there being two statutes still in force for a Parliament to be once a year), and for the manner of it, it is in the King's power that it shall never take effect, if he by a timely summons shall prevent any other way of assembling.

158. In the Bill for continuance of this present Parliament, there seems to be some restraint of the royal power in dissolving of Parliaments, not to take it out of the Crown, but to suspend the execution of it for this time and occasion only: which was so necessary for the King's own security and the public peace, that without it we could not have undertaken any of these great charges, but must have left both the armies to disorder and confusion, and the whole kingdom to blood and rapine.

159. The Star Chamber was much more fruitful in oppression than in profit, the great fines being for the most part given away, and the rest stalled at long times.

160. The fines of the High Commission were in themselves unjust, and seldom or never came into the King's purse. These four Bills are particularly and more specially instanced.

161. In the rest there will not be found so much as a shadow of prejudice to the Crown.

162. They have sought to diminish our reputation with the people, and to bring them out of love with Parliaments.

163. The aspersions which they have attempted this way have been such as these:

164. That we have spent much time and done

little, especially in those grievances which concern religion.

165. That the Parliament is a burden to the kingdom by the abundance of protections which hinder justice and trade; and by many subsidies granted much more heavy than any formerly endured.

166. To which there is a ready answer; if the time spent in this Parliament be considered in relation backward to the long growth and deep root of those grievances, which we have removed, to the powerful supports of those delinquents, which we have pursued, to the great necessities and other charges of the commonwealth for which we have provided.

167. Or if it be considered in relation forward to many advantages, which not only the present but future ages are like to reap by the good laws and other proceedings in this Parliament, we doubt not but it will be thought by all indifferent judgments, that our time hath been much better employed than in a far greater proportion of time in many former Parliaments put together; and the charges which have been laid upon the subject, and the other inconveniences which they have borne, will seem very light in respect of the benefit they have and may receive.

168. And for the matter of protections, the Parliament is so sensible of it that therein they intended to give them whatsoever ease may stand with honour and justice, and are in a way of passing a Bill to give them satisfaction.

169. They have sought by many subtle practices to cause jealousies and divisions betwixt us and our brethren of Scotland, by slandering their proceedings and intentions towards us, and by secret endeavours to instigate and incense them and us one against another.

170. They have had such a party of Bishops and Popish lords in the House of Peers, as hath caused much opposition and delay in the prosecution of delinquents, hindered the proceedings of divers good Bills passed in the Commons' House, concerning the reformation of sundry great abuses and corruptions both in Church and State.

171. They have laboured to seduce and corrupt some of the Commons' House to draw them into conspiracies and combinations against the liberty of the Parliament.

172. And by their instruments and agents they have attempted to disaffect and discontent His Majesty's army, and to engage it for the maintenance of their wicked and traitorous designs; the keeping up of Bishops in votes and functions, and by force to compel the Parliament to order, limit and dispose their proceedings in such manner as might best concur with the intentions of this dangerous and potent faction.

173. And when one mischievous design and attempt of theirs to bring on the army against the Parliament and the City of London, hath been discovered and prevented;

174. They presently undertook another of the same damnable nature, with this addition to it, to endeavour to make the Scottish army neutral, whilst the English army, which they had laboured to corrupt and envenom against us by their false and slanderous suggestions, should execute their malice to the subversion of our religion and the dissolution of our government.

175. Thus they have been continually practising to disturb the peace, and plotting the destruction even of all the King's dominions; and have employed their emissaries and agents in them, all for the promoting their devilish designs, which the vigilancy of those who were well affected hath still

discovered and defeated before they were ripe for execution in England and Scotland.

176. Only in Ireland, which was farther off, they have had time and opportunity to mould and prepare their work, and had brought it to that perfection that they had possessed themselves of that whole kingdom, totally subverted the government of it, routed out religion, and destroyed all the Protestants whom the conscience of their duty to God, their King and country, would not have permitted to join with them, if by God's wonderful providence their main enterprise upon the city and castle of Dublin, had not been detected and prevented upon the very eve before it should have been executed.

177. Notwithstanding they have in other parts of that kingdom broken out into open rebellion, surprising towns and castles, committed murders, rapes and other villainies, and shaken off all bonds of obedience to His Majesty and the laws of the realm.

178. And in general have kindled such a fire, as nothing but God's infinite blessing upon the wisdom and endeavours of this State will be able to quench it.

179. And certainly had not God in His great mercy unto this land discovered and confounded their former designs, we had been the prologue to this tragedy in Ireland, and had by this been made the lamentable spectacle of misery and confusion.

180. And now what hope have we but in God, when as the only means of our subsistence and power of reformation is under Him in the Parliament?

181. But what can we the Commons, without the conjunction of the House of Lords, and what conjunction can we expect there, when the Bishops and recusant lords are so numerous and prevalent that they are able to cross and interrupt our best endeavours for reformation, and by that means give advantage to this malignant party to trudge our proceedings.

182. They infuse into the people that we mean to abolish all Church government, and leave every man to his own fancy for the service and worship of God, absolving him of that obedience which he owes under God unto His Majesty, whom we know to be entrusted with the ecclesiastical law as well as with the temporal, to regulate all the members of the Church of England, by such rules of order and discipline as are established by Parliament, which is his great council in all affairs both in Church and State.

183. We confess our intention is, and our endeavours have been, to reduce within bounds that exorbitant power which the prelates have assumed unto themselves, so contrary both to the Word of God and to the laws of the land, to which end we passed the Bill for the removing them from their temporal power and employments, that so the better they might with meekness apply themselves to the discharge of their functions, which Bill themselves opposed, and were the principal instruments of crossing it.

184. And we do here declare that it is far from our purpose or desire to let loose the golden reins of discipline and government in the Church, to leave private persons or particular congregations to take up what form of Divine Service they please, for we hold it requisite that there should be throughout the whole realm a conformity to that order which the laws enjoin according to the Word of God. And we desire to unburden the consciences of men of needless and supersti-

tious ceremonies, suppress innovations, and take away the monuments of idolatry.

185. And the better to effect the intended reformation, we desire there may be a general synod of the most grave, pious, learned and judicious divines of this island; assisted with some from foreign parts, professing the same religion with us, who may consider of all things necessary for the peace and good government of the Church, and represent the results of their consultations unto the Parliament, to be there allowed of and confirmed, and receive the stamp of authority, thereby to find passage and obedience throughout the kingdom.

186. They have maliciously charged us that we intend to destroy and discourage learning, whereas it is our chiefest care and desire to advance it, and to provide a competent maintenance for conscientious and preaching ministers throughout the kingdom, which will be a great encouragement to scholars, and a certain means whereby the want, meanness and ignorance, to which a great part of the clergy is now subject, will be prevented.

187. And we intended likewise to reform and purge the fountains of learning, the two Universities, that the streams flowing from thence may be clear and pure, and an honour and comfort to the whole land.

188. They have strained to blast our proceedings in Parliament, by wresting the interpretations of our orders from their genuine intention.

189. They tell the people that our meddling with the power of episcopacy hath caused sectaries and conventicles, when idolatrous and Popish ceremonies, introduced into the Church by the command of the Bishops have not only debarred the people from thence, but expelled them from the kingdom.

190. Thus with Elijah, we are called by this malignant party the troublers of the State, and still, while we endeavour to reform their abuses, they make us the authors of those mischiefs we study to prevent.

191. For the perfecting of the work begun, and removing all future impediments, we conceive these courses will be very effectual, seeing the religion of the Papists hath such principles as do certainly tend to the destruction and extirpation of all Protestants, when they shall have opportunity to effect it.

192. It is necessary in the first place to keep them in such condition as that they may not be able to do us any hurt, and for avoiding of such conivance and favour as hath heretofore been shown unto them.

193. That His Majesty be pleased to grant a standing Commission to some choice men named in Parliament, who may take notice of their increase, their counsels and proceedings, and use all due means by execution of the laws to prevent all mischievous designs against the peace and safety of this kingdom.

194. Thus some good course be taken to discover the counterfeit and false conformity of Papists to the Church, by colour whereof persons very much disaffected to the true religion have been admitted into place of greatest authority and trust in the kingdom.

195. For the better preservation of the laws and liberties of the kingdom, that all illegal grievances and exactions be presented and punished at the sessions and assizes.

196. And that Judges and Justices be very careful to give this in charge to the grand jury, and both the Sheriff and Justices to be sworn to the due execution of the Petition of Right and other laws.

197. That His Majesty be humbly petitioned by both Houses to employ such counsellors, ambassadors and other ministers, in managing his business at home and abroad as the Parliament may have cause to confide in, without which we cannot give His Majesty such supplies for support of his own estate, nor such assistance to the Protestant party beyond the sea, as is desired.

198. It may often fall out that the Commons may have just cause to take exceptions at some men for being councillors, and yet not charge those men with crimes, for there be grounds of diffidence which lie not in proof.

199. There are others, which though they may be proved, yet are not legally criminal.

200. To be a known favourer of Papists, or to have been very forward in defending or countenancing some great offenders questioned in Parliament; or to speak contemptuously of either Houses of Parliament or Parliamentary proceedings.

201. Or such as are factors or agents for any foreign prince of another religion; such are justly suspected to get councillors' places, or any other of trust concerning public employment for money; for all these and divers others we may have great reason to be earnest with His Majesty, not to put his great affairs into such hands, though we may be unwilling to proceed against them in any legal way of charge or impeachment.

202. That all Councillors of State may be sworn to observe those laws which concern the subject in his liberty, that they may likewise take an oath not to receive or give reward or pension from any foreign prince, but such as they shall within some reasonable time discover to the Lords of His Majesty's Council.

203. And although they should wickedly forswear themselves, yet it may herein do good to make them known to be false and perjured to those who employ them, and thereby bring them into as little credit with them as with us.

204. That His Majesty may have cause to be in love with good counsel and good men, by shewing him in an humble and dutiful manner how full of advantage it would be to himself, to see his own estate settled in a plentiful condition to support his honour; to see his people united in ways of duty to him, and endeavours of the public good; to see happiness, wealth, peace and safety derived to his own kingdom, and procured to his allies by the influence of his own power and government.

**GRAND SERJEANTY.** See FEUDALISM: Organization.

**GRAND TRUNK RAILWAY.** See RAILROADS: 1853-1919; CANADA: 1920: Canadian national road.

**GRANDCOURT,** village about six miles west of Bapaume, northeast France. During the battle of the Somme, 1916, it was the scene of severe fighting; taken from the Germans by the British, February 7, 1917. See WORLD WAR: 1916: II. Western front: c, 4; e, 3.

**GRANDE TERRE,** island of the West Indies, generally regarded as part of Guadeloupe. See GUADELOUPE.

**GRANDELLA,** or Benevento, Battle of (1266). See ITALY (Southern): 1250-1268.

**GRANDI,** nobles of Florence. See FLORENCE: 1250-1293.

**GRANGER,** Gordon (1821-1876), American general. Served in the Mexican War and in the Union army during the Civil War. See U. S. A.: 1863 (February-April: Tennessee).

**GREAT ST. BERNARD PASS.**—The Great St. Bernard pass (8111 ft.) stretches from Martigny in the Rhone valley, Switzerland, to Aosta in Italy. The mother-house of the hospice, founded by St. Bernard of Menthon (died c. 1081), is at Martigny. Many lives are saved annually by the servants of the canons and their dogs. "The Great St. Bernard being the lowest and easiest of the Alpine frontier passes, we should expect to find that it was the first to be used as a means of getting from country to country. When it was first discovered or used one cannot say; but we know that it formed the passage for quite a number of invasions of Italy by Celts, whilst early missionaries crossed it, carrying with them primitive Christianity. During the tenth century it was the abode of Saracenic robbers, who plundered merchants and their caravans, and held high dignitaries of the Church to ransom. In medieval times German Emperors used the pass on several occasions, and Roman legions crossed it to invade Gaul, so that even many centuries ago it was crossed by large bodies of men. . . . It is, moreover, the one passed by Napoleon and his army on May 21, 1800, the first of six days of enormous difficulty and arduous exertion for his officers and men, numbering over 30,000."—A. R. Sennett, *Across the Great Saint Bernard*, pp. 350, 351.—See also ALPS: As barriers.

**GREAT SCHISM** (1378-1418). See PAPACY: 1377-1417; 1414-1418; ITALY: 1343-1389.

**GREAT SEAL**, official seal of royal authority in England. See CHANCELLOR: British.

Lord Keeper of. See EQUITY LAW: 506; 1538.

Lady Keeper of. See EQUITY LAW: 1253.

**GREATHER RUMANIA**. See RUMANIA: 1919: Rumania in Hungary.

**GRAVES.**—The graves which formed part of the armour of the ancient Greeks were "leggings formed of a pewter-like metal, which covered the lower limbs down to the instep; and they were fastened by clasps. . . . Homer designates them as 'flexible'; and he frequently speaks of the Greek soldiery as being well-equipped with this important defence—not only, that is, well provided with greaves, but also having them so well formed and adjusted that they would protect the limbs of the warrior without in any degree affecting his freedom of movement and action. These greaves, as has been stated, appear to have been formed of a metal resembling the alloy that we know as pewter."—C. Boutell, *Arms and armour in antiquity and the Middle Ages*, ch. 2, sect. 3.

## GREECE

The land.—Geographical characteristics, and their influence upon the people.—"As compared with great India, vast China, or even with insular Japan, Greece is insignificant in size. It is but a petty peninsula. 'Its plains are deep narrow basins between high ridges and peaks.' In place of rivers it has only rushing torrents incapable of floating a ship. Its soil is comparatively sterile, though its reddish color combined with the variety of hills and dales lends it a delightful charm. This is increased by the indentations of innumerable bays and inlets, which add the incomparable blue of Aegean water to the beauty of the landscapes. 'No spot of the land is more than forty miles from the sea.'"—G. A. Barton, *Religions of the world*, p. 243.—"A glance at the physical map of Greece shows you the sort of country which forms the setting of our picture. You see its long and complicated coast line, its intricate system of rugged hills, and the broken strings of islands which they fling off into the sea in every direction. On the map it recalls the features of Scotland or Norway. . . . Like its sister peninsulas of Italy and Spain, it has high mountains to the north of it; but the Balkans do not, as do the Alps and Pyrenees, present the form of a sheer rampart against northern invaders. On the contrary, the main axis of the hills lies in the same direction as the peninsula itself, with a northwest and southeast trend, so that on both coasts there are ancient trade routes

into the country; but on both sides they have to traverse passes which offer a fair chance of easy defence. The historian, wise after the event, deduces that the history of such a country must lie upon the sea. It is a sheltered, hospitable sea, with chains of islands like stepping-stones inviting the timed mariner of early times to venture across it. You can sail from Greece to Asia without ever losing sight of land. This sea will also invite commerce if the Greeks have anything to sell. It does not look as if they will have much. A few valleys and small plains are fertile enough to feed their own proprietors, but as regards corn and foodstuffs Greece will have to be an importer, not an exporter. In history we find great issues hanging on the sea routes by which corn came in from the Black Sea. Wine and olive oil are the only things that nature allowed Greece to export. As for minerals, Athens is rich in her silver mines, and gold is to be found in Thrace under Mount Pangaeus. But if Greece is to grow rich, it will have to be through the skill of her incomparable craftsmen and the shield and spear of her hoplites. The map will help to explain another feature of her history. Although at first sight the peninsula looks as if it possessed a geographical unity, yet a second glance shows that nature has split it up into numberless small plains and valleys divided from one another by sea and mountain. Such a country, as we see in Wales, Switzerland, and

Scotland, encourages a polity of clans and cantons, each jealous of its neighbor over the hill, and each cherishing a fierce local patriotism. Nature, moreover, has provided each plain with its natural citadel. Greece and Italy are both rich in these self-made fortresses. . . . If ever geography made history, it was where those flat-topped hills with precipitous sides, such as the Acropolis of Athens and Acrocorinthus, invited man to build his fortress and his shrine upon their summit. Then, perched safely on the hill-top and ringed with her wall, the city was able to develop her peculiar civilization even in troubled times while the rest of the world was still immersed in warfare and barbarism. The farmer spends the summer in the plain below for sowing and reaping, the mariner puts out from harbor, the soldier marches out for a summer campaign, but the city is their home, their refuge, and the centre of their patriotism. We must not overrate the importance of this natural cause. Even the plains of Greece, such as Thessaly and Boeotia, never developed a unity. There, too, the citadel and the city-state prevailed. Geography is seldom more than a contributory cause, shaping and assisting historical tendencies; but in this case it is impossible to resist the belief that in Italy and Greece the hill-top invited the wall, and the wall enabled the civilization of the city-state to rise and flourish long in advance of the rest of Europe. Greece enjoys a wonderful climate. The summer sun is hot, but morning and evening bring refreshing breezes from the sea. The rain average is low and regular; snow is almost unknown in the valleys. Hence there is a peculiar dry brightness in the atmosphere which seems to annihilate distance. . . . In that radiant sea air the Greeks of old learned to see things clearly. They could live, as the Greeks still live, a simple, temperate life. Wine and bread, with a relish of olives or pickled fish, satisfied the bodily needs of the richest. The climate invited an open-air life, as it still does. To-day, as of old, the Greek loves to meet his neighbors in the market square and talk eternally over all things both in heaven and earth. Though the blood of Greece has suffered many admixtures and though Greece has had to submit to centuries of conquest by many masters and oppressors, her racial character is little changed in some respects. The Greek is still restless, talkative, subtle, and inquisitive, eager for liberty without the sense of discipline which liberty requires, contemptuous of strangers and jealous of his neighbor. In commerce, when he has the chance, his quick and supple brain still makes him the prince of traders. Honesty and stability have always been qualities which he is quicker to admire than to practise. Courage, national pride, intellectual self-restraint, and creative genius have undoubtedly suffered under the Turkish domination. . . . The great defect of the climate of modern Greece is the malaria which haunts her plains and lowlands in early autumn. This is partly the effect and partly the cause of undrained and sparsely populated marsh-lands like those of Boeotia. It need not have been so in early Greek history. There must have been more agriculture and more trees in ancient than in modern Greece. The scenery of Greece is singularly impressive. Folded away among the hills there are, indeed, some lovely wooded valleys, like Tempe, but in general it is a treeless country, and the eye enjoys, in summer at least, a pure harmony of brown hills with deep blue sea and sky. The sea is indigo, almost purple, and the traveler quickly sees the justice of Homer's epithet of 'wine-dark.' Those brown hills make a lovely background for the play

of light and shade. Dawn and sunset touch them with warmer colors, and the plain of Attica is seen 'violet-crowned' by the famous heights of Hymettus, Pentelicus, and Parnes. The ancient Greek talked little of scenery, but he saw a nereid in every pool, a dryad under every oak, and heard the pipe of Pan in the caves of his limestone hills. He placed the choir of Muses on Mount Helicon, and, looking up to the snowy summit of Olympus, he peopled it with calm, benignant deities."—J. C. Stobart, *Legacy of Greece* (*Greek genius and its influence*, L. Cooper, ed., pp. 28-31).

"The considerable part played by the people of Greece during many ages must undoubtedly be ascribed to the geographical position of their country. [See also BALKAN STATES: Geographical position; 19th century.] . . . Greece, a sub-peninsula of the peninsula of the Balkans, was even more completely protected by transverse mountain barriers in the north than was Thracia or Macedonia. Greek culture was thus able to develop itself without fear of being stifled at its birth by successive invasions of barbarians. Mounts Olympus, Pelion, and Ossa, towards the north and east of Thessaly, constituted the first line of formidable obstacles towards Macedonia. A second barrier, the steep range of the Othrys, runs along what is the present political boundary of Greece. To the south of the Gulf of Lamia a fresh obstacle awaits us, for the range of the Ceta closes the passage, and there is but the narrow pass of the Thermopylae between it and the sea. Having crossed the mountains of the Locri and descended into the basin of Thebæ, there still remain to be crossed the Parnes or the spurs of the Citharon before we reach the plains of Attica. The 'isthmus' beyond these is again defended by transverse barriers, outlying ramparts, as it were, of the mountain citadel of the Peloponnesus, that acropolis of all Greece. . . . At an epoch when the navigation even of a land-locked sea like the Ægean was attended with danger, Greece found herself sufficiently protected against the invasions of oriental nations; but, at the same time, no other country held out such inducements to the pacific expeditions of merchants. Gulfs and harbours facilitated access to her Ægean coasts, and the numerous outlying islands were available as stations or as places of refuge. Greece, therefore, was favourably placed for entering into commercial intercourse with the more highly civilised peoples who dwelt on the opposite coasts of Asia Minor. The colonists and voyagers of Eastern Ionia not only supplied their Achaean and Pelasgian kinsmen with foreign commodities and merchandise, but they also imparted to them the myths, the poetry, the sciences, and the arts of their native country. Indeed, the geographical configuration of Greece points towards the east, whence she has received her first enlightenment. Her peninsulas and outlying islands extend in that direction; the harbours on her eastern coasts are most commodious, and afford the best shelter; and the mountain-surrounded plains there offer the best sites for populous cities. . . . The most distinctive feature of Hellas, as far as concerns the relief of the ground, consists in the large number of small basins, separated one from the other by rocks or mountain ramparts. The features of the ground thus favoured the division of the Greek people into a multitude of independent republics. Every town had its river, its amphitheatre of hills or mountains, its acropolis, its fields, pastures, and forests, and nearly all of them had, likewise, access to the sea. All the elements required by a free community were thus to be found within each of

these small districts, and the neighbourhood of other towns, equally favoured, kept alive perpetual emulation, too frequently degenerating into strife and battle. The islands of the Ægean Sea, likewise, had constituted themselves into miniature republics. Local institutions thus developed themselves freely, and even the smallest island of the Archipelago has its great representatives in history. But whilst there thus exists the greatest diversity, owing to the configuration of the ground and the multitude of islands, the sea acts as a binding element, washes every coast, and penetrates far inland."—E. Reclus, *Earth and its inhabitants: Europe*, v. 1, pp. 36-38.—"The independence of each city was a doctrine stamped deep on the Greek political mind by the very nature of the Greek land. How truly this is so is hardly fully understood till we see that land with our own eyes. The map may do something; but no map can bring home to us the true nature of the Greek land till we have stood on a Greek hill-top, on the akropolis of Athens or the loftier akropolis of Corinth, and have seen how thoroughly the land was a land of valleys cut off by hills, of islands and peninsulas cut off by arms of sea, from their neighbours on either side. Or we might more truly say that, while the hills fenced them off from their neighbours, the arms of the sea laid them open to their neighbours. Their waters might bring either friends or enemies; but they brought both from one wholly distinct and isolated piece of land to another. Every island, every valley, every promontory, became the seat of a separate city; that is, according to Greek notions, the seat of an independent power, owing indeed many ties of brotherhood to each of the other cities which helped to make up the whole Greek nation, but each of which claimed the right of war and peace and separate diplomatic intercourse, alike with every other Greek city and with powers beyond the bounds of the Greek world. Corinth could treat with Athens and Athens with Corinth, and Corinth and Athens could each equally treat with the King of the Macedonians and with the Great King of Persia. . . . How close the Greek states are to one another, and yet how physically distinct they are from one another, it needs, for me at least, a journey to Greece fully to take in."—E. A. Freeman, *Practical bearings of European history (Lectures to American audiences)*, pp. 235-244.—See also ATHENS; COLONIZATION: Ancient: Greek, etc.; EUROPE: Ancient: Greek civilization: Its heritage.

Ægean or Minoan civilization (4000-1200 B. C.).—"Long before the Indo-European Greeks came to this land [Greece] it had been affected by the Ægean civilization. This civilization has been disclosed to us most completely in Crete, where excavations have revealed an outline of its history reaching back farther than 3000 B. C. Beginning there in the Stone Age, this civilization slowly evolved in a way as original as that of Babylonia, Egypt or China. Scholars call the race that produced this civilization Minoan; from the myth of Minos of Crete. The early Minoan period of this civilization was contemporary with the Old Kingdom of Egypt: the Middle Minoan period, when the civilization reached its height, coincided with the time of Egypt's Middle Kingdom, 2000-1800 B. C.; while the Late Minoan period, contemporary with the Eighteenth and Nineteenth Egyptian dynasties (1600-1200 B. C.),

though in parts a period of splendor, was on the whole a period of decline. The Cyclades Islands, parts of Laconia, Argolis, Attica, Boeotia, and Thessaly, as well as parts of Caria and the Troad in Asia, shared this civilization. Greece was thus a highly civilized land long before the coming of the Greeks [see also ÆGEAN CIVILIZATION]. At some time before the end of the second millennium B. C. the Indo-European Greeks began to enter the land from the north. They came in successive waves, Ionians, Achæans, Dorians. They appear to have reached some degree of civilization before they separated from the Aryan branches of their race, the Persian and Hindus, for they worshipped some of the same deities as their eastern kinsfolk. On their way to Greece they had advanced farther in civilization, since they passed through the valley of the Danube and came under the influence of the Bronze Age civilization there. When they reached Greece, however, they were far more backward than the men of the Mediterranean race whom they overcame, and it took time for the new race to absorb and transform the culture that they found. This period of absorption and transformation is reflected in the literature from the Homeric poems to the Peloponnesian War."—G. A. Barton, *Religions of the world*, pp. 243-244.—"Meanwhile, it is clear from the successive re-foundations of 'Troy' and from the successive changes in the quality of Hellespontine culture, that the land-bridge between Europe and Asia Minor was the scene of much coming and going, in the early bronze age, and of repeated disturbance of its inhabitants [see also EUROPE: Prehistoric: Bronze Age: Greece]. At the close of the neolithic age (in about the same stage, that is, as the new settlement of Thessaly, though without its characteristic art), a culture which attains its highest development in Servia spreads its influence far into Asia Minor; but it gives way later to strong reverse currents of Cyprus in the earliest age of metal. It cannot be too clearly insisted, that such an extension of culture does not necessarily mean the migration of a people, unless other evidence such as resettlement also points that way; if anything, it rather indicates that the region through which the new arts were spreading was settled and at peace. We should therefore probably think of the early metal age in Asia Minor as the long, quiet period which gave birth to Egypt and Sumerian Babylonia; but as broken, towards the Hellespont, by crises of disturbance such as that which brought in the ancestors of Sargon of Accad. It was in this peaceful interlude, too, that the Minoan culture grew undisturbed to its splendid culmination in Crete. Minoan visitors had been familiar at the Egyptian court for nearly a century. Until the reign of Amenhotep III, who came to the throne about 1415 [B. C.], they had always been called Keftiu by the Egyptians, and had come as friends or traders, wearing their characteristic hair-plaits and gaily coloured kilts, and bringing rich samples of their gold and silver works of art. But from the accession of Amenhotep III no more Keftiu come; and the Shardana and Danaana (how like the Homeric 'Danaoi'!) who take their place, are men of war, hostile or mercenary, like the Goths in Kingsley's *Hypatia*. Some of them enlisted with the King of Egypt, and were set to keep their countrymen out. If a late but learned native historian, Manetho, is to be believed, one such 'Danaan'—perhaps one of these very guardsmen—made himself king for a moment, in the brief anarchy which followed the death of Akhen-aten about 1365; and Shardana continue to make dis-

astrous raids at intervals until about 1200. But after 1300 they no longer came alone; an increasing number of other peoples accompany them, and their raids are on a larger and more offensive scale. The two principal attacks are about 1230 and 1200. The former, in the reign of Menephtah, was in concert with an alongshore invasion of Libyans on the west edge of the Delta. . . . The second attack was made in the eighth year of Ramesses III, by a combined land and sea force, operating this time from the Syrian side. As before, there were Danaans and Shakaisha, and with them Tikkarai and other new tribes, some apparently from the Aegean, others from North Syria and Asia Minor, and among them a force of Hittites. This time the motive is even clearer than before. The land force came with its families and property in large wheeled carts; the sea-men in great sailing ships, with a fighting-top on the masthead, and the decks crowded with well-armed 'heroes,' as their chivalrous enemy calls them. They had clearly come to stay; and though the king of Egypt kept them out, by a hard-fought battle in South Syria and a great sea-fight, he had still to dispose of the survivors and non-combatants. There were already half-foreign settlements on the Palestinian coast plain, and to reinforce these with the newcomers would put a warlike population, under obligations to Egypt, in a position to stop any further attack that might come. It was the same policy again, as had made Egyptian guardsmen out of the Shardana, a century ago. The chief of these settlers bore the name Pulishtu, perhaps akin to the obscure name *Pelusi*, borrowed by Greek writers from an ancient pirate-people in the Aegean; and certainly identical with that of the Philistines, and with the word 'Palestine' which has spread from the coast to be the name of all southern Syria. Their later history is entwined for ever in that of their Israelite neighbours. They did not settle here alone, however; nearly a century and a half later there were still piratical Tikkarai established on this coast, a ruthless terror to travellers. The 'Teucric' settlement at Salamis in Cyprus which grew into a great Greek city, may well be one of their foundations, and perhaps also they gave their name to modern Zakro, a serviceable and already ancient harbour in eastern Crete facing out towards Egypt and Philistia."—J. L. Myres, *Dawn of history*, pp. 203-207.—See also **ÆGEAN CIVILIZATION**: Minoan Age; **AFRICA**: Ancient and medieval civilization: Development of Egyptian civilization; and Roman occupation; **EUROPE**: Ancient: Greek civilization: Freedom of culture; Its heritage.

**Indo-European migrations.**—Coming of the Archæans.—Trojan War.—Dorian invasion.—"In the Aegean, meanwhile, there was pandemonium. Written records we have none, and all we can do is to piece together the evidence of Greek tradition, which remembered three main events in quick succession. The first was the 'Coming of the Achæans,' blonde fair-skinned giants, 'tamers of horses,' 'shepherds of the people.' Their chief political centres are at Mycenae and in Laconia, where the Achæan kings were in some sense of 'Phrygian' origin; their conquests, which include almost all mainland Greece, Crete, and the south end of the island fringe of Asia Minor, are rough-hewn before 1250 [B.C.], but there are still 'unpacified' districts after 1180, for Menelaus sends word from Sparta that he can 'sack a town or so' if Telemachus will find his father and bring him round from rocky Ithaca. We almost hear Roger of Sicily inviting Robert of

Normandy to come south and share the fun. This makes the Achæans exact contemporaries both of the sea-raids on Egypt, and of the Phrygian occupation of northwest Asia Minor. The second event is the 'Trojan War' which the Greeks dated accurately 1194 to 1184. During an absence overseas of Menelaus, King of Sparta, within a year or two of the sea-raid of 1200, and not improbably on business connected with it, Paris, a Phrygian prince, ran away with his queen. As Fair Helen was the heiress, in right of whose hand this Achæan adventurer reigned—a notable glimpse of the pre-Achæan status of women—Paris had now a claim to the throne of Sparta quite as good as that of Edward III to that of France; and something had to be done. The whole Achæan force was flung upon Troy and after a ten years' war the Phrygian city was destroyed and the lady recovered. But it was a hard-bought victory. High gods were angry with both sides; and there were 'too many men in the world.' Achæans and Phrygians alike, were scattered over the waters; some as far as western Sicily, and the mouth of the Tiber, and the recesses of the Adriatic; others, like Menelaus himself, to Egypt again. Their palaces at home were full of sedition, and vagrant ne'er-do-weels with 'old soldier' yarns. Men who could make verses sang of little but the wars and the wanderings. It is the very picture of the foiled Sea-raiders, reeling back before the fleet of Ramesses III [see also **MILITARY ORGANIZATION**: 3]. Third comes the 'Dorian Invasion'; two generations more after the Trojan War, and therefore a little before 1100. Who the Dorians were, was not quite clear to the Greeks; in some sense they were a 'clan of Macedon,' and had arisen from Pindus, the Alpine backbone of the Greek peninsula. Unlike the Achæans, they have no skill in horses, but fight in close order on foot. Their traditional history and tribal nomenclature make them a mixed company, including some almost Albanian-looking highlanders with names of north-western form: there were also descendants of pre-Achæan 'Heraclids' from the south, perhaps dispossessed Minoans. Certain it is that their subjects, all through southern Greece, stood aloof from the Dorians, and the Dorians from them, and for some centuries the peninsula was paralysed by a nightmare of race-feud. Other northern peoples, moving nearer the east coast, conquered almost all the north, in a loose 'confederacy of neighbours' from Thessaly to the frontier of Attica. On the mainland, Attica alone outrode the storm; invaded but unconquered; thanks, so men believed, to wise reorganization by Theseus about the time of the 'Achæan Coming.' In the islands, things were rather better; though, in the south, Crete, Rhodes, and other parts were counted eventually as Dorian. [See also **DORIANS AND IONIANS**.] The refugees from Greece had obviously two ways of escape overseas; eastward and westward. How far they used the latter is not clear, though it seems likely that it was not wholly neglected; certainly some of the sea-raiders had travelled far that way. Eastward, in any case, they profited by the havoc which Phrygian raids had made in the western half of the Hittite dominion, to colonize extensively on the west coast, richer and much more open-featured than the land of bays and promontories that they had left, but essentially the same in structure, soil, and climate. Here, in due course, grows up Ionian Greece, prolonged northward and southward by the cities of Aeolis and the Hellespont, and of the Carian coast. The steps by which order was re-created out of chaos in the Aegean, and contact was re-

established with Eastern culture, over the seaways to Sidon and Tyre, and over old Hittite land-routes from Ionia to the Euphrates, deserve far fuller treatment than would accord with the scale of this book. The results, moreover, belong not to the dawn but to the full daylight of history—the history of the Ancient Greeks.”—*Ibid.*, pp. 200-210.—See also ARYANS: Meaning of the term; PELASGIANS; HELLAS; ACHÆA; ÆOLIANS; DORIANS AND IONIANS.

**Heroes and their age.**—“The period included between the first appearance of the Hellenes in Thessaly and the return of the Greeks from Troy, is commonly known by the name of the heroic age, or ages. The real limits of this period cannot be exactly defined. The date of the siege of Troy is only the result of a doubtful calculation [ending 1183 B. C. as reckoned by Eratosthenes, but fixed at dates ranging from thirty-three to sixty-three years later by Isocrates, Callimachus and other Greek writers]; and . . . the reader will see that it must be scarcely possible to ascertain the precise beginning of the period: but still, so far as its traditions admit of anything like a chronological connexion, its duration may be estimated at six generations, or about 200 years [say from some time in the fourteenth to some time in the twelfth century before Christ]. . . . The history of the heroic age is the history of the most celebrated persons belonging to this class, who, in the language of poetry, are called ‘heroes.’ The term ‘hero’ is of doubtful origin, though it was clearly a title of honour; but, in the poems of Homer, it is applied not only to the chiefs, but also to their followers, the freemen of lower rank, without, however, being contrasted with any other, so as to determine its precise meaning. In later times its use was narrowed, and in some degree altered: it was restricted to persons, whether of the heroic or of after ages, who were believed to be endowed with a superhuman, though not a divine, nature, and who were honoured with sacred rites, and were imagined to have the power of dispensing good or evil to their worshippers; and it was gradually combined with the notion of prodigious strength and gigantic stature. Here, however, we have only to do with the heroes as men. The history of their age is filled with their wars, expeditions, and adventures, and this is the great mine from which the materials of the Greek poetry were almost entirely drawn.”—C. Thirlwall, *History of Greece*, v. 1, ch. 5.—The legendary heroes whose exploits and adventures became the favorite subjects of Greek tragedy and song were Perseus, Hercules, Theseus, the Argonauts, and the heroes of the siege of Troy.—See also ACHILLES; PAGANISM: Heroes and Gods.

**Mycenæ and its kings.**—**Unburied memorials.**—“Thucydides says that before the Dorian conquest, the date of which is traditionally fixed at B. C. 1104, Mycenæ was the only city whence ruled a wealthy race of kings. . . . Archaeology tells us that the gold found at Mycenæ may very probably have come from the opposite coast of Asia Minor which abounded in gold; and further that the patterns impressed on the gold work at Mycenæ bear a very marked resemblance to the decorative patterns found on graves in Phrygia. Thucydides tells us that though Mycenæ was small, yet its rulers had the hegemony over a great part of Greece. Archaeology shews us that the kings of Mycenæ were wealthy and important quite out of proportion to the small city which they ruled, and that the civilisation which centered at Mycenæ spread over south Greece and the Ægean, and lasted for some centuries at least.

It seems to me that the simplest way of meeting the facts of the case is to suppose that we have recovered at Mycenæ the graves of the Pelopid race of monarchs. It will not of course do to go too far. . . . It would be too much to suppose that we have recovered the body of the Agamemnon who seems in the *Iliad* to be as familiar to us as Caesar or Alexander, or of his father Atreus, or of his charioteer and the rest. We cannot of course prove the *Iliad* to be history; and if we could, the world would be poorer than before. But we can insist upon it that the legends of heroic Greece have more of the historic element in them than anyone supposed a few years ago. . . . Assuming then that we may fairly class the Pelopidae as Achæan, and may regard the remains at Mycenæ as characteristic of the Achæan civilisation of Greece, is it possible to trace with bolder hand the history of Achæan Greece? Certainly we gain assistance in our endeavour to realize what the pre-Dorian state of Peloponnesus was like. We secure a hold upon history which is thoroughly objective, while all the history which before existed was so vague and imaginative that the clear mind of Grote refused to rely upon it at all. But the precise dates are more than we can venture to lay down, in the present condition of our knowledge. . . . The Achæan civilisation was contemporary with the eighteenth Egyptian dynasty (B. C. 1700-1400). It lasted during the invasions of Egypt from the north (1300-1100). When it ceased we cannot say with certainty. There is every historical probability that it was brought to a violent end in the Dorian invasion. The traditional date of that invasion is B. C. 1104. But it is obvious that this date cannot be relied upon.”

—P. Gardner, *New chapters in Greek history*, ch. 2-3.—The finds of Sir Arthur Evans at Crete in 1900 and excavations carried on from that date until 1914 have entirely changed the conception formerly had of Mycenæ and its kings. The remains disclosed by Schliemann at Mycenæ and Tiryns are not considered characteristic of an Achæan civilization but rather of the late Ægean or Minoan.—See also ÆGEAN CIVILIZATION; ARCHÆOLOGY: Method and scope; Development.

**Migrations of Hellenic tribes in the peninsula.**—“If there is any point in the annals of Greece at which we can draw the line between the days of myth and legend and the beginnings of authentic history, it is at the moment of the great migrations. Just as the irruption of the Teutonic tribes into the Roman empire in the 5th century after Christ marks the commencement of an entirely new era in modern Europe, so does the invasion of Southern and Central Greece by the Dorians, and the other tribes whom they set in motion, form the first landmark in a new period of Hellenic history. Before these migrations we are still in an atmosphere which we cannot recognize as that of the historical Greece that we know. . . . When, however, the migrations are ended, we at once find ourselves in a land which we recognize as the Greece of history. The tribes have settled into the districts which are to be their permanent abodes, and have assumed their distinctive characters. . . . The original impetus which set the Greek tribes in motion came from the north, and the whole movement rolled southward and eastward. It started with the invasion of the valley of the Peneus by the Thessalians, a warlike but hitherto obscure tribe, who had dwelt about Dodona in the uplands of Epirus. They crossed the passes of Pindus, and flooded down into the great plain to

which they were to give their name. The tribes which had previously held it were either crushed and enslaved, or pushed forward into Central Greece by the wave of invasion. Two of the displaced races found new homes for themselves by conquest. The Arnaeans, who had dwelt in the southern lowlands along the courses of Apidanus and Enipeus, came through Thermopylae, pushed the Locrians aside to right and left, and descended into the valley of the Cephissus, where they subdued the Minyae of Orchomenus [see *MINYAE*], and then, passing south, utterly expelled the Cadmeians of Thebes. The plain country which they had conquered received a single name. Boeotia became the common title of the basins of the Cephissus and the Asopus, which had previously been in the hands of distinct races. Two generations later the Boeotians endeavoured to cross Cithaeron, and add Attica to their conquests; but their king Xanthus fell in single combat with Melanthus, who fought in behalf of Athens, and his host gave up the enterprise. In their new country the Boeotians retained their national unity under the form of a league, in which no one city had authority over another, though in process of time Thebes grew so much greater than her neighbours that she exercised a marked preponderance over the other thirteen members of the confederation. Orchomenus, whose Minyan inhabitants had been subdued but not exterminated by the invaders, remained dependent on the league without being at first amalgamated with it. A second tribe who were expelled by the irruption of the Thessalians were the Dorians, a race whose name is hardly heard in Homer, and whose early history had been obscure and insignificant. They had till now dwelt along the western slope of Pindus. Swept on by the invaders, they crossed Mount Othrys, and dwelt for a time in the valley of the Spercheius and on the shoulders of Oeta. But the land was too narrow for them, and, after a generation had passed, the bulk of the nation moved southward to seek a wider home, while a small fraction only remained in the valleys of Oeta. Legends tell us that their first advance was made by the Isthmus of Corinth, and was repulsed by the allied states of Peloponnesus, Hyllus the Dorian leader having fallen in the fight by the hand of Echemus, King of Tegea. But the grandsons of Hyllus resumed his enterprise, and met with greater success. Their invasion was made, as we are told, in conjunction with their neighbours the Aetolians, and took the Aetolian port of Naupactus as its base. Pushing across the narrow strait at the mouth of the Corinthian Gulf, the allied hordes landed in Peloponnesus, and forced their way down the level country on its western coast, then the land of the Epeians, but afterwards to be known as Elis and Pisatis. This the Aetolians took as their share, while the Dorians pressed further south and east, and successively conquered Messenia, Laconia, and Argolis, destroying the Cauconian kingdom of Pylos and the Achaian states of Sparta and Argos. There can be little doubt that the legends of the Dorians pressed into a single generation the conquests of a long series of years. . . . It is highly probable that Messenia was the first seized of the three regions, and Argos the latest . . . but of the details or dates of the Dorian conquests we know absolutely nothing. Of the tribes whom the Dorians supplanted, some remained in the land as subjects to their newly found masters, while others took ship and fled over sea. The stoutest-hearted of the Achaeans of Argolis, under Tisamenus, a grandson of Agamemnon, retired northward when

the contest became hopeless, and threw themselves on the coast cities of the Corinthian Gulf, where up to this time the Ionic tribe of the Aegialeans had dwelt. The Ionians were worsted, and fled for refuge to their kindred in Attica, while the conquerors created a new Achaia between the Arcadian Mountains and the sea, and dwelt in the twelve cities which their predecessors had built. The rugged mountains of Arcadia were the only part of Peloponnesus which were to escape a change of masters resulting from the Dorian invasion. A generation after the fall of Argos, new war-bands thirsting for land pushed on to the north and west, led by descendants of Temenus. The Ionic towns of Sicyon and Phlius, Epidaurus and Troezen, all fell before them. Even the inaccessible Acropolis which protected the Aeolian settlement of Corinth could not preserve it from the hands of the enterprising Aletes. Nor was it long before the conquerors pressed on from Corinth beyond the isthmus, and attacked Attica. Foiled in their endeavour to subdue the land, they at least succeeded in tearing from it its western districts, where the town of Megara was made the capital of a new Dorian state, and served for many generations to curb the power of Athens. From Epidaurus a short voyage of fifteen miles took the Dorians to Aegina, where they formed a settlement which, first as a vassal to Epidaurus, and then as an independent community, enjoyed a high degree of commercial prosperity. . . . In all probability the Dorian invasion was to a considerable extent a check in the history of the development of Greek civilization, a supplanting of a richer and more cultured by a poorer and wilder race. The ruins of the prehistoric cities, which were supplanted by new Dorian foundations, point to a state of wealth to which the country did not again attain for many generations. On the other hand, the invasion brought about an increase in vigour and moral earnestness. The Dorians throughout their history were the sturdiest and most manly of the Greeks. The god to whose worship they were especially devoted was Apollo, the purest, the noblest, the most Hellenic member of the Olympian family. By their peculiar reverence for this noble conception of divinity, the Dorians marked themselves out as the most moral of the Greeks."—C. W. C. Oman, *History of Greece*, ch. 5.—See also *DORIANS AND IONIANS*; *ACHÆA*; *ÆOLIANS*; *BŒOTIA*; *THESSALY*.

**Ancient political and geographical divisions.**—"Greece was not a single country. . . . It was broken up into little districts, each with its own government. Any little city might be a complete State in itself, and independent of its neighbours. It might possess only a few miles of land and a few hundred inhabitants, and yet have its own laws, its own government, and its own army. . . . In a space smaller than an English county there might be several independent cities, sometimes at war, sometimes at peace with one another. Therefore when we say that the west coast of Asia Minor was part of Greece, we do not mean that this coast-land and European Greece were under one law and one government, for both were broken up into a number of little independent States: but we mean that the people who lived on the west coast of Asia Minor were just as much Greeks as the people who lived in European Greece. They spoke the same language, and had much the same customs, and they called one another Hellenes, in contrast to all other nations of the world, whom they called barbarians, . . . that is, 'the unintel-

ligible folk,' because they could not understand their tongue."—C. A. **Ancient forms of agriculture.**—Pastoral life.—Serfdom. See AGRICULTURE: Ancient: Pastoral life of the Homeric period; SERFDOM: Heroic age.

**Migrations to Asia Minor and islands of the Ægean.**—Æolian, Ionian and Dorian colonies.—"Three movements of expansion can be distinguished in what we know of the history of the Greeks. The first, that of the so-called Dorian and Ionian migrations, left them in possession of the Greek mainland, the principal islands of the Ægean, and the western seaboard of Asia Minor. The second, that of Greek colonisation properly so-called, extended the Greek world to the limits familiar to us in the history of Greece during the fifth and fourth centuries. The third, in which Macedonian kings act as leaders began with the conquests of Alexander, and resulted in that Hellenisation of the East which was the permanent achievement of his successors. . . . The earlier migrations were, it is true, caused by the pressure of advancing tribes, and were thus due, in a sense, to the need for land; but, unlike the later movement of expansion, they were themselves tribal conquests, not settlements organized by a city-state. . . . [After this period the] Dorians, Ionians and the other tribes of the mainland and in the newly-won territories, settled down to a period of agricultural development. Soil hitherto untilled was made productive, tenure of land became more secure, and by sea the pirates, with whom Homer was familiar, were gradually forced to a more regular existence. It is in this period of growing order and prosperity that the origins of Greek colonisation are to be sought. On the one hand, as families began to hold land continuously for generations, and since the amount of fertile soil was very limited, the natural growth of a peasant population soon needed some outlet to replace the earlier custom of restless wandering. On the other hand, with the clearing of the seas from pirates, men grew accustomed to regular intercourse by water. It needed only some local crisis, or the enterprise of some prominent citizen, to suggest the plan of a public emigration. To this period [eighth century] tradition ascribed the settlement of Corcyra [q. v.], the foundation of the earliest Italian and Sicilian colonies [see also SICILY: Phœnician and Greek colonies; AGRIGENTUM], and the first Milesian settlements on the shores of the Propontis and the Euxine; we may perhaps add the first Eretrian colonies in Chalcidice, though here even the approximate date of foundation must remain in doubt. . . . The Milesian exploration of the Euxine is a signal proof that, even at an early date, Greek sailors were not afraid to face real dangers, both from climate and the uncertain hospitality of native tribes. . . . Milesian colonisation was, even more notably than the colonies of Corinth, connected with her later history with the development of commerce and in particular with the traffic in corn from the shores of the North and West. . . . It follows that Milesian exploration was for long confined to the southern coast, and only ventured into the unknown regions of the North-West and North after more than a century's familiarity with

the waters of the Euxine. . . . Sinope is the type of the earliest Milesian settlements. . . . Her unrivalled position as mistress of the Euxine gave her in later centuries an untailing source of wealth, but it is plain that her position as the distributing centre for the trade of the Euxine was slow in bringing her prosperity. . . . Almost certainly, for the first hundred years of her existence, her main income must have been from the local fisheries and the cultivation of her territory on the mainland. Corinth, we know, was one of the first Greek states to develop a commercial system, its coinage was among the earliest struck on the mainland [see also MONEY AND BANKING: Ancient Greece], and it was early afied in the work of colonisation. Here, if anywhere, we should suspect the influence of commercial motives; the conclusion seems almost inevitable that Syracuse, Corcyra and the other early Corinthian colonies were founded with the immediate object of establishing Corinthian influence on an important trade-route. . . . Whatever may have been the later history of Corinth's colonising activity, her first settlements were made at a time when her population was still mainly agricultural, and when commercial interests had not yet become the dominant element in domestic politics. Even after a century of archaeological discovery, we know so little about eighth century Greece, that we can go little further than the mere statement of that fact; but it is always well to remember that the men who followed Archias across the seas were very different from the fully civilised Greeks of the fifth century. . . . They were not the men to organise a great national venture on a purely commercial basis, and for purely commercial ends. In Chalcidice and Thrace, for example, the early colonies of Eretria and Andros preceded by generations the sudden development towards the end of the sixth century of that mining industry which made the fortune first of Thasos, then of Athens, and lastly of the Macedonian kings, and of which we are only now beginning to have clear knowledge. With the exception of Potidæa (not founded until after 600 B.C.), the sites of the various Chalcidic colonies are obviously better suited for agricultural settlements in what has been styled 'the Greek Riviera,' than for towns destined to be centres of trade. So, too, in Italy and Sicily the earliest settlements are not those most obviously chosen for reasons of commerce. . . . Cyrene itself is situated on the heights of a line of cliffs rising steeply from a low-lying shore. A community of traders would have chosen a port as the site of their new home, but the Greeks, as Herodotus tells us, soon moved from the island on which they had first landed to this more inaccessible site; for behind Cyrene stretched those plains which even the first settlers could see to be almost unrivalled for the mildness of their climate and for fertility of soil. There is, therefore, much ground for saying that the earliest Greek settlements were not mainly due to the promptings of commercial enterprise; but, as we pass on to the later chapters of Greek colonial history, we shall see that motives of commerce come to be of increasing importance. . . . Religion played a leading part in their history; above all, during the earlier period with which we are dealing. But in the history of their colonisation religion, though a force, was a force which acted rather for the preservation of national sentiment than as a motive for travel and conquest. . . . When the Greeks founded their earliest settlements in the West and on the Euxine, their religion had not yet developed from a local cult to a universal faith. Men were content to wor-

ship the gods of their fathers in their own homes, and no thought of evangelising other nations ever came to trouble their prayer. Hence the missionary, so familiar a figure in the history of modern colonisation, plays no part in the story of the Greek colonies. [See also COLONIZATION: Ancient Greek, etc.; PAGANISM: Heroes and Gods; PRIESTHOOD: In Greece and Rome; RELIGION: B.C. 600-A.D. 30: Value of Greek religion.] . . . If we turn to the map and mark the different regions in which the two races [Dorians and Ionians] established their colonies we shall at once be struck by an apparent unity in the methods of each. In almost every region of the Greek colonial world, the two races are to be found represented on our maps; but it seems everywhere plain from the grouping of their settlements that the sites were chosen in a spirit of conscious opposition. In Sicily, the north east was originally almost entirely in the hands of Ionians, whilst the east and south were settled by Dorians. In the Ægean, the Ionians went to the north, the Dorians to the south, and there is here little clashing of interests; but, on the shores of the Euxine, though Miletus succeeded in gaining almost a monopoly of the more distant coasts, Megara succeeded in encircling the entrance to the Propontis with a ring of her settlements. A glance at the geographical position of these and other Greek colonies will show at once that of the two races the Ionians were by far the more enterprising. On the Euxine, in the northern waters of the Ægean, beyond the straits of Messina to Gaul and Spain, and (if we may trust Herodotus and Plutarch), up the coast line of the Adriatic, it was Ionian sailors who everywhere led the way; and though their earliest enterprises date back well into the eighth century, even in the seventh century Samian and Phocæan adventurers still found new ports to explore. There is, therefore, much point in a comparison, made by a distinguished French scholar, between the early Ionian settlers and the Portuguese adventurers of the fifteenth century, though we must always bear in mind that it is not in any way a comparison of degree. But it would be a grievous mistake were we to give to the Ionians alone the whole credit of success in the history of Greek colonisation. It is true that only in the Cyrenaica do the Dorians appear in the character of explorers; but, though later in the field, and of a less enterprising spirit, their instinct for colonisation suggested to them a choice of sites even more remarkable than those occupied by the Ionians. Their insight in this respect amounted, indeed, to genius. Chalcedon and Byzantium, Potidæa, no less than the Corinthian outposts along the shores of the Adriatic, commanded routes by which Ionians must inevitably pass on their voyages to and from their more distant colonies. Sites such as these were not chosen at random. From the position of many of their colonies, it would seem that the Dorian states aimed deliberately, at least in their later foundations, at acquiring control of Ionian routes. That in certain regions they succeeded in doing so would seem to appear from the evidence of early Greek standards of coinage. If coinage was not itself an Ionian invention, the Ionians were, at all events, the first Greeks to make a regular use of money; yet it is curious to note that, in many important regions of the ancient Greek world, the Dorian standards of Ægina and Corinth over the Ionian standards of Eubœa and the cities of the Asiatic coast."—A. Gwynn, *Character of Greek colonization* (*Journal of Hellenic Studies*, v. 38, 1918).—See also ASTA MINOR: B.C. 1100;

COMMERCE: Ancient: B.C. 1000-200; DORIANS AND IONIANS.

Character of Greek colonization.—"In the first place we have seen that the fundamental cause of Greek colonisation was not, as in more modern times, the sudden discovery of unexplored regions or the prospect of commercial gain. It was rather the constant pressure of a population outgrowing the productive capacity of land at home, and chafing, too, at the restraints of a social system wholly founded on the hereditary tenure of land. This pressure was a direct result of the increasing stability of Greek life, and the tendency to emigration was further encouraged by a second result of that increasing stability, the clearing of pirates from the home waters. But the Greeks, though essentially an agricultural people, were none the less born for maritime adventure, and the migratory movement soon resulted in a rapid extension of the limits of the Greek world. Parallel to this extension went, naturally, a great development of commerce, and commercial enterprise becomes more and more inextricably united with the growth of the colonies until the later phases of Greek colonial history are identical with the history of contemporary Greek commerce. . . . Yet if we are careful to distinguish the earlier from the succeeding stages of that history we see clearly that the first Greek states founded overseas, were primarily communities of an agricultural people, only later centres of industrial and commercial activity. This primary character of Greek colonisation explains much that would otherwise be puzzling to its later development. Greek society in the colonies no less than in the mother country, had its roots in the conception of a city-state. As long as a Greek colony survived as an independent unit, sometimes long after it had lost its independence, it retained its essential character as a polis. Hence, the development of social and political institutions among the Greek colonies is, as far as we can trace it, closely parallel to the development of society in Greece proper; only occasionally, where pressure from outside threatened the very existence of the Greek states do we find, as in Sicily under Dionysius, the sudden rise of a military despotism. And this continuity is reflected in the whole atmosphere of Greek colonial history. Tradition was a very living force in the Greek colonies, and there was nothing in their development, which can be compared to the characteristic features of modern colonial states. . . . The Greeks, on the other hand, were content with their isolated settlements, and never seem to have thought of establishing an empire in the interior of those countries whose seaboards they held. Perhaps it was the failure to convert the ideal of a city-state into the ideal of a nation; perhaps it was some inherent quality of the Greek mind—content with what it had and not caring for more than was sufficient to supply its material needs. Imperialism and apostolate are two conceptions, very different in their origin and their motives, yet both equally unfamiliar to the Greeks. What they had, they made perfect; and we must admit that the perfection of their civilization was due in no small measure to the existence of their colonies. Exchange of goods and interchange of thought are two very necessary conditions of human progress; and Greek colonisation ensured that, for two centuries at least, the Eastern Mediterranean should be the almost undisputed waterway of Greek merchants and travellers."—A. Gwynn, *Character of Greek colonization* (*Journal of Hellenic Studies*, v. 38, 1918).—"The questions we have touched on have already illustrated the

fact that colonisation was always regarded as a public act in Greece; no settlement was regarded as quite legitimate unless this act of state had been performed by some city, which was then regarded as the metropolis, and might afterwards become the grandmother of the offshoots of its own colony, since ancient custom directed that the latter, in founding a fresh settlement, should seek a leader from its own parent state. The act of colonisation was preceded by certain formalities. A religious sanction was obtained by the consultation of an oracle, generally that of Delphi, which appears to have had the fullest information of the places best suited for settlement. Next came the charter of incorporation given by the government of the founding state. This charter set forth the conditions under which the colony was to be founded, and sometimes the relations, whether religious or political which were to be maintained between it and the parent state. The relation between a colony and its mother city was as a rule merely sentimental and religious, and was emphasised by the worship of the personal founder as a hero after his death. Sometimes, indeed, it was difficult to preserve even this sentimental relationship. Although directed by a single city, colonies were sometimes composed of very mixed elements, and in this case little attachment to the founders was to be looked for. It was an aggregate of races of this kind, planted by the Athenians at Thurii in 443 B.C., that declined to worship a founder of more limited nationality than Apollo Archegetes himself. But community of commercial and political interests often bound the two states closely together, and sometimes this community found expression in a fixed agreement included in the charter. A clause such as that in the charter given by the Locrians to Naupactus about 460—that the colonists should swear not to quit alliance with the mother city, and that thirty years later each state might call on the other to renew the oath—was, in spite of the late date of this document, probably not unusual. We have noticed the actual attempt at government of her colonies made by Corinth. Elsewhere we find tokens of dependence given by the colony, but on reasonable grounds. Cotyora, Trapezus, and Cerasus, colonies of Sinope, had to pay to the mother state a yearly tribute. It was merely, however, a sign of the precarious tenure of their soil, for these colonies had been founded on land which Sinope had taken from the barbarians. But dependence of any kind was rare; and although the slight bonds of Greek international law were here reinforced by the tie of sentiment, and it was considered impious to bear arms against the mother state, the general feeling in Greece seems to have been that all political interference on the part of the latter was sufficient to dissolve the bonds of sentimental allegiance. The chief reason for this independence of the colony is no doubt to be sought simply on the idea of the autonomy of the . . . foundation of Greek political life.”—A. H. Greenidge, *Greek constitutional history*, pp. 40-43.—See also COLONIZATION: Ancient: Greek, etc.; COMMERCE: Ancient: B.C. 2000-1000; ACHÆAN CITIES, LEAGUE OF THE.

B.C. 8th century.—Rule of aristocracies.—Gens.—Tyrants.—“In some ethnè [tribe or nation], as in Epeiros and Macedon, monarchy persisted throughout historical times. The more progressive city-state, however, as the Ionian, began to adopt aristocracies about the middle of the

eighth century. The change was gradual. The great nobles who formed the council took an ever increasing part in the government till they usurped complete control. Their means of aggrandizement were the degradation of the king to a mere priest and judge, the institution of new officers in addition to the kingship, the reduction of the tenure of all offices to a single year, and the appointment and supervision of officials, rendering them responsible to the council for their administration. In this way the council made itself supreme, while the officers became its tools, and the assembly lost the little significance it had possessed under the monarchy.”—G. W. Botsford, *Hellenic history*, p. 71.—The transfer of government to the clans, or gens, could assume either of two forms: it could be kept within the ruling clan with authority vested in the members generally, as in the case of the Bacchiadæ of Corinth; or the government could lapse from the royal to the noble clans of the community as exemplified by that of the Eupatridæ at Athens; or again in the case of Argos where the hereditary principle was abandoned, and the power taken from the Heracleidæ and given to another house—that of Ægon. The clan or gen was a close corporation, the members (gentes) of which possessed a common worship closely dependent on their common ancestry. “The idea of law underwent a corresponding change. While it remained for a time purely customary as before, the nobles generally regarded themselves not as recipients of legal revelations, but as keepers of a body of law once divinely established and now handed down as a precious heritage from father to son. The nobles made use of their legal monopoly to decide cases capriciously or from motives of favoritism or in pursuit of bribes. . . . These evils, it was doubtless thought, could be partially remedied by the codification of legal usages. The state already possessed some written documents, including lists of magistrates and treaties, and it was but natural that writing should now be extended to the preservation of the laws. The earliest European code known to history was produced at Locri, Italy. . . . In Thessaly the aristocrats, who had wrested the supreme power from the king, long retained their supremacy. Elsewhere they usually were too weak to endure more than a century or thereabout. Often the aristocracy was overthrown by a tyrant—usurper, unconstitutional ruler. . . . Whatever the tyrant’s origin, his authority was generally exercised in the interest of peace, material prosperity and progress in civilization. Putting an end alike to the factional strife of nobles and the sectional conflicts of tribes, he reduced his people to harmony and established domestic peace. No force in the Hellenic world of the time contributed so much to cultural progress. . . . [By] fostering literary interest among the people and by attaching them to new cults [the cultivation of Dionysiac worship] he freed them in a degree from the priestly influence of the old nobility and educated them for self-government.”—G. W. Botsford, *Hellenic history*, pp. 71-72, 75.

B.C. 8th-6th centuries.—Economic conditions.—Trade and commerce.—Amphictyonies.—Rise of the city-state.—“This period [eighth and seventh centuries, B.C.] is marked by the growth of commerce and the foundation of colonies, especially in the Euxine and the west; by the rise of commercial cities—Miletus preëminently, other Ionian cities, Chalcis, Eretria, Ægina, Corinth. Agriculture is still the staple industry, but is beginning to be supplemented by manufactures, as of woven

cloth, pottery, armour. The coinage of money is adopted from Lydia and quickly spreads all over Greece, working an economic revolution. . . . [In the sixth century] the Ionians reach the last stage of their development and begin rapidly to decline. All the Asiatic Greek cities pass under the protection of Cræsus; they entirely lose their independence to the Persians. . . . Further advance is made by the commercial cities. The growth of manufactures and the introduction of a currency bring economic evils in their train; loans, usury, mortgages and slavery for debt."—L. Whibley, *Companion to Greek studies*, pp. 83-87.—"In the sixth century B. C. the chief commercial centres were Miletus, Samos, Sinope, Byzantium, Phocæa, the cities of Rhodes, Ephesus, Ægina, Corinth, Athens, Chios and Corcyra: in the fifth century Athens was indisputably the leader, though the Ionian cities, with Corcyra, and Corinth, were still of first-rate importance [see also BOSPORUS: Ancient and Medieval periods]. The result of the Peloponnesian War ruined at once the political and the commercial pre-eminence of Athens. Corinth still enjoyed a considerable prosperity, and Athens recovered somewhat during the fourth century, but the conquests of Alexander, while they widened the sphere of commerce, . . . and brought East and West into closer relationship, diverted Greek trade to fresh centres, Alexandria, Antioch, Seleucia, and Rhodes, large towns of the modern type which held their own up to and during the Roman supremacy. The chief commodities which formed the basis of the Greek export-trade were the oil of Attica; the wine of Chios, Naxos, Lesbos, and Thasos; the agricultural produce of Megara and Bœotia; the purple of Cythera and other coast-places; the copper of Eubœa and Cyprus; the silver of Laureium; the gold of Thasos; the iron of Iaconia; and the tunny of Byzantium. The chief manufactures for export were the woollens, purples, and carpets of Miletus, Chios, and Samos; the metal-work of Corinth, Chalcis, and Argos; the trinkets of Ægina; the pottery of Chalcis, Corinth, and Athens. The principal import was corn, obtained from the Black Sea, Magna Græcia, Sicily, and Egypt: other articles shipped in large quantities were salt, salt fish, wool, timber and skins."—*Ibid.*, p. 427.—See also ASIA MINOR: B.C. 724-530.—"From time to time, however, a longing for union was felt. It showed itself first in the interests of religion, when leagues and associations were established between neighbouring cities for the protection of enrichment of some famous shrine lying in their midst. Of such associations the Amphictyonic league was the most notable. It grouped itself in turn about the temple of Apollo at Delphi, and about that of Demeter Amphictyonia at Thermopylæ, and comprised, at one time, most of the States of Central Greece, and, in its later epoch, several of the Dorian States of the Peloponnesus. The fulfilment of the various obligations was enforced by the Amphictyonic Council, which incidentally established rules prescribing rights and duties of a non-religious character [see also AMPHICTYONIC COUNCIL]. Other associations of cities for mutual profit and defence were occasionally established, but they were imperfect and transitory. Thus the idea of Themistocles to consolidate Greece came to nothing; and a similar project of Pericles, on the eve of the Peloponnesian war, had it been realized, might have altered the course of Greek history. He had issued a decree to the effect that all Greek towns, whether in Europe or in Asia, should be invited to send representatives to a general assembly at Athens, to deliberate on the restoration of temples

destroyed by the barbarians, on the sacrifices vowed to the gods in connection with the Persian wars, and on the best means of assuring to all freedom and security of navigation, and of establishing general peace. But this proposal came to nothing owing to Sparta's jealousy of Athens, and her apprehension that an Athenian hegemony might result. Indeed the temporary confederations that were set up proceeded under the leadership, if not virtual supremacy, of one or other of the more powerful States. Aristocracies and democracies found it impossible to be allied on a footing of real equality; the diversity occasioned by the Dorian and Ionian elements in Hellas could not be eliminated. It was, in truth, easier to subjugate a city and occupy its territory, than to retain it in friendly union."—C. Phillipson, *International law and custom of ancient Greece and Rome*, pp. 36-37.—The lack of union made for individual centralization, exemplified in the unparalleled growth of the city-state. "But they reached, it may be said, the utmost possibility of the city-state. The city-state was, as we have seen, probably evolved by natural survival from the physical conditions of the country. Being established, it entailed certain definite consequences. It involved a much closer bond of social union than any modern territorial state. Its citizens felt the unity and exclusiveness of a club or school. A much larger share of public rights and duties naturally fell upon them. They looked upon their city as a company of unlimited liability in which each individual citizen was a shareholder. They expected their city to feed and amuse them. They expected to divide the plunder when she made conquests, as they were certain to share the consequences if she was defeated. Every full citizen of proper age was naturally bound to fight personally in the ranks, and from that duty his rights as a citizen followed logically. He must naturally be consulted about peace and war, and must have a voice in foreign policy. Also, if he was to be a competent soldier he must undergo proper education and training for it. There will be little privacy inside the walls of a city-state; the arts and crafts will be under public patronage. Inequalities will become hatefully apparent."—J. C. Stobart, *Glory that was Greece*, pp. 10-11.

B.C. 8th-5th centuries.—Political evolution of the leading states.—Variety in the forms of government.—Rise of democracy at Athens.—"The Hellenes followed no common political aim. . . . Independent and self-centred, they created, in a constant struggle of citizen with citizen and state with state, the groundwork of those forms of government which have been established in the world at large. We see monarchy, aristocracy, democracy, rising side by side and one after another, the changes being regulated in each community by its past experience and its special interests in the immediate present. These forms of government did not appear in their normal simplicity or in conformity with a distinct ideal, but under the modifications necessary to give them vitality. An example of this is Lakedæmon. If one of the fami-

ANCIENT GREEK COSTUMES

lies of the Heraclidæ [the two royal families—see SPARTA: Constitution] aimed at a tyranny, whilst another entered into relations with the native and subject population, fatal to the prerogatives of the conquerors, we can understand that in the third case, that of the Spartan community, the aristocratic principle was maintained with the greatest strictness. Independently of this, the divisions of the Lakedæmonian monarchy between two lines, neither of which was to have precedence, was intended to guard against the repetition in Sparta of that which had happened in Argos. Above all, the members of the Gerusia, in which the two kings had only equal rights with the rest, held a position which would have been unattainable to the elders of the Homeric age. But even the Gerusia was not independent. There existed in addition to it a general assembly, which, whilst very aristocratic as regards the native and subject population, assumed a democratic aspect in contrast with the king and the elders. The internal life of the Spartan constitution depended upon the relations between the Gerusia and the aristocratic demos. . . . The Spartan aristocracy dominated the Peloponnesus. But the constitution contained a democratic element working through the Ephors, by means of which the conduct of affairs might be concentrated in a succession of powerful hands. Alongside of this system, the purely aristocratic constitutions, which were without such a centre, could nowhere hold their ground. The Bacchiadæ in Corinth, two hundred in number, with a prytanis at their head, and intermarrying only among themselves, were one of the most distinguished of these families. They were deprived of their exclusive supremacy by Kypselus, a man of humble birth on his father's side, but connected with the Bacchiadæ through his mother. . . . As the Kypselidæ rose in Corinth, the metropolis of the colonies towards the west, so in the corresponding eastern metropolis, Miletus, Thrasybulus raised himself from the dignity of prytanis to that of tyrant; in Ephesus, Pythagoras rose to power, and overthrew the Basilidæ; in Samos, Polycrates, who was master also of the Kyklades, and of whom it is recorded that he confiscated the property of the citizens and then made them a present of it again. By concentrating the forces of their several communities the tyrants obtained the means of surrounding themselves with a certain splendor, and above all of liberally encouraging poetry and art. To these Polycrates opened his citadel, and in it we find Anacreon and Ibycus; Kypselus dedicated a famous statue to Zeus, at Olympia. The school of art at Sikyon was without a rival, and at the court of Periander were gathered the seven sages—men in whom a distinguished political position was combined with the prudential wisdom derived from the experience of life. This is the epoch of the legislator of Athens, Solon [see ATHENS: B.C. 504], who more than the rest has attracted to himself the notice of posterity. He is the founder of the Athenian democracy. . . . His proverb 'Nothing in excess' indicates his character. He was a man who knew exactly what the time has a right to call for, and who utilized existing complications to bring about the needful changes. It is impossible adequately to express what he was to the people of Athens, and what services he rendered them. That removal of their pecuniary burdens, the *seisachtheia* [see DEBT, LAWS CONCERNING: Ancient Greek], made life for the first time endurable to the humbler classes. Solon cannot be said to have introduced democracy, but, in making the share of the upper classes in the government dependent upon the good pleasure of the com-

munity at large, he laid its foundations [see also CENSUS: Ancient]. The people were invested by him with attributes which they afterwards endeavored to extend. . . . Solon himself lived long enough to see the order which he established serve as the basis of the tyranny which he wished to avoid; it was the Four Hundred themselves who lent a hand to the change. The radical cause of failure was that the democratic element was too feebly constituted to control or to repress the violence of the families. To elevate the democracy into a true power in the state other events were necessary, which not only rendered possible, but actually brought about, its further development. The conflicts of the principal families, hushed for a moment, were revived under the eyes of Solon himself with redoubled violence. The Alcæmonidæ [banished about 595 B.C.—(See ATHENS: B.C. 612-595)] were recalled, and gathered around them a party consisting mainly of the inhabitants of the seacoast, who, favored by trade, had the money in their hands; the genuine aristocrats, described as the inhabitants of the plains, who were in possession of the fruitful soil, were in perpetual antagonism to the Alcæmonidæ; and, whilst these two parties were bickering, a third was formed from the inhabitants of the mountain districts, inferior to the two others in wealth, but of superior weight to either in the popular assemblies. At its head stood Peisistratus, a man distinguished by warlike exploits, and at an earlier date a friend of Solon. It was because his adherents did not feel themselves strong enough to protect their leader that they were induced to vote him a body-guard chosen from their own ranks. . . . As soon, however, as the first two parties combined, the third was at a disadvantage, so that after some time sentence of banishment was passed upon Peisistratus. . . . Peisistratus . . . found means to gather around him a troop of brave mercenaries, with whom, and with the support of his old adherents, he then invaded Attica. His opponents made but a feeble resistance, and he became without much trouble master both of the city and of the country [see ATHENS: B.C. 560-510]. He thus attained to power; it is true, with the approbation of the people, but nevertheless by armed force. . . . We have almost to stretch a point in order to call Peisistratus a tyrant—a word which carries with it the invidious sense of a selfish exercise of power. No authority could have been more rightly placed than his; it combined Athenian with Panhellenist tendencies. But for him Athens would not have been what she afterwards became to the world. . . . Nevertheless, it must be admitted that Peisistratus governed Athens absolutely, and even took steps to establish a permanent tyranny. He did, in fact, succeed in leaving the power he possessed to his sons, Hippias and Hipparchus. . . . Of the two brothers it was the one who had rendered most service to culture, Hipparchus, who was murdered at the festival of the Panathenæa. It was an act of revenge for a personal insult. . . . In his dread lest he should be visited by a similar doom, Hippias actually became an odious tyrant and excited universal discontent. One effect, however, of the loss of stability which the authority of the dominant family experienced was that the leading exiles ejected by Peisistratus combined in the enterprise which was a necessary condition of their return, the overthrow of Hippias. The Alcæmonidæ took the principal part. . . . The revolution to which this opened the way could, it might seem, have but one result, the establishment of an oligarchical government. . . . But the matter had a very different issue," resulting in the

constitution of Cleisthenes and the establishment of democracy at Athens, despite the hostile opposition and interference of Sparta.—L. von Ranke, *Universal history: Oldest historical group of nations and the Greeks*, ch. 5.—See also ATHENS: B.C. 509-506; SUFFRAGE, MANHOOD: B.C. 5th century.

**B.C. 8th-5th centuries.—Growth of Sparta.—Culture of the seventh century.—Expansion.—**“Down to 550 Sparta underwent a political development closely analogous to that of the rest of Greece. From 550 onwards for nearly a century and a half the foreign policy of Sparta was dominated primarily by one consideration, and that not the population question, which did not arise at all until the beginning of the fifth century and only became of supreme importance in the fourth, but rather the issue of a conflict between the kings and the ephors lasting in an acute form for over fifty years and in a milder degree for almost the whole of Spartan history. Our best tradition definitely dates the spread of Spartan power in Laconia from the reign of Charilaus or Archelaus. The previous kings have no real history. If Sparta had not yet conquered Amyclæ, she can hardly have interfered much in Argos and Arcadia. If then the synœcism was the origin of Spartan strength as of that of nearly all other Greek cities, we must put it, in default of other evidence, at the time when a sudden growth of strength is really manifested. This comes about 800. The synœcism naturally entailed a revision and reconsideration of the constitution. . . . Greek tradition knowing Lycurgus as the composer of quarrels in Sparta inevitably hailed him as the author of this constitution, and Herodotus fell into the trap. Thucydides was a better judge of evidence. The establishment of a strong aristocracy about 700 at once led to a development in art and culture. That date is marked in the excavations of Sparta by the emergence of an oriental influence in Spartan pottery. . . . So far as can be judged from its archaeological remains Sparta developed during the seventh century on lines very similar to those of other Greek states. We find just the same break in the cruder native art that appears elsewhere in Athens or Corinth, and far earlier than in those towns the emergence of a fully fledged orientalising style. Combs, toilet-boxes, elaborate pins and bronze ornaments, seals, necklaces, and gold and ivory gewgaws, shew that there was no puritan reaction after 700, but rather a golden age of Spartan art, similar to the beginnings in other states. Foreigners with artistic pretensions were welcomed in Sparta. We soon reach the period of Theodorus and Bathycles, of Aleman and Tyrtæus, of Terpander and Timotheus. Art and music, poetry and dancing, were all honoured arts, and Sparta partook fully of the general Hellenic awakening. Sparta had, in the words of Thucydides, become fully settled. . . . The change comes soon after 550. . . . In a word historic Sparta, self-supporting, jealous of all foreign movements, utterly out of touch with the rest of the Greek world, and devoted to an almost monastic military regime, now begins to come into existence. Spartan professionalism in warfare can certainly be dated from about this time, for hitherto Sparta had shewn no essential superiority over her neighbours. The Messenians had been as good soldiers, the Argives had at least once severely defeated her armies, Tegea had proved too strong for her. The complete superiority which belonged to Spartan infantry, from the days of Cleomenes was clearly unknown before 550. We may therefore conclude with some certainty that the social changes of this period were due to an increased

demand for military efficiency and a drastic revival of the ‘Lycurgan’ which entailed a more or less complete abandonment of artistic development. Just as in Athens the abandonment of conscription is contemporaneous with the foundation of the schools of philosophy, so in Sparta the claims of barrack-life drove out the gentler arts of peace. The wars of Sparta prior to 550 had been wars of conquest. At first she had had to fight for her own existence against her neighbours of Argos and Arcadia. After the synœcism in 800 she was able to turn her attention to expansion, and in the next fifty years absorbed the length and breadth of Laconia and started on the struggle with Argos for Cynuria. Then came the first Messenian War, followed by the complete appropriation of the country and enslavement of its inhabitants. Then expansion abroad, a sure sign of over-population and prosperity, especially as a more settled regime was now introduced by Lycurgus. Sparta, as the first state to get a good constitution, expanded rapidly until she could fight against Argos on the field of Hysieæ (probably in 660 B.C.) with nearly half the Peloponnese at her back. The results of this battle were disaster, the loss of Thyreatis, a considerable setback to Spartan power, and soon afterwards the second Messenian War. More domestic troubles intervened, but soon after 620 Sparta was again able to start on a career of expansion. She occupied the Sciritis and much of Arcadia, though long wars against Tegea continued to baffle her armies. The reigns of Leon and Hegesicles were for all that successful on the whole. . . . But until Tegea was conquered there was no possibility of getting at Argos, and Tegea’s resistance was obstinate. The result, as we have seen, was a volte-face in Spartan policy. A treaty was made, and Tegea became an ally. The beginnings of a confederation had replaced the policy of direct conquest, and no new territory was again added to the Laconian heritage.”—G. Dickins, *Growth of Spartan policy* (*Journal of Hellenic Studies*, v. 32, 1912).

B.C. 500-493.—Rising of Ionians of Asia Minor against Persians.—Aid rendered to them by Athenians.—Provocation to Darius.—The Ionic Greek cities, or states, of Asia Minor, first subjugated by Cræsus, king of Lydia, in the sixth century B.C., were swallowed up, in the same century, with all other parts of the dominion of Cræsus, in the conquests of Cyrus, and formed part of the great Persian empire, to the sovereignty of which Cambyses and Darius succeeded. In the reign of Darius there occurred a revolt of the Ionians (about 502 B.C.), led by the city of Miletus, under the influence of its governor, Aristagoras. Aristagoras, coming over to Greece in person, sought aid against the Persians, first at Sparta, where it was denied to him, and then, with better success, at Athens. . . . So the Athenians, being

persuaded, made a decree to send twenty ships to help the men of Ionia, and appointed one Melanthius, a man of reputation among them, to be captain. These ships were the beginning of trouble both to the Greeks and the barbarians. . . . When the twenty ships of the Athenians were arrived, and with them five ships of the Eretrians, which came, not for any love of the Athenians, but because the Milesians had helped them in the old time against the men of Chalcis, Aristagoras sent an army against Sardis, but he himself abode in Miletus. This army, crossing Mount Tmolus, took the city of Sardis without any hindrance; but the citadel they took not, for Artaphernes held it with a great force of soldiers. But though they took the city they had not the plunder of it, and for this reason. The houses in Sardis were for the most part built of reeds, and such as were built of bricks had their roofs of reeds; and when a certain soldier set fire to one of these houses, the fire ran quickly from house to house till the whole city was consumed. And while the city was burning, such Lydians and Persians as were in it, seeing they were cut off from escape (for the fire was in all the outskirts of the city), gathered together in haste to the market-place. Through this market-place flows the river Pactolus, which comes down from Mount Tmolus, having gold in its sands, and when it has passed out of the city it flows into the Hermus, which flows into the sea. Here then the Lydians and Persians were gathered together, being constrained to defend themselves. And when the men of Ionia saw their enemies how many they were, and that these were preparing to give battle, they were stricken with fear, and fled out of the city to Mount Tmolus, and thence, when it was night, they went back to the sea. In this manner was burnt the city of Sardis, and in it the great temple of the goddess Cybele, the burning of which temple was the cause, as said the Persians, for which afterwards they burnt the temples in Greece. Not long after came a host of Persians from beyond the river Halys; and when they found that the men of Ionia had departed from Sardis, they followed hard upon their track, and came up with them at Ephesus. And when the battle was joined, the men of Ionia fled before them. Many indeed were slain, and such as escaped were scattered, every man to his own city. After this the ships of the Athenians departed, and would not help the men of Ionia any more, though Aristagoras besought them: to stay. Nevertheless the Ionians ceased not from making preparations of war against the king, making to themselves allies, some by force and some by persuasion, as the cities of the Hellespont and many of the Carians and the island of Cyprus. For all Cyprus, save Amathus only, revolted from the king under Onesilus, brother of King Gorgus. . . . Meanwhile the Persians took not a few cities of the Ionians and Æolians. But while they were busy about these, the Carians revolted from the king; whereupon the captains of the Persians led their army into Caria, and the men of Caria came out to meet them; and they met them at a certain place which is called the White Pillars, near to the river Mæander. Then there were many counsels among the Carians, whereof the best was this, that they should cross the river and so contend with the Persians, having the river behind them, that so there being no escape for them if they fled, they might surpass themselves in courage. But this counsel did not prevail. Nevertheless, when the Persians had crossed the Mæander, the Carians fought against them, and the battle was exceeding long and fierce. But at the last the Carians were vanquished, being

overborne by numbers, so that there fell of them ten thousand. And when they that escaped—for many had fled to Labranda, where there is a great temple of Zeus and a grove of plane trees—were doubting whether they should yield themselves to the king or depart altogether from Asia, there came to their help the men of Miletus with their allies. Thereupon the Carians, putting away their doubts altogether, fought with the Persians a second time, and were vanquished yet more grievously than before. But on this day the men of Miletus suffered the chief damage. And the Carians fought with the Persians yet again a third time; for, hearing that these were about to attack their cities one by one, they laid an ambush for them on the road to Pedasus. And the Persians, marching by night, fell into the ambush, and were utterly destroyed, they and their captains.—Herodotus, *Story of the Persian War* (version of A. J. Church), *ch. 2*.—See also PERSIA: B.C. 521-493; ATHENS: B.C. 492-479; B.C. 501-490.

B.C. 492-491.—Wrath of the Persian king against Athens.—Failure of his first expedition of invasion.—Submission of "Medizing" Greek states.—Coercion of Ægina.—Enforced union of Hellas.—Headship of Sparta recognized.—The assistance given by Athens to the Ionian revolt stirred the wrath of the Persian monarch very deeply, and when he had put down the rebellion he prepared to chastise the audacious and insolent Greeks. "A great fleet started from the Hellespont, with orders to sail round the peninsula of Mt. Athos to the Gulf of Therma, while Mardonius advanced by land. His march was so harassed by the Thracians that when he had effected the conquest of Macedonia his force was too weak for any further attempt. The fleet was overtaken by a storm off Mt. Athos, on whose rocks 300 ships were dashed to pieces, and 20,000 men perished. Mardonius returned in disgrace to Asia with the remnant of his fleet and army. This failure only added fury to the resolution of Darius. While preparing all the resources of his empire for a second expedition, he sent round heralds to the chief cities of Greece, to demand the tribute of earth and water as signs of his being their rightful lord. Most of them submitted; Athens and Sparta alone ventured on defiance. Both treated the demand as an outrage which annulled the sanctity of the herald's person. . . . The submission of Ægina, the chief maritime state of Greece, and the great enemy of Athens, entailed the most important results. The act was denounced by Athens as treason against Greece, and the design was imputed to Ægina of calling in the Persians to secure vengeance on her rival. The Athenians made a formal complaint to Sparta against the 'Medism' of the Æginetans; a charge which is henceforth often repeated both against individuals and states. The Spartans had recently concluded a successful war with Argos, the only power that could dispute her supremacy in Peloponnesus; and now this appeal from Athens, the second city of Greece, at once recognized and established Sparta as the leading Hellenic state. In that character, her king Cleomenes undertook to punish the Medizing party in Ægina 'for the common good of Greece'; but he was met by proofs of the intrigues of his colleague Demaratus

in their favour. . . . Cleomenes obtained his deposition on a charge of illegitimacy, and a public insult from his successor Leotychides drove Demaratus from Sparta. Hotly pursued as a 'Medist,' he effected his escape to Darius, whose designs against Athens and Sparta were now stimulated by the councils of their exiled sovereigns, Hippias and Demaratus. Meanwhile, Cleomenes and his new colleague returned to Ægina, which no longer resisted, and having seized ten of her leading citizens, placed them as hostages in the hands of the Athenians. Ægina was thus effectually disabled from throwing the weight of her fleet into the scale of Persia: Athens and Sparta, suspending their political jealousies, were united when their disunion would have been fatal: their conjunction drew after them most of the lesser states: and so the Greeks stood forth for the first time as a nation prepared to act in unison under the leadership of Sparta (B.C. 491). That city retained her proud

to their city, but met them at their landing-place. They were few in number—only 10,000, with 1,000 more from the grateful city of Plataea, which Athens had protected against Thebes. They had sent to Sparta for aid, but a superstition delayed the march of the Spartans and they came the day after the battle. "On the morning of the seventeenth day of the month of Meragition (September 12th), when the supreme command according to the original order of succession fell to Miltiades, he ordered the army to draw itself up according to the ten tribes. . . . The troops had advanced with perfect steadiness across the trenches and palisadings of their camp, as they had doubtless already done on previous days. But as soon as they had approached the enemy within a distance of 5,000 feet they changed their march to a double-quick pace, which gradually rose to the rapidity of a charge, while at the same time they raised the war-cry with a loud voice. When the Persians saw

PLAIN OF MARATHON

position till it was forfeited by the misconduct of her statesmen."—P. Smith, *History of the world: Ancient*, v. 1, ch. 13.—See also ATHENS: B.C. 492-479; B.C. 479.

B.C. 490.—Persian Wars: Marathon.—The second and greater expedition launched by Darius against the Greeks sailed from the Cilician coast in the summer of the year 490 B.C. It was under the command of two generals,—a Mede, named Datis, and the king's nephew, Artaphernes. It made the passage safely, destroying Naxos on the way, but sparing the sacred island and temple of Delos. Its landing was on the shores of Eubœa, where the city of Eretria was easily taken, its inhabitants dragged into slavery, and the first act of Persian vengeance accomplished. The expedition then sailed to the coast of Attica and came to land on the plain of Marathon, which spreads along the bay of that name. The Athenians waited for no nearer approach of the enemy

these men rushing down from the heights, they thought they beheld madmen: they quickly placed themselves in order of battle, but before they had time for an orderly discharge of arrows the Athenians were upon them, ready in their excitement to begin a closer contest, man against man in hand-to-hand fight, which is decided by personal courage and gymnastic agility, by the momentum of heavy-armed warriors, and by the use of lance and sword. Thus the well-managed and bold attack of the Athenians had succeeded in bringing into play the whole capability of victory which belonged to the Athenians. Yet the result was not generally successful. The enemy's centre stood firm. . . . But meanwhile both wings had thrown themselves upon the enemy; and after they had effected a victorious advance, the one on the way to Rhamnus, the other towards the coast, Miltiades . . . issued orders at the right moment for the wings to return from the pursuit, and to make a combined attack upon the Persian centre in its rear. Hereupon the rout speedily became general, and in their flight

the troubles of the Persians increased; . . . they were driven into the morasses and there slain in numbers."—E. Curtius, *History of Greece*, v. 2, bk. 3, ch. 1.—The Athenian dead, when gathered for the solemn obsequies, numbered 192; the loss of the Persians was estimated by Herodotus at 6,400.—Herodotus, *History*, bk. 6.

B.C. 481-479.—Congress at Corinth.—Hellenic union against Persia.—Headship of Sparta.—"When it was known in Greece that Xerxes was on his march into Europe, it became necessary to take measures for the defence of the country. At the instigation of the Athenians, the Spartans, as the acknowledged leaders of Hellas and head of the Peloponnesian confederacy, called on those cities which had resolved to uphold the independence of their country to send plenipotentiaries to a congress at the Isthmus of Corinth. When the envoys assembled, a kind of Hellenic alliance was formed under the presidency of Sparta, and its unity was confirmed by an oath, binding the members to visit with severe penalties those Greeks who, without compulsion, had given earth and water to the envoys of Xerxes. This alliance was the nearest approach to a Hellenic union ever seen in Greece; but though it comprised most of the inhabitants of the Peloponnesus, except Argos and Achæa, the Megarians, Athenians, and two cities of Bœotia, Thespiæ and Plataea, were the only patriots north of the Isthmus. Others, who would willingly have been on that side, such as the common people of Thessaly, the Phocians and Locrians, were compelled by the force of circumstances to 'medize.' From the time at which it met in the autumn or summer of 481 to the autumn of 480 B.C., the congress at the Isthmus directed the military affairs of Greece. It fixed the plan of operations. Spies were sent to Sardis to ascertain the extent of the forces of Xerxes; envoys visited Argos, Crete, Corcyra, and Syracuse, in the hope, which proved vain, of obtaining assistance in the impending struggle. As soon as Xerxes was known to be in Europe, an army of 10,000 men was sent to hold the pass of Tempe, but afterwards, on the advice of Alexander of Macedon, this barrier was abandoned; and it was finally resolved to await the approaching forces at Thermopylæ and Artemisium. The supreme authority, both by land and sea, was in the hands of the Spartans; they were the natural leaders of any army which the Greeks could put into the field, and the allies refused to follow unless the ships also were under their charge. . . . When hostilities were suspended, the congress re-appears, and the Greeks once more meet at the Isthmus to apportion the spoil and adjudge the prizes of valour. In the next year we hear of no common plan of operations, the fleet and army seeming to act independently of each other; yet we observe that the chiefs of the medizing Thebans were taken to the Isthmus (Corinth) to be tried, after the battle of Plataea. It appears then that, under the stress of the great Persian invasion, the Greeks were brought into an alliance or confederation; and for the two years from midsummer 481 to midsummer 479 a congress continued to meet, with more or less interruption, at the Isthmus, consisting of plenipotentiaries from the various cities. This congress directed the affairs of the nation, so far as they were in any way connected with the Persian inva-

sion. When the Barbarians were finally defeated, and there was no longer any alarm from that source, the congress seems to have discontinued its meeting. But the alliance remained; the cities continued to act in common, at any rate, so far as naval operations were concerned, and Sparta was still the leading power."—E. Abbott, *Perciles and the golden age of Athens*, ch. 3.

B.C. 480.—Persian Wars: Thermopylæ.—"Now when tidings of the battle that had been fought at Marathon [490 B.C.], reached the ears of King Darius, the son of Hystaspes, his anger against the Athenians," says Herodotus, "which had been already roused by their attack on Sardis, waxed still fiercer, and he became more than ever eager to lead an army against Greece. Instantly he sent off messengers to make proclamation through the several states that fresh levies were to be raised, and these at an increased rate; while ships, horses, provisions and transports were likewise to be furnished. So the men published his commands; and now all Asia was in commotion by the space of three years." But before his preparations were completed Darius died. His son Xerxes, who ascended the Persian throne, was cold to the Greek undertaking and required long persuasion before he took it up. When he did so, however, his preparations were on a scale more stupendous than those of his father, and consumed nearly five years. It was not until ten years after Marathon that Xerxes led from Sardis a host which Herodotus computes at 1,700,000 men, besides half a million more which manned the fleet he had assembled. [He bridged the Hellespont, and in order to avoid the dangers of the promontory of Mt. Athos he cut a canal through the Isthmus.] . . . The Greeks had determined at first to make their stand against the invaders in Thessaly, at the vale of Tempe; but they found the post untenable and were persuaded, instead, to guard the narrower pass of Thermopylæ. It was there that the Persians, arriving at Trachis, near the Malian gulf, found themselves faced by a small body of Greeks. The spot is thus described by Herodotus: "As for the entrance into Greece by Trachis, it is, at its narrowest point, about fifty feet wide. This, however, is not the place where the passage is most contracted; for it is still narrower a little above and a little below Thermopylæ. At Alpeni, which is lower down than that place, it is only wide enough for a single carriage; and up above, at the river Phoenix, near the town called Anthela, it is the same. West of Thermopylæ rises a lofty and precipitous hill, impossible to climb, which runs up into the chain of Cæta; while to the east the road is shut in by the sea and by marshes. In this place are the warm springs, which the natives call 'The Cauldrons'; and above them stands an altar sacred to Hercules. A wall had once been carried across the opening; and in this there had of old times been a gateway. . . . King Xerxes pitched his camp in the region of Malis called Trachinia, while on their side the Greeks occupied the straits. . . . The Greeks who at this spot awaited the coming of Xerxes were the following:—from Sparta, 300 men-at-arms; from Arcadia, 1,000 Tegeans and Mantinæans, 500 of each people; 120 Orchomenians, from the Arcadian Orchomenus; and 1,000 from other cities; from Corinth, 400 men; from Phlius, 200; and from Mycenæ 80. Such was the number from the Peloponnesus. There were also present, from Bœotia, 700 Thespians and 400 Thebans. Besides these troops, the Locrians of Opus and the Phocians had obeyed the call of

their countrymen, and sent the former all the force they had, the latter 1,000 men. . . . The various nations had each captains of their own under whom they served; but the one to whom all especially looked up, and who had the command of the entire force, was the Lacedæmonian, Leonidas. . . . The force with Leonidas was sent forward by the Spartans in advance of their main body, that the sight of them might encourage the allies to fight, and hinder them from going over to the Medes, as it was likely they might have done had they seen Sparta backward. They intended presently, when they had celebrated the Carneian festival, which was what now kept them at home, to leave a garrison in Sparta, and hasten in full force to join the army. The rest of the allies also intended to act similarly; for it happened that the Olympic festival fell exactly at this same period. None of them looked to see the contest at Thermopylæ decided so speedily." For two days Leonidas and his little army held the pass against the Persians. Then, there was found a traitor, a man of Malis, who betrayed to Xerxes the secret of a pathway across the mountains, by which he might steal into the rear of the post held by the Greeks. A thousand Phocians had been stationed on the mountain to guard this path; but they took fright when the Persians came upon them in the early dawn, and fled without a blow. When Leonidas learned that the way across the mountain was open to the enemy he knew that his defense was hopeless, and he ordered his allies to retreat while there was yet time. But he and his Spartans remained, thinking it "unseemly" to quit the post they had been specially sent to guard. The Thespians remained with them, and the Thebans—known partisans at heart of the Persians—were forced to stay. The latter deserted when the enemy approached; the Spartans and the Thespians fought and perished to the last man.—Herodotus, *History* (tr. by Rawlinson), *bk.* 7.—See also ATHENS: B.C. 492-479.

ALSO IN: E. Curtius, *History of Greece*, *bk.* 3, *ch.* 1.—G. Grote, *History of Greece*, *v.* 4, *pt.* 2, *ch.* 40.

B.C. 480.—Persian Wars: Artemisium.—On the approach of the great invading army and fleet of Xerxes, the Greeks resolved to meet the one at the pass of Thermopylæ and the other at the northern entrance of the Eubæan channel. The Persian fleet, after suffering heavily from a destructive storm on the Magnesian coast, reached Aphetæ, opposite Artemisium, at the mouth of the Pagasæan gulf. Notwithstanding its losses, it still vastly outnumbered the armament of the Greeks, and feared nothing but the escape of the latter. But, in the series of conflicts which ensued, the Greeks were generally victorious and proved their superior naval genius. They could not, however, afford the heavy losses which they sustained, and, upon hearing of the disaster at Thermopylæ and the Persian possession of the all-important pass, they deemed it necessary to retreat.—W. Mitford, *History of Greece*, *v.* 2, *ch.* 8, *sect.* 4.—"Thermopylæ and Artemisium display most clearly the strategy of the two contending sides. It did not perhaps demand much knowledge or much intelligence to fix upon Thermopylæ as a point of defence. It would be difficult to mention any other great highway in the world on which a defensive position so strong by nature is afforded. It was, on the other hand, a great strategic blunder on the part of Sparta that, having sent a small force to the pass, she did not later forward reinforcements. That was no doubt part of a still greater strategic blunder,—the desire to concentrate the defence at the Isthmus. The three days' fighting at Thermopylæ proved conclusively that, had an adequate force been present,

there, the army of Xerxes would in all probability never have carried the pass. Sparta and the Peloponnese generally neither did, nor wished to, appreciate the immense strength of the position."—G. B. Grundy, *Great Persian War*, *p.* 541.

B.C. 480.—Persian Wars: Salamis.—Leonidas and his Spartan band having perished vainly at Thermopylæ, in their heroic attempt to hold the pass against the host of Xerxes, and the Greek ships at Artemisium having vainly beaten their overwhelming enemies, the whole of Greece north of the isthmus of Corinth lay completely at the mercy of the invader. The Thebans and other false-hearted Greeks joined his ranks, and saved their own cities by helping to destroy their neighbors. The Plataeans, the Thespians and the Athenians abandoned their homes in haste, conducted their families, and such property as they might snatch away, to the nearer islands and to places of refuge in Peloponnesus. The Greeks of Peloponnesus rallied in force to the isthmus and began there the building of a defensive wall. Their fleet, retiring from Artemisium, was drawn together, with some re-enforcements, behind the island of Salamis, which stretches across the entrance to the bay of Eleusis, off the inner coast of Attica, near Athens. Meantime the Persians had advanced through Attica, entered the deserted city of Athens, taken the Acropolis, which a small body of desperate patriots resolved to hold, had slain its defenders and burned its temples. Their fleet had also been assembled in the bay of Phalerum, which was the more easterly of the three harbors of Athens. At Salamis the Greeks were in dispute. At length Themistocles, the Athenian leader, a man of fertile brain and overbearing resolution, determined the question by sending a secret message to Xerxes that the Greek ships had prepared to escape from him. This brought down the Persian fleet upon them at once and left them no chance for retreat. Of the memorable fight which ensued (Sept. 20 B.C. 480) the following is a part of the description given by Herodotus: "Far the greater number of the Persian ships engaged in this battle were disabled, either by the Athenians or by the Eginetans. For as the Greeks fought in order and kept their line, while the barbarians were in confusion and had no plan in anything that they did, the issue of the battle could scarce be other than it was. Yet the Persians fought far more bravely here than at Eurbæa, and indeed surpassed themselves; each did his utmost through fear of Xerxes, for each thought that the king's eye was upon himself. . . . When the rout of the barbarians began, and they sought to make their escape to Phalerum, the Eginetans, awaiting them in the channel, performed exploits worthy to be recorded. Through the whole of the confused struggle the Athenians employed themselves in destroying such ships as either made resistance or fled to shore; while the Eginetans dealt with those which endeavoured to escape down the straits; so that the Persian vessels were no sooner clear of the Athenians than straightway they fell into the hands of the Eginetan squadron. . . . Such of the barbarian vessels as escaped from the battle fled to Phalerum, and there sheltered themselves under the protection of the land army. . . . Xerxes, when he saw the extent of his loss, began to be afraid lest the Greeks might be counselled by the Ionians, or without their advice might determine, to sail straight to the Hellespont and break down the bridges there, in which case he would be blocked up in Europe and run great risk of perishing. He therefore made up his mind to fly."—Herodotus, *History* (tr. by Rawlinson), *v.* 4, *bk.* 8, *sect.* 85-97.—"The results

of Salamis were immediate. The defeat and moral disorganization of the Persian fleet made it incapable of maintaining its position on the west side of the Ægean, though in point of material damage, relative to numbers, it is probable that it had not suffered more severely than the fleet which had been opposed to it. Its departure withdrew, as it were, the keystone of the Persian plan of invasion; and the whole edifice of design fell into ruin which was incapable of repair, though the wreck was not so complete as to render it impossible for Mardonius to make use of the materials in the ensuing year. The blow had fallen on the indispensable half of the invading force; and, bereft of the aid of the fleet, the land army could no longer maintain itself in a country whose natural resources were wholly inadequate to supply its wants."—G. B. Grundy, *Great Persian War*, p. 545.

ALSO IN: E. Curtius, *History of Greece*, v. 2, bk. 3, ch. 1.—G. Grote, *History of Greece*, v. 4, pt. 2, ch. 4.—W. W. Goodwin, *Battle of Salamis (Papers of the American school at Athens, v. 1)*.

B.C. 479.—Persian Wars: Platæa.—When Xerxes, after the defeat of his fleet at Salamis, fled back to Asia with part of his disordered host, he left his lieutenant, Mardonius, with a still formidable army, to repair the disaster and accomplish, if possible, the conquest of the Greeks. The Spartans and other Peloponnesians who had promised support to the Athenians were slow in coming, but they came in strong force at last. Mardonius fell back into Boeotia, where he took up a favorable position in a plain on the left bank of the Asopus, near Platæa. This was in September, 479 B.C. According to Herodotus, he had 300,000 "barbarian" troops and 50,000 Greek allies. The opposing Greeks, who followed him to the Asopus, were 110,000 in number. The two armies watched one another for more than ten days, unwilling to offer battle because the omens were on both sides discouraging. At length the Greeks undertook a change of position and Mardonius, mistaking this for a movement of retreat, led his Persians on a run to attack them. It was a fatal mistake. The Spartans, who bore the brunt of the Persian assault, soon convinced the deluded Mardonius that they were not in flight, while the Athenians dealt roughly with his Theban allies. Of the remainder of the 300,000 of Mardonius' host, only 3,000, according to Herodotus, outlived the battle. It was the end of the Persian invasions of Greece.—Herodotus, *History* (tr. by Rawlinson), bk. 9.

ALSO IN: G. Grote, *History of Greece*, v. 5, pt. 2, ch. 42.—C. Thirlwall, *History of Greece*, v. 1, ch. 16.—G. W. Cox, *History of Greece*, v. 1, bk. 2, ch. 7.

In celebration of the victory an altar to Zeus was erected and consecrated by the united Greeks with solemn ceremonies, a quintennial festival, called the Feast of Liberty, was instituted at Platæa, and the territory of the Platæans was declared sacred and inviolable, so long as they should maintain the appointed sacrifices and funeral honors to the dead. But these agreements did not avail to protect the Platæans when the subsequent Peloponnesian War broke out, and they stood faithfully among the allies of Athens. "The last act of the assembled army was the expedition against Thebes, in order, according to the obligation incumbent upon them, to take revenge on the most obstinate ally of the national enemy. Eleven days after the battle Pausanias appeared before the city and demanded the surrender of the party-leaders, responsible for the policy of Thebes. Not until the siege had lasted twenty days was the surrender ob-

tained. . . . Timagenidas and the other leaders of the Thebans were executed as traitors against the nation, by order of Pausanias, after he had dismissed the confederate army."—E. Curtius, *History of Greece*, v. 2, bk. 3, ch. 1.

B.C. 479.—Persian Wars: Mycale.—The same day, in September, 479 B.C., on which the Greeks at Platæa destroyed the army of Mardonius, witnessed an almost equal victory won by their compatriots of the fleet, on the coast of Asia Minor. The Persian fleet, to avoid a battle with them, had retreated to Mycale on the narrow strait between the island of Samos and the mainland, where a land-army of 60,000 men was stationed at the time. Here they drew their ships on shore and surrounded them with a rampart. The Greeks, under Leotychides the Lacedæmonian, landed and attacked the whole combined force. The Ionians in the Persian army turned against their masters and helped to destroy them. The rout was complete and only a small remnant escaped to reach Sardis, where Xerxes was still lingering.—Herodotus, *History* (tr. by Rawlinson), bk. 9.—"The best strategy on the Greek side in this year's campaigning was carried out by the commanders of the fleet; especially by Zanthippos, the admiral of the Athenian contingent. The caution displayed in waiting in the Western Ægean until the Ionians gave some signal was probably wise. A move eastward before receipt of information as to the real state of affairs on the Asian coast, as to the numbers and position of the Persian fleet, and especially as to the whereabouts of the Phœnician section of it, might have unduly hazarded the results of the success already obtained on the western coast of the Ægean. On arrival at Samos, a bold and successful attack was made on the Persian force at Mycale. It was necessary to crush the main resistance before further operations were attempted. After this the Spartans went home, while the Athenians continued the campaign by a strategic move of the highest importance. In attacking Sastos and the Thracian Chersonese, they assailed the all-important tête-du-pont in Europe, and by their success rendered Persian operations from the Asiatic side to the north of the Propontis difficult, if not impossible, as the Chersonese lay on the flank of any advance from the direction of the Bosphorus towards Macedonia and Greece. The command of the Hellespont was also the first step towards the freeing of the great trade route to the corn regions on the north coast of the Euxine."—G. B. Grundy, *Great Persian War*, pp. 51-53.—"The land tactics were naturally dictated by the armament of the two opponents, the nature of the forces at their disposal, and the ground on which at different times they came into conflict. The composition of the Persian army placed it at a considerable disadvantage in such a country as Greece. This disadvantage was much emphasized by the fact that, during that of 479 also, it was the attacking force in a country which greatly favoured the defence. Not until Mardonius took up the defensive in Boeotia was it possible for the Persians to choose ground favourable to the nature of their force. Against a foe of greatly superior mobility, the policy of the defensive was the only one which the Greek army could adopt with any suitability to his force. The difference between the two armies was, that the Greek had everything to hope from close fighting, the Persian from the opposite; and in every case throughout the war in which reverse or disaster fell on either party, it was due to its having been forced, either by the nature of the position or by some tactical error of its own, into adopting that method of combat

ATTACK OF THE GREEKS AT MARATHON  
(After painting by A. G. M. Roehgrösse)

for which it was least adapted. If it were not a misnomer to speak of that which is manifest as a secret, it might be said that this is the whole secret of tactical success and failure in the war. It was illustrated in the most marked manner in all the three great land battles, at Thermopylae, at Plataea, at Mykale. The circumstances at Thermopylae forced the Persians to adopt tactics involving close fighting. But it is noticeable that the Persian soldiers and the Persian commanders did not altogether take the same view on this question. The commanders evidently thought that they must win the pass by mere pressure of numbers, and be prepared to sustain losses, absolutely great, but, considering the immense disparity between the two armies, relatively small. Probably also circumstances rendered it all-important for them to force the pass as soon as possible; and this could, owing to the nature of the ground, only be accomplished by close fighting. But the Persian soldier, soon after the attack began, discovered that he was no match for the better-armed Greek, and proceeded, on his own responsibility, to adopt tactics less dangerous to himself, an assault with missiles, to which the enemy could make no effective reply. This is clearly shown by the tactics which the Spartans were compelled to resort to, the charge forward, and then a pretended retreat, with a view to drawing the enemy on. But the circumstances were such that neither side could absolutely force the other to adopt disadvantageous tactics; nor even with whips and other severe methods of encouragement could the Persian commanders induce their men to a sustained assault at close quarters. In the last battle on the mound the Greeks were not cut down, but buried beneath a shower of missiles. Plataea affords three very remarkable examples of the contrast of tactics. It was a battle of mistakes, in which each side conspicuously failed to play its own game. At the first position of the Greeks the Persian threw away his excellent cavalry in an attack on a necessarily limited portion of the front of the unshaken Greek heavy infantry, where outflanking was impossible, and only close fighting could be really effective. The result was inevitable. In the second position, the Greeks made the mistake of seeking to maintain an advanced position in the plain, after the object with which they had in all probability attained it, a surprise flank attack on the Persians, had miscarried. In view of the excessive immobility of their army as compared with that of the enemy, the danger that their line of communication with the passes, short though it was, might be cut, was evident; and their position permitted the cavalry to harass them on all sides by that form of attack to which it was best adapted. The mistake cost them dearly; it ought to have cost them the battle. On the retirement of the Greeks from this position Mardonius threw away the success he had gained by hurling his light-armed infantry against the large Spartan contingent. By doing so he threw away all the advantage which he possessed by reason of his mobile force, of cavalry. The tactics of Pausanias were excellent, but could only have been possible with a highly trained force, such as that which he had under his command. He held his men back, despite a galling shower of missiles, until, as it would seem, the foremost ranks of the enemy behind their barrier of shields were deprived of all power of retreating by the pressure of the ranks in rear of them. Then he charged; and in the close fighting which ensued, the Persian had no chance, despite that quality of conspicuous bravery in which he appears never to

have been lacking. The same inevitable issue of battle resulted from the close fighting at the assault on the Persian stockade. At Mykale the Persians again made the mistake of meeting the Greeks in that form of battle which was most eminently favourable to the more heavily armed man, though in that case the extreme embarrassment of the circumstances in which they found themselves may have necessitated the line of action which they adopted."—*Ibid.*, pp. 553-555.

B.C. 479-478.—Athens the first state of Hellas.—Fortification of Peiræus.—Transfer of naval leadership from Sparta to Athens. See ATHENS: B.C. 479; B.C. 470-476; B.C. 478.

B.C. 478-477.—Reduction of Byzantium.—Recall of Pausanias.—Alienation of the Asiatic Greeks from Sparta.—Closer union with Athens.—Withdrawal of the Spartans from the war.—Formation of the Delian confederacy.—"Sestos had fallen: but Byzantium and the Thracian Doriskos, with Eion on the Strymon and many other places on the northern shores of the Egean, were still held by Persian garrisons, when, in the year after the battle of Plataiai, Pausanias, as commander of the confederate fleet, sailed with 20 Peloponnesian and 30 Athenian ships to Kypros (Cyprus) and thence, having recovered the greater part of the island, to Byzantium. The resistance here was as obstinate perhaps as at Sestos; but the place was at length reduced, and Sparta stood for the moment at the head of a triumphant confederacy. It was now in her power to weld the isolated units, which made up the Hellenic world, into something like an organised society, and to kindle in it something like national life. . . . But she had no statesman capable, like Themistokles, of seizing on a golden opportunity, while in her own generals she found her greatest enemies." Pausanias "was, it would seem, dazzled by Persian wealth and enamoured of Persian pleasures. . . . The reports of this significant change in the behaviour of Pausanias led to his recall. He was put on his trial; but his accusers failed to establish the personal charges brought against him while his Medism also was dismissed as not fully proved. The suspicion, however, was so strong that he was deprived of his command. . . . All these events were tending to alienate the Asiatic Greeks and the islanders of the Egean from a state which showed itself incapable of maintaining its authority over its own servants." Even before the recall of Pausanias, "the Asiatic Greeks intreated Aristides the Athenian commander to admit them into direct relations with Athens; and the same change of feeling had passed over all the non-medising Greek states with the exception of the Peloponnesian allies of Sparta. In short, it had become clear that all Hellas was divided into two great sections, the one gravitating as naturally to Sparta, the great land power, as the other gravitated to Athens with her maritime preponderance. When therefore a Spartan commission headed by Dorkis arrived with a small force to take the place of Pausanias, they were met by passive resistance where they had looked for submission; and their retirement from the field in which they were unable to compel obedience left the confederacy an accomplished fact."—G. W. Cox, *History of Greece*, v. 2, bk. 2, ch. 8.—This confederacy of the Asiatic Greeks with Athens, now definitely organized, is known as the Confederacy of Delos, or the Delian League. "To Athens, as decidedly the prepon-

derant power, both morally and materially, was of necessity, and also with free good-will, assigned the headship and chief control of the affairs and conduct of the alliance; a position that carried with it the responsibility of the collection and administration of a common fund, and the presidency of the assemblies of delegates. As time went on and circumstances altered, the terms of confederation were modified in various instances; but at first the general rule was the contribution, not only of money or ships, but of actual personal service. . . . We have no precise enumeration of the allies of Athens at this early time, but the course of the history brings up the mention of many. . . . Crete was never directly affected by these events, and Cyprus was also soon to be left aside; but otherwise all the Greek islands of the Aegean northwards—except Melos, Thera, Aegina, and Cythera—were contributory, including Euboea; as were the cities on the coasts of Thrace and the Chalcidic peninsula from the Macedonian boundary to the Hellespont; Byzantium and various cities on the coasts of the Propontis, and less certainly of the Euxine; the important series of cities on the western coast of Asia Minor—though apparently with considerable exceptions—Aeolian, Ionian, Dorian, and Carian, as far as Caunus at least on the borders of Lycia, if not even round to the Chelidonian isles. The sacred island of Delos was chosen as the depository of the common treasure and the place of meeting of the contributors. Apart from its central convenience and defensibility as an island, and the sanctity of the reunion, . . . it was a traditional centre for solemn reunions of Ionians from either side of the Aegean. . . . At the distinct request of the allies the Athenians appointed Aristides to superintend the difficult process of assessing the various forms and amounts of contribution. . . . The total annual amount of the assessment was the large sum of 460 talents (£112,125), and this perhaps not inclusive of, but only supplementary to, the costly supply of equipped ships.”—W. W. Lloyd, *Age of Pericles*, v. 1, ch. 14.

B.C. 477-462.—Advancing democracy of Athens.—Sustentation of the Commons from the Confederate treasury.—Stripping of power from the Areopagus. See ATHENS: B.C. 477; B.C. 472-462.

B.C. 477-461.—Athens as the head of the Delian League.—Triumph of anti-Spartan policy at Athens and approach of war.—Ostracism of Cimon.—“Between the end of the Persian war and the year 464 B. C., Sparta had sunk from the champion of the whole of Hellas to the half-discredited leader of the Peloponnese only. Athens, on the contrary, had risen from a subordinate member of the league controlled by Sparta to be the leader and almost the mistress of a league more dangerous than that over which Sparta held sway. Sparta unquestionably entertained towards Athens the jealous hatred of a defeated rival. By what steps Athens was increasing her control over the Delian League, and changing her position from that of a president to that of an absolute ruler [see ATHENS: B. C. 478; B. C. 477], will be explained. . . . She was at the same time prosecuting the war against Persia with conspicuous success. Her leader in this task was Cimon. . . . Under his guidance the Athenian fleet struck Persia blow on blow. . . . In 466, near the mouth of the Eurymedon in Pamphylia, the Persian fleet was destroyed, and after a fierce struggle her land forces also were defeated with very great slaughter. It was long

before Persian influence counted for anything again on the waters of the Mediterranean. Cimon, with the personal qualities of Aristides, had obtained the successes of Themistocles. Opposition to Cimon was not wanting. The Athenian democracy had entered on a path that seemed blocked by his personal supremacy. And now the party of advancing democracy possessed a leader, the ablest and greatest that it was ever to possess. Pericles was about thirty years of age. . . . He was related to great families through both father and mother, and to great families that had championed the democratic side. His father Zanthippus had prosecuted Miltiades, the father of Cimon. . . . To lead the party of advanced democracy was to attack Cimon, against whom he had hereditary hostility. . . . When in 465 Thasos rebelled from Athens, defeat was certain unless she found allies [see also ATHENS: B. C. 466-454]. She applied to Sparta for assistance. Athens and Sparta were still nominally allies, for the creation of the Delian League had not openly destroyed the alliance that had subsisted between them since the days of the Persian war. But the Thasians hoped that Sparta's jealousy of Athens might induce her to disregard the alliance. And they reckoned rightly. The Spartan fleet was so weak that no interference upon the sea could be thought of, but if Attica were attacked by land the Athenians would be forced to draw off some part of their armament from Thasos. Sparta gave a secret promise that this attack should be made. But before they could fulfil their promise their own city was overwhelmed by a terrible earthquake. . . . Only five houses were left standing, and twenty thousand of the inhabitants lost their lives. . . . Archidamus's presence of mind saved them from even greater danger than that of earthquake. The disaster seemed to the masses of Helots that surrounded Sparta clear evidence of the wrath of the god Poseidon. . . . The Helots seized arms, therefore, and from all sides rushed upon Sparta. Thanks to Archidamus's action, they found the Spartans collected and ready for battle. They fell back upon Messenia, and concentrated their strength round Mount Ithome, the natural Acropolis of that district. . . . All the efforts of their opponents, never very successful in sieges, failed to dislodge them. At last, in 464, Sparta had to appeal to her allies for help against her own slaves; and, as Athens was her ally, she appealed to Athens. Should the help be granted? . . . Cimon advocated the granting of Sparta's demand with all his strength. . . . But there was much to be said on the other side, and it was said by Ephialtes and Pericles. The whole of Pericles's foreign policy is founded on the assumption that union between Athens and Sparta was undesirable and impossible. In everything they stood at opposite poles of thought. . . . Cimon gained the vote of the people. He went at once with a force of four thousand heavy-armed soldiers to Ithome. Athenian soldiers enjoyed a great reputation for their ability in the conduct of sieges; but, despite their arrival, the Helots in Ithome still held out. And soon the Spartans grew suspicious of the Athenian contingent. The failure of Sparta was so clearly to the interest of Athens that the Spartans could not believe that the Athenians were in earnest in trying to prevent it; and at last Cimon was told that Sparta no longer had need of the Athenian force. The insult was all the more evident because none of the other allies were dismissed. Cimon at once returned to Athens [see MESSENIAN WARS]. . . . On his return he still opposed those complete democratic changes that Pericles and Ephialtes were at this time in-

roducing into the state. A vote of ostracism was demanded. The requisite number of votes fell to Cimon, and he had to retire into exile (461). . . . His ostracism doubtless allowed the democratic changes, in any case inevitable, to be accomplished without much opposition or obstruction, but it also deprived Athens of her best soldier at a time when she needed all her military talent. [See ATHENS: B.C. 462-461.] For Athens could not forget Sparta's insult. In 461 she renounced the alliance with her that had existed since the Persian wars; and that this rupture did not mean neutrality was made clear when, immediately afterwards, Athens contracted an alliance with Argos, always the enemy and now the dangerous enemy of Sparta, and with the Thessalians, who also had grounds of hostility to Sparta. Under such circumstances war could not be long in coming."—A. J. Grant, *Greece in the Age of Pericles*, ch. 5.

B.C. 460-458.—Disastrous expedition to Egypt.—Defeat at Tanagra.—Athenian triumph over Corinth. See ATHENS: B.C. 460-455; B.C. 458.

B.C. 458-456.—Alliance of Corinth and Ægina against Athens and Megara.—Athenian victories.—Siege and conquest of Ægina.—Spartans in Bœotia.—Defeat of Athens at Tanagra.—Success at Ænophyta.—Humiliation of Thebes.—Athenian ascendancy restored.—Crippled by the great earthquake of 464 B.C., and harassed by the succeeding Messenian War, "nothing could be done, on the part of Sparta, to oppose the establishment and extension of the separate alliance between Athens and Argos; and accordingly the states of Northern Peloponnesus commenced their armaments against Athens on their own account, in order to obtain by force what formerly they had achieved by secret intrigues and by pushing forward Sparta. To stop the progress of the Attic power was a necessary condition of their own existence; and thus a new warlike group of states formed itself among the members of the disrupted confederation. The Corinthians entered into a secret alliance with Ægina and Epidaurus, and endeavored to extend their territory and obtain strong positions beyond the Isthmus at the expense of Megara. This they considered of special importance to them, inasmuch as they knew the Megareans, whose small country lay in the midst between the two hostile alliances, to be allies little deserving of trust. . . . The fears of the Corinthians were realized sooner than they had anticipated. The Megareans, under the pressure of events, renounced their treaty obligations to Sparta, and joined the Attico-Argive alliance. . . . The passes of the Geranea, the inlets and outlets of the Doric peninsula, now fell into the hands of the Athenians; Megara became an outwork of Athens; Attic troops occupied its towns; Attic ships cruised in the Gulf of Corinth, where harbors stood open to them at Pegæ and Ægosthena. The Athenians were eager to unite Megara as closely as possible to themselves, and for this reason immediately built two lines of walls, which connected Megara with its port Nisæa, eight stadia off, and rendered both places impregnable to the Peloponnesians. This extension of the hostile power to the boundaries of the Isthmus, and into the waters of the western gulf, seemed to the maritime cities of

Peloponnesus to force them into action. Corinth, Epidaurus, and Ægina commenced an offensive war against Athens—a war which opened without having been formally declared; and Athens unhesitatingly accepted the challenge thrown out with sufficient distinctness in the armaments of her adversaries. Myronides, an experienced general and statesman, . . . landed with an Attic squadron near Haliæis (where the frontiers of the Epidaurians and Argives met), and here found a united force of Corinthians, Epidaurians, and Æginetans awaiting him. Myronides was unsuccessful in his campaign. A few months later the hostile fleets met off the island of Cecryphalæa, between Ægina and the coast of Epidaurus. The Athenians were victorious, and the struggle now closed round Ægina itself. Immediately opposite the island ensued a second great naval battle. Seventy of the enemy's ships fell into the hands of the Athenians, whose victorious fleet without delay surrounded Ægina. The Peloponnesians were fully aware of the importance of Ægina to them. Three hundred hoplites came to the relief of the island, and the Corinthians marched across the Geranea into Megaris to the relief of Ægina. . . . Myronides advanced to meet the Corinthians with troops composed of those who had passed the age of military service or not yet reached it. In the first fight he held his ground; when the hostile forces returned for the second time, they were routed with tremendous loss. Megara was saved, and the energy of the Athenians had been most splendidly established. In attestation of it the sepulchral pillars were erected in the Ceramicus, on which were inscribed the names of the Athenian soldiers who had fallen in one and the same year (Ol. lxxx 3; B.C. 458-7) off Cyprus, in Egypt, Phœnicia, Haliæis, Ægina, and Megara. A fragment of this remarkable historical document is preserved to this day. While thus many years' accumulation of combustible materials had suddenly broken out into a flame of the fiercest war in Central Greece, new complications also arose in the north. The Thebans, who had suffered so deep a humiliation, believed the time to have arrived when the events of the past were forgotten, and when they could attain to new importance and power. In opposition to them the Phocians put forth their strength. . . . After the dissolution of the Hellenic Confederation, and the calamities which had befallen the Spartans, the Phocians thought they might venture an attack upon the Dorian tetrapolis, in order to extend their frontiers in this direction. . . . For Sparta it was a point of honor not to desert the primitive communities of the Dorian race. She roused herself to a vigorous effort, and, notwithstanding all her losses and the continuance of the war in Messenia, was able to send 11,500 men of her own troops and those of the confederates across the Isthmus before the Athenians had time to place any obstacles in their way [457 B.C.]. The Phocians were forced to relinquish their conquests. But when the Spartan troops were about to return home across the Isthmus they found the mountain-passes occupied by Athens, and the Gulf of Corinth made equally insecure by the presence of hostile ships. Nothing remained for the Lacedæmonians but to march into Bœotia, where their presence was welcome to Thebes. They entered the valley of the Asopus, and encamped in the territory of Tanagra, not far from the frontiers of Attica. Without calculating the consequences, the Athenians had brought themselves into an extremely dangerous situation. . . . Their difficulties increased when, contemporaneously, evil signs of treasonable plots made their appearance in the interior of the

city. . . . Thus, then, it was now necessary to contend simultaneously against foes within and foes without, to defend the constitution as well as the independence of the state. Nor was the question merely as to an isolated attack and a transitory danger; for the conduct of the Spartans in Bœotia clearly showed that it was now their intention to restore to power Thebes . . . because they were anxious to have in the rear of Athens a state able to stop the extension of the Attic power in Central Greece. This intention could be best fulfilled by supporting Thebes in the subjugation of the other Bœotian cities. For this purpose the Peloponnesians had busily strengthened the Theban, i. e., the oligarchical party, in the whole of the country, and encircled Thebes itself with new fortifications. Thebes was from a country town to become a great city, an independent fortified position, and a base for the Peloponnesian cause in Central Greece. Hence Athens could not have found herself threatened by a more dangerous complication. The whole civic army accordingly took the field, amounting, together with the Argives, and other allies, to 14,000 men, besides a body of Thessalian cavalry. In the low ground by the Asopus below Tanagra the armies met. . . . For a long time the result was doubtful; till in the very thick of the battle the cavalry went over to the enemy, probably at the instigation of the Læconian party. This act of treason decided the day in favor of Sparta, although patriotic Athenians would never consent to count this among the battles lost by Athens. . . . But whatever the Spartans did, they did only by halves: they concluded a truce for four months, and quitted the ground. The Athenians, on the other hand, had no intention of allowing a menacing power to establish itself on the frontiers of their country. Without waiting for the return of the fair season, they crossed Mount Parnes two months after the battle, before any thoughts of war were entertained in Bœotia; Myronides, who was in command, defeated the Theban army which was to defend the valley of the Asopus, near Ænophyta. This battle with one blow put an end to all the plans of Thebes; the walls of Tanagra were razed. Myronides continued his march from town to town; everywhere the existing governments were overthrown, and democratic constitutions established with the help of Attic partisans. . . . Thus, after a passing humiliation, Athens was soon more powerful than ever, and her sway extended as far as the frontiers of the Phocians. Nay, during the same campaign she extended her military dominion as far as Locris. . . . Meanwhile the Æginetans also were gradually losing their power of resistance. . . . The Peloponnesian confederation was shaken to its very foundations; and Sparta was still let and hindered by the Messenian revolt, while the Athenians were able freely to dispose of their military and naval forces."—E. Curtius, *History of Greece*, v. 2, bk. 3, ch. 2.—See also ATHENS: B. C. 460-458.

B. C. 449-446.—Cimon's last expedition.—Peace with Persia. See ATHENS: B. C. 449-446.

B. C. 449-445.—Quarrel of Delphians and Phocians.—Interference of Sparta and Athens.—Revolt of Eubœa and Megara.—Thirty Years' Truce.—In 440 B. C. "on occasion of a dispute between the Delphians and the Phocians as to which should have the care of the temple and its treasures, the Lacedæmonians sent an army, and gave them to the former; but as soon as they were gone, Pericles led thither an Athenian army, and

put the Phocians in possession. . . . Eubœa was now (Ol. 83, 3) [B. C. 466] in revolt; and while Pericles was at the head of an army reducing it, the party in Megara adverse to Athens rose and massacred all the Athenian garrisons except that of Nisæa. Corinthians, Sicyonians, and Epidaurians came to their aid; and the Peloponnesians, led by one of the Spartan kings, entered and wasted the plain of Eleusis. Pericles led back his army from Eubœa, but the enemy was gone; he then returned and reduced that island, and having expelled the people of Hestîæa, gave their lands to Athenian colonists; and the Athenians, being unwilling to risk the chance of war with the Dorian confederacy, gladly formed (Ol. 83, 4) [445 B. C.] a truce for thirty years, surrendering Nisæa and Pegæ, and withdrawing a garrison which they had in Træzen, and ceasing to interfere in Achaia."—T. Keightley, *History of Greece*, pt. 2, ch. 1.—"The Athenians saw themselves compelled to give up their possessions in Peloponnesus, especially Achaia, as well as Træzene and Pagæ, an important position for their communication with the peninsula. Even Nisæa was abandoned. Yet these losses, sensibly as they affected their influence upon the Grecian continent, were counterbalanced by a concession still more significant, the acknowledgment of the Delian League. It was left open to states and cities which were members of neither confederacy to join either at pleasure. These events happened in B. C. 445—the revolt of Megara and Eubœa, the invasion of Pleistoanax, the reconquest of Eubœa, and the conclusion of the treaty, which assumed the form of an armistice for thirty years. Great importance must be attributed to this settlement, as involving an acknowledgment which satisfied both parties and did justice to the great interests at stake on either side. If Athens renounced some of her possessions, the sacrifice was compensated by the fact that Sparta recognized the existence of the naval supremacy of Athens, and the basis on which it rested. We may perhaps assume that the compromise between Pericles and Pleistoanax was the result of the conviction felt by both these leading men that a fundamental dissociation of the Peloponnesian from the Delian League was a matter of necessity. The Spartans wished to be absolutely supreme in the one, and resigned the other to the Athenians."—L. von Ranke, *Universal history: Oldest historical group of nations and the Greeks*, ch. 7, sect. 2.—See also ATHENS: B. C. 447; B. C. 446-445.

B. C. 435-432.—Causes of the Peloponnesian War.—"In B. C. 431 the war broke out between Athens and the Peloponnesian League, which, after twenty-seven years, ended in the ruin of the Athenian empire. It began through a quarrel between Corinth and Kerkyra [or Corcyra], in which Athens assisted Kerkyra. A congress was held at Sparta; Corinth and other States complained of the conduct of Athens, and war was decided on. The real cause of the war was that Sparta and its allies were jealous of the great power that Athens had gained. A far greater number of Greek States were engaged in this war than had ever been engaged in a single undertaking before. States that had taken no part in the Persian war were now fighting on one side or the other. Sparta was an oligarchy, and the friend of the nobles everywhere; Athens was a democracy, and the friend of the common people; so that the war was to some extent a struggle between these classes all over Greece."—C. A. Fyffe, *History of Greece (History primer)*, ch. 5.—"The Peloponnesian War was a

protracted struggle, and attended by calamities such as Hellas had never known within a like period of time. Never were so many cities captured and depopulated—some by Barbarians, others by Hellenes themselves fighting against one another; and several of them after their capture were repopled by strangers. Never were exile and slaughter more frequent, whether in the war or brought about by civil strife. . . . There were earthquakes unparalleled in their extent and fury, and eclipses of the sun more numerous than are recorded to have happened in any former age; there were also in some places great droughts causing famines, and lastly the plague which did immense harm and destroyed numbers of the people. All these calamities fell upon Hellas simultaneously with the war, which began when the Athenians and Peloponnesians violated the thirty years' truce concluded by them after the recapture of Euboea. Why they broke it and what were the grounds of quarrel I will first set forth, that in time to come no man may be at a loss to know what was the origin of this great war. The real though unavowed cause I believe to have been the growth of the Athenian power, which terrified the Lacedæmonians and forced them into war."—Thucydides, *History* (tr. by Jowett), *bk. 1, sect. 23*.—The quarrel between Corinth and Corcyra out of which, as an immediate excitement, the Peloponnesian War grew, concerned "the city of Epidamnus, known afterwards, in the Roman times, as Dyrrachium, hard by the modern Durrazzo—a colony founded by the Korkyreans on the coast of Illyria, in the Ionic gulf, considerably to the north of their own island." The oligarchy of Epidamnus, driven out by the people, had allied themselves with the neighboring Illyrians and were harassing the city. Corcyra refused aid to the latter when appealed to, but Corinth (of which Corcyra was itself a colony) promptly rendered help. This involved Corinth and Corcyra in hostilities, and Athens gave support to the latter.—E. Curtius, *History of Greece*, *v. 3, bk. 4*.

**B.C. 432.**—Great sea-fight of the Corinthians with the Corcyrians and Athenians.—Revolt of Potidæa.—"The Corinthians lost no time in bringing the quarrel to an issue. . . . The conflict which ensued exhibited a scene of confusion which the Athenian seamen probably regarded with infinite contempt. After a hard struggle the Korkyraians routed the right wing of the enemy's fleet, and chasing it to its camp on shore, lost time in plundering it and burning the tents. For this folly they paid a terrible price. The remainder of the Korkyraian fleet, borne down by sheer force of numbers, was put to flight, and probably saved from utter ruin only by the open interference of the Athenians, who now dashed into the fight without scruple, and came into direct conflict with the Corinthians. The latter were now resolved to press their advantage to the utmost. Sailing through the enemy's ships, they applied themselves to the task not of taking prizes, but of indiscriminate slaughter, to which not a few of their own people fell victims. After this work of destruction, they conveyed their disabled ships with their dead to Sybota, and, still unwearied, advanced again to the attack, although it was now late in the day. Their Paian, or battle cry, had already rung through the air, when they suddenly backed water. Twenty Athenian ships had come into sight, and the Corinthians, supposing them to be only the vanguard of a larger force, hastily retreated. . . . So ended

the greatest sea-fight in which Hellenes had thus far contended not with barbarians but with their own kinsfolk."—G. W. Cox, *General history of Greece*, *bk. 3, ch. 1*.—"The evils of this imprudent interference of the Athenians began now to be seen. In consequence of the Corcyrian alliance, the Athenians issued an order to Potidæa, a Macedonian town acknowledging their supremacy, to demolish its walls; to send back certain officers whom they had received from Corinth, and to give hostages for their good conduct. Potidæa, although an ally of Athens, had originally been a colony of Corinth, and thus arose the jealousy which occasioned these harsh and peremptory orders. Symptoms of universal hostility to Athens now appeared in the states around. . . . The Potidæans, however, deputed ambassadors to Athens to deprecate the harsh orders which had been sent them; but in the mean time to prepare for the worst, they also sent messengers to Sparta entreating support, where they met deputies from Corinth and Megara. By these loud and general complaints Sparta was at length roused to head the conspiracy against Athens, and the universal flames of war shortly afterwards broke forth throughout Greece." The revolt of Potidæa followed immediately; the Corinthians placed a strong force in the town, under Aristæus, and the Athenians sent an army under Phormion to lay siege to it.—*Early history of Greece (Encyclopædia Metropolitana)*, *p. 283*.

**B.C. 432-431.**—Charges brought by Corinth against Athens.—Hearing and the Congress at Sparta.—Decision for war.—Theban attack on Plataea.—Peloponnesian War begun.—The Corinthians "invited deputies from the other states of the confederacy to meet them at Sparta, and there charged the Athenians with having broken the treaty, and trampled on the rights of the Peloponnesians. The Spartans held an assembly to receive the complaints of their allies, and to discuss the question of peace or war. . . . The congress decided on the war; but the confederacy was totally unprepared for commencing hostilities, and though the necessary preparations were immediately begun and vigorously prosecuted, nearly a year elapsed before it was ready to bring an army into the field. In the meantime embassies were sent to Athens with various remonstrances and demands, for the double purpose of amusing the Athenians with the prospect of peace, and of multiplying pretenses for war. . . . Still, war had been only threatened, not declared; and peaceful intercourse, though not wholly free from distrust, was still kept up between the subjects of the two confederacies. But early in the following spring, B.C. 431, in the fifteenth year of the Thirty Years' Truce, an event took place which closed all prospects of peace, precipitated the commencement of war, imbittered the animosity of the contending parties, and prepared some of the most tragical scenes of the ensuing history. In the dead of night the city of Plataea was surprised by a body of 300 Thebans, commanded by two of the great officers called Bæotarchs. They had been invited by a Plataean named Naclidæ, and others of the same party, who hoped, with the aid of the Thebans, to rid themselves of their political opponents, and to break off the relation in which their city was standing to Athens, and transfer its alliance to Thebes. The Thebans, foreseeing that a general war was fast approaching, felt the less scruple in strengthening themselves by this acquisition, while it might be made with little cost and risk. The gates were unguarded, as in time of peace, and one of them was secretly opened to the

invaders, who advanced without interruption into the marketplace. . . . The Plataeans, who were not in the plot, imagined the force by which their city had been surprised to be much stronger than it really was, and, as no hostile-treatment was offered to them, remained quiet, and entered into a parley with the Thebans. In the course of these conferences they gradually discovered that the number of the enemy was small, and might be easily overpowered. . . . Having barricaded the streets with wagons, and made such other preparations as they thought necessary, a little before daybreak they suddenly fell upon the Thebans. The little band made a vigorous defence, and twice or thrice repulsed the assailants; but . . . they at length lost their presence of mind, and took to flight. . . . On the first entrance of the Thebans into Plataea, a messenger had been despatched to Athens with the intelligence, and the Athenians had immediately laid all the Bœotians in Attica under arrest; and when another messenger brought the news of the victory gained by the Plataeans, they sent a herald to request that they would reserve the prisoners for the disposal of the Athenians. The herald came too late to prevent the execution; and the Athenians, foreseeing that Plataea would stand in great need of defence, sent a body of troops to garrison it, supplied it with provisions, and removed the women and children and all persons unfit for service in a siege. After this event it was apparent that the quarrel could only be decided by arms. Plataea was so intimately united with Athens, that the Athenians felt the attack which had been made on it as an outrage offered to themselves, and prepared for immediate hostilities. Sparta, too, instantly sent notice to all her allies to get their contingents ready by an appointed day for the invasion of Attica."—C. Thirlwall, *History of Greece*, v. 1, ch. 10.

B.C. 431-429.—Peloponnesian War: How Hellas was divided.—Lacedæmon, Athens and their Allies.—Peloponnesian invasions of Attica.—Plague at Athens.—Surrender of Potidæa to the Athenians.—"All Hellas was excited by the coming conflict between her two chief cities. . . . The feeling of mankind was strongly on the side of the Lacedæmonians; for they professed to be the liberators of Hellas. . . . The general indignation against the Athenians was intense; some were longing to be delivered from them, others fearful of falling under their sway. . . . The Lacedæmonian confederacy included all the Peloponnesians with the exception of the Argives and the Achæans—they were both neutral; only the Achæans of Pellene took part with the Lacedæmonians at first; afterwards all the Achæans joined them. Beyond the borders of the Peloponnese, the Megarians, Phocians, Locrians, Bœotians, Ambraciots, Leucadians, and Anactorians were their allies. Of these the Corinthians, Megarians, Sicyonians, Pelenians, Eleans, Ambraciots, and Leucadians provided a navy, the Bœotians, Phocians, and Locrians furnished cavalry, the other states only infantry. The allies of the Athenians were Chios, Lesbos, Plataea, the Messenians of Naupactus, the greater part of Acarnania, Corcyra, Zacynthus, and cities in many other countries which were their tributaries. There was the maritime region of Caria, the adjacent Dorian peoples, Ionia, the Hellespont, the Thracian coast, the islands that lie to the east within the line of Peloponnesus and Crete, including all the Cyclades with the exception of Melos and Thera. Chios, Lesbos and Corcyra furnished a navy; the rest, land forces and money.

Thus much concerning the two confederacies, and the character of their respective forces. Immediately after the affair at Plataea the Lacedæmonians determined to invade Attica, and sent round word to their Peloponnesian and other allies, bidding them equip troops and provide all things necessary for a foreign expedition. The various states made their preparations as fast as they could, and at the appointed time, with contingents numbering two-thirds of the forces of each, met at the Isthmus." Then followed the invasion of Attica, the siege of Athens, the plague in the city . . . and the success won by the indomitable Athenians, at Potidæa, in the midst of their sore distress.—Thucydides, *History* (tr. by Jowett), v. 1, bk. 2, sect. 8-70.—See also ATHIENS: B.C. 431; 431-429; 428-427.

B.C. 430.—Funeral oration of Pericles.—During the winter of the year B.C. 431-430, "in accordance with an old national custom, the funeral of those who first fell in this war was celebrated by the Athenians at the public charge. The ceremony is as follows: Three days before the celebration they erect a tent in which the bones of the dead are laid out, and every one brings to his own dead any offering which he pleases. At the time of the funeral the bones are placed in chests of cypress wood, which are conveyed on hearses; there is one chest for each tribe. They also carry a single empty litter decked with a pall for all whose bodies are missing, and cannot be recovered after the battle. The procession is accompanied by any one who chooses, whether citizen or stranger, and the female relatives of the deceased are present at the place of interment and make lamentation. The public sepulchre is situated in the most beautiful spot outside the walls; there they always bury those who fall in war; only after the battle of Marathon the dead, in recognition of their pre-eminent valour, were interred on the field. When the remains have been laid in the earth, some man of known ability and high reputation, chosen by the city, delivers a suitable oration over them; after which the people depart. Such is the manner of interment; and the ceremony was repeated from time to time throughout the war. Over those who were the first buried Pericles was chosen to speak. At the fitting moment he advanced from the sepulchre to a lofty stage, which had been erected in order that he might be heard as far as possible by the multitude, and spoke as follows:—"Most of those who have spoken here before me have commended the lawgiver who added this oration to our other funeral customs; it seemed to them a worthy thing that such an honour should be given at their burial to the dead who had fallen on the field of battle. But I should have preferred that, when men's deeds have been brave, they should be honoured in deed only, and with such an honour as this public funeral, which you are now witnessing. Then the reputation of many would not have been imperilled on the eloquence or want of eloquence of one, and their virtues believed or not as he spoke well or ill. For it is difficult to say neither too little nor too much; and even moderation is apt not to give the impression of truthfulness. The friend of the dead who knows the facts is likely to think that the words of the speaker fall short of his knowledge and of his wishes; another who is not so well informed, when he hears of anything which surpasses his own powers, will be envious and will suspect exaggeration. Mankind are tolerant of the praises of others so long as each hearer thinks that he can do as well or nearly as well himself,

but, when the speaker rises above him, jealousy is aroused and he begins to be incredulous. However, since our ancestors have set the seal of their approval upon the practice, I must obey, and to the utmost of my power shall endeavor to satisfy the wishes and beliefs of all who hear me. I will speak of our ancestors, for it is right and becoming that now, when we are lamenting the dead, a tribute should be paid to their memory. There has never been a time when they did not inhabit this land, which by their valour they have handed down from generation to generation, and we have received from them a free state. But if they were worthy of praise, still more were our fathers who added to their inheritance, and after many a struggle transmitted to us their sons this great empire. And we ourselves assembled here to-day, who are still most of us in the vigour of life, have chiefly done the work of improvement, and have richly endowed our city with all things, so that she is sufficient for herself both in peace and war. Of the military exploits by which our various possessions were acquired, or of the energy with which we or our fathers drove back the tide of war, Hellenic or Barbarian, I will not speak; for the tale would be long and is familiar to you. But before I praise the dead, I should like to point out by what principles of action we rose to power, and under what institutions and through what manner of life our empire became great. For I conceive, that such thoughts are not unsuited to the occasion, and that this numerous assembly of citizens and strangers may profitably listen to them. Our form of government does not enter into rivalry with the institutions of others. We do not copy our neighbours, but are an example to them. It is true that we are called a democracy, for the administration is in the hands of the many and not of the few. But while the law secures equal justice to all alike in their private disputes, the claim of excellence is also recognised; and when a citizen is in any way distinguished, he is preferred to the public service, not as a matter of privilege, but as the reward of merit. Neither is poverty a bar, but a man may benefit his country whatever be the obscurity of his condition. There is no exclusiveness in our public life, and in our private intercourse we are not suspicious of one another, nor angry with our neighbour if he does what he likes; we do not put on sour looks at him which, though harmless, are not pleasant. While we are thus unconstrained in our private intercourse, a spirit of reverence pervades our public acts; we are prevented from doing wrong by respect for authority and for the laws, having an especial regard to those which are ordained for the protection of the injured as well as to those unwritten laws which bring upon the transgressor of them the reprobation of the general sentiment. And we have not forgotten to provide for our weary spirits many relaxations from toil; we have regular games and sacrifices throughout the year; at home the style of our life is refined; and the delight which we daily feel in all these things helps to banish melancholy. Because of the greatness of our city the fruits of the whole earth flow in upon us; so that we enjoy the goods of other countries as freely as of our own. Then, again, our military training is in many respects superior to that of our adversaries. Our city is thrown open to the world, and we never expel a foreigner or prevent him from seeing or learning anything of which the secret if revealed to an enemy might profit him. We rely not upon management or trickery, but upon our own hearts and hands. And in the

matter of education, whereas they from early youth are always undergoing laborious exercises which are to make them brave, we live at ease, and yet are equally ready to face the Lacedæmonians come into Attica not by themselves, but with their whole confederacy following; we go alone into a neighbour's country; and although our opponents are fighting for their homes and we on a foreign soil we have seldom any difficulty in overcoming them. Our enemies have never yet felt our united strength; the care of a navy divides our attention, and on land we are obliged to send our own citizens everywhere. But they, if they meet and defeat a part of our army, are as proud as if they had routed us all, and when defeated they pretend to have been vanquished by us all. If then we prefer to meet danger with a light heart but without laborious training, and with a courage which is gained by habit and not enforced by law, are we not greatly the gainers? Since we do not anticipate the pain, although, when the hour comes, we can be as brave as those who never allow themselves to rest; and thus too our city is equally admirable in peace and in war. For we are lovers of the beautiful, yet simple in our tastes, and we cultivate the mind without loss of manliness. Wealth we employ, not for talk and ostentation, but when there is a real use for it. To avow poverty with us is no disgrace; the true disgrace is in doing nothing to avoid it. An Athenian citizen does not neglect the state because he takes care of his own household; and even those of us who are engaged in business have a very fair idea of politics. We alone regard a man who takes no interest in public affairs, not as a harmless, but as a useless character; and if few of us are originators, we are all sound judges of a policy. The great impediment to action is, in our opinion, not discussion, but the want of that knowledge which is gained by discussion preparatory to action. For we have a peculiar power of thinking before we act and of acting too, whereas other men are courageous from ignorance but hesitate upon reflection. And they are surely to be esteemed the bravest spirits who, having the clearest sense both of the pains and pleasures of life, do not on that account shrink from danger. In doing good, again, we are unlike others; we make our friends by conferring, not by receiving favours. Now he who confers a favour is the firmer friend, because he would fain by kindness keep alive the memory of an obligation; but the recipient is colder in his feelings, because he knows that in requiting another's generosity he will not be winning gratitude but only paying a debt. We alone do good to our neighbours not upon a calculation of interest, but in the confidence of freedom and in a frank and fearless spirit. To sum up; I say that Athens is the school of Hellas, and that the individual Athenian in his own person seems to have the power of adapting himself to the most varied forms of action with the utmost versatility and grace. This is no passing and idle word, but truth and fact; and the assertion is verified by the position to which these qualities have raised the state. For in the hour of trial Athens alone among her contemporaries is superior to the report of her. No enemy who comes against her is indignant at the reverses which he sustains at the hands of such a city; no subject complains that his masters are unworthy of him. And we shall assuredly not be without witnesses; there are mighty monuments of our power which will make us the wonder of this and of succeeding

ages; we shall not need the praises of Homer or of any other panegyrist whose poetry may please for the moment, although his representation of the facts will not bear the light of day. For we have compelled every land and every sea to open a path for our valour, and have everywhere planted eternal memorials of our friendship and of our enmity. Such is the city for whose sake these men nobly fought and died; they could not bear the thought that she might be taken from them; and every one of us who survive should gladly toil on her behalf. I have dwelt upon the greatness of Athens because I want to show you that we are contending for a higher prize than those who enjoy none of these privileges, and to establish by manifest proof the merit of these men whom I am now commemorating. Their loftiest praise has been already spoken. For in magnifying the city I have magnified them, and men like them whose virtues made her glorious. And of how few Hellenes can it be said as of them, that their deeds when weighed in the balance have been found equal to their fame! Methinks that a death such as theirs has been given the true measure of a man's worth;

a more heroic spirit although they may pray for a less fatal issue. The value of such a spirit is not to be expressed in words. Any one can discourse to you for ever about the advantages of a brave defence which you know already. But instead of listening to him I would have you day by day fix your eyes upon the greatness of Athens, until you become filled with the love of her; and when you are impressed by the spectacle of her glory reflect that this empire has been acquired by men who knew their duty and had the courage to do it; who in the hour of conflict had the fear of dishonour always present to them, and who, if ever they failed in an enterprise, would not allow their virtues to be lost to their country, but freely gave their lives to her as the fairest offering which they could present at her feast. The sacrifice which they collectively made was individually repaid to them; for they received again each one for himself a praise which grows not old, and the noblest of all sepulchres—I speak not of that in which their remains are laid, but of that in which their glory survives, and is proclaimed always and on every fitting occasion both in word and deed. For the

TEMPLE OF THESEUS, ATHENS

it may be the first revelation of his virtues, but is at any rate their final seal. For even those who come short in other ways may justly plead the valour with which they have fought for their country; they have blotted out the evil with the good, and have benefited the state more by their public services than they have injured her by their private actions. None of these men were enervated by wealth or hesitated to resign the pleasures of life; none of them put off the evil day in the hope, natural to poverty, that a man, though poor, may one day become rich. But, deeming that the punishment of their enemies was sweeter than any of these things, and that they could fall in no nobler cause, they determined at the hazard of their lives to be honourably avenged, and to leave the rest. They resigned to hope their unknown chance of happiness; but in the face of death they resolved to rely upon themselves alone. And when the moment came they were minded to resist and suffer, rather than to fly and save their lives; they ran away from the word of dishonour, but on the battle-field their feet stood fast, and in an instant, at the height of their fortune, they passed away from the scene, not of their fear, but of their glory. Such was the end of these men; they were worthy of Athens, and the living need not desire to have

whole earth is the sepulchre of famous men; not only are they commemorated by columns and inscriptions in their own country, but in foreign lands there dwells also an unwritten memorial of them, graven not on stone but in the hearts of men. Make them your examples, and esteeming courage to be freedom and freedom to be happiness, do not weigh too nicely the perils of war. The unfortunate who has no hope of a change for the better has less reason to throw away his life than the prosperous who, if he survive, is always liable to a change for the worse, and to whom any accidental fall makes the most serious difference. To a man of spirit, cowardice and disaster coming together are far more bitter than death striking him unperceived at a time when he is full of courage and animated by the general hope. Wherefore I do not now commiserate the parents of the dead who stand here; I would rather comfort them. You know that your life has been passed amid manifold vicissitudes; and that they may be deemed fortunate who have gained most honour, whether an honourable death like theirs, or an honourable sorrow like yours, and whose days have been so ordered that the term of their happiness is likewise the term of their life. I know how hard it is to make you feel this, when

the good fortune of others will too often remind you of the gladness which once lightened your hearts. And sorrow is felt at the want of those blessings, not which a man never knew, but which were a part of his life before they were taken from him. Some of you are of an age at which they may hope to have other children, and they ought to bear their sorrow better; not only will the children who may hereafter be born make them forget their own lost ones, but the city will be doubly a gainer. She will not be left desolate, and she will be safer. For a man's counsel cannot have equal weight or worth, when he alone has no children to risk in the general danger. To those of you who have passed their prime I say: "Congratulate yourselves that you have been happy during the greater part of your days; remember that your life of sorrow will not last long, and be comforted by the glory of those who are gone. For the love of honour alone is ever young, and not riches, as some say, but honour is the delight of men when they are old and useless." To you who are the sons and brothers of the departed, I see that the struggle to emulate them will be an arduous one. For all men praise the dead, and, however pre-eminent your virtue may be, hardly will you be thought, I do not say to equal, but even to approach them. The living have their rivals and detractors, but when a man is out of the way, the honour and good-will which he receives is unalloyed. And, if I am to speak of womanly virtues to those of you who will henceforth be widows, let me sum them up in one short admonition: To a woman not to show more weakness than is natural to her sex is a great glory, and not to be talked about for good or for evil among men. I have paid the required tribute, in obedience to the law, making use of such fitting words as I had. The tribute of deeds has been paid in part; for the dead have been honourably interred, and it remains only that their children should be maintained at the public charge until they are grown up: this is the solid prize with which, as with a garland, Athens crowns her sons living and dead, after a struggle like theirs. For where the rewards of virtue are greatest, there the noblest citizens are enlisted in the service of the state. And now, when you have duly lamented, every one his own dead, you may depart.' Such was the order of the funeral celebrated in this winter, with the end of which ended the first year of the Peloponnesian War."—Thucydides, *History* (tr. by Jowett), v. 1, bk. 2, sect. 34-47.

**B.C. 429-427.—Peloponnesian War: Siege, capture and destruction of Plataea.**—"In the third spring of the war, the Peloponnesians changed their plan of offence. By the invasion and ravage of Attica for two following summers, the much injury had been done to the Athenians, little advantage had accrued to themselves; the booty was far from paying the expence of the expedition; the enemy, it was found, could not be provoked to risk a battle, and the great purpose of the war was little forwarded. The Peloponnesians were yet very unequal to attempt naval operations of any consequence. Of the continental dependencies of Athens none was so open to their attacks, none so completely excluded from naval protection, none so likely by its danger to superinduce that war of the field which they wished, as Plataea. Against that town therefore it was determined to direct the principal effort. . . . Under the command still of Archidamus, the confederate army accordingly entered the Plataeid, and ravage was immediately begun."—W. Mitford, *History of Greece*, v. 2, ch. 15, sect. 1.—When the blockade had endured for

more than a year, and food in the city grew scarce, about half of the defending force made a bold dash for liberty, one stormy night, scaled the walls of circumvallation, and escaped. The remainder held out until some time in the next year, when they surrendered and were all put to death, the city being destroyed. The families of the Plataeans had been sheltered at Athens before the siege began.—Thucydides, *History* (tr. by Jowett), bk. 2-3.

**B.C. 429-427.—Peloponnesian War: Phormio's sea-fights.—Revolt of Lesbos.—Siege and capture of Mitylene.—Ferocious decree of Cleon reversed.**—"At the same time that Archidamus laid siege to Plataea, a small Peloponnesian expedition, under a Spartan officer named Cnemus, had crossed the mouth of the Gulf of Corinth, and joined the land forces of the Leucadians and Ambraciots. They were bent on conquering the Acarnanians and the Messenians of Naupactus, the only continental allies whom Athens possessed in Western Greece. . . . When Cnemus had been joined by the troops of Leucas and the other Corinthian towns, and had further strengthened himself by summoning to his standard a number of the predatory barbarian tribes of Epirus, he advanced on Stratus, the chief city of Acarnania. At the same time a squadron of Peloponnesian ships collected at Corinth, and set sail down the gulf towards Naupactus. The only Athenian force in these waters consisted of twenty galleys under an able officer named Phormio, who was cruising off the straits of Rhium, to protect Naupactus and blockade the Corinthian Gulf. Both by land and by sea the operations of the Peloponnesians miscarried miserably. Cnemus collected a very considerable army, but as he sent his men forward to attack Stratus by three separate roads, he exposed them to defeat in detail. . . . By sea the defeat of the Peloponnesians was even more disgraceful; the Corinthian admirals Machaon and Isocrates were so scared, when they came across the squadron of Phormio at the mouth of the gulf, that, although they mustered 47 ships to his 20, they took up the defensive. Huddling together in a circle, they shrank from his attack, and allowed themselves to be hustled and worried into the Achaian harbour of Patrae, losing several ships in their flight. Presently reinforcements arrived; the Peloponnesian fleet was raised to no less than 77 vessels, and three Spartan officers were sent on board, to compel the Corinthian admirals, who had behaved so badly, to do their best in future. The whole squadron then set out to hunt down Phormio. They found him with his 20 ships coasting along the Aetolian shore towards Naupactus, and at once set out in pursuit. The long chase separated the larger fleet into scattered knots, and gave the fighting a disconnected and irregular character. While the rear ships of Phormio's squadron were compelled to run on shore a few miles outside Naupactus, the 11 leading vessels reached the harbour in safety. Finding that he was now only pursued by about a score of the enemy—the rest having stayed behind to take possession of the stranded Athenian vessels—Phormio came boldly out of port again. His 11 vessels took 6, and sunk one of their pursuers; and then, pushing on westward, actually succeeded in recapturing most of the 9 ships which had been lost in the morning. This engagement, though it had no great results, was considered the most daring feat performed by the Athenian navy during the whole war. . . . The winter passed uneventfully, and the war seemed as far as ever from showing any signs of producing a definite result. But although the Spartan invasion of 428 B.C. had no

more effect than those of the preceding years, yet in the late summer there occurred an event so fraught with evil omens for Athens, as to threaten the whole fabric of her empire. For the first time since the commencement of hostilities, an important subject state made an endeavour to free itself by the aid of the Spartan fleet."—C. W. C. Oman, *History of Greece*, ch. 28.—"In the year after Cleon had come to the front, the oligarchs of Lesbos induced Mitylene and the other cities of the island except Methymna, to revolt [see also ATHENS: B.C. 428-427]. There was danger that all the maritime cities would follow this example. But the Peloponnesians were too slow in sending the promised aid, and the Athenians made desperate efforts to conquer the island. As a last resort (427 B.C.) the oligarchs of Mitylene armed the commons; but the latter promptly surrendered the city to Paches, the Athenian commander. Thereupon he sent the oligarchs, who alone were guilty of revolt, to Athens, and kept guard over the other Mitylenaeans, awaiting the judgment of the assembly. The Athenians were angry because the Lesbians had revolted without cause; they feared, too, for the safety of their empire and, indeed, for their own lives. Under the excitement of the moment, they decreed to kill all the men of Mitylene and to enslave the women and children. . . . Cleon, the author of this policy of terrorism toward the cities of the empire, wished to make an example of the Lesbians so that the other communities would fear to revolt. But on the next day the decree was reconsidered in the assembly [and was countermanded]. But the thousand Lesbian oligarchs at Athens were massacred. . . . In putting down this revolt, Athens passed the dangerous crisis and was again undisputed mistress of the Ægean Sea."—G. W. Botsford, *Ancient history*, pp. 165-166.—See also ATHENS: B.C. 426-422.

B.C. 425.—Peloponnesian War: Spartan catastrophe at Sphacteria.—Peace pleaded for and refused by Athens.—In the seventh year of the Peloponnesian War (425 B.C.), the enterprising Athenian general, Demosthenes, obtained permission to seize and fortify a harbor on the west coast of Messenia, with a view to harassing the adjacent Spartan territory and stirring up revolt among the subjugated Messenians. The position he secured was the promontory of Pylus, overlooking the basin now called the bay of Navarino, which latter was protected from the sea by the small island of Sphacteria, stretching across its front. The seizure of Pylus created alarm in Sparta at once, and vigorous measures were taken to expel the intruders. The small force of Demosthenes was assailed, front and rear, by a strong land army and a powerful Peloponnesian fleet; but he had fortified himself with skill and stoutly held his ground, waiting for help from Athens. Meantime his assailants had landed 420 men on the island of Sphacteria, and these were mostly hoplites, or heavy-armed soldiers, from the best citizenship of Sparta. In this situation an Athenian fleet made its sudden and unexpected appearance, defeated the Peloponnesian fleet completely, took possession of the harbor and surrounded the Spartans on Sphacteria with a ring from which there was no escape. To obtain the release of these citizens the Spartans were reduced to plead for peace on almost any terms, and Athens had her opportunity to end the war at that moment with great advantage to herself. But Cleon, the demagogue, persuaded the people to refuse peace.

The beleaguered hoplites on Sphacteria were made prisoners by force, and little came of it in the end.—Thucydides, *History* (tr. by Jowett), bk. 4, sect. 2-38.—Pylus remained in the possession of the Athenians until 408 B.C., when it was retaken by the Spartans.—G. Grote, *History of Greece*, pt. 2, ch. 52.

B.C. 424-421.—Peloponnesian War: Brasidas in Chalcidice.—Athenian defeat at Delium.—Year's truce.—Renewed hostilities.—Death of Brasidas and Cleon at Amphipolis.—Peace of Nicias.—"About the beginning of 424 B.C. Brasidas did for Sparta what Demosthenes had done for the Athenians. Just as Demosthenes had understood that the severest blow which he could inflict on Sparta was to occupy the coasts of Laconia, so Brasidas understood that the most effective method of assailing the Athenians was to arouse the allies to revolution, and by all means to aid the uprising. . . . With this small force of 1,700 hoplites, Brasidas resolved to undertake this adventurous and important expedition. He started in the spring of 424, and reached Macedonia through eastern Hellas and Thessaly. He effected the march with great daring and wisdom, and on his way he also saved Megara, which was in extreme danger from the Athenians. Reaching Macedonia and uniting forces with Perdikkas, Brasidas detached from the Athenians many cities, promising them liberty from the tyranny they suffered, and their association in the Peloponnesian alliance on equal terms. He made good these promises by great military experience and perfectly honest dealings. In December he became master of Amphipolis, perhaps the most important of all the foreign possessions of Athens. The historian Thucydides, to whom was intrusted the defense of that important town, was at Thasos when Brasidas surprised it. He hastened to the assistance of the threatened city, but did not arrive in time to prevent its capture. Dr. Thirlwall says it does not appear that human prudence and activity could have accomplished anything more under the same circumstances; yet his unavoidable failure proved the occasion of a sentence under which he spent twenty years of his life in exile, where he composed his history. . . . The revolution of the allied cities in Macedonia astonished the Athenians, who almost at the same time sustained other misfortunes. Following the advice of Kleon, instead of directing their main efforts to the endangered Chalkidike, they decided, about the middle of 424, to recover Bœotia itself, in conjunction as usual with some malcontents in the Bœotian towns, who desired to break down and democratize the oligarchical governments. The undertaking, however, was not merely unsuccessful, but attended with a ruinous defeat. . . . The Athenians suffered a complete defeat [at Delium], and were driven away with great loss. Such was the change of affairs which took place in 424 B.C. During the preceding year they could have ended the war in a manner most advantageous to them. They did not choose to do so, and were now constantly defeated. Worse still, the seeds of revolt spread among the allied cities. The best citizens, among whom Nicias was a leader, finally persuaded the people that it was necessary to come to terms of peace, while affairs were yet undecided. For, although the Athenians had suffered the terrific defeat near Delium, and had lost Amphipolis and other cities of Macedonia, they were still masters of Pylos, of Kythera, of Methone, of Nisæa, and of the Spartans captured in Sphacteria; so that there was now an equality of advantages and

of losses. Besides, the Lacedæmonians were ever ready to lay aside the sword in order to regain their men. Again, the oligarchy in Sparta envied Brasidas, and did not look with pleasure on his splendid achievements. Lately they had refused to send him any assistance whatever. The opportunity, therefore, was advantageous for the conclusion of peace. . . . Such were the arguments by which Nicias and his party finally gained the ascendancy over Kleon, and in the beginning of 423 B. C. persuaded the Athenians to enter into an armistice of one year, within which they hoped to be able to put an end to the destructive war by a lasting peace. Unfortunately, the armistice could not be carried out in Chalkidike. The cities there continued in their rebellion against the Athenians. Brasidas could not be prevailed upon to leave them unprotected in the struggle which they had undertaken, relying on his promises of assistance. The warlike party of Athens, taking advantage of this, succeeded in frustrating any definite conditions of peace. On the other hand, the Lacedæmonians, seeing that the war was continued, sent an ample force to Brasidas. This army did not succeed in reaching him, because the king of Macedonia, Perdikkas, had in the meantime become angered with Brasidas, and persuaded the Thessalians to oppose the Lacedæmonians in their passage. The year of the armistice passed, and Kleon renewed his expostulations against the incompetency of the generals who had the control of affairs in Chalkidike. . . . The Athenians decided to forward a new force, and intrusted its command to Kleon. He therefore, in August, 422 B. C., started from the Peiræus, with 1,200 hoplites, 300 horsemen, a considerable number of allies, and thirty triremes. Reaching Chalkidike, he engaged in battle against Brasidas in Amphipolis, suffered a disgraceful defeat, and was killed while fleeing. Brasidas also ended his short but glorious career in this battle, dying the death of a hero. The way in which his memory was honored was the best evidence of the deep impression that he had made on the Hellenic world. All the allies attended his funeral in arms, and interred him at the public expense, in front of the market-place of Amphipolis. . . . Thus disappeared the two foremost champions of the war—its good spirit, Brasidas, and its evil, Kleon. The party of Nicias finally prevailed at Athens, and that general soon after arranged a conference with King Pleistoanax of Sparta, who was also anxious for peace. Discussions continued during the whole autumn and winter after the battle of Amphipolis, without any actual hostilities on either side. Finally, at the beginning of the spring of 421 B. C., a peace of fifty years was agreed upon [see also ATHENS: B. C. 421]. The principal conditions of this peace, known in history as the 'peace of Nicias,' were as follows: 1. The Lacedæmonians and their allies were to restore Amphipolis and all the prisoners to the Athenians. They were further to relinquish to the Athenians Argilus, Stageirus, Acanthus, Skolus, Olynthus, and Spartolus. But, with the exception of Amphipolis, these cities were to remain independent, paying to the Athenians only the usual tribute of the time of Aristides. 2. The Athenians should restore to the Lacedæmonians Koryphasium, Kythera, Methone, Pteleum, and Atalante, with all the captives in their hands from Sparta or her allies. 3. Respecting Skione, Torone, Sermylus, or any other town in the possession of Athens, the Athenians should have the right to adopt such measures as they pleased. 4. The Lacedæmonians and their allies should restore Pânaktum to the Athenians. When these terms were submitted at Sparta to the consideration of

the allied cities, the majority accepted them. The Bœotians, Megarians, and Corinthians, however, summarily refused their consent. The Peloponnesian war was now considered to be at an end, precisely ten years from its beginning. Both the combatants came out from it terribly maimed. Sparta not only did not attain her object—the emancipation of the Hellenic cities from the tyranny of the Athenians—but even officially recognized this tyranny, by consenting that the Athenians should adopt such measures as they choose toward the allied cities. Besides, Sparta obtained an ill repute throughout Hellas, because she had abandoned the Greeks in Chalkidike, who had at her instigation revolted, and because she had also sacrificed the interests of her principal allies. . . . Athens, on the other hand, preserved intact her supremacy, for which she undertook the struggle. This, however, was gained at the cost of Attica ravaged, a multitude of citizens slain, the exhaustion of the treasury, and the increase of the common hatred."—T. T. Timayenis, *History of Greece*, v. 1, pt. 5, ch. 4.

B.C. 421-418.—Peloponnesian War: New combinations.—Argive League against Sparta.—Conflicting alliances of Athens with both.—Rising influence of Alcibiades.—War in Argos.—Spartan victory at Mantinea.—Revolution in Argos.—"All the Spartan allies in Peloponnesus and the Bœotians refused to join in this treaty [of Nicias]. The latter concluded with the Athenians only a truce of ten days, . . . probably on condition, that, if no notice was given to the contrary, it was to be constantly renewed after the lapse of ten days. With Corinth there existed no truce at all. Some of the terms of the peace were not complied with, though this was the case much less on the part of Athens than on that of Sparta. . . . The Spartans, from the first, were guilty of infamous deception, and this immediately gave rise to bitter feelings. But before matters had come to this, and when the Athenians were still in the full belief that the Spartans were honest, all Greece was startled by a treaty of alliance between Athens and Sparta against their common enemies. This treaty was concluded very soon after the peace. . . . The consequence was, that Sparta suddenly found herself deserted by all her allies; the Corinthians and Bœotians renounced her, because they found themselves given over to the Athenians, and the Bœotians perhaps thought that the Spartans, if they could but reduce the Eleans to the condition of Helots, would readily allow Bœotia to be subdued by the Athenians. Thus Argos found the means of again following a policy which ever since the time of Cleomenes it had not ventured to think of, and . . . became the centre of an alliance with Mantinea, 'which had always been opposed to the Lacedæmonians,' and some other Arcadian towns, Achaia, Elis, and some places of the Acte. The Arcadians had dissolved their union, the three people of the country had separated themselves, though sometimes they united again; and thus it happened that only some of their towns were allied with Argos. Corinth at first would listen to neither party, and chose to remain neutral; 'for although for the moment it was highly exasperated against Sparta, yet it had at all times entertained a mortal hatred of Argos, and its own interests drew it towards Sparta.' But when, owing to Sparta's dishonesty, the affairs on the coasts of Thrace became more and more complicated, when the towns refused to submit to Athens, and when it became evident that this was the

consequence of the instigations of Sparta, then the relation subsisting between the two states became worse also in Greece, and various negotiations and cavillings ensued. . . . After much delay, the Athenians and Spartans were already on the point of taking up arms against each other; but then they came to the singular agreement (Olymp. 89, 4), that the Athenians should retain possession of Pylos, but keep in it only Athenian troops, and not allow the Helots and Messenians to remain there. After this the loosened bonds between the Spartans, Corinthians, and Boeotians, were drawn more closely. The Boeotians were at length prevailed upon to surrender Panacton to the Spartans, who now restored it to the Athenians. This was in accordance with the undoubted meaning of the peace; but the Boeotians had first destroyed the place, and the Spartans delivered it to the Athenians only a heap of ruins. The Athenians justly complained, that this was not an honest restoration, and that the place ought to have been given back to them with its fortifications uninjured. The Spartans do not appear to have had honest intentions in any way. . . . While thus the alliance between Athens and Sparta, in the eyes of the world, still existed, it had in reality ceased and become an impossibility. Another alliance, however, was formed between Athens and Argos (Olymp. 89, 4) through the influence of Alcibiades, who stood in the relation of an hereditary proxenus to Argos. A more natural alliance than this could not be conceived, and by it the Athenians gained the Mantineans, Eleans, and other Peloponnesians over to their side. Alcibiades now exercised a decisive influence upon the fate of his country. . . . We generally conceive Alcibiades as a man whose beauty was his ornament, and to whom the follies of life were the main thing, and we forget that part of his character which history reveals to us. . . . Thucydides, who cannot be suspected of having been particularly partial to Alcibiades, most expressly recognises the fact, that the fate of Athens depended upon him, and that, if he had not separated his own fate from that of his native city, at first from necessity, but afterwards of his own accord, the course of the Peloponnesian war, through his personal influence alone, would have taken quite a different direction, and that he alone would have decided it in favour of Athens. This is, in fact, the general opinion of all antiquity, and there is no ancient writer of importance who does not view and estimate him in this light. It is only the moderns that entertain a derogatory opinion of him, and speak of him as an eccentric fool, who ought not to be named among the great statesmen of antiquity. . . . Alcibiades is quite a peculiar character; and I know no one in the whole range of ancient history who might be compared with him, though I have sometimes thought of Caesar. . . . Alcibiades was opposed to the peace of Nicias from entirely personal, perhaps even mean, motives. . . . It was on his advice that Athens concluded the alliance with Argos and Elis. Athens now had two alliances which were equally binding, and yet altogether opposed to each other: the one with Sparta, and an equally stringent one with Argos, the enemy of Sparta. This treaty with Argos, the Peloponnesians, etc., was extremely formidable to the Spartans; and they accordingly, for once, determined to act quickly, before it should be too late. The alliance with Argos, however, did not confer much real strength upon Athens, for the Argives were lazy, and Elis did not respect them, whence the Spartans had time again to unite themselves more closely with Corinth, Boeotia, and Megara. When, therefore, the war between the

Spartans and Argives broke out, and the former resolutely took the field, Alcibiades persuaded the Athenians to send succour to the Argives, and thus the peace with Sparta was violated in an unprincipled manner. But still no blow was struck between Argos and Sparta. . . . King Agis had set out with a Spartan army, but concluded a truce with the Argives (Olymp. 90, 2); this, however, was taken very ill at Sparta, and the Argive commanders who had concluded it were censured by the people and magistrates of Argos. Soon afterwards the war broke out again, and, when the Athenian auxiliaries appeared, decided acts of hostility commenced. The occasion was an attempt of the Mantineans to subdue Tegea: the sad condition of Greece became more particularly manifest in Arcadia, by the divisions which tore one and the same nation to pieces. The country was distracted by several parties; had Arcadia been united, it would have been invulnerable. A battle was fought (Olymp. 90, 3) in the neighbourhood of Mantinea, between the Argives, their Athenian allies, the Mantineans, and part of the Arcadians ('the Eleans, annoyed at the conduct of the Argives, had abandoned their cause'), on the one hand, and the Spartans and a few allies on the other. The Spartans gained a most decisive victory; and, although they did not follow it up, yet the consequence was, that Argos concluded peace, the Argive alliance broke up, and at Argos a revolution took place, in which an oligarchical government was instituted, and by which Argos was drawn into the interest of Sparta (Olymp. 90, 4). This constitution, however, did not last, and very soon gave way to a democratic form of government. Argos, even at this time, and still more at a later period, is a sad example of the most degenerate and deplorable democracy, or, more properly speaking, anarchy."—B. G. Niebuhr, *Lectures on ancient history*, v. 2, lect. 49.

B.C. 416.—Siege and conquest of Melos by the Athenians.—Massacre of the inhabitants.—"It was in the beginning of summer 416 B. C. that the Athenians undertook the siege and conquest of the Dorian island of Melos, one of the Cyclades, and the only one, except Thera, which was not already included in their empire. Melos and Thera were both ancient colonies of Lacedaemon, with whom they had strong sympathies of lineage. They had never joined the confederacy of Delos, nor been in any way connected with Athens; but, at the same time, neither had they ever taken part in the recent war against her, nor given her any ground of complaint, until she landed and attacked them in the sixth year of the recent war. She now renewed her attempt, sending against the island a considerable force under Kleomedes and Tisias."—G. Grote, *History of Greece*, pt. 2, ch. 56.—"They desired immediate submission on the part of Melos, any attempt at resistance being regarded as an inroad upon the omnipotence of Athens by sea. For this reason they were wroth at the obstinate courage of the islanders, who broke off all further negotiations, and thus made it necessary for the Athenians to commence a costly circumvallation of the city. The Melians even succeeded on two successive occasions in breaking through part of the wall built round them by the enemy, and obtaining fresh supplies; but no relief arrived; and they had to undergo sufferings which made the 'Melian famine' a proverbial phrase to express the height of misery; and before the winter ended the island was forced to surrender unconditionally. . . . There was no question of quarter. All the islanders

capable of bearing arms who had fallen into the hands of the Athenians were sentenced to death, and all the women and children to slavery."—E. Curtius, *History of Greece*, v. 3, bk. 4, ch. 4.—See also ATHENS: B.C. 410-416.

B.C. 415-413.—Peloponnesian War: Disastrous Athenian expedition against Syracuse.—Alcibiades a fugitive in Sparta.—Enmity to Athens. See SYRACUSE: B.C. 415-413.

B.C. 413.—Peloponnesian War: Effects and consequences of the Sicilian expedition.—Prostration of Athens.—Strengthening of Sparta.—Negotiations with the Persians against Athens.—Peloponnesian invasion of Attica.—Decelean War.—“The Sicilian expedition ended in a series of events which, to this day, it is impossible to recall without a feeling of horror. . . . Since the Persian wars it had never come to pass, that on the one side all had been so completely lost, while on the other all was won. . . . When the Athenians recovered from the first stupefaction of grief, they called to mind the causes of the whole calamity, and hereupon in passionate fury turned round upon all who had advised the expedition, or who had encouraged vain hopes of victory, as orators, prophets, or soothsayers. Finally, the general excitement passed into the phase of despair and terror, conjuring up dangers even greater and more imminent than existed in reality. The citizens every day expected to see the Sicilian fleet with the Peloponnesians appear off the harbor, to take possession of the defenceless city; and they believed that the last days of Athens had arrived. . . . Athens had risked all her military and naval resources for the purpose of overcoming Syracuse. . . . In the hopes of enormous booty and an abundance of new revenues, no expense had been spared; and the resources of the city were entirely exhausted. . . . But, far heavier than the material losses in money, ships, and men, was the moral blow which had been received by Athens, and which was more dangerous in her case than in that of any other state, because her whole power was based on the fear inspired in the subject states, so long as they saw the fleets of Athens absolutely supreme at sea. The ban of this fear had now been removed; disturbances arose in those island-states which were most necessary to Athens, and whose existence seemed to be most indissolubly blended with that of Attica,—in Eubœa, Chios, and Lesbos; everywhere the oligarchical parties raised their head, in order to overthrow the odious dominion of Athens. . . . Sparta, on the other hand, had in the course of a few months, without sending out an army or incurring any danger or losses, secured to herself the greatest advantages, such as she could not have obtained from the most successful campaign. Gylippus had again proved the value of a single Spartan man: inasmuch as in the hour of the greatest danger his personal conduct had altered the course of the most important and momentous transaction of the entire war. He was, in a word, the more fortunate successor of Brasidas. The authority of Sparta in the Peloponnesus, which the peace of Nicias had weakened, was now restored; with the exception of Argos and Elis, all her allies were on amicable terms with her; the brethren of her race beyond the sea, who had hitherto held aloof, had, by the attack made by the Athenian invasion, been drawn into the war, and had now become the most zealous and ardent allies of the Peloponnesians. . . . Moreover, the Athenians had driven the most capable of all living statesmen and commanders into the enemy's camp. No man was

better adapted than Alcibiades for rousing the slowly-moving Lacedæmonians to energetic action; and it was he who supplied them with the best advice, and with the most accurate information as to Athenian politics and localities. Lastly, the Spartans were at the present time under a warlike king, the enterprising and ambitious Agis, the son of Archidamus. . . . Nothing was now required, except pecuniary means. And even these now unexpectedly offered themselves to the Spartans, in consequence of the events which had in the meantime occurred in the Persian empire. . . . Everywhere [in that empire] sedition raised its head, particularly in Asia Minor. Pisuthnes, the son of Hystaspes, who had on several previous occasions interfered in Greek affairs, rose in revolt. He was supported by Greek soldiers, under the command of an Athenian of the name of Lycon. The treachery of the latter enabled Darius to overthrow Pisuthnes, whose son, Amorges, maintained himself by Athenian aid in Caria. After the fall of Pisuthnes, Tissaphernes and Pharnabazus appear in Asia Minor as the first dignitaries of the Great King. Tissaphernes succeeded Pisuthnes as satrap in the maritime provinces. He was furious at the assistance offered by Athens to the party of his adversary; moreover, the Great King (possibly in consequence of the Sicilian war and the destruction of the Attic fleet) demanded that the tributes long withheld by the coast-towns, which were still regarded as subject to the Persian empire, should now be levied. Tissaphernes was obliged to pay the sums according to the rate at which they were entered in the imperial budget of Persia; and thus, in order to reimburse himself, found himself forced to pursue a war policy. . . . Everything now depended for the satrap upon obtaining assistance from a Greek quarter. He found opportunities for this purpose in Ionia itself, in all the more important cities of which a Persian party existed. . . . The most important and only independent power in Ionia was Chios. Here the aristocratic families had with great sagacity contrived to retain the government. . . . It was their government which now became the focus of the conspiracy against Athens, in the first instance establishing a connection on the opposite shore with Erythræ. Hereupon Tissaphernes opened negotiations with both cities, and in conjunction with them despatched an embassy to Peloponnesus charged with persuading the Spartans to place themselves at the head of the Ionian movement, the satrap at the same time promising to supply pay and provisions to the Peloponnesian forces. The situation of Pharnabazus was the same as that of Tissaphernes. Pharnabazus was the satrap of the northern province. . . . Pharnabazus endeavored to outbid Tissaphernes in his promises; and two powerful satraps became rival suitors for the favor of Sparta, to whom they offered money and their alliance. . . . While thus the most dangerous combinations were on all sides forming against Athens, the war had already broken out in Greece. This time Athens had been the first to commence direct hostilities. . . . A Peloponnesian army under Agis invaded Attica, with the advent of the spring of B. C. 413 (Ol. xci. 3); at which date it was already to be anticipated how the Sicilian war would end. For twelve years Attica had been spared hostile invasions, and the vestiges of former wars had been effaced. The present devastations were therefore doubly ruinous; while at the same time it was now impossible to take vengeance upon the Peloponnesians by means of naval expeditions. And the worst point in the case was that they were now fully resolved, instead of recurring to their former

method of carrying on the war and undertaking annual campaigns, to occupy permanently a fortified position on Attic soil." The invaders seized a strong position at Decelea, only fourteen miles northward from Athens, on a rocky peak of Mount Parnes, and fortified themselves so strongly that the Athenians ventured on no attempt to dislodge them. From this secure station they ravaged the surrounding country at pleasure. "This success was of such importance that even in ancient times it gave the name of the Decelean War to the entire last division of the Peloponnesian War. The occupation of Decelea forms the connecting link between the Sicilian War and the Attico-Peloponnesian, which now broke out afresh. . . . Its immediate object . . . it failed to effect; inasmuch as the Athenians did not allow it to prevent their despatching a fresh armament to Sicily. But when, half a year later, all was lost, the Athenians felt more heavily than ever the burden imposed upon them by the occupation of Decelea. The city was cut off from its most important source of supplies, since the enemy had in his power the roads communicating with Eubœa. . . . One-third of Attica no longer belonged to the Athenians, and even in the immediate vicinity of the city communication was unsafe; large numbers of the country-people, deprived of labor and means of subsistence, thronged the city; the citizens were forced night and day to perform the onerous duty of keeping watch."—E. Curtius, *History of Greece*, v. 3, bk. 4, ch. 4-5.

B.C. 413-412.—Peloponnesian War: Revolt of Chios, Miletus, Lesbos, and Rhodes from Athens.—Revolution at Samos.—Intrigues of Alcibiades for a revolution at Athens and for his own recall.—"Alcibiades . . . persuaded the Spartans to build a fleet, and send it over to Asia to assist the Ionians in revolting. He himself crossed at once to Chios with a few ships, in order to begin the revolt. The government of Chios was in the hands of the nobles; but they had hitherto served Athens so well that the Athenians had not altered the government to a democracy. Now, however, they revolted (B.C. 413). This was a heavy blow to Athens, for Chios was the most powerful of the Ionian States, and others would be sure to follow its example. Miletus and Lesbos revolted in B.C. 412. The nobles of Samos prepared to revolt, but the people were in favour of Athens, and rose against the nobles, killing 200 of them, and banishing 400 more. Athens now made Samos its free and equal ally, instead of its subject, and Samos became the head-quarters of the Athenian fleet and army. . . . The Athenians . . . had now manned a fresh navy. They defeated the Peloponnesian and Persian fleets together at Miletus, and were only kept from besieging Miletus by the arrival of a fleet from Syracuse. [This reinforcement of the enemy held them powerless to prevent a revolt in Rhodes, carried out by the oligarchs though opposed by the people.] Alcibiades had made enemies among the Spartans, and when he had been some time in Asia Minor an order came ever from Sparta to put him to death. He escaped to Tissaphernes, and now made up his mind to win back the favour of Athens by breaking up the alliance between Tissaphernes and the Spartans. He contrived to make a quarrel between them about the rate of pay, and persuaded Tissaphernes that it would be the best thing for Persia to let the Spartans and Athenians wear one another out, without giving help to either. Tissaphernes therefore kept the Spartans idle for months, always

pretending that he was on the point of bringing up his fleet to help them. Alcibiades now sent a lying message to the generals of the Athenian army at Samos that he could get Athens the help of Tissaphernes, if the Athenians would allow him to return from his exile: but he said that he could never return while there was a democracy; so that if they wished for the help of Persia they must change the government to an oligarchy (B.C. 412). In the army at Samos there were many rich men willing to see an oligarchy established at Athens, and peace made with Sparta. . . . Therefore, though the great mass of the army at Samos was democratical, a certain number of powerful men agreed to the plan of Alcibiades for changing the government. One of the conspirators, named Pisander, was sent to Athens to instruct the clubs of nobles and rich men to work secretly for this object. In these clubs the overthrow of the democracy was planned. Citizens known to be zealous for the constitution were secretly murdered. Terror fell over the city, for no one except the conspirators knew who did, and who did not, belong to the plot; and at last, partly by force, the assembly was brought to abolish the popular government."—C. B.C. 411-407.—Peloponnesian War: Athenian victories at Cynossema and Abydos.—Exploits of Alcibiades.—Return to Athens and to supreme command.—Second deposition and exile.—While Athens was in the throes of its revolution, "the war was prosecuted with vigour on the coast of Asia Minor. Mindarus, who now commanded the Peloponnesian fleet, disgusted at length by the often-broken promises of Tissaphernes, and the scanty and irregular pay which he furnished, set sail from Miletus and proceeded to the Hellespont, with the intention of assisting the satrap Pharnabazus, and of effecting, if possible, the revolt of the Athenian dependencies in that quarter. Hither he was pursued by the Athenian fleet under Thrasylus. In a few days an engagement ensued (in August, 411 B.C.), in the famous straits between Sestos and Abydos, in which the Athenians, though with a smaller force, gained the victory, and erected a trophy on the promontory of Cynossema [see CYNOSSEMA] near the tomb and chapel of the Trojan queen Hecuba. The Athenians followed up their victory by the reduction of Cyzicus, which had revolted from them. A month or two afterward, another obstinate engagement took place between the Peloponnesian and Athenian fleets near Abydos, which lasted a whole day, and was at length decided in favour of the Athenians by the arrival of Alcibiades with his squadron of 18 ships from Samos."—W. Smith, *Smaller history of Greece*, ch. 13.—Alcibiades, although recalled, had "resolved to delay his return until he had performed such exploits as might throw fresh lustre over his name, and endear him to all classes of his fellow-citizens. With this ambition he sailed with a small squadron from Samos, and having gained information that Mindarus, with the Peloponnesian fleet, had gone in pursuit of the Athenian navy, he hastened to afford his countrymen succour. Happily he arrived at the scene of action, near Abydos, at a most critical moment; when, after a severe engagement, the Spartans had on one side obtained an advantage, and were pursuing the broken lines of the Athenians. . . . He speedily decided the fortune of the day, completely routed the Spartans, . . . broke many of their ships in pieces, and took

30 from them. . . . His vanity after this signal success had, however, nearly destroyed him; for, being desirous of appearing to Tissaphernes as a conqueror instead of a fugitive, he hastened with a splendid retinue to visit him, when the crafty barbarian, thinking he should thus appease the suspicions of the Spartans, caused him to be arrested and confined in prison at Sardis. Hence, however, he found means to escape. . . . He sailed immediately for the Athenian camp to diffuse fresh animation among the soldiers, and induce them hastily to embark on an expedition against Mindarus and Pharnabazus, who were then with the residue of the Peloponnesian fleet at Cyzicum" (Cyzicus). Mindarus was defeated and killed and Pharnabazus driven to flight (410 B.C.). "Alcibiades pursued his victory, took Cyzicum without difficulty, and, staining his conquest with a cruelty with which he was not generally chargeable, put to death all the Peloponnesians whom he found within the city. A very short space of time elapsed after this brilliant success before Alcibiades found another occasion to deserve the gratitude of Athens," by defeating Pharnabazus, who had attacked the troops of Thrasyllus while they were wasting the territory of Abydos. He next reduced Chalcedon, bringing it back into the Athenian alliance, and once more defeating Pharnabazus, when the Persian satrap attempted to relieve the town. He also recovered Selymbria, and took Byzantium (which had revolted) after a severe fight (408 B.C.). "Alcibiades having raised the fortunes of his country from the lowest state of depression, not only by his brilliant victories, but his conciliating policy, prepared to return and enjoy the praise of his successes. . . . His next measure heightened, if possible, the brief lustre of his triumph. In consequence of the fortification of Decelea by the Lacedæmonians, and their having possession of the passes of the country, the procession to Eleusis, in honour of Athene, had been long unable to take its usual course, and being conducted by sea, had lost many of its solemn and august ceremonials. He now, therefore, offered to conduct the solemnity by land. . . . His proposal being gladly accepted, he placed sentinels on the hills; and, surrounding the consecrated band with his soldiers, conducted the whole to Eleusis and back to Athens, without the slightest opposition, or breach of that order and profound stillness which he had exhorted the troops to maintain. After this graceful act of homage to the religion he was once accused of destroying, he was regarded by the common people as something more than human; they looked on him as destined never to know defeat, and believed their triumph was certain so long as he was their commander. But, in the very height of his popularity, causes of a second exile were maturing. The great envied him in proportion to the people's confidence, and that confidence itself became the means of his ruin: for, as the people really thought the spell of invincibility was upon him, they were prepared to attribute the least pause in his career of glory to a treacherous design. He departed with a hundred vessels, manned under his inspection, with colleagues of his own choice, to reduce the isle of Chios to obedience. At Andros he once more gained a victory over both the natives and the Spartans, who attempted to assist them. But, on his arrival at the chief scene of action, he found that he would be unable to keep the soldiers from deserting, unless he could raise money to pay them sums more nearly equal to those which the Lacedæmonians offered, than the pay he was able to bestow. He was compelled, therefore, to leave the fleet [at Notium] and go into Caria in order to

obtain supplies. While absent on this occasion, he left Antiochus in the command. . . . To this officer Alcibiades gave express directions that he should refrain from coming to an engagement, whatever provocations he might receive. Anxious, however, to display his bravery, Antiochus took the first occasion to sail out in front of the Lacedæmonian fleet, which lay near Ephesus, under the command of Lysander, and attempt, by insults, to incite them to attack him. Lysander accordingly pursued him; the fleets came to the support of their respective admirals, and a general engagement ensued, in which Antiochus was slain, and the Athenians completely defeated. On receiving intelligence of this unhappy reverse, Alcibiades hastened to the fleet, and eager to repair the misfortune, offered battle to the Spartans; Lysander, however, did not choose to risk the loss of his advantage by accepting the challenge, and the Athenians were compelled to retire. This event, for which no blame really attached to Alcibiades, completed the ruin of his influence at Athens. It was believed that this, the first instance of his failure, must have arisen from corruption, or, at least, from a want of inclination to serve his country. He was also accused of leav-

ALCIBIADES

ing the navy under the direction of those who had no other recommendation to the charge but having been sharers in his luxurious banquets, and of having wandered about to indulge in profligate excesses. . . . On these grounds, the people in his absence took from him his command, and confided it to other generals. As soon as he heard of this new act of ingratitude, he resolved not to return home, but withdrew into Thrace, and fortified three castles . . . near to Perinthus. Here, having collected a formidable band, as an independent captain, he made incursions on the territories of those of the Thracians who acknowledged no settled form of government, and acquired considerable spoils."—T. B.C. 406.—Peloponnesian War: Battle of Arginusæ.—Trial and execution of the generals at Athens.—Alcibiades was succeeded by Conon and nine colleagues in command of the Athenian fleet on the coast of Asia Minor. The Athenians, soon afterwards, were driven into the harbor of

Mitylene, on the island of Lesbos, by a superior Peloponnesian fleet, commanded by Callicratidas, and were blockaded there with small chance of escape. Conon contrived to send news of their desperate situation to Athens, and vigorous measures were promptly taken to rescue the fleet and to save Mitylene. In the battle that ensued, which was the greatest naval conflict of the Peloponnesian War, the Athenians were completely victorious; Callicratidas was drowned and no less than seventy-seven of the Peloponnesian ships were destroyed, while the Athenians themselves lost twenty-five. As the result of this battle Sparta again made overtures of peace, as she had done after the battle of Cyzicus, and Athens, led by her demagogues, again rejected them. But the Athenian demagogues and populace did worse. They summoned home the eight generals who had won the battle of Arginusæ, to answer to a charge of having neglected, after their victory, to pick up the floating bodies of the Athenian dead and to rescue the drowning from the wrecked ships of their fleet. Six of the accused generals came home to meet the charge; but two thought it prudent to go into voluntary exile. The six were brought to trial; the forms of legality were violated to their prejudice and all means were unscrupulously employed to work up the popular passion against them. One man, only, among the prytanes—senators, that is, of the tribe then presiding, and who were the presidents of the popular assembly—stood out, without flinching, against the lawless rage of his fellow citizens, and refused, in calm scorn of all fierce threats against himself, to join in taking the unconstitutional vote. That one was the philosopher Socrates. The generals were condemned to death and received the fatal draught of hemlock from the same populace which pressed it a little later to the lips of the philosopher.—See also ATHENS: B.C. 424-406.

**B.C. 405.—Peloponnesian War: Decisive battle of Ægospotami.—Defeat of the Athenians.**—After the execution of the generals, "no long time passed before the Athenians repented of their madness and their crimes: but, yielding still to their old besetting sin, they insisted, as they had done in the days of Miltiades and after the catastrophe at Syracuse, on throwing the blame not on themselves but on their advisers. This great crime began at once to produce its natural fruits. The people were losing confidence in their officers, who, in their turn, felt that no services to the state could secure them against illegal prosecutions and arbitrary penalties. Corruption was eating its way into the heart of the state, and treason was losing its ugliness in the eyes of many who thought themselves none the worse for dallying with it. . . . The Athenian fleet had fallen back upon Samos; and with this island as a base, the generals were occupying themselves with movements, not for crushing the enemy, but for obtaining money. . . . The Spartans, whether at home or on the Asiatic coast, were now well aware that one more battle would decide the issue of the war; for with another defeat the subsidies of the Persians would be withdrawn from them as from men doomed to failure, and perhaps be transferred to the Athenians. In the army and fleet the cry was raised that Lysandros was the only man equal to the emergency. Spartan custom could not appoint the same man twice to the office of admiral; but when Arakos was sent out with Lysandros [Lysander] as his secretary, it was understood that the latter was really the man in power." In the summer of 405 B.C. Lysander made a sudden movement from the southern Ægean to the Hellespont, and laid siege

to the rich town of Lampsacus, on the Asiatic side. The Athenians followed him, but not promptly enough to save Lampsacus, which they found in his possession when they arrived. They took their station, thereupon, at the mouth of the little stream called the Aegospotami (the Goat's stream), directly opposite to Lampsacus, and endeavored for four successive days to provoke Lysander to fight. He refused, watching his opportunity for the surprise which he effected on the fifth day, when he dashed across the narrow channel and caught the Athenian ships unprepared, their crews mostly scattered on shore. One only, of the six Athenian generals, Conon, had foreseen danger and was alert. Conon, with twelve triremes, escaped. The remaining ships, about one hundred and seventy in number, were captured almost without the loss of a man on the Peloponnesian side. Of the crews, some three or four thousand Athenians were pursued on shore and taken prisoners, to be afterwards slaughtered in cold blood. Two of the incapable generals shared their fate. Of the other generals who escaped, some at least were believed to have been bribed by Lysander to betray the fleet into his hands. The blow to Athens was deadly. She had no power of resistance left, and when her enemies closed around her, a little later, she starved within her walls until resistance seemed no longer heroic, and then gave herself up to their mercy.—G. W. Cox, *Athenian empire*, ch. 7.

**B.C. 404-359.—Greek government.—Types in Athens, Sparta, Thebes.**—"These are the great factors always present in the period from 404 to 359—the growth of the nations in population and wealth, the decline of Greece in both, and the heightened impossibility of concerted Greek action. The promised goal of autonomy for every town was by now an absurdity; it was still talked of, it was put into practice, but never for any other purpose than to weaken a rival power. The real guiding principles of the age are to be looked for elsewhere. Three types of government with more than a small local outlook are to be recognized. There is, of course, the Empire or Hegemony of a Greek city-state. Sparta took it over from Athens at the end of the war, and managed it very badly—with an amount of oppression and exasperation for everybody that soon made enemies of all her allies. Athens tried to revive the glories of her old Confederacy with some accommodation to the newer ideas of the period. And then Thebes broke for ever the power of Sparta, and introduced fresh elements of confusion everywhere. One aspect of the work of Thebes comes pleasantly to the modern student. Whatever her motive—and it was frankly the crippling of Sparta—she gave freedom to two oppressed nationalities of the Peloponnese, the Arcadians, and the Messenians. These liberated races give us two striking examples of another type of government, which was now beginning to be tried in a quiet way in a good many corners of Greece, and which had a great future—Federalism."—F. R. Glover, *From Pericles to Philip*, pp. 367-368.—"The Federal Constitution [of the Arcadian League] was modelled on the ordinary type of democratic constitutions. There was an Assembly, which met at third periods to consider all

important questions. Every citizen of the federal communities was a member of this Assembly, of which the official title was the *Ten Thousand*. The name indicates an approximate, not an exact, number, like the Five Thousand in the constitution of Theramenes at Athens. We have no information as to the working of this body, but from the analogy of other ancient federations it is probable that the votes were taken by cities, the vote of each city being determined by the majority of the votes of those of its citizens who were present. The Ten Thousand made war and peace, concluded alliances, and sat in judgment on offenders against the League. There was also a *Council*, composed of fifty members from the various cities, and this body had doubtless the usual executive and deliberative functions which belonged to the Greek conception of a Council. . . . Messene, like Megalopolis, was founded by 'synoecizing' the districts round about. But its political position was entirely different from that of Megalopolis. Messene was not a federal capital; it was the Messenian state—a city with the whole country for its territory. . . . The relation of Messene to Messenia was that of Athens to Attica, not that of Megalopolis to Arcadia."—J. B. Bury, *History of Greece*, pp. 600-605.—"But so far the federal governments of Greece were weak, and the system had a rival in a new variety of monarchy [Macedonia under Philip]. . . . The problem was one of leadership. The city-state failed to retain the hegemony of the Greek world; the federal league hardly attempted it; and before Philip princely government had not so wide an outlook. But whatever the power was to be that should unite the world, certain qualifications, it was growingly clear, were necessary. First of all, the dominant power must have a strong hold upon the tools of war. . . . But as important as wealth for the hegemony of the Greek world was some clear, strong, and wide outlook in the ruler, whether demos, or council, or prince. Whoever was to rule must have enough political intelligence and insight to realize the unity of the world and the other new elements in the situation before him. Most men are limited in outlook and intelligence; the Greeks were becoming very limited. . . . The Greek's local attachments stood in the way of his sympathies and his power of grasping a world-situation. In the third place, the future ruler must be able to secure that mankind should not recede in culture and civilization. He must have an intelligent feeling for the great achievements of Greek genius. Pericles was right; Athens had been, and was, an education of mankind, and he who was to rule and guide mankind must be trustee for this splendid heritage. Such a task meant some depth of nature, a capacity not quickly found in Spartan, Theban, or Roman. The fourth qualification for the new ruler—perhaps the hardest to find—was some power of enlisting the ruled, of winning at least their consent if not their co-operation."—F. R. Glover, *From Pericles to Philip*, pp. 368-369.

B.C. 401-400.—Expedition of Cyrus, and the retreat of the ten thousand Greeks. See PERSIA: B.C. 401-400.

B.C. 4th century.—General conditions.—Spartan rule.—Revival of Athens.—"The opening events of the fourth century proved that the Peloponnesian war, which was to accomplish so much for the peace of Hellas, had actually settled nothing. Sparta feared too much the growing power of Thebes as well as the condemnation of all Hellenes to allow Athens to be destroyed. Athens was crippled but not beyond repair. Ere long, with Persian help, she rose afresh, became

once more a rival of Sparta, and even hoped for a renewal of her former greatness and empire. The tyranny of the Thirty was overthrown and there was no further hope of establishing an oligarchy in Athens. She remained a democracy and the rallying point for all democratic cities and for all democratic parties in cities against oligarchic Sparta. No real attempt had been made to lessen the differences which held them apart. Nor had their hatred and distrust of each other grown any the less. To complicate matters a new power had arisen. Thebes had grown strong on the misfortunes of Athens. Her population had been increased by refugees, her wealth had been magnified greatly by plunder and her control over the Bœotian League had been strengthened. On the outside stood the Persian king and his satraps. They were interested in keeping any Hellenic power from becoming too strong and in regaining control over the Asiatic cities. Once this were accomplished, it would be to the interest of Persian trade to have peace in the Ægean. The wealth of the Persian Empire, for which both sides among the warring Hellenes bargained, gave it a dominating influence in Hellenic affairs. The gift of freedom to Hellas by the Spartans proved to be a delusion. The small states had but exchanged masters. Spartan military hegemony interposed its iron hand in place of Athenian control. Ly-sander, anxious to secure power and glory for himself as well as for Sparta, saw to it that Spartan influence was established among the former allies of Athens. The democratic leaders who were favorable to Athens were driven out and boards of ten men were put into control of the states. With such bodies Sparta knew how to deal. To keep them in power Lacedæmonian garrisons under harmosts were placed in the cities. The result was 'plunder, oppression and murder.' Spartan power was based on military force, and therefore required military force to maintain it. It would endure only so long as Sparta was supreme on land and sea. Meanwhile her enemies were increasing. Everywhere the exiles were planning revenge and the populace was becoming restive. With the decline of the power of Ly-sander the decarchies fell, but the hatred and fear of Sparta did not decrease. Thebes and Corinth, who had borne their share of the war against Athens, felt that they had been deprived of their share of the rewards. Spartan ambition frightened them and they refused to follow Sparta's lead. . . . To the north a group of states were offering a new solution to the problem of peace and unity. Olynthus in the Chalcidice had become the center of a federal union. Citizens in each state of the league were given full rights of citizenship in every other state and thus were held together by a common interest. Even those who had been forced into the organization soon lost their local interests in the welfare of the whole. Its growing power was regarded as a menace by its neighbors and by the Spartans. Federalism had no place in a world ruled by Sparta. When the Olynthian union had been destroyed by a short war, Spartan power had reached its climax. Agesilaus had attained the goal of his desires. The man who led his city to these achievements was Agesilaus, the embodiment of the Lacedæmonian spirit, patriotic, ambitious and efficient, but with stunted ideals, unprogressive alike in military art, in statesmanship and in humanism—a man who tested the right or wrong of every action by the sole advantage of Sparta, whose vision, limited to brute power, took no account of the moral forces roused through

Hellas by his policy of blood and iron. The armed forces of Athens and Thebes, supported by these moral forces of disappointment and indignation, were preparing to crush the power of Sparta, to punish her for her breach of the peace and to compel her to allow the Hellenes to live in peace, free and secure. Athens had been busy in the formation of a new confederacy. Alliances with Chios, Byzantium and Chalcis were secured, and in 377 the second Athenian Confederacy was launched, with the support of the maritime states. In this Athens had been careful to keep the peace. No one was forced to come in; each treaty provided for local freedom and autonomy. The assembly of the allies met free from Athenian interference and only required Athenian sanction for action. No tribute was collected, but ships and money were to be contributed when needed. The purpose of the league was defence against Sparta."

—W. E. Caldwell, *Hellenic conceptions of peace*, pp. 108-109, 113-114.—See also below: B.C. 399-387; B.C. 385-383; B.C. 383-379; B.C. 379-371.

**B.C. 4th century.—Economic conditions.—Public expenditures. — Industry. — Mining. — Trade.—Labor.**—"An advanced Greek democracy was an expensive form of government. The State spent annually vast sums on the sacrifices, public feasts and processions, dramatic, musical, and gymnastic competitions, chariot and horse races, which gratified the people at the great festivals. The distributions of money common on these occasions were especially wasteful and demoralizing. . . . Under the Athenian democracy the reasonable principle that servants of the State should be paid issued in the practice of taking into the service of the State as many citizens as possible. Magistrates were unnecessarily numerous, and the majority seem to have drawn salaries. The Prytaneis of the Council received 1 Dr. [a drachma was equivalent to eighteen cents] a day, an ordinary Councillor 5 obols [one obol was equivalent to three cents] for each meeting. A court of judges never contained less than 201 members, each of whom received 3 obols. In the fourth century the citizens were even paid for attending the Assembly; this fee was at first only 1 obol but rose to 3 obols before 390 B.C., and finally in Aristotle's time was 1 dr. for an ordinary meeting and 9 obols for that specially important assembly in each Prytany which was called. . . . Further, among ordinary expenses of administration we have to reckon the wages of many subordinate functionaries not accounted magistrates, such as clerks, under-clerks, heralds, assessors, etc., the maintenance of the public slaves, and in particular of the police force of Scythian archers, the allowance of 2 obols a day granted to citizens possessing less than 300 dr. who were crippled and unable to work, and the education of the sons of citizens killed in war. Even in peace the naval and military organisation involved considerable outlay. All Athenians spent their 19th and 20th years in a course of military training at the expense of the State. The cavalry, 1000 in number, cost in Xenophon's time 40 t. [a talent was equivalent to \$1080] a year. Some ships were always in commission and new ships were built every year. The fortifications, arsenals, and docks needed repairs, and war materials had to be kept ready both for fleet and army. But for a long and obstinate war the Athens of Demosthenes was utterly unprepared. The democracy had left itself no resources but voluntary contributions and the property tax, and these proved burdens too heavy for the patriotism, and indeed for the means, of the majority of Athenians. Under normal conditions financial administration centred in the

Council, which checked and supervised all financial officers and all magistrates handling public money, and kept the Assembly informed about the public resources. The letting of contracts and the sale of taxes, confiscated property, etc. were delegated to ten magistrates called 'The Vendors,' and took place in the presence of the Council, which in the case of taxes decided between the bidders by a show of hands, and had power to imprison the purchaser and his sureties if the specified instalments were not punctually paid. Lists of the sums due in each Prytany were kept by a slave in the service of the Council, and the payments were made in the Council Chamber to the ten Receivers-General. These officials at once distributed what they received among the various departments, and on the next day submitted to the Council their scheme of allotment. The details of the distribution were fixed by laws and did not depend on an annual budget based on the forecasts of experts. . . . The distribution of revenue, being established by law, could only be changed by law, not by a simple decree of the people, but the Assembly had no difficulty in enforcing its will; it could order the presidents of the Nomothetae under penalties to submit a prescribed motion at their first session, and it is not likely that such motions were often rejected. Whether in times of peace the Assembly had a constitutional right to draw upon special funds for purposes which the law establishing them did not specify may be open to debate, but we may be sure that a decree ordering a payment could not be resisted by any treasurer. Athenian statesmen invented elaborate precautions to prevent embezzlement on the part of magistrates; they had not the good fortune to discover a method of preventing extravagance on the part of the sovereign people."

—L. Whibley, *Companion to Greek studies*, pp. 409-411.

"One of the first objects of an Athenian statesman was to provide for an adequate supply of imported grain, seeing that the country produced scarcely half the amount needed for consumption. Two-thirds of every cargo brought to Peiraeus had to be sold in the country; the rest might be carried farther. State regulations were established to prevent cornering the market and unreasonable profits of dealers. Among the regulations was one which forbade a profit of more than an obol to the basket, phormos, holding about a medimnus, i.e., a bushel and a half. It was ordered further that no one should buy more than fifty phormi at a time. To enforce these regulations a board of Grain Inspectors . . . was instituted. Death was the penalty for the violation of these laws."—G. W. Botsford and E. G. Sihler, *Hellenic civilization*, p. 426.—"Wine and oil were important articles of export. The vine was probably a Phoenician introduction, and found a home in many of the islands, in Sicyon, Chalcidice, Asia Minor, and Magna Graecia. . . . The producers or wholesale merchants sold by sample to retail dealers in the markets: for the purposes of carriage pitched skins were used. The olive, which is heard of in Greece at the end of the Homeric Age, early became associated with Attica, where it was established at least as soon as 700 B.C.: it was also cultivated at Cyrene, Cyprus, Massilia, Clazomenae, and Sinope."—L. Whibley, *Companion to Greek studies*, p. 429.—"Within its [the land of Greece] folds lies embedded by nature an unstinted store of marble, out of which are chiselled temples and altars of rarest beauty and the most comely images of worship for the gods. This marble, moreover, is an object of desire to many foreigners, Hellenes and barbarians alike. Then there is land which

although it yields no fruit to the sower, needs only to be mined in order to feed many times more mouths than it could as corn-land. Doubtless we owe it to a divine dispensation that our land is veined with silver."—G. W. Botsford and E. G. Sihler, *Hellenic civilization*, p. 431.—"Greek mining owes its introduction to the Phoenicians, who probably copied Egyptian methods; these were often irrational, from an ignorance of geology. The exacting labour of the mines was carried on by gangs of slaves, by whom the ore was extracted from the richest veins; from the pit's mouth galleries were hewn out, pillars being left for support. Hard by outside were furnaces and workshops, where the processes of crushing, washing, sifting and smelting were carried out, until the metal was freed of slag. Diodorus Siculus and Agatharchides have given vivid pictures of gold-mining in their own times; and the other metals seem to have been similarly worked. Besides the simple metals various alloys were commonly used: of gold; . . . of silver; . . . of copper; . . . while from iron a kind of steel . . . was made by tempering the red-hot metal in water. Of the numerous metal-working centres Corinth attained a special pre-eminence by excellent workmanship; the evidence of terminology shows us to what an extent this industry was elaborated and subdivided. Gold was principally used for jewellery; silver for the vessels of the table; bronze or copper for larger vessels, or works of art; and iron for general purposes. Wholesale trade was developed comparatively later among the Greeks, but the progress of commerce and the verdict of society rapidly differentiated it from the retail business conducted by producers and petty tradesmen just as wholesale manufactories were distinguished from the workshops of single craftsmen. Wholesale traders frequently did not confine themselves to one commodity, but shipped various cargoes for colonial ports: they would often accompany their goods in person, unless they had some authorised traveller, or agent abroad. At most large ports a spacious hall was provided at public expense for the purpose of displaying samples, while commission-agents and interpreters facilitated the relations of seller and buyer. It was customary to purchase a return-cargo with the proceeds of sale, as foreign moneys might involve a loss on exchange at home: on the other hand it is to be noted that the coinage of Athens was accepted everywhere. At the ports of call on the voyage merchants usually contrived to ascertain where the prices were best, and sometimes they resorted to questionable artifices in order to rig the markets. The centre of trade in each city was the market-place where most of the retail establishments were to be found, though shops were scattered over the rest of the city as well. At Athens, which city we may take as a type, business was carried on in permanent bazaars and colonnades under the wicker roofs of temporary booths or under umbrellas. Here the various trades and crafts were grouped, so that the separate corners came to be called after the articles sold—fish, meal, wine, pots, or slaves. Special importance attached to the monthly market, at which slaves were generally sold. . . . [There] were occasional fairs and the great religious and athletic festivals incidentally furthered commercial transactions on a large scale. Although there seem to have been no proper guilds or corporations of workmen until the Roman supremacy, there were instances of association, whether local, such as the settlement of similar workmen in distinct quarters, . . . or commercial, such as the frequent combination of kindred trades, tanners and shoemakers, fullers and tailors, innkeepers and vintners.

Except in certain cases (the heralds, cooks, and flute-players at Sparta) there was no obligation on the son to take up his father's trade or craft, though this would naturally be a frequent occurrence. Certain terms of apprenticeship obtained, for which a definite fee was paid to a master of the craft. The cheapness of foodstuffs and the existence of slave-labour combined to reduce the wages obtainable by free labourers. Some difficulty is involved in the study of this question, as it is often uncertain whether the wages recorded in inscriptions and elsewhere include rations or not. The unskilled labour of porters, scavengers, farmhands, was paid at the rate of 3 or 4 obols daily: the better class of workman received about 2 drachmae 3 obols, the lower class 1 drachma 3 obols (to include rations in both cases), and even an architect earned sometimes no more than 1 drachma a day, an instance of the confusion of artist and artisan. The prejudice against trades and handicrafts was most pronounced in Sparta: elsewhere, though the political disabilities might be reduced or removed, the social stigma was scarcely diminished—indeed, even the fullest development of democracy at Athens did but stereotype the conventional horror of hard work, and proclaimed leisure, and not labour, to be the citizen's privilege. The philosophers took the same view, branding as mean . . . and unworthy of citizens the necessary, it humble, occupations on which society rests, and discountenancing the principle of loans. Intellectual labour was hardly considered at all on its merits, and the artist often suffered with the artisan; the marvel is that, amid all this depreciation, mechanical skill and artistic taste should have attained so high a standard of excellence. The capitalist was generally exempt from adverse criticism, but usury met with special disfavour: doubtless there was some justification for this in the unscrupulous methods and exorbitant percentages to which lenders sometimes had recourse, and often the natural animosity between citizens and aliens was the real cause; but the truth remains that even the best-intentioned Greeks had no conception of the real significance of money and capital, and in their short-sighted superiority discouraged a free circulation, thus deliberately courting economic ruin."—L. Whibley, *Companion to Greek studies*, pp. 430-432, 436-437.

**B.C. 399-387.—Spartan war with Persia.—Greek confederacy against Sparta.—Corinthian War.—Peace of Antalcidas.**—The successful retreat of the Ten Thousand from Cunaxa, through the length of the Persian dominions (401-400 B. C.), and the account which they brought of the essential hollowness of the power of the great king, produced an important change among the Greeks in their estimate of the Persian monarchy as an enemy to be feared. Sparta became ashamed of having abandoned the Greek cities of Asia Minor to their old oppressors, as she did after breaking the strength of their protector, Athens, in the Peloponnesian War. When, therefore, the Persians began to lay siege to the coast cities which resisted them, Sparta found spirit enough to interfere (390 B. C.) and sent over a small army, into which the surviving Cyreans were also enlisted. The only immediate result was a truce with the Persian satrap. But, meantime, the Athenian general Conon—he who escaped with a few triremes from Ægospotami and fled to Cyprus—had there established relations with the Persian court at Susa and had acquired a great influence, which he used to bring

about the creation of a powerful Persian armament against Sparta, himself in command. The news of this armament, reaching Sparta, provoked the latter to a more vigorous prosecution of the war in Asia Minor. King Agesilaus took the field in Ionia with a strong army and conducted two brilliant campaigns (396-395 B.C.) pointing the way, as it were, to the expedition of Alexander a couple of generations later. The most important victory won was on the Pactolus, not far from Sardis. But, in the midst of his successes, Agesilaus was called home by troubles which arose in Greece. Sparta, by her arrogance and oppressive policy, had already alienated all the Greek states which helped her to break down Athens in the Peloponnesian War. Persian agents, with money, had assisted her enemies to organize a league against her. Thebes and Athens, first, then Argos and Corinth, with several of the lesser states, became confederated in an agreement to overthrow her domination. In an attempt to crush Thebes, the Spartans were badly beaten at Haliartus (395 B.C.), where their famous Lysander, conqueror of Athens, was killed. Their power in central and northern Greece was virtually annihilated, and then followed a struggle with their leagued enemies for the control of the Corinthian isthmus, whence came the name of the Corinthian War. It was this situation of things at home which called back King Agesilaus from his campaigns in Asia Minor. He had scarcely crossed the Hellespont on his return, in July 394 B.C., before all his work in Asia was undone by an overwhelming naval victory achieved at Cnidus by the Athenian Conon, commanding the Persian-Phœnician fleet. With his veteran army, including the old Cyreans, now returning home after seven years of incredible adventures and hardships, he made his way through all enemies into Bœotia and fought a battle with the league at Coronea, in which he so far gained a victory that he held the field, although the fruits of it were doubtful. The Spartans on the isthmus had also just gained a considerable success near Corinth, on the banks of the Nemea. On the whole, the results of the war were in their favor, until Conon and the Persian satrap, Pharnabazus, came over with the victorious fleet from Cnidus and lent its aid to the league. The most important proceeding of Conon was to rebuild (393 B.C.), with the help of his Persian friends, the long walls of Athens, which the Peloponnesians had required to be thrown down eleven years before. By this means he restored to Athens her independence and secured for her a new career of commercial prosperity. During six years more the war was tediously prolonged, without important or decisive events, while Sparta intrigued to detach the Persian king from his Athenian allies and the latter intrigued to retain his friendship. In the end, all parties were exhausted—Sparta, perhaps, least so—and accepted a shameful peace which was practically dictated by the Persian and had the form of an edict or mandate from Susa, in the following terms: "The king, Artaxerxes, deems it just that the cities in Asia, with the islands of Clazomenae and Cyprus, should belong to himself; the rest of the Hellenic cities he thinks it just to leave independent, both small and great, with the exception of Lemnos, Imbros, and Seyros, which three are to belong to Athens as of yore. Should any of the parties concerned not accept this peace, I, Artaxerxes, will war against him or them with those who share my views. This will I do by land and by sea, with ships and with money." By this, called the Peace of Antalcidas (387 B.C.) from the Lacedæmonian who was instrumental in bringing it about, the Ionian

Greeks were once more abandoned to the Persian king and his satraps, while Sparta, which assumed to be the administrator and executor of the treaty, was confirmed in her supremacy over the other Grecian states.—Xenophon, *Hellenica* (tr. by Dakyns), v. 2, bk. 3-5.

B.C. 385-383.—Further aggressions of Sparta.—**Destruction of Mantinea.**—**Seizure of Thebes.**—"On the strength of this understanding with Persia, and a similar understanding with the Sicilian tyrant Dionysius, the Spartans began again to act in a high-handed fashion... The city of Mantinea, in Arcadia, had at times given them trouble. They now razed it and dispersed the population into the five country villages of which it had originally been formed—an act worthy of Darius or Xerxes. Three years later (382) Lacedæmonian troops on their way towards Macedonia (where a confederation was beginning to cause Sparta suspicions) seized the citadel of Thebes—a violation of peace and an act of tyrannical insolence denounced by all right-minded men in Hellas, such as the venerable orator Lysias and Isocrates, and regarded sorrowfully by Xenophon, the lover of Sparta, as the fatal deed that brought down heaven's just retribution. This retribution came surely but somewhat slowly. The Cadmeian citadel was recaptured by Pelopidas with a band of Theban exiles, disguised as women, and under the new tactics and the discipline of his friend, the great Theban general Epameinondas, the military power of Thebes rapidly grew till she became the head of a Bœotian confederacy, and as the rival of Sparta won the alliance even of Athens, her hereditary enemy."—H. B. Cotterill, *Ancient Greece*, pp. 393-394.

B.C. 383-379.—**Overthrow of the Olynthian confederacy by Sparta.**—Among the Greek cities which were founded at an early day in that peninsula of Macedonia called Chalcidice, from Chaleis, in Eubœa, which colonized the greater number of them, Olynthus became the most important. It long maintained its independence against the Macedonian kings, on one hand, and against Athens, when Athens ruled the Ægean and its coasts, on the other. As it grew in power, it took under its protection the lesser towns of the peninsula and adjacent Macedonia, and formed a confederacy among them, which gradually extended to the larger cities and acquired a formidable character. But two of the Chalcidian cities watched this growth of Olynthus with jealousy and refused to be confederated with her. More than that, they joined the Macedonians in sending an embassy (383 B.C.) to Sparta, then all-powerful in Greece, after the Peace of Antalcidas, and invoked her intervention to suppress the rising Olynthian confederacy. The response of Sparta was prompt, and although the Olynthians defended themselves with valor, inflicting one severe defeat upon the Lacedæmonian allies, they were forced at last (379 B.C.) to submit and the confederacy was dissolved. "By the peace of Antalcidas, Sparta had surrendered the Asiatic Greeks to Persia; by crushing the Olynthian confederacy, she virtually surrendered the Thracian Greeks to the Macedonian princes. . . . She gave the victory to Amyntas [king of Macedonia], and prepared the indispensable basis upon which his son Philip afterwards rose, to reduce not only Olynthus, but . . . the major part of the

Grecian world, to one common level of subjection."

**B.C. 379-371.**—Liberation of Thebes and her rise to supremacy.—Humbling of Sparta.—For three years after the betrayal of the Acropolis, or Cadmea, of Thebes to the Spartans, the city groaned under the tyranny of the oligarchical party of Leontiades, whom the Spartans supported. Several hundreds of the more prominent of the democratic and patriotic party found a refuge at Athens, and the deliverance of Thebes was effected at last, about December, 379 B.C., by a daring enterprise on the part of some of these exiles. Their plans were concerted with friends at Thebes, especially with one Phyllidas, who had retained the confidence of the party in power, being secretary to the polemarchs. The leader of the undertaking was Melon. . . . The party of the oppression was totally crushed and its prominent members put to death. The Spartan garrison in the Cadmea capitulated and was suffered to march out without molestation. The government of Thebes was reorganized on a more popular basis, and with a view to restoring the Bœotian League, in a perfected state, with Thebes for its head (see THEBES: B.C. 378). In the war with Sparta which followed, Athens was soon involved, and the Spartans were driven from all their footholds in the Bœotian towns. Then Athens and Thebes quarreled afresh, and the Spartans, to take advantage of the isolation of the latter, invaded her territory once more. But Thebes, under the training of her great statesman and soldier, Epaminondas, had become strong enough to face her Lacedæmonian enemy without help, and in the momentous battle of Leuctra, fought July 6, 371 B.C., on a plain not far from Platæa, the domineering power of Sparta was broken forever. "It was the most important of all the battles ever fought between Greeks. On this day Thebes became an independent power in Greece, and a return of Spartan despotism was henceforth impossible for all times."—E. Curtius, *History of Greece*, v. 4, bk. 6, ch. 1.

**B.C. 378-357.**—New Athenian confederacy.—Social war. See ATHENS: B.C. 378-357.

**B.C. 371.**—Arcadian union.—Restoration of Mantinea.—Building of Megalopolis.—One of the first effects of the battle of Leuctra (371 B.C.), which ended the domination of Sparta in Greek affairs, was to emancipate the Arcadians and to work great changes among them. Mantinea, which the Spartans had destroyed, was rebuilt the same year. Then "the chiefs of the parties opposed to the Spartan interest in the principal Arcadian towns concerted a plan for securing the independence of Arcadia, and for raising it to a higher rank than it had hitherto held in the political system of Greece. With a territory more extensive than any other region of Peloponnesus, peopled by a hardy race, proud of its ancient origin and immemorial possession of the land, and of its peculiar religious traditions, Arcadia—the Greek Switzerland—had never possessed any weight in the affairs of the nation; the land only served as a thoroughfare for hostile armies, and sent forth its sons to recruit the forces of foreign powers. . . . The object was to unite the Arcadian people in one body, yet so as not to destroy the independence of the particular states; and with this view it was proposed to found a metropolis, to institute a national council which

should be invested with supreme authority in foreign affairs, particularly with regard to peace and war, and to establish a military force for the protection of the public safety. . . . Within a few months after the battle of Leuctra, a meeting of Arcadians from all the principal towns was held to deliberate on the measure; and under its decree a body of colonists, collected from various quarters, proceeded to found a new city, which was to be the seat of the general government, and was called Megalepolis, or Megalopolis (the Great City). The site chosen was on the banks of the Helisson, a small stream tributary to the Alpheus. . . . The city was designed on a very large scale, and the magnitude of the public buildings corresponded to its extent; the theatre was the most spacious in Greece. . . . The population was to be drawn . . . from a great number of the most ancient Arcadian towns. Pausanias gives a list of forty which were required to contribute to it. The greater part of them appear to have been entirely deserted by their inhabitants."—C. Thirlwall, *History of Greece*, v. 5, ch. 30.—"The patriotic enthusiasm, however, out of which Megalopolis had first arisen, gradually became enteebled. The city never attained that preëminence or power which its founders contemplated, and which had caused the city to be laid out on a scale too large for the population actually inhabiting it."—G. Grote, *History of Greece*, pt. 2, ch. 78.

**B.C. 371-362.**—Popular fury in Argos.—Arcadian union and disunion.—Restoration of Mantinea.—Expeditions of Epaminondas into Peloponnesus.—His attempts against Sparta.—His victory and death at Mantinea.—"In many of the Peloponnesian cities, when the power of Sparta seemed, visibly on the wane, internal commotions had arisen, and much blood had been shed on both sides. But now Argos displayed the most fearful example of popular fury recorded in Greek annals, red as they are with tales of civil bloodshed. The democratic populace detected a conspiracy among the oligarchs, and thirty of the chief citizens were at once put to death. The excitement of the people was inflamed by the harangues of demagogues, and the mob, arming itself with cudgels, commenced a general massacre. When 1,200 citizens had fallen, the popular orators interfered to check the atrocities, but met with the same fate; and, sated at length with bloodshed, the multitude stayed the deadly work. But where the pressure of Spartan interference had been heaviest and most constant, there the reaction was naturally most striking. The popular impulses which were at work in Arkadia [see above] found their first outlet in the rebuilding of Mantinea." But there was far from unanimity in the Arcadian national movement. "In Tegea . . . public opinion was divided. The city had been treated by Sparta with special consideration, and had for centuries been her faithful ally; hence the oligarchical government looked with disfavour upon the project of union. But the democratical party was powerful and unscrupulous; and, with the help of the Mantineians, they effected a revolution, in which many were killed, and 800 exiles fled to Sparta." The Spartans, under Agesilaus, avenged them by ravaging the plain in front of Mantinea. "This invasion of Arkadia is chiefly important for the pretext which it furnished for Theban intervention. The Mantineians applied for help at first to Athens, and, meeting with a refusal, went on to Thebes. For this request Epaminondas must have been thoroughly prepared beforehand, and he was soon on the march with a powerful army. . . . On his arrival in the Peloponnesus [370 B.C.], he found that

Agesilaos had already retired; and some of the Theban generals, considering the season of the year, wished at once to return." But Epaminondas was persuaded by the allies of Thebes to make an attempt upon Sparta itself. "After one unsuccessful cavalry skirmish, the Theban general, who, in a campaign undertaken on his sole responsibility, dared not risk the chance of defeat, decided to leave the 'wasps'-nest' untaken. He completed his work of devastation by ravaging the whole of southern Lakonia, . . . and then turned back into Arkadia to devote himself to the more permanent objects of his expedition." Messene was now rebuilt (see MESSENIAN WARS), and "the descendants of the old Messenian stock were gathered to form a new nation from Rhegion and Messene [Sicily], and from the parts of Lybia round Kyrene. . . . By thus restoring the Messenians to their ancient territory, Epaminondas deprived Sparta at one blow of nearly half her possessions. . . . At last Epaminondas had done his work; and, leaving Pammenes with a garrison in Tegea, he hastened to lead his soldiers home. At the Isthmus he found a hostile army from Athens," which had been persuaded to send succor to Sparta; but the Athenians did not care to give battle to the conquering Thebans, and the latter passed unopposed. On the arrival of Epaminondas at Thebes, "the leaders of a petty faction threatened to bring him and his colleagues to trial for retaining their command for four months beyond the legal term of office. But Epaminondas stood up in the assembly, and told his simple tale of victorious generalship and still more triumphant statesmanship; and the invidious cavils of snarling intriguers were at once forgotten." Sparta and Athens now formed an alliance, with the senseless agreement that command of the common forces "should be given alternately to each state for five days. . . . The first aim of the confederates was to occupy the passes of the isthmus," but Epaminondas forced a passage for his army, captured Sicyon, ravaged the territory of Epidaurus, and made a bold but unsuccessful attempt to surprise Corinth. Then, on the arrival of reinforcements to the Spartans from Syracuse, he drew back to Thebes (368 B.C.). For a time the Thebans were occupied with troubles in Thessaly, and their Arcadian protégés in Peloponnese were carrying on war against Sparta independently, with so much momentary success that they became over-confident and rash. They paid for their foolhardiness by a frightful defeat, which cost them 10,000 men, whilst no Spartan is said to have fallen; hence the fight was known in Sparta as the Tearless Battle. "This defeat probably caused little grief at Thebes, for it would prove to the arrogant Arkadians that they could not yet dispense with Theban aid; and it decided Epaminondas to make a third expedition into the Peloponnese." The result of his third expedition was the enrolment of a number of Achæan cities as Theban allies, which gave to Thebes "the control of the coast-line of the Corinthian gulf." But the broad and statesmanlike terms on which Epaminondas arranged these alliances were set aside by his narrow-minded fellow citizens, and a policy adopted by which Achæa was "converted from a lukewarm neutral into an enthusiastic supporter of Sparta. In this unsettled state of Greek politics the Thebans resolved to have recourse, like the Spartans before them, to the authority of the Great King. Existing treaties, for which they were not responsible, acknowledged his right to interfere in the internal affairs of Greece." Pelopidas and other envoys were accordingly sent to Susa (366 B.C.), where they procured from Artaxerxes a rescript

"which recognised the independence of Messene and ordered the Athenians to dismantle their fleet." But the mandate of the great king proved void of effect. "After this the confusion in Greece grew infinitely worse. An accident transferred the town of Oropos . . . from the hands of Athens to those of Thebes; and as the Peloponnesian allies of the Athenians refused to help them to regain it, they broke with them, and, in spite of the efforts of Epaminondas, formed an alliance with Arkadia. . . . The Athenians made soon after a vain attempt to seize the friendly city of Corinth, and the disgusted Corinthians, together with the citizens of Epidaurus and Phlious, . . . obtained the grudging consent of Sparta, and made a separate peace with Thebes. As soon as tranquillity was restored in one quarter, in another the flame of war would again burst forth." Its next outbreak (365 B.C.) was between Elis and Arkadia, the former being assisted by Sparta, and its principal event was a desperate battle fought for the possession of Olympia. Soon afterwards, Mantinea separated herself wholly from the Arcadian confederacy and entered the Spartan alliance. This was among the causes which drew Epaminondas once more, and for the last time, into the Peloponnese (362 B.C.). "The armies of Greece were now gathering from all quarters for the great struggle. On the one side stood Sparta, Athens, Elis, Achaia, and a part of Arkadia, led by Mantinea; on the other side were ranged Boiotia [Thebes], Argos, Messenia, and the rest of Arkadia, while a few of the smaller states—as Phokis, Phlious, and Corinth—remained neutral." At the outset of his campaign, Epaminondas made a bold attempt, by a rapid night march, to surprise Sparta; but a traitorous warning had been given, the Spartans were barricaded and prepared for defence, and the undertaking failed. Then he marched quickly to Mantinea, and failed in his design there, likewise. A pitched battle was necessary to decide the issue, and it was fought on the plain between Mantinea and Tegea, on the 3d day of July, B.C. 362. The fine discipline of the Theban troops and the skilful tactics of Epaminondas had given the victory into his hands, when, "suddenly, the aspect of the battle changed. Except among the light troops on the extreme right, the advance was everywhere stayed. The Spartan hoplites were in full flight, but the conquerors did not stir a step in the pursuit. . . . The fury of the battle had instantly ceased. . . . Epaminondas had fallen wounded to death, and this was the result. . . . Every heart was broken, every arm paralysed. . . . Both sides claimed the victory in the battle, and erected the usual trophies but the real advantage remained with the Thebans. . . . By the peace that ensued, the independence of Messenia was secured, and Megalopolis and the Pan-Arcadian constitution were preserved from destruction. The work of Epaminondas, though cut short, was thus not thrown away; and the power of Sparta was confined within the limits which he had assigned."—C. Sankey, *Spartan and Theban supremacies*, ch. 12.

B.C. 359-358.—First proceedings of Philip of Macedonia.—Acquisition of Amphipolis.—Philip of Macedon succeeded to the Macedonian throne in 359 B.C., at the age of twenty-three. In his youth he had been delivered to the Thebans as one of the hostages given upon the conclusion of a treaty of peace in 368. "His residence at Thebes gave him some tincture of Grecian philosophy and literature; but the most important lesson

which he learned at that city was the art of war, with all the improved tactics introduced by Epaminondas. Philip . . . displayed at the beginning of his reign his extraordinary energy and abilities. After defeating the Illyrians he established a standing army, in which discipline was preserved by the severest punishments. He introduced the far-famed Macedonian phalanx, which was 16 men deep, armed with long projecting spears. Philip's views were first turned towards the eastern frontiers of his dominions, where his interests clashed with those of the Athenians. A few years before the Athenians had made various unavailing attempts to obtain possession of Amphipolis, once the jewel of their empire, but which they had never recovered since its capture by Brasidas in the eighth year of the Peloponnesian war."—W. Smith *Smaller history of Greece*, ch. 19.—The importance of Amphipolis to the Athenians arose chiefly from its vicinity to "the vast forests which clothed the mountains that enclose the basin of the Strymon, and afforded an inexhaustible supply of ship-timber." For the same reason that the Athenians desired ardently to regain possession of Amphipolis their enemies were strong in the wish to keep it out of their hands. Moreover, as the Macedonian kingdom became well-knit in the strong hands of the ambitious Philip, the city of "the Nine Ways" assumed importance to that rising power, and Philip resolved to possess it. It was at this point that his ambitions first came into conflict with Athens. But the Athenians were not aware of his aims until too late. He deceived them completely, in fact, by a bargain to give help in acquiring Amphipolis for them, and to receive help in gaining Pydna for himself. But when his preparations were complete, he suddenly laid siege to Amphipolis and made himself master of the city (358 B.C.), besides taking Pydna as well. [See also MACEDONIA: B.C. 367-350.] At Athens, "Philip was henceforth viewed as an open enemy, and this was the beginning—though without any formal declaration—of a state of hostility between the two powers, which was called, from its origin, the Amphipolitan War."—C. Thirlwall, *History of Greece*, v. 5, ch. 42.—See also ATHENS: B.C. 350-338.

B.C. 357-336.—Advancement of Philip of Macedonia to supremacy.—Sacred Wars and their consequences.—Fatal field of Chæroneia.—Philip's preparations for the invasion of Asia.—Assassination.—"When Philip had taken Amphipolis, he converted the Thasian settlement of Grenides into a great fortress, which he called after his own name, Philippi. He had thus two strong stations to secure Mount Pangæus; and the yield of the gold mines, which were soon actively worked, amounted to at least 1000 talents a year. No Greek state was so rich."—J. B. Bury, *History of Greece*, p. 686.—In the meantime the Greeks became involved in what was known as the "Sacred Wars." "The temple and oracle at Delphi were under the control of the Amphictyonic council, representing a very ancient confederacy of twelve Greek tribes, which no doubt were originally more or less equal in power, but in the course of history had come to differ widely in importance. . . . The geographical position of the smaller tribes was such as to make it likely that the Thebans and Thessalians (at any rate if united) could command a majority of votes in the Council; and since the battle of Leuctra the Thebans had begun to use the Council to further their political ends. . . . In 356 the Council was led to mulct the Phocians in a very large sum for

some offence, the nature of which is variously reported. . . . The Phocians, led by Philomelus, refused to pay the fine, and after obtaining some financial aid from Archidamus, King of Sparta, proceeded in 355 to seize the temple of Delphi, and erase the record of the sentence against them. . . . The Thebans and Thessalians now induced the Amphictyonic Council to declare a 'Sacred War' against the Phocians, and summoned the Greek peoples to join in punishing them for their sacrilege. The response seems to have been fairly general on the part of the tribes situated to the north of Boeotia; Byzantium also, which had for several years been friendly to Thebes, sent supplies of money. The Spartans sent one thousand men to the assistance of the Phocians; and to procure mercenaries, Philomelus made use of part of the treasures of the Delphian temple, probably intending at the time to repay them."—A. W. Pichard-Cambridge, *Demosthenes and the last days of Greek freedom*, pp. 171-174.—Having the vast accumulation of the sacred treasures of the Delphic temple in their hands, the Phocians did not scruple to appropriate them, and were able to maintain a powerful army of mercenaries, gathered from every part of Greece, with which they ravaged the territories of Bœotia and Locris, and acquired control of the pass of Thermopylæ. In the midst of their successes they were called upon for help by the tyrant of Phœræ in Thessaly, then being attacked by Philip of Macedon (353 B.C.). The Phocians opposed Philip with such success, at first, that he retreated from Thessaly; but it was only to recruit and reanimate his army. Returning presently he overthrew the Phocian army, with great slaughter—Onomarchus, its leader, being slain—and made himself master of all Thessaly. Both Athens and Sparta were now alarmed by this rapid advance into central Greece of the conquering arms of the ambitious Macedonian, and both sent forces to the help of the Phocians. The former was so energetic that an army of 5,000 Athenian foot-soldiers and 400 horse reached Thermopylæ (May, 352 B.C.) before Philip had been able to push forward from Thessaly. When he did advance, proclaiming his purpose to rescue the Delphian temple from sacrilegious robbers, he was repulsed at the pass and drew back. It was the beginning of the struggle for Greek independence against Macedonian energy and ambition. A few months later Demosthenes delivered the first of his immortal orations, called afterwards Philippics, in which he strove to keep the already languishing energy of the Athenians alive, in unflinching resistance to the designs of Philip. For six years there was a state of war between Philip and the Athenians with their allies, but the conquests of the former in Thrace and the Chalcidian peninsula were steadily pressed. At length (346 B.C.) Athens was treacherously persuaded into a treaty of peace with Philip (the Peace of Philocrates) which excluded the Phocians from its terms. No sooner had he thus isolated the latter than he marched quickly to Thermopylæ, secured possession of the pass and declared himself the supporter of Thebes. The Sacred War was ended, Delphi rescued, Phocis punished without mercy, and Greece was under the feet of a master. This being accomplished, the Peace of Philocrates was doubtfully maintained for about six years. Then quarrels broke out which led up to still another Sacred War, and which gave Philip another opportunity to trample on the liberties of Greece. Curiously, the provoking causes of this outbreak were an inheritance from that more ancient Sacred War

which brought ruin upon the town of Cirrha and a lasting curse upon its soil. The Locrians of Amphissa, dwelling near to the accursed territory, had ventured in the course of years to encroach upon it with brick-kilns, and to make use of its harbor. At a meeting of the Amphictyonic council, in the spring of 330 B.C., this violation of the sacred law was brought to notice, by way of retaliation for some offence which the deputies of Amphissa had given to those of Athens. Hostilities ensued between the citizens of Delphi, pushed on by the Amphictyons, on one side, and the Amphissians on the other. The influence of Philip in the Amphictyonic council was controlling, and his partisans had no difficulty in summoning him to act for the federation in settling this portentous affair. He marched into Bœotia, took possession of the strong city of Eleata, and very soon made it manifest that he contemplated something more than mere dealing

DEMOSTHENES

with the refractory trespassers of Amphissa. Athens watched his movements with terror, and even Thebes, his former ally, took alarm. Through the exertions of Demosthenes, Thebes and Athens, once more, but too late, gave up their ancient enmity and united their strength and resources in a firm league. Megara, Corinth and other states were joined to them and common cause was made with the Locrians of Amphissa. These movements consumed a winter, and war opened in the spring. Philip gained successes from the beginning. He took Amphissa by surprise and carried Naupactus by storm. But it was not until August—the first day of August, 338 B.C.—that the two combatants came together in force. This occurred in the Bœotian valley of the Cephissus, near the town of Chæroneia, which gave its name to the battle. The sacred band of Thebes and the hoplites of Athens, with their allies, fought obstinately and well; but they were no match for the veterans of the Macedonian phalanx and most of them perished on the field. It was the last struggle for Grecian independence. Henceforth, practically at least, Hellas was swallowed up in Macedonia. We can see very plainly that Philip's "conduct towards Athens after the victory, under the appearance of generosity, was extremely prudent. His object was, to separate the Thebans from the Athenians, and he at once advanced against the former. The Athenian prisoners he sent home, free and clothed, accompanied by Antipater; he ordered the dead

bodies to be burned, and their ashes to be conveyed to Athens, while the Thebans had to purchase their dead from him. He then entered Thebes, which he seems to have taken without any resistance, placed a Macedonian garrison in the Cadmea, and, with the same policy which Sparta had followed at Athens after the Peloponnesian war, he established an oligarchy of 300 of his partizans, who were for the most part returned exiles, and who now, under the protection of the garrison in the Cadmea, ruled like tyrants, and raged in a fearful manner. . . . Philip accepted all the terms which were agreeable to the Athenians; no investigations were to be instituted against his enemies, and none of them was to be sent into exile. Athens was not only to remain a perfectly sovereign city, but retain Lemnos, Imbros, and Scyros, nay even Samos and Chersonnesus, though he might have taken the latter without any difficulty, and though the Athenians had most cleruchiae in Samos. Thus he brought over the Athenians through this peace, against which Demosthenes and others, who saw farther, could not venture to protest, because Philip offered more than they could give him in return. . . . The only thing which the Athenians conceded to Philip, was, that they concluded a *symmachia* with him, and conferred upon him the supreme command in the Persian war. For with great cunning Philip summoned an assembly of the Greeks whom he called his allies, to Corinth, to deliberate upon the war against Persia. The war of revenge against the Persians had already become a popular idea in Greece. . . . Philip now entered Peloponnesus with his whole army, and went to the diet at Corinth, where the Greek deputies received his orders. In Peloponnesus he acted as mediator, for he was invited as such by the Arcadians, Messenians, and Argives, to decide their disputes with Lacedaemon, and they demanded that he should restore to them their ancient territories. The Arcadians had formerly possessed many places on the Eurotas, and the Messenians were still very far from having recovered all their ancient territories. He accordingly fixed the boundaries, and greatly diminished the extent of Laconia. . . . The Spartans, on that occasion, behaved in a dignified manner; they were the only ones who refused to acknowledge Philip as generalissimo against Persia. . . . Even the ancients regarded the day of Chæroneia as the death-day of Greece; every principle of life was cut off; the Greeks, indeed, continued to exist, but in spirit, and politically, they were dead. . . . Philip was now at the height of his power. Byzantium, and the other allied cities, had submitted to the conqueror, when he sent his army against them, and he was already trying to establish himself in Asia. 'A detachment of troops, under Attalus, had been sent across, to keep open the road for the great expedition, and had encamped on mount Ida.' Philip was thus enabled to commence his passage across the Hellespont whenever he pleased. But the close of his career was already at hand." He was assassinated in August, 336 B.C., by a certain Pausanias, at the instigation, it is said, of Olympias, one of Philip's several wives—and the mother of his famous son Alexander—whom he had repudiated to please a younger bride. "Philip was unquestionably an uncommon and extraordinary man, and the opinion of several among the ancients, that by the foundation of the Macedonian state he did something far greater than Alexander by the application of the powers he inherited, is quite correct. . . . When we regard him as the creator of his state, by uniting the most different nations,

Macedonians and Greeks; . . . when we reflect what a man he must have been, from whom proceeded the impulse to train such great generals, . . . to whom Alexander, it must be observed, did not add one, for all Alexander's generals proceeded from the school of Philip, and there is not one whom Alexander did not inherit from Philip;—when we perceive the skill with which he gained over nations and states, . . . we cannot but acknowledge that he was an extraordinary man."—B. **B.C. 351-348.—Olynthian War.—Destruction of Olynthus.—Relations with Athens.**—After the overthrow of Spartan domination in Greece, Olynthus recovered its independence and regained, during the second quarter of the fourth century B.C., a considerable degree of prosperity and power. It was even helped in its rise by the cunning, dangerous band of Philip of Macedon, who secured many and great advantages in his treacherous diplomacy by playing the mutual jealousies of Athens and Olynthus against one another. The Olynthian confederacy, formed anew, just served its purpose as a counterpoise to the Athenian confederacy, until Philip had no more need of that service. He was the friend and ally of the former until he had secured Amphipolis, Methone, and other necessary positions in Macedonia and Thrace. Then the mask began to slip and Olynthus (351 B.C.) got glimpses of the true character of her subtle neighbor. Too late, she made overtures to Athens, and Athens, too late, saw the vital importance of a league of friendship between the two Greek confederacies, against the half Hellenic, half barbaric Macedonian kingdom. Three of the great speeches of Demosthenes—the "Olynthiac orations"—were made upon this theme, and the orator succeeded for the first time in persuading his degenerated countrymen to act upon his clear view of the situation. Athens and Olynthus were joined in a defensive league and Athenian ships and men were sent to the Chalcidian peninsula.—too late. Partly by the force of his arms and partly by the power of his gold, buying traitors, Philip took Olynthus (348 B.C.) and all the thirty-two lesser towns that were federated with her. He took them and he destroyed them most brutally. "The haughty city of Olynthus vanished from the face of the earth, and together with it thirty-two towns inhabited by Greeks and flourishing as commercial communities. . . . The lot of those who saved life and liberty was happy in comparison with the fate of those who, like the majority of the Olynthians, fell into the hands of the conqueror and were sold into slavery, while their possessions were burnt to ashes or flung as booty to the mercenaries. . . . The mines continued to be worked for the royal treasury; with this exception the whole of Chalcidice became a desert."—E. Curtius, *History of Greece*, v. 5, *bk.* 7, *ch.* 3.

**B.C. 340.—Siege of Byzantium by Philip of Macedonia.**—The enmity between Athens and Byzantium yielded in 340 B.C. to their common fear of Philip of Macedon, and the exertions of Demosthenes brought about an alliance of the two cities, in which Perinthus, the near neighbor

of Byzantium, was also joined. Philip, in wrath, proceeded with a fleet and army against both cities, laying siege, first to Perinthus and afterwards to Byzantium, but without success in either case. He was compelled to withdraw, after wasting several months in the fruitless undertaking. It was one of the few failures of the able Macedonian.—Based on G. Grote, *History of Greece*, v. 11, *pt.* 2, *ch.* 00.

**B.C. 336-335.—Northern campaign of Alexander of Macedonia.—Revolt at Thebes.—Destruction of the city.**—"There was as yet no fixity of succession to the Macedonian throne, and as a rule each new monarch had had to win his crown by violence. Alexander was more fortunate than his predecessors, for actual fighting there was none to do. He was set upon the throne by a *coup d'état*, during the paralysis induced by his father's death, and he had but to secure his position. This he did by putting to death Amyntas, that son of Perdiccas whom Philip had set aside indeed, but had suffered to live at his court. . . . The news of Philip's death was welcomed as a deliverance in Greece. At Athens there was offered a public service of thanksgiving. Demosthenes, as ever, was forward to take advantage of the seeming opportunity, and while the Greek states generally were astir, he sent emissaries to beg the aid of Persia. . . . But the Persian King did nothing. He had not time indeed, for before the Greeks themselves could come to any determination, Alexander had marched to Thebes, overawed all malcontents, obtained recognition by the Amphictyonic Council, received anew the submissive envoys of each and every state save Sparta, and summoned a second congress at Corinth (336 B.C.). In this congress he was at once named head of Greece and leader of the Persian crusade in Philip's place. . . . Alexander's first measure had been to declare himself in everything his father's son: he would maintain the honour of the Macedonian arms at home and abroad, and carry out his father's designs upon Asia. His first object had been to show that, despite his youth, he was capable of performing his promise; and it was with this purpose that he had instantly made an armed progress through Greece. With like aim he set himself to administer, to the tribes of his further frontiers, such a general chastisement as should effectually deter them from any aggressions during his intended absence in Asia. In the spring of 335 B.C. he forced the passes of Mount Haemus, fought his way to the Danube, made the passage of that river without fleet or bridge in face of the Getae, burned the stronghold of the tribe, and recrossed the river in safety."—A. H. Allcroft, *History of Greece*, 371-323 B.C., *pp.* 105-107.—"Byzantium . . . had, owing to its hostility with Persia, deserted the side of the Greeks for that of the Makedonians. It was from Byzantium that Alexander summoned triremes to help him against the island in the Danube on which the king of the Triballi had taken refuge. . . . The great successes of Alexander induced all the neighboring nationalities to accept the proposals of friendship which he made to them."—L. von Ranke, *Universal history: The oldest history group of nations and the Greeks*, *ch.* 10, *pt.* 2.—"Turning thence westward he traversed Paconia and ascended the valleys of the Axios and Erigon, to the range of Mount Scardus, and there engaged the whole levy of the Illyrians. For a moment he was in a critical position, but he extricated himself with flying colours, routed his enemies completely, and was ready to return to Pella when there reached him news that Thebes

was in revolt (335 B.C.). The activity and ability of Alexander had not been lost upon the Greek King, who could no longer hope that Philip's heir might prove to be without ambition or without military skill. It might, however, still be possible to give him enough to do in Europe, and in the early part of 335 B.C. the King, Darius Codomannus, did what he had been in vain asked to do before; he sent to his agents in Greece a sum of three hundred talents to be expended in organising and maintaining war against Macedonia. Chief amongst these agents, we are told, was Demosthenes. It has been said that the misconduct of the Macedonian officers and garrisons after the congress of 336 B.C. led to much ill-feeling, over and above that already previously existing, and such ill-feeling was easily worked upon by Persian gold. Moreover both at Thebes and at Athens there was an especially strong sentiment against the Macedonian supremacy."—A. H. Allcroft, *History of Greece, 371-323 B.C.*, p. 107.—"When, therefore, a report was spread in Greece that Alexander had met his death in the north, some Theban fugitives thought that the hour for revolt had come. They returned to Thebes, slew two Macedonian officers, whom they found at night in the lower city, and by means of the assertion that Alexander was dead induced their fellow-citizens to proclaim their independence and even to elect Boeotarchs, a token of the claim to suzerainty over the whole of Boeotia. The Macedonian garrison in the Cadmea did not withdraw as the Spartans had once done; but the Thebans were not discouraged by this. . . . Here the Thebans built a double row of stockades, by which they isolated the Macedonians in the Cadmea. They received much approbation in Greece but no assistance. The Arcadians advanced to the Isthmus, but no farther; Demosthenes sent arms but no troops. This was the position of affairs when Alexander appeared in Boeotia, so suddenly that when he had reached the Copaic Lake people in Thebes were not aware that he had passed Thermopylae. . . . Alexander now hoped Thebes would submit, in which case he would have treated her leniently. But hatred of Macedonia prevailed. . . . The city was taken by storm on the third day. Macedonian divisions carried the first row of palisades, and after a short struggle the second as well, and on their being repulsed by the Thebans, Alexander intervened in person, drove the Thebans out of their advance-works between the two palisades and forced his way into the city. The garrison of the Cadmea also flung itself upon the Thebans. The Macedonian onset was so fierce that a number of Theban cavalry, who were driven from the outwork into the city, fled without stopping through the opposite gate into the plain and were not heard of again. Over 6000 people were killed and 30,000 taken prisoners. Alexander allowed the Phocians, the Orchomenians, the Thespians and the Plataeans, who had joined him, to decide upon their fate. They condemned Thebes to the punishment which she had meted out to other Boeotian cities. The houses were destroyed [October, 335 B.C.]; only the temples and Pindar's house were left standing; the inhabitants were sold into slavery."—A. Holm, *History of Greece, v. 3, pp. 294-296*.—"The close connection that existed at this moment between Grecian and Persian affairs forbade him to lose a moment in turning his arms towards Asia. . . . A war between Alexander and Persia was inevitable, not only on account of the relation of the Greeks to Makedon, whose yoke they were very loth to bear,

but on account of their relation to Persia, on whose support they leaned. . . . The career which Philip had begun, and in which Alexander was now proceeding, led of necessity to a struggle with the power that held sway in Asia Minor. Until that power were defeated, the Macedonian kingdom could not be regarded as firmly established."—L. von Ranke, *Universal history: The oldest history group of nations and the Greeks, ch. 10, pt. 2*.

**B.C. 323-322.—Attempt to break the Macedonian yoke.—The Lamian War.—Subjugation of Athens.—Suppression of democracy.—Expulsion of poor citizens.—Death of Demosthenes.**—"Within a very few months came the news of Alexander's death, and instantly all Greece was in a ferment of patriotic ardour [to break the Macedonian yoke]. Leosthenes led up his men from Taenarum, and from all sides the various states sent their contingents to his support [a league had been formed in which many cities joined]. Athens shared, or rather led, the revolt; and publicly declared her sentiments by the recall of Demosthenes. The confederate army marched into Thessaly, and several times defeated Antipater and his officers. In the autumn of 323 B.C. they held Antipater shut up within the walls of Lamia (*Zeitoun*), and refused to accept any terms short of his absolute and unconditional surrender. This Antipater, of course, refused, and set himself to await reinforcements from the Macedonian officers in Asia; but, before these could arrive, the death of Leosthenes, the last general whom Athens was fated to produce, changed the whole course of the war. Antipater made his escape from Lamia, and being joined by Craterus and large reinforcements in 322 B.C., he broke the confederate army at Crannon (August). With this first reverse the confederacy fell to pieces, and so completely did all resistance cease, that even Athens made no effort to maintain her old traditions. She surrendered unconditionally, received a Macedonian garrison into the fortifications of Peiraeus, reforming her constitution according to Macedonian dictation, disenfranchising and deporting no less than twelve thousand of the poorer citizens, paying the whole cost of the late war, and agreeing to surrender Demosthenes and his fellow-patriot Hyperides. Fortune saved her from the whole onus of this last disgrace: Hyperides was, indeed, taken and slain in sanctuary at Aegina, but Demosthenes, who had sought refuge in the temple of Poseidon at Calauria, near Troezen, forestalled a like fate by taking poison. He was about sixty-two years of age, and for thirty years he had fought the battle of liberty for such a reward as this. Such is the brief and dishonourable record of the Lamian War, the last struggle of the united Greeks to shake off the yoke of the Macedonian."—A. H. Allcroft, *History of Greece, 371-323 B.C.*, p. 161.

B.C. 321-312.—Contest for Athens and Peloponnesus, between Cassander and Polysperchon. — Execution of Phocion. — Restoration of Thebes.—“Antipater, after the termination of the Lamian war, passed over to Asia and took part in the affairs there [see MACEDONIA: B.C. 323-316]. Being appointed guardian to the Kings, as the children and relatives of Alexander were called, he returned to Macedonia, leading them with him. . . . Antipater died (Ol. 115, 3) shortly after his return to Macedonia. He directed that Polysperchon, his ancient mate in arms, should succeed him in his office, while to his son Cassander he left only the second place. But Cassander, an ambitious youth, looked upon his father's authority as his inheritance; and relying on the aid of the aristocratic party in the Grecian states, of Ptolemæus, who ruled in Egypt, and of Antigonus, the most powerful general in Asia, he resolved to dispute it with Polysperchon. . . . Polysperchon, seeing war inevitable, resolved to detach Greece, if possible, from Cassander. Knowing that the oligarchies established in the different states by Antipater would be likely to espouse the cause of his son, he issued a pompous edict, in the name of the Kings, restoring the democracies. . . . At Athens (Ol. 115, 4) [317 B.C.], Nicanor, who commanded in the Munychia, finding that the people were inclined toward Polysperchon, secretly collected troops, and seized the Piræus. The people sent to him Phocion, Conon the son of Timotheüs, and Clearchus, men of distinction, and his friends; but to no purpose. A letter also came to him from Olympias, Alexander's mother, whom Polysperchon had recalled from Epeirus, and given the charge of her infant grandson, ordering him to surrender both the Munychia and the Piræus; but to as little effect. Finally, Polysperchon's son Alexander entered Attica with an army, and encamped before the Piræus. Phocion and other chiefs of the aristocracy went to Alexander, and advised him not to give these places up to the people, but to hold them himself till the contest with Cassander should be terminated. . . . The people, ferocious with the recovery of power, soon after held an assembly, in which they deposed all the former magistrates, appointed the most furious democrats in their room, and passed sentences of death, banishment, and confiscation of goods on those who had governed under the oligarchy. Phocion and his friends fled to Alexander, who received them kindly, and sent them with letters in their favor to his father, who was now in Phocis. The Athenians also despatched an embassy, and, yielding to motives of interest, Polysperchon sent his suppliants prisoners to Athens, to stand a trial for their lives before the tribunal of an anarchic mob. . . . The prisoners were condemned and led off to prison. . . . Polysperchon immediately entered Attica, and encamped near the Piræus. But as the siege was likely to be tedious, and sufficient provisions for so large an army could not be had, he left a force such as the country could support with his son Alexander, and passed with the remainder into Peloponnesus, to force the Megalopolitans to submit to the Kings; for they alone sided with Cassander, all the rest having obeyed the directions to put to death or banish his adherents. . . . He attempted a storm, but was obliged to draw off his men, after an obstinate conflict. . . . The Athenians meantime saw themselves excluded from the sea, and from all their sources of profit and enjoyment, while little aid was to be expected from Polysperchon, who had been forced to raise the siege of Megalopolis,

and whose fleet had just now been destroyed by Antigonus in the Hellespont. A citizen of some consideration ventured at length to propose in the assembly an arrangement with Cassander. The ordinary tumult at first was raised, but the sense of interest finally prevailed. Peace was procured, on the conditions of the Munychia remaining in Cassander's hands till the end of the present contest; political privileges being restricted to those possessed of ten minas and upwards of property, and a person appointed by Cassander being at the head of the government. The person selected for this office was Demetrius of Phaleron, a distinguished Athenian citizen; and under his mild and equitable rule the people were far happier than they could have been under a democracy, for which they had proved themselves no longer fit. Cassander then passed over into Peloponnesus, and laid siege to Tegea. While here, he heard that Olympias had put to death several of his friends in Macedonia; among the rest, Philip Aridæus and his wife Eurydice, members of the royal family. He at once (Ol. 116, 1) [316 B.C.] set out for Macedonia; and, as the pass of Pylæ was occupied by the Ætolians, he embarked his troops in Locris, and landed them in Thessaly. . . . He forced a passage through Pylæ, and coming into Bœotia, announced his intention of restoring Thebes, which had now lain desolate for twenty years. The scattered Thebans were collected; the towns of Bœotia and other parts of Greece (Athens in particular), and even of Italy and Sicily, aided to raise the walls and to supply the wants of the returning exiles, and Thebes was once more numbered among the cities of Greece. As Alexander guarded the Isthmus, Cassander passed to Megara, where he embarked his troops and elephants, and crossed over to Epidaurus. He made Argos and Messene come over to his side, and then returned to Macedonia. . . . The command in Peloponnesus was given to Polysperchon, whose son Alexander was summoned over to Asia to accuse Cassander of treason before the assembly of the Macedonian soldiers. Cassander was proclaimed a public enemy unless he submitted to Antigonus; at the same time the Greeks were declared independent, Antigonus hoping thus to gain them over to his side. He then sent Alexander back with 500 talents; and when Ptolemæus of Egypt heard what Antigonus had done, he also hastened to declare the independence of the Greeks; for all the contending generals were anxious to stand well with the people of Greece, from which country, exclusive of other advantages, they drew their best soldiers. . . . Antigonus, to show the Greeks that he was in earnest in his promise to restore them to independence, sent one of his generals, named Telesphorus, with a fleet and army to Peloponnesus, who expelled Cassander's garrisons from most of the towns. The following year (Ol. 117, 1) [312 B.C.] he sent an officer, named Ptolemæus, with another fleet and army to Greece. Ptolemæus landed in Bœotia, and being joined by 2,200 foot, and 1,300 horse of the Bœotians, he passed over to Eubœa; where having expelled the Macedonian garrison from Chalcis (the only town there which Cassander held), he left it without any foreign garrison, as a proof that Antigonus meant fairly. He then took Orópus, and gave it to the Bœotians; he entered Attica, and the people forced Demetrius Phalereus to make a truce with him, and to send to Antigonus to treat of an alliance. Ptolemæus returned to Bœotia, expelled the garrison from the Cadmeia, and liberated Thebes.”—T. Keightley, *History of Greece*, pt. 3, ch. 5.

ALSO IN: C. Thirlwall, *History of Greece*, v. 7, ch. 58.

**B.C. 307-197.—Demetrius and the Antigonids.**—In the spring of the year 307 B.C. Athens was surprised by an expedition sent from Ephesus by Antigonus, under his adventurous son Demetrius, surnamed Poliorcetes (see MACEDONIA: B.C. 310-301). The city had then been for ten years subject to Cassander, the ruling chief in Macedonia for the time, and appears to have been mildly governed by Cassander's lieutenant, Demetrius the Phalerian. The coming of the other Demetrius offered nothing to the Athenians but a change of masters, but they welcomed him with extravagant demonstrations. Their degeneracy was shown in proceedings of Asiatic servility. They defied Demetrius and his father Antigonus, erected altars to them and appointed ministering priests. After some months spent at Athens in the enjoyment of these adulations, Demetrius returned to Asia, to take part in the war which Antigonus was waging with Ptolemy of Egypt and Lysimachus of Thrace, two of his former partners in the partition of the empire of Alexander. He was absent three years, and then returned, at the call of the Athenians, to save them from falling again into the hands of Cassander. He now made Athens his capital, as it were, for something more than a year, while he acquired control of Corinth, Argos, Sicyon, Chalcis in Eubœa and other important places, greatly reducing the dominion of the Macedonian, Cassander. But in the summer of 301 B.C. this clever adventurer was summoned again to Asia, to aid his father in the last great struggle, which decided the partition of the empire of Alexander between his self-constituted heirs. At the battle of Ipsus (see MACEDONIA: B.C. 310-301), Antigonus perished and Demetrius was stripped of the kingdom he expected to inherit. He turned to Athens for consolation, and the fickle city refused to admit him within her walls. But after some period of wanderings and adventures the unconquerable prince got together a force with which he compelled the Athenians to receive him, on more definite terms of submission on their part and of mastery on his. Moreover, he established his rule in the greater part of Peloponnesus, and finally, on the death of Cassander (297 B.C.), he acquired the crown of Macedonia. Not satisfied with what fortune had thus given him, he attempted to recover the Asiatic kingdom of his father, and died, 283 B.C., a captive in the hands of the Syrian monarch, Seleucus. His Macedonian kingdom had meantime been seized by Pyrrhus of Epirus; but it was ultimately recovered by the eldest legitimate son of Demetrius, called Antigonus Gonatus. From that time, for a century, until the Romans came, not only Macedonia, but Greece at large, Athens included, was ruled or dominated by this king and his descendants, known as the Antigonid kings.—C. Thirlwall, *History of Greece*, v. 7-8, ch. 59-60.

**B.C. 3rd century.—Hellenistic world.**—As the result of the conquests of Alexander and the wars of his successors, there were, in the third century before Christ, three great Hellenistic kingdoms, "Macedonia, Egypt, Syria, which lasted,

each under its own dynasty, till Rome swallowed them up. The first of these, which was the poorest, and the smallest, but historically the most important, included the ancestral possessions of Philip and Alexander—Macedonia, most of Thrace, Thessaly, the mountainous centre of the peninsula, as well as a protectorate more or less definite and absolute over Greece proper, the Cyclades, and certain tracts of Caria. . . . Next came Egypt, including Cyrene and Cyprus, and a general protectorate over the sea-coast cities of Asia Minor up to the Black Sea, together with claims often asserted with success on Syria, and on the coast lands of Southern Asia Minor. . . . Thirdly came what was now called Syria, on account of the policy of the house of Seleucus, who built there its capital, and determined to make the Greek or Hellenistic end of its vast dominions its political centre of gravity. The Kingdom of Syria owned the south and south-east of Asia Minor, Syria, and generally Palestine, Mesopotamia, and the mountain provinces adjoining it on the East, with vague claims further east when there was no king like Sandracottus to hold India and the Punjab with a strong hand. There was still a large element of Hellenism in these remote parts. The kingdom of Bactria was ruled by a dynasty of kings with Greek names—Euthydemus is the chief—who coined in Greek style, and must therefore have regarded themselves as successors to Alexander. There are many exceptions and limitations to this general description, and many secondary and semi-independent kingdoms, which make the picture of Hellenism infinitely various and complicated. There was, in fact, a chain of independent kingdoms reaching from Media to Sparta, all of which asserted their complete freedom, and generally attained it by balancing the great powers one against the other. Here they are in their order. Atropatene was the kingdom in the northern and western parts of the province of Media, by Atropates, the satrap of Alexander, who claimed descent from the seven Persian chiefs who put Darius I. on the throne. Next came Armenia, hardly conquered by Alexander, and now established under a dynasty of its own. Then Cappadocia, the land in the heart of Asia Minor, where it narrows between Cilicia and Pontus, ruled by sovereigns also claiming royal Persian descent. . . . Fourthly, Pontus, under its equally Persian dynast Mithridates—a kingdom which makes a great figure in Eastern history under the later Roman Republic. There was moreover a dynast of Bithynia, set up and supported by the robber state of the Celtic Galatians, which had just been founded, and was a source of strength and of danger to all its neighbours. Then Pergamum, just being founded and strengthened by the first Attalid, Philetærus, an officer of Lysimachus, and presently to become one of the leading exponents of Hellenism. . . . Almost all these second-rate states (and with them the free Greek cities of Heracleia, Cyzicus, Byzantium, &c.) were fragments of the shattered kingdom of Lysimachus. . . . We have taken no account of a very peculiar feature extending all through even the Greek kingdoms, especially that of the Selucids—the number of large Hellenistic cities founded as special centres of culture, or points of defence, and organized as such with a certain local independence. These cities, most of which we only know by name, were the real backbone of Hellenism in the world. Alexander had founded seventy of them, all called by his name. Many were upon great trade lines, like the Alexandria which still exists. Many were intended as garrison towns

in the centre of remote provinces, like Candahar—a corruption of Iskanderieh, Iskandar being the Oriental form for Alexander. Some were mere outposts, where Macedonian soldiers were forced to settle, and guard the frontiers against the barbarians, like the Alexandria on the Iaxartes. . . . As regards Seleucus . . . we have a remarkable statement from Appian that he founded cities through the length and breadth of his kingdom, viz., sixteen Antiochs called after his father, five Laodiceas after his mother, nine Seleucias after himself, three Apameias and one Stratoniceia after his wives. . . . All through Syria and Upper Asia there are many towns bearing Greek and Macedonian names—Berea, Edessa, Perinthos, Achæa, Pella, &c. The number of these, which have been enumerated in a special catalogue by Droysen, the learned historian of Hellenism, is enormous, and the first question which arises in our minds is this: where were Greek-speaking people found to fill them? It is indeed true that Greece proper about this time became depopulated, and that it never has recovered from this decay. . . . Yet . . . the whole population of Greece would never have sufficed for one tithe of the cities—the great cities—founded all over Asia by the Diadochi. We are therefore driven to the conclusion that but a small fraction, the soldiers and officials of the new cities, were Greeks—Macedonians, when founded by Alexander himself—generally broken down veterans, mutinous and discontented troops, and camp followers. To these were associated people from the surrounding country, it being Alexander's fixed idea to discountenance sporadic country life in villages and encourage town communities. The towns accordingly received considerable privileges. . . . The Greek language and political habits were thus the one bond of union among them, and the extraordinary colonizing genius of the Greek once more proved itself.”—J. P. Mahaffy, *Story of Alexander's empire*, ch. 10.—See also HELLENISM, B.C. 280-146.—Achæan League.—Rise and fall.—Destruction of Sparta.—Supremacy of Rome.—The Achæan league, which bore a leading part in the affairs of Greece during the last half of the third and first half of the second century before Christ, was in some sense the revival of a more ancient confederacy among the cities of Achæa in Peloponnesus. The older league, however, was confined to twelve cities of Achæa and had little weight, apparently, in general Hellenic politics. The revived league grew beyond the territorial boundaries which were indicated by its name, and embraced the larger part of Peloponnesus. It began about 280 B.C. by the forming of a union between the two Achæan cities of Patrai and Dyme. One by one their neighbors joined them, until ten cities were confederated and acting as one. “The first years of the growth of the Achæan League are contemporary with the invasion of Macedonia and Greece by the Gauls and with the wars between Pyrrhos and Antigonos Gonatas [see MACEDONIA: B.C. 277-244]. Pyrrhos, for a moment, expelled Antigonos from the Macedonian throne, which Antigonos recovered while Pyrrhos was warring in Peloponnesus. By the time that Pyrrhos was dead, and Antigonos again firmly fixed in Macedonia, the League had grown up to maturity as far as regarded the cities of the old Achæa. . . . Thus far, then, circumstances had favoured the quiet and peaceful growth of the League.” It had had the opportunity to grow firm enough and strong enough, on the small scale, to offer some lessons to its disunited and tyrannized

neighbors and to exercise an attractive influence upon them. One of the nearest of these neighbors was Sicyon, which groaned under a tyranny that had been fastened upon it by Macedonian influence. Among the exiles from Sicyon was a remarkable young man named Aratus, or Aratos, to whom the successful working of the small Achæan league suggested some broader extension of the same political organism. In 251 B.C., Aratus succeeded in delivering his native city from its tyrant and in bringing about the annexation of Sicyon to the Achæan league. Eight years later, having meantime been elected to the chief office of the league, Aratus accomplished the expulsion of the Macedonians and their agents from Corinth, Megara, Troizen and Epidaurus, and persuaded those four cities to unite themselves with the Achæans. During the next ten years he made similar progress in Arcadia, winning town after town to the federation, until the Arcadian federal capital, Megalopolis, was enrolled in the list of members, and gave to the league its greatest acquisition of energy and brain. In 229 B.C. the skill of Aratus and the prestige of the league, taking advantage of disturbances in Macedonia, effected the withdrawal of the Macedonian garrisons from Athens and the liberation of that city, which did not become confederated with its liberators, but entered into alliance with them. Argos was emancipated and annexed, 228 B.C., and “the League was now the greatest power of Greece. A Federation of equal cities, democratically governed, embraced the whole of old Achæa, the whole of the Argolic peninsula, the greater part of Arkadia, together with Phlious, Sicyon, Corinth, Megara, and the island of Aigina.” The one rival of the Achæan league in Peloponnesus was Sparta, which looked with jealousy upon its growing power, and would not be confederated with it. The consequences of that jealous rivalry were fatal to the hopes for Greece which the Achæan union had seemed to revive. Unfortunately, rather than otherwise, the Lacedæmonian throne came to be occupied at this time by the last of the hero-kings of the Heracleid race—Cleomenes. When the inevitable collision of war between Sparta and the league occurred (227-221 B.C.), the personal figure of Cleomenes loomed so large in the conflict that it took the name of the Cleomenic War. Aratus was the worst of generals, Cleomenes one of the greatest, and the Achæans were steadily beaten in the field. Driven to sore straits at last, they abandoned the whole original purpose of their federation, by inviting the king of Macedonia to help them crush the independence of Sparta. To win his aid they gave-up Corinth to him, and under his leadership they achieved the shameful victory of Sellasia (221 B.C.), where all that is worthy in Lacedæmonian history came to an end. The league was now scarcely more than a dependency of the Macedonian kingdom, and figured as such in the so-called Social War with the Ætolian league, 210-217 B.C. The wars of Rome with Macedonia which followed renewed its political importance considerably for a time. Becoming the ally of Rome, it was able to maintain a certain dignity and influence until the supremacy of the Roman arms had been securely proved, and then it sank to the helpless insignificance which all Roman alliances led to in the end. It was in that state when, on some complaint from Rome (167 B.C.), a thousand of the chief citizens of Achæa were sent as prisoners to Italy and detained there until less than 300 survived to return to their homes. Among them was the historian Polybius. A little

later (146 B.C.) there was a wild revolt from the Roman yoke, in which Corinth took the lead. A few months of war ensued, ending in a decisive battle at Leucopetra. Then Corinth was sacked and destroyed by the Roman army and the Achaean league disappeared from history.—E. A. Freeman, *History of federal government*, ch. 5-9.

**B.C. 214-146.**—Roman conquest.—The series of wars in which the Romans made themselves masters of Greece were known in their annals as the Macedonian Wars. At the beginning, they were innocent of aggression. A young and ambitious but unprincipled king of Macedonia—Philip, who succeeded the able Antigonus Dosis—had put himself in alliance with the Carthaginians and assailed the Romans in the midst of their desperate conflict with Hannibal. For the time they were unable to do more than trouble Philip so far as to prevent his bringing effective reinforcements to the enemy at their doors, and this they accomplished in part by a treaty with the Ætoliæ, which enlisted that unscrupulous league upon their side. The first Macedonian war, which began 214 B.C., was terminated by the Peace of Dyrachium, 205 B.C. The peace was of five years duration, and Philip employed it in reckless undertakings against Pergamus, against Rhodes, against Athens, every one of which carried complaints to Rome, the rising arbiter of the Mediterranean world, whose hostility Philip lost no opportunity to provoke. On the ides of March, 200 B.C., the Roman senate declared war. In the spring of 197 B.C. this second Macedonian War was ended at the battle of Cynoscephalæ—so called from the name of a range of hills known as the dog-heads—where the Macedonian army was annihilated by the consul T. Quinctius Flaminius. At the next assembly of the Greeks for the Isthmian games, a crier made proclamation in the arena that the Roman Senate and T. Quinctius the general, having conquered King Philip and the Macedonians, declared all the Greeks who had been subject to the king free and independent. Henceforth, whatever freedom and independence the states of Greece enjoyed were according to the will of Rome. An interval of twenty-five years, broken by the invasion of Antiochus and his defeat by the Romans at Thermopylæ (see **SELEUCTOÆ**: B.C. 224-187), was followed by a third Macedonian War. Philip was now dead and succeeded by his son Perseus, known to be hostile to Rome and accused of intrigues with her enemies. The Roman Senate forestalled his intentions by declaring war. The war which opened 171 B.C. was closed by the battle of Pydna, fought June 22, 168 B.C., where 20,000 Macedonians were slain and 11,000 taken prisoners, while the Romans lost scarcely 100 men. Perseus attempted flight, but was soon driven to give himself up and was sent to Rome. The Macedonian kingdom was then extinguished and its territory divided between four nominal republics, tributary to Rome. Twenty years after, there was an attempt made by a pretender to re-establish the Macedonian throne, and a fourth Macedonian War occurred; but it was soon finished (146 B.C.—see above, 280-146 B.C.). The four republics then gave way, to form a Roman province of Macedonia and Epirus, while the remainder of Greece, in turn, became the Roman province of Achæa.—C. Thirlwall, *History of Greece*, v. 8,

A combination of causes, which could hardly have entered into the calculations of any politician, enabled them to preserve their national institutions, and to exercise all their former social influence, even after the annihilation of their political existence. Their vanity was flattered by their admitted superiority in arts and literature, and by the respect paid to their usages and prejudices by the Romans. Their political subjection was at first not very burdensome; and a considerable portion of the nation was allowed to retain the appearance of independence. Athens and Sparta were honoured with the title of allies of Rome. [Athens retained this independent existence, partaking something of the position of Hamburg in the Germanic body, until the time of Caracalla, when its citizens were absorbed into the Roman empire.] The nationality of the Greeks was so interwoven with their municipal institutions, that the Romans found it impossible to abolish the local administration; and an imperfect attempt made at the time of the conquest of Achæa was soon abandoned. . . . The Roman senate was evidently not without great jealousy and some fear of the Greeks; and great prudence was displayed in adopting a number of measures by which they were gradually weakened, and cautiously broken to the yoke of their conquerors. . . . It was not until after the time of Augustus, when the conquest of every portion of the Greek nation had been completed, that the Romans began to view the Greeks in the contemptible light in which they are represented by the writers of the capital. Crete was not reduced into the form of a province until about eight years after the subjection of Achæa, and its conquest was not effected without difficulty, after a war of three years, by the presence of a consular army. The resistance it offered was so obstinate that it was almost depopulated ere the Romans could complete its conquest. . . . The Roman government . . . soon adopted measures tending to diminish the resources of the Greek states when received as allies of the republic. . . . If we could place implicit faith in the testimony of so firm and partial an adherent of the Romans as Polybius, we must believe that the Roman administration was at first characterised by a love of justice, and that the Roman magistrates were far less venal than the Greeks. . . . Less than a century of irresponsible power effected a wonderful change in the conduct of the Roman magistrates. Cicero declares that the senate made a traffic of justice to the provincials. . . . But as the government of Rome grew more oppressive, and the amount of the taxes levied on the provinces was more severely exacted, the increased power of the republic rendered any rebellion of the Greeks utterly hopeless. . . . For

sixty years after the conquest of Achaia, the Greeks remained docile subjects of Rome. . . . The number of Roman usurers increased, and the exactions of Roman publicans in collecting the taxes became more oppressive, so that when the army of Mithridates invaded Greece, B.C. 86, while Rome appeared plunged in anarchy by the civil broils of the partisans of Marius and Sylla, the Greeks in office conceived the vain hope of recovering their independence [see MITHRADATIC WARS; ATHENS: B.C. 87-86]. . . . Both parties, during the Mithradatic war, inflicted severe injuries on Greece. . . . Many of the losses were never repaired. The foundations of national prosperity were undermined, and it henceforward became impossible to save from the annual consumption of the inhabitants the sums necessary to replace the accumulated capital of ages, which this short war had annihilated."—G. Finlay, *Greece under the Romans*, ch. 1.—"Scarcely had the storm of Roman war passed by, when the Cilician pirates, finding the coasts of Greece peculiarly favorable for their marauding incursions, and tempted by the wealth accumulated in the cities and temples, commenced their depredations on so gigantic a scale that Rome felt obliged to put forth all her military forces for their suppression. The exploits of Pompey the Great, who was clothed with autocratic power to destroy this gigantic evil, fill the brightest chapter in the history of that celebrated but too unfortunate commander [see CILICIA, Pirates of]. . . . The civil wars in which the great Republic expired had the fields of Greece for their theatre. Under the tramp of contending armies, her fertile plains were desolated, and Roman blood, in a cause not her own, again and again moistened her soil [see ROME: Republic: B.C. 48; B.C. 44-42; B.C. 31]. But at length the civil wars have come to an end, and the Empire introduces, for the first time in the melancholy history of man, a state of universal peace. Greece still maintains her pre-eminence in literature and art, and her schools are frequented by the sons of the Roman aristocracy. Her elder poets serve as models to the literary genius of the Augustan age. . . . The historians form themselves on Attic prototypes, and the philosophers of Rome divide themselves among the Grecian sects, while in Athens the Platonists, the Stoics, the Peripatetics, and the Epicureans still haunt the scenes with which the names of their masters were inseparably associated. . . . The establishment of the Empire made but little change in the administration of Greece. Augustus, indeed, showed no great solicitude, except to maintain the country in subjection by his military colonies,—especially those of Patrae and Nicopolis. He even deprived Athens of the privileges she had enjoyed under the Republic, and broke down the remaining power of Sparta, by declaring the independence of her subject towns. Some of his successors treated the country with favor, and endeavored, by a clement use of authority, to mitigate the sufferings of its decline. Even Nero, the amiable fiddler of Rome, was proud to display the extent of his musical abilities in their theatres. . . . The noble Trajan allowed the Greeks to retain their former local privileges, and did much to improve their condition by his wise and just administration. Hadrian was a passionate lover of Greek art and literature. Athens especially received the amplest benefits from his taste and wealth. He finished the temple of Olympian Zeus; established a public library; built a pantheon and a gymnasium; rebuilt the temple of Apollo at Megara; improved the old roads of

Greece and made new ones. . . . Antoninus and Marcus Aurelius showed good will to Greece. The latter rebuilt the temple at Eleusis, and improved the Athenian schools, raising the salaries of the teachers, and in various ways contributing to make Athens, as it had been before, the most illustrious seat of learning in the world. It was in the reign of this Emperor, in the second century of our era, that one of the greatest benefactors of Athens and all Greece lived,—Herodes Atticus, distinguished alike for wealth, learning, and eloquence. Born at Marathon, . . . educated at Athens by the best teachers his father's wealth could procure, he became on going to Rome, in early life, the rhetorical teacher of Marcus Aurelius himself. Antoninus Pius bestowed on him the honor of the consulship; but he preferred the career of a teacher at Athens to the highest political dignities, . . . and he was followed thither by young men of the most eminent Roman families, from the Emperor's down. . . . At Athens, south of the Ilissus, he built the stadium . . . and the theatre of Regilla. . . . At Corinth he built a theatre; at Olympia, an aqueduct; at Delphi, a race-course; and at Thermopylae, a hospital. Peloponnesus, Eubœa, Bœotia, and Epeirus experienced his bounty, and even Italy was not forgotten in the lavish distribution of his wealth. He died in 180."—C. C. 1454-1479.—War of Turks and Venetians in the peninsula.—Siege of Corinth.—Sack of Athens.—Massacres at Negropont and Croia.—“The taking of Constantinople by the Turks, and the captivity of the Venetians settled in Pera, threatened [the power of Venice] . . . in the East; and she felt no repugnance to enter into a treaty with the enemies of her religion. After a year's negotiation, terms were concluded [1454] between the Sultan and Venice; by which her possessions were secured to her, and her trade guaranteed throughout the empire. In virtue of this treaty she continued to occupy Modon, Coron, Napoli di Romania, Argos, and other cities on the borders of the Peninsula, together with Eubœa (Negropont) and some of the smaller islands. But this good understanding was interrupted in 1463, when the Turks contrived an excuse for attacking the Venetian territory. Under pretence of resenting the asylum afforded to a Turkish refugee, the Pasha of the Morea besieged and captured Argos; and the Republic felt itself compelled immediately to resent the aggression. A re-inforcement was sent from Venice to Napoli, and Argos was quickly recaptured. Corinth was next besieged, and the project of fortifying the isthmus was once more renewed. . . . The labour of 30,000 workmen accomplished the work in 15 days; a stone wall of more than 12 feet high, defended by a ditch and flanked by 136 towers, was drawn across the isthmus. . . . But the approach of the Turks, whose numbers were probably exaggerated by report, threw the Venetians into distrust and consternation; and, unwilling to confide in the strength of their rampart, they abandoned the siege of Corinth, and retreated to Napoli, from which the infidels were repulsed with the loss of 5,000 men. The Peloponnesus was now exposed to the predatory retaliations of the Turks and Venetians; and the Christians appeared anxious to rival or surpass the Mahomedans in the refinement of their barbarous inflictions. . . . In the year 1465, Sigismondo Malatesta landed in the Morea with a re-inforcement of 1,000 men; and, without effecting the reduction of the citadel, captured and burned Misitra [near the ruins of ancient Sparta]. In the following year, Vittore Cappello, with the Venetian fleet, arrived in the straits of Euripus; and landing at Aulis marched into Attica. After making himself master of the Piræus, he laid siege to Athens; her walls were overthrown; her inhabitants plundered; and the Venetians retreated with the spoil to the opposite shores of Eubœa. The victorious career of Matthias Corvinus, King of Hungary, for a time diverted the Sultan from the war in the Morca; but . . . in the beginning of the year 1470 a fleet of 108 galleys, besides a number of smaller vessels, manned by a force 70,000 strong, issued from the harbour of Constantinople, and sailed for the

straits of Euripus. . . . The army landed without molestation on the island, which they united to the mainland by a bridge of boats, and immediately proceeded to lay siege to the city of Negropont. . . . The hopes of the besieged were now centred in the Venetian fleet, which, under the command of Nicolo Canale, lay at anchor in the Saronic Gulf. But that admiral, whilst he awaited a re-inforcement, let slip the favourable opportunity of preventing the debarcation of the enemy, or of shutting up the Turks in the island by the destruction of their half-deserted fleet and bridge of boats. By an unaccountable inactivity, he suffered the city to be attacked, which, after a vigorous resistance of nearly a month, was carried by assault [July 12, 1470]; and all the inhabitants, who did not escape into the citadel, were put to the sword. At length that fortress was also taken; and the barbarous conqueror, who had promised to respect the head of the intrepid governor, deemed it no violation of his word to saw his victim in halves. After this decisive blow, which reduced the whole island, Mahomed led back his conquering army to Constantinople. . . . This success encouraged the Turks to attack the Venetians in their Italian territory; and the Pasha of Bosnia invaded Istria and Friuli, and carried fire and sword almost to the gates of Udine. In the following year [1474], however, the Turks were baffled in their attempt to reduce Scutari in Albania, which had been delivered by the gallant Scanderbeg to the guardian care of Venice. Some abortive negotiations for peace suspended hostilities until 1477, when the troops of Mahomed laid siege to Croia in Albania, which they reduced to the severest distress. But a new incursion into Friuli struck a panic into the inhabitants of Venice, who beheld, from the tops of their churches and towers, the raging flames which devoured the neighbouring villages.” The Turks, however, withdrew into Albania, where the siege of Croia was terminated by its surrender and the massacre of its inhabitants, and the Sultan, in person, renewed the attack on Scutari. The stubborn garrison of that stronghold, however, resisted, with fearful slaughter, a continuous assault made upon their walls during two days and a night. Mahomed was forced to convert the siege into a blockade, and his troops reappeared in Friuli. “These repeated aggressions on her territories made Venice every day more anxious to conclude a peace with the Sultan,” and a treaty was signed in April, 1479. “It was agreed that the islands of Negropont and Mitylene, with the cities of Croia and Scutari in Albania, and of Tenaro in the Morea, should be consigned to the Turk; whilst other conquests were to be reciprocally restored to their former owners. A tribute of 10,000 ducats was imposed upon Venice, and the inhabitants of Scutari [now reduced to 500 men and 150 women] were to be permitted to evacuate the city.”—R. Comyn, *History of the Western empire*, v. 2, ch. 31.

1821-1829.—Overthrow of Turkish rule.—Intervention of Russia, England and France.—Battle of Navarino.—Establishment of national independence.—“The Spanish revolution of 1820 [see SPAIN: 1814-1827], which was speedily followed by the revolutions of Naples, Sicily, and Piedmont, caused a great excitement throughout Europe, and paved the way for the Greek revolution of 1821. Since the beginning of the century the Greeks had been preparing for the struggle; in fact, for more than fifty years there had been a general movement in the direction of independence. . . . There had been many insurrections against the Turkish authority, but they were generally suppressed without difficulty, though with the shedding of much Greek blood. Nearly every village in Greece suffered from pillage by the Turks, and the families were comparatively few that did not mourn a father, son, or brother, killed by the Turks or carried into slavery, or a daughter or sister transported to a Turkish harem. . . . Notwithstanding their subjugation, many of the Greeks were commercially prosperous, and a large part of the traffic of the East was in their hands. They conducted nearly all the coasting trade of the Levant, and a few years before the revolution they had 600 vessels mounting 6,000 guns (for defence against pirates) and manned by 18,000 seamen. . . . In laying their plans for independence the Greeks resorted to the formation of secret societies, and so well was the scheme conducted that everything was ripe for insurrection before the Turkish rulers had any suspicion of the state of affairs. A great association was formed which included Greeks everywhere, not only in Greece and its islands, but in Constantinople, Austria, Germany, England, and other countries, wherever a Greek could be found. Men of other nationalities were occasionally admitted, but only when their loyalty to the Greek cause was beyond question, and their official positions gave them a chance to aid in the work. Several distinguished Russians were members, among them Count Capo D'Istria, a Greek by birth, who held the office of private secretary to the Emperor Alexander I of Russia. The society was known as the *Hetaira*, or *Hetairist*, and consisted of several degrees or grades. The highest contained only sixteen persons, whose names were not all known, and it was impossible for any member of the lower classes to ascertain them. . . . All the *Hetairists* looked hopefully towards Russia, partly in consequence of their community of religion, and partly because of the fellow-feeling of the two countries in cordially detesting the Turk. . . . The immediate cause of the revolution, or rather the excuse for it, was the death of the Hospodar of Wallachia, January 30, 1821, followed by the appointment of his successor. During the interregnum, which naturally left the government in a weakened condition, the *Hetairists* determined to strike their blow for liberty. A band of 150 Greeks and Arnauts, under the command of Theodore Vladimiroko, formerly a lieutenant-colonel in the Russian service, marched out of Bucharest and seized the small town of Czernitz, near Trajan's Bridge, on the Danube. There Theodore issued a proclamation, and such was the feeling of discontent among the people, that in a few days he had a force of 12,000 men under his command. Soon afterwards there was an insurrection in Jassy, the capital of Moldavia, headed by Prince Alexander Ipsilanti, an officer

in the Russian service. He issued a proclamation in which the aid of Russia was distinctly promised, and as the news of this proclamation was carried to Greece, there was a general movement in favor of insurrection. The Russian minister assured the Porte that his government had nothing to do with the insurrection, and the Patriarch and Synod of Constantinople issued a proclamation emphatically denouncing the movement, but in spite of this assurance and proclamation the insurrection went on. Count Nesselrode declared officially that Ipsilanti's name would be stricken from the Russian army list, and that his act was one for which he alone was responsible. This announcement was the death-blow of the insurrection in Moldavia and Wallachia, as the forces of Theodore and Ipsilanti were suppressed, after some sharp fighting, by the hordes of Moslems that were brought against them. . . . Nearly the whole of Greece was in full insurrection in a few months, and with far

GREGORY V

Patriarch of Constantinople

better prospects than had the insurrection on the Danube. Turks and Greeks were embittered against each other; the war-cry of the Turk was, 'Death to the Christian!' while that of the Christian was, 'Death to the Turk!' The example was set by the Turks, and, to the eternal disgrace of the Turkish government, slaughter in cold blood was made official. It was by the order and authority of the Porte that Gregory, Patriarch of Constantinople, a revered prelate, eighty years of age, was seized on Easter Sunday, as he was descending from the altar where he had been celebrating divine service, and hanged at the gate of his archiepiscopal palace, amid the shouts and howls of a Moslem mob. After hanging three hours, the body was . . . [thrown into the sea, whence it was recovered and taken to Odessa. It was later removed to Athens, and now lies in a sarcophagus in the cathedral.] This act of murder was the more atrocious on the part of the Turks, since the Patriarch had denounced the insurrection in a public proclamation, and his life and character were most blameless and exemplary. It is safe to say that this barbarity had more to

do with fanning the fires of revolt than any other act of the Turkish government. But it was by no means the only act of the kind of which the Turks were guilty. The Patriarch of Adrianople with eight of his ecclesiastics were beheaded, and so were the dragoman of the Porte and several other eminent residents of Constantinople, descended from Greek settlers of two or three centuries ago. Churches were everywhere broken open and plundered; Greek citizens of the highest rank were murdered, their property stolen, and their wives and daughters sold as slaves; on the 15th of June five archbishops and a great number of laymen were hanged in the streets, and 450 mechanics were sold and transported into slavery; at Salonica the battlements of the town were lined with Christian heads, from which the blood ran down and discolored the water in the ditch. In all the great towns of the empire there were similar atrocities; some were the work of mobs, which the authorities did not seek to restrain, but the greater part of them were ordered by the governors or other officials, and met the approval of the Porte. At Smyrna, the Christian population was massacred by thousands without regard to age or sex, and in the island of Cyprus a body of 10,000 troops sent by the Porte ravaged the island, executed the metropolitan, five bishops, and thirty-six other ecclesiastics, and converted the whole island into a scene of rapine, bloodshed, and robbery. Several thousand Christians were killed before the atrocities ceased, and hundreds of their wives and daughters were carried into Turkish harems. These and similar outrages plainly told the Greeks that no hope remained except in complete independence of the Turks, and from one end of Greece to the other the fires of insurrection were everywhere lighted. The islands, as well as the mainland, were in full revolt, and the fleet of coasting vessels, nearly all of them armed for resisting pirates, gave the Turks a great deal of trouble. . . . On the land, battle followed battle in different parts of the country, and the narration of the events of the insurrection would fill a bulky volume. . . . During the latter part of 1821, the advantages to the Greeks were sufficient to encourage them to proclaim their independence, which was done in January, 1822. In the same month the Turks besieged Corinth, and in the following April they besieged and captured Chios (Scio), ending the capture with the slaughter of 40,000 inhabitants, the most horrible massacre of modern times. In July, the Greeks were victorious at Thermopylæ; in the same month Corinth fell, with great slaughter of the defenders. In April, 1823, the Greeks held a national congress at Argos; the victories of Marco Bozzaris occurred in the following June, and in August he was killed in a night attack upon the Turkish camp; in August, too, Lord Byron landed at Athens to take part in the cause of Greece, which was attracting the attention of the whole civilized world. The first Greek loan was issued in England in February, 1824; Lord Byron died at Missolonghi in the following April; in August the Capitan Pasha was defeated at Samos with heavy loss; in October, the provisional government of Greece was set up; and the fighting became almost continuous in the mountain districts of Greece. In February, 1825, Ibrahim Pasha arrived with a powerful army from Egypt, which captured Navarino in May, and Tripolitza in June of the same year. In July, the provisional government invoked the aid of England; in the following April (1826), Ibrahim Pasha took Missolonghi after a long and heroic

defence [of twelve months]; and nearly a year later Reschid Pasha captured Athens. Down to the beginning of 1826, the Greeks had felt seriously the deprivation of Russian sympathy and aid for which they had been led to look before the revolution. The death of Alexander I, and the accession of Nicholas in December, 1825, caused a change in the situation. The British government sent the Duke of Wellington to St. Petersburg ostensibly to congratulate Nicholas on his elevation to the throne, but really to secure concert of action in regard to Greece. On the 4th of April a protocol was signed by the Duke of Wellington, Prince Lieven, and Count Nesselrode, which may be considered the foundation of Greek independence. Out of this protocol grew the treaty of July 6, 1827, between England, Russia, and France, by which it was stipulated that those nations should mediate between the contending Greeks and Turks. They proposed to the Sultan that he should retain a nominal authority over the Greeks, but receive from them a fixed annual tribute. . . . The Sultan . . . refused to listen to the scheme of mediation, and immediately made preparations for a fresh campaign, and also for the defence of Turkey in case of an attack. Ships and reinforcements were sent from Constantinople, and the Egyptian fleet, consisting of two 84-gun ships, twelve frigates, and forty-one transports, was despatched from Alexandria with 5,000 troops, and reached Navarino towards the end of August, 1827. The allied powers had foreseen the possibility of the Porte's refusal of mediation, and taken measures accordingly; an English fleet under Admiral Sir Edward Codrington, and a French fleet under Admiral De Rigny, were in the Mediterranean, and were shortly afterwards joined by the Russian fleet under Admiral Heiden. . . . The allied admirals held a conference, and decided to notify Ibrahim Pasha that he must stop the barbarities of plundering and burning villages and slaughtering their inhabitants. But Ibrahim would not listen to their remonstrances, and to show his utter disregard for the powers, he commanded four of his ships to sail to the Gulf of Patras to occupy Missolonghi and relieve some Turkish forts, in effect to clear those waters of every Greek man-of-war which was stationed there. This he did easily, the allied squadrons being temporarily absent. Admiral Codrington pursued him and, without difficulty, drove him back to Navarino. . . . A general muster of all the ships was ordered by Admiral Codrington, Commander-in-chief of the squadron. . . . The allied fleet mounted 1,324 guns, while the combined Turkish and Egyptian fleet mounted 2,240 guns. To this superiority in the number of guns on board must be added the batteries on shore, which were all in the hands of the Turks. But the Christians had a point in their favor in their superiority in ships of the line, of which they possessed ten, while the Turks had but three. . . . The allied fleet entered the Bay of Navarino about two o'clock on the afternoon of October 20, 1827. . . . In less than four hours from the beginning of the contest the Ottoman fleet had ceased to be. Every armed ship was burnt, sunk, or destroyed; the only remaining vessels belonging to the Turks and Egyptians were twenty-five of the smallest transports, which were spared by order of Admiral Codrington. It was estimated that the loss in men on the Turkish and Egyptian vessels was fully 7,000. On the side of the allies, no vessels were destroyed, but the Asia, Albion, and Genoa of the English fleet were so much in-

jured, that Admiral Codrington sent them to Malta for repairs which would enable them to stand the voyage home to England. Seventy-five men were killed and 197 wounded on the British fleet, and the loss of the French was 43 killed and 117 wounded. The Russian loss was not reported.

... It was feared that when the news of the event at Navarino reached Constantinople, the lives of all Europeans in that city, including the foreign ambassadors, would be in great danger, but happily there was no violence on the part of the Turks. The ambassadors pressed for an answer to their note of August 10th, and at length the Sultan replied: 'My positive, absolute, definitive, unchangeable, eternal answer is, that the Sublime Porte does not accept any proposition regarding the Greeks, and will persist in its own will regarding them even to the last day of judgment.' The Porte even demanded compensation for the destruction of the fleet, and satisfaction for the insult, and that the allies should abstain from all interference in the affairs of Greece. The reply of the ambassadors was to the effect that the treaty of July obliged them to defend Greece, and that the Turks had no claim whatever for reparation for the affair of Navarino. The ambassadors left Constantinople on the 8th December, and soon afterwards Count Capo D'Istria, who had been elected President of Greece, took his seat, and issued a proclamation, declaring that the Ottoman rule over the country was at an end after three centuries of oppression. Thus was the independence of Greece established. There was little fighting after the events of Navarino, and early in 1828 Admiral Codrington and Ibrahim Pasha held a convention and agreed upon measures for evacuating the land of the Hellenes. During the summer and autumn Patras, Navarino, and Modon were successively surrendered to the French, and the Morea was evacuated by the Turks. Missolonghi was surrendered to Greece early in 1829, and by the Treaty of Adrianople in September of the same year the Porte acknowledged the independence of Greece, which was henceforth to be one in the family of nations."

—T. W. Knox, *Decisive battles since Waterloo*, ch. 3.—See also ADRIANOPLE, TREATY OF.

"The Greek War of Independence was one of a series of revolutions against tyrannical government which took place during the latter part of the eighteenth century and the beginning of the nineteenth. It was the culmination of centuries of oppression and chafing of the liberty-loving Greeks against the Turkish yoke. Nor would it have been successful had it been fostered by men less intrepid and dauntless. First to fall a martyr, even before the revolution began, was Rhigas Pheraios, the poet who stirred the Greeks with his songs. He was delivered by the Austrians to the Turks in 1798. When he was executed at Belgrade, his last words were: 'I have sown a rich seed; the hour is coming when my country will reap its glorious fruits.' The hanging of the venerable Patriarch of Constantinople, Gregorios V, at the gate of the archiepiscopal mansion on Easter morning of 1821 was the first blow in the revolution and fed fuel to the flames that made defeat impossible. Nor was the Patriarch the only martyr of the church militant. Other bishops and priests fell for the cause of their country. Among these, the picturesque Athanasios Diakos, an ordained deacon, who donned civilian dress and led his followers in many a fight. When finally captured he was given the choice of embracing Mohammedanism, or death. He was impaled on a stake and roasted over a fire. Demetrios and Alexander Ipsilanti were lead-

ers from the beginning of the movement, and Alexander finally died in Vienna, after having in vain invoked the assistance of the tsar of Russia for whom he had fought and lost his left arm. Theodoros Kolokotronis was the generalissimo of the Greek insurgents in the Peloponnese, whose personality inspired his followers to the utmost deeds. Georges Karaiskakis was commander-in-chief of the forces on the mainland, and was killed in 1827 leading his men at Phaleron. Marco Bozzaris, immortalized in song by Fitz-Greene Halleck, fell after having caused havoc, with a handful of Suliotas, among the Turks sleeping in their camp at Karpenisi, on the night of August 20, 1823. On the sea, where much of the strength of the Greeks lay, were other leaders: Andreas Miaoulis, of Hydra, the fighting admiral of the Greek privateers, who defeated the Turkish fleets off Patras, at Nauplion, and off the Fort of Methoni, where he burned twenty-eight men-of-war. Constantine Kanaris, the 'demon of the seas,' the boldest of the Greek war captains, who personally attached fireships to the flagship of the Turks at Chios in 1822, and blew up Capitan Pasha, and 2,000 Turks, repeating the feat again at Tenedos later in the year. After the liberation of Greece proper, he served the nation as admiral, senator, minister of war and premier. Nor were men alone active among the Greek patriots. Two women were pre-eminent. Lascarina Bouboulina replaced her husband in command of his privateer after he had been executed at Constantinople, and, collecting two more ships, ranged over the Ægean sea, capturing Turkish vessels and terrorizing the enemy. Penelope Papalexopoulou was as famous a fighter on land, and led bands of men in many heroic ventures. Alexander Mavrokordatos and Georgeos Kountouriotis rendered signal service in the war and as political leaders, giving their fortunes for the creation of a Greek fleet. These are a few of the chiefs who made liberty possible to the future of the Greek nation, as it was the prerogative of their ancestors, and such gave an impetus to the future generations."—A. T. Polyzoides.

1822-1823.—Congress of Verona. See VERONA, CONGRESS OF.

1830-1862.—Independent kingdom constituted under Otho of Bavaria.—Dethronement of King Otho.—Election of Prince George of Denmark.—"On February 3d, 1830, a protocol was signed which constituted Greece an independent State; and on the 11th of the same month Prince Leopold of Belgium accepted the crown which was offered to him by the Powers. He, however, soon resigned the honour, giving for his main reason the hopelessness of establishing a Greek kingdom from which Krete, Epeiros, and Thessaly were to be excluded. The northern boundary, as drawn in 1830, stretched from the Gulf of Zeitoun to the mouth of the Aspropotamos, thus depriving Greece of the greater part of Akarnania and Aitolia. After the assassination [by the family of an insurgent chief] of Count Capodistria (who was the popularly elected President of Greece from April 14th, 1827, to October 6th, 1831), and after the Powers had selected Prince Otho [or Otto] of Bavaria for the position declined by Prince Leopold, an arrangement was

concluded between England, France, Russia, and Turkey, whereby the boundary was drawn from the Gulf of Arta to the same termination in the Gulf of Zeitoun. But a few months later the district of Zeitoun, north of the Spercheios, was added to Greece; and the new kingdom paid to the Porte an indemnity of 40,000,000 piastres, or about £460,000. The Powers guaranteed a loan to Greece of 60,000,000 francs, out of which the payment of the indemnity was made; and thus, at last, in the autumn of 1832, the fatherland of the Greeks was redeemed. [See also EUROPE: Modern: Wars of the Great Powers.] Under Otho of Bavaria the country was governed at first by a Council of Regency, consisting of Count Armarsperg, Professor Maurer, and General Heideck. Maurer was removed in 1834, and Armarsperg in 1837; and at the close of the latter

KING OTHO

year, after the trial of another Bavarian as president of the Council, a Greek was for the first time appointed to the principal post in the Ministry. The greatest benefit conferred upon the country by its German rulers was the reinforcement of the legal system, and the elevation of the authority of the law. But, on the other hand, an unfortunate attempt was made to centralize the whole administration of Greece, her ancient municipal rights and customs were overlooked, taxation was almost as indiscriminate and burdensome as under the Turks, whilst large sums of money were spent upon the army, and on other objects of an unremunerative or insufficiently remunerative character, so that the young State was laden with pecuniary liabilities before anything had been done to develop her resources. . . . No national assembly was convened, no anxiety was shown to conciliate the people, liberty of expression was curtailed, personal offence was given by the foreigners, and by Armarsperg in particular; brigandage and piracy flourished, and Greece

began to suffer all the evils which might have been expected to arise from the government of unsympathetic aliens. . . . In addition to the rapid and alarming increase of brigandage by land and piracy by sea, there were popular insurrections in Messenia, Maina, Akarnania, and elsewhere. One of the most capable Englishmen who have ever espoused the cause of the Greeks, General Gordon, was commissioned in 1835 to clear northern Greece of the marauders by whom it was overrun. He executed his mission in an admirable manner, sweeping the whole of Phokis, Aitolia, and Akarnania, and securing the coöperation of the Turkish Pasha at Larissa. Hundreds of brigands were put to flight,—but only to return again next year, and to enjoy as great immunity as ever. . . . In the absence of a strong and active organization of the national forces, brigandage in Greece was an ineradicable institution; and, as a matter of fact, it was not suppressed until the year 1870. Gradually the discontent of the people, and the feebleness and infatuation of the Government, were breeding a revolution. . . . The three Guaranteeing Powers urged on Otho and his advisers the necessity of granting a Constitution, which had been promised on the establishment of the kingdom; and moral support was thus given to two very strong parties, known by the titles of Philorthodox and Constitutional, whose leaders looked to Russia and England respectively. The King and the Government neglected symptoms which were conspicuous to all besides, and the revolution of 1843 found them practically unprepared and helpless. On the 15th of September, after a well-contrived demonstration of the troops, which was acquiesced in and virtually sanctioned by the representatives of the three Powers, King Otho gave way, and signed the decrees which had been submitted to him. The Bavarian Ministers were dismissed, Mavrokordatos was made Premier, a National Assembly was convoked, and a Constitution was granted. For the first time since the Roman conquest, Greece resumed the dignity of self-government. The Constitution of 1844 was by no means an adequate one. It did not fully restore the privileges of local self-rule, and it only partially modified the system of centralization, from which so many evils had sprung. But it was nevertheless a great advance towards popular liberty. . . . The difficulties which arose between Russia and Turkey in 1853, and which led up to the Crimean War, inspired the Greeks with a hope that their 'grand idea'—the inheritance of the dominion of Turkey in Europe, so far as the Greek-speaking provinces are concerned—might be on the eve of accomplishment. . . . The Russian army crossed the Pruth in July, 1853, and preparations were at once made by the Greeks to invade Turkey. . . . The temper of the whole country was such that England and France deemed it necessary to take urgent measures for preventing an alliance between Russia and Greece. In May, 1854, an Anglo-French force was landed at the Peiraios, where it remained until February, 1857. Pressure was thus brought to bear upon King Otho, who was not in a position to resist it. . . . The humiliation of the Greeks under the foreign occupation weakened the authority of the King and his Ministers, and the unhappy country was once more a prey to rapine and disorder. . . . From the year 1850 a new portent began to make itself apparent in Greece. As the insurrection of 1821 may be said to have derived some of its energy from the upheaval of France and Europe in the preceding decades, so the Greek

revolution of 1862 was doubtless hastened, if not suggested, by the Italian regeneration of 1848-1861. . . . On February 13th, 1862, the garrison of Nauplia revolted; other outbreaks followed; and at last, in October, during an ill-advised absence of the Monarch from his capital, the garrison of Athens broke out into open insurrection. A Provisional Government was nominated; the deposition of King Otho was proclaimed; and when the royal couple hurried back to the city they were refused an entrance. The representatives of the Powers were appealed to in vain; and the unfortunate Bavarian, after wearing the crown for thirty years, sailed from the Peiraios never to return. The hopes of the Greeks at once centred in Prince Alfred of England for their future king. . . . But the agreement of the three Powers on the establishment of the kingdom expressly excluded from the throne all members of the reigning families of England, France, Russia; and thus, although Prince Alfred was elected king with practical unanimity, the English Government would not sanction his acceptance of the crown. The choice eventually and happily fell upon Prince George of Denmark. . . . From this time forward the history of modern Greece enters upon a brighter phase."—L. Sergeant, *Greece*, ch. 5.

1846-1850.—Rude enforcement of English claims.—Don Pacifico affair.—"Greek independence had been established under the joint guardianship of Russia, France, and England. Constitutional government had been guaranteed. It had however been constantly delayed. Otho, the Bavarian Prince, who had been placed upon the throne, was absolute in his own tendencies, and supported by the absolute Powers; and France, eager to establish her own influence in the East, . . . had sided with the Absolutists, leaving England the sole supporter of constitutional rule. The Government and administration were deplorably bad. . . . Any demands raised by the English against the Government—and the bad administration afforded abundant opportunity for dispute—were certain to encounter the opposition of the King, supported by the advice of all the diplomatic body. Such questions had arisen, Ionians, claiming to be British subjects, had been maltreated, the boat's crew of a Queen's ship roughly handled, and in two cases the money claims of English subjects against the Government disregarded. They were trivial enough in themselves; a piece of land belonging to a Mr. Finlay [the historian of medieval and modern Greece], a Scotchman, had been incorporated into the royal garden, and the price—no doubt somewhat exorbitant—which he set upon it refused. The house of Don Pacifico, a Jew, a native of Gibraltar, had been sacked by a mob, without due interference on the part of the police. He demanded compensation for ill-usage, for property destroyed, and for the loss of certain papers, the only proof as he declared of a somewhat doubtful claim against the Portuguese Government. Such claims in the ordinary course of things should have been made in the Greek Law Court. But Lord Palmerston, placing no trust in the justice to be there obtained, made them a direct national claim upon the Government. For several years, on various pretences, the settlement of the question had been postponed, and Palmerston had even warned Russia that he should some day have to put strong pressure upon the Greek Court to obtain the discharge of their debts. At length, at the close of 1849, his patience became exhausted.

Admiral Parker, with the British fleet, was ordered to the Piræus. Mr. Wyse, the English Ambassador, embarked in it. The claims were again formally laid before the King, and upon their being declined the Piræus was blockaded, ships of the Greek navy captured, and merchant vessels secured by way of material guarantee for payment. The French and the Russians were indignant at this unexpected act of vigour." The Russians threatened; the French offered mediation, which was accepted. The French negotiations at Athens had no success; but at London there was promise of a friendly settlement of the matter, when Mr. Wyse, the English Minister at the Greek Court, being left in ignorance of the situation, brought fresh pressure to bear upon King Otho and extorted payment of his claims. The French were enraged and withdrew their Minister from London. "For the time, this trumpery little affair caused the greatest excitement, and, being regarded as a typical instance of Lord Palmerston's management of the Foreign Office, it formed the ground of a very serious attack upon the Government."—J. F. Bright, *History of England*, period 4, pp. 200-203.—See also ENGLAND: 1849-1850.

1862.—Annexation of Ionian islands. See IONIAN ISLANDS: 1815-1862.

1862-1881.—Cretan struggle and defeat.—Greek question in the Berlin Congress.—Small cession of territory by Turkey.—"The annexation of the Heptanessos [the seven (Ionian) islands] was a great benefit to Hellas. It was not only a piece of good fortune for the present but an earnest of the future. . . . There still remained the delusion of the Integrity of the Turkish Empire; but the Christians of the East really cannot believe in the sincerity of all the Powers who proclaim and sustain this extraordinary figment, any more than they are able to fall a prey to the hallucination itself. The reunion of the Heptanessos with the rest of Hellas was therefore regarded as marking the beginning of another and better era—a sanction to the hopes of other reunions in the future. The first of the Hellenes who endeavoured to gain for themselves the same good fortune which had fallen upon the Ionians were again the Cretans. They defied Turkey for three years, 1866-7-8. With the exception of certain fortresses, the whole island was free. Acts of heroism and sacrifice such as those which had rendered glorious the first War of Independence, again challenged the attention of the world. Volunteers from the West recalled the Philhellenic enthusiasm of old days. The Hellenes of the mainland did not leave their brethren alone in the hour of danger; they hastened to fight at their side, while they opened in their own homes a place of refuge for the women and children of the island. Nearly 60,000 fugitives found protection there. For a while there was room for believing that the deliverance of Crete was at last accomplished. Russia and France were favourably disposed. Unhappily the good-will of these two Powers could not overcome the opposition of England, strongly supported by Austria. Diplomacy fought for the enslavement of the Cretans with as much persistence and more success than those with which it had opposed the deliverance of Greece. . . . [Crete was finally joined to Greece in 1913.] The islanders obtained by their struggle nothing but a doubtful amelioration of their condition by means of a sort of

charter which was extracted from the unwillingness of the Porte in 1868, under the name of the 'Organic Regulation.' This edict . . . [was never] honestly put in force. However, even if it had been carried out, it would not have been a settlement of the Cretan question. The Cretans have never concealed what they want, or ceased to proclaim their intention of demanding it until they obtain it. At the time of the Congress of Berlin they thought once more that they would succeed. They got nothing but another promise from the Porte 'to enforce scrupulously the Organic Regulation of 1868, with such modifications as might be judged equitable.' . . . We do not know why Hellas herself remained so long with her sword undrawn during the Russo-Turkish War—what promises or what threats held her back from moving when the armies of Russia, checked before Plevna, would have welcomed a diversion in the West, and when the Hellenic people both within and without the Kingdom were chafing at the do-nothing attitude of the Government of Athens. Everyone in Greece felt that the moment was come. The measures taken by hordes of Bashi-Bazooks were hardly sufficient to repress the insurrection which was ready in all quarters, and which at length broke out in the mountains of Thessaly. . . . It was only at the last moment, when the war was on the point of being closed by the treaty which victorious Russia compelled Turkey to grant at San Stefano, that the Greek Government, under the Presidency of Koumoundouros, yielded tardily to the pressure of the nation, and allowed the army to cross the frontier. It was too late for the diversion to be of any use to Russia, and it could look for no support from any other Government in Europe. This fact was realized at Athens, but men felt, at the same time, that it was needful to remind the world at any price that there is a Greek Question connected with the Eastern Question. The step was taken, but it was taken with a hesitation which betrayed itself in act as well as in word. . . . Diplomacy saw the danger of the fresh effluvia which the armed intervention of Greece was capable of kindling. The utmost possible amount of pressure was therefore brought to bear upon the Government of Athens in order to induce it to retrace the step, and in the result an order was obtained to the Greek Commander-in-Chief to recross the frontier, upon the solemn assurance of the great Powers 'that the national aspirations and interests of the Greek populations should be the subject of the deliberations of the approaching Congress.' . . . On July 5, 1878, the Congress accepted the resolution proposed by the French plenipotentiary, 'inviting the Porte to come to an understanding with Greece for a rectification of the frontiers in Thessaly and Epiros, a rectification which may follow the valley of the Peneus upon the Eastern side, and that of the Thyamis (or Kalamas) upon the Western.' In other words, they assign to Hellas the whole of Thessaly and a large part of Epiros. Notwithstanding the abandonment of the island of Crete, this was some satisfaction for the wrongs which she had suffered at the delimitation of the Kingdom. [See also BERLIN, CONGRESS OF.] . . . But the scheme suggested by the Congress and sanctioned by the Conference of Berlin on July 1, 1880, was not carried out. When Turkey found that she was not confronted by an Europe determined to be obeyed, she refused to submit. And then the Powers, whose main anxiety was peace at any price, instead of insisting upon her compliance, put upon Hellas all the pressure which

they were able to exercise, to induce her to submit the question of the frontiers to a fresh arbitration. . . . Hellas had to yield, and on July 2, 1881, three years after the signing of the famous Protocol of Berlin, she signed the convention by which Turkey ceded to her the flat part of Thessaly and a small scrap of Epiros."—D. Bikelas, *Seven essays on Christian Greece*, essay 6.—See also CRETE: 1800-1913.

1864-1893.—Government under the constitution.—"By November 28th [1864] the revision of the Constitution was completed. . . . The Senate was abolished and the single chamber system established. It is true that in the Greece of that day the elements were wanting which elsewhere render a First Chamber or Senate necessary for safeguarding hereditary conservative interests—as, for instance, the House of Lords in England—but the single chamber system nevertheless lay open to so many dangers that Koumoundouros, Zaimis, and, above all, the King himself, strove to the last to preserve the institution of the Senate, which had existed since 1843. The opponents of the single chamber regarded it as a doubtful honour for Greece to be the first monarchy to frame its Constitution on a basis of the most thoroughgoing radicalism. By 211 votes out of 274 the Senate was buried for ever. It mattered little that at the same time—as a sort of compensation—a Council of State was established, whose function it was to revise and criticise every bill that was introduced; for this institution was abolished as early as November 20th, 1865. . . . King George reigned entirely by parliamentary methods, and only used pressure to a very slight extent: but twice it happened—in 1866 and 1875, when the debates of the Chamber assumed a character little suited to the dignity of the country—that the King on his own initiative dismissed the representatives and invited the nation to elect new ones. [Under the constitution the king has the right to dissolve the Chamber, and also dismiss Ministers and officials.] And when, in 1892, Delyannis persisted in his disastrous financial policy, King George again stepped in and without hesitation dismissed the Minister. Of course it is possible to subject the Greek Constitution to much well-founded criticism; but the country has accepted it and lived under it for half a century, and the Greeks have never wished it altered. Keeping rigidly to its provisions King George won his spurs as a constitutional monarch."—W. Christmas, *King George of Greece*, pp. 71-73.—"Before King Otho there were 4 administrations; under his rule 24 (13 before the Constitution was granted and 11 after), 10 in the interregnum, and 42 under King George. This gives 70 administrations in 62 years, or about one every 10½ months, or, deducting the two kingless periods, 56 administrations in 60 years—that is, with an average duration of nearly 13 months. . . . It should also be stated that there has been a distinct tendency to greater Ministerial longevity of late years in Greece. Under King Otho there were seven Parliaments in 18 years, which allows 2 years and 7 months for each Parliamentary period. Under King George there . . . were 13 in 28 years, or with a life of 2 years and 2 months each."—R. A. H. Bickford-Smith, *Greece under King George*, ch. 18.—See also GREECE, CONSTITUTION OF.

1878.—Map showing extent of territory. See BALKAN STATES: 1913.

1882-1895.—Premiership of Trikoupis.—Reforms.—Crisis of 1886.—Ministerial changes.—"In 1882 there had come into power Charilaos

Trikoupis, one of the two great statesmen whom modern Greece has produced. With brief intervals Trikoupi remained at the head of affairs until 1895. Trikoupi had served a long apprenticeship to diplomacy in England, and had naturally seen much of English public life when, in an administrative sense, that life was perhaps at its best. No man was better qualified to introduce into the politics of his own country the qualities so sadly lacking: financial honesty and economy, with a high sense of public duty. In the years between 1882 and 1894 he did much to improve the financial and social condition of Greece; order was introduced into the public service, and foreign capital, desperately needed for the development of the material resources of the country, was slowly but steadily attracted. The crisis of 1885-6 unfortunately coincided, however, with one of the brief intervals of power enjoyed by his rival Theodore Delyannis. Delyannis, oblivious of the paramount necessity of husbanding the resources of Greece, came in on the cry of a spirited foreign policy. Bulgaria had acquired Eastern Roumelia; Serbia was making a bid—though an unsuccessful one—for an equivalent; Greece could not afford to be left behind. The army and fleet were mobilized, and several collisions occurred between Turkish and Greek forces on the frontier. But the Powers, strongly adverse to a reopening of the Eastern Question on a large scale, called upon Greece to disarm. When Greece declined the Powers, despite the refusal of France to cooperate, established a blockade. The excitement on the mainland spread to Crete, where the Christians proclaimed their union with the kingdom. Thanks, however, to the presence of the European fleets things went no further. Delyannis was forced to resign; Trikoupi came back to power, and did his best to restore order at home and confidence abroad. In 1889, at the instance of the Porte, he persuaded the Cretans to acquiesce in the Turkish occupation of certain fortified places in the island, an act of complaisance characteristically rewarded by an abrogation of the Pact of Helépa. This gross breach of faith on the part of the Sultan not only evoked the liveliest indignation in the island, but fatally undermined the position of Trikoupi in the kingdom. In October, 1890, Delyannis came back to power, only, however, to give way again in 1892 to Trikoupi, who was recalled by the king, in the hope of averting national bankruptcy. Even he proved unequal to the task without recourse to a scaling down of interest on the debt, and when he ultimately resigned in 1895 Greece appeared to be plunging headlong towards financial ruin."

—J. A. R. Marriott, *Eastern question*, pp. 333-334.

—Trikoupi was succeeded by Delyannis.

1895-1902.—**Changing ministries.**—Delyannis, who had done able work in restoring order in Crete in 1896, was forced to resign in the spring of 1897 after the disastrous campaigns in the early part of the war with Turkey. He was succeeded by Rhallis, who invoked the mediation of the powers after withdrawing the army from Crete. The terms agreed to by the powers were rejected by Rhallis; the chamber however refused him a vote of confidence and the king summoned Zaimis to power in October. In April, 1899, Zaimis gave way to Theotokis, the chief of the Trikoupiist party, but was again head of the ministry in 1901. A year later he was beaten at the December elections and was succeeded by Delyannis.

1905.—**Assassination of Delyannis.**—**Successors.**—Theodoros Delyannis, the premier of Greece, was assassinated on June 13, 1905, by a revengeful gambler whose place had been closed by the police. A new ministry formed by Rallis conducted the government until December, when its defeat in the election of a president of the representative assembly forced a resignation. It was succeeded by a cabinet formed under Theotokis, the leader of the Opposition.

1909.—**Government dominated by military league.**—**Submission to dictatorship.**—Whatever vitality may previously have animated the forms of constitutional government in Greece was extinguished suddenly in July, 1909, by a demonstration of the power of a league of army officers to give orders to it. The military league was backed, evidently, by a strong popular feeling against the government, partly well-founded, perhaps, but largely due to an unreasoning desire for rash undertakings to secure the annexation of Crete. The revolution in Turkey had stimulated this by seeming to open opportunities for breaking the island away from the claimed sovereignty of the Turks. What Bulgaria had been able to do in the situation for herself, and what Austria had done in annexing Bosnia and Herzegovina, it must be that the powers which held Crete in commission, so to speak, could do for Greece, in the present state of things, if Greece had a competent government to deal with affairs. This seems to have been the feeling, to a large extent, which produced the military league and the popular threatenings whereby the ministry of Theotokis was impelled to resign office on July 17. The new cabinet constructed by the king, under Rallis, held the semblance of power a little more than a month, and then had to choose between dropping it and taking orders from the league. When it hesitated, and ventured an arrest of several leaders of the military combination, the latter, in a body, to the number of over 500, with about 2,000 of the men of their commands, took possession of a hill outside of Athens, on August 27, and established there a menacing camp. "They then sent an ultimatum to Ralli, who had become Prime Minister since the April episode, demanding the instant removal of the Commander-in-Chief and the other Princes. Reorganisation of the Army and Navy was also demanded 'so that Greece would not have to undergo any more humiliation.' These humiliations included a Turkish ultimatum; the enforced renunciation of Macedonian aims and the continued 'slavery' of Crete were keenly felt. Ralli refused to accept the order of the officers and immediately went out of office. M. Mavromichalis succeeded him. Colonel Lapathiotis, one of the ablest men asso-

ciated with the Military League, was appointed Minister for War on August 31. A *coup d'État* had taken place. The Military League was determined to rid the Greek Army of the incompetent Princes. The Crown Prince had proved himself to be useless as a military commander in the war of 1897; since that disastrous conflict there was no evidence to show that he had become a competent leader. His brothers' proficiency in arms was inconsiderable. The grievances of the Military League were both real and justifiable. Added to these grievances, the League members had arrayed against them a hardy band of professional politicians, who valiantly resisted the demand for the Princes' enforced retirement. A military dictatorship nearly came into being in October. King George contended in secret that the whole movement was anti-dynastic and not a *bona fide* demand for reform. This view was incorrect. When a Bill had been introduced into the Chamber to remove the Princes from the Army, they hurriedly resigned their commands. The position of King George owed its importance to his close ties with other reigning families. These dynastic ties were useful to Greece. . . . The King's nominal authority was limited by the Greek Constitution, he was jealous of his own pre-eminence in the affairs of the kingdom. It has even been said that he never allowed a promising political leader to become too powerful. Trikoupis, a man of extraordinary gifts, caused him anxiety in this respect. But Trikoupis was handicapped by a custom which weakens the authority of Prime Ministers. . . . No doubt, the Greek Princes felt that they had some strong supporters in Greece when they clung so tenaciously to the Army commands, in defiance of the Military League. But it was obviously not a case or a time for tenacity. The King permitted the Princes to hold their ground too long."—S. B. Chester, *Life of Venizelos*, pp. 126-128.—"Internally, the crisis in which the Military League arose was at the bottom an economic crisis, due to normal growth. The Kingdom of Greece could not support its population by agriculture. As long as the country's finances were under international control and its administrative system undermined by the sterile strike of political factions, it could not be expected that industrial development would take care of the excess population. The most virile element was emigrating to America. As for shipping, the mainstay of Greece's prosperity, the Young Turk Revolution, culminating in the boycott, was threatening irreparable disaster. Until Greece was strong enough, by reforming and developing her own military and naval resources and by making alliances with her neighbors, to bring Turkey to book, there was little hope of remedying the ills of which Greece was suffering. And in the background loomed the greatest question of all, the redemption of Hellas through the regeneration of the Kingdom of Greece."—H. A. Gibbons, *Venizelos*, p. 88.—"The troubles connected with Army administration extended to the Navy, although in a lesser degree. On October 29, Commander Typaldos, a naval officer identified with the Military League, started a mutiny and with several destroyers attacked three Greek ironclads, the *Hydra*, the *Spetsae*, and the *Psara*. The crews of the large vessels remained at their posts during the engagement which followed. Shore batteries were brought into action, and for a brief moment excitement ran high. Then Typaldos made off. The Prime Minister and the Military League, fortunately, held together, after an interchange of opinions. Thus the mutiny was soon

only remembered as a fiasco. The situation, nevertheless, remained very unsatisfactory as a whole. The Military League would have been glad to see Venizelos set up as Prime Minister. Indeed, after the exploit of August 28, the League actually invited him to come to Greece to assume control of affairs, but he excused himself on the ground that his presence was required in Crete. Mavromichalis retained office as a buffer between the Crown and the League. On December 22 there was a students' demonstration in Athens in favour of a military dictatorship. The following day, Colonel Lapathiotis, who, as we know, had become Minister for War at the instigation of the Military League, was thrown out of office by his own supporters. That was because he had been discovered in the act of gazetting promotions on his own initiative, without first consulting his masters."—S. B. Chester, *Life of Venizelos*, p. 128.

1909 (July).—Earthquake in Elis.—In July, 1909, an earthquake occurred in Elis accompanied by volcanic eruptions near Ponthioti. The loss of life was estimated at thirty. Four hundred houses were destroyed.

1910.—Agreement to restore constitutional régime.—Venizelos.—The dismissal of Colonel Lapathiotis emboldened the party in the chamber which followed the lead of ex-Premier Rallis to make some show of an independent opposition, and provoked thereby the most arrogant reminder yet given of the dictatorial power of the military league. On January 2, 1910, two officers from the league appeared in the chamber, bearing letters addressed to the prime minister and to the two leaders of Opposition parties, M. Rallis and M. Theotokis, requiring the chamber to pass twenty-seven specified measures, besides the pending budget, and requiring the government to recall its diplomatic representatives from Paris, Berlin, Vienna, and Rome. The messengers announced that they would return at 2 P. M. for a reply, and when they did so they were assured that the commands received would be obeyed. A few hours later the premier received a fresh mandate to dismiss his minister of the interior. On this, he and his colleagues attempted to resign, but were so entreated by the king to remain and submit to the humiliating situation, rather than bring the country to a state of complete political wreck, that they did so, excepting the minister of the interior, who withdrew. In the succeeding four weeks, negotiations appear to have been effected between the league and the leaders of political parties, with the result announced as follows in a telegram from Athens to the American press, January 28: "An agreement was reached to-day by the Theotokis party, the Rallis party, and the military League to convoke the National Assembly for a revision of the Constitution, with the condition that the league shall first be dissolved. The powers of the National Assembly will be limited as to the sections of the Constitution to be revised, and no interference with the royal prerogatives will be permitted." King George assented to the proposed convocation of a National Assembly for the revision of the constitution, though the existing constitution would be violated by the method of procedure to be taken, since the choice seemed to lie between this and a complete wreckage of constitutional government. A Cretan leader, Venizelos, of high reputation for political sagacity, came to Athens on invitation and conducted a settlement of the affair with apparent success. The Mavromichalis ministry gave way to another, formed under Dragoumis;

a program of constitutional changes to be laid before the contemplated National Assembly was agreed upon; the election of the Assembly was appointed for August, 1910, and its meeting for September, and the dissolution of the military league was pledged. Venizelos, the newly appointed premier was born in Crete, and as a youth "carried out his classical studies at the Lycées of Athens and Syra, subsequently proceeding to the law course of Athens University. . . . In 1887, became a doctor of laws. He returned to Canea and practised as an advocate until 1895. It seemed that he was a political leader almost from the moment of his return. Venizelos made his European *début* in the Cretan insurrection which led to the emancipation of his native island. In 1909 he was offered the leadership of the Greek Liberals. He left Crete for Athens, and in 1910 became the Hellenic Prime Minister. His rise was predicted more than ten years earlier by M. Clémenceau . . . [and later statesmen have given the following high estimate of him]. Prince Lichnowsky has said that 'M. Venizelos was certainly the most distinguished personality' at the Balkan Conference held in London in the winter of 1912-1913. . . . The later Baron von Wangenheim, German Minister at Athens in 1912 and subsequently Ambassador at Constantinople, ranked Venizelos as supreme among European statesmen. President Wilson was said to have placed Venizelos first in point of personal ability among all the delegates gathered together in Paris to settle the terms of Peace in 1919. [See also below: 1918-1920.] King Constantine, a most implacable personal enemy, is reported to have said of Venizelos, 'What he is with me I confess that his arguments are so convincing that I quickly begin to imagine that they are my own.'—S. B. Chester, *Life of Venizelos*, pp. 4-6.

ALSO IN: H. A. Gibbons, *Venizelos*.

**1911.—Changes in Constitution.—Internal reforms of Venizelos.**—Following the appointment of Venizelos as premier in October, 1910, and his victory in the December elections, where he won 300 out of 364 seats, the Revisionary Chamber met in January. The chief changes in the constitution were that "the Council of State, a prebouléutic body, was revived; soldiers were declared ineligible for seats in the Boulé; the quorum of the Boulé was reduced to one-third; and elementary education was made both compulsory and gratuitous."—J. A. R. Marriott, *Problem of the Near East* (*Edinburgh Review*, Jan., 1916).—"During the period of more than a year, for which the double Parliament lasted, a great deal of most salutary and urgent legislation was accomplished under M. Venizelos's guidance. Of this, perhaps the most striking was the amendment of the criminal law. One of the most successful changes was the lenient treatment held out to cattle thieves if they voluntarily surrendered to the authorities. These had been a regular pest, and had infested the frontiers of Epirus and Thessaly. The alteration in the law had an almost immediate effect, and within a year the cattle thief had become a *rara avis*. M. Venizelos also introduced the more stringent execution of severe criminal sentences. Murderers condemned to death were practically never executed, and they were frequently allowed to be at large after a few years. M. Venizelos began by ordering the prompt execution of some thirty murderers who had been condemned to death but who were still alive in prison. The stricter measures adopted caused the dignity of the criminal tribunals to be advanced, and a reduction in the worst forms of crime was

soon noticeable. During this time also the reformation of some of the branches of the public service were taken in hand: French and British missions were brought to Athens for the Army and Navy respectively; and as the Italian had been notably successful in organizing the Cretan Gendarmerie, M. Venizelos brought an Italian mission to reform the Greek police. The Italians have scarcely been so successful in Greece as they were in Crete."—D. J. Cassavetti, *Hellas and the Balkan Wars*, p. 20.

**1912.—Formation of the Balkan League.—Importance of Venizelos in its inception.** See **BALKAN STATES: 1912: Balkan League.**

**1912.—Greco-Bulgarian alliance.—Preparations for war.—Attitude of Venizelos.**—"On May 29 the Greco-Bulgarian treaty was signed at Sophia by Gueshoff and the Greek ambassador, both declaring that the two kingdoms firmly desired peace. The document states that this object can best be reached by a defensive alliance, by the creation of political equality among the different nationalities in Turkey, and by the careful observation of treaty rights. To this end the two nations would co-operate to promote correct relations with the Porte and to consolidate the good will already existing between Greeks and Bulgarians in Turkey. Furthermore, the two powers agreed that if either was attacked by Turkey, they would aid each other with their entire forces, and conclude peace only by reciprocal agreement. Both states were to use their influence to the uttermost with their kindred populations in Macedonia for securing a peaceful solution of their previous animosities, and offer active reciprocal assistance in order that they might conjointly impress on Turkey and the great powers alike the importance of such representations as were made to assure the performance of treaty obligations. The treaty was to run for three years, and for a fourth unless denounced six months in advance, and must be kept absolutely secret between the two contracting parties. Bulgaria would not intervene in the settlement of the Cretan question, and would remain neutral should war break out between Greece and Turkey regarding the admission of Cretan delegates to the Greek parliament. To all outward appearance, this compact appeared pacific in its intentions, being not merely defensive, but containing the pledge that both states would avoid aggression or provocation and would bring pressure upon their kinsfolk within the Ottoman empire to live peacefully with each other and with their Turkish fellow subjects. Its aim appears to have been the exertion of efficient diplomatic pressure at Constantinople and in the capitals of Western Europe."—W. M. Sloane, *Balkans*, pp. 197-198.—"King George himself was a ruler of large experience, of great practical wisdom, and of fine diplomatic skill. He had shortly before selected as prime minister the former Cretan insurgent, Mr. Eleutherios Venizelos. It is significant that the new premier had also taken the War portfolio. He foresaw the impending conflict—as every wise statesman in Europe had foreseen it—and began to make preparations for it. For the reorganization of the army and navy he secured French and English experts, the former headed by General Eydoux, the latter by Admiral Tufnel. By 1914, it was estimated that the military and naval forces of the country would be thoroughly trained and equipped, and war was not expected before that date. But now in 1912 the hand of the Greek government was forced. And a decision one way or the other was inevitable. Mr. Venizelos had already proved himself an

agitator, an orator, and a politician. He was now to reveal himself not only to Greece but to Europe as a wise statesman and an effective leader of his people. The first test came in his answer of the invitation to join Bulgaria and Serbia within three days in a war against Turkey. Of all possibilities open to him Mr. Venizelos rejected the programme of continued isolation for Greece. There were those who glorified it as splendid and majestic: to him under the existing circumstances it seemed stupid in itself and certain to prove disastrous in its results. Greece alone would never have been able to wage a war against Turkey. And if Greece declined to participate in the inevitable conflict, which the action of the two Slav states had only hastened, then whether they won or Turkey won, Greece was bound to lose. It was improbable that the Ottoman power should come out of the contest victorious; but, if the unexpected happened what would be the position, not only of the millions of Greeks in the Turkish Empire, but of the little kingdom of Greece itself on whose northern boundary the insolent Moslem oppressor, flushed with his triumph over Bulgaria, Serbia, and Montenegro, would be immovably entrenched? On the other hand, if these Christian states themselves should succeed, as seemed likely, in destroying the Ottoman Empire in Europe, the Kingdom of Greece, if she now remained a passive spectator of their struggles, would find in the end that Macedonia had come into the possession of the Victorious Slavs, and the Great Idea of the Greeks—the idea of expansion into Hellenic lands eastwards towards Constantinople—exploded as an empty bubble. It was Mr. Venizelos's conclusion that Greece could not avoid participating in the struggle. Neutrality would have entailed the complete bankruptcy of Hellenism in the Orient. There remained only the alternative of co-operation with Turkey or co-operation with the Christian states of the Balkans."—J. G. Schurman, *Balkan Wars*, pp. 37-39.

1912-1913.—First Balkan War: Causes.—Invasion of Macedonia.—Siege of Salonika.—Blockade of Turkish ports.—Treaty of London, May 30, 1913.—Acquisition of Crete. See BALKAN STATES: 1912: First Balkan War; 1912-1913; TURKEY: 1912-1913; CRETE: 1800-1913; SALONIKA: 1912-1913.

1913.—Assassination of King George.—Accession of Constantine.—"In the midst of these Greek triumphs a terrible tragedy suddenly saddened the whole Hellenic world. After the capitulation of Salonika, King George had established his headquarters there, standing guard as a sentinel over that coveted conquest. On March 18, he went out, attended by a single aide-de-camp, to take his usual afternoon walk, talking with his customary affability to the people. On his way home, at a spot where two streets met, a badly-dressed man fired two shots at him from a revolver. The King fell speechless against the table of an adjoining shop, whence he was carried to a hospital, and there expired without uttering a single word. The assassin, who was immediately seized by two Cretan policemen, turned out to be a Greek named Schinas, to whom the late King had once refused money. . . . The new King, whom many wished to call Constantine XII, thereby regarding him as the successor of the last Byzantine Emperor, mounted the throne with the laurels of Salonika and Joannina fresh upon him. His triumphs on the field of battle, added to the fact that he was the first sovereign of modern Greece born in that country, invested him with an immense popularity, while the tragic circumstances of his father's

death won for him sympathy everywhere."—W. Miller, *History of the Greek people*, pp. 140-142.

1913.—Second Balkan War.—Policy and defence of Venizelos.—Gains of Greece in the two wars.—"How near Greece was to an alliance with Turkey the world may never know. At the time nothing of the sort was even suspected. It was not until Turkey had been overpowered by the forces of the four Christian states and the attitude of Bulgaria towards the other three on the question of the division of the conquered territories had become irreconcilable and menacing that Mr. Venizelos felt it proper to communicate to the Greek people the history of the negotiations by which the Greek government had bound their country to a partner now felt to be so unreasonable and greedy. Feeling in Greece was running high against Bulgaria. The attacks on Mr. Venizelos's government were numerous and bitter. He was getting little or no credit for the victory that had been won against Turkey, while his opponents denounced him for sacrificing the fruits of that victory to Bulgaria. The Greek nation especially resented the occupation by Bulgarian troops of the Aegean coast lands with their large Hellenic population which lay between the Struma and the Mesta including the cities of Seres and Drama and especially Kavala with its fine harbor and its hinterland famed for crops of choice tobacco. It was on the fourth of July, 1913, a few days after the outbreak of the war between Bulgaria and her late allies, that Mr. Venizelos made his defence in an eloquent and powerful speech at a special session of the Greek parliament. The accusation against him was not only that during the late war he had sacrificed Greek interests to Bulgaria but that he had committed a fatal blunder in joining her in the campaign against Turkey. His reply was that since Greece could not stand alone he had to seek allies in the Balkans, and that it was not his fault if the choice had fallen on Bulgaria. He had endeavored to maintain peace with Turkey. Listen to his own words: 'I did not seek war against the Ottoman Empire. I would not have sought war at a later date if I could have obtained any adjustment of the Cretan question—that thorn in the side of Greece which can no longer be left as it is without rendering a normal political life absolutely impossible for us. I endeavored to adjust this question, to continue the policy of a close understanding with the neighboring empire, in the hope of obtaining in this way the introduction of reforms which would render existence tolerable to the millions of Greeks within the Ottoman Empire.'"—*Ibid.*, pp. 39-42.—"Bulgaria was forced to accept on August 10 [1913] the third treaty of Bucharest, after a diplomatic struggle for Kavalla, with its port and famous tobacco-plantations. On this point King Constantine's insistence received unexpected support from the German Emperor, who later did not fail to claim gratitude for this service. The Greek eastern frontier started from the mouth of the Mesta, thus leaving Xantho to Bulgaria, but securing Kavalla, and Bulgaria formally abandoned any claims that she might have raised under the treaty of London to Crete. Despite Russian advocacy of a Bulgarian Kavalla and Austrian dislike of an enlarged Serbia, all the Powers acquiesced in this, the first experiment of a Balkan settlement made by Balkan statesmen. Greece and Serbia agreed to the partition of their conquests, and a Greco-Turkish treaty on November 14 was the last of these instruments. Greece emerged from the Balkan wars with her territory increased from 25,014

square miles to 41,933, and with her population augmented from 2,631,952 at the census of 1907, and about 2,765,000 in 1912, to about 4,821,300 in 1914. While not a single mile of railway existed in Epeiros, she acquired in Macedonia 385 miles of line, thus making her total mileage 1,371; it required the construction of only 56 miles between Papapouli and Gida to link 'Old' with 'New' Greece by rail—a work completed on May 8, 1916. The dream of Otho had been realized, all Southern Macedonia, most of Epeiros, Crete, Samos and all the islands, except Tenedos, Imbros, Kastellorizon and the thirteen Sporades occupied by the Italians were included in the Greek kingdom. . . . 'New' Greece, with a large access of Hellenic blood, brought a small number of Albanians, a solid mass of Spanish Jews (mainly from Salonika), and still bigger contingents of Koutzo-Wallachs, Turks and Slavs. Subsequent events have shown that politically and, in a less degree, economically, 'Old' and 'New' Greece do not think alike, while the relations of the Piræus and Salonika somewhat resemble those of Venice and Trieste. . . . For administrative purposes, they were divided temporarily into four general administrations and permanently into fourteen provinces (five in Macedonia, two in Epeiros, four in Crete and three in the other islands), making thirty in all for the whole kingdom, to which they have not yet been ecclesiastically subordinated."—W. Miller, *History of the Greek people*, pp. 143-145.—See also BALKAN STATES: 1913; 1913-1914; SALONIKA: 1913.

ALSO IN: J. A. R. Marriott, *Problem of the Near East* (*Edinburgh Review*, Jan., 1916).

1913-1914.—Florence Protocol.—War with Turkey threatened.—"There remained to be settled by the Great Powers the questions of Albania and the Ægean Islands. Commissioners were appointed to delimit the Albanian frontiers, and the 'Florence Protocol' of December 17, 1913, assigned to Albania Northern Epeiros, including the two important towns of Argyrokastron and Koritsa, the port of Santi Cheimarra—all places captured by the Greeks during the first Balkan war—together with the islet of Saseno in the bay of Valona, which had been Greek since 1864. A note of the Powers on February 13, 1914, made the definite recognition of Greek sovereignty over the captured islands contingent upon the previous evacuation of this territory. . . . In June, 1914, Greece seemed on the brink of another war with Turkey. The Germans prompted the willing Turks to deport the Greek population, which from the dawn of history had inhabited the coast of Asia Minor, for the Greek traders were an obstacle alike to German expansion and Turkish centralization. . . . Greeks were boycotted; foreign firms were asked to dismiss their Greek employees; and an occasional massacre, as at Phocæa, lent point to the statement made by a Turkish diplomatist that 'if Greece does not restore the islands, we will persecute the Greeks in Turkey.' Briefly, the Asiatic Greeks were to be treated like the Armenians. . . . Venizelos protested strongly against the expulsion of 30,000 Greeks, adding that the Greek Government would not be responsible for the consequences, unless this persecution ceased, and purchased two American battleships. . . . The Turks, as usual, yielded to the argument of force, the Grand Vizier arranged to meet M. Venizelos, and their meeting was only prevented by the outbreak of the European war."—W. Miller, *History of the Greek people*, pp. 148-149.

1913-1914.—Renunciation of claims to northern Epirus.—Revolution and union with Greece.

1914.—Neutrality at the opening of the World War.—Officers from Germany and the allies.—"M. Venizelos was at Munich on this business when the news of the Austrian ultimatum to Serbia reached him. Greece was bound to Serbia by the treaty of alliance, signed in 1913 [see SERBIA: 1900-1913], and her Premier, interrogated by his Serbian colleague, replied that, 'while reserving his opinion on the application of the treaty in the event of an armed conflict between Austria and Serbia,' Greece would stand by her ally in case Bulgaria should attack the latter. He added to M. Streit, his Foreign Minister, that 'at no price should Greece be induced to enter the camp opposed to Serbia.' Thus, at the outset, the Premier clearly and unmistakably defined his policy. The position of Greece was difficult. She had only a year earlier emerged with considerable losses in men from the two Balkan wars; she had just been on the verge of war with Turkey, and the Premier confessed that he dreaded the possibility of a Turko-Bulgarian coalition against her, the Turks taking the islands and the Bulgars Macedonia. His own sympathies and convictions in the general European struggle were whole-heartedly with the Allies; they were the protecting Powers of Greece, while Germany had been the power behind Turkey; and in those early days, before the labours of the German propaganda and the undiplomatic blunders of the Allies at Athens, the Greek people was not Germanophil. . . . [King Constantine rejected the German offer to join the Central Empires in the following terms:] 'The Emperor knows that My personal sympathies and My political opinions draw Me to His side. I shall never forget that it is to Him that we owe Kavalla. After ripe reflexion it is, however, impossible for Me to see how I could be useful to Him, if I mobilized My army immediately. The Mediterranean is at the mercy of the united British and French fleets. They would destroy our navy and merchant marine, they would take our islands, and above all they would prevent the concentration of My army, which can be effectuated only by sea, since a railway does not yet exist. Without being able to be in any way useful to Him, we should be wiped from the map. I am forced to think that neutrality is imposed upon us, which could be very useful to Him, with the assurance that we will not touch His friends among My neighbours, as long as they do not touch our local Balkan interests.'—W. Miller, *History of the Greek people*, pp. 150-152.—"By this refusal the Greco-Serbian treaty of alliance of May 19, 1913, remained intact; but construed by the Greek Government as applicable only to Balkan warfare, it was not called into play."—P. Hibben, *Constantine I and the Greek people*, p. 10.—"The Premier, however, realized, after Turkey's acquisition of the German vessels, *Goeben* and *Breslau*, that sooner or later she might attack Greece, and he, therefore, wished to fight her with the help of the Allies, declaring that if Turkey went to war against them, Greece 'should put all her forces at their disposal, on condition of being guaranteed against the Bulgarian peril.' The British Government, in recognition of this attitude, told him that the British fleet would not allow the Turkish fleet to leave the Dardanelles, even for the exclusive purpose of attacking Greece, and allowed the Greek troops to re-occupy Northern Epeiros. The King, however, . . . [informed] Admiral Kerr that Greece would not go to war against Turkey, un-

less Turkey first attacked her. Thereupon M. Venizelos resigned [September, 1914], but his resignation was not accepted. Col. Metaxas, 'the little Moltke' of Greece, was authorized to submit to the British Authorities a plan for taking the Dardanelles. Their rejection of this plan, by wounding his professional vanity, made him, already German by education, Germanophil in politics."—W. Miller, *History of the Greek people*, pp. 152-153.—On the other hand Constantine's policy is thus defined by one of his defenders: "Prime Minister Venizelos, . . . had already shown himself disposed to make concessions to . . . Bulgaria. The first point of difference between the Greek premier and his sovereign was upon this head. The king, a trained soldier, preferred to regard Turkey and Bulgaria as the potential enemies of Greece their policy had shown them, and to bend every energy to assure his army sufficient support from western Europe to drive a war with them to a definite, final conclusion. His plan was not to treat with Turkey and Bulgaria, but to defeat them, break the power of Turkey in Europe forever, and limit Bulgaria to the comparatively scant confines of the territory actually inhabited in majority by Bulgarians."—P. Hibben, *Constantine I and the Greek people*, pp. 15-16.—"Meanwhile, however, the Entente powers under the threat of a second Austrian invasion of Serbia, finally summoned Greece in October, 1914, to apply the Greco-Serbian treaty and come to the aid of her ally in the struggle against Austria. It was Venizelos who refused this time, making the coöperation of Bulgaria and Rumania in the hostilities against Austria a condition precedent to Greece's leaving neutrality."—*Ibid.*, pp. 12-13.—See also WORLD WAR: 1914: III. 1915 (January-February).—Sir Edward Grey's communication to Venizelos.—Venizelos' memoranda presented to Constantine.—Constantine's position.—"The crowning success of Venizelos' foreign policy during the European war was the confidential communication by which Sir Edward Grey advised Mr. Venizelos that if Greece would place her army on the side of the Entente Powers, they were willing to recognize in her favor very important territorial concessions in Asia Minor. Here is the text of that very important communication: 'January 23rd, 1915. Sir Edward Grey to Sir F. Elliot. You are requested to converse informally with Mr. Venizelos in the sense of the following: Pending a serious attempt on the part of Austria to crush Serbia, it is of the utmost importance that all who can should help Serbia. If Greece will side with Serbia, as her ally, and participate in the war, I know that France and Russia will both willingly recognize to Greece very important territorial concessions on the coasts of Asia Minor, and if Mr. Venizelos desires under these conditions a definite understanding, he ought to communicate without delay with the Governments of England, France and Russia, and I am sure that any proposition that he might offer would be very favorably received. The matter is urgent, for if Serbia is defeated, although this would not change the possible prospect of defeat of Austria and Germany, nevertheless there would supervene, during the war, accomplished facts in the Balkans that would render it very difficult, if not impossible, to obtain for Greece and Serbia such favorable results as are in prospect to-day. On the contrary, the immediate participation of Greece and Roumania

in the war would make certain a new defeat of Austria, would bring about the failure of the attempt to crush Serbia and would create the certainty that these three states, Greece, Roumania and Serbia, would realize their views and would be masters of the situation in their neighborhood. In order that this participation may be effective, it is very desirable that Bulgaria be assured that if the views of Serbia and Greece are satisfied elsewhere, she would obtain satisfactory territorial concessions in Macedonia, under condition of her participating in the war, or at least that she would not maintain an attitude of unfavorable neutrality, in case she would not decide actively to fight by the side of Serbia. This matter is of a special interest to Serbia and is to be made a subject of negotiations at Nish. You will converse with Mr. Venizelos upon it in order only to ask him not to object to concessions which Serbia might be disposed to make to Bulgaria, on condition that Serbia would realize the Slavic views towards the Adriatic.' . . . In her long history, Greece has seldom found herself in the presence of an international declaration furthering to such a great extent her national interests. Three of the Great European Powers were recognizing her national views upon Asia Minor, and while their extent had not been defined in geographical terms, Mr. Venizelos was distinctly invited to try to obtain their definition, and a positive promise was given that 'any proposition on his part would be very favorably received.' Mr. Venizelos was so careful and practical in handling the great national questions of Greece that he thought he could not accept that proposition; for by sending away the Greek army to the assistance of the Serbians near the Danube he would have exposed Greece to the danger of a Bulgarian invasion, which by severing the communications of both the Greek and the Serbian army with Salonica, might have exposed both of them to destruction. Before accepting that proposition, therefore, Mr. Venizelos tried to secure the co-operation of Roumania, in which case the Bulgarian danger would have been removed, and, having failed in that attempt, he sought to obtain the co-operation of Bulgaria. And, knowing the importance that such co-operation would have had, not only locally, in the Balkans, but also in the issue of the whole war, he did not hesitate to pay the price, as long as he was to get ample compensation elsewhere, in exchange for it. He, therefore, submitted to King Constantine, in two Memoranda [January 11th and 17th], now become famous, the suggestion that Greece should declare to the Entente Powers that she would be willing to relinquish in favor of Bulgaria the districts of Cavalla, Drama, and Sari-Samban, in Macedonia, in order to secure Bulgaria's co-operation in an attack against Turkey, provided that the concessions to be made to Greece in Asia Minor should be of such an extent, as to bring about the creation of an Asia Minor Greece equally large and wealthier than European Greece."—S. A. Xanthaky and N. G. Sakellarios, *Greece in her true light*, pp. 11-15.—From Constantine's point of view, the objections to these plans were as follows: "He [Venizelos] transplants the populations of whole provinces; he outlines Bulgaria's probable future course as if he himself were directing it; Serbia is moved about like a pawn on a chessboard; he disposes of the armies of the Entente as if he were their commander-in-chief; and brushes aside as a mere detail the administrative difficulties of Ottoman territory double the size of present Greece. . . . His whole argument is that Greece will again be doubled in size.—quadruple what she

was in 1912."—P. Hibben, *Constantine I and the Greek people*, p. 19.—"But this scheme was abandoned owing to the objections of Col. Metaxas to an Asiatic extension of Greek responsibilities, and after the proof of Bulgaria's coming coöperation with the Central Empires."—W. Miller, *History of the Greek people*, p. 153.—"The conclusion of a large Bulgarian loan in Berlin . . . cooled the ardor of the British to conciliate Bulgaria, albeit the fact dimmed nothing of Venizelos's purpose. It required a message from Sir Edward Grey that 'there could be no question of a cession to Bulgaria for the present' to check Mr. Venizelos's political campaign in Greece to that end. Nevertheless, the negotiations for Greece's participation in the expedition against Constantinople continued in a desultory way. Both King Constantine and his general staff favored the enterprise, if undertaken upon serious military bases. The consideration being given the venture by the British war council struck them, however, as haphazard and based upon no real knowledge of the difficulties of the undertaking. . . . A purely naval attack was, in their estimation, doomed to certain failure. . . . Despite this warning the first Allied bombardment of the straits took place on February 19, 1915."—P. Hibben, *Constantine I and the Greek people*, pp. 18-21.—See also WORLD WAR: 1915: V. Balkans: c, 1; BOSPORUS: 1914-1918.

1915 (February-June).—Conflict between the king and Venizelos.—Resignation of Venizelos.—June elections.—Venizelos returned.—"When . . . an Allied fleet began an attack against the Dardanelles, Mr. Venizelos thought that the time had arrived for Greece to abandon neutrality and, entering the war on the side of the Allies, to assist with her army in the capture of the Dardanelles. He, therefore, submitted to the King of Greece such a proposition for his sanction. Unfortunately, at this most critical period of the national life of Greece, King Constantine, contrary to all expectations and despite the unanimous opinion, at the time, of the Crown Council, which had approved of Venizelos' policy and recommended its adoption, dissented from his great adviser, on the ground that the interests of Greece demanded that she should remain neutral. In the face of such a disagreement with the Crown, Mr. Venizelos was compelled to resign [March 6] from office and Mr. Gounaris, a representative in Parliament from the district of Patras and a prominent figure among Mr. Venizelos' political opponents, came forward and expressed his willingness to support and undertake to carry out the King's policy. Thereupon, Mr. Gounaris formed a new Cabinet [March 10] and proceeded to the dissolution of Parliament."—S. A. Xanthaky and N. G. Sakellarios, *Greece in her true light*, p. 16.—These events are reviewed by a defender of Constantine as follows: "On March 1, Mr. Venizelos proposed that Greece participate with her fleet and an army corps of three divisions, the Entente furnishing the remainder of the land force to be employed in the attack. During the discussion of the details of the enterprise the Greek staff, taught caution in dealing with the Entente by the naval fiasco of February 19, took the view that, with the Bulgarian attitude still undefined, Greece could not in conscience risk more than a division of her land army, albeit willing to add the entire Greek fleet to the Entente's naval forces. This arrangement King Constantine accepted in principle on March 4. . . . The question of the intervention of Greece in the war at this juncture, however, was decided upon other and entirely unexpected grounds. Russia at the eleventh hour opposed any Greek co-

operation in an attack on Constantinople. . . . They insisted that if the help of the Greeks be accepted at all, it be used against the Austrians, not against the Turks. Unfortunately for this disposition, the Greeks, who had nursed five centuries of hatred of the Turks, had no rancor whatever against the Austrians. . . . Negotiations for Greece's entry into the war ceased at once. Prime Minister Venizelos, failing in his efforts to effect an alliance between Greece and the Entente, resigned. But before he resigned he permitted, under paper protest, an Allied occupation of the Greek islands of Lemnos, Imbros, and Tenedos, at the mouth of the Dardanelles, setting a precedent for future Allied use of Greek soil for military purposes."—P. Hibben, *Constantine I and the Greek people*, pp. 22-25.—See also WORLD WAR: 1915: V. Balkans: c, 1.—"The new Premier, M. Gounares, . . . did not inspire the Allies with the confidence which they had bestowed upon the fallen statesman. Besides there was a power behind the Cabinet and the throne in the persons of the King's confidential advisers, M. Streit, a German by origin, Col. Metaxas and General Dousmanes—all three for various reasons on the side of Germany."—W. Miller, *History of the Greek people*, p. 154.—"The French and British returned to their negotiations with Greece, offering the new Gounaris cabinet one last chance to come in. . . . The Greek staff proposed to march 300,000 Greeks through Bulgaria, and in company with 250,000 European troops to attack Constantinople from the land. Bulgaria was to be summoned to define her attitude. If she declared hostility to the Entente, after all her negotiations to join the Allied powers, the Greeks were quite ready to finish with Bulgaria first and come on to Constantinople later; if, however, Bulgaria were to reiterate her professions of friendship to the Entente, she was to be asked to prove it by permitting the Greek army to pass through her territory. A memorandum embodying these points was submitted to the Entente by the Greek general staff on April 20. The Allies refused to consider this offer, regarding the Greek estimate of the number of troops required for a successful attack upon Constantinople as greatly exaggerated. Six months later General Sarrail set the requisite minimum for an offensive against Bulgaria from Saloniki at virtually the same figures. The British, besides, believed firmly in the friendship of Bulgaria and opposed the Greek plan as calculated to provoke war with King Ferdinand."—P. Hibben, *Constantine I and the Greek people*, pp. 26, 28-29.—"The entry of Italy into the war on May 24, 1915, complicated the situation; for beneficial as it was from a military standpoint, it increased the Allies' diplomatic difficulties at Athens, where Count Bosdari, the Italian Minister, did not pursue the same policy as his colleagues. Since 1912 Italo-Greek relations had been strained, and M. Venizelos, idolized in Britain and France, was regarded in Italy as an obstacle to Italian expansion, which would profit more from a weak than a strong Greece, nor did the Allies' offer of Kavalla to Bulgaria make them more popular."—W. Miller, *History of the Greek people*, pp. 154-155.—A few weeks later "the Greek people were invited to express their opinion upon the policy that was to be followed by Greece in the European War. . . . At the elections which were held on the 31st of May, 1915 [O.S.; N.S. June 13], they triumphantly expressed their approval of Mr. Venizelos' platform, by electing with great majorities the candidates of the Liberal Party of which Venizelos was the leader. As a result of these elections the Liberals constituted almost

the two-thirds of the entire membership of the new Parliament."—S. A. Xanthaky and N. G. Sakellarios, *Greece in her true light*, p. 17.—Whether or not this election indicated a desire on the part of the Greek people to enter the war on the side of the Allies is a disputed point. Some writers on Greek affairs state that the voters were definitely told that a vote cast against Venizelos was a vote for Constantine and peace. On the other hand, Constantine's followers declare that "not even Venizelos, himself, pretended that the vote in question had been a vote by Greece in favor of going to war on the side of the Entente. . . . At this period the Greeks were unquestionably passionately in favor of France in the European War. They also trusted Venizelos and respected his undoubted abilities. But they were by no means disposed to part with a portion of the territory they had won from Bulgaria at the point of the bayonet, even at the behest of Venizelos or to help France in her war with Germany. . . . An exceedingly astute politician, Venizelos himself was as well aware of this general sentiment as anybody. He had, therefore, gone very lightly on the war part of his program during his electoral campaign."—P. Hibben, *Constantine I and the Greek people*, pp. 34-36.

1915 (June-November).—Gounaris cabinet.—Venizelos in office.—Succeeded by Zaimis.—Parliament dissolved by the king.—Scoulovidas chosen prime minister.—"After that verdict of the Greek people, the Gounaris Cabinet instead of immediately resigning, according to parliamentary custom, and giving their place to the man chosen by the people, not only failed to do so, but remained in power and intentionally postponed, in violation of the Constitution, the calling of the new Parliament in session, under the pretext that the condition of the health of the King—who had an attack of pleurisy at the time—did not permit him to attend to a change of cabinet. At that time it became evident that there was an intention of imposing the King's opinion, even by a violation of the Constitution. But inasmuch as the expression of the opinion and of the decision of the Greek people was still very recent, the Gounaris cabinet did not dare to go any further on the unconstitutional road, and when finally Parliament was called in session and Venizelos' great majority became evident, they were compelled to resign from office. . . . The King then called Venizelos to office again [August 23], and there was a general expectation that the King, bowing to the verdict of the people, would allow their chosen leader to carry out his policy. That expectation did not materialize, however. Only one month later, when Venizelos, after a mobilization by Bulgaria, which was evidently aimed at Serbia, asked, in conformity with the obligations of alliance, to go to the assistance of Serbia, even by declaring war, in case of necessity, against Bulgaria, King Constantine again disagreed with Venizelos and asserted that the treaty with Serbia did not bind Greece to come to her assistance when she was at war, not only with Bulgaria, but also with the Teutonic Powers."—S. A. Xanthaky and N. G. Sakellarios, *Greece in her true light*, pp. 17-18.—"When told that it was his duty as a constitutional monarch to follow his Minister's policy, approved by the country at the recent elections, he said: 'I recognize my obligation to obey the popular verdict whenever it is a question of internal questions, but when it is a question of external questions, I must insist that My idea be followed, for I am responsible before God.' . . . As it was clear that Bulgaria was on the point of attacking Ser-

bia, the Premier applied to the Entente for 150,000 men. But a few hours before the landing of the first Anglo-French detachment at Salonika he had been dismissed because of his reply to Theotokes' question as to what he would do if, in aiding Serbia, Greece met German troops, viz., that she would act as her honour demanded. Meanwhile it had long been known at Sofia that, whatever happened, Greek neutrality was assured."—W. Miller, *History of the Greek people*, pp. 155-156.—Defenders of Constantine review the events which led to the dismissal of Venizelos as follows: "On September 15 the Greek staff advised the Serbian staff, as well as the Entente ministers in Athens. . . . that October 14 was the date set for Bulgaria's declaration of war. The information was too precise to be wholly ignored. . . . Albeit Great Britain clung to her assertion that Bulgaria would never move from neutrality. . . . At the same time . . . he [Venizelos] asked France and Great Britain to send 150,000 Allied troops to Macedonia. The two governments replied that they were favorably disposed to consider the matter. On September 23 the Bulgarian mobilization was decreed, but officially stated to be 'solely for defensive purposes.' . . . Then, on October 2, after having completed all his arrangements with the Entente ministers in Athens for the sending of a nominal expeditionary force to Macedonia, Venizelos broached the matter to his sovereign. . . . On the definite understanding that the Entente force to be sent was to total 150,000 men, or at least 100,000 bayonets, Venizelos left the King's presence at Tatoy [or Tatoi] and went at once to the French and British legations. . . . Later in the evening King Constantine telephoned his prime minister to repair to Tatoy the following morning to discuss the details of the proposed arrangement with the officers of the Greek staff. 'It is too late, Sire,' answered Venizelos. 'The French are already on the way.' . . . The Allied expeditionary force, ordered to Saloniki on October 2, 1915, began debarkment October 5. [See WORLD WAR: 1915: V. Balkans: c, 3; FRANCE: 1915 (October).] . . . In Athens, the news of an Allied expedition to Saloniki precipitated an acute political crisis. Venizelos . . . appeared in the Boulé . . . [to ask for the passage of a] resolution constitutionally required to legalize the landing of a foreign force on Greek soil. . . . [Later] King Constantine called his first minister to the palace. The interview was a stormy one. . . . 'I can no longer cooperate with you along those lines,' the king said dryly, when his minister had finished. 'I shall accept your resignation. The people of Greece will decide whether you are authorized to plunge them into war or not.' . . . He [Venizelos] said, speaking of the king's action in dismissing him as prime minister, 'The Constitution of Greece has ceased to exist.' . . . Article XXXI of the Greek Constitution reads, however: 'The king appoints and dismisses his ministers.' There is no qualifying clause whatever. . . . 'The only violations of the Constitution that I know anything about,' he [the king] said, 'were those committed by Venizelos: first, when he authorized foreign troops to land on Greek soil without the consent of the Greek chamber; and, second, when he tried to exercise the power of declaring war, which by Article XXXII of the Constitution, is vested solely in the crown.'—P. Hibben, *Constantine I and the Greek people*, pp. 44-45, 48, 51-53, 60, 62-64, 67.—"Venizelos, although he had the confidence of Parliament, in the face of this new disagreement with the Crown, offered his resignation and relinquished power to Mr. Alexander Zaimis [Octo-

ber 5], to whom the King entrusted the formation of a new cabinet. [Zaimis renewed the declaration of "benevolent neutrality" on the part of Greece, and refused Serbia's appeal for help on the old grounds that the treaty between them was merely Balkan in character—this, in spite of England's offer of Cyprus.] Venizelos tolerated this cabinet for some time and lent it his support in Parliament. But when he realized that they were taking advantage of his toleration, that the Minister of War, General Gliannakitsas [or Yannakitsas], having become a tool of the General Staff, was behaving towards the National Representation in an insulting manner, Venizelos was compelled to withdraw his support [Nov. 4], and then the Zaimis cabinet, having been defeated in Parliament, resigned. Thereupon, King Constantine entrusted Mr. Scouloudis [or Skouloudis] with the formation of a new cabinet, dissolved Parliament and called the people to new elections. Venizelos, considering that the dissolution of Parliament, under those conditions, was unconstitutional, refused together with his friends to participate in those elections, so that, there being no opposition, by the vote of only a small part of the Greek people, all the Government candidates were elected, these men being also supporters of the royal policy, which the Government was trying to carry out."—S. A. Xanthaky and N. G. Sakellarios, *Greece in her true light*, pp. 18-19.—The Constantinist point of view on these events is as follows: "The line between considering the Balkan situation as a political or as a military question was sharply drawn in the Boulé on November 4. Venizelos, sponsor of the former view, returned personally to the charge, speaking of the obligations of Greece toward Serbia and the benefits to be gained by joining the Entente, making a combined appeal to the sentimentality and the cupidity of his countrymen. General Yannakitsas took his stand sharply as a practical soldier—that all of this was beside the main point of whether the campaign could be won or not with the forces available; and he thought not. . . . After dismissing his prime minister on October 5, King Constantine stated that if, in the elections of December 21, which were to be held on the naked question of war or peace, the people were once more to select Venizelos and his party to conduct the affairs of Greece, he, the sovereign, would gladly accept the judgment of his people on a clearly formulated point, would call Venizelos to power again and stifle his objections to going to war under conditions which he firmly believed most hazardous. Of this the Greek monarch apprised Mr. Venizelos himself."—P. Hibben, *Constantine I and the Greek people*, pp. 84, 87, 100.—"Yet when elections were called to ascertain whether the people of Greece did or did not accord with his policy of thrusting Greece into the war, he refused to take part in the elections or to permit any member of his party to take part in them."—*Ibid.*, pp. 98-100.

1916.—Transport of Serbs across Greece.—Surrender of Fort Roupel to Germans and Bulgarians.—Zaimis prime minister.—"Two incidents branded the Skouloudis Ministry: its refusal to allow the Serbian troops, then in Corfu after their retreat across Albania, to traverse the Greek railways on their way to join the Allies at Salonika, and its ignominious surrender of Fort Roupel, which commands the Struma valley. . . . This cost the Greeks the loss of Northern Epeiros, which could no longer be safely entrusted to Greek troops, the proclamation of martial law by General Sarraïl in Macedonia, and the note of the three protecting Powers on June 21, demanding

the reduction of the army to a peace footing, the immediate replacement of the Cabinet by a colourless Government, the dissolution of the Chamber, a fresh election, and the removal of certain obnoxious police officials. The ever-useful M. Zaimis replaced M. Skouloudes promising to execute these demands. . . . Rarely had an independent state received such a humiliation; Greece, as a Greek diplomatist said to the writer, had 'become a public place,' in which the Allies planted themselves where they chose, at Corfu, Salonika, Moudros, Joannina and Preveza, while the Bulgarians invaded Eastern Macedonia, thus making an election impossible. The Bulgars occupied Kavalla [in August], and 8,000 Greek soldiers were 'interned' by the Germans at Görlitz. This so greatly disgusted patriotic officers at Salonika, that they formed [in September] a Committee of National Defence under the Cretan, Col. Zymbrakakes, repudiating the Athens Government. This movement, unsuccessful at the moment, was the forerunner of the Venizelot Provisional Government of Salonika. [His task too difficult of accomplishment, Zaimis retired Sept. 11.] M. Venizelos had reluctantly come to the conclusion that nothing but a revolution would change Greek policy, for the new Kalogeropoulos [Sept. 16] Cabinet, although favourable to the Allies, was powerless to counteract the King's secret advisers."—W. Miller, *History of the Greek people*, pp. 156-158.—After the surrender of Fort Roupel and the consequent humiliation of Greece, the king became openly bitter towards the Allies. As a result, he was openly attacked and as hotly defended. The following quotation is a Constantinist's story of the preceding events. "On April 12 [1916], the Entente ministers in Athens announced their intention to transport the Serbian army across Greece. . . . The Greeks could not see, besides, why the fact that the greater powers had treated the Serbs shabbily should cause hardship to be visited upon Hellas, or why Greece should suffer to make up for the deficiencies in the Allied operations against German submarines. But the deciding cause of the Skouloudis government's refusal to countenance the transport of the Serbs across Greece was the fear that the presence in and about Athens of so large a force of Serbs would be seized by the Venizelists as the moment to effect a *coup d'état*, overturning the constitutional government. . . . The British and French ministers were equally stubborn, declaring that the Entente would transport the Serbian army across the country with or without the consent of King Constantine and his ministers. . . . General Moscopoulos, the Greek commander in Macedonia, had urged the French to extend their lines to the east of the Struma River and to take effective control of the Greek points of strategic importance in that sector. He explained repeatedly that the Greeks, cut off from their base of supplies at Saloniki, partially demobilized at the insistence of the Allies, and dependent upon an open roadstead as a port, were in no position to resist successfully a strong attack from the north. Instead of extending his line, however, General Sarraïl had further emphasized the isolation of the Greeks by destroying the Demir Hissar Lridge, two and a half miles south of the Greek Fort Roupel on the east bank of the Struma. Thus Fort Roupel was as effectually cut off as if it had been located in Bulgarian territory. . . . On May 26, the Bulgarians appeared before Fort Roupel [or Roupel] and demanded its evacuation by the Greek troops, offering a written guarantee that the fort with all its contents would be restored after the war, that private property

would be protected, and that the territory temporarily occupied would be evacuated later. Prime Minister Skouloudis accepted the offer, entering a formal protest against an act of hostility, which his government communicated to the Entente ministers. Fort Rupel was promptly abandoned by the Greek troops, who first rendered its guns useless; the Bulgarians occupied the stronghold, precisely as the Allies had occupied Fort Karabournou and Fort Dova Tepe."—P. Hibben, *Constantine I and the Greek people*, pp. 213-214, 217, 225, 228-229.—See also WORLD WAR: 1916: V. Balkan theater: b.

1916.—Allied operations on the Salonika front.—Greek attitude.—Sided with Allies in operations against Bulgaria. See WORLD WAR: 1916: V. Balkan theater: b; b, 1; b, 2, iii.

1916.—Independent cabinet of Venizelos.—Allied blockade.—"Passing over the disturbances which occurred at Salonica in August, 1916, between the Venelist and anti-Venelist troops, and the attitude taken up by the King, who publicly thanked certain officers of the latter party for their loyalty, the next important event was the departure of M. Venizelos from Athens on September 24 and the formation by him of an Independent Cabinet at Salonica about a fortnight later. This development constituted a sort of dividing of ways, for whilst the Allies did not openly embrace the policy of M. Venizelos, it at once became evident that their only alternative was either to repudiate the step taken by their protégé, which was obviously impossible under the circumstances, or to work for the augmentation of his power and for the increase of the size of the sphere of country which acknowledged him. From October onwards events marched apace."—H. C. Woods, *Cradle of the war*, p. 146.—"The king entrusted the task of forming a cabinet [Oct. 10] to Professor Lampros, the eminent mediaeval scholar, a Germanophil without experience of politics. Greece was thenceforth divided into two camps—Athens and Salonika, separated by a neutral zone; Greek colonies throughout the world took sides; island after island joined Salonika, and Venelist troops fought by the side of the Allies, while the attitude of the Royalists became more and more suspicious."—W. Miller, *History of the Greek people*, p. 158.—In October "Admiral de Fournet demanded the cession of the whole of the Greek fleet except three vessels—a demand which was agreed to by the Lampros Ministry. The demobilisation of the Army, however, proceeded very slowly, and in November the French Commander-in-Chief insisted upon the immediate surrender of ten Greek mountain batteries and the subsequent handing over of the remaining war material. This peremptory request was not complied with, and on December 1, Allied troops were landed at the Piræus. The exact nature of the assurances given by the King as to the likelihood of the occurrence of disturbances resulting from this landing is uncertain, but the fact remains, as a result of some kind of undertaking in this direction, that the Allied contingents disembarked were so inadequate in size that it became necessary ignominiously to withdraw them, on the understanding that six batteries instead of ten would be surrendered. The Allied Legations having been insulted and the Royalist party having maltreated, imprisoned, and murdered a large number of Venelists, a renewed blockade was declared,—a blockade which was accompanied by a demand for reparation for the events of December 1 and 2, and for the transference of a large proportion of the Greek army to the Peloponnesus. [On Decem-

ber 19th Great Britain recognized the provisional government at Saloniki.] Although the King subsequently agreed [Jan. 10, 1917] to the transfer of his forces to the Peloponnesus, and although a formal apology was made for the events of December, it was obvious that after the occurrence of these events, it was impossible for the Allies to look with favour upon the continuance of a régime which was responsible for endangering their whole position in the Balkans. The removal of the Hellenic forces proceeded unsatisfactorily, the reign of terror instituted against Venelists was prolonged, and for a time the Allies temporised in the hope of being able to accomplish their objects without finally resorting to drastic measures."—H. C. Woods, *Cradle of the war*, pp. 146, 147.—See also WORLD WAR: 1916: V. Balkan theater: d.

1917.—Abdication of Constantine.—Succession of Prince Alexander.—Entry into the World War on the side of the Allies.—"But on June 7, 1917, . . . M. Jonnart reached Athens as the High Commissioner of the Protecting Powers. Immediately after his arrival, he claimed from M. Zaimis, who was once again Prime Minister [for the fifth time, May 3], more complete guarantees for the safety of the Allied army in Macedonia, the restoration of the unity of the kingdom, and the working of the constitution in its true spirit. Five days later, when Allied troops had been landed at the Piræus, and when various places in Thessaly had been occupied, the King, as a result of the demand of the High Commissioner, abdicated [June 12], designating as his successor his second son, Prince Alexander—a young man of twenty-four years of age, who had previously played no political rôle in the affairs of his country."—H. C. Woods, *Cradle of the war*, pp. 147-148.—"Venizelos was not consulted in regard to the abdication of Constantine. The move was made wholly upon the responsibility of the British and French Governments. But High Commissioner Jonnart knew that Venizelos believed that this step was the only possible means of saving Greece from civil war of a nature that might jeopardize the hopes of an Allied offensive from Saloniki. There seemed no other way out of the dilemma. The forced abdication was the lesser of two evils. . . . Premier Zaimis remained in office after the abdication of Constantine at the request of King Alexander, who wrote to Zaimis that he was 'the faithful guardian of the Constitution,' and made it clear that he was willing to comply with all the demands of the Entente. Venizelos immediately declared that he had no quarrel with the new Government, and that the Provisional Government at Saloniki went out of existence automatically. He assumed that the change of sovereign indicated the intention of returning to an observance of the Constitution. Since the Provisional Government had been created simply as a protest against the violation of the Constitution, it had no longer a *raison d'être*. Venizelos returned to Athens on June 21 and entered into negotiations with Zaimis. Jonnart insisted upon the convocation of the Chamber elected on May 31, 1915, in which Venizelos had a majority. He based his demand upon the grounds invoked for the abdication of Constantine. The Powers that stood as guarantors of Greece were bound to see that the Constitution was observed. Since the dissolution of the May Chamber had been illegal, its legislative functions and mandates still held good. Zaimis refused to accept this interpretation and resigned. On June 27 King Alexander asked Venizelos to form a Cabinet. He accepted the premiership, reserved to himself the portfolio of

war, and appointed his tried friend, Politis, Minister of Foreign Affairs. Two days later [June 29], Greece formally entered the war. The King signed a decree convoking the Venizelist Chamber of 1915 [which had been dissolved by Constantine Nov. 6, 1915]. In token of their confidence in the new Government, the Allies gradually withdrew their administrative control of Government services, retaining only the censorship of the telegraph and cable in cooperation with the Greek government."—H. A. Gibbons, *Venizelos*, pp. 301-305.—See also WORLD WAR: 1917: V. Balkan theater: a.

1917-1918.—Venizelos in power.—Finances.—Crops.—Part in the World War.—"Tyranny" of Venizelist régime.—"When Venizelos returned to Athens, the Treasury had a deficit of seven hundred million francs. A year later Greek money was at an unprecedented premium in exchange. . . . The 1918 crops were twenty per cent better than those of 1917. The railways, extended and reorganized, rendered invaluable service in the Macedonian campaign. The merchant marine was able to put almost one hundred and fifty steamships at the disposal of the Allies. The Greek fleet proved a precious aid in clearing the eastern Mediterranean of submarines. At the time the Allies disembarked at Saloniki, fifteen Greek divisions were mobilized. . . . During the winter at Saloniki Venizelos created three divisions on a war footing, recruited from Macedonia, Crete, and the Ægean Islands. With the remobilization of the summer of 1917 Venizelos had material for eight more divisions. These were officered and trained in the winter of 1917-18, were gradually introduced into the fighting in the late spring and summer of 1918, and when the Entente Powers were ready for the final defensive, Greece had eleven divisions on war footing, one in Epirus and the rest on the Macedonian front. Of three hundred thousand men under arms, one hundred and seventy thousand participated in the actual fighting. Although, in urging the necessity of an offensive on the Macedonian front, Venizelos guaranteed the effective cooperation of Greece, Entente statesmen were too much impressed by the memory of the Constantinist demoralization to take Venizelos seriously. . . . The first chance Venizelos had of refuting the assertion that other Greeks would not fight under his leadership was during the early spring attacks of 1918. He directed that troops of Old Greece be used by General Nider on the Struma front. They covered themselves with glory on April 15. Then Venizelos persuaded General Guillaumat to confide to four Greek regiments the extremely difficult task of carrying the position of Skradi-Legen on May 30. The next day General Guillaumat telegraphed Venizelos that the Greeks had won a notable success and that 'the new divisions arriving in turn on the front will draw from this victory, which fills all Greece with legitimate pride, a greater ardor still for work and combat.' The Greeks lost in this fight six hundred dead and seventeen hundred wounded. Their dash and courage, their unwavering advance under fire, gave the Greek army confidence in itself and won the esteem of the Allies, who up to this moment had remained doubting Thomases. The intervention of Greece under Venizelos on the Macedonian front had the same effect as the intervention of the Americans under Wilson on the Western front. As German morale was broken in France by the appearance of a new army, which would give the enemy an unquestioned superiority of numbers, so the Bulgarian morale was broken by the unexpected resurrection of Greece. Here was a new

reservoir for the enemy to tap, which could not be prevented from being drawn upon by lack of transportation facilities and the work of submarines. . . . The Allies at Saloniki realized after May 30 that the Greece of Venizelos was going to enable them to make a victorious offensive. . . . The Greeks were active every day from September 15 to September 30. The Fourteenth Division, cooperating with the Sixteenth British Army Corps, was the first to cross the Bulgarian frontier. Both Franchet d'Esperey and General Milne declared that the Greek army had proved a decisive factor in the victory. The British general was most explicit. Writing to General Danglis on October 3, General Milne said: 'Without the aid of the Greek forces, the present victory could not have been obtained.'—*Ibid.*, pp. 323-327.—See also WORLD WAR: 1918: V. Balkan theater: a; c, 5; c, 8, i; c, 8, iii; c, 9.—"Venizelos, using his foreign policy as a shield, no sooner arrived in Greece than he abolished every vestige of civil liberty all over the country. He dismissed more than ten thousand public officials, including the best army and navy officers; . . . he introduced martial law, which held full sway in the country up to the day of the general elections; he instituted mass deportation to the most remote islands of the Greek Kingdom, thus reducing them to the status of miniature Siberias; he established several bodies of secret police, and he adopted spying as an indispensable feature of his policy. The most innocent expression against the doings of the Venizelist dictatorship was enough to send a man to jail and to exile. . . . Spying and counter-spying among the citizens became general, and the country has for three years lived under the shadow of conspiracies, most of which were found to be engineered by the Government itself with the sole object of persecuting its political enemies."—A. T. Polyzoïdes, *Greece and her leaders* (*New York Times Current History*, Feb., 1921).

1918-1920.—Venizelos at the peace conference.—Treaties of Neuilly and Sèvres.—"The defeat of the Bulgars, Turks, and Austrians was so complete that the Venizelos policy was vindicated and his leadership was again accepted by the nation—at least it was assumed to be accepted—and he came to the Paris Conference as the recognized master of the situation. While the Cretan statesman, thus in control of the policies of his country through the defeat of the Central Powers, entered upon his duties as a negotiator holding the confidence and friendship of the Allies because of his devotion to their cause under doubtful, if not adverse, conditions, he could not have been blind to the fact that good fortune rather than popular favor had been the means of his success, and that there smoldered a fire of resentment in 'Old Greece' because, to attain his ends, he had depended on foreign troops rather than the will of the Greek people. To take a conspicuous place in the deliberations at Paris and to employ the good will of the Allies for the exten-

sion of the territorial possessions of Greece must have seemed to him a wise course to pursue, as there was reason to believe that attainment of his object would satisfy the national aspirations and win the favor of many who had opposed the abandonment of neutrality and who had resented his revolutionary act in forcing King Constantine to abandon his throne. . . . It is very obvious from an examination of the terms of the Treaty of Neuilly and the Treaty of Sèvres, that M. Venizelos was successful in winning, not only the confidence, but also the active coöperation of the negotiators who represented the Allied Governments in the formulation of those documents. The settlements were wholly favorable to the Venizelos policy of 'Greek Unity' and to the desires of the Greek expansionists, favorable to the point of extravagance. . . . [The American commissioners were] frankly averse to the Greek claims, not because of any unfriendliness for Greece or of friendliness for her enemies, but because the cession of areas inhabited by large hostile populations creates conditions which threaten the future peace of the world. . . . Except for the personal influence of M. Venizelos, I am convinced that the extension of Greek sovereignty would not have been so great as it is under the treaties. What he asked was granted because *he* asked it. . . . The consequence was the creation of a new and greater Greece embracing within its territory the shores and islands of the Ægean Sea as well as Eastern Thrace, a Greece which, by uniting the Greek cities and settlements on the islands and shores of the Ægean made of it a Greek sea, but a Greece which, by this extension of territorial sovereignty to separated coasts, became a country impossible of military defense and unstable politically on account of ethnic animosities and lack of economic independence. It is possible that my impression of M. Venizelos would have changed and been more in harmony with the common opinion of him had it not been for this apparent appetite for territory. I found it hard to believe that a man of his experience in public affairs . . . could be convinced in his own mind that it would make for the future peace and prosperity of Greece to expand her boundaries to so great an extent, since it was sure to arouse the bitter enmity of the Bulgars and Turks and invite them to war against their conquerors at the first favorable opportunity while the defensive strength of Greece would be materially weakened unless it became a naval power. . . . Apostle of 'unification of Greece' as he [Venizelos] had always been, and an active agent in throwing off the yoke of alien authority from his compatriots of the island of Crete, he may have been obsessed with the idea that Greeks everywhere should be joined to the mother country by uniting under Greek sovereignty the territories where they dwell even though they are a minority of the population. . . . It may have been that he had made promises and announced policies of an all-inclusive Greek State which he could not revoke or modify without losing prestige and political power at home. . . . I am loath to accept this latter reason because it is open to the interpretation that M. Venizelos was willing to adopt an unwise policy in order to perpetuate his political control by satisfying the ambitions of the people of 'Old Greece' and by gaining the support of the Greek inhabitants of the Annexed territory. . . . In fact when one analyzes the record of events there seems to be only one of two conclusions, either M. Venizelos was an unwise statesman or he was a politician who endeavored to preserve his political life by responding to the

impulses of national pride of his countrymen and of the racial affinity of those of Greek blood. In either case the popular estimate of his character is impaired."—R. Lansing, *Big Four, and others of the peace conference*, pp. 156, 147-150.—See also PARIS, CONFERENCE OF: Outline of work; VERSAILLES, TREATY OF: Conditions of peace.—"By the treaties of Neuilly and Sèvres, between the Allies and Bulgaria and Turkey respectively in 1919 and 1920, Greece received Thrace almost up the Chatalja lines, and two of the three remaining Turkish islands of the Ægean, Imbros and Tenedos, subject to their disarmament (Kastellorizon being handed to Italy). Smyrna and its territory remained nominally Turkish, in token of which a Turkish flag (following Cretan precedent) was to fly over one of its outer forts; but Greece was to exercise the rights of sovereignty over the city and territory with a local Parliament, which in five years' time might ask the Council of the League of Nations for their 'definitive incorporation in the Kingdom of Greece.' Although the Dodekanese was formally ceded to Italy, the Venizelos-Tittoni agreement had arranged for its transference (except Rhodes) to Greece. These territorial gains were a great triumph for their author, but some doubted whether Greece could assimilate them, especially as they were not purely Hellenic. It was asked whether Bulgaria, now cut off from the Ægean, would be permanently content with the 'economic outlets' promised her there; whether this double acquisition in Europe and Asia would not sow the seeds of a future Turko-Bulgarian alliance. [Italy] was opposed to a Greek Smyrna, alleging that Mr. Lloyd George had promised it to her at the St. Jean de Maurienne Conference of 1917. But M. Venizelos argued that the Thracian coast in Bulgarian hands might become a submarine base and that Bulgaria by her conduct had no claim to benevolence, while, if Greece were one day to recover Constantinople, it was essential that her land continuity should not be broken by a Bulgarian Thrace. He applied the principle of self-determination to the Greeks of Western Asia Minor (whom he estimated at 818,221), preferring union to autonomy on the ground that the latter would only create a larger Samian or Cretan question, and indicating the difficulty of replacing under Turkish rule the vast numbers of Asiatic Greeks expelled before, and during, the war—for since 1915 the persecutions and expulsions had increased. These figures excluded the Greeks of Trebizond (where a Greek Empire existed from 1204 to 1461), whom their Archbishop sought to form into an autonomous state, but whom the Premier would have attached to Armenia, and those of Brûsa, whom he left to Turkey. Constantinople remained the Turkish capital on condition that Turkey executed the treaty; and, despite the historic claims of Greece to Santa Sophia, that famous church was left to the Moslems. But the 'Holy Mountain' of Athos remains—under Greece—a theocratic Republic."—W. Miller, *History of the Greek people*, pp. 160-162.—See also NEULLY, TREATY OF; SÈVRES, TREATY OF: 1920: Part III: Political clauses: Greece; SMYRNA; BULGARIA: 1919; THRACE: 1918-1921; BALKAN STATES: 1921: Greece; CONSTANTINOPLE: 1920.

1919.—Treaty with Jugo-Slavia.—Occupation of Smyrna.—"On April 18 M. Coundouriotis, the Greek Minister accredited at Belgrade to the Prince Regent of the kingdom of the Serbs, Croats, and Slovenes (Jugoslavia), informed the Government at Athens that he had concluded a treaty of alliance with the new State of Jugoslavia, the terms

of which would be published, in accordance with the new custom, as soon as they had been confirmed by the Parliaments interested. . . . Greece received the mandate from the Council of the Allied and Associated Powers to administer the City of Smyrna. On May 14 Greek forces landed there, followed on the 16th by a naval concentration of British, French, and Italian warships; the United States was represented by the battleship *Arizona* and four destroyers. Late in March the Athens press had published a communiqué from Premier Venizelos, dated Paris, to the effect that the Council of Ten had authorized him to dispatch troops to the Smyrna region to the number of 50,000."—*New York Times Current History*, June, 1919, pp. 428-429.—The occupation of Smyrna was attended with rioting in which both Turks and Greeks got out of hand.

1920.—Greco-Turkish War.—Operations in Asia Minor and Thrace.—Surrender of Adrianople.—Secret treaty of Sèvres.—"The lamentable delay on the part of the Supreme Council in the presentation of the Turkish Treaty permitted the setting up, in Asia Minor, of a 'Nationalist' administration under Moustapha Kemal, a Turkish officer, who took advantage for the purpose of the widespread Young Turkish organisation. . . . In Thrace, the standard of revolt was raised by one General Jaffer [or Tjafer] Tayar, [the Nationalist military governor at Adrianople], who set out to save this last tract of European territory for Turkey. He gathered, or forced, the Ottoman elements of the population around him, and assumed that he would receive very considerable support from the Bulgarians. During the first fortnight of June, the activities of the Nationalists in Asia Minor, the growth of the movement, and the strength of the attacks upon the Allied (Greek) forces in the districts around Smyrna, were the cause of considerable anxiety to the Supreme Council. . . . M. Venizelos, however, had been under no delusion as to the intentions of Moustapha Kemal. He had been quietly maturing his plans for dealing at once with the menace to the Greek forces in Asia Minor and securing the territories allotted to Hellas by the Conference, and, following private conversations with Mr. Lloyd George in London, he came forward at a meeting between the British and French Premiers at Hythe with an offer to enforce the Treaty in its integrity by the employment of the Greek army. This offer was accepted by Britain and France, presumably on June 20th, 'subject to the approval of Italy and the rest of the Allies.' . . . The first big battle of the campaign was fought at Alashehr, the ancient Philadelphia, one of the 'Seven Churches' of the Apocalypse. During June 24th, the Greeks converged on the enemy positions, and by night-fall had registered a notable success, completely routing the 13th Turkish Army Corps and taking possession of the city. . . . The fall of Balikesiri [July 2] may be said to have completed the second phase of the Greek advance, and it was al-

ready obvious that the rout of the Turks on the northern front was now complete. . . . The main operations of the Greek army in Asia Minor were brought to a conclusion with the fall of Brussa [or Brusa, July 10]."—*Graeco-Turkish War of 1920 (Balkan Review, Sept., 1920)*.—"The Greek armies in Thrace were taken over by General Zimbrakakis, and on July 20 began an active campaign against Tjafer Tayar in order to clear the country of the enemy between the Ægean and Black Seas, east and west, and the Bulgarian frontier and the Tchatalja line of Constantinople, north and south. King Alexander, meanwhile, had landed at Rodosto, Sea of Marmora, and followed the southern victorious army on its way to Adrianople. The campaign in its intensified form lasted five days. . . . Meanwhile, the Turkish grand vizier had sent a message to Tjafer Tayar, asking him to surrender and so prevent further bloodshed. . . . On July 25 the city [Adrianople] surrendered to the great relief of the civil population. Tjafer Tayar had decamped the day before for Kirk Kilisse with 5,000 followers. . . . His main forces marched north and surrendered their arms to the Bulgarian authorities and were interned by them. The number of men thus surrendering numbered 15,000. On July 26 King Alexander entered Adrianople amid a great demonstration indulged in by Greeks and Turks alike. Tjafer Tayar was captured July 28, by being betrayed by a farmer at Hals, five miles southwest of Adrianople. . . . [Greece began to administer Eastern Thrace with Western Thrace in the person of Vamvacas, governor-general, who established his capital at Gumuldjina.] By the third week in July the Greek advance in Anatolia had reached the Sea of Marmora, isolating the Nationalist forces in the vicinity of Mount Ida, and covering a line nearly 300 miles long, extending from the Mendere River to Ismid, where the British had cut the railway extending southeast from Skutari, opposite Constantinople, to its junction with the Bagdad railway. On July 28 the Greek commander-in-chief, General Paraskevopoulos, having overseen the completion of the successful campaign carried on in Eastern Thrace, reached Smyrna from Panderma and was brilliantly received."—*New York Times Current History*, Sept., 1920, p. 1078.—In later months much discussion centered around "the secret treaty signed by Venizelos and the representatives of Great Britain, France, Italy and Japan, at Sèvres, on Aug. 10, the day on which the Turkish Peace Treaty was signed. . . . The secret pact of Sèvres, which raises Greece from a fifth-rate to a second-rate power, contains the following passage: 'France and Great Britain renounce all that pertains to special rights of guardianship or of control which had been given them over Greece by the Treaty of London of May 7, 1832; the Treaty of London of Nov. 14, 1863; and, in what concerns the Ionian Islands, by the Treaty of London of March 29, 1864.'"—*Ibid.*, Jan., 1921, p. 60.—See also SÈVRES, TREATY OF: 1920 (Aug. 10).

1920-1921.—Death of King Alexander.—Defeat of Venizelos.—Return of Constantine.—Various points of view on the downfall of Venizelos.—Difficulties of restoration.—Gounaris prime minister.—"Meanwhile, Royalist intrigues were conducted from Switzerland, and the marriage of one of the Princes with an American millionairess provided the sinews of propaganda. Constantine had never 'abdicated'; he had only 'left his country'; his popularity as a soldier was great with the people, while the impeachment of Royalist ex-Ministers and the expulsion of Royalist

supporters increased the numbers of the discontented. A plot against the Premier was discovered at Athens; two Greek officers tried to assassinate him in Paris. Then, on October 25, 1920, the death of King Alexander, due to a monkey's bite, created a reaction in favour of the exile, and the elections were fought on the personal question: Constantine or Venizelos. Meanwhile, Admiral Koundouriotis [or Kounduriotis] acted as Regent till Prince Paul, the later King's younger brother, should make up his mind to accept the Crown. [He refused the crown in favor of his father Constantine or his elder brother.] But the elections of November 14 decided for Constantine; M. Venizelos was not even elected, resigned and left Greece, whereupon Rhallis for the fifth time became Premier [Nov. 16]. His first act was to substitute the Queen-Mother Olga as Regent for Admiral Koundouriotis, his next to hold a *plébiscite* for the restoration of Constantine. The result was a foregone conclusion, and on December 20 Constantine reached Athens. Great Britain and France imposed no obstacle to the will of the people, while Italy rejoiced at the downfall of the Greek Cavour. The Italians were guided by self-interest, but history contains few examples of national ingratitude such as that of the Greeks."—W. Miller, *History of the Greek people*, pp. 162-163.—"Serious international complications threatened when on Dec. 5 [1920] the Greek people voted overwhelmingly for the return of Constantine, their exiled king; remonstrances and warnings were sent by the Supreme Council then sitting in London. So strong was their opposition to this action of the Greeks that they threatened to abandon Greece to her fate if the latter insisted upon Constantine's return to the throne; but neither their threats nor opposition in the Balkans and among the Greeks in Asia Minor prevented his triumphal entry into Athens."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1921, *Supplement*, p. 95.—"But three months after the treaty of Sèvres he [Venizelos] was a defeated exile. Various causes produced this unexpected result. He attributed his defeat to the long mobilization of the army; it was also due to his long absence from Greece owing to the protracted peace negotiations. His lieutenants were far inferior to himself; their unpopularity descended upon him; and as Gladstone repudiated the title of 'Gladstonian,' so Venizelos might repudiate that of 'Venizelist.'"—*Ibid.*, p. 162.—"A member of the Opposition said to me, 'We want Venizelos, but are opposed to his governmental staff, who, taking advantage of his absence, have done many bad and incompetent acts.' There were those who honestly thought Mr. Venizelos too imperialistic, and this thought was fostered by his enemies, especially those who had lost military or civil positions under his Government."—H. A. Henderson, *Passing of Venizelos*, *New York Times Current History*, Feb., 1921).—"The part played by M. Venizelos in bringing Greece into the war was made possible by the presence of Allied forces in the Saloniki region. The Greek Government had prior to that time maintained neutrality in the war, and even went so far in avoiding conflict as to permit Bulgarian occupation of Greek territory without resistance. To what extent the influence of King Constantine and his German Queen induced this policy is of little importance, though there can be no doubt that the Allies were disposed to credit it with chief importance. Outside of this influence, to which the pusillanimous surrender of territory gave color, the arguments in favor of a policy of neutrality were strong and convincing. Serbia

in spite of the unsurpassed valor and sacrifices of her people had been occupied by the conquering armies of Bulgaria and Austria-Hungary. The Serbian nation had endured untold agonies at the hands of the invaders. The Allied Governments though vigorously demanding that the Greeks aid the Serbs in the unequal struggle, would not agree to send troops or munitions to Greece although that country was insufficiently manned and equipped to conduct a war of magnitude. In these circumstances King Constantine and his advisers declined to depart from their neutral attitude on the ground that Greece was not strong enough without foreign aid to resist the armies of the Central Alliance, and that to make war unaided and without adequate military preparations would mean that their country would suffer the same fate of Serbia and the Greek people would undergo the horrors of an invasion by an utterly worthless foe. It would seem that in the circumstances even if the King had not been a brother-in-law of the German emperor, the policy adopted was in the best interests of the Greek nation; and apparently the majority of the people favored this policy of neutrality. The Allies were, deeply, though I think unreasonably, incensed at this attitude of the Royal Government and sought opportunity to force Greece to take up arms against the Central Powers. . . . As far as one is able to judge from the progress of events and from the subsequent restoration of Constantine to the throne, the people of 'Old Greece' who had witnessed with apprehension the terrible sufferings of the Serbian nation, were never favorable to their country's abandoning its neutrality and becoming a participant in the war. The majority seemed to be opposed to the Venizelos party which held its power by the grace of the Allied Governments rather than by will of the Greek nation."—R. Lansing, *Big Four, and others of the peace conference*, pp. 153-155.—"When the Greek people were called, on Nov. 14, 1920, to decide by popular vote the issue between M. Venizelos, the Premier, and the then exiled King Constantine, they found themselves facing a peculiar international situation. Since 1916 Greece had been the victim of a succession of arbitrary acts at the hands of the Entente powers, in flagrant violation of the Greek Constitution. Failing in their attempts to force Greece to enter the war, the Allies, by their ultimatum of June 21, 1916, demanded and obtained the dissolution of the Greek Chamber. They seized the ships of the Greek Navy. They went to Saloniki and helped Venizelos to start his revolution against King Constantine; they disarmed Greece, and armed a revolutionary minority against the legally constituted Greek State. They demanded and obtained the dethronement of King Constantine, whom they considered as pro-German, and hence as their enemy; they prevented the Crown Prince from succeeding his father, and passed the crown to his other son, Alexander, against the Greek fundamental law. They forced on the Greek people in 1917 a Government unauthorized by a constitutional election—the Government of the rebel Venizelos, whom they brought over from Saloniki and helped with their troops to gain control of Athens. . . . Left to themselves, however, and without outside interference, the Greeks in all probability would have joined the Allies when the time seemed to them opportune. Venizelos, in that case, would have been the popular Premier, as he was at the time of the Balkan wars, and the country would have been solidly behind him. The Allies, however, did not allow him to play the part of a patriotic and independent Greek statesman

From that time Venizelos was 'done for' in the eyes of the Hellenic people; that he was brought back to power in 1917 and remained in power until 1920 was due only to the fact that the Greek people no longer had a voice in their own Government, and were not masters in their own house. And thus the naked fact stood out that Greece, from June, 1917, up to November, 1920, was transformed from an independent country into an Anglo-French protectorate, modeled after the pattern of Morocco, Senegal and Egypt.—A. T. Polyzoides, *International status of Greece* (*New York Times Current History*, Apr., 1922).

"The Restoration did not, as had been said at the elections, bring peace, but a continuation of the war in Asia Minor, while it inevitably prolonged the domestic discord; for exiles, returning after three years' banishment, wanted the places of those in office. Nor were the Royalist leaders united: Rhallis soon made way for Kalogropoulos [February, 1921], and the latter for Gounaris [April, 1921]; but none of them possessed the weight and influence of their great rival in the Councils of the Allies."—W. Miller, *History of the Greek people*, p. 164.—The Allies, particularly France and Italy, cut Greece off from financial support and insisted upon a revision of the Sèvres Treaty. Greece, notwithstanding the secret arrangements between the Kemalists and France and Italy, rejected *in toto* the Allied proposals for a revision of the Sèvres Treaty. In March, 1921, the Greeks, attempting single-handed to force the Turks to conform to the original terms of this treaty, launched a new offensive in Asia Minor. King Constantine called three classes of reserves to the colors and on March 24, 1921, the Greek Army began its campaign. The French and Italians gave aid to the Turks and the Inter-allied High Commission declared Constantinople and the Straits to be neutral and, therefore, legally closed to the Greeks.—See also TURKEY: 1921 (March-April): Secret treaties.

Also in: H. Spender, *Resurrection of Greece* (*Contemporary Review*, Aug., 1921).

1921.—Operations in Asia Minor.—"From March, 1919, to March, 1921, Mustapha Kemal continued his preparations, entirely undisturbed by what was going on among European statesmen and the diplomats. . . . He made no serious attempt to engage the Greek Army in Asia Minor during the two years following the occupation of Smyrna. . . . What Kemal aimed at was the revision of the Treaty of Sèvres, and this was almost accomplished when his own representatives were accepted by the allied Governments to discuss in London the details of the Near Eastern settlement, during that memorable conference of last March [1921], when Premier Briand of France came out openly in favor of their claims; Italy had been clamoring for the revision of the Turkish treaty even since the day of its first inception in San Remo, a year before. Greece unanimously rejected the proposal to modify the Turkish treaty, and shortly afterward she launched her first offensive against Eskişehir. . . . The offensive started March 23, 1921. . . . The Greek Army lost almost four thousand men in killed and wounded, while the Turkish losses must have been equal if not more. The railroad remained in the hands of Mustapha Kemal, as well as the moral advantage of that battle. . . . In vain did the Entente address to Athens a solemn note offering mediation with Turkey. Greece arose with a single mind and a single resolve. Constantine soon went to Smyrna, and the flower of the Greek Army, the veterans of the Balkan wars . . . were recalled for the

supreme effort. . . . The Greek offensive was launched this time from Brusa in the north and Oushak in the south, on June 10, and advanced in three directions, namely, toward Kutahia, Afion-Karabissar and Eskişehir. . . . General Polymenakos, commanding the northern group, entered Eskişehir on the evening of July 21, occupying the city in the name of King Constantine."

—A. T. Polyzoides, *Passing of Turkey* (*New York Times Current History*, Oct., 1921).—As a result of the drive that took place in July, 1921, the Eski-Shehr-Afion-Karabissar line was taken by storm. "This capture of the railroad was followed in August by the famous Angora battle, in which the Greeks, after heavy losses on both sides and after reaching a point only fifty miles west of Angora, withdrew to avoid further slaughter [September 10]. . . . Mustapha Kemal, after attempting once or twice to regain his old positions, found the task so costly that he ceased attacks on the Greek Army barring his way. The result of these various campaigns. . . . was largely territorial. . . . Greece decided to declare the whole of western Asia Minor an autonomous political entity, under the protection of the Greek Army and under the guarantee of the League of Nations."—Idem, *Greece and the Near East* (*New York Times Current History*, Sept., 1922).—See also TURKEY: 1921 (March-April): Secret treaties.

1921.—Distribution of Greeks in southeastern Europe. See BALKAN STATES: Map showing distribution of nationalities.

1921 (December).—Great Britain's loan to Greece.—"On December 31, 1921, the British Government authorized the conclusion of a loan to Greece of £15,000,000 on condition that the greatest part of the amount possible be used in the purchase of English products. The British Government, according to the announcement, renounces the privilege conferred on it by Article IV of the Convention of February 10, 1918 . . . which provided that until liquidation of outstanding obligations by Greece, no new guarantee for a foreign loan would be given her. The Greek Government renounces its demands for payment by the British Government of the sum of £5,500,000 representing the remainder of the sum not yet paid by Great Britain of the loan to Greece under the 1918 convention."—*New York Times*, Jan. 1, 1922.

1921-1922.—Near East relief. See INTERNATIONAL RELIEF: Near East relief.

1922 (January-March). — Deportation of Greeks.—Turkish atrocities.—Gounaris in western Europe.—Gounaris cabinet.—"Events in Greece during the year have centered about imperialistic and international affairs. The ambitions of Greece in the Near East have not been realized, and the Greeks and Turks appear to be more embittered towards each other than ever before. By an order of Mustapha Kemal, Turkish Nationalist leader, issued Jan. 20 all the Greek residents of Konieh were reported to Erzerum. Ten days later Kemal authorities in Samsun arrested and put to death 300 Greek civilians. Meanwhile the Turkish authorities nominally in power in Constantinople, confiscated large quantities of Greek goods, and when Greek consular agents protested, they were saved from bodily harm only by the prompt intervention of British forces. On Feb. 2, Thracian deputies in the Greek National Assembly presented a memorandum to the Ministers of Great Britain, France, Italy and the United States asking that Thrace under no circumstances be separated from Greece."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, Supplement, p. 87.—Feb. 8, the Greek cruiser, *Naxos*, captured the

steamer *Berkshire*, bearing a cargo of coal and oil of Mustapha Kemal. "On Feb. 14 the Greek naval forces seized the French steamer *Espoir* with a cargo of coal and oil, whose final destination was alleged to be the Kemalist Government at Mersina. This incident gave rise to a long controversy between the French and Greek Governments, the upshot of it being that Greece released the boat, but kept the cargo, and referred the whole question to an international prize court. A still more serious case of the same kind occurred on March 15, when the Greeks seized, and searched the Italian steamships *Umbria* and *Abbazia*, retaining the latter. The Greek torpedo boat *Naxos* stopped the *Abbazia* near Ineboli and took it to Mudania, where, after a three hours' search of the vessel, the Turkish passengers, including the personnel of a Turkish sanitary corps, were declared prisoners of war. The incident caused excitement in Italy, whose Government has not recognized Greece's right to institute a blockade in its war against the Kemalist Turks."—*Troubles of the Greek government, Feb., 1922 (New York Times Current History, Apr., 1922, p. 167)*.—Meanwhile a mass meeting of fully 10,000 persons had assembled in Adrianople: Greek, Turkish, Armenian and Jewish speakers declared they and their compatriots would resist to the bitter end any Entente attempt to transfer that province back to Turkey. "To the end that Greece might retain her . . . territorial grip along the Ægean and realize her aspirations in Asia Minor, Premier Gounaris spent five months in the chancelleries of Western Europe. That, in the opinion of the National Assembly, he failed in his purpose, was evident from the adverse vote which he received in March 10 [1922], following his return. Out of the 355 votes the government numbered only 155 and at once resigned. Failure of M. Stratos, leader of the Reformists, to form a new cabinet, led to the recall of M. Gounaris, who, after taking the portfolio of Justice, reconstructed his ministry. . . . The National Assembly expressed confidence in the New Ministry by a vote of 164 to 86."—H. J. Carman and E. D. Graper, *Political Science Quarterly, 1922, Supplement, pp. 87-88*.

1922 (April-May).—Represented at Genoa conference. See GENOA CONFERENCE.

1922 (April-July).—New cabinets and coalition ministry.—Bombardment of Samsun and Trebizond.—Turkish protest against Greek protectorate in Asia Minor.—"On April 1 [1922], following a heated discussion about armistice terms with the Turkish Nationalists, the Assembly again expressed confidence, 163 to 52, the 80 Venizelist members withdrawing while the vote was being taken. But the financial and international policies of the government continued to be targets of attack, and on April 11 the Premier won a vote of confidence and King Constantine again summoned M. Stratos to form a new cabinet. Although he succeeded in the task, the Assembly by a vote of 170 to 154 refused to express confidence and on May 18, the New Ministry resigned. Faced by this dilemma, the King again invited M. Gounaris to head a new cabinet; this he refused to do, but expressed willingness to co-operate with Stratos in a coalition ministry in which all legitimist parties would be represented, the Liberals alone being excluded from it. This proposal was accepted by M. Stratos and on May 23, the new government was formed under the presidency of M. Protopapadakis, former minister of finance. In this cabinet M. Theotokis retained the War portfolio; M. Gounaris became Minister of Justice. . . . The National Assembly expressed confidence on May

24 by a vote of 218 to 30."—H. J. Carman and E. D. Graper, *Political Science Quarterly, 1922, Supplement, p. 88*.—On April 7 the Hellenic National Assembly enacted a law for a forced internal loan of 1,600,000,000 drachmas. This, the work of Protopapadakis, created a sensation in European financial circles. The Greek flotilla enforced a blockade of Turkish Black sea ports and on May 10 a ship was seized in reprisal. On May 25 General Hadzanezis was appointed to succeed General Papoulas as commander of Greek forces on the Asia Minor front. On June 10 Greek naval forces in the Black sea bombarded the Turkish fortified cities of Samsun and Trebizond as reprisals for massacres of the Christian population of those cities by the Kemalist Turks. On July 27 the Greek government delivered to the ministers of Great Britain, France and Italy a note proclaiming Greece's liberty of action to end the war with the Turks by "decisive steps." On July 29 the Greek government was forced to inform the Allied Commission that it would not order an advance on Constantinople without permission of the Allies. M. Sterghiades, Greek High Commissioner of Smyrna announced on July 30 self-government for the regions in Asia Minor with Smyrna as the capital to be known as Occidental Asia Minor. This produced chaos. British soldiers were removed across the Bosphorus to reinforce the French on the Tchatalja line, where the Greeks numbered 70,000 men. The Allied force numbered 10,000 with 30 British warships. Constantinople and the Angora government protested against giving Smyrna and other Turkish districts to a Greek protectorate.

1922 (August-September).—Defeat of Greeks by Mustapha Kemal.—Burning of Smyrna.—Reasons for the Greek collapse from two points of view.—On September 7 Mustapha Kemal defeated the Greek army in Anatolia in a decisive battle starting with the capture of Afium Karahissar (August 30), the defeated Greeks retreating 200 miles to Smyrna and the Ægean in utter rout. The Turks captured the Greek field commander, two corps commanders, 400 officers and 15,000 men. About 50,000 Greeks were killed, wounded, made prisoners, or missing. Allied warships landed forces at Smyrna to maintain order and prevent vandalism during the Greek evacuation and Turkish investment. On September 9th Turkish cavalry occupied Smyrna. Brusa was also invested. On September 13th and 14th fire, alleged to have been started by Turkish irregulars, destroyed a large part of Smyrna. The fire began in the Armenian quarter and spread rapidly through the city, burning most of the European section and the American consulate and theatre, where American refugees were congregated. About a thousand were killed by fire and sword. Many Americans were among the missing. "The area destroyed in Smyrna by the great fire was about a square mile, and included the European Greek and Armenian quarters. The Turkish quarter on Mount Pagus and the Jewish quarter remained unharmed. In the European quarter a few houses escaped, and also the Latin cathedral of St. John, but the French establishments at St. Polycarp were burnt. The actual damage in terms of money was incalculable, but certainly amounted to many millions of pounds, apart from the possibly greater losses due to the cessation of trade. As regards the number of victims who lost their lives, it was believed that several thousand Armenians and others were killed before the fire, and that many more perished in the flames, or were drowned or trampled to death in the resulting panic."—*Illus-*

trated *London News*, Oct. 7, 1922, pp. 534-535.—The approximate total of refugees of all nationalities evacuated was 177,000. These people were rescued chiefly in Greek ships under American control and British ships. Between September 26 and 29 the total number evacuated by British and Americans was 146,700. From 30,000 to 40,000 refugees were handled daily. Both Greeks and Turks gave accounts of atrocities that each inflicted upon the other. "The past month has seen the collapse of the Greek army, the overwhelming triumph of Kemal Pasha, and the presentation to a divided Europe of one more acute crisis. In the examination of this affair, too, one must uncover still further evidences of the results of Anglo-French differences, for the return of Turkey is the direct outcome of an Anglo-French quarrel in which the French assumed the historic British rôle as the protector of the Turk. The origin of the present war, for it is a war, is to be found in the settlements of Paris. At that Conference Greece was represented by Venizelos, who had done so much for the Allied cause. Thanks to his services and his skill, Greece was allotted at Paris all of the remaining Turkish territory in Europe right up to the Chatalja lines, which are the outer defenses of Constantinople. In addition the Greeks received the Bulgarian territory . . . [and] were permitted to hope that they would have the eventual possession of Constantinople, itself. . . . [They were allowed] to garrison, or rather pushed into the occupation of, Smyrna, largely because the Italians coveted this prize, but also because a majority of the population were actually Greek. . . . Finally, Greek claims were honored both with respect of the Dodecanesus, an archipelago in the Ægean occupied by the Italians in their Turkish War, and of Northern Epirus, also claimed by the Albanians, who were supported by the Italians. But on his return to his own country Venizelos met with political ruin. . . . Thus it was Constantine, the friend of Germany and the brother-in-law of the Kaiser, who stood to harvest all the considerable profits which had accrued to his country by reason of Venizelos. Meantime the international situation had changed. The French had come to see in Greek expansion the evidence of a British design to dominate the eastern Mediterranean, using Greece as their agent. They had, too, every reason to hate Constantine, who had been personally responsible for the killing of many French sailors in Athens during the war. France, therefore, began to . . . advocate the return to the Turk of all of the Greek holdings in Asia Minor. French policy was further influenced by the fact that the French mandate of Syria had a long frontier with Turkey and the Turks were threatening reprisal there for French support of Greek claims in Paris. In the end, after some negotiations, the French made a separate treaty with the Turks, which obtained security for Syria in return for French evacuation of Cilicia in tacit agreement to support the Turks against the Greeks—a support which included the sale of large amounts of war material. This war material enabled Kemal to equip his army. French policy in the matter of Turkey was closely imitated by the Italians, who had hoped to acquire Syria and were jealous of every Greek gain, for they correctly saw in the rise of a Greater Greece a bar to all their own hopes of ultimate domination in the Eastern Mediterranean. Somewhat later than the French, they too, made a separate treaty with the Turks which was equally unfavorable to the Greeks. Meantime the British support of the Turk had had evil consequences throughout the British Em-

pire. Masters of Constantinople, where they were nominally in occupation together with the French and Italians, the British had forced the Sultan to accept the Paris settlement, but this acceptance had been repudiated by Kemal Pasha, who went to Asia, made Angora his capital, and rallied the remnants of the old Turkish army about him. This resistance of Kemal aroused the war spirit of all the millions of Mohammedans in the British Empire, who saw the Sultan as the head of their faith and British policy as a deliberate assault upon Islam. In India and Egypt the consequences were serious. Moreover, in the British Isles there were loud protests against this Near Eastern policy, which was having such unfortunate results in various parts of the Empire. The Greeks, however, were in Smyrna, and [in 1921] . . . under British sanction, they undertook a grandiose campaign, with Angora as the ultimate objective. . . . But in the end they were obliged to retire. Kemal Pasha escaped ruin and began the systematic reorganization of his forces, largely aided by the French, the Italians and even by the Bolsheviks, who welcomed this chance to retaliate for British aid given to various Russian leaders who sought to overthrow the Soviet régime. Last winter [1921-1922] it became clear that the Greeks would not be able to conquer Asia Minor and in March there was a conference in Paris in which France, Italy and Britain served terms upon Greece and Turkey—terms which proposed an immediate armistice and an eventual evacuation of Smyrna by Greece. But Kemal Pasha had no intention of abandoning Adrianople and the preparations for a new campaign were pushed, while French support of the Turk was disclosed daily in the Paris press. Finally . . . the Greeks threatened to seize Constantinople [August, 1922] and actually withdrew troops from Asia for this gesture. This drew protest from all Allied capitals and promoted an agreement between France, Britain and Italy to resist such an attempt, but did lead Lloyd George to a speech in the House of Commons in which he clearly disclosed his sympathy with the Greeks. After this speech there was a further agreement between the Allies that there should shortly be a Conference at Venice to settle the whole Near Eastern problem. But Kemal Pasha was now ready and a few days later the world was surprised by the news that the Greek army in Asia Minor had been defeated, driven from the line of the Bagdad railway and was in wild and hopeless flight. What had happened was clear. Greece has been at war almost constantly for the past ten years and her population has been mobilized for all of these years. War weariness at last assailed army and people and the army refused to fight. . . . The first and most obvious consequence must be the return to the Turk of all of his Asiatic holdings in Anatolia. . . . As for Greece, she has suffered an appalling disaster: Of the vast territories won by Venizelos she has already lost Northern Epirus and the Ægean Islands, together with Smyrna and her Asiatic holdings. That she can hold Adrianople or any part of Eastern Thrace seems totally unlikely. She will thus be thrown back upon the frontiers which she obtained in the Treaty of Bucharest, which liquidated the Second Balkan War. Her dream of regaining Constantinople and becoming a great nation once more is thus indefinitely postponed. This is the price she has paid for preferring Constantine to Venizelos. . . . Greece is bankrupt as a result of the protracted struggle. Her army has ceased to exist. Italy, Albania, Bulgaria, all of her neighbors save Jugoslavia, are

openly hostile and if she retains British friendship it must be at the price of continuing French opposition, which must postpone her entrance into the Little Entente, where all her interests would naturally take her."—F. H. Simonds, *Greek defeat and European discord* (*American Review of Reviews*, Oct., 1922).

The following quotation gives the opposing view: "During the three years' occupation of Asia Minor by the Greek army [1919-1922], most people in Europe and America took it for granted that the peace of the Near East was secure, and that, the Greeks being the only trouble-makers in that part of the world, ways and means ought to be provided for their withdrawal, when everything would turn out to be as it ought to be. . . . All these calculations went by the board when the Greek army, following a sterile three-year campaign, and meeting political, diplomatic, economic, and moral disappointment on every side, finally gave way before the enemy and disappeared as a military factor in the Asia Minor problem. . . . No sooner had Mustapha Kemal become the master of Asia Minor than he appeared before Europe as the arbiter of war and peace not as the leader of a handful of Turkish irregulars, but as the greatest leader of the Eastern world next to Gandhi. It was also discovered that while Greece, which was in reality fighting the battles of the Allies, was abandoned and betrayed by those who ought to be his friends, Kemal Turkey, which was receiving the lavish material and moral support of France, Italy, and Soviet Russia, was the standard-bearer of Islam, enjoying the absolute confidence and assistance of the whole Moslem world. This fact dawned as a revelation before the astonished politicians of the Entente, whose petty jealousies and wranglings had given Nationalist Turkey the means to play one of them against the other in true Hamidian style. French policy, the guiding motive of which for the last two years has been a blind hatred of England, did her utmost in supporting Mustapha Kemal, in the hope that Turkey, once more re-established in her ancient confines, would become an obedient vassal of France. . . . French policy in befriending Turkey had two objects in view: First, to become the predominant Mohammedan Power, if not in numbers of subjects of that faith, at least in popularity and prestige among them. This would be a heavy enough blow against British predominance in the East. In the second place, France, having successfully created a Greater Poland against Germany, desired to create a strong Islam against Russia, the idea being that a Greater Turkey owing its existence to French support, and rallying to its victorious banners the rest of the Moslem world, would form a bulwark against Soviet Russia, rather than side with Moscow in questions of Eastern policy. In this diplomatic maneuver British policy was outplayed to the end, and France easily won the first game of the set. Britain, however, was careful not to abandon Constantinople and the Straits, and a Turkey without Constantinople and the Dardanelles and without a foothold in Europe cannot really amount to much. This is what Kemal clearly saw from the outset, and this is the reason why, notwithstanding all his attachment for France, he threw an anchor to windward and allied himself with Soviet Russia for just such an emergency. So now Kemal, fully independent of France, poses as the militant leader of a Russo-Islamic alliance and challenges not only Great Britain, but the whole of the Entente as well. He asks outright for Constantinople and the Straits and Thrace, without giving any guaranties

for his future behavior in Mesopotamia and Syria and Arabia and Palestine."—A. T. Polyzoïdes, *What followed the Greek defeat* (*Nation*, Oct. 18, 1922).

1922 (September-October).—Abdication of Constantine.—Armistice with Turkey.—A bloodless revolution occurred in Athens the latter part of September. On the 27th of that month, King Constantine abdicated, in favor of his son George, and, on October 1, with his family sailed for Palermo. His youngest son, Prince Paul, remained in Athens, having been requested to stay as heir apparent. "Four months of intensive secret preparation contributed to this quick success. The movement began among the warsick soldiers in Anatolia. They were poorly equipped and ill fed. The national loan of 1,600,000,000 drachmas was running out in propaganda abroad and graft at home, while the state of the army grew steadily worse. The high military command was inefficient. Despite repeated protests, the Government refused to replace General Haganesti who was making defeat inevitable. Diplomatic reserves abroad, presaging Greek evacuation of Smyrna, completed the destruction of the army's morale. The officers, fearful lest the rising revolt sweep away their caste and flow into proletarian channels, put themselves at its head and changed its course. . . . Meanwhile a small civilian group were active in Athens—underground. On or about September 17 they received a confidential message from Venizelos in Paris. He said the moment to overthrow Constantine had come. At this command 800,000,000 drachmas were hastily collected from Venizelist bankers and dispatched to Gonatas and Plastiras, who took over the island of Chios and Mitylene on September 21-22. Officers and men loyal to the King were imprisoned. Control of communications on the islands kept the Athens Government ignorant of the insurrection. Gonatas, having previously negotiated with Captain Pokas of the navy, now held most of the fleet and transports. Not until the night of the 25th, as the transports were leaving the islands, did the Government learn of the organized rebellion. The following morning the insurgents occupied Salonika, and an aeroplane scattered copies of their manifesto over Athens—demanding defense of Thrace, a 'non-partisan' (Francophile) government, resignation of the Ministry and of the King (in favor of the Crown Prince), dissolution of Parliament, and immediate general elections. The King answered by proclaiming martial law. In the evening a formal ultimatum arrived from the rebels, who had landed thirty miles from the capital. The Ministry resigned. Constantine dispatched General Popoulas to negotiate with the Revolutionary Council on the cruiser Lemnos (formerly U.S.S. Idaho). But at sunrise the Council sent a new ultimatum, giving the King half an hour in which to abdicate. He did. Crown Prince George hurriedly took the oath before the first priest that could be summoned from the church next door. During the afternoon the 25,000 island troops sailed into the harbor while a handful of rebels were occupying Athens without resistance."—L. Denny, *Greeks revolt a little* (*Nation*, Oct. 18, 1922).—On October 2 the Greek army was reorganized and mobilization ordered. General Nidar was placed in command of troops in Thrace and appointed commander-in-chief, October 6. The Greek National banks granted a government loan to be applied exclusively to the army to fight for Thrace. On October 10 at Mudania an armis-

tice was signed by Ismet Pasha for Turkey, settling the sovereignty of Eastern Thrace as Turkish.

1922 (November-December).—Gonatas cabinet.—Trial and execution of former premiers and ministers.—Banishment of Prince Andrew.—On November 26, Colonel Gonatas formed a new cabinet which turned its attention to placing the responsibility of the Asia Minor debacle. "The Smyrna disaster, which uprooted a million and a quarter people from their historic homes in Asia Minor and turned them into a homeless, penniless rabble of refugees, produced such suffering and represented such a gigantic national calamity that public indignation was aroused throughout all Greece. . . . The new Greek revolutionary Government arrested the statesmen held guilty for the disaster, and, after a trial of startling swiftness, condemned them to death (November 28, 1922). The death decree was issued by the extraordinary court-martial at daybreak of November 28 in the Parliament Building at Athens. The court-martial had withdrawn for deliberation at midnight, and it brought in its verdict at 6.30 in the morning, only six and a half hours later. The men condemned were the former Greek Premiers, D. Gounaris, N. Stratos and P. Protopapadakis; the former Ministers, N. Theotokis and George Baltadjis (Baltatzis or Baltazzis), and the ex-Commander-in-Chief of the Greek Army in Asia Minor, General Hadjianestis. At the hour stated, just at daybreak, General Othomeos, President of the court-martial, entered the assembly hall. Here a large throng, which had waited all through the night to hear the decision, among them many women, listened in tense silence to the reading of the sentence by General Othomeos. During the reading the guard presented arms. Messrs. Gounaris, Stratos, Protopapadakis, Baltadjis, Theotokis and General Hadjianestis were condemned to death, while Admiral Goudas and General Strategos were sentenced to life imprisonment. The sentences included military degradation. Heavy fines, varying from 200,000 to 1,000,000 drachmas, were also imposed."—S. S. Papadakis, *How the Greek political leaders faced death* (*New York Times Current History*, Feb., 1923).—The following quotations give opposing views on the executions. "The civilized world was shocked at the news that on November 28 three ex-premiers of Greece, two former Ministers, and the late Commander General of the Greek Armies in Asia Minor, had been summarily shot by order of a court-martial following a military trial of unprecedented rigor and severity in the annals of Greece. The men thus shot were the leaders of a régime, elected on November 14, 1920, by an overwhelming vote of the Greek people. They were the men who had brought about the downfall of the Venizelist Party in that election, and they had a long record of public service behind them. . . . The men who tried the former Premiers were self-appointed officers who enjoyed the confidence of the Revolutionary Committee. The President of the Court Martial was a general known for his bitter opposition to King Constantine and for his blind devotion to Mr. Venizelos. . . . Under such circumstances it became apparent that no fair trial was possible. It was claimed, therefore, by the leaders of various political groups in Greece, that as the former Ministers were still the legally and constitutionally elected representatives of the Greek people, they ought to be tried by a special court, or, still better, by the National Assembly to be elected in the near future. . . . The Revolutionary Court rejected all these pleas. The Diplomatic Corps in Athens, with the sole exception of

the Minister from France, took steps to insure the rights of the accused to appeal to the National Assembly after sentence was imposed upon them. The Revolutionary Committee did not heed this diplomatic plea, although no one would accuse the Entente Ministers of being friendly to the régime of King Constantine. In the meantime the trial was concluded with astonishing dispatch, notwithstanding the fact that it was impossible in so short a time to examine all the evidence and hear all the witnesses. . . . The pity of it all is that the men who were thus executed for the failure of the Asia Minor campaign were the victims of a policy which was not their own. They were the leaders of a régime which did not believe in Asiatic expansion and whose political and military philosophy was exclusively tied with a progressive advance on Constantinople by way of Thrace. Against that policy stood Mr. Venizelos, who as early as 1915 advised King Constantine to forego, not only Eastern and Western Thrace, but even Eastern Macedonia itself, in exchange for Asiatic expansion."—A. T. Polyzoides, *Greek political executions* (*New York Times Current History*, Jan., 1923, pp. 539, 543-544).—"Gounaris and his accomplices hid from the people the fact that the only method of obviating the peril with which Greece was threatened consisted in yielding to the warnings of the Allied Powers, that is to say in deciding on the abdication of the King. They took the opposite course. Concealing from the people what was said to them by the Allied representatives they proceeded to persecute those who attempted to enlighten public opinion. They went to the length of assassination. . . . It was in order to shield themselves from the grave responsibility of their misdeed that they planned the defeat of the Sangarios. . . . [The end was achieved] by the systematic weakening of the Asia Minor front and the sending of strong contingents against Constantinople at the moment when the general staff anticipated an imminent attack against Afium Karahissar. It was precisely this sector which was weakened most by the movement of the troops in question. This catastrophe has no precedent in history. It spelt ruin for many hundreds of thousands of Greek citizens, the massacre of Christians by tens of thousands, dishonor for tens of thousands of Greeks. At present we have to minister to the needs of eight hundred thousand refugees: We have dozens of thousands of wounded and killed, forty thousand officers and soldiers are in captivity. This is the sum total of the Gounaris treason."—M. Mavromichalis, *Le Petit Parisien* (*Contemporary Review*, Jan., 1923, p. 111).—As a result of these executions Great Britain broke relations with Greece. On December 7 the revolutionary military tribunal at Athens sentenced to perpetual banishment, Prince Andrew, brother of Ex-King Constantine, on the charge that it was by his order that 40,000 Greek troops were sent across the Great Salt Desert to their death at the hands of Turks in Asia Minor. He was also deprived of rank in the army. Counter revolutions broke out in several places. On December 28, General Pangulos was made generalissimo of the Greek army.

GREECE, Constitution of (Adopted 1910).

#### Regarding Religion

Article 1. The prevailing religion in Greece is that of the Eastern Orthodox Church of Christ. Every other known religion is tolerated and its worship is permitted under protection of the laws, although proselytising and every other interference against the prevailing religion is forbidden. The official language of the state is the one in which the form of government and the Greek laws were originally written. Any attempt to deform this language is forbidden.

Art. 2. The Orthodox Church of Greece recognizes as its head our Lord Jesus Christ and is inseparably united in dogma with the Great Church of Constantinople and with every other church of Christ of the same faith, keeping as they, unaltered, the Holy Apostolic and Synodical Canons and the sacred traditions. It is, however, independent and acts independently of any other church in her sovereign right, and is governed by a Holy Synod of archbishops. The officials of all the recognized religions are subject to the same supervision by the state as the officials of the prevailing religion. The text of the Holy Scriptures is kept unaltered; it is absolutely forbidden to present it in another language without previous permission from the Great Church of Christ presiding in Constantinople.

#### Regarding the Civil Rights of the Greeks

Art. 3. The Greeks are equal before the law and they contribute to the public expenses in accordance with their power. Only Greek citizens are acceptable in all public offices except in special cases provided by law. Citizens are all those who have acquired or may acquire the qualifications to citizenship according to the laws of the state. To Greek citizens titles of nobility or distinction cannot be granted and are not recognized.

Art. 4. Personal liberty is inviolate. No person may be persecuted, arrested, imprisoned, or otherwise restrained except according to when and as the law prescribes.

Art. 5. With the exception of crime caught in

the very act, no one is arrested or imprisoned without a . . . warrant. . . . [He must be arraigned immediately or within twenty-four hours at latest. The magistrate must then issue order of imprisonment, or release the prisoner within three days.]

Art. 6. [In civil crimes a prisoner may be released on bail. No one can be held longer than three months pending his trial.]

Art. 7. No punishment can be imposed without law providing for it previously.

Art. 8. No one can against his will be deprived of the judge in whose jurisdiction he belongs.

Art. 9. Every citizen and group of citizens have the right, keeping the laws of the state, to appeal in writing to the authorities which are obliged to take quick action and to answer in writing to the appellant as the law prescribes. . . .

Art. 10. The Greeks have the right to meet together quietly and unarmed, although in public meetings the police may be present. Meetings in the open may be forbidden whenever public security is endangered.

Art. 11. The Greeks have the right to foreign associations provided they keep the laws of the state; which laws, however, cannot withdraw this right by any previous permission on the part of the government. No association can be dissolved for violation of law except by court decision.

Art. 12. The home of each citizen is inviolate. No search can be carried out in any house, except as authorized by law. . . .

Art. 13. In Greece, no man can be sold or bought; every mercenary and slave of whatever race or religion is free as soon as he sets foot upon Greek soil.

Art. 14. Any one can publish by speech, by writing, and through the public press, his opinions as long as he keeps the laws of the state. The press is free. Censorship and every other preventive measure is forbidden. It is also forbidden to seize newspapers or any printed articles either before or after publication. It is permitted, however, by exception, to seize after publication such articles as are openly offensive to the Christian religion or to the person of the King or offensive to the morals of the people. But in that case the state prosecutor must, within twenty-four hours from the time of the seizure, submit the case to the council of judges and ask for a ruling, otherwise, seizure is void. The publisher of the offending article may protest against the ruling of the court, but not the state prosecutor. It is permitted, in such a way as the law might provide, to forbid, upon pain of confiscation and criminal prosecution, the publication of reports and communications referring to military movement or acts for the defense of the country. In the event of confiscation, the foregoing orders will govern. The publisher of a newspaper and the writer of a published libelous article concerning private life, besides the penalty prescribed by the criminal code, are civilly and jointly responsible for full restitution for all damage caused and for indemnification of the sufferer by a monetary sum to be fixed according to the discretion of the judge and which sum cannot be less than 200 drachmas. Only to Greek citizens is it permitted to publish newspapers.

Art. 15. No oath may be imposed without law prescribing it and defining its form.

Art. 16. Public education is under the supreme supervision of the state, is carried on at its expense. Elementary education is compulsory for all and is given free by the state. It is permitted, however, to private individuals and to corporations to establish private educational institutions op-

erated according to the Constitution and the laws of the state.

Art. 17. No one may be deprived of his property except for public benefit which must be duly proved, in which case and according to the law, an indemnity is paid to the owner of the property thus condemned. This indemnity is fixed in the legal way. . . . [Here follow proceedings regarding mines, archæological treasures, streams of water, etc.]

Art. 18. The torture of an individual and complete confiscation of his property is forbidden. Political death is abolished. The death penalty for political offenses, except for the instigators, is abolished.

Art. 19. No special permission is required to bring to trial any governmental and municipal officials for wrong acts committed during their services, excepting acts personally ordered by the Ministers themselves.

Art. 20. The secrecy of letters and correspondence is absolutely inviolate.

#### Regarding the Construction of the State

Art. 21. Every authority of the state springs from the Nation and operates in the way prescribed by the Constitution.

Art. 22. The legislative authority is exercised by the King and the Boule.

Art. 23. The right to propose legislation belongs to the Boule and to the King, who acts through the Ministers.

Art. 24. No proposition regarding the increase of the expenditures of the budget, for payment of salaries, or for pension, or for individual profit, may originate in the Boule.

Art. 25. A bill disapproved by either of the parties of the legislative authority may not again be introduced in the same session of Boule.

Art. 26. The authentic interpretation of the laws belongs to the legislative authority.

Art. 27. The executive power belongs to the King. It is exercised through the responsible Ministers appointed by him.

Art. 28. The judicial authority is exercised through the courts and court decisions are carried out in the name of the King.

#### Regarding the King

Art. 29. The person of the King is without responsibility and is inviolate, his Ministers being responsible for his acts.

Art. 30. No act of the King has any force or can be carried out, unless it is countersigned by the proper Minister, who by his signature becomes responsible. In case of change of the entire Ministry, should none of the dismissed ministers agree to countersign the order of the dismissal of the former and of the appointment of the new Ministry, then such decrees are signed by the president of the new Ministry after he has been appointed by the King and taken the oath of office.

Art. 31. The King appoints and dismisses his Ministers.

Art. 32. The King is the supreme chief of the State. He is the chief of the army and navy forces. He declares war. He contracts treaties of peace, of alliance, and of commerce, and he communicates these to the Boule, together with the necessary explanations, whenever the interest and safety of the nation permit. Commercial treaties, however, and other treaties embodying concessions that cannot be granted without a special law in accordance with the present Constitution, or that bind indi-

vidually the Greeks, have no power without the consent of the Boule.

Art. 33. No cession or exchange of territory can be made without specific law. At no time can the secret articles of any treaty reverse the open articles.

Art. 34. The King confers according to the law the military and naval grades, appoints and dismisses also, according to the law, the public officials, with some exceptions expressly provided by the law; but he cannot appoint any official in a position not previously established by law.

Art. 35. The King promulgates the necessary decrees for the enforcement of the laws. He can never restrain the operation of the law and he cannot exempt anyone from its fulfillment.

Art. 36. The King confirms and proclaims all the laws voted by the Boule. Any law not proclaimed within two months after the end of the session of Boule is invalid.

Art. 37. The King convokes the Boule to regular session once a year, and in extra session whenever he deems necessary. He proclaims in person or by proxy the beginning and the end of each session, and has the right to dissolve the Boule; but the decree of dissolution, bearing the signature of the Ministry, must contain also the proclamation of a new election within forty-five days and the convocation of the new Boule within three months.

Art. 38. The King has the right to obstruct the labors of the parliamentary session only once, by either postponing the beginning of the session, or interrupting its continuance. The interruption of the parliamentary labors cannot last for more than thirty days, nor be resumed during the same session without consent of the Boule.

Art. 39. The King has the right to grant pardon, commute and reduce the sentences imposed by the courts with the exception of those sentences affecting Ministers; he can also grant amnesty for political crimes only, provided his Ministers assume the responsibility.

Art. 40. The King has the right to confer decorations as prescribed by the laws.

Art. 41. The King has the right to issue currency in accordance with the law.

Art. 42. The King's compensation is fixed by law, while the annual compensation of King George I, in which the amount voted by the former Ionian Chamber is included, is fixed at 1,125,000 drachmas. This amount may be increased by law after ten years.

Art. 43. King George after the signing of the present Constitution will take before the present national assembly the following oath: "I swear, in the name of the Holy, Consubstantial and Indivisible Trinity, to protect the prevailing religion of the Greeks, to observe the Constitution and the laws of the Greek nation, and to maintain and defend the national independence and the integrity of the Greek nation."

Art. 44. The King has no other authority, except that specifically granted him by the Constitution and by the special laws in accord with it.

#### Regarding Succession and Regency

Art. 45. The Greek Crown and its constitutional rights are hereditary and revert to the direct genuine and lawful descendants of King George I, in order of seniority, the males being preferred.

Art. 46. In the absence of successor in accordance with the foregoing, the King appoints him with the consent of the Boule, convoked for the

purpose, through a two-thirds vote of all the members, and in open ballot.

Art. 47. Every successor to the Greek Throne is required to confess the faith of the Eastern Orthodox Church of Christ.

Art. 48. At no time can the Crown of Greece and that of any other nation be united on the same head.

Art. 49. The King becomes of age when he has completed his eighteenth year. Before he ascends the Throne he takes the oath prescribed in Article 43, in the presence of the Ministers, the Holy Synod, any deputies who might be present at that time in the capital and higher officials. Within two months the King convokes the Boule and repeats the oath before the deputies.

Art. 50. In the event of the King's death when his successor is not of age, or is absent, and there is no regent already appointed, the Boule, even if its session is at an end, or it is dissolved, convenes together without special call, at latest on the tenth day after the death of the King. The Constitutional Royal authority is exercised by the Council of Ministers on its own responsibility until the regent shall take the oath or until the successor to the Throne shall arrive. A special law shall regulate the details of the regency.

Art. 51. If on the death of the King his successor is not of age, the Boule, even if its session is ended, or if it is dissolved, meets to appoint a guardian. A guardian is only chosen if such has not been appointed in the will of the deceased King or when the mother of the minor successor does not remain in her widowhood, she being the rightful guardian for her son. The guardian of the minor king whether appointed by the will of the King or chosen by the Boule, is required to be a Greek citizen of the Eastern church.

Art. 52. In the event of the non-existence of an heir to the throne, the Boule even if its session is ended, or if it is dissolved, elects temporarily, by open vote, a regent who must be a Greek citizen of the Eastern church, and the Council of Ministers exercises under its own responsibility and in the name of the nation the Royal Constitutional prerogatives up to the day when the regent shall take the oath; within two months at latest, the citizens elect representatives equal in number to the Boule, who convene together with the Boule and elect the king by a two-thirds majority of the whole and by open ballot.

Art. 53. If the King on account of illness considers it necessary to establish a regency, he convokes the Boule, and promulgates through his Ministers a special law. If the King is not in a condition to reign, the Council of Ministers convokes the Boule. If the Boule, upon convening, acknowledges the necessity by a three-fourths majority, it elects a regent, and if need be a guardian, by open ballot. A special law will regulate concerning the regency in event of the King's absence outside the country.

#### Regarding the Boule

Art. 54. The Boule convenes *ipso jure* each year from the first of October in regular session to the carrying on of its annual labors unless the King has previously convoked it for the same purpose, in accordance with Article 37.

The duration of each regular session cannot be shorter than three months exclusive of any intermission provided for in Article 38.

Art. 55. The Boule convenes in public session in the parliamentary house, but it can deliberate behind closed doors, upon request of ten of its

members and provided the majority of the chamber in secret session has approved this request and subsequently it is decided whether the details of such a discussion may be repeated in open meeting.

Art. 56. The Boule cannot enter discussion without the presence of at least one-third of its members and it cannot make any decision without the absolute majority of the members present which, however, must not be less than four-fifths of the minimum number of the quorum. In case of an even vote a proposition is defeated.

Art. 57. No bill is accepted which is not discussed and voted upon by the Chamber once in principle, once by article, and once complete, on three different days. After being voted upon on principle the bill is referred to a parliamentary committee unless it has been previously examined by the same committee or by the council of state. Following its examination by the committee within the given time limit, the bill is sent back to the chamber where it is discussed article by article in different sessions, the sessions being at least two days apart. In exceptional instances, the Boule has the right to declare a bill urgent, and not submit it to the committee, but to shorten into one day the period of the discussions. . . . [The rest of this article covers the details of the vote of different bills.]

Art. 58. [Regarding the right of petition to those not members of the Boule.]

Art. 59. [Regarding taxes.]

Art. 60. The Boule in its annual session votes for the coming fiscal year, regarding the strength of the military and naval forces, regarding the budget, and also decides on the accounting for the preceding year. All the income and the expenditures of the state must be written in the budget and in the accounting. The budget is submitted to the chamber during the first two months of the session, and after being examined by special committee is voted upon by chapters and articles on four different days. . . . Within a year at latest from the termination of the fiscal year the accounting is presented to the Chamber, is examined by special committee and voted by the Chamber.

Art. 61. No salary, pension, fee or reward, is listed to the budget of the state, neither is it paid without a special law defining it.

Art. 62. No deputy is prosecuted or otherwise examined on account of an opinion or a vote given by him in the execution of his parliamentary duties.

Art. 63. During the session of the Boule no deputy is prosecuted, arrested, or imprisoned without permission of the Boule, although such a permission is not required in a crime caught in the very act. A deputy can only be arrested four weeks before the session of the Chamber and three days after its conclusion. Should the deputy be imprisoned, he is released four weeks before the Chamber is convened in session.

Art. 64. The deputies take the following oath in the public session of the Chamber: "I swear in the name of the Holy, Consubstantial and Indivisible Trinity to be faithful to my Country, the Constitutional King, to maintain obedience to the Constitution and the laws of the state, and to fulfill conscientiously my duties." Deputies belonging to another religious denomination, instead of taking the oath in the name of the Holy, Consubstantial and Indivisible Trinity, do so according to the formula of their own religion. . . .

Art. 66. The Chamber is made up of deputies legally elected by the citizens having the right to elect by direct universal and secret suffrage. Elec-

tion of deputies are ordered and carried out simultaneously throughout the country.

Art. 67. The deputies represent the nation and not only the district from which they are elected.

Art. 68. The number of deputies of each electoral district is fixed by law according to its population. But at no time can the total number of deputies be less than one hundred and fifty.

Art. 69. The deputies are elected for four consecutive years beginning from the day of the general election. As soon as the four year parliamentary period is ended, the new general elections are ordered. Within forty-five days from the day of election, the new Boule can be compelled to meet in regular session only if the former Boule has not completed its duties for that year as prescribed in Article 60. A parliamentary seat vacated during the last year of the parliamentary period is not filled as long as the number of vacancies does not exceed one-fourth of the total number of the membership.

Art. 70. In order to be elected deputy one must be a Greek citizen, have completed the twenty-fifth year of his age and have legal right of voting. A deputy deprived of these qualifications legally loses his parliamentary office. Should there be differences of opinion on this subject, it is decided by the Boule. . . .

Art. 72. Deputies accepting any office or position incompatible with their duties lose their parliamentary office. . . .

Art. 73. [The examination and judging of parliamentary elections claimed to be invalid.]

Art. 74. The Boule elects from the number of the deputies in the beginning of the parliamentary session its president, its vice presidents and its clerks. . . .

Art. 76. If a deputy has absented himself for more than five meetings without permission of the Boule, . . . he is fined 20 drachmas for each absence.

#### Regarding the Ministers

Art. 77. None of the Royal family can be appointed a Minister.

Art. 78. The Ministers have free access to the sittings of the Boule, and they are heard whenever they request the floor. They vote only if they are members of the Boule. The Boule may request the presence of the Ministers in the sittings.

Art. 79. No order of the King, written or verbal, may relieve the Ministers of their responsibility.

Art. 80. The Boule has the right to impeach the Ministers before a specially constituted court in accordance with the law defining ministerial responsibility. This special court is presided over by the president of the Areopagus [supreme court] and is made up of twelve judges, drawn by lot by the president of the Boule, in open session . . . [from the entire number of the higher judiciary.]

Art. 81. The King may pardon a Minister thus condemned provided the Chamber concurs.

#### Regarding the Council of State

Arts. 82-86. [This section of the constitution was never put into practice and the provisions pertaining thereto are about to be modified.]

#### Regarding the Judiciary

Art. 87. Justice is administered by judges appointed by the King in accordance with the law.

Art. 88. [This article explains how the Greek

judiciary are appointed and what is the time limit of their service. The judges of the Areopagus and the Court of Appeals and all higher judges are appointed by the King for life.]

Art. 89. The qualifications of the judicial officials are defined by law.

Art. 90. The High Council Judiciary, composed of members of the Areopagus, has the right to appoint, transfer or promote according to law those high judicial officials who have attained life appointment with exception of the chief justice, the second chief justice, and high solicitor of the Areopagus.

Art. 91. [This article defines the details of judicial procedure.]

Art. 92. The sessions of the courts are public, except in cases when such publicity might be detrimental to the morals and the good order of society. But in that case the court should issue their decision in this respect.

Art. 93. Every court decision must be specifically justified and proclaimed in a public session.

Art. 94. The jury system is maintained.

Art. 95. Civil crimes are judged by juries, and so are those of the press, provided they do not affect the private life of any individual.

Art. 96. No judge may accept another public office except that of a professor of the University.

Art. 97. Military and naval court-martial and those courts dealing with piracy and barratry are regulated by special laws.

Art. 98. [This article refers to the duties and rights of the members of the Council of Control, which is a body which examines the public accounts of the state.]

#### General Provisions

Art. 99. Without a special law no foreign army is accepted to the Greek service, nor may it remain in the country, nor may it pass through it.

Art. 100. Military and naval officers are deprived of their grades, their decorations and their pensions only with due process of law.

Art. 101. [This article provides for arbitration in the case of conflicts between the judiciary and the administrative authority.]

Art. 102. [This article provides for the fitness of public officials and the requirements demanded of them before and after they are appointed.]

Arts. 103-104. [These articles explain how the high officials of the state can be brought before special courts if found to be delinquent in their duties.]

Art. 105. The election of municipal authorities is by universal suffrage.

Art. 106. Every Greek able to bear arms is obligated to contribute to the defence of the country in accordance with the laws. . . .

Art. 107. [The Constitution may be revised in its non-fundamental provisions, ten years after its adoption.]

Art. 108. All laws and decrees contrary to this Constitution are abolished.

Art. 109. The present Constitution becomes operative as soon as signed by the King, and the Council of Ministers must publish it in the official gazette within twenty-four hours after signature. Every revision of the non-fundamental provisions of the Constitution, voted upon by the Boule, is published in the official gazette within ten days after being voted by the Boule, and is made operative by a special act of the Boule.

Art. 110. The observance of this Constitution is dedicated to the patriotism of the Greeks. —Translated by A. T. Polyzoïdes.

**GREEK FIRE.**—"The important secret of compounding and directing this artificial flame was imparted [in the later part of the seventh century to the Greeks, or Byzantines, at Constantinople] by Callinicus, a native of Heliopolis, in Syria, who deserted from the service of the caliph to that of the emperor. The skill of a chemist and engineer was equivalent to the succour of fleets and armies; and this discovery or improvement of the military art was fortunately reserved for the distressful period when the degenerate Romans of the East were incapable of contending with the warlike enthusiasm and youthful vigour of the Saracens. The historian who presumes to analyze this extraordinary composition should suspect his own ignorance and that of his Byzantine guides, so prone to the marvellous, so careless, and, in this instance, so jealous of the truth. From their obscure, and perhaps fallacious hints, it should seem that the principal ingredient of the Greek fire was the naphtha, or liquid bitumen, a light, tenacious, and inflammable oil, which springs from the earth. . . . The naphtha was mingled, I know not by what methods or in what proportions, with sulphur and with the pitch that is extracted from evergreen firs. From this mixture, which produced a thick smoke and a loud explosion, proceeded a fierce and obstinate flame; . . . instead of being extinguished it was nourished and quickened by the element of water; and sand, urine, or vinegar were the only remedies that could damp the fury of this powerful agent. . . . It was either poured from the ramparts [of a besieged town] in large boilers, or launched in red-hot balls of stone and iron, or darted in arrows and javelins, twisted round with flax and tow, which had deeply imbibed the inflammable oil; sometimes it was deposited in fire-ships . . . and was most commonly blown through long tubes of copper, which were planted on the prow of a galley, and fancifully shaped into the mouths of savage monsters, that seemed to vomit a stream of liquid and consuming fire. This important art was preserved at Constantinople, as the palladium of the state. . . . The secret was confined, above 400 years, to the Romans of the East. . . . It was at length either

discovered or stolen by the Mahometans; and, in the holy wars of Syria and Egypt, they retorted an invention, contrived against themselves, on the heads of the Christians. . . . The use of the Greek, or, as it might now be called, the Saracen fire, was continued to the middle of the fourteenth century."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 52.

**GREEK LITERATURE:** Its sequence.—"Classical Greek Literature begins with Homer, and ends practically, if not precisely, with the death of Demosthenes. During this period Greece was free. With the loss of liberty, literature underwent a change. Greece ceased to produce men of genius, and this constitutes one difference between the classical and later periods. A second great difference is that whereas the literature of the classical period was written not only by Greeks, but for Greeks, later literature was cosmopolitan; and to this change in the literature correspond the change in the language, which from pure Greek became Hellenistic Greek. The earliest period of Greek literature is, then, classical because it is the work of genius, and is due solely to Greek genius. It reflects Greek life and expresses Greek thoughts alone and, like the language in which it is clad, contains no foreign elements. . . . The various kinds of literature, poetry and prose, epic, lyric, and the drama, history, philosophy and oratory, not only remained true, each to its own type, but on the whole they developed in orderly succession. This was because they were the work of different members of the Greek race, whose latent literary tendencies required different political and social conditions to draw them out. They were evoked one after the other by political and social changes, and so the stages in the development of literature correspond with those of the nation's life. The growth of *Epic poetry*, the earliest form of the literature which has been bequeathed remains to us, was favoured by a stage of civilization in which patriarchal monarchy formed the political machinery, and family life furnished the society and the literary public. Lyric, the next branch of literature, found favouring conditions in the aristocracies which succeeded to monarchy, and in which the social communion of the privileged class took the place of family life, and provided a new public for literature. The Drama was designed for the entertainment of large numbers of persons, and was a response to the demands of democracy. From this time on, literature no longer found its home in the halls of chieftains, or its audience in the social meetings of the few; but when the state came to consist of the whole of the citizens, literature became united with the life of the state as a whole, and thenceforward was but one of the ways in which that life expressed itself. Literary men were not a class distinguished by their profession from the rest of the community, nor was literature a thing apart from the practical matters of life. The *Orators* were active politicians or men of law; and their speeches were not literary displays, but had a practical object, to turn the vote of the Assembly, or to gain a verdict. *History* was the record of a contemporary war, or of a war which had occurred in the previous generation. *Philosophy* was but a picture in words of the conversations between

cultivated Greeks on the great problems of life."—F. B. Jevons, *History of Greek literature*, pp. 1-2.

**Period of the epic.—Pre-Homeric bards.—Homeric poems.—Hesiod and later poets.**—"There are no remains of a Greek literature before Homer. Even the Greeks of the classical period possessed nothing earlier than the Iliad. It is impossible to suppose, however, that poems so perfect as works of art could have come into being without forerunners. There must have been bards before Homer. . . . Greek legend recognizes this necessity, for it records the names of certain mythical bards, such as Orpheus, Musaeus, and Olympus, servants of the Muses, who, in the remote past—an indefinite time before Homer—sang in honor of the gods. . . . So, long before Homer, in the childhood of the Greek race, there were doubtless poets who voiced the religious feelings of the people and contributed their share to the development of the poetic art which the authors of the Iliad and Odyssey inherited in its perfected form."—E. Capps, *From Homer to Theocritus*, pp. 15-16.—"It has long been clear to students of early Greece that the Iliad and Odyssey are not primitive poems. Not only their art and construction, but their whole outlook on the world and the gods is far removed from that of the most primitive Greeks known to us. Both poems, indeed, contain a great deal of extremely ancient matter: but both, as they stand, are the products of a long process of development."—G. Murray, *Rise of the Greek epic*, pp. 115-116.—"Long before history, in the proper sense of the word, came to be written, the early Greeks possessed a literature which was equivalent to history for them and was accepted with unreserved credence—their epic poems. The Homeric lays not only entertained the imagination, but also satisfied what we may call the historical interest, of the audiences who heard them recited. This interest in history was practical, not antiquarian; the story of the past made a direct appeal to their pride, while it was associated with their religious piety towards their ancestors. Every self-respecting city sought to connect itself, through its ancient clans, with the Homeric heroes, and this constituted the highest title to prestige in the Greek world. The poems which could confer such a title were looked up to as authoritative historical documents. In disputes about territory the Iliad was appealed to as a valid witness. The enormous authority of Homer, the deep hold which the Trojan epics had won on the minds and hearts of the Greeks, may partly explain the puzzle, why it was so long before it occurred to them to record recent or contemporary events. . . . The epics relating to the Trojan war, which existed, let us say, about 800 B.C. in order to fix our ideas, would raise in an inquiring mind many questions as to the course of the war, its final conclusion, the fortunes of many heroes who took part in it,—questions to which Homer gave no answer. To quench the thirst for such information was the office of later poets, who related events which the older bards did not know or assumed as known. They had to fill up interstices and to explain inconsistencies, and this process necessarily entailed a definite consideration of chronological sequence, an element which the original creators of myth do not take into serious account. It is impossible to say how far these later poets of the Homeric school drew upon local legends, how far upon their own invention, but in their hands the traditions of the Trojan expedition and its heroes were wrought into a corpus of Trojan epics, chronologically connected,

in which the Iliad and the Odyssey had their places. The new instinct for systematizing tradition gave rise at the same time to the school of genealogical poets, of which Hesiod was the most distinguished and perhaps the first. Their aim was to work into a consistent system the relationship of the gods and heroes, deriving them from the primeval beings who generated the world, and tracing thereby to the origin of things the pedigrees of the royal families which ruled in the states of Hellas. . . . Up to the middle or end of the sixth century, then, their epic poetry satisfied the historical interest of the Greeks. For us it is mythical, for them it was historical. And further, during the later centuries of the epic period, it was becoming quasi-historical in form. The body of traditions was being submitted to crude and rudimentary processes of what we may call historical inquiry. The later poets of the Homeric school, and the poets of the Hesiodic school, worked in obedience to the need of systematic arrangement and chronological order. There was no absolute chronology, no dates; but time-sequence determined the completion of the Trojan cycle, and the relation of the Trojan to other cycles (such as the Theban), and, in the very nature of the subject, it controlled the genealogical poems. Scattered and contradictory traditions were harmonized more or less into a superficially consistent picture of the past by the activity of these poets. Their work must have counted for a great deal in both satisfying and stimulating the self-consciousness of the Greeks."—J. B. Bury, *Ancient Greek historians*, pp. 2, 4-5, 7-8.—See also HOMER AND THE HOMERIC POEMS; HISTORY: 13; 16.

**Development of elegiac and iambic poetry.**—"The Ionians, who had created epics in its highest form, were also the leaders in developing the species of poetry which arose next after it. . . . Epic poetry moved in an ideal region of heroic life. Elegiac poetry was an utterance of the new age which was beginning for Hellas, and especially for Ionia, in the eighth and seventh centuries,—an age of gradual transition from monarchy to democracy, an age of enterprise and discovery, of colonization and commerce, when fresh interests and widening experience stimulated individual thought and feeling. Greek elegiac poetry was universal in its range of theme; it could give utterance to patriotic exhortation, to tender sentiment, to social gaiety, to the thoughts of the statesman or the philosopher, and to mourning for the dead. . . . Iambic poetry, like Elegiac, was an Ionian creation, and first comes into view at the same period, viz., circa 700-650 B.C. . . . Elegiac and Iambic poetry may be regarded as, in a sense, companion forms, alike characteristic of the period which followed that of the great epics. Both alike were fitted for the utterance of individual thought and feeling on any subject; and neither demanded, of necessity, any high poetical gift. . . . The iambic measure (the nearest as the Greeks thought, to the cadence of every-day speech), being more colloquial, is more suitable when the utterance is more personal, as in satire, or in controversy. Solon writes of his reforms both in elegiacs and in iambs; but the iambic form is that which he prefers for keen self-defence in detail. Satire was more especially the purpose to which iambic verse was applied by its earlier masters, as Archilochus (c. 650 B.C.), Semonides of Amorgos (c. 640), and Hipponax of Ephesus (c. 540), the inventor of the 'scazon.' This side of the iambic tradition was continued in Attic Comedy."—L. Whibley, *Companion to Greek studies*, pp. 130-131.

Rise and decline of lyric poetry.—“In the field of poetry, first one division of the Greek race, and then another, comes to the front. The Ionians, after maturing the epic form, develop the elegiac and the iambic; then Aeolians share with Dorians the glory of creating lyric poetry; and as the last named reaches the summit of its excellence, the Athenians are perfecting the drama. The Period during which Greek lyric poetry flourished is roughly measured by the two centuries from 650 to 450 B.C. No loss which the modern world has suffered in respect to ancient literature has been more often deplored than that of the Greek song to which those centuries gave birth. Of all the manifold forms which the Greek lyric assumed, there is only one which is known to us with any completeness, namely, the ode of victory, as treated by Pindar. The other forms are represented only by small fragments. . . . Nine lyric poets, including Pindar, were recognized by the Alexandrian critics as standing in the first rank. With the exception of Pindar himself there is not one of these whose work can now be adequately estimated. . . . Greek lyric poetry had two main branches, the Aeolian and the Dorian. The Aeolian lyric was meant to be sung by a single voice,—it was ‘monodic’; and it was essentially the utterance of the singer’s own feelings. The Dorian lyric was choral, and dealt largely though not exclusively, with themes of public interest, especially with those suggested by public worship. . . . After the days of Simonides and Pindar, it [Greek lyric poetry] languished, and soon perished. Why was this so? As to the Aeolian lyric poetry, that had been virtually extinct from a still earlier time. It could flourish only where the conditions amidst which Sappho and Alcaeus lived were at least partially continued, and where the Aeolian fire burned in spirits like theirs. Sweetness and light, even when Athenian, were not enough to nourish Aeolian song. . . . One cause may be recognized in the diminished number of forms for choral lyrics which Athenian life afforded. In the seventh century B.C., the period at which the intellectual culture of Sparta reached its highest level, the lyrists whom Sparta attracted and honored found one of their best opportunities in those choral dances of Spartan maidens for which *parthenia* like those of Alcman were composed. But the Attic maiden was brought up in a comparatively strict seclusion; the Dorian *parthenia* were wholly opposed to Attic feeling and usage. With regard to other species of the choral lyric, most of them were eclipsed at Athens by the popularity of one, the choral hymn to Dionysus, known as the dithyramb. And the dithyramb in its turn lost much of its hold upon public favor when a more brilliant and enthralled form of the Dionysus cult had been matured in the drama. Meanwhile, the ode of victory, so popular in the age of Simonides and Pindar, gradually died out in the latter part of the fifth century B.C., as the divisions and troubles of Hellas began to react upon the national festivals. And when, in the time of the Peloponnesian war, the dithyramb made a last effort to compete with drama at Athens, that effort only hastened the extinction of lyric poetry. . . . Attic comedy, with its ridicule of these things, well interprets the moribund phase of lyric poetry.”—R. C. Jebb, *Growth and influence of classical Greek poetry*, pp. 109-110, 123-124.

Origin and development of drama. See DRAMA: Origin; Greek comedy; ATHENS: B.C. 461-431: Development of Greek drama; B.C. 421.

Late development of prose.—History.—“It is a remarkable fact in the history of Greek literature

that literary prose was not developed until after the great branches of poetry which we have considered had reached maturity. While the drama, the most perfect and highly finished form of poetry, was being perfected in Attica, the Greeks of Asia Minor were but just turning their attention to narrative in prose. The first work of real literature in prose, the history of Herodotus, was not published until after Sophocles had reached the zenith of his powers. The explanation of this phenomenon lies not in the absence of adequate materials for writing, nor in the fact that there was no reading public, properly so-called, until the age of Pericles. . . . The late rise of prose was due rather to the perfection which narrative verse had early attained, and to the dominating influence which composition in verse, such as the narratives of Homer and the practical philosophy of Hesiod and the elegiac poets, had acquired among cultivated Greeks. Before the sixth century it did not occur to any one who desired to address the public to use any other form of expression than verse. Naturally prose was employed for certain purposes long before it was used in literature. Codes of law, treaties, the annals of cities and sanctuaries, lists of officials and victors at the games, were certainly written down as early as the seventh century. . . . But the impulse to extended composition in prose was first felt by the Ionians of Asia Minor about the middle of the sixth century, first by writers on speculative theology and natural philosophy, and a little later by writers on travel and geography.”—E. Capps, *From Homer to Theocritus*, pp. 301-302.—“The historical study of their past by the Greeks arose out of the epic tradition and was a continuation of the work of the later epic poets. The tradition of the Homeric and Hesiodic poets maintained its control to the end. What we would designate as the post-mythical or historical period overlapped by means of genealogies with the mythical period; the existing families of Greece were connected in line of blood with the heroes and thereby with the gods. The genealogical principle, lying at the base of their historical reconstruction, hindered the Greeks from drawing a hard and fast line between the mythical and the historical age. The historians who approached the subject never got beyond criticism of details and rationalistic interpretation of miracles. But at the very time when the study of mythological tradition began to assume a more critical character, the interest of the Greeks expanded to the ‘modern’ history and institutions of non-Greek states, and here they were in a region not mythical, but historical. This intellectual movement originated in Ionia; its main cause was the Persian conquest, and the resulting contact of Ionian thinkers with oriental history. . . . It was from the ‘modern’ history of the East that the Greeks went on to study the ‘modern’ history of the Hellas. And the struggle with Persia in the first twenty years of the fifth century impelled them to begin to write histories of their own time. Further their contact with the traditions of non-Greek lands within the Persian empire suggested to the Greeks a new kind of criticism of their own mythical traditions.”—J. B. Bury, *Ancient Greek historians*, pp. 33-35.—See also HISTORY: 16.

Oratory as literature.—“Oratory as a branch of literature resting upon formal rules of rhetoric is a creation of this period. . . . In the fourth century the trained professional orator comes forward on the Pnyx as a public statesman, is elected general, and gives orders to the professional soldiers who now command armies and fleets. The

profession of the pleader had grown inevitably out of the legal system in vogue at Athens. Where suits were decided by juries numbering hundreds, a rather violent style of pleading had naturally arisen. Although it was necessary by law for the litigants to conduct their own case, it became customary for them to apply to speech-writers like Lysias, Isaeus, and Demosthenes for a speech to be learnt and recited as dramatically as possible. We should expect such performances to be highly emotional and to consist largely of oratorical clap-trap. That, on the contrary, they are for the most part severely logical, that purple passages are carefully eschewed and references to national feeling kept within limits is the clearest possible proof of the high intellectual standard of the average Athenian citizen who sat upon the jury. It is true that defendants did dress in mourning and produce wives and families in rags and tears to move the sympathies of their judges, but their arguments must be sensible and must include copious reference to the letter of the law. From the so-called 'Private Orations' of Demosthenes we obtain rare glimpses of social life at Athens in the fourth century, the banker Phormio who rises to affluence from slavery, who is liberated and marries his master's daughter, the elegant hooliganism of rich young men who quarrel in camp and assault one another in the Athenian market-place, the extraordinary luxury of Meidias, who rode on a silver-plated saddle, or the quarrels of neighbours in the country about watercourses and rights of way. . . . The public orations of Demosthenes as the opponent of the Macedonian conquerors [made him] . . . unquestionably for European literature the father of oratory. Cicero learnt his art from Demosthenes, and Burke from Cicero. Cleverness is the distinguishing mark of Demosthenes; his style is restrained and logical."—J. C. Stobart, *Glory that was Greece*, pp. 228-230.

**Development of philosophical literature.**—Socrates, Plato and Aristotle.—**Alexandrine period.**—"As Greece more and more enters into her inheritance of the world, she realizes more and more the mystery of it all; and the great questions rise of Whence, and Whither, of the One and the Many, of God and man, of being and becoming."—T. R. Glover, *From Pericles to Philip*, p. 41.—The early philosophers, such as Thales, Anaximander and Anaximenes do not properly belong to a history of literature, since their writings are not contributions to it. Their primary interest was to find the element from which all things are derived. The first of the great philosophers who find a place in literature is Socrates, not for his writings, for we have none left to us, but as the inspiration of the philosophers who followed him. "Socrates, as we know, had taught by means of dialogue, and all his disciples developed their own or their master's teaching in the same form. . . . Dialogue became the dominant form of literary art, and fully met the intellectual requirements of the Greeks and particularly of the Athenians, who liked every form of competition and were always delighted to look on and listen when any discussion was going forward. The Socratic dialogue, by the way, hastened the decline of tragedy, a point which does not seem to have been hitherto noticed. For in tragedy, especially since the time of Euripides, it had become more and more essential that the *dramatis personae* should converse in a witty and instructive manner. The story was of minor importance, for after all not much novelty could be presented in it, as the same legends were treated over and over again. The interest consequently centred more and more in

discussion. These could now be had at first hand in the schools of philosophy, and every one who could not be present in person at the conversations of the philosophers was able at all events to enjoy their reproduction in the written dialogues. The interest which attached to dialogue is shown, for instance, in the introduction to Plato's *Symposium*. In this way educated people lost their interest in tragedy, which had quite exhausted its rôle of instructor, and the composition of tragedies almost came to an end."—A. Holm, *History of Greece*, v. 3, pp. 160-161.—See also SOCRATES.—"We must not forget that although poetry as such had ceased to enjoy much popularity, the need for it never ceases to assert itself. And in the period under discussion this want was satisfied by the rhetoricians in point of form only, and not as regards subject-matter. Then came Plato's philosophy, which is often simply poetry in the garb of prose. That it was sometimes so regarded in antiquity is shown by another circumstance. In the old days tragedies had been grouped into tetralogies. The philosophical discussions of the time replaced the drama for the more cultivated classes to such an extent that even Plato's dialogues were arranged in tetralogies, without much success it is true, for the resemblance between tragedy and philosophical dialogue is after all not so patent that the accidental form assumed by the one is bound to reappear in the other. It was mainly through Plato that the study of philosophy became a favourite occupation of the Athenians and of foreigners staying in Athens. . . . Thus Athens by her great thinkers occupied a higher position in the intellectual life of Greece in the first half of the fourth century than she had done in the fifth. A democracy, and a high type of one, she became through Isocrates and Plato the great school of aristocratic culture. . . . The aristocratic tendency in literature was dominant in Athens in the fifth century, when she was in her prime and at the zenith of her material and intellectual power in the age which produced the history of Thucydides, the poetry of Aristophanes, and the teaching of Socrates, but in those days Athens was not visited by so many foreigners as in the fourth century. For at the moment when she reached the climax of her intellectual and artistic greatness, the Peloponnesian War broke out, which kept half the Greek world away from Athens for more than twenty years. It was only after its close that the whole of Greece could thoroughly enjoy the grandeur and beauty offered by Athens. It may safely be asserted that in the first half of the fourth century Athens was a centre which diffused throughout the world a wealth of ideas unmatched by any single city at any other period of history. Aristotle was one of the most acute and prolific of writers, and the importance of his writings is immense. He traversed the whole field of the human knowledge of that day and advanced the cause of every science. . . . His own publications were marked by perfection of form; they were philosophical dialogues, after the fashion of the day."—A. Holm, *History of Greece*, v. 3, pp. 166-168, 428-429.—"Aristotle's life fell at the end of the old Hellenic world of freedom and artistic creativeness and entered into the new, cosmopolitan, Hellenistic world which was ushered in by the conquests of Alexander. He belonged to the one but was no small factor in shaping the other. It was a fortunate circumstance for Greece and for humanity that an Aristotle was at hand precisely when the transformation of Greece was taking place, to bring together and to summarize the

results of the creative period and to hand down the essence of its experiences and achievements to the new and complex civilization that was to follow. . . . With the death of political liberty in Greece, the creative spirit and the genius which goes with it, slowly but surely passed away. There were still writers innumerable. The art of elegant composition in prose and verse survived, but the spirit was fettered. The conditions which had produced Homer, Sappho, Sophocles, Aristophanes, Thucydides, Plato, and Demosthenes had departed forever. Greece was yet to produce great writers, but the distinctively Hellenic flavor which had made the earlier literature preëminent for all time was gradually weakened, and then lost altogether. The quick and wholesome reaction of an intelligent populace upon the poets, orators, and historians, who addressed the public directly and depended upon the popular verdict—a relationship which was possible only in a free citizen-state—now gave place to the unsafe and often capricious judgment of a literary oligarchy. The result was affectation in place of simplicity. . . . The loss of the old creative spirit, however, was in part compensated by the wider diffusion of Greek culture which followed the conquests of Alexander. Greek civilization was spread throughout Asia and Egypt, and over portions of Europe which had once been counted barbarian. The cultivated world came to speak and to write Greek. . . . The period extending from about the beginning of the third century down to the Roman conquest is known as the Alexandrine period of Greek literature. The literature of the post-classical period—in fact the whole civilization—is often called ‘Hellenistic,’ from the fact that, while Hellenic in its general character, the people who participated in it were not exclusively pure Hellenes. But the term is somewhat vague and often misused. The literature of the Alexandrine age, with the exception of the New Comedy, was essentially a book-literature—that is, the authors addressed a reading public and no longer the people at large through oral recitation or performance. . . . In the second place, it was mainly an imitative or derivative, and not an original, literature. The canons of the great classical writers in each branch were established, their unapproachable excellence acknowledged, and the new poets, instead of drawing their inspiration directly from life, labored, by careful study of the old models, to reproduce their literary qualities.”—E. Capps, *From Homer to Theocritus*, pp. 400-401, 442-444.—See also ARISTOTLE; DEMOCRACY: During the classical period; ECONOMICS: Greek theory; EDUCATION: Ancient: B.C. 7th-A.D. 3rd centuries: Greece; ETHICS: Greece, Ancient: B.C. 4th century; EUROPE: Ancient: Greek civilization; Philosophy; Renaissance and Reformation: Earlier and later Renaissance.

Relation to Latin literature. See LATIN LITERATURE: B.C. c. 753-264.

Greek poetry reborn in Sicily.—“It was during the first half-century of the Alexandrine period, a time so unfavorable to original creations in pure literature, that the last flower of true Greek poetry came to bloom. The bucolic or pastoral poetry of Theocritus represented a natural reaction from the conventionalities of the over-refined life of the Egyptian court, with its luxuries, flatteries, and artificial standards of taste. It was a revolt from art to nature. Sicily was the birthplace of this branch of poetry, which was, in the main, the natural outgrowth of the conditions of peasant life in Sicily.”—E. Capps, *From Homer to Theocritus*, pp. 446-447.—Theocritus was the greatest of the pastoral poets of this era, and with him

closes the history of truly Greek literature.—See also CLASSICS; HELLENISM.

First part of Greco-Roman period.—Polybius and Siculus.—“As Greece was first in the things of the mind, so Rome was to rule the nations. The bent of his [Polybius, c. 205-120 B.C.] great work was to show that this was no accident, but the deliberate purpose of a wise Power. ‘The whole earth subject to Rome’ is his vision. Yet he writes neither as a Roman, nor as a Greek who flatters Rome, but as a Greek with keen insight and a clear sense of harmony. Of earlier history he is not always a good judge; he shows that he did not understand the growth of the Roman constitution, and he misjudges Demosthenes; but he understood the lessons of his own wonderful age. . . . His style has been called ‘a camp style.’ It is plain, straightforward, sometimes rough; but it has not the faults of the contemporary rhetoric. His work has the further interest of being the oldest and best in the common dialect, based on the Attic, which dates from about 300 B.C., and is distinguished by a few peculiar forms, but chiefly by a less pure vocabulary. . . . His history, in 40 books, was a record of Roman conquest from 264 B.C. to 146 B.C. . . . Polybius used some Roman authorities, as the annalist Fabius Pictor. [See also HISTORY: 15; 16.] . . . From about 80 B.C., Greek literature, especially Rhetoric, became thoroughly established in the higher Roman education. The study of History and Geography also flourished. Didorus Siculus (40 B.C.) wrote a history of the world in 40 books, down to Cæsar’s Gallic Wars. . . . This *Historical Library* was, as the title implies, less a single history than a series of histories, founded on the labours of predecessors, and grouped round the point which Polybius had recognised as henceforth the centre of political interests—Rome. Historians had now ceased to produce original works with an artistic unity, such as those of Herodotus and Thucydides. Their aim was to present, in new combinations or more lucid arrangements, facts amassed by previous writers. This endeavor becomes the source of the most useful work which marks the closing centuries of the old literature.”—R. C. Jebb, *Greek literature (Literature Primers Series)*, pp. 146, 144, 146-147.

Greco-Roman period.—History: Dionysius of Halicarnassus, Strabo, geographer and historian, Josephus, Arrian, Appian and Herodian.—Biography: Plutarch, Laertius and Philostratus.—Geography: Pausanias and Ptolemy.—Rhetoric: Hermogenes, Aphthonius and Longinus.—“Under the Roman Empire the Greek language and literature were diffused throughout the civilised world. Institutions resembling universities arose in the great cities. Teachers recognised by the State gave celebrity to the schools of Alexandria and Antioch, of Tarsus and Rhodes, of Pergamus and Byzantium, of Athens and Rome, of Marseilles and Lyons. The varied literature of Hellenism in the five centuries from Augustus to Justinian has four great departments:—History, with the neighbouring provinces of Biography and Geography; Erudition, including grammar, criticism, archæology and literary miscellanies; Rhetoric, in theory and practice, with kindred forms of ornamental prose, such as Dialogues, Novels and Letters; Philosophy, represented chiefly by Stoics

and Neoplatonists. In Poetry there is little to record."—R. C. Jebb, *Greek literature (Literature Primers Series)*, pp. 147-148.—"The early history of the Romans was written by Dionysius of Halicarnassus, where he was born in the second quarter of the last century before Christ. He betook himself to Rome in 29 B.C., probably giving instruction there in rhetoric, and preparing his history. He wrote a number of books on both subjects. Those on rhetoric are intelligent; and his history, although his method ill bears the test of modern scientific examination, contains a vast mass of information. . . . Strabo, . . . who lived from about 60 B.C. until about 24 A.D., was . . . a contemporary of Dionysius of Halicarnassus. His Description of the Earth, in seventeen books, contains abundant historical facts, besides many interesting descriptions of places that the author had himself seen. It was not a mere geography that he wrote, but rather a sort of manual of general information about the different regions he describes. Flavius Josephus, born about 37 A.D., is a marked instance of the cosmopolitanism that was growing up with the increasing power of Rome. . . . His history of the Jewish War, which he first composed in his own language and then translated into Greek, was much admired in Rome, where the author was treated with great respect. Another book, on Jewish Antiquities, in twenty books, begins with the creation of the world and brings the record down to 66 A.D., when Nero was emperor. Here he made an especial effort to conciliate the Romans, speaking of the books of the Old Testament as nothing more than ancient history, with no claim to divine authority. Yet he makes very clear the difference between Judaism and Paganism, in spite of his efforts to smooth them away."—T. S. Perry, *History of Greek literature*, pp. 815-816.—"Arrian, born about 100 A.D., and raised to consular rank by M. Antoninus Pius in 146, emulated Xenophon's *Anabasis* by relating the Asiatic Expedition of Alexander the Great in 7 books, of which we have all but the end of the 7th; and, after the example of Xenophon's contemporary Ctesias (a Greek physician at the Persian court) wrote, in the Ionic dialect, an *Indian History*, including the voyage of Alexander's general Nearchus from the mouth of the Indus to the Persian Gulf. And, as Xenophon preserved records of his master Socrates, so Arrian preserved records of his master Epictetus, who, like Socrates, left nothing written. From Appian (140 A.D.) we have still 10 books, besides fragments, of a History of Rome, divided according to the countries. Herodian (240 A.D.) has left a history of the Emperors from Commodus to Gordian (180-238 A.D.), in a style far from pure, but not without dramatic force. Plutarch was born at Chaeronea in Boeotia about 40 A.D. He frequently visited Rome, and received honours from the emperors Trajan and Hadrian; but he never thoroughly mastered Latin; and, though he could use Roman annalists, the only allusion to Roman poetry in all his works is a quotation from Horace in his life of Lucullus. Greece in his day had been almost drained of inhabitants; he tells us that the whole country could not put more than 3000 men in the field—the number sent in old days by one little town, Megara, to Plataea. It may have been partly the wish to remind the world that Greece could once breed as good men as Rome that led him to write his 46 Parallel Lives. These 'lives' are in pairs, one Greek and one Roman in each pair. The ground of comparison is sometimes rather slight; thus *Alcibiades* and *Coriolanus* seem to be joined merely because both were slain

in banishment. There are also four detached Lives—*Artaxerxes II.* (Mnemon), *Aratus*, founder of the Achaean League, and the Emperors *Galba* and *Otho*. These Lives are vivid portraits of character, with some brilliant historical pictures. Plutarch was useful to Shakspeare (through North's translation) in the Roman plays. The *Moralia* or 'Ethical Works' are a collection of about 80 pieces, by no means all on ethical subjects, but also on history, archæology, and physical science. Some of the best ethical pieces are those on Garrulity, on False Shame, on Restraining Anger, on the Delays of Divine Justice. Among works wrongly ascribed to Plutarch are the 'Lives of the Ten Orators,' a 'Life of Homer,' and probably the collections of Apophthegms. These 'Sayings' are sometimes neat. . . . Diogenes Laertius, who is usually placed early in the third century, in his eighty-four *Lives of the Philosophers*, deals with the early schools of Greek philosophy, with the schools of Plato and Aristotle, and, in fuller detail, with Epicurus. Though neither an accurate nor an elegant writer, he is often valuable as supplying information which is preserved nowhere else. Flavius Philostratus (235 A.D.), in his 59 *Lives of the Sophists*, gives us valuable material for the later history of Rhetoric. In his *Pictures (Eikonnes)* he has described 66 paintings of various classes, professedly from real works in a gallery at Naples, but more probably from his own imagination. Though essentially rhetorical in conception, this curious and once popular treatise is of much interest for art-history. . . . Pausanias (160 A.D.) has left a Tour of Greece in 10 books—(going through Attica—Corinth—Laconia—Messenia—Elis—Achaia—Arcadia—Boeotia—Phocis)—which is of the greatest value for the details of topography and the monuments of art. Somewhat in the spirit of Herodotus, but less simply and freshly, he seeks to bring out the *religious* meaning of all that he sees on this sacred ground of Greece. Ptolemy (Claudius Ptolemaeus) of Alexandria (160 A.D.) built up a mathematical system of astronomy and geography which was universally received until, in the course of the 16th and 17th centuries, the system of Copernicus displaced it. Ptolemy believed that the sun, planets and stars revolved round the earth. [See ASTRONOMY: 130-1609.] . . . Rhetoric was reduced to a complete system by Hermogenes (170 A.D.). His work was long the standard text-book of an art which employed the best energies of the age. Early in the fourth century, however, it found a rival in the treatise of Aphthonius, which, at the Revival of Letters, once more became a favourite manual. Cassius Longinus (260 A.D.), one of the most accomplished Greeks of the third century, and minister of Queen Zenobia at Palmyra, has left a treatise on Rhetoric. To him is ascribed, though doubtfully, the essay *On Sublimity*, one of the best pieces of literary criticism in the language."—R. C. Jebb, *Greek literature (Literature Primers Series)*, pp. 149-52.

Greco-Roman period.—Lucian, first of the moderns.—Emperor Julian.—Romances: Xenophon of Ephesus, Longus, Heliodorus and his followers.—Alciphron.—Philosophy: Epictetus and Marcus Aurelius.—Plotinus, Hypatia and Proclus.—Verse: Babrius, Oppian and Musæus.—Anthology.—Sibylline books.—Works of the Fathers.—Decay of literary Hellenism.—"While Plutarch . . . presents us a picture of what was best in the old religion and early society, and drew from them lessons that should counteract the corruption of his day, Lucian, on the other hand, broke with the past, derided its religion,

scorned its philosophy; denounced his contemporaries as well, with no occult purpose of favoring any sect, but merely to show the age its own rottenness. Plutarch fought wrongdoing with good advice and good examples from early history: Lucian's weapons were ridicule and satire. Plutarch has been well called the last of the ancients, and Lucian the first of the moderns. Yet, true as this statement is, Lucian still shows many of the qualities of an ancient in the artistic completeness of his work, the lightness and certainty of his touch, and in his freedom from deep imprecations. He says what he has to say without sullen wrath, and having said it, he stops. Lucian's possession of this classic quality is the more striking in view of the fact that he was not a Greek. He was born at Samosata, near Antioch, at an uncertain date in the second century of our era, 120 A.D., or 140 A.D.—T. S. Perry, *History of Greek literature*, p. 817.—His *Dialogues of the Gods*, almost Homeric in their freshness and almost Aristophanic in their fun, bring out the ludicrous side of the popular Greek faith; the *Dialogues of the Dead* are brilliant satires on the living. In his *Auction of Philosophers* the gods knock down each of the great thinkers to the highest bidder; Socrates goes for about £500; Aristotle for a fifth of that sum. In another piece, Lucian himself is tried for this jesting; but is acquitted, with the approval of Plato and others. Much historical interest belongs to his sketch of *Peregrinus*, a man whom he represents as having been a Christian. Lucian notices several traits in the 'strange philosophy' of the Christians; their hope of immortality and their patience unto death; their holding of their goods in common; and their teaching that all men are brothers. His *Timon*, the misanthrope, is interesting in connexion with Shakspeare's play. The *Veracious History*, a mock narrative of travel, is the original of such books as *Gulliver's Travels*. Lucian has much in common with Swift, and more, perhaps, with Voltaire. The Emperor Julian (b. 331-d. 363 A.D.) claims mention here, less for his extant orations or addresses than for his satirical pieces. His *Emperors, or the Banquet*, is a criticism, in the form of a dialogue, on his predecessors, in which Marcus Aurelius is extolled and Constantine disparaged. The *Misopogon*, or *Beard-Hater*, is a satire levelled at the people of Antioch, who during a visit of Julian had insulted the opinions, and even the beard, of their sovereign. The Greek Romance, or Novel, originated not later than the age of Augustus, and had two chief lines of descent. One of these was purely Greek, and is represented by Xenophon the Ephesian (probably not later than 360 A.D.) in his elegant but somewhat frigid *Tale of Ephesus*, the love-story of Anthia and Habrocomes; and by the charming pastoral romance, *Daphnis and Chloe*, which bears the name of Longus. The other series was influenced, through Syria, by oriental and especially by Indian fiction. Its best representative is Heliodorus (390 A.D.). His *Tale of Æthiopia* relates the fortunes of Chariclea, a priestess at Delphi, and Theagenes, a Thessalian with whom she flies to Egypt. After many perils and separations they reach Æthiopia, and are on the point of being immolated to the sun and moon, when it is discovered that Chariclea is the daughter of the Æthiopian king,—having, by a miracle, been born white; and the union of the lovers is followed by the introduction of a more humane religion. Achilles Tatius and Chariton were inferior followers of Heliodorus. Three books of fictitious *Letters*, written with vivacity in an artificial Attic style, bear the name of Alci-

phron (about 180 A.D.). They represent a kind of literature popular from the beginning of the second century, and derive much of their material from the New Attic Comedy. . . .

"Philosophy, during these centuries, is represented chiefly by the Stoics and the Neoplatonists. The Stoic School, with its unbroken Greek tradition from the beginning of the third century B.C., was distinguished under the Empire as that School which most earnestly sought to find a practical rule of life."—R. C. Jebb, *Greek literature (Literature Primers Series)*, pp. 153-156.—See also ETHICS: Greece, Ancient: B.C. 5th century, also B.C. 4th century.—"In both Epictetus and Marcus Aurelius we may see the most serious statements of the dignity of the moral law. While these two men were alike in announcing this important truth, no greater contrast can be found than that between their respective conditions; M. Aurelius was Emperor, Epictetus a slave. The two men, however, met on a ground which does not concern itself with social position. Both owed the direction of their thought to the philosophy of the Stoics, and both taught the same lofty lessons. The manual of Epictetus was not written down by him, but by one of his disciples, Arrian. . . . Epictetus was born in Phrygia in the first century of our era, and was the slave of a freedman in Rome at the time of Nero. In that city he lived many years, until Domitian exiled the philosophers, when he betook himself to Nicopolis, a town in Epeirus, and there he is supposed to have died. All that we know of his life is his lameness, his poverty, and his untiring zeal in teaching upright-ness in thought and conduct. The upshot of his maxims may be expressed in the words, 'Bear and forbear'; endurance and abstinence he forever inculcated with an intensity of language which is very different from the grace of the earlier philosophers. . . . The Thoughts of Marcus Aurelius, the last of the great pagan moralists, show us the same intense feeling of the claims of duty, expressed with a certain tendency to meditation on the emptiness of all things, that is rather a matter of sentiment than of cold reason. . . . He modifies the rigid tone of Epictetus, and turns continually to the statement of the need of toleration. . . . The upshot of its teaching is virtue and a reasonable, determined virtue, which is surely a good fruit by which to judge its value for mankind."—T. S. Perry, *History of Greek literature*, pp. 846, 848-849.—See also ROME: Empire: 138-180.—"While Stoicism was thus pre-eminently a moral guide, Neoplatonism strove to seize the essence of knowledge and of existence. [See NEOPLATONISM.] The oriental element traceable in Plato was developed at Alexandria, largely under Jewish influences, into a mystic doctrine. By ascetic discipline and intense contemplation the soul may achieve complete abstraction from the world of the senses, and may attain to complete union (*henôsis*) with God, the source of all knowledge. This doctrine, defined by Numenius (150 A.D.) and developed by Ammonius Saccas, was expounded in writing by the pupil of the latter, Plotinus (240 A.D.), who claimed inspiration and miraculous power, and averred that, four times during his life, in ecstatic trance, he had risen to the union with deity. His disciple and editor Porphyry and the pupil of the latter, Iamblichus, a mystic who forestalled the extravagance of a dervish, continued the laborious enthusiasm. It found a more gifted witness in the beautiful and noble-hearted Hypatia, who was cruelly murdered by the fanatic mob of Alexandria in 415 A.D. In the fifth century calmer minds, still to be found

in the School of Athens, made a last effort to rally the forces of Greek wisdom. Proclus (450 A.D.) sought to combine whatever was scientific in the conceptions of Neoplatonism with the best elements of earlier systems. The attempt failed; and his followers were equally unsuccessful. The victory of Christianity over the thought of the age was already all but complete when the edict of Justinian formally closed the schools of heathen philosophy (529 A.D.). Meanwhile, for seven hundred years, the higher Poetry had been almost silent. Babrius (40 A.D.) put into choliambic verse the Fables ascribed to Aesop, whose legendary date is about 560 B.C., but from whom we have no authentic remains. Plato describes Socrates in prison amusing himself by putting such fables into verse. 'The Wolf and the Lamb' is a fair sample of the skill of Babrius, who was freely translated into Latin by Phaedrus. Oppian (180 A.D.) wrote the *Fisher's Art* (*Halieutica*), a clever epic of the didactic sort in 5 books, on the habits of fish and the modes of capturing them. He is also the reputed author of the epic on *Hunting* (*Cynegetica*), in 4 books,—greatly inferior to the other, but with some good descriptions. Buffon [the great French naturalist] consulted it. Nonnus, early in the fifth century, gave epic poetry a short, flickering life; his huge epic *On the Adventures of Dionysus* is a romance of physical nature,—fervent, but often turgid, and showing an Egyptian taste for crude colour. Quintus Smyrnaeus (450 A.D.) wrote a sequel to the Iliad in 14 books, carrying it down to the capture of Troy; and though devoid of poetical originality, is of value for the study of Homer. Under the name of Musaeus (500 A.D.) we have 340 verses, of much beauty, on the story of Leander swimming the Hellespont to see Hero. Poetry of a mystic character forms a special province of the later Greek verse. The *Argonautica* (which must be distinguished from the poem of Apollonius Rhodius) is an epic in 1384 lines, written probably in Egypt before 400 A.D., and treating select incidents in the voyage of Jason. Orpheus, bard, prophet and enchanter, is the central figure: his mysterious power over the world of gods, spirits and men is the central motive of the whole. The *Lithica*, in 768 hexameters, composed probably soon after the death of Julian in 363 A.D., celebrates the talismanic properties of rare or precious stones, and vindicates magic science from the disrepute into which it is falling. The eighty-seven *Hymns*, sometimes styled 'Orphic,' can have nothing in common with the Orphic hymns which old Greek writers mention in connexion with an Orphic ritual. The hymns in our collection represent the tendency of the later Neoplatonists to resolve the old Greek deities into abstract or mystic formulas; and few of them, perhaps, are older than 350 A.D. The Greek Anthology brings together epigrams and short pieces ranging over about 1000 years,—from Simonides of Ceos (490 B.C.) to the sixth century of our era. . . . Early Christian writers occasionally quote the Sibylline Oracles, regarding these, apparently, as genuine utterances of a heathen prophetess who sometimes became the involuntary mouth-piece of divine truth. [See *SIBYLS*.] . . . As the literature of Greek culture had gradually lost its significance, a constantly greater importance had accrued to the Greek Literature of Christianity, represented by the Epistles, Homilies and learned works of the Fathers, and by Ecclesiastical Histories such as those of Eusebius, Socrates and Sozomen. The relations between the declining and the rising literature passed through two great phases. The Christian writers

who immediately succeeded the Apostolic age, true to its example, had not ignored either the humanising value of Greek letters or the theological interest of Greek thought. Justin Martyr, Origen and, above all, Clement of Alexandria had in their different ways claimed recognition for the endeavours of the Greek search after truth. But towards the end of the third century a different spirit began to appear. While Neoplatonists like Plotinus alleged that philosophy had anticipated revelation, Christian writers like Eusebius maintained that whatever was good in Greek thought had come to it through the Hebrew Scriptures. The progressive estrangement of the Christian laity from Greek letters, and the divergence of spoken from written Greek at Constantinople, were the two great causes which in the fourth century hastened the decay of literary Hellenism. Yet the greatest Christian Fathers of that century, Gregory of Nazianzus, Basil, his brother Gregory of Nyssa, and Chrysostom were trained by Greek masters in the art of expression—that art in which all men still felt the power of ancient Greece; and the matured eloquence of the preacher first issued from the schools of Antioch and Athens.—R. C. Jebb, *Greek literature (Literature Primers Series)*, pp. 157-162.—See also *ETHICS: Greece, Ancient: B.C. 2nd-A.D. 4th centuries*.

**Middle or Byzantine period.—Contributions of Photius and Constantine VII.—Psellus.**—“Learning continued to be cultivated up to the sixth century, when the Athenian colleges were suppressed, and theological controversies began. From the seventh century to the ninth is the darkest hour of Greek learning; at least, we have no means of knowing anything about those centuries, save in the annals of the Byzantine historians, who are indeed our only authorities for those times. Just after this dark hour, the ninth century brings in a dim light of a new day. Learning revives, and we become acquainted from Arabian sources with the fact that a great philosopher named Leo lived at Constantinople. . . . Literature in the ninth century was patronised by powerful men, but the brightest work in this direction is due to the exertions of the celebrated patriarch Photius. He was a man of vast intellectual powers, and the extracts left by him from 280 out of the total number of authors whom he had read, reveal to us the existence of eighty authors who otherwise would have remained unknown. The labours of Photius are followed by the reign of the Emperor Porphyrogenetos, or Constantine VII., a man of great literary attainments, who contributed much to the intellectual advancement of the race. But neither the political condition of the Empire nor the character of the succeeding emperors was favourable to productive literary work, until the eminent scholar Psellus, in the eleventh century, who was named by his admirers Prince of Literature, enriched his age by a great number of writings in all departments of knowledge, which are ranked among the best in all literature. The greatest part of them, as of many other mediæval Greek writings, is still in manuscript, hidden in the great libraries of Europe. . . . The Frankish invasion had its beneficial aspect. It gave a colour to the native poetic bent. It infused into it a modern spirit of a romantic nature and stimulated versification. Modern versification dates from that time. Greek romances began then to be written in verse. Prose romances, it must be noted, were peculiar to the Greeks from the time of their contact with the Oriental peoples through the Alexandrian expedition. They continued to be written up to the twelfth century, but only a few of them

survived in their entirety."—P. E. Drakoules, *Neohellenic language and literature*, pp. 20-23.

**Renaissance.—Klephtic poetry.**—Effect of fall of Constantinople.—Spread of Greek learning in the West.—Cretan poetry.—"The pride of the rising literature of modern Greece is the unwritten poetry of the Klephts, a poetry which stirred the soul of the race to its depths, and did more for its resurrection than anything else. . . . They are without rhyme and for the most part the metre is accented iambic of fifteen syllables, the final syllable remaining unaccented. The verse is characterised by an abruptness and rapidity of narrative and by terse and pithy expression. These songs constitute a whole cycle of poetry and naturally represent a great variety of subjects. Being the product of a large number of men they exhibit a great many views of human life from the most joyful optimism to the most despairing pessimism. A certain Homeric vein in them is unmistakable. There are, at all events, minor characteristics which are common in Homer's manner and in the Klepht's mode of expression; for example, the occurrence of three or four lines exactly the same in various parts. . . . All our modern poets have drunk in that well of lyric sentiment which had been for centuries the sole inspiration and delight of the race. The whole tone of Neohellenic poetry is marked by the Klephtic longing for a free fatherland and a free life."—P. E. Drakoules, *Neohellenic language and literature*, pp. 24-26, 32.

—"Learning was entirely neglected after the Crusaders took Constantinople; and it was only when they, sixty years later, were expelled that there was a new literary revival. The family of the Paleologi, who regained the Byzantine throne, made great efforts to promote education, founded schools, collected libraries, and we are indebted to those educational activities for a large number of solid scholars who were destined later to awaken the literary taste and a zeal for real study, in lieu of the mania for authorship which characterised the previous centuries. . . . The very despair which followed the conquest engendered a new hope. National energies were rudely roused, and at the same time was revived that literary taste which impelled a small number of men to take an interest in the old writers long forgotten in the monasteries. How providential this coincidence was is shown by the fact that those few students, in seeking a refuge, created a place of safety for menaced Hellenism in Italy, where a new spirit had been inaugurated by Dante and Petrarch. Up to the time when Petrarch took up the study of Greek, the language was but little known in Europe; at least, it exercised no influence on the character of European literature. Boccaccio learned it from Leo Pilatus, who became the first Professor of Greek in Florence. In the fourteenth century, during the negotiations for the reunion of the Churches, Chrysoloras, who had been Greek ambassador to King Richard II. of England, became the second Professor of Greek at Florence, and had a brilliant career, including among his pupils some of the most illustrious scholars of the time. These were among the first Greeks who paved the way to a long series of scholars fleeing from Constantinople, and carrying to Italy the manuscripts of the classics. A remarkable Greek prelate, who embraced the Catholic creed and became a cardinal, proved most efficient in founding a centre of Hellenism at Rome. This eminent hierarch was Cardinal Bessarion, whose speeches at the council of Florence are important as an index of linguistic development. Greek studies now travelled northwards, though

an Italian named Vitalli is said to have taught Greek at Oxford in 1475. His pupil, Grocyn, taught here later, and had among his scholars Erasmus, who afterwards completed his knowledge of Greek in Italy under the tuition of the Greek Chalcocondyles. . . . Another stronghold of Hellenism, besides Florence, became the island of Crete, after the great catastrophe in Constantinople. Nearly the whole activity for propagation of Greek learning in the West was carried out by Cretans, who founded printing presses and edited Greek authors. The first impulse for writing modern Greek poetry was born, like Zenus, in Crete, and the island is remarkable for the production of several poems with which the Neohellenic literature may be said to begin. . . . Two poems only I need mention here; one is the epic entitled *Erotokritos*, a long poem, not of any great merit, but worth noticing on account of the great popularity it has acquired, as also for its peculiarities of language and for the transition it marks in the growth of modern Greek poetry, being the first to introduce rhyme. It was composed in the sixteenth century by Vicentio Cornaro, a Cretan of Venetian extraction, and in all probability a relative of Tasso. His style is diffuse, but there are here and there passages of poetic elevation. . . . The next poetical production of Crete worth mentioning is a tragedy entitled *Erophile*, and written by Hortakes in the seventeenth century. In its historic sense it is more truthful than *Erotokritos*, but its arrangement and taste are inferior, though it contains some passages marked by a really Dantesque vein."—P. E. Drakoules, *Neohellenic language and literature*, pp. 34-38.

**Modern period.**—General cultural activities.—Regas and Koraes, makers of modern Greece.—Effect of victory at Navarino, 1828.—Poetry: Rangavos family and others.—The brothers Soutzos, pioneers of romantic movement.—Humorists.—Valaorites, national poet.—Prose: Fiction, history and journalism.—Soures.—Younger poets.—"The picture presented by Greek activities between the sixteenth and the nineteenth centuries shows these prominent points: A vigorous and well-regulated University at Constantinople, under the ægis of the patriarchate, sets the example of founding schools in various parts of the Greek world. An endless series of publications on all subjects, and especially editions of classic authors with a view to their ideas, not restricted to grammar as hitherto, engenders a craving for reading. . . . During this period nearly every Greek town could boast of an efficient college, and the men whom these colleges produced exercised a very great influence on the moral tone of the nation. . . . A refreshing current of idealism permeated the Greek world through their exertions. Chrysoloras, George Gemistos, George Kortesios, Laskaris, Mousouros, Eparchos, are some of the names among those pioneers of the Greek resurrection. . . . After the Renaissance, both in the West and in the East, literary energies were converging into that declaration of the new order of things which we call the French Revolution. . . . The fact that the two makers of modern Greece, Regas and Koraes, were literary men and democrats is very characteristic and significant. Regas was the *Tyrtaios* of modern Greece. He was born at Velestino, in Thessaly, about the year 1753. His songs had a tremendous influence, and are still remembered and sung. . . . He was the first national poet and the first national martyr. Vigour rather than elegance characterises his songs of freedom, but they were all-sufficient for their mission. They were first published in 1814,

and by the year 1821 their effect was completed. . . . Another class of instructors must be mentioned here, whose object of education was to make their fellow-countrymen think, and think not only as individuals, but as a collective unity. Mere scholarship and grammar were no longer sufficient; wider views were inaugurated. . . . Among those more distinguished were Bardalchos, Proios, Doukas, Photiades, Philippides, Konstandas, Psalidas, Gennadius. . . . But the greatest of these great instructors was Koræes. He stands alone in the history of modern Greece as a moral teacher. His work for the language was not his primary object. He aimed principally at the moral elevation of the race and he considered that a pure Greek tongue with political autonomy was the *sine qua non* for the attainment of that object. Justly, therefore, Regas and Koræes are placed very high in the estimation of the Greek nation. . . . [Greek freedom was regained through the battle of Navarino, 1828.] Naturally, the literary instinct received new impetus after so signal a national triumph, and there is abundant creative power in the literature produced during the last sixty years, in spite of periodical depression and political unrest. The language as reformed by Koræes found at once a field of activity in the periodical press, in school handbooks, in parliamentary speeches, and in official business. Nowhere is it more elegantly exhibited than in the works of Alexander Rangaves, who is the Atlas, so to say, of Neohellenic literature. . . . Rangaves wrote a vast number of works on science, classic art, mathematics, political economy. His poetical works are lyric, dramatic, and epic, but he is most successful in lyric poetry. His religious poems are full of an exquisite spirit of adoration, and his patriotic songs are eminently inspiring. He wrote a number of beautiful little idylls of remarkable simplicity of taste and directness of expression. He seems to have founded a new kind of epic poetry. He calls his little poems metrical narratives, and regards them, in relation to *epopee*, as little tales must be regarded in relation to novel-writing. . . . A singular chasteness of style characterises all his productions. . . . His son, Kleon Rangaves, is almost as fertile as his father, but his style suffers somewhat from his great zeal to use archaic forms, though possibly by doing so he anticipates a still further development of the language in the archaic direction. Many of his works will always rank among the best products of Neohellenic literature. . . . He is most original in lyric poetry, and often excels his father in this branch. He wrote many dramas based on historical subjects, and his manner generally is that of a man who feels deeply and thinks deeply on the wider human interests. The Rangaves family produced many poets, and it was, so to speak, a fountain of modern Greek poetry and novel-writing. . . . Modern Greece can boast of a great number of poets, and although criticism has not yet decided as to whether any of them must be called great, there are a few who, if judged by the influence they have had on the Greek people, and by the good they have produced, deserve that epithet. . . .

"The present century [the nineteenth] begins with the poetry of John Vilaras, an Epirote, born in 1770. . . . Most of his poetry is lyric, and evinces a lofty nature and a stoic character. He most excelled in the satirical mood of his muse. His contemporary, Athanasios Christopoulos, a Macedonian, wrote lyrics which have been compared to Anacreon's. Sweetness and grace are their chief characteristics. The versification is very

melodious, and entitles him to be ranked among the very best poets of modern Greece. His imagery is very felicitous, and remarkable for its freshness, serenity, and joyfulness. Each of his songs has a unity of its own, and is a miniature drama excellently conceived. . . . Beautiful poems and several dramas have also been written by Jacobos Risos, an uncle of Rangaves. . . . One of the sweetest singers of natural beauty was Elias Tantalides, a native of Constantinople, who was deprived of his eyesight while quite young. There is no tone of discontent or impatience in the large number of poems which he wrote, and which reflect a gentle, cheerful, ethereal disposition. A stanza from his 'Hymn to May' may be cited as a single instance of regret. . . . Tantalides was one of the most learned men of the age, and lectured in the Theological College of Chalke, in Constantinople, to the end of his long life. For artistic use of the language in versification, George Zalokostas may be mentioned, who wrote chiefly under the inspiration of patriotic achievement, though his love-lyrics would suffice for his poetic reputation. A tone of melancholy pervades his poetry. . . . Vizyenos is another intensely lyrical poet. . . . Perhaps to the Ionian Islands belongs the honour of the production of Greece's greatest poets. Dionysios Solomos wrote at first in the Italian language. He was born at Zante in 1798—the year when Regas died—and belonged to a family of Cretan descent. He was educated in Italy, whither he went when ten years old, and lived there up to his twentieth year. He then returned to Greece. His 'Ode to Liberty' became celebrated, and was translated into most languages. It is a long poem, and reflects all the enthusiasm and all the passions of that remarkable generation of Greeks who achieved the national emancipation. The first two stanzas of this ode have been selected to constitute the National Anthem."—P. E. Drakoules, *Neohellenic language and literature*, pp. 43-48, 53-57, 59-60, 63.—"Two brothers, Alexander and Panagiotes Soutos [Soutzos], natives of Constantinople, and belonging to a distinguished Greek family, were both poets and men of letters, producing romances, drama, and lyric and narrative poems. The brothers were both educated in France and Italy, and their poetic work shows unmistakable influences of Beranger and Lamartine, and also of Byron. But they hold a distinctive place as the writers who initiated the romantic school in modern Greek literature."—L. Whiting, *Athens, the violet-crowned*, pp. 216-217.—"The island of Cephalonia produced the best humorists of modern Greece. Andreas Laskaratos is pre-eminent among them. All his works are written in the unreformed idiom, and his satire is generally directed against ecclesiasticism. . . . Cephalonia, like Zante, is extremely fertile in poets, of whom I have only time to mention Charalambes Anninos, distinguished for wit, melody, and imagination; Panayotes Panas for originality, fervour, sarcasm, and harmonious versification; Vergotes, whose translation of some cantos of Dante into popular idiom are eminently successful. The island is also rich in thinkers, mathematicians, jurists and physicians. A very remarkable epic, called 'O'Opkos (The Oath), containing 1,800 lines, has been written by Markoras, a native of Corfu. It relates to one of the most dramatic incidents of the war of independence, and exhibits linguistic skill, chasteness of style and imagination, and a beautiful tone of spirituality."—P. E. Drakoules, *Neohellenic language and literature*, p. 64.—"Aristotle Valaorites, born in Leucadia in 1824, and educated at Corfu and in

Paris, is ranked as the most typically national poet of modern Greece. . . . He died in 1879, leaving several volumes of his works, the most important of which bears the title of *Mnemosyna*. One of his most ambitious poems has for its theme a tragic episode at the court of Ali Pasha. Dr. Theodore Apbentoules, a Cretan, and later a professor in the University of Athens, is especially the interpreter of Crete in song. He was born in 1835 and died in 1893, leaving a high reputation as a savant and a patriot, as well as of a poet with much claim to distinction. . . . Achilles Paraschos is a genuine Athenian, born and educated in Athens, who has been one of the most popular poets in Greece for the past forty years. George Drosines is another of the poets whose lyrics are highly regarded in Athens, and who has written much prose in the way of stories, sketches, and folklore. Among his best-known lyrics are *The Fortune Teller*, *The Osier Bough*, *Snows*, and some personal poems of an order not common in Greek poetry. Perhaps the best English translations of modern Greek are those by Elizabeth Mayhew Edmonds and by Florence MacPherson, both of whom are highly commended by Dr. Drakoules."—L. Whiting, *Athens, the violet-crowned*, pp. 218-219.

"Of prose writers many have been distinguished in branches. In fiction, Rhoides wrote masterful pieces of imagination and satire, like his story of Pope Joan. Besides being a critic and a writer on philology, he is a clever humorist, somewhat after Lucian and Voltaire. Xenopoulos, Drosines, and Eftaliotes, whose tales have been recently translated into English, are among the best of a rising school of short story-telling. In history, most notable names are Philemon, Trikoupes, and Paparegopoulos of the past generation, while the present generation can boast of Spiridion Lampros, Soteriades, Karolidis, and many others. . . . The greatest part, however, of prose literary energy is absorbed by the press. The Greeks are extremely fond of reading, but they do not pay for books, being better able to afford the modest price of the daily paper or the periodical magazine. As a consequence nearly all literary production has been concentrated in the columns of the journals. Works of all kinds, from the most abstruse scientific treatises to the most entertaining accounts of travel, are published in these papers, the number of which is incredibly great. Even poetry condescends to enshrine herself in a weekly of four pages written exclusively in rhyme from the title to the last advertisement. It is all the work of one man, George Soures, who eminently deserves the great popularity he enjoys. His satirical power is astonishing; and of its real value it is enough to say that he endears himself even to those whom he attacks. . . . His work evidently marks a new era in the literary history of Greece—an era of more sober views of life."—P. E. Drakoules, *Neohellenic language and literature*, pp. 65-67.—"There are, too, a group of younger poets, whose work gives promise, among whom are Strateges, Kambyses, Stephanou, Polemes, Mano, Zetouniates, Palamas, and others. Athens has not lost her classic love for poetry. Homer called the divine Athena of the Parthenon 'the goddess of many thoughts'; and the poetic expression of thought is now, as then, held in reverence. The art of poetry is encouraged by the University of Athens, and is fostered by competitions, and by prizes offered by citizens. But the latest poetic expression reveals a tendency to contemplation and to philosophic speculation which is a result of the growing influence of Western ideals. The produc-

tion of dramatic poetry is not very great, although Rhangabes, Zampelius, and Angelos Vlachos have all made some contribution to the creative drama; but more notable than these is the enthusiasm for translating great foreign masterpieces, as plays from Shakespeare, rendered with singular artistic perfection by Demetrios Bikelas, and the translation of *Faust* by Probelgios. Athens, as studied in this second decade of the twentieth century, still maintains herself as the city of genius whom Pindar celebrated as 'the city brilliant, immortal, violet-crowned, like the Muses and the Graces.'"—L. Whiting, *Athens, the violet-crowned*, pp. 222-223.

**GREENBACK PARTY.**—"In 1876 dissatisfaction with the financial policy of the government was so bitter that it crystallized in a separate political organization known as the Greenback or National party, and later as the Greenback Labor party; a consideration of the views of this organization throws light upon the success of the free silver agitation. The propositions advocated by the Greenback party, . . . were by no means new; inflationists are in evidence from the beginning of financial reconstruction; at one time or another, when party lines were not firmly drawn on financial questions, they exercised influence within each of the great political organizations. Unable, however to force these parties to

accept their views without reservation, many voters in 1876 abandoned their allegiance in order to form a new organization; nevertheless, this secession and party reconstruction did not mean that each of the older parties was purged of the doctrines of government fiat money and payment of bondholders in greenbacks. There still remained such a latitude of opinion that, on all questions touching monetary policy or the treatment of public debt, Greenbackers were likely to find a sympathetic support among Republicans and Democrats. It was during this period that the term of 'soft' currency was invented. The significance of the term is not very precise, but it included the doctrines of all then opposed to specie or hard money as the basis of the monetary system. The specific demands of the Greenback party in 1876 were as follows: (1) Repeal of the act [passed in 1875] for the resumption of specie payments; (2) Issue of legal-tender notes convertible into obligations bearing interest not exceeding one cent per day on each \$100; (3) Suppression of bank-notes; (4) No gold bonds for sale in foreign markets. The underlying idea in the greenback philosophy, an idea which still finds much popular acceptance, is that the issue of currency is a function of the government, a sovereign right which ought not to be delegated to corporations. Such a view appealed to the spirit of nationalism and democracy, and naturally and quickly led to the full acceptance of the principle of 'fiat money.' This phrase in its extreme form signified a money that was not dependent for its value on the material of which it was made, that was not redeemable in any other money, and that had its origin, force, sanction, and value in the mandate of the government. The value of currency was held to depend not upon its convertibility, but upon its purchasing power. Bonds were based upon the credit of the United States and thus had value; why not follow the same reasoning and policy as to paper money? According to the greenbacker logic, resumption in 1879 was effected not by the retirement of greenbacks, or the creation of a gold reserve backed up by fortunate trade conditions, but by the word of the secretary of the treasury ordering the acceptance of greenbacks at par at the custom-houses in payment of the duties. 'At once these greenbacks were made equal to gold. The greenback, meeting all the demands for money equally as well as gold, had the same worth as gold, and the premium on gold at once disappeared.' The speakers and newspapers in the greenback cause were fierce in the denunciation of the so-called money interests; to them the American people were opposed, if not enslaved by the bondholding interests. These interests, rendered skilful and wise by years of dealings in the old world and new, were accused of successfully laboring for two objects: the perpetuation of the bond, and the increase of the value of the currency in which all payments on interest or principal of the bonds were to be made. It was thus reasoned that all of the banking, coinage, and bond legislation since the Civil War had been a part of a well-defined scheme to defraud the public. In 1876 the Greenback party polled less than one hundred thousand votes (81,740); in 1878, at the congressional election, it secured the support of more than 1,000,000 voters; in 1880, 308,578; in 1884, with Butler as the presidential candidate, 175,370. This was the last presidential election in which the Greenback party figured. For a time its financial demands were enunciated by the Labor party, and later were put into the platform of the Populists or People's party. Al-

though the advocates of greenbacks never acquired responsible party power, they gained several decisive victories which have left permanent results. Chief among these may be mentioned the stopping of contraction in 1868, and in 1878, the repeal of the cancellation of notes which was authorized by the resumption act.—D. R. Dewey, *Financial history of the United States*, pp. 378-381.—See also U. S. A.: 1876-1877; 1880: Twenty-fourth presidential election.

**GREENBACKS**, name used after the Civil War, designating government legal tender notes. See MONEY AND BANKING: Modern: 1861-1864; U. S. A.: 1895 (January-February); 1895-1896 (December-February); 1896-1898; 1900 (March-December).

**GREENE, Francis Vinton** (1850-1921), American general, and author. Military attaché United States Legation in Petrograd, 1877-1879; with Russian army in Turkish campaign during that period; 1886, resigned from army, but joined the United States volunteers in the Spanish-American War and served in the Philippines.—See also U. S. A.: 1898 (July-September).

**GREENE, Nathanael** (1742-1786), American general. Was of Quaker birth. 1770, member of Rhode Island legislature; reelected, 1771, 1772, 1775; 1776, in command of city of Boston; 1778, made quartermaster-general, a post he resigned in 1780; 1780, commander-in-chief of the Southern army; 1783, retired to Rhode Island.—See also U. S. A.: 1775 (May-August); 1780-1781; 1781 (April-May).

**GREENE, Robert** (c. 1560-1592), Elizabethan prose writer and dramatist. See DRAMA: 1558-1592; ENGLISH LITERATURE: 1530-1660.

**GREENLAND: Area.—Glaciers.—Climate.—Vegetation.—Population.—Government.—Trade.—State of civilization.—**The Danish dependency of Greenland "extends from about 59° N. to about 83° N. It thus lies well within the Polar regions, while nearly three-quarters of its length is actually within the Arctic circle. Greenland is twice as long as it is broad. The extension . . . from Cape Farewell . . . to the Polar coast of Peary Land—has been estimated as 1650 miles, the maximum breadth as about 800 miles, and the total as 827,300 sq. miles. This great island is separated from the American Archipelago to the west by the shallow passage-ways of Robeson's Channel, Kane Basin, and Smith Sound in the north-west, and southward by the wider waters of Baffin Bay and Davis Strait. To the east, beyond the continental shelf, are the deeper waters of the North Atlantic [see also BRITISH EMPIRE: Map of the world]. . . Greenland consists of a vast continuous ice-cap entirely covering the interior, and a narrow coastal fringe of headland, fiord, and island. The ice-cap of the interior, overlying an area of approximately 715,000 sq. miles, is sufficiently thick to obliterate entirely the underlying topographic features. It forms an accumulation of snow and ice congealed into the largest glacier of the north. . . The ice-cap of the interior slopes exceedingly gently to the coastal fringe. It is a solid but not entirely motionless block. Impelled by the weight of its colossal mass, it tends to flow slowly outward, and at its margins is broken by great crevasses. In the constricted areas of the valleys and fiords of the coast the ice gathers pace, and finally, as the glacier enters the sea, it breaks and is dispersed in the numerous icebergs characteristic of these northern waters. . . By far the greater part of the coast of Greenland is much indented and fringed with numerous small islands. . . The interior of Greenland forms one of the poles of

cold. . . . During the brief summer, where the surrounding areas record temperatures as high as 40° F. the temperature in Greenland appears to remain below 32° F. Over this pole of cold, permanent anticyclonic conditions seem to prevail, from which the winds blow towards the coasts. . . . Though the interior is entirely ice-covered, vegetation of the Arctic type flourishes along the coasts during the summer. In the north are the lichens, mosses, creeping dwarf willows, and even such flowering-plants as the yellow poppy, pyrola, &c. In South Greenland the vegetation becomes somewhat more profuse, and in sheltered places dwarf birches and bushes occur. Gardening has been attempted with success in the south, and even as far north as Umanak (lat. 70° 40' N.), where [hardy vegetables are grown]. . . . The population, scattered in small groups along the coasts, throughout the 46,700 square miles of Danish territory, has been estimated as about 13,449. It fluctuates, however, both with migration and disease. [Except in the east and north, where about 800 'Polar' Eskimos live] the original Eskimo population has been completely crossed with European stock. [Many show the stature, and the fair hair and blue eyes of their Danish progenitors.] The largest settlement is at Sydproven, with a maximum population of 780 (1920); the smallest is in the north at Skansen, consisting of 46 people. The majority of the settlements are in the south on the west coast. The most important are Julianehaab, Frederikshaab, Godthaab, Sukkertoppen, Holsteinborg; and in the region of Disco Bay, Godhavn, Egedesmunde, Retterbuck, Jacobshaven, Christianshaab. North of lat. 70° N. is Upernivik. On the east coast is the colony of Angmagssahk, established in 1804."—J. H. Lyde (A. R. H. Moncrieff, *New world of today*, v. 3, pp. 242-243).—"The exports consist of oil (whale, seal, and shark), furs (white and blue fox, seal), fish (cod, caplin, and halibut), eiderdown, and certain minerals, viz., graphite from Upernivik, cryolite from the Ivigtut district. Iron and coal have been found in the Disco Bay area, but are not worked. The cryolite is exported to the United States of America for the manufacture of soda. . . . For purposes of trade and administration the country is divided into Inspectorates—a southern, lying south of 67° N., and a northern, from 67° N. to about 74° N. These Inspectorates are ruled by two governors, with their headquarters at Godthaab and Godhaven respectively, who are responsible to the director of the Government Board at Copenhagen. The Inspectorates are subdivided into districts, each with its chief settlement in addition to the Eskimo stations, and administered by the local 'Udligger,' who is responsible to the superintendent. The superintendent is also a magistrate. Councils for local administration also exist, consisting of delegates (one for every 120 of the population) from the stations. The Councils meet twice a year. Their functions are: (1) To inquire into and punish crime (which, however, is very rare). (2) To relieve the poor. (3) To settle litigation. (4) To distribute some of the public funds. Five-sixths of the price of goods is paid to the sellers in Greenland, but one-sixth is kept back for the public funds."—*Ibid.*, p. 244.—"Hans Egede [see below: Modern history] and his two sons first taught the Eskimos to put their language into writing, and in the last two centuries the Greenlanders have brought this written language to a high state of cultivation, capable of unlimited growth by the compounding of native elements. Illiteracy is now unknown, thanks to the Danish

system of public schools, where the young Eskimos are taught reading and writing, but very little arithmetic, . . . [for the native can seldom] get beyond his aboriginal ability to count twenty on his fingers and toes. He has adopted Christianity without losing his tribal superstitions, the two kinds of belief producing many queer combinations. Most of the Greenland school teachers are natives who have had a course of training in Denmark. . . . There are [now] two printing offices in Godhaab and one in Godhaven, and many books are published in the Eskimo language, which is the same, with intelligible dialectical variations, throughout Greenland and all the way across Arctic America and Siberia. . . . Two monthly journals are distributed free to the whole population. The one at Godhaab, entitled *Atuagadgluutit* (Something to Read), was founded over sixty years ago [c. 1862]. . . . It contains news, native literary contributions and general features. The monthly paper at Godhaven, entitled *Avangnamiog* (The Northlander), is more political in character and has been running for about ten years. The political sense has become very strong in the Greenland Eskimos; even nationalism is taking root, and the natives are making many patriotic national songs. . . . [Native epics] are of historical value as telling stories of the Eskimos' contact with the Vikings of the period A.D. 1000-1400. Many tell of the raids in which the natives exterminated the Viking colonies, . . . and thus afford the only record of the fate of Greenland's earlier white population. . . . [Difficult as it is to make farmers out of nomadic hunters], Eskimos are settling down to the occupations of farming and the raising of cattle and sheep on the good haylands and pastures around the southwestern fjords. The meadows and pastures are fenced off and used in rotation, the crops being improved by constant fertilization. Enough hay is harvested for home consumption without the need of importing more from Iceland, as was necessary in the Viking age. For fuel most of the natives use peat. There are considerable soft-coal deposits on Disco Island and further south along the west coast, and a good deal is mined on the island for use in the port towns"—I. C. Waterbury, *Danish achievements in Greenland* (*New York Times Current History*, July, 1922).

**Early history.**—Discovery by Leif, son of Eric the Red.—Origin of name.—Settlement.—Life of the settlers.—Discovery of the mainland of North America.—Voyages of exploration.—Disappearance of settlers.—"The first account of Greenland given to the world, indeed the first mention of that region in literature, is by Adam of Bremen, an ecclesiastical official and geographical author [who in 1069 interviewed] . . . the enterprising king Sweyn of Denmark, and acquired from him divers Scandinavian and other northern items which [about 1076] Adam embodied . . . in his work 'Descriptio Insularum Aquilonis.' . . . 'To this island [he writes] it is said, one can sail from the shore of Nortmannia [*sic*] in five or seven days, as likewise to Iceland. The people there are blue ("cerulei," bluish-green) from the salt water; and from this the region takes its name. They live in a similar fashion to the Icelanders, except that they are more cruel and trouble seafarers by predatory attacks. To them also, as is reported, Christianity has lately been wafted.'

It was in fact about seventy-five years since Leif, son of Eric the Red, according to the sagas, had effected that wafting from the Christian court of Norway to the still pagan Norsemen of his father's far-western domain. For Adam clearly means these white people and not the Eskimos, with whom they had not yet come in contact and of whom no whisper had yet reached the European world. . . . Adam's idea of oceanic insulation was accepted in many quarters, as the maps disclose. Of course, they may not have derived it from him in all instances, directly or indirectly, but at least they shared it. Usually the name becomes the equivalent of 'Green Island.' It is pretty well understood that about 985 or 986 Eric Rauda (Eric the Red, or Ruddy), the first explorer and colonizer of this new region, applied the name at least partly as an advertisement of fertility and promising conditions for the encouragement of Icelandic colonists. . . . Greenland to the intending colonists would naturally mean . . . the really habitable thousand-mile fringe of uncovered land along the southwestern shore, on the average fifty miles wide and occasionally much wider. It was partly shut in by forbidding headlands and perverse currents, but feasible of access when the true course was disclosed. Some parts of this region were, and still are, green with grass and bright with summer flowers. Nansen, who certainly ought to know, declares that the Greenland sites chosen would have seemed more attractive than Iceland to an Icelander. . . . Eric settled in Eric's fiord, the present Tunugdliarfik, at a place which he called Brattahlid, now Kagsiarsuk, in 985 or 986 [see AMERICA: 10th-11th centuries]. Two distinct colonies were founded, the Eastern Settlement, extending from about Cape Farewell to a point well beyond Cape Desolation, comprising the whole of Julianehaab Bay and the coast past Ivigtut, and the Western Settlement, beginning about one hundred and seventy miles farther north at Lysufiord, [i.e., Agnafjord], the present Ameralikfiord, comprising the district of Godthaab. The fiord next Eric's fiord in the Eastern Settlement was Einarsfiord, now Igalikofiord. These fiords were separated at their head by a low and narrow strip of land, the present Igaliko Isthmus. It was here, at Gardar, that the Althing of Greenland met, and here was also found the bishop's seat, established at the beginning of the twelfth century. There were as many as sixteen churches in Greenland, for almost every fiord had its own church on account of the long distances and difficult traveling between the fiords. . . . It is apparent that from the first to last the heart of Greenland was about the low fairly fertile, favorable tract near the heads of the two fiords named for Eric and his friend, Einar and not far from Eric's Greenland home. The Western Settlement was a comparatively small offshoot, with four churches only, yet it contrived to maintain existence for between three and four centuries, being at last obliterated, as is supposed, by the Eskimos [or absorbed by them]. The main settlement was still more enduring, having a continuous record of nearly half a millennium. . . . This seems marvelous, if it be true that the entire population never exceeded 2,000 souls, as Nansen and Hovgaard have supposed. Rink, on the other hand, estimated the maximum at 10,000. Some intermediate number would seem more likely than either extreme. . . . The prosperity of the colony, such as it was, seems to have been at its best in the eleventh and twelfth centuries but was never conspicuous enough to get an outline of Greenland into the maps until about the time of final extinc-

tion. . . . The life of the people seems simple and innocent enough, as disclosed by their relics and remnants, which have been unearthed with great care. As seal bones predominate in their refuse piles, this offshore supply must have been their greatest reliance for animal food; but they had also sheep, goats, and a small breed of cattle. They spun wool and wove it; they carved vessels of soapstone, sometimes with decoration; they milked cows and made butter; they exported seal-skins, ropes of walrus hide, and walrus tusks; they paid tithes to the Pope in such commodities; they boiled seal fat and made seal tar; they gathered tree trunks as driftwood far up the coast and probably brought back cargoes of timber from Markland; they built substantial houses and churches. . . . But they had to import grain, iron, and many other articles from Europe; and the infrequent visits of ships from Iceland, Norway, and elsewhere must have made a break in the monotony of their lives which they could ill afford to forego. . . .

"If Greenland had a long history, it was that of a few people in a remote region and could not present many salient features. The colony possessed at least one monastery and the beginning of a literature, including, it is said, the Lay of Atli, revealing a curious interest in the career of the great Hun Attila, on the part of a distant colonist hidden in Arctic mists and writing beside the glaciers. . . . In seamanship and exploration their achievements, considering their numbers and resources, were really wonderful. All experts agree that Eric's first exploration was daring, skillful, persistent, and exhaustive, according to the best modern standards, and that his selection of settlement sites was exceedingly judicious; in fact, could not have been improved upon. Then followed in less than twenty years the discovery of the American mainland by Eric's son Leif (or, as some say, by one Biarni, followed by Leif) and a series of other voyages, including Thorfinn Karlsefni's prolonged effort to colonize, involving the tracing of the American coast line from at least upper Labrador to some point south of Newfoundland. The precise lower limit is matter of dispute, but, according to the better opinion, may be found somewhere on the front of southern New England [see also AMERICA: 10th-11th centuries]. These were followed in 1121 by the missionary journey, as it seems to have been, of Bishop Eric Gnuþsson, who then sailed out of Greenland for Vinland, we do not know with what result. Subsequent communication with parts of the American continent was probably not uncommon, as has been inferred from the accidental arrival in 1347 of a ship which had sailed from Greenland to Markland and been storm-driven from the latter westward. It pursued its course to Norway. In the opposite (Northern) direction we know of at least two venturesome voyages up Baffin Bay, and, as the records have reached us almost by accident, we may naturally conjecture many more. A British exploring expedition in 1824 acquired a small stone inscribed with runic characters near some beacons on an island north of Upernivik on the upper north-western coast of Greenland. The original is lost, but a duplicate of it is preserved in the Copenhagen National Museum. . . . The inscription is thought to date from about 1300, but, of course, may relate to a much earlier event. It has been translated by various runologists, with differences in detail. As given by Professor Hovgaard, it reads: 'Erling Sivgatsson and Bjarne Thordarson and Endride Oddson built this (or these) beacon (s) Saturday after "Gadnday" (April 25th) and

cleared (the place) (or made the inscription) 1135 (?). . . The date 1135 would better accord with the climax of Norse strenuousness and Greenland adventure. . . But, whether the original visit took place in the twelfth century or the fourteenth, and whether the stone denotes two Norse visits to this place or only one, it is still conclusive that some Greenlanders had explored well to the northward along the shore of Baffin Bay in the time of the old colony. A more extensive exploration was undertaken in 1266 by the clergy, apparently of the Bishop's seat, since they traveled home to Gardar. It appears that certain men had been farther north than usual but reported no sign of previous occupancy by the Eskimos (who seem by this time to have awakened some concern among the Norsemen) [except at a pasture land a little below Disco bay]. . . The Eskimo race was the ominous shadow of the Norse colonist from the beginning, though long unrecognized as a menace. Apparently there had been a temporary movement of these people down the western coast about the tenth century, withdrawing before the first white men appeared. After that for generations, perhaps centuries, the weaker heathen wisely kept out of sight. . . At last they moved nearer, and there was occasional contact while still the Norsemen were formidable. But by the fourteenth century Norse Greenland had begun to dwindle in power and population, with diminishing aid and reinforcement from Europe, and the danger drew nearer. Perhaps there was some special impulsion of the uncivilized people which resulted in the obliteration of the Western Norse Settlement, always relatively feeble. Some rumor of its need having reached the Eastern Settlement, an expedition of relief was dispatched about 1337, or perhaps a little later, accompanied by Ivar Bardsen, then or afterward steward of the Bishop, who tells the tale. Only a few stray cattle were found; presumably the colonists had been killed or carried away. The ground thus lost could not be regained. On the contrary, we may suppose the Eskimos to be getting stronger and drawing nearer. In 1355 an expedition under Paul Knutson came out to reinforce the Norsemen; but it returned home in or before 1364 and can have made only a temporary lightening of the load. In 1379 there seems to have been an Eskimo attack, costing the Norsemen 18 of their few men. But peace may have reigned as a rule. At any rate, the ordinary functions of life went on, for it is of record that a young Icelander, visiting Greenland, was married by the Bishop at Gardar in 1409; and the last visit of the Norwegian *knorr*, or supply ship, occurred by way of Iceland in 1410. After that nothing is certainly known. There are two papal letters at different periods of the century, based on very questionable hearsay information and indicating confusion and general falling away. There was even a futile effort to reopen communication in 1492."—W. H. Babcock, *Legendary islands of the Atlantic*, pp 94-95, 101-104, 106-110, 112.

ALSO IN: F. Nansen, *In northern mists*.

**Modern history.**—In 1585, John Davis, the English explorer, when on his way in search of the North Pole visited the island, and found no sign of the Northmen, except a few traditions among the Eskimo, and some traces of the influence of Norse civilization. Frobisher, Hudson (see AMERICA: 1607-1608) and Baffin also touched on the coasts, and made a few forced visits to the southwest of Greenland; but no attempt at European settlement was again made until 1721, when Hans Egede, a Danish missionary, went there

with his family, determined to convert the heathen tribes, and for that purpose made a settlement where the little town of Gotthaab now stands, and took possession for the king of Denmark. In spite of many discouragements, not the least being the fact that a number of the settlers sent up were lawbreakers or even convicts, Egede persevered, and succeeded so well that as the result of his efforts, and those of his successors, the natives of the present-day are all Christians. This result, however, was probably helped by constant intermarriage between the settlers and the natives. About ten years after the new settlement was made, a virulent epidemic of small-pox reduced the population by relatively large numbers. The trade which developed was, in 1750, made the monopoly of one private company, which, however, did not make it pay. In 1754, therefore, it was retrieved by the government in whose hands it still remains. Although exploration of the coasts was made by a number of Arctic explorers, no effort was made to cross the central ice cap until 1870 when Nordenskiöld attempted this feat. He failed; but was successful in 1883, and was followed by Nansen in 1888; Peary, 1892, and 1895; Rasmussen, 1912; De Quervain, 1912; Koch, 1913 (see also ARCTIC EXPLORATION: 1886-1900). The great interest of Greenland's modern history, therefore, lies in achievement in exploration and its scientific value. This has been enhanced by the foundation, by M. P. Porsild, of an Arctic station, or laboratory at Godhavn, where excellent work has been done in the field of experiment and research. The work was begun as a private enterprise, but in 1906 was taken over by the government. In 1921 the king of Denmark paid a visit to this great northern portion of his dominions.

**Gregory X** (1210-1276), pope, 1271-1276. See **FLORENCE: 1248-1278**.

**Gregory XI**, pope, 1371-1378. Terminated the "Babylonish Captivity" at Avignon by removing to Rome. See **FLORENCE: 1375-1378; PAPACY: 1352-1378**.

**Gregory XII** (1325-1417), pope, 1406-1415. He was elected in opposition to Benedict XIII, who reigned at Avignon. Both were deposed in 1409, but Gregory refused to recognize it until 1415. See **PAPACY: 1377-1417**.

**Gregory XIII** (1502-1585), pope, 1572-1585. Famous for introducing the Gregorian calendar. See **CHRONOLOGY: Gregorian reformation, etc.**

**Gregory XIV**, pope, 1590-1591. See **JESUITS: 1573-1592**.

**Gregory XV** (1554-1623), pope, 1621-1623. Famous for founding the Congregation of the Propaganda. See **PAPACY: 1622**.

**Gregory XVI** (1765-1846), pope, 1831-1846. See **VATICAN MUSEUM**.

**Gregory V** (1739-1821), ecumenical patriarch of the Greek Orthodox church. Bishop of Smyrna, 1784; patriarch of Constantinople, 1795, 1806-1817, 1819. At the beginning of the Greek War of Independence, he was hanged by the Turks at Constantinople for revolutionary sympathies. See **GREECE: 1821-1829**.

**GREGORY, Augusta, Lady**, Irish dramatist. See **DRAMA: 1892-1921**.

**GREGORY, Thomas Watt** (1861- ), American lawyer and cabinet officer. See **U.S.A.: 1913 (March)**.

**GREGORY OF TOURS, Saint (Gregorius Turonensis)** (538-594), Frankish historian. See **HISTORY: 19**.

**GREGORY THE PATRIARCH**. See **BOHEMIA: 1434-1457**.

**GRENADES**, small projectiles filled with explosives, and, in modern warfare, thrown by hand.

"Bombing as a war measure dates back to antiquity. The Chinese are early supposed to have fired poisonous or incendiary compositions at an enemy at short range with their frog-gun called 'huo-p'an.' They first began the use of the 'stink-pot' bomb. Indications lead us to believe that this weapon was used in various forms since the year 904 when they were used at the siege of Salonika. At the siege of Nice, William of Tyne also reported the use of pitch balls, composed of pitch, oil, and fat. Explosive grenades were utilized early in the history of gunpowder warfare. As early as 1427 they were used at the siege of the fortress of Casalmaggiore on the River Po, the defenders having thrown bottles filled with gunpowder at the besieging troops. This constituted the early or primitive grenade employed largely during the seventeenth and eighteenth centuries. In 1665, during the reign of Louis XIV, grenades were carried in an especially made pocket called the *grena-diere*. Soon the name *grenadier* began to be applied to a group of picked soldiers who scoured the country in advance of the line of march. While only four grenadiers, each carrying twelve to fourteen grenades, were assigned to each regiment of infantry during the early years, companies were organized after 1670 and soon after each grenadier was armed with a rifle in addition [see also **MILITARY ORGANIZATION: 16**]. During the Napoleonic wars, grenades were not much in vogue, but they were employed at Saragossa (1808-1809), at Antwerp (1832), and at Sebastopol (1854-1856). Here, during the Crimean War, the French are reported to have thrown about 3,200 grenades, while the Russians also used them extensively. The Russians used two types of grenade, one of cast-iron about four inches in diameter, and another of glass. The latter was a specially shaped bottle filled with gunpowder with a fuse attached to it. The grenades were used for close combat both in assault and in defense. They weighed about three pounds, so that they could be thrown by hand from twenty to thirty yards. This weapon of war fell into disuse amongst the armies of Europe until 1885, when it was used against the Sudanese tribes by the English. The advent of the Russo-Japanese War of 1904-1905 found the hand-grenade nearly as important an adjunct of infantry equipment as the rifle. They were first utilized during the siege of Port Arthur, and then gradually became the main weapon for close, hand-to-hand fighting. The Russian grenade was composed of old cannon balls or rolled brass cases of quick-firing artillery cut into four inch lengths which were filled with dynamite or pyroxil, to which was attached a fuse set to burn fifteen seconds. The Japanese grenade was made from two ordinary preserve boxes of bamboo canes which were filled with a pound of pyroxil and later replaced by picric acid. To this was attached a Bickford's fuse which was composed of flax treated with gunpowder. Soon after the commencement of the World War, the experiences gained during the Russo-Japanese and the Balkan wars began to be utilized. Commanders of the belligerent armies saw the great possibilities of the hand-grenade in the close trench warfare, and soon we saw the reappearance of this ancient engine in many new and modified forms. The modern grenade is not unlike a miniature high explosive shell. [The body is composed of steel or cast-iron containing a charge of T. N. T., picric acid, toluite, gun-cotton, or any other suitable explosive, and a detonator fired by a fuse. This is arranged to fire only on impact, but cannot explode until the grenade has

traversed a certain distance. This eliminates the possibility of a premature explosion. Time fuses are also employed, but they must be so arranged that the grenade can become active only after having been thrown. The general weight of modern grenades is about a pound.] . . . For a long time in the trenches of France [in the World War] only one type of hand-grenade was used. This was the so called defensive grenade, built of stout metal which would fly into fragments when the interior charge exploded. As might be expected, such a weapon was used only by men actually within the trenches, the walls of which protected the throwers from the flying fragments. But, as the war continued, six other distinct kinds of grenades were developed, America contributing one of the most important of them. The defensive, or fragmentation, type grenade was the commonest, most numerous, and, perhaps, the most useful of all of them. Another important one, however, was that known as the offensive grenade, and it was America's own contribution to trench warfare. The body of the offensive grenade was made of paper, so that the deadly effect of it was produced by the flame and concussion of the explosion itself. It was quite sure to kill any man within 3 yards of it when it went off, but it was safe to use in the open offensive movements, since there were no pieces of metal to fly back and hit the thrower. A third development was known as the gas grenade. It was built of sheet metal, and its toxic contents were effective in making enemy trenches and dugouts uninhabitable. A fourth, a grenade of similar construction, . . . scattered burning phosphorus over an area 3 to 5 yards in diameter and released a dense cloud of white smoke. . . . As a fifth class there was a combination hand and rifle grenade, a British device adopted in the American program. The sixth class of grenades was known as the incendiary type. These were the paper bombs filled with burning material and designed for use against structures intended to be destroyed by fire. In the seventh class were the thermit grenades, built of terneplate and filled with a compound containing thermit, which develops an intense heat while melting. Thermit grenades were used principally to destroy captured guns."—E. S. Farrow, *American guns in the war with Germany*, pp. 74-75.—See also TRENCH WARFARE: Defensive weapons.

**GRENADIER.** See GRENADES.

**GRENADIER GUARDS,** British army. See MILITARY ORGANIZATION: 31.

**GRENFELL,** Francis Wallace, 1st Baron Kilvey (1841- ), English soldier. See EGYPT: 1885-1896.

**GRENOBLE,** town in southeastern France, contained in the kingdom of Arles during the 10th century. See BURGUNDY: 843-933.

**GRENVILLE,** George (1712-1770), English statesman. Held various governmental positions, 1741-1762; secretary of state, 1762; prime minister, uniting the offices of first lord of the treasury and chancellor of the exchequer, 1763; known for his advocacy of the Stamp Act. See ENGLAND: 1760-1763; 1765-1768; U. S. A.: 1763-1764.

**GRENVILLE,** or Greynville, Sir Richard (c. 1541-1591), British naval commander and colonizer. See AMERICA: 1584-1586.

**GRESHAM'S LAW.**—"When different grades of an article can be secured for the same price, individuals use the better one; when different grades of money are in existence, they use the

poorer one. In the first case the individuals act as buyers, in the second as sellers. The use of money is not its consumption, but its alienation in order to secure things that can be consumed. Hence, so long as the poor money has legal tender equally with the good, individuals can make profits by melting or exporting the latter and paying out the former. This principle is known as Gresham's law. The name Gresham's law is due to the fact that a Scotch writer, McLeod, who was not familiar with the history of economic thought, happened half a century ago to find the idea in a report to Elizabeth by Sir Thomas Gresham. In reality, it is expressed more fully and forcibly by many of the earlier mediæval writers, not to speak of those of classic antiquity. It applies primarily to underweight or debased coin which will drive out the full-weight or good coin of the same metal. This will happen, however, only under two conditions. First, the total amount of money, good and bad, must be in excess of the country's needs. In the second place, both the good and the poor coins must be actually used as money. A better statement of Gresham's law would therefore be that whenever a coin is worth appreciably more as bullion than as money it will disappear from circulation. Gresham's law applies also to paper money as contrasted with metallic money. Here, however, as before, not only must the paper be issued to excess before it drives out the coin, but public opinion may entirely prevent the circulation of the paper money, as was the case with the greenbacks on the Pacific slope during the civil war. Gresham's law finally applies practically also to coin of one metal whose bullion value is less than that of coin of another metal, provided that both metals are legal standard money, with free coinage. In every case, whenever there is a double standard with free coinage of both metals, a discrepancy between the mint and the market ratio makes one of the two metals the poorer money, and leads to a gradual disappearance of the better money."—E. R. A. Seligman, *Principles of economics*, pp. 473-475.

**GREUZE,** Jean Baptiste (1725-1805), French portrait painter. See PAINTING: French.

**GREVILLERS,** town in France about three miles west of Bapaume. Was a center of fighting during the World War, 1918. See WORLD WAR: 1918: II. Western front: c, 18; d; k, 1.

**GRÉVY,** François Paul Jules (1807-1891), French statesman and president of the republic, 1879-1887. See FRANCE: 1875-1889.

**GREY,** Charles, 2nd Earl (1764-1845), English statesman. In the House of Commons, where he worked for reform of borough system, 1786; first lord of the admiralty, 1806; then secretary of state for foreign affairs; of opposition party in House of Lords, 1807-1830; prime minister, 1830-1834. See ENGLAND: 1830-1832; 1834-1837.

**GREY,** Sir George (1812-1898), British statesman and colonial governor. Explored Australia, 1837-1840; governor of South Australia, 1841; governor of New Zealand, 1846-1854; governor and commander-in-chief, Cape of Good Hope, 1854-1861; premier of New Zealand, 1877-1891. **GRIQUAS, GRIQUALAND EAST, AND GRIQUALAND WEST**.—"Territorial divisions of the Cape Province of the Union of South Africa. Griqualand East has an area of 6,602 square miles, southeast of the Drakensberg, and contains about 6,000 Griquas, and a quarter million of other inhabitants (5,880 Europeans in 1918). Griqualand West, lying north of the Orange river, is noted for its diamond mines in the neighborhood of Kimberley, the principal town, celebrated for its siege by the Boers in the South African War. The area of Griqualand West is 15,197 square miles, its population in 1914 being 110,000 of whom some 40,000 were whites. The Griquas, or Baastards, a mixed race sprung from the intercourse of the 'Boers' [of South Africa] with their Hottentot slaves," migrated from Cape Colony after the Emancipation Act of 1833, "and, under the chiefs Waterboer and Adam Kok, settled in the country north of the confluence of the Orange and Vaal,

the present Griqualand West. Subsequently, in 1852, Adam Kok's section of the Griquas again migrated to the territory then called No Man's Land, between Kafraria and southern Natal, now known as Griqualand East, or New Griqualand. . . . In consequence of the discovery of diamonds in the Griqua country in 1867, and the rush thither of thousands of Europeans from all the surrounding states, as well as from Europe, America, and Australia, the chief Waterboer ceded his rights to the British Government, and this region was annexed to the Cape Colony as the Lieutenant-Governorship of Griqualand West in 1871."—Hellwald-Johnston, *Africa*, ch. 23, sect. 5.

**GRISONS** (Graubünden), largest canton of Switzerland. Entered the Swiss Confederation in 1497. It was partly controlled by the French in 1626, and dismembered by Bonaparte in 1797. See SWITZERLAND: 1300-1499; FRANCE: 1624-1626; 1797 (May-October).

**GROCHOW**, Battles of (1831). See POLAND: 1830-1832.

**GRODEK**, town sixteen miles west of Lemberg, Galicia. Strongly defended by lakes, river and marshes, played a part in the World War campaigns of 1914 and 1915, between German-Austrian and Russian forces.—See also WORLD WAR: 1914: II. Eastern front: d, 1; 1915: III. Eastern front: f, 6; g, 1.

**GROGAN**, Ewart Scott (1874- ), British military officer who traversed Africa. See CAPE-TO-CAIRO RAILWAY.

**GROL**, small town in Holland. Was captured in 1627 by Frederick Henry. See NETHERLANDS: 1625-1647.

**GRONDO**, city of Poland, on the Nieman, about ninety miles southwest of Vilna. Was in the zone of conflict between Russians and Germans during the first two years of the World War. See RUSSIA: Map; WORLD WAR: 1915: III. Eastern front: i, 6.

Congress of (1793). See POLAND: 1793-1796.

**GRONDWET**, Dutch word meaning fundamental law, and applied to early constitutions in South Africa.

**GRONENBURG**, Dutch city. Was captured in 1593 from the Spaniards by Prince Maurice of Nassau. See NETHERLANDS: 1588-1593.

**GROOT**, Gerhard (1340-1384), preacher and founder of Brethren of the Common Lot. See BROTHERN OF THE COMMON LOT.

**GROOT**, Huig van. See GROTIUS, HUGO.

**GROS**, Jean Baptiste Louis (b. 1793), French diplomat in China. See CHINA: 1856-1860.

**GROS VENTRE INDIANS**. See ALGONQUIAN FAMILY; HIDATSA; INDIANS, AMERICAN: Cultural areas in North America: Plains Area; SIOUAN FAMILY.

**GROSS BEEREN**, Battle of (1813). See GERMANY: 1813 (August-October).

**GROSS GÖRSCHEN**, or Lützen, Battle of. See GERMANY: 1813 (April-May).

**GROSSCUP**, Peter Stenger (1852- ), American jurist. See TRUSTS: United States: 1903-1906; 1904-1909.

**GROSSE RATH**, Swiss legislative body. See SWITZERLAND: 1848-1890.

**GROSSWARDEIN**, Treaty of (1538). See HUNGARY: 1526-1567.

**GROTE**, George (1794-1871), English historian. See HISTORY: 27; AUSTRALIAN BALLOT: Origin.

**GROTIUS**, Hugo, (properly Huig van Groot) (1583-1645), Dutch scholar and jurist. At age of twenty-one, historiographer of the United Provinces and advocate-general to Holland and

Zeeland; member of embassy to England, 1613; imprisoned for life, 1619, for connection with Remonstrants; escaped to Paris, 1621, where he served some years as Swedish ambassador; called the "father of international law," his most important treaties being "De jure belli et pacis."—See also FREEDOM OF THE SEAS: 1400-1650; INTERNATIONAL LAW: Grotius and the early jurists; NETHERLANDS: 1603-1619.

**GROTTE DES ENFANTS**, cave in France where human remains of early man were found. See EUROPE: Prehistoric: Earliest remains, etc.: Grimaldi man.

**GROUCHY**, Emmanuel, Marquis de (1766-1847), French marshal. Took part in the various Napoleonic campaigns; did not arrive at Waterloo in time to help Napoleon, but conducted the retreat to Paris.

**GROVETON**, Battle of. See U. S. A.: 1862 (August-September: Virginia): End of General Pope's campaign.

**GRUNDY**, Felix (1777-1840), American lawyer and politician. See U. S. A.: 1810-1812.

**GRUNWALD**, or Tannenburg, Battle of (1410). See POLAND: 1333-1572; 14th century.

**GRÜTHUNGI**, Roman name for Ostrogoths. See GOTHS: 376.

**GRÜTLI**, or Rütli, Meadow of. See SWITZERLAND: Three forest cantons.

**GRYNEUM**, celebrated oracle of the Island of Lesbos. See ORACLES.

**GUADACELITO**, or Salado, Battle of (1340). See SPAIN: 1273-1460.

**GUADALAJARA**, Mexico, capital of the state of Jalisco. Founded in 1531 by Nuño de Guzman; made a bishopric in 1540. The cathedral, one of the largest churches of Mexico, was built in 1618. It is the third city of Mexico in size; center of the iron, steel and glass industries, and widely known for the manufacture of Indian pottery.—See also MEXICO: 1535-1822; and Map.

**GUADALAJARA**, Spain, capital of the province of Guadalajara. Known as Orriaca or Caraca during Roman and Visigothic times; captured by the Moors in 714; retaken by Spanish in 1081; originally noted for the cloth-weaving industry, which however, has been superseded by manufactures of leather, woolen fabrics, soap and bricks.

**GUADALAJARA**, Battle of (1811). See SPAIN: 1810-1819.

**GUADALETE**, Battle of (711). See SPAIN: 711-713.

**GUADALOUPE HIDALGO**, Treaty of (1848). See MEXICO: 1848.

**GUADALUPES**. See GACHUPINES.

**GADELOUPE**, French West Indian islands lying between the British islands of Montserrat and Dominica. Discovered by Columbus in 1493; settled by the French in 1635; captured by the British in 1759, and ruled by them for four years. In 1794 and 1810 the British captured the colonies, but almost immediately lost possession; transferred to Sweden in 1813; reverted to France again in 1816. In 1848 slavery was abolished there. Guadeloupe consists of two islands: Basse-Terre, forming Guadeloupe proper, and Grande-Terre. Basse-Terre is best known for its beautiful scenery, and Grande-Terre for its sugar plantations.—See also CARIBS; LOUISIANA: 1762-1766; WEST INDIES.

**GAICARUS INDIANS**. See PAMPAS TRIBES.

**GAJIRA**. See COAJIRA.

**GUAM**, largest of the Ladrone or Mariana islands (see MARIANNES), in the Pacific ocean, about thirty miles long and six miles wide. Noted chiefly as a naval station and a port of transit

between the United States and the Philippine islands (see BRITISH EMPIRE: Map of the world). A small part of it is under cultivation. The inhabitants are of the Indonesian stock, greatly mixed with Filipino and Spanish elements. The language is dialect of Malay corrupted by Spanish. According to the United States census of 1920, the population was 14,724.

1521-1898.—**Spanish control.**—Guam was discovered by Magellan in 1521, but not effectively occupied by Spain till a century and a half later. It was ceded to the United States by Spain on December 10, 1898, but not effectively occupied until 1899.—See also U. S. A.: 1898 (June); (July-December).

1900-1922.—**Under American control.**—Guam is governed by the officer of the United States navy who is commandant at the naval station. Under American rule the condition of the people has been improved, and the island developed. Peonage was abolished in 1900 and a public school system established. There is also a good hospital, and the capital, Agana, has a sewerage and water system. In 1908 an agricultural station was established in Guam. A high power radio station was constructed by the navy department and opened for communication November, 1917. In 1918 the island was struck by a terrific typhoon which was described as follows: "The Navy Department . . . received a dispatch from Captain Roy C. Smith, Governor of Guam, stating that Guam was swept by a typhoon on July 6 [1918]. . . . Half of the inhabitants are destitute and homeless, crops destroyed and food scarce. Governor Smith states: 'I am feeding destitute natives as necessary from naval supplies and commandeered food stocks, making repairs as soon as possible.'"—*New York Times*, July 10, 1918.

See also TERRITORIES AND DEPENDENCIES OF THE UNITED STATES.

**Battle of (1734).** See FRANCE: 1733-1735.

**GUATEMALA:** Origin of name.—"Like its Mexican neighbor, it still bears a name of Aztec origin, the term Guatemala (Quaubtematlan), according to some interpreters, meaning 'Eagle Land,' though a less poetic etymology gives it the signification of 'Land of the Wooden Piles.' Others again write, U-ha-tez-ma-la, a group of syllables which would mean 'Mountain vomiting water,' the whole region being so named in reference to the Aqua ('Water') volcano, one of its loftiest cones."—E. Reclus, *International geography*, v. 17, p. 206.—"According to Fuentes y Guzman, derived from 'Coctemalan'—that is to say 'Palo de leche,' milk-tree, commonly called 'Yerba mala,' found in the neighborhood of Antigua. . . . In the Mexican tongue, if we may believe Vasquez, it was called 'Quauhtimali,' rotten-tree; . . . and Juanos suggests that it may be from Juitemal, the first king of Guatemala."—H. H. Bancroft, *History of the Pacific states of North America*, v. 1, p. 620, *foot note*.

**Geographic description.**—**Area.**—**Population.**—"Guatemala, the most northern of the Central American States, . . . is bounded on the west and north by the Mexican States of Tabasco, Chiapas, Campeche, and Yucatan, and on the northeast by British Honduras and the Gulf of Honduras; on the east by the Republics of San Salvador and Honduras, and on the south by the Pacific Ocean. The total area is about 48,000 square miles. The coast line on the Atlantic, or Gulf of Honduras, is about 100 miles in length, and that on the Pacific, approximately 155 miles [see CENTRAL AMERICA: Map]. . . . The hydrographical system of Guatemala may be divided into two watersheds. The Cordillera of the Andes, which runs from north to south of the country, affects the course of the rivers in such a distinct manner that the rainfall in the city of Chimaltenango, which is situated in the mountains, is equally divided; that falling in the north and east feeds the rivers flowing to the Atlantic, and the rain falling on the south and west goes eventually to the Pacific. . . . The physical aspect of Guatemala is very mountainous. The whole centre of the country is broken by the lofty Andean range and its spurs, only the coast lands bordering the two oceans being but little above sea-level. This central table-land, which has an area of some thirty thousand square miles, is by far the largest and most populated portion of the country, and upon it are situated all the important cities and towns of the Republic, with the exception of the coast ports."—C. W. Dornville-Fife, *Great states of South America*, pp. 211-212.—In 1914 the estimated population was 2,003,579.

ALSO IN: A. H. Keane, *Central and South America* (*Stanford's compendium of geography*, v. 2).—N. O. Winter, *Guatemala and her people of today*, p. 3.

**Aborigines and their culture.**—"Long before the dawn of written history this portion of Central America was inhabited by a nation skilled in the arts of weaving by hand, carving, and metal-work. When, in the sixteenth century, the Spanish adventurers came from over the sea, they discovered, in ruined temple and beside stately monolith, priceless treasures of antiquity. Exquisitely carved vases, copper ornaments covered with hieroglyphics, curious images and strange gods of gold and silver, all told them tales of an early civiliza-

tion which historians and antiquarians believe to have resembled that which flourished under the famous Incas of the Bolivian tableland. . . . Their temples were magnificently decorated with pictures and altars of carved stone, adorned with finely worked ornaments. The tiled floors were covered with rich carpets, and the masonry of these holy edifices must have called for the united labour of many hundreds, so splendidly was it fashioned. The true origin of this strange race of Guatemalan Indians is a mystery the solution of which lies hidden deep in the realms of myth and fable. Some believe that they are the descendants of the yellow men, whom ancient tradition asserts to be the first settlers in the land. Certain it is that the Indians can understand and be understood by the Chinese with more facility than is the case with any other stranger race. We must remember, too, that the sacred book, 'Popol Vuh,' . . . states that primitive man was made of clay; thus confirming the universal tradition that the primitive American was formed of red or yellow earth. . . . In times very remote there came down from the north a people called the Nahoas, whose great chief was Quetzalcoatl—that is, 'the serpent with the plumes of the Quetzal'—or Gucumatz, as he is called in 'Popol Vuh,' 'the serpent with the skin of green and azure.' This Gucumatz succeeded in overthrowing Xibalbag, another great chief then ruling in the land, whose subjects were scattered broadcast. Some went northward to Mexico, and, when famine drove them thence, returned, after some four hundred years, and founded, in the seventh century, the kingdom of Hucytlat, in Honduras, whose principal city, Copantl, is now represented by the strange ruins of Copan. Another inroad from the north appears to have resulted in the foundation of the tribe known as the Quichés, a powerful race, to whom the other neighbouring tribes in turn submitted. The Quiché dominions gradually grew in extent, until they stretched from Mexico to the Pacific Ocean, and eastward as far as Lake Izabal. We do not know very much about the history of these people, but from the chief source of our information, their most interesting sacred book, 'Popol Vuh,' they appear to have had a certain civilisation and an established feudal system comparable only with that of mediæval Europe."—C. W. Domville-Fife, *Guatemala and the states of Central America*, pp. 13-15.—See also CENTRAL AMERICA: ABORIGINES; QUICHÉS AND CAKCHIQUELS; MAYAS.

1524-1776.—Conquest by Alvarado, the lieutenant of Cortés.—Settlement.—"Pedro de Alvarado, a lieutenant of Cortez, was the first to attempt the conquest of Guatemala, then inhabited by the Quichés, Caribs, and other warlike Indian tribes. Due to constant strife among the natives the Spaniards easily succeeded in conquering and enslaving them, and in the year 1524 Alvarado, in order to firmly establish his authority, had the two kings of the Quichés executed. Guatemala, which at that time comprised all the territory now known as Central America, as well as the Mexican States of Chiapas and Yucatan, became a Captain-generalcy, at first independent, but later under the authority of the Viceroy of Mexico. In July, 1527, Alvarado founded the city of Guatemala. This first city was short lived and in the year 1542 it was rebuilt on the site of what is now the old city, which was itself in time destroyed by an earthquake in the year 1773. In 1776 the present city was laid out at a site 25 miles northeast of La Antigua."—*General descriptive data prepared*

in June, 1900 (*International Bureau of American Republics*, p. 3).—See also MEXICO: 1521-1524.

1776-1821.—Under Spanish domination.—Up to the year 1821, the history of Guatemala is purely that of its colonization by Spain; this process was marked by extreme severity on the part of the Spaniards, whole tribes being entirely wiped out and others exploited for the advantage of the conquerors.

1885-1898.—Presidency of Manuel Lisandro Barillas.—Dictatorship of José Maria Reina Barrios.—His assassination.—Rufino Barrios 1783-1885 was succeeded by Manuel Lisandro Barillas, a man of kind and benevolent instincts but ill fitted to control a turbulent republic like Guatemala. He at once withdrew the decree of federation which had proven so ill-timed and made peace with the other republics. Little was accomplished by him, although he attempted to continue the reform policies of Barrios. He was elected for and served for one full term, but was defeated for re-election by a nephew of the elder Barrios. This soured him and from that time until his death he was a more or less turbulent factor in the Guatemala political situation. . . . Barillas had figured that the malcontents would flock to him as soon as he entered the country. He had sacrificed his all, and even his daughters had sold their diamonds to purchase guns and ammunition for his campaign. The President of Mexico compelled him to leave their territory, and President Cabrera rushed troops to the border, so that the movement was a fiasco. Had it not been for this, the result might have been different, for the discontented in Guatemala at that time numbered many. Ex-President Barillas was killed in the City of Mexico on the 7th day of April, 1907, aged sixty-seven years. . . . The successor of Barillas as president, José Maria Reina Barrios, served only a few years [1892-1898] and developed no marked policy. He was a man of energy and strong will, but did not possess the ability or strength of character of his uncle. During the first few years of his term he gave the country a fairly good government and worked much for the prosperity of Guatemala. Near the close of his first term, however, he sought by legislative enactment to extend his term of office for five years, and a series of revolutions followed."—N. O. Winter, *Guatemala and her people of today*, pp. 194-196.—In June, 1897, President Barrios, whose six years term in the presidency would have expired the following March, fearing defeat in the approaching election, forcibly dissolved the National Assembly and proclaimed a dictatorship. Three months later a revolt was organized by General Prospero Morales; but Barrios crushed it with merciless energy, and a veritable reign of terror ensued. In February, 1898, the career of the dictator was cut short by an assassin, who shot him to avenge the death of a wealthy citizen. Don Juan Aparicio, whom Barrios had executed for expressing sympathy with the

objects of the rebellion of the previous year. Control of the government was then taken by Dr. Cabrera, who had been at the head of the party which supported Barrios. A rising under Morales was again attempted, but failed. Morales, in a dying condition at the time, was betrayed and captured. Cabrera, with no more opposition, was elected president for six years.

1898-1901.—Period of progress and prosperity.—Accession of Manuel Estrada Cabrera, first civilian president.—“The *Premier Designado*, which corresponds to the position of Vice-President under our form of government, at the time of the assassination of Reina Barrios, was Manuel Estrada Cabrera. He was a lawyer by profession and the first civilian to hold that office since the establishment of the republic. Upon his accession to the presidency he found the country involved in many serious complications. The foreign obligations were threatening to precipitate trouble with international entanglements, and the new President at once exerted every effort to place this indebtedness in a more favourable condition, and to organize the finances in such a way that the legitimate demands of creditors might be met. . . . His legal training stood him in good stead. The finances of the country were reorganized, foreign creditors were appeased, and, after the first few years, for he was elected to a full term in September of the same year, the way to permanent peace and prosperity seemed to open up wide.”—N. O. Winter, *Guatemala and her people of today*, pp. 197-198.

1907-1917.—Attempts on President Cabrera's life.—Reign of terror.—Cabrera assumes dictatorial powers.—Order restored.—“In 1907 an attempt was made upon the life of President Cabrera by exploding a mine, but this failed. Severe measures were adopted by the officials, and several of those suspected of implication in the plot were put to death, while a larger number were imprisoned *incommunicado*—that is, without privilege of communication with friends or counsel. Among this number were several foreigners who were suspected of designs against the President. Again, in April, 1908, another attack was made upon the President by some of his soldiers and he narrowly escaped death by shooting. The conditions that followed have been described as a ‘regime of terror’ because of the many executions and incarcerations. . . . [When Mexico] wanted him to give up certain persons for trial on the

charge of conspiracy in the murder of ex-President Barillas, which had occurred on Mexican soil, Cabrera absolutely declined to grant this request, and his refusal almost resulted in the breaking off of all diplomatic relations between the two countries. . . . [With this exception, Cabrera] consistently refrained from becoming involved in the various conflicts that have raged between Nicaragua and its neighbours, and [was] . . . an active supporter of the Central American peace conference which was brought about by the influence of the United States.”—*Ibid.*, pp. 200-201.—“The favorable status enjoyed by the Guatemalan affairs during 1908 . . . are dwelt upon in a message delivered by President Estrada Cabrera to the National Assembly on March 1 of the latter year. A surplus is credited to public revenues and increased earnings noted for various public enterprises. The new mining code, promulgated in June, 1908, was productive of augmented activity in this field, and increased yields of bananas, rubber, sugar, and hard woods are features of the year's industrial life. The gathering of medical men of the Western Continent in the capital of Guatemala during the month of August was made the occasion of many notable celebrations, both of a social and official character. That the Pan-American Medical Congress as a feature of international development is fully appreciated is evidenced by the utterances of the delegates. . . . Especially appropriate remarks were made at the opening of the Congress by the delegate from the United States, who called attention to the fact that the first Congress was held in Washington to commemorate the four hundredth anniversary of the discovery of America. Representatives were present from practically all the countries of Latin America. Another important event of the year was the inauguration in the city of Guatemala on September 15 of the International Central American Bureau, in accordance with the Washington Convention of December 20, 1907. The personnel of the Bureau embraces representatives from the five Republics of Central America. The Government is taking steps to establish adequate hygienic measures in the country through the opening of a National Pasteur Institute in Quezaltenango and by the requirement that entry into Government employ and also into certain specified private enterprises shall be made only by persons who have been vaccinated. The sanitation of Puerto Barrios is another organized effort in the same direction. This port is the Caribbean terminus of the country's interoceanic railway, which was completed and opened in January, 1908, with imposing ceremonies. The development of railway communication with the adjacent Republics is another forecast of progress in this enterprising Republic, measures for connection by rail with the Salvador and Mexican frontiers being the subject of recent contracts [written in 1909]. On February 15, 1909, the Government ratified many of the conventions adopted by the Third International Conference of American States held in Rio de Janeiro in 1906, covering the status of naturalized citizens who return to their own country after a foreign residence, international law, patents of invention, trade-marks, and literary and artistic property.”—*General descriptive data prepared in June, 1909 (International Bureau of American Republics, pp. 6-8)*.—From 1909 to 1917, Cabrera with the strong hand of the dictator restrained the turbulent elements within the republic and maintained friendly relations with the neighboring states. The preservation of peace and order

gave impetus to considerable economic development.

1917-1918.—Severance of diplomatic relations with Germany.—Guatemala declared her intention of entering the war on the side of the Allies. On April 27, 1917, diplomatic relations were severed with Germany. On April 22, 1918, the government of Guatemala announced that Guatemala occupied the same relationship to the belligerents which the American government had adopted. It was announced some days later that the republic would participate with the United States in the war against the Central Powers.—See also LATIN AMERICA: 1917-1918: Central America in the World War.

1919.—Conference at Paris.—Treaty. See PARIS, CONFERENCE OF: Outline of work; VERSAILLES, TREATY OF: Conditions of peace.

1920.—Revolt against President Cabrera.—Overthrow of President Cabrera.—Carlos Herrera elected president.—New government recognized by the United States.—“A revolt broke out on April 7 against Estrada Cabrera, President of Guatemala since 1898. . . . [A movement against the methods of the dictator had been gathering force since 1917. The immediate] cause of the trouble was the agitation for a Central American union of the five republics of Guatemala, Honduras, Nicaragua, Salvador and Costa Rica. Such a union would have terminated the rule of the dictator, and he began making wholesale arrests of all who favored it. A large number of college students were thrown into prison for favoring the union, and many are reported to have been executed. There had been riots and other disturbances, ruthlessly put down by troops since early in March. Finally the Unionists gained control of Guatemala City in spite of Cabrera's army, the largest in Central America. The President . . . ordered an attack on the city. . . . He began shelling it on April 8 (1920) and for three days shells continued to fall in the city, many non-combatants being killed. The whole country by this time had joined the revolutionists, who formed a new Government with Carlos Herrera as President. . . . On the night of April 11 a conference was held by both sides at the American Legation in Guatemala City and an armistice between the Unionists and the forces of President Cabrera was signed. . . . Señor Cabrera was formally deposed from the Presidency on April 17 by the National Assembly, and Dr. Carlos Herrera was named as President. On the same morning the Cabrera forces near Guatemala City surrendered and Cabrera himself was taken prisoner. The new Government at once began functioning, and perfect order was reported throughout Guatemala.”—*New York Times Current History*, May, 1920, pp. 261-262.—In an official proclamation issued by the state department at Washington the new government in Guatemala was recognized by the United States on June 24 “as the constitutional successor of the Government of Estrada Cabrera.” On July 25, Herrera, having been duly elected, took the oath of office and pledged himself to endeavor to effect a union of the Central

American states; he took the oath of office before the National Assembly on September 15. On the 29th President Wilson received Dr. Julio Binachi as Guatemalan minister to the United States, representing the new (Herrera) government.

1921.—Central American Union created.—Bank proposals.—Ex-president Cabrera held prisoner.—Herrera government overthrown in revolution.—As a preliminary step to the foundation of a Central American Union the Guatemalan government in January abolished all trade restrictions with the republics of Nicaragua, Salvador, Costa Rica and Honduras. On January 20 it was announced that the standing army of 15,000 men would be reduced to 5,000; at the same time a new law was passed prohibiting illiterates from participating in political contests. The pact establishing a Central American Union was signed on January 22. During March-April the export duty on sugar was abolished and proposals invited for a concession to establish a bank with a capital of 10,000,000 gold pesos and the privilege of issuing thirty millions in currency, the notes to be redeemable at sight in national money or American dollars. Since his downfall in 1920, the former president, Cabrera, had been held in prison. On May 9 it was reported that Guadalupe Cabrera, his eighteen-year-old daughter, had committed suicide by shooting, in order to call the world's attention to her father's continued imprisonment, despite the Guatemalan government's pledge to guarantee his life, liberty and property. When the Provisional Federal Council of the Central American Union began its functions on June 17, the Guatemalan delegate Vicente Martinez was named president of the Council. Early in August a revolt headed by General Isidro Valdez was quickly suppressed. An uprising of Indians in the department of Zacapa was also put down. On October 10 the Union was formally constituted, and Guatemala, Salvador and Honduras ceased to be separate entities. Elections for deputies for the Union Congress were held in those countries on the 30th. On December 5 another revolution broke out, in the course of which the Herrera government was overthrown, the president and his cabinet taken prisoners, and a provisional government under General Orellana proclaimed.—See also CENTRAL AMERICA: 1921; 1921 (October); 1921 (December).

1922.—Orellana president.—Collapse of the Union.—Amnesty for political prisoners.—Release of Cabrera.—The Central American Union was destined to have a short existence. On January 7 Orellana took the oath of office as president and formed a cabinet; senators were elected to represent Guatemala in the federal state. On January 29, however, the new Union flag was hauled down in the capital and replaced by the Guatemalan flag. The Union was defunct. On February 15 Orellana was elected constitutional president, not without some bloodshed. He opened parliament on March 2, and in April ordered the release of political prisoners after investigation of their cases. In a message to Congress he asked for a general amnesty for all political prisoners, but this clemency met with considerable opposition. The United States recognized the Orellana government on April 15, a procedure which reversed the rule of President Wilson's State Department not to recognize governments in Latin America established by force. On July 4, President Orellana decreed an amnesty for all prisoners committed for military offences. In August ex-president Cabrera was removed from prison to a private house owing to illness.—See also CENTRAL AMERICA: 1922 (January-February).

1922 (October).—Attitude towards Tri-Party Treaty.—On October 5th, the Guatemalan government “announced it would not become a party to the treaty signed recently [August 22] aboard the United State cruiser *Tacoma* by Nicaragua, Salvador and Honduras. . . . Guatemala says she is still abiding by the treaty of 1907 signed at Washington by the Central American Governments and does not wish ‘to lend herself to entangling alliances and difficulties embraced in the treaty signed aboard the cruiser.’”—*New York World*, Oct. 5, 1922.—See also HONDURAS: 1922.

GUCK, or COCO, GROUP, extensive linguistic group of tribes in Brazil, on the north of the Amazon, extending as far as the Orinoco, has been called the Guc., or Coco, group. “There is no common name for the group, that here used meaning a father’s brother, a very important personage in these tribes. The Guck group embraces a large number of tribes. . . . We need enumerate but few. The Cuyriri or Kiriri (also known as Sabaja, Pimenteiros, etc.), number about 3,000. Some of them are half civilized, some are wild, and, without restraint, wander about, especially in the mountains in the Province of Pernambuco. The Araicu live on the lower Amazon and the Tocantins. Next come the Manaos, who have a prospect of maintaining themselves longer than most tribes. With them is connected the legend of the golden lord who washed the gold dust from his limbs in a lake [see EL DORADO]. . . . The Uirina, Baré, and Cariay live on the Rio Negro, the Cunimaré on the Jurua, the Maranha on the Jutay. Whether the Chamicoco on the right bank of the Paraguay, belong to the Guck is uncertain. Among the tribes which, though very much mixed, are still to be enumerated with the Guck, are the Tecuna and the Passé. In language the Tecunas show many similarities to the Gês; they live on the western borders of Brazil, and extend in Equador to the Pataça. Among them occur peculiar masques which strongly recall those found on the northwest coast of North America. . . . In the same district belong the Uaupe, who are noticeable from the fact that they live in barracks, indeed the only tribe in South America in which this custom appears. The communistic houses of the Uaupe are called ‘malloca;’ they are buildings of about 120 feet long, 75 feet wide, and 30 feet high, in which live a band of about 100 persons in 12 families, each of the latter, however, in its own room. . . . Finally, complex tribes of the most different nationality are

comprehended under names which indicate only a common way of life, but are also incorrectly used as ethnographic names. These are Caripuna, Mura, and Miranha, all of whom live in the neighborhood of the Madeira River. Of the Caripuna or Jaûn-Avô (both terms signify ‘watermen’), who are mixed with Quichua blood, it is related that they not only ate human flesh, but even cured it for preservation. . . . Formerly the Mura . . . were greatly feared; this once powerful and populous tribe, however, was almost entirely destroyed at the end of the last century by the Mundruco; the remnant is scattered. . . . The Mura are the gypsies among the Indians on the Amazon; and by all the other tribes they are regarded with a certain degree of contempt as pariahs. . . . Much to be feared, even among the Indians, are also the Miranha (i.e., rovers, vagabonds), a still populous tribe on the right bank of the Japura, who seem to know nothing but war, robbery, murder, and man-hunting.”—J. S. Kingsley, ed., *Standard natural history*, v. 6, pp. 245-248.

GUELDERLAND, Gelderland, or Guelders, an eastern province of the Netherlands. See NETHERLANDS: Map.

1079-1473.—Under the House of Nassau.—Acquisition by the duke of Burgundy.—“The arable extent of Guelderland, its central position, and the number of its ancient towns, rendered it at all times of great importance. The men of Zutphen and Arnheim were foremost among the claimants of civic freedom; and at Tiel and Bommel industry struck early root, and struggled bravely to maturity through countless storms of feudal violence and rapine. Guelderland was constituted a county, or earldom, by Henry III [emperor, 1079], and bestowed on Otho, count of Nassau; and thus originated the influence of that celebrated family in the affairs of the Netherlands. Three centuries later the province was created a duchy of the empire. Vigour and ability continued to distinguish the house of Nassau, and they were destined to become eventually the most popular and powerful family in the nation. Apart from their influence, however, Guelderland hardly occupies as important a place in the general history of the country as Utrecht or Holland.” In 1473, when the House of Burgundy had acquired sovereignty over most of the Netherland states, Charles the Bold asserted himself of a domestic quarrel between the reigning prince of Guelderland and his heir “to purchase the duchy from the former for 92,000 crowns of gold. The old duke died before the pecuniary portion of the bargain was actually completed; and, the rightful heir being detained in prison, the grasping lord of Burgundy entered into possession of his purchase, for which no part of the price was ever paid.”—W. T. McCullagh, *Industrial history of free nations*, v. 2, ch. 8, 10.

GUELFs, or GUELFs, AND GHIBELLINES: German origin of these factions and

their feuds.—On the death (1125) of Henry V, the last of the Franconian dynasty of Germanic emperors, Lothaire, Duke of Saxony, was elected emperor, in rather a tumultuous and irregular manner. Lothaire, and the Saxons generally, were embittered in enmity against the house of Franconia, and against the new family—the Suabian or Hohenstauffen—which succeeded by inheritance, through the female line, to the Franconian claims. It was the object of his reign, moreover, to pass the imperial crown from his own head to that of his son-in-law, Henry the Proud. Hence arose a persecution of the Suabian family, under Lothaire, which stirred deep passions. Henry the Proud, for whose succession Lothaire labored, but vainly, united in himself several ancient streams of noble blood. He “was fourth in descent from Welf [or Guef], son of Azon marquis of Este, by Cunegonda, heiress of a distinguished family, the Welfs of Altorf in Suabia.” His ancestor, Welf, had been invested with the duchy of Bavaria. He himself represented, by right of his mother, the ancient ducal house of Saxony; and, by favor of his imperial father-in-law, the two powerful duchies, Bavaria and Saxony, were both conferred on him. He also received Hanover and Brunswick as the dowry of his wife. “On the death of Lothaire in 1138 the partisans of the house of Suabia made a hasty and irregular election of Conrad [one of the Hohenstauffen princes], in which the Saxon faction found itself obliged to acquiesce. The new emperor availed himself of the jealousy which Henry the Proud’s agrandizement had excited. Under pretence that two duchies could not legally be held by the same person, Henry was summoned to resign one of them, and on his refusal, the diet pronounced that he had incurred a forfeiture of both. Henry made but little resistance, and before his death, which happened soon afterwards, saw himself stripped of all his hereditary as well as acquired possessions. [See also AUSTRIA: 805-1246.] Upon this occasion the famous names of Guef [or Guef] and Ghibelin were first heard, which were destined to keep alive the flame of civil dissension in far distant countries, and after their meaning had been forgotten. The Guef, or Welf, were, as I have said, the ancestors of Henry, and the name has become a sort of patronymic in his family. The word Ghibelin is derived from Wibelung, a town in Franconia, whence the emperors of that line are said to have sprung. The house of Suabia were considered in Germany as representing that of Franconia; as the Guef may, without much impropriety, be deemed to represent the Saxon line.”—H. Hallam, *Middle Ages*, v. 2, ch. 5.—Sir Andrew Halliday, in his “Annals of the House of Hanover,” traces the genealogy of the Guef with great minuteness and precision—with more minuteness, perhaps, in some remote particulars, and more precision, than seems consistent with entire credibility. He carries the line back to Edico, king or prince of the Heruli, or Rugii, or Scyrii,—the stock from which came Odoacer, who overturned the Western Roman empire and made himself the first king of Italy. Edico, who was subject to Attila, and the favorite adviser of the king of the Huns, is thought to have had a son or brother named Guef or Welf, who fell in battle with the Ostrogoths. It is to him that Sir Andrew is disposed to assign the honor of being the historical chief of the great family of the Guef. If not from this shadowy Guef, it is from another of like name in the next generation—a brother of Odoacer—that he sees the family spring, and the story of its wide-branching and many-rooted growth, in Friuli, Altdorf, Ba-

varia, old Saxony, Brunswick, Hanover,—and thence, more royally than ever, in England,—is as interesting as a narrative of highly complicated genealogy can be.—A. Halliday, *Annals of the House of Hanover*.—From the Guef uncertainly indicated above were descended two Marquesses of Este, “successively known in German and Italian story as the first and second of that name. . . . Azo, the second Marquess of Este in Italy (born 995, died 1097), the head of the Italian (junior) branch of Guef [see ESTE, HOUSE OF], married Cunigunda, the sole heiress of the German Guef of Altdorf, thus uniting in his family the blood, wealth, and power of both branches of the old Guef, and becoming the common father of the later German and Italian princes of the name of Guef. No wonder, then, that he was elected by the Emperor, Henry III., as his representative in Italy. . . . Cunigunda, the first wife of Azo II., bore him one son, Guef, who was known in German history as Guef VI. He succeeded to his mother’s titles and vast estates on her death, A.D. 1055, and to those of his father, A.D. 1097. . . . Henry IV. invested him with the duchy of Bavaria, A.D. 1071—a title first assumed 170 years before (A.D. 900) by his almost mythological ancestor, Henry of the Golden Chariot.” This Guef VI. was the grandfather of Henry the Proud, Duke of Saxony and Bavaria, referred to above.—P. M. Thornton, *Brunswick accession*, ch. 1.—See also SAXONY: 1178-1183; GERMANY: 1138-1197.

**GUIANA**: Geographic description.—Area.—

**Population**.—Guiana, a region on the eastern coast of South America, north of Brazil and east of Venezuela (see LATIN AMERICA: Map), is the only portion of the continent still held by European powers. "The English occupy the extreme west and to them undoubtedly belongs the lion's share; British Guiana (q.v.) comprising the whole basin of the Essequibo, besides that of the Demerara and Berbice rivers, and the left bank of the Corentyne [for a total of 90,000 square miles]. It is the most flourishing, agriculturally and commercially, of all the divisions of the region. To the east of the British section lies Dutch Guiana, or Surinam [of 46,000 square miles]. French Guiana [with its 31,000 square miles] comes next extending to the northern boundary of Brazil, on the Atlantic sea-board, and containing the well-known penal settlement of Cayenne."—H. W. Bates, ed., *Stanford's compendium of geography and travel, Central and South America*, pp. 436-437.—In 1918, the estimated population of French Guiana, and Dutch Guiana was 26,325, and 107,827 respectively; and in 1921 British Guiana had an estimated population of 297,691.

**Resources**.—The chief exports from British Guiana are sugar, timber, rice, gold, rum, rubber, balata, coffee, cocoanuts, diamonds, cattle, and molacuit—a cattle food. In 1920, about 170,000 acres were under cultivation including 69,530 acres in sugar-cane; and 55,250 acres under rice. Gold production amounted to 12,600 ounces valued at £46,803½; and the output of diamonds was 39,362½ carats valued at £211,829. French Guiana has immense forests rich in many kinds of timber; but the most important industry is gold mining (placer). There is little agriculture in the colony; only about 7,500 acres being under cultivation.

The principal exports are gold, timber, hides and essence. Agriculture is the chief means of subsistence in Dutch Guiana and the principal exports are cocoa, coffee, sugar, rice and gold. The production of gold in 1920 amounted to 458,700 grammes valued at 706,561 guilders. Exploitation of the forest products has been exceedingly difficult.

**Aboriginal inhabitants**. See CARIBS; INDIANS, AMERICAN: Cultural areas in South America: Amazon area.

**1498-1500**.—**Early voyagers**.—From 1498 to 1500 Guiana was sighted by Columbus, Ojeda, and Vespucci; and touched by Pinzon, in a voyage along the coast. See AMERICA: 1490-1500.

**16th century**.—**Search for El Dorado**. See EL DORADO.

**1580-1814**.—**Dutch, French and English settlements and conquests**.—"There was one European nation which was not likely to hunt for a golden city, when gold was to be earned by plain and matter of fact commerce. The Dutch had as early as 1542 established a systematic if contraband trade with the Spanish Main; and in 1580 they began to settle in Guiana by planting a depot on the river Pomeroon, in what is now the county of Essequibo. In 1599 they built two forts at the mouth of the Amazon, but were driven out by the Portuguese; and about 1613 they established a colony on the Essequibo, building the fort of 'Kyk over al,' 'Look over all,' on an island where the Massaruni flows into the Essequibo. The colony was founded by Zealand merchants, was known as Nova Zeelandia, and came under the control of the Netherlands West India Company, which was incorporated in 1621. Shortly afterwards colonisation began further to the east on the Berbice river. The founder was a Flushing merchant, Van Peere by name; he founded his settlement about 1624, and he held his rights under contract with the Chamber of Zealand. . . . Thus was the present province of British Guiana colonised by Dutchmen. . . . While English discovery was attracted to the west and Orinoco, the first attempts at English settlement were far to the east on the Wuyapoco or Oyapok river. Here, in 1604, while Raleigh was in prison. Captain Charles Leigh founded a colony at the mouth of the river. . . . In 1609 Robert Harcourt of Stanton Harcourt in Oxfordshire took up the work in which Leigh had failed. . . . In 1613 he obtained from King James a grant of 'all that part of Guiana or continent of America lying between the river of Amazones and the river of Dessequebe,' which was not actually possessed or inhabited by any Christian power in friendship with England. . . . In 1619 a scheme was started for an Amazon Company, the leading spirit in which was Captain Roger North. . . . The company was fortunate enough to secure the powerful patronage of the Duke of Buckingham. Harcourt threw in his lot with them, and on the 19th of May, 1627, a royal grant was made to the Duke of Buckingham and 55 other adventurers, including the Earl of Pembroke and Montgomery, who were incorporated under the title of 'the governor and company of noblemen and gentlemen of England for the plantation of Guiana.' The Duke of Buckingham was Governor, North was Deputy-Governor, and the grant included the 'royal' river of the Amazon. For about two years the company did some solid work, sending out four ships and 200 colonists; an attempt was then made in 1629 to bring the territory covered by their grant immediately under royal protection, and upon its failure their efforts at colonisation appear to have gradually died away.

The English were not the only Europeans who tried their hand at settlement in the east of Guiana. . . . In 1613, 160 French families settled in Cayenne. The first colony failed, but in 1624 and 1626 fresh attempts were made a little to the west on the rivers Sinamari and Cananama; and in 1643 a Rouen Company, incorporated under the name of the Cape North Company, sent out three or four hundred men to Cayenne under the Sieur de Bretigny. Bretigny ruined the scheme by savage ill-treatment of Indians and colonists alike, and the remains of the settlement were absorbed by a new and more powerful Normandy Company." This failed in its turn and gave way to a "French Equinoctial Company," organized under the auspices of Colbert, which sent out 1,200 colonists and fairly established them at Cayenne. Colbert, in 1665, placed the colony, "with all the other French possessions in the West Indies, under one strong West India Company. Such were the beginnings of colonisation in the west and east of Guiana. Between them lies the district now known as Dutch Guiana or Surinam." The first settlement in this was made in 1630 by 60 English colonists, under a Captain Marshall. The colony failed, and was revived in 1650 by Lord Willoughby, then representing the fugitive King Charles II., as Governor of Barbadoes. In 1663, after the Restoration, Lord Willoughby, in conjunction with Lawrence Hyde, second son of the Earl of Clarendon, received Letters Patent "constituting them lords and proprietors of the district between the Copenam and the Maroni (which included the Surinam river) under the name of Willoughby Land." Soon afterwards "war broke out with the Dutch and in March 1667 the colony capitulated to the Dutch admiral Crynseenn. The peace of Breda between Great Britain and the Netherlands, which was signed in the following July, provided that either nation should retain the conquests which it had made by the preceding 10th of May, and under this arrangement Surinam was ceded to the Netherlands, while New York became a British possession. . . . Thus ended for many long years all British connexion with Guiana. . . . When at length the English returned [in 1796 and 1803, during the subjection of the Dutch to Napoleon, and while they were forced to take part in his wars], they came as conquerors rather than as settlers and by a strange perversity of history, the original Dutch colonies on the Berbice and Essequibo became a British dependency, while the Netherlands retain to this day the part of Guiana which Lord Willoughby marked out for his own." These arrangements were settled in the convention between Great Britain and the Netherlands signed at London in 1814.—C. P. Lucas, *Historical geography of the British colonies*, v. 2, sect. 2, ch. 8.

1814-1834.—Slavery agitation.—The period of 1814 to 1834 was chiefly remarkable for the agitation on the part of the negro slaves in Guiana, for emancipation. Having heard that the question of abolition of slavery was under discussion in England the slaves took the matter into their own hands and instituted attacks on houses and property on the east coast of Demerara. The case of the missionary, John Smith, attracted attention in England, and though found guilty of fostering the rising by his teachings in special court-martial, the death sentence was remitted.

1834-1900.—Problem of labor supply in British Guiana.—Abolition of slavery.—Im-

ported labor.—System of importing coolies.—"After the slave trade was abolished by Great Britain [1834] other countries still carried it on, even when their Governments were supposed to discountenance it. Several vessels brought Africans to Surinam, notwithstanding the reports and protests of the British consuls. The fact was, the demand for labour justified the risk of execution for piracy. In the British colony the want was quite urgent, but no illicit slave-trading took place. Protests were, however, made against the law that prevented labourers from being removed from one colony to another. Prices were very high where the demand was great and correspondingly lower in depressed West Indian islands. Why should the trade be hampered? Here in Demerara £100 or £150 was asked for an able-bodied man; in some of the islands he was worth about half as much. But the law prevented removal. Now came the British emancipation. Immediately the hours of work were reduced from 10 to 7½ per day—a reduction of one-fourth. Already most of the plantations of cotton and coffee were abandoned to concentrate labour on sugar estates; now ruin stared the planter in the face, for in four years the apprentice would be entirely free. When this critical time arrived the labour supply failed; women no longer went into the field, men only worked when they pleased, and at extortionate wages. More than half the plantations were abandoned, and the others worked at a loss in hopes that immigration might prevent total ruin. Already a few negroes had been brought from the West Indies, but nothing like a supply was obtainable. Some Africans from condemned slavers also helped a little, and an attempt was made to get Kroom boys. But the Exeter Hall contingent would not allow recruiting of labourers in Africa for fear it might develop another kind of slave trade. Suggestions were made to bring Irish and Germans, but without success, only a few people coming who were quite unfit to labour in the field. Maltese were tried, but without success, and were sent back. Madeirans, who were then suffering very much from the result of the vine disease, were brought in some numbers but they could not labour in the field. They, however, became gardeners, pedlars, and shopkeepers, their descendants now forming a very important element in the population. Finally, coolies from India were brought under engagement. At last the best labourer had been found, but the planter waited a long time before he got a proper supply. The first coolie immigrants from Calcutta came as strangers to a strange land. The planter knew nothing of their habits, customs, or language, and could only leave them to their sirdar who, it was said, beat the coolie and drove him into the field whether sick or well. No one seems to have thought of the care necessary during acclimatisation or the sympathy required by a stranger. The coolie was an experiment; he was the last resort of the ruined planter, who had no money to provide all the necessaries now demanded by the Government. . . . After a great deal of trouble and the passing of many ordinances the present system was adopted. Under this arrangement the coolie agrees to serve five years and to work at the current rate of wages, after which a residence of another five years entitles him to a free passage back to India. There is a Protector of Immigrants and a large staff of agents, Government medical service, provisions for housing, and hospitals. Under this system about five thousand have arrived annually until of late, when the number has been lessened, more than half of whom re-

main in the colony. By these means the exports of sugar have nearly doubled as compared with those of the highest years before the emancipation. Even now, however, there is a want of cheap labour if the colony is ever to be developed to the extent that might be wished. Chinese coolies have also been brought to British Guiana under similar arrangements, but without success. They are not so well suited for field labour, but most of them have become very useful colonists, competing with the Madeirans as small shopkeepers."—J. Rodway, *Guiana, British, Dutch and French*, pp. 200-204.

1900.—Arbitration of French Guiana boundary dispute with Brazil. See BRAZIL: 1900.

1901-1906.—Brazilian arbitration and the settlement of the boundary question of British Guiana.—"In the course of 1901 Senhor Nabuco, as plenipotentiary for Brazil, and the British Foreign Office arrived at bases of negotiation which resulted in a treaty of arbitration, signed on November 6, 1901. By this treaty the two Governments agreed to limit their claims by a definite zone, and to submit the question of boundary to the decision of the King of Italy. The zone finally accepted lay between a line formed by the courses of the Cotinga and Takutu on the west and a line formed by those of the Ireng or Mahu and the Rupununi on the east. . . . This arbitration was conducted entirely by written case and argument. The documents submitted on each side were even more complete than those on which the arguments in the Venezuelan matter had been based; they form a most valuable contribution to the history and geography of the Colony. The King of Italy decided that it was unnecessary to hear oral evidence. His Majesty gave his award in June 1904. [See BRAZIL: 1904.] . . . Meanwhile, as we have already seen, the King of Italy had given his award in the Brazilian matter, and there was no further obstacle to the delimitation of that part of the boundary of British Guiana which divides it from Brazilian territory. This service was entrusted to Mr. Anderson, the surveyor. . . . By the end of 1906, British Guiana for the first time had its boundaries fixed, and though those boundaries almost certainly did not go so far as Dutch influence at one time extended, still they included most of the territory for which Storm van's Gravesande had always contended, and they justified in a marked degree the line drawn by Sir Robert Schomburgk as a result of his official surveys."—C. A. Harris and J. A. J. de Villiers, *Storm van's gravesande*, v. 1, series 2, no. 26, pp. 136-137, 140-141.

1905.—Labor disturbances.—Labor disturbances broke out in 1905, arising from a demand for higher pay on the part of the laborers in the capitol and other places. The disturbances entailed considerable violence on the part of the mob but prompt action was taken and order speedily restored.

GUILD MERCHANT. See GUILDS: Medieval; Merchant adventurers.

GUILD SOCIALISM, school of socialist thought which originated in England early in the twentieth century. "Guild Socialists aim at autonomy in industry, with consequent curtailment, but not abolition, of the power of the State. . . . The first pamphlet of the 'National Guilds League' sets forth their main principles. In industry each factory is to be free to control its own methods of production by means of elected managers. The different factories in a given industry are to be federated into a National Guild which will deal with marketing and the general interests of the industry as a whole. 'The State would own the means of production as trustee for the community; the Guilds would manage them, also as trustees for the community, and would pay to the State a single tax or rent. Any Guild that chose to set its own interests above those of the community would be violating its trust, and would have to bow to the judgment of a tribunal equally representing the whole body of producers and the whole body of consumers. This Joint Committee would be the ultimate sovereign body, the ultimate appeal court of industry. It would fix not only Guild taxation, but also standard prices, and both taxation and prices would be periodically readjusted by it.' Each Guild will be entirely free to apportion what it receives among its members as it chooses, its members being all those who work in the industry which it covers. 'The distribution of this collective Guild income among the members seems to be a matter for each Guild to decide for itself. Whether the Guilds would, sooner, or later, adopt the principle of equal payment for every member, is open to discussion.' Guild Socialism accepts from Syndicalism the view that liberty is not to be secured by making the State the employer: 'The State and the Municipality as employers have turned out not to differ essentially from the private capitalists.' Guild Socialists regard the State as consisting of the

community in their capacity as consumers, while the Guilds will represent them in their capacity as producers; thus Parliament and Guild Congress will be two co-equal powers representing consumers and producers respectively. Above both will be the joint Committee of Parliament and the Guild Congress for deciding matters involving the interests of consumers and producers alike. The view of the Guild Socialists is that State Socialism takes account of men only as consumers, while Syndicalism takes account of them only as producers. 'The problem,' say the Guild Socialists, 'is to reconcile the two points of view. That is what advocates of National Guilds set out to do. The Syndicalist has claimed everything for the industrial organizations of producers, the Collectivist everything for the territorial or political organizations of consumers. Both are open to the same criticism; you cannot reconcile two points of view merely by denying one of them.' But although Guild Socialism represents an attempt at readjustment between two equally legitimate points of view, its impulse and force are derived from what it has taken over from Syndicalism. Like Syndicalism, it desires not primarily to make work better paid, but to secure this result along with others by making it in itself more interesting and more democratic in organization."—B. Russell, *Roads to freedom*, pp. 81-84.—See also SOCIALISM: 1906; WHITLEY COUNCILS: Organization and method.

**GUILDER**, coin and money of account, used in the Netherlands. See MONEY AND BANKING: Medieval: Coinage and banking in Middle Ages.

**GUILDS, or Gilds: Roman guilds.**—"The story of Rome carries the founding of these guilds back to the early days of the regal period. From the investigations of Waltzing, Liebenam, and others their history can be made out in considerable detail. Roman tradition was delightfully systematic in assigning the founding of one set of institutions to one king and of another group to another king. Romulus, for instance, is the war king, and concerns himself with military and political institutions. The second king, Numa, is a man of peace, and is occupied throughout his reign with the social and religious organization of his people. It was Numa who established guilds of carpenters, dyers, shoemakers, tanners, workers in copper and gold, flute-players, and potters. . . . There are no bankers or weavers, for instance, in the list. . . . As Roman civilization became more complex, industrial specialization developed, and the number of guilds grew, but during the Republic we cannot trace their growth very successfully for lack of information about them. . . . The trades-guilds had little share in politics; they were made up of the obscure and weak, and consequently are rarely mentioned in the writings of a Cicero or a Livy. The tendency of the Romans to form voluntary associations was . . . a national characteristic. This fact comes out very clearly if we compare the number of trades-unions in the Western world with those in Greece and the Orient. Our conclusions must be drawn of course from the extant inscriptions which refer to guilds, and time may have dealt more harshly with the stones in one place than in another, or the Roman government may have given its consent to the establishment of such organizations with more reluctance in one province than another; but, taking into account the fact

that we have guild inscriptions from four hundred and seventy-five towns and villages in the Empire, these elements of uncertainty in our conclusions are practically eliminated, and a fair comparison may be drawn between conditions in the East and the West. . . . These guilds . . . were trades-unions in the sense that they were organizations made up of men working in the same trade, but they differed from modern unions, and also from mediæval guilds, in the objects for which they were formed. They made no attempt to raise wages, to improve working conditions, to limit the number of apprentices, to develop skill and artistic taste in the craft. . . . It was the need which their members felt for companionship, sympathy, and help in the emergencies of life, and the desire to give more meaning to their lives, that drew them together. These motives explain the provisions made for social gatherings, and for the burial of members, which were the characteristic features of most of the organizations. It is the social side, for instance, which is indicated on a tombstone, found in a little town of central Italy. After giving the name of the deceased, it reads: 'He bequeathed to his guild, the rag-dealers, a thousand sesterces, from the income of which each year, on the festival of the Parentalia, not less than twelve men shall dine at his tomb.' Another in northern Italy reads: 'To Publius Etereius Quadratus, the son of Publius, of the *Tribus Quirina*, Etereia Aristolais, his mother, has set up a statue, at whose dedication she gave the customary banquet to the union of rag-dealers, and also a sum of money, from the income of which annually, from this time forth, on the birthday of Quadratus, April 9, where his remains have been laid, they should make a sacrifice, and should hold the customary banquet in the temple, and should bring roses in their season and cover and crown the statue; which thing they have undertaken to do.' The menu of one of these dinners given in Dacia has come down to us. It includes lamb and pork, bread, salad, onions, and two kinds of wine. The cost of the entertainment amounted to one hundred and sixty-nine *denarii*, or about twenty-seven dollars, a sum which would probably have a purchasing value to-day of from three to four times that amount. The 'temple' or chapel referred to in these inscriptions was usually semi-circular, and may have served as a model for the Christian oratories. The building usually stood in a little grove, and, with its accommodations for official meetings and dinners, served the same purpose as a modern club-house. Besides the special gatherings for which some deceased member or some rich patron provided, the guild met at fixed times during the year to dine or for other social purposes. The income of the society, which was made up of the initiation fees and monthly dues of the members, and of donations, was supplemented now and then by a system of fines. . . . Besides the need of comradeship, and the desire to provide for a respectable burial, . . . another motive . . . brought the weak and lowly together in these associations. They were oppressed by the sense of their own insignificance in society, and by the pitifully small part which they played in the affairs of the world. But if they could establish a society of their own with concerns peculiar to itself which they would administer, and if they could create positions of honor and importance in this organization, even the lowliest man in Rome would have a chance to satisfy that craving to exercise power over others which all of us feel, to hold titles and

distinctions, and to wear the insignia of office and rank. This motive worked itself out in the establishment of a complete hierarchy of offices. . . . The Roman state was reproduced in miniature in these societies, with their popular assemblies, and their officials, who bore the honorable titles of *quæstor*, *curator*, *prætor*, *ædile*, and so forth. . . . It is not entirely clear why the guilds never tried to bring pressure to bear on their employers to raise wages, or to improve their position by means of the strike, or by other methods with which we are familiar to-day. . . . In ancient times, as may be seen in the chapter on Diocletian's edict, machinery was almost unknown, and the artisans worked singly in their own homes or in the houses of their employers, so that joint action to improve their condition would hardly be expected. Another factor which should probably be taken into account is the influence of slavery. This institution did not play the important rôle under the Empire in depressing the free laborer which it is often supposed to have played, because it was steadily dying out; but an employer could always have recourse to slave labor to a limited extent, and the struggling freedmen who had just come up from slavery were not likely to urge very strongly their claims for consideration. . . . Every guild put itself under the protection of some deity and was closely associated with a cult. *Silvanus*, the god of the woods, was a natural favorite with the carpenters, *Father Bacchus* with the innkeepers, *Vesta* with the bakers, and *Diana* with those who hunted wild animals for the circus. . . . The religious side of Roman trade associations will not surprise us when we recall the strong religious bent of the Roman character, and when we remember that no body of Romans would have thought of forming any kind of an organization without securing the sanction and protection of the gods. The family, the clan, the state all had their protecting deities, to whom appropriate rights were paid on stated occasions. . . . In the last days of the Republic, however, they [the Guilds] began to enter politics, and were used very effectively in the elections by political leaders in both parties. In fact the fortunes of the city seemed likely to be controlled by political clubs, until severe legislation and the transfer of the elections in the early Empire from the popular assemblies to the senate put an end to the use of trade associations for political purposes. It was in the light of this development that the government henceforth required all newly formed trades-unions to secure official authorization. . . . The Roman government started with the assumption that the operation of these voluntary associations was a matter of public as well as of private concern, and could serve public interests. Therefore their members were to be exempted from some of the burdens which the ordinary citizen bore. It was this reasoning, for instance, which led *Trajan* to set the bakers free from certain charges, and which influenced *Hadrian* to grant the same favors to those associations of skippers which supplied Rome with food. In the light of our present-day discussion it is interesting also to find that *Marcus Aurelius* granted them the right to manumit slaves and receive legacies—that is, he made them juridical persons. But if these associations were to be fostered by law, in proportion as they promoted the public welfare, it also followed logically that the state could put a restraining hand upon them when their development failed to serve public interests in the highest degree. Following this logical sequence, the Emperor *Claudius*, in

his efforts to promote a more wholesome home life, or for some other reason not known to us, forbade the eating-houses or the delicatessen shops to sell cooked meats or warm water. *Antoninus Pius*, in his paternal care for the unions, prescribed an age test and a physical test for those who wished to become members. Later, under the law a man was allowed to join one guild only. Such a legal provision as this was a natural concomitant of the concession of privileges to the unions. If the members of these organizations were to receive special favors from the state, the state must see to it that the rolls were not padded. It must, in fact, have the right of final supervision of the list of members. So long as industry flourished, and so long as the population increased, or at least remained stationary, this oversight by the government brought no appreciable ill results. But when financial conditions grew steadily worse, when large tracts of land passed out of cultivation and the population rapidly dwindled, the numbers in the trades-unions began to decline. The public services, constantly growing heavier, which the state required of the guilds in return for their privileges made the loss of members still greater. This movement threatened the industrial interests of the Empire and must be checked at all hazards. Consequently, taking another logical step in the way of government regulation in the interests of the public, the state forbade men to withdraw from the unions, and made membership in a union hereditary. Henceforth the carpenter must always remain a carpenter, the weaver a weaver, and the sons and grandsons of the carpenter and the weaver must take up the occupation of their fathers, and a man is bound forever to his trade as the serf is to the soil."—*F. F. Abbott, Common people of ancient Rome*, pp. 215-217, 219-222, 226-228, 230-231, 233-234.—"It was from the artisans that the political clubs of the last century of the Republic were recruited. They were an element in the state, always important and often dangerous. It would be apart from our purpose to enter into a detailed treatment of the political influence of industrial groups. In 64 B.C. the artisans formed a class upon which *Catiline* could faithfully depend. In many instances expression was given to their sentiments in the shows, where a separate place was allotted them. During the last century of the Republic the industrial class profited largely by that liberty of association accorded to all whose organizations did not contravene public law. The Twelve Tables had authorized complete autonomy in internal government. The first corporations were semi-military,—to assist in the work of equipment and construction in campaigns. These colleges of workmen did not have a religious origin; nor was their primary purpose to preserve industrial processes, to develop technical skill or to impose conditions of apprenticeship. We may believe that where a father taught his son his trade apprenticeship was by no means formal, and that men of the same handicraft could scarcely be brought together without a comparison of methods, leading to the adoption of newer and better ways of doing things. The instinct for sociability, the greater dignity which springs from association would be sufficient motives for their existence. The corporations, naturally assuming a semi-religious character in the state where each occupation possessed a protecting deity, probably discharged such religious functions as the burial of dead members. This duty was being performed in the interesting incident recorded by *Appian* where the bearers of a corpse fell upon and killed a man,

who, though assisting in carrying the corpse, was not a member of their trade."—E. H. Oliver, *Roman economic conditions*, pp. 138-139.

**Medieval guilds.**—"The history of the Gild Merchant begins with the Norman Conquest. The latter widened the horizon of the English merchant even more than that of the English annalist. The close union between England and Normandy led to an increase in foreign commerce, which in turn must have greatly stimulated internal trade and industry. Moreover, the greatly enhanced power of the English crown tempered feudal turbulence, affording a measure of security to traders in England that was as yet unknown on the continent. . . . With this expansion of trade the mercantile element would become a more potent factor in town life, and would soon feel the need of joint action to guard its nascent prosperity against encroachments. Not until there was something of importance to protect, not until trade and industry began to predominate over agriculture within the borough, would a protective union like the Gild Merchant come into being. Its existence, in short, presupposes a greater mercantile and industrial development than that which prevailed in England in the tenth century. This circumstance and the absence of all mention of the Gild Merchant in the records of the Anglo-Saxon period render it probable that this fraternity first appeared in England soon after the Conqueror had established his sway and restored order in the land. Whether it was merely a reorganization of older guilds, a spontaneous adaptation of the gild idea to the newly-begotten trade interests, or a new institution directly transplanted from Normandy, we have no means of determining with certainty. The last-mentioned view is strongly favoured by the circumstance that, at the time of the Conquest, the Gild Merchant doubtless existed in Northern France and Flanders. From the Frenchmen who became burgesses of English towns, and from the Norman merchants who thronged the marts of England after the Conquest, the English would soon ascertain the advantages of formal trade organization. The earliest distinct references to the Gild Merchant occur in a charter granted by Robert Fitz-Hamon to the burgesses of Burford (1087-1107), and in a document drawn up while Anselm was Archbishop of Canterbury (1093-1109). . . . Whether we place the inception of the fraternity immediately before or after the Norman Conquest, whether we make it a continuation of older Anglo-Saxon guilds, or a derivative from Normandy, or a wholly new and spontaneous growth, it was doubtless at first merely a private society, unconnected with the town government, having for its object the protection of its members, the tradesmen of the borough, and the maintenance of the newly invigorated trade interests. During the twelfth century it gradually became a recognised part of the town constitution, thus entering upon its second stage of development. How this came to pass can be easily realised from the later history of English guilds in general. For in the fourteenth and fifteenth centuries . . . a simple social-religious gild at times attained such power in a community that it came to be regarded as an important constituent element of the civic administration. Quite similar must have been the growth of the Gild Merchant, which from the outset was doubtless composed of the most influential burgesses, and which, as the exponent of the mercantile interests, must always have been greatly concerned in the increase of the privileges and prosperity of

the borough in general. It was very natural that the town authorities should use such a society for public purposes, entrusting to it the surveillance of the trade monopoly, in which its members were particularly interested,—allowing it to gradually become an important part of the civic administrative machinery. . . . The beginning of this third and final stage of development cannot be definitely fixed; for in some places it was of an earlier date than in others. The fourteenth century may in general be called the period of gradual transition. In the fifteenth century the transformation was completed. In this and the following centuries the term 'Gilda Mercatoria' became less and less frequent. In many places it soon wholly disappeared. Where it continued to subsist, the Gild no longer had an individuality of its own. Its alderman and other peculiar officers, its whole organization as a distinctive entity, had vanished. It had merged its identity in that of the general municipal organism. The head of the fraternity was now the head of the town, borough and Gild, burgesses and gildsmen were now identical. What had once been a distinct integral part of the civic body politic became vaguely blended with the whole of it. The old Gild Merchant was now rarely mentioned in connection with the municipal trade restrictions and regulations, the latter being commonly applied to burgesses, craftsmen, freemen, or 'foreigners.' The exegesis of this transformation . . . was due mainly to three causes: (1) the expansion of trade and the multiplication of the craft and mercantile fraternities, which absorbed the ancient functions of the Gild Merchant and rendered it superfluous; (2) the growth of the select governing body, which usurped most of the privileges of the old burghers at large, and hence tended to obliterate the distinction between them, or their less privileged successors, and the ancient gildsmen, leaving both only certain trade immunities; (3) the decay of the leet—the rallying point of the old burghers as distinguished from that of the gildsmen—the functions of which passed, in part, to the crafts, but mainly to the select body and to the justices of the peace. But even after the Gild Merchant and the borough had thus become identical, the old dual idea did not completely disappear, the Gild being often regarded as a particular phase or function of the town, namely, the municipality in its character of a trade monopoly. Hence the modern survivals of the Gild Merchant help to elucidate its actual functions in ancient times. In a few boroughs the select governing body of the town—the narrow civic corporation, in distinction from the burgesses or freemen at large—succeeded to the name and traditions of the Gild Merchant. In some of these cases the signification of the latter gradually dwindled down to a periodical civic feast of the privileged few. . . . In the eighteenth century we meet the word much less frequently than in the seventeenth; and toward the beginning of the present century it became very rare. The Municipal Corporations Commission, in 1835, found it still used in only a few boroughs. The remnants of the Gild Merchant and of the craft fraternities were rapidly vanishing before the new ideas of a more liberal age,—the age of *laissez faire*. The onerous, self-destructive restrictions of guilds were now being superseded by the stimulating measures of Chambers of Commerce. More than six centuries elapsed before the enactment of Magna Carta that all merchants 'may go through England, by land and water, to buy and sell, free from all unjust imposts,' became a

realised fact throughout the realm. The Municipal Corporations Act of 1835 provided that 'every person in any borough may keep any shop for the sale of all lawful wares and merchandizes by wholesale or retail, and use every lawful trade, occupation, mystery, and handicraft, for hire, gain, sale, or otherwise, within any borough.' In a single town of England the Gild Merchant still subsists, but only as the shadow of its former self—a spectre from the distant past. At Preston the Gild Merchant has been 'celebrated' regularly once every twenty years for more than three centuries, on which occasions the burghesses renew their freedom and indulge in all the festivities of a civic carnival. The last Gild Merchant was held in 1882. There was then much feasting and dancing, there were gay processions of townsmen, and much talk of the glories of the past. And yet how few even of the scholars and noblemen there assembled from various parts of Great Britain knew what an important rôle the Gild Merchant had played in the annals of English municipal history, what strange vicissitudes it had undergone, what a remarkable transformation the centuries had wrought in it."—C. Gross, *Gild merchant*, v. 1, ch. 1 and 9.—See also MERCHANT ADVENTURERS.—"The rise of the craft guilds is, roughly speaking, a century later [than the rise of the merchant guilds]; isolated examples occur early in the twelfth century, they become more numerous as the century advances, and in the thirteenth century they appear in all branches of manufacture and in every industrial centre. Craft guilds were associations of all the artisans engaged in a particular industry in a particular town, for certain common purposes. . . . Their appearance marks the second stage in the history of industry, the transition from the family system to the artisan (or gild) system. In the former there was no class of artisans properly so called; no class, that is to say, of men whose time was entirely or chiefly devoted to a particular manufacture; and this because all the needs of a family or other domestic group, whether of monastery or manor-house, were satisfied by the labours of the members of the group itself. The latter, on the contrary, is marked by the presence of a body of men each of whom was occupied more or less completely in one particular manufacture. The very growth from the one to the other system, therefore, is an example of 'division of labour,' or, to use a better phrase, of 'division of employments.' . . . When the place of the young manufactures of the twelfth century in the development of mediæval society is thus conceived, the discussion as to a possible Roman 'origin' of the guilds loses much of its interest. No doubt modern historians have exaggerated the breach in continuity between the Roman and the barbarian world; no doubt the artisans in the later Roman Empire had no organization somewhat like that of the later guilds. Moreover, it is possible that in one or two places in Gaul certain artisan corporations may have had a continuous existence from the fifth to the twelfth century. It is even possible that Roman regulations may have served as models for the organization of servile artisans on the lands of monasteries and great nobles,—from which, on the continent, some of the later craft guilds doubtless sprang. But when we see that the growth of an artisan class, as distinguished from isolated artisans here and there, was impossible till the twelfth century, because society had not yet reached the stage in which it was profitable or safe for a considerable number of men to confine themselves to any occupa-

tion except agriculture; and that the ideas which governed the craft guilds were not peculiar to themselves but common to the whole society of the time; then the elements of organization which may conceivably have been derived from or suggested by the Roman artisan corporations become of quite secondary importance. There is, as we have said, little doubt that some of the craft guilds of France and Germany were originally organizations of artisan serfs on the manors of great lay or ecclesiastical lords. This may also have been the case in some places in England, but no evidence has yet been adduced to show that it was so. . . . The relation of the craft guilds to the merchant gild is a still more difficult question. In many of the towns of Germany and the Netherlands a desperate struggle took place during the thirteenth and fourteenth centuries between a burgher oligarchy, who monopolized the municipal government, and were still further strengthened in many cases by union in a merchant gild, and the artisans organized in their craft guilds; the craftsmen fighting first for the right of having guilds of their own, and then for a share in the government of the town [see also BELGIUM: Ancient and mediæval history]. These facts have been easily fitted into a symmetrical theory of industrial development; the merchant guilds, it is said, were first formed for protection against feudal lords, but became exclusive, and so rendered necessary the formation of craft guilds; and in the same way the craft guilds became exclusive afterwards, and the journeymen were compelled to form societies of their own for protection against the masters. . . . The very neatness of such a theory, the readiness with which it has been accepted by popular writers in spite of the paucity of English evidence, have perhaps led some historians to treat it with scant consideration. . . . At the end of the reign of Edward III. there were in London forty-eight companies or crafts, each with a separate organization and officers of its own, a number which had increased to at least sixty before the close of the century."—W. J. Ashley, *Introduction to English economic history and theory*, v. 1, bk. 1, ch. 2.—"The unions known by the names of mystery, faculty trade, fellowship, or (from the fact of possessing particular costumes) livery company, existed in large numbers throughout the realm, and were frequently divided into two or three categories. Thus in London the principal crafts were the twelve 'substantial companies' or 'livery companies' [Mercers, Grocers, Drapers, Fishmongers, Goldsmiths, Skinners, Merchant Tailors, Haberdashers, Salters, Ironmongers, Vintners, Cloth-workers]. . . . A perfect acquaintance with the details of the trade and the desire as well as the ability to produce good work were in all cases preliminary requisites [of membership]. In fact the main provisions of the craft, the very soul of its constitution, were the regulations intended to ensure the excellence of the products and the capacity of the workman. . . . The whole character of the craft guild is explained by these regulations."—E. R. A. Seligman, *Mediæval guilds of England* (*American Economic Review*, v. 2, no. 5, pt. 2, sect. 2).—See also COMMUNE, MEDIEVAL; HANSA TOWNS; EUROPE: Middle Ages: Growth of towns; SUFFRAGE, MANHOOD: 1000-1300; 1200-1600; LONDON: 1154-1309.

Types of guilds in the Middle Ages.—"The

interest of modern readers in the craft guilds of the middle ages has created special associations between the general term 'gild' and this particular form of gild. A number of writers, including Professor W. J. Ashley, have given added currency to such a specialization of meaning by using the phrase 'gild system' to describe the form of industrial organization which is more precisely described as the craft or handicraft system. This laxity of usage has been peculiarly unfortunate because it adds to the obscurities and complexities of a subject that is beset with the difficulties that come from ambiguities of terminology and misleading connotations. . . . The disposition of the earlier Teutonic writers to trace all guilds to a common Teutonic origin was not unnatural, but one cannot help feeling that this unduly literal scholarship added gratuitous difficulties to the problems connected with these different types of association. Three distinct types of society might be described as guilds: associations for charitable and religious purposes; associations for commercial or social purposes; and associations designed to share with the municipal authority the supervision of fellow-craftsmen. In England and in Germany these associations were all called guilds, though there were usually elements in the name of the society that would be sufficient to indicate the general purpose of the association. Religious associations were usually placed under the patronage of some saint, or connected with the celebration of some religious festival. Guilds of Corpus Christi, of the Holy Trinity, of the Blessed Virgin, were to be found in many towns. Some of these religious titles appear in connection with associations that were not exclusively religious in character, for merchant and craft guilds were sometimes so closely identified with religious observances that the religious element appeared in the title. In such cases it would seem that there might be grounds for searching for specific evidence of the actual purposes of the gild. All writers have recognized that these three types are somewhat distinct, but many have insisted that the growth of these different forms of association is dominated by some common principle. This thesis was given wide currency by Professor Brentano's essay on the 'Origin and Development of Guilds,' and later writers in dealing with English problems have found it difficult to emancipate themselves from the influences of the misleading suggestions of the old Anglo-Saxon term. The French terminology is different, and French writers have maintained more explicit distinctions among these various forms of association. The religious association is designated by a special term both in Latin and in French (*fraternitas-confrérie*). The merchant gild for some reason as yet unexplained has left little trace in the history of French commerce. A derivative from the root 'gild' appears in French terminology in this connection. The craft gild is designated by the term 'métier,' the general term for craft. It is therefore necessary to distinguish in French between the organized and unorganized crafts, and thus we have the 'métier libre'—a mere group of unorganized craftsmen distinguished from the 'métier juré,' the chartered craft whose members swear to observe the statutes of the organization. The *confrérie*, or religious fraternity, plays about the same rôle in France as the religious 'gild' in England. There may have been significant differences in the development of the gild merchant in France, but we can at least affirm that such associations existed. The craft guilds in France and in England also exhibit differences of form. The most notable difference

in the history of guilds in the two countries is that in France these forms appear more clearly to be different kinds of associations. The members of these societies were drawn from a single class, and in many cases the same people belonged to two societies or guilds; the different forms thus exerted curious reciprocal influences upon each other, as they were all a part of the daily life of a fairly definite group. The close relations of the different forms of gild to each other cannot be effectively studied, however, unless the larger differences of form and purpose are carefully distinguished. [See also COMMUNE, MEDIEVAL.] . . . The fact that a single term was applied to a variety of organizations in the middle ages can hardly be taken as evidence of a common purpose, and it happens that there is fairly definite evidence that there was no clear fraternal element in the craft gild of the pure type. In the course of development in England the religious and industrial organizations of craftsmen frequently became one society rather than two parallel organizations of the same persons. To that extent a fraternal element crept into the craft organizations, but it would be an exaggeration to suppose that the craft gild was in general a kind of fraternity. Both on the Continent and in England the religious society and the administrative organization of the craft were distinct; they were different organizations of essentially the same group of men. Although the modern trade union is not comparable to the craft gild, the relation between workingmen's benefit societies and the trade union is substantially similar to the relation that existed between the religious fraternity and the craft gild [see also LABOR ORGANIZATION: 1720-1800]. These various kinds of guilds are not merely variations from a common type, but essentially different organizations, owing their origin to widely different circumstances and having notable different functions and purposes."—A. P. Usher, *Industrial history of England*, pp. 165-168.—See also MASONIC SOCIETIES: Legend and fact.

Operation of the guilds in the Middle Ages.—Rules for apprenticeship.—Regulation of production.—"In the time when the artisans, still slaves of the bishop, worked only for him and for his escort, they were divided into small bands; each, composed of men who did the same kind of work, was obedient to a domestic of the bishop. This band was called a trade corporation, and the chief was a minister. There was a corporation of blacksmiths, of saddlers, of tailors, etc. From that came the word 'métier' in the sense which we give to it to-day, a trade. The artisans gradually became free: in place of working for their suzerain, an' being maintained by him, they worked on their own account and sold their products in the market; but they remained organized in a corporation. Each trade formed a single corps. It had its common coffer, its banner, which was carried in processions and which was taken along when the town went to war; it had its patron saint (the carpenters had Saint Joseph, the shoemakers Saint Crispin), it had chiefs, people who were in the same trade (in France they were called wardens), it had its own regulations; following the custom of the Middle Ages, these rules were unwritten. In France it was not until the middle of the thirteenth century even that the rules of the trades corporations in Paris were drawn up in due form. These regulations fixed the conditions upon which any one was admitted into the trade. The child must begin by being apprenticed to a master of the

trade; the master teaches him, feeds and clothes him. The apprentice must work for the master and must obey him; the master having the right to beat him if it is necessary. At the end of several years the apprentice becomes a journeyman; he still works for his employer, but is paid and is only engaged for a short time; he may leave his employer and go to another. The journeymen were a race of vagabonds; many went from town to town offering their services; the usage of 'making a four of France' was preserved among us for a long time. Those who are rich enough to open a shop become masters (employers); they alone can vote in the assembly of the trades [see also EDUCATION: Medieval: 13th-14th centuries]. The regulations also prescribe how one must work; he is forbidden to

open a tailor shop without having been received into the corporation of tailors would be fined and his shop would be closed. The right to manufacture and sell objects of a trade belonged exclusively to the men of that corporation. The tailors prevented the old-clothes men from selling new garments, for they alone had the right to sell them; the business of the old-clothes man was to sell old clothes. The makers of bits and bridles had a suit against the saddlers, to forbid them manufacturing bridles. The trades of the Middle Ages had a horror of competition. The principal trades were those of the butchers, weavers, dyers, masons, tanners, armorers, carpenters. The number of trades depended on the importance of the town; many German towns had only eighteen or twenty; in Paris there were more than one hundred.

NUREMBURG CLOTHMAKERS' PARADE, 1722

work elsewhere than in his shop, so that the public may watch over him; he is forbidden to work by artificial light, in order not to do bad work; he is forbidden to employ other materials or to make objects by any other measure than the rules call for. The silversmiths must not set gold on silver; the makers of statues must employ only a certain kind of wood. If a piece of cloth was narrower or wider than the prescribed measure it was confiscated and the merchant was fined. The people of the 'guild' insisted on guarding their honor, and their honor consisted in not permitting any but honestly made merchandise to be sold; that is the reason why they watched each other so closely. In return they supported each other against foreigners and against the men of the other trades or guilds. No one in the town had the right to manufacture or sell save the masters in the business; the man who would

Many different callings could be united in a single corporation, or one calling could be divided among several corporations; for example, there were three corporations of chaplet manufacturers in Paris."—C. Seignobos, *History of mediæval and of modern civilization*, pp. 165-167.—See also APPRENTICES, STATUTE OF; INSURANCE: Fire: Early forms; Life: Early forms.

**Modern guilds.**—Modification and final abolition of the guilds in France, Germany and Austria.—Vitality of the system in China.—The restrictions which the old régime in France threw about the industries of the townspeople were fewer than those which hindered the progress of agriculture. In most of the towns industries were still under the control of guilds or corporations of masters, which aimed to regulate the methods of manufacture and to preserve to the members the advantages of a local monopoly. The honor as

well as the interest of the guild was involved in maintaining the reputation of the product. The masters naturally desired to lessen the numbers admitted to the guild, so that in some cases it was impossible for any except relatives of masters to become members, although they might have served their apprenticeship and their usual time as journeymen. This policy increased the value of the monopoly, but was likely to excite the indignation of the rest of the community. The government sometimes attempted to reduce the evil by offering royal letters of mastership, a practice which also brought in a little revenue. In 1775 a decree threw open all towns except Paris, Lyons, Rouen, and Lille to men who had completed their apprenticeship and the usual term as journeymen, waiving the rule that they should first be received as masters. The guilds were still powerful enough to prevent their monopoly from being destroyed in this way, and the decree served chiefly to mark the increasing liberality of the government. The spread of industry into the country undermined the monopoly of the guilds and was favored by the government, which after 1762 assured to the rural inhabitants the right to purchase tools, machines, and raw materials. The selfish conservatism of the guilds was not the only obstacle to the progress of industry. Under the influence of Colbert's ideas, a mass of regulative decrees determined the exact amount of raw material which each piece of stuff should contain, as well as the manner in which it should be put together. The aim of these regulations was the protection of the consumer against bad workmanship or fraud, but they threw difficulties in the way of inventors, for it was not always easy to persuade a government council of the usefulness or practicability of a new production. The regulations were enforced by the guilds and by royal inspectors, whose seals were affixed to the goods. Offenders were prosecuted, their goods pilloried or destroyed, and their business ruined. Roland, the ill-fated minister of the interior in the Revolution, declared that when he was an inspector in Rouen he had seen as many as one hundred pieces of goods destroyed in one morning, solely because they were of an irregular weave. From the middle of the century masters and officers became less severe in the enforcement of the regulations. This movement was especially due to the influence of the economist Gournay, who became intendant of commerce in 1751. The word manufacture has a literal application to the methods of work under the old régime, for most of the machinery was run by hand and was of a type which had been used for centuries. A few large shops employed several hundred persons, but there was little division of labor. Most of the shops were small, with only the master, an apprentice or two, and a few journeymen. The goods were often sold by the master, who was a petty tradesman as well as a 'manufacturer.' The ordinary workmen, who had little prospect of ever becoming masters, sought to improve their condition by uniting in secret organizations or brotherhoods. Towards the middle of the century so many strikes and boycotts occurred that the government issued a decree forbidding such organizations or any combinations of employees to bring pressure on the masters. The employees could not abandon the service of a master without a permit; and if another master received them without this permit, he, as well as they, was liable to a heavy fine. Turgot held the view taught by the economists that the monopolies enjoyed by the guilds were a dangerous restriction of the liberty of industry and a

serious hindrance to the development of trade. The consequences of the monopoly were higher prices for the purchaser and a narrower opportunity for the artisan. His plan was to preserve the guild organization only in a few cases,—notably those of the apothecaries and the printers—in order to secure government control of those trades. He ordered the property of the guilds to be sold, the debts paid and the balance distributed among the members. Henceforward it should only be necessary for a workman to record his name, profession, and domicile at the proper office and conform to the police regulations of his industry. The ordinances on the *corvée* and on the guilds, with four others of less importance, were laid before the parlement of Paris for registration in March, 1776. Upon the question of the *corvée*, the judges took the attitude adopted by the keeper of the seals, regarding the change as a violation of the rights of property. They also considered masterships as rights over production which it would be unjust to take away without indemnification. They were ready to concede certain changes, reducing the number of guilds and lowering the entrance fees, but Turgot would not listen to any compromise, and persuaded the King to command the registration in a solemn *lit de justice*.—H. E. Bourne, *Revolutionary period in Europe*, p. 66.—“Turgot's fall was followed by a reaction against the policy of reform. . . . The guilds were reëstablished, although some changes were made which decreased the traditional abuses. Trades so closely connected that it was difficult to mark off their fields were not united, and the fees for mastership were reduced. The new guilds, six of merchants and forty-four of arts and trades, were introduced into Paris immediately. The attempt at restoration was extended more gradually to other towns. Several provincial parlements took the attitude that as they had never registered Turgot's edicts the older guilds still existed within their jurisdiction.”—*Ibid.*, p. 68.—A year after the Assembly began its efforts to free agricultural labor it freed trade and industry by abolishing the guilds or corporations which had survived Turgot's attack or had been reëstablished after his overthrow. This important reform met no resistance either in the Assembly or outside. The cahiers of several towns where the guilds were powerful urged their retention, and, in a few cases, requested a reëstablishment of the system which existed prior to Turgot's ordinance. For the costly and cumbersome restrictions of the system the Assembly substituted simply the payment of a moderate tax called the *patente*. With the guilds disappeared also the minute regulation of the processes of manufacture.”—*Ibid.*, p. 121.—See also COMPAGNONNAGES.

“In Germany and Austria the guilds had long been losing ground when the territorial princes vigorously undertook their reorganization. Labor troubles such as were the object of the French legislation furnished the occasion. In the German states the situation was peculiar in that journeymen who got into conflict with their employers or with the administration had only to cross a near-by frontier in order to be welcomed with open arms. Each state was glad to swell its population of artisans at the expense of its rivals. In Germany, also, the journeymen had an organization of their own akin to the guilds. The state governments found no way to meet the difficulty except by resort to the outworn method of imperial legislation. With unusual energy the diet undertook the task and in 1731 seriously modified and weakened the powers of the organizations of journeymen, leaving them hardly more than their

functions as charitable and religious bodies. No journeyman could be employed without a pass from the head of the guild, endorsed by his previous employer, even though this employer belonged to another state. The guilds were put under the control of the states, with the result that in Germany industry, like religion, became an affair of the state. The main purpose of the legislation which followed was to deprive the guilds of their petty monopolies and make the conditions of admission easier.—*Ib. id.*, p. 16.

"The Chinese guilds, the backbones of Chinese business organization, are formed primarily to pool interests for self-protection. Their rules for members are rules of restraint; their effect internally tends to equalize opportunity and make the minority subservient to the complete, though often modulated, tyranny of the majority. In China these guilds wield a tremendous power. Often it is exercised so quietly that it goes unnoticed. . . . Two kinds of guilds, broadly speaking, flourish in China. The Kung So is the association of men in the same business or trade. The Hui Kwan is the association of men from the same province, based upon the need of combination of those who are away from home, competing for trade in an alien territory. . . . The 'cessation of business' is a weapon of reprisal for some alleged injustice not often used because it injures the user as well as his enemy, but it is a guild measure of no mean efficiency. No doubt it has been used most often in rebuke of official corruption or blackmail or offensive regulation and as a substitute for insurrection. Its purpose is to paralyze business. Suddenly, some morning, the members of the guild do not start work. If their number for resistance includes a substantial part of the coolie laborers who unload ships in a port, and of the ricksha men and of merchants who sell certain food products and of carpenters and others in the building trades, the result may be a much dreaded and not soon forgotten period of stagnation. There are no unlawful acts; the guild has decreed a 'cessation' and its members merely do nothing. The guild has no governmental authority or charter, so none can be taken away from it; the members are acting within their rights and are beyond the law. If any member were to be taken to task for not fulfilling his engagement to work he would say as all Chinese say, on every occasion for avoidance, 'I am sick' and hundreds of his friends would swear that such is the case. However, it is not the Hui Kwan but the Kung So or trade guild which plays the most important part in the internal business of China.

"There is no tracing the origin of the Kung So. I have been told by missionaries, who on the whole constitute the class with the greatest intimacy with Chinese life, that the Kung So had its origin in co-operative contributors to worship and propitiation in the temples, and the small volume of H. B. Morse gives some indication of the same thought. I have yet to find a Chinese who would give an opinion on the origin of the trade guild in China; it is lost somewhere back yonder in a long, long history. Today the trade guilds still remain organizations of simple form—standing apart from public authority, avoiding all contracts with and controversies at law; internally they are democratic despotisms dictating methods of business, externally exercising little power or political influence, but prepared to undertake resistance to oppression and reprisals for injustice done their members. Because the guilds in the minds of foreigners, even of some who have lived for years in China, are confused with secret societies and

political party 'underground rings' of which there are plenty, it is necessary to point out that among the Kung So there is little activity beyond that of combination for protection and for social intercourse among men in the same trade. The extent covered by these guilds is their most important characteristic. One hears that there are guilds of thieves and of river pirates, still common in China. The Beggars Guild is large and powerful. Probably no trade or occupation in China is without a guild. Most of the trade guilds, indeed all that I have visited with but one exception, maintain a strict code of rules and fines. Seldom does a guild try to force membership on any individual in the trade. The guild is a hen with wings extended and if an individual wants to shiver without protection the most the guild does is to cluck. For members, however, the authority of the guild is quite a different matter—often a stern and terrible thing for the recalcitrant. There are rules made governing weights and measures to be used, length of credits, interest rates, prices. There are rules concerning the long apprenticeship so well established in the artisan's occupation; in Canton, for instance, the Silk Weavers require four and five years training for the men who pull the pattern strings in the looms. Rules are made by employees' guilds establishing maximum and minimum wages; for instance, in the Servants Guild for a No. 1 cook or a No. 3 houseboy; and rules are made in trade guilds to which both employer and employee belong which are the result of arbitration within the guild after two opposing factions have quarreled, as for instance when the bookkeepers of the Pottery Guild have a difference with the Wholesale Merchants of the Guild. The Ningpo Bankers Guild which was founded about the time the father of Christopher Columbus was learning to walk has dealt in its regulations with banking hours, discounts, loans, security and exchange rates since a time to which its present officers' memories runneth not. Some guilds cling to old-fashioned notions and still prohibit sons and nephews from engaging in callings and trades different from those of their fathers and uncles. The power for enforcement of discipline is very strong. Sometimes the members make deposits for good faith against which the guild may draw for breach of its rules. But usually the punishment is a thumb screw system no less effective because old-fashioned and at times brutal and cruel. . . . China is more skilled in merciless boycott than any other country in the world. The guilds have taught her. The manager of one of the largest of American ventures in China said to me, 'I do not say that the time will soon come when Chinese feeling will produce enough cohesion for the purpose, but I do say that if that moment arrived the Chinese could drive every foreigner out of China in seventy-two hours. The Servants Guild of Shanghai seldom exercises its power openly but when it boycotts a foreign woman she will be living in a hotel in the end. When a foreign firm enters into a law suit with a Chinese firm, it is not beyond the range of possibility that as long as the suit is in progress the business of the foreign firm with the Chinese will vanish like a handful of dust in the wind. Ninety per cent. or more of the sales of Standard Oil in China at the time of the passage of the American Chinese Exclusion Act dropped away in the now forgotten Chinese boycott of American goods. A guild of coolies in Shanghai, licensed to do porters' and carriers' business on the streets, successfully defied the authorities and forced a municipal regulation to be rescinded. Anti-British and anti-Japanese shipping boycotts have on two occasions swept away the

Chinese cargoes of the merchant marines of these two countries like magic. 'The anti-Japanese steamship boycott was astonishing' said a Hong-kong official. 'The Empress boats were at the Dardanelles; the one American Pacific service was out of business temporarily. The Chinese were depending upon Japanese ships to take their goods away. But after Japan had presented her famous Demands of 1915 the Chinese just stopped shipping goods at all!' The gild is still the powerful factor in Chinese business. Modern industrial activities, however, have begun to throw shadows over this ancient institution. In Shanghai I talked with Mr. Chang Lot-chung, an old gentleman with a strong and genial countenance who speaks no English and appears to be a prosperous merchant belonging to the old school. But Mr. Chang Lot-chung is president of the Welfare Association and the Welfare Association is a new institution in China. The Welfare Association is not a gild. It is a combination of gilds. Its significance lies in the power of its idea. Who can say to what a movement to federate the gilds of one province with those of another may lead? Who can say what pressure the combined gilds of China might bring finally upon the wobbling internal administration of China or upon the foreign trade within her borders?"—*Asia, Aug., 1917*.—See also CHINA: Industrial development from earliest period.

**GUILDS OF FLANDERS.**—"In the course of the tenth century Bruges had waxed great and wealthy through its trade with England, while the Ghent people constructed a port at the junction of their two rivers. The Flemings, nevertheless, were still noted for the boorishness of their demeanour, their addiction to intemperance, and their excessive turbulence. Their pagan ancestors had been accustomed to form associations for their mutual protection against accidents by fire or water, and similar misadventures. These unions were called 'Minne,' or Friendships—an idea reproduced in the 'Amicitiae,' to which allusion is so frequently made in the deeds of ancient corporations. . . . After a time the name of 'Minne' came to be supplanted by that of 'Ghilde,' meaning a feast at the common expense. Each ghilde was placed under the tutelage of a departed hero, or demigod, and was managed by officers elected by the members—social equality being the foundation of each fraternity. Subsequent to the introduction of Christianity the demigod was replaced by a saint, while the members were enjoined to practise works of piety. . . . The Ghildes were the base of the municipal administration, and gradually assumed the government of the town, but took another form and appellation. The word was thenceforward applied, in its restricted sense of Guild, as referring to trade corporations, while the previous organisation came to be described in French and Latin documents as Commune or Communia, and embraced all who were entitled to gather together in the cauter, or public place, when the bell rang out the summons from the town belfry. In Flanders the Communes grew out of popular institutions of ancient date, and, though, no doubt, their influence was sensibly increased by their confirmation at the hands of King or Count, they did not owe their origin to royal or seigniorial charters."—J. Hutton, *James and Philip Van Arteveldt*, pt. 1, ch. 1.

**GUILLOTINE**, instrument of decapitation in use at the present time in France, Belgium, and parts of Germany. It consists of two upright posts, grooved on the inside, along which groove a sharp and heavy slanting blade descends on the neck of the victim, who is bound to a board beneath it. It was the invention of a Dr. Guillotin during the French Revolution. "It was during these winter months [of the session of the French National Assembly, 1790] that Dr. Guillotin read his long discourse upon the reformation of the penal code; of which the 'Moniteur' has not preserved a single word. This discourse attracts our attention on two accounts:—First, it proposed a decree that there should be but one kind of punishment for capital crimes; secondly, that the arm of the executioner should be replaced by the action of a machine, which Dr. Guillotin had invented. 'With the aid of my machine,' said the glib doctor, 'I will make your head spring off in the twinkling of an eye, and you will suffer nothing.' Bursts of laughter met this declaration; nevertheless, the Assembly listened with attention, and adopted the proposal."—G. H. Lewes, *Life of Robespierre*, ch. 10.

**GYMNASIA**, German, name given to establishments of secondary education in Germany. See **EDUCATION**: Modern: 19th century: Germany; Modern developments: 20th century: General education: Germany: Under the empire.

**GYMNASIA**, Greek.—"Amongst public buildings [of the ancient Greeks] we mentioned first the gymnasia, which, originating in the requirements of single persons, soon became centrepoints of Greek life. Corporeal exercise was of great importance amongst the Greeks, and the games and competitions in the various kinds of bodily skill . . . formed a chief feature of their religious feasts. This circumstance reacted on both sculpture and architecture, in supplying the former with models of ideal beauty, and in setting the task to the latter of providing suitable places for these games to be celebrated. For purposes of this kind (as far as public exhibition was not concerned) the palaestrai and gymnasia served. In earlier times these two must be distinguished. In the palaestra . . . young men practised wrestling and boxing. As these arts were gradually developed, larger establishments with separate compartments became necessary. Originally such places were, like the schools of the grammarians, kept by private persons; sometimes they consisted only of open spaces, if possible near a brook and surrounded by trees. Soon, however, regular buildings—gymnasia—became necessary. At first they consisted of an uncovered court surrounded by colonnades, adjoining which lay covered spaces, the former being used for running and jumping, the latter for wrestling. In the same degree as these

exercises became more developed, and as grown-up men began to take an interest in these youthful sports, and spent a great part of their day at the gymnasia, these grew in size and splendour. They soon became a necessary of life, and no town could be without them, larger cities often containing several."—**E. Guhl** and **W. Koner**, *Life of the Greeks and Romans*, sect. 25.—Of gymnasia "there were many at Athens; though three only, those of the Academy, Lyceum, and Cynosarges, have acquired celebrity. The site of the first of these gymnasia being low and marshy was in ancient times infested with malaria, but having been drained by Cimon and planted with trees it became a favourite promenade and place of exercise. Here, in walks shaded by the sacred olive, might be seen young men with crowns of rushes in flower upon their heads, enjoying the sweet odour of the smilax and the white poplar, while the platanos and the elm mingled their murmurs in the breeze of spring. The meadows of the Academy, according to Aristophanes the grammarian, were planted with the Apragmosune, a sort of flower so called as though it smelt of all kind of fragrance and safety, like our heart's-ease or flower of the Trinity. This place is supposed to have derived its name from Ecadamos, a public-spirited man who bequeathed his property for the purpose of keeping it in order. . . . The name of the Lyceum, sometimes derived from Lycus, son of Pandion, probably owed its origin to the temenos of Lycian Apollo there situated. It lay near the banks of the Ilissos, and was adorned with stately edifices, fountains and groves. . . . In this place anciently the Polemarch held his court and the forces of the republic were exercised before they went forth to war. Appended to the name of the Cynosarges, or third gymnasium surrounded with groves, was a legend which related that when Diomos was sacrificing to Hestia, a white dog snatched away a part of the victim from the altar, and running straightway out of the city deposited it on the spot where this gymnasium was afterwards erected."—**J. A. St. John**, *Hellenes*, bk. 2, ch. 5.—"The name of that most illustrious of the Athenian gymnasia, the Academy, has been preserved through the dark ages, and exactly in the situation indicated by ancient testimony. We are informed that the Academy was six or eight stades distant from a gate in the wall of the asty named Dipylum, and that the road from thence to the Academy led through that part of the outer Cerameicus, in which it was a custom to bury the Athenian citizens who had fallen in battle on important occasions. Dipylum was the gate . . . whence began the Sacred Way from Athens to Eleusis. . . . It appears also that the Academy lay between the Sacred Way and the Colonus Hippius, a height near the Cephissus, sacred to Neptune, and the scene of the *Œdipus Coloneus* of Sophocles; for the Academy was not far from Colonus, and the latter was ten stades distant from the city. That part of the plain which is near the olive-groves, on the northeastern side of Athens, and is now called Akadhimia, is entirely in conformity with these data. It is on the lowest level, where some water-courses from the ridges of Lycabettus are consumed in gardens and olive plantations."—**W. M. Leake**, *Topography of Athens*, sect. 2.—See also **EDUCATION**: Ancient: B.C. 7th-A.D. 3rd centuries: Greece; Contrast between Athenian and Spartan education.

**GYMNASIARCH**, title of an Athenian official in ancient times. See **LITURGIES**.

**GYMNÔTE**, name of a French submarine. See **SUBMARINES**: 1888-1893.

**GYPSIES.**—"Having in various and distant countries lived in habits of intimacy with these people, I have come to the following conclusions respecting them: that wherever they are found, their manners and customs are virtually the same, though somewhat modified by circumstances, and that the language they speak amongst themselves, and of which they are particularly anxious to keep others in ignorance, is in all countries one and the same, but has been subjected more or less to modification; and lastly, that their countenances exhibit a decided family resemblance, but are darker or fairer according to the temperature of the climate, but invariably darker, at least in Europe, than the natives of the countries in which they dwell, for example, England and Russia, Germany and Spain. The names by which they are known differ with the country, though, with one or two exceptions, not materially; for example, they are styled in Russia, Zigan; in Turkey and Persia, Zingarri; and in Germany, Zigeuner; all which words apparently spring from the same etymon, which there is no improbability in supposing to be 'Zincali,' a term by which these people, especially those of Spain, sometimes designate themselves, and the meaning of which is believed to be, 'The black men of Zend or Ind.' In England and Spain they are commonly known as Gypsies and Gitanos, from a general belief that they were originally Egyptians, to which the two words are tantamount; and in France as Bohemians, from the circumstance that Bohemia was the first country in civilized Europe where they made their appearance; though there is reason for supposing that they had been wandering in the remote regions of Slavonia for a considerable time previous, as their language abounds with words of Slavonic origin, which could not have been adopted in a hasty passage through a wild and half populated country. But they generally style themselves and the language which they speak, Rommany [see also PHILOLOGY: 26]. This word . . . is of Sanscrit origin, and signifies, 'The Husbands,' or that which pertaineth unto them. From whatever motive this appellation may have originated, it is perhaps more applicable than any other to a sect or caste like them, who have no love and no affection beyond their own race; who are capable of making great sacrifices for each other, and who gladly prey upon all the rest of the human species, whom they detest, and by whom they are hated and despised. It will perhaps not be out of place to observe here, that there is no reason for supposing that the word Roma or Rommany is derived from the Arabic word which signifies Greece or Grecians, as some people not much acquainted with the language of the race in question have imagined. . . . Scholars have asserted that the language which they speak proves them to be of Indian stock, and undoubtedly a great number of their words are Sanscrit. . . . There is scarcely a part of the habitable world where they are not to be found; their tents are alike pitched on the heaths of Brazil and the ridges of the Himalayan hills, and their language is heard at Moscow and Madrid, in the streets of London and Stamboul."—G. Borrow, *Zincali*, v. 1, pp. 2-5.—"One day, 450 years ago, or thereabouts, there knocked at the gates of the city of Lüneburg, on the Elbe, as strange a rabble rout as had ever been seen by German burgher. There were 300 of them, men and women, accompanied by an extraordinary number of children. They were dusky of skin, with jet-black hair and eyes; they wore strange garments; they were unwashed and dirty even beyond the liberal limits tolerated by the cold-water-fearing citizens of Lüneburg;

they had with them horses, donkeys, and carts; they were led by two men whom they described as Duke and Count. . . . All the Lüneburgers turned out to gaze open-mouthed at these pilgrims, while the Duke and the Count told the authorities their tale, which was wild and romantic. . . . Many years before, they explained, while the tears of penitence stood in the eyes of all but the youngest children, they had been a Christian community, living in orthodoxy, and therefore happiness, in a far-off country known as Egypt. . . . They were then a happy Christian flock. To their valley came the Saracens, an execrable race, worshipping Mahound Yielding, in an evil hour, to the threats and persecutions of their conquerors, they—here they turned their faces and wept aloud—they abjured Christ. But thereafter they had no rest or peace, and a remorse so deep fell upon their souls that they were fain to arise, leave their homes, and journey to Rome in hope of getting reconciliation with the Church. They were graciously received by the Pope, who promised to admit them back into the fold after seven years of penitential wandering. They had letters of credit from King Sigismund—would the Lüneburgers kindly look at them?—granting safe conduct and recommending them to the protection of all honest people. The Lüneburg folk were touched at the recital of so much suffering in a cause so good; they granted the request of the strangers. They allowed them to encamp. . . . The next day the strangers visited the town. In the evening a good many things were missed, especially those unconsidered trifles which a housewife may leave about her doorway. Poultry became suddenly scarce; eggs doubled in price; it was rumoured that purses had been lost while their owners gazed at the strangers; cherished cups of silver were not to be found. . . . While the Lüneburgers took counsel in their leisurely way, how to meet a case so uncommon, the pilgrims suddenly decamped, leaving nothing behind them but the ashes of their fires and the picked bones of the purloined poultry. . . . This was the first historical appearance of Gipsies. It was a curious place to appear in. The mouth of the Elbe is a long way from Egypt, even if you travel by sea, which does not appear to have been the case; and a journey on land not only would have been infinitely more fatiguing, but would, one would think, have led to some notice on the road before reaching Lüneburg. There, however, the Gipsies certainly are first heard of, and henceforth history has plenty to say about their doings. From Lüneburg they went to Hamburg, Lübeck, Rostock, Griefswald, travelling in an easterly direction. They are mentioned as having appeared in Saxony, where they were driven away . . . for their thievish propensities. They travelled through Switzerland, headed by their great Duke Michael, and pretending to have been expelled from Egypt by the Turks. Their story in these early years, though it varied in particulars, remained the same in essentials. In Provence they called themselves Saracens; in Swabia they were Egyptians doomed to everlasting wanderings for having refused hospitality to the Virgin and Joseph; at Bâle, where they exhibited letters of safe conduct from the Pope, they were also Egyptians. Always the Land of the Nile; always the same pretence, or it may be reminiscence, of sojourn in Egypt; always, to soothe the suspicions of priests, faithful and submissive sons of the Church. From the very first their real character was apparent. They lie, cheat and steal at Lüneburg; they lie and steal everywhere; they tell fortunes and cut purses, they buy

and sell horses, they poison pigs, they rob and plunder, they wander and they will not work. They first came to Paris in the year 1427, when more people went to see them, we are told, than ever crowded to the Fair of Laudet. . . . They remained at St. Denis for a month, when they received peremptory orders to quit for the usual reason. . . . In the 16th century trouble began for the Roman folk. By this time their character was perfectly well known. They were called Bohemians, Heathen, Gitanos, Pharaohites, Robbers, Tartars, and Zigeuner. They had abandoned the old lying story of the penitential wanderings; they were outcasts; their hand was against every man's hand; their customs were the same then as they are described now by Leland or Borrow."—*Gipsies and their friends* (*Temple Bar*, v. 47), pp. 65-67.—"Since the publication of Pott's book upon the gypsies [*Die Zigeuner in Europa und Asien*—about 30 years ago—we have come to regard the origin of this singular people with considerable unanimity of opinion. Almost nobody doubts now that they are Indians; and the assumption that all the gypsies scattered throughout Europe are descended from one parent stock meets with little contradiction. Both of these beliefs are the outcome of the investigation of their language. . . . Pott, in the introduction to his book, and quoting from the 'Shah-Name' of Firdousi, informs us that, during the 5th century of our era, the Persian monarch, Behram Gour, received from an Indian king 12,000 musicians of both sexes, who were known as Luris. Now, as this is the name by which the gypsies of Persia are known even at the present day, and as, moreover, the author of the Persian work 'Modjmal at-tawarikh' emphatically says that the Luris or Lulis of modern Persia are the descendants of these same 12,000 musicians, there is no bazard in the assumption that we have here the first recorded gypsy migration. Confirmation of this is afforded by the Arabian historian, Hamza of Ispahan, who wrote half a century before Firdousi, and who was well versed in the history of the Sassanides. It is related by this author that Behram Gour caused 12,000 musicians, called Zott, to be sent from India for the benefit of his subjects. An 'Zott' is the name by which the gypsies were known to the Arabs, and which they even bear in Damascus at the present day. In the Arabic dictionary 'al-Kamus' this entry occurs. 'Zott, arabicized from Jatt, a people of Indian origin. The word might be pronounced Zatt with equal correctness.' . . . For the fatherland of these Zott, or Jatt, we have not long to seek. Istakhri and Ibn-Haukal, the celebrated 10th-century geographers, recount as follows:—'Between al-Mansura and Mokran the waters of the Indus have formed marshes, the borders of which are inhabited by certain Indian tribes called Zott; those of them who dwell near the river live in huts, like the huts of the Berbers, and subsist chiefly on fish and water-fowl; while those occupying the level country further inland live like the Kurds, supporting themselves on milk, cheese, and maize.' In these same regions there are yet two more tribes placed by these geog-

raphers, namely, the Bodha and the Meid. The former are properly, according to Ibn-Haukal, a subdivision of the Zott. . . . In course of time the Meds (to adopt the spelling favoured by Sir Henry Elliott) overcame the Zotts, whom they treated with such severity that they had to leave the country. The Zotts then established themselves on the river Peben, where they soon became skillful sailors"; while those living farther to the north, known as Kikan, became famed as breeders of horses and herders of buffalos. When the Arabs, in their career of conquest, came in contact with the Zotts, the latter joined them, and large colonies of them were removed, for some reason, to western Asia, and settled with their herds on the lower Euphrates and Tigris, and in Syria. The Zotts on the Tigris became strong and troublesome in time, and in 834 the khalif Motacem, after subjugating them by force, removed them from the country, to the number of 27,000, sending them to Ainzarba, on the northern frontier of Syria. In 855, Ainzarba was captured by the Byzantines, who carried off the Zotts, with all their buffalo herds. "Here, then, we have the first band of gypsies brought into the Greek Empire. . . . As regards the destinies of the Zotts after they had been brought to Asia Minor from Ainzarba, in the year 855, I have been unable—in the course of a hurried search—to discover anything. But, now that we know the year in which they entered Byzantine territory, others may be more successful. Whether the name Zott, or rather its Indian form Jatt (or Jaut), has also been brought with them into Europe, I am, of course, as little able to say."—M. J. de Goeje, *Contribution to the history of the gypsies* (D. MacRitchie, ed., *Accounts of the gypsies of India*).—"Students of the gypsies, and especially those who have interested themselves in the history of the race, will have read with regret the announcement of the death, at Paris, on March 1st, of the veteran 'tsiganologue,' M. Paul Bataillard. For the last half century he had devoted his leisure time to the study of the early notices of the presence of gypsies in Europe. . . . It was his opinion that there have been gypsies in Eastern Europe since prehistoric times, and that it is to them Europe owes its knowledge of metallurgy. Heterodox although this opinion may be, it has recently been observed by Mr. F. H. Groome that 'Bataillard's theory is gaining favour with foreign archæologists, among whom MM. Mortillet, Chantre, and Burnouf had arrived independently at similar conclusions.'"—*Athenæum*, Mar. 31, 1894.

**HABEAS CORPUS**.—"The right to personal liberty as understood in England," says Dicey, "means in substance a person's right not to be subjected to imprisonment, arrest, or other physical coercion in any manner that does not admit of legal justification." Since the seventeenth century, the right to the writ of Habeas Corpus has been justly regarded as the most effective among the guarantees of personal liberty. In brief the legal process is this: a court of competent jurisdiction, upon application, issues a writ to an officer or to any person holding another in custody, commanding him to bring the prisoner before the court at once and show the reasons for his detention. If in the judgment of the court the charges do not justify such detention, the prisoner is discharged. But if they are considered adequate, and the offense is bailable, he is released upon furnishing suitable bail; otherwise he is remanded to prison. To the English people is due the credit for having created this most effective remedy for infringement upon personal liberty, although it has now been adopted with various modifications in nearly all civilized countries. The tendency of legal writers has been to obscure the origin and development of the writ of Habeas Corpus behind a mass of vague generalities, extolling the liberty of the English subject. In the absence of a careful and detailed history of the writ, it is the purpose of this article to outline the principal changes through which it has passed to become the chief safeguard of personal liberty. The right to the writ of

Habeas Corpus is ascribed by many to the famous statute bearing that name passed by Parliament in 1679 [see ENGLAND: 1679 (May)]. But this act merely corrected certain important defects and abolished many abuses of a practice long known at Common Law. On the other hand, many legal writers have endeavored to find in articles 39, 39 and 40 of Magna Charta, a recognition of the principles involved in the writ of Habeas Corpus. Although the last two clauses declare that rights of justice and personal liberty will not be violated, they cannot as they stand be made to imply the writ of Habeas Corpus. . . . It was not until near the close of the Tudor period that the people began to demand more effective guarantees against the exercise of the arbitrary powers of the crown over personal liberty. . . . Thus as early as 1592, at least, Habeas Corpus was established as an independent writ to test the validity of imprisonment. But as yet it afforded no relief when the commitment was made in consequence of a warrant from the crown or the Privy Council. . . . The Commons were not content to leave the matter in this state. In the course of a long and heated discussion, they passed a unanimous resolution on April 3, 1628, denying the right of the king, the privy council, or anyone, to imprison or detain a freeman without a legal warrant setting forth the reasons for detention and affirming the right of every man confined to prison, even under the express command of the king or the council to demand and obtain a writ of Habeas Corpus. This resolution was made the basis of an important part of the Petition of Right, passed by Parliament of May 27th. After quoting 39 Magna Charta and a portion of 25 Edw. II, C. 3, the Petition continues: 'Divers of your subjects have of late been imprisoned without any cause shown, and when for their deliverance they were brought before your justices by your majesty's writs of Habeas Corpus and there to undergo and receive as the court should order, and their keepers commanded to certify the causes of their detainer, no cause was certified, but they were detained by your majesty's special command, signed by the lords of your privy council, and yet were returned back to their several prisons without being charged with anything to which they might answer according to the law. They, therefore, humbly pray your Most Excellent Majesty . . . that no freeman in any such manner as is before mentioned, be imprisoned or detained.' After a vigorous protest, the king signed the petition on June 7, 1628, thereby giving it the force of law. . . . One of the charges preferred against Clarendon in the articles of impeachment of 1667 was, 'That he hath advised and procured divers of his majesty's subjects to be imprisoned against the law . . . thereby to prevent them from the benefit of the law.' Whether this charge were true or false, it is certain that cases arose between 1660-1679 in which the prisoner suffered great hardship because of unsettled points in the practice of Habeas Corpus, and it appears that the administration took advantage of these defects for political purposes. The Shaftesbury and the Jenks cases were certainly of this character. . . . On June 27, 1677, Shaftesbury was brought before the court of King's Bench by an Alias Writ of Habeas Corpus. The return stated merely that the prisoner was held in custody by order of the Lords for 'high contempt committed against the House.' In spite of a vig-

orous protest by Shaftesbury's counsel, the court held that since the commitment had been ordered by the king's highest court, the court of King's Bench had no jurisdiction in the matter. He was remanded and not released until late in the following February upon order of the Lords themselves. The case was clearly one of political oppression. It is significant that Shaftesbury was later the author of the Habeas Corpus Act as passed in 1679, and it has been said, without definite proof, that he drafted the Act while in prison at this time. . . . In February, 1674, 'An act for the speedy relief of persons detained for criminal matters,' was passed by the Commons, but apparently no action was taken by the Lords. A similar fate awaited another bill in June, 1675. In March and April, 1677, the Lords themselves had originated and passed through the second reading, 'An act for the better security of liberty of the subject,' but it was dropped. Finally, in the spring of 1679, after a long series of compromises and joint conferences, the Habeas Corpus Act was passed by both houses and signed by the king on May 27th. On the day that the king signed the bill he dissolved Parliament. It has been suggested that pending the new election, Charles II had approved the measure to gain popular support. According to the provisions of 31 Charles II, C. 2, any person detained for crime, 'unless for treason and felony plainly expressed in the warrant of commitment,' or anyone in his behalf, has the right to demand a writ of Habeas Corpus of the courts of King's Bench, Common Pleas, Chancery or Exchequer, or of any of the judges of the same, if the above courts are not in session. The existing law provided the remedy when the appeal was made to the court. But in case the appeal was made to the judges personally the Habeas Corpus Act required that on view of a copy of the warrant of commitment, or the oath of two witnesses that such a copy had been denied, he issued at once a writ of Habeas Corpus to the one holding the prisoner in charge, commanding him within a period not less than three nor more than twenty days, depending upon the distance, to bring before the judge the body of the prisoner and show reasons for his detention. Within two days after the prisoner was presented, the judge was obliged to bail or remand him in accordance with the provisions of the law for the particular offense. If the judge to whom the proper demand was made refused to act in accord with the intent of the statute, he was made liable to a forfeit of 500 pounds to the aggrieved person. If the gaoler refused a copy of the warrant of commitment within six hours after the demand had been made, or transferred the prisoner into the custody of another except in obedience to a legal process, or failed to make a proper return to the writ of Habeas Corpus within the time specified, he was liable to a forfeiture of 100 pounds to the aggrieved person. Once released on a writ of Habeas Corpus, the defendant was privileged against further arrest for the same offense. Although those 'committed for high treason, plainly and specially expressed in the warrant of commitment,' were denied the writ of Habeas Corpus, conviction must be had no later than the end of the second session of the court after arrest; but in the failure of such conviction the prisoner must be discharged."—C. C. Crawford (P. L. Kaye, *Readings in civil government*, pp. 105-110).—See also COMMON LAW: 1680.

**HAGENAU**, or *Haguenau*, town in Germany, sixteen miles north of Strasburg.

1648.—Ceded to France. See GERMANY: 1648; Peace of Westphalia.

Treaty of (1330). See AUSTRIA: 1330-1364.

**HAGGAI**, Jewish prophet of postexilic period. See JEWS: Religion. 1 the prophets.

**HAGMATAN**, or *Ecbatana*. See ECBATANA.

**HAGUE**, The, seat of government of the Netherlands, and residence of the sovereign. It is situated in the Province of South Holland, three miles from the North sea. (See NETHERLANDS: Map.) It possessed no municipal rights until the time of Louis Bonaparte. "Unlike other Dutch cities, the Hague owed its importance, not to commerce or manufactures, but to having early been made the seat of government of the United Provinces, and to the constant presence of the officers of state and the foreign ministers accredited to the republic. For four centuries the abode of the counts of Holland, it derives its name from the 'Haeg' or hedge encircling the magnificent park which formed their ancient hunting ground."—J. R. Brodhead, *History of the state of New York*, v. 1, p. 61.—Among its notable buildings are the Groot Kerk, built during the fifteenth and sixteenth centuries; the Mauritshuis, which contains a picture gallery rich in Rembrandts; the Municipal Museum, and the Royal library (see LIBRARIES: Modern: Netherlands). The city has often been the seat of treaty negotiations. The negotiations of the Triple Alliance of England, Sweden, and the Netherlands against France, 1668, and of the Triple Alliance of England, France and Holland for the maintenance of the Treaty of Utrecht, 1717, took place there. In 1899 and 1907 it was the scene of the Hague Peace Conferences. It is now the seat of the Permanent Court of International Justice. See INTERNATIONAL JUSTICE, PERMANENT COURT OF.

**HAGUE CONFERENCES: 1899.**—First International conference.—Invitation of Count Muraviev.—Suggested program.—On August 24, 1898, without previous heralding or intimation, Count Muraviev, the Russian minister for foreign affairs, placed copies of the following momentous proposal from the tsar in the hands of all the foreign representatives attending his weekly reception at St. Petersburg: "The maintenance of universal peace and a possible reduction of the excessive armaments which weigh upon all nations represent, in the present condition of affairs all over the world, the ideal towards which the efforts of all Governments should be directed. This view fully corresponds with the humane and magnanimous intentions of His Majesty the Emperor, my august Master. Being convinced that this high aim agrees with the most essential interests and legitimate aspirations of all the Powers, the Imperial Government considers the present moment a very favourable one for seeking, through international discussion, the most effective means of assuring to all peoples the blessings of real and lasting peace, and above all of limiting the progressive development of existing armaments. During the last twenty years aspirations towards general pacification have particularly asserted themselves in the consciences of civilized nations. The preservation of peace has been made the aim of international policy; for the sake of peace the Great Powers have formed powerful alliances, and for the purpose of establishing a better guarantee of peace they have developed their military forces in an unprecedented degree, and continue to develop them without hesitating at any sacrifice. All these efforts, however, have not yet led to the

beneficent results of the desired pacification. The ever increasing financial burdens strike at the root of public prosperity. The physical and intellectual forces of the people, labour and capital, are diverted for the greater part from their natural application and wasted unproductively. Hundreds of millions are spent in acquiring terrible engines of destruction which are regarded to-day as the latest inventions of science, but are destined tomorrow to be rendered obsolete by some new discovery. National culture, economical progress, and the production of wealth are either paralysed or developed in a wrong direction. Therefore, the more the armaments of each Power increase, the less they answer to the objects aimed at by the Governments. Economic disturbances are caused in great measure by this system of excessive armaments, and the constant danger involved in this accumulation of war material renders the armed peace of to-day a crushing burden more and more difficult for the nations to bear. It consequently seems evident that if this situation be prolonged, it will inevitably lead to that very disaster which it is desired to avoid, and the horrors of which make every humane mind shudder by anticipation. It is the supreme duty, therefore, at the present moment of all States to put some limit to these unceasing armaments, and to find means of averting the calamities which threaten the whole world. Deeply impressed by this feeling, His Majesty the Emperor has been pleased to command me to propose to all Governments who have Representatives at the Imperial Court the meeting of a Conference to discuss this grave problem. Such a Conference, with God's help, would be a happy augury for the opening century. It would concentrate in one powerful effort the strivings of all States which sincerely wish to bring about the triumph of the grand idea of universal peace over the elements of trouble and discord. It would, at the same time, cement their agreement by a united affirmation of the principles of law and equity on which rest the security of States and the welfare of peoples."—Great Britain, *Parliamentary Publications (Papers by command: Russia, no. 1, 1899)*. Having allowed his proposition to stand before the world for consideration during a period of four months, and having received from almost every governing authority a formal expression of willingness to join in the conference recommended, the sovereign of Russia pursued his grand design, on January 11, 1899, by the following communication to the foreign representatives at his court: "When, in the month of August last, my august master instructed me to propose to the Governments which have Representatives in St. Petersburg the meeting of a Conference with the object of seeking the most efficacious means for assuring to all peoples the blessings of real and lasting peace, and, above all, in order to put a stop to the progressive development of the present armaments, there appeared to be no obstacle in the way of the realization, at no distant date, of this humanitarian scheme. The cordial reception accorded by nearly all the Powers to the step taken by the Imperial Government could not fail to strengthen this expectation. While highly appreciating the sympathetic terms in which the adhesions of most of the Powers were expressed, the Imperial Cabinet has been also able to collect, with lively satisfaction, evidence of the warmest approval which has reached it, and continues to be received, from all classes of society in various parts of the globe. Notwithstanding the strong current of opinion which set in in favour of the ideas of general pacification, the political horizon has recently un-

dergone a sensible change. Several Powers have undertaken fresh armaments, striving to increase further their military forces, and in the presence of this uncertain situation, it might be asked whether the Powers considered the present moment opportune for the international discussion of the ideas set forth in the Circular of the 12th (24th) August. In the hope, however, that the elements of trouble agitating political centres will soon give place to a calmer disposition of a nature to favour the success of the proposed Conference, the Imperial Government is of opinion that it would be possible to proceed forthwith to a preliminary exchange of ideas between the Powers, with the object:—(a.) Of seeking without delay means for putting a limit to the progressive increase of military and naval armaments, a question the solution of which becomes evidently more and more urgent in view of the fresh extension given to these armaments; and (b.) Of preparing the way for a discussion of the questions relating to the possibility of preventing armed conflicts by the pacific means at the disposal of international diplomacy. In the event of the Powers considering the present moment favourable for the meeting of a Conference on these bases, it would certainly be useful for the Cabinets to come to an understanding on the subject of the programme of their labours. The subjects to be submitted for international discussion at the Conference could, in general terms, be summarized as follows:

1. An understanding not to increase for a fixed period the present effective of the armed military and naval forces, and at the same time not to increase the Budgets pertaining thereto; and a preliminary examination of the means by which a reduction might even be effected in future in the forces and Budgets above-mentioned.
2. To prohibit the use in the armies and fleets of any new kind of fire-arms whatever and of new explosives, or any powders more powerful than those now in use either for rifles or cannon.
3. To restrict the use in military warfare of the formidable explosives already existing, and to prohibit the throwing of projectiles or explosives of any kind from balloons or by any similar means.
4. To prohibit the use in naval warfare of submarine torpedo-boats or plungers, or other similar engines of destruction; to give an undertaking not to construct vessels with rams in the future.
5. To apply to naval warfare the stipulations of the Geneva Convention of 1864, on the basis of the Additional Articles of 1868 [see also GENEVA CONVENTIONS].
6. To neutralize ships and boats employed in saving those overboard during or after an engagement.
7. To revise the Declaration concerning the laws and customs of war elaborated in 1874 by the Conference of Brussels, which has remained unratified to the present day.
8. To accept in principle the employment of good offices, of mediation and facultative arbitration in cases lending themselves thereto, with the object of preventing armed conflicts between nations; to come to an understanding with respect to the mode of applying these good offices, and to establish a uniform practice in using them. It is well understood that all questions concerning the political relations of States and the order of things established by Treaties, as generally all questions which do not directly fall within the programme adopted by the Cabinets, must be absolutely excluded from the deliberations of the Conference. In requesting you, Sir, to be good enough to apply to your Government for instructions on the subject of my present communication, I beg you at the same time to inform it that, in the interest of the great cause

which my august master has so much at heart, His Imperial Majesty considers it advisable that the Conference should not sit in the capital of one of the Great Powers, where so many political interests are centred which might, perhaps, impede the progress of a work in which all the countries of the universe are equally interested.

General assent being given to the suggestions here offered, the next step toward realization of the grand project was taken, by an arrangement with the government of the kingdom of the Netherlands, in accordance with which an invitation was addressed from The Hague, in April, to many governments, both the greater and the less of the political world, in the following terms: "For political reasons the Imperial Russian Government considered that it would not be desirable that the meeting of the Conference should take place in the capital of one of the Great Powers, and after securing the assent of the Governments interested, it addressed the Cabinet of The Hague with a view of obtaining its consent to the choice of that capital as the seat of the Conference in question. The Minister for Foreign Affairs at once took the orders of Her Majesty the Queen in regard to this request, and I am happy to be able to inform you that Her Majesty, my august Sovereign, has been pleased to authorize him to reply that it will be particularly agreeable to her to see the proposed Conference meet at The Hague. Consequently, my Government, in accord with the Imperial Russian Government, charges me to invite [the Governments named] to be good enough to be represented at the above-mentioned Conference, in order to discuss the questions indicated in the second Russian Circular of the 30th December, 1898 (11th January, 1899), as well as all other questions connected with the ideas set forth in the Circular of the 12th (24th) August, 1898, excluding, however, from the deliberations everything which refers to the political relations of States or the order of things established by Treaties. My Government trusts, that [the Government named] will associate itself with the great humanitarian work to be entered upon under the auspices of His Majesty the Emperor of All the Russias, and that it will be disposed to accept this invitation, and to take the necessary steps for the presence of its Representatives at The Hague on the 18th May next for the opening of the Conference, at which each Power, whatever may be the number of its Delegates, will only have one vote."—Great Britain, *Parliamentary Publications (Papers by command: Miscellaneous, no. 1, 1899, p. 3-4, 8)*.

**Conference.**—In response to this definite invitation, the governments of Austria-Hungary, Belgium, Bulgaria, China, Denmark, France, Germany, Great Britain, Greece, Italy, Japan, Luxembourg, Mexico, Montenegro, the Netherlands, Persia, Portugal, Rumania, Russia, Serbia, Siam, Spain, Sweden and Norway, Switzerland, Turkey, and the United States of America, appointed representatives who met at The Hague, on May 18, 1899, and organized the conference by electing M. de Staal, Russian ambassador, to preside. The United States was represented by the Hon. Andrew D. White, ambassador to Berlin, the Hon. Seth Low, president of Columbia University, the Hon. Stanford Newel, envoy extraordinary, etc., to The Hague, Capt. Alfred T. Mahan, U.S.N., Capt. William Crozier, U.S.A., and the Hon. Frederick W. Halls, of New York. The representatives of Great Britain were Sir Julian Pauncefote, ambassador to the United States, Sir Henry Howard, envoy extraordinary, etc., to The Hague, Vice-Admiral Sir John A. Fisher, Major-General Sir J. C. Ardagh, and

Lieutenant-Colonel C. à Court. "The Conference at The Hague was a Parliament of Man representing, however imperfectly, the whole human race. The only independent ones not represented at the Huis ten Bosch were the South American republics, the Emperor of Morocco, the King of Abyssinia, and the Grand Lama of Tibet. That the South American republics were not represented is not the fault of the Russian Emperor. Mexico received and accepted an invitation. Brazil received, but rejected, the invitation to be present, and so did one other South American republic. The original Russian idea was to assemble representatives from every independent government in the world; nor did they even confine themselves to the secular governments. They were very anxious that the Pope should also be directly represented in this supreme assembly. Even with the Pope and South America left out the Congress represented more of the world and its inhabitants than any similar assembly that [had] ever been gathered together for the work of international legislation."—W. T. Stead, *Conference at The Hague (Forum, Sept., 1899)*.

**Constitution.**—To systematize and facilitate the discussions of the conference, three commissions or committees were appointed, between which the several subjects suggested in the Russian circular of January 11 (as given above), and agreed to by the several governments, were distributed. The 1st, 2d, 3d and 4th propositions of the program were referred to the first commission, the 5th, 6th and 7th to the second, the 8th (concerning mediation and arbitration) to the third. This was done on May 23, after which the general conference was held only at intervals, to receive and consider reports from the several commissions, of agreements reached or disagreements ascertained. This went on until July 29, when the several conventions, declarations, and recommendations agreed upon for submission to the governments represented were summarized in the following "Final Act," signed by all: "In a series of meetings, between the 18th May and the 20th July, 1899, in which the constant desire of the Delegates above mentioned has been to realize, in the fullest manner possible, the generous views of the august Initiator of the Conference and the intentions of their Governments, the Conference has agreed, for submission for signature by the Plenipotentiaries, on the text of the Conventions and Declarations enumerated below and annexed to the present Act:—

"I. Convention for the pacific settlement of international conflicts.

"II. Convention regarding the laws and customs of war by land.

"III. Convention for the adaptation to maritime warfare of the principles of the Geneva Convention of the 22nd August, 1864.

"IV. Three Declarations:—1. To prohibit the launching of projectiles and explosives from balloons or by other similar new methods. 2. To prohibit the use of projectiles, the only object of which is the diffusion of asphyxiating or deleterious gases. 3. To prohibit the use of bullets which expand or flatten easily in the human body, such as bullets with a hard envelope, of which the envelope does not entirely cover the core, or is pierced with incisions.

"These Conventions and Declarations shall form so many separate Acts. These Acts shall be dated this day, and may be signed up to the 31st December, 1899, by the Plenipotentiaries of the Powers represented at the International Peace Conference

at The Hague. Guided by the same sentiments, the Conference has adopted unanimously the following Resolution:—"The Conference is of opinion that the restriction of military budgets, which are at present a heavy burden on the world, is extremely desirable for the increase of the material and moral welfare of mankind." It has, besides, formulated the following wishes:—1. The Conference, taking into consideration the preliminary steps taken by the Swiss Federal Government for the revision of the Geneva Convention, expresses the wish that steps may be shortly taken for the assembly of a Special Conference having for its object the revision of that Convention. This wish was voted unanimously. 2. The Conference expresses the wish that the questions of the rights and duties of neutral may be inserted in the programme of a Conference in the near future. 3. The Conference expresses the wish that the questions with regard to rifles and naval guns, as considered by it, may be studied by the Governments with the object of coming to an agreement respecting the employment of new types and calibres. 4. The Conference expresses the wish that the Governments, taking into consideration the proposals made at the Conference, may examine the possibility of an agreement as to the limitation of armed forces by land and sea, and of war budgets. 5. The Conference expresses the wish that the proposal, which contemplates the declaration of the inviolability of private property in naval warfare, may be referred to a subsequent Conference for consideration. 6. The Conference expresses the wish that the proposal to settle the question of the bombardment of ports, towns, and villages by a naval force may be referred to a subsequent Conference for consideration.

"The last five wishes were voted unanimously, saving some abstentions. In faith of which, the Plenipotentiaries have signed the present Act, and have affixed their seals thereto. Done at The Hague, 20th July, 1899, in one copy only, which shall be deposited in the Ministry for Foreign Affairs, and of which copies, duly certified, shall be delivered to all the Powers represented at the Conference."—Great Britain, *Parliamentary Publications (Papers by command: Miscellaneous, no. 1, 1899, pp. 3-4, 8, 288-289)*.—The accompanying conventions and declarations were in no case unanimously signed, several delegations, in each case, claiming time for the governments they represented to consider certain questions involved. The most important of the proposed conventions, namely, that "For the Pacific Settlement of International Disputes," was signed at The Hague by the delegates from Belgium, Denmark, Spain, the United States of America, Mexico, France, Greece, Montenegro, the Netherlands, Persia, Portugal, Roumania, Russia, Siam, Sweden and Norway, and Bulgaria; but not by Austria-Hungary, Germany, Italy, Japan, Great Britain, Luxembourg, Switzerland, Serbia, Turkey, or China. Ultimately, however, the great treaty of arbitration was signed by every one of the powers represented. The full text of each of the conventions is given below.

Convention for the pacific settlement of international disputes.

TITLE I.—ON THE MAINTENANCE OF THE GENERAL PEACE.

Article 1. With a view to obviating, as far as possible, recourse to force in the relations between States, the Signatory Powers agree to use

their best efforts to insure the pacific settlement of international differences.

#### TITLE II.—ON GOOD OFFICES AND MEDIATION.

Article II. In case of serious disagreement or conflict, before an appeal to arms, the Signatory Powers agree to have recourse, as far as circumstances allow, to the good offices or mediation of one or more friendly Powers.

Article III. Independently of this recourse, the Signatory Powers recommend that one or more Powers, strangers to the dispute, should, on their own initiative, and as far as circumstances may allow, offer their good offices or mediation to the States at variance. Powers, strangers to the dispute, have the right to offer good offices or mediation, even during the course of hostilities. The exercise of this right can never be regarded by one or the other of the parties in conflict as an unfriendly act.

Article IV. The part of the mediator consists in reconciling the opposing claims and appeasing the feelings of resentment which may have arisen between the States at variance.

Article V. The functions of the mediator are at an end when once it is declared, either by one of the parties to the dispute, or by the mediator himself, that the means of reconciliation proposed by him are not accepted.

Article VI. Good offices and mediation, either at the request of the parties at variance, or on the initiative of Powers strangers to the dispute, have exclusively the character of advice and never have binding force.

Article VII. The acceptance of mediation can not, unless there be an agreement to the contrary, have the effect of interrupting, delaying, or hindering mobilization or other measures of preparation for war. If mediation occurs after the commencement of hostilities it causes no interruption to the military operations in progress, unless there be an agreement to the contrary.

Article VIII. The Signatory Powers are agreed in recommending the application, when circumstances allow, for special mediation in the following form:—In case of a serious difference endangering the peace, the States at variance choose respectively a Power, to whom they intrust the mission of entering into direct communication with the Power chosen on the other side with the object of preventing the rupture of pacific relations. For the period of this mandate, the term of which, unless otherwise stipulated, cannot exceed thirty days the States in conflict cease from all direct communication on the subject of the dispute, which is regarded as referred exclusively to the mediating Powers, who must use their best efforts to settle it. In case of a definite rupture of pacific relations, these Powers are charged with the joint task of taking advantage of any opportunity to restore peace.

#### TITLE III.—ON INTERNATIONAL COMMISSIONS OF INQUIRY.

Article IX. In differences of an international nature involving neither honour nor vital interests, and arising from a difference of opinion on points of fact, the Signatory Powers recommend that the parties, who have not been able to come to an agreement by means of diplomacy, should as far as circumstances allow, institute an International Commission of Inquiry, to facilitate a solution of these differences by elucidating the facts by means of an impartial and conscientious investigation.

Article X. The International Commissions of Inquiry are constituted by special agreement between the parties in conflict. The Convention for an inquiry defines the facts to be examined and the extent of the Commissioner's powers. It settles the procedure. On the inquiry both sides must be heard. The form and the periods to be observed, if not stated in the inquiry Convention, are decided by the Commission itself.

Article XI. The International Commissions of Inquiry are formed, unless otherwise stipulated, in the manner fixed by Article XXXII of the present Convention.

Article XII. The powers in dispute engage to supply the International Commission of Inquiry, as fully as they may think possible, with all means and facilities necessary to enable it to be completely acquainted with and to accurately understand the facts in question.

Article XIII. The International Commission of Inquiry communicates its Report to the conflicting Powers, signed by all the members of the Commission.

Article XIV. The Report of the International Commission of Inquiry is limited to a statement of facts, and has in no way the character of an Arbitral Award. It leaves the conflicting Powers entire freedom as to the effect to be given to this statement.

#### TITLE IV.—ON INTERNATIONAL ARBITRATION.

##### CHAPTER I.—ON THE SYSTEM OF ARBITRATION.

Article XV. International arbitration has for its object the settlement of differences between States by judges of their own choice, and on the basis of respect for law.

Article XVI. In questions of a legal nature, and especially in the interpretation or application of International Conventions, arbitration is recognized by the Signatory Powers as the most effective, and at the same time the most equitable, means of settling disputes which diplomacy has failed to settle.

Article XVII. The Arbitration Convention is concluded for questions already existing or for questions which may arise eventually. It may embrace any dispute or only disputes of a certain category.

Article XVIII. The Arbitration Convention implies the engagement to submit loyally to the Award.

Article XIX. Independently of general or private Treaties expressly stipulating recourse to arbitration as obligatory on the Signatory Powers, these Powers reserve to themselves the right of concluding, either before the ratification of the present Act or later, new Agreements, general or private, with a view to extending obligatory arbitration to all cases which they may consider it possible to submit to it.

##### CHAPTER II.—ON THE PERMANENT COURT OF ARBITRATION.

Article XX. With the object of facilitating an immediate recourse to arbitration for international differences, which it has not been possible to settle by diplomacy, the Signatory Powers undertake to organize a permanent Court of Arbitration, accessible at all times and operating, unless otherwise stipulated by the parties, in accordance with the Rules of Procedure inserted in the present Convention.

Article XXI. The Permanent Court shall be competent for all arbitration cases, unless the parties agree to institute a special Tribunal.

Article xxii. An International Bureau, established at The Hague, serves as record office for the Court. This Bureau is the channel for communications relative to the meetings of the Court. It has the custody of the archives and conducts all the administrative business. The Signatory Powers undertake to communicate to the International Bureau at The Hague a duly certified copy of any conditions of arbitration arrived at between them, and of any award concerning them delivered by special Tribunals. They undertake also to communicate to the Bureau the Laws, Regulations, and documents eventually showing the execution of the awards given by the Court.

Article xxiii. Within the three months following its ratification of the present Act, each Signatory Power shall select four persons at the most, of known competency in questions of international law, of the highest moral reputation, and disposed to accept the duties of Arbitrators. The persons thus selected shall be inscribed, as members of the Court, in a list which shall be notified by the Bureau to all the Signatory Powers. Any alteration in the list of Arbitrators is brought by the Bureau to the knowledge of the Signatory Powers. Two or more Powers may agree on the selection in common of one or more Members. The same person can be selected by different Powers. The Members of the Court are appointed for a term of six years. Their appointments can be renewed. In case of the death or retirement of a member of the Court, his place shall be filled in accordance with the method of his appointment.

Article xxiv. When the Signatory Powers desire to have recourse to the Permanent Court for the settlement of a difference that has arisen between them, the Arbitrators called upon to form the competent Tribunal to decide this difference, must be chosen from the general list of members of the Court. Failing the direct agreement of the parties on the composition of the Arbitration Tribunal, the following course shall be pursued:—Each party appoints two Arbitrators, and these together choose an Umpire. If the votes are equal, the choice of the Umpire is intrusted to a third Power, selected by the parties by common accord. If an agreement is not arrived at on this subject, each party selects a different Power, and the choice of the Umpire is made in concert by the Powers thus selected. The Tribunal being thus composed, the parties notify to the Bureau their determination to have recourse to the Court and the names of the Arbitrators. The Tribunal of Arbitration assembles on the date fixed by the parties. The Members of the Court, in the discharge of their duties and out of their own country, enjoy diplomatic privileges and immunities.

Article xxv. The Tribunal of Arbitration has its ordinary seat at The Hague. Except in cases of necessity, the place of session can only be altered by the Tribunal with the assent of the parties.

Article xxvi. The International Bureau at The Hague is authorized to place its premises and its staff at the disposal of the Signatory Powers for the operations of any special Board of Arbitration. The jurisdiction of the Permanent Court, may, within the conditions laid down in the Regulations, be extended to disputes between non-Signatory Powers, or between Signatory Powers and non-Signatory Powers, if the parties are agreed on recourse to this Tribunal.

Article xxvii. The Signatory Powers consider it their duty, if a serious dispute threatens to

break out between two or more of them, to remind these latter that the Permanent Court is open to them. Consequently, they declare that the fact of reminding the conflicting parties of the provisions of the present Convention, and the advice given to them, in the highest interests of peace, to have recourse to the Permanent Court, can only be regarded as friendly actions.

Article xxviii. A Permanent Administrative Council, composed of the Diplomatic Representatives of the Signatory Powers accredited to The Hague and of the Netherland Minister for Foreign Affairs, who will act as President, shall be instituted in this town as soon as possible after the ratification of the present Act by at least nine Powers. This Council will be charged with the establishment and organization of the International Bureau, which will be under its direction and control. It will notify to the Powers the constitution of the Court and will provide for its installation. It will settle its Rules of Procedure and all other necessary Regulations. It will decide all questions of administration which may arise with regard to the operations of the Court. It will have entire control over the appointment, suspension or dismissal of the officials and employes of the Bureau. It will fix the payments and salaries, and control the general expenditure. At meetings duly summoned the presence of five members is sufficient to render valid the discussions of the Council. The decisions are taken by a majority of votes. The Council communicates to the Signatory Powers without delay the Regulations adopted by it. It furnishes them with an annual Report on the labours of the Court, the working of the administration, and the expenses.—See also ARBITRATION, INTERNATIONAL: Modern: 1898-1899; MONROE DOCTRINE: 1899.

Article xxix. The expenses of the Bureau shall be borne by the Signatory Powers in the proportion fixed for the International Bureau of the Universal Postal Union.

### CHAPTER III. ON ARBITRAL PROCEDURE.

Article xxx. With a view to encourage the development of arbitration, the Signatory Powers have agreed on the following Rules which shall be applicable to arbitral procedure, unless other Rules have been agreed on by the parties.

Article xxxi. The Powers who have recourse to arbitration sign a special Act ("Compromis"), in which the subject of the difference is clearly defined, as well as the extent of the Arbitrators' powers. This Act implies the undertaking of the parties to submit loyally to the award.

Article xxxii. The duties of Arbitrator may be conferred on one Arbitrator alone or on several Arbitrators selected by the parties as they please, or chosen by them from the members of the Permanent Court of Arbitration established by the present Act. Failing the constitution of the Tribunal by direct agreement between the parties, the following course shall be pursued: Each party appoints two Arbitrators, and these latter together choose an Umpire. In case of equal voting, the choice of the Umpire is intrusted to a third Power, selected by the parties by common accord. If no agreement is arrived at on this subject, each party selects a different Power, and the choice of the Umpire is made in concert by the Powers thus selected.

Article xxxiii. When a Sovereign or the Chief of a State is chosen as Arbitrator, the arbitral procedure is settled by him.

Article xxxiv. The Umpire is by right President of the Tribunal. When the Tribunal does not include an Umpire, it appoints its own President.

Article xxxv. In case of the death, retirement, or disability from any cause of one of the Arbitrators, his place shall be filled in accordance with the method of his appointment.

Article xxxvi. The Tribunal's place of session is selected by the parties. Failing this selection the Tribunal sits at The Hague. The place thus fixed cannot, except in case of necessity, be changed by the Tribunal without the assent of the parties.

Article xxxvii. The parties have the right to appoint delegates or special agents to attend the Tribunal, for the purpose of serving as intermediaries between them and the Tribunal. They are further authorized to retain, for the defense of their rights and interests before the Tribunal, counsel or advocates appointed by them for this purpose.

Article xxxviii. The Tribunal decides on the choice of languages to be used by itself, and to be authorized for use before it.

Article xxxix. As a general rule the arbitral procedure comprises two distinct phases; preliminary examination and discussion. Preliminary examination consists in the communication by the respective agents to the members of the Tribunal and to the opposite party of all printed or written Acts and of all documents containing the arguments invoked in the case. This communication shall be made in the form and within the periods fixed by the Tribunal in accordance with Article xlix. Discussion consists in the oral development before the Tribunal of the arguments of the parties.

Article xl. Every document produced by one party must be communicated to the other party.

Article xli. The discussions are under the direction of the President. They are only public if it be so decided by the Tribunal, with the assent of the parties. They are recorded in the "procès-verbaux" drawn up by the Secretaries appointed by the President. These "procès-verbaux" alone have an authentic character.

Article xlii. When the preliminary examination is concluded, the Tribunal has the right to refuse discussion of all fresh Acts or documents which one party may desire to submit to it without the consent of the other party.

Article xliii. The Tribunal is free to take into consideration fresh Acts or documents to which its attention may be drawn by the agents or counsel of the parties. In this case, the Tribunal has the right to require the production of these Acts or documents, but is obliged to make them known to the opposite party.

Article xliv. The Tribunal can, besides, require from the agents of the parties the production of all Acts, and can demand all necessary explanations. In case of refusal, the Tribunal takes note of it.

Article xlv. The agents and counsel of the parties are authorized to present orally to the Tribunal all the arguments they may think expedient in defense of their case.

Article xlvi. They have the right to raise objections and points. The decisions of the Tribunal on those points are final, and cannot form the subject of any subsequent discussion.

Article xlvii. The members of the Tribunal have the right to put questions to the agents and counsel of the parties, and to demand explanations from them on doubtful points. Neither the questions put nor the remarks made by members of the Tribunal during the discussions can

be regarded as an expression of opinion by the Tribunal in general, or by its members in particular.

Article xlviii. The Tribunal is authorized to declare its competence in interpreting the "Compromis" as well as the other Treaties which may be invoked in the case, and in applying the principles of international law.

Article xlix. The Tribunal has the right to issue Rules of Procedure for the conduct of the case, to decide the forms and periods within which each party must conclude its arguments, and to arrange all the formalities required for dealing with the evidence.

Article l. When the agents and counsel of the parties have submitted all explanations and evidence in support of their case, the President pronounces the discussion closed.

Article li. The deliberations of the Tribunal take place in private. Every decision is taken by a majority of members of the Tribunal. The refusal of a member to vote must be recorded in the "procès-verbal."

Article lii. The award, given by a majority of votes, is accompanied by a statement of reasons. It is drawn up in writing and signed by each member of the Tribunal. Those members who are in the minority may record their dissent when signing.

Article liii. The award is read out at a public meeting of the Tribunal, the agents and counsel of the parties being present, or duly summoned to attend.

Article liv. The award, duly pronounced and notified to the agents of the parties at variance, puts an end to the dispute definitely and without appeal.

Article lv. The parties can reserve in the "Compromis" the right to demand the revision of the award. In this case, and unless there be an agreement to the contrary, the demand must be addressed to the Tribunal which pronounced the award. It can only be made on the ground of the discovery of some new fact calculated to exercise a decisive influence on the award, and which, at the time the discussion was closed, was unknown to the Tribunal and to the party demanding the revision. Proceedings for revision can only be instituted by a decision of the Tribunal expressly recording the existence of the new fact, recognizing in it the character described in the foregoing paragraph, and declaring the demand admissible on this ground. The "Compromis" fixes the period within which the demand for revision must be made.

Article lvi. The award is only binding on the parties who concluded the "Compromis." When there is a question of interpreting a Convention to which Powers other than those concerned in the dispute are parties, the latter notify to the former the "Compromis" they have concluded. Each of these Powers has the right to intervene in the case. If one or more of them avail themselves of this right, the interpretation contained in the award is equally binding on them.

Article lvii. Each party pays its own expenses and an equal share of those of the Tribunal.

#### GENERAL PROVISIONS.

Article lviii. The present Convention shall be ratified as speedily as possible. The ratification shall be deposited at The Hague. A "procès-verbal" shall be drawn up recording the receipt of each ratification, and a copy duly certified shall be sent, through the diplomatic channel, to all the Powers who were represented at the International Peace Conference at The Hague.

Article LIX. The non-Signatory Powers who were represented at the International Peace Conference can adhere to the present Convention. For this purpose they must make known their adhesion to the Contracting Powers by a written notification addressed to the Netherland Government, and communicated by it to all the other Contracting Powers.

Article LX. The conditions on which the Powers who were not represented at the International Peace Conference can adhere to the present Convention shall form the subject of a subsequent Agreement among the Contracting Powers.

Article LXI. In the event of one of the High Contracting Parties denouncing the present Convention, this denunciation would not take effect until a year after its notification made in writing to the Netherland Government, and by it communicated at once to all the other Contracting Powers. This denunciation shall only affect the notifying Power. In faith of which the Plenipotentiaries have signed the present Convention and affixed their seals to it. Done at The Hague, the 29th July, 1899, in a single copy, which shall remain in the archives of the Netherland Government, and copies of it, duly certified, be sent through the diplomatic channel to the Contracting Powers.—*United States, 56th Congress, 1st Session, Senate Document 159.*

Convention with respect to the laws and customs of war on land.

Article I. The High Contracting Parties shall issue instructions to their armed land forces, which shall be in conformity with the "Regulations respecting the Laws and Customs of War on Land" annexed to the present Convention.

Article II. The provisions contained in the Regulations mentioned in Article I. are only binding on the Contracting Powers, in case of war between two or more of them. These provisions shall cease to be binding from the time when, in a war between Contracting Powers, a non-Contracting Power joins one of the belligerents.

Article III. The present Convention shall be ratified as speedily as possible. The ratifications shall be deposited at The Hague. A "procès-verbal" shall be drawn up recording the receipt of each ratification, and a copy, duly certified, shall be sent through the diplomatic channel, to all the Contracting Powers.

Article IV. Non-Signatory Powers are allowed to adhere to the present Convention. For this purpose they must make their adhesion known to the Contracting Powers by means of a written notification addressed to the Netherland Government, and by it communicated to all the other Contracting Powers.

Article V. In the event of one of the High Contracting Parties denouncing the present Convention, such denunciation would not take effect until a year after the written notification made to the Netherland Government, and by it at once communicated to all the other Contracting Powers. This denunciation shall affect only the notifying Power.

In faith of which the Plenipotentiaries have signed the present Convention and affixed their seals thereto.

#### REGULATIONS.

##### SECTION I.—ON BELLIGERENTS.

#### CHAPTER I.—ON THE QUALIFICATIONS OF BELLIGERENTS.

Article I. The laws, rights and duties of war apply not only to armies, but also to militia and

volunteer corps, fulfilling the following conditions:—1. To be commanded by a person responsible for his subordinates; 2. To have a fixed distinctive emblem recognizable at a distance; 3. To carry arms openly; and, 4. To conduct their operations in accordance with the laws and customs of war. In countries where militia or volunteer corps constitute the army, or form part of it, they are included under the denomination "army."

Article II. The population of a territory which has not been occupied who, on the enemy's approach, spontaneously take up arms to resist the invading troops without having time to organize themselves in accordance with Article I, shall be regarded a belligerent, if they respect the laws and customs of war.

Article III. The armed forces of the belligerent parties may consist of combatants and non-combatants. In case of capture by the enemy both have a right to be treated as prisoners of war

#### CHAPTER II.—ON PRISONERS OF WAR.

Article IV. Prisoners of war are in the power of the hostile Government, but not in that of the individuals or corps who captured them. They must be humanely treated. All their personal belongings, except arms, horses, and military papers remain their property.

Article V. Prisoners of war may be interned in a town, fortress, camp, or any other locality, and bound not to go beyond certain fixed limits; but they can only be confined as an indispensable measure of safety.

Article VI. The State may utilize the labour of prisoners of war according to their rank and aptitude. Their tasks shall not be excessive, and shall have nothing to do with the military operations. Prisoners may be authorized to work for the Public Service, for private persons, or on their own account. Work done for the State shall be paid for according to the tariffs in force for soldiers of the national army employed on similar tasks. When the work is for other branches of the Public Service or for private persons, the conditions shall be settled in agreement with the military authorities. The wages of the prisoners shall go towards improving their position, and the balance shall be paid them at the time of their release, after deducting the cost of their maintenance.

Article VII. The Government into whose hands prisoners of war have fallen is bound to maintain them. Failing a special agreement between the belligerents, prisoners of war shall be treated as regards food, quarters, and clothing, on the same footing as the troops of the Government which has captured them.

Article VIII. Prisoners of war shall be subject to the laws, regulations, and orders in force in the army of the State into whose hands they have fallen. Any act of insubordination warrants the adoption, as regards them, of such measures of severity as may be necessary. Escaped prisoners, recaptured before they have succeeded in rejoining their army, or before quitting the territory occupied by the army that captured them, are liable to disciplinary punishment. Prisoners who, after succeeding in escaping, are again taken prisoners, are not liable to any punishment for the previous flight.

Article IX. Every prisoner of war, if questioned, is bound to declare his true name and rank, and if he disregards this rule, he is liable to a curtailment of the advantages accorded to the prisoners of war of his class.

Article x. Prisoners of war may be set at liberty on parole if the laws of their country authorize it, and, in such a case, they are bound, on their personal honour, scrupulously to fulfil, both as regards their own Government and the Government by whom they were made prisoners, the engagements they have contracted. In such cases, their own Government shall not require of nor accept from them any service incompatible with the parole given.

Article xi. A prisoner of war cannot be forced to accept his liberty on parole; similarly the hostile Government is not obliged to assent to the prisoner's request to be set at liberty on parole.

Article xii. Any prisoner of war, who is liberated on parole and recaptured, bearing arms against the Government to whom he had pledged his honour, or against the allies of that Government, forfeits his right to be treated as a prisoner of war, and can be brought before the Courts.

Article xiii. Individuals who follow an army without directly belonging to it, such as newspaper correspondents and reporters, sutlers, contractors, who fall into the enemy's hands, and whom the latter think fit to detain, have a right to be treated as prisoners of war, provided they can produce a certificate from the military authorities of the army they were accompanying.

Article xiv. A Bureau for information relative to prisoners of war is instituted, on the commencement of hostilities, in each of the belligerent States and, when necessary, in the neutral countries on whose territory belligerents have been received. This Bureau is intended to answer all inquiries about prisoners of war, and is furnished by the various services concerned with all the necessary information to enable it to keep an individual return for each prisoner of war. It is kept informed of internments and changes, as well as of admissions into hospital and deaths. It is also the duty of the Information Bureau to receive and collect all objects of personal use, valuables, letters, etc., found on the battlefields or left by prisoners who have died in hospital or ambulance, and to transmit them to those interested.

Article xv. Relief Societies for prisoners of war, which are regularly constituted in accordance with the law of the country with the object of serving as the intermediary for charity, shall receive from the belligerents for themselves and their duly accredited agents every facility, within the bounds of military requirements and Administrative Regulations, for the effective accomplishment of their humane task. Delegates of these Societies may be admitted to the places of internment for the distribution of relief, as also to the halting places of repatriated prisoners, if furnished with a personal permit by the military authorities, and on giving an engagement in writing to comply with all their Regulations for order and police.

Article xvi. The Information Bureau shall have the privilege of free postage. Letters, money orders, and valuables, as well as postal parcels destined for the prisoners of war or despatched by them, shall be free of all postal duties, both in the countries of origin and destination, as well as in those they pass through. Gifts and relief in kind for prisoners of war shall be admitted free of all duties of entry and others, as well as of payments for carriage by the Government railways.

Article xvii. Officers taken prisoners may receive, if necessary, the full pay allowed them in this position by their country's regulations, the amount to be repaid by their Government.

Article xviii. Prisoners of war shall enjoy every latitude in the exercise of their religion, including

attendance at their own church services, provided only they comply with the regulations for order and police issued by the military authorities.

Article xix. The wills of prisoners of war are received or drawn up on the same conditions as for soldiers of the national army. The same rules shall be observed regarding death certificates, as well as for the burial of prisoners of war, due regard being paid to their grade and rank.

Article xx. After the conclusion of peace, the repatriation of prisoners of war shall take place as speedily as possible.

### CHAPTER III.—ON THE SICK AND WOUNDED.

Article xxi. The obligations of belligerents with regard to the sick and wounded are governed by the Geneva Convention of the 22d August, 1864, subject to any modifications which may be introduced into it.

### SECTION II.—ON HOSTILITIES.

#### CHAPTER I.—ON MEANS OF INJURING THE ENEMY, SIEGES, AND BOMBARDMENTS.

Article xxii. The right of belligerents to adopt means of injuring the enemy is not unlimited.

Article xxiii. Besides the prohibitions provided by special Conventions, it is especially prohibited:—(a.) To employ poison or poisoned arms; (b.) To kill or wound treacherously individuals belonging to the hostile nation or army; (c.) To kill or wound an enemy who, having laid down arms, or having no longer means of defence, has surrendered at discretion; (d.) To declare that no quarter will be given; (e.) To employ arms, projectiles, or material of a nature to cause superfluous injury; (f.) To make improper use of a flag of truce, the national flag, or military ensigns and the enemy's uniform, as well as the distinctive badges of the Geneva Convention; (g.) To destroy or seize the enemy's property, unless such destruction or seizure be imperatively demanded by the necessities of war.

Article xxiv. Ruses of war and the employment of methods necessary to obtain information about the enemy and the country, are considered allowable.

Article xxv. The attack or bombardment of towns, villages, habitations or buildings which are not defended, is prohibited.

Article xxvi. The Commander of an attacking force, before commencing a bombardment, except in the case of an assault, should do all he can to warn the authorities.

Article xxvii. In sieges and bombardments all necessary steps should be taken to spare as far as possible edifices devoted to religion, art, science, and charity, hospitals, and places where the sick and wounded are collected, provided they are not used at the same time for military purposes. The besieged should indicate these buildings or places by some particular and visible signs, which should previously be notified to the assailants.

Article xxviii. The pillage of a town or place, even when taken by assault, is prohibited.

### CHAPTER II.—ON SPIES.

Article xxix. An individual can only be considered a spy if, acting clandestinely, or on false pretences, he obtains, or seeks to obtain information in the zone of operations of a belligerent, with the intention of communicating it to the hostile party. Thus, soldiers not in disguise who

have penetrated into the zone of operations of a hostile army to obtain information, are not considered spies. Similarly, the following are not considered spies: soldiers or civilians, carrying out their mission openly, charged with the delivery of despatches destined either for their own army or for that of the enemy. To this class belong likewise individuals sent in balloons to deliver despatches, and generally to maintain communication between the various parts of an army or a territory.

Article xxx. A spy taken in the act cannot be punished without previous trial.

Article xxxi. A spy who, after rejoining the army to which he belongs, is subsequently captured by the enemy, is treated as a prisoner of war, and incurs no responsibility for his previous acts of espionage.

#### CHAPTER III.—ON FLAGS OF TRUCE.

Article xxxii. An individual is considered as bearing a flag of truce who is authorized by one of the belligerents to enter into communication with the other, and who carries a white flag. He has a right to inviolability, as well as the trumpeter, bugler, or drummer, the flag-bearer, and the interpreter who may accompany him.

Article xxxiii. The Chief to whom a flag of truce is sent is not obliged to receive it in all circumstances. He can take all steps necessary to prevent the envoy taking advantage of his mission to obtain information. In case of abuse, he has the right to detain the envoy temporarily.

Article xxxiv. The envoy loses his rights of inviolability if it is proved beyond doubt that he has taken advantage of his privileged position to provoke or commit an act of treachery.

#### CHAPTER IV.—ON CAPITULATIONS.

Article xxxv. Capitulations agreed on between the Contracting Parties must be in accordance with the rules of military honour. When once settled, they must be scrupulously observed by both the parties.

#### CHAPTER V.—ON ARMISTICES.

Article xxxvi. An armistice suspends military operations by mutual agreement between the belligerent parties. If its duration is not fixed, the belligerent parties can resume operations at any time, provided always the enemy is warned within the time agreed upon, in accordance with the terms of the armistice.

Article xxxvii. An armistice may be general or local. The first suspend all military operations of the belligerent States; the second, only those between certain fractions of the belligerent armies and in a fixed radius.

Article xxxviii. An armistice must be notified officially, and in good time, to the competent authorities and the troops. Hostilities are suspended immediately after the notification, or at a fixed date.

Article xxxix. It is for the Contracting Parties to settle, in the terms of the armistice, what communications may be held, on the theatre of war, with the population and with each other.

Article xl. Any serious violation of the armistice by one of the parties gives the other party the right to denounce it, and even, in case of urgency, to recommence hostilities at once.

Article xli. A violation of the terms of the armistice by private individuals acting on their own initiative, only confers the right of demanding the punishment of the offenders, and, if necessary, indemnity for the losses sustained.

#### SECTION III.—ON MILITARY AUTHORITY OVER HOSTILE TERRITORY.

Article xlii. Territory is considered occupied when it is actually placed under the authority of the hostile army. The occupation applies only to the territory where such authority is established, and in a position to assert itself.

Article xliii. The authority of the legitimate power having actually passed into the hands of the occupant, the latter shall take all steps in his power to re-establish and insure, as far as possible, public order and safety, while respecting, unless absolutely prevented, the laws in force in the country.

Article xliiv. Any compulsion of the population of occupied territory to take part in military operations against its own country is prohibited.

Article xli v. Any pressure on the population of occupied territory to take the oath to the hostile Power is prohibited.

Article xli vi. Family honours and rights, individual lives and private property, as well as religious convictions and liberty, must be respected. Private property cannot be confiscated.

Article xli vii. Pillage is formally prohibited.

Article xli viii. If, in the territory occupied, the occupant collects the taxes, dues, and tolls imposed for the benefit of the State, he shall do it, as far as possible, in accordance with the rules in existence and the assessment in force, and will in consequence be bound to defray the expenses of the administration of the occupied territory on the same scale as that by which the legitimate Government was bound.

Article xli ix. If, besides the taxes mentioned in the preceding Article, the occupant levies other money taxes in the occupied territory, this can only be for military necessities or the administration of such territory.

Article l. No general penalty, pecuniary or otherwise, can be inflicted on the population on account of the acts of individuals for which it cannot be regarded as collectively responsible.

Article li. No tax shall be collected except under a written order and on the responsibility of a Commander-in-chief. This collection shall only take place, as far as possible, in accordance with the rules in existence and the assessment of taxes in force. For every payment a receipt shall be given to the taxpayer.

Article lii. Neither requisitions in kind nor services can be demanded from communes or inhabitants except for the necessities of the army of occupation. They must be in proportion to the resources of the country, and of such a nature as not to involve the population in the obligation of taking part in military operations against their country. These requisitions and services shall only be demanded on the authority of the Commander in the locality occupied. The contributions in kind shall, as far as possible, be paid for in ready money; if not, their receipt shall be acknowledged.

Article liii. An army of occupation can only take possession of the cash, funds, and property liable to requisition belonging strictly to the State, depôts of arms, means of transport, stores and supplies, and, generally, all movable property of the State which may be used for military operations. Railway plant, land telegraphs, telephones, steamers, and other ships, apart from cases governed by maritime law, as well as depôts of arms and, generally, all kinds of war material, even though belonging to Companies or to private persons, are likewise material which may serve

for military operations, but they must be restored at the conclusion of peace, and indemnities paid for them.

Article LIV. The plant of railways coming from neutral States, whether the property of those States, or of Companies, or of private persons, shall be sent back to them as soon as possible.

Article LV. The occupying State shall only be regarded as administrator and usufructuary of the public buildings, real property, forests, and agricultural works belonging to the hostile State, and situated in the occupied country. It must protect the capital of these properties, and administer it according to the rules of usufruct.

Article LVI. The property of the communes, that of religious, charitable, and educational institutions, and those of arts and science, even when State property, shall be treated as private property. All seizure of, and destruction, or intentional damage done to such institutions, to historical monuments, works of art or science, is prohibited, and should be made the subject of proceedings.

#### SECTION IV.—ON THE INTERNMENT OF BELLIGERENTS AND THE CARE OF THE WOUNDED IN NEUTRAL COUNTRIES.

Article LVII. A neutral State which receives in its territory troops belonging to the belligerent armies shall intern them, as far as possible, at a distance from the theatre of war. It can keep them in camps, and even confine them in fortresses or localities assigned for this purpose. It shall decide whether officers may be left at liberty on giving their parole that they will not leave the neutral territory without authorization.

Article LVIII. Failing a special Convention, the neutral State shall supply the interned with the food, clothing, and relief required by humanity. At the conclusion of peace, the expenses caused by the internment shall be made good.

Article LIX. A neutral State may authorize the passage through its territory of wounded or sick belonging to the belligerent armies, on condition that the trains bringing them shall carry neither combatants nor war material. In such a case, the neutral State is bound to adopt such measures of safety and control as may be necessary for the purpose. Wounded and sick brought under these conditions into neutral territory by one of the belligerents, and belonging to the hostile party, must be guarded by the neutral State, so as to insure their not taking part again in the military operations. The same duty shall devolve on the neutral State with regard to wounded or sick of the other army who may be committed to its care.

Article LX. The Geneva Convention applies to sick and wounded interned in neutral territory.

Added to the Convention relative to Laws and Customs of War were three declarations, separately signed, as follows: 1. "The contracting powers agree to prohibit, for a term of five years, the launching of projectiles and explosives from balloons, or by other new methods of a similar nature." 2. "The contracting parties agree to abstain from the use of bullets which expand or flatten easily in the human body, such as bullets with a hard envelope which does not entirely cover the core, or is pierced with incisions." [See also DUM-DUM BULLETS.] 3. "The contracting parties agree to abstain from the use of projectiles the object of which is the diffusion of asphyxiating or deleterious gases" [see also POISON GAS: First

use in war]. The first of these declarations was signed by the delegates from the United States, but not by those from Great Britain. The second and third were signed by neither British nor American representatives. Great Britain later gave her adherence to these last two, however.

As for the third declaration, it was opposed by Captain Maha., who spoke for the Americans, because "he considered the use of asphyxiating shell far less inhuman and cruel than the employment of submarine boats, and as the employment of submarine boats had not been interdicted by the Conference (though specially mentioned with that object in the Mouravieff Circular), he felt constrained to maintain his vote in favour of the use of asphyxiating shell on the original ground that the United States Government was averse to placing any restriction on the inventive genius of its citizens in inventing and providing new weapons of war."

#### Convention for the adaptation to maritime warfare of the principles of the Geneva Convention of August 22, 1864.

Article I. Military hospital-ships, that is to say, ships constructed or assigned by States specially and solely for the purpose of assisting the wounded, sick, or shipwrecked, and the names of which shall have been communicated to the belligerent Powers at the commencement or during the course of hostilities, and in any case before they are employed, shall be respected and cannot be captured while hostilities last. These ships, moreover, are not on the same footing as men-of-war as regards their stay in a neutral port.

Article II. Hospital-ships, equipped wholly or in part at the cost of private individuals or officially recognized relief Societies, shall likewise be respected and exempt from capture, provided the belligerent Power to whom they belong has given them an official commission and has notified their names to the hostile Power at the commencement of or during hostilities, and in any case before they are employed. These ships should be furnished with a certificate from the competent authorities, declaring that they had been under their control while fitting out and on final departure.

Article III. Hospital-ships, equipped wholly or in part at the cost of private individuals or officially recognized Societies of neutral countries, shall be respected and exempt from capture, if the neutral Power to whom they belong has given them an official commission and notified their names to the belligerent Powers at the commencement of or during hostilities, and in any case before they are employed.

Article IV. The ships mentioned in Articles I, II, and III shall afford relief and assistance to the wounded, sick, and shipwrecked of the belligerents independently of their nationality. The Governments engage not to use these ships for any military purpose. These ships must not in any way hamper the movements of the combatants. During and after an engagement they will act at their own risk and peril. The belligerents will have the right to control and visit them; they can refuse to help them, order them off, make them take a certain course, and put a Commissioner on board; they can even detain them, if important circumstances require it. As far as possible the belligerents shall inscribe in the sailing papers of the hospital-ships the orders they give them.

Article V. The military hospital-ships shall be distinguished by being painted white outside with

a horizontal band of green about a metre and a half in breadth. The ships mentioned in Articles II and III shall be distinguished by being painted white outside with a horizontal band of red about a metre and a half in breadth. The boats of the ships above mentioned as also small craft which may be used for hospital work, shall be distinguished by similar painting. All hospital-ships shall make themselves known by hoisting, together with their national flag, the white flag with a red cross provided by the Geneva Convention.

Article VI. Neutral merchantmen, yachts, or vessels, having, or taking on board, sick, wounded, or shipwrecked of the belligerents cannot be captured for so doing, but they are liable to capture for any violation of neutrality they may have committed.

Article VII. The religious, medical, or hospital staff of any captured ship is inviolable, and its members cannot be made prisoners of war. On leaving the ship they take with them the objects and surgical instruments which are their own private property. This staff shall continue to discharge its duties while necessary, and can afterwards leave when the Commander-in-chief considers it possible. The belligerents must guarantee to the staff that has fallen into their hands the enjoyment of their salaries intact.

Article VIII. Sailors and soldiers who are taken on board when sick or wounded, to whatever nation they belong, shall be protected and looked after by the captors.

Article IX. The shipwrecked, wounded, or sick of one of the belligerents who fall into the hands of the other, are prisoners of war. The captor must decide, according to circumstances, if it is best to keep them or send them to a port of his own country to a neutral port, or even to a hostile port. In the last case, prisoners thus repatriated cannot serve as long as the war lasts.

Article X. The shipwrecked, wounded, or sick, who are landed at a neutral port with the consent of the local authorities, must, failing a contrary arrangement between the neutral State and the belligerents, be guarded by the neutral State, so that they cannot again take part in the military operations. The expenses of entertainment and internment shall be borne by the State to which the shipwrecked, wounded, or sick belong.

Article XI. The rules contained in the above Articles are binding only on the Contracting Powers, in case of war between two or more of them. The said rules shall cease to be binding from the time when, in a war between the Contracting Powers, one of the belligerents is joined by a non-Contracting Power.

Article XII. The present Convention shall be ratified as soon as possible. The ratifications shall be deposited at The Hague. On the receipt of each ratification a "procès-verbal" shall be drawn up, a copy of which, duly certified, shall be sent through the diplomatic channel to all the Contracting Powers.

Article XIII. The non-Signatory Powers who accepted the Geneva Convention of the 22d August, 1864, are allowed to adhere to the present Convention. For this purpose they must make their adhesion known to the Contracting Powers by means of a written notification addressed to the Netherland Government, and by it communicated to all the other Contracting Powers.

Article XIV. In the event of one of the High Contracting Parties denouncing the present Convention, such denunciation shall not take effect until a year after the notification made in writing

to the Netherland Government, and forthwith communicated by it to all the other Contracting Powers. This denunciation shall only affect the notifying Power.

In faith of which the respective Plenipotentiaries have signed the present Convention and affixed their seals thereto.

[Signed by the representatives of Belgium, Denmark, Spain, Mexico, France, Greece, Montenegro, the Netherlands, Persia, Portugal, Rumania, Russia, Siam, Sweden and Norway, and Bulgaria.]

1907.—Second International Peace Conference: Conventions, declarations, and recommendations.—Text of the convention for a pacific settlement of international disputes, and of the "Final Act."—Pursuant to a request of the Interparliamentary Union, held at St. Louis in 1904, that a further peace conference be held, and that the President of the United States invite all nations to send representatives to such a conference, the late Secretary of State, at the direction of the President, instructed, on October 21, 1904, the representatives of the United States accredited to each of the signatories to the acts of The Hague Conference of 1899 to present overtures for a second conference to the ministers for foreign affairs of the respective countries. The replies received to this circular instruction of October 21, 1904, indicated that the proposition for the calling of a second conference met with general favor. At a later period it was intimated by Russia that the initiative of the First Conference was, owing to the restoration of peace in the Orient, disposed to undertake the calling of a new conference to continue as well as to supplement the works of the first. The offer of the Czar to take steps requisite to convene a second international peace conference was gladly welcomed by the President, and the Final Act of the Conference only recites in its preamble the invitation of the President.

"The Russian Government thus assumed the calling of the Conference, and on April 12, 1906, submitted the following programme, which was acceptable to the Powers generally and which served as the basis of the work of the Conference:

"1. Improvements to be made in the provisions of the convention relative to the peaceful settlement of international disputes as regards the Court of Arbitration and the International Commissions of Inquiry. [See also ARBITRATION, INTERNATIONAL; MODERN; 1907; Second peace conference; HAGUE TRIBUNAL.] 2. Additions to be made to the provisions of the convention of 1899 relative to the laws and customs of war on land—among others, those concerning the opening of hostilities, the rights of neutrals on land, etc. Declaration of 1899. One of these having expired, question of its being revived. 3. Framing of a convention relative to the laws and customs of maritime warfare, concerning—The special operations of maritime warfare, such as the bombardment of ports, cities, and villages by a naval force; the laying of torpedoes, etc. The transformation of merchant vessels into war ships. The private property of belligerent at sea. The length of time to be granted to merchant ships for their departure from ports of neutrals or of the enemy after the opening of hostilities. The rights and duties of neutrals at sea, among others the questions of contraband, the rules applicable to belligerent vessels in neutral ports; destruction, in cases of *vis major*, of neutral merchant vessels captured as prizes. In the said convention to be drafted there would be introduced the provisions relative

to war on land that would be also applicable to maritime warfare. 4. Additions to be made to the convention of 1899 for the adaptation to maritime warfare of the principles of the Geneva Convention of 1864.

"The United States, however, reserved the right to bring to discussion two matters of great importance not included in the programme, namely, the reduction or limitation of armaments and restrictions or limitations upon the use of force for the collection of ordinary public debts arising out of contracts. It was finally decided that the Conference should meet at The Hague on the 15th day of June, 1907, and thus the Conference, proposed by the President of the United States, and convoked by Her Majesty the Queen of the Netherlands upon the invitation of the Emperor of All the Russias, assumed definite shape and form. . . . In the circulars of October 21 and December 16, 1904, it was suggested as desirable to consider and adopt a procedure by which States nonsignatory to the original acts of The Hague Conference may become adhering parties. This suggestion was taken note of by the Russian Government and invitations were issued to forty-seven countries, in response to which the representatives of forty-four nations assembled at The Hague and took part in the Conference. No opposition was made to the admission of the nonsignatory States."

The delegation of the United States to the conference was composed of the following members: Commissioners plenipotentiary with the rank of ambassador extraordinary: Joseph H. Choate, of New York, Horace Porter, of New York, Uriah M. Rose, of Arkansas; Commissioner plenipotentiary: David Jayne Hill, of New York, envoy extraordinary and minister plenipotentiary of the United States to the Netherlands; Commissioners plenipotentiary with rank of minister plenipotentiary: Brig. Gen. George B. Davis, Judge-Advocate-General, U. S. Army, Rear-Admiral Charles S. Sperry, U. S. Navy, William I. Buchanan, of New York; Technical delegate and expert in international law: James Brown Scott, of California; Technical delegate and expert attaché to the commission: Charles Henry Butler, of New York; Secretary to the commission: Chandler Hale, of Maine; Assistant secretaries to the commission: A. Bailly-Blanchard, of Louisiana, William M. Malloy, of Illinois.

"The Dutch Government set aside for the use of the Conference, the Binnenhof, the seat of the States-General, and on the 15th day of June, 1907, at 3 o'clock in the afternoon, the Conference was opened by his excellency the Dutch minister for foreign affairs in the presence of delegates representing forty-four nations. . . . At the conclusion of the address of welcome his excellency suggested as president of the Conference His Excellency M. Nelidow, first delegate of Russia, and, with the unanimous consent of the assembly, M. Nelidow accepted the presidency and delivered an address." In accordance with the suggestion of the president, an order of procedure, in twelve articles, was adopted, and the conference was divided into four commissions, between which the subjects specified in the programme of the conference were apportioned. "The actual work of the Conference was, therefore, done in commission and committee. The results, so far as the several commissions desired, were reported to the Conference sitting in plenary session for approval, and after approval, submitted to the small subediting committee for final revision which, however, affected form, not substance. The results thus reached were included in the Final Act and signed by the plenipotentiaries on the 18th day

of October, 1907, upon which date the Conference adjourned."—*Report of the delegates of the United States (60th Congress, 1st Session, Senate Document 444)*.

The results of the conference are embodied in fourteen conventions duly formulated and signed, and a "Final Act" in which certain principles are declared as being "unanimously admitted." Of the conventions entered into, that most important one which provides means for a pacific solution of international conflicts is but a revision of the convention for the same purpose which the powers represented at the First Peace Conference, of 1899, gave adhesion to. To a large extent the articles of the convention are unchanged, and the changes made are mostly in the nature of an amplification of provisions and prescriptions of procedure for carrying out the agreements set forth in the compact of 1899. This occurs especially in part III, relating to "International Commissions of Inquiry," the specifications for which, merely outlined in six articles of the convention of 1899, were detailed with precision in twenty-eight articles of the convention of 1907. A similar amplification was given to the chapters on "The System of Arbitration" and "Arbitral Procedure." By a verbal change of some significance, the parties to the convention are designated "Contracting Powers," instead of "Signatory Powers," as before. Other important features of the revision are noted in an article which the Hon. David Jayne Hill, one of the American commission at the conference, communicated to *The American Review of Reviews* of December, 1907. Dr. Hill wrote: "With regard to good offices and mediation, a slight step forward was taken by the acceptance of the American proposition that the initiative of powers foreign to the controversy in offering them is not only 'useful' but 'desirable.' Greater precision has been given to the operation of commissions of inquiry, whose great utility has already been tested, but it was decided that the functions of such commissions should be confined to a determination of facts and should not extend to fixing responsibility. As regards arbitration, while it was asserted that 'in questions of a legal character, and especially in the interpretation or application of international conventions, arbitration is recognized by the contracting powers as the most efficacious and at the same time the most equitable means of settling differences that have not been adjusted by diplomacy,' and, 'in consequence it would be desirable that, in contentions of this character, the powers should resort to arbitration,' it was not found possible to render this resort an obligation. . . . It must, in justice, be added that some of the powers voting against an obligatory arbitration convention probably did so chiefly for the purpose of avoiding the isolation of others, and that some of the powers most earnest in opposing the project not only have negotiated special treaties of obligatory arbitration, but declare their intention of negotiating many more. The state of the question, then, is this: All accept the principle of obligatory arbitration in certain classes of cases, 32 powers are prepared to make definite engagements with all the rest, 9 prefer to make them only with states on whose responsibility they can rely, and 3 decline at present to commit themselves." On the part of the United States, when this important convention was submitted subsequently to the Senate, it was ratified conditionally, by the following resolution, adopted April 2, 1908. "*Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of a convention signed by the delegates of*

the United States to the Second International Peace Conference, held at The Hague from June sixteenth to October eighteenth, nineteen hundred and seven, for the pacific settlement of international disputes, subject to the declaration made by the delegates of the United States before signing said convention, namely: 'Nothing contained in this convention shall be so construed as to require the United States of America to depart from its traditional policy of not intruding upon, interfering with, or entangling itself in the political questions of policy or internal administration of any foreign state; nor shall anything contained in the said convention be construed to imply a relinquishment by the United States of its traditional attitude toward purely American questions.' *Resolved further, as a part of this act of ratification*, That the United States approves this convention with the understanding that recourse to the permanent court for the settlement of differences can be had only by agreement thereto through general or special treaties of arbitration heretofore or hereafter concluded between the parties in dispute: and the United States now exercises the option contained in article fifty-three of said convention, to exclude the formulation of the 'compromis' by the permanent court, and hereby excludes from the competence of the permanent court the power to frame the 'compromis' required by general or special treaties of arbitration concluded or hereafter to be concluded by the United States, and further expressly declares that the 'compromis' required by any treaty of arbitration to which the United States may be a party shall be settled only by agreement between the contracting parties, unless such treaty shall expressly provide otherwise."

Of the other conventions agreed to and signed at the conference it will be sufficient to give here in part a summary statement of their objects and provisions which was prepared by the Hon. James Brown Scott, one of the technical delegates to the conference from the United States, originally for publication in *The American Journal of International Law* for January, 1908. They are described by Mr. Scott as follows: "The second is the convention restricting the use of force for the recovery of contract debts. This was introduced by the American delegation, loyally and devotedly seconded by Doctor Drago, who has battled for the doctrine to which he has given his name. Without the support of Doctor Drago, it is doubtful if Latin America—for whose benefit it was introduced—would have voted for this very important doctrine. The proposition is very short; it consists of but three articles, but we must not measure things by their size. In full it is as follows: 'In order to avoid between nations armed conflicts of a purely pecuniary origin arising from contractual debts claimed from the government of one country by the government of another country to be due to its nationals, the contracting powers agree not to have recourse to armed force for the collection of such contractual debts. However, this stipulation shall not be applicable when the debtor state refuses or leaves unanswered an offer to arbitrate, or, in case of acceptance, makes it impossible to formulate the terms of submission, or after arbitration, fails to comply with the award rendered. It is further agreed that arbitration here contemplated shall be in conformity, as to procedure, with Title IV, Chapter III of the convention for the pacific settlement of international disputes adopted at The Hague, and that it shall determine, in so far as there shall be no agreement between the parties, the justice, and the amount

of the debt, the time and mode of payment, thereof.' . . . The third convention relates to the opening of hostilities and provides, in Article I, that the contracting powers recognize that hostilities between them should not commence without notice, which shall be either in the form of a formal declaration of war or of an ultimatum in the nature of a declaration of conditional war. This is to protect belligerents from surprise and bad faith. Article II is meant to safeguard the rights of neutrals. The state of war should be notified without delay to neutral powers, and shall only affect them after the receipt of a notification, which may be sent even by telegram. . . . The fourth convention concerns the laws and customs of land warfare, [and is] a revision of the convention of 1899. It is highly technical and codifies in a humanitarian spirit the warfare of the present [see also DUM-DUM BULLET; POISON GAS; First use in war]. The fifth convention attempts to regulate the rights and duties of neutral powers and of neutral persons in case of land warfare. Short, but important, its guiding spirit is expressed in the opening paragraph of the preamble, namely, to render more certain the rights and duties of neutral powers in case of warfare upon land and to regulate the situation of belligerent refugees in neutral territory. . . . The sixth is the convention concerning enemy merchant ships found in enemy ports or upon the high seas at the outbreak of hostilities. Custom forbids the capture of enemy vessels within the port of the enemy on the outbreak of hostilities and allows them a limited time to discharge or load their cargo and depart for their port of destination. The attempt was made to establish this custom or privilege as a right. The proposition, however, met with serious opposition and, instead of the right, the convention states that it is desirable that enemy ships be permitted freely to leave the port. The convention, therefore, was restrictive rather than declaratory of existing international practice. The same might be said of another provision of the convention concerning the treatment of enemy merchant ships upon the high seas. It may be said that the expression of a desire is tantamount to a positive declaration, but, strictly construed, the convention is not progressive. It lessens rights acquired by custom and usage, although it does, indeed, render the privilege granted universal. The American delegation, therefore, refrained from signing the convention. The seventh convention deals with the transformation of merchant ships into ships of war, and it must be said that the positive results of this convention are of little or no practical value. The burning question was whether merchant ships might be transformed into men-of-war upon the high seas. As the transformation of merchant vessels into war vessels upon the high seas caused an international commotion during the recent Russo-Japanese war, Great Britain and the United States insisted that the transfer should only be allowed within the territorial jurisdiction of the transforming power. Some of the continental states, on the contrary, refused to renounce the exercise of the alleged right. The great maritime states were thus divided, and as the question was too simple and too plain to admit of compromise, it was agreed to drop it entirely for the present. In order, however, that something might remain of the careful and elaborate discussions of the subject, a series of regulations was drawn up regarding the transformation of merchant ships into vessels of war, declaratory of international custom. . . . Indirectly, the rightfulness or wrongfulness of privateering was concerned, and inasmuch

as the United States would not consent to abolish privateering unless the immunity of private property be safeguarded, the American delegation abstained from signing the convention. The eighth convention relates to the placing of submarine automatic mines of contact, a subject of present and special interest to belligerents; while the interest of the neutral is very general. . . . Mines break from their moorings and endanger neutral life and property. The conference, therefore, desires to regulate the use of mines in such a way as not to deprive the belligerents of a recognized and legitimate means of warfare, but to restrict, as far as possible, the damage to the immediate belligerents. . . . The ninth convention forbade the bombardment by naval forces of undefended harbors, villages, towns, or buildings. The presence, however, of military stores would permit bombardment of such ports for the sole purpose of destroying the stores, provided they were not destroyed or delivered up upon request. Notice, however, should be given of the intention to bombard. In like manner, the convention permitted the bombardment of such undefended places if provisions were not supplied upon requisition to the naval force. Bombardment, however, was not allowed for the collection of mere money contributions. . . . The tenth convention adapted to maritime warfare the principles of the Geneva Convention of 1906. . . . The eleventh convention relates to certain restrictions in the exercise of the right of capture in maritime war. It is a modest document, but is all that was saved from the wreck of the immunity of private property. The American delegation urged the abolition of the right of capture of unoffending enemy private property upon the high seas, but great maritime powers such as Great Britain, France, Russia, and Japan were unwilling to relinquish this means of bringing the enemy to terms. . . . The twelfth convention sought to establish an international court of prize, and there only remains the ratification of this convention by the contracting powers in order to call into being this great and beneficent institution. For years enlightened opinion has protested against the right of belligerents to pass final judgment upon the lawfulness of the capture of neutral property, and it is a pleasure to be able to state that the interests of the neutrals in the neutral prize are henceforward to be placed in the hands of neutral judges with a representation of the belligerents, in order that the rights of all concerned may be carefully weighed and considered. . . . The thirteenth convention concerns and seeks to regulate the rights and duties of neutral powers in case of maritime war. This is an elaborate codification of the rights and duties of neutrals in which the conference essayed to generalize and define on the one hand the rights of neutrals and the correlative duties of the belligerents, and in the second place to set forth in detail the duties of neutrals, thus safeguarding the rights of belligerents in certain phases of maritime warfare. . . . The result, however, was unsatisfactory to some of the larger maritime powers, which prefer their present regulations on the subject of neutrality or which were unwilling to accept the modifications proposed. The United States was not satisfied with certain provisions of the convention, and reserved the right to study the project in detail before expressing a final opinion. It therefore abstained from voting and signing. The fourteenth convention is a reenactment of the declaration of 1899 forbidding the launching of projectiles and explosives from balloons. The original declaration

was agreed to for a period of five years, and as this period had expired the powers were without a regulation on the subject. The reenactment provided that the present declaration shall extend, not merely for a period of five years, but to the end of the Third Conference of Peace."—Reprinted in *Senate document no. 433, 60th Congress, 1st Session*.

Appended to these conventions are the resolutions or declarations of accepted principles embodied in the "Final Act," as mere expression of opinion, they entail no definite obligation. How much significance they had for the states whose representatives formulated them, is therefore open to question. Disarmament, the fundamental question, obtained no agreement, but was again referred to the individual states for consideration. The text is as follows: "The Conference, actuated by the spirit of mutual agreement and concession characterizing its deliberations, has agreed upon the following Declaration, which, while reserving to each of the Powers represented full liberty of action as regards voting, enables them to affirm the principles which they regard as unanimously admitted:—It is unanimous—1. In admitting the principle of compulsory arbitration. 2. In declaring that certain disputes, in particular those relating to the interpretation and application of the provisions of International Agreements, may be submitted to compulsory arbitration without any restriction. Finally, it is unanimous in proclaiming that, although it has not yet been found feasible to conclude a Convention in this sense, nevertheless the divergences of opinion which have come to light have not exceeded the bounds of judicial controversy, and that, by working together here during the past four months, the collected Powers not only have learnt to understand one another and to draw closer together, but have succeeded in the course of this long collaboration in evolving a very lofty conception of the common welfare of humanity.

"The Conference has further unanimously adopted the following Resolution:—The Second Peace Conference confirms the Resolution adopted by the Conference of 1899 in regard to the limitation of military expenditure; and inasmuch as military expenditure has considerably increased in almost every country since that time, the Conference declares that it is eminently desirable that the Governments should resume the serious examination of this question.

"It has besides expressed the following opinions:—1. The Conference calls the attention of the Signatory Powers to the advisability of adopting the annexed draft Convention for the creation of a Judicial Arbitration Court, and of bringing it into force as soon as an agreement has been reached respecting the selection of the Judges and the constitution of the Court. 2. The Conference expresses the opinion that, in case of war, the responsible authorities, civil as well as military, should make it their special duty to ensure and safeguard the maintenance of specific relations, more especially of the commercial and industrial relations between the inhabitants of the belligerent States and neutral countries. 3. The Conference expresses the opinion that the Powers should regulate, by special Treaties, the position, as regards military charges, of foreigners residing within their territories. 4. The Conference expresses the opinion that the preparation of regulations relative to the laws and customs of naval war should figure in the programme of the next Conference, and that in any case the Powers may apply, as far as possible, to war by sea the principles of the Con-

vention relative to the Laws and Customs of War on land. Finally, the Conference recommends to the Powers the assembly of a Third Peace Conference, which might be held within a period corresponding to that which has elapsed since the preceding Conference, at a date to be fixed by common agreement between the Powers, and it calls their attention to the necessity of preparing the programme of this Third Conference a sufficient time in advance to ensure its deliberations being conducted with the necessary authority and expedition. In order to attain this object the Conference considers that it would be very desirable that, some two years before the probable date of the meeting, a preparatory Committee should be charged by the Governments with the task of collecting the various proposals to be submitted to the Conference, of ascertaining what subjects are ripe for embodiment in an International Regulation, and of preparing a programme which the Governments should decide upon in sufficient time to enable it to be carefully examined by the countries interested. This Committee should further be intrusted with the task of proposing a system of organization and procedure for the Conference itself. In faith whereof the Plenipotentiaries have signed the present Act and have affixed their seals thereto."

**Ratification of the conventions of 1899 and 1907.**—The three conventions of 1899 received general ratification, and are considered binding. Those of 1907 met with less cordial acceptance. None of them have been accepted without reservation by all the signatories. The first two, by their nature, have not been very seriously affected by this lack of unanimity; the remainder, however, which deal with the laws and customs of war, all contain clauses to the effect that "the provisions of the present convention do not apply except between contracting powers, and then only if all belligerents are parties to the convention." Thus the fact that each one of these conventions was left unratified, or was ratified only with important reservations, by one or more of the belligerents in the World War, released all belligerents from legal obligation to respect them. In the case of VIII, IX, XIII and XIV an actual preponderance of the great powers failed to ratify. It should, however, be noted that so far as these conventions were declarative of existing usage the powers were already in honor bound to observe them; also it was the evident intention of the conference that those provisions of the conventions of 1899 which were revised in 1907 should remain in force until superseded by the new regulations. Thus it is only those sections which embody innovations in the law of nations that might properly be claimed to be nonexistent in August, 1914. The effect upon the laws of war of the usages of the belligerents in the years 1914-1918 is yet to be determined. It is generally agreed that the Hague conventions are inappropriate to existing conditions and must be thoroughly revised before they can be universally ratified.

#### HAGUE (ALLIED) CONFERENCE, 1922.

—Owing to the failure of the Genoa Conference (q.v.) in May, 1922, to settle the economic and financial problems of Europe plus the position of Russia in the comity of nations, it was decided to call another conference at The Hague. The sessions opened in the Carnegie Peace Palace on June 15 and ended on July 19. Delegates representing twenty-nine nations attended; the United States Government was unofficially represented by Louis A. Sussdorff, chargé d'Affaires of the American delegation at The Hague. The object of the conference was to effect a settlement under which the Russian Government would recognize Russia's pre-war debts and consent to satisfactory arrangements concerning the restitution of foreign-owned property which had been nationalized in Russia. At Genoa the Russians had refused to restore this property on the grounds that such an act would violate their communistic principles and infringe Russian sovereignty. On the first day, Jonkheer van Karnebeek, Dutch Foreign Minister, was elected provisional president of the conference. None of the leading statesmen of the Genoa gathering was present; the participating governments had sent financial and economic experts to attempt what diplomats had failed to accomplish. As Edward Hilton Young, one of the British delegates, declared in his speech, it was "a meeting of experts, not statesmen. We are to deal with facts, and not with principles. We should merely prepare to discuss facts with the Russians." The Russians were not due to appear till June 26; meanwhile the delegates met behind closed doors guarded by Dutch soldiers. On the 16th the chief business was the formation of three committees to deal with the question of Russia's debts, her credits and private property, respectively. It was decided that these committees should consist of eleven members, each capable of being increased to thirteen. One seat on each of the commissions was allotted to Great Britain, France, Italy, Belgium, Japan and Holland—Holland being included as an act of courtesy for permitting the conference to be held at her capital. It was further proposed to ask the Russians to form three similar committees—the non-Russian and Russian committees to hold separate sessions and only to meet in common session when required. Practically all the non-Russian states represented at the conference agreed to this procedure except France, whose representatives declared themselves unable to give a formal consent without prior consultation with their government. Dr. Patyn (Holland) was appointed president of the non-Russian commission. The Russian delegation arrived at The Hague on June 26, headed by Maksim Litvinov, M. Krestinsky, Minister to Berlin and commissioner of finance, M. Sokolnikov, assistant commissioner of finance; Leonid Krassin, commissioner of trade,

did not arrive until July 6. Litvinov quickly made his programme public, telling newspaper correspondents that credits would be insisted upon, and that on this basis alone would Russia consent to forego her counter-claim of 50,000,000,000 gold rubles for war damage. The question of credits, he added, must first be settled before the Russians would be prepared to consider the other points. "This attitude was persisted in by Litvinov at the first joint session, held on June 27. He refused to split up his delegation into subcommittees, as the allied commission desired; thus the Russian delegation met as a whole with each allied subcommittee in alternation. The first meeting was with the Subcommittee on Credits. Litvinov began with an energetic demand that Russia be granted credits. Baron Avezzano (Italy) formally asked him to specify what money was needed, and how it would be expended. M. Litvinov insisted that he must first receive assurance that credits would be granted. What Russia wanted was credits for Russian purchases abroad, with each country guaranteeing payment to its shippers. Hilton Young, the British expert, pointed out that capital would go only where it had confidence, and any credits which the Russian Government might get would depend on the work of the other two commissions; in other words, on what the Soviet did about debts and private property. This view was supported by France, whose representatives declared the Russians must state (1) the purpose for which the credits were required; (2) the sum desired, and (3) the guarantees offered. Baron Avezzano then asked Mr. Litvinov to present proposals for Russia's reconstruction under the heads of transport, agriculture, industry and commerce, setting forth what was regarded as most urgent. Litvinov's further attempts to commit the conference to a promise of credits were again countered by Hilton Young, who expressed the issue of lack of confidence in plain and uncompromising words. Litvinov gave up the struggle temporarily, and asked time to prepare the information asked."—*New York Times Current History*, Aug., 1922, pp. 870-871.—Facing the Subcommittee on Debts, June 28, Litvinov insisted that assurance of a long moratorium to Russia must precede her recognition of debts. Sokolnikov fixed the moratorium to extend from twenty to fifty years. The allied demand for a detailed statement on Russian finances was finally acceded to, the information to be forwarded from Moscow. Before the Subcommittee on Private Property on June 29 the Russians were asked to state what they would do about the foreign-owned and now nationalized property in Russia. To Litvinov's declaration that whatever concessions were made by Russia they would be merely expedients without renunciation of political principles, the British chairman of the Committee, Sir Philip Lloyd-Graeme, retorted that such a declaration was not calculated to inspire confidence. Litvinov was requested to submit definite proposals regarding foreign property on (1) industrial and commercial enterprises, such as engineering work, textile factories, public utility work, mines, timber, banks, etc.; (2) immovable property, such as lands, houses, buildings, forests, trade and private debts. The Russian credit demands were presented on June 30 to the committee dealing with that subject. Credits were asked for in foreign currencies and loans amounting to 3,224,000,000 gold rubles (\$1,612,000,000): transport, 1,050,000,000 gold rubles; agriculture, 924,000,000 gold rubles; industries, 750,000,000 gold rubles; miscellaneous commercial credits, 300,000,000 gold rubles, and bank credits, 200,000,000 gold rubles. These,

it was declared, were Russia's minimum needs, which could be spread over three years, though more than one-third would be required during the first year. "The sum asked for was to be granted as a direct credit to the Moscow Government, and had nothing to do with the other credits requested, which were to facilitate private trade with Russia under Government guarantee. One of the items given was for \$100,000,000 cash to enable Russia to establish at least a partial gold standard for an issue of new currency. The total sum demanded—\$1,612,000,000—may be compared with the \$1,000,000,000 demanded by the Russians at Genoa, a demand which broke up that conference. Both the French and Belgian delegates characterized this new demand as fantastic. Litvinov and Sokolnikov retorted that if the Russians did not get the money they needed, there would be small probability that the allied nations would collect on what they claimed was due to them. This remark aroused resentment, and Hilton Young then adjourned the session, declaring that further discussions must be confined to facts."—*Ibid.*, pp. 872-873.—On July 4, the same day, Sokolnikov presented the Russian budget information, which proved to be a bewildering mass of figures running into trillions of rubles—one gold ruble being reckoned at 1,200,000 paper rubles. Krassin arrived on the 6th and on the following day the French delegate M. Alphand informed the Russians that the allied experts had studied the Russian budget figures and had found that instead of 80 per cent. being met by tax revenue, as the Russians had declared, in reality only four-and-a-half per cent. was being so covered, and that all the remainder was covered by paper money. In a session of the Private Property committee the delegates attempted to commit Litvinov to something definite on the restitution problem; after desultory sparring the latter roundly demanded the allies to state their credit terms. He was told that no credits could be obtained until Russia yielded on the property question. Litvinov became defiant and declared that the list of concessions (containing only five per cent. of the foreign-owned property) represented all that Russia would agree to, and would not agree to that unless the demanded credits were forthcoming. A similar reply was given by Krassin on the debts proposition. On the 14th the two Commissions were reported to have given up hope of reaching any agreement and that further discussion was useless. The door was still left open for any new Russian proposals, while the non-Russian representatives continued their meetings. At a plenary session of the latter on July 18 it was decided to grant a request made by the Russians for a joint meeting, on the distinct understanding that it would be only for the purpose of submitting new proposals. In a letter to the president of the Conference, declining to attend that meeting, Litvinov strongly criticized the invitation of the European representatives to the meeting as imposing conditions absolutely unacceptable. "Your invitation to attend a meeting," he wrote, "of the subcommission on private property is all the more inadmissible upon our making a definite statement of our position, while it imposes no obligation whatsoever upon the other party to the negotiation. These two commissions came to The Hague on a footing of equality of right, and I can never consent to an arrangement under which one commission pretends to impose on the other preliminary conditions for their meetings." On the following day, however, new proposals were forthcoming, in which the Russians suggested an arrangement by which Rus-

sia would undertake to negotiate directly with foreigners for the payment of compensation for confiscated property and with the bondholders for the settlement of the Russian debt. "For a good round month, the Soviet delegates were given a thorough earth-earthy education in the first principles of business and of western economics. Vainly did the Russians writh and struggle and make speeches and present absurd counter-questionnaires. The solid front of the Westerners held firm, even in the face of a threatened break, and in the end, Maxim Litvinov, head of the Soviet delegation, was constrained to propose, without question of credits, that Russia should recognize freely and frankly the pre-war debt and the right of foreign property-owners to restitution or compensation. Having obtained this unexpected and gratifying result, the Western powers, by common accord, took cognizance thereof in a friendly resolution, and abruptly closed the conference, in an atmosphere of calm and of hope, with everyone reasonably satisfied."—P. S. Mowrer, *What The Hague did for Russia* (*Our World*, Sept., 1922, p. 96).—See also FRANCE: 1922 (April-July).

**HAGUE TRIBUNAL:** Permanent court of arbitration.—**Supplementary bodies.**—Court of summary jurisdiction, and commissions of inquiry.—"The Hague Conventions of 1899 and 1907 regarding the peaceful settlement of international disputes . . . did not withhold from the parties at issue the right to select their own arbitrators as in the past, but they placed before them a definite method of procedure with an organisation in working order, ready to take cognizance, under rules laid down beforehand, of complaints submitted to it. This is the Permanent Court of Arbitration situated at The Hague. The task assigned to the New Court is laid down in Article 20 of the Convention of 1899, reproduced by Article 41 of the 1907 Convention. It runs as follows: With a view to facilitating the immediate reference to arbitration of international disputes, which have failed of settlement through diplomatic channels, the signatory Powers bind themselves to form a Permanent Court of Arbitration accessible at all times and working—*save when the parties at issue shall agree otherwise*—according to the rules of procedure laid down in the present Convention. Despite its name, the Permanent Court of Arbitration is not a tribunal established once for all in permanent session and waiting for litigants to appear before it. It is neither a Court of *Justice* nor a *permanent* Court. It consists merely of a panel or list of persons bound by oath, who are proposed for the consideration of the parties concerned. The litigants can select from among this list the members of the Arbitration Tribunal to examine their dispute. . . . The parties at issue declare, in a preliminary agreement, their willingness to accept the interposition of the court in the dispute; they then form the Court, that is to say, they nominate the Arbitrators. . . . The Convention of 1899 did not prohibit the parties at issue from selecting their two arbitrators from among their own nationals. As is clear, the result of this might be to make the award the work of the Chief Arbitrator alone, his colleagues being influenced by feelings of patriotism. This danger was removed, however, by the 1907 Convention, which provided that only one of the arbitrators might be chosen by each side from among its own nationals. On the formation of the Tribunal, the parties notify the Secretariat of their intention to approach the Court, forwarding the text of their preliminary agreement and the names of the arbitrators selected. The Secretariat at once sends to

each arbitrator a copy of the preliminary agreement, together with the names of his colleagues. All is then ready for the Court to begin its work. The rules of procedure are merely optional, and not binding on the parties at issue. As a general rule, failing agreement to the contrary, a written statement of the case, composed of memoranda, replies, and counter replies, is drawn up. The parties at issue are represented before the Court by agents, assisted sometimes by counsel. . . . The Tribunal decides on the question of language and as to whether the public is to be admitted to the sittings. At the end of the sittings, the Tribunal considers its award in private, but the finding must be read in open Court and the reasons for the finding given. In 1899, judges who dissented were authorised to state the fact, but not to give the grounds for their opinion. In 1907 this rule was amended. The derogation from the authority of the finding which resulted from this practice was considered to be most unfortunate, and at the present time neither expressions of dissent nor even reservations are permitted. When once the finding has been announced, it is judicially binding on the States which are parties to the dispute. They are bound to carry it out loyally and in good faith. Nevertheless, the absence of sanctions has prevented an award by arbitration from having the executive force which belongs to ordinary judicial decrees. Executive force can only spring from a fount of public authority which receives its powers from the supreme ruler of the country where it is established. International judges have had no such powers. Besides, it is not clear that the arbitrators' award has the authority of 'chose jugée' in the national Courts of the States that were parties to the dispute, nor that these latter Courts are bound to recognise the award. Hitherto the awards of such a Court had been subject to no *appeal*. *Revision* of the finding is permitted in certain cases, however, if the parties at issue, in their preliminary agreement, had reserved to themselves the right of eventual appeal against the decision to be given. Yet even so, a revision is not possible unless a new fact of a nature decisively to affect the finding has been discovered, and one which was unknown both to the Court and to the appellant party at the time the sittings were closed. . . . The procedure detailed above is certainly complicated. Certain disputes may require a more speedy, less costly method of solution, while others may call for specially qualified persons, other than those whose judicial skill or high moral reputation has placed them on the permanent panel of the Arbitration Court. To provide for such cases the Hague Convention of 1907 amended the scheme of 1899 to provide a summary method of procedure by arbitration for cases of minor importance or of a technical character. This amendment was really the creation of an International Court of Summary Jurisdiction. The simplified procedure excludes all verbal argument and limits the number of arbitrators to three, who may be chosen by the parties from outside the panel of the Permanent Court. In principle all arbitration referred to in the Hague Conventions is purely optional. Every effort to invest the Court with powers of a compulsory nature, both in 1899 and 1907, was of no avail. Russia proposed to insert a clause in the 1899 Convention which would generally bind the contracting Powers to submit to arbitration certain types of purely legal questions or matters of minor importance affecting neither their honour nor their vital interests. The opposition of Germany, however, brought this proposal to nought. Similar projects

in 1907 met with a like fate, though one secured 32 votes to 9. . . . In thus sketching the outlines of the work accomplished by the Hague Conferences, reference must be made to the Commission of Inquiry, instituted by the Convention of 1899 and remodelled by that of 1907. These Commissions may be set up to establish by conscientious and impartial scrutiny any questions of fact which have given or may give rise to disputes. The opinions they pronounce bear only on the facts of the case, and their use is authorised only in international litigation which affects neither the honour nor the vital interests of States. The advantages of these Commissions of Inquiry are obvious. For instance, there may be a frontier incident. A misdemeanour has been committed in the immediate neighbourhood of the frontier between two countries, it is not definitely known if it occurred on this side or the other. There are two stories which appear equally possible. The inquiry which the Commission institutes clears up the facts. Once such light has been thrown on the case the parties may easily agree upon the conclusions to be drawn. Like the Court of Arbitration, the Commission is constituted by a special agreement between the litigant parties specifying the facts with which the inquiry must deal, the manner of its constitution, the scope of its powers, the place of its sitting, and its procedure. The result of the investigation is embodied in a report drawn up in private, approved by a majority of votes and then read in public session in the presence of the agents or counsel of the parties concerned. At first sight there is a strong analogy between the working of the Court of Arbitration and the Inquiry Commission, but this is more apparent than real. The Court of Arbitration sits in judgment, gives a verdict and puts an end to the controversy; while the Commission confines itself to a statement and proof of facts, acting after the manner of a police magistrate, and is not, as a general rule, competent to appraise in any way the results of the inquiry it has conducted, nor the questions of law which arise therefrom. It is for the parties at issue, once obscure or contested facts have been made clear, to draw the necessary inferences. They are free to arrive at a direct and friendly settlement, or else, if a point of law remains contentious, to set up an arbitration court to judge it. The tragic incident at Hull in 1904, which nearly caused a conflict between Great Britain and Russia during the Russo-Japanese War, has enabled the International Inquiry Commission to demonstrate its preventive value."—L. Bourgeois, *Hague permanent court of arbitration (League of Nations, pp. 64-71)*.—Although not officially dissolved, this court is practically superseded by the Permanent Court of International Justice.—See also ARBITRATION, INTERNATIONAL: Modern: 1898-1899; 1907; HAGUE CONFERENCES; INTERNATIONAL JUSTICE, PERMANENT COURT OF.

**HAINAULT**, or Hainaut, region of the Netherlands (see NETHERLANDS: Map), occupied in ancient times by the Nervii. Became a county under hereditary lords in the ninth century; was joined to the territories of the counts of Flanders in the eleventh century; united with Holland under the same family of counts in the fourteenth century. (See BELGIUM: Ancient and medieval period; NETHERLANDS: 922-1345; 1406-1417); surrendered by Jacqueline to her cousin, Philip the Bold of Burgundy, 1428; became subsequently a possession of the House of Hapsburg; and successively a part of the Spanish Netherlands under Philip II, 1579, the Austrian Netherlands, Holland, and is at present a province of Belgium, bordering on France and the chief seat of the mining and metal manufacturing industries of that country. The estimated population in 1920 was 1,231,720. They are chiefly Walloons.

**HAINISH**, Michael (1858- ), president of Austria. Elected member of the Austrian Parliament, 1909; chosen president by the National Assembly, December 9, 1920. See AUSTRIA: 1920 (November-December).

**HAINSNES**, town in France, southeast of Bethune. It was reached by the British in the World War. See WORLD WAR: 1915: II. Western front: i, 3.

**HAITI**, Santo Domingo, or Hispaniola, second largest island in the West Indies. "The island of Santo Domingo, better known by its old Carib name of Haiti (rough land), or by the name Hispaniola bestowed on it by Columbus in 1492, is separated from Cuba by the Windward passage, and from Porto Rico by Mona passage. The out-

line of the coast is remarkable, and the island is nearly as large as Ireland, the length being about 400 miles and the greatest breadth 160."—H. K. Mill, *International geography*, p. 801.—"It is the most mountainous island of the West Indies, and contains the highest peaks, for Monte Tena, of its central Cordillera, is about 10,200 feet in altitude. Its longitudinal axis is the Cordillera of the Cibao, in which most of its rivers have their origin, but parallel with it, near the north-coast, runs the Sierra of Monte Cristi, and detached ranges occupy various portions of the island. Between them lie salubrious and fertile valleys, in which may be grown every variety of vegetation to be found in the temperate and the torrid zones."—F. O. Ober, *Guide to the West Indies and Panama*, p. 213.

**Political divisions of the Island of Haiti.**—"The island is divided between two political entities, the western one, comprising one-third of its surface, . . . being the Republic of Haiti [see HAITI, REPUBLIC OF], while the eastern one is popularly known as Santo Domingo or San Domingo, though it is officially termed The Dominican Republic. [See SANTO DOMINGO.]"—O. Schoenrich, *Santo Domingo*, pp. 97-98.—"The disuse of Española as the exclusive general term for the whole island is to be regretted. In the absence of such a general term both San Domingo and Haiti are now commonly used in this sense; but as these words are also the official designations of the eastern and western states respectively, much confusion often arises from their twofold meaning. It is as if the term Britain, or Great Britain, were to become obsolete, and both England and Scotland were to be used in a general sense for the whole island, while retaining their special meanings as the proper names of the southern and northern divisions."—E. RECLUS, *Universal geography*, v. 17, p. 397.—See also LATIN AMERICA; WEST INDIES.

**HAITI, Republic of: Area and location.**—The republic of Haiti comprises about one third of the island of Haiti, approximately 10,200 sq. mi., and occupies the western portion of the island. As a result of an irregular coast and two great promontories Haiti has a very large extent of coastline. It is bounded on the north by the Atlantic ocean, on the south by the Caribbean sea, on the east by the Mona passage, which separates it from Porto Rico, and on the west by the Windward passage, which separates it from Cuba and Jamaica.—Based on S. B. St. John, *Haiti, or the black republic*, p. 2.

**Resources.—Population.—Education.**—Haiti is mainly an agricultural country, and coffee its chief product, although cocoa, cotton, and tobacco are raised in fairly large quantities. The mineral resources are considerable but as yet quite undeveloped. The population in 1912 was about 2,500,000, the great majority being negroes; there are numerous mulatto Haitians who are descendants of the French settlers, and some 5,000 foreigners. Haiti has a system of free public schools and in 1910 education was made compulsory.

**Aborigines.**—"At the time of its discovery the Island of Santo Domingo [or Haiti] was thickly inhabited. The native Indians were Arawaks belonging to the same race as those who occupied the other larger West India Islands. Unlike the fierce Caribs who inhabited some of the smaller Antilles, the Arawaks were of a gentle and meek disposition."—O. Schoenrich, *Santo Domingo*, pp. 1-2.—See also CARIBS.

1492-1505.—Discovery and occupation by Columbus and Ojeda. See AMERICA: 1492; 1493-1496; 1498-1505; 1502.

1632-1803.—Partly possessed by France and partly by Spain.—Revolt of the slaves and rise of Toussaint L'Ouverture to power.—Extinction of slavery.—Treachery of the French.—Independence of the island acquired.—"About 1632 the French took possession of the western shore, and increased so rapidly that the Spaniards found it impossible to drive them out; and the footing they had gained was recognized by the Treaty of Ryswick, in 1697, when the western portion of Haiti was confirmed to France. The latter nation was fully conscious of the importance of the new acquirement, and under French rule it became of great value, supplying almost all Europe with cotton and sugar. But the larger eastern portion of the island, which still belonged to Spain, had no

TOUSSAINT L'OUVERTURE

share in this progress, remaining much in the same condition as formerly; and thus matters stood—a sluggish community side by side with a thriving one—when the French Revolution broke out, and plunged the island into a state of ferment. In 1790 the population of the western colony consisted of half a million, of which number 38,360 were of European origin, 28,370 free people of colour, and the whole of the remainder negro slaves. The government of the island excluded the free people of colour—mostly mulattoes—from all political privileges, although they were in many cases well-educated men, and themselves the owners of large estates. . . . On the 15th May, 1790, the French National Assembly passed a decree declaring that people of colour, born of free parents, were entitled to all the privileges of French citizens. When this news reached the colony, it set the inhabitants in a perfect frenzy, the mulattoes manifesting an unbounded joy, whilst the whites boiled at the indignity their class had sustained. The representations of the latter caused the governor to delay the operation of the decree until the home government could be communicated with—a measure that aroused the greatest indignation

amongst the mulattoes, and civil war appeared inevitable, when a third and wholly unexpected party stepped into the arena. The slaves rose in insurrection on August 23rd. 1791, marching with the body of a white infant on a spear-head as a standard, and murdering all Europeans indiscriminately. In the utmost consternation the whites conceded the required terms to the mulattoes, and, together with the help of the military, the rising was suppressed, and there seemed a prospect of peace, when the Assembly at Paris repealed the decree of the 15th May. The mulattoes now flew to arms, and for several years a terrible struggle was sustained, the horrors of which were augmented by vindictive ferocity on both sides. Commissioners sent from France could effect no settlement, for the camp of the whites was divided into two hostile sections, royalist and republican. The English and Spaniards both descended on the island, and the blacks, under able chiefs, held impregnable positions in the mountains. Apprehensive of a British invasion in force, the Commissioners, finding they could not conquer the blacks, resolved on conciliating them; and in August, 1793, universal freedom was proclaimed—a measure ratified by the National Convention early in the following year. Meanwhile the English had taken Port-au-Prince, and were besieging the French governor in Port de la Paix, when the blacks, relying on the recent proclamation, came to his assistance, under the command of Toussaint L'Ouverture, and effected his release. . . . François Dominique Toussaint, a negro of pure blood, a slave and the offspring of slaves, was born in 1743, and on attaining manhood was first employed as a coachman, and afterwards held a post of trust in connexion with the sugar manufactory of the estate to which he belonged. The overseer having taken a fancy to him, he was taught to read and write, and even picked up some slight knowledge of Latin and mathematics." He was slow to join the rising of the blacks; "but at length, after having secured the escape of his master and family, he joined the negro army in a medical capacity," but quickly rose to leadership. "At first the blacks fought with the Spaniards against the French," but Toussaint came to the conclusion that they had more to hope from the French, and persuaded his followers to march to the relief of the French governor, Levaux. When the latter heard that Toussaint had won the blacks to this alliance, he exclaimed, "Mais cet homme fait ouverture partout," and from that day the black commander-in-chief received the surname of L'Ouverture, by which he is best known in history. Acting with wonderful energy, Toussaint effected a junction with Levaux, drove the English from their positions, took 28 Spanish batteries in four days, and finally the British abandoned the island, whilst the Spaniards [1797] gave up all claim to its western end. Toussaint L'Ouverture—now holding the position of commander-in-chief, but virtually dictator—succeeded with great skill in combining all the hostile elements of the colony. Peace was restored, commerce and agriculture revived, the whites were encouraged to reclaim their estates, and by a variety of prudent and temperate measures Toussaint showed the remarkable administrative abilities that he possessed. At this stage he assumed great state in public, being always guarded by a chosen body of 1,500 men in brilliant uniform, but in private life he was frugal and moderate. In the administration of affairs he was assisted by a council of nine, of whom eight were white planters. This body drew up a Constitution by which

L'Ouverture was named president for life, and free trade established. The draft of this constitution, together with an autograph letter, he forwarded to Bonaparte; but the First Consul had no toleration for fellow-upstarts, and replied, 'He is a revolted slave whom we must punish; the honour of France is outraged.' At this time the whole island of Haiti was under Toussaint's sway. As some excuse for Bonaparte it must be acknowledged that Toussaint undoubtedly contemplated independence. . . . Anxious to divest his new presidency of even nominal subjection to France, he declared the independence of the island, with himself as supreme chief, in July 1801. Most unfortunately for the Haitian general, hostilities had for the moment ceased between Great Britain and France, and the First Consul was enabled to bestow his close attention on the former French colony. Determined to repossess it, Bonaparte sent out an army of 30,000 men, with 66 ships of war, under the command of his brother-in-law General Leclerc. . . . During Toussaint's presidency he had abolished slavery, the negroes still working the plantations, but as free men, and under the name of 'cultivators,' . . . Leclerc now endeavoured by proclamations to turn the cultivators against their chief, and also laboured to sow dissension in the ranks of the black army, by making the officers tempting offers, which they too often believed in and accepted. For months a bloody war raged, in which great cruelties were inflicted; but the discipline of the French was slowly telling in their favour, when Leclerc made a political blunder that destroyed the advantages he had gained. Thinking that all obstacles were overcome, he threw off the mask, and boldly declared the real object of the expedition—the re-enslavement of the negro population. This news fell like a thunderbolt amongst the blacks, who rallied round Toussaint in thousands." Alarmed at the effect, Leclerc recalled his proclamation, acknowledged it to be an error, and promised the summoning of an assembly representative of all races alike. "This specious programme won over Christophe, Dessalines, and other negro generals; and finally, on receiving solemn assurances from Leclerc, Toussaint accepted his offers, and peace was concluded." Soon afterwards, by an act of the blackest treachery, the negro statesman and soldier was lured into the hands of his mean enemy, and sent, a prisoner, to France. Confined, without trial, or any hearing, in the dungeons of the Château Joux, in the department of Doubs, he was there "allowed to pine away, without warm clothing and with insufficient food. . . . Finally the governor of the prison went away for four days, leaving his captive without food or drink. On his return Toussaint was dead, and the rats had gnawed his feet. It was given out that apoplexy was the cause of death. . . . This breach of faith on the part of the French aroused the fury and indignation of the blacks. . . . Under Dessalines, Christophe, Clervaux, and others, the fires of insurrection blazed out afresh." At the same time yellow fever raged and Leclerc was among the victims. General Rochambeau, who succeeded him, continued the war with unmeasured barbarity, but also with continued defeat and discouragement, until he was driven, in 1803, to surrender, and "the power of the French was lost on the island."—C. H. Eden, *West Indies*, ch. 13.

warfare with Spain. See AMERICA: 1639-1700.

1804-1880.—Massacre of whites.—Empire of Dessalines.—Kingdom of Christophe.—Republic of Pétion and Boyer.—Separation of the independent republic of Santo Domingo.—Empire of Soulouque.—Restored republic of Haiti.—“In the beginning of 1804 the independence of the negroes under Dessalines was sufficiently assured: but they were not satisfied until they had completed a general massacre of nearly the whole of the whites, including aged men, women and children, who remained in the island, numbering, according to the lowest estimate, 2,500 souls. Thus did Dessalines, in his own savage words, render war for war, crime for crime, and outrage for outrage, to the European cannibals who had so long preyed upon his unhappy race. The negroes declared Dessalines Emperor: and in October 1804 he was crowned at Port-au-Prince by the title of James I. Dessalines was at once a brave man and a cruel and avaricious tyrant. He acquired great influence over the negroes, who long remembered him with affectionate regret: but he was not warmly supported by the mulattoes, who were by far the most intelligent of the Haytians. He abolished the militia, and set up a standing army of 40,000 men, whom he found himself unable to pay, from the universal ruin which had overtaken the island. The plantation labourers refused to work. . . . Dessalines authorised the landowners to flog them. Dessalines was himself a large planter: he had 32 large plantations of his own at work, and he forced his labourers to work on them at the point of the bayonet. Both he and his successor, Christophe, like Mahomed Ali in Egypt, grew rich by being the chief merchants in their own dominions. . . . He failed in an expedition against St. Domingo, the Spanish part of the island, whence the French general Ferrand still threatened him: and at length some sanguinary acts of tyranny roused against him an insurrection headed by his old comrade Christophe. The insurgents marched on Port-au-Prince, and the first black Emperor was shot by an ambuscade at the Pont Rouge outside the town. The death of Dessalines delivered up Hayti once more to the horrors of civil war. The negroes and mulattoes, who had joined cordially enough to exterminate their common enemies, would no longer hold together; and ever since the death of Dessalines their jealousies and differences have been a source of weakness in the black republic. In the old times, Hayti, as the French part of the island of Española was henceforth called, had been divided into three provinces: South, East, and North. After the death of Dessalines each of these provinces became for a time a separate state. Christophe wished to maintain the unlimited imperialism which Dessalines had set up: but the Constituent Assembly, which he summoned at Port-au-Prince in 1806, had other views. They resolved upon a Republican constitution.” Christophe, not contented with the offered presidency, “collected an army with the view of dispersing the Constituent Assembly: but they collected one of their own, under Pétion, and forced him to retire from the capital. Christophe maintained himself in Cap François, or, as it is now called, Cap Haytien; and here he ruled for 14 years. In 1811, despising the imperial title which Dessalines had desecrated, he took the royal style by the name of Henry I. Christophe, as a man, was nearly as great a monster as Dessalines. . . . Yet Christophe at his best was a man capable of great aims, and a sagacious and energetic ruler.” In 1820, finding himself deserted in the face of a

mulatto insurrection, he committed suicide. “In a month or two after Christophe’s suicide the whole island was united under the rule of President Boyer.” Boyer was the successor of Pétion, who had been elected in the north, under the republican constitution which Christophe refused submission to. Pétion, “a mulatto of the best type,” educated at the military academy of Paris, and full of European ideas, had ruled the province which he controlled ably and well for eleven years. Discouraged, however, by internal dissensions and continued war with Christophe, he took his own life, and was succeeded, in 1818, by his lieutenant, Jean Pierre Boyer, a mulatto. “On the suicide of Christophe, the army of the Northern Province, weary of the tyranny of one of their own race, declared for Boyer. The French part of the island was now once more under a single government: and Boyer turned his attention to the much larger Spanish territory, with the old capital of St. Domingo, where a Spaniard named Muñoz de Caceres, with the aid of the negroes, had now followed the example in the West, and proclaimed an independent government. The Dominicans, however, were still afraid of Spain, and were glad to put themselves under the wing of Hayti: Boyer was not unwilling to take possession of the Spanish colony, and thus it happened that in 1822 he united the whole island under his Presidency. In the same year he was elected President for life under the constitution of Pétion, whose general policy he maintained: but his government, especially in his later years, was almost as despotic as that of Christophe. Boyer was the first Haytian who united the blacks and mulattoes under his rule. It was mainly through confidence in him that the government of Hayti won the recognition of the European powers. . . . In 1825 its independence was formally recognised by France, on a compensation of 150,000,000 of francs being guaranteed to the exiled planters and to the home government. This vast sum was afterwards reduced: but it still weighed heavily on the impoverished state, and the discontents which the necessary taxation produced led to Boyer’s downfall,” in 1843, when he withdrew to Jamaica, and afterwards to Paris, where he died in 1850. A singular state of affairs ensued. The eastern, or Spanish, part of the island resumed its independence (1844), under a republican constitution resembling that of Venezuela, and with Pedro Santana for its president, and has been known since that time as the republic of Santo Domingo, or the Dominican republic. In the Western, or Haitian republic, large numbers of the negroes, “under the names of Piquets and Zinglins, now formed themselves into armed bands, and sought to obtain a general division of property under some communistic monarch of their own race. The mulatto officials now cajoled the poor negroes by bribing some old negro, whose name was well known to the mass of the people as one of the heroes of the war of liberty, to allow himself to be set up as President. The Boyerists, as the mulatto oligarchy were called, thus succeeded in re-establishing their power,” and their system (for describing which the word “gerontocracy” has been invented) was carried on for some years, until it resulted, in 1847, in the election to the presidency of General Faustin Soulouque. “Soulouque was an illiterate negro whose recommendations to power were that he was old enough to have taken part in the War of Independence, having been a lieutenant under Pétion, and that he was popular with the negroes, being devotedly attached to the strange mixture of freemasonry and fetish worship by which the

Haytian blacks maintain their political organisation." The new president took his elevation more seriously than was expected, and proved to be more than a match for the mulattoes who thought to make him their puppet. He gathered the reins into his own hands, and crushed the mulattoes at Port-au-Prince by a general massacre. He then "caused himself to be proclaimed Emperor, by the title of Faustinus the First (1849)," and established a grotesque imperial court, with a fantastic nobility, in which a Duke de Lemonade figured by the side of a Prince Tape-à-l'œil. This lasted until December 1858, when Soulouque was dethroned and sent out of the country, to take refuge in Jamaica, and the republic was restored, with Fabre Nicholas Geffrard, a mulatto general, at its head. Geffrard held the presidency for eight years, when he followed his predecessor into exile in Jamaica, and was succeeded by General Salnave, a negro, who tried to re-establish the empire and was shot, 1869. Since that time revolutions have been frequent and nothing has been constant except the disorder and decline of the country.—E. J. Payne, *History of European colonies*, ch. 15.

1888-1896.—Civil war.—General Hippolite becomes president.—From 1888 to 1889 there was civil war between generals Légitime and Hippolite who were candidates for the presidency. General Hippolite was the victor and ruled until his death, 1896. General Therasias Simon Sam was elected to succeed him.

1890.—Represented at first International American Congress. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1890.

1897.—Quarrel with Germany.—The government of Haiti came into conflict with that of Germany, in September, 1897, over what was claimed to be the illegal arrest of a Haitian-born German, named Lueders, who had secured German citizenship. Germany demanded his release, with an indemnity at the rate of \$1,000 per day for his imprisonment. The demand not being acceded to promptly, the German consul at Port-au-Prince hauled down his flag. Then the United States minister persuaded the Haitian president, General Simon Sam, to set Lueders free. But the demand for indemnity, still pending, brought two German war-ships to Port-au-Prince on December 6, with their guns ready to open fire on the town if payment were not made within eight hours. For Haiti there was nothing possible but submission, and \$30,000 was paid, with apologies and expressions of regret.

1901-1902.—Second International Conference of American republics. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1901-1902.

1902.—Revolution and civil war produced by a blunder of law.—Resignation of President Sam.—Election of General Nord Alexis.—An outbreak of revolution in Haiti occurred under singular circumstances on May 12, 1902. As related in a dispatch of a few days later by W. F. Powell, United States minister to Haiti, the circumstances were these: When, in April, 1806, General Therasias Simon Sam was elected president of the republic, "Congress enacted a law requiring him to enter upon the duties of the Presidential office at once, and to remain in office until May 15, 1903. This law, it seems now," wrote Mr. Powell, "was not constitutional, as the constitution states: 'That upon the death, resignation, malfeasance in office, or removal therefrom of the President before the 15th of May (in any

year) the cabinet or council of ministers is charged with these functions until the 15th of May, when the newly elected President shall assume the duties of the Presidency; but if a President should accept office or enter upon the duties of the same prior to this time (15th of May), then his term of office must expire on the 15th of May of the year preceding the time that it actually expired, thus not allowing the incumbent to remain in office the full seven years, the time for which he was elected.' For some reason this provision of the constitution was not thought of, or else forgotten, at the time General Sam was elected. No mention was made of this section until about a year ago, when the question was launched upon the public view by the enemies of the Government. The more this question was discussed the more potent it became, until it occupied the attention of all classes to the exclusion of all other matters. . . . The several political arrests and the exile of many persons within the past two years have been on account of this discussion, they demanding that this article of the constitution should be literally followed, the Government, on its part, believing that in the arrest and exile of all such persons all discussions and agitation of this matter would cease. But this rigor on the part of the Government produced, instead of friends, enemies, who were daily gaining strength. At the several interviews I had with the President up to the time I left for Santo Domingo (February 10) he stated that it was his intention to remain in office until he had finished his term (to May 15, 1903) and that he would not resign or cease to be President prior to that time. He had also impressed this fact upon the members of his cabinet up to May 1 of the present year, when it was learned that it was his intention to resign at an early day." This announcement brought a number of candidates into the field, and Mr. Powell, on returning to Port-au-Prince on May 11, found a precarious situation there. He secured an interview with President Sam the following morning, and "was informed that he had determined to resign, that his resignation was ready to be sent to Congress, that he was tired of this constant agitation, and that he would leave by the French steamer then in port for France, where he would pass the remainder of his life in quietness and peace; that since it was the wish of the people to have a new President he would not oppose them, but would abide by article 93 of the national constitution, and if the chambers did not elect a President to-day, Monday, the country would be without a President." One of the candidates, General Leconte, a member of the government about to be dissolved, "felt certain that he would be elected, as he had sufficient votes pledged in both houses to elect him. This news spread rapidly, the streets became full of armed citizens wending their way toward the chambers to prevent, forcibly if necessary, his election. At first it was difficult to get the members together. The streets in the neighborhood of the legislative halls were thronged with people and the Government troops, the latter to protect the members in case of violence. Several secret meetings of the members were held. At last the doors were opened, and as soon as opened every available space not occupied by the two houses was filled by the friends and foes of General Leconte. As the balloting was about to commence some one in the chambers fired a revolver. In an instant shooting commenced from all parts of the room. One or two were killed and the same number wounded. The

members all sought shelter in the most available places they could find—under benches or desks. Others forgot the way they entered and sought exit by means of the windows. By this means the populace prevented the election of General Leconte, forcibly adjourned the chambers without date, and dispersed the members of both chambers. The Government troops immediately retired to the palace, the arsenal, the barracks, or the arrondissement, as it was thought that an attack would be immediately made on each place. A committee of safety was at once formed to safeguard the interests of the city, and as the news reached the other cities of the Republic similar committees were named with like duties. The next object was to secure the palace, arsenal, and the Government buildings. A concerted attack was made on each of the above places at 10 p. m., lasting about twenty minutes, in which the Government troops were the victors. It is supposed that in these engagements about one hundred persons were either killed or wounded."

The next day, on the ex-president's request, Mr. Powell, as dean of the diplomatic corps, arranged with his associates to escort General and Mrs. Sam, together with General Leconte, to the steamer on which they wished to embark, and their departure was undisturbed. On May 26, a provisional government, with General Boisronnd Canal for its president, was established by delegates sent from "the several sections of the Republic." Elections for a new Chamber of Deputies were appointed to be held early in July; though the constitution had declared that such elections "must occur during the first weeks in the month of January." This gave a fine opening for future troubles. Meantime, irregular skirmishing, preliminary to positive civil war, was bringing all business to an end. On July 26 Mr. Powell reported to Washington that civil war had been declared. The contest for the presidency seemed narrowed to two candidates, General Nord Alexis, minister of war and marine in the provisional government, and Mr. A. Firmin. Firmin was the Haitian ambassador at Paris and had established a rival government at Gonaïves in the northern part of the island. His cause was supported by the Haitian navy, of two gunboats, commanded by Admiral Killick. It is needless to give details of the hostilities that ensued except to state that Firmin was overthrown in October 1902.

The elections were determined and the Chamber of Deputies was organized about August 20. The deputies had then to choose the Senatorial body, and the strife of factions among them prevented that election until late in the year, when the forces of the provisional government had achieved successes which brought the civil war practically to an end. General Nord Alexis, who had been campaigning for months, returned triumphantly with his army to Port au Prince on December 14; was acclaimed president by the army on the 17th; and was formally elected by the National Assembly on the 21st. He was then reported to be eighty-five years old.

1908.—**Revolution once more.—Overthrow and expulsion of President Nord Alexis.—General Antoine Simon is elected successor.**—The government under President Nord Alexis was maintained for six years, by its own unsparing use of power, it would seem, rather than by the good will of the country. Revolutionary projects had been crushed with prompt vigor before they had much chance of development, until November, 1908, when one, led by a displaced military commander, General Antoine Simon, ran so rapid a

course that it arrived at complete success on the 2nd of the following month. The aged but indomitable Nord Alexis strove hard to resist it, even to the last inch of fighting in his own palace; but Port au Prince rose against him; his partisans fell away; his soldiers deserted; and finally, on the afternoon of December 2nd, he consented to be taken on board a French training-ship, then in port. In doing this there was difficulty in saving him from an angry city mob. General Simon and his victorious army of rebellion entered the capital on the 5th. Some degree of order had been restored by a committee of safety, but fresh strifes were imminent between rival candidates for the vacant presidency. Simon, with his military following, brushed them aside, and obtained a unanimous election by the Haitian Congress on the 7th, assuming office as president on the 20th.

1909.—**Curse of the country in its military government.**—"The curse of Haiti from the day she established her independence in 1804 to the present time is the tyrannical and wasteful Government of the military party. . . . Scarcely a President in the history of Haiti has not been a military man and the favourite leader, for the time being, of the major portion of the army. . . . That President Antoine Simon will follow in the bloody footsteps of all his Presidential predecessors is improbable. He is a man of obviously kindly nature, with a record of 22 years' essentially clement government of the great southern province of Haiti; but he is an old man of imperfect education. . . . The whole power of the country is still entirely based on the soldiers."—H. Johnston, *The Times* (London), Apr. 13, 1909.—"General Nord Alexis, ex-president of Haiti, died in Jamaica in May. He had taken refuge in the island after his downfall in 1909, and with other refugees was believed to be engaged in a conspiracy for the overthrow of his successor, General Simon, against whom General Firmin was conducting a revolution said to be financed by Alexis. Alexis possessed a considerable fortune. A Haitian gunboat was blown up off Port de Paix in October with heavy loss of life, among the killed being ten Haitian generals on their way to command troops in the north."—*Annual Register*, 1910, p. 470.

1911-1916.—**Foreign intervention.—President Oreste forced to flee.—Great Britain paid indemnity by President Zamor.—Violent civil war (1915).—Intervention by the United States.—Haiti partially under the control of the United States.**—"In 1911 France, Germany, Great Britain, and Italy made a joint demand on the Haitian government for the settlement of claims within three months or their submission to arbitration. Political conditions then were and thereafter contained to be unsettled. In 1914 revolutionary disturbances occurred."—J. B. Moore, *Principles of American diplomacy*, p. 403.—"In January, 1914, President Oreste succeeded in putting down a revolt. . . . Theodore and Zamor then started uprisings, both opposing the Government, but each seeking to put himself into the presidency. American and German marines were landed to protect the interests of foreigners. The revolts were successful and President Oreste sought safety in flight to Colombia. Theodore and Zamor now turned on each other. Zamor was favored by Congress and was elected President on February 7th. He was recognized by the United States and succeeded in putting down Theodore temporarily. But in June Theodore was again in the field and by October gained the upper hand, forcing Zamor into exile, and himself into the presidency. Mean-

while, the clouds of international trouble were gathering around the republic whose leaders were so much engaged in fighting each other. In May, Great Britain, tired of being put off, sent an ultimatum demanding payment of \$62,000 indemnity. Zamor managed to raise the money and that cloud blew over, but the next month, with Theodore again in arms, Germany and France made a formal demand for control of customs. What would have been the outcome of this situation had it stood alone it is impossible to tell. It was certainly highly dangerous for Haiti and unpleasant for the United States, carrying as it did the possibility of European intervention. The European War came in August and the Haitian treasury suspended payment on all obligations of the Government. Theodore came into power in October and the United States, which had been an anxious spectator, undertook in December to secure supervisory control of the country's finances. Theodore could not keep his seat until the arrangement could be put through. The feeling against him was said to be due partly to his willingness to consider an American protectorate, including a grant of a naval station at Mole St. Nicholas. In January and February the tide was rising against him, and in the middle of 1915 it took his life. In the fighting preceding his violent death, a French cruiser had landed marines to protect foreign interests at Cape Haitien. The United States ordered Rear Admiral Wm. B. Caperton, who had been at Vera Cruz, to proceed to Cape Haitien with his cruiser, the *Washington*. Being of a higher rank than the French commander, this put an American in charge of the situation. Caperton had hardly arrived at Cape Haitien when both sides broke into unrestrained savagery at the capital, Port-au-Prince. July 27, 1915, marked the beginning of a ten days reign of terror. Rosalvo Bobo was gaining ground against President Guillaume-Sam. . . . Guillaume-Sam and his general, Oscar, defended the building [the palace], but unable to hold it were forced to flee. Before doing so they put to death all the 160 men held as political prisoners. . . . When the populace heard of the wholesale murders, a mob gathered, invaded the Dominican Legation and from it dragged General Oscar to the street and shot him. The next day, July 28, the mob attacked the French Legation, dragged out Sam, shot him, dragged his body through the streets, and Bobo proclaimed himself President. Confronted by this situation, the foreign military were prompt to act. Admiral Caperton landed marines at Port-au-Prince on July 29 to protect the legations. During the landing, six Haitians and two Americans were killed. An American battleship, the *Connecticut*, was ordered to the port. By August 10, there were 1,400 marines ashore and 850 more on the way. In addition, there was a small force of French marines protecting their Legation, with the approval of Admiral Caperton. The American marines took possession of the fort dominating the town, the barracks and a Haitian gunboat. The Haitian Congress, not to pass unnoticed for lack of activity, proposed the election of a President on August 8. Admiral Caperton decided that, for the moment, such action was inopportune, but his opinion soon changed and on August 12th [1915], under American auspices, an election was held, which resulted in the choice of General D'Artigueave."—C. L. Jones, *Caribbean interests of the United States*, pp. 137-140.—On August 12, a new president was elected who cooperated with the American forces in their efforts to establish

peace and order. "On September 16 [1915], a treaty was signed at Port-au-Prince frankly converting Haiti into a protectorate of the United States. The chief provisions were: (1) a Haitian receivership of customs under American control; (2) appointment of an American financial adviser, and American supervision of all expenditure of public moneys; (3) a native constabulary commanded by American officers; (4) a pledge on the part of the Haitian government to cede or lease no territory to a foreign power; and (5) a promise by the United States to 'lend an efficient aid for the preservation of Haitian independence and the maintenance of a government adequate for the protection of life, property, and individual liberty.' The treaty was to last ten years, and an equal additional period if its objects were not accomplished within that time. Pending ratification, its terms were put in operation under a *modus vivendi*. The Haitian Congress ratified it in November, 1915, and the American Senate February 28, 1916. The arrangement marked a distinct expansion of the policy of Caribbean control; for responsibility was assumed not only for honest customs administration and prompt meeting of obligations abroad, but for wise management of the country's internal finances and for the maintenance of an adequate police. Haiti had been a pariah among nations. The population was almost wholly black, and twice as great as that of Santo Domingo. The burden assumed by the United States was therefore more weighty than most people understood."—F. A. Ogg, *National progress (American Nation Series, pp. 259-260)*.—See also DOLLAR DIPLOMACY; U.S.A.: 1915 (August-September).

1918.—New constitution.—A new Constitution was drafted and submitted, June 19, to a plebiscite and was approved by a large majority. The chief change was in the matter of allowing foreigners to acquire property. A new article provided that foreigners residing in the country and societies formed by them should have the right to own real property. This right should expire five years after the foreigner ceased to be a resident of Haiti or the companies had gone out of business. The legislative power is vested in a chamber of deputies and a senate. The members of the former are elected for two years by direct popular vote on a basis of one for 60,000 inhabitants. The members of the latter are chosen for six years also by a direct vote of the people. The president is elected for four years by the two chambers in joint session.

1918 (July).—War declared on Germany.—Haiti joined the allies on account of the torpedoing of a French steamer causing the loss of eight Haitians.—See also LATIN AMERICA: 1917-1918: Central America in the World War.

1919.—Represented at Paris conference and Conference of Versailles. See PARIS, CONFERENCE OF; Outline of work; VERSAILLES, TREATY OF; Conditions of Peace.

1920-1921.—Inquiry into the conduct of the United States marines.—"The naval court of inquiry which investigated the conduct of marines in Haiti on Dec. 18 reported to Secretary Daniels that there 'had been no proper grounds for the statement by Brig. Gen. George Barnett, former Commandant of the Marine Corps, that the American Occupation forces had been guilty of "practically indiscriminate killing" of Haitians.' . . . James Weldon Johnson, Secretary of the Association for the Advancement of Colored People, called

the report absurd on its face and said it was not to be expected that a naval court of inquiry would do other than obscure charges brought against a branch of the navy."—*New York Times Current History, Feb., 1921, p. 351.*—"Rear Admiral H. S. Knapp, in a report on conditions in Haiti made public by the Navy Department on Feb. 13, 1921, urged that Haiti should be held for years to come, as the only means of maintaining the progress which the island republic has made under the American régime. Admiral Knapp declared that the cry for complete independence came from an element which did not represent as much as 5 per cent. of the population, and that the only aim of the agitators in demanding the abrogation of the 1915 treaty between Haiti and the United States was to restore the old régime of graft and wholesale exploitation. The report advocated the extension of the treaty, but expressed a strong belief, based on study of the conditions, that the American rule must be continued."—*Ibid., Mar., 1921, p. 403.*

1922.—American marines exonerated.—"The select committee appointed by the United States Senate to investigate the charges of maladministration in Haiti and Santo Domingo presented its formal report on Haiti to the Senate on June 26, 1922. The report, which is unanimous, is made up of some twenty-six pages, exclusive of maps. The American occupation is justified. On this subject the committee says: 'The chronic anarchy into which Haiti had fallen, the exhaustion of its credit, the threatened intervention of the German Government, and the actual landing of the French naval forces, all imperiled the Monroe Doctrine and led the Government of the United States to take the successive steps set forth . . . to establish order in Haiti, to help institute a Government as nearly representative as might be, and to assure the collaboration of the Governments of the United States and Haiti for the future maintenance of peace and the development of the Haitian people.' The main interest centres in the committee's findings with regard to the charges of maladministration, oppression, killings of Haitians and even torture and mutilation. The charges of cruelty by marines and local gendarmerie are given at length. Only a few of these are declared to have been proved. Many charges are declared to be completely false; others are stated to have been based on hearsay testimony by illiterate natives. All in all, the report gives high praise to the Marine Corps for its work in Haiti. The committee recommends indefinite continuance of American military occupation, but with a reduction of the marine force. It is stated emphatically to be the committee's belief that early withdrawal or drastic reduction would be beyond all doubt immediately followed by brigandage and revolution."—*New York Times Current History, Aug., 1922, p. 836.*

**HALIFAX, George Savile, 1st Marquess of (1633-1695),** English statesman. Member of privy council, 1679; presided over council of lords which took measures to maintain order after James's flight, 1688; lord chancellor and speaker of House of Lords, 1689; tendered the crown to William and Mary in the name of the nation and made lord privy seal the same year.—See also **ENGLAND: 1689 (January-February).**

**HALIFAX,** Canadian port of entry, and capital of the province of Nova Scotia, situated on the southwestern side of Halifax harbor on the southeastern coast of the province. "In the year [1749] after the peace [of Aix-la-Chapelle] the land forces in Great Britain were reduced to little more than 18,000 men; those in Minorca, Gibraltar, and the American plantations, to 10,000; while the sailors retained in the Royal Navy were under 17,000. From the large number both of soldiers and seamen suddenly discharged, it was feared that they might be either driven to distress or tempted to depredation. Thus, both for their own comfort and for the quiet of the remaining community, emigration seemed to afford a safe and excellent resource. The province of Nova Scotia was pitched upon for this experiment, and the freehold of fifty acres was offered to each settler, with ten acres more for every child brought with him, besides a free passage, and an exemption from all taxes during a term of ten years. Allured by such advantages, above 4,000 persons, with their families, embarked under the command of Colonel Cornwallis, and landed at the harbour of Chebuctow. The new town which soon arose from their labours received its name from the Earl of Halifax, who presided at the Board of Trade, and who had the principal share in the foundation of this colony. In the first winter there were but 300 huts of wood, surrounded by a palisade."—Lord Mahon, *History of England, v. 4, ch. 31.*—See also **NOVA SCOTIA: 1749-1755.**—Halifax was made the capital of the province in 1750; declared a free port in 1817, and incorporated as a city in 1842. In 1911 it became an Imperial naval station. "Between February 21, 1915 and August 23, 1918 . . . 305,655 troops sailed from Halifax, this being three-fifths of the slightly over five hundred thousand men who composed the total Canadian Expeditionary Force."—A. W. Eaton, *Chapters in the history of Halifax, Nova Scotia, p. 141.*—On December 6, 1917, as the result of an explosion and conflagration, caused by the collision of two ships, one carrying a cargo of war munitions, the north end of the city and Dartmouth on the east side of the harbor were devastated. The French munitions ship, *Mont Blanc*, was passing up the Narrows, carrying 2800 tons of nitroglycerin and trinitrotoluol, and a deck cargo of gasoline. The Belgian relief-ship *Imo* was passing through the Narrows out to sea. Owing to a misunderstanding of the signals, the *Imo* crashed into the *Mont Blanc*. An area of about two and one-half square miles was totally destroyed by the explosion and fires that followed. A blizzard, the following day, impeded the rescue work and increased the number of deaths. Relief trains were immediately sent by the American Red Cross, and the city was put under martial law. The Domin-

ion government made large appropriations for relief, and organized clearing operations. The report submitted to the General Relief Committee gave estimates of 1,500 killed, 4,000 seriously injured, 20,000 rendered homeless, and a total property loss of \$50,000,000.

**HALIFAX CURRENCY.**—"For many years Canada used what was called 'Halifax currency,' in which the nomenclature of sterling money was that employed, but having a pound of this currency valued at four dollars."—G. Bryce, *Short history of the Canadian people, p. 433.*

**HALL OF FAME FOR GREAT AMERICANS.**—In the designing of new buildings for the New York University College of Arts and Science, at University Heights, certain exigencies of art led to the construction of a stately colonnade, surrounding a high terrace which overlooks Harlem river, and the happy idea was conceived by Chancellor MacCracken of evolving therefrom a "Hall of Fame for Great Americans." The idea has been carried out, by providing for the inscription of carefully chosen names on panels of stone, with a further provision of space for statues, busts, portraits, tablets, autographs, and other memorials of those whose names are found worthy of the place. For the selection of names thus honored, a body of one hundred electors, representing all parts of the country, was appointed by the Senate of the University. These electors were apportioned to four classes of citizens, in as nearly equal numbers as possible, namely: (A) University or college presidents and educators. (B) Professors of history and scientists. (C) Publicists, editors, and authors. (D) Judges of the Supreme Court, State or National. It was required of the electors that they should consider the claims of eminent citizens in many classes, not less than fifteen, and that a majority of these classes should be represented among the first fifty names to be chosen. They were, furthermore, restricted in their choice to native-born Americans, a rule which had some reasons in its favor, though it excluded from the hall such shining names in American history as those of John Winthrop, Roger Williams, and Alexander Hamilton. As the result of the votes given by 97 electors, in the year 1900, 29 names were found to have received the approval of 51 or more of the electors, and these were ordered to be inscribed in the Hall of Fame. The 29 names are as follows, in the order of preference shown them by the 97 electors: George Washington, Abraham Lincoln, Daniel Webster, Benjamin Franklin, Ulysses S. Grant, John Marshall, Thomas Jefferson, Ralph Waldo

Emerson, Henry Wadsworth Longfellow, Robert Fulton, Washington Irving, Jonathan Edwards, Samuel F. B. Morse, David Glasgow Farragut, Henry Clay, Nathaniel Hawthorne, George Peabody, Robert E. Lee, Peter Cooper, Eli Whitney, John James Audubon, Horace Mann, Henry Ward Beecher, James Kent, Joseph Story, John Adams, William Ellery Channing, Gilbert Stuart, Asa Gray. Resolutions by the Senate of the University determined the action to be taken for the selection of further names, as follows: "The Senate will take action in the year 1902, under the rules of the Hall of Fame, toward filling at that time the vacant panels belonging to [1900], being 21 in number." "Each nomination of the present year to the Hall of Fame that has received the approval of ten or more electors, yet has failed to receive a majority, will be considered a nomination for the year 1902. To these shall be added any name nominated in writing by five of the Board of Electors. Also other names may be nominated by the New York University Senate in such way as it may find expedient. Any nomination by any citizen of the United States that shall be addressed to the New York University Senate shall be received and considered by that body." Furthermore: "Every five years throughout the twentieth century five additional names will be inscribed, provided the electors under the rules can agree by a majority upon so many." The senate further took note of the many requests that foreign-born Americans should be considered, by adopting a memorial to the university corporation, to the effect that it will welcome a similar memorial for foreign-born Americans, for which a new edifice may be joined to the north porch of the present hall, containing one-fifth of the space of the latter, providing thirty panels for names.—Chancellor H. M. MacCracken, *Hall of Fame (American Review of Reviews, Nov., 1900, p. 563)*.—This loggia was added, and, in 1905, the names of Alexander Hamilton, Louis Agassiz, and John Paul Jones were inscribed upon its panels. The same year, a loggia for American women was erected and Mary Lyon, Emma Willard, and Maria Mitchell were the first women honored. Harriet Beecher Stowe led the list in 1910 with 74 votes. The others elected in that year were as follows: Oliver Wendell Holmes, Edgar Allan Poe, Roger Williams, James Fenimore Cooper, Phillips Brooks, William Cullen Bryant, Frances E. Willard, Andrew Jackson, George Bañcroft, John Lathrop Motley.

In 1915 the new names added were: Francis Parkman, Mark Hopkins, Elias Howe, Joseph Henry, Charlotte Cushman, Rufus Choate, Daniel Boone. The election of 1915 was "conducted under amended rules, the chief of which gives electors of a certain class the power to place special emphasis upon their choice of nominees in their [field], thus giving weight in the final ballot to each estimate concurred in by a majority of anyone of the seven decisions of electors. The electors are also asked to designate by the initials M.J.F. (more justly famous) those nominees thus estimated (to a number not over one-third of the entire list), thus entitling them to enter the Hall of Fame by a majority rather than the two-thirds vote which would otherwise be required."—*Journal of Education, Aug. 26, 1915, p. 157*.—When the constitution was amended in 1914 to do away with the distinction between native, and foreign-born, it was required that the four foreign-born already chosen, be re-elected in competition with the native-born put in nomination. Alexander Hamilton, and Louis Agassiz were approved,

while John Paul Jones, and Roger Williams, lacked a majority but remained in nomination for the year 1920. The successful candidates of the 1920 elections were Samuel L. Clemens (Mark Twain), Augustus Saint-Gaudens, Patrick Henry, Roger Williams, advocate of religious liberty and founder of Rhode Island, James Buchanan Eads, bridgebuilder and constructor of the Mississippi jetties, William Thomas Green Morton, discoverer of anesthesia, and Alice Freeman Palmer, educator and president of Wellesley College.

**HALLECK, Henry Wager (1815-1872),** American general and jurist. Took part in the Mexican War in California, 1847-1849; member of California Constitutional Convention, 1849; president of Pacific and Atlantic Railroad, 1855; during the Civil War, supreme commander in western theater of the war, 1861-1862; general-in-chief of the United States army, 1862-1864. See U.S.A.: 1861 (July-November); (August-October: Missouri); 1862 (February-April: Tennessee); (April-May: Tennessee-Mississippi); (June-October: Tennessee-Kentucky); July-August: Virginia); End of peninsular campaign; Beginning of Pope's campaign.

**HALLER, Albrecht von (1708-1777),** Swiss physiologist, anatomist and botanist. See MEDICAL SCIENCE: Modern; 18th century: System of Haller.

**HALLER, Joseph (1873- ),** Polish commander in the World War. Served as colonel in the Austrian army, and deserted after the Treaty of Brest-Litovsk, 1918; joined the Czecho-Slovaks in Russia, 1918; made his way to France and took command of the Polish troops fighting there for the Allies, 1918; commander-in-chief of Polish army, 1919-1920. See AUSTRIA-HUNGARY: 1917-1918.

**HALLEY, Edmund (1656-1742),** English astronomer and mathematician. Published paper on comets, 1676; catalogue of stars of southern hemisphere, 1679; observed the comet whose return he predicted, 1682; published theory of the variation of comets, 1683; published chart on the variation of the compass in different parts of the globe, 1701; predicted the return in 1758 of the comet named for him, 1705; experimented with the diving bell, 1716. See INVENTIONS: 18th century: Improved diving bell.

**HALLOGNE,** one of the forts around Liège, Belgium. In 1914 of the World War, it was taken by the Germans. See WORLD WAR: 1914: I. Western front: b.

**HALLSTATT,** upper Austria. Region famous for its prehistoric remains. See EUROPE: Prehistoric period: Iron Age.

**HALMAHEIRA,** one of the Spice islands. See MOLUCCAS.

**HALS, Frans (c. 1580-1666),** Dutch painter. See PAINTING: Dutch.

**HALSTED, William Stewart** (1852- ), American surgeon. See **MEDICAL SCIENCE: Modern: 20th century: Advance in surgical methods.**

**HALYS, Battle of** (1102). See **CRUSADES: 1101-1102.**

**HAM, Race of.** See **ARABIA: Ancient succession and fusion of races.**

**HAM, town in northeastern France, fourteen miles southeast of Péronne.** Taken by the Germans in the Franco-German War, 1870, and again in the World War; relieved by the Allied counter-offensive, 1918. See **WORLD WAR: 1918: II. Western front: c, 11; Miscellaneous auxiliary services: XI. Devastation: c.**

**HAMADAN, Persian town, capital of the province of the same name.** It is identified with the ancient Ecbatana, but contains few remains of antiquity. The population in 1922 was about 40,000.—See also **ECBATANA.**

**1915-1916.—Activities during World War.** See **WORLD WAR: 1915: VII. Persia and Germany; 1916: VI. Turkish theater: d, 3; d, 7.**

**HAMATH, Kingdom of.**—"It is impossible to doubt that the Hamathites are identical with the Canaanitish tribe that was settled in the town of Hamath, afterwards called Epiphania, on the Orontes, between the Hittites and the Amorites of Kadesh. After the time of David they were succeeded in that town by the Arimæans."—F. Lenormant, *Manual of ancient history of the East*, v. 2, bk. 6, ch. 1.

**HAMBURG, German republic situated on the lower Elbe, between Schleswig-Holstein and Hanover, and consists of the city of Hamburg and the four domains: Bergedorf, Geestlande, Marschlande, and Ritzbüttel.** (See **GERMANY: Maps.**) Under the constitution of 1861 (revised in 1879 and 1906), it had a republican form of government, consisting of a Senate and a House of Burgeses. The "Free and Hansa City Hamburg," in the republic of Hamburg and the second largest city in Germany, lies on the northern arm of the Elbe. Tradition has it that Charlemagne built the castle of Hamburg between 805 and 811. An episcopal see was established there in 831, and Hamburg became the center of civilization for northern Europe. In 1110 it passed into the hands of Adolph I, count of Schauenburg, and with the building of the Neustadt (present parish of St. Nicholas) by Adolph III of Holstein the history of the commercial city begins. In 1189 it received important commercial privileges from Frederick Barbarossa and the treaties with Lübeck and Bremen, in 1241, and 1249 practically laid the foundations of the Hanseatic League. (See **HANSA TOWNS.**) In 1270 the constitution rendered the internal organization more stable, and 1292, the city acquired complete internal autonomy. The gild war between handicraftsmen and the patrician merchants forced the latter, 1310, to recognize the authority of a committee of forty-eight burghers, which concluded with the senate, the so-called First Recess. In 1510, Maximilian I, declared Hamburg an imperial city, but the act was not confirmed by the imperial chamber, till 1618. In 1520, the Great Recess of February 19 definitely established the Reformation in Hamburg, and vested the city government in the Rath. In 1536, Hamburg joined the League of Schmalkalden; in 1603, received a code of laws regulating exchange; in 1619, the bank was established; in 1770, was admitted for the first time to a representation in the diet of the empire, and in 1783, received its first great commercial impulse when by the Treaty of Paris, the United States became an independent

power which opened up a direct maritime communication with America.

**HAMILTON COLLEGE**, New York: Founded in 1812. See **UNIVERSITIES AND COLLEGES**: 1812.

**HAMITES, HAMITIC LANGUAGES.**—The name Hamites, as now used among ethnologists, is restricted more closely than it once was to certain African races, whose languages are found to be related. The languages classed as Hamitic are those of the ancient Egyptians and the modern Copts, most of the Abyssinian tribes, the Gallas and the Berbers. Some of the older writers, Lenormant, for example, embraced the Phœnicians and all their Canaanite neighbors among the Hamites; but this is not now an accepted view. It was undoubtedly formed under the influence of the theory from which the name Hamites came, namely that the people so designated were descendants of Ham; and it sought to adjust a division of the Hamitic family to four lines of descent, indicated by the biblical account of the four sons of Ham,—Cush, Mizraim, Phut, and Canaan. This hypothesis identified the Cushites with the Ethiopians (modern Abyssinians and Nubians), the descendants of Mizraim with the Egyptians, those

of Phut with the Libyans, and those of Canaan with the Canaanites, including the Phœnicians. Some held that the Hamites occupied originally a great part of western and southern Asia; that they were the primitive inhabitants of southern Mesopotamia, or Chaldea, southern Persia, and southern Arabia, and were displaced by the Semites; also that they once inhabited the most of Asia Minor, and that the Carians were a surviving remnant of them. But the more conservative sense in which the term Hamite is now used restricts it, as stated above, to certain races which are grouped together by a relationship in their languages. Whether or not the Hamitic tongues have an affinity to the Semitic seems still an open question; and, in fact, the whole subject is in an undetermined state, as may be inferred from the following extract: "The so-called Hamitic or sub-Semitic languages of Northern Africa . . . exhibit resemblances to the language of ancient Egypt as well as to those of the Semitic family. In the Libyan dialects we find the same double verbal form employed with the same double function as in Assyrian, and throughout the 'Hamitic' languages the causative is denoted by a prefixed sibilant as it was in the parent Semitic speech. We cannot argue, however, from language to race. . . . and the Libyans have ethnologically no connection with the Semites or the Egyptians. Moreover, in several instances the 'Hamitic' dialects are spoken by tribes of negro or Nubian origin, while the physiological characteristics of the Egyptians are very different from those of the Semite."—A. H. Sayce, *Races of the Old Testament*, ch. 4.—See also **LIBYANS**; **PHILOLOGY**: 25.

**HAMLIN, Hannibal** (1809-1891), American statesman. Member Maine legislature, 1835-1841; national House of Representatives, 1843-1847; United States Senate, 1848-1856, 1857-1860, 1869-1881; governor of Maine, 1856-1857; vice president of the United States, 1861-1865; minister to Spain, 1881-1883.

**HAMMOND, James Bartlett** (1839-1913), American inventor. See **INVENTIONS**: 19th century: Typewriter.

**HAMMOND, John Hays** (1885- ), American mining engineer. Appointed special expert United States Geological Survey, 1885; consulting engineer South African properties, 1893-1900; for complicity in the Jameson raid was arrested, sentenced to death by the South African republic, and released on payment of \$125,000 fine, 1895-1896; elected president of the American Institute of Mining Engineers, 1907; special representative of President Taft at the coronation of King George V, 1911; and chairman of the World Court Congress, 1914-1915.

**HAMMURABI, or Khammurabi**, king of Babylonia, c. 2124-2081 B.C., codifier of laws. The date of Hammurabi's reign which is fixed by the "List of the Babylonian Kings" has been the subject of much discussion. Earlier authorities set the close of his life at (c.) 2250 B.C.; but later discoveries place his period from (c.) 2124-(c.) 2081 B.C. See **ASSYRIA**: People; **BABYLONIA**: First Babylonian empire; Hammurabi: His character; **CODES**: B.C. 2250; **ELAM**; **WOMAN'S RIGHTS**: B.C. 2250-538.

**HAMPSTEAD**, metropolitan borough of London, England. See CITY PLANNING: Great Britain.

**HAMPTON**, Wade (1754-1835), American soldier and planter. Served as an officer in the Revolutionary War, and in the War of 1812. See U. S. A.: 1813 (October-November).

**HAMPTON**, Wade (1818-1902), American soldier and statesman. Served in the Civil War, and was active in the reconstructive period that followed; governor of South Carolina, 1876-1879. See U. S. A.: 1864 (May-June; Virginia: Campaigning in the Shenandoah valley).

**HAMPTON COURT CONFERENCE**, held after the accession of James I, for the discussion of religious differences. See ENGLAND: 1604.

**HAMPTON COURT PALACE**, royal palace of red brick with battlemented walls, is situated in a park on the bank of the River Thames, at Hampton Court, fifteen miles from London. It is the largest palace in the British Isles and was originally founded by Cardinal Wolsey, the one-time favorite of Henry VIII. The story runs that the king on a visit to Wolsey expressed his admiration for the grandeur of the buildings and the extensive gardens, whereupon the cardinal immediately presented the whole estate to his sovereign. It was later occupied by Cromwell, the Stuarts, William III, and the first two kings of the House of Hanover. It was here also that Shakespeare's company of players entertained the royal guests and that the Hampton Court Conference was held in 1604.

**1833.—Northwestern League.** See TARIFF: 1833.

**1837.—Separation of the crown from that of Great Britain.**—"From the hour that the Crown

of these kingdoms [Great Britain and Ireland] devolved upon Queen Victoria, dates a change which was a real blessing in the relations of the Sovereign to the Continent of Europe. Hanover was at that instant wholly separated from Great Britain. By the law of that country a female could not reign except in default of heirs male in the Royal family. But in addition to the great advantage of separating the policy of England wholly from the intrigues and complications of a petty German State, it was an immediate happiness that the most hated and in some respects the most dangerous man in these islands was removed to a sphere where his political system might be worked out with less danger to the good of society than amongst a people where his influence was associated with the grossest follies of Toryism and the darkest designs of Orangism. On the 24th of June the duke of Cumberland, now become Ernest Augustus, King of Hanover, left London. On the 28th he made a solemn entrance into the capital of his states, and at once exhibited to his new subjects his character and disposition by refusing to receive a deputation of the Chambers, who came to offer him their homage and their congratulations. By a proclamation of the 5th of July he announced his intention to abolish the representative constitution, which he had previously refused to recognize by the customary oath. We shall have little further occasion to notice the course of this worst disciple of the old school of intolerance and irresponsible government, and we may therefore at once state that he succeeded in depriving Hanover of the forms of freedom under which she had begun to live; ejected from their offices and banished some of the ablest professors of the University of Göttingen, who had ventured to think that letters would flourish best in a free soil; and reached the height of his ambition in becoming the representative of whatever in sovereign power was most repugnant to the spirit of the age."—C. in the intention of serving as a fort to bridle the Saxons, who had been subjugated by the emperor. Its favourable situation on the Elbe necessarily rendered it a commercial emporium. Towards the close of the twelfth century, the inhabitants, who had already been extensively engaged in naval enterprises, began to form the design of emancipating themselves from the authority of their counts, and of becoming a sovereign and independent state; and in 1189 they obtained an Imperial charter which gave them various privileges, including among others the power of electing councillors, or aldermen, to whom, in conjunction with the deputy of the count, the government of the town was to be entrusted. Not long after Hamburg became entirely free. In 1224 the citizens purchased from Count Albert the renunciation to any property in or sovereignty over the town, and its immediate vicinity. And the government was thus early placed on that liberal footing on which it has ever since remained. Lubeck, situated on the Trave, was founded about the middle of the twelfth century. It rapidly grew to be a place of great trade. It became the principal emporium for the commerce of the Baltic, and its merchants extended their dealings to Italy and the Levant. At a period when navigation was still imperfect, and when the seas were infested with pirates, it was of great importance to be able to maintain a safe intercourse by land between Lubeck and Hamburg, as by that means the difficult and dangerous navigation of the Sound was avoided. And it is said by some, that the first political union between these cities had the protection of merchandise carried between them by land for its sole object. But this is contradicted by Lambeck in his 'Origines Hamburgenses' (lib. xi, pa. 26). . . . But whatever may have been the motives which led to the alliance between these two cities, it was the origin of the famous Hanseatic League, so called from the German word 'hansa,' signifying a corporation. There is no very distinct evidence as to the time when the alliance in question was established; but the more general opinion seems to be that it dates from the year 1247. . . . From the beginning of the twelfth century, the progress of commerce and navigation in the north was exceedingly rapid. The countries which stretch along the bottom of the Baltic from Holstein to Russia, and which had been occupied by barbarous tribes of Slavonic origin, were then subjugated by the Kings of Denmark, the Dukes of Saxony, and other princes. The greater part of the inhabitants being exterminated, their place was filled by German colonists, who founded the towns of Stralsund, Rostock, Wismar, etc. Prussia and Poland were afterwards subjugated by the Christian princes, and the Knights of the Teutonic order. So that in a comparatively short period, the foundations of civilization and the arts were laid in countries whose barbarism had ever remained impervious to the Roman power. The cities that were established along the coasts of the Baltic, and even in the interior of the countries bordering upon it, eagerly joined the Hanseatic confederation. They were indebted to the merchants of Lubeck for supplies of the commodities produced in more civilized countries, and they looked up to them for protection against the barbarians by whom they were surrounded. The progress of the league was in consequence singularly rapid. Previously to the end of the thirteenth century it embraced every considerable city in all those vast countries extending from Livonia to Holland; and was a match for the most powerful monarchs. . . . The principal factory of the

League was at Bruges in the Netherlands. Bruges became, at a very early period, one of the first commercial cities of Europe, and the centre of the most extensive trade carried on to the north of Italy. The art of navigation in the thirteenth and fourteenth centuries was so imperfect, that a voyage from Italy to the Baltic and back again could not be performed in a single season, and hence, for the sake of their mutual convenience, the Italian and Hanseatic merchants determined on establishing a magazine or store-house of their respective products in some intermediate situation. Bruges was fixed upon for this purpose, a distinction which it seems to have owed as much to the freedom enjoyed by the inhabitants, and the liberality of the government of the Low Countries, as to the conveniency of its situation."—*History of the Hanseatic League (Foreign Quarterly Review, Jan., 1831)*.—See also BRUGES: 13th-15th centuries.—"Under cities we are to understand fortified places in the enjoyment of market-jurisdiction (marktrecht), immunity and corporate self-government. The German as well as the French cities are a creation of the Middle Ages. They were unknown to the Frankish as well as to the old Germanic public law; there was no organic connection with the Roman town-system. . . . All cities were in the first place markets; only in market-jurisdiction are we to seek the starting point for civic jurisdiction. The market-cross, the same emblem which already in the Frankish period signified the market-peace imposed under penalty of the king's ban, became in the Middle Ages the emblem of the cities. . . . After the 12th century we find it to be the custom in most German and many French cities to erect a monumental town-cross in the market-place or at different points on the city boundary. Since the 14th century the place of this was often taken in North-German cities by the so-called Roland-images. . . . All those market-places gradually became cities in which, in addition to yearly markets, weekly markets and finally daily markets were held. Here there was need of coins and of scales, of permanent fortifications for the protection of the market-peace and the objects of value which were collected together; here merchants settled permanently in growing numbers, the Jews among them especially forming an important element. Corporative associations of the merchants resulted, and especially were civic and market tribunals established. . . . From the beginning such a thing as free cities, which were entirely their own masters, had not existed. Each city had its lord; who he was depended on to whom the land belonged on which they stood. If it belonged to the empire or was under the administration (vogtei) of the empire, the city was a royal or imperial one. The oldest of these were the Pfalz-cities (Pfalzstädte) which had developed from the king's places of residence (Königspfalze). . . . Beginning with the 12th century and in course of the 13th century all cities came to have such an organ [i. e. a body of representatives] called the Stadtrath (consilium, consules) with one or more burgomasters (magistri civium) at their head. Herewith did the city first become a public corporation, a city in the legal sense. . . . Of the royal cities many since the time of Frederick II had lost their direct dependence on the empire (Reichsunmittelbarkeit) and had become territorial or provincial cities, through having been sold or pledged by the imperial government. As soon as the view had gained ground that the king had no right to make such dispositions and thus to disregard the privileges that had been granted to the cities, people spoke

no longer of royal cities but of cities of the empire. These had, all of them, in course of time, even where the chief jurisdiction remained in the hand of an imperial official, attained a degree of independence approximating to the territorial suzerainty of the princes. They had their special courts as corporations before the king. Since the second half of the 13th century they rejoiced in an autonomy modified only by the laws of the realm; they had the disposal of their own armed contingents and the sole right of placing garrisons in their fortresses. They had accordingly also the right of making leagues and carrying on feuds, the right to lordless lands (*Heimfallsrecht*) . . . and other prerogatives. The cities of the empire often ruled at the same time over extensive territories. . . . Among the cities of the empire were comprised after the 14th century also various cities of bishops which had been able to protect themselves from subjection to the territorial power of the bishop, and which only stood

'Hansa of Germany' or 'Gildhall of the Germans in England,' come to comprise all Germans who carried on trade with England. Similar associations of the German merchants were the 'German House' in Venice, the 'German Counting-house' in Bruges and the German Hansas in Wisby on Gotland, in Schonen, Bergen, Riga and Novgorod. The chief purpose of these Hansas was the procuring of a 'House' as a shelter for persons and for wares, the maintaining of peace among the Hansa brothers, legal protection, the acquisition of commercial privileges, etc. The Hansas were guilds with several elected aldermen at their heads who represented them in external matters and who administered the property. . . . Quarrels among the brothers might not, under penalty, be brought before external tribunals; they were to be brought before the Hansa committee as a gild-tribunal. This committee had also an extended penal jurisdiction over the members; under certain circumstances they had even the

TOWNS INCLUDED IN THE HANSEATIC LEAGUE

to it in a more or less loose degree of subordination. . . . For the majority of the cities of bishops which later became cities of the empire the denomination 'Free Cities' came up in the 14th century (not till later 'Free Cities of the Empire'). . . . Among the leagues of cities, which especially contributed to raise their prestige and paved the way to their becoming Estates of the empire or of the principalities, the great Rhenish civic confederation (1254-1256) lasted too short a time to have an enduring effect. The Swabian civic league was for purely political purposes—the maintenance of the direct dependence on the empire (*Reichsunmittelbarkeit*) against the claims of territorial sovereignty of the princes, and its unfortunate ending served rather to deteriorate than to improve the condition of the cities. It was different with the Hansa. This name, which signified nothing else than gild or brotherhood, was first applied to the gild of the German merchants in the 'stahlhof' in London. This gild, having originated from the amalgamation of various national Houses of German merchants in England, had finally, under the name of

power of life and death in their hands. An especially effective punishment was the Hansa bann, which occasioned, besides expulsion from the Hansa, a complete boycott on the part of the Hansa brothers. . . . The community of interests thus founded among these cities led repeatedly, already as early as the second half of the 13th century, to common steps on their part; so that in Hansa affairs a tacit league existed, even although it had not been expressly sanctioned. After this had become more clearly apparent in the troubles with Flanders (1356-1358) the name Hansa was also applied to this league-relationship, so that henceforward besides the Hansa of the German merchants there existed a Hansa of the German cities. The Hanseatic League received a firm organization through the Greifswald and Cologne confederations of 1361 and 1367, both of which were at first only entered into for a single warlike undertaking (against Waldemar of Denmark), but which were then repeatedly renewed and finally looked upon as a permanent league. The Hanseatic League . . . came forward in external matters, even in inter-

national relationships, as an independent legal entity. It carried on war and entered into treaties with foreign nations; it had a league army at its disposal and a league fleet; it acquired whole territorial districts and saw to the building of fortresses. In itself it was not a defensive and offensive league; it did not concern itself with the feuds of single cities with outsiders. The sphere of activity of the league was essentially confined to the province of commerce: protection of commerce, . . . the closing of commercial treaties, etc. . . . The head of the League was and continued to be Lubeck. Its kernel, as it were, was formed by the Wendish (i. e. Mecklenburg and Pomeranian) cities which were united under Lubeck. Originally any city of Lower Germany which asked to be taken in was received into the League. . . . Hansa cities which did not fulfil their federal obligations came under the penalty of the Hansa bann and the general commercial ostracism consequent upon it. . . . The federal power was exercised by civic diets, which were assemblies of delegates from the members of the council [Rath] of the individual cities. The summons was sent by Lubeck. The decrees were passed in the form of 'recesses'. . . . Within the League again were narrower leagues with their own common affairs and their own civic diets. After numerous changes the four 'quarters' were recognized as such: the Wendish under Lubeck as its head, the Saxon under Brunswick, the Cologne under Cologne, the Prussian-Livonian under Danzig."—R. Schröder, *Lehrbuch der deutschen Rechtsgeschichte* (tr. from the German), pp. 588-600.—"The complete ruin of the empire in the course of the 15th century necessarily entailed at last the ruin also of its members. Nowhere did this elementary truth make itself felt in a more terrible manner than in northeastern Germany, in those colonial districts which in consequence of the extraordinary development of the Hansa had risen in importance to the extent of having an influence on the whole east and northeast of Europe. Here the year 1370 had denoted for the Hansa a climax without a parallel. After a glorious war it had closed with the Danish king, Waldemar Atterdag, a peace which seemed about to keep the northern kingdoms, for a long time to come, under the power of its will. But, soon after, the Lubeck-Hanseatic policy began to degenerate. . . . The Hansa had looked on without interfering at the struggle which began between the Teutonic Order and Poland. This freed it from the threatening maritime supremacy of the Order; besides this it had just become involved, itself, in conflicts in the North. . . . A long and tedious war ensued . . . which ended to the disadvantage of the Hansa. . . . Within the Hansa, during the struggle, the divergency of interests between the Wendish, Prussian and Livonian cities had for the first time become so pronounced as to amount to complete disunion, and already in 1431 in Hanseatic circles the fear could be expressed . . . 'that the noble confederation of our Hansa will be dissolved and destroyed.' Such being the case it soon became evident that the struggle with King Erich had actually cost the Hansa the 'Dominium maris Baltici.' For one thing the English and the Dutch, more and more unopposed, began to carry on in the East a commerce which was hostile to the Hansa. . . . While the Western enemies of the Hansa thus appeared in districts on the Baltic, which had hitherto been reserved for the Hanseatic merchant, the influence on the North Sea of the Baltic Hansa cities diminished also more and

more. It was possible indeed, for some time to come, still to hold on to Norway. But further to the south-west the Hansa ships, in the war which England in union with Burgundy had been waging with France since the year 1415, saw themselves attacked on all sides in spite of the neutral flag. It was well known that the empire would not protect the German flag. It was worse still that in England a more and more violent opposition arose against the Hanseatic privileges, for the progress of this movement laid bare once and for all the fundamental contrast between the commercial interests in England of the Rhenish Hansa cities and those of the 'Osterlings' [Eastern cities]. If the English were prepared perhaps to further extend the rights of the Hansa in their land in return for the simultaneous free entry of their flag in the Baltic, that was a condition which pleased the German western cities as much as it seemed unacceptable to the Osterlings, Lubeck at their head. The English had succeeded in carrying discord into the enemy's camp. Affairs in Flanders were on a footing equally dangerous to the continued existence of the Hansa as a whole. . . . Lubeck, in a diet of the year 1466, recommended the members of the Hansa to consider the merchants of Cologne as not belonging to the Hansa when in the lands of the Duke of Burgundy. A complete breach could not now fail to come. It occurred, very unfortunately for Cologne and the western cities, on English territory. In 1468 English ships were plundered in the 'Sund,' at the bidding, as was claimed, of the Hansa. The result was that King Edward IV took prisoner all German merchants who happened to be in England and forbade commercial intercourse with Germany. From this restriction, however, the Cologners were able to free themselves through separate negotiations with the king. It was an inconsiderate step thus to separate themselves from the rest of the Hansa, and that, too, in such a question as this. Cologne stood there fully isolated now even from the western cities. Lubeck at once profited by the occasion to have Cologne placed under the Hansa bann, and soon after the Hansa, almost entirely united now except for Cologne, began the war against England. In the year 1472 a great fleet sailed out against the island-kingdom; it had complete success. The peace of Utrecht of February 18th, 1474, restored once more the old Hanseatic privileges in England and opened up the prospect of damages amounting to £10,000. Cologne had to submit; in 1478 it returned to the Hansa. But all the same there was no complete restoration of the old unity. The mercantile differences between the west and the east cities not only continued but increased, and a dominion over the Baltic, not to mention the North Sea, was, in spite of the momentary success in England, no longer to be thought of. . . . After about 1490 the interests also of the Wendish cities including, say, Bremen, Hamburg and Lüneburg, became divided. . . . Thus towards the end of the 15th century the Hansa bore the stamp of decline in all directions, . . . the political-mercantile preponderance on land, as well as the 'Dominium maris Baltici,' was broken and the league itself was torn by internal dissensions. In the years from 1476 to 1494 only one common Hansa diet was held; complete ruin was now only a question of time. The 16th century and a part still of the 17th century comprise the period of the slow wasting away of the Hansa. While at the beginning of this period the South-German merchant-princes developed a German world-commerce, the satiated mercantile

houses of the North showed themselves incapable of progressing even on purely commercial paths. They remained in the ruts of old-fashioned commerce." In England "less and less regard was paid to the warnings and complaints of this antiquated piece of retrogression, until Queen Elizabeth made use of the incautious promulgation of an imperial edict forbidding English merchants to settle in the Hansa cities to simply abrogate the Hanseatic privileges in England. It was the key-stone of the tomb of the Hanseatic relations with England, once so close and full of import."—K. Lamprecht, *Deutsche Geschichte* (tr. from the German), v. 4, pp. 468-484.—See also COMMERCE: Medieval; SUFFRAGE, MANHOOD: 1300-1600.—"The Thirty Years' War put an absolute end to the corporate activity of the Hanseatic League, and this, not only because of foreign competition, but, primarily, because the pressure of the War on the inland towns belonging to the League prevented them from helping to maintain its organization by their contributions. . . . As a matter of fact, two out of the three great maritime towns which after nominally renewing the decrepit League towards the end of the War, preserved down to our own day the ancient name which was all that was left of it—Hamburg and Bremen—suffered perhaps less than any other of the more important German towns during the course of the conflict; and one of them, Hamburg, which from the beginning of the 17th century onwards, had facilitated the advance through its portals of English trade into Germany, turned the actual state of things to its own account with remarkable skill. Lübeck, the venerable head of the Hansa, was necessarily less favoured by fortune; for the command of the Baltic was one of the main ends to compass which first Denmark and then Sweden entered into the War, and the ultimate ambition of the Scandinavian Powers contemplated nothing short of the extinction of German navigation in its waters. Lübeck, instead of any share in the rule of the blue sea over which she had once been mistress, had to guard her ancient gateways against horsemen and pikemen; and even before the conclusion of the peace called by her name at the end of the Danish War her citizens are found complaining of the diminution of her fleet, ship after ship, ill made up for by the unavoidable increase of her military trained bands. The credit of her great merchant houses was beginning to give way, and a decline was setting in to which there has hardly been a turn till the last quarter of the nineteenth century."—A. W. Ward, *Effects of the Thirty Years' War (Proceedings of the Royal Institution of Great Britain, Mar. 8, 1912)*.

Harald III, Haardraade (1015-1066), king of Norway, 1047-1066.

Harald IV, Gylle (d. 1136), king of Norway, 1134-1136.

HARALD BLAATAND, king of Denmark, 941-991.

HARALD SWEYNSON, king of Denmark, 1076-1080.

HARAN.—"From Ur, Abraham's father had migrated to Haran, in the northern part of Mesopotamia, on the high road which led from Babylonia and Assyria into Syria and Palestine. Why he should have migrated to so distant a city has been a great puzzle, and has tempted scholars to place both Ur and Haran in wrong localities; but here, again, the cuneiform inscriptions have at last furnished us with the key. As far back as the Accadian epoch, the district in which Haran was built belonged to the rulers of Babylonia; Haran was, in fact, the frontier town of the empire, commanding at once the highway into the west and the fords of the Euphrates; the name itself was an Accadian one, signifying 'the road.'"—A. H. Sayce, *Fresh light from the ancient monuments*, ch. 2.—The site of Haran is generally identified with that of the later city of Carrhæ.

**HARBIN**, or Kharbin, city of Manchuria, on the Sungari river. (See JAPAN: Map.) The Russian government in 1896 established the city in connection with surveys for the Chinese Eastern Railway Company. It became important both as a railway administration center and as a military depot. During the Russo-Japanese War it was a valuable military base for the Russians. Harbin was officially opened to the world's trade on January 14, 1907, in accordance with the terms of the Chino-Japanese Treaty of December, 1905. (See CHINA: 1905 [December].) In 1918 of the World War it was a center of fighting activities. See WORLD WAR: 1918: III. Russia: e, 1; SIBERIA: 1917-1918.

**HARBONNIERES**, town in France on the Somme region, northeast of Montdidier. See WORLD WAR: 1918: II. Western front: j, 1.

**HARBORD**, James Guthrie (1866- ), American major-general. Entered army as a private, 1889; served in World War, 1917-1919; twice chief-of-staff of the American Expeditionary Forces; commanded successively the marine brigade near Château-Thierry, the Second Division in the Soissons offensive, and the Services of Supply; was chief of the American military mission in Armenia, 1919. See WORLD WAR: 1918: II. Western front: g, 3.

**HARCOURT**, Lewis Vernon, 1st Viscount, Baron Nuneham (1863-1922). See ENGLAND: 1905-1906.

**HARDEE**, William Joseph (1815-1873), American confederate soldier. See U.S.A.: 1865 (February: South Carolina); (May): Feeling of surrendered Confederate officers.

**HARDEN**, Maximilian (Witkowski) (1861- ), German publicist. Tried three times for *lèse majesté*; was sued for libel in 1907 by General Kuno von Moltke, who, together with Count zu Eulenburg and Count Wilhelm von Hohenau, had been accused by Harden as members of a court Camarilla to influence the Kaiser's political actions; was sentenced to four months' imprisonment, which, on appeal two years later, was changed to a fine of \$150; arrested in 1917 and his newspaper suppressed, but was later released and permitted to resume publication; an attempt was made to assassinate him, July 3, 1922.—See also GERMANY: 1900 (Oct. 9); 1907-1908.

**HARDENBERG**, Karl August, Prince (1750-1822), Prussian statesman and administrator. President of Council of State in Brunswick, 1787; minister of state in Prussia, 1791; arranged peace negotiations with France, 1795; first Prussian minister, 1804; resigned, 1805; chancellor, 1810; representative at Congress of Vienna, 1815; re-organized Council of State, 1817.—See also GERMANY: 1807-1808; 1814-1820; ADMINISTRATIVE LAW: Prussian; VIENNA, CONGRESS OF.

**HARDENBURG**, Edict of (1812). See JFWs: 18th-19th centuries.

**HARDICANUTE**, or Harthacnut (c. 1019-1042), king of Denmark, 1035-1042; king of England, 1040-1042. See ENGLAND: 1042-1066.

**HARDIE**, James Keir (1856-1915), English labor leader. Founded the Socialistic Independent Labor party, 1893; elected to parliament, 1892; became leader of the Labor party in the House of Commons, 1906. See SOCIALISM: 1882-1916.

**HARDING**, Stephen (d. 1134), founder of Cistercian Order. See CISTERCIAN ORDER.

**HARDING**, Warren Gamaliel (1865- ), twenty-ninth president of the United States. Member Ohio Senate, 1900-1904; lieutenant-governor of Ohio, 1904-1906; United States senator, 1915-

1920; elected president, 1920. See U.S.A.: 1920 (May-November).

Inaugural address. See U. S. A.: 1921 (March): Inauguration, etc.

First message to Congress. See U. S. A.: 1921 (April).

Vetoes War Bonus Bill. See U. S. A.: 1921 (March-July).

Signs Knox Resolution. See U. S. A.: 1920-1921 (April-July).

Foreign policy. See U. S. A.: 1921 (April-May): Comments on President Harding's foreign policy.

Treaty with Colombia. See U. S. A.: 1914-1921.

Refusal of mediation on German reparations. See U.S.A.: 1921 (April-May): German appeal, etc.

Proposes conference on limitation of armaments. See U. S. A.: 1921 (July-August).

Letter to Sulgrave Institution on bonds of English speaking peoples. See U. S. A.: 1921: American friendship, etc.

**HARDINGE OF LAHORE**, Henry, 1st Viscount (1785-1856), English field marshal, and governor-general of India. Entered as ensign Queens Rangers, Upper Canada, 1799; deputy quartermaster-general, Portuguese army, 1800-1813; commissioner at Prussian headquarters, 1815; secretary of war, 1828, and 1841-1844; chief secretary for Ireland, 1830, and 1834-1835; governor-general of India, 1844-1847; commander-in-chief of the British army, 1852-1856.—See also INDIA: 1836-1845; 1845-1849.

**HARDINGE OF PENSURST**, Charles, 1st Baron (1858- ), British colonial official. Entered diplomatic service, 1880; secretary of legation, Teheran, 1896; secretary of embassy, St. Petersburg, 1898-1903; assistant under-secretary for foreign affairs, 1903-1904; British ambassador, St. Petersburg, 1904-1906; viceroy of India, 1910-1916. See DELHI: 1911.

**HARD-SHELL DEMOCRATS**. See U.S.A.: 1845-1846.

**HARDWICKE**, Philip Yorke, 1st Earl of (1600-1764), English lord chancellor and distinguished judge. See EQUITY LAW: 1736-1756; 1742.

**HARDY**, Alexandre (1575-1621), French dramatist. See DRAMA: 1500-1700.

**HARDY**, Thomas (1840- ), English novelist. See ENGLISH LITERATURE: 1880-1920.

**HARE**, Robert (1781-1858), American chemist and inventor. See CHEMISTRY: General: Modern: Lavoisier.

**HAREM**: Ancient Egypt. See WOMAN'S RIGHTS: B.C. 2000-500.

**HARFLEUR**, town in France, four miles east of Havre. In 1415 it was captured by Henry V. See FRANCE: 1415.

**HARGREAVES**, James (d. 1778), English inventor of the carding machine and spinning jenny. See INDUSTRIAL REVOLUTION: England; Inventions in textile industry.

**HARII**, or Aarii, ancient tribe. See LYGIANS.

**HARKNESS**, Mrs. Stephen V. See COMMON-WEALTH FUND; GIFTS AND BEQUESTS.

**HARLAW**, Battle of (1411), a very memorable battle in Scottish history, fought July 24, 1411, between the Highlanders and Lowlanders of the country. Donald, lord of the Isles, was then practically an independent sovereign of the western Highlands of Scotland, as well as the islands opposite their shore. He claimed still larger domains and invaded the lowland districts to make his claim good. The defeat inflicted upon him, at

heavy cost to the victors, was felt, says Mr. Benton in his "History of Scotland," as a more memorable deliverance even than that of Bannockburn. The independence of the lord of the Isle was not extinguished until sixty years later. "The battle of Harlaw and its consequences were of the highest importance, since they might be said to decide the superiority of the more civilized regions of Scotland over those inhabited by the Celtic tribes."—W. Scott, *History of Scotland*, ch. 17.

**HARLEIAN LIBRARY OF MANUSCRIPTS.** See BRITISH MUSEUM.

**HARLEM.** See HAARLEM.

**HARLEY, Robert, Earl of Oxford and Mortimer** (1661-1724), English statesman and founder of collection of books in the British Museum. See LIBRARIES: Modern: England, etc.: King's library.

**HARMAR, Josiah** (1753-1813), American soldier. Commander-in-chief of the United States army, 1789; led a disastrous expedition against the northwestern Indians, 1790. See NORTHWEST TERRITORY OF UNITED STATES: 1790-1795.

**HARMON, Judson** (1846- ), American lawyer. Governor of Ohio, 1909-1911 and 1911-1913. See U.S.A.: 1912: Woodrow Wilson and the election.

**HARMONY SOCIETY.** See SOCIALISM: 1805-1827.

**HARMOSTS**, name of Spartan governors of subject towns. See SPARTA: B.C. 404-403.

**HARNEY, William Selby** (1800-1889), American general. Served in wars with Indians. See MISSOURI: 1861; WYOMING: 1851-1865.

**HARNEY TREATY** (1856). See WYOMING: 1851-1865.

**HARO ARCHIPELAGO**, Pacific ocean, off the coast of Washington. See SAN JUAN.

**HAROLD**, kings of Norway. See HARALD.

**HAROLD I, the Dane** (d. 1040), king of England, 1037-1040.

**Harold II, the Saxon** (c. 1022-1066), king of England, 1066. Disputed the kingship with William but was defeated at the battle of Hastings. See ENGLAND: 1042-1066; 1066: Norman invasion; Spring and summer.

**HAROUN AL-RASHID.** See HARUN AL-RASHID.

**HARP: Egypt.** See INVENTIONS: Ancient and medieval: Stringed instruments.

**England.** See MUSIC: Folk music and nationalism: England.

**Ireland.** See MUSIC: Folk music and nationalism: Celtic: Ireland.

**Scandinavian countries.** See MUSIC: Folk music and nationalism: Scandinavia.

**HARPER, Robert Goodloe** (1765-1825), American senator and originator of name Liberia. See LIBERIA: Origin of name.

**HARPER'S FERRY**, town in West Virginia, fifty-six miles northwest of Washington.

1859.—John Brown's invasion. See U. S. A.: 1859.

1861 (April).—Arsenal destroyed and abandoned by federal garrison.—Occupied by rebels. See U.S.A.: 1861 (April): Activity of rebellion, etc.

1862.—Capture by Confederates. See U. S. A.: 1862 (September: Maryland): Lee's first invasion.

**HARPSICHORD**, musical instrument, precursor of the piano. See INVENTIONS: 18th century: Piano.

**HARRIMAN, Edward Henry** (1848-1900), American railroad magnate and financier. See RAILROADS: 1893-1910; 1901-1905; 1901-1909.

**HARRIS, Isham Green** (1818-1897), governor of Tennessee, 1857-1862. See TENNESSEE: 1834-1856; U.S.A.: 1861 (April): President Lincoln's call to arms.

**HARRIS, Townsend** (1804-1878), American diplomat. First consul-general to Japan, 1855-1861. See JAPAN: 1857-1862.

**HARRIS, William Alexander** (1841-1909), populist senator from Kansas, 1897-1903. See U.S.A.: 1899 (January-February).

**HARRIS, Sir William Snow** (1791-1867), English electrician and inventor. See ELECTRICAL DISCOVERY: 1831-1921.

**HARRISBURG**, capital of Pennsylvania. See BUCKSHOT WAR; CITY PLANNING: United States: Progress in city planning.

**HARRISON, Benjamin** (c. 1740-1791), American patriot and signer of the Declaration of Independence. See U.S.A.: 1776 (July): Text of Declaration, etc.; STATE DEPARTMENT OF THE UNITED STATES: 1774-1789.

**HARRISON, Benjamin** (1833-1901), twenty-third president of the United States. Served in the Civil War; brevetted brigadier-general of volunteers, 1865; appointed member of the Mississippi River Commission, 1878; elected United States senator, 1880; president of the United States, 1889-1893; chief representative of the United States at the Hague Conference, 1899; counsel for Venezuela before the Commission appointed to arbitrate the boundary dispute with England, 1899. See U.S.A.: 1888; 1889-1890; 1892: Twenty-seventh presidential election; 1901 (March); CHILE: 1891-1892; OKLAHOMA: 1889-1890.

**HARRISON, Fairfax** (1869- ), American railway president. See RAILROADS: 1916-1920.

**HARRISON, Francis Burton** (1873- ), governor-general of the Philippine islands, 1913-1917. See PHILIPPINE ISLANDS: 1917-1918.

**HARRISON, Joseph** (1810-1874), American engineer and inventor. See RAILROADS: 1830-1880.

**HARRISON, Thomas** (1606-1660), English regicide. See FIFTH MONARCHY MEN.

**HARRISON, William Henry** (1773-1841) ninth president of the United States. Northwest territorial delegate in Congress, 1799; appointed governor, Indiana territory, 1801-1812; negotiated treaties, 1803-1814; vanquished the Indians at the battle of Tippecanoe, 1811; served in the War of 1812; member of Congress, 1815-1819; served in Ohio Senate, 1819-1821; member United States Senate, 1825-1828; first United States minister to Colombia, 1828; unsuccessful candidate for presidency, 1835; elected president, 1840.

Indian campaign and battle of Tippecanoe. See U.S.A.: 1811.

War of 1812. See U. S. A.: 1812-1813: Harrison's northwestern campaign; KENTUCKY: 1812-1814.

Presidency.—Death. See U. S. A.: 1840; 1841.

**HARRISON'S LANDING**, Army of the Potomac at. See U. S. A.: 1862 (June-July: Virginia), (July-August: Virginia): End of peninsular campaign

**HARROD, James** (1746-1825), American pioneer. See KENTUCKY: 1765-1778.

**HARSHA OF KANOUJ** (fl. 606-648), king of India. See INDIA: 480-648.

**HART, John** (1714-1770), American patriot and signer of Declaration of Independence. See U.S.A.: 1776 (July): Text of Declaration, etc.

**HART VS. WHITE** (1872). See U. S. A.: 1869-1872.

**HARTFORD**, city, port of entry, and capital of Connecticut.

1634-1637.—Beginnings of the city. See CONNECTICUT: 1631; 1634-1637.

1650.—Treaty with the Dutch of New Netherlands. See NEW YORK: 1650.

1687.—Hiding of the charter. See CONNECTICUT: 1685-1687.

1880-1920.—Manufactures. See CONNECTICUT: 1880-1920.

**HARTFORD CONVENTION**, political assembly of the New England Federalists. See U.S.A.: 1814 (December).

**HARTHACNUT**. See **HARDICANUTE**.

**HARTLEPOOL**, seaport in northeastern England. On December 16, 1914, it was bombarded by German cruisers and hundreds of civilians were killed and wounded.

**HARTLIB**, Samuel (c. 1500-c. 1670), English social reformer, of German birth. See SCIENCE: Modern: 17th century.

**HARTMANNWEILERKOPF**, hill in Alsace about twelve miles northwest of Mulhouse. During the World War it was the scene of severe fighting between the French and Germans and frequently changed hands. See WORLD WAR: 1915: II. Western front: a, 3.

**HARTOG**, Dirk (fl. 1611), Dutch navigator. See AUSTRALIA: 1601-1800.

**HARUN AL-RASHID** (c. 763-809), caliph of Bagdad. Belonged to the Abbasside family; patron of learning and the arts. See BARMECIDES; PRINTING AND THE PRESS: Before 14th century.

**HARUSPICES**.—"The haruspices, nearly related to the augures, were of Etruscan origin. Under the [Roman] Republic they were consulted only in a few individual cases; under the emperors they gained more importance, remaining, however, inferior to the other priestly colleges. They also expounded and procured lightnings and 'prodigies,' and moreover examined the intestines of sacrificed animals. . . . Heart, liver and lungs were carefully examined, every anomaly being explained in a favourable or unfavourable sense."—E. Guhl and W. Koner, *Life of the Greeks and Romans*, sect. 103.

**HARVARD, John** (1607-1638), Puritan minister, of English parentage, and principal founder of Harvard college. Studied theology at Emmanuel college, Cambridge, England; assistant pastor of the First Church, Charleston, Massachusetts, 1637; bequeathed to the "Wilderness seminary" half his estate, \$3,700, and his library of 320 books. See UNIVERSITIES AND COLLEGES: 1636; GIFTS AND BEQUESTS.

**HARVARD UNIVERSITY: Founding**. See UNIVERSITIES AND COLLEGES: 1636.

**Library**. See LIBRARIES: Modern: United States: University libraries.

**HARVEY, George** (1864- ), American editor and diplomat. Appointed United States ambassador to Great Britain, 1921. See U.S.A.: 1921 (May).

**HARVEY, Hayward Augustus** (1824-1893), American manufacturer. See WARSHIPS: 1861-1892.

**HARVEY, Sir John** (1778-1852), British soldier and governor of New Brunswick. See AROSTOOK WAR.

**HARVEY, William** (1578-1657), English physician. Discovered circulation of blood. See MEDICAL SCIENCE: Modern: 17th century: Harvey, etc.; SCIENCE: Middle Ages and the Renaissance: 16th century; EUROPE: Modern: Revolutionary period.

**HASA**, division of Arabia. See ARABIA: Political divisions; Map.

**HASDRUBAL** (d. 221 B.C.), Carthaginian statesman and son-in-law of Hamilcar Barca. Carried on a campaign in Spain, where he retained control of the country. See CARTAGENA: B.C. 209-221.

**HASDRUBAL** (d. 207 B.C.), Carthaginian soldier, son of Hamilcar Barca, and brother of Hannibal. He took part in the Second Punic War in Italy, and fought against Scipio in Spain, 212 B.C. See PUNIC WARS: Second; ROME: Republic: B.C. 218-202.

**HASMONEANS**, or **Asmoneans**, name of Maccabees. See JEWS: B.C. 166-40.

**HASSAN SABBAH** (1056-1124), chief of Ishmaelites, founder of Assassins. See ASSASSINS.

**HASSIDIN**, sect of Jewish mystics which rose during the seventeenth century in Podolia, Wallachia, Moldavia, Hungary, and neighboring regions.—H. H. Milman, *History of the Jews*, v, 3, bk. 28.

**HASTATI**, youngest troops in the Roman legion. See LEGION, ROMAN.

**HASTENBACK**, Battle of. See GERMANY: 1757 (July-December).

**HASTINGS, Francis Rawdon**, 1st Marquess of (1754-1826), British soldier and governor-general of India. Served in American Revolution, 1775-1782; governor-general of India, 1813-1823; governor of Malta, 1824-1826. See INDIA: 1805-1816; 1816-1819.

**HASTINGS, Warren** (1732-1818), first governor-general of British India. Upon his return to England, he was impeached for "high crimes and misdemeanors," but ultimately acquitted.—See also INDIA: 1757-1772; 1773-1785; 1780-1783; 1785-1795.

**HASTINGS, England**, one of the cinque ports. See CINQUE PORTS.

**HASTINGS, or Senlac**, Battle of. See ENGLAND: 1066: Norman invasion.

**HASUUR**, town in Great Namaqua Land, southwestern Africa, held by the English during the World War. See WORLD WAR: 1915: VIII. Africa: a, 1.

**HATAMOTOS**, powerful class in Japan during shogunate. See JAPAN: 1540-1605.

**HATCH ACT** (1887). See EDUCATION, AGRICULTURAL: United States.

**HATFIELD CHASE**, vast swamp in the West Riding of Yorkshire, England, 180,000 acres in extent, which was sold by the crown in the reign of Charles I to a Hollander who drained and reclaimed it. It had been a forest in early times and was the scene of a great battle between Penda, king of Mercia, and Edwin of Northumberland.—J. C. Brown, *Forests of England*, pt. 1, ch. 2, sect. 2.

**HATRA**.—"Hatra [in central Mesopotamia] became known as a place of importance in the early part of the second century after Christ. It successfully resisted Trajan in 116, and Severus in 198. It is then described as a large and populous city, defended by strong and extensive walls, and containing within it a temple of the Sun, celebrated for the great value of its offerings. It enjoyed its own kings at this time, who were regarded as of Arabian stock, and were among the more important of the Parthian tributary monarchs. By the year 363 Hatra had gone to ruin, and is then described as 'long since deserted.' Its flourishing period thus belongs to the space between 100 and 300. [The ruins of Hatra, now called El-Hadhr, were] visited by Mr. Layard in 1846, and described at length by Mr. Ross in the ninth volume of the 'Journal of the Royal Geographical Society,' as well as by Mr. Fergusson,

in his 'History of Architecture.'—G. Rawlinson, *Sixth great oriental monarchy*, ch. 22.

**HATS AND CAPS, Parties of.** See SWEDEN: 1720-1792.

**HATSEPSUT**, or *Hatasu*, queen of Egypt of the eighteenth dynasty. Daughter of Thothmes I and Mother of Thothmes III, during whose reign she exercised great power. See EGYPT: B.C. c. 1700-1400.

**HATTERAS EXPEDITION.** See U. S. A.: 1861 (August: North Carolina).

**HATTERS' BOYCOTT** (1897). See BOYCOTT: 1897-1920.

**HATTI SHERIFF OF GÜLHANÉ**, or *The Tanzimat*, decree of Sultan Abdul Medjid. See TURKEY: 1839.

**HATTIN, Battle of** (1187). See CRUSADES: Military aspect of the Crusades.

**HAUENSTEIN LEAGUE.** See FEDERAL GOVERNMENT: Medieval leagues in Germany.

**HAUGWITZ, Christian August Heinrich Kurt**, Count von, Freiherr von Krappitz (1752-1831), Prussian statesman. See GERMANY: 1806 (January-August).

**HAUPTMANN, Gerhart** (1862- ), German dramatist. See DRAMA: 1871-1921; GERMAN LITERATURE: 1900-1922; NOBEL PRIZES: Literature: 1912.

**HAUSEN, Max Clemens Lothar, Baron von** (1846-1922), German general. In the World War he commanded one of the armies which in 1914 invaded France. It was his army that was broken by Foch, September 9, 1914, in the battle of the Marne. See WORLD WAR: 1914: I. Western front: g, 2; i; p, 4; p, 7.

**HAUTMONT**, village in France, south of Mons, seized by Germans in 1914, and re-taken by the British in the World War. See WORLD WAR: 1918: II. Western front: w, 2.

**HAUT-RHIN**, department of France. See FRANCE: 1915 (January).

**HAÜY, Valentin** (1746-1822), French teacher of the blind. See EDUCATION: Modern developments: 20th century: Education for the deaf, etc.: Blind.

**HAVANA**, capital of Cuba and the commercial center of the West Indies, is located on the western side of Havana harbor on the northern coast of the island. It was founded by Diego Valesquez, on an unhealthy site near the present Batabano (see CUBA: 1514-1762), but was removed to its present location, 1519. It was burned by buccaneers, 1528; sacked by another band, 1555; again despoiled, 1563; and unsuccessfully attacked by Drake, 1585, after which Philip II ordered the building of forts El Morro and La Punta, 1580. It was captured by the English, 1762, but was restored to Spain the next year, in exchange for the Floridas (see CUBA: 1762-1763; LOUISIANA: 1762-1766; SPAIN: 1761-1763). Partly burned, 1802, it was rebuilt into a modern city of brick and stone. The United States battleship *Maine* was blown up in the harbor, February 5, 1898 (see U. S. A.: 1808 [February-March]), following which the harbor was blockaded by the American fleet, and the city administered by American forces until 1902, and again from 1906 to 1909. Since that time the city has been rapidly modernized by the latest scientific improvements. In 1921 port conditions were bettered and plans made for a subway. H. Upmann and Co., a German bank in Havana, suspended payments May 1, 1922, with liabilities of \$9,111,000 and assets of \$12,110,000. Charges were made of fraud and bribery in connection with alleged efforts to recover securities seized by the United States during the World War

as alien property, which were returned to them in March, 1920. Estimated population, 1919, about 363,506.

**HAVELBERG, Capture of** (1635). See GERMANY: 1634-1639.

**HAVELOCK, Sir Henry** (1795-1857), British soldier. Figured in the relief of Lucknow in the Sepoy rebellion in 1857. See INDIA: 1857-1858.

**HAVEMEYER, Henry Osborne** (1847-1907), American manufacturer. See TRUSTS: United States: Sugar trust.

**HAVRE**, fortified seaport of northwestern France on the northern bank of the Seine. Havre owes its origin to Louis XII, who built the foundations in 1509. Francis I, recognizing the maritime importance of the situation, ordered the construction of docks for the use of the royal navy and bestowed upon the town, under the name Ville-Françoise, valuable privileges. The name Havre originated from Havre-de-Grâce, an ancient chapel in the neighborhood.

1563-1564.—Occupation by the English.—Siege and recovery by the French. See FRANCE: 1563-1564.

20th century.—Increased importance during World War.—“Sixty per cent of the tonnage of the port in 1913 was in regular lines, especially of passenger ships. The war altered this decidedly. Regular lines almost disappeared, giving place to a great English base, a Belgian base and to services of the national food-supply. The commercial rôle, still important for certain commodities, notably cotton and coffee, seemed however to be effaced by the enormous transit of Allied troops, munitions, provisions for the armies and for the civil population, arriving by full cargo and re-shipped by rail and by water. In 1916 the tonnage of the entering ships, which was 5,405,500 tons in 1913, rose to 8,741,243, and the importations of merchandise passed from 3,003,566 tons to 5,981,000.”—L. Fontain, *Le port du Havre*, pp. 7-8.—From August, 1914, to November, 1918, Havre was the seat of the Belgian government. During the war it was an important port of debarkation and supply base for the British and for the many thousands of Americans who went to France via England. Two so-called “rest camps” were located here.

1915.—Bombed by Germans. See WORLD WAR: 1915: X. War in the air.

**HAVRINCOURT**, town in France, ten miles southwest of Cambrai, scene of fighting in the World War. See WORLD WAR: 1918: c, 6; g, 3; 1, 3.

**HAWAIIAN ISLANDS: Geographical description.**—Area.—Population.—The Hawaiian islands at the “crossroads” of the north Pacific form the most northeasterly group of Polynesia, or the division of Oceania lying between North America and the Fiji islands. From Honolulu, the capital, the distance to San Francisco is about 2,067 miles. The group, which consists of eight inhabited and twelve uninhabited islands, lies just below the tropic of Cancer and extends over more than 380 miles. All of the islands are of volcanic origin built up by eruptive process from a base about 15,000 feet below the sea, to a maximum height (Mauna Kea) on the largest island (Hawaii) of 13,805 feet above the sea. The physical features vary tremendously: mountain peaks clad in perpetual snow, deep valleys, arid plains, and deep forests. The total area of the islands is about 6,449 square miles. The principal islands are Hawaii, 4,015; Maui, 728; Oahu, 598; Kauai, 547; Molokai, 261; Lanai, 139; Niihau, 97; and Kahoolawe, 69. The estimated population, 1920,

was 255,912, divided among races and nationalities as follows: Hawaiians, 22,000; part-Hawaiians, 16,900; Chinese, 22,600; Japanese, 113,500; Portuguese, 24,800; Filipinos, 23,400; Porto Ricans, 5,300; Spanish, 1,000; Korean, 5,200; American, British, German, and Russian about 25,600.

ALSO IN: W. T. Brigham, *Volcanoes of Kilauea and Mauna Loa*.—C. W. Baldwin, *Geography of the Hawaiian Islands*.—W. R. Castle, Jr., *Hawaii, past and present*.

**Resources.—Education.**—The soil of the Hawaiian islands is very fertile and productive, and the climatic conditions highly favorable for agricultural activities; but owing to the distance from the world's markets, and the tariffs, only a few products have been raised on a sufficient scale to export in considerable quantities—chief among these are sugar and pineapples. The yield of cane sugar per acre is the greatest in the world. The development of the sugar industry on a large scale dates from 1875, when the Reciprocity Treaty established practically free trade between the islands and the United States. Of the exports, 1920, raw sugar represented \$154,550,205; and canned pineapples \$29,176,104. "The conditions existent in the islands seem highly favorable for the production of henequen, or sisal, and extensive plantations are in operation. An obstacle to its ready and profitable sale in the United States appears in freight charges that are heavy in comparison with the transportation of the product of Yucatan. A good grade of tobacco is produced on a relatively considerable acreage and there is a tendency toward a material increase in plantings. Some of the crop is manufactured for domestic consumption and some is shipped abroad. . . . Experiments are being made with rubber on a fairly extensive scale and the prospects are regarded as highly promising. If insect pests can be successfully combated, there seems no reason why the islands should not be a source of supply for cotton of excellent quality. Sea-island cotton is reported as having given most encouraging results in a number of localities, yielding a heavier crop than is obtained in the Charleston (S. C.) district, but the Caravonica variety has thus far proved the most satisfactory of the various kinds that have been tried. From this, yields ranging from 400 to 700 pounds an acre have been obtained. The success of the industry depends upon the discovery of the variety best suited to the local conditions, upon the care taken in cultivation, and upon the eradication of the several insect pests whose activities at present make the industry somewhat precarious. The various experiments now on trial give promise of a successful issue and of the establishment of a reasonably profitable cotton industry."—A. G. Robinson, *Commerce and industry of Alaska, Hawaii, Porto Rico and Philippine islands*, pp. 38-40.—The forest reserves in the territory number 47, aggregating 817,114 acres, and other reserves are contemplated. There are no important mineral resources.

Elementary education is free, and English the language in general use. In 1920 there were 174 public schools with an enrollment of 41,151 pupils, of this number 7,850 were Hawaiians, 5,251 Portuguese, 24,965 Asiatics, and 1,236 Anglo-Saxon. A child born on American soil is entitled to American citizenship, a law that makes possible in Hawaii a condition which careful observers regard with grave apprehension. In 1900 the Japanese pupils in the public schools numbered 1,352 and in 1909 they had increased to 6,415. Most of them are Hawaiian-born. The annual records show the Japanese birth-rate to be over

half the total in the islands, and this proportion has been steadily increasing. "The United States has for its solving a genuine enigma out in these islands. . . . It is not merely a matter of the Americanization of foreign-born residents speaking alien tongues. . . . It is that even more troublesome necessity of molding for citizenship the offspring of Mongolian peoples, themselves not admitted to naturalization under the Federal Constitution. It is this part of the Hawaiian population, moreover, which is most rapidly growing. . . . Here, clearly, is a puzzle of Oriental sort—and written in Japanese characters, one might say. This "Paradise of the Pacific" is today [1922] 44 per cent Japanese. They are far and away the largest single element among the heterogeneous inhabitants. Counting the Chinese, Koreans and Filipinos, Hawaii is 64 per cent Oriental. Now it is easily understandable that these foreigners should wish their children trained, partly at least, in the parents' tongues, and so automatically there grew up a system of foreign-language schools, conducted by teachers often unacquainted with English and usually out of sympathy with American ideals and institutions. However, this has been set right to a very considerable degree. Just a year ago there went into effect a law bringing all such institutions under the Territorial Department of Public Instruction, prohibiting their sessions preceding or during those of the regular schools, or for more than one hour a day. Most important of all, their teachers must now have permits from the department, and these are granted only on satisfactory evidence of a reasonable knowledge of democratic ideals and American history, accompanied by ability to use the English language. Even so, there are yet 200 schools of this sort in Hawaii, whose 500 teachers instruct close upon 23,000 pupils, though never for more than one hour daily."—*Christian Science Monitor*, Aug. 2, 1922.—In July, 1922, the joint committee on the revision of text books and courses of study in the Japanese language schools recommended the reduction of the course of study for elementary Japanese schools, from eight to six years. The territorial school department officially approved the recommendation. "In recommending that the course of study for Japanese language schools be planned for six instead of eight years, thereby eliminating the first and second grades and the kindergartens, the joint committee had in mind not only the greater Americanization of the foreign schools but a desire to give to each child of Japanese parentage a thorough background in the English language and in American customs and ideals before the time came for him to enter a language school to acquaint himself with the tongue, the customs, the history and the literature of the homeland of his forebears. Those in charge of the Japanese language schools in Hawaii have voluntarily agreed to the proposed reduction in the length of the course of study."—*Christian Science Monitor*, Aug. 15, 1922.

**Anthropology of the islands.**—Fusion of the races: Hawaiian, Caucasian, Chinese, Portuguese, and Japanese.—The culture which early

discoverers found in Hawaii was typical of Polynesian civilization. The migrations of the Polynesians through all the islands of the Pacific have caused a tremendous amount of speculation and through cultural evidences some of their journeyings have been traced, but all are as yet but tentative. Fornander in his book, "The Polynesian Race," endeavors to prove that the Polynesians previously inhabited the Asiatic Archipelago and perhaps even lands beyond. His evidence is principally of a geographical nature; he claims that naming new places of habitation after old abodes is a deep rooted trait in human nature and through linguistic resemblances of place names he maps out courses of emigration. As far as we know at present the Hawaiians (often called Kanakas from the Hawaiian word Kanaka which means man) settled on the islands in the 10th century, probably having come from Samoa, Tahiti and the Marquesas islands. These people may not be assigned directly with the white, negroid or Mongoloid race and have often been called the Malayo-Polynesian type. (They speak a dialect of the Malayo-Polynesian group of languages.) In physical characteristics they are markedly different from their Melanesian neighbors although the further west one travels in Polynesia the more clearly the intermixture of the two types can be seen. The typical Polynesian has a reddish skin, dark brown or black hair, more often wavy than straight, a broad face and a prominent profile; large eyes, a flattened nose and fairly thick lips. Anthropological measurements show the Hawaiians to be a sub-brachycephalic type, that is, the average cephalic index (on the living) is about 82 while the cranial index of skulls is 79. This puts the type on the border line of the brachycephalic and mesocephalic. There is a difference in physique between the nobles and the common people especially in stature for both the men and women of the upper classes are remarkably tall, while the average stature of the common people is only medium height. This division in physical appearance is typical of the entire culture. "Fusion is in process in the mid-Pacific. In order to estimate it let us first examine the elements. The base is of course the native race. . . . Together with the inhabitants of New Zealand, the Marquesas, the Society, the Samoan, and other Pacific islands it makes up the Polynesian group. . . . Next chronologically among the fusing factors in Hawaii is the Caucasian. . . . Real acquaintance with the whites came when Cook discovered the islands for the modern world in 1778. . . . Hawaii has since 1778 felt the touch of libertinism, of Puritanism, and finally of modern, middle-class American ideals. . . . The Chinese in Hawaii may well debate the claim of the Caucasian to second place among the fusing elements. Chinese began to arrive before the middle of the [nineteenth] century, in response to the opportunities of the sandalwood trade. . . . A dozen other peoples are found in Hawaii in appreciable numbers. Of these the Portuguese alone promise to contribute in any considerable measure to the race mixture. They were imported as cheap plantation labor. . . . They intermarry with no great freedom, but since their group is relatively large their influence is bound to be felt. The Japanese stand at the other end of the scale. Separate, exclusive, and avoided by all, they almost never form unions with other peoples. Between these two extremes are sprinklings of various nationalities—small in extent, but nevertheless certain to leave their mark in a community where race lines are vague and the fusing process well under way. These include

Korean, Russian, Filipino, Spanish, Porto Rican negro. Moreover, the influences catalogued are by no means final. . . . The tragedy of the highly cultured negro finds a mild counterpart in the situation of the educated native of Hawaii in whose veins runs a mixture of white, Hawaiian, and Chinese blood. . . . Race amalgamation in Hawaii is more than an interesting and isolated movement. World-statesmen have for years been inquiring what is to happen when there transpires the real meeting of East and West. . . . The significant facts are that it has seemingly established itself in the community, and that it is to all appearances virile, capable, fertile, and charged with the excellences of parent races."—E. J. Reece, *Race mingling in Hawaii* (*American Journal of Sociology*, July, 1914).

**Ancient mythology.** See MYTHOLOGY: Oceanic: Polynesian myths.

**Social organization.—Taboo.**—"Polynesian romance reflects its own social world—a world based upon the fundamental conception of social rank. The family tie and the inherited rights and titles derived from it determine a man's place in the community. The families of chiefs claim these rights and titles from the gods who are their ancestors. They consist not only in land and property rights but in certain privileges in administering the affairs of a group, and in certain acknowledged forms of etiquette equivalent to the worship paid to a god. These rights are administered through a system of taboo. . . . The limits of this right are prescribed by grade. Before some chiefs the bystander must prostrate himself, others are too sacred to be touched. So, when a chief dedicates a part of his body to the deity, for an inferior it is taboo; any act of sacrilege will throw the chief into a fury of passion. In the same way tabooed food or property of any kind is held sacred and can not be touched by the inferior. To break a taboo is to challenge a contest of strength—that is, to declare war. As the basis of the taboo right lay in descent from the gods, lineage was of first importance in the social world. . . . For this reason women held a comparatively important position in the social framework, and this place is reflected in the folk tales. Many Polynesian romances are, like the *Laiwikawai*, centered about the heroine of the tale. . . . The taboo means that he [the chief] can command, at the community expense, the best of the food supply, the most splendid ornaments, equipment, and clothing. He is further able, again at the community expense, to keep dependent upon himself, because fed at his table, a large following, all held in duty bound to carry out his will. Even the land was, in Hawaii and other Polynesian communities, under the control of the chief, to be redistributed whenever a new chief came into power. The taboo system thus became the means for economic distribution, . . . [and] constituted as powerful an instrument for the control of the labor and wealth of a community and the consequent enjoyment of personal ease and luxury as was ever put into the hands of an organized upper class."—M. W. Beckwith, *Hawaiian romance*, pp. 308-310.

**Discovery and early history.—Recognition as an independent state, 1842-1843.—Constitutions of 1852 and 1864.—Reciprocity Treaty with the United States, 1875; renewed, 1887.—Deposition of Queen Liliuokalani, 1893.—Blount's report.—Annexation refused by Cleveland.—Failure of**

the Treaty of 1897.—“Gaetano discovered one of the Sandwich [Hawaiian] Islands in 1542; and, following him, Quiros found Tahiti and the New Hebrides. Sea voyages in the Pacific multiplied, but that sea long continued the exclusive theatre of the enterprises of the Spaniards and Portuguese. . . . Native traditions refer to the arrival of strangers a long time before Cook's appearance. In the seventeenth century Spanish merchantmen were crossing the Pacific, and might have refreshed at these islands. The buccaneers, too, may have found the small harbour a convenient place of concealment.”—M. Hopkins, *Hawaii: Past, present and future of the island kingdom*, pp. 83, 87.—“It is about a century since His Majesty's ships ‘Resolution’ and ‘Adventure,’ Captains Cook and Clerke, turned back from Behring Strait after an unsuccessful attempt to discover the North-West Passage. But the adventurers were destined to light upon fairer lands than those which they had failed to find. On the 18th of January, 1778, whilst sailing through the Pacific, the look-out man reported land ahead, and in the evening they anchored on the shores of that lovely group of twelve islands, which they named in honour of the then First Lord of the Admiralty—Lord Sandwich—better known to the satirists of his day as ‘Jemmy Tickler,’ one of the greatest of statesmen and most abandoned of men. The natives received the strangers gladly; but on the 14th of February, 1779, in an altercation consequent on the theft of a boat, Captain Cook was killed in Kealakekua or Karakakoa Bay, in the Island of Hawaii, or Owhyhee, from which the official name of the country—the kingdom of Hawaii—takes its name.”—R. Brown, *Countries of the world*, v. 4, p. 22.—The several islands of the Hawaiian group were politically independent of each other and ruled by different chiefs at the time of Captain Cook's visit; but a few years later a chief named Kamehameha (1736-1810), of remarkable qualities and capabilities, succeeded to the sovereignty in the Island of Hawaii, and made himself master in time of the whole group. Dying in 1810, he left a consolidated kingdom to his son Liholiho, or Kamehameha II. Kamehameha II ruled from 1810 to 1824 and was succeeded by his younger brother (Kamehameha III). During the minority of these two kings, the country was governed by Kaahumanu, the widow of Kamehameha I. “Kaahumanu, or ‘Feather Mantle,’ was one of the three most notable native characters that Hawaii produced in its later history. . . . She followed the policy of her husband, Kamehameha I, quelling insubordination and rebellion, administering the government with discretion, and making the years of her rulership long to be remembered as a time of progress and prosperity. She ruled the Liliupian kingdom of Hawaii for thirteen years (1810-1832), choosing the best governors for the islands that could be found. She overcame rebellious chiefs, enacted useful laws, and finally . . . supplemented her bold step in abolishing idolatry by making the most of the advice of the missionaries by whom she was converted in 1824. In 1820 the first American missionaries, sent out by the American Board from Boston, Massachusetts, were received by the queen regent with haughty disdain. She reluctantly consented that they should stay a year; but she watched them and scrutinized all their actions. These pioneer teachers reached the island March 31, 1820. . . . The missionaries were Hiram Bingham and Asa Thurston, clergymen, and their wives; Thomas Holman, a physician; Samuel Whitney and Samuel Ruggles, teachers; Elisha Loomis, a printer, Daniel

Chamberlain, a farmer, and their wives. . . . In two years, the teachers had reduced the Hawaiian language to writing, and Mr. Loomis set up his printing press. . . . It was in the beginning of the year 1825 that this remarkable woman [Kaahumanu] took hold in earnest of the work of reforming her subjects in all the islands. She did not realize the task which she undertook with so much enthusiasm. A nation given to idolatry for centuries cannot be changed by a royal edict in a day or a generation. But by the queen regent's efforts education became general, until the people themselves, young and old, insisted on being taught.”—A. S. Twombly, *Hawaii and its people*, pp. 173-177, 203.—See also MISSIONS, CHRISTIAN: Islands of the Pacific.—“The first declaration of the creation of a law-making body is contained in a proclamation by the King [Kamehameha III] dated October 7, 1820. It named the King, regent and ten chiefs as entitled to sit in Council. . . . As the country grew in enlightenment a Bill of Rights, aptly called Hawaii's Magna Charta, was proclaimed, June 7, 1830. This was the forerunner of the First Constitution, . . . promulgated October 8, 1840, portions of which were incorporated into that document. This constitution did not create the House of Nobles; it merely continued the old council of chiefs, who were already Members of the Council, to sit in council with the King and premier, as heretofore, and provided that additional members were to be made so by law. Members of this Council were called Nobles, and as such were a degree higher in the rank of chiefs. Provision was also made for choosing annually ‘certain persons to sit in Council with the Nobles and establish laws.’ . . . While Representatives were thus provided for, the people did not seem to make much use of their privilege. . . . The Representatives are not mentioned in any way until April 28, 1842, . . . and later they are referred to from time to time up to the session of 1845, when their names are recorded for the first time. . . . During this period the Representatives had little or no influence and took but a minor part in legislation. This was doubtless partly due to their forming such a small minority, but probably the principal reason was their deference to the Nobles, all of whom ranked as Chiefs. . . . The Legislative journals began with the session of 1841, held at Lahaina, and the Council continued to meet there until the session of 1845, when, on April 2, it met for the first time at Honolulu, by which time it had become generally known as the Legislature, and its branches as the House of Nobles and the House of Representatives, respectively.”—R. C. Lydecker, *Roster legislatures of Hawaii, 1841-1918*, pp. 3-5.

After a series of controversies, between 1840 and 1841, with British subjects, on the question of leasing territory, the Hawaiian government took steps to obtain formal recognition of its rights as an independent state from the great powers. In 1842 the United States, by an official letter from Daniel Webster, then Secretary of State, “recognized the independence of the Hawaiian kingdom, and declared, ‘as the sense of the government of the United States, that the government of the Sandwich Islands ought to be respected; that no power ought to take possession of the islands, either as a conquest or for the purpose of colonization; and that no power ought to seek for any undue control over the existing government, or any exclusive privileges or preferences in matters of commerce.’ On the 28th of November, 1843, the two governments of France and

England united in a joint declaration to the effect that 'Her Majesty, the queen of the United Kingdom of Great Britain and Ireland, and His Majesty, the king of the French, taking into consideration the existence in the Sandwich Islands of a government capable of providing for the regularity of its relations with foreign nations, have thought it right to engage reciprocally to consider the Sandwich Islands as an independent state, and never to take possession, either directly or under the title of a protectorate, or under any other form, of any part of the territory of which they are composed.' . . . This was the final act by which the Hawaiian Kingdom was admitted within the pale of civilized nations."—W. D. Alexander, *Brief history of the Hawaiian people*, p. 253.—In 1848, Kamehameha III abolished the feudal system of land tenure or *mahele*. "By this *Mahele* (division of land) a portion of the soil was set apart to the king and his successors on the throne as their private property—the 'crown lands'; another portion to the government—the 'government lands'; another to the chiefs or land lords; and another—the *Kuleanas*—to those tenants who had occupied and cultivated them since 1830, the date of the Bill of Rights."—W. F. Blackman, *Making of Hawaii*, p. 158.

"As time passed it began to be felt that the people should be more fully represented, which feeling culminated in an Act passed July 30, 1850. . . . This Act increased the number of Representatives. . . . The Legislative Council to which these representatives were elected convened April 30, 1851, from which time the House of Representatives may be said to date its existence as a separate and influential branch of the legislature. . . . [In 1852 a new constitution was adopted.] . . . It will be noted that at the early sessions of the House of Nobles female chiefs were members of that body. . . . It will also be noted that Associate Justice Geo. M. Robertson held a seat in the House of Representatives, and was Speaker during the Sessions of 1855, 1856 and 1858-9, while at the same time occupying a seat on the Supreme Bench. . . . The right of the Judges to hold seats in the legislature was abolished by the Constitution of 1864. . . . From the time the Constitution of 1852 went into effect until that of 1887, the Nobles were appointed for life by the King. Previous to 1852 they were elected by the Nobles themselves, and under the Constitution of 1887 by the people. . . . [In 1864, however, King Kamehameha V had forced the adoption of a new constitution which reversed the bi-cameral arrangement of the legislature and restored a single chamber. The right to vote was modified by property and educational qualifications.] Under the Constitutions of 1852 and 1864 the Ministers held seats ex-officio, in the House of Nobles; under that of 1887 they held seats in the legislature. . . . Under the Constitution of the Republic, the Members of the President's Cabinet were ex-officio members of both Houses, with all the rights, powers and privileges of elected members, except that of voting. The Cabinet did not take part in the legislative proceedings to the same extent as that taken by the Ministers of the Crown. Their services in the Legislature were more in the nature of an advisory capacity and of furnishing information required."—R. C. Lydecker, *Roster legislatures of Hawaii, 1841-1918*, pp. 5-7.—With the death of Kamehameha V in 1872, his line ended. (In 1854, Kamehameha III had been succeeded by Alexander Liholiho. This prince, as Kamehameha IV, governed the islands from 1855 to 1863, and was in turn

succeeded by his brother Lot, Kamehameha V.) His successor, Lunalilo, was elected by the legislature, and the choice ratified by a popular vote. The reign of Lunalilo lasted but two years. His successor, David Kalakaua, was raised to the throne by election. (He aspired to what was called the "primacy of the Pacific.") In the year after his accession, Kalakaua visited the United States, and soon afterwards, in 1875, a treaty of reciprocity between the two countries was negotiated. "The triumph of his (David Kalakaua) reign was the securing of a treaty of commercial reciprocity by which Hawaiian sugar and a few other products were admitted free of duty into the United States. In return Hawaii, besides making a general remission of duties, gave to the United States the use of Pearl Harbor, as a coaling or naval station. This treaty assured the prosperity of the Islands and marked the definite establishment of the great industries."—W. R. Castle, Jr., *Hawaii, past and present*, p. 47.—In 1881 the King made a tour of the world. In the fall of 1890 he came to California for his health; in January, 1891, he died at San Francisco. His sister, Liliuokalani, widow of an American resident, succeeded him.

The reciprocity treaty of 1875 was renewed by the convention of 1887 and Pearl harbor was ceded to the United States. "The provisional cession by the Hawaiian government to the United States of Pearl Harbor, by the convention of 1887, was the first step which gave to the latter any rights territorial in the Islands. The importance of this can scarcely be overestimated. . . . Pearl Harbor is situated at a distance of seven miles from Honolulu, and in some respects is superior to the harbor of that city. . . . That the renewal of the treaty of reciprocity was ardently desired by President Cleveland is shown in a passage in his message to the forty-ninth Congress at the opening of its second session in December, 1886. . . . The treaty had scarcely been proclaimed when a note was handed to Secretary of State Bayard by the British ambassador at Washington, from Lord Salisbury, British prime minister. In this the attention of the United States government was called to the Franco-English compact of 1843, by which those two nations agreed never to take possession of the Hawaiian Islands, either directly or under the title of a protectorate, and suggesting a triple compact, in which the United States should join, guaranteeing the neutrality and equal accessibility of the Islands and their harbors to the ships of all nations without preference. . . . The British government saw in this cession an indication of a coming passage of the sovereignty of the Islands to the United States."—E. J. Carpenter, *America in Hawaii*, pp. 146-147, 151, 154-155.—In 1887 a new constitution had been adopted. "This new constitution was not framed by the king but by the people through their own appointed citizens and members of the courts. The legislative powers of the crown which had been abridged by the constitution of 1864 were now entirely removed and vested in the representatives of the people. By this the crown became an executive. In addition to this provision there was one making the ministry a responsible body and depriving the king of the right to nominate members of the house of nobles. . . . The legislature consists of a House of Nobles composed of twenty-four members, who are elected for a term of six years, and a House of Representatives consisting of from twenty-four to forty-two members elected for two years. The Houses sit in joint session. In addition to these public officers there is a cab-

inet composed of four ministers appointed by the sovereign holding executive power and who may be removed upon sufficient cause by the legislature. . . . On the 15th of January [1893] . . . Queen Liliuokalani made the attempt to promulgate a new constitution, obviously for the purpose of increasing her power in the government. . . . This new constitution, as framed by her, deprived foreigners of the right of franchise, abrogated the House of Nobles, and gave to the queen herself the power to appoint a new House. . . . The queen's own ministry were unsuccessful in their efforts to dissuade her from the attempt to put the new constitution into effect. The resolve was not to be shaken, however, and her determination to carry out her plan incited the people, chiefly the foreigners, to oppose the measure."—A. A. Black, *Hawaiian Islands (Charataquian, Apr., 1893)*.—The result was a bloodless revolution. The queen was declared deposed in the following proclamation in which the revolutionists gave a preliminary sketch of Hawaiian constitutional history from their point of view. They declared that during the reign of Kalahaua (1874-1891) "a change was discernible in the spirit animating the chief executive and in the influences surrounding the Throne. A steadily increasing disposition was manifested on the part of the King, to extend the Royal prerogatives; to favor adventurers and persons of no character or standing in the community; to encroach upon the rights and privileges of the people . . . in the interest of absolutism. This finally resulted in the revulsion of feeling and popular uprising of 1887, which wrested from the King a large portion of his ill-gotten powers. . . . Up to the time of his death, the history of the Government has been a continual struggle between the King on the one hand and the Cabinet and the Legislature on the other, the former constantly endeavoring by every available form of influence and evasion to ignore his promises and agreements and regain his lost powers. . . . Upon the accession of Her Majesty Liliuokalani [1891], for a brief period the hope prevailed that a new policy would be adopted. This hope was soon blasted by her immediately entering into conflict with the existing Cabinet, who held office with the approval of a large majority of the Legislature, resulting in the triumph of the Queen and the removal of the Cabinet. . . . In this belief, and also in the firm belief that the action hereby taken is, and will be for the best personal, political and property interests of every citizen of the land; We, citizens and residents of the Hawaiian Islands, organized and acting for the public safety and the common good, hereby proclaim as follows:

"1. The Hawaiian Monarchical system of Government is hereby abrogated.

"2. A Provisional Government for the control and management of public affairs and the protection of the public peace is hereby established, to exist until terms of union with the United States of America have been negotiated and agreed upon.

"3. Such Provisional Government shall consist of an Executive Council of Four Members, who are hereby declared to be S. B. Dole, J. A. King, P. C. Jones, W. O. Smith.' The Executive and Advisory Councils were named as the Legislative Power by a Proclamation of the Committee of Safety, issued January 17, 1893, and acted as such until May 22, 1895, on which date the last joint meeting was held."—R. C. Lydcker, *Roster legislatures of Hawaii, 1841-1918*, pp. 185-187, 180.

The provisional government set up by the revo-

lutionists was immediately recognized by the United States minister, John L. Stevens, and commissioners were sent to Washington to apply for the annexation of the islands to the United States. On February 16th, 1893, the president of the United States, Benjamin Harrison, sent a message to the Senate, submitting an annexation treaty and recommending its ratification. Meantime, at Honolulu, on February 6th, the United States minister, acting without instructions, had established a protectorate over the Hawaiian islands, in the name of the United States. On March 4th, a change in the presidency of the United States occurred, Grover Cleveland succeeding Benjamin Harrison. One of the earliest acts of President Cleveland was to send a message to the Senate, withdrawing the annexation treaty of his predecessor. A commissioner, James H. Blount, was then sent to the Hawaiian islands to examine and report upon the circumstances attending the change of government. On December 18th following, the report of Commissioner Blount was sent to Congress, with an accompanying message from the president, in which latter paper the facts set forth by the Commissioner, and the conclusions reached and action taken by the United States Government, were summarized partly as follows: "On Saturday, January 14, 1893, the Queen of Hawaii, who had been contemplating the proclamation of a new constitution, had, in deference to the wishes and remonstrances of her Cabinet, renounced it for the present at least. Taking this relinquished purpose as a basis of action, citizens of Honolulu, numbering from fifty to one hundred, mostly resident aliens, met in a private room and selected a so-called committee of safety composed of thirteen persons, nine of whom were foreign subjects, and composed of seven Americans, one Englishman, and one German. This committee, though its designs were not revealed, had in view nothing less than annexation to the United States, and between Saturday, the 14th, and the following Sunday, the 15th of January—though exactly what action was taken may never be revealed—they were certainly in communication with the United States minister. On Monday morning the Queen and her Cabinet made public proclamation, with a notice which was specially served upon the representatives of all foreign governments, that any changes in the constitution would be sought only in the methods provided by that instrument. Nevertheless, at the call and under the auspices of the committee of safety, a mass meeting of citizens was held on that day to protest against the Queen's alleged illegal and unlawful proceedings and purpose. Even at this meeting the committee of safety continued to disguise their real purpose and contented themselves with procuring the passage of a resolution denouncing the Queen and empowering the committee to devise ways and means 'to secure the permanent maintenance of law and order and the protection of life, liberty, and property in Hawaii.' This meeting adjourned between 3 and 4 o'clock in the afternoon. On the same day, and immediately after such adjournment, the committee, unwilling to take further steps without the co-operation of the United States Minister, addressed him a note representing that the public safety was menaced and that lives and property were in danger, and concluded as follows: 'We are unable to protect ourselves without aid, and therefore pray for the protection of the United States forces.' Whatever may be thought of the other contents of this note, the absolute truth of this latter statement is incontestable. When the note was written and delivered, the committee, so far as it appears, had neither

a man nor a gun at their command, and after its delivery they became so panic-stricken at their position that they sent some of their number to interview the Minister and request him not to land the United States forces till the next morning, but he replied the troops had been ordered and whether the committee were ready or not the landing should take place. And so it happened that on the 16th day of January, 1893, between 4 and 5 o'clock in the afternoon, a detachment of marines from the United States steamship Boston, with two pieces of artillery, landed at Honolulu. The men, upwards of one hundred and sixty in all, were supplied with double cartridge belts, filled with ammunition, and with haversacks and canteens, and were accompanied by a hospital corps with stretchers and medical supplies. This military demonstration upon the soil of Honolulu was of itself an act of war, unless made either with the consent of the Government of Hawaii or for the bona fide purpose of protecting the imperilled lives and prop-

QUEEN LILIUOKALANI

erty of the citizens of the United States. But there is no pretense of any such consent on the part of the Government of Hawaii, which at that time was undisputed, and was both the de facto and the de jure Government. In point of fact the Government, instead of requesting the presence of an armed force, protested against it. There is little basis for the pretense that such forces landed for the security of American life and property. . . . When these armed men were landed the city of Honolulu was in its customary orderly and peaceful condition. There was no symptom of riot or disturbance in any quarter. . . . Thus it appears that Hawaii was taken possession of by the United States forces without the consent or wish of the Government of the Islands, or anybody else so far as known, except the United States Minister. Therefore, the military occupation of Honolulu by the United States on the day mentioned was wholly without satisfaction, either as an occupation by consent or as an occupation necessitated by dangers threatening American life and property. It must be accounted for in some other way and on some other ground, and its real motive and purpose

are neither obscure nor far to seek. The United States forces being now on the scene and favorably stationed, the committee proceeded to carry out their original scheme. They met the next morning, Tuesday, the 17th, perfected the plan of temporary government and fixed upon its principal officers, who were drawn from 13 members of the committee of safety. Between 1 and 2 o'clock, by squads and by different routes to avoid notice, and having first taken the precaution of ascertaining whether there was anyone there to oppose them, they proceeded to the Government building to proclaim the new Government. No sign of opposition was manifest, and thereupon an American citizen began to read the proclamation from the steps of the Government Building almost entirely without auditors. The United States Minister, pursuant to prior agreement, recognized this Government within an hour after the reading of the proclamation, and before 5 o'clock, in answer to an inquiry on behalf of the Queen and her Cabinet, announced that he had done so. . . . As I apprehend the situation, we are brought face to face with the fact that the lawful government of Hawaii was overthrown without the drawing of a sword or the firing of a shot, by a process every step of which, it may safely be asserted, is directly traceable to and dependent for its success upon the agency of the United States acting through its diplomatic and naval representatives. . . . Believing, therefore, that the United States could not, under the circumstances disclosed, annex the islands without justly incurring the imputation of acquiring them by unjustifiable methods, I shall not again submit the treaty of annexation to the Senate for its consideration, and in the instructions to Minister Willis, a copy of which accompanies this message, I have directed him to so inform the Provisional Government. But in the present instance our duty does not, in my opinion, end with refusing to consummate this questionable transaction. . . . I mistake the American people if they favor the odious doctrine that there is no such thing as international morality; that there is one law for a strong nation and another for a weak one; and that even by indirection a strong power may, with impunity, despoil a weak one of its territory. . . . The Queen surrendered, not to the Provisional Government, but to the United States. She surrendered not absolutely and permanently, but temporarily and conditionally until such facts could be considered by the United States. . . . In view of the fact that both the Queen and the Provisional Government had at one time apparently acquiesced in a reference of the entire case to the United States Government, and considering the further fact that, in any event, the Provisional Government, by its own declared limitation, was only 'to exist until terms of union with the United States of America have been negotiated and agreed upon,' I hoped that after the assurance to the members of that Government that such union could not be consummated, I might compass a peaceful adjustment of the difficulty. Actuated by these desires and purposes, and not unmindful of the inherent perplexities of the situation nor limitations upon my part, I instructed Mr. Willis to advise the Queen and her supporters of my desire to aid in the restoration of the status existing before the lawless landing of the United States forces at Honolulu on the 17th of January last, if such restoration could be effected upon terms providing for clemency as well as justice to all parties concerned. The conditions suggested contemplated a general amnesty to those concerned in setting up the Pro-

Maps prepared specially for the NEW LARNED  
under direction of the editors and publishers.

visional Government and a recognition of all the bona fide acts and obligations. In short, they require that the past should be buried, and that the restored Government should reassume its authority as if its continuity had not been interrupted. These conditions have not proved acceptable to the Queen, and though she has been informed that they will be insisted upon, and that unless acceded to the effort of the President to aid in the restoration of her Government will cease, I have not thus far learned that she is willing to yield them her acquiescence." The refusal of the queen to consent to a general amnesty forbade further thought of her restoration; while the project of annexation to the United States was extinguished for the time by the just action of President Cleveland, sustained by the Senate.

Hawaii was consequently left to its own resources, and on July 4, 1864, was declared a republic by the insurgents. The government was organized with Sanford B. Dole as president, and the next year Queen Liliuokalani abdicated after an unsuccessful monarchist revolt. In 1897 the question of annexation was revived. The following year at the opening of the Hawaiian legislature, the acting president reviewed these facts as follows: "Exercising the authority conferred upon him by the Constitution and following the spirit of a Resolution passed at your last regular session, the president has, with the approval of the Cabinet, made a treaty of political union with the United States of America. Negotiations were opened early in the month of April, 1897, which resulted in the signing of the Treaty at Washington on the 16th day of June, following, by the plenipotentiaries of the two Governments; on behalf of the United States of America by the Hon. John Sherman, Secretary of State, and by Messrs. Francis M. Hatch, Lorrin A. Thurston and William A. Kinney, for the Republic of Hawaii. Having reviewed the action of our plenipotentiaries and finding that the Treaty contained in its several articles sufficient provisions for the benefit and protection of the Republic and desiring to ascertain the pleasure of the Senate in regard to its final ratification, the President called a special session of that body which assembled on the 8th day of September, 1897. After mature consideration of the Treaty, the Senate, by an unanimous vote, consented to its ratification on the 6th day of September. The Treaty was signed by the President two days later. The American copy of the Treaty was transmitted by President McKinley to the Senate of that country, on the 16th day of June, 1897, accompanied by a special message recommending its ratification."—R. C. Lydecker, *Roster Legislatures of Hawaii, 1841-1918*, p. 240.—With the treaty, President McKinley submitted a report from his secretary of state, Sherman, in which the latter said: "The negotiation which has culminated in the treaty now submitted has not been a mere resumption of the negotiation of 1893, but was initiated and has been conducted upon independent lines. . . . The temporary character of its [Hawaii's] first Government gave place to a permanent scheme under a constitution framed by the representatives of the electors of the Islands, administration by an executive council not chosen by suffrage, but self-appointed, was succeeded by an elective and parliamentary régime, and the ability of the new Government to hold—as the Republic of Hawaii—an independent place in the family of sovereign States, preserving order at home and fulfilling international obligations abroad, has been put to the proof. Recognized by the powers of the earth, sending and receiving envoys, enforcing respect for the law, and maintaining peace within its

island borders, Hawaii sends to the United States, not a commission representing a successful revolution, but the accredited plenipotentiary of a constituted and firmly established sovereign State. . . . The Republic of Hawaii approaches the United States as an equal, and points for its authority to that provision of article 32 of the constitution, promulgated July 24, 1864, whereby—"The President, with the approval of the cabinet, is hereby expressly authorized and empowered to make a treaty of political or commercial union between the Republic of Hawaii and the United States of America, subject to the ratification of the Senate." The essential articles of the treaty thus submitted were the following:

Article I. The Republic of Hawaii hereby cedes absolutely and without reserve to the United States of America all rights of sovereignty of whatsoever kind in and over the Hawaiian Islands and their dependencies; and it is agreed that all the territory of and appertaining to the Republic of Hawaii is hereby annexed to the United States of America under the name of the Territory of Hawaii.

Art. II. The Republic of Hawaii also cedes and hereby transfers to the United States the absolute fee and ownership of all public, government or crown lands, public buildings or edifices, ports, harbors, military equipment and all other public property of every kind and description belonging to the Government of the Hawaiian Islands, together with every right and appurtenance thereunto appertaining. The existing laws of the United States relative to public lands shall not apply to such lands in the Hawaiian Islands; but the Congress of the United States shall enact special laws for their management and disposition. Provided: that all revenue from or proceeds of the same, except as regards such part thereof as may be used or occupied for the civil, military or naval purposes of the United States, or may be assigned for the use of the local government, shall be used solely for the benefit of the inhabitants of the Hawaiian Islands for educational and other public purposes.

Art. III. Until Congress shall provide for the government of such Islands all the civil, judicial and military powers exercised by the officers of the existing government in said Islands, shall be vested in such person or persons and shall be exercised in such manner as the President of the United States shall direct; and the President shall have power to remove said officers and fill the vacancies so occasioned. The existing treaties of the Hawaiian Islands with foreign nations shall forthwith cease and determine, being replaced by such treaties as may exist, or as may be hereafter concluded between the United States and such foreign nations. The municipal legislation of the Hawaiian Islands, not enacted for the fulfilment of the treaties so extinguished, and not inconsistent with this treaty nor contrary to the Constitution of the United States, nor to any existing treaty of the United States, shall remain in force until the Congress of the United States shall otherwise determine. Until legislation shall be enacted extending the United States customs laws and regulations to the Hawaiian Islands, the existing customs relations of the Hawaiian Islands with the United States and other countries shall remain unchanged.

Art. IV. The public debt of the Republic of Hawaii, lawfully existing at the date of the exchange of the ratifications of this Treaty, including the amounts due to depositors in the Hawaiian Postal Savings Bank, is hereby assumed by the Government of the United States; but the liability of the United States in this regard shall in

no case exceed \$4,000,000. So long, however, as the existing Government and the present commercial relations of the Hawaiian Islands are continued, as hereinbefore provided, said Government shall continue to pay the interest on said debt.

Art. v. There shall be no further immigration of Chinese into the Hawaiian Islands, except upon such conditions as are now or may hereafter be allowed by the laws of the United States, and no Chinese by reason of anything herein contained shall be allowed to enter the United States from the Hawaiian Islands.

Art. vi. The President shall appoint five commissioners, at least two of whom shall be residents of the Hawaiian Islands, who shall as soon as reasonably practicable, recommend to Congress such legislation concerning the Territory of Hawaii as they shall deem necessary or proper.

United States, 55th Congress, 1st Session, *Senate executive document E*.

1897-1898.—**Opposition in United States to annexation.**—Resolution providing for annexation passed (July 6, 1898).—**Text.**—A determined opposition to the renewed proposal of Hawaiian annexation was manifested at once, in Congress and by many expressions of public opinion at large. It condemned the measure on grounds of principle and policy alike. It denied the right of the existing government at Honolulu to represent the Hawaiian people in such disposal of their country. It denied the constitutional right of the government of the United States to annex territory in the circumstances and the manner proposed. It denied, too, the expected advantages, whether naval or commercial, that the annexation of the islands would give to the United States. A protest against the annexation came also from the deposed Hawaiian queen, Liliuokalani, and another from a party in the island which attempted to rally round the presumptive heirress to the overturned Hawaiian throne, the Princess Kaiulani. The government of Japan also entered a protest, apprehending some disturbance of rights which it had acquired for its emigrating subjects, by treaty with the Republic of Hawaii; but this protest was ultimately withdrawn. The array of opposition sufficed, however, to hold the question of annexation in abeyance for more than a year. No action was taken on the treaty during the special session of the Senate. When Congress assembled in December, 1897, President McKinley repeated his expressions in its favor, and the treaty was reported to the Senate, from the committee on foreign relations, early in the following year; but the two-thirds majority needed for its ratification could not be obtained. Attempts to accomplish the annexation by that method were given up in March, 1898, and the advocates of the acquisition determined to gain their end by the passage of a joint resolution of Congress, which required no more than a majority of each House. Over the question in this form the battle was fiercely fought, until June 15th in the House of Representatives and July 6th in the Senate, on which dates the following "joint resolution to provide for annexing the Hawaiian Islands to the United States" was passed. It was signed by the President the following day. "Whereas the Government of the Republic of Hawaii having, in due form, signified its consent, in the manner provided by its constitution, to cede absolutely and without reserve to the United States of America all rights of sovereignty of whatsoever kind in and over the Hawaiian Islands and their dependencies, and also to cede and transfer to the United States absolute fee and ownership of all public, Government, or

Crown lands, public buildings or edifices, ports, harbors, military equipment, and all other public property of every kind and description belonging to the Government of the Hawaiian Islands, together with every right and appurtenance thereunto appertaining: Therefore,

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That said cession is accepted, ratified, and confirmed, and that the said Hawaiian Islands and their dependencies be, and they are hereby, annexed as a part of the territory of the United States and are subject to the sovereign dominion thereof, and that all and singular the property and rights hereinbefore mentioned are vested in the United States of America. The existing laws of the United States relative to public lands shall not apply to such lands in the Hawaiian Islands; but the Congress of the United States shall enact special laws for their management and disposition: Provided, That all revenue from or proceeds of the same, except as regards such part thereof as may be used or occupied for the civil, military, or naval purposes of the United States, or may be assigned for the use of the local government, shall be used solely for the benefit of the inhabitants of the Hawaiian Islands for educational and other public purposes.

"Until Congress shall provide for the government of such islands all the civil, judicial, and military powers exercised by the officers of the existing government in said islands shall be vested in such person or persons and shall be exercised in such manner as the President of the United States shall direct; and the President shall have power to remove said officers and fill the vacancies so occasioned. The existing treaties of the Hawaiian Islands with foreign nations shall forthwith cease and determine, being replaced by such treaties as may exist, or as may be hereafter concluded, between the United States and such foreign nations. The municipal legislation of the Hawaiian Islands, not enacted for the fulfillment of the treaties so extinguished, and not inconsistent with this joint resolution nor contrary to the Constitution of the United States nor to any existing treaty of the United States, shall remain in force until the Congress of the United States shall otherwise determine. Until legislation shall be enacted extending the United States customs laws and regulations to the Hawaiian Islands the existing customs relations of the Hawaiian Islands with the United States and other countries shall remain unchanged. The public debt of the Republic of Hawaii, lawfully existing at the date of the passage of this joint resolution, including the amounts due to depositors in the Hawaiian Postal Savings Bank, is hereby assumed by the Government of the United States; but the liability of the United States in this regard shall in no case exceed four million dollars. So long, however, as the existing Government and the present commercial relations of the Hawaiian Islands are continued as hereinbefore provided said Government shall continue to pay the interest on said debt.

"There shall be no further immigration of Chinese into the Hawaiian Islands, except upon such conditions as are now or may hereafter be allowed by the laws of the United States; and no Chinese, by reason of anything herein contained, shall be allowed to enter the United States from the Hawaiian Islands.

"The President shall appoint five commissioners, at least two of whom shall be residents of the Hawaiian Islands, who shall, as soon as reasonably practicable, recommend to Congress such legis-

lation concerning the Hawaiian Islands as they shall deem necessary or proper.

"Sect. 2. That the commissioners hereinbefore provided for shall be appointed by the President, by and with the advice and consent of the Senate.

"Sect. 3. That the sum of one hundred thousand dollars, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, and to be immediately available, to be expended at the discretion of the President of the United States of America, for the purpose of carrying this joint resolution into effect."

There was no strict division of parties on the passage of the resolution; but only three Republicans in the House voted against it. Speaker Reed, who had strenuously opposed the measure, was absent. Two Republican senators voted against the resolution and three who opposed it were paired. A large majority of the Democrats in both Houses were in opposition. The policy advocated by the opponents of annexation was set forth in the following resolution, which they brought to a vote in the House, and which was defeated by 205 to 94: "1. That the United States will view as an act of hostility any attempt upon the part of any government of Europe or Asia to take or hold possession of the Hawaiian islands or to account upon any pretext or under any conditions sovereign authority therein. 2. That the United States hereby announces to the people of those islands and to the world the guarantee of the independence of the people of the Hawaiian islands and their firm determination to maintain the same."—See also PACIFIC OCEAN: 1800-1914; U. S. A.: Historical geography.

1898-1904.—Organization as territory.—Sanford B. Dole appointed governor.—Fundamental provisions of the act to provide a government.—Immediately upon the passage of the resolution of annexation, preparations were begun at Honolulu for the transfer of sovereignty to the United States, which was performed ceremoniously August 12. Meantime, the president had appointed, as commissioners to recommend legislation for the government of the islands, Messrs. Shelby M. Cullom, John T. Morgan, Robert R. Hitt, Sanford B. Dole, and Walter F. Frear. In the following November the Commission presented its report, with a draft of several bills embodying the recommended legislation. When the subject came into Congress, wide differences of opinion appeared on questions concerning the relations of the new possession to the United States and the form of government to be provided for it. As the consequence, more than a year passed before Congress reached action on the subject, and Hawaii was kept in suspense for that period, provisionally governed under the terms of the resolution of annexation. The Act which, at last, determined the status and the government of Hawaii, under the flag of the United States, became law by the president's signature on the 30th of April, 1900, and Sanford B. Dole, formerly president of the Republic of Hawaii, was appointed its governor and served until 1904. The fundamental provisions of the "Act to provide a government for the Territory of Hawaii" are the following:

Sect. 2. That the islands acquired by the United States of America under an Act of Congress entitled "Joint resolution to provide for annexing the Hawaiian Islands to the United States," approved July seventh, eighteen hundred and ninety-eight, shall be known as the Territory of Hawaii.

Sect. 3. That a Territorial government is hereby

established over the said Territory, with its capital at Honolulu, on the island of Oahu.

Sect. 4. That all persons who were citizens of the Republic of Hawaii on August twelfth, eighteen hundred and ninety-eight, are hereby declared to be citizens of the United States and citizens of the Territory of Hawaii. And all citizens of the United States resident in the Hawaiian Islands who were resident there on or since August twelfth, eighteen hundred and ninety-eight, and all the citizens of the United States who shall hereafter reside in the Territory of Hawaii for one year shall be citizens of the Territory of Hawaii.

Sect. 5. That the Constitution, and, except as herein otherwise provided, all the laws of the United States which are not locally inapplicable, shall have the same force and effect within the said Territory as elsewhere in the United States: Provided, that sections eighteen hundred and fifty and eighteen hundred and ninety of the Revised Statutes of the United States shall not apply to the Territory of Hawaii.

Sect. 6. That the laws of Hawaii not inconsistent with the Constitution or laws of the United States or the provisions of this Act shall continue in force, subject to repeal or amendment by the legislature of Hawaii or the Congress of the United States. . . .

Sect. 12. That the legislature of the Territory of Hawaii shall consist of two houses, styled, respectively, the senate and house of representatives, which shall organize and sit separately, except as otherwise herein provided. The two houses shall be styled "The legislature of the Territory of Hawaii." . . .

Sect. 17. That no person holding office in or under or by authority of the Government of the United States or of the Territory of Hawaii shall be eligible to election to the legislature, or to hold the position of a member of the same while holding said office. . . .

Sect. 55. That the legislative power of the Territory shall extend to all rightful subjects of legislation not inconsistent with the Constitution and laws of the United States locally applicable. . . .

Sect. 66. That the executive power of the government of the Territory of Hawaii shall be vested in a governor, who shall be appointed by the President, by and with the advice and consent of the Senate of the United States, and shall hold office for four years and until his successor shall be appointed and qualified, unless sooner removed by the President. He shall be not less than thirty-five years of age; shall be a citizen of the Territory of Hawaii; shall be commander in chief of the militia thereof; may grant pardons or reprieves for offences against the laws of the said Territory and reprieves for offences against the laws of the United States until the decision of the President is made known thereon. . . .

Sect. 68. That all the powers and duties which, by the laws of Hawaii, are conferred upon or required of the President or any minister of the Republic of Hawaii (acting alone or in connection with any other officer or person or body) or the cabinet or executive council, and not inconsistent with the Constitution or laws of the United States, are conferred upon and required of the governor of the Territory of Hawaii, unless otherwise provided. . . .

Sect. 80. That the President shall nominate and, by and with the advice and consent of the Senate, appoint the chief justice and justices of the supreme court, the judges of the circuit courts, who shall hold their respective offices for the term of four years, unless sooner removed by the President. . . .

SEC. 81. That the judicial power of the Territory shall be vested in one supreme court, circuit courts, and in such inferior courts as the legislature may from time to time establish. . . .

Sect. 85. That a Delegate to the House of Representatives of the United States, to serve during each Congress, shall be elected by the voters qualified to vote for members of the house of representatives of the legislature; such Delegate shall possess the qualifications necessary for membership of the senate of the legislature of Hawaii. . . . Every such Delegate shall have a seat in the House of Representatives, with the right of debate, but not of voting.

Sect. 86. That there shall be established in said Territory a district court to consist of one judge, who shall reside therein and be called the district judge. The President of the United States, by and with the advice and consent of the Senate of the United States, shall appoint a district judge, a district attorney, and a marshal of the United States for the said district, and said judge, attorney, and marshal shall hold office for six years unless sooner removed by the President. Said court shall have, in addition to the ordinary jurisdiction of district courts of the United States, jurisdiction of all cases cognizable in a circuit court of the United States, and shall proceed therein in the same manner as a circuit court. . . .

Sect. 88. That the Territory of Hawaii shall comprise a customs district of the United States, with ports of entry and delivery at Honolulu, Hilo, Mahukona, and Kahului.

See also TERRITORIES AND DEPENDENCIES OF THE UNITED STATES.

1900-1921.—Governors of the territory.—The governors of the territory between 1900 and 1921 were Sanford B. Dole, June 14, 1900, to November 23, 1903; George R. Carter, November 23, 1903, to August 15, 1907; Walter F. Frear, August 15, 1907, to November 20, 1913; Lucius E. Pinkham, November 20, 1913, to June 22, 1918; Charles J. McCarthy, June 22, 1918, to July 5, 1921; Wallace R. Farrington, July 5, 1921.

1909.—Bird reservation started by President Roosevelt. See HAWAIIAN ISLANDS RESERVATION.

1910.—Changes made in the "Organic Act of Hawaii."—On May 27, 1910, President Taft approved an amendment to the "Act to provide a government for the Territory of Hawaii," the Organic Act passed in 1900. This amendment made several very important changes, the most significant of which were connected with the land laws. "Experience demonstrated that there were, unfortunately, too many loopholes in the old laws, whereby corporations and aliens might obtain title to the lands, while the citizen still failed to cling to his acres as homesteading implies. Governor Frear and the native prince delegate to Congress, J. K. Kalaniana'ole, conferred over a bill designed to remove these faults. This bill, after being approved by the native legislature, was introduced into Congress by Kalaniana'ole. It shut off the speculator and corporation by providing that when a homestead patent is issued the land shall not be sold to any one who would own more than eighty acres with that particular homestead property. . . . Only citizens, or those eligible to become so, can take up homesteads, and the latter class must complete their citizenship before the patent is issued. [This excluded the Japanese since they are ineligible to citizenship.] The sale of public land to a corporation or alien is prohibited. The general details of the land laws are not changed, the idea being to offer the prospective settler, under a

special homestead agreement, a certain area of good arable land, the size being left to the discretion of the Commissioner of Public Lands. The area will, it is thought, vary from twenty-five to forty acres of the best land, but considerable latitude in this regard will prevail. As a general thing, a long residence is to be required. No one can take up more than eighty acres under any circumstances."—R. B. Kidd, *Hawaii's new homestead law* (*Harper's Weekly*, July 2, 1910).—Furthermore, the act settled questions which had arisen as to the applicability to Hawaii of various Federal laws; and it made clear the powers of the legislature in the matter of appropriations. The law on the disqualifications of judges was improved; land set aside for Federal purposes was restored to Hawaii; and the validity of the naturalization laws made by the circuit courts was settled, also the pay of certain executive, judicial and legislative officers was raised. The text, in part, is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section five . . . is hereby amended to read as follows: 'Sect. 5. That the Constitution, and, except as otherwise provided, all the laws of the United States, including laws carrying general appropriations, which are not locally inapplicable, shall have the same force and effect within the said Territory as elsewhere in the United States: *Provided*, That sections eighteen hundred and forty-one to eighteen hundred and ninety-one, inclusive, nineteen hundred and ten and nineteen hundred and twelve, of the Revised Statutes, and the amendments thereto, and an Act entitled "An Act to prohibit the passage of local or special laws in the Territories of the United States, to limit territorial indebtedness, and for other purposes," approved July thirtieth, eighteen hundred and eighty-six, and the amendments thereto, shall not apply to Hawaii.' . . .

"Sect. 3. That section fifty-two of said Act is hereby amended to read as follows: "Sect. 52. That appropriations, except as herein otherwise provided, shall be made by the legislature." . . .

"Sect. 6. That section eighty-four of said Act is hereby amended to read as follows: "Sect. 84. That no person shall sit as a judge or juror in any case in which his relative by affinity or by consanguinity within the third degree is interested, either as a plaintiff or defendant, or in the issue of which the said judge or juror has, either directly or through such relative, any pecuniary interest; nor shall any person sit as a judge in any case in which he has been of counsel or on an appeal from any decision or judgment rendered by him, and the legislature of the Territory may add other causes of disqualification to those herein enumerated."

"Sect. 7. That section ninety-one of said Act is hereby amended to read as follows: "Sect. 91. That, except as otherwise provided, the public property ceded and transferred to the United States by the Republic of Hawaii under the joint resolution of annexation, approved July seventh, eighteen hundred and ninety-eight, shall be and remain in the possession, use, and control of the government of the Territory of Hawaii, and shall be maintained, managed, and cared for by it, at its own expense, until otherwise provided for by Congress, or taken for the uses and purposes of the United States by direction of the President or of the governor of Hawaii. And any such public property so taken for the uses and purposes of the United States may be restored to its previous status by direction of the President; and the title to any such public property in the possession and use of the Territory

for the purposes of water, sewer, electric, and other public works, penal, charitable, scientific, and educational institutions, cemeteries, hospitals, parks, highways, wharves, landings, harbor improvements, public buildings, or other public purposes, or required for any such purposes, may be transferred to the Territory by direction of the President, and the title to any property so transferred to the Territory may thereafter be transferred to any city, county, or other political subdivision thereof by direction of the governor when thereunto authorized by the legislature." . . .

"Sect. 9. That section one hundred of said Act is hereby amended by adding thereto the following: "All records relating to naturalization, all declarations of intention to become citizens of the United States, and all certificates of naturalization filed, recorded, or issued prior to the taking effect of the naturalization Act of June twenty-ninth, nineteen hundred and six, in or from any circuit court of the Territory of Hawaii, shall for all purposes be deemed to be and to have been made, filed, recorded, or issued by a court with jurisdiction to naturalize aliens, but shall not be by this Act further validated or legalized."'"—*Statutes of the United States of America, 1909-1910, pt. 1, ch. 258.*

1910.—Law on leprosy.—As early as 1865 an act was passed providing for the forcible segregation of lepers in a colony. In 1910 this was modified in response to the claim of the natives that the old law was unjust and brutal. Thereafter, the natives were given a careful diagnosis and preliminary hospital treatment before final segregation was resorted to.

1911.—Creation of military district.—Pearl harbor dredging completed.—"On October 1, 1911, the District of Hawaii was constituted a geographical department in the Western Division, to be known as the Department of Hawaii, under the authority of General Orders 129, War Department, 1911. . . . [M. M. Macomb] assumed command of the department the same date."—*War Department, Annual Reports, 1912, v. 3, p. 83.*—"The isolation of the Hawaiian Islands makes them from the scientific, military and naval points of view, the ideal stronghold upon the seas. From the original plans, made soon after the Hawaiian Islands were annexed to the United States, two dry docks and the erection of a naval repair station [at Pearl Harbor were provided for]. . . . The world-renowned haven [Pearl Harbor] . . . contains from ten to twelve square miles of deep water and is absolutely calm in any weather. The difficulty of making it practicable lay in the bar at the entrance and in the crooked channel leading to the inner bay. The dredging of the bar was started in 1808 and completed in 1911, the channel straightened, and the . . . *California* [flagship of the Pacific fleet] steamed through the four-and-a-half mile passage into the wonderful bay. The dredging alone cost \$3,000,000, but today our entire navy can find safe anchorage here."—W. D. Boyce, *Hawaiian islands and Porto Rico, pp. 54-55.*

1914-1921.—American recreational facilities introduced. See RECREATION: 1914-1921: Recreational facilities, etc.

1916.—Creation of the Hawaiian National Park.—In 1916, Congress reserved as a national park, the active volcanoes Kilauea and Mauna Loa, on the island of Hawaii, and the great extinct crater, Haleakala, on the island of Maui, with their surrounding regions. This is the first national park to be created outside the boundaries of the United States mainland proper.

1917-1918.—Part played in World War.—The territory furnished 5,644 men or .15 per cent. of

the entire expeditionary forces. This made possible the release of the United States regulars. Eight German ships were interned in the harbor at Honolulu.

1919.—Conservation of resources.—In 1919, the government set aside over eight hundred thousand acres of land as a forest reserve. There are forty-seven of these in all and it is estimated they will be a permanent security for the water supply of the islands. In places where native forests were lacking, trees have been planted, especially the rapid growing and valuable eucalyptus.

Thrum, *Social and civic Hawaii (Hawaiian Annual, Honolulu, 1916)*.—C. London, *Our Hawaii—Preliminary catalogue of Hawaiiana—Centennial Book, 1820-1920*.—D. Logan, *All about Hawaii*.

HAWAIIAN ISLANDS RESERVATION.—"On February 3, 1909, President Roosevelt issued an Executive order to the effect that the islets and reefs, namely: 'Cure Island, Pearl and Hermes Reef, Lysianski or Pell Island, Laysan Island, Mary Reef, Dowsetts Reef, Gardiner Island, Two Brothers Reef, French Frigate Shoal, Necker Island, Frost Shoal, and Bird Island, situated in the Pacific Ocean at and near the extreme western extension of the Hawaiian Archipelago, . . . are hereby reserved and set apart . . . as a preserve and breeding ground for native birds. . . . This reservation to be known as the Hawaiian Islands Reservation.' [This reservation is composed of islands and reefs included in the leeward chain extending in a north-easterly direction from the main Hawaiian group.] . . . The purpose of the reservation was to insure for all time a refuge and breeding place for the numerous species of birds, chiefly sea fowl, that for ages past had made the islands their home during the whole or a part of each year. In the spring of 1909, however, a party of foreign plumage hunters landed on Laysan, the principal bird rookery of the reservation, and for several months made the slaughter of sea birds a business. Had they not been interrupted, they would probably have exterminated the entire colony of birds on this island and perhaps on others of the group. As it was, many thousands of sea birds were destroyed, especially albatrosses."—H. R. Dill, *United States government report on the Hawaiian bird reservation, 1919.*

HAWK, British cruiser sunk by German submarine. See WORLD WAR: 1914: IX. Naval operations: b.

HAWKE, Edward, Baron (1705-1781), British admiral. Upheld British supremacy at sea in numerous battles with French and Spanish fleets; rendered abortive the projected invasion of England by the French, 1759. See ENGLAND: 1759 (August-November).

HAWKER, Harry (1880-1921), British aviator. Attempted transatlantic flight. See AVIATION: Important flights since 1900: 1910 (May): Attempts to cross Atlantic; Hawker's attempted Atlantic flight.

HAWKEYE STATE. See IOWA: Geographical location.

HAWKINS, Alvin (1821-1905), governor of Tennessee, 1881-1883. See TENNESSEE: 1870-1884.

**HAWKINS**, or **Hawkins**, Sir John (1532-1595), British admiral and adventurer. Made three slave-trading voyages to the New World, 1562, 1564, 1567; treasurer and comptroller of the Royal Navy, 1573; served as rear-admiral against the Spanish Armada, 1588; accompanied Sir Francis Drake in an unsuccessful expedition to the West Indies, 1595. See AMERICA: 1562-1567; 1572-1580; BUCCANEERS: English buccanners; ENGLAND: 1588; Destruction of the Armada; FLORIDA: 1564-1565.

**HAWKSBEER**, Francis, the Elder (died c. 1712), English physicist and experimenter in electricity. See ELECTRICAL DISCOVERY: Early experiments.

**HAWKWOOD**, Sir John (d. 1394), English adventurer. Attained renown fighting in Italy in the 14th century as a condottiere. See ITALY: 1343-1393; VENICE: 1379-1381.

**HAWLEY**, Jesse, American journalist. His writings interested the people in the Erie canal project. See NEW YORK: 1817-1825.

**HAWLEY**, Joseph (1723-1788), American statesman. See U. S. A.: 1776 (June): Resolutions for independence.

**HAWTHORNE**, Nathaniel (1804-1864), American novelist. See AMERICAN LITERATURE: 1790-1860.

**HAY**, John (1838-1905), American statesman, journalist, and author. Assistant private secretary to President Lincoln during the Civil War; secretary of legation at Paris, 1864-1867; at Vienna, 1867-1868; at Madrid, 1868-1869; editorial writer, *New York Tribune*, 1870-1875; first assistant secretary of state, 1870-1881; editor, *Tribune*, 1881-1883; ambassador to Great Britain, 1897-1898; secretary of state, 1898-1905; author (with J. C. Nicolay) of a famous biography of Lincoln.

Voices President McKinley's views in favor of acquiring Philippine islands. See U. S. A.: 1898 (July-December).

**9th-13th centuries.**—Dominion of the Normans. See NORMANS: 8th-9th centuries: Island empire; 10th-13th centuries; SODOR AND MAN.

**1266.**—Cession to Scotland. See SCOTLAND: 1266.

**1346-1504.**—Lords of the Isles.—In 1346, the dominion of most of the Hebrides became consolidated under John, son of Ronald or Angus Oig, of Islay, and he assumed the title of "Lord of the Isles." The Lords of the Isles became substantially independent of the Scottish crown until the battle of Harlaw, in 1411 (see HARLAW, BATTLE OF). The lordship was extinguished in 1504 (see SCOTLAND: 1502-1504).—*Historical tales of the wars of Scotland*, pp. 65-72.

**HEBRON.**—In the settlement of the tribes of Israel, after the conquest of Canaan, Caleb, one

of the heroes of Judah, "took possession of the territory round the famous old city of Hebron, and thereby gained for his tribe a seat held sacred from Patriarchal times. . . . Beginning with Hebron, he acquired for himself a considerable territory, which even in David's time was named simply Caleb, and was distinguished from the rest of Judah as a peculiar district. . . . Hebron remained till after David's time celebrated as the main seat and central point of the entire tribe, around which it is evident that all the rest of Judah gradually clustered in good order."—H. Ewald, *History of Israel*, bk. 2, sect. 3, A.—"Hebron was a Hittite city, the centre of an ancient civilization, which to some extent had been inherited by the tribe of Judah. It was undoubtedly the capital of Judah, a city of the highest religious character full of recollections and traditions. It could boast of fine public buildings, good water, and a vast and well-kept pool. The unification of Israel had just been accomplished there. It was only natural that Hebron should become the capital of the new kingdom [of David]. . . . It is not easy to say what induced David to leave a city which had such ancient and evident claims for a hamlet like Jebus [Jerusalem], which did not yet belong to him. It is probable that he found Hebron too exclusively Judahite."—E. Renan, *History of the people of Israel*, bk. 2, ch. 18.—See also JEWS: Children of Israel in Egypt.

**HECANA, Kingdom of,** one of the small, short-lived kingdoms of the Angles in early England. Its territory was in modern Herefordshire.—W. Stubbs, *Constitutional history of England*, ch. 7, sect. 70.

**HECATÆUS OF MILETUS** (fl. 6th-5th centuries B.C.), Greek historian. See HISTORY: 16.

**HECATOMB.**—"Large sacrifices, where a great number of animals were slaughtered, [among the ancient Greeks] are called hecatombs."—G. F. Schömann, *Antiquity of Greece: The state*, p. 60.

**HECATOMBÆON, Battle of** (224 B.C.), fought by Cleomenes of Sparta with the forces of the Achæan League, over which he won a complete victory. The result was the calling in of Antigonus Doseon, king of Macedonia, to become the ally of the league, and to be aided by it in crushing the last independent political life of Peloponnesian Greece.—C. Thirlwall, *History of Greece*, ch. 62.

**HECATOMPEDON.** See PARTHENON: B.C. 445-431.

**HECATOMPYLOS,** chief city of Parthia proper, founded by Alexander the Great, and long remaining one of the capitals of the Parthian empire.

**HECKER, Friedrich Karl Franz** (1811-1881), German revolutionist. See SUFFRAGE, MANHOOD: Germany: 1840-1850.

**HECKER, Isaac Thomas** (1819-1888), American Catholic priest.

Discussion of his biography by Pope Leo. See PAPACY: 1899 (January).

**HEDWIG, or Hedviga, Poland.** See **JADWIGA.**

**HEERBAN.**—The "heerban" was a military system instituted by Charlemagne, which gave way to the feudal system under his successors. "The basis of the heerban system was the duty of every fighting man to answer directly the call of the king to arms. The freeman, not only of the Franks, but of all the subject peoples, owed military service to the king alone. This duty is insisted upon in the laws of Charlemagne with constant repetition. The summons (heerban) was issued at the spring meeting, and sent out by the counts or missi. The soldier was obliged to present himself at the given time, fully armed and equipped with all provision for the campaign, except fire, water, and fodder for the horses."—E. Emerton, *Introduction to the study of the Middle Ages*, ch. 14.

**HEERINGEN, Josias von (1850- ),** German general. See **WORLD WAR: 1914: I.** Western front: a; g, 2.

**HEFENFELD, Battle of (634),** battle fought at Bede Denisesburn near Hefenfeld, between Cadwallan, British king, and Oswald, brother of Eanfrith, king of Bernicia. At the time that Cadwallan invaded Northumbria and slew its ruler, the kingdom was divided into two states, that of Deira and Bernicia. By the battle of Hefenfeld in which Cadwallan was defeated and killed, Oswald avenged his brother's death and took possession of Northumbria.

Also in: T. R. Green, *Making of England*, p. 275.—Bede, *Ecclesiastical history*, bk. 3, ch. 1-2.

**HEGEL, Georg Wilhelm Friedrich (1770-1831),** German philosopher. Studied theology and philosophy at Tübingen, 1788-1793; held private tutorships in Switzerland and Frankfurt, 1794-1801; established himself at Jena, 1801, and received a professorship, 1805; called to professorship of philosophy in Heidelberg, 1816, and to Berlin, 1818. "Hegel builds on the foundations laid by Fichte and Schelling. He agrees with the former in insisting on a logical method,—indeed, he undertakes to put the world-view of his friend Schelling on a rational scientific basis,—with the latter, in identifying logic with ontology or metaphysics; with both in conceiving reality as a living developing process. For him, too, nature and mind or reason are one; only, he subordinates nature to reason. Indeed, for him, all being and reason are identical; the same process that is at work in reason, is present everywhere; hence, whatever is real is rational, and whatever is rational is real. There is, therefore, a logic in nature as well as in history, and the universe is at bottom a logical system. The Absolute, then, is not an undifferentiated absolute, 'in which all cows are black,' as Schelling had taught (according to Hegel), but reason itself. Nor is the Absolute so much a substance (Spinoza) as a subject, which means that it is life, process, evolution, as well as consciousness and knowledge. All motion and action, all life, are but an unconscious thinking; they follow the law of thought; hence, the more law there is in nature, the more rational is its activity. And, finally, the goal toward which the developing Absolute moves is self-consciousness; the meaning of the entire process lies in its highest development: in the realization of truth and goodness, in the realization of a mind that knows the meaning and purpose of the universe and identifies itself with the universal purpose. . . . The impetus which Hegel gave to the study of the history of philosophy and the history of religion produced a school of great historians

and philosophy (Trendelenberg, Ritter, Brandis, J. E. Erdmann, E. Zeller, Kuno Fischer, W. Windelband) and of religion (O. Pfleiderer). He likewise exercised a great influence on the philosophy of history, the study of jurisprudence, politics, and indeed on all the mental Sciences."—F. Thilly, *History of philosophy*, pp. 464, 463, 477.—Notable among his works are: "Encyclopedie der philosophischen Wissenschaften"; "Grundlinien der philosophie des Rechts."

**HELIAEA**.—Under Solon's constitution for the government of Athens, "a body of 6,000 citizens was every year created by lot to form a supreme court, called Heliaea, which was divided into several smaller ones, not limited to any precise number of persons. The qualifications required for this were the same with those which gave admission into the general assembly, except that the members of the former might not be under the age of thirty. It was, therefore, in fact, a select portion of the latter, in which the powers of the larger body were concentrated and exercised under a judicial form."—*C. Thirlwall, History of Greece, ch. 11.*—See also *DICASTERIA.*

**HELICON**. See *THESSALY.*

**HELIGOLAND**, small island in the North sea, situated fifty miles from the mouth of the Elbe. The natives are of Frisian origin, and the island in ancient times was known as Fosetisland, from the Frisian goddess Foseta. From the tenth to the thirteenth centuries it was an independent republic; from the fourteenth to the seventeenth centuries it was in possession of the dukes of Schleswig; in the eighteenth century it was captured and held by Denmark; in 1807 it was occupied by Great Britain; in 1814, officially ceded to Great Britain by Denmark; and in 1890 was ceded to Germany by England.—See also *BRITISH EMPIRE: Treaties promoting expansion: 1815; SWEDEN: 1813-1814; AFRICA: Modern European occupation: 1884-1899; GERMANY: 1890-1891.*

1910.—Building of sea-wall.—A few hundred years ago, Heligoland had five times its present

area. The sea was consuming it rapidly, until, in 1910, a sea wall was completed of steel, granite, and concrete. The island holds a commanding position over the entrance to the Kiel canal, and was heavily fortified by Germany.

1914.—Naval station in World War.—The island served as a fortified naval station. The first British naval victory of the war was won off its coast, August 28, 1914.

1920.—After-war status.—By the Treaty of Versailles, Germany retained Heligoland. However, it was stipulated that all fortifications and harbor works there should be destroyed by German labor and at Germany's expense, and that no similar works should be constructed in the future.—See also *VERSAILLES, TREATY OF: Part III: Section XIII.*

**HELIGOLAND BIGHT**, Battle of (1914). See *WORLD WAR: 1914: IX. Naval operations: c.*

**HELIOPOLIS**, ancient city of Egypt, modern Baalbek. See *BAALBEK; ON.*

641.—Conquest by Amru. See *CALIPHATE: 640-646.*

**HELIUM**, gaseous chemical element. See *CHEMISTRY: Radio-activity: Thorium.*

**HELLANICUS** (c. 496-c. 406 B. C.), Greek historian. See *HISTORY: 16.*

**HELLAS, HELLENES** (Graikoi or Greeks).—"To the Greek of the historical ages the idea of Hellas was not associated with any definite geographical limits. Wherever a Greek settlement existed, there for the colonists was Hellas. . . . Of a Hellas lying within certain specified bounds, and containing within it only Greek inhabitants, they knew nothing."—*G. W. Cox, History of Greece, bk. 1, ch. 1.*—"Their language was . . . from the beginning, the token of recognition among the Hellenes. . . . Where this language was spoken—in Asia, in Europe, or in Africa—there was Hellas. . . . A considerable number of the Greek tribes which immigrated by land [from Asia] into the European peninsula [of Greece] followed the tracks of the Italicans, and, taking a westward route through Pæonia and Macedonia, penetrated through Illyria into the western half of the Alpine country of Northern Greece, which the formation of its hill ranges and valleys renders more easily accessible from the north than Thessaly in its secluded hollow. The numerous rivers, abounding in water, which flow close by one another through long gorges into the Ionian Sea, here facilitated an advance into the south; and the rich pasture-land invited immigration; so that Epirus became the dwelling-place of a dense crowd of population, which commenced its civilized career in the fertile lowlands of the country. Among them three main tribes were marked out, of which the Chaones were regarded as the most ancient. . . . Farther to the south the Thesprotians had settled, and more inland, in the direction of Pindus, the Molossians. A more ancient appellation than those of this triple division is that of the Greeks (Graikoi), which the Hellenes thought the earliest designation of their ancestors. The same name of Graeci (Greeks) the Italicans applied to the whole family of peoples with whom they had once dwelt together in these districts. This is the first collective name of the Hellenic tribes in Europe. . . . Far away from the coast, in the seclusion of the hills, where lie closely together the springs of the Thyamis, Aous, Aracthus, and Achelous, extends at the base of Tomarus the lake Ioannina, on the thickly wooded banks of which, between fields of corn and damp meadows, lay Dodona, a chosen seat of the Pelasgian Zeus, the invisible God, who announced his presence in the rustling of the oaks, whose altar

was surrounded by a vast circle of tripods, for a sign that he was the first to unite the domestic hearths and civic communities into a great association centering in himself. This Dodona was the central seat of the Græci; it was a sacred center of the whole district before the Italicans commenced their westward journey; and at the same time the place where the subsequent national name of the Greeks can be first proved to have prevailed; for the chosen of the people, who administered the worship of Zeus, were called Selli or Helli, and after them the surrounding country Hellopia or Hellas.—E. Curtius, *History of Greece*, v. 1, bk. 1, ch. 1, 4.—See also *ACHÆA*; *BALKAN STATES*: 10th century; GREECE.

**HELLENISM**: Greek genius and culture.—Its influence.—“It was the privilege of the Greeks to discover the sovereign efficacy of reason. They entered on the pursuit of knowledge with a sure and joyous instinct. Baffled and puzzled they might be, but they never grew weary of the quest. The speculative faculty which reached its height in Plato and Aristotle, was, when we make due allowance for time and circumstance, scarcely less eminent in the Ionian philosophers; and it was Ionia that gave birth to an idea, which was foreign to the East, but has become the starting-point of modern science,—the idea that Nature works by fixed laws. A fragment of Euripides speaks of him as ‘happy who has learned to search into causes,’ who ‘discerns the deathless and ageless order of nature, whence it arose, the how and the why.’ The early poet-philosophers of Ionia gave the impulse which has carried the human intellect forward across the line which separates empirical from scientific knowledge; and the Greek precocity of mind in this direction, unlike that of the Orientals, had in it the promise of uninterrupted advance in the future,—of great discoveries in mathematics, geometry, experimental physics, in medicine also and physiology. . . . By the middle of the fifth century B.C. the general conception of law in the physical world was firmly established in the mind of Greek thinkers. Even the more obscure phenomena of disease were brought within the rule. Hippocrates writing about a malady which was common among the Scythians and was thought to be preternatural says: ‘As for me I think that these maladies are divine like all others, but that none is more divine or more human than another. Each has its natural principle and none exists without its natural cause.’ Again, the Greeks set themselves to discover a rational basis for conduct. Rigorously they brought their actions to the test of reason, and that not only by the mouth of philosophers, but through their poets, historians, and orators. Thinking and doing—clear thought and noble action—did not stand opposed to the Greek mind. The antithesis rather marks a period when the Hellenic spirit was past its prime, and had taken a one-sided bent. The Athenians of the Periclean age—in whom we must recognise the purest embodiment of Hellenism—

had in truth the peculiar power, which Thucydides claims for them, of thinking before they acted and of acting also. . . . To Greece . . . we owe the love of Science, the love of Art, the love of Freedom: not Science alone, Art alone, or Freedom alone, but these vitally correlated with one another and brought into organic union. And in this union we recognise the distinctive features of the West. The Greek genius is the European genius in its first and brightest bloom. From a vivifying contact with the Greek spirit Europe derived that new and mighty impulse which we call Progress. Strange it is to think that these Greeks, like the other members of the Indo-European family, probably had their cradle in the East; that behind Greek civilisation, Greek language, Greek mythology, there is that Eastern background to which the comparative sciences seem to point. But it is no more than a background. In spite of all resemblances, in spite of common customs, common words, common syntax, common gods, the spirit of the Greeks and of their Eastern kinsmen—the spirit of their civilisation, art, language, and mythology—remains essentially distinct. . . . From Greece came that first mighty impulse, whose far-off workings are felt by us to-day, and which has brought it about that progress has been accepted as the law and goal of human endeavour. Greece first took up the task of equipping man with all that fits him for civil life and promotes his secular wellbeing; of unfolding and expanding every in-born faculty and energy, bodily and mental; of striving restlessly after the perfection of the whole, and finding in this effort after an unattainable ideal that by which man becomes like to the gods. The life of the Hellenes, like that of their Epic hero Achilles, was brief and brilliant. But they have been endowed with the gift of renewing their youth. Renan, speaking of the nations that are fitted to play a part in universal history, says ‘that they must die first that the world may live through them’; that ‘a people must choose between the prolonged life, the tranquil and obscure destiny of one who lives for himself, and the troubled stormy career of one who lives for humanity. The nation which revolves within its breast social and religious problems is always weak politically. Thus it was with the Jews, who in order to make the religious conquest of the world must needs disappear as a nation.’ ‘They lost a material city, they opened the reign of the spiritual Jerusalem.’ So too it was with Greece. As a people she ceased to be. When her freedom was overthrown at Chaeronea, the page of her history was to all appearance closed. Yet from that moment she was to enter on a larger life and on universal empire. Already during the last days of her independence it had been possible to speak of a new Hellenism, which rested not on ties of blood but on spiritual kinship. This presentiment of Isocrates was marvellously realised. As Alexander passed conquering through Asia, he restored to the East, as garnered grain, that Greek civilisation whose seeds had long ago been received from the East. Each conqueror in turn, the Macedonian and the Roman, bowed before conquered Greece and learnt lessons at her feet. [See EUROPE: Ancient: Greek civilization.] To the modern world too Greece has been the great civiliser, the æumenical teacher, the disturber and regenerator of slumbering societies. She is the source of most of the quickening ideas which re-make nations and renovate literature and art. If we reckon up our secular possessions, the wealth and heritage of the past, the larger share may be traced back to Greece. One half of life she has made her

domain,—all, or well-nigh all, that belongs to the present order of things and to the visible world.”—S. H. Butcher, *Some aspects of the Greek genius*, pp. 9-43.—“The part assigned to [the Greeks] in the drama of the nations was to create forms of beauty, to unfold ideas which should remain operative when the short bloom of their own existence was over, and thus to give a new impulse, a new direction, to the whole current of human life. The prediction which Thucydides puts into the mouth of the Athenian orator has been fulfilled, though not in the sense literally conveyed: ‘Assuredly we shall not be without witnesses,’ says Pericles; ‘there are mighty documents of our power, which shall make us the wonder of this age, and of ages to come.’ He was thinking of those wide-spread settlements which attested the empire of Athens. But the immortal witnesses of his race are of another kind. Like the victims of the war, whose epitaph he was pronouncing, the Hellenes have their memorial in all lands, graven, not on stone, but in the hearts of mankind. . . . Are we not warranted by what we know of Greek work, imperfect though our knowledge is, in saying that no people has yet appeared in the world whose faculty for art, in the largest sense of the term, has been so comprehensive? And there is a further point that may be noted. It has been said that the man of genius sometimes is such in virtue of combining the temperament distinctive of his nation with some gift of his own which is foreign to that temperament; as in Shakespeare the basis is English, and the individual gift a flexibility of spirit which is not normally English. But we cannot apply this remark to the greatest of ancient Greek writers. They present certainly a wide range of individual differences. Yet so distinctive and so potent is the Hellenic nature that, if any two of such writers be compared, however wide the individual differences may be,—as between Aristophanes and Plato, or Pindar and Demosthenes,—such individual differences are less significant than those common characteristics of the Hellenic mind which separate both the men compared from all who are not Hellenes. If it were possible to trace the process by which the Hellenic race was originally separated from their Aryan kinsfolk, the physiological basis of their qualities might perhaps be traced in the mingling of different tribal ingredients. As it is, there is no clue to these secrets of nature’s alchemy: the Hellenes appear in the dawn of their history with that unique temperament already distinct: we can point only to one cause, and that a subordinate cause, which must have aided its development, namely, the geographical position of Greece. No people of the ancient world were so fortunately placed. Nowhere are the aspects of external nature more beautiful, more varied, more stimulating to the energies of body and mind. A climate which, within three parallels of latitude, nourishes the beeches of Pindus and the palms of the Cyclades; mountain-barriers which at once created a framework for the growth of local federations, and encouraged a sturdy spirit of freedom; coasts abounding in natural harbors; a sea dotted with islands, and notable for the regularity of its wind-currents; ready access alike to Asia and to the western Mediterranean,—these were circumstances happily congenial to the inborn faculties of the Greek race, and admirably fitted to expand them.”—R. C. Jebb, *Growth and influence of classical Greek poetry*, pp. 27-31.—“The sense of beauty which the Greeks possessed to a greater extent than any other people could not fail to be caught by the exceptionally beautiful

natural surroundings in which they lived; and their literature, at any rate their poetry, bears abundant testimony to the fact. Small though Greece is, it contains a greater variety, both in harmony and contrast, of natural beauty than most countries, however great. Its latitude gives it a southern climate, while its mountains allow of the growth of a vegetation found in more northern climes. Within a short space occur all the degrees of transition from snow-topped hills to vine-clad fountains. And the joy with which the beauty of their country filled the Greeks may be traced through all their poetry. . . . The two leading facts in the physical aspect of Greece are the sea and the mountains. As Europe is the most indented and has relatively the longest coast-line of all the continents of the world, so of all the countries of Europe the land of Greece is the most interpenetrated with arms of the sea. . . .

‘Two voices are there: one is of the Sea,  
One of the Mountains; each a mighty voice:  
In both from age to age thou didst rejoice;  
They were thy chosen music, Liberty!’

Both voices spoke impressively to Greece, and her literature echoes their tones. So long as Greece was free and the spirit of freedom animated the Greeks, so long their literature was creative and genius marked it. When liberty perished, literature declined. The field of Charonea was fatal alike to the political liberty and to the literature of Greece. The love of liberty was indeed pushed even to an extreme in Greece; and this also was due to the physical configuration of the country. Mountains, it has been said, divide; seas unite. The rise and the long continuance in so small a country of so many cities, having their own laws, constitution, separate history, and independent existence, can only be explained by the fact that in their early growth they were protected, each by the mountains which surrounded it, so effectually, and the love of liberty in this time was developed to such an extent, that no single city was able to establish its dominion over the others. . . . Every one of the numerous states, whose separate political existence was guaranteed by the mountains, was actually or potentially a separate centre of civilisation and of literature. In some one of these states each kind of literature could find the conditions appropriate or necessary to its development. Even a state which produced no men of literary genius itself might become the centre at which poets collected and encouraged the literature it could not produce, as was the case with Sparta, to which Greece owed the development of choral lyric. . . . The eastern basin of the Mediterranean has deserved well of literature, for it brought Greece into communication with her colonies on the islands and on the surrounding coasts, and enabled the numerous Greek cities to co-operate in the production of a rich and varied literature, instead of being confined each to a one-sided and incomplete development. The process of communication began in the earliest times, as is shown by the spread of epic literature. Originating in Ionia, it was taken up in Cyprus, where the epic called the Cypria was composed, and at the beginning of the sixth century it was on the coast of Africa in the colony of Cyrene. The rapid spread of elegiac poetry is even more strikingly illustrated, for we find Solon in Athens quoting from his contemporary Minnermus of Colophon. Choral lyric, which originated in Asia Minor, was conveyed to Sparta by Alcman, and by Simonides of Ceos all over the Greek world. But although

in early times we find as much interchange and reaction in the colonies amongst themselves as between the colonies and the mother-country, with the advance of time we find the centripetal tendency becoming dominant. The mother-country becomes more and more the centre to which all literature and art gravitates. At the beginning of the sixth century Sparta attracted poets from the colonies in Asia Minor, but the only form of literature which Sparta rewarded and encouraged was choral lyric. No such narrowness characterised Athens, and when she established herself as the intellectual capital of Greece, all men of genius received a welcome there, and we find all forms of literature deserting their native homes, even their native dialects, to come to Athens. . . . As long as literature had many centres, there was no danger of all falling by a single stroke; but when it was centralised in Athens, and the blow delivered by Philip at Chæronea had fallen on Athens, classical Greek literature perished in a generation. It is somewhat difficult to distinguish race-qualities from the characteristics impressed on a people by the conditions under which it lives, since the latter by accumulation and transmission from generation to generation eventually become race-qualities. Thus the Spartans possessed qualities common to them and the Dorians, of whom they were a branch, and also qualities peculiar to themselves, which distinguished them from other Dorians. . . . The ordinary life of a Spartan citizen was that of a soldier in camp or garrison, rather than that of a member of a political community, and this system of life was highly unfavourable to literature. . . . Other Dorians, not hemmed in by such unfavourable conditions as the Spartans, did provide some contributions to the literature of Greece, and in the nature of their contributions we may detect the qualities of the race. The Dorians in Sicily sowed the seeds of rhetoric and carried comedy to considerable perfection. Of imagination the race seems destitute: it did not produce poets. On the other hand, the race is eminently practical as well as prosaic, and their humour was of a nature which corresponded to these qualities. . . . The Æolians form a contrast both to the Spartans and to the Athenians. The development of individuality is as characteristic of the Æolians as its absence is of the Spartans. But the Æolians, first of all Greeks, possessed a cavalry, and this means that they were wealthy and aristocratic. . . . This gives us the distinction between the Æolians and the Athenians: among the former, individuality was developed in the aristocracy alone; among the latter, in all the citizens. The Æolians added to the crown of Greek literature one of the brightest of its jewels—lyric poetry, as we understand lyric in modern times, that is, the expression of the poet's feelings, on any subject whatever, as his individual feeling. . . . But it was the Ionians who rendered the greatest services to Greek literature. They were a quick-witted race, full of enterprise, full of resources. In them we see reflected the character of the sea, as in the Dorians the character of the mountains. The latter partook of the narrowness and exclusiveness of their own homes, hemmed in by mountains, and by them protected from the incursion of strangers and strange innovations. The Ionians, on the other hand, were open as the sea, and had as many moods. They were eminently susceptible to beauty in all its forms, to the charm of change and to novelty. They were ever ready to put any belief or institution to the test of discussion, and were governed

as much by ideas as by sentiments. Keeness of intellect, taste in all matters of literature and art, grace in expression, and measure in everything distinguished them above all Greeks. The development of epic poetry, the origin of prose, the cultivation of philosophy, are the proud distinction of the Ionian race. In Athens we have the qualities of the Ionian race in their finest flower."—F. B. Jevons, *History of Greek literature*, pp. 485-490.—See also GREEK LITERATURE: Development of philosophical literature; DRAMA: Origin; Greek comedy.

**Hellenism and the Jews.**—"The Jewish religion . . . was, in ancient times as well as in the Graeco-Roman period, surrounded on all sides by heathen districts. Only at Jamnia and Joppa had the Jewish element advanced as far as the sea. Elsewhere even to the west, it was not the sea, but the Gentile region of the Philistine and Phœnician cities, that formed the boundary of the Jewish. These heathen lands were far more deeply penetrated by Hellenism, than the country of the Jews. No reaction like the rising of the Maccabees had here put a stop to it, besides which heathen polytheism was adapted in quite a different manner from Judaism for blending with Hellenism. While therefore the further advance of Hellenism was obstructed by religious barriers in the interior of Palestine, it had attained here, as in all other districts since its triumphant entry under Alexander the Great, its natural preponderance over Oriental culture. Hence, long before the commencement of the Roman period, the educated world, especially in the great cities in the west and east of Palestine, was, we may well say, completely Hellenized. It is only with the lower strata of the populations and the dwellers in rural districts, that this must not be equally assumed. Besides however the border lands, the Jewish districts in the interior of Palestine were occupied by Hellenism, especially Scythopolis . . . and the town of Samaria, where Macedonian colonists had already been planted by Alexander the Great, . . . while the national Samaritans had their central point at Sichem. The victorious penetration of Hellenistic culture is most plainly and comprehensively shown by the religious worship. The native religions, especially in the Philistine and Phœnician cities, did indeed in many respects maintain themselves in their essential character; but still in such wise, that they were transformed by and blended with Greek elements. But besides these the purely Greek worship also gained an entrance, and in many places entirely supplanted the former. Unfortunately our sources of information do not furnish us the means of separating the Greek period proper from the Roman; the best are afforded by coins, and these for the most part belong to the Roman. On the whole however the picture, which we obtain, holds good for the pre-Roman period also, nor are we entirely without direct notices of this age. . . . In the Jewish region proper Hellenism was in its religious aspect triumphantly repulsed by the rising of the Maccabees; it was not till after the overthrow of Jewish nationality in the wars of Vespasian and Hadrian, that an entrance for heathen rites was forcibly obtained by the Romans. In saying this however we do not assert that the Jewish people of those early times remained altogether unaffected by Hellenism. For the latter was a civilising power, which extended itself to every department of life. It fashioned in a peculiar manner the organization of the state, legislation, the administration of justice, public

arrangements, art and science, trade and industry, and the customs of daily life down to fashion and ornaments, and thus impressed upon every department of life, whatever its influence reached, the stamp of the Greek mind. It is true that Hellenistic is not identical with Hellenic culture. The importance of the former on the contrary lay in the fact, that by its reception of the available elements of all foreign cultures within its reach, it became a world-culture. But this very world-culture became in its turn a peculiar whole, in which the preponderant Greek element was the ruling keynote. Into the stream of this Hellenistic culture the Jewish people was also drawn; slowly indeed and with reluctance, but yet irresistibly, for though religious zeal was able to banish heathen worship and all connected therewith from Israel, it could not for any length of time restrain the tide of Hellenistic culture in other departments of life. Its several stages cannot indeed be any longer traced. But when we reflect that the small Jewish country was enclosed on almost every side by Hellenistic regions, with which it was compelled, even for the sake of trade, to hold continual intercourse, and when we remember, that even the rising of the Maccabees was in the main directed not against Hellenism in general, but only against the heathen religion, that the later Asmonaeans bore in every respect a Hellenistic stamp—employed foreign mercenaries, minted foreign coins, took Greek names, etc., and that some of them, e. g., Aristobulus I., were direct favourers of Hellenism,—when all this is considered, it may safely be assumed, that Hellenism had, notwithstanding the rising of the Maccabees, gained access in no inconsiderable measure into Palestine even before the commencement of the Roman period.”

—E. Schürer, *History of the Jewish people in the time of Christ*, div. 2, v. 1, pp. 29-30.—See also JEWS: B.C. 332-167.

**Hellenism and the Romans.**—“In the Alexandrian age, with all its close study and imitation of the classical models, nothing is more remarkable than the absence of any promise that the Hellenic spirit which animated those masterpieces was destined to have any abiding influence in the world. . . . And yet it is true that the vital power of the Hellenic genius was not fully revealed, until, after suffering some temporary eclipse in the superficially Greek civilizations of Asia and Egypt, it emerged in a new quality, as a source of illumination to the literature and the art of Rome. Early Roman literature was indebted to Greece for the greater part of its material; but a more important debt was in respect to the forms and moulds of composition. The Latin language of the third century B.C. was already in full possession of the qualities which always remained distinctive of it; it was clear, strong, weighty, precise, a language made to be spoken in the imperative mood, a fitting interpreter of government and law. But it was not flexible or graceful, musical or rapid; it was not suited to express delicate shades of thought or feeling; for literary purposes, it was, in comparison with Greek, a poor and rude idiom. The development of Latin into the language of Cicero and Virgil was gradually and laboriously accomplished under the constant influence of Greece. That finish of form, known as classical, which Roman writers share with Greek, was a lesson which Greece slowly impressed upon Rome. . . . A close and prolonged study of the Greek models could not end in a mere discipline of form; the beauty of the best Greek models depends too much on their vital

spirit. Not only was the Roman imagination enriched, but the Roman intellect, through literary intercourse with the Greek, gradually acquired a flexibility and a plastic power which had not been among its original gifts. Through Roman literature the Greek influence was transmitted to later times in a shape which obscured, indeed, much of its charm, but which was also fitted to extend its empire, and to win an entrance for it in regions which would have been less accessible to a purer form of its manifestation.”

—R. C. Jebb, *Growth and influence of classical Greek poetry*, ch. 8.—“Italy had been subject to the influence of Greece, ever since it had a history at all. . . . But the Hellenism of the Romans of the present period [second century B.C.] was, in its causes as well as its consequences, something essentially new. The Romans began to feel the lack of a richer intellectual life, and to be startled as it were at their own utter want of mental culture; and, if even nations of artistic gifts, such as the English and Germans, have not disdained in the pauses of their own productiveness to avail themselves of the paltry French culture for filling up the gap, it need excite no surprise that the Italian nation now flung itself with eager zeal on the glorious treasures as well as on the vile refuse of the intellectual development of Hellas. But it was an impulse still more profound and deep-rooted which carried the Romans irresistibly into the Hellenic vortex. Hellenic civilization still assumed that name, but it was Hellenic no longer; it was, in fact, humanistic and cosmopolitan. It had solved the problem of moulding a mass of different nations into one whole completely in the field of intellect, and to a certain degree in that of politics, and, now when the same task on a wider scale devolved on Rome, she entered on the possession of Hellenism along with the rest of the inheritance of Alexander the Great. Hellenism therefore was no longer a mere stimulus, or subordinate influence; it penetrated the Italian nation to the very core. Of course, the vigorous home life of Italy strove against the foreign element. It was only after a most vehement struggle that the Italian farmer abandoned the field to the cosmopolite of the capital; and, as in Germany the French coat called forth the national Germanic frock, so the reaction against Hellenism aroused in Rome a tendency, which opposed the influence of Greece on principle in a style to which earlier centuries were altogether unaccustomed, and in doing so fell not unfrequently into downright follies and absurdities. No department of human action or thought remained unaffected by this struggle between the new fashion and the old. Even political relations were largely influenced by it. The whimsical project of emancipating the Hellenes, . . . the kindred, likewise Hellenic, idea of combining republics in a common opposition to kings, and the desire of propagating Hellenic polity at the expense of eastern despotism—which were the two principles that regulated, for instance, the treatment of Macedonia—were fixed ideas of the new school, just as dread of the Carthaginians was the fixed idea of the old; and, if Cato pushed the latter to a ridiculous excess, Philhellenism now and then indulged in extravagances at least as foolish. . . . But the real struggle between Hellenism and its national antagonists during the present period was carried on in the field of faith, of manners, and of art and literature. . . . If Italy still possessed—what had long been a mere antiquarian curiosity in Hellas—a national religion, it was already visibly beginning to be ossified into

theology. The torpor creeping over faith is nowhere perhaps so distinctly apparent as in the alterations in the economy of divine service and of the priesthood. The public service of the gods became not only more tedious, but above all more and more costly. . . . An augur like Lucius Paullus, who regarded the priesthood as a science and not as a mere title, was already a rare exception; and could not but be so, when the government more and more openly and unhesitatingly employed the auspices for the accomplishment of its political designs, or, in other words, treated the national religion in accordance with the view of Polybius as a superstition useful for imposing on the public at large. Where the way was thus paved, the Hellenistic irreligious spirit found free course. In connection with the incipient taste for art the sacred images of the gods began even in Cato's time to be employed, like other furniture, to embellish the chambers of the rich. More dangerous wounds were inflicted on religion by the rising literature. . . . Thus the old national religion was visibly on the decline; and, as the great trees of the primeval forest were uprooted, the soil became covered with a rank growth of thorns and briars and with weeds that had never been seen before. Native superstitions and foreign impostures of the most various hues mingled, competed and conflicted with each other. . . . The Hellenism of that epoch, already denationalized and pervaded by Oriental mysticism, introduced not only unbelief but also superstition in its most offensive and dangerous forms to Italy; and these vagaries, moreover, had a special charm, precisely because they were foreign. . . . Rites of the most abominable character came to the knowledge of the Roman authorities: a secret nocturnal festival in honour of the god Bacchus had been first introduced into Etruria by a Greek priest, and spreading like a cancer, had rapidly reached Rome and propagated itself over all Italy, everywhere corrupting families and giving rise to the most heinous crimes, unparalleled unchastity, falsifying of testaments, and murdering by poison. More than 7,000 men were sentenced to punishment, most of them to death, on this account, and rigorous enactments were issued as to the future. . . . The ties of family life became relaxed with fearful rapidity. The evil of grisettes and boy-favourites spread like a pestilence. . . . Luxury prevailed more and more in dress, ornaments and furniture, in the buildings and on the tables. Especially after the expedition to Asia Minor, which took place in 564 [B.C. 190], Asiatic-Hellenic luxury, such as prevailed at Ephesus and Alexandria, transferred its empty refinement and its petty trifling, destructive alike of money, time, and pleasure, to Rome. . . . As a matter of course, this revolution in life and manners brought an economic revolution in its train. Residence in the capital became more and more coveted as well as more costly. Rents rose to an unexampled height. Extravagant prices were paid for the new articles of luxury. . . . The influences which stimulated the growth of Roman literature were of a character altogether peculiar and hardly paralleled in any other nation. . . . By means of the Italian slaves and freedmen, a very large portion of whom were Greek or half Greek by birth, the Greek language and Greek knowledge to a certain extent reached even the lower ranks of the population, especially in the capital. The comedies of this period indicate that even the humbler classes of the capital were familiar with a sort of Latin, which could no more be properly

understood without a knowledge of Greek than Sterne's English or Wieland's German without a knowledge of French. Men of senatorial families, however, not only addressed a Greek audience in Greek, but even published their speeches. . . . Under the influence of such circumstances Roman education developed itself. It is a mistaken opinion, that antiquity was materially inferior to our own times in the general diffusion of elementary attainments. Even among the lower classes and slaves there was considerable knowledge of reading, writing, and counting. . . . Elementary instruction, as well as instruction in Greek, must have been long ere this period imparted to a very considerable extent in Rome. But the epoch now before us initiated an education, the aim of which was to communicate not merely an outward expertness, but a real mental culture. The internal decomposition of Italian nationality had already, particularly in the aristocracy, advanced so far as to render the substitution of a broader human culture for that nationality inevitable; and the craving after a more advanced civilization was already powerfully stirring men's minds. The study of the Greek language as it were spontaneously met this craving. The classical literature of Greece, the *Iliad* and still more the *Odyssey*, had all along formed the basis of instruction; the overflowing treasures of Hellenic art and science were already by this means spread before the eyes of the Italians. Without any outward revolution, strictly speaking, in the character of instruction the natural result was, that the empirical study of the language became converted into a higher study of the literature; that the general culture connected with such literary studies was communicated in increased measure to the scholars; and that these availed themselves of the knowledge thus acquired to dive into that Greek literature which most powerfully influenced the spirit of the age—the tragedies of Euripides and the comedies of Menander. In a similar way greater importance came to be attached to the study of Latin. The higher society of Rome began to feel the need, if not of exchanging their mother-tongue for Greek, at least of refining it and adapting it to the changed state of culture. . . . But a Latin culture presupposed a literature, and no such literature existed in Rome. . . . The Romans desired a theatre, but the pieces were wanting. On these elements Roman literature was based; and its defective character was from the first and necessarily the result of such an origin. . . . Roman poetry in particular had its immediate origin not in the inward impulse of the poet, but in the outward demands of the school, which needed Latin manuals, and of the stage, which needed Latin dramas. Now both institutions—the school and the stage—were thoroughly anti-Roman and revolutionary. . . . The school and the theatre became the most effective levers in the hands of the new spirit of the age, and all the more so that they used the Latin tongue. Men might perhaps speak and write Greek, and yet not cease to be Romans; but in this case they were in the habit of speaking in the Roman language, while the whole inward being and life were Greek. It is one of the most pleasing, but it is one of the most remarkable and in a historical point of view most instructive, facts in this brilliant era of Roman conservatism, that during its course Hellenism struck root in the whole field of intellect not immediately political, and that the schoolmaster and the *maître de plaisir* of the great public in close alliance created a Roman litera-

ture."—T. Mommsen, *History of Rome*, v. 2, bk. 3, ch. 13.—Panætius was the founder of "that Roman Stoicism which plays so prominent a part in the history of the Empire. He came from Rhodes, and was a pupil of Diogenes at Athens. The most important part of his life was, however, spent at Rome, in the house of Scipio Æmilianus, the centre of the Scipionic circle, where he trained up a number of Roman nobles to understand and to adopt his views. He seems to have taken the place of Polybius, and to have accompanied Scipio in his tour to the East (143 B.C.). He died as head of the Stoic school in Athens about 110 B.C. This was the man who, under the influence of the age, really modified the rigid tenets of his sect to make it the practical rule of life for statesmen, politicians, magnates, who had no time to sit all day and dispute, but who required something better than effete polytheism to give them dignity in their leisure, and steadfastness in the day of trial. . . . With the pupils of Panætius begins the long roll of Roman Stoics. . . . Here then, after all the dissolute and disintegrating influences of Hellenism,—its comœdia palliata, its parasites, its panders, its minions, its chicanery, its mendacity—had produced their terrible effect, came an antidote which, above all the human influences we know, purified and ennobled the world. It affected, unfortunately, only the higher classes at Rome; and even among them, as among any of the lower classes that speculated at all, it had as a dangerous rival that cheap and vulgar Epicureanism, which puffs up common natures with the belief that their trivial and coarse reflections have some philosophic basis, and can be defended with subtle arguments. But among the best of the Romans Hellenism produced a type seldom excelled in the world's history, a type as superior to the old Roman model as the nobleman is to the burgher in most countries—a type we see in Rutilius Rufus, as compared with the elder Cato. . . . It was in this way that Hellenistic philosophy made itself a home in Italy, and acquired pupils who in the next generation became masters in their way, and showed in Cicero and Lucretius no mean rivals of the contemporary Greek. . . . Till the poem of Lucretius and the works of Cicero, we may say nothing in Latin worth reading existed on the subject. Whoever wanted to study philosophy, therefore, down to that time (60 B.C.) studied it in Greek. Nearly the same thing may be said of the arts of architecture, painting, and sculpture. There were indeed distinctly Roman features in architecture, but they were mere matters of building, and whatever was done in the way of design, in the way of adding beauty to strength, was done wholly under the advice and direction of Greeks. The subservience to Hellenism in the way of internal household ornament was even more complete. . . . And with the ornaments of the house, the proper serving of the house, especially the more delicate departments—the cooking of state dinners, the attendance upon guests, the care of the great man's intimate comfort—could only be done fashionably by Greek slaves. . . . But of course these lower sides of Hellenism had no more potent effect in civilising Rome than the employing of French cooks and valets and the purchase of French ornaments and furniture had in improving our grandfathers. Much more serious was the acknowledged supremacy of the Greeks in literature of all kinds, and still more their insistence that this superiority depended mainly upon a careful system of intellectual education. . . .

This is the point where Polybius, after his seventeen years' experience of Roman life, finds the capital flaw in the conduct of public affairs. In every Hellenistic state, he says, nothing engrosses the attention of legislators more than the question of education, whereas at Rome a most mural and serious government leaves the training of the young to the mistakes and hazards of private enterprise. That this was a grave blunder as regards the lower classes is probably true. . . . But when Rome grew from a city controlling Italy to an empire directing the world, such men as Æmilius Paullus saw plainly that they must do something more to fit their children for the splendid position they had themselves attained, and so they were obliged to keep foreign teachers of literature and art in their houses as private tutors. The highest class of these private tutors was that of the philosophers, whom we have considered, and while the State set itself against their public establishments, great men in the State openly encouraged them and kept them in their houses. . . . As regards literature, however, in the close of the second century B.C. a change was visible, which announced the new and marvellous results of the first. . . . Even in letters Roman culture began to take its place beside Greek, and the whole civilised world was divided into those who knew Greek letters and those who knew Roman only. There was no antagonism in spirit between them, for the Romans never ceased to venerate Greek letters or to prize a knowledge of that language. But of course there were great domains in the West beyond the influence of the most western Greeks, even of Massilia, where the first higher civilisation introduced was with the Roman legions and traders, and where culture assumed permanently a Latin form. In the East, though the Romans asserted themselves as conquerors, they always condescended to use Greek, and there were prætors proud to give their decisions at Roman assize courts in that language."—J. P. Mahaffy, *Greek world under Roman sway*, ch. 5.—See also EUROPE: Ancient: Roman civilization: Origins.

Hellenism and Alexandria.—Architecture.—"Let us now turn to art, and ask what was the influence of Hellenism upon the nations which it drew within its mighty influence. Of the recognised fine arts the two most subtle and subjective are lost to us—music and painting. The hand of time has been against us, and we have only stray fragments which give us not even adequate suggestions. The case is far simpler with architecture. We may say broadly that the Corinthian style is exclusively Hellenistic and Roman. All the great remains in that style, from the splendours of the Olympian temple at Athens to the colonnades at Palmyra—all are essentially the product of Hellenism. Nay more, the restorations of old buildings in that age are so artistic that in many cases—as, for example, at the temple of Eleusis—we are still in doubt whether the work is archaistic or archaic; whether it be the original execution of Mnesicles, the contemporary of Pericles, or a far later Hellenistic, nay possibly Roman-Greek restoration. . . . Recent discoveries have shed new light on the achievements of Hellenism in pure science and in practical business. The longer we study the mathematical books of the Greeks, most of them dating from this epoch, the more we are persuaded that they knew vastly more than we learn from their explicit statements. It was only of late years that Mr. Penrose discovered the delicate and complicated system of curves applied to the build-

ing of the Parthenon, which does not contain in its plan a single straight line. There must have been large mathematical knowledge in the mind of this Hellenic Wren; we know from the fragments of Pythagorean lore that the science of numbers occupied the deepest attention of that early sect. . . . The papyri deal in very large and complicated computations which range from the use of millions down to series of minute fractions, and though they do make mistakes, their counting is as accurate as average work of the present day."—J. P. Mahaffy, *Story of Alexander's empire*, pp. 110-119.—See also EGYPT: B.C. 323-30.

**Science and invention.**—"The keen and wide-awake intelligence of this wonderful age was everywhere evident, but especially in the application of science to the work and needs of daily life. It was an age of inventions, like our own. An up-to-date man would install an automatic door opener for the doorkeeper of his house, and a washing machine which delivered water and mineral soap as needed. On his estate olive oil was produced by a press operating with screw pressure. Outside the temples the priests set up automatic dispensers of holy water, while a water sprinkler operating by water pressure reduced the danger of fire. The application of levers, cranks, screws, and cogwheels to daily work brought forth cable roads for use in lowering stone from lofty quarries, or water wheels for drawing water on a large scale. A similar endless-chain apparatus was used for quickly raising heavy stone missiles to be discharged from huge missile-hurling war machines, some of which even operated by air pressure. As we go to see the 'movies,' so the people crowded to the market place to view the automatic theater, in which a clever mechanic presented an old Greek tragedy of the Trojan War in five scenes, displaying ship-building, the launch of the fleet, the voyage, with the dolphins playing in the water about the vessels, and finally a storm at sea, with thunder and lightning, amid which the Greek heroes promptly went to the bottom. Housekeepers told stories of the simpler days of their grandmothers, when there was no running water in the house and they actually had to go out and fetch it a long way from the nearest spring. A public clock, either a shadow clock, such as the Egyptian had had in his house for over a thousand years, or a water clock of Greek invention, stood in the market place and furnished all the good townspeople with the hour of the day. [See INVENTIONS: Ancient and medieval: Measurements.] The Ptolemies or the priests under them attempted to improve the calendar by the insertion every fourth year of a leap year with an additional day, but the people could not be roused out of the rut into which usage had fallen, and everywhere they continued to use the inconvenient moon month of the Greeks. There was no system for the numbering of the years anywhere except in Syria, where the Seleucids gave each year a number reckoned from the beginning of their sway.

"The most remarkable man of science of the time was probably Archimedes. He lived in Syracuse, and one of his famous feats was the arrangement of a series of pulleys and levers, which so multiplied power that the king was able by turning a light crank to move a large three-masted ship standing fully loaded on the dock, and to launch it into the water. After witnessing such feats as this the people easily believed his proud boast, 'Give me a place to stand on and I will move the earth.' He de-

vised such powerful and dangerous war machines that he greatly aided in defending his native city from capture by the Romans. But Archimedes was far more than an inventor of practical appliances. He was a scientific investigator of the first rank. He was able to prove to the king that one of the monarch's gold crowns was not of pure metal, because he had discovered the principle of determining the proportion of loss of weight when an object is immersed in water. He was thus the discoverer of what science now calls specific gravity. Besides his skill in physics he was also the greatest of ancient mathematicians. Archimedes was in close correspondence with his friends in Alexandria, who formed the greatest body of scientists in the ancient world. They lived together at the Museum, where they were paid salaries and supported by the Ptolemies. They formed the first scientific institution founded and supported by a government. Without financial anxieties they could devote themselves to research, for which the halls, laboratories, and library of the institution were equipped. Thus the scientists of the Hellenistic Age, especially this remarkable group at Alexandria, became the founders of systematic scientific research, and their books formed the sum or body of scientific knowledge for nearly two thousand years, until the revival of science in modern times. The very first generation of scientists at the Alexandrian Museum boasted a great name in mathematics which is still famous among us—that of Euclid. His complete system of geometry was so logically built up, that in modern England Euclid's geometry is still used as a schoolbook—the oldest schoolbook in use to-day. . . . Along with mathematics much progress was also made in astronomy. The Ptolemies built an astronomical observatory at Alexandria, and although it was, of course, without telescopes, important observations and discoveries were made. An astronomer of little fame named Aristarchus, who lived on the island of Samos, made the greatest of the discoveries of this age. He demonstrated that the earth and the planets revolve around the sun. Almost no one adopted his conclusion, however, and both the Hellenistic Greeks and all ancient scientists of later days wrongly believed that the earth was the center around which the sun and the planets revolved. One Hellenistic astronomer at the cost of immense labor, made a catalogue of eight or nine hundred fixed stars, to serve as a basis for determining any future changes that might take place in the skies. Astronomy had now greatly aided in the progress of geography. Eratosthenes, a great mathematical astronomer of Alexandria, very cleverly computed the size of the earth by observing that when the summer sun, shifting steadily northward, reached its farthest north, it shone at noonday straight down to the bottom of a well at the First Cataract of the Nile. To this notion of the size of the earth, much information had been added regarding the extent and the character of the inhabited regions reached by navigation and exploration in this age. At home, in Greece, one geographer undertook to measure the heights of the mountains, though he was without a barometer. The campaigns of Alexander in the Far East had greatly extended the limits where the known world ended. Bold Alexandrian merchants had sailed to India and around its southern tip to Ceylon and the eastern coast of India, where they heard fabulous tales of the Chinese coast beyond. In the Far West as early as 500 B.C. Phœnician navigators had passed Gibraltar, and turning southward had

probably reached the coast of Guinea, whence they brought back marvelous stories of the hairy men whom the interpreters called 'Gorillas.' A trained astronomer of Marseilles named Pytheas fitted out a ship at his own expense and coasted northward from Gibraltar. He discovered the triangular shape of the island of Britannia, and penetrating far into the North Sea he was the first civilized man to hear tales of the frozen sea beyond and the mysterious island of Thule (Iceland) on its margin. He discovered the influence of the full moon on the immense spring tides, and he brought back reports of such surprising things that he was generally regarded as a sensational fable-monger. With a greater mass of facts and reports than anyone before him had ever had, Eratosthenes was able to write a very full geography. His map of the known world including Europe, Asia, and Africa, not only showed the regions grouped about the Mediterranean with fair correctness, but he was the first geographer who was able to lay out on his map a cross-net of lines indicating latitude and longitude. He thus became the founder of scientific geography."—J. H. Breasted, *Ancient times*, pp. 466-471.—See also EUROPE: Ancient: Greek civilization; SCIENCE: Ancient.

Position of women. See WOMAN'S RIGHTS: B.C. 600-300.

Place in modern life.—Personal religion. See RELIGION: Course of development, etc.; B.C. 600-A.D. 30: Value of Greek religion.

HELLENISTS. See CHRISTIANITY: A.D. 33-70.

HELLESPONT, ancient Greek name of what is now called the straits of the Dardanelles (q.v.), the channel which unites the Sea of Marmora with the Ægean. The name (Sea of Helle) came from the myth of Helle, who was said to have been drowned in these waters.

HELOTS, Spartan bondmen or serfs. See SERFDOM: Heroic Age; SPARTA: Military organization; GREECE: B.C. 477-461; ÆGEAN CIVILIZATION: Minoan Age: B.C. 1200-750.

HELVECONES, ancient tribe. See LYGIANS.

HELVETIAN REPUBLIC.—Switzerland is sometimes called the Helvetic republic, for no better reason than is found in the fact that

the country occupied by the Helvetii of Cæsar is embraced in the modern Swiss confederacy. But the original confederation, out of which grew the federal republic of Switzerland, did not touch Helvetic ground.—See also SWITZERLAND: Three Forest Cantons; also 1332-1460.

HELVETIC REPUBLIC OF 1798. See SWITZERLAND: 1792-1798.

HELVETII: Arrested migration.—"The Helvetii, who inhabited a great part of modern Switzerland, had grown impatient of the narrow limits in which they were crowded together, and harassed at the same time by the encroachments of the advancing German tide. The Alps and Jura formed barriers to their diffusion on the south and west, and the population thus confined outgrew the scanty means of support afforded by its mountain valleys. . . . The Helvetii determined to force their way through the country of the Allobroges, and to trust either to arms or persuasion to obtain a passage through the [Roman] province and across the Rhone into the centre of Gaul. . . . Having completed their preparations, [they] appointed the 28th day of March [58 B.C.] for the meeting of their combined forces at the western outlet of the Lake Lemanus. The whole population of the assembled tribes amounted to 368,000 souls, including the women and children; the number that bore arms was 92,000. They cut themselves off from the means of retreat by giving ruthlessly to the flames every city and village of their land; twelve of one class and four hundred of the other were thus sacrificed, and with them all their superfluous stores, their furniture, arms and implements." When the news of this portentous movement reached Rome, Cæsar, then lately appointed to the government of the two Gauls, was raising levies, but had no force ready for the field. He flew to the scene in person, making the journey from Rome to Geneva in eight days. At Geneva, the frontier town of the conquered Allobroges, the Romans had a garrison, and Cæsar quickly gathered to that point the one legion stationed in the province. Breaking down the bridge which had spanned the river and constructing with characteristic energy a ditch and rampart from the outlet of the lake to the gorge of the Jura, he held the passage of the river with his single legion and forced the migratory horde to move off by the difficult route down the right bank of the Rhone. This accomplished, Cæsar hastened back to Italy, got five legions together, led them over the Cottian Alps, crossed the Rhone above Lyons, and caught up with the Helvetii before the last of their cumbersome train had got beyond the Saone. Attacking and cutting to pieces this rear-guard (it was the tribe of the Tigurini, which the Romans had encountered disastrously half a century before), he bridged the Saone and crossed it to pursue the main body of the enemy. For many days he followed them, refusing to give battle to the great barbarian army until he saw the moment opportune. His blow was struck at last in the neighborhood of the city of Bibracte, the capital of the Ædui—modern Autun. The defeat of the Helvetii was complete, and, although a great body of them escaped, they were set upon by the Gauls of the country and were soon glad to surrender themselves unconditionally to the Roman proconsul. Cæsar compelled them—110,000 survivors, of the 368,000 who left Switzerland in the spring—to go back to their mountains and rebuild and re-occupy the homes they had destroyed.—C. Merivale, *History of the Romans*, v. 1, ch. 6

**HENRY I**, the Fowler (c. 876-936), Holy Roman emperor, 918-936, a title he did not claim; king of Germany, 919-936; and duke of Saxony, 912-936. He achieved control of Lorraine, 925; defeated the Hungarians, 933; defeated the Danes, 934. He was noted for fortifying and strengthening German cities, and for reorganizing the army. See GERMANY: 911-936; BRANDENBURG: 928-1142; HUNGARY: 934-955.

**Henry II** (973-1024), Holy Roman emperor and king of Germany, 1002-1024; king of Italy, 1004-1024. He defeated his greatest enemy, Boleslas Chrobry of Poland, 1005; overcame rebellions in Flanders and Meissen, 1005-1013; displaced usurper Arduin from Italian throne, 1013. See GERMANY: 973-1056.

**Henry III**, the Black (1017-1056), Holy Roman emperor, 1039-1056; king of Germany, Burgundy, and duke of Bavaria, and Swabia. Led an expedition to Italy to settle rival claims for papacy, 1046; overcome revolts in his kingdom, 1046-1056. See GERMANY: 973-1056; PAPACY: 887-1046.

**Henry IV**, of Franconia (1050-1106), Holy Roman emperor, 1056-1106; king of Germany, Italy and Burgundy. Agnes of Poitou, his mother, ruled during his infancy, when the empire lost

Swabia, Bavaria, and Carinthia. Victorious over Saxons, 1075; excommunicated by Pope Gregory VII for resisting the new law of lay investiture and then deposing the pope, 1076; humiliated himself at Canossa before Gregory and was absolved, 1077; excommunicated again, 1080; captured Rome and installed Clement III as antipope, but was driven out by Robert Guiscard, 1084; contended with his rival claimants in Germany, 1085-1088; excommunicated by Pope Paschal II, 1101; forced to abdicate, 1105. See GERMANY: 1056-1122; CANOSSA; PAPACY: 1056-1122; ROME: Medieval city: 1081-1084; SAXONY: 1073-1075.

**Henry V** (1081-1125), Holy Roman emperor, 1106-1125. Second son of Henry IV, whom he succeeded. Invaded Italy, 1110, and agreed with the pope to renounce rights of investiture in exchange for church yielding feudal privileges; Pope Paschal II renounced this agreement and excommunicated him; invaded Italy again, 1116, and drove out the pope; concluded Concordat of Worms, 1122. See GERMANY: 1056-1122.

**Henry VI** (1165-1197), Holy Roman emperor and king of Germany, 1190-1197; king of Sicily, 1194-1197. Son of Frederick Barbarossa, whom he succeeded; led expedition to Sicily to attempt the rescue of his inheritance, 1191; subdued the two Sicilies, 1194, 1197. See GERMANY: 1138-1197; ITALY: 1183-1250.

**Henry VII**, of Luxemburg, (c. 1269-1313), Holy Roman emperor and king of Germany, 1308-1313. Gained control of Bohemia, 1310; crowned emperor, 1312. See GERMANY: 1308-1313; AUSTRIA: 1291-1349; ITALY: 1310-1313: Visitation of the emperor.

**Henry** (c. 1174-1216), emperor of Romania, or Constantinople, 1205-1216.

**Henry II**, king of Austria. See AUSTRIA: 805-1246.

**Henry I** (c. 1207-1217), king of Castile, 1214-1217.

**Henry II**, of Trastamara (1333-1379), king of Castile, 1369-1379. See SPAIN: 1366-1369.

**Henry III** (1379-1406), king of Castile and Leon, 1390-1406.

**Henry IV** (1425-1474), king of Castile and Leon, 1454-1474.

**Henry I**, Beauclerc (1068-1135), king of England, 1100-1135. Fourth son of William the Conqueror. Elected by the witan during the absence of his brother Robert on a crusade; restored laws of Edward the Confessor, suppressed the great feudatories; conquered Normandy, 1106. See ENGLAND: 1087-1135; 1100-1135.

**Henry II**, Plantagenet (1133-1189), king of England, 1154-1189. Succeeded Stephen of Blois. His other possessions were Normandy, Brittany, Anjou and Maine from his mother, and Poitou, Guienne and Gascony, by marriage to Eleanor of Aquitaine. Compelled Malcolm of Scotland to do homage and restore certain English counties, 1157; reduced Wales, 1158-1165, and southern Ireland, 1171. Consolidated and centralized royal authority by military, monetary and judicial reforms. Reforms related to church were opposed by Thomas Becket, archbishop of Canterbury. See ENGLAND: 1154-1189; 1170-1189; 1162-1170; COMMON LAW: 1154-1189; FRANCE: 1108-1180; IRELAND: 1160-1200; ULSTER: 1171-1186.

**Henry III**, of Winchester (1207-1272), king of England, 1216-1272. William Marshall was regent during his childhood. Henry's right to the throne was disputed by Louis of France who was defeated in 1217; a rising of the barons occurred in 1258, and he was forced to accept the Provisions of Oxford; battle of Lewes, 1264, where he

was defeated by the barons and taken prisoner; rescued by his son Edward, 1265. See ENGLAND: 1216-1272; OXFORD, PROVISIONS OF; WESTMINSTER ABBEY; IRELAND: 13th-14th centuries.

**Henry IV, of Lancaster** (1367-1413), king of England, 1399-1413, son of John of Gaunt. Banished by Richard II, 1398; succeeded father as duke of Lancaster, and captured and imprisoned Richard, 1399; put down rising under Harry Percy (Hotspur), 1403. See ENGLAND: 1399-1471.

**Henry V, of Monmouth** (1387-1422), king of England, 1413-1422, son of Henry IV. Invaded France, 1415, and won the battle of Agincourt; concluded Peace of Troyes, 1420. See ENGLAND: 1413-1422; FRANCE: 1415; 1417-1422; IRELAND: 1413-1467.

**Henry VI, of Windsor** (1421-1471), king of England, 1422-1461, son of Henry V. His uncles, John, duke of Bedford, and Humphrey, duke of Gloucester, reigned during his childhood; crowned king of France, 1451; lost all French possessions but Calais, 1453; temporarily insane, 1453-1454; Wars of Roses, 1455-1461; deposed, 1461; temporarily restored, 1470. See ENGLAND: 1455.

**Henry VII, Tudor** (1457-1509), king of England, 1485-1509. Exile in France, 1471-1485; victory of Bosworth Field over Richard III and crowned king, 1485; defeated the imposter Lambert Simnel, 1487; executed Perkin Warbeck, the pretender, 1499. See ENGLAND: 1485; 1485-1509; 1485-1603; IRELAND: 1485-1509.

**Henry VIII** (1491-1547), king of England, 1509-1547, son of Henry VII. Joined Holy League against France, 1511; war in France, victory at battle of Spurs, 1513; Cardinal Wolsey made lord chancellor, 1515; met Francis I of France, at Field of Cloth of Gold, 1520; wrote article opposing Luther for which the pope praised him, 1521; alliance with France against Charles V, 1525; instituted divorce proceedings against Catherine of Aragon, 1527, and caused final break with Rome; passed Act of Supremacy, 1534; suppressed the monasteries, 1536-1539. He married six times. See ENGLAND: 1513-1529; 1527-1534; 1529-1535; 1531-1563; 1535-1539; 1536-1543; CHURCH OF ENGLAND: 1534-1563; FRANCE: 1513-1515; IRELAND: 1520-1540; 1535-1553; 1541-1555; ITALY: 1527-1529; SCOTLAND: 1542; SUPREMACY, ACT OF.

**Henry I** (1008-1060), king of France, 1031-1060.

**Henry II** (1109-1159), king of France, 1147-1159, son of Francis I. Conquered bishoprics of Metz, Toul, and Verdun from Germany, 1152; captured Calais and Guines, last English possessions in France, 1158. See FRANCE: 1147-1159; IRELAND: 1140-1170.

**Henry III, of Valois** (1151-1180), king of France, 1154-1180, and of Poland, 1173-1174. Defeated Huguenots, 1169; elected king of Poland, 1173; became king of France, 1174; Holy league of Catholics formed against him, 1176; death of his brother caused succession to throne to be questioned, 1184; renewal of war with Huguenots under Henry of Navarre, and his victory at Coutras, 1187; assassinated by Dominican friar. He was the last of the House of Valois. See FRANCE: 1178-1180; 1184-1189; POLAND: 1173; 1174-1190.

**Henry IV, the Great** (1553-1610), king of France, 1589-1610, and of Navarre and Bearn. First of Bourbon kings. Head of Huguenot party, 1569; succeeded to throne of Navarre, 1572; heir presumptive to throne of France, 1584, which caused outbreak of war; defeat of Holy League, 1590; joined Catholic church, 1593; crowned

king, 1594; published Edict of Nantes, and ended wars of the Huguenots, 1598; assassinated, 1610. See FRANCE: 1589-1590; 1591-1593; 1590-1610; CANADA: 1608-1611; GERMANY: 1608-1618; NAVARRE: 1528-1563.

**Henry I** (c. 1210-1274), king of Navarre, 1270-1274.

**Henry I** (1512-1580), king of Portugal, 1578-1580.

**Henry, the Navigator** (1394-1460), prince of Portugal. Encouraged science and exploration; discovered Madeira, 1420, the Azores, 1433; explored coast of Africa, 1441-1460; rounded Cape Verde, 1445. See PORTUGAL: 1415-1460; ABYSSINIA: 15th-19th centuries; COMMERCE: Era of geographic expansion: 15th-17th centuries; Leadership of the Portuguese.

**Henry (Friedrich Heinrich Ludwig)** (1726-1802), prince of Prussia. Served as a general in Seven Years' War, 1758-1762. See GERMANY: 1758; 1761-1762.

**Henry** (1862- ), prince of Prussia. Visited United States in 1902. See U.S.A.: 1902 (February-March).

**Henry** (1876- ), duke of Mecklenburg-Schwerin. Married to Queen Wilhelmina of Holland, 1901. See NETHERLANDS: 1808-1903.

**Henry, the Proud** (c. 1108-1130), duke of Saxony and Bavaria, 1126-1130. Took part in warfare of Hohenstaufen brothers struggle in Germany, 1127; put down rising in Bavaria, 1133; invaded Italy, 1136; succeeded to dukedom of Saxony, 1137. See AUSTRIA: 805-1246; GUELF.

**Henry, the Lion** (1120-1195), duke of Saxony and Bavaria, 1142-1195. War against Abotrites and extended dukedom, 1147; succeeded in reclaiming Bavaria, 1156; control of Lubeck, 1158; aid to Frederick I against Poles and Italians, 1158-1159; coalition formed against him, led by Albert the Bear of Brandenburg, 1166-1168; rupture of friendship with Frederick, 1175-1176; defeated by Frederick, 1181; temporary exile in England, 1189; peace of Fulda, 1190; unsuccessful revolt, 1193. See AUSTRIA: 805-1246; ITALY: 1174-1183; SAXONY: 1178-1183.

**Henry** (d. 1114), count of Burgundy and ruler of Portugal. See PORTUGAL: 1095-1325.

**Henry** (d. 1197), count of Champagne, and ruler of Jerusalem. See JERUSALEM: 1187-1229.

**HENRY, Guy V.** (1839-1890), American general. See PORTO RICO: 1898-1899 (October-November).

**HENRY, John** (fl. 1793), Irish adventurer. See U. S. A.: 1810-1812.

**HENRY, Joseph** (1799-1878), American physicist, and experimenter in telegraphy. See ELECTRICAL DISCOVERY: Telegraphy and telephony: Telegraph: 1753-1874.

**HENRY, Patrick** (1736-1799), American orator and statesman. Studied law and granted a license, 1760; won fame in the defense of the "Parson's Cause," 1763; elected member of the House of Burgesses, Virginia, 1765-1775; author of the "Virginia Resolutions," 1765; chosen delegate to the Continental Congress, and served on three of its most important committees, 1774-1775; presented resolutions for arming the Virginia militia and supported them with his famous speech, 1775; governor of Virginia, 1776-1778; 1784-1786; member of state legislature, 1780-1784; 1787-1790; attended constitutional convention at Philadelphia, 1787.

**Parson's Cause.** See VIRGINIA: 1763.

**American Revolution.** See U. S. A.: 1765: Reception of the news of the Stamp Act, 1774 (Sep-

tember); 1775 (April-June); 1778-1779: Clarke's conquest; VIRGINIA: 1776.

Opposition to Federal constitution. See U. S. A.: 1787-1789; Virginia: 1788.

HENRY, William (1729-1786), American inventor. See STEAM NAVIGATION: Beginnings.

HENRY, Fort: Captured by Grant. See U. S. A.: 1862 (January-February; Kentucky-Tennessee).

HENRY OF CARINTHIA (d. 1335), king of Bohemia, 1307-1310.

HENRY OF FRANCONIA. See HENRY IV, Holy Roman emperor.

HENRY OF LUXEMBURG. See HENRY VII, OF LUXEMBURG, Holy Roman emperor.

HENRY OF NAVARRE. See HENRY IV, THE GREAT, king of France.

HENRY OF TRASTAMARA. See HENRY II, OF TRASTAMARA, king of Castile.

HENRY OF VALOIS. See HENRY III, OF FRANCE.

HENRY RASPE, rival of Frederic II, Holy Roman emperor, 1246.

HENRYS, War of the Three. See FRANCE: 1584-1589.

HENSON, William Samuel, English inventor. See AVIATION: Development of airplanes, etc.: 1800-1874.

HEPBURN VS. GRISWOLD (1867-1870). See SUPREME COURT: 1867-1884.

HEPBURN ACT (1906): Strengthens Interstate Commerce Act. See RAILROADS: 1887-1906.

Commodity clause. See COMMODITY CLAUSE OF THE HEPBURN ACT; RAILROADS: 1908-1909.

HEPHÆSTION, Alexandrian grammarian of the age of the Antonines. See EDUCATION: Ancient: B.C. 3rd-A.D. 3rd centuries.

HEPTANOMIS, northern district of upper Egypt, embracing seven provinces, or nomes; whence its name.

HEPTARCHY, so-called Saxon, period of English history between the coming of the Anglo-Saxons in 449, and the union of the kingdoms under Ecgbert in 828. See ENGLAND: 7th century.

HERA, Greek goddess. See ARGOS, ACROPOLIS OF.

HERACLEA, town in southwestern Anatolia. Subject of negotiations between Turkey and Italy. See TURKEY: 1921 (March-April): Secret treaties.

HERACLEA, ancient town in Lucania, Italy, near the gulf of Tarentum.

Battle of (280 B.C.). See ROME: Republic: B.C. 281-272.

HERACLEA LYNCESTIS, ancient Greek city. See MONASTIR.

HERACLEA PONTICA: Siege of.—Heraclea, a flourishing town of Greek origin on the Phrygian coast, called Heraclea Pontica to distinguish it from other towns of like name, was besieged for some two years by the Romans in the Third Mithradatic War. It was surrendered through treachery, 70 B.C., and suffered so greatly from the ensuing pillage and massacre that it never recovered. The Roman commander, Cotta, was afterwards prosecuted at Rome for appropriating the plunder of Heraclea, which included a famous statue of Hercules, with a golden club.—G. Long, *Decline of the Roman republic*, v. 3, ch. 5.

Battle of (313). See ROME: Empire: 305-323.

HERACLEIDÆ, or Herakleids.—Among the ancient Greeks the reputed descendants of the demi-god hero, Herakles, or Hercules, were very numerous. "Distinguished families are everywhere to be traced who bear his patronymic and glory in the belief that they are his descendants.

Among Achæans, Kadmeians, and Dorians, Hēraklēs is venerated: the latter especially treat him as their principal hero—the Patron Hero-God of the race: the Hērakleids form among all Dorians a privileged gens, in which at Sparta the special lineage of the two kings was included."

—G. Grote, *History of Greece*, v. 1, pt. 1, ch. 4. —"The most important, and the most fertile in consequences, of all the migrations of Grecian races, and which continued even to the latest periods to exert its influence upon the Greek character, was the expedition of the Dorians into Peloponnesus. . . . The traditionary name of this expedition is 'the Return of the Descendants of Hercules' [or 'the Return of the Heraclidæ']. Hercules, the son of Zeus, is (even in the Iliad), both by birth and destiny, the hereditary prince of Tiryns and Mycenæ, and ruler of the surrounding nations. But through some evil chance Eurystheus obtained the precedence and the son of Zeus was compelled to serve him. Nevertheless he is represented as having bequeathed to his descendants his claims to the dominion of Peloponnesus, which they afterwards made good in conjunction with the Dorians; Hercules having also performed such actions in behalf of this race that his descendants were always entitled to the possession of one-third of the territory. The heroic life of Hercules was therefore the mythical title, through which the Dorians were made to appear, not as unjustly invading, but merely as reconquering, a country which had belonged to their princes in former times."—C. O. Müller, *History and antiquity of the Doric race*, bk. 1, ch. 3.—See also DORIANS AND IONIANS.

HERACLEIDÆ OF LYDIA, second dynasty of the kings of Lydia—so-called by the Greeks as reputed descendants of the sun-god. The dynasty is represented as ending with Candaules. —M. Duncker, *History of antiquity*, bk. 4, ch. 17.—See also LYDIANS.

HERACLEONAS (born c. 614), Roman emperor (Eastern), 641.

HERACLEOPOLIS, Grecian name of an ancient Egyptian city. See HANES.

HERACLES, or Hercules, Greek legendary hero. See HERACLEIDÆ.

HERACLIUS I (c. 575-642), Roman emperor in the East, 610-641. See MONOTHELITE CONTROVERSY; JERUSALEM: 628-637; JEWS: Spain: 7th century; ROME: Medieval city: 565-628; PERSIA: 226-627.

HERALD, The New York, a morning journal. Founded in 1835 by James Gordon Bennett, who died in 1872. His son, also James Gordon Bennett, continued the publication until his death in 1918. During their ownership the *Herald* was famous for its news and for spectacular undertakings, such as sending Stanley to Africa. In 1920 it became the property of Frank A. Munsey, and was merged with the *Sun*.

HERAT, city of Afghanistan, capital of the province of the same name. It was formerly regarded as the key to India. In 1922 the population was about 20,000.

B.C. 330.—Founding of the city. See MACEDONIA: B.C. 330-323.

1221.—Destruction by the Mongols. See KHORASSAN: 1220-1221.

1837.—Siege. See INDIA: 1836-1845.

1857.—Persian claims renounced. See AFGHANISTAN: 1842-1869.

See also COMMERCE: Medieval: 5th-8th centuries.

HERAULT DE SEHELLES, Marie Jean (1759-1794), French revolutionist. Appointed

judge of the court of the first arrondissement in the department of Paris, 1789; elected to the Legislative Assembly, 1791; supported Danton in the revolution of August and September, 1792; appointed president of the Legislative Assembly, September, 1792; was author of the constitution drawn up, 1793; employed on a military mission in Alsace, October-December, 1793; guillotined as a Dantonist, 1794.

**HERBART, Johann Friedrich** (1776-1841), German philosopher and educator. "An independent critical thinker who opposes the entire idealistic movement, as it had developed in Germany after Kant. . . . Herbart opposes the rationalistic method, apriorism, monism, pantheism, subjective idealism, and free will, and substitutes for these doctrines empiricism, pluralism, realism, and determinism. . . . [He] exercised his greatest influence through his theory of education. Pedagogy he regarded as applied psychology, and its ends as determined by ethics. His mechanical conception of mental life as the result of the interplay of ideas accounts for the emphasis he places on instruction, the importance of interest, and the value of apperception."—F. Thilly, *History of philosophy*, pp. 478, 479, 484-485.—Among the works of Herbart are: "Einleitung in die Philosophie"; "Psychologie als Wissenschaft"; "Allgemeine pädagogik"; "Allgemeine Metaphysik." See **EDUCATION: Modern: 19th century: Herbart, etc.**; **MUSIC: Modern: 1800-1908.**

**HERBERT I**, Count of Vermandois (d. 902). See **CHAMPAGNE**.

**HERCULANO DE CARVALHO E ARANJO, Alexander** (1810-1877), Portuguese historian and poet. See **HISTORY: 29.**

**HERCULES, or Heracles**, Greek legendary hero. See **HERACLEIDEÆ**.

**HERCYNIAN FOREST**.—"The Hercynian Forest was known by report to Eratosthenes and some other Greeks, under the name Oreyntia. The width of this forest, as Caesar says (B. G. vi. 25), was nine days' journey to a man without any incumbrance. It commenced at the territory of the Helvetii [Switzerland] . . . and following the straight course of the Danube reached to the country of the Daci and the Anartes. Here it turned to the left in different directions from the river, and extended to the territory of many nations. No man of western Germany could affirm that he had reached the eastern termination of the forest even after a journey of six days, nor that he had heard where it did terminate. This is all that Caesar knew of this great forest. . . . The nine days' journey, which measures the width of

the Hercynian forest, is the width from south to north; and if we assume this width to be estimated at the western end of the Hercynia, which part would be the best known, it would correspond to the Schwarzwald and Odenwald, which extend on the east side of the Rhine from the neighbourhood of Bâle nearly as far north as Frankfort on the Main. The eastern parts of the forest would extend on the north side of the Danube along the Rauhe Alp and the Boehmerwald and still farther east. Caesar mentions another German forest named Bacenis (B. G. vi. 10), but all that he could say of it is this: it was a forest of boundless extent, and it separated the Suevi and the Cherusci; from which we may conclude that it is represented by the Thüringerwald, Erzgebirge, Riesengebirge, and the mountain ranges farther east, which separate the basin of the Danube from the basins of the Oder and the Vistula."—G. Long, *Decline of the Roman republic*, v. 4, ch. 2.

**HERDER, Johann Gottfried von** (1744-1803), German philosopher and critic. See **GERMAN LITERATURE: 1700-1832**; **HISTORY: 25**; **PHILOLOGY: 1.**

**HEROPHILUS** (c. 335-280 B.C.), Alexandrian surgeon. See **MEDICAL SCIENCE**: Ancient: B.C. 4th-A.D. 2nd centuries.

**HERRERA**, Carlos (c. 1865- ), Guatemalan statesman. Member of Pan-American financial congress, 1915; president of Guatemala, April, 1920, to December, 1921. See **GUATEMALA**: 1920; **CENTRAL AMERICA**: 1921 (December).

**HERRERA**, Francisco (surnamed el Viejo) (1576-1656), Spanish painter. Accused of coining base money, he took refuge in the Jesuit college of San Hermenegildo; pardoned by Philip IV, 1624; best work, easel-picture of "Last Judgment," and fresco in the dome of San Buenaventura in his native city of Seville.

**HERRERA**, José Joaquin de (1792-1854), Mexican general and statesman. Served as minister of war and president of the Supreme Court; president of Mexico, September-December, 1845, 1848-1851. See **MEXICO**: 1848.

**HERRERA**, Juan de (fl. 15th-16th centuries), Spanish architect. See **ARCHITECTURE**: Renaissance: Spain.

**HERRERA**, Rodolfo, Mexican revolutionary leader. See **MEXICO**: 1920 (May).

**HERRICK**, Myron Timothy (1854- ), American statesman. Governor of Ohio, 1903-1906; ambassador to France, 1912-1914, 1921.

**HERRING**, Augustus M., French inventor, pioneer in aeronautics. See **AVIATION**: Development of airplanes and air service: 1889-1900.

**HERRINGS**, Battle of the (1429).—In February, 1429, while the English still held their ground in France, and while the duke of Bedford was besieging Orleans [see **FRANCE**: 1429-1431], a large convoy of Lenten provisions, salted herring in the main, was sent away from Paris for the English army. It was under the escort of Sir John Fastolf, with 1,500 men. At Rouvray en Beausse the convoy was attacked by 5,000 French cavalry, including the best knights and warriors of the kingdom. The English entrenched themselves behind their wagons and repelled the attack, with great slaughter and humiliation of the French chivalry; but in the mêlée the red-herrings were scattered thickly over the field. This caused the encounter to be named the Battle of the Herrings.—C. M. Yonge, *Cameos from English history*, 2d series, cameo 35.

**HERRIOT**, Edouard (1872- ), mayor of Lyons, France. First to propose vocational training for disabled soldiers. See **EDUCATION**: Modern developments: 20th century: World War and education: Reëducation.

**HERRNHUT**, village in Saxony, founded in 1722 by the Moravian or Bohemian Brethren. See **MORAVIAN**, OR **BOHEMIAN**, **BRETHREN**.

**HERSCHEL**, Sir William (1738-1822), English astronomer, of German birth. See **ASTRON-**

OMY: 1781-1846; INVENTIONS: 19th century: Instruments.

**HERTLING, George F., Count von** (1843-1919), German statesman. Appointed imperial chancellor, November 1, 1917; served until the capitulation of Bulgaria, September, 1918. See GERMANY: 1917 (November-December); WORLD WAR: 1917: XII. Political conditions in the belligerent countries: e; 1918: X. Statement of war aims: d; e; f.

**HERTZ, Heinrich** (1857-1894), German physicist. Experimented with and made some important discoveries regarding electro-magnetic waves. See ELECTRICAL DISCOVERY: Telegraphy and telephony: Wireless or radio: 1864-1903.

**HERTZOG, James Barry Munnik** (1866- ), Dutch South African statesman and general. With De Wet and other Boers, led a short-lived rebellion against British rule, 1914; recognized leader of the Nationalist party in the Union of South Africa, 1917-1921. See SOUTH AFRICA, UNION OF: 1910-1913; 1914; 1920-1921; WAR, PREPARATION FOR: 1909: British Imperial defense conference; WORLD WAR: 1914: VI. Africa: b, 1.

**HERULI.**—The Heruli were a people closely associated with the Goths in their history and undoubtedly akin to them in blood. The great piratical expedition of 267 from the Crimea, which struck Athens, was made up of Herules as well as Goths. The Heruli passed with the Goths under the yoke of the Huns. After the breaking up of the empire of Attila, they were found occupying the region of modern Hungary which is between the Carpathians, the upper Theiss, and the Danube. The Herules were numerous among the barbarian auxiliaries of the Roman army in the last days of the empire.—H. Bradley, *Story of the Goths.*—See also THURINGIA; EUROPE: Ethnology: Migrations: Map; GOTHs: Origin.

**HERVE, town of Belgium**, situated about ten miles east of Liège. See WORLD WAR: Miscellaneous auxiliary services: X. Alleged atrocities, etc.: a, 2.

**HERVEY ISLANDS.** See COOK, OR HERVEY, ISLANDS.

**HERZEGOVINA**, formerly in the extreme southern part of Austria-Hungary. Originally a Turkish possession, the administration of it was granted to Austria-Hungary in 1878 by the Congress of Berlin; annexed by Austria-Hungary in 1908 and administered with Bosnia as the province of Bosnia-Herzegovina; incorporated in the new kingdom of Jugo-Slavia, 1918. See BOSNIA-HERZEGOVINA; BALKAN STATES: Geographical position; Map showing distribution of nationalities.

**HERZEN, or Hertzén, Alexander Ivanovitch** (1812-1870), Russian writer and political agitator, a precursor of Nihilism. See RUSSIAN LITERATURE: 1836-1859; NIHILISM.

**HERZL, Theodor** (1860-1904), Hungarian author. Founder of political Zionism. See JEWS: Zionism: Definition.

**HERZOGENBUCHSEE, Battle of** (1653). See SWITZERLAND: 1562-1780.

**HESILRIGL, Heselrig, or Hazlerigg, Sir Arthur** (d. 1661), English statesman. Member of Cromwell's Parliament, and of the Long Parliament; impeached by King Charles, 1642. See ENGLAND: 1642 (January).

**HESIOD** (fl. 8th century B.C.), Greek poet. See GREEK LITERATURE: Period of the epic; HISTORY: 13.

**HESPERIAN, Canadian steamship**, torpedoed by the Germans off Fastnet, Ireland, September,

1915. See WORLD WAR: 1915: XI. Politics and diplomacy: d.

**HESSE**, state of the German republic, formerly a grand-duchy and known as Hesse-Darmstadt until 1866. (See GERMANY: Map.) The line of Hesse-Darmstadt was founded by George I, the youngest son of Philip the Magnanimous. During the revolutionary year of 1848 many reforms were introduced. Hesse shared the fate of the rest of Europe in the period of repression that followed, which lasted until 1871. It played an important part in the Franco-Prussian War, and finally became a part of the German empire. Ernest Ludwig succeeded to the grand-ducal throne in 1914. Hesse was proclaimed a republic early in November, 1918.

1801.—Given control of Westphalia by Treaty of Lunéville. See GERMANY: 1801-1803.

1812.—Extent of dominions. See EUROPE: Modern: Map of central Europe in 1812.

1815.—Embraced in Germanic confederation. See VIENNA, CONGRESS OF.

1833.—Member of Prussian Zollverein. See TARIFF: 1833.

1862-1866.—Allied with Austria in war against Prussia.—Extinction of the electorate.—Absorption by Prussia. See GERMANY: 1861-1866; AUSTRIA: 1862-1866.

1870.—Treaty and union with Germanic confederation. See GERMANY: 1866-1870; 1870 (September-December).

**HESSE-CASSEL**, or Electoral Hesse, district of Cassel in Hesse-Nassau, formerly a landgraviate and electorate of Germany.

1803.—Gains by the Treaty of Lunéville. See GERMANY: 1801-1803.

1806.—Occupied by the king of Holland.—Seized by the French. See GERMANY: 1806 (October); (October-December).

1807.—Included in the duchy of Westphalia. See GERMANY: 1807 (June-July).

1815.—Embraced in Germanic confederation. See VIENNA, CONGRESS OF.

1833.—Member of the Zollverein. See TARIFF: 1833.

**HETAIRIA**, Hetairists, Modern, Greek secret society formed in 1814 for the overthrow of Turkish rule in Greece. See GREECE: 1821-1829.

**HETCH HETCHY WATER DAM**.—The dam built in the Hetch Hetchy valley by the city of San Francisco, to create a reservoir for the city water supply, was the object of almost nation-wide opposition. National interest centered on the flooding of the floor of the beautiful valley, which is part of the Yosemite National Park, and the destruction of Lake Eleanor. This also was a ground of opposition in California. In addition the proposed monopolization, by the city, of water which could be made available for irrigation purposes, created a strong feeling of antagonism to the scheme. The question first came up about 1901 when the city engineer, after examination of various possible sources of water supply, reported in favor of the Hetch Hetchy and Tuolumne river supply, which was accordingly selected. The site of the projected reservoir was described by F. H. Clark, of San Francisco as "one of the most widely known regions of the high Sierras, second only to Yosemite in scenic interest. It is formed by a widening of the gorge of the Tuolumne River, about 30 miles westerly from the crest of the Sierras. It is thus described in the United States Geological Survey, 21st Annual Report. 'The valley proper is about three and one-half miles long and of a width varying from one-quarter to three-quarters of a mile. The rugged granite walls, crowned with spires and upon battlements, seem to rise almost perpendicular upon all sides to a height of 2500 feet above this beautiful emerald meadow. The Tuolumne River leaves this valley in a very narrow granite gorge, the sides of which rise precipitously for 800 or more feet, thus providing naturally a most favorable site for a masonry dam.' As the result of exhaustive investigations, in 1901, having reference to the procuring of an adequate water supply for the City of San Francisco, that city, through its proper officers, selected, surveyed, filed upon and made application for the reservoir rights of way in the Hetch Hetchy Valley and Lake Eleanor, which lie within the reservation known as Yosemite National Park. These reservoir sites were recognized and surveyed as such by the United States Geological Survey, in 1891, and the survey filings and application were made in conformity with the act of Congress of February 15, 1901, relating to rights of way through certain parks, reservations and other public lands. Lake Eleanor is situated 136 miles east of San Francisco on the west slope of the Sierra Nevada Mountains. It is about 300 acres in extent and lies in a broad, flat valley enclosed by precipitous walls of granite, narrowing at the lower end of the valley. It is 4,700 feet above sea level and receives the direct drainage from 83 square miles, and by a diverting canal 6 miles long from 103 square miles additional of uninhabitable mountain slopes which reach an altitude of 11,000 feet, and receive a mean annual precipitation of from 40 to 50 inches, most of which is snow. About a mile and a quarter below the lake, the valley closes into a granite walled gorge and offers an excellent site and material for a dam. . . . Hetch Hetchy reservoir [site] is about 140 miles from San Francisco on the main fork of the Tuolumne River and is about 3,700 feet above sea level. It receives the drainage from 452 square miles of the

uninhabitable slopes of the Sierra Nevada, reaching to elevations of over 13,000 feet. . . . The Hetch Hetchy project proposes to conduct the water liberated from these reservoirs by way of the gorge of the Tuolumne River 16 miles and thence by canals, tunnels and pipes." At the hearing before the Committee of Public Lands, in 1913, the city attorney stated that Hetch Hetchy Valley "was not in the national park until 1905, and even then not by express dedication. . . . As far back as 1870 the State geologist of California made a report to the State in which he suggested Hetch Hetchy Valley and Lake Eleanor as possible sources of water supply for domestic purposes for the city of San Francisco. . . . Application was made in 1903 to the Secretary of the Interior to grant to the city and county of San Francisco a revocable permit to build a dam to impound the waters of the Tuolumne River flowing through the Hetch Hetchy Valley and Lake Eleanor and to bring the same to San Francisco. That application was denied, Secretary Hitchcock basing his denial upon the ground that he was without power to grant it." He directed the city to buy out the Spring Valley Water Co. which was furnishing most of the city water. No agreement could be reached with the company, however. Negotiations resulted in bitter controversy, and the problem remained unsettled for years. The cities around San Francisco joined in asking for the relief, which would be afforded by the proposed reservoir, as the State law permitted the necessary organization of a metropolitan water district, and furthermore engineers reported to the department of the interior that in creating the new water system, the city agreed to supply water at cost to irrigationists, and electric energy at cost to landowners in the Turlock-Modesto district. The power potentiality of the stream was estimated at 115,000 horsepower in its ultimate development. It was proposed to develop this energy in 10,000 horsepower units, and use the power for public purposes in San Francisco and adjoining cities. "On May 11, 1908, the Secretary of the Interior, the Hon. James R. Garfield, authorized the city of San Francisco to use the Hetch Hetchy Valley of the Tuolumne River as a reservoir site in connection with other works on branches of this river. . . . In that grant, briefly, Secretary Garfield gave to the city of San Francisco a permit to store the waters of Lake Eleanor and what is known as Cherry Creek, which is outside the reservation, develop them to their highest capacity, and then, when their combined output was insufficient for San Francisco's needs, she was to be permitted to store water in the Hetch Hetchy Valley."—*Hetch Hetchy Dam Site, Hearing before Committee on Public Lands; House of Representatives, 63rd Congress, 1st session on H. R. 6281, 1913, p. 103.*—In the decision rendered by the Secretary, the considerations for and against the proposed use of these famous seats of natural beauty and sublimity were discussed at length and concluded to have the greater weight in favor of the application. One stipulation made by Secretary Garfield was that within two years the city should submit the question of water supply to the vote of its citizens, as contemplated in its charter. This was done on November 11, 1908, and the voters of San Francisco, notwithstanding the strenuous efforts of the private water company, recorded their approval of the Hetch Hetchy project by the overwhelming vote of 34,950 for, to 5708 against the proposition. At the same election a sale of municipal bonds to the amount of \$600,000 was authorized in or-

der to enable the city to proceed to perfect its titles. Almost passionate protests and pleadings against this use of the beautiful Hetch Hetchy valley were uttered by John Muir, the word-painter of "The Mountains of California," and many earnest voices from all parts of the country joined him in expostulation. "It is impossible [he wrote] to overestimate the value of wild mountains and mountain temples. They are the greatest of our natural resources, God's best gifts; but none, however high and holy, is beyond reach of the spoiler. . . . Excepting only Yosemite, Hetch Hetchy is the most attractive and wonderful valley within the bounds of the great Yosemite National Park and the best of all the camp-grounds. . . . Though the walls are less sublime in height than those of Yosemite, its groves, gardens, and broad spacious meadows are more beautiful and picturesque."—"In 1909 the Secretary of the Interior, Mr. Ballinger, . . . deemed it advisable to again submit the matter to the people in an amount sufficient to provide for this scheme. Acting upon that suggestion, in January, 1910, the proposition was again submitted to the people. . . . So that the people of San Francisco have twice committed themselves to this plan and have authorized the issuance of bonds in the amount of \$45,000,000. . . . [At the request of the president] the Secretary of War, by Special Order . . . [detailed three army engineers] as a board to pass on those questions and scrutinize and review all data regarding same, and report to the Secretary of the Interior. In November, 1912, an exhaustive hearing was held at Washington before the Secretary of the Interior, Hon. Walter L. Fisher, and the Army board, at which all elements of this proposition were exhaustively discussed. On February 19, 1913, the above Army board filed a report . . . in which their conclusions . . . amply sustain the contentions of the city. The time was too short, however, for the Secretary of the Interior to pass on the permit for the use of the Hetch Hetchy before he left office March 4, 1913."—*Hetch Hetchy Dam Site, Hearing before the Committee on the Public Lands, House of Representatives, 63rd Congress, 1st session on H. R. 6281, 1913, pp. 106, 132.*—The question was taken up by the new Congress without delay, and the bill necessary to permit the project to be put into effect was passed in December, 1913, and signed by the president. In 1917 a municipally owned railroad was completed which was a necessary preliminary to the actual work on the dam. A \$5,400,000 contract for the building of the dam was awarded in 1919, the work to be finished in about three years. The Lake Eleanor dam, and the lower Cherry power system were completed, July, 1922. This included the 4,000 h.p. plant and transmission lines. Ten miles of main aqueduct tunnel were excavated, and the Hetch Hetchy dam two-thirds finished. Up to that time the total expenditure on the project was \$18,000,000. The ultimate capacity fixed for the works is 400,000,000 gallons daily, the intention being to supply the whole region round San Francisco bay before the end of the twentieth century.

**HIAWATHA**.—A legendary North American Indian chief, credited with the organization of the Five Nations of Iroquois stock. "The region of the Great Lakes was a border land between the great warring Indian families—the Iroquois, the Hurons, and the Algonquins. But at length the Hurons were practically exterminated by the Iroquois and but two were left to battle for the supremacy. There was evidence that there had been a long and bloody war just before the coming of the white man to the shores of Lake Ontario. The most remarkable of these barbarous peoples were the Iroquois or Five Nations constituting the most powerful Indian confederation north of Mexico. [The league was at first composed of the Mohawks, Onandagas, Oneidas, Cayugas, and Senecas. The Tuscaroras were admitted later, and the league is sometimes called the Six Nations.] They occupied a great section of Northern New York and a portion of North-eastern Pennsylvania and were further advanced in the direction of civilization than the great majority of Indian tribes found in the New World. Many were the legends of the early history of the Iroquois, one of which we reproduce here: Many ages ago a white canoe was seen on Lake Ontario approaching the mouth of the Oswego River. When it landed, there stepped from it a venerable person who announced himself as the spirit man come to rescue the people from their troubles. Ascending the Oswego River, he removed the falls so that canoes could pass without portage. (It should be stated that this cataract was afterward replaced owing to the wickedness of later generations.) The strange visitor next proceeded up the river into the interior, cut in two a mighty serpent several miles in length and performed other feats to which the labors of Hercules were as child's play. Finally he laid aside his spiritual character and remained for many years as a mere man, the father and adviser of the Iroquois, under the name of Hiawatha, a name that has become world-famous through the poem of Longfellow."—H. W. Elson,

*Lake Ontario in history (New York State Historical Association Proceedings, 1914, pp. 144-145).*—"Hiawatha had long beheld with grief the evils which afflicted not only his own nation, but all the other tribes about them, through the continual wars in which they were engaged, and the misgovernment and miseries at home which these wars produced. With much meditation he had elaborated in his mind the scheme of a vast confederation which would ensure universal peace. In the mere plan of a confederation there was nothing new. There are probably few, if any, Indian tribes which have not, at one time or another, been members of a league or confederacy. It may almost be said to be their normal condition. But the plan which Hiawatha had evolved differed from all others in two particulars. The system which he devised was to be not a loose and transitory league, but a permanent government. While each nation was to retain its own council and its management of local affairs, the general control was to be lodged in a federal senate, composed of representatives elected by each nation, holding office during good behavior, and acknowledged as ruling chiefs throughout the whole confederacy. Still further, and more remarkably, the confederation was not to be a limited one. It was to be indefinitely expandible. The avowed design of its proposer was to abolish war altogether. He wished the federation to extend until all the tribes of men should be included in it, and peace should everywhere reign. Such is the positive testimony of the Iroquois themselves: and their statement, as will be seen, is supported by historical evidence. . . . His conceptions were beyond his time, and beyond ours; but their effect, within a limited sphere, was very great. For more than three centuries the bond which he devised held together the Iroquois nations in perfect amity. It proved, moreover, as he intended, elastic. The territory of the Iroquois, constantly extending as their united strength made itself felt, became the 'Great Asylum' of the Indian tribes. . . . Among the interminable stories with which the common people [of the Five Nations] beguile their winter nights, the traditions of Atotarho and Hiawatha became intermingled with the legends of their mythology. An accidental similarity, in the Onondaga dialect, between the name of Hiawatha and that of one of their ancient divinities, led to a confusion between the two, which has misled some investigators. This deity bears, in the sonorous Canienga tongue, the name of Taronhiawagon, meaning 'the Holder of the Heavens.' The Jesuit missionaries style him 'the great god of the Iroquois.' Among the Onondagas of the present day, the name is abridged to Taonhiawagi, or Tahiwagi. The confusion between this name and that of Hiawatha (which, in another form, is pronounced Tahionwatha) seems to have begun more than a century ago. . . . Mr. J. V. H. Clark, in his interesting *History of Onondaga*, makes the name to have been originally Ta-own-ya-wat-ba, and describes the bearer as 'the deity who presides over fisheries and hunting-grounds.' He came down from heaven in a white canoe, and after sundry adventures, which remind one of the labors of Hercules, assumed the name of Hiawatha (signifying, we are told, 'a very wise man'), and dwelt for a time as an ordinary mortal among men, occupied in works of benevolence. Finally, after founding the confederacy and bestowing many prudent counsels upon the people, he returned to the skies by the same conveyance in which he had descended. This legend, or, rather,

congeries of intermingled legends, was communicated by Clark to Schoolcraft, when the latter was compiling his 'Notes on the Iroquois.' Mr. Schoolcraft, pleased with the poetical cast of the story, and the euphonious name, made confusion worse confounded by transferring the hero to a distant region and identifying him with Manabozho, a fantastic divinity of the Ojibways. Schoolcraft's volume, which he chose to entitle 'The Hiawatha Legends,' has not in it a single fact or fiction relating either to Hiawatha himself or to the Iroquois deity Taronhiawagon. Wild Ojibway stories concerning Manabozho and his comrades form the staple of its contents. But it is to this collection that we owe the charming poem of Longfellow; and thus, by an extraordinary fortune, a grave Iroquois lawgiver of the fifteenth century has become, in modern literature, an Ojibway demigod, son of the West Wind, and companion of the tricky Paupukkeewis, the boastful Iagoo, and the strong Kwasind. If a Chinese traveler, during the middle ages, inquiring into the history and religion of the western nations, had confounded King Alfred with King Arthur, and both with Odin, he would not have made a more preposterous confusion of names and characters than that which has hitherto disguised the genuine personality of the great Onondaga reformer."—H. Hale, ed., *Iroquois book of rites (Brinton's library of aboriginal American literature, no. 2, pp. 21-36)*.

**HIBERNIA**, Iverna, Juverna, or Ierne, classical name for Ireland. See IRELAND: Geographical description; EUROPE: Ethnology: Migrations: Map.

**HIBERNIANS, Ancient Order of**.—"The Ancient Order of Hibernians, as its name indicates, is a society composed exclusively of Irishmen by birth or descent, . . . organized in Ireland for the preservation of the Catholic Church and the protection of the priest and schoolmaster. . . . There has been a great deal said as to when and where the Ancient Order of the Hibernians was first organized. Some authorities place it at 1642, where Pope Urban the Eighth sent his blessing to the Irish people and encouraged them in their fight for God and country. Again, it is given as 1651, in Connaught. . . . The history of the Ancient Order of Hibernians is practically the history of Ireland, as its members took an active part in all the struggles and efforts of the old Celtic chiefs to throw off the hated Saxon yoke."—T. F. McGrath, *History of the Ancient Order of Hibernians*, pp. 27-28.

**HICKS, Elias** (1748-1830), American Quaker, founder of the denomination of Hicksites. See FRIENDS, SOCIETY OF: 1827-1920.

**HICKS, Thomas Holliday** (1798-1865), governor of Maryland, 1857-1861. See MARYLAND: 1860-1864; U. S. A.: 1861 (April): President Lincoln's call to arms.

**HICKS, William (Hicks Pasha)** (1830-1883), British officer. His expedition against the Mahdi in 1883 resulted in his defeat and the complete extermination of his forces in the Kasgil passes. See EGYPT: 1870-1883.

**HICKS-BEACH, Michael Edward, Viscount St. Aldwyn** (1837-1916), English statesman. Represented East Gloucestershire in Parliament, 1864,

and West Bristol, 1885-1906; chief secretary for Ireland, 1874-1878 and 1886-1887; secretary of state for the colonies, 1878-1880; chancellor of the exchequer, 1885, 1895-1902; president of the Board of Trade, 1888-1902; raised to the peerage in 1906. See ENGLAND: 1894-1895; 1902 (July).

**HIDALGO**, central state of Mexico, bounded on the north by San Luis Potosi, on the east by Vera Cruz and Puebla, on the south by Tlaxcala and Mexico, and on the west by Querétaro.

**HIDALGO**.—"Originally written 'ñijodalgo,' son of something. Later applied to gentlemen, country gentlemen perhaps more particularly. . . . In the Dic. Univ. authorities are quoted showing that the word 'hidalgo' originated with the Roman colonists of Spain, called 'Italicos,' who were exempt from imposts. Hence those enjoying similar benefits were called 'Italicos,' which word in lapse of time became 'hidalgo.'"—H. H. Bancroft, *History of the Pacific states*, v. 1, p. 252, *foot-note*.

**HIDALGO Y COSTILLA**, Miguel (1753-1811), Mexican patriot. First leader in the Mexican War of Independence; captured Guanajuato and Valladolid, 1810; advanced against Mexico City but was forced to retreat owing to lack of ammunition; captured by the Spaniards and shot. See MEXICO: 1810-1810.

**HIDATSA**, Minnetaree, or Grosventres.—One of the three tribes which inhabit the reservation at Fort Berthold, North Dakota. "The history of this tribe is . . . intimately connected with that of the politically allied tribes of the Aricarees and Mandans." The name, Grosventres, was given to the people of this tribe "by the early French and Canadian adventurers. The same name was applied also to a tribe, totally distinct from these in language and origin, which lives some hundreds of miles west of Fort Berthold; and the two nations are now distinguished from one another as Grosventres of the Missouri and Grosventres of the Prairie. . . . Edward Umfreville, who traded on the Saskatchewan River from 1784 to 1787, . . . remarks: . . . 'They [the Canadian French] call them Grosventres, or Big-Bellies; and without any reason, as they are as comely and as well made as any tribe whatever.' . . . In the works of many travellers they are called Minnetarees, a name which is spelled in various ways. . . . This, although a Hidatsa word, is the name applied to them, not by themselves, but by the Mandans; it signifies 'to cross the water,' or 'they crossed the water.' . . . Hidatsa was the name of the village on Knife River farthest from the Missouri, the village of those whom Lewis and Clarke considered the Minnetarees proper." It is the name "now generally used by this people to designate themselves."—W. Matthews, *Ethnography and philology of the Hidatsa Indians*, pt. 1-2 (*United States geological and geographical survey*, F. V. Hayden, *Miscellaneous publication*, no. 7).—See also INDIANS, AMERICAN: Cultural areas in North America; Plains area; SIQUAN FAMILY.

**HIDE OF LAND, CARUCATE, VIRGATE**.—"In the [Hundred] rolls for Huntingdonshire [England] a series of entries occurs, describing, contrary to the usual practice of the compilers, the number of acres in a virgate, and the number of virgates in a hide, in several manors. . . . They show clearly—(1) That the bundle of scattered strips called a virgate did not always contain the same number of acres. (2) That the hide did not always contain the same number of virgates. But at the same time it is evident that the hide in Huntingdonshire most often contained 120 acres or thereabouts. . . . We may gather from the in-

stances given in the Hundred Rolls for Huntingdonshire, that the 'normal' hide consisted as a rule of four virgates of about thirty acres each. The really important consequence resulting from this is the recognition of the fact that as the virgate was a bundle of so many scattered strips in the open fields, the hide, so far as it consisted of actual virgates in villenage, was also a bundle—a compound and fourfold bundle—of scattered strips in the open fields. . . . A trace at least of the original reason of the varying contents and relations of the hide and virgate is to be found in the Hundred Rolls, as, indeed, almost everywhere else, in the use of another word in the place of hide, when, instead of the anciently assessed hidage of a manor, its modern actual taxable value is examined into and expressed. This new word is 'carucate'—'the land of a plough or plough team,'—'caruca' being the mediæval Latin term for both plough and plough team. . . . In some cases the carucate seems to be identical with the normal hide of 120 acres, but other instances show that the carucate varied in area. It is the land cultivated by a plough team; varying in acreage, therefore, according to the lightness or heaviness of the soil, and according to the strength of the team. . . . In pastoral districts of England and Wales the Roman tribute may possibly have been, if not a hide from each plough team, a hide from every family holding cattle. . . . The supposition of such an origin of the connexion of the word 'hide' with the 'land of a family,' or of a plough team, is mere conjecture; but the fact of the connexion is clear."—F. Seebohm, *English village community*, ch. 2, sect. 4, ch. 10, sec. 6.

**HIDEYOSHI**, Toyotomi, the Taiko (1536-1598), Japanese soldier and statesman. Regent of Japan, 1581-1591. See JAPAN: B.C. 600-A.D. 1853; 1542-1593; 1549-1605; 1593-1625; KOREA: Early history.

**HIERATIC WRITING**. See HIEROGLYPHICS.  
**HIERO**, or Hieron, I (d. 467 B.C.), tyrant of Syracuse, c. 478-467 B.C. Noted patron of literature. See BALANCE OF POWER: Ancient Greece and Rome.

**Hiero II** (c. 307-216 B.C.), tyrant of Syracuse, 270-216 B.C. See ROME: Republic: B.C. 264-241.

**HIERODULI**.—In some of the early Greek communities, the Hieroduli, or ministers of the gods, "formed a class of persons bound to certain services, duties, or contributions to the temple of some god, and . . . sometimes dwelt in the position of serfs on the sacred ground. They appear in considerable numbers, and as an integral part of the population only in Asia, as, e. g., at Comana in Cappadocia, where in Strabo's time there were more than 6,000 of them attached to the temple of the goddess Ma, who was named by the Greeks Enyo, and by the Romans Bellona. In Sicily too the Erycinian Aphrodite had numerous ministers, whom Cicero calls Venerii, and classes with the ministers of Mars (Martiales) at Larinum in South Italy. In Greece we may consider the Craugallidæ as Hieroduli of the Delphian Apollo. They belonged apparently to the race of Dryopes, who are said to have been at some former time conquered by Heracles, and dedicated by him to the god. The greater part of them, we are told, were sent at the command of Apollo to the Peloponnese, whilst the Craugallidæ remained behind. . . . At Corinth too there were numerous Hieroduli attached to Aphrodite, some of whom were women, who lived as Iletæreæ and paid a certain tax from their earnings to the god-

dess."—G. F. Schömann, *Antiquities of Greece: The state, pt. 2, ch. 4.*—See also DORIS AND DRYOPIS.

**HIEROGLYPHICS:** Cretan. See ÆGEAN CIVILIZATION; Excavations and antiquities: Cretan area; Minoan Age: B.C. 2200-1600.

**Egyptian.**—"The Greeks gave the name of Hieroglyphics, that is, 'Sacred Sculpture,' to the national writing of the Egyptians, composed entirely of pictures of natural objects. Although very inapplicable, this name has been adopted by modern writers, and has been so completely accepted and used that it cannot now be replaced by a more appropriate appellation. . . . For a long series of ages the decipherment of the hieroglyphics, for which the classical writers furnish no assistance, remained a hopeless mystery. The acute genius of a Frenchman at last succeeded, not fifty years since, in lifting the veil. By a prodigious effort of induction, and almost divination, Jean Francois Champollion, who was born at Figeac (Lot) on the 23d of December, 1790, and died at Paris on the 4th of March, 1832, made the greatest discovery of the nineteenth century in the domain of historical science, and succeeded in fixing on a solid basis the principle of reading hieroglyphics. Numerous scholars have followed the path opened by him. . . . It would . . . be very far from the truth to regard hieroglyphics as always, or even generally, symbolical. No doubt there are symbolical characters among them, generally easy to understand; as also there are, and in very great number, figurative characters directly representing the object to be designated; but the majority of the signs found in every hieroglyphic text are characters purely phonetic; that it, representing either syllables (and these are so varied as to offer sometimes serious difficulties) or the letters of an only moderately complicated alphabet. These letters are also pictures of objects, but of objects or animals whose Egyptian name commenced with the letter in question, while also the syllabic characters (true rebusses) represented objects designated by that syllable."—F. Lenormant and E. Chevallier, *Manual of the ancient history of the East, v. 1, bk. 3, ch. 5.*—"The system of writing employed by the people called Egyptians was probably entirely pictorial either at the time when they first arrived in Egypt, or during the time that they still lived in their original home. We, however, know of no inscription in which pictorial characters alone are used, for the earliest specimens of their writing known to us contain alphabetical characters. The Egyptians had three kinds of writing—Hieroglyphic, Hieratic, and Demotic. . . . Hieroglyphics . . . were commonly employed for inscriptions upon temples, tombs, coffins, statues, and stelæ, and many copies of the Book of the Dead were written in them. The earliest hieroglyphic inscription at present known is found on the monument of SHERA, parts of which are preserved in the Ashmolean Museum at Oxford and in the Gizeh Museum; it dates from the IIInd dynasty. Hieroglyphics were used in Egypt for writing the names of Roman Emperors and for religious purposes until the third century after Christ, at least. Hieratic . . . was a style of cursive writing much used by the priests in copying literary compositions on papyrus; during the XIth or XIIth dynasty wooden coffins were inscribed in hieratic with religious texts. The oldest document in hieratic is the famous Prisse papyrus, which records the counsels of Ptah-hetep to his son; the composition itself is about a thousand years older than this papyrus, which was probably inscribed about the XIth dy-

nasty. Drafts of inscriptions were written upon flakes of calcareous stone in hieratic, and at a comparatively early date hieratic was used in writing copies of the Book of the Dead. Hieratic was used until about the fourth century after Christ. Demotic . . . is a purely conventional modification of hieratic characters, which preserve little of their original form, and was used for social and business purposes; in the early days of Egyptian decipherment it was called enchorial. . . . The Demotic writing appears to have come into use about B.C. 900, and it survived until about the fourth century after Christ. In the time of the Ptolemies three kinds of writing were inscribed side by side upon documents of public importance, hieroglyphic, Greek, and Demotic; examples are the stele of Canopus, set up in the ninth year of the reign of Ptolemy III. Euergetes I., B.C. 247-222, at Canopus, to record the benefits which this king had conferred upon his country, and the famous Rosetta Stone, set up at Rosetta in the eighth year of the reign of Ptolemy V. Epiphanes (B.C. 205-182), likewise to commemorate the benefits conferred upon Egypt by himself and his family. . . . A century or two after the Christian era Greek had obtained such a hold upon the inhabitants of Egypt, that the native Christian population, the disciples and followers of Saint Mark, were obliged to use the Greek alphabet to write down the Egyptian, that is to say Coptic, translation of the books of the Old and New Testament, but they borrowed six signs from the demotic forms of ancient Egyptian characters to express the sounds which they found unrepresented in Greek."—E. A. W. Budge, *Mummy, pp. 353-354.*—See also ALPHABET: Earliest stages; Deciphering the hieroglyphs; PHILOLOGY: 12; Rosetta stone.

**Mexican (so-called).** See AZTEC AND MAYA PICTURE-WRITING; MAYAS; ALPHABET: Earliest stages.

**HIERONYMITES.**—"A number of solitaries residing among the mountains of Spain, Portugal, and Italy, gradually formed into a community, and called themselves Hieronymites, either because they had compiled their Rule from the writings of St. Jerome, or because, adopting the rule of St. Augustine, they had taken St. Jerome for their patron. . . . The community was approved by Gregory XI., in 1374. The famous monastery of Our Lady of Guadalupe, in Estremadura; the magnificent Escorial, with its wealth of literary treasures, and the monastery of St. Just, where Charles V. sought an asylum in the decline of his life, attest their wonderful energy and zeal."—J. Alzog, *Manual of universal church history, v. 3, p. 149.*

**HIGH CHURCH, English.** See ENGLAND: 1689 (April-August).

**HIGH COMMISSION, Court of,** created by English Act of Supremacy, 1559. See ENGLAND: 1559; 1686.

**HIGH COMMISSIONER,** an official title given to the British representative of the crown in Egypt and, formerly, in South Africa. Lord Cromer was "agent-general" in Egypt; Lord Al-lenby in 1921 received the title of "high commissioner," while the British representative in South Africa is now known as "governor-general." Commercial and semi-diplomatic agents of the British self-governing dominions are stationed in London and bear the style of "high commissioner" or "agent-general." "Unlike the Crown Agents for the Colonies, the high commissioners of the self-governing dominions are not by any means exclusively business agents. In their con-

tribution to the agenda for the Imperial Conference of 1911, the Government of New Zealand went so far as to propose that the high commissioners should be the sole channel of communication between imperial and dominion governments, and that they should have direct access to the Foreign Secretary; in other words, that they should be placed in much the same position as ambassadors. These proposals were not entertained, but it is clear that the high commissioners are the recognized representatives and spokesmen in this country of the younger nations of the Empire. It would be difficult, if not impossible, at the present moment further to define their status, for two reasons. The first reason is that the office and duties of a high commissioner, like every other fact and factor, past or present, in the British Empire, are undergoing a process of evolution. As the people represented grows, so the status of the representative of the people grows also. The second reason is that, apart from the extent of recognition which may be accorded by the Imperial Government to a high commissioner, his powers and position depend upon the views of those by whom he is appointed; and the views of one dominion or the particular government of one dominion at a particular time do not necessarily accord with the views of another. When the relations between the mother country and the self-governing dominions are talked of or discussed in writing, it is commonly assumed that there are two parties only concerned, the mother country being one and the self-governing dominions, taken as a whole, being the other; as though the self-governing dominions formed one homogeneous whole. The young peoples of the Empire are, on the contrary, as distinct from one another as each of them is from the mother country. They regard imperial questions each from their own standpoint; and the value of the Imperial Conference consists in eliciting different points of view, enabling the differences to be appreciated and finding out their common measure."

—A. J. Herbertson and O. J. R. Howarth, *Oxford survey of the British empire*, pp. 48-49.—See also PACIFIC OCEAN: 1800-1914.—"Previous to 1880 Canada had been represented in the United Kingdom by . . . [an] agent, Sir John Rose. Early in that year, Sir John Macdonald resolved to put the office of agent for Canada in London on a more satisfactory footing. An act was, therefore, passed constituting the office of High Commissioner. In appointing Sir Alexander Galt to the post certain definite instructions were formulated and approved by the Governor-General. He was also appointed chief emigration agent for Canada, and he was informed that it was the Government's intention to transfer the entire management of the public debt and correspondence relating to the finances of the Dominion in London to the High Commissioner. After a brief tenure of office, Sir Alexander Galt was succeeded by Sir Charles Tupper in 1884. With all Sir Charles's qualities of manner and knowledge which made him so capital a representative of the country abroad, he was, it must be avowed, far too keen a politician and followed far too ardently his instincts of combat to be quite acceptable to both political parties in Canada."—B. Willson, *Life of Lord Strathcona and Mount Royal*, v. 2, p. 216.

**HIGHBINDER ASSOCIATIONS,** organizations formed among the Chinese population of San Francisco, California, under the semblance of benefit societies for the purpose of blackmail and violation of the immigration laws of the United States. See SAN FRANCISCO: 1902.

**HIGHER LAW DOCTRINE.**—William H. Seward, speaking in the Senate of the United States, March 11, 1850, on the question of the admission of California into the Union as a free state, used the following language: "The Constitution," he said, "regulates our stewardship; the Constitution devotes the domain to union, to justice, to defence, to welfare, and to liberty. But there is a higher law than the Constitution, which regulates our authority over the domain, and devotes it to the same noble purposes. The territory is a part, no inconsiderable part, of the common heritage of mankind, bestowed upon them by the Creator of the universe. We are His stewards, and must so discharge our trust as to secure in the highest attainable degree their happiness." This public recognition by a Senator of the United States that the laws of the Creator were 'higher' than those of human enactment excited much astonishment and indignation, and called forth, in Congress and out of it, measureless abuse upon its author."—H. Wilson, *History of the rise and fall of the slave power in America*, v. 2, pp. 262-263.—In the agitations that followed upon the adoption of the fugitive slave law, and the other compromise measures, this Higher Law Doctrine was much talked about.—See also U. S. A.: 1850 (March).

**HILDEGARD, Saint (c. 1098-1179), German Benedictine abbess.** See ABBOT; MEDICAL SCIENCE: Medieval: 10th-12th centuries; MONASTICISM: Women and monasticism.

**HILL, David Bennett (1843-1910), American statesman.** Member New York legislature, 1871-1872; lieutenant-governor of New York, 1882-1885; governor, 1885-1891; United States senator, 1891-1897. See AUSTRALIAN BALLOT: 1882-1916.

**HILL, David Jayne (1850- ), American diplomat and historian.** Minister to Switzerland, 1903-1905; to Netherlands, 1905-1907; ambassador to Germany, 1908-1911; delegate to second

peace conference at The Hague, 1907 (see HAGUE CONFERENCES: 1907); member American Academy of Arts and Letters; author of numerous historical books and articles.

**HILL, Isaac** (1788-1851), American politician. Member of the "Kitchen Cabinet" under Andrew Jackson. See U. S. A.: 1829.

**HILL, James Jerome** (1838-1916), American railway magnate, head of extensive system of railroads including the Great Northern, 1889-1912. See RAILROADS: 1901-1905.

**HILL, Sir Rowland** (1795-1879), English administrator. His agitations led to the introduction of the penny-postage in England, 1840; secretary to the post office, 1854-1864; knighted, 1860. See ENGLAND: 1840: Adoption of penny-postage.

**HILLER, or Hüller, Johann Adam** (1728-1804), German composer of operettas and church music. See MUSIC: Modern: 1630-1800.

**HILLQUIT, Morris** (1869- ), American lawyer. Prominent member of the Socialist party in America. See U. S. A.: 1920 (May-November).

**HILLS OF ROME.** See SEVEN HILLS OF ROME.

**HILMI PASHA, Hussein** (d. 1923), Turkish statesman. Governor-general of Adana and later, of the Yemen; inspector-general of Macedonia, 1903; minister of the interior, 1908; minister of justice, 1912; ambassador to Austria, 1912; grand vizier, 1909, 1914; vigorously opposed German influence in Turkey and favored the British in Mesopotamia. See TURKEY: 1909 (May-December).

**HILTON HEAD**, site of a fort in South Carolina. Surrendered by the Confederates to the Federals after a severe bombardment November 7, 1861, during the Civil War. See U. S. A.: 1861 (October-December: South Carolina-Georgia).

**HIMALAYAS**, ranges of mountains forming the northern boundary of India. Greatest and highest mountain system in the world. See INDIA: Geographical description.

**HIMATION**, an article of dress in the nature of a cloak, worn by both men and women among the ancient Greeks. It "was arranged so that the one corner was thrown over the left shoulder in front, so as to be attached to the body by means of the left arm. On the back the dress was pulled toward the right side, so as to cover it completely up to the right shoulder, or, at least, to the armpit, in which latter case the right shoulder remained uncovered. Finally, the himation was again thrown over the left shoulder, so that the ends fell over the back. . . . A second way of arranging the himation, which left the right arm free, was more picturesque, and is therefore usually found in pictures."—E. Guhl and W. Koner, *Life of the Greeks and Romans* (tr. by Hueffer), sect. 42.

**HIMERA**, town on the northern coast of Sicily. It was the scene of the defeat of the Carthaginians by Gelon in 480 B.C., and of Agathokles by the Carthaginians in 310 B.C.; destroyed by Hannibal in 408 B.C. See SICILY: B.C. 480; B.C. 409-405; SYRACUSE: B.C. 317-289.

**HIMYARITES**, an ancient tribe of southwestern Arabia. See ARABIA: Ancient succession and fusion of races; 6th-16th centuries.

**HIN**, unit of measurement used by the ancient Egyptians. See EPHAH.

**HINDENBURG, Paul von Beneckendorff und von** (1847- ), German field marshal. Won a brilliant victory during the World War at Tannenberg against the Russians, September 12, 1914; drove the Russians out of Poland the following summer; was appointed chief of general staff in

1916 (see WORLD WAR: 1916: I. Military situation: d, 3); directed the retreat of the Teuton armies from the Somme battlefield, 1917; with Ludendorff was practically the generalissimo of the armies of Germany and her allies during the last two years of the war.

**Recapture of East Prussia.—Battle of Tannenberg.—Campaign in Galicia.** See WORLD WAR: 1914: II. Eastern front: c, 2; c, 3; d, 1; d, 2; 1915: III. Eastern front: g, 6; h.

**HINDENBURG LINE.**—"The German preparation for a renewal of the Somme battle in 1917 was a 'strategic retreat' to the 'Hindenburg line,' a new and carefully prepared line of defense which had supposedly been rendered impregnable. The line . . . ran through Laon, La Fère, St Quentin, Cambrai, and Lille, joining the old line at Vimy Ridge north of Arras. The retreat on a front extending from Arras to the Aisne was intended to frustrate the Allied plans for their spring offensive, and was carried out with an orgy of destruction in March, 1917. The Allied pursuit overtook the retreat. La Fère was rendered useless by French successes. St. Quentin was eliminated from the line in April, and the Germans . . . failed to establish their impregnable defense."—*War cyclopaedia*, p. 130.—See also WORLD WAR: 1916: II. Western front: e, 7; 1917: II. Western front: a, 1; c, 7; c, 8; c, 11; g, 2; g, 3; g, 16; 1918: II. Western front: l, 1; l, 3; 1918: II. Western front: o; o, 2; v, 4.

**HINDI LANGUAGE**, chief vernacular of northern India. See PHILOLOGY: 16.

**HINDMAN**, fort in Arkansas, commonly known as "Arkansas Post," situated on the Arkansas river. Bombarded and captured by Federal troops in the Civil War. See U.S.A.: 1863 (January: Arkansas).

**HINDOSTANI**, dialect of the Hindi language; current over nearly all India.

**Its relation to the gypsy.** See PHILOLOGY: 26.

**HINDU LAWS.** See MANU, LAWS OF; HINDU LITERATURE: Legal writings.

**HINDU LITERATURE.**—"Nearly all the most valuable works of the Vedic, as well as the later period, have within the last fifty years [written in 1900] been made accessible in thoroughly trustworthy editions. . . . The literature

of the Vedas at least equals in extent what survives of the writings of ancient Greece. Thus in the course of a century the whole range of Sanskrit literature, which in quantity exceeds that of Greece and Rome put together, has been explored. . . . [Sanskrit is still spoken as the tongue of the learned by thousands of Brahmans. Many books and journals are written in it and copying of manuscripts goes on as in the time of Alexander.] The study of Sanskrit literature deserves far more attention than it had yet received. . . . For in that ancient heritage the languages, the religious and intellectual life and thought, in short, the whole civilisation of the Hindus, who form the vast majority of the inhabitants of our Indian Empire, have their roots. Among all the ancient literatures, that of India is, moreover, undoubtedly in intrinsic value and æsthetic merit second only to that of Greece. To the latter it is, as a source for the study of human evolution, even superior. Its earliest period, being much older than any product of Greek literature, presents a more primitive form of belief, and therefore gives a clearer picture of the development of religious ideas than any other literary monument of the world. Hence it came about that, just as the discovery of the Sanskrit language led to the foundation of the science of Comparative Philology, an acquaintance with the literature of the Vedas resulted in the foundation of the science of Comparative Mythology by Adalbert Kuhn and Max Müller. Though it has touched excellence in most of its branches, Sanskrit literature has mainly achieved greatness in religion and philosophy. The Indians are the only division of the Indo-European family which has created a great national religion—Brahmanism—and a great world-religion—Buddhism; while all the rest, far from displaying originality in this sphere, have long since adopted a foreign faith. The intellectual life of the Indians has, in fact, all along been more dominated by religious thought than that of any other race. The Indians, moreover, developed independently several systems of philosophy which bear evidence of high speculative powers. The great interest, however, which these two subjects must have for us lies, not so much in the results they attained, as in the fact that every step in the evolution of religion and philosophy can be traced in Sanskrit literature. The history of ancient Indian literature naturally falls into two main periods. The first is the Vedic, which beginning perhaps as early as 1500 B.C., extends in its latest phase to about 200 B.C. In the former half of the Vedic age the character of its literature was creative and poetical, while the centre of culture lay in the territory of the Indus and its tributaries, the modern Punjab; in the latter half, literature was theologically speculative in matter and prosaic in form, while the centre of intellectual life had shifted to the valley of the Ganges. The second period, concurrent with the final offshoots of Vedic literature and closing with the Muhammadan conquest after 1000 A.D., is the Sanskrit period strictly speaking. In a certain sense, owing to the continued literary use of Sanskrit, mainly for the composition of commentaries, this period may be regarded as coming down to the present day. During this second epoch Brahmanic culture was introduced into and overspread the southern portion of the continent called the Dekhan or 'the South.' In the course of these two periods taken together, Indian literature attained noteworthy results in nearly every department. The Vedic age, which, unlike the earlier epoch of Greece, produced only religious

works, reached a high standard of merit in lyric poetry, and later made some advance towards the formation of a prose style. The Sanskrit period embracing in general secular subjects achieved distinction in many branches of literature, in national as well as court epic, in lyric and especially didactic poetry, in the drama, in fairy tales, fables, and romances. Everywhere we find much true poetry, the beauty of which is, however, marred by obscurity of style and the ever-increasing taint of artificiality. But this period produced few works which, regarded as a whole, are dominated by a sense of harmony and proportion. Such considerations have had little influence on the æsthetic notions of India. The tendency has been rather towards exaggeration, manifesting itself in all directions. The almost incredible development of detail in ritual observance; the extraordinary excesses of asceticism; the grotesque representations of mythology in art; the frequent employment of vast numbers in description; the immense bulk of the epics; the unparalleled conciseness of one of the forms of prose; the huge compounds habitually employed in the later style, are among the more striking manifestations of this defect of the Indian mind. In various branches of scientific literature, in phonetics, grammar, mathematics, astronomy, medicine, and law, the Indians also achieved notable results. In some of these subjects their attainments are, indeed, far in advance of what was accomplished by the Greeks. History is the one weak spot in Indian literature. It is, in fact, non-existent. The total lack of the historical sense is so characteristic, that the whole course of Sanskrit literature is darkened by the shadow of this defect, suffering as it does from an entire absence of exact chronology. So true is this, that the very date of Kalidasa, the greatest of Indian poets, was long a matter of controversy within the limits of a thousand years, and is even now doubtful to the extent of a century or two. In the Vedic period three well-defined literary strata are to be distinguished. The first is that of the four Vedas, the outcome of a creative and poetic age, in which hymns and prayers were composed chiefly to accompany the pressing and offering of the Soma juice or the oblation of melted butter (*ghrita*) to the gods. The four Vedas are 'collections,' called *samhita*, of hymns and prayers made for different ritual purposes. They are of varying age and significance. By far the most important as well as the oldest—for it is the very foundation of all Vedic literature—is the Rigveda, the 'Veda of verses' (from *rich*, 'a laudatory stanza'), consisting entirely of lyrics, mainly in praise of different gods. It may, therefore, be described as the book of hymns or psalms. The *Sama-veda* has practically no independent value, for it consists entirely of stanzas (excepting only 75) taken from the *Rigveda* and arranged solely with reference to their place in the Soma sacrifice. Being meant to be sung to certain fixed melodies, it may be called the book of chants (*saman*). [See also RELIGION: B.C. 1000.] The *Fajur-veda* differs in one essential respect from the *Sama-veda*. It consists not only of stanzas (*rich*), mostly borrowed from the *Rigveda*, but also of original prose formulas. It resembles the *Sama-veda*, however, in having its contents arranged in the order in which it was actually employed in various sacrifices. It is, therefore, a book of sacrificial prayers (*yajus*). The matter of this Veda has been handed down in two forms. In the one, the sacrificial formulas only are given; in the other, these are

to a certain extent intermingled with their explanations. These three Vedas alone were at first recognised as canonical scriptures, being in the next stage of Vedic literature comprehensively spoken of as 'the threefold knowledge' (*trayi vidya*). The fourth collection, the *Atharva-veda*, attained to this position only after a long struggle. Judged both by its language and by that portion of its matter which is analogous to the contents of the *Rigveda*, the *Atharva-veda* came into existence considerably later than that Veda. In form it is similar to the *Rigveda*, consisting for the most part of metrical hymns, many of which are taken from the last book of the older collection. In spirit, however, it is not only entirely different from the *Rigveda*, but represents a much more primitive stage of thought. While the *Rigveda* deals almost exclusively with the higher gods as conceived by a comparatively advanced and refined sacerdotal class, the *Atharva-veda* is, in the main, a book of spells and incantations appealing to the demon world, and teems with notions about witchcraft current among the lower grades of the population, and derived from an immemorial antiquity. These two, thus complementary to each other in contents, are obviously the most important of the four Vedas. As representing religious ideas at an earlier stage than any other literary monuments of the ancient world, they are of inestimable value to those who study the evolution of religious beliefs. [See also *VEDAS*.] The creative period of the Vedas at length came to an end. It was followed by an epoch in which there no longer seemed any need to offer up new prayers to the gods, but it appeared more meritorious to repeat those made by the holy seers of bygone generations, and handed down from father to son in various priestly families. The old hymns thus came to be successively gathered together in the Vedic collections already mentioned, and in this form acquired an ever-increasing sanctity. Having ceased to produce poetry, the priesthood transferred their creative energies to the elaboration of the sacrificial ceremonial. The result was a ritual system far surpassing in complexity of detail anything the world has elsewhere known. The main importance of the old Vedic hymns and formulas now came to be their application to the innumerable details of the sacrifice. Around this combination of sacred verse and rite a new body of doctrine grew up in sacerdotal tradition, and finally assumed definite shape in the guise of distinct theological treatises entitled *Brahmanas*, 'books dealing with devotion or prayer' (*brahman*). They evidently did not come into being till a time when the hymns were already deemed ancient and sacred revelations, the priestly custodians of which no longer fully understood their meaning owing to the change undergone by the language. They are written in prose throughout and are in some cases accented, like the Vedas themselves. They are thus notable as representing the oldest prose writing of the Indo-European family. Their style is, indeed, cumbersome, rambling, and disjointed, but distinct progress towards greater facility is observable within this literary period. . . . We have now arrived at the third and last stage of Vedic literature, that of the *Sutras*. These are compendious treatises dealing with Vedic ritual on the one hand, and with customary law on the other. The rise of this class of writings was due to the need of reducing the vast and growing mass of details in ritual and custom, preserved in the *Brahmanas* and in floating tradition, to a systematic shape, and of

compressing them within a compass which did not impose too great a burden on the memory, the vehicle of all teaching and learning. The main object of the *Sutras* is, therefore, to supply a short survey of the sum of these scattered details. They are not concerned with the interpretation of ceremonial or custom, but aim at giving a plain and methodical account of the whole course of the rites or practices with which they deal. . . . Though the Upanishads generally form a part of the *Brahmanas*, being a continuation of their speculative side (*jnana-kanda*), they really represent a new religion, which is in virtual opposition to the ritual or practical side (*karma-kanda*). Their aim is no longer the obtainment of 'earthly happiness and afterwards bliss in the abode of Yama by sacrificing correctly to the gods, but release from mundane existence by the absorption of the individual soul in the world-soul through correct knowledge. Here, therefore, the sacrificial ceremonial has become useless and speculative knowledge all-important. The essential theme of the Upanishads is the nature of the world-soul. Their conception of it represents the final stage in the development from the world-man, Purusha, of the *Rigveda* to the world-soul, Atman; from the personal creator, Prajapati, to the impersonal source of all being, Brahma. [See also *UPANISHADS*.] . . . The best productions of the Indian drama are nearly a dozen in number, and date from a period embracing something like four hundred years, from about the beginning of the fifth to the end of the eighth century A.D. These plays are the compositions of the great dramatists Kalidasa and Bhavavhuti, or have come down under the names of the royal patrons Cudraka and Cribharsha, to whom their real authors attributed them. The greatest of all is Kalidasa, already known to us as the author of several of the best *Kavyas*. Three of his plays have been preserved, *Cakuntala*, *Vikramorvasi*, and *Malavikagnimitra*. The richness of creative fancy which he displays in these, and his skill in the expression of tender feeling, assign him a high place among the dramatists of the world."—A. A. Macdonell, *History of Sanskrit literature*, pp. 5-10, 20-32, 35, 218, 353.—See also *BHAGAVAD-GITA*; *COMMERCE: Ancient: B.C. 2000*; *INDIA: B.C. 2000-600*.

**Epic poetry.**—*Mahabharata* and *Ramayana*.—"In few departments of literary activity is there a greater chasm between Greece and India than in epic poetry. The *Iliad*, as we look back to it, remains for us the one stately structure that closes the vista of Greek literature. In India, on the other hand, the *epos* is a relatively modern building, placed late and midway down the avenue that leads us to the first temple built by the Hindus, the Vedic edifice of hymns to the gods. Between these two, the Veda and the *Mahabharata* (the elder of the epics) stand other buildings, representing centuries of verse and prose, a whole civilization in various stages of slow development. The very metres with which epic poetry is adorned. . . —I do not mean the metres of the mass, but occasional embellishments—are late forms of versification. There is much that is primitive in this poetry, but, taken as a whole, it reflects ages of culture, philosophy, and religion. If comparable with any western form of epic, that of India should then be set beside the Rhodian and Roman epic, or perhaps more fittingly beside the mediæval romances of France and Germany. As was to be expected in poetry such as this, the wisdom of antiquity is engrafted upon it. But we find more than this,

for in the Mahabharata—the Ramayana has something of the same sort, but it is too clearly a modern addition to discuss—there are interpolated tedious sermons, tractates on morality, philosophical essays, religious discussions, interminable laudations of the supreme gods, all set into the poem as distinct pieces, having nothing to do with the action, some of them clearly differentiated by metre from the poem itself. We must, then, if we would get at the original epic, discard this alien mass, and in many cases it is easy to see how the first poem has been distorted by it. In fact, the greater epic, as it stands to-day, is so heterogeneous that only the most unhistorical type of mind could view all this heap of goods and rubbish as the product of one uniform source. Such a theory has indeed actually been suggested, but it was too fantastic to find support, and has awakened only a passing interest. If we compare the two epics, we shall find quite a difference between them. The huge Mahabharata is seven times as long as the Iliad and Odyssey put together; the Ramayana is but a quarter as long as the Mahabharata. The Ramayana is more symmetrical, more homogeneous, and lastly it is more refined, both in its visibly polished metre and in its social atmosphere. A further distinction is to be noticed. The Bharata poem belongs to the west, the region about Delhi; the Ramayana, to the east, to Oudh, the region north of Benares. Nevertheless, the style of the two epics is in so far related as to be formed to a great extent on identical phraseology. Both epics have the same proverbs and know the same stories. All of this shows that the ancient tale of the north-west has been transplanted into the new seat of culture about Benares, and that the Mahabharata was completed where the Ramayana began. In the course of this brief survey I cannot go into the further reasons for this assumption, but I may add that all the literary indications point to this explanation, such, for example, as that the tales woven into the later epic are almost always set about the lower Ganges. To turn from the finished product to the origin of these two poems, which arose far apart but ended in the same literary environment, or the source of the Ramayana there is little to say, for it is attributed as definitely and regularly to Valmiki as is the *Aeneid* to Vergil, whom the Hindu author preceded by several centuries. Now, tradition ascribes the great epic also—that is, the Mahabharata (which means the great Bharata story and so may be called simply the Bharata)—to a certain Vyasa; but this Vyasa is a very shadowy person, to whom is ascribed also the arrangement of the Vedas and other works, his name meaning merely arranger or disposer. In fact, his name probably covers a guild of revisers and retellers of the tale. Moreover, there is internal evidence that the poem has been rewritten. There is, in a word, no one author of the great epic. It was handed down piece-meal at first in ancient lays. These became recitations and, united with heterogeneous material of all sorts, were at last bound together as one loosely connected whole."—E. W. Hopkins, *India old and new*, pp. 67-69.—See also INDIA: B.C. 600-327.

**Legal writings.**—"In connexion with the subject of the evolution of caste, the famous law-book commonly called the 'Laws,' or 'Code,' or 'Institutes of Manu' (*Manava-dharmasāstra* in Sanskrit) demands notice. The treatise, written in lucid Sanskrit verse of the 'classical' type, comprises 2,634 couplets (*sloka*) arranged in

twelve chapters; and is the earliest of the metrical law-books. It professes to be the composition of a sage named Bhrigu, who used the works of predecessors. The date of composition may lie between 200 B.C. and A.D. 200. About one-tenth of the verses is found in the *Mahabharata*. The *Laws of Manu* form the foundation of the queer medley of inconsistent systems of jurisprudence administered by the Privy Council and the High Courts of India under the name of Hindu Law. The prevalent error concerning the supposed 'four original castes' rests partly, as proved above, on erroneous interpretation of the text, and partly on fictitious explanations of the facts of caste offered by the author. The early Sanskritists unduly exalted the authority of the *Laws of Manu*, which they regarded as veritable laws instead of mere rulings of a textbook writer, which they actually are. "The fuller knowledge of the present day sees the book in truer perspective, but the old errors still exert a baneful influence in many directions."—V. A. Smith, *Oxford history of India*, p. 42.—See also MANU, LAWS OF; INDIA: People.

**Lyric poetry.**—"The lyrical branch of Sanskrit poetry divides itself, according to its subject, into the Religious and the Erotic Lyric. With respect to the former, we have already seen, when treating of the Atharva-Samhitā, that the hymns of this collection are no longer the expression of direct religious emotion, but are rather to be looked upon as the utterance of superstitious terror and uneasy apprehension, and that in part they bear the direct character of magic spells and incantations. This same character is found faithfully preserved in the later religious lyrics, throughout the Epic, the Puranas, and the Upanishads, wherever prayers of the sort occur; and it has finally, within the last few centuries, found its classical expression in the Tantra literature. It is in particular by the heaping up of titles under which the several deities are invoked that their favour is thought to be won; and the 'thousand-name-prayers' form quite a special class by themselves. To this category belong also the prayers in amulet-form, to which a prodigious virtue is ascribed, and which enjoy the very highest repute even in the present day. Besides these, we also meet with prayers, to Siva especially, which for religious fervour and child-like trust will bear comparison with the best hymns of the Christian Church, though, it must be admitted, their number is very small. The Erotic Lyric commences, for us, with certain of the poems attributed to Kalidasa. . . . Of the Ethico-Didactic Poetry—the so-called *Niti-Sastras*—but little has survived in a complete form (some pieces also in the Tibetan Tadjur), no doubt because the great epic, the Maha-Bharata, in consequence of the character of universality which was gradually stamped upon it, is itself to be regarded as such a *Niti-Sastra*. Still, relics enough of the aphoristic ethical poetry have been preserved to enable us to judge that it was a very favourite form, and achieved very excellent results. Closely allied to it is the literature of the 'Beast-Fable,' which has a very special interest for us, as it forms a substantial link of connection with the West."—A. F. Weber, *History of Indian literature*, pp. 208-210.—See also MUSIC: Ancient: B.C. 2000-A.D. 1200.

**HINDU MUSIC.** See MUSIC: Ancient: B.C. 2000-A.D. 1200.

**HINDUISM**, general term for religion and social system of the Hindus. See RELIGION: B.C. 1000; BRAHMANISM: Essential features; INDIA:

People; B.C. 2000-600; MALAY ARCHIPELAGO: Before 16th century; VEDANTISM.

**HINDUS**, generally speaking, natives of India. Hindu now means a person of the Hindu religion as distinct from Mohammedan, Sikh, Parsee and other religions of India. They form the great majority of the population. See INDIA: People.

Their influence in the Philippines and in Java. See PHILIPPINE ISLANDS: Language; Previous to 1525; Java. Early history.

**HINDUSTAN**, name widely applied to India proper. See INDIA.

**HINDUSTANI**, or Hindostani, dialect of the Hindi language, current over nearly all India. See PHILOLOGY: 16; 26.

**HINES**, Walker Downer (1870- ), American lawyer and railway official. Director-general of railroads, January, 1910-May, 1920. See RAILROADS: 1916-1920; U.S.A.: 1919 (August-November).

**HINGSTON DOWN**, Battle of (838). See SCANDINAVIAN STATES: 8th-9th centuries.

**HINKSTON'S FORK**, Battle of (1782). See KENTUCKY: 1775-1784.

**HINTERLAND**, German word which has come into general use to describe unnamed and poorly defined regions lying behind, or on the inland side, of coast districts, in Africa more especially, which have been occupied or claimed by European powers.

**HIONG-NU**, or Hiung-Nu, a people who formed a powerful empire toward the end of the 3rd century B.C., which extended from the Great Wall of China to the Caspian sea. See TURKEY: 6th century.

**HIPPARCH**, commander of cavalry in the military organization of the ancient Athenians.—G. F. Schömann, *Antiquities of Greece: The state*, pt. 3, ch. 3.

**HIPPARCHUS** (fl. 146-126 B.C.), Greek astronomer and mathematician. See SCIENCE: Ancient: Greek science.

**HIPPEIS**.—Among the Spartans, the honorary title of Hippeis, or "Knights," was given to the members of a chosen body of three hundred young men, the flower of the Spartan youth, who had not reached thirty years of age. "Their three leaders were called Hippagretæ, although in war they served not as cavalry but as hoplites. The name may possibly have survived from times in which they actually served on horseback." At Athens the term Hippeis was applied to the second of the four property classes into which Solon divided the population,—their property obliging them to serve as cavalry.—G. F. Schömann, *Antiquities of Greece: The state*, pt. 3, ch. 1, 3.

**HIPPER**, Admiral von, German naval commander at battle of Dogger Bank, January 24, 1915. Commanded the German battle-cruiser squadron under Scheer at Jutland, May 31, 1916. See WORLD WAR: 1915: IX. Naval operations: a; 1916: IX. Naval operations: a, 8; a, 9.

**HIPPIAS** (died c. 490 B.C.), tyrant of Athens. Succeeded Pisistratus, 527 B.C. See ATHENS: B.C. 509-506; GREECE: B.C. 8th-5th centuries: Political evolution of the leading states.

**HIPPIS**, Battle of (550), fought, in what was known as the Lazic War, between the Persians on one side and the Romans and the Lazis on the other. The latter were the victors.

**HIPPO**, or Hippo Regius, ancient city of north Africa, on the Numidian coast. It was besieged and captured by the Vandals in 431. See NUMIDIANS; CARTHAGE: Dominions; VANDALS: 429-439.

**HIPPOBOTÆ**. See EUBÆA.

**HIPPOCRATES** (c. 460-377 B.C.), Greek physician and philosopher, called the "Father of Medicine." See MEDICAL SCIENCE: Ancient Greece.

**HIPPOCRATIC OATH**, an oath embodying a code of medical ethics, sworn by those entering upon the practice of medicine. See MEDICAL SCIENCE: Ancient Greece.

**HIPPODROME**, **STADION**, **THEATER**.—"The arts practised in the gymnasia were publicly displayed at the festivals. The buildings in which these displays took place were modified according to their varieties. The races both on horseback and in chariots took place in the hippodrome; for the gymnastic games of the pentathlon served the stadion; while for the acme of the festivals, the musical and dramatic performances, theatres were erected."—E. Guhl and W. Koner, *Life of the Greeks and Romans* (tr. by Hueffer), sect. 28-30.

**HIPPOLYTUS** (fl. 3rd century), teacher and writer of the early church. See CHRISTIANITY: 100-300; Church in Gaul and Spain.

**HIPPOTOXOTÆ**, body of mounted archers in the service of the Athenian state.

**HIRA**.—"The historians of the age of Justinian represent the state of the independent Arabs, who were divided by interest or affection in the long quarrel of the East [between the Romans and Persians—third to seventh century]: the tribe of Gassan was allowed to encamp on the Syrian territory; the princes of Hira were permitted to form a city about 40 miles to the southward of the ruins of Babylon. Their service in the field was speedy and vigorous; but their friendship was venal, their faith inconstant, their enmity capricious: it was an easier task to excite than to disarm these roving barbarians; and, in the familiar intercourse of war, they learned to see and to despise the splendid weakness both of Rome and of Persia."—E. Gibbon, *History of the decline and fall of the Roman empire*, v. 5, ch. 50.—"The dynasty of Palmyra and the western tribes embraced Christianity in the time of Constantine; to the east of the desert the religion was later in gaining ground, and indeed was not adopted by the court of Hira till near the end of the 6th century. Early in the 7th, Hira fell from its dignity as an independent power, and became a satrapy of Persia."—W. Muir, *Life of Mahomet, introduction*, ch. 1.—In 633 Hira was overwhelmed by the Mahometan conquest, and the greater city of Kufa was built only three miles distant from it.—See also CALIPHATE: 632-651; COMMERCE: Medieval: 5th-8th centuries.

**HIRAGANA**, style of Japanese writing. See JAPAN: Language.

**HIRPENIANS**, or *hirpini*, Samnite tribe of southern Italy. See ROME: Republic: B.C. 90-88.

**HIRSCH**, Maurice, Baron de (Maurice de Hirsch de Gereuth) (1831-1806), Austrian financier. Bequeathed a large fortune for the amelioration of the conditions of the Jews. See JEWS: Zionism: Definition, etc.

**HIRSCHBEIN**, Peretz (1878- ), Jewish dramatist. See JEWS: Drama and theater.

**HIRSON**, town of northeastern France, near the Belgian border. See WORLD WAR: 1918: II. Western front: x, 3.

**HISGEN**, Thomas Louis (1858- ), American manufacturer. Candidate of the National Independence party for the presidency of the United States, 1908. See U.S.A.: 1908 (April-November).

**HISHAM IBN AL-KALBI** (Abu-l Mundhir Hisham ibn Mahommed ibn us-Sa'ih ul-Kalb) (died c. 810), Arabic historian. See HISTORY: 21.

**HISPALIS**, name of Seville under the Romans. See SEVILLE; Early history.

**HISPANIA**, ancient Latin name for modern Spain and Portugal. See SPAIN; PORTUGAL;

EUROPE; Ethnology; Migrations: Map.

Citerior and Ulterior. See SPAIN: B.C. 218-25.

**HISPANIOLA**, name given by Columbus to the island now divided between the repub-

lic of Haiti and Santo Domingo. See AMERICA: 1492; 1493-1496; HAITI, ISLAND OF; HAITI, REPUBLIC OF; SANTO DOMINGO; REPARTIMIEN-TOS.

**HISSARLIK**, site of ancient Troy, as identified by the excavations of Schliemann. See AEGEAN CIVILIZATION: Excavations and antiquities; Mycenaean area; ASIA MINOR: B.C. 1100; TROY; HOMER AND THE HOMERIC POEMS.

## HISTORY

1. **Definitions.**—"With us the word 'history,' like its equivalents in all modern languages, signifies either a form of literary composition or the appropriate subject or matter of such composition—either a narrative of events, or events which may be narrated. It is impossible to free the term from this doubleness and ambiguity of meaning. Nor is it, on the whole, to be desired. The advantages of having one term which may, with ordinary caution, be innocuously applied to two things so related, more than counterbalances the dangers involved in two things so distinct having the same name. . . . Since the word history has two very different meanings, it obviously cannot have merely one definition. To define an order of facts and a form of literature in the same terms—to suppose that when either of them is defined the other is defined—is so absurd that one would probably not believe it could be seriously done were it not so often done. But to do so has been the rule rather than the exception. The majority of so-called definitions of history are definitions only of the records of history. They relate to history as narrated and written, not to history as evolved and acted; in other words, although given as the only definitions of history needed, they do not apply to history itself, but merely to accounts of history. They may tell us what constitutes a book of history, but they cannot tell us what the history is with which all books of history are occupied. It is, however, with history in this latter sense that a student of the science or philosophy of history is mainly concerned. . . . If by history be meant history in its widest sense, the best definition of history as a form of literature is, perhaps, either the very old one, 'the narration of events,' or W. von Humboldt's, 'the exhibition of what has happened' (*die Darstellung des Geschehenen*). The excellence of these definitions lies in their clear and explicit indication of what history as effectuated or transacted is. It consists of events; it is *das Geschehene*. It is the entire course of events in time. It is all that has happened precisely as it happened. Whatever happens is history. . . . Probably Droysen has found a neater and terser formula for it in German than any which the English language could supply. Nature he describes as '*das Nebeneinander des Seienden*,' and history as '*das Nacheinander des Gewordenen*.' . . . The only kind of history with which we have here directly to deal is that kind of it to which the name is generally restricted, history par excellence, human history, what has happened within the sphere of human agency and interests, the actions and creations of men, events which have affected the lives and destinies of men, or which have been produced by men. This is the ordinary sense of the word history. . . . The definition given in the Dictionary of the French Academy—"l'histoire est le récit des choses dignes de mémoire"—is a specimen of a very numerous species. According to such definitions

history consists of exceptional things, of celebrated or notorious events, of the lives and actions of great and exalted men, of conspicuous achievements in war and politics, in science and art, in religion and literature. But this is a narrow and superficial conception of history. History is made up of what is little as well as of what is great, of what is common as well as of what is strange, of what is counted mean as well as of what is counted noble. . . . Dr. Arnold's definition—"history is the biography of a society"—has been often praised. Nor altogether undeservedly. For it directs attention to the fact that all history accords with biography in supposing in its subject a certain unity of life, work, and end. . . . It does not follow, however, that biography is a more general notion than history, and history only a species of biography. In fact, it is not only as true and intelligible to say that biography is the history of an individual as to say that history is the biography of a society, but more so. It is the word biography in the latter case which is used in a secondary and analogical sense, not the word history in the former case. . . . According to Mr. Freeman, 'history is past politics and politics are present history.' This is not a mode of definition which any logician will be found to sanction. It is equivalent to saying that politics and history are the same, and may both be divided into past and present; but it does not tell us what either is. To affirm that this was that and that this is not a definition of this or that, but only an assertion that something may be called either this or that. Besides, the identification of history with politics proceeds, as has been already indicated, on a view of history which is at once narrow and arbitrary. Further, it is just as true that mathematical history is past mathematics and mathematics are present history, as that political history is past politics and politics are present history. . . . The whole of man's past was once present thought, feeling, and action. There is nothing peculiar to politics in this respect."—R. Flint, *History of the philosophy of history*, pp. 5-10.—The following view is one that is very generally held but is rapidly being superseded:—"History is a man's record of the self-consciousness of the race in concrete process, producing what we call events, and viewed with reference to his environment and actual relations. . . . Its phenomena are conditioned by space as well as time. A phenomenon outside of human consciousness has no place in history. . . . Man is the first postulate of history. He is the beginning and the end of it. He enacts it, he tells it; he accepts it as a message or a gospel for guidance and self-realization. Man, mind, phenomena, memory, narrative—and history is born. But while we should recognize that the phenomena belonging to history are conditioned by space as well as time and are organic in man, we must keep constantly in view that the material universe, which we call nature, except in its rela-

tion to the sentient spirit of man, does not belong to the province of history. Science is the register of nature; history the record of man. . . . The realm of nature belongs to science, not history."—W. P. Johnston, *Definition of history* (*American Historical Association Annual Report*, 1893, pp. 47-48).—As a definition of history involves the whole history of the subject, the following article is an attempt to reconstruct the varying definitions which the different ages and different schools of thinkers have evolved. That history meant to the early tribes a "tale that is told" and that it meant to Freeman and the nationalist school "past politics" are historical facts in the evolution of the subject. According to the modern view, history stands in the same relation to the present as man's memory does to man. In the words of J. T. Shotwell, history includes "all that has happened, not merely all the phenomena of human life, but those of the natural world as well. It includes everything that undergoes change; and as modern science has shown that there is nothing absolutely static, therefore the whole universe, and every part of it, has its history." F. J. Teggart states the problem of history as "how man everywhere has come to be as he is," which involves the story of the natural world. "The question, 'What is History?' is closely connected with that deepest of all questions, 'What is Human Life?'. For, whatever in reality human life may be, history is the record of its development, its progress and its manifestations. I have said 'the record' rather than the historical process itself, because that is the phase of the subject with which the historian has primarily to deal. What this process really is, what is its inherent principle of change, what are the categories of its manifestations—these are questions for the philosopher rather than the historian to discuss. But, in truth, the historian cannot separate himself from some conception—general or specific, positive or negative, real or ideal—of the process whose transmutations he describes. Even if he were able to do so, language has already settled that question for him; for he cannot tell the simplest story without some implications regarding the nature of the process which forms the substance of his narrative."—D. J. Hill, *Ethical function of the historian* (*American Historical Review*, Oct., 1908).—Henry Adams states the modern concept of history in his "Education" in these words: "To historians the single interest is the law of reaction between force and force—between mind and nature—the law of progress." "The word 'history' has two meanings. It may mean either the record of events or events themselves. We call Cromwell a 'maker of history' although he never wrote a line of it. We even say that the historian merely records the history which kings and statesmen produce. History in such instances is obviously not the narrative but the thing that awaits narration. The same name is given to both the objects of the study and to the study itself. . . . Of the two meanings, the larger one is comparatively recent. The idea that events and people are historic by reason of any quality of their own, even if no one has studied or written upon them, did not occur to the ancients. . . . It was not until modern times that the phenomena themselves were termed history. The history of a people originally meant the research and narrative of a historian, not the evolution of the nation. It meant a work dealing with the subject, not the subject itself. And this is logically as well as historically the more accurate use of the word. Things are never historic

in themselves. They can be perpetuated out of the dead past only in two ways: either as part of the ever-moving present,—as institutions, art, science, etc.—things timeless or universal; or in that imaginative reconstruction which it is the special office of the historian to provide. This distinction must be insisted upon if we are to have any clear thinking upon the history of History."—J. T. Shotwell, *Introduction to the history of history*, pp. 2-3.

ALSO IN: F. Harrison, *Meaning of history*.—J. E. D. Daiberg-Acton, *Inaugural lecture as Regius professor of modern history at Cambridge*.—K. Lamprecht, *What is history?*—E. Bernheim, *Lehrbuch der historischen methode*, ch. 1.

2. *Philosophy of history*.—"The philosophy of history is not a something separate from the facts of history, but a something contained in them. The more a man gets into the meaning of them, the more he gets into it, and it into him; for it is simply the meaning, the rational interpretation, the knowledge of the true nature and essential relations of the facts. And this is true of whatever species or order the facts may be. Their philosophy is not something separate and distinct from, something over and above, their interpretation, but simply their interpretation. He who knows about any people, or epoch, or special development of human nature, how it has come to be what it is and what it tends to, what causes have given it the character it has, and what its relation is to the general development of humanity, has attained to the philosophy of the history of that people, epoch, or development. Philosophical history is sometimes spoken of as a kind of history, but the language is most inaccurate. Every kind of history is philosophical which is true and thorough; which goes closely and deeply enough to work; which shows the what, how, and why of events as far as reason and research can ascertain. History always participates in some measure of philosophy, for events are always connected according to some real or supposed principle either of efficient or final causation."—R. Flint, *Philosophy of history in Europe, introduction*.

3. *Possibility of a science of history*.—Buckle's theory.—"The believer in the possibility of a science of history is not called upon to hold either the doctrine of predestined events, or that of freedom of the will; and the only positions which, in this stage of the inquiry, I shall expect him to concede are the following: That when we perform an action, we perform it in consequence of some motive or motives; that those motives are the results of some antecedents; and that, therefore, if we were acquainted with the whole of the antecedents, and with all the laws of their movements, we could with unerring certainty predict the whole of their immediate results. This, unless I am greatly mistaken, is the view which must be held by every man whose mind is unbiased by system, and who forms his opinions according to the evidence actually before him. . . . Rejecting, then, the metaphysical dogma of free will and, the theo-

logical dogma of predestined events, we are driven to the conclusion that the actions of men, being determined solely by their antecedents, must have a character of uniformity, that is to say, must, under precisely the same circumstances, always issue in precisely the same results. And as all antecedents are either in the mind or out of it, we clearly see that all the variations in the results—in other words, all the changes of which history is full, all the vicissitudes of the human race, their progress or their decay, their happiness or their misery—must be the fruit of a double action; an action of external phenomena upon the mind, and another action of the mind upon the phenomena. These are the materials out of which a philosophic history can alone be constructed. On the one hand, we have the human mind obeying the laws of its own existence, and, when uncontrolled by external agents, developing itself according to the conditions of its organization. On the other hand, we have what is called Nature, obeying likewise its laws; but incessantly coming into contact with the minds of men, exciting their passions, stimulating their intellect, and therefore giving to their actions a direction which they would not have taken without such disturbance. Thus we have man modifying nature, and nature modifying man; while out of this reciprocal modification all events must necessarily spring. The problem immediately before us is to ascertain the method of discovering the laws of this double modification.”—H. T. Buckle, *History of civilization in England*, ch. 1.—“Buckle is not the first who has attempted to treat the unscientific character of History, the ‘methodless matter,’ as an ancient writer names it, by the method of exhibiting vital phenomena under points of view analogous to those which are the starting-point of the exact sciences. But a notion which others have incidentally broached under some formula about ‘natural growth,’ or carried out in the very inadequate and merely figurative idea of the inorganic; what still others, as Comte in his attractive ‘Philosophie Positive,’ have developed speculatively, Buckle undertakes to ground in a comprehensive historical exposition. . . . He purposes to raise History to a science by showing how to demonstrate historical facts out of general laws. He paves the way for this by setting forth that the earliest and rudest conceptions touching the course of human destiny were those indicated by the ideas of chance and necessity, that ‘in all probability’ out of these grew later the ‘dogmas’ of free-will and predestination, that both are in a great degree ‘mistakes,’ or that, as he adds, ‘we at least have no adequate proof of their truth.’ He finds that all the changes of which History is full, all the vicissitudes which have come upon the human race, its advance and its decline, its happiness and its misery, must be the fruit of a double agency, the working of outer phenomena upon our nature, and the working of our nature upon outer phenomena. He has confidence that he has discovered the ‘laws’ of this double influence, and that he has therefore elevated the History of mankind to a science. . . . Buckle does not so much leave the freedom of the will, in connection with divine providence, out of view, but rather declares it an illusion and throws it overboard. Within the precincts of philosophy also something similar has recently been taught. A thinker whom I regard with personal esteem says: ‘If we call all that an individual man is, has and performs A, then this A arises out of  $a + x$ ,  $a$  embracing all that comes to the man from his outer circum-

stances: from his country, people, age, etc., while the vanishingly little  $x$  is his own contribution, the work of his free will.’ However vanishingly small this  $x$  may be, it is of infinite value. Morally and humanly considered it alone has value. The colors, the brush, the canvas which Raphael used were of materials which he had not created. He had learned from one and another master to apply these materials in drawing and painting. The idea of the Holy Virgin and of the saints and angels, he met with in church tradition. Various cloisters ordered pictures from him at given prices. That this incitement alone, these material and technical conditions and such traditions and contemplations, should ‘explain’ the Sistine Madonna, would be, in the formula  $A = a + x$ , the service of the vanishing little  $x$ . Similarly everywhere. Let statistics go on showing that in a certain country so and so many illegitimate births occur. Suppose that in the formula  $A = a + x$  this  $a$  includes all the elements which ‘explain’ the fact that among a thousand mothers twenty, thirty, or whatever the number is, are unmarried; each individual case of the kind has its history, how often a touching and affecting one. Of those twenty or thirty who have fallen is there a single one who will be consoled by knowing that the statistical law ‘explains’ her case? Amid the tortures of conscience through nights of weeping, many a one of them will be profoundly convinced that in the formula  $A = a + x$  the vanishing little  $x$  is of immeasurable weight, that in fact it embraces the entire moral worth of the human being, his total and exclusive value. No intelligent man will think of denying that the statistical method of considering human affairs has its great worth; but we must not forget how little, relatively, it can accomplish and is meant to accomplish. Many and perhaps all human relations have a legal side; yet no one will on that account bid us seek for the understanding of the *Eroica* or of Faust among jurists’ definitions concerning intellectual property.”—J. G. Droysen, *Outline of the principles of history*, pp. 62-64, 77-79.

4. History as root of all science.—Lost history.—“History, as it lies at the root of all science, is also the first distinct product of man’s spiritual nature; his earliest expression of what can be called Thought. It is a looking both before and after; as, indeed, the coming Time already waits, unseen, yet definitely shaped, predetermined and inevitable, in the Time come; and only by the combination of both is the meaning of either completed. The Sibile Books, thought old, are not the oldest. Some nations have prophecy, some have not: but of all mankind, there is no tribe so rude that it has not attempted History, though several have not arithmetic enough to count Five. History has been written with quipo-threads, with feather-pictures, with wampum-belts; still oftener with earth-mounds and monumental stone-heaps, whether as pyramid or cairn; for the Celt and the Copt, the Red man as well as the White, lives between two eternities, and warring against Oblivion, he would fain unite himself in clear conscious relation, as in dim unconscious relation he is already united, with the whole Future and the whole Past. A talent for History may be said to be born with us, as our chief inheritance. In a certain sense all men are historians. Is not

every memory written quite full with Annals, wherein joy and mourning, conquest and loss manifoldly alternate; and, with or without philosophy, the whole fortunes of one little inward Kingdom, and all its politics, foreign and domestic, stand ineffaceably recorded? Our very speech is curiously historical. Most men, you may observe, speak only to narrate; not in imparting what they have thought, which indeed were often a very small matter, but in exhibiting what they have undergone or seen, which is a quite unlimited one, do talkers dilate. Cut us off from Narrative, how would the stream of conversation, even among the wisest, languish into detached handfuls, and among the foolish utterly evaporate! Thus, as we do nothing but enact History, we say little but recite it: nay rather, in that widest sense, our whole spiritual life is built thereon. For, strictly considered, what is all Knowledge too but recorded Experience, and a product of History; of which, therefore, Reasoning and Belief, no less than Action and Passion, are essential materials? . . . Social Life is the aggregate of all the individual men's Lives who constitute society; History is the essence of innumerable Biographies. But if one Biography, nay our own Biography, study and recapitulate it as we may, remains in so many points unintelligible to us; how much more must these million, the very facts of which, to say nothing of the purport of them, we know not, and cannot know! . . . Which was the greatest innovator, which was the more important personage in man's history, he who first led armies over the Alps, and gained the victories of Carnæ and Thrasymene; or the nameless boor who first hammered out for himself an iron spade? When the oak-tree is felled, the whole forest echoes with it; but a hundred acorns are planted silently by some unnoticed breeze. Battles and war-tumults, which for the time din every ear, and with joy or terror intoxicate every heart, pass away like tavern-brawls; and, except some few Marathons and Morgartens, are remembered by accident, not by desert. Laws themselves, political Constitutions, are not our Life, but only the house wherein our Life is led: nay they are but the bare walls of the house; all whose essential furniture, the inventions and traditions, and daily habits that regulate and support our existence, are the work not of Dracos and Hampdens, but of Phœnician mariners, of Italian masons and Saxon metallurgists, of philosophers, alchymists, prophets, and all the long-forgotten train of artists and artisans; who from the first have been jointly teaching us how to think and how to act, how to rule over spiritual and over physical Nature. Well may we say that of our History the more important part is lost without recovery."—T. Carlyle, *On history (Critical and miscellaneous essays, v. 2)*.

5. Interpretation of the past by the present.—“But how, it may be asked, are we to interpret the Past from the Present, if there are no institutions in the present answering to those in the past? We have no serfs, for example, in England at the present time, how then are we to understand a state of Society of which they were a component element? The answer is—by analogy, by looking at the essence of the relation. Between a modern master and his lackeys and dependents, the same essential relation subsists as between the lord and serf of feudal times. If we realise to ourselves the full round of this relationship, deepen the shades to correspond with the more absolute power possessed by a lord in early times, allow for a more aristocratic state of opinion

and belief, the result will be the solution desired. This method of interpreting the Past from the Present has been followed by Shakespeare in his great historical dramas, with such success as we all know. He wishes, for example, to give us a picture of old Roman times. He gets from Plutarch and other sources the broad historical facts, the form of Government and Religion, the distribution of Power and Authority; this is the skeleton to which he has to give life and reality. How does he proceed? He simply takes his stand on the times in which he himself lived; notes the effects existing institutions have on his own and other minds; allows for the differences in custom, mode of life, and political and religious forms; and the result is a drama or dramas more real and lifelike, more true and believable, an insight into the working of Roman life more subtle and profound, than all the husks with which the historians have furnished us.”—J. B. Crozier, *Civilization and progress, p. 35*.

ALSO IN: H. B. Adams, *Methods of historical study*.

6. Moral lessons of history.—“Gibbon believed that the era of conquerors was at an end. Had he lived out the full life of man, he would have seen Europe at the feet of Napoleon. But a few years ago we believed the world had grown too civilized for war, and the Crystal Palace in Hyde Park was to be the inauguration of a new era. Battles bloody as Napoleon's are now the familiar tale of every day; and the arts which have made greatest progress are the arts of destruction. . . . What, then, is the use of History, and what are its lessons? If it can tell us little of the past, and nothing of the future, why waste our time over so barren a study? First, it is a voice forever sounding across the centuries the laws of right and wrong. Opinions alter, manners change, creeds rise and fall, but the moral law is written on the tablets of eternity. For every false word or unrighteous deed, for cruelty and oppression, for lust or vanity, the price has to be paid at last; not always by the chief offenders, but paid by some one. Justice and truth alone endure and live. Injustice and falsehood may be long-lived, but doomsday comes at last to them, in French revolutions and other terrible ways. That is one lesson of History. Another is that we should draw no horoscopes; that we should expect little, for what we expect will not come to pass.”—J. A. Froude, *Short studies on great subjects, pp. 27-28*.

7. Educational and practical value of history.—“It is, I think, one of the best schools for that kind of reasoning which is most useful in practical life. It teaches men to weigh conflicting probabilities, to estimate degrees of evidence, to form a sound judgment of the value of authorities. Reasoning is taught by actual practice much more than by any a priori methods. Many good judges—and I own I am inclined to agree with them—doubt much whether a study of formal logic ever yet made a good reasoner. Mathematics are no doubt invaluable in this respect, but they only deal with demonstrations; and it has often been observed how many excellent mathematicians are somewhat peculiarly destitute of the power of measuring degrees of probability. But History is largely concerned with the kind of probabilities on which the conduct of life mainly depends. There is one hint about historical reasoning which I think may not be unworthy of your notice. When studying some great historical controversy, place yourself by an effort of the imagination alternately on each side of the battle; try to realise

as fully as you can the point of view of the best men on either side, and then draw up upon paper the arguments of each in the strongest form you can give them. You will find that few practices do more to elucidate the past, or form a better mental discipline."—W. E. H. Lecky, *Political value of history*, pp. 47-49.—"He who demands certainties alone as the sphere of his action must retire from the activities of life, and confine himself to the domain of mathematical computation. He who is unwilling to investigate and weigh probabilities can have no good reason to hope for any practical success whatever. It is strictly accurate to say that the highest successes in life, whether in statesmanship, in legislation, in war, in the civic professions, or in the industrial pursuits, are attained by those who possess the greatest skill in the weighing of probabilities and the estimating of them at their true value. This is the essential reason why the study of history is so important an element in the work of improving the judgment, and in the work of fitting men to conduct properly the larger interests of communities and states. It is a study of humanity, not in an ideal condition, but as humanity exists. The student of history surveys the relations of life in essentially the same manner as the man of business surveys them. Perhaps it ought rather to be said that the historical method is the method that must be used in the common affairs of every-day life. The premises from which the man of business has to draw his conclusions are always more or less involved and uncertain. The gift which insures success, therefore, is not so much the endowment of a powerful reasoning faculty as that other quality of intelligence, which we call good judgment. It is the ability to grasp what may be called the strategic points of a situation by instinctive or intuitive methods. It reaches its conclusions not by any very clearly defined or definable process, but rather by the method of conjecturing the value and importance of contingent elements. It is the ability to reach correct conclusions when the conditions of a strictly logical process are wanting. To a man of affairs this is the most valuable of all gifts; and it is acquired, so far as it comes by effort, not by studying the rigid processes of necessary reasoning, but by a large observance and contemplation of human affairs. And it is precisely this method of studying men that the historical student has to use. His premises are always more or less uncertain, and his conclusions, therefore, like the conclusions of every day life, are the product of his judgment rather than the product of pure reason. It is in the light of this fact that we are to explain the force of Guizot's remark, that nothing tortures history more than logic. Herein also is found the reason why the study of history is so necessary a part of a good preparation for the affairs of politics and statesmanship. . . . The kind of involved and contingent reasoning necessary for the successful formation of political judgments is unquestionably the kind of reasoning which, of all studies, history is best adapted to give. It may also be said that the most important elements of success are the same in all practical vocations. The conditions, whether those of statesmanship or those of industry and commerce, have been essentially the same in all ages. Society is, and has been, from its first existence, a more or less complicated organism. It is a machine with a great number of wheels and springs. No part is independent. Hence it is that no man can be completely useful if he is out of gear with his age, however perfect he may be in himself."—

C. K. Adams, *Manual of historical literature*, pp. 15-16.—"To turn for a moment to the general question. I should not like to be thought to be advocating my study on the mere grounds of utility; although I believe that utility, both as regards the training of the study and the information attained in it, to be the highest, humanly speaking, of all utilities; it helps to qualify a man to act in his character of a politician as a Christian man should. But this is not all; beyond the educational purpose, beyond the political purpose, beyond the philosophical use of history and its training, it has something of the preciousness of everything that is clearly true. In common with Natural Philosophy it has its value, I will not say as Science, for that would be to use a term which has now become equivocal, but it has a value analogous to the value of science; a value as something that is worth knowing and retaining in the knowledge for its own and for the truth's sake. And in this consists its especial attraction for its own votaries. It is not the pleasure of knowing something that the world does not know,—that doubtless is a motive that weighs with many minds, a motive to be accepted as a fact, though it may not be worth analysis. It is not the mere pleasure of investigating and finding with every step of investigation new points of view open out, and new fields of labour, new characters of interest;—that investigating instinct of human nature is not one to be ignored, and the exercise of it on such inexhaustible materials as are before us now is a most healthy exercise, one that cannot but strengthen and develop the whole mind of the man who uses it, urging him on to new studies, new languages, new discoveries in geography and science. But even this is not all. There is, I speak humbly, in common with Natural Science, in the study of living History, a gradual approximation to a consciousness that we are growing into a perception of the workings of the Almighty Ruler of the world. . . . The study of History is in this respect, as Coleridge said of Poetry, its own great reward, a thing to be loved and cultivated for its own sake. . . . If man is not, as we believe, the greatest and most wonderful of God's works, he is at least the most wonderful that comes within our contemplation; if the human will, which is the motive cause of all historical events, is not the freest agent in the universe, it is at least the freest agency of which we have any knowledge; if its variations are not absolutely innumerable and irreducible to classification, on the generalisations of which we may formulate laws and rules, and maxims and prophecies, they are far more diversified and less reducible than any other phenomena in those regions of the universe that we have power to penetrate. For one great insoluble problem of astronomy or geology there are a thousand insoluble problems in the life, in the character, in the face of every man that meets you in the street. Thus, whether we look at the dignity of the subject-matter, or at the nature of the mental exercise which it requires, or at the inexhaustible field over which the pursuit ranges, History, the knowledge of the adventures, the development, the changeful career, the varied growths, the ambitions, aspirations, and, if you like, the approximating destinies of mankind, claims a place second to none in the roll of sciences"—W. Stubbs, *Seventeen lectures on the study of medieval and modern history*, lecture 1, 4.—"There is a passage in Lord Bacon so much to this purpose that I cannot forbear quoting it. 'Although' (he says) 'we are deeply indebted to the light, because by

means of it we can find our way, ply our tasks, read, distinguish one another; and yet for all that the vision of the light itself is more excellent and more beautiful than all these various uses of it; so the contemplation and sight of things as they are, without superstition, without imposture, without error, and without confusion, is in itself worth more than all the harvest and profit of inventions put together.' And so may I say of History; that useful as it may be to the statesman, to the lawyer, to the schoolmaster, or the annalist, so far as it enables us to look at facts as they are, and to cultivate that habit within us, the importance of History is far beyond all mere amusement or even information that we may gather from it."—J. S. Brewer, *English studies*, p. 382.—"To know History is impossible; not even Mr. Freeman, not Professor Ranke himself, can be said to know History. . . . No one, therefore, should be discouraged from studying History. Its greatest service is not so much to increase our knowledge as to stimulate thought and broaden our intellectual horizon, and for this purpose no study is its equal."—W. P. Atkinson, *On history and the study of history*, p. 107.

8. Writing of history.—Macaulay's view.—"A history in which every particular incident may be true may on the whole be false. The circumstances which have most influence on the happiness of mankind, the changes of manners and morals, the transition of communities from poverty to wealth, from knowledge to ignorance, from ferocity to humanity—these are, for the most part, noiseless revolutions. Their progress is rarely indicated by what historians are pleased to call important events. They are not achieved by armies, or enacted by senates. They are sanctioned by no treaties and recorded in no archives. They are carried on in every school, in every church, behind ten thousand counters, at ten thousand firesides. The upper current of society presents no certain criterion by which we can judge of the direction in which the under current flows. We read of defeats and victories. But we know that nations may be miserable amidst victories and prosperous amidst defeats. We read of the fall of wise ministers and of the rise of profligate favourites. But we must remember how small a proportion the good or evil effected by a single statesman can bear to the good or evil of a great social system. . . . The effect of historical reading is analogous, in many respects, to that produced by foreign travel. The student, like the tourist, is transported into a new state of society. He sees new fashions. He hears new modes of expression. His mind is enlarged by contemplating the wide diversities of laws, of morals, and of manners. But men may travel far and return with minds as contracted as if they had never stirred from their own market-town. In the same manner, men may know the dates of many battles and the genealogies of many royal houses, and yet be no wiser. . . . The perfect historian is he in whose work the character and spirit of an age is exhibited in miniature. He relates no fact, he attributes no expression to his characters, which is not authenticated by sufficient testimony. But, by judicious selection, rejection, and arrangement, he gives to truth those attractions which have been usurped by fiction. In his narrative a due subordination is observed: some transactions are prominent; others retire. But the

scale on which he represents them is increased or diminished, not according to the dignity of the persons concerned in them, but according to the degree in which they elucidate the condition of society and the nature of man. He shows us the court, the camp, and the senate. But he shows us also the nation. He considers no anecdote, no peculiarity of manner, no familiar saying, as too insignificant for his notice which is not too insignificant to illustrate the operation of laws, of religion, and of education, and to mark the progress of the human mind. Men will not merely be described, but will be made intimately known to us."—T. B. Macaulay, *History (Essays, v. 1)*.

ALSO IN: F. M. Fling, *Writing of history: An introduction to historical method*.

9. Pre-literary history.—It is inherent in the ambiguity of the meanings of the word "history" that we find ourselves the possessors of a vast amount of history of times before history was written, of "prehistoric times." The development of archaeological research opens to us records of history that are sources equally valuable as those which have come to us since the origin of writing. For this reason the term "pre-literary history" is being adopted. The age of the earth as a solid body offers a problem which astronomer, geologist and biologist answer with figures varying as their standpoints, from 25,000,000 to 1,600,000,000 years. H. F. Osborn in "Origin and Evolution of Life" (1917) gives the estimate of 100,000,000 years, and, in "Men of the Old Stone Age," says that "Man emerges from the vast geologic history of the earth in the period known as the Pleistocene, or Glacial, and Postglacial, the Diluvium of the older geologists." The Pleistocene period is dated at approximately 550,000 years ago. "Geology first gives us an adequate conception of time. The limitations which shut our fathers into the narrow close of six thousand years [4004 B.C.—estimates based on the biblical theory of creation] are taken down . . . and we are turned out into the open of unnumbered millions of years. Upon the background of geologic time our chronological time shows no more than a speck upon the sky. The whole of human history is but a mere fraction of a degree of this mighty arc. . . . Archean time in geologic history answers to prehistoric time in human history."—J. Burroughs, *Time and change*, pp. 90, 100.—See also ARCHAEOLOGY; EUROPE: Prehistoric: Earliest remains, etc.

ALSO IN: F. Boas, *Mind of primitive man*, ch. 6-7.

10. Origin of writing.—Palæography.—Epi-graphy.—Diplomatic.—The first step in the gradual evolution of a system of writing was taken probably by cave men of the latter half of the palæolithic period. This earliest step was the conventionalization of a picture to represent one thing, a story, an object or an idea. The second step was the representation by a picture or symbol of a sound,—at first a whole word, then broken into syllables. Through the analysis of these sounds an alphabet was constructed. The Phœnician alphabet is the earliest known, appearing about 1000 B.C. and made up of symbols borrowed from the civilizations of Egypt, Assyria and Babylonia. "An examination of the civilizations of the Near East shows clearly that (excluding monumental documents) there were two physical processes of writing in the eastern Mediterranean world. One, which grew up on the Nile, consisted in applying a colored fluid to a vegetable membrane; the other, which arose in the Tigris-Euphrates world, incised or impressed its signs on a yielding or plastic surface which later hardened. Both of these

methods reached the classical world: in the wax tablet for the Greek or Roman gentleman's memoranda, and in the pen, ink and paper (papyrus) which have descended to our own day. The early geographical line to be drawn between these two methods of writing may be indicated in the shortest terms by saying that the practice of incision on a plastic surface was Asiatic; the process employing pen, ink, and vegetable paper was Egyptian."—J. H. Breasted, *Physical processes of writing* (*American Journal of Semitic Languages*, July, 1916).—Epigraphy deals with the inscriptions found on stone, metal or any other enduring material. "The rules for deciphering the old handwritings that one encounters in documents of an earlier date than the seventeenth century, are embodied in two distinct though related and interacting sciences. The first of these is the science of Palæography, which has for its province the mere deciphering of the writings, as well as questions concerning the nature of the material upon which it is imposed, of the implements by which it was produced, and of the medium through which the thought and intention of the writer are recorded. Diplomatic, on the other hand, the second of the sciences, is chiefly concerned with the style of the documents, and even the individuals who produced them. In the words of M. Léon Gauthier . . . 'Palæography studies the body, while Diplomatic studies the soul of the document!'"—W. Saunders, *Ancient handwritings*, p. 3.—See also AZTEC AND MAYA PICTURE-WRITING; CUNEIFORM INSCRIPTIONS; ALPHABET; EUROPE: Prehistoric: Iron Age; ÆGEAN CIVILIZATION: Minoan Age: B.C. 1200-750; ASSYRIA: Art and archaeological remains: ROSETTA STONE; PHIL-  
OLOGY: 12; 13.

11. Development of a chronology.—"Neither calendar nor chronology was worked out in the first place to discover Time or keep track of it. They have to do with events and the problem of tracing their relationships, not with what lies between them. . . . Our knowledge of 'the past,' is, therefore, really a knowledge of things in the past. It seems at first glance as though, by giving each day and year a number we bring them all within the field of knowledge. But the numbers mean nothing by themselves. Only those dates upon which memorable things have taken place really stand for anything. . . . Dates do not matter in primitive stories. Myths need no arithmetic. All the child's story requires for a proper beginning is 'once upon a time.' So with the childhood of the race. Poetry, the universal vehicle for the saga, cannot well risk marking its marvellous events with exact days and years. The calendar, and the chronology which the calendar made possible, are not only the basis of scientific history, but of far more than we suspect in the structure of civilization. . . . We have erected a civilization based on dates, in which the mathematics of Time is as fundamental to human relationships as that of Space is in the conquest of the material world. . . . As for the sun, while it furnished the divisions of day and night, it offered no ready multiple for their grouping. Its yearly circuit served for no more than the framework of the calendar; in a sense, it merely offered the cycle that needed calendaring. And yet, in those parts of the world where the seasons are marked off from each other with any degree of distinctness, a rough solar year could be appreciated without any detailed divisions by stellar or lunar periods. This is especially true outside the tropics, in the northern or southern temperate zones, where the farmer can grow but one crop of grain in the year, so that from a practical standpoint, he divides his time into two main

seasons, winter and summer. . . . Time was not discovered by counting days, like knots on a string, but by observing their virtues. We have already seen this in the practical farming calendar, where the signs of the seasons are observed to make sure that the right thing shall be done in its time, and the vintage be begun under the star that is associated with it, and the like."—J. T. Shotwell, *Discovery of time* (*Journal of Philosophy, Psychology and Scientific Methods*, Apr. 15, 1915).—"The reckoning of time reflects everywhere the outlook and habits of society, as those in turn reflect the environment and conditions of life of early peoples. In no other country is this more evident than in ancient Egypt. There it was almost inevitable that the solar year should triumph, for the land itself forced along the adjustment. Nowhere else does nature provide such a chronometer as in the valley of the Nile."—*Ibid.*, June 10, 1915.—See also CHRONOLOGY.

12. Early interpretation of history: Mythological.—Myth has long played a momentous "rôle in the history of the human intelligence—by far the largest of any one element in our whole history. Science was born but yesterday. Myths are milleniums old. And they are as young to-day as in the glacial period. Heroes and victims share the stage of the drama of history with those uncanny Powers that mock at effort or exalt the weak, and trick with sudden turns the stately progress of society. Wherever the marvellous event is explained by causes more marvellous still, where the belief is heightened by basing it upon deeper mysteries, we are following the world-old method of explaining by the inexplicable. Now myths are unsatisfactory as explanations for various reasons, but the main one is that human events are subordinated to the supernatural in which they are set. This means that normal events of daily life are generally passed unnoticed, and attention is concentrated upon the unusual and abnormal. It is in these that the divine or diabolic intervenes. They are pre-eminently—as we still say of railway accidents—acts of God. So the myth neither tells a full story, with all the human data involved, nor directs to any natural sequence of events. . . . Pontiffs and medicine men elaborate the mythology which explains and justifies the taboos. That is not to say that myths are creations of priests. The creation is the work of the society itself. . . . Men first tell stories. Then they think about them. So from mythology, the ancients proceeded to philosophy."—J. T. Shotwell, *Interpretation of history* (*American Historical Review*, July, 1913).—See also MYTHOLOGY: Meaning of the word, etc.

ALSO IN: F. C. Conybeare, *Myth, magic and morals*.

13. Origins of history in myths, tribal songs and race epics.—"As in the contemplation of nature, so in the first estimate of human deeds, wonder rather than exact comprehension was undoubtedly the chief source of inspiration. The unusual, the extraordinary in every sense, most attracted attention, impressed memory and stimulated phantasy. The earliest traditions were, therefore, of great heroes and great occasions, while the phenomena of ordinary life, like the habitual course of nature, passed without observation and left no trace behind. Depending entirely upon the accidents of memory, modified from generation to generation by unconscious imaginative accretions, the saga and the legend for long ages satisfied the needs of primitive men in relation to the past."—D. J. Hill, *Ethical function of the historian* (*Amer-*

*ican Historical Review*, Oct., 1908).—"The earliest historical narrative is the myth. It is at the same time an explanation. It is no mere product of imagination, of the play of art with the wayward fancies of childlike men. Myths, real genuine myths—not Homeric epics composed for sophisticated, critical audiences—are statements of 'facts' to the believer. They are social outputs, built up out of experience and fitted to new experiences. The long canoes are swept to sea by the northeast hurricane, and year by year in the winter nights at the camp-fires of those who go by long canoes the story is repeated, over and over again, until the sea is left behind or a new race brings triremes with machinery in the inside."—J. T. Shotwell, *Interpretation of history* (*American Historical Review*, July, 1913).—"The amount of historical material contained in tribal songs and epics can be tested by the more permanent traces of the past and estimated by comparative criticism. The natural growth of legend distorts the truth in the description of events, but the social customs and attitude of mind of savage races can be deduced from primitive songs and poems. Sometimes the early tribal songs have been preserved, as in the Norse Eddas, sometimes they have been worked up into race epics, as in the Homeric poems, the Kalevala, and the Chanson de Roland."—H. M. Stephens, *History and historians (syllabus)*, pp. 5-6.—See also MYTHOLOGY: Meaning of the word; BALLAD: Definition; Development; ENGLISH LITERATURE: 6th-16th centuries; FRENCH LITERATURE: 1050-1350; GERMAN LITERATURE: 1050-1350; SAGA; ARTHURIAN LEGEND; SCANDINAVIAN LITERATURE: 9th-13th centuries.—"The greatest of these [Hellenic] bards was Homer, who lived in Asia Minor perhaps in the ninth or in the eighth century. He incorporated nothing, but created his great poems afresh, making use, however, of much traditional subject matter. The *Odyssey* was composed after the *Iliad*; yet both may have been the product of one genius. After their completion by Homer the poems were to some extent interpolated. No analysis of the subject matter for historical purposes will satisfy every scholar. Much of the material civilization is clearly Minoan, and may be distinguished by archaeological study, although important elements are later than that period. In the political sphere the vast pretensions of king and nobles and their contempt for the commons seem Minoan, whereas the actualities of political life are largely those of Homer's time and place. The same principle holds for society. The religion, too, is composite; earlier and contemporary elements are mingled. In a word, each detail of Homeric life requires individual consideration, and on many points, because of a lack of determinative facts, it will be impossible for scholars to agree."—G. W. Botsford and E. G. Sihler, *Hellenic civilization*, p. 5.—"In Hesiod we come down to an actuality which moves no longer among gods and men of might; but in his work the common and commonplace are mirrored, we may say, with photographic fidelity. . . . The poet's time has been computed for about 700 B.C. or perhaps somewhat later. In his personality there are reflected thoughtfulness and meditation rather than imagination and enthusiasm. His *Theogony* was the first effort of the Hellenic world to construct through a system of genealogies and pedigrees a unity of Heaven and Earth and their history. The epic of the *Heroines* . . . continued this constructive process and dove-tailed it into the ancestral legends of the chief families associated with the principal communities or states of Greece. . . . So far as we know, it was Hesiod who made the first attempt to divide the past into periods;

and far from conceiving a development, he assumed a succession of declines. He calls his own time the Iron age, before which have come and passed the Golden, the Silver, and the Bronze. Curiously enough, this process of recession and decline was for an epoch stopped or inhibited,—that is, the Fourth age was an heroic age, the period of the Seven against Thebes and of the Trojan war, but now there is no intimation of any survival of that heroic spirit. Socially the horizon of the Ascran farmer is narrow, morally it is large and wide. If we look at the abundant data of material living, there is here a detail of the year and of the husbandman's changing task, of house and home, of summer and winter, of wife and children and fire-side, of servants and slaves, of crops and harvests and vintage, of seafaring and of a form of trade, which, in part, may still have been barter. No other piece of ancient literature brings us into so close and realistic touch with country people and rural conditions."—*Ibid.*, pp. 8-10.—See also GREEK LITERATURE: Period of the epic.

ALSO IN: G. Murray, *Rise of the Greek epic*.

14. Early oriental historiography.—"Egyptian chronology is full of difficulties, and without more materials than we possess at present can be little else than a system of guess-work. We must be content to date the period preceding the seventh century B.C. by dynasties rather than by years. All we can state with certainty is that the chronology, historically considered, is an enormously long one, and that the earlier dynasties must be placed at least 6000 years ago. Our authorities are partly classical, partly monumental. The most important is Manetho (in Egyptian Mei en-Tahuti—"Beloved of Thoth"), a priest of Sebennytos, who was entrusted by Ptolemy Philadelphus (B.C. 284-246) with the task of translating into Greek the historical works contained in the Egyptian temples. Unfortunately Manetho's work is lost, and we have to depend for our knowledge of it upon the meagre and sometimes contradictory extracts made by Josephus, Eusebius, Julius Africanus, and George Syncellus. . . . Manetho's list has come to us in a very corrupt condition, and . . . the numbers contained in it must be received with extreme caution. . . . His statements, notwithstanding the imperfect state in which they have reached us, are in the main correct. The monumental names can generally be detected under their Greek disguises, the scheme of dynasties has received full confirmation, and the chronology of the Sebennyti priest seems rather to err on the side of defect than of excess."—A. H. Sayce, *Ancient empires of the East*, pp. 14-16.—"It is possible that the sources from which Manetho composed his history may yet be recovered. What they were we may gather from the famous Turin papyrus, written in the time of Ramses II., and found probably in a tomb at Thebes. . . . In spite of the horribly mutilated condition, the papyrus is nevertheless of the highest value. A considerable number of royal names are preserved, many of them otherwise unknown as well as the years and months each king reigned."—*Ibid.*, p. 20.—See also MANETHO, LIST OF; EGYPT: Historical antiquity.—"Until the decipherment of the cuneiform inscriptions our knowledge of Babylonian and Assyrian history was at once meagre and uncertain. With the exception of Herodotos, whose notices were scanty and of doubtful value, we had to depend almost entirely on the copyists and excerptists of Ktesias and Berossos. Ktesias was a native of Knidos, and the physician of Artaxerxes Mnemon, but he seems to have been devoid of critical power. . . . In the later Persian period, however, Ktesias becomes more trustworthy.

The work of Berossos was of a far different character. He was a priest of the temple of Bel at Babylon, and is said by Eusebios and Tatian to have been a contemporary of Alexander the Great, and to have lived into the reign of Antiokhos Soter. He had, therefore, special opportunities of knowing the history and astronomy of his country, upon which he wrote in Greek. Recent discoveries have abundantly established the truthworthiness of this Manetho of Babylonia, whose works, unfortunately, are known to us only through quotations at second and third hand. Since a cylinder of Antiokhos, the son of Seleukos, has been found inscribed in Babylonian cuneiform, while bilingual fragments in cuneiform and cursive Greek of the Seleukid age have also been discovered; and a contract tablet in Babylonian cuneiform, dated in the fifth year of the Parthian king, Pakoros, the contemporary of Domitian, exists in the Museum of Zurich, there is no reason why Berossos should not have been equally well acquainted with both the Greek language and the old literature of his native country. And in spite of the fragmentary and corrupt state in which his fragments have come down to us, we now know that he was so. His account of the Deluge, for instance, agrees even in its details with that of the cuneiform texts. . . . We can put no confidence in the numbers attached to the dynasties in which Berossos, like his contemporary, Manetho, arranged the list of Babylonian kings. . . . Berossos confined his attention to Babylonian history; the history of Assyria seems to have been compiled by Megasthenes in the time of Seleukos Nikator (B.C. 290), from whom (as Professor Schrader has shown) it was extracted by Abydenos (B.C. 260). Abydenos in turn survives only in the quotations of the Christian writers. But as Nineveh and its monuments had long been destroyed, the only sources Abydenos could have had for his history must have been the records of Babylonia; and it is not surprising, therefore, that the extracts we possess from his work all relate to the period of the Second Assyrian Empire, when Babylonia was brought into close contact with the northern kingdom. The earlier period must have been for the most part a mere blank, or else filled up with myth and legend. One more classical authority for Babylonian history remains. This is the valuable Canon of Ptolemy, preserved in the *Almagest*, and giving the chronology of Babylon from B.C. 747 downwards. It probably came from Berossos. Other classical notices of Assyro-Babylonian history may be passed over; like those of Diodoros, they are little more than echoes of Ktesias. It is only the Old Testament which gives us fuller and more trustworthy information. It is, therefore, to the native texts that we have mainly to look for the history of Assyria and Babylonia. These are partly contemporaneous with the events they record, partly more recent compilations. The statements of those that are contemporaneous may be frankly accepted, due allowance being made for oriental exaggeration and tendency to self-praise. The Assyrian historical documents, however, are singularly free from these faults. They were intended to be read by a large and well-educated public, and the practical character of the Assyrians made them realistic in style. The historical inscriptions are scrupulous in recording the names, and if possible the parentage, of the foreign princes whom they mention; every small town is carefully noted by name, and the numbers, whether of conquered populations and spoil, or of the Assyrian armies, are seldom round and never excessive. Even the disaster which befell Sennacherib—the least trustworthy of all the royal authors—in Palestine is not

denied or glossed over; it is simply omitted, leaving a break which presupposes it. Of course, the same accuracy or trustworthiness cannot be expected in later compilations, and many of these, like the legend of Sargon of Agade, merely embody popular tales. But such legends belong rather to Babylonia than to Assyria, where the historical sense was really remarkably developed, and the extreme faithfulness with which old documents were copied inspires us with confidence in the statements made regarding them. The Assyrians early possessed a fixed chronology, reckoned by the names of officers called *limni*, who were changed every year, and, like the eponymous archons at Athens, gave their name to their year of office. The chief events of each year were added to the name of its eponym, and in the earlier period of the empire the king himself assumed the office in his year of accession. We possess fragments of several editions of the Canon in which the names of the eponyms were recorded in order, and thus have an exact chronology of the empire from B.C. 913 to B.C. 650. . . . The system of eponyms . . . seems to have been confined to Assyria, and the early Chaldeans do not appear to have had any settled system of chronology. Their inscriptions, if dated at all, are dated by such events as the capture of a city or an inundation of the river. Still they must have had some more definite mode of counting time, since Assur-bani-pal affirms that Cudur-Nank-hundi, the Elamite, had oppressed Accad 1635 years before his own conquest of Shushan; while the table of Babylonian dynasties, first discovered by Mr. Smith, assigns to each king the length of his reign in years, months, and days. It must have been some such table as this which was used by Berossos. . . . It is only with the era of Nabonassar (B.C. 747), and the mutual help afforded by the Assyrian inscriptions and the Canon of Ptolemy, that an exact chronology of Babylonia begins. For the empire of Nebuchadrezzar the records of the Egibi banking firm are invaluable—dated deeds extending, year by year, from the reign of Nebuchadrezzar to the close of that of Darius Hystaspis."—*Ibid.*, pp. 90-105.—See also BABYLONIA: Historical sources.—"The honor of having first produced a true historical narrative of considerable scope and high relative veracity," writes Professor Barnes, "must be accorded to the Hebrews of ancient Palestine." "History, in the modern sense of the term, cannot be looked for in the Old Testament, at least only to a limited degree. The narrators of past events did not, as a rule, consider it their duty to criticise the historicity of the traditions which had been handed down to them, and to distinguish between what was true and what was false, to separate the legendary from the historical. If they did criticise at all, they only did so in the sense that they quietly ignored what seemed to be untrue. The finer differences between popular legends and strict history were unknown to most of them. Where they, or rather the compilers, do exercise criticism, it is, as we shall point out later, in a different sense. Therefore, what we find in the historical writings of the Old Testament generally, is a compilation of narratives, describing the nation's past, its great men, and its religious traditions, which were current among the Israelites and had been gradually collected."—R. Kittel. *Scientific study of the Old Testament*, pp. 93-94.—"The first to conceive the really epoch-making idea that the Pentateuch is a compilation of different records, which had at one time an independent existence, was, strange to say, a layman in the world of Biblical research, namely, Jean Astruc, physician-in-ordi-

nary to his Majesty Louis XIV. of France (1753). His clever conclusion is now almost universally accepted, in spite of all that has justly or unjustly been brought against it. He observed that in the narratives of the book of Genesis—to which book he confined himself—the name of the Deity changed, in what seemed an arbitrary and inexplicable manner, from 'God' (Heb. Elohim) to 'the Lord' (Heb. Jahwe), and *vice versa*, and he concluded that two independent records must have been compiled to form the present book. He therefore distinguished between an Elohist and a Jahwist document. . . . This theory of two records or 'sources' was later developed by Ilgen (1798). He believed that he could perceive two separate sources within the Elohist document, an older and a younger. Later scholars recognized one of these Elohist sources as a priestly document or Priestly Code, and so we have a triad of narrative and legal writings, which the editor (R) compiled—a Jahwist (J), an Elohist (E), and a second Elohist which was also a Priestly Code (P or PC).—*Ibid.*, pp. 71-72.—"Among the authentic results of Pentateuch criticism the most important is the existence of several records, historical and legislative, from which the present Pentateuch has been compiled; further, that the chief sources of antediluvian as well as patriarchal and Mosaic histories are J, E, and P, and that J and E represent an older tradition than P. . . . Of the legal writings, as we have already heard, the Book of the Covenant forms the oldest part and belongs to a very early period; then comes the book of Deuteronomy (D) and the Law of Holiness (H); whilst P, at least, taken as a whole represents the latest addition to this class of literature. As another authentic conclusion, I maintain that J and E, in respect of their authorship, at least as regards their real authors, belong to the ninth and eighth centuries B.C. respectively. . . . "The present books of Judges, Samuel, and Kings . . . are the products of a thorough compilation and revision. . . . Deuteronomic editors did not regard their subject-matter from the purely historical standpoint, but rather from that of their own characteristic principles, which, in their view, history as a whole is to exemplify. The end they had in view was not the compilation of historical facts, but history is consciously and deliberately made a teacher of life. Past events are not related merely in order to make known what the condition of things was in days gone by, but to show how the future could be made better, and how the errors of the past may be avoided. On this account the selection of the material is naturally biased. A redaction influenced by such ideals as those of the Deuteronomic school, could not make use of everything at hand, but was compelled to select only what seemed to be suitable, and to reject what did not conform to their ideas. . . . Only a few words need be added concerning the *later historical writings*. In the books of Chronicles we have a parallel to a large part of the earlier historical books. But the value of Chronicles is much less than that of the latter. Where the Chronicles go their own way, they often follow a very late tradition, which is not always unbiassed. The chroniclers either omitted the displeasing or disturbing features in the traditions at their disposal, or altered them and thus presented quite a different picture from that conveyed in the original. Above all, the Chronicles have been strongly influenced by very pronounced priestly ideals, so that on this account the older traditions have undergone changes to harmonize with the priestly teaching. Although this book can, therefore, only be accepted with great reservation as a record of history,

the books of Ezra and Nehemiah, which are probably from . . . the same hand as the book of Chronicles, are, however, of a different type. It is true that we must regard certain parts of these books with distrust, but in this case the books relate the history of a much later period than the Chronicles, and the narrator therefore is in a much better position, in that he speaks of events which were nearer to him in time than the events described in the Chronicles.—*Ibid.*, pp. 78, 101, 105-106, 114-115.—For Hebrew history, from the conquest of Palestine by Alexander the Great to the accession of John Hyrcanus, the first Book of Maccabees, although highly colored and partisan, is a trustworthy source of information. It gives a stirring account of the struggle of Judas Maccabæus and his successors against the Syrian domination of Palestine, and takes a high place in Hebrew historiography. Flavius Josephus (c. 37-105 A.D.) was the last great Hebrew historian. "In Rome he wrote a 'History of the Jewish War' in the tongue commonly spoken among Jews in the East, for he intended it for the instruction of his countrymen beyond the Euphrates. He afterwards translated it into Greek. Both Titus and Agrippa bore testimony to its accuracy; though its bias is unquestionably in favor of his patrons in Rome. Titus ordered a copy to be placed in the public library, and signed it with his own hand, in testimony of its being an authentic memorial of his own times. About the year A.D. 93, Josephus published his great work on the 'Antiquities of the Jews.' This book is the Bible History, presented in such a way as to make a favorable impression upon Greek and Roman readers."—E. W. Latimer, *Judea from Cyrus to Titus*, p. 368.—See also JEWS.

"The Chinese have undoubtedly surpassed all other great oriental peoples in the department of historical literature. . . . No people can boast of so lengthened and strictly continuous a series of historical writers; since for upwards, apparently, of 2600 years a tribunal has been established in the capital expressly for the recording of events supposed to be of national importance. The mass of Chinese literature is immense. It includes the histories of particular dynasties, annals or chronological summaries, complete records or general histories, memoirs of many kinds, biographies innumerable, vast historical dictionaries and compilations. It exhibits all ages and aspects of the national life, and much of it is written in a style which commends itself to Chinese taste as admirable. But even Chinese historiography scarcely rises above the stage of annals. . . . The two most celebrated historians of China, although separated by twelve centuries, bear the same family name. Szema-Thsian (born about B.C. 145) wrote 'Historical Records' (Sze Ke), a kind of encyclopædia of all that appeared historically noteworthy in the annals of China from the reign of Hwang-te to that of Wo-te—*i.e.*, from about 2697 before the Christian era to the age in which the author lived. He distributed his materials into three divisions, and various subdivisions, yet presented them as far as possible chronologically. . . . It has served as a model to many subsequent Chinese historians, is regarded with admiration by native critics, and has been highly commended by such eminent European authorities as Schott and Remusat. Szema-Kwang, often styled the 'Prince of Literature,' flourished in the eleventh century of our era, and produced the 'Universal Mirror for Rulers' (Tsze Che Tung Këen). It describes a period of 1362 years, and flows on, in the main, as a single continuous stream of narrative. It has been the most popular of Chinese histories. It has been often

added to, and with the additions bringing the record onwards to the eighteenth century, it was translated into French by Father Mailla, and published by Grosier and Le Roux in 12 vols., 1777-83."—R. Flint, *Philosophy of history in Europe*, pp. 44-45.—See also CHINESE LITERATURE: Confucius, the founder.

15. **Philosophic interpretation of history.—Greek and Roman.**—"One may distinguish two phases of philosophic interpretation of history, that in which the philosophy is in reality a theology and that in which it is natural science. In the first phase we are still close to myth. Myth places the cause of events in Mystery of some sort—deities, demons, the Fates, or Fortune. Early philosophy proceeds upon these assumptions, which also penetrate most antique histories. Even Polybius, hard-headed, much-experienced man of the world, cannot quite attribute to natural causes the rise of Rome. Fortune, that wayward goddess of Caesar, had something to do with it—how much it would be hard to say. Livy had this myth-philosophy to the full; every disaster had its portent, every triumph its omen. This was the practical philosophy of all but the few calm thinkers whose scepticism passed into the second phase, which reached all the way from an open question whether or not the gods interfered in human affairs to the positive denial of their influence. The great source-book for such interpretations of history is Cicero's *On the Nature of the Gods*, where one may find in the guise of a theological discussion a résumé of the various pagan philosophies of history. . . . Moreover there were two reasons why antique philosophy could not accomplish much. It lacked the instruments by which to penetrate into the two centres of its problem: psychology, to analyze the mind, and experimental laboratories, to analyze the setting of life or life itself. It had some knowledge of psychology, to be sure, and some experimental science, but relatively little; and it never realized the necessity for developing them. It sharpened the reason to an almost uncanny degree, and played, like a grown athlete, with ideas. But it followed the ideas into their ideal world and left this world unaccounted for. Above all, it knew practically nothing of economic and material elements in history. Even a Thucydides has no glimpse of the intimate connection between the forces of economics and of politics. History for him is made by *men*, not by grain-fields and metals. It was not until the nineteenth century—just the other day—that economic factors in historical causation were emphasized as playing a rôle comparable to that of man himself."—J. T. Shotwell, *Interpretation of history* (*American Historical Review*, July, 1913).

16. **Greek historians.**—"In the sixth century B.C., the age that saw the birth of Hellenic science, the epics current under the name of Homer and Hesiod's genealogical poems formed in the mind of the Greeks the background of their history. . . . A notable advance was made by Hecataeus of Miletus, a younger contemporary of Acusilaüs. He was the author of a geography entitled *Circuit of the Earth*. The voyages of the Ionians to all parts of the Mediterranean and its tributary waters for commerce and colonization supplied him with the knowledge necessary for such a work. . . . His *Genealogies* differ from those of his predecessors in dealing extensively with the historical period. The extant fragments prove, too, that he was gifted with a nascent critical

spirit. There can be no doubt that Herodotus drew extensively from him, and that though he is set down among the logographi, he deserves to be called the earliest of historians.

"From Hecataeus to Herodotus the advance is not so much in critical ability and accuracy of statement as in literary genius, in largeness of mind, and amiability of character. It is clear, however, that Herodotus doubted some things which Hecataeus accepted, that in the later writer there was an appreciable growth of the historical spirit. . . . The object of his literary labor is expressed in his preface: 'This is a presentation of the Inquiry—*Historia*—of Herodotus of Halicarnassus to the end that time may not obliterate the great and marvellous deeds of the Hellenes and the Barbarians, and especially that the causes for which they waged war with one another may not be forgotten.' So far as we know, he is the first to apply the word *Historia* to the department of literature of which he was laying the foundation. In his mind the term cause . . . far from signifying historical causation in the modern sense, meant in particular the grievances of the parties to the war, which expressed themselves in the series of events leading to that struggle. In tracing these events he narrates from the earliest known times the notable achievements of all the peoples engaged in the great struggle. His production may be described therefore as a universal history, the unifying element of which is the ultimate conflict. . . . Hellanicus of Mytilene lived to see the close of the Peloponnesian war, and occupied accordingly a place next after that of Herodotus. In spirit and method, however, he connected closely with the logographi; his chief interest was in myth and genealogy. It was his task to carry much farther than his predecessors the extension and systematizing of pedigrees. . . . A part of the work of Hellanicus was to bring the early chronology of other states into harmony with that of Argos. In his *Atthis*—Attic chronicle—for example, he inserted new names in the existing list of kings in order to synchronize Athenian with Argive history; and we may assume that in the case of other states his method was similar. . . . It seems clear that the chronological outline of early Hellas accepted by later authors was largely his work. The portion dealing with the period anterior to about 750 is almost wholly fictitious, an arbitrary system of myth and actual invention joined with an extremely scant and uncertain tradition. While his chief interest was in remote antiquity, he treated meagerly of recent times. His *Atthis* extended to the close of the Peloponnesian war. While we possess mere shreds of the vast works of Hellanicus, we are fortunate in having the entire production of Thucydides, universally reputed the greatest of ancient historians. . . . The period anterior to the war [Peloponnesian] he surveys by way of introduction to his theme; and yet this portion, brief as it is, is of the highest value not only for the facts it contains, but also as an illustration of the author's method. . . . His method of drawing deductions from the survival of customs and conditions and from archaeological remains and of making allowances for the mistakes and exaggerations of earlier authors has been adopted by modern historians. Historians before Thucydides limited themselves to the time before the Persian war or to that war itself. The period intervening between the Persian and the Peloponnesian war was omitted by all with the exception of Hellanicus; and he, where he touched upon it in his Attic chronicle (*Syngraphé*), was very brief, and in his chronology inaccurate. . . . Thucydides adopts

what he considers a better chronological system. . . . The advantage of reckoning time by the natural year, rather than by the conflicting civil years of the various states, Thucydides fully appreciates, although he seems to have no conception of the importance of an era of chronology for fixing the period of his history in its appropriate universal relation. This shortcoming is probably due in the main to the concentration of his attention upon the present, which he regards as all-important: 'Former ages were not great either in their wars or in anything else.' . . . This high valuation of the present as compared with the past he shares with the sophists. He is at one with them also in his desire to impart useful information. The chief object of Herodotus had been to entertain the public, that of Thucydides was to furnish information useful to the general and statesman. . . . It is universally granted that Thucydides, though by no means infallible, possesses the quality of accuracy in an extraordinarily high degree. His theme [the Peloponnesian War] is extremely narrow—a war rather than a period of national development; yet within this limited field he is deep and thorough. With marvelous analytical power he lays bare the spirit of government and the soul of political factions. When he has to do with persons, he tells us nothing of their outward appearance, their habits, or mannerisms, but reveals the mind only."—G. W. Botsford and E. G. Sihler, *Hellenic civilization*, pp. 20-29.—"Thucydides," says Sir Richard Jebb, 'was the greatest historian of antiquity, and, if not the greatest that ever lived; as some have deemed him, at least the historian whose work is the most wonderful, when it is viewed relatively to the age in which he did it.'"—J. H. Wright, *Masterpieces of Greek literature*, p. 319.—"An orthodoxy of appreciation surrounds the works of the old masters in any art; the heretics 'fail to understand.' But heresy has a moral if not an artistic justification, and we must register the disappointment of the reader of Thucydides who comes to him in the hope that he will find in his pages a living picture of the cities which waged the war. To be sure, he did not write for us; he wrote for Athenians, or at least for Greeks, and they took for granted what we wish most to know. But the fact remains that the work lacks for us its central theme. . . . There are at least four major elements in his history which he would now recast. In the first place he would have to admit his inability to grapple with the past. He lacked both the implements for dealing with it and a sense of its bearings upon the present. In the second place he failed to give an adequate picture of Greek politics, keeping too close to the definite politics of the war to catch its working as a whole; and he missed altogether the economic forces which underlay so much of both war and politics. Finally, he put the political and diplomatic elements of his story into the form of speeches by the leading characters,—a device common to all antique historians, but which violates the primary laws of historical work today."—J. T. Shotwell, *Introduction to the history of history*, pp. 165, 167.—"It remains for us to gather up the details, and to form some general estimate of the genius and character of the great historian. Whatever faults of style, whatever transient fashion of involving his thoughts, may be due to a sophistic education, and to the desire of exhibiting depth and acuteness, there cannot be the smallest doubt that in the hands of Thucydides the art of writing history made an extraordinary stride, and attained a perfection which no subsequent Hellenic, and few modern writers, have attained. If the subject

which he selected was really a narrow one, and many of the details trivial, it was nevertheless compassed with extreme difficulty, for it is at all times a hard task to write contemporary history, and more especially so in an age when published documents were scarce, and the art of printing unknown. Moreover, however trivial may be the details of petty military raids, of which an account was yet necessary to the completeness of his record, we cannot but wonder at the lofty dignity with which he has handled every part of the subject. There is not a touch of comedy, not a point of satire, not a word of familiarity throughout the whole book, and we stand face to face with a man who strikes us as strangely un-Attic in his solemn and severe temper. . . . I trust that in refuting this undue glorifying of a favourite author, I have not detracted ought from the great and enduring merits of the historian who has taught us to know more of Greek interpolitical life than all other Greek authors put together. In acuteness of observation, in intellectual force and breadth, in calmness of judgment, in dignity of language, there has never been a historian greater than Thucydides."—J. P. Mahaffy, *History of classical Greek literature*, v. 2, pt. 1, pp. 119, 123.—"To the circumstance that he is one of the very few classical Greek historians whose work has survived, Xenophon owes a prominence to which his qualities do not entitle him. In history as in philosophy he was a dilettante; he was as far from understanding the methods of Thucydides as he was from apprehending the ideas of Socrates. . . . So far as history is concerned, his true vocation was to write memoirs. The *Anabasis* is a memoir, and it is the most successful of his works. It has the defects which memoirs usually have, but it has the merits, the freshness, the human interest of a personal document. The adventures of the Ten Thousand are alive forever in Xenophon's pages. He took up the story of the Peloponnesian war where Thucydides had left it, and he carried down the history of Greece from that date to the fall of the Theban supremacy, in the work which we know as the *Hellenica*. By this work his powers as a historian must be judged. Some of its characteristics are due to the superficial lessons which the author learned from the founder of political history. . . . The life of Polybius covered about the first eighty years of the second century B.C. (c. 198-117 B.C.)—the period of the great destinies of Greece and Rome. He was born in the Hellenistic world, a noble representative of its civilisation, to become the herald of the new Græco-Roman world into which he witnessed the Hellenistic system passing. . . . His original design was to relate the history of the advance of Roman conquest, through a period of fifty-three years from the eve of the Second Punic war (220 B.C.) to the Roman conquest of Macedonia (168 B.C.). . . . Subsequent events, the fall of Carthage and the annexation of Greece in 146 B.C., led Polybius to extend his plan and fix this later year as the term of his history. In its augmented form it reached the considerable bulk of forty Books, of which only the first five had been preserved completely, though of many of the others we possess long excerpts. . . . Both Polybius and Thucydides, held with equal conviction that the first obligation of a historian is to discover and relate facts as they actually occurred, and herein they both represented a reaction against the history which held the field. Each alike feels that the purpose of his work is to be instructive and not to be entertaining. Polybius is fully aware that for the majority of the reading public his work

will have no attractions; it is intended for statesmen, not for antiquarians or people who want to be amused. . . . [Polybius] . . . stands out among the few ancient writers who understand the meaning and recognise the obligation of historical truth and impartiality. Belonging to no school, he opposed the tendencies of the current historiography of the day."—J. B. Bury, *Ancient Greek historians*, pp. 150-152, 191-193, 209, 217.—See also GREEK LITERATURE: Late development of prose; First part of Greco-Roman period; Greco-Roman period: History.

17. Roman historiography and historians.—"The pride of the early Romans led them both to falsify their own history and to take some measures to preserve the memory of it. Their registers, their *fasti* and annals, were only meagre and unsatisfactory materials for history. As an art history was late in appearing at Rome. . . . The first Latin work entitled to be called a history would seem to have been the 'Origines' of Cato. For a considerable time Roman historiography was uncritical and inartistic; and it was from the first affected by a vice which inhered in it to the end—namely, a tendency to subordinate truth to what was supposed to be for the interest of the State, or for the edification of the individual."—R. Flint, *Philosophy of history in Europe*, p. 57.—"We should have a better idea of the situation if the works of Varro had come down to us in anything like the way in which those of Cicero were preserved. . . . There remain but slight fragments of the many writings of Varro. . . . The only work which concerns us, however, is his treatise on *Roman Antiquities*, published in 47 B.C. There were twenty-five books dealing with human and sixteen with 'divine' antiquities. The data were grouped into large sections under Persons, Places, Times and Things. There was no attempt to establish their interconnection historically, but simply an amassing of curious facts. . . . Modern scholarship, correcting Varro in places, is upon the whole able to profit better from the data he offers than were the Fathers of the Church; and perhaps, also, better than the believing pagans. To these Varro supplied something like a 'counterblast' to the negative criticism of Lucretius, and helped to restore that emphasis upon the good old Roman virtue of *pietas*, upon which the Vergilian epic was so strongly to insist."—J. T. Shotwell, *Introduction to the history of history*, pp. 237.—"Cæsar and Sallust were the first Roman writers who produced works displaying historical genius. The Commentaries of Cæsar on the Gallic and Civil Wars are not only invaluable for the information which they contain, but are composed in a style perfect in its kind and in its relation to the subject. They are an admirable reflection of their author's mind. . . . They are simply military narratives, and cannot entitle Cæsar to a place in the highest rank of historians. Of historical philosophy of any kind, or general historical ideas, they show no trace. Cæsar was far too clear-sighted to state what was false, but no one probably knew better how to make silence serve his purpose, or so to present his facts as to make them suggest what it would hardly have become him to have said. . . . Sallust may justly be described as the first artistic historian or historical artist of Rome. His Catalinarian Conspiracy and Jugurthine War are small but choice and carefully finished pieces, in which their author's talents alike as historian and *litterateur* are seen to full advantage. In the selection, disposition, and general treatment of his subjects, as also in his style, he

took the work of Thucydides for his model. As regards the highest historical qualities, he must be admitted to have fallen much beneath his great exemplar. . . . He had remarkable skill in combining and disposing facts into pictures, in drawing characters by a few striking traits, and in juxtaposing and contrasting his personages. His moral reflections may be irrelevant, but his talent for moral portraiture was indubitable. He had a power of psychological, and consequently of moral, analysis, almost equal to that of Tacitus, although exercised on a much smaller scale. His works are from their own merits worthy of their reputation; and their relation to those of Thucydides on the one side, and to those of Tacitus on the other, give them a special interest for a student of the development of historiography. But it was neither in the sphere of universal nor of episodic history that the Latin historians performed their most distinctive work. It was in that of national history. . . . [See LATIN LITERATURE: B.C. 82-43.] Livy and Tacitus might, with little exaggeration, be described as the two first national historians on a large and prominent scale, and who, it may be added, had as such no worthy successors for sixteen hundred years. Livy narrated the events of Rome's career of heroic struggle and achievement with the colouring and in the tone most adapted to inspire the youth of his own generation with reverence and emulation of their ancestors. He was the greatest prose writer of his age. He narrated with unflinching vividness, sensibility, and charm, and could picture or portray with masterly vigour and skill. His ethical feeling was keen and pure. Patriotism was his strongest passion. And if the chief end of history be, as he obviously supposed, to supply examples and *stimuli* to virtue and patriotism, he certainly cannot be accused of having neglected the historian's main function. His whole work, as has been said, was a triumphal celebration of the heroic spirit and military glory of Rome.' It was natural that he should have been the most popular of the Roman historians. But unfortunately his great qualities were combined with great defects. He was superficial in research; easily satisfied in regard to evidence; prone to take the version of a story which told best; uncritical in the choice and use of authorities. Dazzled by the splendour of the military history of Rome, he neglected the study of its constitutional history. He lacked political insight. He lacked still more philosophical comprehension. Of the general conditions and causes which determined the course of Roman history, and of any law or plan in it, he had no glimpse. He was merely an annalist, although the most attractive and brilliant of analysts."—R. Flint, *Philosophy of history in Europe*, pp. 57-59.—"Of . . . [Livy's] work—originally consisting of 142 books—about one quarter has survived the Middle Ages. Its massive proportions and an early, though not original, division into decads (or sets of ten books) militated against preservation intact. . . . It is unreasonable to judge Livy by standards of modern research. It is imperative to take his own aim into account; his work in any case must be appraised as literature no less than as history; and he has a right to credit for his positive merits. . . . Livy conceived a colossal scheme. It was no less than an account of the life, customs, men, and training in peace and war, that had made Rome mistress of the world. . . . It is in the art rather than in the science of history that Livy's mastery is best assured. Here the striking features are his power of graphic description, his dramatic contrivances, his management of orations, his attention to char-

acter, and his noble language. . . . The fame which Livy won in his own day was increased by the admiration of his immediate successors. The 'fairest appraiser of all great talents,' as the elder Seneca called him, was sure to find enthusiastic readers. . . . The complete work, now divided into decads, lived on through the age of compendia and extracts. Priscian in the sixth century still quotes from the text direct. Thereafter Livy vanishes from sight till he reappears in John of Salisbury in the twelfth century. From that point onwards—in Dante, among the scholars of the Renaissance, and in more modern times—Livy's place has been secure."—J. W. Duff, *Literary history of Rome*, pp. 641, 648, 652, 662-663.—See also LATIN LITERATURE: B.C. 43-A.D. 14.—"The elder Pliny's *History of the Wars of Germany* was begun when he was serving in that country, and may have been published under Claudius. It is, however, by no means certain that it was, and it seems most convenient to speak of the work under the Flavian dynasty, which saw the completion of the *Natural History* and the history in continuation of Aufidius. It has perished, and the only certain fragment is a statement concerning Agrippina preserved by Tacitus. . . . The author's nephew informs us that it contains in twenty books an account of all Rome's wars with the Germans. The history that bore the title *From the Conclusion of Aufidius Bassus* ran to thirty-one books, and was kept unpublished so that no one could suspect the author of having made in it any bids for imperial favour."—W. C. Summers, *Silver age of Latin literature from Tiberius to Trajan*, pp. 159-160.—See also LATIN LITERATURE: B.C. 234-103.—"Tacitus was very unlike Livy in almost all respects, but as an historian he was like him in so far that his aim too was essentially moral and patriotic. . . . He delineated the growth of social corruption from the time of Tiberius onwards. . . . No historian has given so large a place to the moral element in history, yet without ever becoming a mere moralist or ceasing to be an historian. . . . His strong moral feelings may have given rise in certain cases to harsh judgments; but obviously they were, in general, under such firm control, that this must be deemed only a possibility, and in no particular instance assumed as a fact, or even as a probability. From what he knew of the corruption of the governing classes of Rome he may have drawn inferences as to the corruption of the whole social body which are not to be accepted without corroborative evidence, or which can be even proved exaggerated; but it is easy to attribute to Tacitus errors of this kind, which are really only mistakes of the reader's own, consequent on his not keeping in view the precise limits and scope of the two chief works of Tacitus. Notwithstanding his extraordinary intellectual power, Tacitus attained no settled convictions on which any general philosophy of history, or even any general conceptions of history, could be rested. . . . He is justly entitled to be regarded as a scientific or philosophical historian, inasmuch as he traced actions back to their motives, events to their causes, and penetrated to the secret springs of social change. In the analysis of character he surpassed all the historians of antiquity. Full of matter as his narrative is, it never contains anything trivial or superfluous. His style fitly exhibits the force, originality, and dignity of his mind. His words are singularly pregnant with meaning, and few of them could either be omitted or replaced by another without loss. He was unquestionably far the most eminent of the Roman historians."—R. Flint, *Philosophy of history in Europe*, pp. 60-61.—"The following is a list of the writings of

Tacitus. . . . *Dialogus de Oratoribus*.—This work was composed in the reign of Titus, or in the beginning of that of Domitian, and is the first-fruit of his historical studies. . . . *De origine, situ, moribus ac populis Germanorum*, sometimes called simply *Germania*, is an ethnographical treatise on Germany and the Germans, which Tacitus was induced to compose on account of the great interest which at that time Germany had for the Romans. . . . *Historiæ*.—This work comprised, in fourteen books, the history of the reigns of Galba, Otho, Vitellius, Vespasian, Titus, and Domitian, i.e., the history of Rome from A.D. 60 to 96, or the history of Tacitus' own time. . . . *Annales* or *Ab excessu divi Augusti*.—After finishing the *Historiæ*, Tacitus went back and undertook to write the history of Rome from the death of Augustus till he reached the beginning of the *Historiæ*, i.e., it comprised the history of Tiberius, Caligula, Claudius, and Nero, so that the two works together formed a continuous history from the death of Augustus to that of Domitian. This work was written in the reign of Trajan, and must have been published between A.D. 115 and 117. It consisted of sixteen books, but a considerable part of it is lost."—L. Schmitz, *History of Latin literature*, pp. 168-170.—See also LATIN LITERATURE: A.D. 14-117.—"Suetonius Tranquillus (c. 75-160 A.D.) was, like Tacitus, an upper class Roman who devoted himself to scholarship; by no means so much a personage as Tacitus, but perhaps more of a scholar. In his researches he reminds one of Varro, for he had a perfect mania for finding and noting all kinds of details, physical peculiarities, trivial incidents, obscure situations, in short all the miscellany that might go into an encyclopædic *Notes and Queries* dealing with biography. He ultimately held a position where his insatiable curiosity could have full play, as secretary to Hadrian's prætorian prefect, Septicius Clarus, a position which opened to him the secret documents of the imperial cabinet. The result was a work as different as possible from Tacitus, yet sharing the same immortality by reason of the subjects of which it treated. *The lives of the Cæsars* (*De Vita Cæsarum* . . .) is a collection of biographies in eight books. The first six books are each devoted to the life of a single emperor (Cæsar to Nero), but the seventh book covers the revolutionary year 69 with the three emperors it produced, and the Flavians make up the eighth. It was published in the year 120 A.D. . . . Ammianus Marcellinus (c. 330-400 A.D.) was a native of Antioch who fought with the Roman armies all along the threatened frontiers, east and west. . . . *Rerum Gestarum Libri*, which carried the story of Rome from Nerva to the death of Valens (96-378 A.D.), was a performance worthy of the best company in antique historiography."—J. T. Shotwell, *Introduction to the history of history*, pp. 273-276.—See also ANNALS: Roman; LATIN LITERATURE: 2nd-4th centuries.

18. Christian philosophy of history.—Patristic historiography.—"Christianity dropped [the] . . . rationalist tone of the Greeks, and turned the keen edge of Greek philosophy to hew a structure so vast in design, so simple in outline, that the whole world could understand and none escape. History was but the realization of religion—not of various religions, but of one; the working out of one divine plan. . . . For a thousand years and more it was the unquestioned interpretation of the meaning of history, easily adaptable to any circumstance because it covered all. It still is found wherever pure theology satisfies historical curiosity. . . . Science began to challenge the the-

GREAT HISTORIANS

ological history of the universe before it challenged the theological history of man himself. . . . From Augustine to Bossuet one may trace an almost unbroken line of theological interpretations."—J. T. Shotwell, *Interpretation of history (American Historical Review, July, 1913)*.—"Christianity was an historical religion: its basis not a cosmogony or a priestly code or a series of visions or a metaphysical system, but the story of a life—its prime documents a group of biographies. And these biographies linked the story of the master to the long annals of his people, whose history, like their law, their poetry, and the lofty teaching of their prophets, became the heritage of the younger faith. In that Hebrew literature, which carried them back to the very creation, and in the world-wide outlook of their own aspiring sect, Christian scholars now found inspiration for the first thought of a history truly universal, and with zeal took up the great task of knitting into a single story the chronologies of Orient and Occident. But to Christian historians the biographies which were the starting-point of that Christian historiography were the record of no merely human life. That long history which was now their preamble was the sacred story of the chosen people, with its Jacob's ladder forever linking earth to heaven. The central actor was Jehovah, now the God of all the earth. About that story and its culmination in the Gospels all other history must now fall into place; and from the sacred record—for the record too is sacred—may be learned the plans of the Omnipotent. It was Jerome who now found them in the interpretations and the visions of Daniel—in the image with head of gold and belly of brass, in the four great beasts that came up out of the sea—and from his day on almost to ours the changing empires of earth have been forced to find a place within that scheme. Whatever in non-sacred annals was found in conflict with Holy Writ must be discarded. What was left must be adjusted to its words. Man's career on earth became a fall. Nor might human wit exalt itself: Pythagoras and Plato had learned from Moses, Seneca from Paul. Yet history was still of moment, and earth was still its scene. But when the religious genius of Augustine, turning with disdain from earthly story, centred all interest on a State of God which filled the universe, and traced from revelation its career, even on the primal counsels of eternity to the ultimate goal of prophecy in the New Jerusalem, leaving to earth and time but a poor midway span—when even in that earthly span man's place was but a puppet's, his impulses the voice of guardian angel or besetting fiend, and all the spheres 'twixt Empyrean and Hell the battleground of God and Satan—when, to the growing exegesis of the Church, not even Holy Writ itself was prized for the poor literal facts of history, but for those deeper meanings, allegorical, moral, analogical, mystical, to be discerned beneath: then history, like all else, was lost in theology. The Middle Age did not dis sever them. Nay, to forbid it there grew to completeness that consummate preserver of the unity of thought, the procedure against heresy. And to the end of that long age of faith history did not escape the paternal eye. Yet even through that age history lived on. Great was often her freedom in all that lay beyond the line of sacred. Ever and again a biographer or a contemporary historian—an Einhard or a Nithard in the ninth century, a Villehardouin or a Joinville in the thirteenth—showed how vigorous still could be the interest in human affairs and human deeds. All

through that age one finds by snatches abundant proof of the same impulse. And long before the ending of that age the clergy's scribbling habit was heaping up materials that should one day prove rich for history."—G. L. Burr, *Freedom of history (American Historical Review, Jan., 1917)*.—"The greatest master of Christian allegory was Origen. While not a historian in the stricter sense, he contributed to Christian historiography one of its most remarkable chapters. He not only denied the literal truth of much of Genesis, and explained away the darker happenings in the history of Israel; but, even in the New Testament, he treated as parables or fables such stories as that of the Devil taking Jesus up into a high mountain and showing him the kingdoms of the world. One reads Origen with a startle of surprise. The most learned of the Fathers of the third century was a modern. His commentaries upon the bible might almost pass for the product of the nineteenth century. . . . Although the allegorical method of biblical interpretation was used by nearly all the Fathers—by none more than by the pope whose influence sank deepest into the Middle Ages, Gregory the Great."—J. T. Shotwell, *Christianity and history (Journal of Philosophy, Psychology and Scientific Methods, Feb. 26, 1920)*.—"The path to Christian historiography lies . . . through a study of Christian chronology. The basis for this was the work of the Jewish scholars of the diaspora. When the Christian apologists of the second and third centuries attempted to synchronize the Old Testament history with that of the gentiles, they could fall back upon the work of a Jewish scribe, Justus of Tiberius, who wrote in the reign of Hadrian. He prepared a chronicle of Jewish kings, working along the same uncertain basis of 'generations' as had been used in gentile chronicles, and so claiming for Moses an antiquity greater than that of the oldest figures in Greek legend. . . . The first formally prepared Christian chronology did not appear until the middle of the third century when Julius Africanus wrote his *Chronographia*. It was a work in five books, drawing upon the writings of Josephus, Manetho and pagan scholars, and arranging the eras of the old dispensation in a series symbolical of creation itself. . . . Eusebius of Caesarea, the father of Church History, worked out from materials like these the chronology of the world which was to be substantially that of all the subsequent history of Europe to our own time, and preserved the precious fragments of his predecessors in the first history of Christianity. . . . Eusebius was a voluminous writer, 'historian, apologist, topographer, exegete, critic, preacher, dogmatic writer.' But his fame as a historian rests upon two works, the *Church History* and the *Chronicle*. Both were epoch-making. The one has earned for the author the title of Father of Church History; the other set for Christendom its frame-work in the history of the world. . . . This scholarly accuracy was combined with a vast learning. Eusebius had enjoyed the freedom of the great library of Pamphilus at Antioch, in his earlier days. He tells us that he gathered materials as well in the library at Jerusalem founded by Bishop Alexander, and Constantine seems to have opened his archives to him. But he learned not less from the busy world in which he lived."—*Ibid.*, Mar. 11, 1920.—"The work of Eusebius, in its primitive form, does not go further than the year 329; Saint Jerome translated it into Latin, adding a continuation as far as 378. The chronicle thus completed and vulgarized became the great historical authority

for the western world, side by side with the decidedly inferior compilation of Paulus Orosius (who died about 420), entitled *Historiarum Libri VII. adversus Paganos*.—G. Masson, *France (Early chroniclers of Europe)*, p. 4.

ALSO IN: A. Loisy, *Les Évangèles synoptiques*.—J. B. Bury, *History of the freedom of thought*, ch. 3.

19. History and historians in the Middle Ages.—“All those who aimed at the reputation of historians copied Eusebius, or rather Saint Jerome, tacking on to the original narrative the facts which had fallen under their own personal observation, the records of this or that monastery, the petty revolutions of this or that diocese. Amongst the numerous continuators of the . . . [work of Eusebius], we may name Marcellinus, chancellor to the Emperor Justinian (died 534), author of a chronicle extending from 379 to 534; and Idatius, a Spanish bishop, who, describing the events between 379 and 468, deals especially with the history of the Visigoths and of Southern Gaul. Marius, Bishop of Avenche, Victor, Bishop of Tunis, John, Abbot of Biclair, at the foot of the Pyrenees, Cassiodorus, Isidorus Hispalensis, and finally the well-known Bede, all belong to the same group of writers, and lead us on by a kind of uninterrupted chain from the year 445 to the year 726, having, as historians, the common characteristic of extreme dullness. . . . Prosper of Aquitaine (403-463?), one of the most distinguished members of the clergy of Marseille, the friend and correspondent of Saint Augustine, should certainly not be forgotten. He discussed the origin of the French nation in a work extending down to the death of Valentinian III. and the taking of Rome by Genseric in the year 455. Written as an abridgment, it follows the chronicle of Eusebius as far as the year 326, and for the subsequent events adheres to the text of Saint Jerome. . . . Cassiodorus, who flourished during the fifth century, . . . also wrote a *chronicon*, in obedience to the orders of Theodoric. . . . Style is entirely out of the question in the writings of Prosper, as well as in those of Gregorius Turo-nensis (539-593), who, however, judged from the standpoint of historical importance alone, is immeasurably superior to all the Latin annalists of the early Middle Ages. The *Historia Francorum* of the Bishop of Tours, divided into sixteen books, covers the space of 174 years, from 417 to 591, and is of the highest value for the whole period of the Merovingian dynasty. No one has described with more picturesque truth that strange condition of a society still in a state of disorganization where the work of conquest was not yet accomplished, and where a number of discordant elements had still to be welded together, so as to form one powerful nation. Romans, Gauls, Franks, Burgundians, contribute in equal proportion their share of interest to the dramatic narrative, and the contrast presented between the rudeness of the invaders and the comparative polish of Gallo-Roman society is extremely striking. . . . The authority of our chronicler may, perhaps, be challenged on certain points, and it would be a wonder if an annalist of the sixth century was always and uniformly accurate; but the Bishop of Tours must be judged less from the details of his work, than from the general view it gives us of the society amidst which he moved.”—G. Masson, *France (Early chroniclers of Europe)*, pp. 4-6, 11.—“Bede’s *Ecclesiastical History of the English Nation* . . . is certainly the most interesting narrative to be found in . . . early annals. . . . From the first the *Ecclesiastical History*

of Bede has always been regarded as a work of the highest interest. [See also BIBLE, ENGLISH: 7th-8th centuries; CHRISTIANITY: 597-800.] After the lapse of several centuries it was still looked upon as the model of what a history ought to be, and after which other histories ought to be written. It was translated by the great king Alfred into the vernacular English of his own day, and it has been frequently translated since. No one, indeed, can be indifferent to such a remarkable record of the dawn of Christian civilization in this country, written so near the time itself by one of the most vigorous and many-sided intellects that England ever produced. Much of the information contained in it seems to have been derived from the memory of persons living in Bede’s own day. A good deal more was supplied to him by correspondents at London and at Canterbury. Some part also is believed to have been founded on native annals not now extant. It is evident that the author sought eagerly for information wherever it was to be found. . . . It must be owned that the art of writing history languished after the days of Bede. For about four centuries England scarcely produced any one deserving the name of a historian. Yet during that very period one remarkable record was preserved in the vernacular language, of all the important events from year to year; and though for the most part only a mere register of facts, it is impossible to pass over in silence such a great literary monument as the *Anglo-Saxon Chronicle*. Originated, as some believe, by King Alfred, and certainly existing in his day . . . it was continued from age to age by various hands till after the death of Stephen.”—J. Gairdner, *England (Early chroniclers of Europe)*, pp. 10, 28, 49-50.—Geoffrey of Monmouth, bishop of St. Asaph (1100-1154), was one of the most interesting among English chroniclers. Through the Arthurian legend he attempted to consolidate English traditions and aimed to exaggerate their antiquity “by giving them a legendary origin and a long record of wonderful heroes.” (See ARTHURIAN LEGEND.) William of Malmesbury’s (1090-1143) efforts were concentrated in bringing out the importance of the church, and Giraldus Cambrensis (1160-1220) devoted his time to an account of the conquest of Ireland by Henry II.—See also BALLAD: Ballad and history.—“Roger of Hoveden (that is, of Howden, in Yorkshire) set himself to the task of continuing Bede’s *History* down to his own day, with the aid of several former compilations.”—*Ibid.*, p. 194.—Matthew Paris (1200-1259), wrote an account of the reign of Henry III from contemporary information given to him by both sides of the political struggle.—See also ENGLISH LITERATURE: 6th-11th centuries.—“As M. de Wailly well observes, Villehardouin is the father of French vernacular history. . . . The *Conquête de Constantinoble* is the first original French work of a thoroughly historical character. . . . It is not too much to say that his work is a masterpiece of candour and of veracity. . . . The *Conquête de Constantinoble* comprises the history of the events from 1108 to 1207. . . . The Latin empire founded in the East by the heroes of the fourth Crusade was not of long duration; Villehardouin’s record of it, to quote a recent critic, has outlived it, and it is no exaggeration to say that it will subsist as long as the French language. A captain, a statesman, and an historian, he reminds us sometimes of Thucydides, more frequently of Herodotus. . . . The chronicle of Jean Froissart extends from 1328 to 1400, and treats of the events which took place not only in France, but

in England, Scotland, Ireland, Flanders, Spain, and the other countries of Europe. . . . Froissart's chronicle is of the highest importance as a biographical and geographical *répertoire*; it may be considered as a kind of international temple, where all the grand feudal families of Europe are represented, and where our aristocracy can find its title-deeds. No writer excels him in describing the bustling scenes which took place around him. Gifted with a real passion for observing, knowing, and relating all that was worth attention, we fancy we can see him travelling from spot to spot, making friends everywhere by his agreeable manners, his lively temperament, his talent as a poet, and availing himself of the *otium cum dignitate* which he enjoyed, for the purpose of taking notes of all the deeds of valour and of chivalry which were performed throughout the battlefields of Europe."—G. Masson, *France (Early chroniclers of Europe)*, pp. 124-126, 132-133, 165, 168.—"For the next century may be mentioned Philippe de Comines (1436-1509), whose memoirs give an account by a contemporary of the relations between Louis XI of France and Charles the Bold of Burgundy."—H. M. Stephens, *History and historians (syllabus)*.—"The Middle Ages produced historical writers of high literary merit—Matthew Paris and Lambert of Herzfeld, Joinville and Froissart—whose testimony to events of their own time was fairly trustworthy; but the essential conditions of study did not exist. Printing was unknown and books were rare. The critical treatment of documents had not begun, nor was it realised that there was need to treat them critically. Happy in the treasures of his monastic library, the pious chronicler did not stop to investigate their value, and with equal innocence copied earlier compilations into his own pages. Though the forging of charters was a regular trade, the means of discovering such forgeries had not been invented. Recorded events were accepted without challenge, and the sanction of tradition guaranteed the reality of the occurrence. Finally, the atmosphere of the Middle Ages was saturated with theology. The influence of Augustine weighed with an almost physical pressure on the mind of Europe for a thousand years, diverting attention from secular history and problems. In view of the constant interposition of Providence, the search for natural causation became needless and even impertinent. History was a sermon, not a science, an exercise in Christian evidences, not a disinterested attempt to understand and explain the course of civilisation."—G. P. Gooch, *History and historians in the nineteenth century*, p. 1.—See also ANN 5: Medieval.

20. Medieval historical biography. — "The great historical authority for the reign of Charlemagne is Eginhard. . . . Independently of his correspondence, Eginhard has left two works of a distinctly historical character—1. *The Life of Charlemagne*; 2. *The Annals of his Time*. . . . Since the days of Gregorius Turonensis and of his continuators, the art of the historian had been making rapid progress, and . . . the ruggedness of the old annalists was softening down. *The Life of Charlemagne* is, without comparison, the most distinguished history from the sixth to the eighth century—indeed, the only one which can be called a history, for it is the only one in which we recognize any traces of composition, any political and literary pretension. . . . It is a genuine political biography, written by a man who was

present at the events he narrates, and who understood them. . . . It combines the importance of an excellent historical authority with the merits of a literary production, and if Eginhard's language is open to criticism, the plan of the work and the general harmony of its constituent part is, on the other hand, remarkable. . . . The biography of Saint Louis, which has immortalized the Sénéchal de Champagne, and which will endure as long as the French language, was composed long after the author's [Joinville] return from the Crusade, when he was stricken down by age, and without the slightest pretension on his part to obtain literary fame, or to pass himself off as a scholar. . . . It has been remarked that Villehardouin is often touching, but that he never smiles. Equal in beauty to the *Conquête de Constantinople*, but superior in point of attractiveness, the life of Saint Louis is also the narrative of the Crusade; but it is something more, and the history of the war may be considered as the framework destined to set off and bring out in strong relief the character of the king. . . . A modern writer has well pointed out the difference which separates Villehardouin from Joinville: the former is the brilliant exponent of feudal independence; the latter, by the biographical mould into which he has cast his narrative, already expresses the growing importance of the monarchical principle."—G. Masson, *France (Early chroniclers of Europe)*, pp. 31-33, 136, 140, 145.

21. Arabic historians and historiography.—"It must not be forgotten . . . that during the middle age there existed a Mohammedan as well as a Christian civilisation, and a Mohammedan as well as a Christian historiography. In the seventh century Mohammed founded a new religion, which first united into a single people the scattered tribes of Arabia, and then spread with unparalleled rapidity over the eastern provinces of Rome, Persia, Sænde, Egypt, North Africa, and Spain. It everywhere roused and quickened the minds of its believers; and for several centuries Moslim civilisation in most respects equalled, and in some surpassed, the Christian civilisation which it confronted. . . . In the early period of Mohammedan historiography a prominent place was occupied . . . by accounts of Mohammed, and of the wars in which his immediate followers were engaged. The genealogies of Arab tribes and families received much attention. The collection of the traditions relating to the Prophet and to religious beliefs and practices was a work in which great interest was felt and by which reputation was most easily gained. . . . One of the first and most important of these collections [of oral traditions] was Ibn Ishak's History of the Moslim Wars, a work of which we possess but a small portion, containing the life of Mohammed, with notes and additions by a later editor, Ibn Hisham; this is a book of the highest authority, and deservedly so, but it is unfortunately of great rareness. The History of Islamism, by At-Tabari, was formed also in a similar manner. . . . The method followed by Mohammedan historians in the composition of their works compelled them from the first to exercise a certain kind and measure of historical criticism. Proceeding on a recognition of the supreme importance of the testimony of the primary witnesses, it required an examination of the claims of those who passed for such. . . . We cannot credit the Arabic historians with the knowledge or practice of historical criticism in its modern sense. Wakidi, Tabari, Coteiba,

Mas'udi, were unacquainted with it. Ibn Khaldun stood almost alone in clearly apprehending its nature and realising its importance. . . . In the second century of the Mohammedan era *Hisham* was the most renowned of the genealogists. . . . *Ma'mar* (ben el-Muthana), who died in 209 A.H. (821 A.D.), published about 200 works, the most important of which treated of historical subjects. He wrote a history of Mecca and of Medina, but showed, like so many Arabic historiographers, a marked preference for themes relating to war. . . . His contemporary, *Wakidi* (d. 207 A.H.), enjoyed immense popularity in his lifetime, and his fame as an historian has in the East never waned. . . . A History of Mohammedan Conquests is his most important work, and it is an excellent, almost typical, example of the Arabic historiography of the time. . . . Among the historians of the period [815-912 A.D.] it may suffice to mention only *Bochari*, *Coteiba*, and *Tabari*. *Bochari* [Bukhari] acquired high fame as a commentator on the Koran, and became the most eminent authority on the subject of tradition. He wrote a work known as the Great History, on the trustworthy and untrustworthy traditionists; and drew up the *Kitab as-Sahih*, a collection of 7275 traditions which he regarded as genuine. . . . *Coteiba* was a man of varied literary gifts, and particularly distinguished as a philologist and exegete. His 'Book of Facts,' or, as *Wustenfeld* its editor calls it, 'Handbook of History,' and his 'Exquisite Histories,' are allowed to be characterised by exceptional keenness and comprehensiveness of research, and accuracy and elegance of statement. He showed great good sense in avoiding diffuseness, refraining from useless repetitions, and silently rejecting uncertified traditions. *Tabari* was born in 224 and died in 310 of the Hegira. His Commentary on the Koran is deemed by some judges an even greater work than his Annals; but, however this may be, the latter work has made his name one of the most renowned and esteemed in Arabic historiography. It may be reckoned the first General History written from the Mohammedan point of view. It began with the creation and ended with 302 A.H. (914 A.D.). It was planned on the largest scale, and executed with great skill and ability, with unsparing toil, with vast information, with independence of judgment, with attractiveness of style. It was a collection of historical traditions and documents so ample yet judicious, and so aptly combined, that it was at once recognised as a substitute for many, and a supplement to all, previous historical works. . . . The Mohammedan view of ancient history had all the defects of the medieval Christian view, with others peculiarly its own. *Tabari's* work had the fault of being far too long. The Arabic mode of writing history necessarily tended to excessive bulk, and its accompaniment excessive cost. Hence there was a demand for abridgments, and these often practically displaced the works which they summarised. With all its reputation and merits, the Chronicle of *Tabari* fell almost into oblivion after it had been abridged and continued by *El-Makin* (*Elmacin*). . . . Another historical writer of great celebrity was *Mas'udi*, whose life fell mostly within the tenth century of our era, as he died in 345 or 346 A.H. . . . He embodied the results [of his travels] in a 'History of the Times,' the wonder and delight of the East, yet so vast that it has never been printed. He, however, abridged it under the title of 'Meadows of Gold and Mines of Gems,' and on this abridgment his fame chiefly rests. . . . During five centuries after the death of *Mas'udi*, Arabic his-

toriography continued to be diligently cultivated. It was, perhaps, the last branch of Mohammedan literature to wither and decay. . . . As regards the science or philosophy of history, Arabic literature was adorned by one most brilliant name. Neither the classical nor the medieval Christian world can show one of nearly the same brightness. *Ibn Khaldun* (A.D. 1332-1406), considered simply as an historian had superiors even among Arabic authors, but as a theorist on history he had no equal in any age or country until *Vico* appeared, more than three hundred years later. *Plato*, *Aristotle*, and *Augustine* were not his peers, and all others were unworthy of being even mentioned along with him. He was admirable alike by his originality and sagacity, his profundity and his comprehensiveness. He was, however, a man apart, as solitary and unique among his co-religionists and contemporaries in the department of historical philosophy as was *Dante* in poetry or *Roger Bacon* in science among theirs. Arabic historians had, indeed, collected the materials which he could use, but he alone used them."—*R. Flint, Philosophy of history in Europe, pp. 78-83, 85-86.*

22. History and the humanists.—"Amid this conflict of ideas and ideals [during the Renaissance] three other movements typified the changes then coming about in European life and thought. The first was the emergence of historical scholarship. . . . It was no mere casual concurrence of unrelated circumstances that in the same year of the preceding century in which the Portuguese were finding their way about Cape Bojador fair on the way to India, the Italian scholar, *Valla*, not only demonstrated the falsity of the so-called Donation of Constantine, but detected flaws in *Livy* and even in the Vulgate itself [see EUROPE: Middle Ages: Science]. From that spring flowed a stream of destructive historical criticism which, by the beginning of the sixteenth century, had powerfully aided not only the humanists but the reformers. To its development the investigations of the Roman, *Biondo*, in the Papal archives contributed. To this the labors of the Florentine historians, *Varchi*, *Guicciardini*, and, above all, *Machiavelli*, joined to produce a new school of history. Of these the last was the greatest. In his *Discourse on the Language of Dante, Petrarch, and Boccaccio*, in his books on *Livy*, and, still more in his *History of Florence*, he typified that method of critical investigation which was rapidly superseding the blind processes of 'harmonizing' rather than comparing historical material, by discarding what seemed to be untrue and so raising history from legend to at least an approximation to truth. To these he added his great contribution to political thought, on which his chief fame rests, *The Prince*; and, whether it be reckoned merely a description of the motives which ruled men in the age of the tyrants, or as a satire, or as a manual of the theory and practice of despotism, it remains not merely a masterpiece of the maxims of that school of statecraft, but an example of a new school of thought which for the first time in modern history looked its phenomena in the face and set them down as they were."—*W. C. Abbott, Expansion of Europe, pp. 182-183.*—"Too many things were left out of *Machiavelli's* view of society. Of economic development he took no account; of a sensitive and active conscience that determines the deeds of men he did not dream; of social progress he had no thought; of the fact that a nation cannot be made by the arbitrary will of a single man but that its growth is just as organic in its own

way as is that of a plant he had no suspicion; and in an aspiring religion that transforms and sublimates the ideals of men he did not believe. [See also ITALIAN LITERATURE: 1450-1505.] The man who continued the history of Florence, Francesco Guicciardini (1482-1540), was one of the keenest observers of society that has ever recorded the things he witnessed. Like his predecessor he gained experience in the field of practical politics and he had a varied opportunity for direct observation. Circumstances eventually compelled him to retire into private life, and there it was that he began his remarkable History of Italy. . . . He was more interested in the facts of history than was his predecessor and in their accurate interpretation. He was distrustful of general ideas. The critical sense was alert within him. With his eminently practical mind he pointed out the fact that the conditions of Roman regimental government could not be applied with success to the entirely different conditions of contemporary Italy. His profound experience of political affairs is set forth in his *Recordi*. With a cynicism that is perhaps unconscious he tells us how he invariably pursued his personal welfare. 'My private interest,' he declares, 'has obliged me to attach myself to the power of the Church; otherwise I should have loved Martin Luther as much as myself.' But it is his *History of Italy* that is for us his most important work. In it he narrates in chronological order the story of each of the different States of the peninsula, and at the same time he indicates their inter-relations. The history is unusually trustworthy, and through it there flows a stream of supple and vivacious thought. But its style and minuteness of detail make it laborious reading; and the total absence of the elements of morality and religion is a repellent characteristic. The explanation of this lack lies not, it would seem, so much in the character of the man as in the decadent character of the age."—E. M. Hulme, *Renaissance, the Protestant revolution and the Catholic reformation*, pp. 376-377.—"Classical examples of history writing were recovered, interest in the human past and intelligent curiosity in the present were aroused, the spirit and method and apparatus of criticism were all developed, the sense of literary style became keener and more general, and the invention of printing was an enormous advantage both to the historian and to his readers. The revival of individuality, the fundamental factor of the entire Renaissance movement, gave rise to numerous biographical and auto-biographical writings; and the revival of nationality was the cause of many an attempt to write a national history."—*Ibid.*, p. 538.—"Humanistic historiography quickly spread over Europe. The pleiad of scholars whose rays illuminated the court of Maximilian, himself an historian, aroused interest in the heroes and achievements of the Teutonic races. Celtis lectured on the *Germania*, Cuspinian edited Jordanes and Otto of Freising, Peutingger and Beatus Rhenanus plunged into the study of German antiquities, and Aventin compiled the Annals of Bavaria. They introduced into Central Europe the ideal and the methods of secular study and disinterested scholarship. It was of this that Goethe was thinking when he declared that the Reformation had thrown back European culture for a hundred years."—G. P. Gooch, *History and historians in the nineteenth century*, p. 3.—See also EUROPE: Renaissance and Reformation: Various Italian humanists.

23. **Historiography during the Reformation and Counter-Reformation.**—"Theology once more became dominant, and secular studies were engulfed in the whirlpool of confessional strife. But the fever contained within itself the germ of its cure. The controversialists of the Middle Ages appealed to reason, their successors to history."—G. P. Gooch, *History and historians in the nineteenth century*, p. 3.—"Less by far than that of the older church did the theology of Luther or Calvin accord reality or worth to human effort. Luther valued history, it is true, but only as a divine lesson; and Melancthon set himself to trace in it the hand of God, adjusting all its teachings to the need of Protestant dogma. Had either Papist or Lutheran brought unity to Christendom, history again must have become the handmaid of theology. But, while the struggle lasted, both sides had other use for her. And now it came to history's profit that Christianity is an historical religion. Not in the court of metaphysics, but at the bar of sober fact, had Protestant and Catholic to make good their charges and their claims; and by such evidence as should not only quiet the devout but rout opponents and convince the hesitant. At bottom, too, they were honest and earnest men who strove, convinced each of the soundness of his cause and eager to prove it by research. To discomfit the Magdeburg centuriators a Baronius printed wholesale the archives of the Vatican. To rescue what could yet be saved of the prestige of the saints the Bollandists outdid their Calvinist critics in relentless sifting of the legends. Contemporary annalists vied with each other in savage suspicion—and in documentation. Soon on both sides came internal rivalries: Calvinist impeached Lutheran, and Anglican Calvinist—Benedictine rallied to defend against Jesuit his ancient charters. And on all sides this wealth of study brought keener insight, fairer judgment, deeper interest in human affairs."—G. L. Burr, *Freedom of history* (*American Historical Review*, Jan., 1917).—"The new theologies had to justify themselves historically; and, on the other hand, their historical claims had to be refuted. In Germany, the most notable historian was John Sleidan (1506-56), conscientious and cautious annalist of the religious revolution, whose great work, containing many important documents, remains one of the most valuable of the contemporary histories of its times. The writers of the *Magdeburg Centuries*, of whom the principal one was Matthias Flacius, gave to the world (1550-74) the first general ecclesiastical history written from a Protestant point of view. The reproach of revolutionary innovation made against the Protestants turned the attention of Flacius and his collaborators to the past. The centuriators endeavored to gather for the overthrow of the Catholic claims documentary proof of alterations that had been made in doctrine, ceremonies, and ecclesiastical polity. Written in the midst of the bitter controversies of the time the *Centuries* is nevertheless a scholarly work and has been called 'the first monument of modern historical research.' With far greater resources at his command Cardinal Caesar Baronius (1538-1607) the chief of the Vatican library, and the little army of scholars in the libraries of many lands whom he was able by his position to summon to his assistance, began a work in reply that took forty years to complete. The work of Baronius is defective, yet it greatly excelled any

previous similar attempt. Such work as that of the centuriators and the librarian of the Vatican had for its impulse an avowedly polemical purpose; nevertheless the researches that it entailed bore fruit in the development of historical method. The necessity of consulting original sources gradually became evident. Collections of sources were made by a number of scholars. The *History of the Council of Trent* is the most important work of Fra Paolo Sarpi (1552-1623) whom Gibbon called an 'incomparable historian.' It is informed by an undying hatred of the Papacy of his time, but it is notably accurate in detail and is brilliantly written. The conscientious and reliable work of Geronimo de Zurita (1512-80), as the official historian of Aragon, still has its worth for the student of Spanish history. Also important is the work of another Spanish writer, the Jesuit Juan de Mariana (1536-1624), deemed in his own time and country to be the 'prince of historians.' His work has been described in a later century by Ticknor, the historian of Spanish literature, as being 'the most remarkable union of picturesque chronicling with sober history the world has ever seen.' The merit of his style is beyond question, and his work, although it is defective and is not notable for critical sifting or analyzing of sources, is not without a considerable degree of accuracy and penetration. In France where constitutional law rather than theology engaged the attention of the historians, Claude Fauchet (1530-1601) made researches in the history of the Franks down to the beginning of the Capetian dynasty in which is displayed a mature and systematic mind. [See also FRENCH LITERATURE: 1552-1610.] A far greater historian was Jacques de Thou (1553-1617), who undertook to write a history of his own times. His history, which deals with events from 1546 to 1607, consists of five parts. The fact that it is written in Latin shows that French had not yet won complete acceptance as a language fitted for a learned work. In the matter of style he was surpassed by many of his fellow countrymen, but he is unequalled in breadth of view, ripeness of judgment and invincible sense of justice. With few exceptions his views have been confirmed by the historical research of our own time; and his own century regarded his history, which is by no means narrowly confined to political affairs, as something of a secular bible. In England historiography was represented by William Camden (1551-1623) who, in his *Britannia*, wrote in elegant Latin a survey of the British Isles, and in his *Annales* a history of the reign of Elizabeth. George Buchanan (1506-82) . . . gained for Scotland the fame of possessing the best Latinist in contemporary Europe. His *Rerum Scotticarum Historia*, written to clear the history of his native country 'of some English lies and Scottish vanity,' is still of great value for the history of Scotland during the period known personally to its author.—E. M. Hulme, *Renaissance, the Protestant revolution and the Catholic reformation*, pp. 538-539.

Gebhardt, *Les historiens florentins de la Renaissance et les commencements de l'économie politique et sociale*.—J. B. Bury, *History of the freedom of thought*, ch. 4-5.—C. A. Beard, *Reformation of the sixteenth century in its relation to modern thought and knowledge*.

24. Historical literature during the seventeenth century.—"The seventeenth century witnessed a gradual decline of confessional violence;

but historical studies remained predominantly ecclesiastical. The great school of Anglican divines, from Usher to Bingham, whose situation midway between Rome and Geneva was favourable to a balanced view of controversial questions, produced works of enduring importance on the early Church. The Belgian Jesuits, under the guidance of Bolland and Papebroch, began a collection of Lives of the Saints on so vast a scale that it is still in progress [1913]. Even greater were the services rendered by France. The Gallican theologians subjected Ultramontane contentions to severe scrutiny, while the Jansenist Tillemont gathered materials for his priceless works on the Church and the Roman Empire, and Baluze explored the history of the Avignon Popes. Above all, the Benedictines of St. Maur began to pour forth the great series of works which threw light on almost every province of ecclesiastical history. No page in the annals of learning is more glorious than that which records the labours of these humble but mighty scholars in an age when an abstract Cartesianism was the dominant philosophy, when the State stood aloof and public interest was hardly born. . . . Among the few attempts that were made to determine the principles and methods of historical study the treatise of Bodin, stands out as a bold and brilliant achievement. At the height of the religious wars the French publicist envisages history as a secular subject and approaches it in a thoroughly scientific spirit. In language which anticipates Montesquieu he points out the influence of geographical situation, climate and soil on the character and fortunes of nations, while on the other hand he calls attention to the influence of personal position, patriotic and religious bias, and opportunity of knowledge on the views and value of writers. No such insight into the operation of environment had been possessed by any previous thinker, and nothing was added to it for a couple of centuries. In the region of criticism a few results were obtained, though rather in the nature of anticipations than of definite conquests. Spinoza declared that the Old Testament must be treated like any other historical work, and Père Simon incurred the wrath of Bossuet when he began to apply critical methods to the Jewish Scriptures."—G. P. Gooch, *History and historians in the nineteenth century*, pp. 3-5.—"The influence of classical models may be seen throughout the historical writings of the seventeenth century. In England, Sir Walter Raleigh (1552-1616) wrote while in prison his 'History of the World' intended to teach political lessons and not to record events, while Hobbes, the philosopher (1588-1679), wrote an imitation of Thucydides in his 'Behemoth,' or 'Historie of the Civil Warres of England.' In France, De Thou (1553-1617) wrote in Ciceronian Latin an elaborate history of his own times, and Mezeray (1610-1683) published a history of France in many volumes during the reign of Louis XIV to display the glory and the services to France of the French monarchy. The attitude towards history at the end of the seventeenth century is best shown in the 'Discours sur l'Histoire Universelle' by Bossuet (1627-1704)."—H. M. Stephens, *History and historians (syllabus)*, p. 14.—"The seventeenth century witnessed the appearance of works of high value—relating either to events in which their authors had taken part or to the immediate past—by Sarpi and Davila, D'Aubigné and De Thou, Clarendon and Burnet, Hoofd and Puffendorf; but surveys of national life were scarcely attempted."—G. P. Gooch, *History and historians in the nineteenth century*, p. 7.

ALSO IN: E. de Broglie, *Mabillon et la société de l'abbaye de Saint-Germain-des-Près à la fin du XVII<sup>e</sup> siècle.*—H. Delehaye, *Works of the Bollandists.*

25. Progress of historiography during the eighteenth century.—“It was at the end of the seventeenth and the beginning of the eighteenth century—the natural sciences were already showing signs of a new life, and historical science was just beginning. It was in 1681 that the great work of Mabillon, *De Re Diplomatica*, which created the science of determining the age and authenticity of documents first appeared, the supplement being published in 1704. About the same time, in 1690, appeared the *Histoire des Empereurs* of Le Nain de Tillemont, who, according to Monod, was ‘the first to teach how historical truth is arrived at by rigorous analysis and comparison of texts.’ It was in the year 1700 that Muratori began at Modena to gather and edit the documents which form his great compilation of authentic texts. In 1708, Montfaucon laid the foundations of Greek epigraphy by the publication of his *Palaeographia Græca*, soon afterward followed by the great collections of texts for French history. In Germany, Leibnitz, in 1700, founded the Royal Prussian Academy of Sciences at Berlin, and began, in 1707, his *Scriptores Rerum Brunsvicensium*, the originality of which, according to Wegele, consisted in ‘relying upon authentic testimony and rejecting baseless traditions.’ . . . How fruitful the historical method may be, joined with the mathematical, in the study of nature is proved by the results that have followed from its application. Our whole conception of the universe has been changed by it under the influence of Laplace, Lamarck, Darwin and their successors. Instead of a rigid, static order of things, we now conceive of the universe as undergoing constant transformation; and it is in these processes of change that its real nature is revealed.”—D. J. Hill, *Ethical function of the historian* (*American Historical Review*, Oct., 1908).—“With the eighteenth century the scope of historical study rapidly widened. While the task of collecting material was steadily pursued, a more critical attitude towards authorities and tradition was adopted, the first literary narratives were composed and the first serious attempts were made to interpret the phenomena of civilisation.”—G. P. Gooch, *History and historians in the nineteenth century*, p. 5.—“In the earlier régime when human thought was believed to be the result of a mysterious spiritual essence, when economic and social relations and positions were fixed by custom and confirmed by an inscrutable Providence, and when prowess in the natural sciences was thought to be allied to sorcery or savored of impiety, none of the most characteristic lines of modern thought could well exist. The political, economic, scientific and theological revolutions which humanity has passed through since 1750 have transformed the whole basis of our civilization and have also been reflected in the development of a series of new sciences which were virtually impossible in any earlier era. These new sciences are the science of man or *anthropology*, the science of the mind or *psychology*, the science of life or *biology*, the science of industrial relations or *economics*, the science of the relation of man to his environment or *anthropogeography* and the science of social relations or *sociology*. Each of these sciences represents a new set of interests and there has grown up as the result a vital need for its type of information and analysis. Their spirit and tendencies have reacted upon history to give it a

broader, sounder and more human content. Beyond this they have forever silenced such non-scientific doctrines as the biological superiority of the classical Greek, the racial interpretation of history introduced by Gobineau and others, and the myth of an Aryan race.”—H. E. Barnes, *Past and the future of history* (*Historical Outlook*, Feb., 1921).—“In the storage of erudition the French Benedictines maintained the supremacy that they had established in the seventeenth century. . . . Though the great collectors rarely applied critical tests to their material, sources and traditions began to be scrutinised with greater freedom. . . . The seventeenth century had witnessed sporadic outbursts of scepticism, checked by a lively fear of temporal penalties. As its successor dawned a cool blast blew across Europe, and by the middle the sun of the *Aufklärung* was high in the heavens. Within the lifetime of Fontenelle France passed from the world of Bossuet to the age of Voltaire, from Port-Royal to the *Encyclopédie*. The criticism of existing practices and of inherited beliefs reacted on one another. The fashion of throwing doubt on testimony and tradition was set by Bayle; but it was to Voltaire more than any other man that the new attitude towards the past was due. While Bayle was a sceptic, Voltaire was a rationalist; and the crushing weight of authority could only be overthrown by a whole-hearted champion of the might and majesty of reason. With all his intellectual and moral faults Voltaire claims a high place among the influences that prepared the world for historical science. By allowing his razor-edged intelligence to play over vast ranges hitherto unchallenged by critical thought, he did much to destroy the blind credulity against which erudition alone was powerless.”—G. P. Gooch, *History and historians in the nineteenth century*, pp. 5-7.—He was the typical historian of the eighteenth century, when “the predominance of literary style in the estimation of history reached its climax. [His] ‘Siccle de Louis XIV’ and ‘Histoire de Charles XII’ are models of luminous style and interesting narration, not so closely based on classical rules as in former times. The influence of Voltaire broke down slavish imitation of the classics, while maintaining the literary theory of history.”—H. M. Stephens, *History and historians* (*syllabus*), pp. 14-15.—“A polished narrative of English history was produced by Hume, of Scotland by Robertson. Hénault compiled a chronological handbook on which Frenchmen were nourished till Sismondi. Moscow and Schmidt recorded the fortunes of Germany, Johannes Müller the epic of the Swiss cantons. Schlözer narrated the story of Slavonic Europe, and Putter traced the institutions of the Holy Roman Empire. Cellarius abandoned the traditional framework of the Five Monarchies, which had prevented a rational conception of the development of civilisation; and a group of obscure English writers produced the first comprehensive Universal History, which, though destitute of literary qualities, brought together a mass of material not easily accessible, and which, in translations and abridgments, held its own till it was superseded by Rotteck and Schlosser. Above all, Gibbon constructed a bridge from the old world to the new which is still the highway of nations, and stands erect long after every other structure of the time has fallen into ruins.”—G. P. Gooch, *History and historians in the nineteenth century*, p. 7.—“Gibbon declared, . . . that he ‘never presumed to accept a place in the British triumvirate of historians’; but succeeding generations have concurred in assigning to *The De-*

*cline and Fall* the primacy, which it still holds, among historical works in our literature, and in esteeming its author the most brilliant example known of 'the union of the historian and the man of letters.' From the ancients, he had taken over the rhetorical side of the historian's task; from the French, he had derived the treatment of historical materials by a scientific method of criticism and selection; from the French, too, with the assistance of Hume and Robertson, he had learnt how to combine scientific method with artistic effect. His literary art may suffer from mannerisms, which were those of his age, as well as from foibles, which were his own, and, as a scientific history, his work has, in many respects, become superannuated; but its main and distinctive qualities continue unimpaired. . . . Inspired, as it were, by the muse of history herself in the magnificence of his choice of subject and in the grandeur of his determination to treat it with a completeness in harmony with its nature, Gibbon displayed a breadth of grasp and a lucidity of exposition such as very few historians have brought to the performance of a cognate task. Whether in tracing the origin and growth of a new religion, such as Mohammedanism, or in developing in comprehensive outline the idea of Roman jurisprudence, the masterly clearness of his treatment is equal to the demands of his philosophic insight; nor does the imaginative power of the historian fall short of the consummate skill of the literary artist. . . . 'If,' writes Bury, 'we take into account the vast range of his work, his accuracy is amazing, and, with all his disadvantages, his slips are singularly few.' It is an objection of very secondary importance, though one to which even experienced writers are wont to expose themselves, that Gibbon is apt to indulge in what might almost be called a parade of authorities. Complete, lucid and accurate, Gibbon, finally, is one of the great masters of English prose. His power of narrative is at least equalled by his gift of argumentative statement, and, in all parts of his work, his style is one which holds the reader spellbound by its stately dignity, relieved by a curious subtlety of *nuance*, and which, at the same time, is the writer's own as much as is that of Clarendon, Macaulay or Carlyle."—A. W. Ward, *Historians II (Cambridge history of English literature, v. 10, pp. 312-315)*.—"By their contemporaries, Hume, Robertson, and Gibbon were regarded as the triumvirate of great historians, whose fame was to reflect a permanent lustre upon their age and country. Their writings, indeed, whatever defects may have been discovered in them by later historians, were in fact among the most characteristic products of the time. Unluckily Hume's and Robertson's fame was insecurely based. They constructed elegant summaries of the knowledge then attainable, but worked in a perfunctory spirit. Later labourers in that fruitful field have gathered a harvest so immense that they have been all but overwhelmed by their own industry, and we are beginning to wish for a new Hume or Robertson to give the essence of the heterogeneous masses of fact which cumber the earth. Gibbon, more fortunate in his subject, and far more thorough in his methods, produced a monumental work not yet, if it ever will be, superseded. And, therefore, though he repudiates as presumptuous the pretension to a place in the triumvirate, he is now the most honored member. Gibbon's great book, whatever its faults, remains as the first great triumph of a genuine historical method."—L. Stephen, *History of English thought, p. 446*.—"No rational interpretation of history was possible till

the doctrine of evolution was enunciated by Leibnitz. 'Nothing happens all at once,' we read in 'Nouveaux Essais,' 'and nature never makes jumps. I call that the law of continuity. In starting from ourselves and going down to the lowest, it is a descent by very small steps, a continuous series of things which differs very little—fishes with wings, animals very like vegetables, and again animals which seem to have as much reason as some men.' As nature advanced by small steps so humanity moved slowly and painfully forward. The lonely Neapolitan thinker, Vico, in discussing the laws of change in his 'Scienza Nuova,' added that the process of history was cyclic. The principle was further elaborated in Turgot's Discourse at the Sorbonne on the Successive Advances of the Human Mind. . . . Further contributions to a theory of progress were made towards the end of the century in Germany. At the close of his life, as from a lofty watch-tower, Lessing surveyed the panorama of history and recorded his impressions in the pregnant apophorisms on the Education of the Human Race. The human mind, he declared, was greater than any of the influences that moulded it. Religion was a progressive revelation, and religions were the school-books which man uses in his progress, each helpful at a certain stage of development, none of them final. . . . But the most detailed and exhaustive investigation into the conditions and nature of progress was contained in Herder's Ideas on the History of Humanity. Deeply impressed by the influence of cosmic factors, he emphasises the existence of similar laws in history and nature. At the end of the century, in combating the French Revolution, Burke emphasised the continuity of historic life and the debt of every age to its predecessors. In addition to these speculations on the nature of progress, serious endeavours were made to explain particular factors of civilisation. Montesquieu investigated the origin and influence of laws and institutions, explaining that they must be judged not by abstract principles but by their suitability to the circumstances of the time. Of no less importance was the study of the economic elements in historical development. Hume reached some illuminating sociological generalisations in his Essays; but it was the glory of Adam Smith to relate the rise and fall of nations to their economic and commercial equipment and policy."—G. P. Gooch, *History and historians in the nineteenth century, pp. 8-10*.—"While style became the test of the historians [of the eighteenth century], the antiquarians devoted themselves to collecting and editing unpublished materials for history. Of these antiquarians the most distinguished were Muratori (1672-1750) in Italy, Leibnitz (1646-1716) in Germany, Dugdale (1605-1686) in England, and Sirmond (1559-1651), Labbe (1607-1667), and Dom Bouquet (1685-1754) in France."—H. M. Stephens, *History and historians (syllabus), p. 15*.

26. Historiography during the nineteenth century.—Beginnings of scientific history.—"The years that immediately preceded and followed the opening of the nineteenth century witnessed a revolt against the superficial rationalism of the eighteenth century and the emergence of forces that rendered possible the birth of historical science. The most powerful factor in this change of standpoint, which was felt all over Europe but found its earliest and strongest expression in Germany, was the Romantic movement. . . . A second factor that prepared the ground for historical science was the birth of nationalism. . . .

GREAT HISTORIANS

A final factor that stimulated critical investigation was the publication of Friedrich August Wolf's *Prolegomena to Homer* in 1795, which exerted a profound influence on every branch of research. The method that appeared to give such startling results could obviously be applied to other writings, sacred and profane. That the sources of history themselves must be analysed and subjected to internal and external criticism was the principle which Wolf contributed to the growth of historic study in the nineteenth century. . . . Niebuhr was the first to make ancient Rome a living political organism and to illustrate Roman and universal history by one another. He was also the first to collect and discuss the whole of the available literary evidence, and to steer a middle course between blind acceptance of Livy's narrative and wholesale scepticism. To these immense merits Niebuhr owes his unassailable position as the principal author of the great revolution in historical study effected in the opening years of the nineteenth century. . . . The impetus to historical research was given by Niebuhr; but the edifice had to be erected on surer foundations. . . . A still more powerful influence now began to be felt in every department of historical study. Leopold von Ranke had been deeply impressed by Niebuhr's history while a student at Leipzig, and by the works of Böckh and Otfried Müller while teaching at Frankfort-on-the-Oder. . . . Ranke was beyond comparison the greatest historical writer of modern times, not only because he founded the scientific study of materials and possessed in an unrivalled degree the judicial temper and sobriety of judgment at which every historian professes to aim, but because his powers of work and length of life enabled him to produce a larger number of first-rate works than any historian who ever lived. . . . Of the three most distinguished of Ranke's pupils the eldest two, Waitz and Giesebrecht, devoted the greater part of their lives to the study of the Middle Ages. . . . Though Giesebrecht's explicit purpose of national instruction and edification carries us some distance beyond the cosmopolitanism and Olympian detachment of his master, it was left to the youngest of Ranke's three great pupils to break completely away from the Berlin tradition and to share in the foundation of the 'Prussian' school of historians.—G. P. Gooch, *Growth of historical science (Cambridge modern history, v. 12, pp. 818-821, 824-825, 827-828.)*—"François Mignet [1796-1884] represents to some degree the contemporary movement in Germany as a French historian. His work is objective and narrative. He began to write history before he became a scholar and published his 'Histoire de la Révolution Française' in 1824. He then became an editor of documents and devoted himself to elaborate studies from documents upon smaller topics. Since the new school of historians could not work without materials, their influence brought about the beginning of the publication, at the expense of the State, of private societies and of individuals, of great collections of documents. In editing these documents scholars were trained and the work of sound scientific history [was] made possible. [This resulted in the] foundation of the *École des Chartes* at Paris, 1821; [in the] commencement of the publication in England of the works of the Record Commission, 1802, in Germany of the *Monumenta Germaniae Historica*, 1826, and in France of the *Documents inédits sur l'Histoire de France*, 1835."—H. M. Stephens, *History and historians (syllabus)*, p. 19.

27. Philosophic historians.—"Kant created a new realm in metaphysics, where one could take refuge and have the world as his own. The *idea* dominates. Space and time, the *à priori* forms of all phenomena, lie within us. Mathematics are vindicated because the mind can really master relationships, and the reason emerges from its critique to grapple with the final problem of metaphysics. This at first sight has little to do with interpreting history, but it proved to have a great deal to do with it. The dominance of ideas became a fundamental doctrine among those who speculated concerning causation in history, and metaphysics all but replaced theology as an interpreter. One sees this already in the work of the greatest historian of the nineteenth century, Leopold von Ranke. To him each age and country is explicable only if one approaches it from the standpoint of its own *Zeitgeist*. But the spirit of a time is more than the temporal environment in which events are set. It is a determining factor, clothed with the creative potency of mind. . . . Where else should one look for the vital forces of history than in the mind of the actors? So if the historic imagination can restore events, not simply as they seem to us but as they seemed to those who watched them taking place, we shall understand them in so far as history can contribute to their understanding. . . . Hegel was a sort of philosophic Augustine, tracing through history the development of the realm of the spirit. The City of God is still the central theme, but the crude expectations of a miraculous advent are replaced by the conception of a slow realization of its spiritual power, rising through successive stages of civilization. So he traces, in broad philosophic outlines, the history of this revelation of the Spirit, from its dawn in the Orient, through its developing childhood in Asia, its Egyptian period of awakening, its liberation in Greece, its maturity in the Roman balance of the individual and the State, until finally Christianity, especially in the German world, carries the spirit life to its highest expression."—J. T. Shotwell, *Interpretation of history (American Historical Review, July, 1913)*.—"In his book, *The Philosophy of History*, he propounds the idea that each period is characterized by the predominance of a 'world people,' who are possessed of a 'universal idea' which must be given to mankind. Once this has been accomplished the 'world people' has fulfilled its mission; it then sinks into decadence and yields the scepter to its successor. Conquest is, therefore, the victory of a superior idea; hence, might and right coincide. '*Die Weltgeschichte ist das Weltgericht*' (Universal history shows the progress of universal justice). The Oriental Greek, and Roman nations had once played this rôle in history; now a new 'world people' had arisen, the Germans, who were to give their 'universal idea' to mankind. He declared that although the need of German unity was deeply felt, the achievement of this result would be the fruit, not of deliberation, but of force; the divided Germans must, therefore, 'be gathered into one by the violence of a conqueror.'"—J. S. Schapiro, *Modern and contemporary European history*, pp. 130-140.—In France Guizot is one of the principal exponents of the philosophical interpretation of history. "The reverse of the apocalyptic, mystical, and pantheistic view of history of Michelet is to be found in the rigid and dogmatic writings of the doctrinaire

Guizot, who could more truly lay claim to representing a 'philosophical' school. Michelet turned to the imaginative metaphysics of Germany, Guizot to the prosaic constitutional theories of England. But the cold pedagogue who loved principles and not anecdotes was not impeccable in his systematic conclusions, any more than the excitable Michelet or any more than his precursor Montesquieu. None the less his desire to determine the great reasons of events and to discover the guiding principles of history gave it higher dignity as a science than did the poetry of Michelet. His chief writings, often heavy and colorless in style, were the *Essais sur l'histoire de France*, the *Révolution d'Angleterre*, the *Histoire générale de la civilisation en Europe*, the *Mémoires pour servir à l'histoire de mon temps*, and the *Histoire de France racontée à mes petits-enfants*.—C. H. C. Wright, *History of French literature*, pp. 731-732.—"His method was to dissect the political, economic, and intellectual structure of society, to lay bare its elements and forces, separately and in connexion. He has been blamed for presenting laws instead of life, abstractions in place of men and women. A juster censor would perhaps contend that he makes history appear more orderly and rational than it really is, and allows too little place to the will and the passions, the follies and the failures, of individual men."—G. P. Gooch, *Growth of historical science* (*Cambridge modern history*, v. 12, p. 832).—Alexis de Tocqueville [1805-1859] deserves mention not only as a philosophical observer of other lands, but as a philosophical historian of his own country. *L'Ancien régime et la révolution* traces the causes of the Revolution and shows it to have been, in spite of the violence of the outbreak, the necessary conclusion of the nation's experience. . . . [He] is of special interest to Americans because of his work on American democracy, which in turn became an important text-book to the participants in the European popular tendencies culminating in the mid-century movements. . . . Tocqueville is a cold and unimpassioned writer, but his statements are based on direct observation, and he carefully eschewed second-hand authorities, so that he produces the conviction of absolute sincerity. He belongs to the tradition of men like Montesquieu, but is without the latter's flippant *hors-d'œuvre*.—C. H. C. Wright, *History of French literature*, pp. 734, 733.—Grote's philosophical theories found expression in "the 'History of Greece,' a work which, conceived in the 'pre-scientific' days, still embraced all the special learning that bore on his subject. Except that Grote is the better writer, you could hardly tell now that he and Mommsen were not writing according to the same canons—Grote making the story of Greece an example of Republicanism, and Mommsen making the story of Rome a glorification of Imperialism."—W. R. Thayer, *Historical writing* (*Nation*, July 8, 1915).—"Carlyle was very sure of his own doctrine, and two out of his three great works were conceived on a plan which might illustrate it. All history, he tells us over and over again, should be biographical. Economic forces, mass prejudice, and the like are mere detail; they are marginal, not focal; what really matters is the compelling personality; and where no such personalities are, as he would say, 'granted to us by the kind Heavens,' there you have a sterile district in human affairs. Thus Cromwell made the English Revolution and Frederick of Prussia was the key to the middle eighteenth century. The voice that rolled over primeval chaos, 'Let there be light,' was hardly more

decisive, hardly less an outcome of the latent energies in the chaos itself, than the summons that issued from these human oracles. This view, of course, has its obvious consequence in Carlyle's contempt of democracy in his insistence by some means or other the multitude must place itself under command. . . . More than once Carlyle takes the interesting position that the best picture of a nation's past would be got from an adequate account of its poetry. For in the poet, if he be sincere, the spiritual temper of his age, its interests and convictions, its hopes and fears, must find a voice. He is the exponent of how the world in its deeper aspects appeared from the standpoint of that particular time."—H. L. Stewart, *Carlyle's conception of history* (*Political Science Quarterly*, Dec., 1917).—"His *French Revolution*, 1837, is unique in the field of historical literature. The picture is distorted, but it tells the story with a fire and dramatic intensity that leaves an indelible impression on the mind. The *Letters and Speeches of Oliver Cromwell*, 1845, is made up of skillfully selected extracts, interpreted with incisive comments by Carlyle. One-sided as it is, it completely vindicated Cromwell from the charges of hypocrisy which had hung over him for two centuries. The *History of Frederick the Great*, which occupied the author from 1857-1865, gave him another opportunity to champion a strong man, and to exhibit his rare genius for epic narration."—A. L. Cross, *History of England and Greater Britain*, p. 1044.—See also ECONOMICS: 19th-20th centuries.

ALSO IN: G. Monod, *Rénan, Taine, Michelet*.

28. Political historians.—"The modern political history has been variously defined. Freeman described it as 'past politics,' but Seeley's characterization of it as the 'biography of states' is more accurate and clarifying. It assumes that political events have been the 'backbone' of historical development and constitute the only logical foundation for the organization and presentation of historical events. In its extreme form, it maintains that political events have been the *causal influences* in determining the nature and course of history. While these are both entirely arbitrary assumptions, supported by nothing more than opinion, and give a very distorted notion of the historical process, there would be less cause for any quarrel with the political historian if he did not proceed to rule out as unworthy of consideration all the great events of history which are not directly and visibly connected with the life and growth of the state and the functioning of political organs. . . . The cause for the present domination of historiography by the *political fetish* is obvious to anyone who has made a study of the development of historical writing in modern times. The source of the modern political history was the Germany which followed the defeat by Napoleon, at Jena, and which was reorganized by Stein, Hardenberg and Scharnhorst, and inspired by Fichte, Arndt and Hegel. It was in the midst of this fervid patriotism that Niebuhr and Ranke began the work that transformed historical writing and research. The fact that many of the most influential followers of these men were Prussians ended to sustain an unflinching interest in patriotic, political and nationalistic history throughout the nineteenth century—the period in which Prussia was securing a dominant position in the German Empire and longed for a European pre-eminence. National pride and competition stimulated a similar movement in France and England, and the American students brought back to this

country the spirit and methods of the Continental historiography."—H. E. Barnes, *Past and the future of history* (*Historical Outlook*, Feb., 1921).—"Throughout the first half of the nineteenth century the position of history in England and Germany was not unlike what it had been during the eighteenth century in France. . . . The work that Voltaire, Leibnitz, Descartes, and David Hume had done in the eighteenth century was being done in the nineteenth by Carlyle, Mill, Bright, Lassalle, Karl Marx—the Radicals and the Social Democrats. Philosophers had liberated historical research; politicians were now to alter its centre of gravity. . . . The motive force in his [Macaulay's] work is concern for the existing state of affairs, and an interest in the conditions which produced it. The concern, indeed, is different from Carlyle's; it is wholly a middle-class concern, aroused by the political sufferings of Whiggism, and not by the sheer physical sufferings of the man of the people. The interest, again, is of a different quality from Hallam's; it is not the scholar's interest in constitutional development, but the politician's interest in party struggles. Still Macaulay writes with his foot firmly planted in his own day; he reaches no further back than he can go without lifting that foot. In a word, he has at any rate conceived of history as more than annals. His critics, while admitting that, have thought too easily that his cure for the annalistic outlook was solely the romantic imagination. In truth, it was the same cure as better historians than he, both at his own time and since, found and applied—the pivoting of history upon the affairs and the immediate political interests of their contemporaries. Macaulay's own remark that his ambition was to make his *History* replace the latest novel of the day upon the tables of young ladies has often been turned against him by the purists in history. It was not so far out of accord with the developing purpose of history schools."—R. H. Gretton, *History*, pp. 24, 23.—In France "Adolphe Thiers is the exponent of the . . . ["political"] school, and his *Histoire de la Révolution*, followed by the *Histoire du Consulat et de l'Empire*, are to be contrasted, if for nothing else, for their detailed treatment with the concision of Mignet's philosophical exposition of the Revolution. Thiers felt that the historian should put himself in the background, and not seek to impose attention either by an eccentric style or by artificial grouping of facts. . . . Consequently his style is easy, sometimes to the extent of looseness, but clear and business-like. As a historian, his work is of value in spite of his commonplace bourgeois ideals."—C. H. C. Wright, *History of French literature*, p. 732.—In Germany, "after applying the critical method with brilliant success to the First Crusade, Sybel entered political life, as an adversary of Ultramontanism, feudalism, and radicalism. The events of 1848 turned his attention to the French Revolution, which occupied him for thirty years. Devoting special attention to economic conditions and international relations, Sybel at the same time made his book the vehicle of a vigorous polemic against the doctrines of the Revolution. His closing years were devoted to a massive *History of the Founding of the German Empire*, for which Bismarck not only opened the archives of State but himself supplied information. While Sybel's devotion to Prussia did not forbid sharp criticism of Prussian policy, Droysen and Treitschke devoted themselves to the glorification of the Hohenzollern. After producing important works on Alexander and his successors,

Droysen turned to modern history, and in his *Lectures on the Wars of Liberation* and his biography of York gave the first living picture of the heroic age of Prussia."—G. P. Gooch, *Growth of historical science* (*Cambridge modern history*, v. 12, p. 828).—"Gustav Droysen may be considered to be the real founder of the Prussian School. The thesis of his *History of Prussian Policy*, on which he spent thirty years of labor, was that German unity was the lodestar of Prussian policy throughout the centuries, and that the Hohenzollerns alone had always been unwaveringly faithful to German interests; therefore it was to them that the people must look for a united Fatherland."—J. S. Schapiro, *Modern and contemporary European history*, p. 171.—In America "Bancroft's first volume [of the *History of the United States*] succeeded mainly because it was redolent of the ideas of the new Jacksonian democracy,—its exuberant confidence, its uncritical self-laudation, its optimistic hopes. The Demos heard, as an undercurrent to his narrative, the same music which charmed its ears in the Fourth of July oration; indeed, many of Bancroft's most characteristic ideas are to be found in his own oration pronounced at Northampton on July 4, 1826; and the style was one whose buoyancy of rhetoric was well suited to those sanguine times. It would be but a shallow criticism that should see in all this only the ebullition of national vanity. The uncritical patriotism of those times, as of other times in the course of history, was in some respects admirable, and in many respects useful. But we need not forget that it was critical. . . . From 1846 to 1849, the historian was our minister to England, and from 1866 to 1874 he was minister in Germany. The result was the collection of an enormous mass of material from the archives of foreign states, and from the stores of family correspondence. Because of the long duration and the great fame of his researches, similar opportunities, almost unlimited in extent, were at his service in this country."—J. F. Jameson, *History of historical writing in America*, pp. 104-105, 107-108.

29. Nationalist historians.—"Among the influences and forces in the modern world which have produced that spirit of egotistic and arrogant nationalism from which mankind is suffering today, the nationalistic interpretation of history is one of the most insidious and not one of the least important. In varying degrees this interpretation has affected the people of all nations, fostering in them a sense of inflated patriotism. Probably the best example of the effect of historical interpretation upon public opinion and national policy is to be found in Germany, where the nationalistic school of history sought in the past a justification for the establishment of a national state under the leadership of the Kingdom of Prussia and the House of Hohenzollern. Karl Hillebrand told the truth about the German historians of the nineteenth century when, shortly after the establishment of the German Empire he said: 'History in Germany, in spite of the impartiality on which its writers pride themselves, is, above and before all, national and Protestant.' But as moulders of public opinion and promoters of an egotistic and vaulting nationalism, German historians have not been unique, though for the spread of their hypotheses and opinions they have enjoyed the advantage of an educational system which assures to teachings acceptable to the state the widest possible diffusion in the shortest possible time. In some degree every modern nation has been influenced

by the nationalistic interpretation of its history."—R. L. Schuyler, *History and public opinion* (*Educational Review*, Mar., 1918).—"When peace had been restored [1815], the nationalist point of view, which was to control the minds of men throughout the nineteenth century, began to influence both historical research and historical writing. As early as 1816 the great German statesman, Stein, who had been the chief German exponent of the German national idea in the German resistance to the Napoleonic Empire, had conceived the idea of quickening the taste for German history; in 1819 the Society for the Study of Early German History was founded; in 1824 the definite plan for the publication of the *Monumenta Germaniae Historica* was promulgated; and in 1826 the first volume of the series appeared. But it was not until after the Revolution of 1830 that important national histories began to be written. In them the influence of the Romantic Movement and more particularly of Sir Walter Scott's historical novels can be seen in picturesqueness of literary style and the attention paid to dramatic episodes and individual personalities, but through them all runs the desire to bring out the persistence of the national element. Nowhere can this be more clearly seen than in Henri Martin's *Histoire de France*, of which the first edition appeared in 1838-1853. The aim of Martin is to show that the French nation has always preserved its identity in spite of its adoption of the Latin language under the Roman Empire to the almost complete extinction of its original Celtic tongue and in spite of the conquest by the Franks, which gave the land its modern name. Through such radical changes, Martin declares that a national character, illustrated in the *esprit gaulois*, persisted and that the settlement within its borders of German Franks and Scandinavian Northmen had not affected the national identity of the people of France. The key to French national history is, according to Martin, to be found in the continuance of Celtic ideas and Celtic characteristics. Augustin Thierry had gone a step further and in his *Histoire de la Conquête de l'Angleterre par les Normands*, published in 1825, had rejoiced in the victory of France over England at Hastings as if it had been a battle between the nations that had fought at Waterloo. Jules Michelet, in his *Histoire de France*, published in 1836-1843, was almost dithyrambic in his portraiture of the French nation, which had become to him a personal hero. Nor should the name of Guizot be forgotten, for his services to the national history of France included not only his *Histoire de la Civilisation en France*, published in 1828-1830, but also his foundation of the Société de l'Histoire de France in 1832 and his commencement of the publication by the French government in 1833 of the *Documents inédits sur l'Histoire de France*. But, after all, the nationalistic tendency of French historians under the monarchy of July did not have a great political effect nor tend to change the condition of Europe. France had shown her glowing national spirit in the days of the Reign of Terror, and her nationalistic historians only worked to emphasize with some exaggeration the antiquity of the existence of such a spirit. It was otherwise in Germany and Italy. There the problem of the nationalist historians was to show that in spite of ancient political divisions there had always been a German nation and an Italian nation. . . . Bismarck is reported to have said that next to the Prussian army, it was the German professors of history who had done the most to cre-

ate the new Germany under the hegemony of Prussia. The views set forth by the long list of eminent German historians from Dahlmann through Droysen and Sybel to Treitschke dwelt upon the historic unity of the German people and argued for the creation of the united German state, which had been foreshadowed in the united German movement against the Napoleonic Empire."—H. M. Stephens, *Nationality and history* (*American Historical Review*, Jan., 1916).—"The most striking personality and the most eloquent writer of the ["Nationalist"] school was Treitschke, the Macaulay of Germany. . . . He had planned a history of modern Germany when a young man; but the first volume did not appear till 1876. With the possible exception of Mommsen's *Roman History*, Treitschke's *Germany in the Nineteenth Century* is the most brilliant historical work in the language. Every side of national life and thought is treated with a knowledge, vigour, and eloquence that have made the book a national possession. But its faults are as conspicuous as its merits. It is written throughout from a Prussian standpoint, with a pronounced antipathy to the smaller States and without comprehension for the men and movements that opposed the military and bureaucratic régime of the Hohenzollern. Treitschke was the last and greatest of the Prussian school, which arose in the years of depression and contributed powerfully to prepare the soil in which Bismarck worked. Its inspiration was political rather than scientific, and it disappeared with the realisation of its ideals."—G. P. Gooch, *Growth of historical science* (*Cambridge modern history*, v. 12, p. 828).—"Nature had intended him to be a poet, but patriotism made him a historian. Almost all his life Treitschke was a professor of history in various German universities, where his lectures attracted wide attention because of their eloquence, learning, and intense patriotism. 'We have no German Fatherland; the Hohenzollerns alone can give us one,' was Treitschke's constant refrain before 1870. Great crowds were thrilled by this patriotic professor, whose lectures on history were in the nature of passionate declamations. The Germans, according to him, were the best of all peoples, and the Prussians, the best of all Germans; Prussia had performed every great deed in German history since the Treaty of Westphalia; she alone had realized the true ideal of national greatness, for the nation was an army, and the army, a nation. Treitschke's ideal state was one in which parliament played a subordinate rôle in the government; the latter should have supreme control over all its agencies, and should devote itself mainly to the task of training virile citizens. England was the special object of this historian's wrath. He would bitterly denounce and mock the English as vulgar utilitarians and hypocrites, as a decadent race holding a position in the world which by right belonged to the idealistic, virile Germans."—J. S. Schapiro, *Modern and contemporary European history*, p. 172.—See also PAN-GERMANISM; WORLD WAR; Causes: Indirect: h, 2.—"England waited long for its national historian. Although many English historians were fanatically nationalistic and supremely insular in their conviction of the superiority of their own over every other nation, it was not until 1874, when J. R. Green published his *Short History of the English People*, that a modern nationalist historian, with intent to insist, like Michelet, upon the personality of the nation, and to exaggerate like Martin, the antiquity of national unity, actually appeared. The immediate success of

Green's book was not only the result of its extraordinary literary merit, but also of its expression of a national feeling, which had been steadily growing in intensity."—H. M. Stephens, *Nationality and history* (*American Historical Review*, Jan., 1916).—"Green . . . possessed a fine talent for perspective; but what distinguished him still more was his gift of narration. *History*—let us never forget—is five-sevenths story; and a story must have unity and consecutiveness; it must flow on as the stream or river flows; it must be varied by the alternations of sunshine and shadow, of night and day, but still preserve its oneness. No amount of erudition in a narrative historian will ever make good defects in the story-telling quality."—W. R. Thayer, *Historical writing* (*Nation*, July 8, 1915).

"In Italy the movement of the Risorgimento was reflected in historical works as well as in poetry and romance, and in no work more typically than in Botta's *Storia dell'Italia*, intended as a continuation of Guicciardini and published in 1834. . . . Don Modesto Lafuente in his *Historia de Espana*, published between 1850 and 1867, has attempted a task for Spain resembling that undertaken for France by Henry Martin, but with hardly the same success."—H. M. Stephens, *Nationality and history* (*American Historical Review*, Jan., 1916).—"In 1845—the year before the horrible civil war known as the War of Maria da Fonte, or Patuleia—Alexandra Herculano published the first volume of his 'Historia de Portugal.' . . . The publication of this volume marks an epoch in the literary history of Portugal. . . . The second volume of his History, going down to the death of Alfonso III. in 1279, was published in 1850, with two dissertations or essays on the elements which composed the Portuguese people, and on the history of the municipalities of the country. . . . He had been led to take an interest in the early ages of Europe by his study of Walter Scott and of the French Romanticists, and he had learnt from these masters of fiction that the men and women of all centuries are alike human, and are never demi-gods or fiends in human shape. He was therefore ready to disbelieve in legendary stories, which made men more or less than human, while not neglecting the picturesque point of view in the lives of the men of past ages. But while it was from these masters that Herculano learnt his attitude towards the past history of his country, he derived his method of study from quite a different school. The influence of the German historical school, of which the most illustrious masters have been Niebuhr and Von Ranke, and of which the disciples are now numerous all over the Continent, had penetrated even to Portugal. Early history, Herculano learned, could only be re-written after an elaborate study of ancient documents and a careful comparison between them, and Nature fortunately granted him the qualities of patience to wade through documents, and of critical insight by which to judge them. To this power of indefatigable study he added the gift of a keen perception of the picturesque, and the talent to tell history with clearness, conciseness, and eloquence. No wonder, then, that he became a great historian, and the founder of an historical school which was to have great weight in the politics of his native country. . . . It produced a school of new historians, contented to labour for the truth, and changed the minds of the young men of the time from the writing of melancholy poetry to the study of history and its attendant sciences, political economy and critical jurisprudence. . . . Recognizing, as he did, that

it was only possible to understand history by studying contemporary documents, Herculano commenced the publication of the 'Portugallie Monumenta Historica,' an immense series of reproductions and editions, of which the cost was defrayed by the Portuguese Government. This series he divided into three sections: 'Scriptores,' containing editions of unpublished chronicles and lives of saints, 'Leges et Consuetudines,' and 'Diplomata et Charta.' . . . Franz Palacky is the central figure of the Bohemian historical revival, and his influence was even greater, from a political point of view, than that of Herculano. . . . In 1836 appeared the first volume of Palacky's 'History of Bohemia,' published simultaneously in German and Czech. The book made its mark at once, and it was recognized in Germany that a great genius had risen. Palacky was essentially a disciple of the new historical school, a follower of Niebuhr. He had laboured diligently among chronicles and documents to discover the truth, and, like Herculano, did not fear to destroy the legends which were most cherished by the Bohemian people, when he found that they had no historical basis. The success of his work among his fellow-countrymen was immense. In spite of the policy of Austria, the Czech national spirit had not been destroyed; the nobility and bourgeois had been to some extent Germanized, but the Slav feeling had not been extinguished. The work of Palacky completed what Dobrowski and Schafaryk had begun; it made known to the Czechs of the nineteenth century what manner of men their ancestors had been, and what great deeds in the past they had done for their descendants to remember with pride. Palacky no more caused the Bohemian revival of the present century than Herculano had caused that of Portugal, but he became the central figure, and the father of the new historical school there, which signalized the revival. Like Herculano, he did not bring his history down to modern times, but between 1836 and 1854 he published six volumes, going down to the end of the reign of King Sigismund. The publication of each volume was almost an historical event; in each, old legends were destroyed, and the early history of the Czech people, with its curious and interesting development, was for the first time truly and clearly narrated. . . .

"Like Herculano, he devoted himself after the completion of his History to the collecting and editing of ancient chronicles and documents. He knew that that was the only way by which early history could be truly studied, and spared no labour in such work. He superintended all the editions of the various publications of this nature issued by the Academy of Prague at the expense of the Bohemian Government, and himself collected and issued a collection of documents on John Huss, the Czech reformer, which threw an entirely new light on the early career of the man who, with John Ziska, the blind general, shares the honour of making the Czech history of Europe."—H. M. Stephens, *Modern historians and their influence on small nationalities* (*Contemporary Review*, July, 1887).—"The establishment of Rumania as a sovereign state was preceded by the revival of the study of Rumanian history, culminating in the great work of Alexandru Xenopol, *L'Histoire des Roumains de la Dacie Trajane*. In Finland and in Poland and in Croatia, in Sweden and in Denmark, and above all in Belgium, profound and passionate historical studies were published and the creation of a national spirit was even more pronounced, if that were possible,

in these small states, that especially cherished the memory of their past, than in larger countries, which had a powerful present as well as a splendid past."—H. M. Stephens, *Nationality and history* (*American Historical Review*, Jan., 1916).—"In our own country historical interpretation has naturally been busy with the epic of our history, the American Revolution, and around that event a veritable myth has grown up. For some time after the Revolution it was, perhaps, inevitable that writers on American history who dealt with that epoch in the life of the nation should approach it in the spirit of apologists and partisans, reflecting in their writings the fierce animosities engendered by the conflict, and, indeed, contributing powerfully to the perpetuation of those animosities. It is only within the last generation that the Revolution has come to be studied in a fairer and more scientific spirit, with the desire to understand rather than to justify. . . . The older school of American history disregarded what did not suit their patriotic purposes. They slighted the arguments and ideals of the Loyalists, ignored the British Tory side of the case, and exalted the revolutionary cause. In so doing they could not fail to create a one-sided and grossly distorted conception of the Revolution."—R. L. Schuyler, *History and public opinion* (*Educational Review*, Mar., 1918).—"James Schouler, whose *History of the United States under the Constitution* was mostly published between 1880 and 1889, and John Bach McMaster, whose *History of the People of the United States* appeared from 1883 to 1914, show themselves to be inspired with the highest national and patriotic enthusiasm. It is curious to note that such nationalist histories as those of Green and Schouler and McMaster did not see the light until after the doctrine of nationalism had found its fullest expression in Europe, in the foundation of the German Empire and the Kingdom of Italy."—H. M. Stephens, *Nationality and history* (*American Historical Review*, Jan., 1916).—"McMaster's spirit was that of Green. He went far afield from the well-worn paths of constitution-making and party contention and pictured the operation of many more subtle influences that had contributed mightily to make the people of the United States what it was. To the technique of historiography also he added a significant element. Von Holst was imposing upon the writer of American history for all future time the necessity of searching that useful but unalluring repository of information, the Congressional Record; McMaster added the even more burdensome duty of going through all the newspapers of the day."—W. A. Dunning, *Generation of American historiography* (*American Historical Association Report*, 1917, p. 350).

30. Romantic historians.—"A group of historical writers in the middle of the nineteenth century, who were attracted to history writing by the fascination exercised over them by certain topics and ideas and who were more subjective than objective, may be termed the romantic historians. They were all distinguished men of letters and wrote in an effective style, and paid more attention to the manner of telling their story than to the matter of it. They frankly avowed their sympathies and did not aim at impartiality. They

were historical writers rather than historical scholars, and were influenced in the form of their works and in their desire to reproduce the atmosphere of the past by the great historical novelties. Alphonse de Lamartine (1792-1869) may be taken as the type of this school of writers in France,"—H. M. Stephens, *History and historians* (*syllabus*), p. 26.—The "Histoire des Girondins," his most successful attempt in the field of history, illustrates his qualities as well as his defects as an historian. It shows his graphic power of description as well as his lack of historical scholarship. "Thierry was the chief of what has been called the 'picturesque school,' sometimes the 'impressionistic school,' of those who tried to make the past live again. No one was more anxious than Thierry to be accurate and to replace the rhetoric of the seventeenth and eighteenth-century historians by the method of documentary proof. Two things detract from his value to modern scientific historians: firstly, his imagination led him, at any rate in the works written after his blindness, to warp by his reconstruction the probable truth in his mental vision of the past; secondly, his almost feminine sensibility led him to side with the losing cause and to view its downfall as an epic, or to read into history his own sociological prepossessions shaped by a poet's touch. . . . Thierry's chief work is the *Histoire de la Conquête de l'Angleterre par les Normands*, in which, instead of following the victors to the conquered land, he places himself, to express his theory of the 'antagonism of two races,' rather at the standpoint of the gradually submerged people. His other important work is the *Récits des temps mérovingiens*, the reanimation of the old sixth-century chronicles of Gregory of Tours, so that the archaic narratives spring into the vividness of a romance by Scott. If Thierry represents the sane use of the imagination in history, Quinet and Michelet embody rampant Romanticism, the former as a philosopher of history, the latter as a narrator. Edgar Quinet (1803-1875) was the great exponent of German ideas in France, where, like Pierre Leroux and Michelet, he interpreted history under the form of a vague symbolic pantheism. Quinet was a man of poetic and mystical temperament who had fed on Chateaubriand, of quick feeling, and of great power in rapid though hazardous philosophical intuition or synthesis. He travelled in Germany and fell under the spell of Herder and of his interpretation of the philosophy of history, the process of studying the world-development as an organic whole. . . . Later, after the Romantic movement had passed away, Quinet, in his numerous historical and critical writings, underwent the influence of the new scientific movement. . . . The name of Quinet is scarcely separable from that of Jules Michelet (1798-1874), another historian with a poetic imagination and the most popular writer of the 'picturesque school.' . . . The author who particularly gave him his start in philosophical thought was the eighteenth-century Neapolitan writer Vico, a broad generalizer before Herder upon history and its epic manifestations. . . . Michelet, who translated Vico's book under the title *Principes de la philosophie de l'histoire*, looked upon history as an epic . . . or a drama, and as a resurrection in which even inanimate objects and places are inspired with symbolic existence and men are manifestations of the spirit of the age: Jeanne d'Arc personifies patriotism and embodies the masses. . . . Michelet's first original books were a *Précis de l'histoire moderne* and an *Histoire romaine*, but his great

work was the *Histoire de France*. He began with a series of volumes on the Middle Ages in which he conscientiously studied the old documents; but far from leaving them to speak for themselves alone, he recreated the men and manners of the past and stamped upon all his potent imagination, so that it became history in the shape of romance. The Middle Ages were the favorite hunting ground of the Romanticists, as we have seen, and they aroused Michelet's imagination until his glowing style made the old times speak again in the narrative of action, and in the description of art and architecture, even of geography."—C. H. C. Wright, *History of French literature*, pp. 727-729.—In England James Anthony Froude (1818-1894) belonged to the group of romantic historians. "Approaching history in the spirit of [Carlyle], his master [Froude], accomplished work in which shining merits and glaring faults were inextricably mingled. . . . The first four volumes of the 'History of England from 1529 to the death of Elizabeth' created a sensation only less than that of Macaulay. . . . No English historian has possessed a style so easy, so flowing, so transparent. . . . Twelve stout volumes had been occupied with the story of sixty years. . . . The struggle for national freedom which began in 1529 ended in 1588. . . . The strength and weakness of the work are now generally recognized. It was the first and it remains the only detailed survey of one of the two most critical periods of our history. It restored the author of the Reformation to life, and enriched English literature with innumerable pages of vivid and thrilling narrative. . . . Though his incredible carelessness in detail is a grave fault, it is still more lack of impartiality that excludes Froude from the first rank of historians."—G. P. Gooch, *History and historians in the nineteenth century*, pp. 332-333, 336-337.—In the United States, "the choice of subjects which Prescott made gives the plainest evidence of such purposes [literary]. Even apart from the brilliant treatment which his genius gave them, and from which it is hard for our minds now to separate them, it is plain that the reign of Ferdinand and Isabella, the conquest of Mexico, the conquest of Peru, the history of Philip the Second, were subjects eminently capable of picturesque treatment. . . . The books themselves need no factitious interest arising from the knowledge of the circumstances of their production. They are too admirable and too familiar to need praise in respect to interest of narrative, grace of style, or artistic skill in the management and marshaling of the various parts. The unity of design and picturesqueness which the author sought, he certainly obtained. Scarcely less praise must be given to the conscientiousness of his research, though it may be doubted whether his critical insight was of the most penetrating sort. Nor was he a profoundly philosophical historian, distinguished for searching analysis. In one of his early private memoranda, he confesses that he hates 'hunting up latent, barren antiquities,' and though he later to some extent, conquered this repugnance, the studies which make the analytical and sociological historian were never thoroughly congenial to him. It is mainly the concrete aspects of life that engage his interest, and as a historical painter of these, he was, in the period of the publication of his works, the years from 1837 to 1858, without a rival, save Macaulay and Michelet. . . . The first of Motley's works carried down to the year 1584 a narrative whose subject, though not the same as that of

Prescott's last work, necessarily had much in common with it. For the history of the Dutch revolt against Philip could hardly be written without saying much concerning other aspects or portions of his reign. In the year 1860 appeared the first two, in 1868 the last two, volumes of the 'History of the United Netherlands,' embracing the years 1584 to 1609. 'The Life and Death of John of Barneveld,' a work in form biographical, but really continuing the 'History of the Netherlands' for a decade more, appeared in 1874. Enormous labors in the investigation of archives were performed in the preparation of these books. Motley had the intense zeal of the born investigator, a rare and heroic quality of which the world takes little note in historians. He had likewise in full possession those qualities which

SIR WALTER SCOTT

engage the reader. No American has ever written a history more brilliant and dramatic. . . . But the author who has most conspicuously continued the school of picturesque historians is Francis Parkman, the eminent historian of the French dominion in North America."—J. F. Jameson, *History of historical writing in America*, pp. 114, 116-117, 118-119, 125.

ALSO IN: G. Monod, *La Place de Michelet parmi les historiens du XIX<sup>e</sup> siècle*.—G. Brandes, *Romantic school in Germany*.—E. Fueter, *L'Histoire de l'historiographie moderne*, bk. 5.—H. T. Peck, *W. H. Prescott*.

31. Historical romance and romantic history.—Sir Walter Scott.—"The prodigious addition which the happy idea of the historical romance has made to the stories of elevated literature, and through it to the happiness and improvement of the human race, will not be properly appreciated, unless the novels most in vogue before

the immortal creations of Scott appeared are considered. . . . Why is it that works so popular in their day, and abounding with so many traits of real genius, should so soon have palled upon the world? Simply because they were not founded upon a broad and general view of human nature; because they were drawn, not from real life in the innumerable phases which it presents to the observer, but imaginary life as it was conceived in the mind of the composer; because they were confined to one circle and class of society, and having exhausted all the natural ideas which it could present, its authors were driven, in the search of variety, to the invention of artificial and often ridiculous ones. Sir Walter Scott, as all the world knows, was the inventor of the historical romance."—*Historical romance (Blackwood's Magazine, Sept., 1845)*.—"Those sticklers for truth, who reproach Scott with having falsified history because he wilfully confused dates, forget the far greater truth which that wonderful writer generally presented. If, for his purposes, he disarranged the order of events a little; no

the conventional representation of it which historians have accustomed us to."—J. R. Seeley, *History and politics (Macmillan's Magazine, Aug., 1879)*.—"According to John Stuart Mill, we owe it to Sir Walter Scott that the change in history writing took place. Scott first related that there were Saxons and Normans living alongside of one another in England—neighbors, but most unneighborly—for generations after the Conquest. Why did not the historians tell us so much? Certain French historians—Augustin Thierry and his group—first took the hint from Scott, and in the Conquest of England and the Third Estate of Thierry and in other writings of the time told the history of the people."—E. Eggleston, *New history (American Historical Association Report, 1900, v. 1, p. 44)*.

32. Modern scientific historians.—"Side by side with the philosophic, the political, the national-ist, and the romantic group of historical writers developed the modern scientific school. Some of the former used scientific methods, such as Hallam in England, Droysen in Germany, Martin in

KENILWORTH CASTLE, SCOTLAND  
The scene of Scott's novel "Kenilworth"

grave historian ever succeeded better in painting the character of the epoch."—G. H. Lewes, *Historical romance (Westminster Review, Mar., 1846)*.—"Macaulay is only the most famous of a large group of writers who have been possessed with the same idea. As Scott founded the historical romance, he may be said to have founded the romantic history. And to this day it is an established popular opinion that this is the true way of writing history, only that few writers have genius enough for it. . . . It must be urged against this kind of history that very few subjects or periods are worthy of it. Once or twice there have appeared glorious characters whose perfection no eloquence can exaggerate; once or twice national events have arranged themselves like a drama, or risen to the elevation of an epic poem. But the average of history is not like this; it is indeed much more ordinary and monotonous than is commonly supposed. The serious student of history has to submit to a disenchantment like that which the experience of life brings to the imaginative youth. As life is not much like romance, so history when it is studied in original documents looks very unlike

France, and Parkman in the United States, but their professed aims and their desire to draw conclusions place them with the former groups. Most of the scientific historians drew their inspiration from Germany, and many of them were pupils of Ranke and other professors in the German universities. Germany first provided regular university training in scientific history, and the scientific school is sometimes termed the German school. But these trained scholars tended to become editors of documents and writers of monographs, rather than historians. . . . The most distinguished scientific historians at the present time are not Germans, though Germany led the way with Niebuhr and Ranke."—H. M. Stephens, *History and historians (syllabus), p. 28*.—"With Freeman (1823-1892), Stubbs (1825-1901), and Gardiner (1829-1902) 'scientific' historical writing in England reached its height. They exerted a deep influence on historical students in the English-speaking world, and reinforced what were supposed to be the special glories of their German models. Freeman, intellectually restless, opinionated and disputatious, not only loaded his 'History of the Norman Conquest' with a ponderous ballast

of footnotes which a German dryasdust might envy, but threw out controversial articles on particular points; and, when he came to the 'History of Sicily,' he decanted his fermenting erudition in innumerable appendices—up to XX, YY, and ZZ—which must astonish the latter-day readers—if there still be any of that elephantine fragment. In his 'Constitutional History' Stubbs had a subject which, like a treatise on jurisprudence, was peculiarly fitted to a depersonalized treatment. But when he came to write his lectures and other works, his personality had free play, and, in his own account of how he prevented John Richard Green from reading Renan's 'Life of Jesus,' we have first-hand evidence that he was, for all his 'scientific' training, fundamentally dishonest. For any historian who deliberately tries to prevent another from reading arguments opposed to his own view cannot be called honest. Samuel Rawson Gardiner reached, it seems to me, the highest level that this school of historians can ever hope to reach. He was precise as to facts, unbiassed in judging persons, thorough in collecting material, and sober in discussing it. But can a history truly represent life if it leaves on you the impression of monotony? If it hardly differentiates, in its attempt to be minutely accurate in events, between the important and the negligible? If it never glows or throbs? Perhaps among some of the seventeen volumes of Gardiner—I have not read them all—these defects may be remedied; but when I look at the shelf on which those seventeen volumes repose, and remember that had Gardiner lived, he would have gone on, to the end of time turning out a volume every sixteen months—so that we can compute how large the output would be by now, and how much larger in 1950—I feel as one does who stands on the brink of a glacier and learns from the guide-books where, at its unchanging rate of speed, it will be at any given date. Every student of historical writing should read in Gardiner's work; but he will imitate it at his peril. Separated by only a decade from the three supposedly 'scientific' historians, came John R. Seeley (1834-1895), John Richard Green (1837-1883), John Morley (1837), George Trevelyan and James Bryce (both born in 1838). The last three are the veterans of to-day, bred in their historical work at the moment when enthusiasm for the evolutionary treatment of history was in spate and the scientific method was revered as infallible. Is it fanciful to say that these three men exemplify in their works the happy balance, the desired union of qualities without which historical writing must be doctrinaire? Mr. Bryce's earliest book, 'The Holy Roman Empire,' shows the most patient erudition in the assembling of material, together with critical finesse in examining and objectivity in presenting it; his later works, such as 'The American Commonwealth,' are not less erudite and critical, but they gain immensely in value because of their subjective presentation. The conclusion arrived at are James Bryce's; had a sexless, soulless, impersonal quiddity uttered them, they would have left us indifferent or unimpressed. Mr. Morley also began his career in authorship with biographical studies, in which, although he displayed complete detachment as to facts, he still allowed himself freedom as to interpretation. In him, the critic, especially the literary critic, has always competed with the historian; and, indeed, no man can be a penetrating historian who does not know the literary background of his chosen period. The 'Life of Gladstone' is a masterly synthesis,

enfolded not only the political, but also the intellectual and religious elements of his subject—an interpretation of a very high order. If Mr. Morley in his youth trusted to formulas as to how history should be written he long since rose above them. So, too, Sir George Trevelyan illustrates how the true historian, absorbed in his passion to see life and to interpret it livingly, forgets the rule of thumb. It is forty years since he wrote his 'Life of Macaulay,' the best biography, as I think, of any man of letters, except Boswell's 'Johnson'; and now he has just completed his notable history of the American Revolution, in which there is surely no lack of scholarship, no neglect of 'sources,' no carelessness, no haste. Of Seeley it must be said that, although educated according to 'scientific' rules, he also showed the same tendency to be human rather than to be consciously abstract. A life of Stein might be a noble contribution to biography, but Seeley failed in sense of proportion and in the art of selection. So the life he wrote has large humps and hollows, superfluities and skimpings, as if an artist should set out to draw a horse and achieve a Bactrian camel. . . . One historian, who belongs chronologically with the earlier group, must be classed, by his product, with the later. This is Goldwin Smith (1823-1910), a man of amazingly rich equipment, who passed through the successive stages of intellectual experience from the fourth to the tenth decade of the nineteenth century, and then, at the age of seventy-six, published 'The United Kingdom,' a work written without reference to any school or *ism*—the fruit of a lifetime of study and meditation, shaped by a keen and sometimes savage wit. Of the younger British writers of history I will not speak in detail. Each school has its champion among them. The learned Professor Bury insists that history is 'scientific' or nothing, while the versatile and vivid Mr. George Trevelyan, standing in the opposite camp, teaches by example the futility of cramping any representation of life into the straitjacket of doctrinaire formulas. In the main, however, contemporary British historical writers start with the assumption that they must know their subject thoroughly, and then they aim at producing works which have, as the best English histories have always had, strong human interest and pertinence."—W. R. Thayer, *Historical writing* (*Nation*, July 8, 1915).

In France—"the most original historian, next to Taine and Renan, was Fustel de Coulanges (1830-1889) who came from the school of Guizot. To him, as against Taine and Renan, history was an end in itself, a pure science. His literary production is divided into two halves. During the first period, of which *La Cité antique* is the best known work, he endeavored to give large historical syntheses. They are based . . . on the careful study of original documents. . . . Fustel de Coulanges's sole ideal was truth and accuracy. In the latter respect he was liable to error because of his lack of equipment as a palaeographer. But he is the type of historical sincerity, especially when even the slight tendency to synthesis due to the early German historians had given way to the cult of the text. His chief work, apart from the *Cité antique*, was the *Histoire des institutions politiques de l'ancienne France*. Among the other important historians of the second half of the nineteenth century there was Gaston Bois-sier (1823-1908), a somewhat miscellaneous writer, studying the spirit of different ages or individuals, such as the times of Cicero, the Roman Empire,

or great men and women of French literature. Albert Sorel (1842-1906), a pupil of Taine, dealt with the Franco-Prussian war, the Orient in the eighteenth century, or Europe and the French Revolution. Albert Vandal (1853-1910) wrote on the times of Napoleon. The leading contemporary historians, Aulard, Langlois, Lavissee, Monod, and Seignobos are scholars primarily and men of letters in a subsidiary sense.—C. H. C. Wright, *History of French literature*, pp. 815-816.—“German historical writing has produced no greater master than Theodor Mommsen (1817-1903), whose famous *History of Rome* continues to be the standard work on the subject. Although as great and as thorough a scholar as Ranke, Mommsen possessed, in addition a brilliant historical imagination which enabled him to reproduce the past in a most vivid and fascinating way. He was not only a narrator of facts, carefully gathered and scientifically classified, but also an interpreter of most original power. Mommsen's *History*, which appeared during the years 1854-56, treats of the life history of the Roman Republic. It is a condensation, in three volumes, of a vast period in human history without, however, omitting any important facts, a luminous and exact résumé of all the available knowledge on the subject. His judgment on the overthrow of the Roman Republic is this: ‘When a government cannot govern, it ceases to be legitimate and he who has the power to overthrow it has also the right.’ Julius Caesar is the historian's hero. Him he regards as the true founder of Roman democracy which displaced a corrupt oligarchy masquerading as a republic. Mommsen's history is mainly along political and constitutional lines, although it contains some excellent chapters on the social and economic life of the Romans.”—J. S. Schapiro, *Modern and contemporary European history*, pp. 141-142.

“In the United States, the course of development in historical production has resembled that in England, but with one striking difference. Most of the college professors of history here during the past fifty years got their final education in Germany; and in characteristic American fashion they have run to an extreme. They have worshipped the German method, as if it were everything, forgetting that the German historians themselves—Droysen, Sybel, Treitschke, and the rest—made history a vehicle for their national propaganda. Our professors have for some time had the machinery: but it is noteworthy that the three leading American historians of this period—Francis Parkman, Henry Adams, and James Ford Rhodes—were not, so to speak machine-made. Parkman, whose ‘Pioneers of France in the New World’ came out precisely in 1865, and who combines in so many respects the chief requisites of an historian, taught himself. Mr. Henry Adams, although he served as assistant professor of history at Harvard for seven years, is the last man in the world to be anybody's disciple; his methods are his own, just as his extraordinary gift of expression is his own. Mr. Rhodes had no formal training; and, while he seems sometimes to hold the ‘scientific’ formulas in such respect as they might claim if they were the *end* instead of merely the *means*, the traits which stamp his history—poise, sympathy, insistence on being just—never came from formulas.”—W. R. Thayer, *Historical writing* (*Nation*, July 8, 115).—“In 1865 the doctrine of evolution had taken hold of the younger historians as a gospel to be followed joyously, trustfully, triumphantly. Almost every

other field of intellectual activity was being cultivated by the ‘scientific method.’ . . . The method of scientific investigation in history had been elaborated long since by the Germans, who, under the lead of Ranke, professed to write history as they would write a treatise on chemistry or medicine or philology. The historian must make himself as impartial as a photographic plate. The earlier ideal made him a judge, whose duty it was, in commenting upon historic movements and personages, to render an impartial verdict; but the scientific historian held himself above good and evil, and in describing the past he regarded it as none of his business to let you surmise that he had any preference between, say, the acts of St. Francis of Assisi and those of the Duke of Alba. True to his rôle of sensitized plate, he took whatever was in front of him. It is late in the day to say that every one worthy of the name of historian long ago accepted the scientific method of investigation; but perhaps it is not too late to assert that this method was not invented by the Germans. Gibbon practiced it; so did Thucydides—to mention no others—and as both Gibbon and Thucydides possessed other qualities which have not been vouchsafed to German historians, and as they wrote in English and in Greek—languages which, as vehicles of prose, the German cannot approach—their histories are more, much more, than examples of the scientific method. . . . The historian uses, as a matter of course, the scientific method, just as the judge uses it, who hears all the evidence before forming an opinion. But let us not delude ourselves into supposing—as so many who discuss this subject do—that the mere use of that method qualifies a man as an historian. Method is only machinery, a tool, an instrument, a key; but what results from its use depends upon the individual user. A hundred surgeons, all taught by the same method, pursue their profession with very different achievement. . . . The time appears to be at hand, when, through a clear understanding of the purpose of history, its subdivisions and collaterals will not be mistaken for the great subject itself. . . . And with this realization the conviction is spreading that it is not what principles or method the historical writer professes, but what he writes, that counts. The writers of fiction are classified as realists or romanticists, impressionists or veritists, but the label is no guarantee of the worth of the novel. So likewise the great historian will be great not because he embodies the doctrines or mannerisms of a school, but because of his own inalienable and untransmissible qualifications.”—*Ibid.*

33. Current schools of history.—“There are at present some seven definite schools of historical interpretation among the representatives of the modernized students of historical phenomena, each of which has made an important contribution to our knowledge of historical development. They may be designated as the personal or ‘great man’ theory, the economic or materialistic, the allied geographical or environmental, the spiritual or idealistic, the scientific and the sociological. It might be pointed out in passing that the conventional type of historians either cling to the outworn theory of political causation, or, like Professor Emerton, hold that historical development is entirely arbitrary, obeys no ascertainable laws

and exhibits no definite tendencies. The best known of these schools of historical interpretation, and the only one that the current political historians accord any consideration, is that which found its most noted representative in Carlyle, who claimed that the great personalities of history were the main causative factors in history."—H. E. Barnes, *Past and the future of history (Historical Outlook, Feb., 1921)*.—"It was the materialistic Feuerbach, with his thoroughgoing avowal that man is the creature of his appetite and not of his mind (*Der Mensch ist was er isst*), who furnished the transition to a new and absolutely radical line of historical interpretation—the materialistic and the economic. Materialism has a bad name. It has partly earned it, partly had it thrust upon it. But whatever one may think of its cruder dogmatic aspects, the fact remains the interpretation of history owes at least as much to it as to all the speculations which had preceded it. For it supplied one-half the data—the material half! Neither theology nor metaphysics had really got down to earth. . . . The materialistic interpretation of history does not necessarily imply that there is nothing but materialism in the process, any more than theology implies that there is nothing but spirit. It will be news to some that such was the point of view of the most famous advocate of the materialistic interpretation of History, H. T. Buckle. His *History of Civilization in England*, published in 1857, was the first attempt to work out the influences of the material world upon the formation of societies. . . . Ten years before Buckle published his *History of Civilization*, Karl Marx had already formulated the 'economic theory of history.' Accepting with reservations Feuerbach's materialistic attack upon Hegel, Marx was led to the conclusion that the motive causes of history are to be found in the conditions of material existence."—J. T. Shotwell, *Interpretation of history (American Historical Review, July, 1913)*.—"The contributions of the economic school of historical interpretation which was founded by Feuerbach and Marx and has been carried on by a host of later and less dogmatic writers, the most notable of whom are W. S. Sombart and Thorsten Veblen, are too familiar to call for any additional emphasis. In spite of obvious exaggerations, no phase of historical interpretation has been more fruitful or epoch-making. The geographical interpretation of history, which begun with Hippocrates and continued through Vegetius, Bodin, Montesquieu and Buckle, has been revived and given a more scientific interpretation in the hands of writers like Karl Ritter, Ratzel, Reclus, Semple, Metchnikoff, Demolins and Huntington. Since the days of Ritter no respectable historian has dared to chronicle the history of a nation without first having acquired a knowledge of its geography. The historical work of Curtius, Riehl, Freeman, Bryce, Myres, Shaler, Semple and Payne are a few conspicuous illustrations of the influence which geography has had upon historiography. But even more important has been the work of those students of geography, such as Ratzel, Demolins, Metchnikoff and Huntington, who have shown in great detail the importance of the natural features of the earth's surface and climatic conditions in determining the regions in which the historical civilizations originated, developed and expanded. Especially noteworthy has been the suggestive, if not entirely convincing, work of Prof. Ellsworth Huntington, of Yale, whose researches in Asia Minor enabled him to ascertain the existence of important climatic changes in the past

which throw a new light upon the hitherto unexplained problems of the shifting of the center of civilization from Egypt to Northwestern Europe and the invasions of Europe by Asiatic peoples. A somewhat belated offshoot of the Hegelian idealism is to be found in the so-called spiritual interpretation of history which finds its most ardent advocates in Professor Eucken of Germany, Professor E. D. Adams of Leland Stanford and Professor Shailer Matthews of Chicago. The attempt to view human progress as directly correlated with the advances in natural science received its first great exposition in the writings of Condorcet and was revived by Comte and Buckle. This phase of historical interpretation has been sadly neglected by recent historians. It has been emphasized incidentally by Professors Breasted, Marvin, Shepherd, Shotwell and Robinson in their synthetic interpretation of history, but it remains the least exploited, and yet the most promising of all the special phases of historical interpretation. The sociological interpretation of history goes back as far as the Arab Ibn Khaldun; was developed by Vico, Turgot, Condorcet, Comte and Spencer; and has its ablest modern historical representatives in Professors Giddings of Columbia, Thomas of Chicago, Hobhouse of London and Durkheim of Paris. Giddings describes it as 'an attempt to account for the origin, growth, structure and activities of society by the operation of physical, vital and psychical causes, working together in a process of evolution.' One of its chief concerns is to account for repetitions and uniformities in historical development and to formulate the laws of historical causation. But the latest and more important of all types of historical interpretation, and the one which most perfectly represents the newer history, is the synthetic or 'collective psychological.' According to the view of the adherents of this type of historical interpretation no single type of 'causes' is sufficient to explain all phases and periods of historical development. Nothing less than the collective psychology of any period can be deemed sufficient to determine the historical development of that age, and it is the task of the historian to discover, evaluate and set forth the chief factors which create and shape the collective view of life and determine the nature of the group struggle for existence and improvement. The most eminent leaders of this school of historical interpretation have been Professor Lamprecht of Leipzig, Professor Marvin in England, Professor Breasted of Chicago, Professor Turner of Harvard, and Professors Robinson and Shotwell of Columbia University."—H. E. Barnes, *Past and future of history (Historical Outlook, Feb., 1921)*.

"The newer synthetic history has enlarged the scope of historical narrative in three distinct ways. It has expanded it with respect to the variety of human interests and activities which are recounted. It has pushed back the period in which our knowledge of the career of man begins, and it has expanded the scope of history in space by showing that more and more modern history is becoming world history. In regard to the extension of the range of interests which are deemed worthy of narrating, the newer history refuses to look upon any phase of human conduct as unworthy of consideration, but it seeks to put due emphasis upon those classes of activities and interests which the slightest reflection upon human life must demonstrate always to have been the most vital and influential in human existence and development, namely, economic activities, social rela-

tions, technology and natural science, and political, legal and religious institutions. The chief novel element in this phase of the newer historiography is the greater emphasis which is put upon economic, social and scientific factors in human development. Without for a moment committing itself to the Feuerbach-Marxian determinism, the newer synthetic history recognizes that civilization has a fundamental economic basis, that the state of scientific knowledge at any period determines the manner in which the economic struggle will be carried on, and that the nature of the economic process will to a very large extent decide the nature of the prevailing social relations and institutions. . . . Of course, this tendency to emphasize non-political factors in the treatment of history is not new. It is as old as Herodotus, and, in its modern phase, it dates from Vico, Voltaire and Heeren. It already has been represented by some of the most eminent of historians from all nations. England can boast of the names of Hallam, Flint, Symonds, Lecky, Green, Maitland, Slater, Pollard, Dill, Morley, and Ashley, Cunningham, Rogers and the less-noted economic historians; France has been represented by DeTocqueville, Guizot, Fustel de Coulanges, Luchaire, Rambaud, Tannery, Faguet, Reinach, Jaurès, Levasseur and the other economic historians; in Germany the most conspicuous names are those of Heeren, Riehl, Freytag, Burckhardt, Erman, Harnak, Breyssig, Lamprecht, and Schmoller, Bücher and the lesser economic historians; Russia has contributed two noted members in Vinogradoff and Kovalevsky; finally, one finds in the United States such writers as Lea, Tyler, McMaster, Turner, Sumner, Jastrow, Breasted, Cheyney, Shepherd, Abbott, Burr, Becker, Taylor, Robinson, Shotwell, Beard, [Gross, G. B. Adams, Jameson] and the economic historians, such as Tetlen, Coman, Bogart, Bolles, Gay, Commons, Wright, Day, Callender, Clark and Meyer. Its attainment to an organized movement of such proportions that it seems destined to dominate historical writing and teaching in the not very distant future is what distinguishes the recent phase from the earlier sporadic and isolated examples of this tendency. . . . These newer ideas must of necessity bring with them a revolution in our historical chronology and our periodizing of history. Oriental history can no longer be regarded as 'ancient.' Ancient history really begins with the lower Paleolithic age, around two hundred thousand years ago, and ends with the beginning of the Neolithic, about fifteen thousand years ago. Modern history might be said to extend from the Neolithic to the dawn of written history. The period from 3500 B.C. might well be regarded as contemporary history. The major part of the so-called 'historic period' from 3500 B.C. to 1750 A.D. has in reality been the least important era in the development of mankind. The really significant achievements in advance were made before 3500 B.C. or after 1750 A.D. No phase of progress in historical writing or interpretation has been more significant than the advances which have been made in the demonstration of the importance of extra-European influences on the history of western civilization. Particularly significant has been the investigation of these factors in their relation to the origins of modern times. It was long the fashion to trace modern times to the Turkish occupation of the trade routes and the capture of Constantinople, to the Italian revival of letters and development of art, or to the Lutheran revolt against the Medieval Church, Professor

Lybyer has proved beyond possibility of contradiction that the Turkish occupation of the trade routes had no influence on the development of overseas explorations and the development of modern colonial enterprise in America and the Far East, and, along with Professors Shepherd and Abbott, has demonstrated that the great cause for overseas expansion around 1500 was the scientific curiosity of the West and the jealousy of the western states concerning the Italian monopoly of the eastern trade with the Levant districts. Further, these writers have shown that the characteristic events and developments of early modern times, colonization, the downfall of feudalism and the rise of the national state, the beginnings of representative government through the rise of the middle class, the awakening of modern science, and the development of the modern commercial and economic life, are primarily the product of the reaction upon Europe of the expansion of European civilization overseas. Even the Protestant Reformation would not have succeeded but for the rise of the middle class and the awakening of those nationalistic aspirations which the expansion did so much to produce. Compared with the overseas expansion and the Commercial Revolution, the Renaissance and Reformation appear backward-looking movements. Again, though the Industrial Revolution must be looked upon as the most appalling transformation in the history of humanity, it could scarcely have appeared without the preceding Commercial Revolution which prepared the way for its development directly or indirectly in the realms of navigation, capital, commercial practices and institutions, raw materials, markets, legal development and even the mobility of labor. Finally, the Industrial Revolution and its direct resultant, modern national imperialism, have promoted the final stage of expansion overseas since 1870. This has led to the exploration and commercial exploitation of all remaining habitable portions of the earth's surface and has bound the whole world together as an organic economic and cultural unit, however powerful the centrifugal forces may at times become. As Viscount Bryce has well insisted in his judicious Raleigh Lecture on *World History*, we can now for the first time witness a real concrete unity of history rather than postulating a metaphysical or potential unity as was the case from the Greek Stoics and Augustine down to our day. Despite anything that Senators Borah or Johnson may do or say we have now become inextricable units in a world organism, and any attempt to study, write or teach national history without considering external influences must be regarded as a hopeless anachronism."—*Ibid.*—See also EUROPE: Middle Ages; Renaissance and Reformation; Modern period.

34. New orientation of history.—"The War has profoundly affected our outlook in every sphere of mental as well as material activity. No body of intellectual workers is likely to feel its influence more acutely than those who occupy themselves with the study of history. The world-con-

flict has undoubtedly aroused a new and wider interest in the subject; and it is significant that, though the output of fiction and general literature fell below the average in 1914, there was a considerable increase in historical books. . . . The War has given a new orientation to our historical studies. Now as ever the historian is subject to the influences of his environment. He cannot abstract himself from the tone and temper which prevail outside his library. And however single-minded he may be in his pursuit of what he deems undiluted truth he must necessarily be affected by the atmosphere in which he moves. . . . This new orientation is likely to be more marked among our native scholars than in those of the Continental countries. In France and Germany and Italy, the international and military aspects of history continued to attract a much larger share of interest than among ourselves, for the tradition of great wars, and of struggles for sheer existence, was too vivid to be extinguished. In Germany indeed, as we have been frequently reminded, the professors were working hand in hand with the politicians; and the new imperialism of Prussia found, or thought it had found, its intellectual justification in the researches of writers and teachers like Sybel, Dahlmann, Droysen, and above all Treitschke. Yet even in the land, and in the very universities, of these sabre-rattling chroniclers there were other writers who were steadily working out an entirely different conception of history, and endeavoring to make a place for it among the sciences, or the quasi-sciences, like jurisprudence, ethnology, philology, and economics. The War has gone far to complete the reaction against this current of opinion [racial self-conceit]. It is improbable that the 'Anglo-Saxon' theory will ever be pressed so far again. . . . Our historical outlook is changing in other ways. It is seeking wider horizons and losing at the same time something of its dogmatic certainty, its definiteness, its symmetrical limitation. . . . The War, indeed, has shown how vain were the optimistic illusions of the writers and thinkers of a society mainly occupied, as Britain was between 1815 and 1899, with peaceful industry and expanding commerce, chequered only by remote and secondary campaigns. In that period it was easy to believe that the bells were ringing out the thousand years of war and striking the note for a thousand years of peace. . . . Herbert Spencer built up a whole vast scheme of politics and sociology round the assumption that the progress of humanity had been a steady transition from militarism to industrialism, and that the journey was now rapidly approaching its final stages. And surely no prophet was ever more unfortunate in his predictions! The philosopher of evolution lived long enough to discover, if he did not acknowledge, that a social system based on industry offers no better security against war than one grounded on theocracy or feudalism. If he had lived a few years longer he would have seen that industrialism itself may only be another facet of militarism. . . . Even before the outbreak of hostilities the reaction against the systematic and reasoned view of history had set in. Writers like Sorel in France, to say nothing of Nietzsche in Germany, had warned us that the Age of Conflict was not passed, and that the Age of Reason had scarcely begun. . . . Evolution itself is no longer so satisfying. Darwinism, with its assumption of a slow, steady, upward movement, through the aeons, has lost much of its authority. The Neo-Darwinians and the Mendelians teach us that Nature does

not always work in this leisurely systematic fashion by an infinite number of minute variations, but on the contrary often produces its greater changes by sudden jumps and unexpected starts and violent strokes and counter-strokes. Must not the historian be haunted by a suspicion that our world-war itself may be a kind of Mendelian 'mutation'? May he not feel that this startling retrogression, or this equally startling advance towards a new type of civilization, whichever it may turn out to be, does not lend itself to the theory of purposive adaptation and causality by which he sometimes seeks to explain the lesser cataclysms and upheavals of the past? . . . In the light of all that is happening history will have less encouragement to pursue that somewhat arid path of generalization and abstraction which the feet of Clio never tread with ease. It may be tempted to go back to description, narrative, and biography; and will not be less instructive, or in any real sense, less scientific, on that account."—S. Low, *New orientation of history* (*Living Age*, May 27, 1916).

**HITTITES**, a people mentioned in the Bible, known as the Khita or Khatta to the Egyptians, with whom they were often at war. Recent discoveries indicate that they formed a more civilized and powerful nation and played a more important part in the early history of Western Asia than was previously supposed. Many inscriptions and rock sculptures in Asia Minor and Syria which were formerly inexplicable are now attributed to the Hittites. The inscriptions have not yet been deciphered, but scholars are confident that the key to their secret will be found. The two chief cities of the Hittites were Kadesh on the Orontes and Carchemish on the Euphrates; so that their seat of empire was in northern Syria, but their power was felt from the extremity of Asia Minor to the confines of Egypt. It is conjectured that these people were originally from the Caucasus. "Their descendants are still to be met with in the defiles of the Taurus and on the plateau of Kappadokia, though they have utterly forgotten the language or languages their forefathers spoke. What that language was is still uncertain, though the Hittite proper names which occur on the monuments of Egypt and Assyria show that it

was neither Semitic nor Indo-European."—A. H. Sayce, *Fresh light from the ancient monuments*, ch. 5.—"We may . . . rest satisfied with the conclusion that the existence of a Hittite empire extending into Asia Minor is certified, not only by the records of ancient Egypt, but also by Hittite monuments which still exist. In the days of Ramses II., when the children of Israel were groaning under the tasks allotted to them, the enemies of their oppressors were already exercising a power and a domination which rivalled that of Egypt. The Egyptian monarch soon learned to his cost that the Hittite prince was as 'great' a king as himself, and could summon to his aid the inhabitants of the unknown north. Pharaoh's claim to sovereignty was disputed by adversaries as powerful as the ruler of Egypt, if indeed not more powerful, and there was always a refuge among them for those who were oppressed by the Egyptian king. When, however, we speak of a Hittite empire, we must understand clearly what that means. It was not an empire like that of Rome, where the subject provinces were consolidated together under a central authority, obeying the same laws and the same supreme head. It was not an empire like that of the Persians, or of the Assyrian successors of Tiglath-pileser III., which represented the organised union of numerous states and nations under a single ruler. . . . Before the days of Tiglath-pileser, in fact, empire in Western Asia meant the power of a prince to force a foreign people to submit to his rule. The conquered provinces had to be subdued again and again; but as long as this could be done, as long as the native struggles for freedom could be crushed by a campaign, so long did the empire exist. It was an empire of this sort that the Hittites established in Asia Minor. How long it lasted we cannot say. But so long as the distant races of the West answered the summons to war of the Hittite princes, it remained a reality. The fact that the tribes of the Troad and Lydia are found fighting under the command of the Hittite kings of Kadesh, proves that they acknowledged the supremacy of their Hittite lords, and followed them to battle like the vassals of some feudal chief. If Hittite armies had not marched to the shores of the Ægean, and Hittite princes been able from time to time to exact homage from the nations of the far west, Egypt would not have had to contend against the populations of Asia Minor in its wars with the Hittites, and the figures of Hittite warriors would not have been sculptured on the rocks of Karabel. There was a time when the Hittite name was feared as far as the western extremity of Asia Minor, and when Hittite satraps had their seat in the future capital of Lydia. Traditions of this period lingered on into classical days."—A. H. Sayce, *Hittites*, ch. 4.—"But it was not from the Sea-Country that the West-Semitic Dynasty of Babylon received its death-blow. In the later chronicle, which has thrown so much light on the earlier conflicts of this troubled period, we read of another invasion, which not only brought disaster to Babylon but probably put an end to her first dynasty. The chronicler states that during the reign of Samsuditana, the last king of the dynasty, 'men of the land of Khatti marched against the land of Akkad,' in other words, the Hittites from Anatolia marched down the Euphrates and invaded Babylonia from the north-west. The chronicle does not record the result of the invasion, but we may probably connect it with the fact that the Kassite king Agum-Kakrime brought back to Babylon from Khani, the old Khana on the

middle Euphrates, the cult-images of Marduk and Sarpanitum and installed them once more with great pomp and ceremony within their shrines in E-sagila. We may legitimately conclude that they were carried off by the Hittites during their invasion in Samsu-ditana's reign. If the Hittites succeeded in despoiling Babylon of her most sacred deities, it is clear that they must have raided the city, and they may even have occupied it for a time. Thus the West-Semitic dynasty of Babylon may have been brought to an end by these Hittite conquerors, and Samsu-ditana himself may have fallen in defence of his own capital. But there is no reason for supposing that the Hittites occupied Babylon for long. Even if their success was complete, they would soon have returned to their own country, laden with heavy spoil; and they doubtless left some of their number in occupation of Khana on their withdrawal up the Euphrates."—L. W. King, *History of Babylon*, pp. 210, 211.—"Soon after the treaty between Egypt and Mitanni, Subiluliuma, King of the Hittites of Cappadocia (whom Egyptian scribes conveniently abbreviate as Saplel), was overlord apparently of a number of outpost baronies in North Syria. Assured of their help, and watching his opportunity, he flung his whole force, about 1400, upon Mitanni, and over-ran the foothill country as far as the Tigris; as far indeed as the conquests of his great predecessor Hattusil I, of whom unfortunately we have little news but this bare allusion. This closed the career of Mitanni, and totally upset the calculations of Egypt. It also impressed greatly the leading chiefs of the Aramæans. Another forward move must needs be at their expense; so they made the best of a bad business by throwing in their lot with the Hittites; at first secretly, on account of allegiance only recently sworn to Egypt; then, on detection, openly, as a tributary state. Egypt, deserted on all hands, made terms with the victor, and ceded all North Syria, and this treaty was renewed between Mursil, the second successor of Saplel (about 1360 [B.C.]), and Amenhotep IV, who found himself cut off by hostile Aramæans from his hereditary friends in Babylonia, and was rapidly losing his hold even on the coast towns of Phœnicia, who were as hard pressed as he through the defection of all North Syria. Others, however, whom the Hittite victories had taken no less by surprise, had now had time to revise their policy. Assyria, when it had harried Mitanni in time past, had not meant to weaken it for Hittites to destroy. To redress the balance, Shalmaneser I decided to scramble for its remains: he raided about 1320 [B.C.] as far as the Euphrates, and his successor invaded Comagene, in the hills between Syria and Cappadocia itself. About the same time Seti I, an early king of the XIX Dynasty, claims to have reached the Euphrates again, and his successor, Rameses II, certainly re-occupied the Lebanon. The situation was critical: and the Hittites, who by this time had overlordship over almost the whole of Asia Minor, gathered all their allies, including Lycians from the far south-west, and Dardanians from the neighbourhood of Troy, and met the Egyptian army in 1287 in a great battle at Kadesh in North Syria. Rameses claims to have won; but he did not pursue his victory; and as the Aramæans took opportunity to revolt from the Hittites, the truce which resulted was probably needed on both sides. It was followed in 1271 by a most elaborate treaty between Rameses and the king of Boghaz-keui, Hattusil II (whom Rameses calls Khetasar) providing for a frontier to be delimited

in the Lebanon, for extradition of evil-doers, and for offensive and defensive alliance—against whom? The king of Babylon, for one, was uneasy, and sent to Boghaz-keui to enquire. Two possibilities are open. Hattusil had occasion about this time to use very firm language to a Babylonian pretender in reference to an unnamed enemy: and this enemy can hardly be other than Assyria, which had lately been so active westward. The other danger was a new one; Europe, as we shall see again, more clearly, was emptying itself with violent spasms into the Mediterranean, and not least into northwest Asia Minor. The Hittite Empire was being attacked in the rear. . . . [It] drew rein not a moment too soon. If, as the Greeks believed the Trojan War began about 1194 [B.C.], the Phrygian invasion of the plateau, and their great fight with the 'ben-pecker' Amazons must have occurred about forty years before: i. e., about 1230 [B.C.], within a year or two of the great sea-raid which fell on Egypt under Merenptah. And when another sea-raid, and a wholesale land-migration also, fell upon Syria about 1200, and was only beaten off from Egypt by the courage and diplomacy of Rameses III, the Hittites who took part in it were not the leaders, but colleagues or subordinates of peoples with Ægean and West-Anatolian names. Of these newcomers, the people who come most into view are the Muski, ancestors probably of the Moschoi of Greek geography. Still migratory, by 1170 they were threatening the Assyrian border, and (in spite of promises) remained dangerous till Tiglath-pileser I drove them back 'as far as the Upper Sea,' which in this context may well mean the Black Sea. This was in 1120 [B.C.], and it gave the fragments of Assyria's old enemy, the Hittite Empire, a chance to revive. Their chief city now, however, was not Boghaz-keui, but the fortress of Carchemish on the Euphrates, which seems to have survived untaken when Tiglath-pileser's army swept through the North Syrian baronies to the Lebanon and the Phœnician coast. This first Assyrian conquest, however, was short-lived; formal acknowledgments may have been paid to Nineveh by states west of the Euphrates, for some generations, but a revolt about 1060 released Syria, and broke an Assyrian army at Carchemish."—J. **HOAR**, Ebenezer Rockwood (1816-1895), American jurist. Judge of Massachusetts state supreme court, 1849-1855; attorney-general of United States, 1869-1870; member of Joint High Commission, 1871; president of Board of Overseers of Harvard University, 1878-1880, 1881-1887. See U.S.A.: 1869-1877.

**HOAR**, George Frisbie (1826-1904), American legislator. Member of Massachusetts senate, 1857; member of United States House of Representatives, 1869-1877; member of Electoral Commission which settled Hayes-Tilden election dispute, 1877; United States senator, 1877-1904. See U. S. A.: 1899 (January-February); 1900 (April).

**HOARD**, **HORDERE**, court official in the time of Alfred the Great. See STALLER.

**HOBART**, Garret Augustus (1844-1899), vice president of the United States, 1896-1899. See U.S.A.: 1896: Party platforms and nominations: Republican; 1899 (November).

**HOBART**, John Henry (1775-1830), American

divine. Episcopal bishop of New York, 1816-1830. See PROTESTANT EPISCOPAL CHURCH: 1811-1836.

**HOBBEEMA**, Meyndert (c. 1638-1709), Dutch landscape painter. See PAINTING: Dutch.

**HOBBS**, Thomas (1588-1679), English philosopher. "One of the boldest and most consistent of the representatives of the modern movement is Thomas Hobbes. Like all the reformers, he breaks with the past: Greek philosophy is to him a 'phantasm'; the weeding out of inveterate opinions is the business to be taken in hand. With Bacon he accentuates the practical utility of science or philosophy: the end of knowledge is power. He denies completely the scientific character of theology. . . . He also repudiates the spiritualistic notion of the soul. . . . He accepts, instead, the new natural science of Copernicus, Galileo, and Harvey, whom he regards as the founders of science, and fearlessly deduces the consequences of the mechanical theory in his materialistic philosophy. Himself a student of mathematics, Hobbes looks upon the method of geometry as the only one capable of giving us sure and universal knowledge. . . . He is, like Bacon, an empiricist in his theory of the origin of knowledge. He finds it difficult, however, to reconcile his rationalism with his empiricism; the presence of both factors in the system is responsible for many inconsistencies and uncertainties."—F. Thilly, *History of philosophy*, pp. 263-264. Among his works are: "Elementa philosophica de cive," "De corpore," "De homine," "Leviathan," and "Elements of law, natural and politic."—See also DEISM: English; ETHICS: 17th century; HISTORY: 24.

**HOBHOUSE**, Leonard Trelawney (1864- ), English philosopher and sociologist. See HISTORY: 33.

**HOBKIRK'S HILL**, Battle of (1781). See U.S.A.: 1780-1781.

**HOBOKEN**, city on the Hudson river in Hudson county, New Jersey. Located opposite New York City, Hoboken is connected with it by tube and ferry. Originally the town was part of the patroonship, called Hobocan, which Hackingh granted to Michael Pauw in 1630, but the present city dates from 1804 when John Stephen acquired the land. He planned the town but it was not until 1840 that it was incorporated as such, and not until 1855 that it received a city charter. Hoboken is an important shipping place for coal, and a terminus of several steamship lines and railroads. On the 30th of June, 1900, between 200 and 300 people lost their lives in a fire which destroyed the pier system of the North German Lloyd steamship line. The fire wrecked three of the large ships of the company, and is said to have been the most destructive blaze that ever visited the piers and shipping of New York harbor. Among its chief manufactures are marine engines, cork and machine-shop products, elevators, chemicals, leather goods, silk and wall paper. Its most notable buildings are Stephens Institute of Technology and St. Marys Hospital.

**HOBSON**, John Atkinson (1858- ), English economist. See SOCIALISM: 1006.

**HOBSON**, Richmond Pearson (1870- ), American naval constructor. During the Spanish-American War he sank the collier *Merrimac* at the entrance of Santiago harbor in order to imprison Cervera's fleet. Member of House of Representatives, 1907-1915. See U. S. A.: 1898 (April-June).

**HOBSON**, William (d. 1842), British captain of the royal navy. Sent to New Zealand with

authority to annex the country to Australia, 1839; acted as lieutenant-governor, 1839-1841, and as governor, 1841-1842. See NEW ZEALAND: 1837-1852.

**HOBSON JOINT RESOLUTION** (1914). See LIQUOR PROBLEM: United States: 1913-1919.

**HOCH, Edward Wallis** (1849- ), governor of Kansas, 1905-1909. See KANSAS: 1904-1912.

**HOCHE, Lazare** (1768-1797), French general. Succeeded in driving the Austrians out of Alsace, 1793; suppressed the Vendean revolt, 1795-1796; won several victories over the Austrians as commander of the Army of the Sambre and Meuse, 1797. See FRANCE: 1793 (July-December): Progress of War of Coalition; 1794-1796.

**HOHELAGA**, name of an Indian village founded by Cartier on the site of the present city of Montreal. An extensive region of surrounding country seems to have likewise borne the name Hochelaga, and Cartier calls the river St. Lawrence "the river of Hochelaga," or "the great river of Canada."—See also AMERICA: 1534-1535; CANADA: Names.

**HODGSON, Sir Frederic Mitchell** (1851- ), British governor of Gold Coast, 1898-1900. See ASHANTI: 1895-1900.

**HODSON, William Stephen Raikes** (1821-1858), British soldier. Participated in the Sikh War; distinguished himself in the Sepoy mutiny as leader of a cavalry unit called "Hodson's Horse," 1857. See INDIA: 1857 (June-September).

**HOETZENDORFF, Franz, Baron Conrad von** (1852- ), Austrian general. Served in Bosnia and Herzegovina, 1878-1879; chief of general staff, Austrian army, 1906-1911, 1912; served in World War as commander in the Trentino. See WORLD WAR: Diplomatic background: 13; 14; 1916: IV. Austro-Italian front: b, 2; 1917: IV. Austro-Italian front: a, 1; d, 2; 1918: IV. Austro-Italian theater: b; b, 3.

**HOFER, Andreas** (1767-1810), Tyrolese patriot. Famous for his resistance to French and Bavarian invaders. See GERMANY: 1800-1810 (April-February).

**HOFF, Jacobus Henricus Van 't** (1852-1911), Dutch chemist. Expounder of the theory of stereo-isomerism; awarded Nobel prize for chemistry in 1901. See CHEMISTRY: General: Modern: Lavoisier; NOBEL PRIZES: Chemistry: 1901.

**HOFFMANN, August Wilhelm von** (1818-1892), German chemist. Head of the Royal College of Chemistry in London; experimented with coal tar dyes. See CHEMISTRY: Practical application: Dyes.

**HOFFMANN, Frederic** (1660-1742), German physician. See MEDICAL SCIENCE: Modern: 17th century: Closing period of humoral pathology.

**HOFFMANNITES**, German sect. See FRIENDS OF THE TEMPLE.

**HOFMANNSTHAL, Hugo von** (1874- ), German poet. See GERMAN LITERATURE: 1900-1922.

**HOFSTADE**, village of East Flanders, Belgium, situated on the Dender, about 18 miles east

of Ghent. See WORLD WAR: Miscellaneous auxiliary services: X. Alleged atrocities, etc.: a, 7; a, 8, ii.

**HOGARTH, David George** (1862- ), English archaeologist. Carried on extensive excavations in the Cretan area, 1899-1900. See ÆGEAN CIVILIZATION: Excavations and antiquities: Cretan area.

**HOGARTH, William** (1697-1764), English painter and engraver. First attained eminence by the series of engravings, *A Harlot's Progress*, followed by *A Rake's Progress*, *Marriage à la Mode*, and other dramatic satires of his time; his oil paintings, thought little of in his own day, have since been highly praised. See PAINTING: English.

**HOGG, James Stephen** (1851-1906), governor of Texas, 1891-1895. See TEXAS: 1892.

**HOGUE**, British cruiser, sunk by a German submarine off the Dutch coast, September 22, 1914. See WORLD WAR: 1914: IX. Naval operations: b.

**HOHENLINDEN, Battle of** (1800). See AUSTRIA: 1798-1806; FRANCE: 1800-1801 (May-February).

**HOHENLOHE - SCHILLINGSFÜRST, Prince of** (Chlodwig Karl Victor) (1819-1901), German statesman. Became duke of Ratibor and of Korvei, 1845; Bavarian minister of foreign affairs, 1866-1870; governor of Alsace-Lorraine, 1885-1894; chancellor of Germany, 1894-1900. See ALSACE-LORRAINE: 1870-1894.

**HOHENSTAUFEN FAMILY**, famous Suabian family whose members were emperors of Germany, 1138-1208, 1214-1254; also rulers of Sicily, 1194-1266. See AUSTRIA: 805-1246; GERMANY: 1138-1197; ITALY: 1154-1162, to 1183-1250; PAPACY: 1122-1250.

Genealogical table. See GERMANY: 1250-1272.

**HOHENZOLLERN**, province in southern Germany. "Hohenzollern lies far south in Schwaben (Suabia), on the sunward slope of the Rauhe-Alp Country; no great way north from Constance and its Lake; but well aloft, near the springs of the Danube; its back leaning on the Black Forest; it is perhaps definable as the southern summit of that same huge old Hercynian Wood, which is still called the Schwarzwald (Black Forest), though now comparatively bare of trees. Fanciful Dryasdust, doing a little etymology, will tell you the name 'Zollern' is equivalent to 'Tollery' or Place of Tolls. Whereby 'Hohenzollern' comes to mean the 'High' or Upper 'Tollery':— and gives one the notion of antique pedlars climbing painfully, out of Italy and the Swiss valleys, thus far; unstrapping their packhorses here, and chaffering in unknown dialect about 'toll.'"—T. Carlyle, *Frederick the Great*, bk. 2, ch. 5.

**HOHENZOLLERN, House of: Rise.**—"The title, Count of Zollern, was conferred by Henry IV in the eleventh century. . . . In 1190 Henry VI appointed the Count of Zollern to the imperial office of Burgrave of Nuremberg. . . . His descendants . . . acquired extensive estates in Franconia, Moravia, and Burgundy. . . . Frederick VI was enriched by Sigismund, . . . and was made his deputy in Brandenburg in 1411. The marches were in utter confusion. . . . Frederick reduced them to order, and, . . . in 1417, received from Sigismund the margraviate of Brandenburg with the dignity of Elector."—C. T. Lewis, *History of Germany*, bk. 3, ch. 12.—See also BRANDENBURG: 1168-1417; 1417-1640; GERMANY: 1417; PRUSSIA: 1618-1700.

HOLDEN, Hale (1860- ), American railway official. Member of advisory board to assist the United States director-general of railroads, December, 1917-February, 1918. See RAILROADS: 1916-1920.

HOLDEN, William Woods (1818-1892), provisional governor of North Carolina, 1865. See U.S.A.: 1865 (May-July).

"HOLDING COMPANY". See RAILROADS: 1901-1905.

HOLIDAYS, United States.—In the United States there are no national holidays made so by Congressional enactment. Christmas day, Independence day (July 4), and Thanksgiving day are holidays throughout the country; New Year's day, Washington's birthday (Feb. 22), and Labor day (the first Monday in September), as well as the general election day (the Tuesday after the first Monday in November), have become legal holidays in most of the states; Columbus day (Oct. 12), and Lincoln's birthday (Feb. 12) are observed by more than half the states; Decoration or Memorial day (May 30) is observed in all the northern states; Lee's birthday (Jan. 19) is observed by eight, and Jefferson Davis' birthday (June 3) by nine of the southern states.—See also ARBOR DAY.

HOLINESS CHURCH.—A revival movement in 1880 in southern California and Arizona resulted in a number of "Holiness Bands," the members of which retained their identity with the churches to which they originally belonged. "With the development of these bands and the acquisition of certain property for the conduct of their worship, certain legal difficulties arose, and in 1806 they became incorporated under the laws of the state of California. From California the work extended into other states and was especially prominent in Kentucky and Tennessee. . . . This denomination was reported for the first time in 1916 and shows thirty-three organizations . . . [with] a membership of 926."—United

States Census, *Religious bodies*, 1916, pt. 2, pp. 310-311.—See also CHURCHES of God.

HOLINESS METHODIST CHURCHES. See EVANGELISTIC ASSOCIATIONS.

HOLKAR, name of a powerful Mahratta family. Early members of this family fought unsuccessfully against British rule in India. See INDIA: 1747-1761; 1798-1805.

HOLLAND, Henry Fox, 1st Baron (1705-1774), English statesman. Surveyor-general of works, 1737; lord of the treasury, 1743; privy councillor and secretary of state for war, 1746; leader of House of Commons, 1755, 1762; paymaster-general, 1757-1765; became Baron Holland, 1763. See ENGLAND: 1757-1760.

HOLLES, Denzil, Baron (1599-1680), British statesman. See ENGLAND: 1629; 1642 (January).

HOLLS, George Frederick William (1857-1903), American lawyer. Secretary and counsel of American delegation to Hague Peace conference, 1890. See HAGUE CONFERENCES: 1890.

HOLLY SPRINGS, Capture of. See U. S. A.: 1862 (December: On the Mississippi).

HOLMES, David (d. 1832), governor of Mississippi, 1817-1820. See FLORIDA: 1798-1810.

HOLMES, Oliver Wendell (1809-1894), American man of letters, novelist and poet. See AMERICAN LITERATURE: 1830-1845; MEDICAL SCIENCE: Modern: 19th century: Antiseptic surgery and obstetrics.

HOLMES, Oliver Wendell, Jr. (1841- ), American jurist. Became chief justice of Massachusetts supreme court, 1899; succeeded Justice Grey in the United States Supreme Court, 1902. See SUPREME COURT: 1917-1921; ESPIONAGE ACT: Trials under the Espionage Act.

HOLOCAUST.—"The sacrifice of a whole burnt-offering, where nothing was kept back for the enjoyment of men," was called a holocaust by the ancient Greeks.—G. F. Schömann, *Antiquities of Greece: The state*, p. 60.

HOLST, Hermann Eduard von (1841-1904), German historian. Most of his books are on American topics. See HISTORY: 29.

HOLSTEIN, Friedrich von (1837-1909), German statesman. For many years chief of the political department of the German foreign office. See GERMANY: 1889-1890.

HOLSTEIN, southern part of Schleswig-Holstein, Prussia, separated from Schleswig by the Eider river and Baltic canal. See SCHLESWIG-HOLSTEIN.

HOLSTEIN-GOTTORP, House of: Genealogical table. See SWEDEN: 1720-1702.

HOLT, Sir John (1642-1710), English jurist. Made lord chief justice of the King's Bench, 1689. See COMMON LAW: 1689-1710; 1750.

HOLY ALLIANCE.—"The document called the Holy Alliance was originally sketched at Paris [during the occupation of the French capital by the Allies, after Waterloo, in 1815], in the French language, by [the Czar] Alexander's own hand, after a long and animated conversation with Madame de Krüdener and Bergasse. It was suggested, perhaps, by words spoken by the king of Prussia after the battle of Bautzen, but was

chiefly the result of the influence, upon a mind always inclined to religious ideas, of the conversation of Madame de Kriüdener and of the philosopher Bader, the admirer of Tauler, Jacob Boehm, and St. Martin, the deadly foe of Kant and his successors in Germany. . . . The Czar dreamt of founding a Communion of states, bound together by the first principles of Christianity. . . . The king of Prussia signed the paper from motives of friendship for the Czar, without attaching much importance to what he did. . . . The emperor of Austria, the least sentimental of mankind, at first declined to sign, 'because,' he said, 'if the secret is a political one, I must tell it to Metternich; if it is a religious one, I must tell it to my confessor.' Metternich accordingly was told, and observed scornfully, 'C'est du verbiage.' Indeed no one of the princes who adhered to the Holy Alliance, with the single exception of Alexander himself, ever took it seriously. It was doomed from its birth. As M. de Bernliardi observes: 'It sank without leaving a trace in the stream of events, never became a reality, and never had the slightest real importance.' What had real importance was the continuance of the good understanding between the powers who had put down Napoleon, and their common fear of France. This good understanding and that common fear led to the treaty of the 20th November 1815, by which it was stipulated that the Powers should, from time to time, hold Congresses with a view to regulating the welfare of nations and the peace of Europe. It was these Congresses, and not the Holy Alliance, which kept up close relations between the rulers of Russia, Prussia, and Austria, and enabled them when the liberal movement on the Continent which followed the conclusion of the war began to be alarming, to take measures for a combined system of repression."—M. E. G. Duff, *Studies in European politics*, ch. 2.—The text of the treaty is as follows: "In the name of the Most Holy and Indivisible Trinity: Holy Alliance of Sovereigns of Austria, Prussia, and Russia. Their Majesties the Emperor of Austria, the King of Prussia, and the Emperor of Russia, having, in consequence of the great events which have marked the course of the three last years in Europe, and especially of the blessings which it has pleased Divine Providence to shower down upon those States which place their confidence and their hope on it alone, acquired the intimate conviction of the necessity of settling the steps to be observed by the Powers, in their reciprocal relations, upon the sublime truths which the Holy Religion of our Saviour teaches; They solemnly declare that the present Act has no other object than to publish, in the face of the whole world, their fixed resolution, both in the administration of their respective States, and in their political relations with every other Government, to take for their sole guide the precepts of that Holy Religion, namely, the precepts of Justice, Christian Charity, and Peace, which, far from being applicable only to private concerns, must have an immediate influence on the councils of Princes, and guide all their steps, as being the only means of consolidating human institutions and remedying their imperfections. In consequence, their Majesties have agreed on the following Articles:—Art. I. Conformably to the words of the Holy Scriptures, which command all men to consider each other as brethren, the Three contracting Monarchs will remain united by the bonds of a true and indissoluble fraternity, and considering each other as fellow countrymen, they will, on

all occasions and in all places, lend each other aid and assistance; and, regarding themselves towards their subjects and armies as fathers of families, they will lead them, in the same spirit of fraternity with which they are animated, to protect Religion, Peace, and Justice. Art. II. In consequence, the sole principle of force, whether between the said Governments or between their Subjects, shall be that of doing each other reciprocal service, and of testifying by unalterable good will the mutual affection with which they ought to be animated, to consider themselves all as members of one and the same Christian nation; and three allied Princes looking on themselves as merely delegated by Providence to govern three branches of the One family, namely, Austria, Prussia, and Russia, thus confessing that the Christian world, of which they and their people form a part, has in reality no other Sovereign than Him to whom alone power really belongs, because in Him alone are found all the treasures of love, science, and infinite wisdom, that is to say, God, our Divine Saviour, the Word of the Most High, the Word of Life. Their Majesties consequently recommend to their people, with the most tender solicitude, as the sole means of enjoying that Peace which arises from a good conscience, and which alone is durable, to strengthen themselves every day more and more in the principles and exercise of the duties which the Divine Saviour has taught to mankind. Art. III. All the Powers who shall choose solemnly to avow the sacred principles which have dictated the present Act, and shall acknowledge how important it is for the happiness of nations, too long agitated, that these truths should henceforth exercise over the destinies of mankind all the influence which belongs to them, will be received with equal ardour and affection into this Holy Alliance. Done in triplicate, and signed at Paris, the year of Grace 1815, 14/26th September." "It is stated in 'Martens' Treaties' that the greater part of the Christian Powers acceded to this Treaty. France acceded to it in 1815; the Netherlands and Wurtemberg did so in 1816; and Saxony, Switzerland, and the Hansa Towns in 1817. But neither the Pope nor the Sultan were invited to accede."—E. Hertslet, *Map of Europe by treaty*, v. 1, no. 36, pp. 317-319.—"The Treaty of the Holy Alliance was not graced with the name of the Prince Regent [of Great Britain], but the Czar received a letter declaring that his principles had the personal approval of this great authority on religion and morality. The Kings of Naples and Sardinia were the next to subscribe, and in due time the names of the witty glutton, Louis XVIII., and of the abject Ferdinand of Spain were added."—C. A. Fyffe, *History of modern Europe*, v. 2, ch. 1.—See also FRANCE: 1815 (July-November); PEACE MOVEMENT: 1815.

**HOLY BROTHERHOOD**, or **Hermadad**: **Spain**.—Before the close of the thirteenth century, there first arose in Spain "an anomalous institution peculiar to Castile, which sought to secure the public tranquility by means scarcely compatible themselves with civil subordination. I refer to the celebrated *Hermadad*, or *Holy Brotherhood*, as the association was sometimes called,—a name familiar to most readers in the lively fictions of *Le Sage*, though conveying there no very adequate idea of the extraordinary functions which it assumed at the period under review [13th-14th centuries]. Instead of a regularly organized police, it then consisted of a confederation of the principal cities, bound together by a solemn league and covenant for the defence

of their liberties in seasons of civil anarchy. Its affairs were conducted by deputies, who assembled at stated intervals for this purpose, transacting their business under a common seal, enacting laws which they were careful to transmit to the nobles and even the sovereign himself, and enforcing their measures by an armed force. . . . One hundred cities associated in the Hermandad of 1315. In that of 1295, were thirty-four. The knights and inferior nobility frequently made part of the association. . . . In one of [the articles of confederation] it is declared that if any noble shall deprive a member of the association of his property, and refuse restitution, his house shall be razed to the ground. In another, that if any one, by command of the king, shall attempt to collect an unlawful tax he shall be put to death on the spot." Under the government of Ferdinand and Isabella, among the measures adopted for checking the license and disorder which had become prevalent in Castile, and restoring a more effective administration of justice, was one for a reorganization of the Santa Hermandad. "The project for the reorganization of this institution was introduced into the cortes held, the year after Isabella's accession, at Madrigal, 1476. . . . The new institution differed essentially from the ancient hermandades, since, instead of being partial in its extent, it was designed to embrace the whole kingdom; and, instead of being directed, as had often been the case, against the crown itself, it was set in motion at the suggestion of the latter, and limited in its operation to the maintenance of public order. The crimes reserved for its jurisdiction were all violence or theft committed on the highways or in the open country, and in cities by such offenders as escaped into the country; house-breaking; rape; and resistance of justice. . . . An annual contribution of 18,000 maravedis was assessed on every 100 vecinos or householders, for the equipment and maintenance of a horseman, whose duty it was to arrest offenders and enforce the sentence of the law. On the flight of a criminal, the tocinos of the villages through which he was supposed to have passed were sounded and the cuadrilleros or officers of the brotherhood, stationed on the different points, took up the pursuit with such promptness as left little chance of escape. A court of two alcaldes was established in every town containing thirty families, for the trial of all crimes within the jurisdiction of the hermandad; and an appeal lay from them in specified cases to a supreme council. A general junta, composed of deputies from the cities throughout the kingdom, was annually convened for the regulation of affairs, and their instructions were transmitted to provincial juntas, who superintended the execution of them. . . . Notwithstanding the popular constitution of the hermandad, and the obvious advantages attending its introduction at this juncture, it experienced so decided an opposition from the nobility, who discerned the check it was likely to impose on their authority, that it required all the queen's address and perseverance to effect its general adoption. . . . The important benefits resulting from the institution of the hermandad secured its confirmation by successive cortes, for the period of 22 years, in spite of the repeated opposition of the aristocracy. At length, in 1498, the objects for which it was established having been completely obtained, it was deemed advisable to relieve the nation from the heavy charges which its maintenance imposed. The great salaried officers were dismissed; a few subordinate functionaries were retained for the

administration of justice, over whom the regular courts of criminal law possessed appellate jurisdiction; and the magnificent apparatus of the Santa Hermandad, stripped of all but the terrors of its name, dwindled into an ordinary police, such as it has existed, with various modifications of form, down to the present [nineteenth] century." —W. H. Prescott, *History of the reign of Ferdinand and Isabella*, introduction, sect. 1, foot-note, and pt. 1, ch. 6.

Mexico, tribunal established in Mexico by the Spanish viceroy about 1550 for the purpose of protecting travelers.

HOLY CROSS: At Jerusalem. See JERUSALEM: 615; 1099; 1144-1187.

HOLY CROSS ABBEY.—"The ruined Abbey of Holy Cross (some ten miles from Cashel) [Ireland] was founded in 1168 by Donald O'Brien for the Benedictines. The 'black monks' lived here in 1182, when a change took place, which, according to the fragmentary MS. left by a Cistercian chronicler, 'should be called rather a transfer' to the younger order. It is fair to infer that the Benedictines would have called it something different. But at all events its flourishing was under the white monks, and it was thrice rebuilt: for the second time in 1214, and later, at an unspecified date, 'in a far finer style than that of King Donald.' . . . In 1200 somehow or other the monastery became possessed of the relic which made its special glory—a piece of the Holy Cross. Tradition says that this was procured for the order by the 'Good Woman' . . . and the Cistercian chronicler suggests that the 'Good Woman' can be no other lady than Henry II.'s Queen Eleanor—a startling theory. But at all events the place enjoyed high patronage: in 1340 Edward III. confirmed Donald's grant, as King John had done before him. In 1414 the Earl of Ormonde and Thomas de Botelir, then Lord-Deputy, granted their special protection to it, as chief glory of their territory. And in 1563, after the dissolution, it fell into no unfriendly hands, being granted with 450 acres of land to the then Earl of Ormonde. Its line of abbots lasted till after 1700—the monks still hanging on and coming tremulously back under the Butler protection. Throughout the reign of Elizabeth, Holy Cross flourished in great repute. After the break-up of the old Irish order under James and Charles, the relic fell into the custody of Walter, eleventh Earl of Ormonde, who before his death in 1632 (seeing his grandson, the First Duke, a Protestant) confided it to one Dr. Fennel till the house should return to its religious allegiance."—S. Gwynn, *Fair hills of Ireland*, pp. 396-398.—The name "Holy Cross Abbey" is also applied to the famous abbey at Waltham, England. See WALTHAM ABBEY.

HOLY LAND.—When we speak of the Holy Land we generally mean that province of ancient Syria extending along the shores of the Mediter-

anean, called Palestine—the land where Jesus Christ and his disciples lived and taught. Certain so-called holy places in this section of country “have been visited by pilgrims and travelers at least since the third century, when we hear of Alexander, the friend of Origen, and Origen himself as going to Palestine to explore them. Constantine, early in the fourth century, after the removal of the earth and rubbish which had long encumbered the site of the Holy Sepulchre, caused a magnificent church to be built over it. His mother, St. Helena, erected and richly adorned a basilica over the grotto of Christ’s nativity at Bethlehem, and a portion of her work is believed to be still preserved in the existing structure. She also built a church on the top of Mount Olivet, over the cave which was traditionally believed to mark the scene of the Ascension. Towards the end of the fourth (?) century the noble pilgrim Etheria (Sylvia) refers to the three sacred buildings at Jerusalem: (1) the *Anastasis* or Sanctuary of the Resurrection, where was the Holy Sepulchre; (2) the Sanctuary of the Cross where the true cross and other relics were preserved; (3) the *Martyrium*, or great basilica of Constantine, situated ‘behind the Sanctuary of the Cross.’ Arculfus, a French bishop, visiting the Holy Land about the end of the seventh century A.D., saw a church built over the rock of Golgotha, the place of the Crucifixion.”—W. E. Addis and T. Arnold, *Holy places (Catholic dictionary)*, p. 411.—See also PALESTINE; CRUSADES.

**HOLY ROMAN EMPIRE:** 962.—Founded by Otto the Great.—Later origin of the name.—“The Holy Roman Empire, taking the name in the sense which it commonly bore in later centuries, as denoting the sovereignty of Germany and Italy vested in a Germanic prince, is the creation of Otto the Great [who was crowned emperor by the pope in Rome, in the year 962]. Substantially, it is true, as well as technically, it was a prolongation of the Empire of Charles [Charlemagne]; and it rested (as will be shewn in the sequel) upon ideas essentially the same as those which brought about the coronation of 800. . . . This restored Empire, which professed itself a continuation of the Carolingian, was in many respects different. It was less wide, including, if we reckon strictly, only Germany proper and two-thirds of Italy; or counting in subject but separate kingdoms, Burgundy, Bohemia, Moravia, Poland, Denmark, perhaps Hungary. Its character was less ecclesiastical. Otto exalted indeed the spiritual potentates of his realm, and was earnest in spreading Christianity among the heathen: he was master of the Pope and Defender of the Holy Roman Church. But religion

held a less important place in his mind and his administration. . . . It was also less Roman. . . . Under him the Germans became not only a united nation but were at once raised on a pinnacle among European peoples as the imperial race, the possessors of Rome and Rome’s authority. While the political connection with Italy stirred their spirit, it brought with it a knowledge and culture hitherto unknown.” It was not until the reign of Frederick Barbarossa that the epithet “Holy” was prefixed to the title of the revived Roman Empire. “Of its earlier origin, under Conrad II (the Salic), which some have supposed, there is no documentary trace, though there is also no proof to the contrary. So far as is known it occurs first in the famous Privilege of Austria, granted by Frederick in the fourth year of his reign, the second of his empire. . . . Used occasionally by Henry VI and Frederick II, it is more frequent under their successors, William, Richard, Rudolf, till after Charles IV’s time it becomes habitual, for the last few centuries indispensable. Regarding the origin of so singular a title many theories have been advanced. . . . We need not, however, be in any great doubt as to its true meaning and purport. . . . Ever since Hildebrand had claimed for the priesthood exclusive sanctity and supreme jurisdiction, the papal party had not ceased to speak of the civil power as being, compared with that of their own chief, merely secular, earthly, profane. It may be conjectured that, to meet this reproach, no less injurious than insulting, Frederick or his advisers began to use in public documents the expression ‘Holy Empire’; thereby wishing to assert the divine institution and religious duties of the office he held. . . . It is almost superfluous to observe that the beginning of the title ‘Holy’ has nothing to do with the beginning of the Empire itself. Essentially and substantially, the Holy Roman Empire was, as has been shewn already, the creation of Charles the Great. Looking at it more technically, as the monarchy, not of the whole West, like that of Charles but of Germany and Italy, with a claim, which was never more than a claim, to universal sovereignty, its beginning is fixed by most of the German writers, whose practice has been followed in the text, at the coronation of Otto the Great. But the title was at least one, and probably two centuries later.”—J. Bryce, *Holy Roman empire*, ch. 6, 9, 12, with foot-note.—Otto, or Otho, the Great, the second of the Saxon line of Germanic kings, crossed the Alps and made himself master of the distracted kingdom of Italy in 951, on the invitation of John XII, who desired his assistance against the reigning king of Italy, Berengar II, and who offered him the imperial coronation (there had been no acknowledged emperor for forty years) as his reward. He easily reduced Berengar to vassalage, and, after receiving the imperial crown from Pope John, he did not scruple to depose that licentious and turbulent pontiff, by the voice of a synod which he convoked in St. Peter’s, and to seat another in his place. Three revolts in the city of Rome, which were stirred up by the deposed pope, the emperor suppressed with a heavy hand, and he took away from the city all its forms of republican liberty, entrusting the government to the pope as his viceroy.—*Ibid.*, ch. 9.—“This Germanic empire . . . was a resuscitation of the idea of the old Roman empire but by no means of its form. On the contrary, through constant struggles new constitutional forms had developed themselves of which the old world had as yet no conception. . . . In a word or two at

least, we must characterize this transformation. Its essence is that an attempt was made to adjust the conception of obedience and military service to the needs of the life of the individual. All the arrangements of life changed their character so soon as it became the custom to grant land to local overlords who, in turn, provided with possessions according to their own several grades, could only be sure of being able to hold these possessions in so far as they kept faith and troth with the lord-in-chief of the land. It was through and through a living organization, which took in the entire monarchy and bound it together into a many-membered whole; for the counts and dukes for their own part entered into a similar relationship with their own sub-tenants. Therewith the possession of land entered into an indissoluble connection with the theory of the empire, a connection which extended also to those border nations which were in contact with and subordinate to the monarchy. That an empire so constituted could not reckon on such unconditional obedience as had been paid to the old Roman empire is clear as day. Nevertheless the whole order of things in the world depended on the system of adjusted relationships, the keystone or rather commanding central point of which was formed by this same empire. It could scarcely claim any longer to be universal, but it did nevertheless hold the chief place in the general state-system of Europe, and it proved a powerful upholder of the independence of the secular power. It was just this idea of universal power, and altogether of ascendancy over the Christian world, that was indelibly implanted in the German empire. But could this idea be actually realized, was Germany strong enough to carry it through? Otto the Great originated it, but by no means carried it to its completion. He passed his life amid constant internal and external struggles; no lasting form of constitution was he able to leave behind."—L. von Ranke, *Weltgeschichte* (tr. from the German), v. 7, pp. 5-7.—"Not through laws, not through an artificial state-system, not through a great army of officials did Otto rule Western Europe, but more than all through the wealth of military resources which his victories had placed in his hands. Through the great army of his German vassals who were well versed in war he overthrew the Slavonians, kept the Danes in check, compelled the Hungarians to relinquish their nomadic life of plunder and to seek settled dwelling places in the plains of the Danube; so that now the gates of the East through which up till then masses of peoples threatening everything with destruction had always anew broken in upon the West were closed forever. The fame of his victories and his feudal supremacy, extending itself further and further, made him also protector of the Burgundian and French kingdoms, and finally lord of Lombardy and of the City of Rome. With the military resources of Germany he holds in subjection the surrounding peoples; but through the power thus won, on the other hand, he himself gains a proud ascendancy over the multitude of his own vassals. Only for the reason that he wins for himself a truly royal position in Germany is he enabled to gain the imperial crown; but this again it is which first really secures and confirms his own and his family's rule in the German lands. On this rests chiefly his preëminent position, that he is the first and mightiest lord of Western Christendom, that as such he is able at any moment to bring together a numerous military force with which no people, no prince can any longer cope. But

not on this alone. For the Catholic clergy also, spreading far and wide over the whole West, serves him as it were like a new crowd of vassals in stole and cassock. He nominates the archbishops and bishops in his German and Italian kingdoms as well as in the newly converted lands of the North and East; he rules the successor of St. Peter and through him exercises a decisive influence on church progress even in the Western lands where he does not himself install the dignitaries of the church. Different as this German empire was from the Frankish, faulty as was its organization, its resources seemed nevertheless sufficient in the hand of a competent ruler to maintain a far-reaching and effectual rule in the West; the more so as it was upheld by public opinion and supported by the authority of the church. But one must not be led into error; these resources were only sufficient in the hands of a so powerful and active prince as Otto. From the Elbe marshes he hastened to the Abruzzian Mountains; from the banks of the Rhine now to the shores of the Adriatic, now to the sand-dunes of the Baltic. Ceaselessly is he in motion, continually under arms—first against the Wends and Hungarians, then against the Greeks and Lombards. No country in his wide realm, no bishopric in Catholic Christendom but what he fixed his eye upon and vigilantly watched. And wherever he may tarry and whatever he may undertake, his every act is full of fire, force and vigor and always hit the mark. With such a representative the empire is not only the highest power in the Western world but one which on all its affairs has a deep and active influence—a power as much venerated as it was dreaded."—W. von Giesebrecht, *Deutsche Kaiserzeit* (tr. from the German), v. 1, pp. 476-484.—See also ITALY: 843-951; 961-1039; GERMANY: 936-973; EUROPE: Middle Ages; Holy Roman and papal empires; FEUDALISM: Continental growth; ROMANS, KING OF THE; CRUSADES: Map of Mediterranean lands in 1097, and 1204.

HOLY ROMAN EMPERORS.—The following is a list of the Holy Roman emperors:

Charles the Great, or Charlemagne, 768-814  
 Louis the Pious, 814-840  
 Lothair I, 840-855  
 Ludwig the German, 855-875  
 Charles II (the Bald), 875-881  
 Charles III (the Fat), 881-891  
 Guido, 891-894  
 Lambert, 894-896  
 Arnulf, 896-899  
 Louis the Child (did not claim imperial title), 899-911  
 Conrad I (did not claim imperial title), 911-918  
 Henry I (the Fowler) (did not claim imperial title), 918-936  
 Otto I (the Great) 936-973  
 Otto II, 973-983  
 Otto III, 983-1002  
 Henry II (the Saint), 1002-1024  
 Conrad II (the Salic), 1024-1039  
 Henry III (the Black), 1039-1056  
 Henry IV, 1056-1106  
 Henry V, 1106-1125  
 Lothair II, 1125-1137  
 Conrad III, 1138-1152  
 Frederick I (Barbarossa), 1152-1190  
 Henry VI, 1190-1197  
 Philip and Otto IV (rivals), 1197-1208  
 Otto IV, 1208-1215  
 Frederick II, 1215-1250  
 Conrad IV, 1250-1254  
 Rudolf of Hapsburg, 1273-1291  
 Adolphus of Nassau, 1292-1298  
 Albert I of Hapsburg, 1298-1308  
 Henry VII of Luxemburg, 1308-1313  
 Ludwig of Bavaria, 1314-1347  
 Charles IV of Luxemburg, 1347-1378  
 Wenceslaus, 1378-1400  
 Rupert of the Palatinate, 1400-1410  
 Sigismund of Luxemburg, 1410-1437  
 Albert II of Hapsburg, 1438-1439  
 Frederick III, 1440-1493  
 Maximilian I, 1493-1519  
 Charles V, 1519-1558  
 Ferdinand I, 1558-1564  
 Maximilian II, 1564-1576  
 Rudolf II, 1576-1612  
 Matthias, 1612-1619  
 Ferdinand II, 1619-1637  
 Ferdinand III, 1637-1657  
 Leopold I, 1658-1705  
 Joseph I, 1705-1711  
 Charles VI, 1711-1740  
 Charles VII, 1742-1745  
 Francis I (Stephen), 1745-1765  
 Joseph II, 1765-1790  
 Leopold II, 1790-1792  
 Francis II, 1792-1806

**HOLY ROOD OF SCOTLAND.**—"A certified fragment of the true cross preserved in a shrine of gold or silver gilt. It was brought over by St. Margaret, and left as a sacred legacy to her descendants and their kingdom. . . . The rood had been the sanctifying relic round which King David I. raised the house of canons regular of the Holy Rood, devoted to the rule of St. Augustin, at Edinburgh. The kings of Scotland afterwards found it so convenient to frequent this religious house that they built alongside of it a royal residence or palace, well known to the world as Holy-rood House."—J. H. Burton, *History of Scotland*, v. 2, ch. 20.—The Holy Rood, or Black Rood as it was sometimes called, was carried away from Scotland, along with the "coronation stone," by Edward I of England, afterwards got back by

treaty, and then lost again at the battle of Neville's Cross, from which it went as a trophy to Durham Abbey.

**HOLY SEE**, name applied to the pope and his court; used to indicate the jurisdiction of the popes as head of the Roman Catholic church. See PAPACY; VATICAN.

**HOLY SEPULCHRE.** See HOLY LAND.

**HOLY WAR:** The Jihad.—Meaning. See DAR-UL-ISLAM; ABYSSINIA: 1913-1920; ARABIA: 1916.

**In World War.**—"When Turkey entered the war [World War], the Sultan, in his capacity of Caliph of the Mohammedan world, issued a *fatwa* [decree] to the faithful of Islam, calling them to a 'holy war' against the unbelievers. The object was to disturb the loyalty of the Mohammedans owing allegiance to Great Britain, France and Russia. These people, however, paid little attention to the summons, and Mohammedan troops . . . fought against Turkey in Mesopotamia and against Germany in Europe and Africa."—*War cyclopaedia*, p. 130.—See also WORLD WAR: 1914: IV. Turkey: f.

**HOMAGE**, ceremony by which a vassal in feudal times indicated his submission and devotion to his overlord. See FEUDALISM: Organization.

**HOME OFFICE**, department of the central government of the United Kingdom whose head is a member of the cabinet. The secretaryship for home affairs was created in 1782. The duties had been assigned previously to the "southern secretaryships," which included the affairs of Ireland, Great Britain, the colonies, and southern Europe. These duties were divided by the appointment of "home" and "foreign" secretaries. The home secretary, however, retained Irish, colonial and war business until 1794. Colonial affairs were removed in 1801. The home office is the senior of the departments of the principal secretaries of state. Its functions, which formerly extended to foreign, colonial, and military affairs, are now strictly confined to the United Kingdom, and in some matters to England and Wales only. The affairs of the Isle of Man and the Channel islands, however, still come to the home office. The home secretary is the medium of communication between the crown and its subjects, and receives addresses and petitions. He is responsible for the king's peace, attends to the general administration of criminal justice, police, and prisons, and advises the sovereign in the exercise of the prerogative of mercy. He supervises lunatic asylums, reformatories, and industrial schools; enforces all rules and orders of a legislative character for the protection of the life and health of the community generally, more particularly the statutes passed for the protection of workers in mines, quarries, factories, and workshops.

**HOME RULE BILLS:** Irish. See ENGLAND: 1885-1886; 1892-1893; IRELAND: 1912-1914; 1914-1916; 1920.

**HOME RULE FOR CITIES.** See MUNICIPAL GOVERNMENT: Home rule for cities.

**HOME RULE LAW**, Baltimore (1915). See MARYLAND: 1915-1916.

**HOME RULE MOVEMENT:** Ireland. See IRELAND: 1873-1879; 1885-1801; 1895; 1917-1918; ENGLAND: 1894-1895 (March-September); ULSTER: 1892.

**India.** See INDIA: 1918-1920.

**HOMEL.** See GOMEL.

**HOMEOPATHY.** See MEDICAL SCIENCE: Modern: 17th-18th centuries: Hahnemann, etc.; 19th-20th centuries: Modification in use of drugs.

HOMER, Winslow (1836-1910), American landscape painter. See PAINTING: American.

HOMER AND THE HOMERIC POEMS.—“When we use the word Homer, we do not mean a person historically known to us, like Pope or Milton. We mean in the main the author, whoever or whatever he was, of the wonderful poems called respectively, not by the author, but by the world, the ‘Iliad’ and the ‘Odyssey.’ His name is conventional, and its sense in etymology is not very different from that which would be conveyed by our phrase, ‘the author.’ . . . At the first dawn of the historic period, we find the poems established in popular renown; and so prominent that a school of minstrels takes the name of ‘Homeridæ’ from making it their business to preserve and to recite them. Still, the question whether the poems as we have them can be trusted, whether they present substantially the character of what may be termed original documents, is one of great but gradually diminishing difficulty. It is also of importance, because of the nature of their contents. In the first place, they give a far greater amount of information than is to be found in any other literary production of the same compass. In the second place, that information, speaking of it generally, is to be had nowhere else. In the third place, it is information of the utmost interest, and even of great moment. It introduces to us, in the very beginnings of their experience, the most gifted people of the world, and enables us to judge how they became such as in later times we know them. . . . And this picture is exhibited with such a fulness both of particulars and of vital force, that perhaps never in any country has an age been so completely placed upon record. . . . We are . . . probably to conceive of Homer as of a Bard who went from place to place to earn his bread by his profession, to exercise his knowledge in his gift of song, and to enlarge it by an ever-active observation of nature and experience of men. . . . It has . . . been extensively believed that he was a Greek of Asia Minor. And as there were no Greeks of Asia Minor at the time of the Trojan War, nor until a wide and searching revolution in the peninsula had substituted Dorian manners for those of the earlier Achaian age, which Homer sang, this belief involves the further proposition that the poet was severed by a considerable interval of time from the subjects of his verse. The last-named opinion depends very much upon the first; and the first chiefly, if not wholly, upon a perfectly vague tradition, which has no pretence to an historical character. . . . The question . . . has to be decided . . . by the internal evidence of the poems. This evidence, I venture to say, strongly supports the belief that Homer was an European, and if an European, then certainly also an Achaian Greek: a Greek, that is to say, of the pre-Doric period, when the Achaian name prevailed and principally distinguished the race. . . . Until the 18th century of our era was near its close, it may be said that all generations had believed Troy was actually Troy, and Homer in the main Homer; neither taking the one for a fable, or (quaintest of all dreams) for a symbol of solar phenomena, nor resolving the other into a multiform assemblage of successive bards, whose verses were at length pieced together by a clever literary tailor. . . . After slighter premonitory movements, it was Wolf that made, by the publication of his ‘Prolegomena’ in 1795, the serious attack. . . . Wolf maintained that available writing was not known at, or till long after, the period of their composition; and that works of

such length, not intrusted to the custody of written characters, could not have been transmitted through a course of generations with any approach to fidelity. Therefore they could only be a number of separate songs, brought together at a later date.”—W. E. Gladstone, *Homer (Literature primers)*, ch. 1-2.—“Homeric geography is entirely pre-Dorian. Total unconsciousness of any such event as the Dorian invasion reigns both in the Iliad and Odyssey. . . . A silence so remarkable can be explained only by the simple supposition that when they were composed the revolution in question had not yet occurred. Other circumstances confirm this view.”—A. M. Clerke, *Familiar studies in Homer*, ch. 1.—“It is . . . in the discoveries of Dr. Schliemann that we have the impulse which seems to be sending the balance over towards the belief in the European instead of in the Asiatic origin of the poems. We now know that at the very point which Homer makes the chief royal city of Greece there did, in fact, exist a civilisation which did, in fact, offer just the conditions for the rise of a poetry such as the Homeric—a great city ‘rich in gold,’ with a cultivation of the material arts such as is wont to go hand in hand with the growth of poetry [see GREECE: Mycenæ and its kings; ÆGEAN CIVILIZATION: Excavations and antiquities: Mycenæan area; Cretan area]. . . . It is no longer possible to doubt that the world which the poems described was one which really existed in the place where they put it. Even in details the poems have received striking illustration from the remains of Mykenai. . . . It appears that we may date the oldest part of the Iliad at least to some time before the Dorian invasion, which, according to the traditional chronology, took place about 1000 B.C. . . . But the poems can hardly be much earlier than the invasion; for there are various signs which indicate that the civilisation which they depict had made some advance beyond that of which we find the material remains in the ‘shaft tombs,’ discovered by Dr. Schliemann in the Acropolis of Mykenai. And the date of these has now been fixed by Mr. Petrie, from comparison with Egyptian remains, at about 1150. We can therefore hardly be far wrong, if the poems were composed in Achaian Greece, in dating their origin at about 1050 B.C. There still remains the question of the historical basis which may underlie the story of the Iliad. The poem may give us a true picture of Achaian Greece and its civilisation, and yet be no proof that the armies of Agamemnon fought beneath the walls of Troy. But here again the discoveries of recent years, and notably those of Schliemann at Hissarlik, have tended on the whole to confirm the belief that there is a historic reality behind the tale of Troy. . . . The hypothesis that the Iliad and Odyssey are the work of more than one poet . . . is one which has been gaining ground ever since it was seriously taken up and argued at length by Wolf in his famous ‘Prolegomena,’ just a century ago. But it has from the first encountered strong opposition, and is still regarded, in England at least, as the heretical view.”—W. Leaf, *Companion to the Iliad, introduction*.—“It seems clear that the author or authors of the Iliad and Odyssey lived long before the time when Æolian, Ionian, Dorian, were the three great tribal names of Greece, and far from the coast on which these three names were attached to successive portions of territory. If we are to decide the ancient controversy about the birthplace of Homer, we must turn away from Asia, and set ourselves to consider the claims of three districts of Greece proper: Thessaly, the

home of the chief hero and the most ancient worship; Bœotia, the ancient seat of the Muses, and the first in the very ancient (if not actually Homeric) muster-roll of the ships; and Argolis, the seat of Achæan empire."—D. B. Monro, *Homer and the early history of Greece (English Historical Review, Jan., 1886)*.—"I hold that the original nucleus of the Iliad was due to a single Achæan poet, living in Thessaly before the immigration which partly displaced the primitive Hellenes there. This primary Iliad may have been as old as the eleventh century B.C. It was afterwards brought by Achæan emigrants to Ionia, and there enlarged by successive Ionian poets. The original nucleus of the Odyssey was also composed, probably, in Greece proper, before the Dorian conquest of the Peloponnesus; was carried to Ionia by emigrants whom the conquerors drove out; and was there expanded into an epic which blends the local traits of its origin with the spirit of Ionian adventure and Ionian society."—R. C. Jebb, *Growth and influence of classical Greek poetry, p. 14*.—"We accept the Iliad as one epic by one hand. The inconsistencies which are the basis of the opposite theory seem to us reconcilable in many places, in others greatly exaggerated. . . . To us the hypothesis of a crowd of great harmonious poets, working for centuries at the Iliad, and sinking their own fame and identity in Homer's, appears more difficult of belief than the opinion that one great poet may make occasional slips and blunders." As for the Odyssey, "we have . . . to deal with critics who do not recognise the unity, the marshalling of incidents towards a given end. We have to do with critics who find, in place of unity, patchwork and compilation, and evident traces of diverse dates, and diverse places of composition. Thus argument is inefficient, demonstration is impossible, and the final judge must be the opinion of the most trustworthy literary critics and of literary tradition. These are unanimous, as against the 'microscope-men,' in favor of the unity of the Odyssey."—A. HONDURAS: Geographic description.—Honduras "third in size of the Isthmian republics [with an area of 44,275 square miles, and a population of 637,114 in 1921] is bounded on the west and southwest by Guatemala and Salvador, and is conterminous eastwards with Nicaragua. On the Atlantic side it has an extensive coast-line facing the Gulf of Mexico, and extending from the Gulf of Honduras on the Guatemalan frontier for about 400 miles nearly to Cape Gracias-à-Dios. But the land tapers rapidly southwards in the direction of the Pacific, and here the coast-line is contracted to about 60 miles, enclosing the greater part of the magnificent inlet of Fonseca Bay. Honduras thus presents the outlines of an irregular triangle, with its apex on the Pacific and its base on the Atlantic Ocean."—*Stanford's compendium of geography: Central and South America, v. 2, p. 195*.—"The limits of the State are, however, almost everywhere indicated, not by conventional lines as elsewhere, but by such natural features as mountains and river valleys. In the northwest it is separated from Guatemala by a winding frontier, which, while assigning to Honduras the Guatemalan valley of Copan, coincides in a general way with the crests of the Merendon, Espiritu Santo and Grita ranges, beyond which it follows the course of the Rio Tinto to a secondary inlet of Honduras Bay. Towards Salvador the frontier is formed mainly by the rivers Sumpul, Lempa, Tonola and Goascoian, and towards Nicaragua by the Rio Negro on the Pacific side, and by the Ocotol and Segovia on the Atlantic slope, the common waterparting being indicated by the Dipilto Range."—E. Reclus, *Universal geography: Mexico, Central America, and West Indies, v. 17, p. 256*.—See also CENTRAL AMERICA: Map.

ALSO IN: H. Mill, *International geography, p. 784*.—D. G. Munro, *Five republics of Central America, pp. 119-120*.

Origin of name.—"The very name of Honduras recalls the times of the discovery, when Spanish Pilots, advancing cautiously along the coasts, reported shallow-soundings (Honduras) in the waters at the head of Honduras Bay. Columbus . . . ran great risks amid the surrounding reefs and shoals. But its present name was given to the seaboard not by Columbus, but by Bartholomew de las Casas, who in his 'Discovery of the West Indies by the Spaniards,' speaks of the land of 'Hondure,' as if this name were of Indian origin. Twenty-one years later, at the time of Fernan Cortes' famous expedition across Yucatan, the country was known to the Spaniards by the name of Hibueras or Higueras, and it has also been called 'New Estremadura.'"—E. Reclus, *Universal geography: Mexico, Central America, and West Indies, v. 17, p. 255*.

1900-1915.—Revolution: Overthrow of Policarpo Bonilla by Manuel Bonilla.—War.—“In 1900, Manuel Bonilla headed a successful revolution against Policarpo Bonilla, an understudy and puppet of Zelaya [of Nicaragua. Dr. Juan Angel] Arias became President long enough for Bonilla to be ‘elected.’ Policarpo Bonilla, the former President, was thrown into prison where he was kept till 1906. By this time Zelaya was again dissatisfied and sent a general to invade Honduras.”—C. L. Jones, *Caribbean interests of the United States*, p. 166.—“In 1907, as a result of a quarrel between Bonilla and President Zelaya of Nicaragua, the latter sent an army into Honduras to aid a revolutionary movement headed by Miguel Dávila. Salvador, fearing the increase of Zelaya’s influence, came to the aid of Bonilla, but was unable to prevent the complete victory of the revolution. Zelaya now threatened to attack Salvador, and the president of that country, in league with Guatemala, prepared to support a counter revolution in Honduras. A general Central American war would undoubtedly have followed, had not the United States and Mexico jointly interposed their mediation and suggested that all of the republics of the Isthmus send representatives to Washington to discuss the questions at issue between them. . . . One of the most important conventions adopted by the delegates of the five countries provided for the complete neutrality of Honduras and the abstention of her government from all participation in the conflicts between the other governments of the Isthmus. This treaty had little effect for the time being on the situation of Honduras, for nearby countries encouraged and materially assisted a number of uprisings against the government of Dávila during the four years following 1907. Zelaya helped his ally to suppress these, but when the Nicaraguan dictator himself fell, the fate of the administration which he had protected in Honduras was sealed. Manuel Bonilla invaded the Republic from the North Coast in the latter part of 1910, and decisively defeated Dávila’s troops after a few weeks of fighting. When it was evident that the revolutionists were gaining the upper hand, a peace conference was arranged through the mediation of the United States, and both factions agreed to place the control of affairs provisionally in the hands of Dr. Francisco Bertrand. In the election which followed, Bonilla was made president by an almost unanimous vote. He held office until his death in 1913, when the vice-president, Dr. Bertrand, succeeded him.”—D. G. Munro, *Five republics of Central America*, pp. 123-124.—Dr. Bertrand was reelected in 1915 for the term, 1916-1920.

1919-1920.—Revolution.—Resignation of President Bertrand.—General Gutierrez elected president.—President Bertrand’s term of office expired in 1920. The opponents of his administration, claiming that it would be impossible to secure a fair election, took up arms against the government. The revolution began in July, 1919, and the rebels under the leadership of General Lopez Gutierrez continued in the field with varying success until September when President Bertrand resigned and fled. General Lopez Gutierrez assumed charge of affairs, acting almost as dictator. Dr. Nazario Sorano and General Lopez Gutierrez himself were the candidates. The latter was chosen by an overwhelming majority.

1921-1922.—Member of federation of Central America.—Dissolution of provisional federal council.—Sovereign republic. See CENTRAL AMERICA: 1921; 1921 (October); 1922 (January-February); CENTRAL AMERICA, CONSTITUTION OF; GUATEMALA: 1921.

1922.—Protest against Swan island occupation.—Radio communication.—Tri-party Treaty.—In April, 1922, Honduras entered a protest at Washington, against the occupation of the Swan islands by the United Fruit Company, an American corporation. The islands, which are small, are in the Caribbean sea, about 140 miles from the coast of the Honduras republic, which lays claim to their ownership. The work of establishing radio communication with the United States was begun toward the close of the summer. In order to cope with the border troubles which perplexed all three countries a treaty entered into by Nicaragua, Salvador and Honduras was signed in the Gulf of Fonseca, August 22, and provided for united action in checking rebel bandits within their borders.—See also CENTRAL AMERICA: 1922 (March-August); GUATEMALA: 1922; NICARAGUA: 1922 (August).

HONDURAS, British (formerly called Belize or Balize), British Crown colony in Central America forms a slice of land off the northeast coast of Guatemala and lying between that country and Yucatan. Its greatest length is one hundred and seventy-four miles and its greatest width sixty-eight miles, and, with the adjacent cays [keys], contains an area of about eight thousand five hundred and ninety-two square miles.—N. O.

Winter, *Guatemala and her people of to-day*, p. 237.—In 1921 the population numbered 45,317.—See also BRITISH EMPIRE: Extent; CENTRAL AMERICA: Map.

Aborigines. See MAYAS.

1502-1733.—Discovery.—Origin of name.—Exploits of Peter Wallace.—Settlement.—“Columbus in 1502, on his fourth voyage, explored the entire coast of Central America in his search for a strait which would lead him to India and the East [see AMERICA: 1498-1505]; but the first settlement of what is now British Honduras was not effected until more than a century later. From their rendezvous at Tortuga, off the north coast of Hispaniola, buccaneers of all nationalities periodically visited the coast.”—A. E. Aspinall, *West Indies and Guiana*, p. 114.—“A halo of romance surrounded the early history of British Honduras, legend assigning this region as the scene of many a daring exploit, many a riotous orgie, in the good old times when the adventurous sons of Albion roamed the Caribbean, partly under the protection of their own dreaded black flag and sometimes under that of the country of their birth. . . . The central hero of this romance was a Scottish rover named Wallace or Wallis, ‘who so distinguished himself by acts of bravery and desperation that his name became a terror to the Spaniards.’ His name is supposed to survive in that of the town of Belize which is considered [by some] a Spanish corruption of Wallis. In the Spanish there is no W, and Wallis became Vallis, and as V is sounded by Spaniards almost as B, the transition to Ballis, Balize and finally Belize is easily understood.”—A. R. Gibbs, *British Honduras*, p. 21.—“Others, however, claim that the capital derives its name from the French *balise* or beacon, and it is quite likely that a signal fire was used in early days to mark the entrance to the river.”—A. E. Aspinall, *West Indies and Guiana*, p. 114.—“Peter Wallace, with eighty companions, was the first to enter the port of Belize, which name was originally given to the whole settlement. These men immediately erected houses at that place enclosed by rude palisades for defence. From there they set out on their expeditions after stray merchantmen. It was not long, however, before the shrewd Scotchman discovered that there was more and surer money in marketing the native woods than in the uncertain and dangerous occupation of robbing ships. Logwood at that time was in such demand for the manufacture of dyes that it sometimes brought as much as one hundred dollars a ton. . . . So prosperous had this colony become by 1733 that Yucatan sent troops and attempted to drive away the colonists by force.”—N. O. Winter, *Guatemala and her people of to-day*, p. 236.

ALSO IN: E. G. Squier, *States of Central America*, p. 576.

1754.—Settlement attacked by Spaniards.—The Spaniards made many more attempts to expel the settlers, the most formidable of these being in 1754. “The Spaniards were aware that an attack upon the settlement from the sea was unlikely to be successful. The intricate navigation amongst the islands and shoals of the Bay, better known to the Baymen than to them, was an obstacle to any maritime force. Exasperated, however, by the continued prosperity of the British wood-cutters, they again, in the year 1754, determined on a land expedition to drive out the persistent intruders from their territory. . . . The Spaniards mustered to the number of 1500, and

marched upon the Old River Works, and reached Labouring Creek . . . unopposed. But here they were met by a couple of hundred cutters with their slaves, and defeated.”—A. R. Gibbs, *British Honduras*, pp. 36-37.

1763.—Treaty between England and Spain.—“The log-cutters were not again disturbed for a number of years; and their position became so well established, that, in the treaty between England and Spain in 1763, the former power while agreeing to demolish ‘all fortifications which English subjects had erected in the Bay of Honduras, and other places of the territory of Spain in that part of the world,’ nevertheless insisted upon a clause in favor of the cutters of logwood, in the following terms: ‘And his Catholic majesty shall not permit his Britannic majesty’s subjects or their workmen to be disturbed or molested, under any pretext whatever, in their said places of cutting and loading logwood; and for this purpose they may build without hindrance, and occupy without interruption, the houses and magazines necessary for their families and effects.’ . . . To insure the observance of this treaty, the British Government sent out Sir William Burnaby, who not only settled the limits within which the English were to confine their wood-cutting operations, but also drew up for their government a code of regulations or laws.”—E. G. Squier, *States of Central America*, p. 577.

1779.—Settlement attacked by Spaniards.—In 1779 the Spaniards, becoming alarmed at the way in which the settlers were abusing the privileges conceded to them by the treaty of 1763, suddenly fell upon the establishment. They were successful in their attack and taking the inhabitants prisoners, sent them to Havana. The British government at once made strong representations to the Spanish government but nothing was done and for two or three years the settlement seems to have been abandoned.

1782-1783.—Peace of Versailles.—Logwood provisions.—“The British Government had no intention of relinquishing the settlement. Its importance had come to be appreciated, at least in certain quarters, as the more explicit terms of the Treaty of Versailles testify. That treaty was executed [1783] on the termination of the American War, and its article vi. contains the following provisions:—‘The intention of the high contracting parties being to prevent, as much as possible, all causes of complaint and misunderstanding heretofore occasioned by the cutting of wood for dyeing, or logwood, and several English settlements having been formed *under that pretence* upon the Spanish Continent, it is expressly agreed that his Britannic Majesty’s subjects shall have the right of cutting, loading, and carrying away logwood lying between the River Wallis or Belize and Rio Hondo.’ The article goes on to secure to the settlers privilege to build the necessary houses and magazines for carrying on their trade, ‘provided that these stipulations shall not be considered as derogating in any wise from his Catholic Majesty’s rights.’ In the same year the garrisons at Black River and Fort Dalling were captured by the Spaniards, who withdrew to Cape Gracias; but a force under Colonel Marcus Despard and Major Laurie retook the positions immediately afterwards. The liberation of the captives at Havana was at length affected by the representations of our [British] government. . . . Some few are said to have returned at once to Belize, but the majority went further south to the settlements on the Mosquito Shore, which is a little extraordinary in view of the events oc-

curing in that locality narrated in the preceding paragraph. Not long after the treaty of 1783 was executed, the settlement began to resume its former appearance. . . . The colony would now appear to have retained its position previous to the disaster of 1770. On the 14th of July, 1786, additional articles were added by the Convention of London to the treaty of 1783, granting more extended boundaries to the south. 'The Catholic king [wished] . . . to prove, on his side, to the king of Great Britain, the sincerity of his sentiments of friendship towards his Majesty and the British nation.' The English line now began from the sea, and, taking the centre, proceeded up the Sibun (Sherboon or Javon) River to its source, then across to the intersection of the River Wallis (Belize), thus adding nine miles of coast-line to the settlement. The right of cutting not dyewoods only, but, for the first time, 'not excepting even mahogany,' was granted by article iii., and also permission to gather the fruits of the earth purely natural; but the same article expressly stipulates that this grant is to be no pretext for establishing any plantations of 'sugar, coffee, cocoa, or other like articles,' mills, or machines, and reserves as usual sovereign rights to the crown of Spain, which are also again reserved in article vii. of the same convention."—A. R. Gibbs, *British Honduras*, pp. 44-47.

1798-1850.—Treaties establishing British authority over Belize.—The logcutters "seem to have given great annoyance to their Spanish neighbors, who eagerly availed themselves of the breaking out of war between the two countries in 1796, and the consequent suspension of treaty obligations, to concert a formidable attack on Belize, with a view to a complete annihilation of the establishment. They concentrated a force of two thousand men at Campeachy, which, under the command of General O'Neill, set sail in thirteen vessels for Belize, and arrived off the place July 10th, 1798. The settlers, in anticipation of their approach, and effectively aided by the English sloop of war Merlin, had strongly fortified a small island off the harbor, called St. George's Cay. From this position they maintained a determined and successful resistance against the Spanish force, which, after a contest of two days' duration, was obliged to abandon its object and retire to Campeachy. This was the last attempt to dislodge the English, who took new courage from their success, and, it may be presumed, did not thereafter pay much regard to the stipulations of previous treaties. It is proper to remark that the defeat of the Spanish attack of 1798 has been adduced as an act of conquest, thereby permanently establishing British sovereignty over the territory. . . . In 1814, Great Britain, by a new treaty with Spain, revived and re-enacted all the provisions of the treaty of 1786 . . . [and] as late as 1817-19, the acts of Parliament relating to Belize always refer to it as 'a settlement for certain purposes, in the possession and under the protection of his majesty, etc.' The 'certain purposes' here referred to are clearly those set forth in the treaty of 1786, and revived in 1814. But this is not all; after the independence of the Spanish American provinces, Great Britain, not knowing within which new republic the territory of Belize might fall, sought to secure her rights there by incorporating the provisions of the treaty of 1786 in all of her treaties with the new states. It was, in fact, incorporated in her treaty of 1826 with Mexico; was included in the project of a treaty which she submitted to Señor Zebadua, the representative of the Republic of Central Amer-

ica in London, in 1831, but which failed from the want of adequate powers to negotiate on the part of that representative; and was incorporated also in the project of a treaty submitted to New Granada, in 1825, from which it was omitted by New Granada, as relating to territory beyond and never within her jurisdiction. Great Britain, therefore, [rests her claim on the rights conveyed by] the treaties already quoted, which define with the greatest precision the area within which these qualified rights may be exercised [written in 1855]. But it appears from a dispatch of Sir George Gray, Colonial Secretary, dated in 1836, that pretensions had been then set up to an additional wide extent of territory, including the entire coast as far south as the River Sarstoon, and inland to the meridian of Garbutt's Falls, on the River Belize."—R. G. Squier, *States of Central America*, pp. 581-583.—From 1836 onward, for over twenty years, Belize was not treated as part of Honduras, but was governed by a superintendent and local assembly, as a dependency of Jamaica. The territory between the Belize and Sarstoon rivers was claimed by the British in 1836. The British title was questioned in some quarters. In 1850, however, the territory of Belize was excepted from the Clayton-Bulwer Treaty, which bound both powers not to "occupy, fortify or colonize any part of Central America," and was thus tacitly recognized as a British possession.—See also NICARAGUA, 1850.

1850-1859.—Boundary Treaty with Guatemala.—For some years after the date of the Clayton-Bulwer Treaty, 1850, Belize, though recognized as British territory, occupied the same rather anomalous position as before. In 1850, however, by a treaty with Guatemala, the boundaries between British Honduras and Guatemala were definitely fixed; both British Honduras and Belize were formally decreed to be British, and Belize was thereafter made part of the colony. In the same year, the Bay islands, over which British authority had been extended, were recognized as part of the republic of Honduras.

1862-1910.—Organization of colonial government.—Currency.—Railway.—Sale of crown timber.—As far back as 1836 the settlers had "managed their own affairs. From 1797 superintendents were regularly appointed by the Home Government. An Executive Council was established in 1839 to assist the Superintendent, and in 1853 a Legislative Assembly was constituted, consisting of eighteen elected and three nominated members. The settlement was declared a Colony on May 12, 1862, and a Lieutenant-Governor was appointed subordinate to the Governor of Jamaica. In 1870 the Legislative Assembly was replaced by a Legislative Council, which now [1922] consists of five official and seven unofficial members, with the Governor as President. On October 31, 1884, Letters Patent were proclaimed, constituting the office of Governor and Commander-in-Chief, which rendered the Colony independent of Jamaica. For administration the Colony is divided into the six districts. . . . By Ordinance No. 31 of 1864 the currency has been established on a gold basis, the United States gold dollar being adopted as the standard coin. Gold coins of the United States Mint are legal tender for the amounts of their respective denominations in standard dollars; also the British sovereign and half-sovereign for the amounts of \$4.867 and \$2.433 respectively. . . . A short railway leads from the town of Stann Creek, 25 miles inland. The first section was opened in 1908. The line was practically completed in 1910.

. . . A contract was signed in December, 1904, for the sale of the pine trees on Crown Land to Mr. B. Chipley, a citizen of the United States, at a price of 1 cent per tree.—W. H. Koebel, *Anglo-South American Handbook including Central America, Mexico and Cuba for 1922*, pp. 197, 199-201.

**HONG KONG**, or *Hiang Kiang* (*fragrant lagoon*), island situated off the southeast coast of China, near the mouth of the Canton river. By the Treaty of Nanking, at the close of the "Opium War" (see CHINA: 1839-1842), the island of Hong-Kong was ceded by China to Great Britain. "It is not without appropriateness that Hong-Kong has been styled the Gibraltar of the East. . . . For just as Gibraltar dominates the entrance to the Mediterranean Sea, and opens the strategical gate from the west to our dominions in India, so does Hong-Kong commercially dominate the entrance to the China Seas, and strategically close the road to India from the far East. Like Gibraltar, it lies in immediate contiguity to the mainland of an alien power; it has the same physical aspects—a rocky height rising abruptly from the sea with the town at the foot of its slopes."—*Her Majesty's colonies (Colonial and Indian exhibition, 1886, p. 485)*.—"By the Convention of Peking [1860], the promontory of Kowloon, opposite the island of Hong-Kong on the northern side of the harbour, was definitely ceded to Her Majesty's Government, having been already leased to them by the authorities at Canton. . . . Hong-Kong is a Crown Colony of the ordinary type, the local administration being in the hands of a Governor, an Executive Council, and a Legislative Council. . . . Along the northern shore the city of Victoria stretches for some 4 miles, and between the town and the mainland is one of the finest and most picturesque harbours in the world, with a water area of about 10 miles. As the promontory of Kowloon lies directly opposite, both sides of the harbour are in British hands."—C. P. Lucas, *Historical geography of the British colonies*, v. 1, ch. 4, sect. 2.—Hong Kong island is 32 square miles in area; the total area of the territory, insular and mainland, is about 391 square miles. "The port is free [except for a tax on opium and intoxicating liquor. The imports for 1920, approximated 131,719,952 taels, and the exports, 45,804,536]. . . . Considerably over half a million vessels enter and leave annually; of ocean-going vessels the proportions under the British flag and under foreign flags are not far from equal, with the balance generally in favour of foreign ships."—A. J. Herbertson and O. J. R. Howarth, *Oxford survey of the British empire: Asia*, pp. 439-446.—The total civil population in 1921 was 625,166.—See also BRITISH EMPIRE: Extent; CHINA: Map.

1898.—British lease of territory on the mainland. See CHINA: 1898 (April-August).

1911-1912.—Establishment of university.—The Hong Kong university, which came into existence in 1911, was built on the foundation of the Hong Kong school of medicine for Chinese, which had been in existence from the year 1887. In 1908 the school of medicine received \$60,000 as bequests from the estates of two Chinese gentlemen, and a building site from the government. The idea of

a university, for Chinese students, however, had been discussed for about three years, and it was suggested that the school of medicine should become the medical faculty of the university. The Hong Kong government accordingly presented an additional site of twenty-three acres; the buildings were provided by one person, and about the end of 1909 public subscription provided an endowment and equipment fund of more than a million and a quarter of dollars. To this fund the Chinese government, the merchants of Hong Kong, the people of Canton and other provinces, and Chinese residents abroad, contributed generously. The university is still small—in 1921 it had accommodations for 500 students only—but the degrees conferred are equal to those of the University of London.

**HOSEA**, or Hoshea, Hebrew prophet. See **JEWS: Religion and the prophets.**

**HOSEIN**, or Husein (d. 680), grandson of Mohammed and son of Ali. His martyrdom forms one of the tragic pictures of the early caliphate, and is largely responsible for the schism which has existed from his day among the followers of Islam.—See also **CALIPHATE: 680.**

**HOSKINS**, Sir Arthur Reginald (1871- ), British major-general. Member of Dongola and Nile expeditions; served in the World War, 1914-1918; commander-in-chief of the East African forces, 1917. See **WORLD WAR: 1916: VII. African theater: a, 7; a, 10; a, 14.**

**HOSPES, HOSPITES, HOSPITIUM.**—"In the earlier stages of society, especially in Greece and Italy . . . it became common for a person who was engaged in commerce, or any other occupation which might compel him to visit a foreign country, to form previously a connection with a citizen of that country, who might be ready to receive him as a friend and act as his protector. Such a connection was always strictly reciprocal. . . . An alliance of this description was termed *Hospitium*, the parties who concluded it were termed *Hospites* in relation to each other, and thus the word *Hospes* bore a double signification, denoting, according to circumstances, either an entertainer or a guest. . . . In process of time, among both the Greeks and Romans, it became common for a state, when it desired to pay a marked compliment to any individual, to pass a resolution declaring him the *Hospes* of the whole community."—W. Ramsay, *Manual of Roman antiquity*, ch. 3.

**HOSPITALLERS OF ST. JOHN OF JERUSALEM, Knights: 1118-1310.**—Origin and rise of the order.—"Some citizens of Amalfi, in Italy, who traded to the East, had [some time before the first crusade], with the permission of the Egyptian khaleefeh, built a convent near the church of the Resurrection [at Jerusalem], which was dedicated to the Virgin, and named Santa Maria de Latina, whose abbot and monks were to receive and entertain pilgrims from the West. A nunnery was afterwards added, and as the confluence of pilgrims increased, a new 'hospitium' was erected, dedicated to St. John Eleëmon ('compassionate'), a former patriarch of Alexandria, or, as is asserted, with perhaps more probability, to St. John the Baptist. This hospital was sup-

ported by the bounty of the abbot of Sta. Maria and the alms of the faithful, and the sick and poor of the pilgrims here met with attention and kindness. At the time of the taking of Jerusalem, Gerhard, a native of Provence, presided over the hospital; and the care taken by him and his brethren of the sick and wounded of the crusaders won them universal favour. Godfrey bestowed on them his domain of Monboire, in Brabant; his example was followed by others, and the brethren of the Hospital soon found themselves rich enough to separate from the monastery. They adopted the rule of the Augustinian canons, and assumed for their habit a black mantle, with a white cross of eight points on the left breast. Many knights who had come to Asia to combat the Infidels now laid aside their swords, and, as brethren of the Hospital, devoted themselves to the tending of the sick and relieving of the poor. Among these was a knight of Dauphiné, named Raymond Dupuy, who, on the death of Gerhard, was chosen to be his successor in office. Raymond, in the year 1118, gave the order its first regular organization."—T. Keightley, *Crusaders*, ch. 2.—To Raymond Dupuy "the Order owed its distinctly military character, and that wonderful organization, combining the care of the sick and poor with the profession of arms, which characterized the Knights of St. John during all their subsequent history. . . . A new and revised constitution was drawn up, by which it was provided that there should be three classes of members. First, the Knights, who should bear arms and form a military body for service in the field against the enemies of Christ in general, and of the kingdom of Jerusalem in particular. These were to be of necessity men of noble or gentle birth. Secondly, the Clergy, or Chaplains. . . . Thirdly, the Serving Brethren, who were not required to be men of rank, and who acted as Esquires to the Knights, and assisted in the care of the hospitals. All persons of these three classes were considered alike members of the Order, and took the usual three monastic vows, and wore the armorial bearings of the Order, and enjoyed its rights and privileges. As the Order spread and the number of its members and convents increased, it was found desirable to divide it further into nations or 'Langes' [tongues, or languages], of which there were ultimately seven, viz., those of Provence, Auvergne, France, Italy, Aragon, Germany, and England. The habit was a black robe with a cowl having a cross of white linen of eight points upon the left breast. This was at first worn by all Hospitaliers, to whichever of the three classes they belonged; but Pope Alexander IV. afterwards ordered that the Knights should be distinguished by a white cross upon a red ground. . . . It was not long before the new Order found a field for the exercise of its arms. . . . From this time the Hospitaliers were always found in the ranks of the Christian army in every battle that was fought with the Moslems, and the fame of their gallantry and bravery soon spread far and wide, and attracted fresh recruits to their ranks from the noblest families of every country of Europe. They became the right hand of the King of Jerusalem," sharing the fortunes of the nominal kingdom for nearly two centuries, and almost sharing its ultimate fate. The handful who escaped from Acre in 1291 (see **JERUSALEM: 1291**) took refuge in Cyprus and rallied there the Knights scattered in other lands. Rebuilding and fortifying the town of Limisso, they made that their citadel and capital for a few years, finding a new vocation for their pious valor. They

now took up war upon the naval side, and turned their arms specially against the Moslem pirates of the Mediterranean. They fitted out armed ships "which began to cruise between Palestine and European ports, conveying pilgrims, rescuing captives, and engaging and capturing the enemy's galleys." But not finding in Cyprus the independence they desired, the Knights, ere long, established themselves in a more satisfactory home on the island of Rhodes.—F. C. Woodhouse, *Military religious orders of the Middle Ages*, pt. 1, ch. 3-6.

1310.—Conquest and occupation of Rhodes.—"The most important conquest of the time . . . was that of Rhodes, by the Knights Hospitallers of St. John of Jerusalem, both from its durability and from the renown of the conquerors. The knights had settled in Cyprus after they had been expelled from Acre, but they were soon discontented to remain as vassals of the King of Cyprus. They aspired to form a sovereign state, but it was not easy to make any conquests from the Infidels in a position which they could hope to maintain for any length of time. They therefore solicited permission from the Pope to turn their arms against the Greeks. His Holiness applauded their Christian zeal, and bestowed on them innumerable blessings and indulgences, besides nine thousand ducats to aid their enterprise. Under the pretext of a crusade for the recovery of Christ's tomb, the knights collected a force with which they besieged Rhodes. So great was their contempt for the Greek emperor that they sent an embassy to Constantinople, requiring Adronicus to withdraw his garrisons, and cede the island and its dependencies to them as feudatories, offering to supply him with a subsidiary force of three hundred cavalry. Adronicus dismissed the ambassadors, and sent an army to raise the siege; but his troops were defeated, and the knights took the city of Rhodes on the 15th August, 1310. As sovereigns of this beautiful island, they were long the bulwark of Christian Europe against the Turkish power; and the memory of the chivalrous youth who for successive ages found an early tomb at this verge of the Christian world, will long shed a romantic colouring on the history of Rhodes. They sustained the declining glory of a state of society that was hastening to become a vision of the past; they were the heroes of a class of which the Norse sea-kings had been the demigods. The little realm they governed as an independent state consisted of Rhodes, with the neighbouring islands of Kos, Kalymnos, Syme, Leros, Nisyros, Telos, and Chalke; on the opposite continent they possessed the classic city of Halicarnassus, and several strong forts, of which the pictureque ruins still overhang the sea."—G. Finlay, *History of the Byzantine and Greek empires*, v. 2, bk. 4, ch. 2.

1482.—Treatment of the Turkish Prince Jemshid or Zizim. See TURKEY: 1481-1520.

1522.—Siege and surrender of Rhodes to the Turks.—In 1522, the Turkish sultan, Solyman the Magnificent, "turned his victorious arms against the island of Rhodes, the seat at that time of the Knights of St. John of Jerusalem. This small state he attacked with such a numerous army as the lords of Asia have been accustomed, in every age, to bring into the field. Two hundred thou-

sand men, and a fleet of 400 sail, appeared against a town defended by a garrison consisting of 5,000 soldiers and 600 knights, under the command of Villiers de L'Isle Adam, the grand-master, whose wisdom and valour rendered him worthy of that station at such a dangerous juncture. No sooner did he begin to suspect the destination of Solyman's vast armaments than he despatched messengers to all the Christian courts, imploring their aid against the common enemy. But though every prince in that age acknowledged Rhodes to be the great bulwark of Christendom in the East, and trusted to the gallantry of its knights as the best security against the progress of the Ottoman arms,—though Adrian, with a zeal which became the head and father of the Church, exhorted the contending powers to forget their private quarrels, and, by uniting their arms, to prevent the infidels from destroying a society which did honour to the Christian name,—yet so violent and implacable was the animosity of both parties [in the wars of the Emperor Charles V. and Francis I. of France], that, regardless of the danger to which they exposed all Europe, . . . they suffered Solyman to carry on his operations against Rhodes without disturbance. The grand-master, after incredible efforts of courage, of patience, and of military conduct, during a siege of six months,—after sustaining many assaults, and disputing every post with amazing obstinacy,—was obliged at last to yield to numbers; and, having obtained an honourable capitulation from the sultan, who admired and respected his virtue, he surrendered the town, which was reduced to a heap of rubbish, and destitute of every resource. Charles and Francis, ashamed of having occasioned such a loss to Christendom by their ambitious contests, endeavoured to throw the blame of it on each other, while all Europe, with greater justice, imputed it equally to both. The emperor, by way of reparation, granted the Knights of St. John the small island of Malta, in which they fixed their residence, retaining, though with less power and splendour, their ancient spirit and implacable enmity to the infidels."—W. Robertson, *History of the reign of Charles V.*, v. 1, bk. 2.

ALSO IN: C. Torr, *Rhodes in modern times*, ch. 1.—J. S. Brewer, *Reign of Henry VIII*, v. 1, ch. 19.

1530-1565.—Occupation of Malta.—Improvement and fortification of the island.—Great siege.—Turks repelled.—"Malta, which had been annexed by Charles [the Fifth's] predecessors to Sicily, had descended to that monarch as part of the dominions of the crown of Aragon. In . . . ceding it to the Knights of St. John, the politic prince consulted his own interests quite as much as those of the order. He drew no revenue from the rocky isle, but, on the contrary, was charged with its defence against the Moorish corsairs, who made frequent descents on the spot, wasting the country, and dragging off the miserable people into slavery. By this transfer of the island to the military order of St. John, he not only relieved himself of all further expense on its account, but secured a permanent bulwark for the protection of his own dominions. . . . In October, 1530, L'Isle Adam and his brave associates took possession of their new domain. . . . It was not very long before the wilderness before them was to blossom like the rose, under their diligent culture. Earth was brought in large quantities, and at great cost, from Sicily. Terraces to receive it were hewn in the steep sides of the rock; and the soil, quickened by the ardent sun of Malta, was soon clothed with the glowing vegetation of the

South. . . . In a short time, too, the island bristled with fortifications, which, combined with its natural defences enabled its garrison to defy the attacks of the corsair. To these works was added the construction of suitable dwellings for the accommodation of the order. But it was long after, and not until the land had been desolated by the siege on which we are now to enter, that it was crowned with the stately edifices that eclipsed those of Rhodes itself, and made Malta the pride of the Mediterranean. . . . Again their galleys sailed forth to battle with the corsairs, and returned laden with the spoils of victory. . . . It was not long before the name of the Knights of Malta became as formidable on the southern shores of the Mediterranean as that of the Knights of Rhodes had been in the East." At length the Turkish sultan, Solymán the Magnificent, "resolved to signalize the close of his reign by driving the knights from Malta, as he had the commencement of it by driving them from Rhodes," and he made his preparations on a formidable scale. The grand-master of Malta, Jean Parisot de la Valette, had his spies at Constantinople, and was not long in ignorance of the Turkish project. He, too, prepared himself for the encounter with prodigious energy and forethought. He addressed appeals for help to all the Christian powers. "He summoned the knights absent in foreign lands to return to Malta, and take part with their brethren in the coming struggle. He imported large supplies of provisions and military stores from Sicily and Spain. He drilled the militia of the island, and formed an effective body of more than 3,000 men; to which was added a still greater number of Spanish and Italian troops. . . . The fortifications were put in repair, strengthened with outworks, and placed in the best condition for resisting the enemy. . . . The whole force which La Valette could muster in defence of the island amounted to about 9,000 men. This included 700 knights, of whom about 600 had already arrived [when the siege began]. The remainder were on their way, and joined him at a later period of the siege." The Turkish fleet made its appearance on the 18th of May, 1565. It comprised 130 royal galleys, with fifty of lesser size, and a number of transports. "The number of soldiers on board, independently of the mariners, and including 6,000 janizaries, was about 30,000,—the flower of the Ottoman army. . . . The command of the expedition was intrusted to two officers. One of these, Piali, was the same admiral who defeated the Spaniards at Gelves [see BARBARY STATES: 1543-1560]. He had the direction of the naval operations. The land forces were given to Mustapha, a veteran nearly 70 years of age. . . . The Turkish armada steered for the south-eastern quarter of the island, and cast anchor in the port of St. Thomas. The troops speedily disembarked, and spread themselves in detached bodies over the land, devastating the country. . . . It was decided, in the Turkish council of war, to begin operations with the siege of the castle of St. Elmo"—a small but strong fort, built at the point of a promontory which separates Port Musicette, on the west, from what is now known as Valetta harbor, then called the Great Port. The heroic defense of St. Elmo, where a mere handful of knights and soldiers withstood the whole army and navy of the Turks for an entire month, is one of the grand episodes of war in the 16th century. The few surviving defenders were overwhelmed in the final assault, which took place on the 23d of June. "The number of Christians who fell in this siege amounted to about 1,500. Of

these 123 were members of the order, and among them several of its most illustrious warriors. The Turkish loss is estimated at 8,000, at the head of whom stood Dragut," the famous pasha of Tripoli, who had joined the besiegers, with ships and men, and who had received a mortal wound in one of the assaults. After the loss of St. Elmo, "the strength of the order was . . . concentrated on the two narrow slips of land which run out from the eastern side of the Great Port. . . . The northern peninsula, occupied by the town of Il Borgo, and at the extreme point by the castle of St. Angelo, was defended by works stronger and in better condition than the fortifications of St. Elmo. . . . The parallel slip of land was crowned by the fort of St. Michael." Early in July, the Turks opened their batteries on both St. Angelo and St. Michael, and on the 15th they attempted the storming of the latter, but were bloodily repulsed, losing 3,000 or 4,000 men, according to the Christian account. Two weeks later they made a general assault and were again repelled. On August 25, the valiant knights, wasted and worn with watching and fighting, were relieved by long-promised re-enforcements from Sicily, and the disheartened Turks at once raised the siege. "The arms of Solymán II., during his long and glorious reign, met with no reverse so humiliating as his failure in the siege of Malta. . . . The waste of life was prodigious, amounting to more than 30,000 men. . . . Yet the loss in this siege fell most grievously on the Christians. Full 200 knights, 2,500 soldiers, and more than 7,000 inhabitants,—men, women, and children,—are said to have perished."—W. H. Prescott *History of the reign of Philip II*, bk. 4, ch. 2-5.—See also MALTA, ISLAND OF: 1530-1798.

ALSO IN: W. Porter, *History of the Knights of Malta*, v. 2, ch. 15-18.—S. Lane-Poole, *Story of the Barbary corsairs*, ch. 13.

1565-1878.—Decline and practical disappearance of the order.—"The Great Siege of 1565 was the last eminent exploit of the Order of St. John. From that time their fame rested rather on the laurels of the past than the deeds of the present. Rest and affluence produced gradually their usual consequences—diminished vigour and lessened independence. The 'esprit de corps' of the Knights became weaker after long years, in which there were no events to bind them together in united sympathies and common struggles. Many of them had become susceptible of bribery and petty jealousies. In 1789 the French Revolution burst out and aroused all European nations to some decided policy. The Order of St. John had received special favours from Louis XVI., and now showed their grateful appreciation of his kindness by cheerfully contributing a large portion of their revenue to assist him in his terrible emergencies. For this they suffered the confiscation of all the property of the Order in France, when the revolutionists obtained supreme power."—W. Tallack, *Malta*, sect. 8.—"In September, 1792, a decree was passed, by which the estates and property of the Order of St. John in France were annexed to the state. Many of the knights were seized, imprisoned, and executed as aristocrats. The principal house of the Order in Paris, called the Temple, was converted into a prison, and there the unfortunate Louis XVI. and his family were incarcerated. The Directory also did its best to destroy the Order in Germany and Italy. . . . All this time the Directory had agents in Malta, who were propagating revolutionary doctrines, and stirring up the lowest of the people to rebellion and violence. There were in the island 332 knights

(of whom many, however were aged and infirm), and about 6,000 troops. On June 9, 1798, the French fleet appeared before Malta, with Napoleon himself on board, and a few days after troops were landed, and began pillaging the country. They were at first successfully opposed by the soldiers of the Grand Master, but the seeds of sedition, which had been so freely sown, began to bear fruit, and the soldiers mutinied, and refused to obey their officers. All the outlying forts were taken, and the knights who commanded them, who were all French, were dragged before Napoleon. He accused them of taking up arms against their country, and declared that he would have them shot as traitors. Meanwhile sedition was rampant within the city. The people rose and attacked the palace of the Grand Master, and murdered several of the knights. They demanded that the island should be given up to the French, and finally opened the gates, and admitted Napoleon and his troops. After some delay, articles of capitulation were agreed upon, Malta was declared part of France, and all the knights were required to quit the island within three days. Napoleon sailed for Egypt on June 19, taking with him all the silver, gold, and jewels that could be collected from the churches and the treasury. . . . In the following September, 1798, Nelson besieged, and quickly obtained possession of the island, which has ever since remained in the hands of the English. In this way the ancient Order of St. John ceased to be a sovereign power, and practically its history came to an end. The last Grand Master, Baron Ferdinand von Hompesch, after the loss of Malta, retired to Trieste, and shortly afterwards abdicated and died at Montpellier, in 1805. Many of the knights, however, had in the mean time gone to Russia, and before the abdication of Hompesch, they elected the Emperor Paul Grand Master, who had for some time been protector of the Order. This election was undoubtedly irregular and void. By the terms of the Treaty of Amiens, in 1802, it was stipulated that Malta should be restored to the Order, but that there should be neither French nor English knights. But before the treaty could be carried into effect Napoleon returned from Elba, and war broke out again. By the treaty of Paris, in 1814, Malta was ceded to England. . . . In 1801, the assembly of the Knights at St. Petersburg . . . petitioned Pope Pius VII. to select a Grand Master from certain names which they sent. This he declined to do, but, some time afterwards, at the request of the Emperor Alexander, and the King of Naples, and without consulting the knights, the Pope appointed Count Giovanni di Tommasi Grand Master. He died in 1805, and no Grand Master has been since appointed. On his death-bed, Tommasi nominated the bailiff, Guevara Suardo, Lieutenant Master. . . . [Such] lieutenants have presided over an association of titular knights at Rome, which is styled 'the Sacred Council.' In 1814, the French knights assembled at Paris and elected a capitulatory commission for the government of the Order. . . . In or about the year 1826, the English 'Lange' of the Order of the Knights of Malta was revived. . . . A regular succession of Priors has been continued to the present time [1878], and the Duke of Manchester is the present Prior. The members of the Order devote themselves to relieving the poor, and assisting hospitals."—F. C. Woodhouse, *Military religious orders of the Middle Ages*, pt. 1, ch. 20.

1653.—Possession of St. Croix. See VIRGIN ISLANDS: Discovery and settlement.

1879.—Partial revival by Pope Leo XIII.—In 1870 Pope Leo XIII restored the title of grand master, which was bestowed upon Fra Giovanni Ceschi a Santa Croce. The headquarters of the order were established in Rome.

**HOUSE, or HUT, TAX**, tax of five shillings imposed by the British on each house in three districts of Sierra Leone in 1898. The tax was deprecated but not removed by the British Commission appointed to investigate the subsequent uprisings. See SIERRA LEONE: 1896.

**HOUSECARLS**.—"No English King or Ealdorman had hitherto kept a permanent military force in his pay. But Cnut [or Canute, 1018-1035] now organized a regular paid force, kept constantly under arms, and ready to march at a moment's notice. These were the famous Thingmen, the Housecarls, of whom we hear so much under Cnut and under his successors. . . . The Housecarls were in fact a standing army, and a standing army was an institution which later Kings and great Earls, English as well as Danish, found it to be their interest to continue. Under Cnut they formed a sort of military guild with the king at their head."—E. A. Freeman, *Norman conquest*, v. 1, ch. 6, sect. 2, and appendix, note kkk.—See also COMITATUS.

**HOUSEHOLD FRANCHISE**, extension of the suffrage in England, introduced by Disraeli in 1867. It conferred a Parliamentary vote on male householders of twelve months' residence. See ENGLAND: 1865-1868.

## HOUSING

**Outline of the problem.**—Different agencies interested.—Though the World War and the following period of readjustment tended to make the housing problem acute and bring it more to public notice, it had existed for some time previous. So far the agencies most active in supplying the need for more and better housing have been either employers, some division of the government, or privately organized housing companies. At first the private agencies were mainly philanthropic pioneers, but more recently housing has been undertaken on a business basis. The employers have been interested in housing most often when their factories were located in small towns, which could not of themselves supply sufficient dwellings; sometimes the entire community has been created by the employer. During the World War the United States government, as a large-scale employer of manufacturing labor, much of which was temporary, undertook to house many of its employees. One difficulty arising where the employer controls the dwellings of its workers is that in case of any industrial dispute the employer has an unfair advantage in having the power to evict from their homes, on very short notice, striking workers and their families or workers who are discharged because they have taken a stand disapproved of by the employer. But often housing by the employer has been necessary if the workers were to live within a convenient distance from the factory. Governmental housing in Europe has been chiefly a matter of municipal enterprise. While the technical problem of the economical construction of suitable dwellings is one of the most important, much of the following description, covering about twenty countries, has to do either with the financing and business organization of housing enterprises, or with the arrangement of the houses, thus touching upon city planning (see also CITY PLANNING), or with the temporary alleviation of a housing shortage by rent and tenancy regulations.

**Belgium.**—"In Brussels as in other large cities all over the world, there exists an acute shortage of dwelling houses and apartments. The popula-

tion of Greater Brussels, which, at the end of 1913 was about 800,000, now [1920] is estimated at about 830,000. Needless to say there has been no new construction during the period of German occupation, nor has there been any considerable resumption since the armistice. Before the war the municipality of Brussels organized a corporation for the construction of dwelling houses which were to become the property of the city at the expiration of a 99-year lease. This corporation had undertaken but little work when the war broke out, and it is estimated that there is now immediate need for the construction of 7,000 houses and apartments in the city. . . . The reconstruction of the devastated regions is divided into sectors with a representative of the Government in charge of each. . . . Belgium has good expropriation and excess condemnation laws, and is now working actively on a compulsory town planning law. It already has good housing and sanitary laws."—*Housing Betterment*, Feb., 1920, pp. 16-17, 37.—"An intensive campaign for the construction of cheap homes has been begun in Belgium on the initiative of an organization known as La Société Nationale des Habitations et Logements à Bon Marché, which has a capital of 100,000,000 francs and which is under supervision of the State. In Antwerp 125 of these habitations have just been completed in the populous quarter of Looibroek, due to the intervention of the communal authorities. . . . About 18 local organizations are already in process of formation. . . . The Société Nationale is at the same time making experiments with material, apparatus, and processes of construction. It has constituted for this purpose what is termed a Comptoir National des Matériaux to facilitate the acquisition by officially recognized societies and at advantageous terms of new material and economical processes of building."—*American Architect*, Dec. 1, 1920, p. 715.

**Canada.**—"In common with many other countries, Canada at the termination of the Great War faced a serious house shortage. Whilst the war was in progress, building was at a minimum—

practically at a complete standstill. . . . At the conclusion of hostilities a huge army returned to the Dominion's shores, many of who had been overseas four or five years, bringing back with them wives and children. To cap this there commenced a heavy flow of immigration whilst settlers poured in from the United States at an unabated rate. The situation all over the country was serious, and still remains acute [written January, 1921]. . . . To aid in coping with this state of affairs, . . . to assist in the immediate necessity of erecting homes, and partly offset the high cost of construction by enabling tenants to borrow money to purchase homes, the Federal government established a housing scheme, appropriating [December 3, 1919] the sum of \$25,000,000 for the purpose. This was taken in varying sums by nearly all the provinces and supplemented by provincial appropriations. In Ontario, for instance, the total sum appropriated through both Federal and provincial channels amounted to nearly eleven million dollars. The scheme provides for a maximum loan to the individual of \$5,100. To soldiers and widows of soldiers killed in action, loans may be made to cover the entire cost of both land and home, if the land is obtained through the local housing commission. In other cases, the borrower must either own the land or advance ten per cent. of the total cost to the commission. In New Brunswick, about fifty houses have been built under the Federal scheme; in Quebec, both model garden suburbs and houses have been constructed; in the western provinces, hundreds of homes have been erected mainly for returned soldiers. During the early part of the year [1920], the scheme was not taken advantage of as readily as had been anticipated, there being some lack of understanding of its working. There were also difficulties in the way of shortage of material and labor. . . . Local corporations with a realization of the severity of the housing situation, have co-operated admirably in aiding the speeding up of the erection of dwellings. In Winnipeg, for instance, under the housing scheme, the commission makes loans of 85 per cent. of the net cost of the home and takes a first mortgage on the property for twenty years, repayable monthly at the rate of \$7.13 for each \$1,000 borrowed. The builder under the scheme selects his lot in any part of the city and may at any time pay off a portion or the whole of the borrowed money without interest. During the Summer [of 1920], the city let contracts for 300 houses for returned soldiers, the tender let for fifty of the residences representing an investment of \$185,000. In all Winnipeg has been loaned \$700,000 by the Provincial Government to finance the city housing scheme. . . . In St. Catharines, Ontario, the city council guaranteed 80 per cent. of the bonds of a company formed to erect twenty dwelling houses, to cost from \$3,000 to \$4,000 each, \$500 of which will be paid down by the purchasers. In Windsor, in the same province, the city council purchased one hundred lots on which to build houses to solve the congestion. The city of St. Johns', Quebec, borrowed from the government the sum of \$150,000 to assist in financing a civic housing scheme, and building operations were extensive during the summer of 1920. Fredericton, the New Brunswick capital, obtained the loan of \$200,000 from the provincial government's Better Housing Fund to construct dwellings for workmen. . . . A novel housing project was formulated by a city councillor of Woodstock, Ontario, who erected twenty-five houses and grades the rental according to the number of children in the in-

coming families. The larger the offspring the lower the rent. . . . There has been much activity in the last few years on the side of manufacturers to establish colonies and erect dwellings for employees. During 1920, the Laurentide Paper Co. purchased a farm of fifty acres at Grand'mere upon which to build houses for their employees. In British Columbia, the Imperial Oil Co. at Ioco is making progress with its town-site scheme for employees. Five hundred houses are being erected with ample garden allowance, the company's workers being given the opportunity of becoming owners on easy payments of long terms. Other firms are inaugurating similar projects in various parts of Canada, co-operating in relieving the existing congestion and endeavoring to get the housing situation back to normal condition."—Canadian Pacific Railway, *Agricultural and industrial progress in Canada, Jan., 1921.*

Denmark.—"In March, 1912, a small coöperative organization was formed by representatives of the building trades and the Coöperative Supply Association of Copenhagen, acting as a stock company [known as the Working People's Coöperative Association of Copenhagen]. Its avowed object was a reform of housing conditions 'by carrying over the principle of sharing to the production of houses, so that the stockholders by becoming joint possessors of their dwellings get a share in the profits, which through amortization of loans and in other ways can be carried over to members.' . . . The Association sought to procure the cheapest possible houses by the production and direct purchase of building material, by being itself wholly or partly its own contractor, and by purchase of ground when such could be acquired with advantage. The organization was formed on practically the same lines on which it is being carried on today [written in 1921]. Anyone can become a member by paying an entrance fee of two kroner, which entitles him to a membership card the number of which gives him his place on the list in selecting apartments. He becomes a voting member by paying an association share of forty kroner, payable at once or in instalments within two years' time. When this share is fully paid, he receives interest on it at four per cent and is entitled to a vote in the general assembly of the Association. He can then open up a savings account in which to save up the money for his housing share, an amount approximating two years' rent, which is his investment in the property in which he lives and which must be fully paid in before he can get an apartment. He receives four per cent interest on this money while it is still a savings account and also after it is turned over to the Association as a housing share. The money for the first building was borrowed from a small bank through the friendship of one of its directors with Mr. Jensen. The land was bought from a lawyer who took payment in a mortgage of ten per cent on the building. . . . In 1913 the house was built, housing 55 families. The Association could finance only ten per cent of its liabilities, mortgaging out the rest. The bank, seeing the house built and running, loaned for a second and third house. Then the war came. The small bank, threatened by larger ones, refused further aid. Fortunately a new venture was being made. The peasants desired to establish in Copenhagen a bank to handle their big dairy export accounts. They got together with Mr. Jensen [president of the Working People's Coöperative Building Association], and after hearing his plans, asked him to build them a bank. This is the big 'Axelborg,'

where the Association now has its offices free. The fourth house, meanwhile, financed by a state loan and a friend's loan, was going up. The fifth was financed by the new peasants' bank, the Danske Andels Bank. The Association, now firmly on its feet, started buying land, a forty-acre tract. At the same time it began to purchase its means of production. It bought a tile factory in the town of Taastrup, a few miles out of Copenhagen, and with it a farm of eighty acres, on which some day a new village may rise. It bought another tile factory on the island of Bornholm, with twenty-five acres of land. It set up cement works where it produced all the cement products necessary for its buildings at half the price it had been paying outside. . . . The Association has built fifteen completely running buildings, housing some fifteen hundred families; and it has four buildings under way which will house at least a thousand more families. It owns its own brick and cement works. It buys its timber direct from Sweden and has great yards full lying ready for future building. It has land enough to build on for years ahead. . . . At the same time that the Association was building itself up strongly from within, Mr. Jensen, as a member of the Rigsdag, was working to get state help for building, because he believes that housing, like education, is a social need and that good housing, like good education, is fundamental to good citizenship. He succeeded. In 1917 the Rigsdag passed a law which gave the city the right to remit taxes on new buildings and rents on ground purchased from the city. In 1918 the Rigsdag passed the first law in Danish history by which the state gives direct subsidy to building houses. This law authorized communities to give a direct subsidy of ten per cent to building, and when this was done the state would give a like amount. In 1919 a new law was passed authorizing communities to grant fifteen per cent where the state also gives fifteen per cent. With thirty per cent thus assured, the Association today is able to take care of the rest of its liabilities through its own shares of stock."—E. Bryner, *How Denmark is solving the housing problem* (Nation, Jan. 12, 1921).

"In order to cope with the situation caused by the shortage of dwellings in Denmark, the Government has issued a number of regulations since 1916 seeking to control conditions. In order to combat rent profiteering, a regulation has been adopted by which rents cannot be increased, nor can persons be made to give up their dwellings except by a resolution of the Municipal Authorities. A special board, very similar to the rent profiteering boards that were in operation in the United States during the War, is required to pass upon all such cases. This board is composed of 5 persons of whom 2 are owners and 2 are renters. Under the regulations, an increase of 10% in rent over the rent that was charged on August 1st, 1914, is allowable, and where dwellings are kept in good repair, a 20% increase is permitted. It is not within the power of the board to deny either of these increases, but increases beyond that amount must be approved by the board. The power to commandeer or seize vacant dwellings is also given to these boards, which are organized in most of the towns and also in several of the country districts. The regulations also prohibit the demolishing of existing dwellings during the shortage of houses and exempt all new dwelling houses from municipal taxes for a 10-year period. In order to stimulate building, loans are made by the State to building societies, the State loaning up to 4/10 of the entire

value of the property on second mortgage at 4%. As to government subsidies, in the case of municipal housing for poor, a subsidy equal to 24% of the entire building loan is granted to building societies, a subsidy representing 15% of the entire value of the development is made upon condition that the municipal authorities grant a similar subsidy of 15% and that the rents to be charged are controlled by the municipal authorities. To private individuals or corporations erecting dwellings for people of small means, a subsidy of 15% of the total investment is granted by the State upon the condition that a similar subsidy is granted by the municipality and that the owner submits to the control of rents by the municipal authorities."—*Housing Betterment*, Feb., 1920, pp. 15-16.—"The house famine which had existed is now considered to have passed, but the housing shortage is still great, as far as the city of Copenhagen is concerned, where it is stated that 10,000 dwellings are needed. Consequently the Housing Act providing for subsidies and state aid is being extended from year to year until the housing shortage has been met."—*Ibid.*, Jan., 1922, p. 40.

**France: Workmen's dwellings.**—**Industrial housing.**—"Workmen's dwellings in France have been made the subject of special legislation, the chief provisions of which are contained in the laws of 1906 and 1912, passed for the purpose of facilitating the acquisition of small property. The law of 1906 enacted, as the leading feature of this type of house, that builders, tenants or purchasers must be persons of small means—in particular, workers living chiefly upon their earnings; a maximum letting value was at the same time determined for each dwelling. . . . This indispensable task can be undertaken only by Companies or Public Offices for the housing of the working-classes; thus, Public Offices—whether municipal or departmental, regulated by the law of 1912, have increased in recent years, as was strongly advocated in 1918 by the Minister for Labour. . . . In particular, several offices have been established within the liberated regions (in the Department of Nord, for instance), where the urgent necessity for the building of new houses is more keenly felt than elsewhere. In order to facilitate the development of these institutions and the efficiency of their work, various modifications have on several occasions been introduced into pre-war legislation. Firstly, on April 24th, 1919, a law was passed for the purpose of regulating the situation brought about by the war in connection with Loan Societies dealing with real property and Workmen's Building Societies. Both of these were empowered to suspend payment of annual amounts on parts of such amounts falling due since August 1st, 1914, until the end of the sixth month after the declaration of the cessation of hostilities; this time limit was extended by one year in respect of houses which suffered damage during the war. Loan Societies dealing in real property, Workmen's Building Societies, Public Offices, Savings Banks, Charitable Societies, Asylums and Hospitals and holders of loans repayable by annual sums were authorized to suspend payment of such sums already due until the expiration of the same time limit; they are to utilize for the payment of these annual amounts the sums received from borrowers or tenants during this period. The State has undertaken responsibility for the total interest due during the same period by these Societies, with an annual increase of 50 per cent. on the total capital remaining due in virtue of

agreements signed, after deduction of interest paid to these Societies by borrowers or tenant purchasers. The law of October 24th, 1919, introduced the most important modifications in legislation previous to 1914. It began by raising the maximum letting values—which must not be exceeded at the time of building—for dwelling houses which are to profit by the benefits granted to houses intended for the working-classes. . . . This same law fixes at 200 million francs (normally £8,000,000) the total of the advances which may be made by the State to Loan Societies dealing with real property. It also decides that the Deposit Bank shall employ, for the purpose of loans to Public Offices and Building Societies connected with Workmen's Dwellings, the reserve and guarantee funds of the Savings Banks; this is authorized up to the amount of 300 million francs (normally £12,000,000), and within the limit of applications approved by the Managing Committee of the Deposit Bank. These loans are effected at the rate of 2 per cent. and the funds are employed to facilitate the purchase or construction of private houses for the working-classes or the purchase of small properties within the provision of the laws of 1906, 1908, and of more recent years. They are effected at the rate of 2.50 per cent. if the funds are employed for the purchase or construction of workmen's houses, or for the purchase of small properties intended for letting only. The State undertakes responsibility for the difference between these rates of interest and the average rate of income arising from all investments of Savings Bank funds effected by the Deposit Bank during the year preceding the carrying out of these loans, with the exception of short term credits. Lastly, the law also provides for the advance of funds required for the completion in accordance with the original plans, of houses left unfinished in consequence of the war. . . . Side by side with the work of the City of Paris itself, we find that of its Public Office for workmen's houses, established January 28th, 1914. In 1919 the Office received from the city—to enable it to meet expenses in connection with building—a grant of ten millions, supplemented by the sum of forty millions in March, 1920. The total required for the execution of the plans prepared will be completed by loans effected, either with the Deposit Bank or with some other Credit Establishment. The City of Paris guarantees the interest and the redemption of these loans, for the whole period of their duration; in order to enable the Office to meet its ordinary expenses, the City also guarantees interest at the rate of 2.50 per cent. upon the sums raised upon the supplementary grant and used in connection with workmen's houses. Several building sites have been granted to the Office; in the Rue de L'Ourcq, a group of buildings has been started, including 350 dwellings (probable net cost 15,888,250 francs); the group in the Rue de Fecamp and Rue de Tourneaux, also in course of erection, will include 628 dwellings (price 28,089,445 francs). Plans are still under consideration for the use of the land granted to the Office near the Montmartre Gate, on the site of Bastion No. 38 of the fortifications, which has just been razed. The work of the Municipal Office for workmen's houses is not limited to building: the Office will be responsible for the management of houses erected by the City itself, in proportion as they are completed."—H. Sellier, *Housing problem and public action in France (Garden Cities and Town Planning, Sept., 1921)*.

"The new village of Tergnier, France, was

officially 'opened' on the 10th of last July. This is one of several industrial towns constructed by the Nord Railway Company, which has been interested in providing shelter for its employees since 1883. The houses are mostly of 4 rooms with cellar, and cost on the average 25,000 francs each, the cost of land, water and electric light systems amounting to an additional 5,000 francs each. Large families are provided for by allowing 5% of 5-room houses, and 5% of 6 room houses. There are in all over 100 developments varying from 20 houses up to 1,400. Nearly all are provided with a plentiful distribution of drinking water and electricity, and have excellent sewage systems. There are public laundries, infirmaries, coöperative stores, schools, playgrounds and community buildings. Tergnier, which was built in 18 months, at a point where the devastation of the War was complete, now has 1,350 houses, and 18 miles of streets. . . . The company has similar developments in 26 other localities, containing in all about 8,700 houses, of which nearly 6,000 are of permanent construction. Among these are groups of 700 or more houses in or near Arras, Bethune, Lens and Lille."—*Housing Betterment, Jan., 1922, pp. 35-36*.

France: Housing policy.—Legislation.—Housing shortage in Paris.—"According to statements issued by the National Housing and Town Planning Council of England, the Government of France is contemplating embarking upon a housing policy similar to the housing policy adopted by the British Government in 1919. In this statement it is reported that the French Government has decided to ask Parliament to pass the necessary financial measures to permit the building of 500,000 houses in 10 years, the number to be constructed annually to be an average of 50,000 houses. One very important aspect in which the proposed policy of France differs materially from that of the British housing policy of 1919, is that the responsibility for getting the houses built in France will *not* be placed upon the shoulders of the local authorities, which was the essential feature of the British housing scheme. Instead, financial aid is to be given to Public Committees (*Offices Publique des Habitations à Bon Marché*) formed by municipalities, with a large number of nominated representatives as members, from various groups in each community, including employers of labor, workmen's associations, &c. It is stated that the Societies thus formed will work in close coöperation with the local authorities even though the finances of these societies will be separate and their administration outside the general scope of municipal affairs. Financial aid is also to be given to private Societies (*Sociétés des Habitations à Bon Marché*) organized on lines quite similar to the British Public Utility Societies. It is further stated that the French Government holds the view that in the present financial situation the payment of vast sums in grants of capital is not a practical policy and that it has therefore decided to give annual grants or subsidies instead. Newspaper dispatches from Paris in November [1921] stated that the Chamber of Deputies authorized the 'Union of Building Societies' to float a loan of 750,000,000 francs for the building of 100,000 cheap dwellings between the present time and 1930, most of these to be erected in the Devastated Regions, but about one-third to be put up in the suburban towns and villages around Paris, the Government guaranteeing the interest on the loan. It is stated that the bill in question was passed by almost unanimous vote. Under the

terms of the act the Building Societies which will receive these subsidies from the State will not be required to pay property taxes or income taxes; the State, however, reserves the right to revise the rents as the cost of living decreases and also the right of offering tenants an opportunity to become home owners on the installment plan."—*Housing Betterment, Jan., 1922, pp. 23-35.*—"Pending the approval by the Senate of France of a law which passed the Chamber of Deputies last December [1921] regarding rents and tenancies, a temporary law was rushed through and became effective on January 6th [1922]. This law provides that where the parties have been unable to agree among themselves, and where no final legal decision has been handed down, no tenant may be ejected before April 1st, 1922; subject, however, to the following conditions: (1) the tenants must have fulfilled all requirements of contract, local usage, or judicial decision; (2) the dwelling must be occupied by them or members of their family dwelling with them previously; (3) they must pay pending the stay, in addition to the present rent, an increase to be fixed by the court under whose jurisdiction the case falls. An exception is made where the owner or members of his family can show real need of the premises for his or their own use as a dwelling-place."—*Ibid., Apr., 1922, pp. 148-149.*—"The municipality of Paris has taken in hand the housing problem there and proposes to spend 1,700,000,000 francs (nominally about \$340,000,000) to solve it. It contemplates building 1476 new two-room workingmen's apartments at once, with 950 more to be erected later. They will be built in the heart of Paris and near the fortifications."—*American Architect, May 26, 1920, p. 656.*—"According to recent accounts which have been received from Paris, the housing shortage which has existed in Paris ever since the war is beginning to abate somewhat and the outlook for more normal conditions in the near future is said to be bright. The dwellings crisis was in part produced by the abundance of furnished apartments to let. In 1913 the number of such lodgings was—in the city, 3,051, and in the suburbs, 2,105. By 1920 these figures had increased to 9,166 and 5,308 respectively. As there was very little building during the years in question, the inference is that by 1920 there were nearly 10,000 fewer unfurnished flats and rooms at the disposal of the public. It is easy to understand, therefore, the severity of the dwellings crisis. The law prohibiting any further increase in the practice of subletting came several years too late. Just before the end of the war Allies and neutrals began to flock to Paris, and hotels were soon overcrowded and very dear. This gave speculators their opportunity. Furnished flats sprang up like mushrooms, syndicates were formed to take up empty flats, furnish them more or less sumptuously and sublet them. Flats of four rooms which the bourgeois was in the habit of renting for 2,000 francs a year were thus sublet, furnished, for 1,500 francs a month. An unfurnished room—generally on the fifth floor—the rent of which was 60 francs a month, rose to 250 francs a month, furnished."—*Housing Betterment, Apr., 1922, p. 147.*

Germany: Difficulties of the housing problem.—State and city legislation.—"The housing problem in the larger cities of Germany manifested itself not as a problem of providing homes and fixing the home interests of the worker, but as a pressing need for accommodations to meet the contingencies of the moment and to avoid

the very serious evils of congestion and high rents which result therefrom. The most important difficulty in the way of a constructive policy in the direction of housing reform in Germany was economic, and it was from this point of view that they approached the problem with characteristic thoroughness and promptness. The Compulsory Insurance Act, passed by the Reichstag in 1883 and amended in 1899, was the first means of placing at the disposal of the people funds for the construction of houses for the wage earners. This law made funds available for this purpose by the provisions which gave the government power to use part of the funds in meeting social needs. . . . The second difficulty in the way of housing reform was found to be in the high speculative value of land, and the limited areas available for building within the city limits. Professor Eberstadt, for example, cites a case where land increased in value 1,700 per cent in seventeen years. This increase in land values and the congestion which caused it, produced rental rates which increased with the increase in congestion rather than in proportion to the accommodations furnished. The little suburb of Rixdorf, outside of Berlin, which is inhabited mainly by working people, was found, upon investigation, to have a higher average rental rate than the city of Cologne, which is more or less of an exclusive and aristocratic community. It was, therefore, along these two lines—cheaper money and cheaper land—that the State and the individual cities undertook to solve their housing problems. But, since 1902, when the cities in the Rhein region began their effort in the direction of housing reform, to the present day, when the garden-city movement is finding its most ardent advocates, comparatively nothing of importance has been done to solve the housing problem from the point of view of the individual owners. . . . The first city to take a radical step in the direction of reducing the influence of land speculation upon the housing problem was Mannheim, which spent 11,000,000 marks in the purchase of land to be sold to local building associations at very reasonable rates. The practice of merely renting the land for a certain period, usually seventy-five years, prevails. To further aid in the building of homes, the cities of Germany, at their discretion, exempt from taxation and reduce the requirements for homes intended to be occupied by wage-earners. The limitation of the taxes generally covers a fixed period of years. An effort in the direction of reducing the desire for land speculation is being made in Frankfort and in Cologne, where, since 1904 in the former and 1905 in the latter, an unearned increment tax has been established. This tax amounts, sometimes, to as much as 10 per cent of the increment. This, however, has not produced the desired results, since the increment need not be paid until a sale is made, and consequently the owner can easily plan to add to the price the amount needed to pay the extra tax. Frankfort-am-Main, on the strength of the law of 1900, has acquired large tracts of land which the city has the power to gather in one holding and dispose of to building associations and private citizens. In 1907 the city of Crefeld bought 3,842 acres at a cost of 676,060 marks, which is being devoted to workingmen's homes. . . . Hamburg, which is a city of over one million population, did not begin to consider its housing problem until 1902, when a series of extensive municipal improvements were undertaken, and the community found itself face to face with the problem of accommodating large groups of

workers and their families. Some of the workers were compelled to leave their old abodes which had been included in the improved territory, while others were attracted to the city by the improvements which were being carried out. The city soon voted an appropriation of 1,200,000 marks, to be used as a loan fund for the assistance of building associations, which were to undertake the construction of workingmen's homes. The buildings constructed were exempt from taxation, and the loans were to be paid back to the city within ten years. This loan fund stimulated the building of three thousand homes, which are accommodating a population of approximately 11,000 people. As in the case of Frankfurt, the Hamburg policy does not promote private ownership, and the tenement type of dwelling has been the only type provided."—C. Aronovici, *German housing reform*, pp. 3-6.—"Owing to the scarcity of houses in Germany, measures are being taken by some local authorities to prevent people from other districts from coming to live in the towns where the shortage is acute. At Königsburg the local authority has taken this course, making an exception only in the case of sick persons who have medical certificates to prove that they cannot obtain adequate treatment in the neighboring towns. In Stuttgart notices have been published forbidding the entry of any new residents; no house-letting contracts are to be sanctioned by the Town Housing office and severe penalties are threatened in the case of the persons, who, having bought houses, intend to move into them. At Frankfort-on-Main the State Housing Commissioner has authorized the Local Authority to issue an order prohibiting until July 15, 1919, negotiations between landlords and tenants which have not the sanction of the Rent Arbitration Office; negotiations with individuals outside the town are strictly forbidden; this order affects rooms of all sorts including those in hotels and boarding houses. The Local Authority has also instructed the Housing Office to come to an arrangement with the Food Ministry with regard to the stopping of food supplies to any prospective residents from other neighborhoods. . . . In the fine residential suburb of Charlottenburg, as well as in the Friedrichshafen and Friedenau districts, the local authorities have, according to the Berlin press, obtained permission from the State Commissioner of Housing to force the owners of large houses not entirely occupied to reconstruct them so as to make parts of them available for tenants, and to place them at the disposition of the local housing boards. Houses of from eight to twelve rooms occupied by only from four to six persons come under this ruling. The summer residence villages and towns in the neighborhood of Berlin are taking steps to make use of the houses of their transient inhabitants during the rest of the year. The community of Helligensee, embracing the summer colonies of Konradshöhe, Tegelort, and Jörsfelde, has received the right to take possession of all its unused houses and to rent them to the public, and other places are about to follow this example, reports the *Vorwärts* of September 3. The town of Grünau has ordered the occupants of bachelor apartments and cottages to offer them for rent. On August 29 [1919], following the example of Potsdam, Spandau and some other districts, the City Council of Greater Berlin ordered that no leases were to be renewed, nor were any apartments, houses or shops to be rented to any one without first being placed on the list of the housing board, which would then issue the necessary permits to the owners, if the renting

conditions appeared satisfactory. In making out new leases, the landlords are allowed to add enough to the rents to compensate them for the additional outlay for coal, labor, etc., now unavoidable. According to a Berlin cablegram of October 1, the municipality was renting cells in the old city jail for use as flats. Outside cells were bringing the best rates."—*Housing Betterment*, Feb., 1920, pp. 17-19.—"The territory which Germany has surrendered to Poland under the terms of the Versailles treaty is dumping thousands of homeless fugitives into already overcrowded Berlin, according to Dr. W. Laporte, municipal housing commissioner. 'Investigation has shown that in a single house seventy-nine persons were fugitives from Polish Germany. There are approximately 32,000 families seeking homes in Berlin. We have today only 320 apartments at our disposal,' said Dr. Laporte. The Berlin housing commission has proposed the immediate construction of 5,000 two-room apartments or huts to accommodate the families who are now exposed to disease, sleeping in cellars."—*American Architect*, May 5, 1920, p. 557.—See also BERLIN: 1910-1917.

Germany: Convention of the League of German Tenants' Associations.—National rent law.—"At the annual convention of the League of German Tenants' Associations held in Dresden this fall [1922], socialization of rented dwelling houses, flats, apartments and offices was demanded as the only satisfactory remedy for the housing shortage which is becoming worse in Germany from day to day. At this same meeting of the Tenants' Associations, said to represent 1,000,000 rent payers, it was urged that the various rent rules and regulations be unified in one single national law which would cover all contingencies and all phases of the renting question. . . . In a recent article reviewing the whole subject it is estimated that it will be necessary to build from 750,000 to 1,000,000 dwellings to meet the housing shortage throughout the country. It is pointed out that at the present rate of building, with government supervision and subsidies, not more than a small fraction of the demand is being met."—*Housing Betterment*, Jan., 1922, pp. 48-49.—"The Reichstag (Parliament) on March 3rd [1922] passed a national rent law extending until April first, 1926, the present restrictions on rents. . . . The new law was put through the Reichstag by only a small majority and according to the Berlin correspondent of the *Kölnische Zeitung*, it pleases nobody, as the tenants will soon experience a material rise in rents while the landlords will not get anything near the returns they had hoped for. The property owners are wrath over the feature of the law providing for the legal establishment of 'Tenants' Councils' empowered to send representatives from each house to participate in the adjustment of rents and other matters, while the proponents of the socialization of housing are indignant at the Reichstag's failure to establish a common fund out of which landlords were to be paid for important necessary improvements at the general expense of all rent payers. Under the new law a special account will be opened for each house and aid will be extended only in cases where the tenants and owners are in straightened financial circumstances. Business buildings are also covered by the regulations, with provision for special rent increases. In general the provincial authorities are to fix rents on the prewar basis, with all sorts of allowances for repairs, increases in carrying and maintenance charges and ability of the tenants

to pay. . . . *Die Rote Fahne*, the Communist organ, in an article attacking the Government for its failure to compel the War and Treasury Departments to place alleged empty army barracks and public buildings at the disposal of the public, asserted that there were 135,000 homeless persons in Berlin and that 386,000 families with children were obliged to live in one-room flats."—*Ibid.*, Apr., 1922, pp. 157-158.

Great Britain: Legislation.—"Lord Shaftesbury was the first social reformer [in Great Britain] to approach the question of housing from a practical standpoint. The Labourers' Friendly Society, afterwards the Society for Improving the Condition of the Labouring Classes, was largely the result of his agitation in 1842. . . . The main development of Housing Reform was a late one, for the first general Act dealing with the problem was not placed on the Statute Book until 1851. . . . The first real attempt to grapple with the situation was made under the auspices of the short-lived Derby-Disraeli Ministry of 1866 to 1868. The Torrens Act of 1866, introduced as a private Bill by a Liberal member, was sent to a Select Committee, presided over by Lord Chelmsford. The Government fell almost immediately afterwards, and the new Conservative Administration took the matter up so vigorously that they placed a remodelled version of it on the Statute Book in less than a year. The Torrens Acts (The Artisans' and Labourers' Dwellings Acts, 1868, 1870 and 1882—31 & 32 Vict. c. 130, 42 & 43 Vict. c. 64, 45 & 46 Vict. c. 54) are concerned with matters coming under Part II of the Act of 1890, and are the foundation of all subsequent legislation under this head. They were limited in their application to towns and boroughs, but otherwise the machinery of the law remains practically unchanged though the area of its working has been extended. . . . The object of these Acts was clearly stated in the 14th section of the Statute of 1870, which declared the purpose of the Act to be—(1) The providing, by the construction of new buildings, or the repairing of existing buildings, the working classes with suitable dwellings, situate within the jurisdiction of the local authority. (2) The opening out of closed or partially closed alleys or courts inhabited by the labouring classes, and the widening of the same by pulling down any building, or otherwise leaving such open spaces as may be necessary to make such alleys or courts healthful. By 1875, however, it had become apparent that any action taken under the Torrens Act—or to use the modern phraseology, under Part II—could only be applied successfully in a limited number of circumstances. . . . Their object was to do on a large scale that which the Torrens Acts intended to do for small areas. . . . In the region of social reform the year 1884 is notable for the appointment of the Royal Commission on the Housing of the Poor, which was gazetted on the 4th March. . . . The Report of the Commissioners appeared (1885) in two large volumes, and contains almost all the recommendations which housing reformers, then and since, have urged upon Parliament. . . . Unfortunately, the legislative result was in no way equal to the ability and earnestness of those who worked on this Commission; but much was brought to light, especially in the sympathetic evidence of the Earl of Shaftesbury, which it has been highly advantageous for the country to hear and to discuss. . . . The Royal Commission having reported, in 1885 the Conservative Ministry produced an Act whose aim was described as the wide one of 'the provision

of suitable dwellings for the working classes.' The most important provision in the Act was the extension of the Artisans' and Labourers' Dwellings Improvements Act, which had applied only to boroughs of over 25,000 inhabitants, to all urban sanitary districts. The passing of the 1885 Act was, however, very ineffective in making local authorities take adequate action, and after five years of comparative inactivity the Government passed the Housing of the Working Classes Act, 1890, an Act of comprehensive and extensive power which left no excuse for the slothfulness of any local authority. This Act is now known as the principal Act, and consolidates all the legislation passed from 1851 onwards. For twenty years it governed the activities of local authorities in this direction. With the amending Acts of 1900 and 1903, it constituted until 1909 the chief legislative measure for housing reform. The Act contained little that was new, and far less than the Commissioners had recommended; it was rather a consolidating Act, collecting and revising such measures as had been adopted in the Torrens Acts and Cross Acts. The Act consists of seven parts, three only of which need to be described in any detail. The division of legislation into Parts I, II, and III, represents not a legislative fiction, but a real—if not antagonistic—distinction between points of view on the best means of carrying out reform. The various great municipalities generally tend to work more under one or other of the Parts of the parent Act. Liverpool, for instance, prefers not only to act almost entirely under Part I, but to re-house on the spot the exact number of people displaced, and to indulge in no schemes for re-housing on the outskirts. Birmingham, on the other hand, after the first great clearance scheme carried out by Mr. Chamberlain in 1876, prefers to act through Part II, and to insist rigidly, by means of closing orders, on the duty of every individual owner to keep his house or houses in a proper state. This method of action is also preferred by Hull. Glasgow, on the other hand, approximates more nearly to Liverpool, while London, having carried out many important schemes under Part I has turned its attention towards a policy of reinforcing slum clearance in the centre by large housing schemes, under Part III, outside. . . . Part I, which applies to the London County Council and all Urban District and Borough Councils, provides for the clearance, by the sanitary authority concerned, of large unhealthy areas. . . . Part II, which applies to all urban and rural sanitary authorities (the London Borough and Rural District Councils must seek ratification of the County Council above them), provides a means of dealing with small areas. . . . Part III, the most valuable part of the Act for practical housing reform, enables local sanitary authorities to erect workers' dwellings, whenever they consider it necessary to do so, and without any clearance of other areas. . . . The object of the Housing of the Working Classes Act, 1900, was to amend Part III of the Housing of the Working Classes Act, 1890. . . . In 1902 attention was drawn to the fact that several railway companies, by acquiring property without first obtaining Parliamentary powers to enable them to do so, or by acquiring land through secret agents, had attempted to evade their responsibilities for providing accommodation for persons of the labouring classes in connection with various schemes. A Joint Select Committee of the House of Lords and the House of Commons was appointed. . . . Following the report of the Select Committee of

1902, the Housing of the Working Classes Act, 1903, was passed, providing that in cases in which any land was acquired, whether compulsorily or by agreement, under the powers given by any Local Act or Provisional Order, or Order having the effect of an Act, by any authority, company, or person, or where such land was acquired compulsorily under any general Act other than the Housing Act, the requirements with respect to the provision of dwelling accommodation for persons of the working class set out in the schedule to the Act, should apply. . . . The Housing of the Working Classes Act of 1890, whatever may have been its effect in the towns, did little to improve housing in the country districts. The Select Committee on the Housing of the Working Classes Amendment Bill, 1906 (H. of C. 376, p. 9), reported that most Rural District Councils had taken practically no advantage of the Act [see also IRELAND; 1906]. This committee, which was appointed to consider a Rural Housing Bill introduced into the House of Commons, collected a large amount of valuable information. The evidence, together with the Report, forms a considerable addition to the information on the subject. Some of its more important recommendations were embodied in the Housing and Town Planning, etc., Act of 1909. . . . The Act is a long and complicated measure consisting of four parts, having no less than seventy-six sections and six schedules. Part I deals with the acquisition of land for Housing purposes, with amendment of procedure for closing and demolition orders, the granting of loans and other amendments in general. Part II deals wholly with Town Planning, and is the newest and probably the most important part of the Act. Part III deals with the appointment of county medical officers, housing committees of the County Councils, etc., Part IV gives supplementary provisions as to commons, open spaces, royal parks, etc. The first section of Part I is extremely important, for it provides that in the future Part III of the Housing of the Working Classes Act (1890) need no longer formally be adopted by an urban or rural district authority. Modern housing legislation, to adopt the nomenclature of the great Act of 1890, and the subsequent Act of 1909, is based on a triple conception, and may be said to be remedial, constructive, and preventive. It is remedial by providing for the clearing and improvement of slum areas. It is constructive by providing for the erection of new houses where required. It is preventive by providing for the maintenance to an approved standard and the improvement of existing houses."—J. J. Clarke, *Housing problem*, pp. 5, 7, 8-9, 15, 17, 21-23, 26, 28-29, 31, 33-34.—"The new Housing and Town Planning Act, adopted by the House of Commons on May 28th, 1919, permits a Local Authority to prepare or adopt a town planning scheme without having to obtain the authorization of the Local Government Board, except where the scheme includes land outside of the limits of the borough. Within 3 years after January 1st, 1923, every borough with over 20,000 inhabitants and any other Local Authority which the Local Government Board may require must prepare and submit to the Board a town planning scheme in accordance with provisions to be determined by the Board with reference to any land within the area of the Local Authority. The Board can oblige the Local Authority to carry accepted plans into effect. If the Local Authority fails to act satisfactorily in any part of this procedure the Board may do the work itself at the expense of

the Local Authority. This law was greatly aided in its passage by the French compulsory town planning law."—*Housing Betterment, Feb., 1920.*

**Great Britain: National Housing and Town Planning Council.**—Government building program.—"The National Housing and Town Planning Council under the leadership of its energetic executive officer, Mr. Henry R. Aldridge, is carrying on a campaign throughout all England stimulating and guiding public sentiment to the end that a housing policy may be adopted which will insure the building of houses. Members of Parliament will evidently not be allowed to allow the Government's housing policy to go by default. In a recent memorandum issued by this organization it is stated that: Whilst it is urged that at the present stage enquiry should be concentrated upon administrative work in carrying through to success the policy entered upon in 1919, it is however clearly recognized that even when 500,000 houses are built the terrible problem presented by the persistence in many centres of populations of wretched congeries of miserable dwellings in which life is lived at only half values, will remain unsolved. It will not be possible until the detailed Census Figures are published, to determine whether general housing conditions have greatly improved since 1911. The Census figures then recorded that out of the 8,005,290 separate homes in England and Wales upwards of a quarter of a million (254,710) of these were one-room homes, two thirds of a million (660,472) two-room homes, more than a million (1,107,873) three-room homes, and nearly two million (1,981,428) four-room homes. . . . It has therefore been decided that the National Council shall set up a Housing and Town Planning Enquiry Committee for the purpose of framing a National Policy sufficient in its scope and character to secure not simply the amelioration of present conditions but the provision of such conditions both in regard to housing and town planning as an enlightened community may regard as providing a solution of a problem which vitally affects the national honor. This Committee will be in effect a Voluntary Commission set up by the Council for the purpose of defining in clear terms the greatest common measure of agreement amongst housing and town planning experts concerning an adequate National Housing and Town Planning Policy and including the constructive steps essential to its realization."—*Ibid., Jan., 1922, pp. 13-14.*—"In addition to the handicaps of high prices and scarcity of building material, England's efforts to catch up to the demand for dwelling houses are being seriously retarded by a shortage of some 200,000 workers in the building trades, due to the results of the World War. Talking to London newspaper men recently [written in April, 1920] Sir Kingsley Wood, Parliamentary Private Secretary to the Minister of Health, pointed out that 60,000 of the 840,000 men engaged in building houses before the war had been killed, many thousands had been disabled and a host of others had gone into other trades. Sir Kingsley went on to say that, including the 500,000 houses that the Government building program called for, there must be at least 1,630,000 dwellings put up during the next ten years in order to house the people at all adequately, and that there would be more than enough work for 1,000,000 men during that period. He said there was a shortage of 15,000 bricklayers in sight if the requisite number of houses were to be got under way this year, and that there was no prospect of any unemployment in the building

trades, even if the workers now in the army were all to return to their old places. Since the Government mapped out its building program the Ministry of Health has approved nearly 120,000 plans for new houses embraced in some 4,500 'schemes,' covering about 37,000 acres of land in the leading cities of England. On February 20 [1920] Dr. Addison, the Minister of Health, laid the first brick in the Hayes building 'scheme,' the largest one under way in the Metropolitan district, which aims at constructing 2,000 dwellings."—*American Architect*, Apr. 21, 1920, p. 493.

—"In announcing the changed policy Sir Alfred Mond, the Minister of Health, stated [1921] that, under an arrangement made between his predecessor (Dr. Addison) and the then Chancellor of the Exchequer, the number of housing schemes which the Government contemplated had been reduced from 500,000 to between 200,000 and 300,000 houses; that now it was proposed to limit the number of houses to 200,000, of these 176,000 houses were to be built by the local authorities, and in addition 24,000 or 25,000 houses were to be built by private builders under the Subsidy Scheme. He added that the country now had a permanent burden for 60 years of ten million pounds (£10,000,000) a year on their taxes in order to provide these houses. . . . The latest figures available with regard to the progress of the various Government housing schemes in England is that issued by the Ministry of Health under date of November 18th as follows:

Estimates for 165,000 houses have been approved.

Contracts signed for 159,400 houses.

Houses commenced 141,500.

Houses completed (November 1) 62,000."

*Housing Betterment*, Jan., 1922, pp. 5, 21.

**Holland.**—"Holland, through its Government, is doing some progressive housing work as described by the president of the Nederlandsch Instituut voor Volkschuisvesting (Dutch Housing Institute), Mr. D. Hudig. 'Our Housing Act of 1901 empowers the Government to grant loans to local authorities for the purpose of buying land and building working class houses themselves or by the aid of public utilities societies. The money is not directly advanced by the central government to these societies but by way of the local authorities which have the power to allow or refuse a loan—a system that affords the opportunity for more efficient control over the societies than could be exerted by a central department. The money is advanced on mortgage repayable in 50 years by equal annual instalments, the rate being fixed at the rate indicated by the market quotation of the State debentures on the Amsterdam Exchange. The local authority is responsible for the payment of the interest and instalments on the loan so that there is no financial risk to the State. The Government is willing to grant 100% of the total building cost. Local authorities on granting the loan may impose such conditions on the society as they think fit to secure efficient management, proper repairs, etc. The public utilities societies have a semi-public character. They must be authorized by the Government; the interest on their shares is limited to 4%; the capital and profit are only to be applied to the improving of housing and the members can be given no right to buy their houses. Nearly 750 public utilities societies are now authorized. About 250 are organized in the National Housing Council, this corporation being exclusively a federation of public utility housing societies

and local building authorities. Up to the end of 1914, 461 loans had been granted, 371 of public utility societies and 90 on behalf of local authorities building themselves; 9,900 houses had been built and loans in total had been approved for the building of 16,251 houses. Since the beginning of the war private enterprise has been practically out of business. Working class houses have only been built by public utility societies and some local authorities. The housing shortage is growing every day; at least 100,000 houses are now wanted. In Amsterdam and Rotterdam about half of the newly married people cannot get houses. In the next five years 250,000 should be built. Immediately after the war the State fixed the interest chargeable on state loans at 3-7/8%, being the interest indicated by the market quotation of the State debentures on the Amsterdam Exchange the day before it was shut. A subsidy was granted to meet the difficulties caused by the rise in prices of materials. The local authorities were obliged to partake in this subsidy. After many tribulations the scheme now in practice was settled upon, providing an annual subsidy of the amount of the deficit incurred by the societies, 75% being afforded by the State, 25% by the local authority. Since the war more loans than ever have been granted, the total number of loans at the end of 1917 being 810, of which 636, amounting to 71,500,000 florins (about £6,000,000) were granted on behalf of public utility societies; 174, amounting to 27,500,000 florins, on behalf of municipal building, including a loan to Amsterdam of 15,000,000 florins. From May, 1918, to the end of July, 1919, loans and subsidies were granted for the building of about 15,000 houses, the monthly number growing rapidly. The fixing of rents must now be approved by the State, and there is a tendency to put them up. But as the cost of living is about 92% above the cost before the war and the raising of rents of private houses is under the control of rent committees and as the cost of building is still increasing, and wages, though raised, have not in general reached a level at which economic rents may be paid, the deficit will be very great, in some cases growing to nearly 300 florins (£25) per annum. This will go on for a long time. The capital cost now varies from 5,000 florins (£417) to 8,500 florins (£709) and an economic rent would be about 9 florins (15s.) or 12 florins (£1) per week (rates are not included in rents), whereas the normal pre-war rent for newly built houses was 4 florins (6s. 8d.) in Amsterdam and some other towns."—*Housing Betterment*, Feb., 1920, pp. 25-27.

"The overcoming of the housing shortage is attributed largely to the effect of the various schemes by which government-aid to housing was furnished. . . . The government subsidy for housing in 1905 amounted to 46,000 florins (\$18,400 at par) and covered 31 houses. In 1920 this appropriation amounted to 150,000,000 florins (\$60,000,000 at par). While the Government has employed a number of different means of stimulating the construction of houses, that found most generally effective has been the one by which a subsidy is given to municipalities, to building societies and to private individuals erecting houses not exceeding 450 cubic meters in size. While the subsidy is limited to 20 florins (\$8 at par) per cubic foot and the total amount is similarly limited to 2,000 florins (\$800 at par) for each dwelling, no restriction is placed upon the final disposition that may be made of the dwellings. They may be sold, rented, or occupied by the

owner himself, if he so chooses."—*Ibid.*, Jan., 1922, p. 45.

Italy.—The United States trade commissioner at Rome, under date of January 15, 1920, submitted to the Department of Commerce the following statement, . . . which was published in Commerce Reports (Washington) for March 14: "Under the existing provisions, whereby the State participates in the payment of the interest on loans made to building organizations and co-operative societies, the Government has already assumed annual interest charges amounting to about 2,500,000 lire [\$482,500, par]. The following municipalities have so far been granted aid by the State in this connection: Milan, Reggio Emilia, Pozzuoli, Caldebosco, Sivignano, and Vezzano, as well as the institutes for popular houses of Catania, Bergamo, Bologna, Florence, Milan, Modena, Rome, Turin, Treviso, and Venice, and various co-operative organizations at Rome, Parma, and Reggio Emilia. Many additional proposals are now under consideration, and a number of local bodies have already begun construction without awaiting the definite allotment of funds from the Government. It is calculated that at this time there are under construction in Italy popular houses the cost of which will exceed 200,000,000 lire [\$38,600,000, par], without including in this sum the construction undertaken at Rome, where the work already under way will provide 25,000 rooms. Every effort is being made to simplify the formalities connected with the granting of loans, and provision has now been made whereby commercial, industrial, and agricultural organizations can also obtain aid from the State for the construction of houses for their own employees, provided separate accounts are kept in this connection, and the interest derived from their investment does not exceed 5 per cent. Such houses can not be used for any purpose other than that for which they were originally intended. There has been a demand for such aid on the part of certain large industrial establishments, especially at Milan, and it is believed that these companies will now undertake construction on a large scale. Another stimulus to building activities will consist in the complete exemption from customs duties of building materials imported. The exemption from the normal tax and the supertax will also be considerably extended. Houses coming under the definition of popular or economical houses, as well as popular hotels and dormitories constructed by municipalities and bodies not organized for profit, will enjoy such exemption for 20 years; other houses not belonging in the above classes, but at the same time not of a luxurious character, will be exempt for 10 years, and this exemption may be extended for an additional 15 years. In addition to encouraging new construction efforts are being made to assure the most advantageous use of housing facilities already available. By a decree . . . published [in 1919], Government commissioners [were to] . . . be appointed in cities possessing over 100,000 inhabitants on December 31, 1919, to see that tenants receive the full protection afforded them by law in connection with the leasing of apartments, furnished rooms, etc., and in regard to evictions. By this decree it is also provided that civil and military offices of the Government, having a temporary character owing to the war, must be removed within three months from private buildings heretofore occupied, and established in temporary buildings which will be constructed. Furthermore, by virtue of a decree of the Ministry of Industry, Commerce, and Labor, buildings in-
