CONTEST OF THE MINNESINGERS, OR SÄNGERKRIEG

Contest between the most celebrated German minstrels said to have been held at the  
Castle of Wartburg in 1207, immortalized in Wagner's "Tannhäuser."

*After painting by J. Gehrtz*

## LIST OF MAPS IN VOLUME V

1. TERRITORY IN WHICH THE THIRTY YEARS' WAR WAS FOUGHT . . . . . See GERMANY: 1627-1629
2. GERMANY AT THE PEACE OF WESTPHALIA, 1648 (colored) . . . . . See GERMANY  
 [EDITOR'S NOTE: This complicated map reveals the territorial arrangement of central Europe at the end of the Thirty Years' War. It will be noticed that Switzerland and the United Netherlands are outside the Holy Roman Empire, and that the Spanish Netherlands were in 1648 reduced to approximately the area of modern Belgium. The important fact also appears that France, through the acquisition of parts of Lorraine and Alsace, had brought her frontier to the Rhine.]
3. BATTLEFIELD OF THE SEVEN YEARS' WAR . . . . . See GERMANY: 1761-1762
4. NAPOLEONIC WARS . . . . . See GERMANY: 1807
5. GERMANY AFTER THE CONGRESS OF VIENNA, IN 1815; AFTER THE  
 PEACE OF PRAGUE, 1866; THE GROWTH OF THE ZOLLVEREIN (colored) . . . . . See GERMANY
6. GERMANY: 1870-1923 (colored) . . . . . See GERMANY  
 [EDITOR'S NOTE: The present-day German Republic differs territorially from the former empire on three of its frontiers. The most striking difference is to be seen on the east, where the new Poland has acquired portions of Posen and Silesia and the corridor running down to the Baltic between East and West Prussia. On the southwest the new boundary with France shows the loss of Alsace-Lorraine while a separate color differentiates the Saar district from the rest of Germany. The northern part of Schleswig is here shown as part of Denmark as a result of plebiscite held after the World War.]
7. ANCIENT GREECE (HELLAS) (colored) . . . . . See GREECE
8. TOWNS INCLUDED IN THE HANSEATIC LEAGUE . . . . . See HANSA TOWNS
9. HAWAII (colored) . . . . . See HAWAII
10. INDIA ABOUT CLOSE OF THE 16TH CENTURY, AND SHOWING THE  
 GROWTH AND EXTENT OF THE ANGLO-INDIAN EMPIRE . . . . . See INDIA: 1498-1850
11. INDIA (colored) . . . . . See INDIA
12. CULTURAL AREAS OF NORTH AMERICA . . . . . See INDIANS, AMERICAN:  
 Cultural Areas of North America
13. ENGLAND, BEFORE AND AFTER THE INDUSTRIAL REVOLUTION (colored) . . . . .  
 See INDUSTRIAL REVOLUTION

[EDITOR'S NOTE: The two economic maps of England, Wales and the Lowlands of Scotland bring out the contrasts between the distribution of population and industries in those countries before the Industrial Revolution and in recent times. The power of coal and iron, in the north, to draw population to that hitherto thinly populated region is clearly brought out by the colors indicating density of population. The great urban growth of modern England is likewise to be noted in the clusters of industrial towns near the coal mines.]

# THE NEW LARNED HISTORY

## FOR READY REFERENCE, READING AND RESEARCH

### VOLUME V

**FROEBEL, Friedrich Wilhelm August** (1782-1852), German philosopher and educational reformer; founder of the kindergarten. See **EDUCATION: Modern: 18th century: Rousseau; 19th century: Froebel.**

**FROG'S POINT, Battle at.** See **U. S. A.: 1776 (September-November).**

**FROISSART, Jean** (c. 1337-1410), French poet and historian. See **ANNALS: Medieval; FRENCH LITERATURE: 1337-1465; HISTORY: 19.**

**FROMENTIN, Eugene** (1820-1876), French painter and author. See **PAINTING: Europe (19th century).**

**FRONDE, FRONDEURS**, in French history, the names given respectively to a political party and its adherents who during the minority of Louis XIV opposed the policy of Mazarin. See **FRANCE: 1647-1648; 1649; 1650-1651; 1651-1653; BORDEAUX: 1652-1653.**

**FRONT ROYAL, Capture of.** See **U. S. A.: 1862 (May-June: Virginia).**

**FRONTENAC, Fort.** See **KINGSTON, Canada.**  
**FRONTENAC ET PALLUAU, Louis de Buade, Comte de** (1620-1668), governor of New France. As a young man, an officer in the French army, he saw military service in Italy, Flanders, and Germany; governor of New France, 1672-1682, 1689-1698; showed energy and tact especially in dealing with the Indians; foiled Sir William Phipps's fleet before Quebec, 1690; defeated the Iroquois, 1696.—See also **CANADA: 1634-1673; 1640-1700; 1673-1682; 1689-1690; 1696; OSWEGO: 1690-1696; QUEBEC, PROVINCE OF: 1672-1680.**

**FRONTIER POSTS.**—"When a group of families moved out into the wilderness they built themselves a station or stockade fort; a square palisade of upright logs, loopholed, with strong blockhouses as bastions at the corners. One side at least was generally formed by the backs of the cabins themselves, all standing in a row; and there was a great door or gate, that could be strongly barred in case of need. Often no iron whatever was employed in any of the buildings. The square inside contained the provision sheds and frequently a strong central blockhouse as well. These forts, of course, could not stand against cannon, and they were always in danger when attacked with fire; but save for this risk of burning they were very effectual defences against men without artillery, and were rarely taken, whether by whites or Indians, except by surprise. Few other buildings have played so important a part in our history as the rough stockade fort of the backwoods. The families only lived in the fort when there was war with the Indians, and even then not in the winter. At other times they all separated out to their own farms, universally called clearings, as they were always made by first cutting of the timber. . . . These clearings lay far apart from one another in the wilderness. Up to the doorsills of the log-huts

stretched the solemn and mysterious forest."—T. Roosevelt, *Winning of the West*, v. 1, pp. 110-112.—See also **U. S. A.: 1794-1795: Jay Treaty.**

**FROSCHWEILER, Battle of.** See **FRANCE: 1870 (July-August).**

**FROUDE, James Anthony** (1818-1894), English historian. See **HISTORY: 6; 30.**

**FRUCTIDOR, month.** See **CHRONOLOGY: French revolutionary era and calendar.**

**Coup d'Etat of the eighteenth of.** See **FRANCE: 1797 (September).**

**FRUELA I, king of Leon and the Asturias or Oviedo, 757-768.**

**Fruela II, king of Leon and the Asturias or Oviedo, 923-925.**

**FRUGONI, Carlo Innocenzio Maria** (1692-1768), Italian poet of the Arcadian school. See **ITALIAN LITERATURE: 1690-1800.**

**FRUMENTARIAN LAW, First.** See **ROME: Republic: B. C. 133-121.**

**FRUMENTIUS, Saint** (c. 300-360), a Greek who was the founder of the Abyssinian church and who became Bishop Axum. See **ABYSSINIA: A. D. 4th century; ABYSSINIAN CHURCH.**

**FRYATT, Charles** (1872-1916), British captain of the merchant steamship *Brussels*. On March 20, 1915, he attempted to ram the German submarine U-33. On June 23, 1916, he was captured by German warships and being condemned as a "franc-tireur of the sea" was, on July 27, executed. The British held that he had a right to act as he did in defense of his ship, and that his execution was an atrocity. See **WORLD WAR: 1916: IX. Naval operations: d.**

**FRYE, WILLIAM P.,** American vessel. See **WILLIAM P. FRYE.**

**FU, name for administrative district, Japan.** See **JAPAN: Local government.**

**FUAD I** (1868- ), king of Egypt. Acceded to the throne October 9, 1917, as sultan; king, 1922. See **EGYPT: 1917; 1922 (March).**

**FUCHOW, capital of the province of Fukien, China, situated on the river Min.** See **CHINA: Map.**

1842.—Made one of the five open ports by the Treaty of Nanking. See **CHINA: 1830-1842.**

1919.—Fuchow incident. See **CHINA: 1919-1920.**

**FUEGIAN TRIBE.** See **INDIANS, AMERICAN: Cultural areas in South America: Pampean area; PATAGONIANS.**

**FUEL CONTROL, United States.** See **FOOD REGULATION: 1917-1918: Food control in the United States; PRICE CONTROL: 1917-1919: United States; U. S. A.: 1917 (June): Food and Fuel Control Act.**

**FUENTES D'ONORO, Battle of** (1811). See **SPAIN: 1810-1812.**

**FUFIAN LAW.** See **ÆLIAN AND FUFIAN LAWS.**

**FUGGERS.**—"Hans Fugger was the founder of

the Fugger family. . . . He came to Augsburg in 1305 as a poor but energetic weaver's apprentice, acquired citizenship by marrying a burgher's daughter, and, after completing an excellent masterpiece, was admitted into the guild of weavers. . . . Hans Fugger died in 1409, leaving behind him a fortune of 3,000 florins, which he had made by his skill and diligence. This was a considerable sum in those days, for the gold mines of the New World had not yet been opened up, and the necessities of life sold for very low prices. The sons carried on their father's business, and with so much skill and success that they were always called the rich Fuggers. The importance and wealth of the family increased every day. By the year 1500 it was not easy to find a frequented route by sea or land where Fugger's wares were not to be seen. On one occasion the powerful Hanseatic league seized twenty of their ships, which were sailing with a cargo of Hungarian copper, down the Vistula to Cracow and Dantzic. Below ground the miner worked for Fugger, above it the artisan. In 1448 they lent 150,000 florins to the then Archdukes of Austria, the Emperor Frederick the Third (father of Maximilian) and his brother Albert. In 1500 a century had passed since the weaver Hans Fugger had died leaving his fortune of 3,000 florins, acquired by his laborious industry. His grand-children were now the richest merchants in Europe; without the aid of their money the mightiest princes of the continent could not complete any important enterprise, and their family was connected with the noblest houses by the ties of relationship. They were raised to the rank of noblemen and endowed with honourable privileges by the Emperor Maximilian the First."—A. W. Grube, *Heroes of history and legend*, ch. 13.

**FUGITIVE SLAVE LAWS, United States.** See U. S. A.: 1793: First fugitive slave law; 1850 (March); (April-September); 1864 (May-November); CONNECTICUT: 1818-1845.

**FUGUE, or Fuga**, polyphonic composition in music. See MUSIC: Medieval: 1350-1500.

**FUIDHIR**, class in ancient Ireland, under the protection of a chief. See IRELAND: 1269.

**FUJIWARA**, name of powerful family in Japan, who gave their name to one era of Japanese history. See JAPAN: 645-833; 833-1050; 1050-1150.

**FUJIYAMA**, highest mountain in Japan, about 12,450 feet. Its beauty is famous, and it is looked upon as sacred by the Japanese.

**FUKUOKA UNIVERSITY.** See UNIVERSITIES AND COLLEGES: 1871-1913.

**FUKUZAWA**, Ynkichi (1834-1901), Japanese author and journalist who endowed Keio University. See UNIVERSITIES AND COLLEGES: 1871-1913.

ALSO IN: S. L. Gulick, *Evolution of the Japanese*.

**FULAS**, tribe of Hamitic-negro stock in Africa. See AFRICA: Races of Africa: Modern peoples.

**FULDA**, town in Hesse-Nassau, Germany, which contains a famous Benedictine Abbey. In 1803 it was ceded to Holland. See GERMANY: 1801-1803; LIBRARIES: Medieval: Monastic libraries.

**FULK III** (c. 970-1040), called Fulk Nerra, count of Anjou. See ANJOU: 987-1129.

**Fulk V** (1092-1143), king of Jerusalem. See CRUSADES: 1147-1149; JERUSALEM: 1099-1131.

**FULK OF NEUILLY**, preacher of fourth Crusade. See CRUSADES: 1201-1203.

**FULLER, Melville Weston** (1833-1910), American jurist. Chief justice United States Supreme Court, 1888-1910; member Arbitration Commission to adjust Anglo-Venezuelan boundary question, 1899; arbitrator at The Hague in case

between England and France, 1904-1905. See SUPREME COURT: 1888-1913; U. S. A.: 1895 (April-May).

**FULTON, Robert** (1765-1815), American engineer and inventor, known principally for the successful application of steam to navigation. He constructed his first steamboat in France in 1803. The *Clermont* was launched on the Hudson in 1807, and led to the permanent establishment of steamship navigation. See STEAM NAVIGATION: Beginnings; SUBMARINES: 1624-1815; U. S. A.: 1793; Whitney's cotton gin; WARSHIPS: 1782-1860; NEW YORK: 1909.

**FUNCHAL**, capital city of Madeira. In 1916 it was shelled by a submarine. See WORLD WAR: 1916: IX. Naval operations: b.

**FUNDAMENTAL AGREEMENT OF NEW HAVEN.** See CONNECTICUT: 1639.

**FUNDAMENTAL CONSTITUTIONS.** See NORTH CAROLINA: 1669-1693.

**FUNDAMENTAL ORDERS OF CONNECTICUT.** See CONNECTICUT: 1636-1639.

**FUNDING OF DEBTS, Origin of.** See DEBTS, PUBLIC: Great Britain.

**FUNG-YUN-SAN**, Chinese missionary in the Taiping rebellion. See CHINA: 1850-1864.

**FUNSTON, Frederick** (1865-1917), American general. In 1896 he joined the Cuban insurgents and became lieutenant-colonel; 1898, became colonel of the Twentieth Kansas Volunteers; became brigadier-general and in 1901 captured the rebel Aguinaldo in the Philippines; was commissioned in regular army; 1906, commanded in San Francisco after earthquake; 1914, took charge of Vera Cruz after the American seizure and was made major-general. See SAN FRANCISCO: 1906; U. S. A.: 1914 (April): Occupation of Vera Cruz.

**FUORUSCITI.**—In Italy, during the Guelph and Ghibelline contests of the 13th and 14th centuries (see ITALY: 1215 to 1313-1330), "almost every city had its body of 'fuorusciti';—literally, 'those who had gone out';—proscrits and exiles, in fact, who represented the minorities. . . . in the different communities;—Ghibelline fuorusciti from Guelph cities, and Guelph fuorusciti from Ghibelline cities."—T. A. Trollope, *History of the commonwealth of Florence*, v. 1, p. 380.

**FUR TRADE**, one of the important factors leading to the exploration and settlement of the western United States and Canada. See ALASKA: 1741-1787; 1919; CANADA: 1616-1628; DAKOTA TERRITORY: 1806-1833; MISSOURI: 1700-1800; MONTANA: 1800-1852; OREGON: 1749-1859; 1808-1826; WISCONSIN: 1812-1825; WYOMING: 1807-1833; 1834-1862; MICHIGAN: 1616-1701; 1706-1840.

**FURKHAH, Battle at.** See WORLD WAR: 1918: VI. Turkish theater: c, 15.

**FURNACE, Electric.** See ELECTRICAL DISCOVERY: 1815-1921.

**FURNES**, town in West Flanders, Belgium, which, in 1744, was captured by the French. See AUSTRIA: 1743-1744.

**FURNESS ABBEY**, founded in 1127 in Lancashire by a small body of monks belonging to the Benedictine order of Savigny. In 1148 the monks of Savigny, having been attracted by the Cistercian reform, became Cistercians. Generous gifts helped to make it one of the richest monastic establishments in England. There were a number of offshoots from this abbey, notably that of Rushen in the Isle of Man. However, Furness abbey was, under compulsion, surrendered to the king on April 7, 1537, as the result of the abbot's being charged with complicity in the Pilgrimage of Grace. Some three years later Parliament annexed the estates and revenues to the duchy of Lancaster from which

they descended to the Prestons and later to the dukes of Devonshire.

**FURNIVAL**, Sir John Talbot. See SHREWSBURY, JOHN TALBOT, 1ST EARL OF.

**FURST**, German conferred title for "prince." See GERMANY: 1125-1272.

**FURSTENBUND**, or League of princes, Germany. See GERMANY: 1785.

**FURY**: French. See NETHERLANDS: 1581-1584. Spanish. See NETHERLANDS: 1575-1577.

**FUSILLADES**. See FRANCE: 1793-1794 (October-April).

**FUSTEL DE COULANGES**, Numa Denis (1830-1889), French historian. See HISTORY: 32.

**FUTTEH ALI SHAH**, shah of Persia, 1798-1834.

**FUTTEHPORE**, Battle of (1857). See INDIA: 1857-1858.

**FYLFOT-CROSS**, swastikalike device to fill

the lower part of a painted window. See TRISKELION.

**FYRD**.—"The one national army [in Saxon England, before the Norman Conquest] was the fyrd, a force which had already received in the Karolingian legislation the name of landwehr by which the German knows it still. The fyrd was in fact composed of the whole mass of free landowners who formed the folk: and to the last it could only be summoned by the voice of the folk-moot. In theory therefore such a host represented the whole available force of the country. But in actual warfare its attendance at the king's war-call was limited by practical difficulties. Arms were costly; and the greater part of the fyrd came equipped with bludgeons and hedgestakes, which could do little to meet the spear and battleaxe of the invader."—J. R. Green, *Conquest of England*, p. 133.

## G

**GA**. See GAU.

**GAAFER PASHA**, German leader of the Senussi revolt in 1916. See WORLD WAR: 1916: VI. Turkish theater: b, 1.

**GABA TEPE**, hill on the western shore of the Gallipoli peninsula. See WORLD WAR: 1915: VI. Turkey: a, 3; a, 4, v.

**GABELLE**. See TAILLE AND GABELLE.

**GABINIAN LAW**, proposed and carried through by the Roman tribune, Aulus Gabinus in 67 B.C. giving Pompey command of the war against the pirates. See ROME: Republic: B.C. 69-63.

**GABRIELI**, Andrea (c. 1510-1586), Italian organist and composer. See MUSIC: Modern: 1527-1613; 1650-1739.

**GABRIELI**, Giovanni (1557-1613), Italian composer. See MUSIC: 1650-1739.

**GACHUPINES AND GUADALUPES**.—In the last days of Spanish rule in Mexico, the Spanish official party bore the name of Gachupines, while the native party, which prepared for revolution, were called Guadalupe.—E. J. Payne, *History of European colonies*, p. 303.—The name of the Guadalupe was adopted by the Mexicans "in honour of 'Our Lady of Guadalupe,' the tutelary protectress of Mexico"; while that of the Gachupines "was a sobriquet gratuitously bestowed upon the Spanish fraction."—W. H. Chynoweth, *Fall of Maximilian*, p. 3.

**GADE**, Niels (1817-1890), Danish composer. See MUSIC: Folk music and nationalism: Scandinavia.

**GADEBUSCH**, Battle of (1712). See SWEDEN: 1707-1718.

**GADEIRA**, ancient Greek name for the modern city of Cadiz. See CADIZ: Location; PHOENICIANS: Origin.

**GADENI**, ancient Celtic tribe. See BRITAIN: Celtic tribes.

**GADES**, ancient Roman name for the modern city of Cadiz. See CADIZ: Location.

**GADSDEN**, Christopher (1724-1805), American Revolutionary officer. Members of South Carolina legislature, c. 1760-1780; representative at Stamp Act Congress, 1765; member of Continental Congress, 1774; lieutenant-governor of South Carolina, 1780, at the surrender of Charleston to the British. See U. S. A.: 1765: News of the Stamp Act in the colonies; 1765: Stamp Act congress; 1774 (September); 1776 (February-April).

**GADSDEN PURCHASE**.—By a treaty negotiated by James Gadsden with Mexico in 1853, the United States acquired slightly over 45,000 square miles of land in what is now Arizona and New Mexico, paying \$10,000,000. The purchase also settled the southern boundaries of territories which had previously been received from Mexico.—See also ARIZONA: 1853; U. S. A.: Historical geography.

**GAEL**, Gaidhel, or Goidel. See CELTS.

**GAELIC LANGUAGE**. See PHILOLOGY: 11; 17.

**GAELIC LEAGUE**, an organization for the purpose of fostering and spreading the Gaelic language, especially in Ireland. See IRELAND: 1893-1905; 1905-1916.

**GAESERIC**. See GENSERIC.

**GAETA**, episcopal city and seaport on the southern coast of Italy. It was besieged and captured by the French, 1805-1806.

1848.—Refuge of Pope Pius IX. See ITALY: 1848-1849.

1860-1861.—Last stand of Francis II.—Francis II of Naples was besieged here by the forces of United Italy under Garibaldi from November, 1860, to February 13, 1861, when the king was forced to surrender.

**GAETANO**, Benedetto (Boniface VIII). See PAPACY: 1294-1348; FRANCE: 1285-1314.

**GAETULIANS**, wandering tribes of the Berber race, northern Africa. See AFRICA: Races of Africa: Prehistoric peoples; NUMIDIANS AND MAURI.

**GAFOL**, a payment in money, or kind, or work, rendered in the way of rent by a villein-tenant to his lord, among the Saxons and early English. The word signified tribute.—F. Seeböhm, *English village community*, ch. 2, 5.—See also TAILLE AND GABELLE.

**GAGE**, Lyman Judson (1836- ), American financier. President of First National Bank of Chicago, 1891; secretary of the treasury, 1897-1902; president of United States Trust Co., New York, 1902-1906. See U. S. A.: 1897 (March); 1900 (March-December); 1901-1905.

**GAGE**, Thomas (1721-1787), English soldier and colonial governor of Massachusetts, 1774-1775. In expeditions against Fort Duquesne, 1755, Ticonderoga, 1758; appointed governor of Montreal, 1760; commander-in-chief of the English forces in North America, 1763-1772, 1774; recalled to England, 1775. See BOSTON: 1768: Quartering,

etc.; 1774; U. S. A.: 1774-1775; 1775 (April-May); (June).

**GAGERN**, Heinrich Wilhelm August, Baron von (1799-1880), German statesman. President of Frankfurt parliament, 1848; leader of movement for the unity of Germany. See AUSTRIA: 1849-1859.

**GAI SABER**, El, form of poetry sung by the troubadours in the south of France during the twelfth century. See PROVENCE: 1179-1207.

**GAIHEL**. See CELTS.

**GAILLARD**, Château. See CHÂTEAU GAILLARD.

**GAILLARD CUT**.—"The 'Culebra Cut' (in the Panama canal) was renamed 'Gaillard Cut' by executive order of the president dated April 27, 1915. . . . At Gamboa the Chagres Valley turns sharply to the east and the line of the canal leaves it for the heavy cut thru the Continental Divide. Gaillard Cut, forming the passage-way between the opposite slopes of the divide, is 7.97 miles long, 300 feet wide at the bottom, and from 45 to 65 feet in depth. The great depth of the cut is responsible for the magnitude of the slides, which are breaks in the banks, due to the pressure of the material. The elementary phenomena of slides are encountered in almost any kind of cutting or trenching thru earth; the great depth of the Gaillard Cut has caused similar breaks even in ordinarily firm rock. The slides are responsible for 35,158,225 cubic yards of additional excavation to February 1, 1915. To that date the total excavation from the Cut has been 117,077 cubic yards. The Cut is an arm of Gatun Lake and its bottom is accordingly 40 feet above sea-level."—*Official handbook of the Panama canal*.—See also PANAMA CANAL: 1904-1905; 1907-1914; 1914.

**GAINAS**, little tribe or state of old Lincolnshire, England, constituting a part of the great Anglian kingdom of the Mercians. See ENGLAND: 547-633.

**GAINES**, Edmund Pendleton (1777-1849), American brigadier-general. Figured in the defense of Fort Erie, August, 1814, and in the Seminole War of 1817. See U. S. A.: 1814 (July-September); FLORIDA: 1812-1819.

**GAINES**, Fort, Alabama, guarding the entrance to Mobile. A stronghold of the Confederates during the American Civil War. It was forced to surrender August 7, 1864. See U. S. A.: 1864 (August; Alabama).

**GAINES' MILL**, Battle of. See U. S. A.: 1862 (June-July; Virginia).

**GAINSBOROUGH**, Thomas (1727-1788), English painter. Settled at Ipswich, moving in 1759 to Bath, and to London in 1774; he painted portraits of all of the celebrities of his day; together with Sir Joshua Reynolds he ranks as the foremost of the English portrait-painters; also left some notable landscapes; was one of the original members of the Royal Academy.—See also PAINTING: English.

**GAIVS CAESAR**. See CALICULA.

**GAJ**, Ljudevit (1809-1872), Croatian poet. Proposed that the Serbs, Croats and Slovenes adopt the name of Illyrians, and urged the adoption of an official literary language of the nation. See JUGOSLAVIA: Early tendencies toward Jugo-Slav unity.

**GALABAT**, Battle of (1889). See EGYPT: 1885-1896.

**GALAPAGOS ISLANDS**, group of islands belonging to Ecuador and lying in the Pacific Ocean just under the equator. The nearest island lies about 580 miles off the Ecuadorian coast. The name is derived from the "galápago," the giant tortoise, which abounds in the islands. "The archipelago consists of 15 larger islands and about 40 smaller, with a total area variously estimated at

from 2,400 to 3,000 square miles. [See LATIN AMERICA: Map of South America.] Culpeper and Wenman Isles lie outside of this radius to the north. The most important in area are Albemarle, Indefatigable, Narborough, Chatham, James, and Charles. Other islands are Hood, Bindloe, Abingdon, Barrington, Tower, Duncan, Jarvis, Brattle, Culpeper, and Wenman. These names are the more common ones, but they are no longer official, as the Republic of Ecuador renamed the archipelago, in 1892, 'Colon,' in honor of Columbus, at the same time changing the nomenclature of each distinct island. . . . An ancient Incan legend would lead one to believe that the archipelago was known to the Kings of Quito, having been discovered by the Incan Tupac Yupanqui, who, according to their traditions, made a voyage of discovery on the Pacific during which he fell in with the two islands (Fire and Seaward). . . . That the group was known to the Quichuas, however, is probable. These people were great fishermen . . . so it is easily possible, especially when we consider the relation of the antarctic current to the isles, that some of their craft found the way to what we now call the Galápagos Islands. Leaving the question of Quichua discovery perhaps forever undetermined, we do know that Thomas De Berlanga, third bishop of Panama, was the first European to sight the Galápagos, on the 10th of March, 1535. . . . His discovery of the Galápagos Islands was quite accidental and came about during a voyage from Panama to Peru, whither he had been sent to report on the doings of Pizarro. The prelate left Panama on the 23d of February, 1535, laying a course for Inca land. All went well until the 1st of March, when the ship ran into calm weather, and was drawn at the mercy of the currents for eight days, at the end of which time the watch descried land. . . . After Bishop Berlanga left the islands their existence was again ignored, and they remained almost forgotten for a space of eleven years, when Diego de Rivadeneira, who, in carrying on war against the constituted authority at the time, was compelled to put to sea without chart or compass. He arrived at Albemarle. . . . Rivadeneira also left the group nameless, but after arriving safely at Acapulco and making his peace with the powers that were, his discovery was made known to the King of Spain, and he was recommended for the post of governor of the islands, a position he never filled, however. The archipelago now was well known to the Spanish mariners, [and was] . . . called the Enchanted Isles. Ortelius, however, in his map of America and the South Sea, published in 1570, indicated the group under the name Galápagos, which designation it has held ever since. Ambrose Cowley, a sea rover of the seventeenth century, gave the islands individual names, some of which hold to this day. The group became the rendezvous of the pirates who ravaged the west coast about the end of the seventeenth and eighteenth centuries. [See also PACIFIC OCEAN: 1513-1764.] . . . The South Pacific whalers also made port in the islands and early reported them as most satisfactory fishing grounds, a distinction they still enjoy. Near the end of the eighteenth century, to be exact, in 1793, the Viceroy of Peru ordered a survey of the archipelago made, as it was part of his domains, and Alonso de Torres carried out his orders. During the period of revolution against Spanish authority in South America the islands were much used by the privateers that preyed on Spanish commerce, being visited by those two active Argentine corsairs, Buchar and Brown, who came to divide their booty and settle a difference that had arisen between

them. With the fall of Spanish power the isles were in a measure forgotten and these desolate shores were only touched by an occasional whaler or some circumnavigating sailor, the archipelago actually remaining no man's land until February 12, 1832, when the Ecuadorean Government formally took possession of the group. . . . This act of occupation was inspired by a North American, a Louisianian named Villamil, who left his native territory when it came under the jurisdiction of the United States. . . . General Villamil entered on a plan of colonization with great enthusiasm. He obtained a concession from the Ecuadorean Government in recognition for his having brought the islands to the notice of the officials of this Republic. He induced some of the younger men of the best families of Guayaquil to accompany him to Charles Island, where he established the Society for the Colonization of the Archipelago of the Galápagos. . . . Unfortunately the originator of the scheme soon lost interest in the affairs of the colony, and this, combined with the fact that the Ecuadorean Government found the islands a suitable place for use as a dumping ground for undesirable citizens, and a constantly diminishing trade between the group and the main coast, due to various circumstances, caused the original colonizers to become discouraged.—*Galápagos islands* (*Bulletin of the Pan-American Union, Jan.-June, 1911, pp. 228-230*).—"They [Galápagos Islands] lie almost in the direct path of vessels on the route across the Pacific from Australia and New Zealand to the Panama Canal. . . . The prospective strategic value, due to the . . . Panama Canal, of the islands has motivated various negotiations by foreign Powers for their acquisition. In 1909 some sensation was caused in Ecuador by the publication of ex-president García's private papers, showing that there had been proposals for sale of the Archipelago, first to France and then (that in view of the Monroe Doctrine having been found inadvisable) to the United States. In 1911 there were dealings between President Estrada and the United States for a proposed lease of the islands for a term of ninety-nine years, under a payment of £3,000,000 to Ecuador; the American offer was refused, as its acceptance would have affronted Ecuadorian patriotism."—C. R. Enoch, *Ecuador, pp. 209, 306*.

**GALATA**, suburb of Constantinople, largely settled by Venetian and Genoese traders during the thirteenth century. See GENOA: 1261-1299; CONSTANTINOPLE: 1261-1453; 1348-1355; also Map of the Dardanelles, etc.; TURKEY: 1696 (August).

**GALATIA, GALATÆ, GALATIANS**.—In 280 B.C. a body of Gauls, or Celts, invaded Greece, under Brennus, and in the following year three tribes of them crossed into Asia Minor. There, as in Greece, they committed terrible ravages, and were a desolating scourge to the land, sometimes employed as mercenaries by one and another of the princes who fought over the fragments of Alexander's empire, and sometimes roaming for plunder on their own account. Antiochus, son of Seleucus, of Syria, is said to have won a great victory over them; but it was not until 239 B.C. that they were seriously checked by Attalus, king of Pergamus, who defeated them in a great battle and forced them to settle in the part of ancient Phrygia which afterwards took its name from them, being called Galatia, or Gallo-Græcia, or Eastern Gaul. When the Romans subjugated Asia Minor they found the Galatæ among their most formidable enemies. The latter were permitted for a time to retain a certain degree of independence, under tetrarchs, and afterwards under kings of their own. But finally Galatia became a Roman prov-

ince. "When St. Paul preached among them, they seemed fused into the Hellenistic world, speaking Greek like the rest of Asia; yet the Celtic language long lingered among them and St. Jerome says he found the country people still using it in his day (fourth cent. A.D.)."—J. P. Mahaffy, *Story of Alexander's empire, ch. 8*.—See also CHRISTIANITY: A.D. 35-60; GAUL: People.

**GALATZ**, important commercial center and port on the left bank of the Danube river, Rumania. Extensive floods occurred there in June, 1897, rendering 20,000 people homeless. The scene of various conflicts with the Russians. See WORLD WAR: 1918: V. Balkan theater: b.

**GALBA**, Servius Sulpicius, Roman general and orator. Praetor in Spain, 151 B.C.; consul, 144 B.C.—See LUSITANIA.

**GALBA**, Servius Sulpicius (5 B.C.-69 A.D.), Roman emperor, 68-69 A.D. See ROME: Empire: A.D. 69.

**GALEAZA, GALEOTA, GALERA**, types of sailing vessels. See CARAVELS.

**GALEN**, Claudius (c. 130-203), Greek medical writer, anatomist and physician. See MEDICAL SCIENCE: Ancient: 2nd century; EDUCATION: Ancient: B.C. 3rd-A.D. 3rd centuries.

**GALERIUS** (Galerius Valerius Maximianus) (d. 311), Roman emperor, 305-311. Created Cæsar by Diocletian, 293. See ROME: Empire: 284-305; 303-305.

**GALIBIS**, race related to the Caribs of French Guiana. See CARIBS.

**GALICIA**, ancient kingdom, captaincy-general and province of northwestern Spain, comprising the modern provinces of Coruña, Lugo, Orense and Pontevedra.

5th-6th centuries.—Settlement of Sueves and Vandals. See SPAIN: 409-474.

734-750.—Occupation by the Moors.—Moors driven out by Alphonso I of Asturias.—Founding of the kingdom. See SPAIN: 713-950.

**GALICIA** (German Galizien, Polish Halicz): Area.—Location.—Resources.—At the outbreak of the World War, Galicia was the largest of the Austrian crownlands with an area of over 30,000 square miles and a population of more than 8,000,000 according to the 1910 census. Its present area cannot be strictly defined until its boundaries are determined by the peace treaty with Russia and Lithuania, and by the plebiscite in Upper Silesia. The Carpathian Mountains, in the form of an arc, form the boundary between Galicia and Hungary. The country has extensive forests, and some of the richest petroleum fields in Europe.

**Agriculture**.—**Emigration**.—**Open-door policy**.—**Peasant farming**.—Agriculture is the principal industry. Rural population before the World War "numbered 71 to the square kilometer, or about 200 to the square mile. It is only within the last two decades that Ruthenians started to emigrate to other countries, or even to go to work for a season beyond their home lines, whereas immigration into Eastern Galicia had kept up at a steady pace all along. A failure in crops in Mazovia in the late sixties caused a large number of Poles from that district to seek homes in Podolia, the Panhandle of Eastern Galicia. They came in large groups. As they furnished steady and cheap labor, the landlords set aside parcels of land adjacent to the villages and built dwellings for their accommodation. These additions were commonly known as Mazowówka (Mazovia towns). The Mazur and his wife became the servants of the landlord, and so did their children as they grew up, one generation succeeding the other. When Germany decreed that all foreigners

should leave her country, 3,600 Poles were affected. Austria's open-door policy brought nearly all of them to Galicia, and added to the population of the Mazowówka. Peasant farming is still very primitive, and the smaller the farm the more old fashioned are the implements used. The location of the land contributes to a great deal of lost motion. The peasants live in villages, and the near-by land is divided into several subdivisions, usually three to five. A farmer owning five acres has one acre each in every division, miles apart. To do a day's work on his land he has to rise hours before sunrise to reach his destination in time. The grain is transported to the village in the shock. The sickle and the scythe are still the harvesting tools, and the flail is used for thrashing. There is not much meadow land, but the land is only cultivated two years in succession and then left fallow for a year. The fields are not fenced, and the fallow year is for the whole division, the land being used for pasture collectively by the owners. This is the reason for the parcel plan. If a man's land were all in one area he would have to let it all lie fallow in certain years and would have nothing to cultivate that year."—B. Falk, *Ruthenians versus Poles in Galicia* (*New York Times Current History*, Feb., 1910).

**Nationalities.—Poles and Ruthenians.—Antagonism between the two races.—Formation of the nobility.—Language.**—"The Ruthenians of Eastern Galicia have commonly been classed as Poles, but there is as great a difference between the two nationalities as if they were living on different hemispheres. The Ruthenians have always been pacific, meek, and humble, whereas the Poles have been aggressive and domineering. In the 400 years that the Ruthenians were under the rule of the Poles the latter made themselves masters of the land, and, at the partition of Poland by Germany, Russia, and Austria, the Poles in Eastern Galicia formed the nobility and the more privileged peasant class, while the Ruthenians were serfs and laborers. Austria's emancipation of the serfs in 1848 gave the Ruthenians more freedom and put them in possession of the land which they had held nominally before the abolition of serfdom, but it did not narrow the gulf between the two classes. Church, language, and caste remained the true line of cleavage. The Poles are Roman Catholics and the Ruthenians are Greek Catholics; the Poles speak Polish and the Ruthenians speak Ruthenian, the same language as that of the Ukraine. From the beginning the Poles were the masters, the Ruthenians the peasants. The language of the province was Polish, and the Poles were also the more literate, so that they filled all the official and clerical positions."—*Ibid.*, p. 326.—See also BALKAN STATES: Map showing distribution of nationalities.

900-1382.—Bela III.—Changing conditions.—Galicia, from the tenth to the fourteenth centuries, was fought over by the Poles, Russians, and Hungarians. The original Germanic population was replaced by the Slavic Poles and Ruthenians. The principalities of Halicz (Galicia) and Vladimir (Lodomeria), in the twelfth century, rose to prominence from a host of petty states. Disputes, between Halicz and Lodomeria, led to the interference of the king of Hungary, Bela III, who, in 1190, assumed the title of king and appointed his son Andreas lieutenant of the kingdom. In 1198, Roman, prince of Lodomeria, succeeded in annexing Galicia to his kingdom; the two duchies were separated in 1215, but later were united by Daniel of Lodomeria, who accepted the crown of Galicia from the hands of the papal legate about 1235. In

1340 the house of Roman died out; and in 1382 Galicia and Lodomeria became a part of the kingdom of Poland.

1382-1861.—First and second partitions of Poland.—Rearrangement by Napoleon.—Galicia again awarded to Austria, 1814.—Cession of Cracow.—Constitution granted to Galicia.—From 1382 to 1772, Galicia and Lodomeria formed a part of Poland. In the first partition of Poland, 1772, the country passed to Austria and in the second partition, 1795, the districts of Little Poland, Radom and Lublin, were added to Austria's share under the name of West or New Galicia. These districts, with Cracow, were taken from Austria and given to the new grand duchy of Warsaw by Napoleon after the defeat of Austria at Wagram in 1809. [See GERMANY: 1809 (July-September).] At the Congress of Vienna, 1814-1815, Austria was again awarded the kingdom of Galicia, minus certain portions of Little Poland, and in 1846 the crownland was rounded out by the cession of the suppressed republic of Cracow. [See AUSTRIA: 1815-1846.] The period since 1848 has been marked by political struggles between the Polish and Ruthenian nationalities, the former retaining the ascendancy. In 1861, Galicia was granted a constitution which allowed a provincial diet as well as representation in the Austrian Reichsrat.

1772-1914.—Austria's policy of "divide and rule."—Setting of one Slav race against the other.—Efforts to manufacture a new nationality and language for its Galician subjects.—"It has often been asserted that the government of Vienna has ruled its Galician subjects more kindly than the remainder of Poland was treated after the Partition by its German and Russian masters; and this is probably true. It was a matter of much importance to Austria to have on its side a people who could be turned into good soldiers and be a make-weight against the newly incorporated Poles, so the policy was adopted of setting one Slav people against another—the usual Hapsburg policy of 'divide and rule.' The Little Russian peasants of Galicia were converted into a new nationality and a new name was invented for them. They were called 'Ruthenes' so as to obliterate from memory their Russian origin. But they and their language and their literature are Russian. In religion they stand between Catholic Poland and 'Orthodox' Russia. They belong to the Uniate Greek Church, acknowledging the authority of the Pope while adhering to the ritual, discipline and doctrine of the Orthodox Russian Church. The Austrian Government—the great supporter of Catholicism—has looked with disfavour on the propagandist efforts of Catholic Poles to win over the Ruthenes. Such a junction of religions would tend to strengthen the Polish element in Galicia—a consummation devoutly to be avoided. In their efforts to manufacture a new nationality for their Little Russian subjects the Austrian Government also tried to give them a language of their own, with Latin characters to take the place of Cyrillic, a new phonetic spelling, new words collected from all quarters and new grammatical forms. A strong effort was also made to set up opposition and ill-feeling between this manufactured nationality and their Russian relatives over the border. They were pampered with benefits, they were well supplied with schools, churches and museums. They were given a large share in the magistracy and bureaucracy and their religion was favoured even at the expense of the Roman Catholic church. For the last half century Austria has done everything in its power to create and set up nationalities of Poles and Ruthenes as a bulwark against Russia.

There are 4 millions of these Ruthenes in [Galicia]. . . . They are a passive and melancholy people, often deceitful and cunning—the characteristics of a race long tyrannized over and ground down as these were by the Polish aristocracy who lived amongst them. They are, however, rapidly improving. The competition of the Austrian and Russian Empires for their favour—for Russia has not been idle—is having its effect and the people are rapidly rising in the social scale. Eastern Galicia is mainly occupied by Ruthenes, but as we journey west, Poles predominate. Of this race are the rich landowners and aristocrats of the northern Carpathian Plain that extends through Galicia across the Russian border into Podolia where it amalgamates with the great Steppe country that stretches away to the Urals and the Caucasus.”—W. F. Bailey, *Slavs of the war zone*, pp. 5-7.—See also AUSTRIA: 1815-1846.

1850.—Treatment of Ukrainians by Poles. See UKRAINE: 1795-1860.

1861-1879.—Condition of peasantry.—Compulsory education law.—Formation of Ruthenian state defeated.—Revival of nationalism.—“The abolition of serfdom in Russia in 1861 gave the Ukrainians larger land grants, and their economic condition was better than that of the Galicians. They also had a larger intellectual class, which tended to create closer ties between the people of the same nationality. . . . Prior to 1869 the Austrian school system was in the hands of the clergy. The priests conducted schools, but the peasants were mostly illiterate. The compulsory education law was passed that year requiring all established communities to build and maintain schoolhouses for elementary education. The Constitution of 1867 also gave them direct representation in the Reichsrat and Provincial Diet and in the selection of local officers. . . . Lack of self-confidence contributed much toward the peasants’ peonage. In 1874, however, the Ruthenian intellectuals, led by their Bishop, Jachymowicz, who represented them in the National Council, petitioned the Emperor to create the territory east of Lemberg in Galicia and the adjoining territory in Bukowina—inhabited by Ruthenians—into a Ruthenian State. Smalko, the Polish member, opposed them vigorously and used, it is charged, unfair means to defeat the measure. Count Goluchowski, an Eastern Galicia magnate, then Governor of Galicia, disapproved of the measure on the ground that the Ruthenians, formed into a separate province, would join their neighbors on the east, the Ukrainians, who speak the same language and have the same customs, and, with slight variations, have suffered the same injustices. The bill was defeated, but it had given the Ruthenians food for thought. . . . Simultaneously with the Austro-German alliance [1870] an impetus to revive Ruthenian nationalism became noticeable. At the same time the thirst for knowledge among the Ruthenians became more pronounced. Instead of spending Sunday after church in the tavern the peasants congregated in the reading room to hear the latest news read by those who were able to read. These libraries gradually increased in volume, and history, novels, and even poetry were read. It was surprising to hear an old peasant who could neither read nor write recite a poem he had learned by heart, and discuss history or the political questions of the day. Ruthenian was a prescribed language in the elementary schools where Ruthenians predominated, but secondary education was not provided for. Agitation for Ruthenian gymnasiums and an academy, which have since been built, began at that time.”—B. Falk, *Ruthenians*

*versus Poles in Galicia* (*New York Times Current History*, Feb., 1919).

1861-1914.—Austria’s policy towards Poles in Galicia.—Pan-Slavism of the Ruthenians.—Political advance.—“While her neighbors were carrying out a policy which meant to Russianize and Prussianize their Polish subjects, Austria used her Poles to her own advantage and made them serve as the very pillars of her monarchy. After Austria was defeated by Prussia in 1866, and after the formation of the German Empire in 1871 had excluded her as a German power, she started an attempt to make all her Slavs props of her empire. But with the exception of the Poles the Slavs were more or less under the influence of the Pan-Slavic idea, with Russia as their leader. They were also agitating for the reorganization of the empire into autonomous States on national lines. The Austrian Government feared and opposed those movements, and the Poles, fearing Pan-Slavism under Russian influence, showed a readiness to support the Government in return for concessions to them. They asked for large rewards for their support—and received them. The new Constitution of 1867, establishing the so-called Dual Monarchy of Austria-Hungary, gave Galicia more liberal concessions than any of the other provinces. In course of a few years the Poles had complete administrative autonomy, and since then they have had the administration of Galicia in their own hands and have been able to govern it in their own interests. But this served only to advantage the nobility and near nobility. [See also POLAND: 1867-1910.] Franz Ferdinand had his own reasons for trying to develop Ukrainian autonomy. He had married a Bohemian Countess morganatically, and their children were not eligible to Austrian succession. The Countess, later Duchess of Hohenberg, a brilliant and ambitious woman, wanted her son to succeed to a throne, either through the separation of Hungary from Austria or the Ukraine from Russia. The German Emperor encouraged the scheme, because he had designs on the throne of St. Stephan for one of his younger sons. During a visit of the German Emperor and his son to the Austrian Court, the Austrian Emperor was painfully surprised to learn that the young German Prince spoke Hungarian fluently, a fact which could have but one meaning. Notwithstanding their former backwardness the Ruthenians in Galicia have made great political strides in the last thirty years, and by 1891 had a considerable representation in the Legislatures. In 1895 only Ruthenians were elected to the Reichsrat, where they predominated. There were several Ukrainian parties in Galicia before the great war, but the Ruthenian Party and the Russian National Party were predominant. Pursuant with the Austrian and German policy of playing both ends against the middle, when war was declared it was made known that if Austria and Germany won the war against Russia, Ukraina would be made an autonomous State, and Austrian Ruthenia might become part of it. Thus, on Aug. 3, 1914, all the Ukrainian parties in Galicia hailed the war against Russia as a war of freedom for the Ukrainians.”—B. Falk, *Ruthenians versus Poles in Galicia* (*New York Times Current History*, Feb., 1919).

1902-1908.—Strikes of Ukrainians.—Assassination of Potocki. See UKRAINE: 1840-1914.

1913.—Strife of nationalities.—Aim of the Russian Chauvinists.—Agitation of Count Bobrinsky.—Ruthenian campaign of Polish obstruction.—“In Galicia the strife of nationalities was more complicated than in Bohemia, as it was mixed up with a politico-religious agitation, started

by a reactionary member of the Duma, Count Bobrinsky, and some of the bishops of the Russian Church. So long as Poland was independent the Ruthenians, who inhabited extensive districts under her rule, regarded themselves as Poles and did not claim to be a separate nationality, but after the partition both Russia and Austria endeavoured to sow dissensions between them and the Poles, and the Ruthenians now claim an autonomy of their own, so that Eastern Galicia, where they are much more numerous than the Poles, should be separated from the western part of the province and have a separate local government and diet. Their aspirations even go farther, to the extent of detaching the province of the Ukraine, where also they form the great majority of the population, from Russia and joining it to Eastern Galicia; and the formation of a separate province in Eastern Galicia where they would be predominant, was regarded as the first step towards a consummation which could only take place if Austria-Hungary were successful in a war against Russia. The Russian Chauvinists, on the other hand, with Count Bobrinsky at their head, aim at an annexation of Eastern Galicia to Russia, and accordingly strive by sending Russian missionaries to Galicia to produce a movement among the Ruthenians for leaving the Uniate Church, whose head is the Pope, and joining the Russian Church under the Holy Synod at St. Petersburg—a movement which the Austrian Government naturally does its utmost to check. Hence the stories of religious persecution, in Eastern Galicia, which have as little foundation as those of political persecution, the Ruthenians having more schools in Eastern Galicia than the Poles, and their own professors giving instruction in the Ruthenian language in the University of Lemberg. The agitation of Count Bobrinsky and his agents among the Ruthenians in Eastern Galicia and Hungary became so active that the Hungarian Government arrested eighty-four of them, who were brought to trial on December 29 [1913] on a charge of high treason. It appeared from the evidence that the accused had promised money to the peasants 'for the building of Russian churches,' and had assured them that 'the time was not far distant when Russia would rule,' and that 'conversions were necessary to produce this result.' Young men had been sent to Russia to be trained as priests 'that they might strengthen the Russian faith on their return.' . . . Meanwhile the Ruthenians of Galicia, being unable to come to an agreement with the Poles as to their being granted a larger representation in the Diet, started a campaign of obstruction in the Reichsrath, which they filled with the din of whistles, motor horns, penny trumpets, electric bells and the slamming of the lids of their desks. The campaign lasted for three weeks, and only ceased at the end of the year when the Ruthenians declared that 'in consideration of the threatened danger to Austrian Parliamentarism,' they would refrain from further obstruction. The Minister for Galicia, Dr. Dlugosz, having stated in a speech to his constituents that the leader of the Polish People's Party had received large sums of money from the Government for election purposes, was reprimanded by the Prime Minister on December 19, and consequently resigned. He was given a 'provisional' successor in Dr. Morawski, a Privy Councillor in the Ministry."—*Annual Register*, 1913, pp. 328-329.

1914-1920.—World War and the devastation wrought in Galician district.—Strife between Poles and Ruthenians after the war.—In the great military conflict of the World War, Galicia suffered more than any other large area of the

Hapsburg dominions. The first waves of the Russian invasion in 1914 engulfed the province except for the westernmost district around Cracow; and it was not till mid-summer of the next year that Mackensen's drive cleared the greater part of the invaded region. The severe fighting of 1916 (Brusilov's offensive) further devastated the Ruthenian districts of southeastern Galicia. During 1917 comparative quiet reigned throughout the territory, but the war between Poland, Ukraine, and Bolshevik Russia in 1919-1920 disturbed large areas of the country.—See also WORLD WAR: 1914: II. Eastern front: d, 1; d, 5; 1915: III. Eastern front: c; f; f, 8; g; i, 5; 1916: III. Eastern front: a, 3; 1917: III. Russia and the eastern front: b; k; AUSTRIA-HUNGARY: 1914-1915; POLAND: 1914-1917; RUSSIA: 1914-1915; UKRAINE: 1914-1921.

"The Ruthenians and the Poles in Eastern Galicia present a difficult problem in the crazy quilt of Middle Europe. The Ruthenians compose 62 per cent. of the population in Eastern Galicia, the former palatinate of Halicz adjoining the recently formed Government of the Ukraine. During the turmoil that followed the Austrian collapse they declared themselves a separate State, joined the Ukrainians, and called in the Government military forces against Polish resistance. The Poles, who for centuries dominated Galicia and form the majority of the population in the western part of the province, formed the Polish Republic, joined the Polish Nation on the north of them, and undertook to prevent the Ruthenians' secession by force of arms. Thus a small region of 20,000 square miles has become a battleground, with neighbor arrayed against neighbor, each seeking independence by acts of violence, without a restraining hand to stop the mutual destruction."—B. Falk, *Ruthenians versus Poles in Galicia* (*New York Times Current History*, Feb., 1919).—See also AUSTRIA-HUNGARY: 1917-1918; 1918; POLAND: 1919 (September).

1914-1921.—Russian activities.—Struggle between Poland and Ukraine for possession of eastern Galicia. See UKRAINE: 1914-1921.

GALILEE.—The Hebrew name Galil, applied originally to a little section of country, became in the Roman age, as Galilæa, the name of the whole region in Palestine north of Samaria and west of the River Jordan and the Sea of Galilee. Ewald interprets the name as meaning the "march" or frontier land; but in Smith's "Dictionary of the Bible" it is said to signify a "circle" or "circuit." It had many heathen inhabitants and was called Galilee of the Gentiles.—H. Ewald, *History of Israel*, bk. 5, sect. 1.—See also JEWS: Israel under the Judges; JERUSALEM: 1100; 1244; CHRISTIANITY: Map of Palestine in time of Christ.

GALILEE, "a porch or chapel at the entrance of a church. The term also appears sometimes to be applied to the nave, or at least to the western portion of it, and in some churches there are indications of the west end of the nave having been parted off from the rest, either by a step in the floor, a division in the architecture, or some other line of demarkation. . . . The name is thus accounted for by Precentor Millers, in his 'Description of the Cathedral Church of Ely' (1834): 'As Galilee, bordering on the Gentiles, was the most remote part of the Holy Land from the holy city of Jerusalem, so was this part of the building, most distant from the sanctuary, occupied by those unhappy persons, who, during their exclusion from the mysteries, were reputed scarcely, if at all, better than heathens.' . . . The great narthexes or open porches in France, such as those at Autun, Beaune, Notre Dame at Dijon, Paray le Monial,

Tournus, and Vezelay, correspond in some measure with our Galilee. One of the finest was at the Abbey Church of Cluny, destroyed early in the last century. In Italy one of the most wonderful of these narthexes is that of the cathedral at Casale Monferrato."—J. S. Bumpus, *Dictionary of ecclesiastical terms*, pp. 142-143.

**GALILEO GALILEI** (1564-1642), Italian astronomer and physicist. The following were his most important contributions to science: (1) the discovery that the motion of the pendulum may be used for the exact measurement of time; (2) the law of falling bodies; (3) the invention of the telescope and microscope; (4) the discovery of four satellites of Jupiter and spots on the sun. He advocated the Copernican theory of astronomy. For this his works were put on the Index, and he was forced to make a public recantation in the following words: "I, Galileo, being in my seventieth year, being a prisoner and on my knees, and before your Eminences, having before my eyes the Holy Gospel, which I touch with my hands, abjure, curse, and detest the error and the heresy of the movement of the earth."—G. H. Putnam, *Censorship of the Church of Rome*, p. 313.—Tradition says that, immediately after uttering this recantation, he murmured the now historic phrase, "Eppure si muove" ("and yet it moves"). Some authorities discredit the story, though it is generally accepted in Italy. He was also sentenced to an indefinite term of imprisonment, which was, however, commuted; and he was allowed to live at Siena and later at Florence, where he died.—See also ASTRONOMY: 130-1609; EUROPE: Modern: Revolutionary period; INVENTIONS: 16th-17th centuries: Time measurement; Instruments; ITALIAN LITERATURE: 1600-1700; SCIENCE: Middle Ages and Renaissance: 16th century.

**GALLIA**, **GALLI**. See **GAUL**.

**GALLIA BRACCATA**, **COMATA** and **TOGATA**.—"The antient historians make some allusion to another division of Gaul, perhaps introduced by the soldiers, for it was founded solely upon the costume of the inhabitants. Gallia Togata, near the Rhone, comprehended the Gauls who had adopted the toga and the Roman manners. In Gallia Comata, to the north of the Loire, the inhabitants wore long plaited hair, which we find to this day among the Bas Britons. Gallia Bracata, to the south of the Loire, wore, for the national costume, trousers reaching from the hips to the ancles, called 'braccæ.'"—J. C. L. S. de Sismondi, *The French under the Merovingians* (tr. by Bellingham), *ch. 2, note*.

**GALLIA CISALPINA**, territory lying between the Alps, Apennines, and the Adriatic which was overrun by the Gauls. See **ITALY**: Ancient; **ROME**: Republic: B. C. 300-347; also Map of ancient Italy.

**GALVANI**, Luigi (1737-1798), Italian physiologist and discoverer of current electricity. See **ELECTRICAL DISCOVERY**: 1784-1800.

**GALVANOMETER**, instrument for the measurement of electric currents. See **ELECTRICAL DISCOVERY**: Measuring instruments: 1833-1921.

**GALVESTON**, city of Texas on the gulf of Mexico; population in 1920, 44,255. The harbor was probably named by Spanish explorers who entered it in 1782. It later served as a base for buccaners and pirates until they were driven out in 1820. The first settlement from the United States was made in 1837, and it was incorporated as a town in 1839. During the Civil War it was captured successively by Federal and Confederate troops.

1900.—City overwhelmed by wind and waves.—"The southern coast of the United States was visited by a tropical hurricane on September 6-9, the fury of which reached its climax at and near Galveston, Texas, 1:45 A.M., on Sunday, the 9th. Galveston is built upon the east end of a beautiful but low-lying island some thirty miles long and six or seven miles wide at the point of greatest extent, though only a mile or two wide where the city is built. The pressure of the wind upon the waters of the Gulf was so powerful and so continuous that it lifted the waves on the north coast many feet above the ordinary high-tide level, and for a short time the entire city was submerged. . . . The combined attack of hurricane and tidal-wave produced indescribable horrors—the destruction of property sinking into insignificance when compared with the appalling loss of life. The new census taken in June accredited Galveston with a population of 37,789. The calamity of a few hours seems to have reduced that number by 20 per cent. The loss of life in villages and at isolated points along the coast-line will probably bring the sum total of deaths caused by this fatal storm up to 10,000. The condition of the survivors for two or three days beggars description. The water had quickly receded, and all means of communication had been destroyed, including steamships, railroads, telephone and telegraph lines, and public highways. Practically all food supplies had been destroyed, and the drinking-water supply had been cut off by the breaking

of the aqueduct pipes. The tropical climate required the most summary measures for the disposition of the bodies of the dead. Military administration was made necessary, and many ghastly looters and plunderers were summarily shot, either in the act of robbing the dead or upon evidence of guilt. . . . Relief agencies everywhere set to work promptly to forward food, clothing, and money to the impoverished survivors. Great corporations like the Southern Pacific Railroad made haste to restore their Galveston facilities, and ingenious engineers brought forward suggestions for protection of the city against future inundations. These suggestions embraced such improvements as additional break-waters, jetties, dikes, and the filling in of a portion of the bay, between Galveston and the mainland. The United States Government in recent years has spent \$8,000,000 or \$10,000,000 in engineering works to deepen the approach to Galveston harbor. The channel, which was formerly only 20 or 21 feet deep across the bar, is now 27 feet deep, and the action of wind and tide between the jetties cuts the passage a little deeper every year. The foreign trade of Galveston, particularly in cotton, has been growing by leaps and bounds."*—American Review of Reviews, Oct., 1900, p. 398.*—See also **TEXAS**: 1900.

1901.—Origin of commission government. See **COMMISSION GOVERNMENT IN AMERICAN CITIES**: 1901-1903.

1904-1920.—Protection against floods.—**Population**.—As a protection against a recurrence of the disastrous flood of September, 1900, a wall, covering the entire frontage of the city, was built facing the gulf of Mexico. It was completed in 1904. As a further protection against storms the entire grade of the city was raised from one to fifteen feet above its former level. In 1908 the city issued bonds for the construction of a causeway, over two miles in length, to connect Galveston with the mainland, which was opened to traffic in May, 1912. Since the storm the growth of the city has been steady.

**GALVÉZ**, Bernardo de, Count de (1755-1786), governor of Louisiana and viceroy of Mexico. Sided with the Americans during the Revolutionary War, even before Spain's declaration of war against England, 1779; captured Baton Rouge, Pensacola and Mobile; appointed captain-general of Cuba, 1783; succeeded his father as viceroy of Mexico, 1785.—See also **FLORIDA**: 1779-1781; **LOUISIANA**: 1770-1797.

**GALVEZ**, José (1720-1787), Spanish statesman, visitor-general of Mexico and the West Indies, 1761-1774 (see also **VISITOR-GENERAL**); after his return to Spain was *ministro universal de Indias* and was created marquis of Sonora. Perhaps the greatest of the Spanish colonial administrators.

**GAMA**, Vasco da (c. 1460-1524), Portuguese mariner and discoverer of the ocean route to India in 1498. Four years later he headed a second expedition to India. In 1524 he was appointed viceroy of Portuguese Asia, but died shortly after his arrival at Cochin. See **COMMERCE**: Era of geographic expansion: 15th-17th centuries; Leadership of the Portuguese; **INDIA**: 1498-1580; **PORTUGAL**: 1463-1498; **SOUTH AFRICA, UNION OF**: 1486-1806.

**GAMARRA**, Agustin (1785-1841), president of Peru, 1820-1834. See **PERU**: 1826-1876.

**GAMBETTA**, Léon Michael (1838-1882), French Republican statesman. Vigorous opponent of the second empire and the Franco-Prussian War; minister of interior in the government of national defense formed in 1870, escaping from Paris by balloon to organize the armies in the provinces;

resigning after the capitulation of Paris; president of the Chamber of Deputies, 1870-1881; premier, November, 1881, to January, 1882.—See also FRANCE: 1870-1871; 1875-1889; DEMOCRACY: Genesis of modern democracy; SUFFRAGE, MANHOOD: France: 1848-1875.

**GANGANELLI, Lorenzo.** See CLEMENT XIV. **GANGANI**, early Celtic tribe of Ireland. See IRELAND: Tribes of early Celtic inhabitants.

**GANGES**, great river of northern India, flowing from the Himalayas into the bay of Bengal. In all branches of the Hindu religion it is revered as a holy stream, the mere touch of whose waters has marvelous efficacy in washing away sin. Certain places on its banks receive annual visits from thousands of pilgrims.—See also INDIA: Land.

**GANGWAY.**—On the floor of the English House of Commons, "the long lines of seats rise

gradually on each side of the chair—those to the Speaker's right being occupied by the upholders of the Government, and those to the left accommodating the Opposition. One length of seating runs in an unbroken line beneath each of the side galleries, and these are known as the 'back benches.' The other lengths are divided into two nearly equal parts by an unseated gap of about a yard wide. This is 'the gangway.' Though nothing more than a convenient means of access for members, this space has come to be regarded as the barrier that separates the thick and thin supporters of the rival leaders from their less fettered colleagues—that is to say, the steady men from the Radicals, Nationalists, and free-lancers generally."—*Popular account of parliamentary procedure*, p. 6.

**GARCIA, king of Leon and Asturias, or Oviedo**, 910-914.

**García I**, king of Navarre, 925-970.

**García II**, king of Navarre, 995-1001.

**García III**, king of Navarre, 1035-1054.

**García IV**, king of Navarre, 1134-1150.

**GARCIA Y INIGUEZ, Calixto** (1836-1898), Cuban general and leader of the insurgents. See U. S. A.: 1898 (June-July).

**GARDA, Lake**, largest lake in Italy, thirty-four miles long, two to ten miles wide; southern extremity is sixteen miles west of Verona; points of interest on its shores are connected with early Roman history; it is known for its fashionable resorts, fine hotels, agreeable climate and beautiful scenery; its northern extremity marked the limit of the Italian offensive in the summer of 1915 during the World War.

**GARDEN CITIES, England.** See CITY PLANNING: Great Britain.

**GARDEN OF EDEN.** See EDEN, GARDEN OF.

**GARDINER, Alan Henderson** (1870- ), English archaeologist. Editor of the *Journal of Egyptian Archaeology* since 1916; discovered the origin of the alphabet from inscriptions found in Sinai, 1915. See ALPHABET: Theories of origin and development.

**GARDINER, Samuel Rawson** (1829-1902), English historian. See HISTORY: 32.

**GARDNER, Henry** (1730-1782), American statesman. See U. S. A.: 1774-1775.

**GARDOQUI, Don Diego**, Spanish minister in the United States. See U. S. A.: 1784-1788.

**GARFIELD, Harry Augustus** (1863- ), president of Williams college. Appointed fuel administrator, 1917. See U. S. A.: 1918 (January-February); 1918-1920.

**GARFIELD, James Abram** (1831-1881), twentieth president of the United States. Presi-

dent of Hiram college, 1857-1859; member Ohio senate, 1859-1860; served in the Civil War, rising in rank from lieutenant-colonel to major-general; elected to the House of Representatives while in the field; served, 1863-1880; member of electoral commission, 1877; inaugurated president of the United States, 1881; shot at Washington, July 2, 1881, by Charles Guiteau; died September 19, 1881.—See also U. S. A.: 1880: Twenty-fourth presidential election; 1881.

**GARFIELD, James Rudolph** (1865- ), United States government official. Served in the upper house of the Ohio legislature, 1896-1899; became commissioner of the bureau of corporations in the federal Department of Commerce and Labor, 1903; appointed secretary of the interior, 1907. See U. S. A.: 1905-1909.

**Investigation of the "Beef Trust."** See TRUSTS: United States: 1903-1906.

**GARGANTUA**, principal character in two works by Rabelais. See EDUCATION: Modern: 16th century: Rabelais' Gargantua.

**GARIBALDI**, king of the Lombards, 672-673.

**GARIBALDI, Giuseppe** (1807-1882), Italian patriot. Condemned to death for his part in the Mazzinian conspiracy, 1834, but fled to South America where he served the republic of Rio Grande against the Brazilians and gained a reputation as a brilliant leader; returned to Italy, 1848, to aid the Italians in their rising against Austria; went to Rome to support Mazzini's republic, 1849, and was appointed commander of the forces; after a desperate defence escaped from Rome and fled to the United States; returned to Italy in 1854 and on the outbreak of war, 1859, was placed in command of the *Chasseurs* of the Alps; after a series of brilliant victories succeeded in liberating Alpine territory as far as the Tyrol. On the revolt of the Sicilians in 1860 he crossed to the island and wrested it from the king of Naples. In 1866 he attempted the liberation of the Italian Tyrol, but was unsuccessful; attempted the liberation of Rome, 1867, but was defeated and taken prisoner by the French. In 1870 he offered his services to the French in the war against Germany. In 1875 Garibaldi took his seat in the parliament of united Italy. The latter part of his life he spent quietly at Caprera, a small island off Sardinia.—See also ITALY: 1848-1849; 1856-1859; 1859-1861; 1862-1866; 1867-1870; EUROPE: Modern: Wars of the great powers (1848-1878); ROME: Modern city: 1849.

**GARIBALDI, Giuseppe (Peppino Garibaldi)** (1879- ), Italian general, grandson of the Italian Liberator. Served under Goethals in Panama canal zone, 1907-1909; in the Greek army, 1912; in the Italian army during World War, 1915-1918; promoted to the rank of brigadier-general for distinguished service, 1918. See WORLD WAR: 1916: IV. Austro-Italian front: a.

**GARNETT, Robert S.** (1819-1861), American

soldier; general in the Confederate army during the Civil War. See U. S. A.: 1861 (June-July).

**GARNIER-PAGES, Louis Antoine** (1803-1878), French statesman and member of provisional government. See FRANCE: 1842-1848.

**GARONNE**, river of southwestern France, rising at the Mount Maladetta in the Pyrenees and emptying in the bay of Biscay at Point de Grave. See CONSERVATION OF NATURAL RESOURCES: France: 1717-1922.

**GARRETSON, Austin Bruce** (1856- ), American labor-union official. Member of the federal commission on industrial relations, 1912. See INDUSTRIAL RELATIONS COMMISSION.

**GARRISON, Lindley Miller** (1865- ), American cabinet officer. Vice chancellor of New Jersey, 1904-1913; secretary of war in the cabinet of President Wilson, 1913-1916. See U. S. A.: 1913 (March); 1916-1917.

**GARRISON, William Lloyd** (1805-1879), American abolitionist. Editor of several abolition newspapers, 1826-1831; editor of the *Liberator*, an extreme abolitionist paper, 1831-1865; organized American Anti-Slavery Society, 1832, becoming its president. See SLAVERY: 1828-1832; U. S. A.: 1829-1832.

**GARSTIN, Sir William** (1849- ), British government director of the Suez Canal Company since 1907; Red Cross worker in England during the World War. See SUDAN: 1914.

**GARTER, Knights of the Order of the.**—"About this time [1343] the king of England [Edward III] resolved to rebuild and embellish the great castle of Windsor, which king Arthur had first founded in time past, and where he had erected and established that noble round table from whence so many gallant knights had issued forth, and displayed the valiant prowess of their deeds at arms over the world. King Edward, therefore, determined to establish an order of knighthood, consisting of himself, his children, and the most gallant knights in Christendom, to the number of forty. He ordered it to be denominated 'knights of the blue garter,' and that the feast should be celebrated every year at Windsor, upon St. George's day. He summoned, therefore, all the earls, barons, and knights of his realm, to inform them of his intentions; they heard it with great pleasure; for it appeared to them highly honourable, and capable of increasing love and friendship. Forty knights were then elected, according to report and estimation the bravest in Christendom, who sealed, and swore to maintain and keep the feast and the statutes which had been made. The king founded a chapel at Windsor, in honour of St. George, and established canons, there to serve God, with a handsome endowment. He then issued his proclamation for this feast by his heralds, whom he sent to France, Scotland, Burgundy, Hainault, Flanders, Brabant, and the empire of Germany, and offered to all knights and squires, that might come to this ceremony, passports to last for fifteen days after it was over. The celebration of this order was fixed for St. George's day next ensuing, to be held at Windsor, 1344."—Froissart (Johnes), *Chronicles*, bk. 1, ch. 100.—"The popular tradition, derived from Polydore Vergil, is that, having a festival at Court, a lady chanced to drop her garter, when it was picked up by the King. Observing that the incident made the bystanders smile significantly, Edward exclaimed in a tone of rebuke, 'Honi soit qui mal y pense'—'Dishonoured be he who thinks evil of it': and to prevent any further inuendos, he tied the garter round his own knee. This anecdote, it is true, has been characterized by some

as an improbable fable: why, we know not. . . . Be the origin of the institution, however, what it may, no Order in Europe is so ancient, none so illustrious, for 'it exceeds in majesty, honour and fame all chivalrous fraternities in the world.' . . . By a Statute passed on the 17th January, 1805, the Order is to consist of the Sovereign and twenty-five Knights Companions, together with such lineal descendants of George III, as may be elected, always excepting the Prince of Wales, who is a constituent part of the original institution. Special Statutes have since, at different times, been proclaimed for the admission of Sovereigns and extra Knights."—B. Burke, *Book of orders of knighthood*, p. 08.

**GAU**, or **Ga**.—"Next [after the Mark, in the settlements of the Germanic peoples] in order of constitution, if not of time, is the union of two, three, or more Marks in a federal bond for purposes of a religious, judicial, or even political character. The technical name for such a union is in Germany a Gau or Bant; in England the ancient name Ga has been almost universally superseded by that of Scir or Shire. For the most part the natural divisions of the country are the divisions also of the Ga; and the size of this depends upon such accidental limits as well as upon the character and dispositions of the several collective bodies which we have called Marks. The Ga is the second and final form of unsevered possession; for every larger aggregate is but the result of a gradual reduction of such districts, under a higher political or administrative unity, different only in degree and not in kind from what prevailed individually in each. The kingdom is only a larger Ga than ordinary; indeed the Ga itself was the original kingdom. . . . Some of the modern shire-divisions of England in all probability have remained unchanged from the earliest times; so that here and there a now existent Shire may be identical in territory with an ancient Ga. But it may be doubted whether this observation can be very extensively applied."—J. M. Kemble, *Saxons in England*, bk. 1, ch. 3.—See also **GRAF**; **HUNDRED**.

**GAUL**: Cæsar's description.—"Gallia, in the widest sense of the term, is divided into three parts, one part occupied by the Belgæ, a second by the Aquitani, and a third by a people whom the Romans name Galli, but in their own tongue they are named Celtae. These three people differ in language and social institutions. The Garumna (Garonne) is the boundary between the Aquitani and the Celtae; the rivers Matrona (Marne, a branch of the Seine) and the Sequana (Seine) separate the Celtae from the Belgæ. . . . That part of Gallia which is occupied by the Celtae

begins at the river Rhone: it is bounded by the Garonne, the Ocean and the territory of the Belgae; on the side of the Sequani and the Helvetii it also extends to the Rhine. It looks to the north. The territory of the Belgae begins where that of the Celts ends: it extends to the lower part of the Rhine; it looks towards the north and the rising sun. Aquitania extends from the Garonne to the Pyrenean mountains and that part of the Ocean which borders on Spain. It looks in a direction between the setting sun and the north."—Julius Cæsar, *Gaulic Wars*, bk. 1, ch. 1 (quoted in G. Long, *Decline of the Roman Republic*, v. 3, ch. 22).

People.—"The Gauls, properly so called, the Galatæ of the Greeks, the Galli of the Romans, and the Gael of modern history, formed the van of the great Celtic migration which had poured westward at various intervals during many hundred years. . . . Having overrun the south of Gaul and penetrated into Spain, they lost a part of the territory thus acquired, and the restoration of the Iberian fugitives to Aquitania placed a barrier between the Celts in Spain and their brethren whom they had left behind them in the north. In the time of the Romans the Galli were found established in the centre and east of the country denominated Gaul, forming for the most part a great confederation, at the head of which stood the Arverni. It was the policy of the Romans to raise the Ædui into competition with this dominant tribe. . . . The Arverni, whose name is retained in the modern appellation of Auvergne, occupied a large district in the middle and south of Gaul, and were surrounded by tributary or dependent clans. The Ædui lay more to the north and east, and the centre of their possessions is marked by the position of their capital Bibracte, the modern Autun, situated in the highlands which separate the waters of the Loire, the Seine and the Saone. [See also ÆDUI.] . . . Other Gallic tribes stretched beyond the Saone: the Sequani, who afterwards made an attempt to usurp this coveted preëminence (the valley of the Doubs formed the centre of the Sequanese territory, which reached to the Jura and the Rhine); the Helvetii and other mountain races, whose scanty pastures extended to the sources of the Rhine; the Allobroges, who dwelt upon the Isere and Rhone, and who were the first of their race to meet and the first to succumb before the prowess of the Roman legions. According to the classification both of Cæsar and Strabo, the Turones, Pictones and Santones must be comprised under the same general denomination."—C. Merivale, *History of the Romans*, v. 1, ch. 5.—See also CELTS; GALLIA BRACCATA; FRANCE: PEOPLE.

Migrations of tribes. See EUROPE: Introduction to historic period: Migrations.

Civilization. — Government. — Religion. — "The knowledge of metals penetrated into Gaul by two routes, of which the starting-point was in the Ægean. South-Eastern Gaul was served by the route that led through Central Europe; Western Gaul borrowed from Spain. It must not, indeed, be supposed that the Gallic tribes were merely imitative. The types which were introduced from the more favoured East developed along national lines. But side by side with the products of their own manufacture they continued to use many that came from abroad. Although the memory of inter-tribal war is preserved by the earthworks and stone forts which, even in the Neolithic Age, had been erected upon the hills, commerce, internal and external, advanced with rapid strides. Forests were gradually cleared; and trackways were laid out from village to village. Caravans

began to cross the Alps from the valley of the Po. Gold crescent-shaped ornaments, intended to be worn round the neck, and fancifully decorated with geometrical figures, were brought from Ireland; comparison of the types of pottery, of knives and axes, razors and swords, of bracelets, pins, and brooches, shows that many were derived from Italy and Germany; and before the end of the Hallstatt period trade was established with the Greeks, while wine was imported and distributed by the merchants of Massilia. . . . The earliest inhabitants of the Gaul about whom history has anything to tell were the Ligurians. According to the ancient geographers, the land which originally belonged to them in Gaul was the mountainous tract between the Rhône, the Durance, and the Cottian and Maritime Alps; but by the fifth century before Christ they were mingled with Iberians on the west of the Rhône; and from the evidence of certain geographical names as well as of archaeology, it would seem that they once possessed the whole of Eastern Gaul as far north as the Marne. The culture of this region in the Bronze Age differed from that of the west, but closely resembled that of Northern Italy, where we know that Ligurians lived. The vast number of sickles which have been discovered in the south-east show that the Ligurians were industrious tillers of the soil; and they may have been descended, at least in part, from Swiss lake-dwellers of the Stone Age, who probably introduced cereals and domestic animals into Gaul. The origin of the Iberians remains uncertain; but when they came under the notice of the Greeks they occupied the eastern part of Spain as well as the country between the Pyrenees and the Rhône; and it should seem that they had crossed the Pyrenees and made conquests in Aquitania as well as on the Mediterranean coast. The 'Iberian question' is one of the problems which amuse and baffle ethnologists; for there can be little doubt that in the land which belonged to the Iberians of history, in Spain as well as in Southern Gaul, there once existed, besides Celtic, at least two forms of speech,—Basque and the uncouth, undeciphered language or languages in which were engraved the so-called Iberian inscriptions. But if the Iberians were not one race, the bulk of them were small and dark, and not unlike the neolithic people of l'Homme Mort. [See also IBERIANS, WESTERN.] In Cæsar's time Liguria, as well as the land of the Iberians, was also peopled by the descendants of Celtic invaders. It was perhaps in the seventh century before the Christian era that the tall fair Celts began to cross the Rhine; but it is unlikely that even they were homogeneous; and those to whom belonged the characteristics which the ancient writers associated with the Gallic or Celtic type may have been accompanied by the descendants of aliens who had joined them during their long sojourn in Germany. Successive swarms spread over the land, partly subduing and mingling with the descendants of the palæolithic peoples and of their neolithic conquerors, partly perhaps driving them into the mountainous tracts. Physically, they resembled the tall fair Germans whom Cæsar and Tacitus describe; but they differed from them in character and customs as well as in speech. . . . But the growth of material prosperity had not been matched by true national progress. The Aquitani, indeed, the maritime tribes, and the Belgae were untouched by foreign influences; but the Celticans of the interior had been enfeebled by contact with Roman civilization. Much nonsense has been written about the enervating effect of luxury. Its effect, however, when it is suddenly introduced

among a half-civilized people, is quite different from its effect when it is a natural growth. The Gauls had lost the strength of barbarism, and had not gained the strength of civilization. They had once, as Caesar remarked, been more than a match for the Germans; but enervated by imported luxury, and cowed by a succession of defeats, they no longer pretended to be able to cope with them. Their constitution was based upon the tribe, if that word may be applied to the political unit which Caesar called a *civitas*. The tribe was generally an aggregate, more or less compact, of communities to which he gave the name of *pagi*, the members of which had originally been related by blood or by near neighbourhood; but it would seem that some of the smaller tribes consisted each of one *pagus* only. Each *pagus*, under its own magistrate, appears to have enjoyed a certain measure of independence, and to have contributed its separate contingent to the tribal host. Each tribe had its council of elders, and had once had its king; but in certain tribes the king was now superseded by an annually elected magistrate; while in others perhaps the council kept the government to itself. . . . The country swarmed with outlawed criminals, who had fled from justice, and exiled adventurers, who had failed to execute *coups d'état*. Nobles and their clients lived sword in hand; and hardly a year passed without some petty war. Every tribe, every hamlet, nay every household was riven by faction. One was for the Romans and another for the Helvetii: one for the Aedui and another for the Arverni: one for a Diviciacus and another for a Dumnorix; one for the constitutional oligarchy and another for the lawless adventurer. All, in short, were for a cult; and none was for the state. . . . Local cults of course abounded; but the great gods whom Caesar noticed, however variously they may have been conceived by various tribes, were common to Gaul; while every rite and every sacrifice was recognized and regulated by Druidism. . . . Celtic religion, in so far as it was descended from the religion of the undivided Aryan stock, was fundamentally one with the religions of Italy and Greece; but our imperfect knowledge of the classical religions hardly helps us more to understand the inwardness of Celtic religion than the remark of Caesar, that about their deities 'their notions are much the same as those of other peoples.' What is certain is that, like every other polytheistic religion, that of the Celts, except perhaps where it was moulded by Druidical doctrine, had no definite theology, but was an ever-expanding, ever-shifting, formless chaos, alike in its main developments in Britain, Gaul, and Spain, yet differing in every tribe and household, and in every age; that, on its practical side, it was a performance of traditional rites; and that it concerned the individual most as a member of a family, a community, or a tribe."—T. R. Holmes, *Cæsar's conquest of Gaul*, pp. 9-27.—See also DRUIDS: Points of agreement, etc.

**B. C. 280-279.—Invasion of Greece.**—In the year 280 B.C. the Gauls, who had long before passed from northern Italy around the Adriatic to its eastern coast, made their first appearance in Macedonia and northern Greece. The Macedonian throne was occupied at the time by the infamous

usurper, Ptolemy Ceraunus (see MACEDONIA: B.C. 297-280), and the Celtic savages did one good service to Greece by slaying him, in the single battle that was fought. The whole open country was abandoned to them, for a time, and they swept it, as far southward as the valley of the Peneus, in Thessaly; but the walled cities were safe. After ravaging the country for some months the Gauls appear to have retired; but it was only to return again the next year in more formidable numbers and under a chief, Brennus, of more vigor and capability. On this occasion the country suffered fearfully from the barbaric swarm, but defended itself with something like the spirit of the Greece of two centuries before. The Ætolians were conspicuous in the struggle; the Peloponnesian states gave little assistance. The policy of defense was much the same as at the time of the Persian invasion, and the enemy was confronted in force at the pass of Thermopylæ. Brennus made a more desperate attempt to force the pass than Xerxes had done and was beaten back with a tremendous slaughter of his Gauls. But he found traitors, as Xerxes had done, to guide him over the mountains, and the Greeks at Thermopylæ, surrounded by the enemy, could only escape by sea. The Gauls marched on Delphi, eager for the plunder of the great temple, and there they met with some fatal disaster. Precisely what occurred is not known. According to the Greeks, the god protected his sanctuary, and the accounts they have left are full of miracles and prodigies—of earthquakes, lightnings, tempests, and disease. The only clear facts seem to be that Delphi was successfully defended; that the Gauls retreated in disorder and were destroyed in vast numbers before the remnant of them got away from the country. Brennus is said to have killed himself to escape the wrath of his people for the failure of the expedition. One large body of the great army had separated from the rest and gone eastward into Thrace, before the catastrophe occurred. These subsequently passed over to Asia and pursued there an adventurous career, leaving a historic name in the country (see GALATIA).—C. Thirlwall, *History of Greece*, ch. 60.

**B. C. 125-121.—First Roman conquests.** See SALYES; ALLOBROGES; ÆDUI.

**B. C. 58-51.—Cæsar's conquest.**—Cæsar was consul for the year 695 A. U. (59 B.C.). At the expiration of his consulship he secured, by vote of the people, the government of the two Gauls (see ROME: Republic: B.C. 63-58), not for one year, which was the customary term, but for five years—afterwards extended to ten. Cisalpine Gaul (northern Italy) had been fully subjugated and was tranquil; Transalpine Gaul (Gaul west and north of the Alps, or modern France, Switzerland and Belgium) was troubled and threatening. In Transalpine Gaul the Romans had made no conquests beyond the Rhone, as yet, except along the coast at the south. The country between the Alps and the Rhone, excepting certain territories of Massilia (Marseilles) which still continued to be a free city, in alliance with Rome, had been fully appropriated and organized as a province—the Provence of later times. The territory between the Rhone and the Cevennes mountains was less fully occupied and controlled. Cæsar's first proceeding as proconsul in Gaul was to arrest the migration of the Helvetii, who had determined to abandon their Swiss valleys and to seize some new territory in Gaul. He blocked their passage through Roman Gaul, then followed them in their movement eastward of the Rhone, attacked and defeated them with great slaughter, and forced the small remnant to return to their deserted mountain homes. The same year

(58 B. C.) he drove out of Gaul a formidable body of Suevic Germans who had crossed the Rhine some years before under their king, Ariovistus. They were almost annihilated. (See SUEVI: B. C. 58). The next year (57 B. C.) he reduced to submission the powerful tribes of the Belgian region, who had provoked attack by leaguering themselves against the Roman intrusion in Gaul. The most obstinate of those tribes—the Nervii—were destroyed. In the following year (56 B. C.) Cæsar attacked and nearly exterminated the Veneti, a remarkable maritime people, who occupied part of Armorica (modern Brittany); he also reduced the coast tribes northwards to submission, while one of his lieutenants, Crassus, made a conquest of Aquitania. The conquest of Gaul was now apparently complete, and next year (55 B. C.), after routing and cutting to pieces another horde of Germanic invaders—the Usipetes and Tenctheri—who had ventured across the lower Rhine, Cæsar traversed the channel and invaded Britain. (See also USIPETES.) This first invasion, which had been little more than a reconnaissance, was repeated the year following (54 B. C.), with a larger force. It was an expedition having small results, and Cæsar returned from it in the early autumn to find his power in Gaul undermined everywhere by rebellious conspiracies. The first outbreak occurred among the Belgæ, and found its vigorous leader in a young chief of the Eburones, Ambiorix by name. Two legions, stationed in the midst of the Eburones, were cut to pieces while attempting to retreat. (See also EBURONES.) But the effect of this great disaster was broken by the bold energy of Cæsar, who led two legions, numbering barely 7,000 men, to the rescue of his lieutenant Cicero (brother of the orator) whose single legion, camped in the Nervian territory, was surrounded and besieged by 60,000 of the enemy. Cæsar and his 7,000 veterans sufficed to rout the 60,000 Belgians. Proceeding with similar vigor to further operations, and raising new legions to increase his force, the proconsul had stamped the rebellion out before the close of the year 53 B. C., and the Eburones, who led in it, had ceased to exist. But the next year (52 B. C.) brought upon him a still more serious rising, of the Gallic tribes in central Gaul, leagued with the Belgians. Its leader was Vercingetorix, a gallant and able young chief of the Arverni. It was begun by the Carnutes, who massacred the Roman settlers in their town of Genabum (probably modern Orleans, but some say Gien, farther up the Loire). Cæsar was on the Italian side of the Alps when the news reached him, and the Gauls expected to be able to prevent his joining the scattered Roman forces in their country. But his energy baffled them, as it had baffled them many times before. He was across the Alps, across the Rhone, over the Cevennes—through six feet of snow in the passes—and in their midst, with such troops as he could gather in the Province, before they dreamed of lying in wait for him. Then, leaving most of these forces with Decimus Brutus, in a strong position, he stole away secretly, recrossed the Cevennes, put himself at the head of a small body of cavalry at Vienne on the Rhone, and rode straight through the country of the insurgents to join his veteran legions, first at Langres and afterwards at Sens. In a few weeks he was at the head of a strong army, had taken the guilty town of Genabum and had given it up to fire and the sword. A little later the capital of the Bituriges, Avaricum (modern Bourges), suffered the same fate. Next, attempting to reduce the Arvernian town of Gergovia, he met with a check and was placed in a serious strait. But with the able help of his lieutenant

Labienus, who defeated a powerful combination of the Gauls near Lutetia (modern Paris), he broke the toils, reunited his army, which he had divided, routed Vercingetorix in a great battle fought in the valley of the Vingeanne, and shut him up, with 80,000 men, in the city of Alesia. The siege of Alesia (modern Alise-Sainte-Reine, west of Dijon) which followed, was the most extraordinary of Cæsar's military exploits in Gaul. Holding his circumvallation of the town, against 80,000 within its walls and thrice as many swarming outside of it, he scattered the latter and forced the surrender of the former. His triumph was his greatest shame. Like a very savage, he dragged the knightly Vercingetorix in his captive train, exhibited him at a subsequent "triumph" in Rome, and then sent him to be put to death in the ghastly Tullianum. The fall of Alesia practically ended the revolt; although even the next year found some fighting to be done, and one stronghold of the Cadurci, Uxellodunum (modern Puy-d'Issolu, near Vayrac), held out with great obstinacy. It was taken by tapping with a tunnel the spring which supplied the besieged with water, and Cæsar punished the obstinacy of the garrison by cutting off their hands. Gaul was then deemed to be conquered and pacified, and Cæsar was prepared for the final contest with his rivals and enemies at Rome.—Cæsar, *Gaulic Wars*.

277.—Invaders driven back by Probus.—"The most important service which Probus [Roman emperor, 276-282] rendered to the republic was the deliverance of Gaul, and the recovery of seventy flourishing cities oppressed by the barbarians of Germany, who, since the death of Aurelian, had ravaged that great province with impunity. Among the various multitude of those fierce invaders, we may distinguish, with some degree of clearness, three great armies, or rather nations, successively vanquished by the valour of Probus. He drove back the Franks into their morasses; a descriptive circumstance from whence we may infer that the confederacy known by the manly appellation of 'Free' already occupied the flat maritime country, intersected and almost overflowed by the stagnating waters of the Rhine, and that several tribes of the Frisians and Batavians had acceded to their alliance. He vanquished the Burgundians [and the Lygians]. . . . The deliverance of Gaul is reported to have cost the lives of 400,000 of the invaders—a work of labour to the Romans, and of expense to the emperor, who gave a piece of gold for the head of every barbarian."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 12.—See also LYGIANS.

355-361.—Julian's recovery of the province from the barbarians.—During the civil wars and religious quarrels which followed the death of Constantine the Great—more especially in the three years of the usurpation of Magnentius, in the west (350-353), Gaul was not only abandoned, for the most part, to the barbarians of Germany, but Franks and Alemanni were invited by Constantius to enter it. "In a little while a large part of the north and east of Gaul were in their almost undis-

VERCINGETORIX BEFORE CÆSAR  
(From an old print)

puted possession. The Alamans seized upon the countries which are now called Alsace and Lorraine; the Franks secured for themselves Batavia and Toxandria: forty-five flourishing cities, among them Cologne, Trèves, Spire, Worms, and Strasburg, were ravaged; and, in short, from the sources of the Rhine to its mouth, forty miles inland, there remained no safety for the population but in the strongly fortified towns." In this condition of the Gallic provinces, Julian, the young nephew of the emperor, was raised to the rank of Cæsar and sent thither with a trifling force of men to take the command. "During an administration of six years [355-361] this latest Cæsar revived in Gaul the memory of the indefatigable exploits and the vigorous rule of the first Cæsar. Insufficient and ill-disciplined as his forces were, and baffled and betrayed as he was by those who should have been his aids, he drove the fierce and powerful tribes of the Alamans, who were now the hydra of the western provinces, beyond the Upper Rhine; the Chamaves, another warlike tribe, he pursued into the heart of their native forests; while the still fiercer and more warlike Franks were dislodged from their habitations on the Meuse, to accept of conditions from his hands. . . . A part of these, called the Saliens, and destined to figure hereafter, were allowed to settle in permanence in Toxandria, between the Meuse and the Scheld, near the modern Tongres. . . . By three successful expeditions beyond the Rhine [he] restored to their friends a multitude of Roman captives, recovered the broken and down-trodden lines of the empire, humiliated many of the proud chiefs of the Germans, and impressed a salutary awe and respect upon their truculent followers. . . . He spent the intervals of peace which his valor procured in recuperating the wasted energies of the inhabitants. Their dilapidated cities were repaired, the excesses of taxation retrenched, the deficient harvests compensated by large importations of corn from Britain, and the resources of suspended industry stimulated into new action. Once more, says Libanius, the Gauls ascended from the tombs to marry, to travel, to enjoy the festivals, and to celebrate the public games."—P. Godwin, *History of France: Ancient Gaul*, bk. 2, ch. 7.

406-409.—Breaking of the Rhine barrier.—The same year (406) in which Radagaisus, with his motley barbaric horde, invaded Italy and was destroyed by Stilicho, a more fatal assault was made upon Gaul. Two armies, in which were gathered up a vast multitude of Suevi, Vandals, Alans and Burgundians, passed the Rhine. The Franks opposed them as faithful allies of the Roman power, and defeated a Vandal army in one great battle, where 20,000 of the invaders were slain; but the Alans came opportunely to the rescue of their friends and forced the Frank defenders of Gaul to give way. "The victorious confederates pursued their march, and on the last day of the year, in a season when the waters of the Rhine were most probably frozen, they entered without opposition the defenceless provinces of Gaul. This memorable passage of the Suevi, the Vandals, the Alani, and the Burgundians, who never afterwards retreated, may be considered as the fall of the Roman empire in the countries beyond the Alps; and the barriers which had so long separated the savage and the civilized nations of the earth were, from that fatal

moment, levelled with the ground. . . . The flourishing city of Mentz was surprised and destroyed, and many thousand Christians were inhumanly massacred in the church. Worms perished after a long and obstinate siege; Strasburg, Spire, Rheims, Tournay, Arras, Amiens experienced the cruel oppression of the German yoke; and the consuming flames of war spread from the banks of the Rhine over the greatest part of the seventeen provinces of Gaul. That rich and extensive country, as far as the ocean, the Alps, and the Pyrenees, was delivered to the barbarians, who drove before them in a promiscuous crowd the bishop, the senator, and the virgin, laden with the spoils of their houses and altars."—E. 5th-8th centuries.—Barbarities of the Frank conquest.—The conquests of the Franks in Gaul, under Clovis, began in 486 and ended with his death in 511 (see FRANKS: 481-511). "In the year 532, Theoderik, one of the sons and successors of Cblodowig, said to those Frankish warriors whom he commanded: 'Follow me as far as Auvergne, and I will make you enter a country where you will take as much gold and silver as you possibly can desire; where you can carry away in abundance flocks, slaves, and garments.' The Franks took up arms and once more crossing the Loire, they advanced on the territory of the Bituriges and Arvernes. These paid with interest for the resistance they had dared to the first invasion. Everything amongst them was devastated; the churches and monasteries were razed to their foundations. The young men and women were dragged, their hands bound, after the luggage to be sold as slaves. The inhabitants of this unfortunate country perished in large numbers or were ruined by the pillage. Nothing was left them of what they had possessed, says an ancient chronicle, except the land, which the barbarians could not carry away. Such were the neighbourly relations kept up by the Franks with the Gallic populations which had remained beyond their limits. Their conduct with respect to the natives of the northern provinces was hardly less hostile. When Hilperik, the son of Chlothar, wished, in the year 584, to send his daughter in marriage to the king of the West Goths, or Visigoths, settled in Spain, he came to Paris and carried away from the houses belonging to the 'fisc' a great number of men and women, who were heaped up in chariots to accompany and serve the bride elect. Those who refused to depart, and wept, were put in prison: several strangled themselves in despair. Many people of the best families enlisted by force into this procession, made their will, and gave their property to the churches. 'The son,' says a contemporary, 'was separated from his father, the mother from her daughter; they departed sobbing, and pronouncing deep curses; so many persons in Paris were in tears that it might be compared to the desolation of Egypt.' In their domestic misfortunes the kings of the Franks sometimes felt remorse, and trembled at the evil they had done. . . . But this momentary repentance soon yielded to the love of riches, the most violent passion of the Franks. Their incursions into the south of Gaul recommenced as soon as that country, recovered from its terrors and defeats, no longer admitted their gar-

risons nor tax collectors. Karle, to whom the fear of his arms gave the surname of Marteau, made an inroad as far as Marseilles; he took possession of Lyons, Arles, and Vienne, and carried off an immense booty to the territory of the Franks. When this same Karle, to insure his frontiers, went to fight the Saracens in Aquitania, he put the whole country to fire and sword; he burnt Bérgeries, Agde, and Nûnes; the arenas of the latter city still bear traces of the fire. At death of Karle, his two sons, Karlemann and Peppin, continued the great enterprise of replacing the inhabitants of the south, to whom the name of Romans was still given, under the yoke of the Franks. . . . Southern Gaul was to the sons of the Franks what entire Gaul had been to their fathers; a country, the riches and climate of which attracted them incessantly, and saw them return as enemies, as soon as it did not purchase peace of them."—A. Thierry, *Narratives of the Merovingian era, historical essays, etc., essay 24.*

**5th-10th centuries.—Conquerors and the conquered.—State of society under the barbarian rule.—Evolution of Feudalism.**—"After the conclusion of the great struggles which took place in the fourth and fifth centuries, whether between the German conquerors and the last forces of the empire, or between the nations which had occupied different portions of Gaul, until the Franks remained sole masters of the country, two races, two populations, which had nothing in common but religion, appear forcibly brought together, and, as it were, face to face with each other, in one political community. The Gallo-Roman population presents under the same law very different and very unequal conditions; the barbarian population comprises, together with its own peculiar classifications of ranks and conditions, distinct laws and nationalities. In the first we find citizens absolutely free, coloni, or husbandmen belonging to the lands of a proprietor, and domestic slaves deprived of all civil rights; in the second, we see the Frankish race divided into two tribes, each having its own peculiar law [the law of the Salic Franks or Salic law, and the law of the Riparian Franks or Riparian law]; the Burgundians, the Goths, and the rest of the Teutonic races, who became subjected, either of their own accord or by force, to the Frankish empire, governed by other and entirely different laws; but among them all, as well as among the Franks, we find at least three social conditions—two degrees of liberty, and slavery. Among these incongruous states of existence, the criminal law of the dominant race established, by means of the scale of damages for crime or personal injury, a kind of hierarchy—the starting-point of that movement towards an assimilation and gradual transformation, which, after the lapse of four centuries, from the fifth to the tenth, gave rise to the society of the feudal times. The first rank in the civil order belonged to the man of Frankish origin, and to the Barbarian who lived under the law of the Franks; in the second rank was placed the Barbarian, who lived under the law of his own country; next came the native freeman and proprietor, the Roman possessor, and, in the same degree, the Lidus or German colonus; after them, the Roman tributary—i.e., the native colonus; and, last of all, the slave, without distinction of origin. These various classes, separated on the one hand by distance of rank, on the other by difference of laws, manners, and language, were far from being equally distributed between the cities and the rural districts. All that was elevated in the Gallo-Roman population, of whatever character it might be, was found in the cities, where its

noble, rich, and industrious families dwelt, surrounded by their domestic slaves; and, among the people of that race, the only constant residents in the country were the half-servile coloni and the agricultural slaves. On the contrary, the superior class of the German population established itself in the country, where each family, independent and proprietary, was maintained on its own domain by the labour of the Lidi whom it had brought thither, or of the old race of coloni who belonged to the soil. The only Germans who resided in the cities were a small number of officers in the service of the Crown, and of individuals without family and patrimony, who, in spite of their original habits, sought a livelihood by following some employment. The social superiority of the dominant race rooted itself firmly in the localities inhabited by them, and passed, as has been already remarked, from the cities to the rural districts. By degrees, also, it came to pass that the latter drew off from the former the upper portion of their population, who, in order to raise themselves still higher, and to mix with the conquerors, imitated, as far as they were able, their mode of life. . . . While Barbarism was thus occupying or usurping all the vantage points of the social state, and civil life in the intermediate classes was arrested in its progress, and sinking gradually to the lowest condition, even to that of personal servitude, an ameliorating movement already commenced before the fall of the empire, still continued, and declared itself more and more loudly. The dogma of a common brotherhood in the eyes of God, and of one sole redemption for all mankind, preached by the Church to the faithful of every race, touched the heart and awakened the mind in favour of the slave, and, in consequence, enfranchisements became more frequent, or a treatment more humane was adopted on the part of the masters, whether Gauls or Germans by origin. The latter, moreover, had imported from their country, where the mode of life was simple and without luxury, usages favourable to a modified slavery. The rich barbarian was waited upon by free persons—by the children of his relatives, his clients and his friends; the tendency of his national manners, different from that of the Roman, induced him to send the slave out of his house, and to establish him as a labourer or artisan on some portion of land to which he then became permanently attached, and the destination of which he followed, whether it were inherited or sold. . . . Domestic slavery made the man a chattel, a mere piece of moveable property. The slave, settled on a spot of land, from that time entered into the category of real property. At the same time that this last class, which properly bore the name of serfs, was increased at the expense of the first, the classes of the coloni and Lidi would naturally multiply simultaneously, by the very casualties of ruin and adverse circumstances which, at a period of incessant commotions, injured the condition of the freemen. . . . In the very heart of the Barbarian society, the class of small proprietors, which had originally formed its strength and glory, decreased, and finally became extinct by sinking into vassalage, or a state of still more ignoble dependence, which partook more or less of the character of actual servitude. . . . The freemen depressed towards servitude met the slave who had reached a sort of half liberty. Thus, through the whole extent of Gaul, was formed a vast body of agricultural labourers and rural artisans, whose lot, though never uniform, was brought more and more to a level of equality; and the creative wants of society produced a new sphere of industry in the

country, while the cities remained stationary, or sank more and more into decay. . . . On every large estate where improvement flourished, the cabins of those employed, *Lidi*, *coloni* or slaves, grouped as necessity or convenience suggested, were multiplied and peopled more numerous, till they assumed the form of a hamlet. When these hamlets were situated in a favourable position . . . they continued to increase till they became villages. . . . The building of a church soon raised the village to the rank of a parish; and, as a consequence, the new parish took its place among the rural circumscriptions. . . . Thence sprung, altogether spontaneously, under the sanction of the intendant, joined to that of the priest, rude outlines of a municipal organization, in which the church became the depository of the acts which, in accordance with the Roman law, were inscribed on the registers of the city. It is in this way that beyond the towns, the cities, and the boroughs, where the remains of the old social condition lingered in an increasing state of degradation, elements of future improvement were formed. . . . This modification, already considerably advanced in the ninth century, was completed in the course of the tenth. At that period, the last class of the Gallo-Frankish society disappeared—viz., that of persons held as chattels, bought, exchanged, transferred from one place to another, like any other kind of moveable goods. The slave now belonged to the soil rather than to the person; his service, hitherto arbitrary, was changed into customary dues and regulated employment; he had a settled abode, and, in consequence, a right of possession in the soil on which he was dependent. This is the earliest form in which we distinctly trace the first impress of the modern world upon the civil state. The word *serf* henceforward took its definite meaning; it became the generic name of a mixed condition of servitude and freedom, in which we find blended together the states of the *colonus* and *Lidus*—two names which occur less and less frequently in the tenth century, till they entirely disappear. This century, the point to which all the social efforts of the four preceding ones which had elapsed since the Frankish conquest had been tending, saw the intestine struggle between the Roman and German manners brought to a conclusion by an important revolution. The latter definitely prevailed, and from their triumph arose the feudal system; that is to say, a new form of the state, a new constitution of property and domestic life, a parceling out of the sovereignty and jurisdiction, all the public powers transformed into demesne privileges, the idea of nobility devoted to the profession of arms, and that of ignobility to industry and labour. By a remarkable coincidence, the complete establishment of this system is the epoch when the distinction of races terminates in Frankish Gaul—when all the legal consequences of diversity of origin between Barbarians and Romans, conquerors and subjects, disappear. The law ceases to be personal, and becomes local; the German codes and the Roman code itself are replaced by custom; it is the territory and not the descent which distinguishes the inhabitant of the Gallic soil; finally, instead of national distinctions, one mixed population appears, to which the historian is able henceforward to give the name of French.”

—A. Thierry, *Formation and progress of the Tiers État in France*, v. 1, ch. 1.—See also FEUDALISM: Definition; SERFDOM: 5th-18th centuries.

412-453.—Mixed administration, Roman and barbarian.—“A praetorian prefect still resided at Trèves; a vicar of the seventeen Gallic provinces at Arles: each of these provinces had its Roman

duke; each of the hundred and fifteen cities of Gaul had its count; each city its *curia*, or municipality. But, collaterally with this Roman organisation, the barbarians, assembled in their ‘*mallum*,’ of which their kings were presidents, decided on peace and war, made laws, or administered justice. Each division of the army had its *Graf Jarl*, or Count; each subdivision its centenary, or hundred-man; and all these fractions of the free population had the same right of deciding by suffrage in their own *mallums*, or peculiar courts, all their common affairs. In cases of opposition between the barbarian and the Roman jurisdiction, the overbearing arrogance of the one, and the abject baseness of the other, soon decided the question of supremacy. In some provinces the two powers were not concurrent: there were no barbarians between the Loire and the Meuse, nor between the Alps and the Rhone; but the feebleness of the Roman government was only the more conspicuous. A few great proprietors cultivated a part of the province with the aid of slaves; the rest was desert, or only inhabited by *Bagaudæ*, runaway slaves, who lived by robbery. Some towns still maintained a show of opulence, but not one gave the slightest sign of strength; not one enrolled its militia, nor repaired its fortifications. . . . Honorius wished to confer on the cities of southern Gaul a diet, at which they might have deliberated on public affairs: he did not even find public spirit enough to accept the offered privilege.”—J. C. L. de Sismondi, *Fall of the Roman empire*, v. 1, ch. 7.

453-484.—Extension of the Visigothic kingdom. See GOTHS: 453-484.

457-486.—Last Roman sovereignty.—The last definite survival of Roman sovereignty in Gaul lingered until 486 in a district north of the Seine, between the Marne and the Oise, which had Soissons for its capital. It was maintained there, in the first instance, by Ægidius, a Gallic noble whom Marjorian, one of the last of the emperors at Rome, made Master-General of Gaul. The respect commanded by Ægidius among the surrounding barbarians was so great that the Salian Franks invited him to rule over them, in place of a licentious young king, Childeric, whom they had driven into exile. He was king of these Franks, according to Gregory of Tours, for eight years (457-464), until he died. Childeric then returned, was reinstated in his kingdom and became the father of Clovis (or Chlodwig), the founder of the great Frank monarchy. But a son of Ægidius, named Syagrius, was still the inheritor of a kingdom, known as the “Kingdom of Syagrius,” embracing, as has been said, the country around Soissons, between the Seine, the Marne and the Oise, and also including, in the opinion of some writers, Troyes and Auxerre. The first exploit of Clovis—the beginning of his career of conquest—was the overthrow of this “king of the Romans,” as Syagrius was called, in a decisive battle fought at Soissons, 486, and the incorporation of his kingdom into the Frank dominions. Syagrius escaped to Toulouse, but was surrendered to Clovis and put to death.—P. Godwin, *History of France: Ancient Gaul*, bk. 3, ch. 11.

**GAZA** (Arabic, Ghazeh), town in Palestine, southwest of Jerusalem, near the Mediterranean coast, one of the five chief cities of the Philistines. See PHILISTINES; ECBATANA; CHRISTIANITY; Map of Palestine, etc.

**B. C. 332.—Siege by Alexander.**—In his march from Phœnicia to Egypt (see MACEDONIA: B. C. 334-330), Alexander the Great was compelled to pause for several months and lay siege to the ancient Philistine city of Gaza. It was defended for the Persian king by a brave eunuch named Batis. In the course of the siege, Alexander received a severe wound in the shoulder, which irritated his savage temper. When the town was at length taken by storm, he gave no quarter. Its male inhabitants were put to the sword and the women and children sold to slavery. The eunuch Batis, being captured alive, but wounded, was dragged by the feet at the tail of a chariot, driven at full speed by Alexander himself. The "greatest of conquerors" proved himself often enough, in this way, to be the greatest of barbarians—in his age.—G. Grote, *History of Greece*, pt. 2, ch. 93.

**B. C. 312.—Battle between Ptolemy and Demetrius.** See MACEDONIA: B. C. 315-310.

**B. C. 100.—Destruction by Alexander Jannæus.**—Gaza having sided with the Egyptian king, in a war between Alexander Jannæus, one of the Asmonean kings of the Jews, and Ptolemy Lathyrus of Egypt and Cyprus, the former laid siege to the city, about 100 B. C., and acquired possession of it after several months, through treachery. He took his revenge by massacring the inhabitants and reducing the city to ruins. It was rebuilt not long afterwards by the Romans.—G. Long, *Decline of the Roman republic*, v. 3, ch. 9.

**GEDDES**, Jenny, reputed Scottish religious fanatic. See SCOTLAND: 1637.

**GEDROSIA**, **GEDROSĪANS**.—"Close to the Indus, and beyond the bare, hot, treeless shores of the ocean, the southern part of the plain [of eastern Iran] consists of sandy flats, in which nothing grows but prickly herbs and a few palms. The springs are a day's journey from each other, and often more. This region was possessed by a people whom Herodotus calls Sattagyde and the companions of Alexander of Macedonia, Gedrosians. . . . Neighbours of the Gandarians, who, as we know, dwelt on the right bank of the Indus down to the Cabul, the Gedrosians led a wandering, predatory life; under the Persian kings they were united into one satrapy with the Gandarians."—M. Duncker, *History of antiquity*, v. 5, bk. 7, ch. 1.—See also BALUCHISTAN: Origin of name; B. C. 325.

In 1851 the United States and Portugal referred the case for arbitration to the president of the French republic. The case pended until 1852 when the award was made in favor of Portugal.
- GENERAL EDUCATION BOARD.**—"The General Education Board, founded by John D. Rockefeller, began informally when, on the evening of January 15, 1902, a few of those who subsequently became its members met for the purpose of discussing the probable scope and methods of an educational organization, the creation of which Mr. Rockefeller was then contemplating. At a second meeting, held in the following month, . . . Edward M. Shepard submitted articles of association under which the Board began its preliminary operations. Incorporation by Act of Congress took place January 12, 1903. The charter set

forth the general object of the corporation as 'the promotion of education within the United States of America, without distinction of race, sex, or creed'; and this broad object was specifically stated to include the power to establish or endow elementary or primary schools, industrial schools, technical schools, normal schools, training schools for teachers, or schools of any grade, or higher institutions of learning; to cooperate with associations engaged in educational work; to donate property or money to any such association; to collect educational statistics and information, to publish and distribute documents and reports, 'and in general to do and perform all things necessary or convenient for the promotion of the object of the corporation.' Under the authority thus conferred, the entire field of education in the United States—taking the word education in its broadest significance—is open to the General Education Board. The Board can employ its resources in supplementing the income of established institutions of learning; it can cooperate with state and local authorities as well as with private organizations; it can undertake educational experimentation along new and hitherto untried lines, whether at the primary, academic, technical, industrial, or professional level; it can conduct educational research and disseminate educational data."—General Education Board, *General Education Board: An account of its activities, 1902-1914*.—In the first twelve years of its existence the board "moved in two principal directions: education in the South and higher education in the whole United States. In the South much had already been done to aid and improve special educational agencies, but the General Education Board first made a survey of the entire field, and after acquiring a comprehensive knowledge of conditions in the Southern States, it decided that before a system of public schools could be successfully maintained better economic conditions must prevail. . . . Therefore it was decided to undertake the agricultural training of the farmer on the theory that if he could be substantially helped to secure better economic results he would gladly support better schools. This was the origin of the great work of farm demonstrations, in which the General Education Board cooperated with the Government at Washington. The board has expended nearly \$1,000,000 in this work, and it was declared that the results have been not only better farm conditions and increased financial profit, but a social and educational awakening of the rural South. . . . The great educational problem in the South is the rural school problem, and it is that which has been made the center of the General Education Board's attack. There is no doubt whatever that the farm demonstration work has brought about increased provisions for schools, and in those regions where this work has been most successful, vigorous efforts have been made to remedy school deficiencies. Realizing that without high schools the educational system would largely fail of its purpose, the board has, from the beginning, tried to further the building up of good secondary schools. As a result of its policy of providing funds for the several State universities and departments of education for the salaries and traveling expenses of professors of secondary education. . . . North of Mason and Dixon's line the work of the board has been chiefly known in its relation to college and university education. After a survey of the chaotic conditions that prevailed in the field of higher education at the time when it began its work, the board was at length enabled to formulate a definite policy, which the report [of the

board's activities, 1902-1914] states as follows: (1) Preference for centers of wealth and population as the pivots of the system; (2) systematic and helpful cooperation with religious denominations; (3) concentration of gifts in the form of endowment. In the matter of location the board has been governed in its selection for assistance by its preference for those institutions situated within a field where students could be easily procured, where the care of a prosperous community could be counted on, and where an appetite for education and culture could be stimulated, at the same time not passing by older institutions, otherwise located. In the matter of endowment it was tentatively estimated that an efficient college should enjoy an income from endowment covering from 40 to 60 per cent. of its annual expenditure. It was decided that the gifts of the board should be made to endowment, and on such terms as were calculated to draw further funds to the selected institutions."—*American Review of Reviews*, Nov., 1915, pp. 628-629.—Prior to 1921, the board had given \$35,000,000 toward endowments of colleges and universities, and \$14,000,000 for the endowment of schools of medicine, and education in general, or a total of \$49,000,000. All this has been done in cooperation with other funds, and with state and district school authorities, so as to expend the money for the greatest benefit.

ALSO IN: V. Hendricks, *Handbook of social resources of United States*, p. 136.

In 1921 a million dollars were given toward the combined medical school and hospital which was being constructed by Columbia University and the Presbyterian Hospital in New York; \$1,000,000 to aid medical instruction in various universities in Canada; \$3,500,000 towards a new medical laboratory and hospital in Brussels; \$50,000 to purchase apparatus and supplies needed by five universities in central Europe. In the same year all restrictions on the fund were removed, so as to enable the trustees to deal with principal as well as income; and it was announced that 33 per cent. of the principal had already been applied for educational purposes. Attacks were made on the foundation in the New York legislature in 1922 and a bill to dissolve it and end its influence in state educational policies was introduced into the state legislature in January. This was in pursuance of a demand made by the State Federation of Labor, which declared that moneyed interests were seeking to control the educational systems.

**GENEVA** (French *Geneve*, German *Genf*, Italian *Ginevra*), city capital of the canton Geneva, Switzerland, situated at the southwest extremity of Lake Geneva at the outlet of the river Rhone which divides the city. In 1920 the estimated population was 55,738.—See also **CIVIC BEAUTY**.

**Industries.**—“Geneva may be said to lead the industry of *la Suisse romande*. Geneva’s specialty lies in the manufacture of musical-boxes, jewellery, and watches, with which must be included time-pieces. For some two hundred years, or more, the ancient city has been engaged in the making of watches, and though its business has of late years been considerably injured by American and English competition, it still does a considerable trade in that department, employing a large number of men. In Geneva the art of the jeweller is closely allied with that of the watchmaker, the Geneva watch, *par excellence*, being a highly finished and exquisitely decorated piece of workmanship, a jewel first, as one might say, and a timekeeper afterwards. It is an education in art to spend half a day in the streets of Geneva, studying the beautiful things, the manufacture of the city, that are displayed in the windows of its shops. Only after doing so, and perhaps visiting one of its many workshops, is one in a position to understand the superior quality of artisan everywhere to be met with in this city built on the ‘Rock of Predestination,’ as Michelet wittily puts it. Not all its workmen, however, are employed in the shops, many of the best working in their own homes, and showing fine traits of independence.”—A. T. Story, *Swiss life in town and country*, p. 97.

**1504-1535.**—Emancipation of the city from the Vidomme and the prince-bishop.—Triumph of the Reformation.—“Geneva was nominally a free city of the Empire, but had in reality been governed for some centuries by its own bishop, associated with a committee of lay-assessors, and controlled by the general body of the citizens, in whose hands the ultimate power of taxation, and of election of the magistrates and regulation of the police, rested. The prince-bishop did not exercise his temporal jurisdiction directly, but through an officer called the Vidomme (*vice-dominus*), whose rights had in the 15th century become hereditary in the dukes of Savoy. These rights appear to have been exercised without any considerable attempt at encroachment till the beginning of the following century, when Charles III. succeeded to the ducal crown (1504). To his ambition the bishop, John, a weak and willing tool of the Savoy family, to which he was nearly allied, ceded everything; and the result was a tyrannical attempt to destroy the liberties of the Genevese. The Assembly of the citizens rose in arms; a bitter and sanguinary contest ensued between the Eidgenossen [Confederates] or Patriot party on the one side, and the Mamelukes or monarchical party on the other side. By the help of the free Helvetic states, particularly Berne and Freiburg, the Patriots triumphed, the friends of Savoy were banished, the Vidomme abolished, and its powers transferred to a board of magistrates. The conduct of the bishops in this conflict . . . helped greatly, as may be imagined, to shake the old hierarchical authority in Geneva; and when, in

1532, Farel first made his appearance in the city, he found a party not indisposed to join him in his eager and zealous projects of reform. He had a hard fight for it, however, and was at first obliged to yield, and leave the city for a time; and it was not till August, 1535, that he and Viret and Froment succeeded in abolishing the mass, and establishing the Protestant faith.”—J. Tulloch, *Leaders of the Reformation*, pp. 161-162.—See also **SWITZERLAND**: 1531-1648.

**1536.**—Coming of Calvin. See **PAPACY**: 1521-1535.

**1536-1564.**—Calvin’s ecclesiastical state.—“Humanly speaking, it was a mere accident which caused Calvin to yield to the entreaties of his friends to remain in the city where he was to begin his renowned efforts in the cause of reform. Geneva had been from ancient times one of the most flourishing imperial cities of the Burgundian territory; it was situated on the frontiers of several countries where the cross roads of various nationalities met. The city, which in itself was remarkable, belonged originally to the German empire; the language of its inhabitants was Romanic; it was bounded on one side by Burgundy, on the other by German Switzerland. . . . Geneva was apparently in a state of political, ecclesiastical, and moral decay. With the puritanical strictness of Geneva, as it afterwards became, before the mind’s eye, it is difficult to picture the Geneva of that day. An unbridled love of pleasure, a reckless wantonness, a licentious frivolity had taken possession of Genevan life, while the State was the plaything of intestine and foreign feuds. . . . Reformers had already appeared in the city: Vinet, Farel, Theodore Beza; they were Frenchmen, Farel a near neighbour of Geneva. These French Reformers are of quite a different stamp from our Germans, who, according as Luther or Melancthon is taken as their type, have either a plebeian popular, or learned theological character. They are either popular orators of great power and little polish, or they belong to the learned circles, and keep strictly to this character. In France they were mostly men belonging not to the lower, but to the middle and higher ranks of society, refined and cultivated; and in this fact lay the weakness of Calvinism, which knew well how to rule the masses, but never to gain their affection. . . . His [Calvin’s] greatness . . . was shown in the fanatical zeal with which he entered the city, ready to stake his life for his cause. He began to teach, to found a school, to labour on the structure which was the idea of his life, to introduce reforms in doctrine, worship, the constitution and discipline of the Church, and he preached with that powerful eloquence only possessed by those in whom character and teaching are in unison. The purified worship was to take place within bare, unadorned walls; no picture of Christ, nor pomp of any kind, was to disturb the aspirations of the soul. Life outside the temple was also to be a service of God; games, swearing, dancing, singing, worldly amusements, and pleasure were regarded by him as sins, as much as real vice and crime. He began to form little congregations, like those in the early ages of the Church, and it need scarcely be said that even in this worldly and pleasure-loving city the apparition of this man, in the full vigour of life, all conviction and determination, half prophet and half tribune, produced a powerful impression. The number of his outward followers increased, but they were out-

ward followers only. Most of them thought it would be well to make use of the bold Reformer to oppose the bishop, and that he would find means of establishing a new and independent Church, but they seemed to regard freedom as libertinism. Calvin therefore regarded the course things were taking with profound dissatisfaction. . . . So he delivered some extremely severe sermons, which half frightened and half estranged his hearers; and at Easter, 1538, when the congregation came to partake of the Lord's Supper, he took the unheard-of step of sending them all back from the altar, saying, 'You are not worthy to partake of the Lord's body; you are just what you were before; your sentiments, your morals, and your conduct are unchanged.' This was more than could be hazarded without peril to his life. The effect was indescribable; his own friends disapproved of the step. But that did not dismay him. He had barely time to flee for his life, and he had to leave Geneva in a state of transition—a chaos which justified a saying of his own, that defection from one Church is not renovation by another. He was now once more an exile. He wandered about on the frontiers of his country, in the German cities of Strasburg, Basle, &c., and we several times meet with him in the religious discussions between 1540 and 1550. . . . But a time came when they wished him back at Geneva. . . . In September, 1541, he returned and began his celebrated labours. Endowed with supreme power, like Lycurgus at Sparta, he set to work to make Geneva a city of the Lord—to found an ecclesiastical state in which religion, public life, government, and the worship of God were to be all of a piece, and an extraordinary task it was. Calvinistic Geneva became the school of reform for western Europe, and scattered far and wide the germs of similar institutions. In times when Protestantism elsewhere had become cool, this school carried on the conflict with the mediæval Church. Calvin was implacable in his determination to purify the worship of God of all needless adjuncts. All that was calculated to charm and affect the senses was abolished; spiritual worship should be independent of all earthly things, and should consist of edification by the word, and simple spiritual songs. All the traditional externals that Luther had retained—altars, pictures, ceremonials, and decorations of every kind—were dispensed with. . . . Calvin next established a system of Church discipline which controlled the individual in every relation of life, and ruled him from the cradle to the grave. He retained all the means by which ecclesiastical authority enforced obedience on the faithful in the Middle Ages—baptism, education up to confirmation, penance, penal discipline, and excommunication. . . . Calvin began his labours late in the autumn of 1541, and he acquired and maintained more power than was ever exercised by the most powerful popes. He was indeed only the 'preacher of the word,' but through his great influence he was the lawgiver, the administrator, the dictator of the State of Geneva. There was nothing in the commonwealth that had not been ordained by him, and this indicates a remarkable aspect of his character. The organization of the State of Geneva began with the ordinances of the 2nd of January, 1542. There were four orders of officials—pastors, teachers, elders, and deacons. The Consistory was formed of the pastors and elders. . . . It was the special duty of the Consistory, which was composed of the clergy and twelve laymen, to see that the ordinances were duly observed, and it was the supreme tribunal of morals. The twelve laymen were elected for a year, by the council of

two hundred, on the nomination by the clergy. The Consistory met every Thursday to see that everything in the church was in order. They had the power of excommunication, but this only consisted in exclusion from the community of the faithful, and the loss of the privilege of partaking of the Lord's Supper. It also decided questions relating to marriage. The deacons had the care of the poor and of almsgiving. Calvin himself was the soul of the whole organization. But he was a cold, stiff, almost gloomy being, and his character produces a very different impression from the genial warmth of Luther, who could be cheerful and merry with his family. Half Old Testament prophet, half Republican demagogue, Calvin could do anything in his State, but it was by means of his personal influence, the authority of his words, 'the majesty of his character,' as was said by a magistrate of Geneva after his death. He was to the last the simple minister, whose frugal mode of life appeared to his enemies like niggardliness. After a reign of twenty-three years, he left behind him the possessions of a mendicant monk. . . . No other reformer established so rigid a church discipline. . . . All noisy games, games of chance, dancing, singing of profane songs, cursing and swearing, were forbidden, and. . . church-going and Sabbath-keeping were strictly enjoined. The moral police took account of everything. Every citizen had to be at home by nine o'clock, under heavy penalties. Adultery, which had previously been punished by a few days' imprisonment and a small fine, was now punished by death. . . . At a time when Europe had no solid results of reform to show, this little State of Geneva stood up as a great power; year by year it sent forth apostles into the world, who preached its doctrines everywhere, and it became the most dreaded counterpoise to Rome, when Rome no longer had any bulwark to defend her. . . . It formed a weighty counterpoise to the desperate efforts which the ancient Church and monarchical power were making to crush the spirit of the Reformation. It was impossible to oppose Caraffa, Philip II., and the Stuarts, with Luther's passive resistance; men were wanted who were ready to wage war to the knife, and such was the Calvinistic school. It everywhere accepted the challenge; throughout all the conflicts for political and religious liberty, up to the time of the first emigration to America, in France, the Netherlands, England, and Scotland, we recognise the Genevan school. A little bit of the world's history was enacted in Geneva, which forms the proudest portion of the sixteenth and seventeenth centuries."—L. Häusser, *Period of the Reformation*, ch. 18.—See also EDUCATION: Modern: 16th century: Calvin; EUROPE: Renaissance and Reformation: Genevan reformers.

1570.—Treaty with the duke of Savoy.—Agreement of non-molestation. See SAVOY AND PIEDMONT: 1559-1580.

1602-1603.—Escalade of the Savoyards and its repulse.—Treaty of St. Julien.—Finding a pretext in some hostile manifestations which had appeared among the Genevese during a conflict between the French king and himself, Charles Emanuel I, duke of Savoy, chose to consider himself at war with Geneva, and "determined to fight out his quarrel without further notice. The night of the 11th to the 12th of December, 1602, is

forever memorable in the annals of Geneva. 4,000 Savoyards, aided by darkness, attempted the escalade of its walls; an unforeseen accident disconcerted them; the citizens exhibited the most heroic presence of mind; the ladders by which the aggressors ascended were shot down by a random cannon-ball; the troops outside fell into confusion; those who had already entered the town were either mowed down in fight or hung on the scaffold on the morrow; thus the whole enterprise miscarried. It was in vain that the Duke came forward with his whole host, and tried to prevail by open force where stratagem had failed. He was thwarted by the intervention of the French and Swiss, and compelled by their threats to sign the Treaty of St. Julien (July 21st, 1603), which secured the independence of the Genevese. Charles nevertheless did not, to his last day, give up his designs upon that city."—A. Gallenga, *History of Piedmont*, v. 3, ch. 2.

1738.—Struggle for democracy.—Constitution.—"At Geneva the power of legislation belonged to the whole body of citizens on the general Council. No discussion was permitted, and the votes were taken individually and orally by the officials deputed to record them. The aristocracy of Geneva labored unceasingly to restrict this privilege, which intrepid citizens defended with a passion which in 1707 cost a lawyer, named Fatio, and a number of others their lives. One of the upholders of the rights of the people, Jacques Barthélemy Micheli, was degraded from the nobility and deprived of all his property. He was condemned to death, but his life was spared and he remained for eighteen years a prisoner in the hands of the oligarchy of Bern. Micheli was one of the bar-bingers of modern Swiss democracy. He urged the adoption of the popular initiative and desired that the people should enjoy facilities for expressing approval or disapproval of the decisions of the Council. These efforts were not in vain. In 1738, through the mediation of France, Zürich and Bern, the people of Geneva received a constitution which restored to the general council the power of legislation, that is, the power to accept or reject proposals for new laws or amendments to existing laws."—F. Bonjour, *Real democracy in operation*, pp. 27-28.

GENEVA CONFESSION. See SCOTLAND: 1558-1560.

GENEVA CONVENTIONS: Summary of provisions.—Adhesions and revisions.—The first convention of Geneva was formulated in 1864 by the representatives of twelve European states. The provisions of it were not new, but were declarative of the best existing usage; they were, in fact, partly based on Lieber's "Regulations" for the American army, published the preceding year.

"1. Ambulances and military hospitals to be neutral. Neutrality to cease if held by a military force. 2. Persons employed in hospitals and ambulances to participate in neutrality. 3. Neutrality to continue to persons fulfilling duties in hospitals, etc., occupied by the enemy. Persons ceasing their functions to be delivered to outposts of the enemy. 4. Private property in military hospitals only can be carried away. Ambulance to retain its equipment. 5. Persons assisting the wounded to be respected. Houses containing wounded men to be protected. Privileges to inhabitants entertaining wounded men. 6. Care to be taken of wounded or sick men. Delivery of wounded to outposts of the enemy. Wounded, if capable of serving, to be sent to their country. Wounded or sick cured to be sent back on condition of not bearing arms. Evacuations to enjoy absolute neutrality. 7. Distinctive flag for hospitals, etc. Arm-badge to be worn by neutralized individuals. Colour of flag and arm-badge. 8. Details of execution. 9. Governments to be invited to accede to convention. 10. Ratifications."—*Hertslet's map of Europe by treaty*, v. 3, p. 1621.—"The convention was signed by the representatives of twelve powers, and in less than four years all Europe and most of the States of America had accepted it. . . . Some additional articles extending its provisions to maritime warfare were added in 1868, although they did not become binding because of lack of unanimity in their ratification. Nevertheless they were observed by the belligerents during the Franco-German war of 1870-1871 and during the Spanish-American war of 1898; and in 1899 they received the approval of the First Hague Conference, which extended its provisions to maritime warfare. In 1906 the convention was revised and improved by a conference at Geneva representing more than thirty States, and it has been accepted by practically all the States of the world."—J. W. Garner, *International law and the World War*, v. 1, pp. 13-14.—See also RED CROSS: Character and aim; HAGUE CONFERENCES: 1899; INTERNATIONAL LAW: 1856-1909.

**GENGHIS KHAN.** See JENGHIZ-KHAN.

**GENOA**, city of northern Italy, on the west coast, at the head of the wide bay formed by the turn of the coast, called the gulf of Genoa. It is the capital of the province of Genoa which is situated in Liguria. In 1915 it had a population of 300,139. The harbor of Genoa, which made it the trade center that it was in ancient times, makes the city one of the great ports of Italy, second only to Naples. Its greater growth is somewhat hampered by the congested traffic and the difficulties in the way of increasing facilities for docking. In 1919 the number of vessels that entered the port of Genoa was 3,043, while 3,054 leared from that point. Just outside the city is the famous Ausaldo factory, which, during the World War, turned out super-dreadnoughts, motors, guns, and destroyers.

**Origin and rise of the city.**—"Genoa, anciently Genua, was the chief maritime city of Liguria, and afterwards a Roman municipium. Under the Lombards the constant invasions of the Saracens united the professions of trade and war, and its greatest merchants became also its greatest generals, while its naval captains were also merchants. The Crusades were of great advantage to Genoa [see CRUSADES: 1104-1111] in enabling it to establish trading settlements as far as the Black Sea; but the power of Pisa in the East, as well as its possession of Corsica and Sardinia, led to wars between it and Genoa, in which the Genoese took Corsica [see CORSICA: Early history] and drove the Pisans out of Sardinia. By land the Genoese territory was extended to Nice on one side and to Spezia on the other."—A. J. C. Hare, *Cities of northern and central Italy*, v. 1, p. 30.—See also CRUSADES: Map of Mediterranean lands.

**1261-1299.**—Supplanting of Venice at Constantinople and in the Black sea trade.—Colonies in the Crimea.—Wars with Venice.—Victory at Curzola and favorable treaty of peace.—"During the Latin dynasty in Constantinople the Genoese never gained the first place in the commerce of the Black Sea. . . . It was Venice who held the key of all this commerce, at Constantinople; when, after diverting the whole course of the fourth Crusade, she induced Christendom to waste its energies on subduing the Greek empire for her benefit [see BYZANTINE EMPIRE: 1203-1204]. With the exiled Greek dynasty, however, the Genoese were always on the best of terms, at Thebizond, Nicea, and in Roumania; and recognizing that as long as the Latins were all-powerful in Constantinople she would have to relinquish the cream of the Black Sea commerce to the Queen of the Adriatic, she at length determined to strike a bold stroke and replace a Greek again on the throne." This was accomplished in 1261, when Baldwin II fled from the Byzantine capital and Michael Paleo-

logus took possession of his throne and crown (see NICEA: 1204-1261). For the assistance given in that revolution, the Genoese obtained the treaty of Ninfco, "which firmly established their influence in the Black Sea. . . . Thus did the brave mariner-town of Genoa turn the scale of the vast, but rotten, Eastern Empire; and her reward was manifold. The grateful emperor gave her streets and quays in Constantinople, immunity from tribute, and a free passage for her commerce. . . . In addition to these excellent terms in the treaty of Ninfco, the emperor conceded to various Genoese private families numerous islands in the Archipelago. . . . But the great nucleus of this power was the streets, churches, and quays in Constantinople which were allotted to the Genoese, and formed a vast emporium of strength and commerce, which must have eventually led to entire possession of Constantinople, had not the 'podestà,' or ruler of the Genoese colony there, thought fit, from personal motives, or from large offers made him by the Venetians, to attempt a restoration of the Latin line. . . . His conspiracy was discovered, and the Genoese were sent away in a body to Eraclea. However, on representation from home that it was none of their doing, and that Guercio had been acting entirely on his own account, the emperor yielded in perpetuity to the Genoese the town of Pera, on the sole condition that the governors should do him homage [see also CONSTANTINOPLE: 1261-1453]. . . . Thus were the Genoese established in this commanding position; here they had a separate government of their own, from here they ruled the road of commerce from China to Europe; and, taking advantage of the weakness of the emperors, they were able to do much as they wished about building fortresses and palaces, with gardens to the water's edge; and thus from Pera, with its citadel of Galata behind it, they were enabled to dictate what terms they pleased to ships passing to and from the Bosphorus." In the Black sea, "from time immemorial, the small tongue of land now known as the Crimea, then as the Tauric Chersonese, was the mart towards which all the caravan trade of Asia was directed by this northern road, and upon this tongue of land sprang up a group of noble cities which, until finally seized by the Turks, were without exception Genoese property. Of these, Caffa was the chief. When this city was built on the ruins of Theodosia, and by whom, is somewhat shrouded in mystery. Certain it is that Genoa had a colony here soon after the first Crusade. . . . Second only to Caffa in importance, and better known to us by name, was the town of Crim, which gave its name eventually to the whole peninsula, which originally it had got from the Crim Tatars. . . . Prior to its cession to the Genoese, it had been the residence of a Tatar emperor. . . . Here, then, in this narrow tongue of land, which we now call the Crimea, was the kernel of Genoese prosperity. As long as she flourished here she flourished at home. And when at length the Turkish scourge swept over this peninsula and swallowed up her colonies, the Ligurian Republic, by a process of slow decay, withered like a sapless tree." The supplanting of the Venetians at Constantinople by the Genoese, and the great advantages gained by the latter in the commerce of the Black sea, led necessarily to war between the rival republics. "To maintain her newly acquired influence in the East, Genoa sent forth a fleet under the joint command of Pierino Grimaldi, a noble, and Perchelto Mallone, the people's representative. They encountered the Venetian squadron at Malvasia [1263] which was greatly inferior to

their own. But as the combatants were just warming to their work, Mallone, actuated by party spirit, withdrew his ships and sailed away. The Venetians could scarcely believe what they saw; they anticipated some deep laid stratagem, and withdrew for a while from the contest. When however they beheld Mallone's galleys fairly under sail, they wonderingly attacked Grimaldi and his 13 ships and obtained an easy victory. Grimaldi fell at his post. . . . This fatal day of Malvasia [sometimes called the battle of Sette Pozzi] might easily have secured Venice her lost place in the Black Sea had she been able to follow up her victory, but with inexplicable want of vigour she remained inactive." Genoa, meantime, recovered from the disaster and sent out another fleet which captured a rich squadron of Venetian merchant ships in the Adriatic, taking large booty. "It surprises us immensely to find how for the next thirty years Genoa was able to keep up a desultory warfare with Venice, when she was at the height of her struggle with Pisa; and it surprises us still more that Venice raised not a hand to assist Pisa, though she was on most friendly terms with her, and when by so doing she could have ruined Genoa. . . . After the fall of Pisa at Meloria, in 1296 [1284], Genoa could transfer her attention with all the greater vigour to her contest against Venice. Four years after this victory men's minds were again bent on war. Venice cared not to pay a tax to her rival on all ships which went to Caffa, Genoa resented the treatment she had received in Cyprus, and thus the rivals prepared for another and more determined contest for supremacy." The Venetians sent a fleet to operate in the Black sea. "Fire was set to the houses of Galata, irreparable damage was done to Caffa, and in the Archipelago everything Genoese was burnt, and then off they sailed for Cyprus, whilst the Genoese were squabbling amongst themselves. With much trouble the many rulers of Genoa succeeded at length in adjusting their difference, and a goodly array of 76 galleys was entrusted to the care of Lamba D'Oria to punish the Venetians for their depredations. . . . Much larger was the force Venice produced for the contest, and when the combatants met off Curzola, amongst the Dalmatian islands, the Genoese were anxious to come to terms, and sought them, but the Venetians haughtily refused. . . . This battle of Curzola [September 8, 1298] was a sharp and vehement struggle, and resulted in terrible loss to the Venetians, four of whose galleys alone escaped to tell the tale. . . . Had Lamba D'Oria but driven the contest home, Venice was ill-prepared to meet him; as it was, he determined to sail off to Genoa, taking with him the Venetian admiral . . . Dandolo. . . . The natural result of such a victory was a most favourable peace for Genoa, signed under the direction of Matteo Visconti, lord of Milan, in 1299; and thus the century closed on Genoa as without doubt the most powerful state in Italy, and unquestionably the mistress of the Mediterranean. . . . The next outbreak of war between the two Republics had its origin in the occupation of the island of Chios, in 1349," and Genoa in that struggle encountered not the Venetians alone, but the Greeks and Catalans in alliance with them (see CONSTANTINOPLE: 1348-1355).—J. T. Bent, *Genoa*, ch. 6, 8.—See also COMMERCE: Medieval: 11th-16th centuries.

1381-1422.—Succession of foreign masters: King of France, the marquis of Montferrat and the duke of Milan.—The history of Genoa for more than a century after the disastrous War of Chioggia "is one long and melancholy tissue of internal and external troubles, coming faster and faster upon one another as the inherent vitality of the Republic grew weaker. . . . During this period we have a constant and unhealthy craving for foreign masters, be they Marquises of Monferrato, Dukes of Milan, or the more formidable subverters of freedom, the kings of France. . . . In 1396 . . . Adorno [then doge of Genoa], finding himself unable to tyrannize as he wished, decided on handing over the government to Charles VI. of France. In this he was ably backed up by many members of the old nobility, as the signatures to the treaty testify. The king was to be entitled 'Defender of the Commune and People,' and was to respect in every way the existing order of things. So on the 27th of November, in that year, the great bell in the tower of the ducal palace was rung, the French standard was raised by the side of the red cross of Genoa, and in the great council hall, where her rulers had sat for centuries, now sat enthroned the French ambassadors, whilst Antoniotto Adorno handed over to them the sceptre and keys of the city. These symbols of government were graciously restored to him, with the admonition that he should no longer be styled 'doge,' but 'governor' in the name of France. Thus did Adorno sell his country for the love of power, preferring to be the head of many slaves, rather than to live as a subordinate in a free community. The first two governors sent by France after Adorno's death were unable to cope with the seething mass of corruption they found within the city walls, until the Marshal Boucicault was sent, whose name was far famed for cruelty in Spain against the Moors, in Bulgaria against the Turks, and in France against the rebels." The government of Boucicault was hard and cruel, and "his name is handed down by the Genoese as the most hateful of her many tyrants." In 1409 they took advantage of his absence from the city to bring in the marquis of Monferrato, who established himself in his place. "It was but for a brief period that the Genoese submitted to the Marquis of Monferrato; they preferred to return to their doges and internal quarrels. . . . Throughout the city nothing was heard but the din of arms. Brother fought against brother, father against son, and for the whole of an unusually chill December, in 1414, there was not a by-path in Genoa which was not paved with lances, battle-axes and dead bodies. . . . Out of this fiery trial Genoa at length emerged with Tommaso Campofregoso as her doge, one of the few bright lights which illumined Liguria during the early part of this century. . . . The Genoese arms during this time of quiescence again shone forth with something of their ancient brilliancy. Cor-

sica was subdued, and a substantial league was formed with Henry V. of England, . . . 1421, by which perpetual friendship and peace by land and sea was sworn. Short, however, was the period during which Genoa could rest contented at home. Campofregoso was driven from the dogeship, and Filippo Maria, Visconti of Milan, was appointed protector of the Republic [1422], and through this allegiance the Genoese were drawn into an unprofitable war for the succession in Naples, in which the Duke of Milan and the Pope supported the claims of Queen Joanna and her adopted son, Louis of Anjou, against Alphonso of Aragon."—J. T. Bent, *Genoa*, ch. 9.—*Universal history*, v. 25, ch. 73, sect. 3-4.

1421-1435.—Submission to the duke of Milan, and recovery of the freedom of the city. See ITALY: 1412-1447.

1458-1464.—Renewed struggles of domestic faction and changes of foreign masters.—Submission to the dukes of Milan.—"Genoa, wearied with internal convulsions, which followed each other incessantly, had lost all influence over the rest of Italy; continually oppressed by faction, it no longer preserved even the recollection of liberty. In 1458, it had submitted to the king of France, then Charles VII.; and John of Anjou, duke of Calabria, had come to exercise the functions of governor in the king's name. He made it, at the same time, his fortress, from whence to attack the kingdom of Naples [see ITALY: 1447-1480]. But this war had worn out the patience of the Genoese; they rose against the French; and, on the 17th of July, 1461, destroyed the army sent to subdue them by René of Anjou. The Genoese had no sooner thrown off a foreign yoke than they became divided into two factions,—the Adorni and the Fregosi [severally partisans of two families of that name which contended for the control of the republic]: both had at different times, and more than once, given them a doge. The more violent and tyrannical of these factious magistrates was Paolo Fregoso, also archbishop of Genoa, who had returned to his country, in 1462, as chief of banditti; and left it again, two years afterwards, as chief of a band of pirates. The Genoese, disgusted with their independence, which was disgraced by so many crimes and disturbances, had, on the 13th of April, 1464, yielded to Francesco Sforza, duke of Milan; and afterwards remained subject to his son Galeazzo."—J. C. L. de Sismondi, *History of the Italian republics*, ch. 11.

1475.—Loss of possessions in the Crimea. See TURKEY: 1451-1481.

1500-1507.—Capitulation to Louis XII of France, conqueror of Milan.—Revolt and subjugation.—By the conquest of Milan (see ITALY: 1499-1500), Louis XII. of France acquired the signoria of Genoa, which had been held by the deposed duke, Ludovico Sforza. "According to

the capitulation, one half of the magistrates of Genoa should be noble, the other half plebeian. They were to be chosen by the suffrages of their fellow-citizens; they were to retain the government of the whole of Liguria, and the administration of their own finances, with the reservation of a fixed sum payable yearly to the king of France. But the French could never comprehend that nobles were on an equality with villains; that a king was bound by conditions imposed by his subjects; or that money could be refused to him who had force. All the capitulations of Genoa were successively violated; while the Genoese nobles ranged themselves on the side of a king against their country: they were known to carry insolently about them a dagger, on which was inscribed, 'Chastise villains'; so impatient were they to separate themselves from the people, even by meanness and assassination. That people could not support the double yoke of a foreign master and of nobles who betrayed their country. On the 7th of February, 1507, they revolted, drove out the French, proclaimed the republic, and named a new doge; but time failed them to organize their defence. On the 3rd of April, Louis advanced from Grenoble with a powerful army. He soon arrived before Genoa: the newly-raised militia, unable to withstand veteran troops, were defeated. Louis entered Genoa on the 20th of April; and immediately sent the doge and the greater number of the generous citizens, who had signalized themselves in the defence of their country, to the scaffold."—J. C. L. de Sismondi, *History of the Italian republics*, ch. 14.

1527-1528.—French dominion momentarily restored and then overthrown by Andrew Doria.—Republic revived. See ITALY: 1527-1520.

1528-1559.—Conspiracy of Fiesco and its failure.—Revolt and recovery of Corsica.—"Sustained by the ability of Doria, and protected by the arms of Charles V., the Republic, during near nineteen years subsequent to this auspicious revolution, continued in the enjoyment of dignified independence and repose. But, the memorable conspiracy of Louis Fiesco, Count of Lavagna, the Catiline of Liguria, had nearly subverted Genoa, and reduced it anew to the obedience of France, or exposed it once more to all the misfortunes of anarchy. The massacre of Doria and his family constituted one of the primary objects of the plot; while the dissimulation, intrepidity, and capacity, which marked its leader . . . have rendered the attempt one of the most extraordinary related in modern history. It was accompanied with complete success till the moment of its termination. Jeannetin Doria, the heir of that house, having perished by the dagger, and Andrew, his uncle, being with difficulty saved by his servants, who transported him out of the city, the Genoese Senate was about to submit unconditionally to Fiesco, when that nobleman, by a sudden and accidental death, at once rendered abortive his own hopes and those of his followers. The government, resuming courage, expelled the surviving conspirators; and Doria, on his return to the city, sullied the lustre of his high character, by proceeding to acts of cruelty against the brothers and adherents of the Count of Lavagna. Notwithstanding this culpable and vindictive excess, he continued invariably firm to the political principles which he had inculcated, for maintaining the freedom of the Commonwealth. Philip, Prince of Spain, son of Charles V., having visited Genoa in the succeeding year, attempted to induce the sen-

ate, under specious pretences of securing their safety, to consent to the construction of a citadel, garrisoned by Spaniards. But he found in that assembly, as well as in Doria, an insurmountable opposition to the measure, which was rejected with unanimous indignation. The island of Corsica, which had been subjected for ages to Genoa, and which was oppressed by a tyrannical administration, took up arms at this period [1558-1559]; and the French having aided the insurgents, they maintained a long and successful struggle against their oppressors. But the peace concluded at Cateau between Philip, King of Spain, and Henry II., in which the Spanish court dictated terms to France, obliged that nation to evacuate their Corsican acquisitions, and to restore the island to the Genoese [see FRANCE: 1547-1559]. Soon afterwards [1559], at the very advanced age of ninety, Andrew Doria expired in his own palace, surrounded by the people on whom he had conferred freedom and tranquillity; leaving the Commonwealth in domestic repose and undisturbed by foreign war."—N. W. Wraxall, *History of France*, v. 2, pp. 43-44.

1816.—Suppression. See ITALY: 1814-1815.

1848.—Genoa in revolt for the national cause.—Measures of Gioberti.—Suppression by La Marmora.—Genoa, in common with the other Italian cities, was in semi-revolt at this time, as a sign of its sympathy with the nationalist cause. During the period of Gioberti's ministry, Genoa ceaselessly opposed his vacillating policy. "The Democrats were now frankly hostile, especially at Genoa; the city was loyal to the King, but it was fiercely democratic and unsettled, and three times in the past summer and autumn had been on the brink of civil war. Gioberti had appeased it when he came into office, but now it readily joined in the revolt against his new tendencies. The government took up the challenge; . . . the ministry illegally closed a club at Genoa, and by a sordid

trick got Brofferio expelled from the chamber. [After the defeat of Piedmont at Novara and the resulting humiliation, the storm broke.] At Genoa the suspicions of treachery broke into revolt. The report won credence that the young King had torn up the constitution and surrendered the city to the Austrians. Panic-stricken at the reported advance of the enemy and wildly surmising treachery in the commander of the garrison, they frightened him into a tame surrender of the forts. The Genoese protested their loyalty to Piedmont; the primary, and indeed the main purpose of the rising was to protect the city from the fancied danger of an Austrian occupation; the movement was accepted by the mass of the citizens, and men of responsibility, as Pareto, the ex-minister, took a leading part. . . . But the new ministry, which had just come into office, was zealous to prove its conservatism; it was frightened by the spectre of separation, and the Moderates had an old grudge against the turbulent democracy of Genoa. The Genoese were declared rebels; La Marmora was sent to force the city into submission, and two days' hard fighting, disgraced by a bombardment and looting by the troops, forced the city to a tardy surrender (April 10)."—B. King, *History of Italian unity*, v. 1, pp. 299-300.

1915.—D'Annunzio's speeches in Genoa.—"Gabriele d'Annunzio had been invited to take part in the Quarto celebrations. He arrived at Genoa on the 4th of May, and on the same evening he delivered the first of that series of impassioned orations . . . which vitalised the idea of the Greater Italy."—S. Low, *Italy in the war*, p. 292.

GENOA CONFERENCE (1922).—The allied powers, met in conference at Cannes, France, unanimously decided on January 6, 1922, "that a conference of an economic and financial nature should be called during the first weeks of March, at which all the European powers, Germany, Austria, Hungary, Bulgaria and Russia included, should be invited to send representatives." The objects of the proposed conference were thus set forth in the resolution: "A common effort by the most powerful States is necessary to render to the European system its vitality which is now paralyzed. This effort ought to be applied to the suppression of all obstacles in the way of commerce. It ought to be applied also to granting large credits to the most feeble countries and to the coöperation of all for the restoration of normal production. The Allied Powers consider that the fundamental and indispensable conditions for the realization of an efficacious effort are capable of being defined in general terms as follows: 1. The nations cannot claim the right to dictate to each other the principles according to which they must organize within their frontiers, their régime of property, their economy and their government. It is the right of each country to choose for itself the system which it prefers. 2. Nevertheless it is not possible to place foreign capital in order to help a country unless the foreigners who provide the capital have a certitude that their property and their rights will be respected and that the fruits of their enterprise will be assured. 3. This feeling of security cannot be reëstablished unless nations or their Governments desiring to obtain foreign credits freely engage: (a) To recognize all public debts and obligations which have been contracted, or will be contracted or guaranteed by States, municipalities, or other public organizations, and to recognize also obligation to restore or, in case of default, to indemnify all foreign interests for loss or damage which has been caused by the confiscation or sequestration of property; (b) to establish legal and juristic

punishment and assure the impartial execution of all commercial or other contracts. 4. The nations ought to have available convenient means of exchange; in general, financial and monetary conditions ought to exist which offer sufficient guarantees. 5. All nations ought to engage to abstain from all propaganda which is subversive of the political system established in other countries. 6. All nations ought to take a common engagement to abstain from all aggression on their neighbors. If with a view to assuring the necessary conditions for the development of the commerce of Russia the Russian Government claims official recognition, the Allied Governments cannot accord this recognition unless the Russian Government accepts the preceding conditions." Two lines of postscript were added that the conference would be held in Italy and that the United States would be invited to participate.

The conference, which was described by Mr. Lloyd George in his opening speech as "the greatest gathering of European nations which has ever assembled on this continent," held its first session on April 10, 1922. "We meet on equal terms," continued the speaker, "provided we accept equal conditions. . . . We are assembled as the representatives of all the nations and peoples of Europe, to seek out in common the best methods for restoring the shattered prosperity of this continent. . . . [The] conditions in inviting the Powers were laid down at Cannes. They apply to all alike; they are the conditions which heretofore have been accepted by all civilized communities as the basis of international good faith. . . . The first is, when a country enters into contractual obligations with another country or its nationals for value received, that contract cannot be repudiated, whenever the country changes its Government, without returning value. The second is, that no country can wage war on the institutions of another. The third is, that one nation shall not engage in aggressive operations against the territory of another. If any people reject these elementary conditions of civilized intercourse between nations they cannot be expected to be received into the comity of nations. . . . A distinguished citizen of this city once upon a time discovered America, and as Genoa in the past discovered America to Europe, I am hopeful that Genoa once more will render another immortal service to humanity by rediscovering Europe to America. Thirty-four nations are represented at this table, and the interest taken in the conference by the world is by no means exhausted by that representation. The press of practically all the world is represented." The United States was not represented by delegates at the conference, though the American ambassador to Italy, Richard Washburn Child, was present as an unofficial observer. An invitation had been extended to the American government through the Italian ambassador in Washington, to which Secretary of State Hughes replied, in part: "I am sure that you will realize that the Government of the United States must take a deep interest in any conference which holds promise of effective measures to promote the economic rehabilitation of Europe, since not only do we keenly desire the return of prosperity to the peoples who have suffered most severely from the wastes and dislocations of war, but it is also manifest that there can be no improvement in world conditions in the absence of European recuperation. It is with this sympathetic spirit, and with the utmost reluctance to withhold its support from any appropriate effort to attain this object, that the Government of the United States has examined the resolution adopted at Cannes and the sug-

gested agenda for the conference. I regret to inform your Excellency that, as a result of this examination, it has been found impossible to escape the conclusion that the prospective conference is not merely an economic conference, as questions appear to have been excluded from consideration without the satisfactory determination of which the chief causes of economic disturbance must continue to operate, but is rather a conference of a political character in which the Government of the United States could not helpfully participate. . . . It is also the view of this Government . . . that while awaiting the establishment of the essential basis of productivity in Russia, to which reference was made in the public declaration of this Government on March 25, 1921, and without which this Government believes all consideration of economic revival to be futile, nothing should be done looking to the obtaining of economic advantages in Russia which would impair the just opportunities of others, but that the resources of the Russian people should be free from such exploitation and that fair and equal economic opportunity in their interest, as well as in the interest of all the powers, should be preserved. While this Government does not believe that it should participate in the proposed conference, it sincerely hopes that progress may be made in preparing the way for eventual discussion and settlement of the fundamental economic and financial questions relating to European recuperation which press for solution." The declaration referred to by Secretary of State Hughes was in reply to a formal appeal by the Russian Soviet Government on March 20, 1921, for the conclusion of a trade compact with the United States.

The following list shows the nations represented at the conference, with their respective number of delegates:—Albania, 4; Australia, 14; Austria, 6; Belgium, 14; Bulgaria, 15; Canada, 2; Czecho-Slovakia, 30; Denmark, 10; Estonia, 25; Finland, 7; France, 80; Germany, 80; Great Britain, 128; Greece, 22; Holland, 16; Hungary, 7; Ireland, 6; Italy, 6; Japan, 4; Jugo-Slavia, 12; Latvia, 6; Lithuania, 7; Luxemburg, 4; New Zealand, 16; Norway, 8; Poland, 40; Portugal, 9; Rumania, 22; Russia, 12; San Marino, 16; South Africa, 4; Spain, 16; Sweden, 10, and Switzerland, 8. Counting all delegations, with assistants, the total number was estimated at 1,500. Signor Luigi Facta, Italian premier, presided over the conference. M. Barthou, leader of the French delegation at the conference, declared that the world was tired of vain words and solemn declamations. "We have come here to act. . . . The French Delegation . . . will act in the full light of day; it has no ideas and plans to conceal. . . . Peace and work are the program and watchword of France." Dr. Wirth, the German chancellor, said that Germany had come to work for the economic reconstruction of Europe and told of Germany's domestic difficulties and needs, though he refrained from making any statement on the question of the reparations due from Germany to the Allies. The Bolshevik foreign minister, George Tchicherin, head of the Russian delegation, stated that Russia had come to the conference to cooperate in the economic reconstruction of the world; that the Soviet government was ready to give all suitable guarantees to the trading and business nationals of other countries on a basis of reciprocity, was prepared to grant concessions and open Siberia to the world. He then declared that Russia was perfectly willing to reduce her army provided that other nations reduced theirs and promised to leave Russia alone. This statement evoked a spirited protest from M. Barthou, who asserted that the Cannes program

specifically excluded the discussion of disarmament, and if that subject were introduced by any one at the conference, the French answer would be "a definite, categorical, decisive, final 'No.'" Tchicherin ironically replied that Russia knew "that at Washington M. Briand told Mr. Hughes that France could not cut down her army because Russia had a big one. We thought that if we offered to disarm, France could do so, and we should be helping all round. We are very sorry if we were wrong, and since we have been invited to confer, we will abide by the rules."

In order to facilitate the labors of the conference three special commissions were created—Finance, Commercial, and Transportation, respectively under British, French and Belgian leadership, while to another and superior body, "Commission No. 1," composed of representatives of all the nations, was assigned the task of deciding all questions falling within the scope of sections 1, 2 and 3 of the Cannes resolution, and in particular the position of Russia. Not without considerable friction Commission No. 1 reduced itself into an active sub-committee composed of twelve members, drawn as follows: Signor Schanzer (Italy), chairman; D. Lloyd George (Great Britain); M. Barthou (France); Baron Ishii (Japan); M. Theunis (Belgium); Julius Wirth and Walter Rathenau (Germany); George Tchicherin (Russia); H. Branting (Sweden); M. Motta (Switzerland); M. Bratianu (Rumania); M. Skirmunt (Poland). In the report of the Allied experts on the Russian problem, Chapter 1, headed "Liquidation of the Past," Article 1 declared that the Soviet government should accept the financial obligations of its predecessors, the former Imperial government and the Provisional government of 1917, which included obligations to foreign states and their nationals. Article 2 provided for the recognition by the Soviet of the financial engagements of all Russian authorities, provincial or local, and also all public utility enterprises contracted with other powers or their peoples. Article 3 declared that the Soviet should assume responsibility for all material damage suffered by foreigners in consequence of the acts or negligence of the Soviet or its predecessors. Article 4 proposed that the responsibilities referred to would be fixed by the commission on the Russian debt and by mixed arbitration tribunals to be created. Article 5 declared that all debts, responsibilities and obligations between foreign governments and the Russian government since August 1, 1914, should be considered as entirely effaced by the payment of sums to be fixed in a future accord. Furthermore, the Soviet government was called upon to promise various reforms in the administration of justice, including independence of the judiciary and free access to the courts by foreigners, who were to be treated on a basis of equality. Other recommendations stipulated that the Soviet permit foreigners to enter and leave Russia in conformity with international practice; that foreigners residing in Russia should be exempt from obligatory military service, have liberty to communicate through the post, telegraph and wireless systems and use telegraphic codes and enjoy every protection and the right to carry on business or profession without discrimination or restriction on account of nationality. No discrimination should be shown in the case of foreign workmen employed by foreigners, regarding military service or enforced labor. Finally, the report specially emphasized that effective collaboration between Russia and other nations would be difficult unless Russia wholeheartedly labored to restore her economic life, the basis of which was agriculture.

Security of property rights was a necessary condition for the rebirth of Russia, and when this was realized, foreign assistance would immediately be available. Russia could not expect foreign help in her industrial life until foreigners were able to count upon the good will and collaboration of the Russian government. With regard to the economic rehabilitation of Europe the report declared that an essential condition of reconstruction was that each country should stabilize the value of its money: "No country can be master of its own money so long as its budget shows an annual deficit which it tries to meet by the issue of paper currency or by opening bank credits. Each country must try by independent effort to remove the deficit." Other reform measures related to exchange, credits, tariff restrictions and prohibitions respecting importation and exportation; the administration of international transports must not be determined by political considerations, but by commercial and technical reasons as emphasized by the conventions of Barcelona, 1921, dealing with the liberty of transit.

The French delegation endeavored to rule out the German and Russian representatives from the deliberations, but the majority decided against the exclusion. It soon became apparent that there was considerable divergence of policy in the Allied ranks. "The Western nations needed Russia. Britain needed the Russian market for its manufactures and desired cheap Russian wheat. Italy was equally anxious to open the Black Sea ports. With comparative rapidity national and official views both in Britain and Italy have been changed and the new watchword, voiced alike by Lloyd George and various Italian statesmen, has been 'peace with Russia.' By contrast, France and Belgium, and in a limited measure the United States, were more concerned with investments already made in Russia than with the future Russian market or with imaginary Russian food supplies. . . . The Russian position was enormously strengthened at the outset by this obvious difference existing between the nations which had been enemies of Red Russia and allies against Germany. The British, supported by the Italians, proclaimed in advance that they must, as a matter of national prosperity, reach a settlement with Russia. And since the British leadership at Genoa was certain, Russia thus began the conference with assured allies. In addition, Russia had certain things with which to trade. Money she lacked; immediate liquid assets were also lacking, but despite the contemporary misery and chaos in Russia, there was world-wide recognition of the fact that the natural resources of Russia were almost incalculably rich and the western nations which could obtain the chance to exploit them would profit enormously. . . . Still another advantage Russia possessed and meant to use to its full extent. There was in Europe another great nation, momentarily broken by defeat but, industrially speaking, still the most potential of all the Continental states—namely, Germany. The French and Belgians, who were precisely the most exigent in respect of Russia, were similarly the most insistent upon German fulfilment of the terms of the treaty which marked German defeat." —F. H. Simonds, *Battle of Genoa (American Review of Reviews, June, 1922)*.—"From the statements given out by the Soviet delegates, it was made clear that the Russian delegation as a whole was amazed and even staggered by the sweeping political changes—to say nothing of the wide scope of the financial clauses—suggested in the allied report. It was declared by them that the demands respecting the right of personal property and pro-

tection for foreigners contemplated changes in the Soviet Government which would virtually wipe out communism and impair Soviet sovereignty in its own dominion."—*Genoa conference (New York Times Current History, May, 1922, p. 326)*.—"The French were adamant in insisting on Soviet acceptance of the Russian debt to France, and Lloyd George was equally resolved on acceptance of far-reaching political changes."—*Ibid.*, p. 327.—The total claims of Russia's creditors amounted to 65,000,000,000 gold francs; against this the Russian delegate presented a counter-claim for 300,000,000,000 gold francs, being Russian expenditure in the war against Germany before the revolution of 1917 and reparation for the damage sustained by Soviet Russia through the military operations of Kolchak, Denikin and Wrangel, aided and abetted by the Allied governments. "This claim the Russians subsequently scaled down to 50,000,000,000 gold rubles—the equivalent of 125,000,000,000 gold francs. Having thus shown that they owed the Allies nothing, but were in reality a creditor nation, the Russian leaders offered to settle on the basis of 2,000,000,000 gold francs, plus a considerable loan for economic reconstruction. Tchicherin pointed out the difficulty of persuading some 150,000,000 Russian peasants, who believed that the whole Czarist régime had been swept away, to assume the obligation to repay the old debt. Lloyd George in reply pointed out that a large part of the Russian debt was owed to French peasants. (Before the outbreak of the World War Russian indebtedness to France on account of loans amounted to ten thousand million francs.) Late on April 15, at the close of two days of discussions, the British Premier told M. Tchicherin flatly that the Russians must abandon their fantastic indemnity claims, and must comply with the following conditions: (1) Recognize the pre-war debt of Russia; (2) recognize the responsibility of the Russian Government for the sums borrowed by Russia from the Allies during the war; (3) recognize the liability of the Soviet Government for property owned by foreigners, which the Soviet had nationalized. After the Russians had accepted these conditions, Lloyd George said, the Allies would entertain the Soviet suggestion of reciprocity in the case of the damage done by the anti-Soviet generals. The Russians asked time to consider this."—*Genoa conference (New York Times Current History, June, 1922, pp. 479-480)*.—On the same day Rakovsky appeared before the Finance Committee to answer the claim of 6,000,000,000 gold francs for foreign-owned property seized or destroyed in Russia. He declared that his government was prepared to recognize this claim provided that the Allies recognized the Russian counter-claim of 30,000,000,000 gold francs and would pay to Russia an initial instalment of 2,000,000,000 gold francs on account. The session terminated abruptly. This was on Saturday, April 15. On the Sunday a tremendous *coup* was engineered in the neighboring town of Rapallo, 15 miles from Genoa. On Monday the Germans dropped a veritable diplomatic bombshell among the Allied delegations when they announced that a Russo-German *entente* had been concluded at Rapallo. By this *coup*, one of the chief aims of the conference—to prevent Germany and Russia from making common cause—had been frustrated. Russia had won from Germany practically all that the Allies had refused her. (See RAPALLO, TREATY OF, 1922.) Great consternation reigned among the Allied statesmen. On April 18 the representatives of Great Britain, France, Italy, Japan, Belgium, Czecho-Slovakia, Poland, Rumania, Portugal and Jugo-Slavia ad-

ressed this note to the German delegation: "The undersigned powers learned with astonishment that in the first stage of the Genoa conference, Germany, without reference to the other powers assembled, has secretly concluded a treaty with the Soviet Government. The questions covered by the treaty are the subject of negotiations between the representatives of Russia and those of all the other powers invited to the conference, including Germany, and the German Chancellor himself declared at the opening session that the German delegation would co-operate with the other powers for a solution of these questions in a spirit of genuine loyalty and fellowship. The undersigned powers therefore express to the German delegation in the frankest terms their opinion that the conclusion of such an agreement while the conference was in session is a violation of the conditions to which Germany pledged itself on entering the conference. . . . In these circumstances the undersigned do not consider it fair or equitable that Germany, having effected her own arrangement with Russia, should enter into a discussion of the conditions of an arrangement between their countries and Russia; they therefore assume that the German delegates have by their action renounced further participation in the discussion of the conditions of agreement between Russia and the various countries represented at the conference."—*Ibid.*, p. 482. The question arose as to whether Germany, by making this treaty, had infringed any of the provisions of the Treaty of Versailles, by which her actions and relations to the Allies were governed. Russia had taken no part in the Versailles Treaty, and consequently stood in an independent position. In the course of his reply Dr. Rathenau said: "I came with my hands free to see what Germany would get at Genoa. When I saw that she would get nothing, I acted as though there had been no Genoa conference."

Thanks to the mediation of the Italian foreign minister, Signor Schanzer, the German delegates agreed to withdraw from discussions on Russian affairs, while continuing to participate in the remaining work of the conference. This proposal came from Dr. Julius Wirth, the German premier, submitted on April 21, but on the following day the problem was aggravated by a vigorous protest from the French side, attacking the legality of the Russo-German Treaty as being outside the scope of Germany's treaty engagements and of the Cannes resolutions, and calling upon the signatories to the note of April 18 (see above) to consider the matter afresh. At the same time Germany was asked for a statement that there were no secret clauses in the treaty with Russia. (Assurances on this last point were given by Tchicherin in a note to Barthou on May 1: "The Russian delegation announces in the most categorical manner that the Rapallo Treaty does not contain any secret clauses of military or political character, and the Russian Government has not engaged in any action of any sort against the interests of the French nation or any other nation whatsoever.") Before the end of the month French legal experts had submitted the treaty to a microscopic examination to discover any infringements of Articles 243 and 260 of the Treaty of Versailles. The experts "decided that the reservations already contained in the Rapallo treaty safeguarded Allied rights to a considerable degree, and that, if they were somewhat extended, there would be no violation." Acting on this basis the Reparations Commission did not demand the annulment of the Russo-German Treaty, "but would require Germany to enlarge her reservations in the compact to the point where they

covered and protected all Allied interest."—Based on *Genoa conference* (*New York Times Current History, June, 1922*).—But the storm raised by the Russo-German Treaty was by no means allayed. While in Germany the instrument was regarded as entirely innocuous, there were not a few who considered it a tactical blunder to have concluded it during the Genoa conference. The French, on the other hand, looked upon it as the gravest menace to their interests since the war. In a bellicose speech at Bar-le-Duc (France) on April 24, M. Poincaré announced that if Germany failed to comply with the terms of the Reparations Commission when the next payment was due, on the forthcoming May 31, France would be obliged, either with her allies or alone, to take active steps against Germany. "Under the double menace of Rapallo and Bar-le-Duc, the whole Genoa Conference staggered. Crisis followed crisis, the reports of speedy dissolution multiplied and to the outside world the prospect of failure increased in clarity with each day."—F. H. Simonds, *Battle of Genoa* (*American Review of Reviews, June, 1922, pp. 599-600*).—On May 2 the Allied plan for Russian recognition was handed to the Soviet delegates, but without the signatures of France and Belgium. On May 4 the session emphasized the necessity of settling international debts before attempting to restore financial stability. The French delegates protested that Lloyd George was trying to help the Soviets arrange land terms which would enable Russia to shift ownership of oil lands from France and Belgium over to Great Britain and Germany on long leases under the guise of Russian land nationalization. To Lloyd George's proposal for a ten-year non-aggression pact the French were prepared to agree on condition (1) that every European nation signed, (2) that Russia recognized all her existing boundaries for ten years, and (3) that France should not be called upon to surrender any of her rights of enforcing the Versailles Treaty. On the same day the Reparations Commission handed a long note to Germany; the reply came on May 28, nine days after the conference had broken up. Germany conceded all demands, conditional upon an international loan on terms bearable to Germany. Already on May 10 Germany had claimed that she could not meet her obligations under the moratorium of March 21 before May 31 without the aid of foreign loans, alleging that it was impossible to levy 60,000,000,000 marks new taxes before May 31. The Russian reply to the Allied proposals was received and published on May 11. While considered conciliatory in its actual commitments, the note denounced the Allies in scathing terms and accused them of deviating from the line of their original proposals and of conspiring to overthrow the Bolshevik government. "Not one of the conditions imposed by the powers as the price of resuming commercial relations with Russia was accepted. Every offer of concessions which the Russians had previously accepted was withdrawn, and the reply brought the conference back to the conditions that existed at its opening, and even further, for in accepting the Cannes invitation the Soviet had agreed to recognition of Russia's debts. The Russians now took back their pledge to cancel their counter-claim of 50,000,000,000 gold rubles against the Allies for damage done by the anti-Soviet Russian armies with allied support, and reverted to the principle of reciprocity, under which all debts would be canceled upon both sides. M. Rakovsky, speaking for the Russian delegation, declared that it would henceforth stand upon this principle. . . . The French on reading the Russian

note at once wired to Paris for instruction. Whether the French and their allies would withdraw was problematical. . . . It was clearly intimated in the note that no agreement could be reached unless Russia received a large international loan, and the allied governments had already made it clear that such a loan would not be extended. This refusal was confirmed officially in the British Parliament on May 11, the day when the Russian reply was received, when Sir Robert Horne, speaking for the Government, declared that the British Government was not prepared to make a loan to the Moscow Government. . . . After full consideration of the Russian reply, the delegation unanimously agreed that all hope of reaching an economic settlement with the Soviet Government at Genoa must be abandoned. The impossibility of realizing Lloyd George's other project—the making of a ten-year non-aggressive treaty—was generally admitted, for this plan depended primarily on the success of an economic arrangement with Russia. . . . Lloyd George . . . succeeded on May 14 in securing an agreement to begin a new attempt at settlement at The Hague on June 15, the main issues to be decided between then and the end of October being Russian credits, debts and private property. All the powers pledged themselves to conclude no separate treaties with Russia up to October 26. A special invitation was transmitted to the United States through Ambassador Child. Secretary Hughes declined this invitation on May 15, reiterating the American position that the question of Russian reconstruction and re-establishment of commerce and credit must be preceded by fundamental changes in the policy of the Soviet Government. . . . The receipt of the American refusal to participate in the new discussions caused keen disappointment at Genoa among all the delegations."—*New York Times Current History, June, 1922, pp. 497, 503*.—The conference decided on May 17 to adjourn *sine die* on the 10th, after a plenary session on that day. The Russian delegation had consented to cooperate in the proposed new conference. At 1 o'clock on May 19 the Genoa conference came to an end after six weeks of hopes and disappointments. One direct result of the Genoa conference was the calling by Moscow of a general conference of eastern nations to meet in the Russian capital late in June. Another was the withdrawal by the Soviet government of its troops concentrated on the Bessarabian frontier, which move was apparently due to the protest entered by Rumania at Genoa, and more particularly by France's support and guarantee to Rumania of her possession of Bessarabia, transferred to her from Russia under the peace settlement of 1919. The economic problems of Europe, however, remained unsettled, although another attempt to solve these questions was made at the Hague conference held in June.—See also HAGUE CONFERENCE (1922).

**GENOA CONGRESS OF ORIENTAL PEOPLES (1922).**—This gathering, which opened toward the end of May, was attended by delegates from Egypt, India, Turkey, Persia, Syria, Afghanis-

tan, Armenia, Mesopotamia and the Lebanon. It was originally intended to hold this congress concurrently with the Genoa economic and financial conference of the Allied powers, but owing to the late arrival of the delegates the congress did not open until after the conference had closed. The congress was held behind closed doors. An Egyptian Nationalist, Abdul Hamid Said, presided, and Chekib Arslan, a Syrian emigré, usually resident in Berlin, acted as secretary. A voluminous resolution was passed, protesting against European imperialism and declaring that "if imperialism will not take our friendship, it will have to reckon with our enmity." The congress also made the following demands: The extension to the entire East of the European and American code of international law; the abolition of the mandates; the recognition of the right of the eastern peoples to organize themselves in their own way as wholly independent states; complete withdrawal of European troops from all territory occupied by them in the East; all eastern states to be admitted to full membership of the League of Nations; the pact of non-aggression to be extended to the eastern states.

**GENS, GENTES, GENTILES.**—"When Roman history begins, there were within the city, and subordinate to the common city government, a large number of smaller bodies, each of which preserved its individuality and some semblance of governmental machinery. These were clans [gens], and in prehistoric times each of them is taken to have had an independent political existence, living apart, worshipping its own gods, and ruled over by its own chieftain. This clan organization is not supposed to have been peculiar at all to Rome, but ancient society in general was composed of an indefinite number of such bodies, which, at the outset, treated with each other in a small way as nations might treat with each other to-day. It needs to be noted, however, that, at any rate, so far as Rome is concerned, this is a matter of inference, not of historical proof. The earliest political divisions in Latium of which we have any trace consisted of such clans united into communities. If they ever existed, separately, therefore their union must have been deliberate and artificial, and the body thus formed was the canton ('civitas' or 'populus'). Each canton had a fixed common stronghold ('capitolium,' 'height,' or 'arx'—cf. 'arceo'—'citadel') situated on some central elevation. The clans dwelt around in hamlets ('vici' or 'pagi') scattered through the canton. Originally, the central stronghold was not a place of residence like the 'pagi,' but a place of refuge . . . and a place of meeting. . . . In all of this, therefore, the clan seems to lie at the very foundation. . . . Any clan in the beginning, of course, must have been simply a family. When it grew so large as to be divided into sections, the sections were known as families ('familie') and their union was the clan. In this view the family, as we find it existing in the Roman state, was a subdivision of the clan. In other words, historically, families did not unite to form clans, but the clan was the primitive thing, and the families were its branches. Men thus recognized kinship of a double character. They were related to all the members of their clan as 'gentiles,' and again more closely to all the members of their branch of the clan at once as 'gentiles' and also as 'agnati.' As already stated, men

belonged to the same family ('agnati') when they could trace their descent through males from a common ancestor who gave its name to the family, or, what is the same thing, was its eponym. Between the members of a clan the chief evidence of relationship in historical times was tradition. . . . We have thus outlined what is known as the patriarchal theory of society, and hinted at its application to certain facts in Roman history. It should be remembered, however, that it is only a theory, and that it is open to some apparent and to some real criticism."—A. Tighe, *Development of the Roman constitution*, ch. 2.—T. Mommsen, *History of Rome*, bk. 1, ch. 5.—"The patricians were divided into certain private associations, called Gentes, which we may translate Houses or Clans. All the members of each Gens were called gentiles; and they bore the same name, which always ended in -ius; as for instance, every member of the Julian Gens was a Julius; every member of the Cornelian Gens was a Cornelius, and so on. Now in every Gens there were a number of Families which were distinguished by a name added to the name of the Gens. Thus the Scipios, Sullas, Cinnas, Cethegi, Lentuli, were all families of the Cornelian Gens. Lastly, every person of every Family was denoted by a name prefixed to the name of the Gens. The name of the person was, in Latin, prænomen; that of the Gens or House, nomen, that of the Family, cognomen. Thus Caius Julius Cæsar was a person of the Cæsar Family in the Julian Gens; Lucius Cornelius Scipio was a person of the Scipio Family in the Cornelian Gens; and so forth."—H. G. Liddell, *History of Rome*, bk. 1, ch. 3.—"There is no word in the English language which satisfactorily renders the Latin word 'gens.' The term 'clan' is apt to mislead; for the Scotch Highland clans were very different from the Roman 'gentes.' The word 'House' is not quite correct, for it always implies relationship, which was not essential in the 'gens'; but for want of a better word we shall use 'House' to express 'gens,' except where the spirit of the language rejects the term and requires 'family' instead. The German language has in the word 'Geschlecht' an almost equivalent term for the Latin 'Gens.'"—W. Ihne, *History of Rome*, bk. 1, ch. 13, *foot-note*.—See also ROME: Ancient kingdom: Early character, etc.; Genesis of the people.

**GEOMORI**, or Gamori.—"As far as our imperfect information enables us to trace, these early

oligarchies of the Grecian states, against which the first usurping despots contended, contained in themselves more repulsive elements of inequality, and more mischievous barriers between the component parts of the population, than the oligarchies of later days. . . . The oligarchy was not (like the government so denominated in subsequent times) the government of a rich few over the less rich and the poor, but that of a peculiar order, sometimes a Patrician order, over all the remaining society. . . . The country-population, or villagers who tilled the land, seem in these early times to have been held to a painful dependence on the great proprietors who lived in the fortified town, and to have been distinguished by a dress and habits of their own, which often drew upon them an unfriendly nickname. . . . The governing proprietors went by the name of the Gamori, or Geomori, according as the Doric or Ionic dialect might be used in describing them, since they were found in states belonging to one race as well as to the other. They appear to have constituted a close order, transmitting their privileges to their children, but admitting no new members to a participation. The principle called by Greek thinkers a Timocracy (the apportionment of political rights and privileges according to comparative property) seems to have been little, if at all, applied in the earlier times. We know no example of it earlier than Solon."—G. Grote, *History of Greece*, pt. 2, ch. 9.

GEORGIA, southern state of the United States and one of the original thirteen states of the Union. On the north it is bounded by Tennessee and North Carolina; on the west by Alabama; on the east by South Carolina and the Atlantic Ocean; and on the south by Florida. The area is 59,265 square miles, of which 540 square miles are water. The population, according to the census of 1920, aggregated 2,895,832 inhabitants. Georgia ranks second among the cotton producing states of the Union. Among her other agricultural products are corn, oats, wheat, rice and sugar cane. The fisheries, particularly the oyster and shad fisheries, as well as the mineral resources of the state, are of great importance. See U. S. A.: Economic map.

1732-1739.—Oglethorpe's colony.—“Among the members of Parliament during the rule of Sir Robert Walpole was one almost unknown to us now, but deserving of honour beyond most men of his time. His name was James Oglethorpe. He was a soldier, and had fought against the Turks and in the great Marlborough wars against Louis XIV. In advanced life he became the friend of Samuel Johnson. Dr. Johnson urged him to write some account of his adventures. ‘I know no one,’ he said, ‘whose life would be more interesting: if I were furnished with materials I should be very glad to write it.’ Edmund Burke considered him ‘a more extraordinary person than any he had ever read of.’ John Wesley ‘blessed God that ever he was born.’ Oglethorpe attained the great age of ninety-six, and died in the year 1785. . . . In Oglethorpe's time it was in the power of a creditor to imprison, according to his pleasure, the man who owed him money and was not able to pay it. It was a common circumstance that a man should be imprisoned during a long series of years for a trifling debt. Oglethorpe had a friend upon whom this hard fate had fallen. His attention was thus painfully called to the cruelties which were inflicted upon the unfortunate and helpless. He appealed to Parliament, and after inquiry a partial remedy was obtained. The benevolent exertions of Oglethorpe procured liberty for multitudes who but for him might have ended their lives in captivity. This, however, did not content him. Liberty was an incomplete gift to men who had lost, or perhaps had scarcely ever possessed, the faculty of earning their own maintenance. Oglethorpe devised how he might carry these unfortunates to a new world, where, under happier auspices, they might open a fresh career. He obtained [1732] from King George II. a charter by which the country between the Savannah and the Alatamaha, and stretching westward to the Pacific, was erected into

the province of Georgia. It was to be a refuge for the deserving poor, and next to them for Protestants suffering persecution. Parliament voted £10,000 in aid of the humane enterprise, and many benevolent persons were liberal with their gifts. In November the first exodus of the insolvent took place. Oglethorpe sailed with 120 emigrants, mainly selected from the prisons—peniless, but of good repute. He surveyed the coasts of Georgia, and chose a site for the capital of his new State. He pitched his tent where Savannah now stands, and at once proceeded to mark out the line of streets and squares. Next year the colony was joined by about a hundred German Protestants, who were then under persecution for their beliefs. . . . The fame of Oglethorpe's enterprise spread over Europe. All struggling men, against whom the battle of life went hard, looked to Georgia as a land of promise. They were the men who most urgently required to emigrate; but they were not always the men best fitted to conquer the difficulties of the immigrant's life. The progress of the colony was slow. The poor persons of whom it was originally composed were honest but ineffective, and could not in Georgia more than in England find out the way to become self-supporting. Encouragements were given which drew from Germany, from Switzerland, and from the Highlands of Scotland men of firmer texture of mind—better fitted to subdue the wilderness and bring forth its treasures. With Oglethorpe there went out, on his second expedition to Georgia [1736], the two brothers John and Charles Wesley. Charles went as secretary to the Governor. John was even then, although a very young man, a preacher of unusual promise. . . . He spent two years in Georgia, and these were unsuccessful years. His character was unformed; his zeal out of proportion to his discretion. The people felt that he preached ‘personal satires’ at them. He involved himself in quarrels, and at last had to leave the colony secretly, fearing arrest at the instance of some whom he had offended. He returned to begin his great career in England, with the feeling that his residence in Georgia had been of much value to himself, but of very little to the people whom he sought to benefit. Just as Wesley reached England, his fellow-labourer George Whitefield sailed for Georgia. . . . He founded an Orphan-House at Savannah, and supported it by contributions—obtained easily from men under the power of his unequalled eloquence. He visited Georgia very frequently, and his love for that colony remained with him to the last. Slavery was, at the outset, forbidden in Georgia. It was opposed to the gospel, Oglethorpe said, and therefore not to be allowed. He foresaw, besides, what has been so bitterly experienced since, that slavery must degrade the poor white labourer. But soon a desire sprung up among the less scrupulous of the settlers to have the use of slaves. Within seven years from the first landing, slave-ships were discharging their cargoes at Savannah.”—R. Mackenzie, *America: History*, bk. 1, ch. 10.—See also U. S. A.: 1607-1752.

1734.—Settlement of the Salzburghers.—“As early as October the 12th, 1732, the ‘Society for the Propagation of Christian Knowledge’ expressed to the Trustees a desire ‘that the persecuted Salzburghers should have an asylum provided for them in Georgia.’ . . . These Germans belonged to the

Archbishopric of Salzburg, then the most eastern district of Bavaria; but now forming a detached district in upper Austria, and called Salzburg from the broad valley of the Salzer, which is made by the approximating of the Norric and Rhetian Alps. Their ancestors, the Vallenges of Piedmont, had been compelled by the barbarities of the Dukes of Savoy, to find a shelter from the storms of persecution in the Alpine passes and vales of Salzburg and the Tyrol, before the Reformation; and frequently since had they been hunted out by the hirings and soldiery of the Church of Rome. . . . The quietness which they had enjoyed for nearly half a century was now rudely broken in upon by Leopold, Count of Firmian and Archbishop of Salzburg, who determined to reduce them to the Papal faith and power. He began in the year 1729, and ere he ended in 1732, not far from 30,000 had been driven from their homes, to seek among the Protestant States of Europe that charity and peace which were denied them in the glens and fastnesses of their native Alps. More than two-thirds settled in the Prussian States; the rest spread themselves over England, Holland, and other Protestant countries. Thrilling is the story of their exile. The march of these Salzburgers constitutes an epoch in the history of Germany. . . . The sympathies of Reformed Christendom were awakened on their behalf, and the most hospitable entertainment and assistance were everywhere given them." Forty-two families, numbering seventy-eight persons, accepted an invitation to settle in Georgia, receiving allotments of land and provisions until they could gather a harvest. They arrived at Savannah in March, 1734, and were settled at a spot which they selected for themselves, about thirty miles in the interior. "Oglethorpe marked out for them a town; ordered workmen to assist in building houses; and soon the whole body of Germans went up to their new home at Ebenezer."—W. B. Stevens, *History of Georgia*, v. 1, bk. 2, ch. 2.

1735-1749.—Slavery question.—Original exclusion and subsequent admission of negro slaves.—Among the fundamental regulations of the trustees was one prohibiting negro-slavery in the colony. "It was policy and not philanthropy which prohibited slavery; for, though one of the trustees, in a sermon to recommend charity, declared, 'Let avarice defend it as it will, there is an honest reluctance in humanity against buying and selling, and regarding those of our own species as our wealth and possessions'; and though Oglethorpe himself, speaking of slavery as against 'the gospel as well as the fundamental law of England,' asserted, 'we refused, as trustees, to make a law permitting such a horrid crime'; yet in the official publications of that body its inhibition is based only on political and prudential, and not on humane and liberal grounds; and even Oglethorpe owned a plantation and negroes near Parachucla in South Carolina, about forty miles above Savannah. . . . Their [the trustees] design was to provide for poor but honest persons, to erect a barrier between South Carolina and the Spanish settlements, and to establish a wine and silk-growing colony. It was thought by the trustees that neither of these designs could be secured if slavery was introduced. . . . But while the trustees disallowed negroes, they instituted a system of white

slavery which was fraught with evil to the servants and to the colony. These were white servants, consisting of Welch, English, or German, males and females—families and individuals—who were indentured to individuals or the trustees, for a period of from four to fourteen years. . . . On arriving in Georgia, their service was sold for the term of indenture, or apportioned to the inhabitants by the magistrates, as their necessities required. . . . Two years had not elapsed since the landing of Oglethorpe before many complaints originated from this cause; and in the summer of 1735 a petition, signed by seventeen freeholders, setting forth the unprofitableness of white servants, and the necessity for negroes, was carried by Mr. Hugh Sterling to the trustees, who, however, resented the appeal as an insult to their honour. . . . The plan for substituting white for black labour failed through the sparseness of the supply and the refractoriness of the servants. As a consequence of the inability of the settlers to procure adequate help, the lands granted them remained uncleared, and even those which the temporary industry of the first occupants prepared remained uncultivated. . . . There accumulated on the trustees' hands a body of idle, clamorous, mischief-making men, who employed their time in declaiming against the very government whose charity both fed and clothed them. . . . For nearly fifteen years from 1735, the date of the first petition for negroes, and the date of their express law against their importation, the trustees refused to listen to any similar representations, except to condemn them," and they were supported by the Salzburgers and the Highlanders, both of whom opposed the introduction of negro slaves. But finally, in 1749, the firmness of the trustees gave way and they yielded to the clamor of the discontented colony. The importation of black slaves was permitted, under certain regulations intended to diminish the evils of the institution. "The change in the tenure of grants, and the permission to hold slaves, had an immediate effect on the prosperity of the colony."—W. B. Stevens, *History of Georgia*, v. 1, bk. 2, ch. 9.

1735-1750.—Methods of laying out grants.—Savannah.—Georgia towns and New England towns.—"It is an interesting fact that Georgia was largely settled in communities or towns somewhat resembling those of New England. This was the result of the policy . . . of making trust deeds for several thousand acres to be laid out and subdivided among the settlers sent over by the Trust. There were in all eight of these large tracts, varying in size from twenty-five hundred to ten thousand acres; and most of the people of the province were located in one of the towns or villages that developed from these trust deeds. Savannah was the first of the towns to be established, and it served as a model for the later ones. Since this is true, it may be worth while to study the general plan of Savannah as a type of the Georgia towns. It was laid off for two hundred and forty freeholds, the quantity of land necessary being twenty-four square miles or fifteen thousand three hundred and sixty acres. Of this land, twelve thousand acres were used for actual grants to settlers while the remainder was used for roadways, streets, Trust reserves, commons, and the like. The town proper was laid off into wards of forty building lots each, and these wards were subdivided into tithings of ten lots each. Wide streets and numerous squares for market purposes were left; and in every ward was left one large square to accommodate people from the country if these should ever need to seek the protection of the town. Around the residence and business portions of the town were the com-

mons which were planned for grazing cattle and for recreation. The building lots were each sixty by ninety feet, fronting two streets. Each owner of such a lot would have a garden plot beyond the town commons, and this was large enough to make the combined area of lot and garden amount to five acres as planned by the Trustees. As a rule, adventurers would not have their lands laid off within the limits of one of these especially assigned tracts, but they were given estates adjoining the towns or villages, though not infrequently they were allowed a building lot within the town for a residence only. While the general arrangement of the Georgia villages, with Savannah as a type, was something like that of Massachusetts, or other New England colonies, there were several points of difference that should be noted. In general appearance, the Georgia villages were much more compact, due to the small building lots, though the streets and squares were perhaps wider than the average ones in New England towns. This compactness was due to the fact that Georgia was designed as a buffer Colony against the Spanish; and each town was therefore considered, and to a degree arranged, as a garrison. In respects other than appearance, the settlements in Georgia were still more unlike the New England towns. The latter owned all the land within their limits and could prescribe what should be done with it, while in Georgia all vacant land was owned by the Common Council, three thousand miles away. Again, a town in Massachusetts was to a considerable extent self-governing and could regulate entirely its internal affairs, while no Georgia village ever enjoyed this privilege under proprietary rule. There were some decided disadvantages in laying out lots and farms so regularly. Much of the land in Georgia was not well adapted to cultivation; and it was impossible to find large tracts of it that would all be good. As a result, when towns were laid out and when the various divisions were distributed, some settlers would surely get poor land either for their gardens or for their farms or for both."—J. R. McCain, *Georgia as a proprietary province*, p. 273.

1738-1743.—War with the Spaniards of Florida.—Discontent in the colony.—"The assiento enjoyed under the treaty of Utrecht by the English South Sea Company, the privilege, that is, of transporting to the Spanish colonies a certain number of slaves annually, . . . was made a cover for an extensive smuggling trade on the part of the English, into which private merchants also entered. . . . To guard against these systematic infractions of their laws, the Spaniards maintained a numerous fleet of vessels in the preventive service, known as 'guarda costas,' by which some severities were occasionally exercised on suspected or detected smugglers. These severities, grossly exaggerated, and resounded throughout the British dominions, served to revive in England and the colonies a hatred of the Spaniards, which, since the time of Philip II., had never wholly died out. Such was the temper and position of the two nations when the colonization of Georgia was begun, of which one avowed object was to erect a barrier against the Spaniards, among whom the runaway slaves of South Carolina were accustomed to find shelter, receiving in Florida an assignment of lands, and being armed and organized into companies, as a means of strengthening that feeble colony. A message sent to St. Augustine to demand the surrender of the South Carolina runaways met with a point blank refusal, and the feeling against the Spaniards ran very high in consequence. . . . Oglethorpe . . . returned from his second visit to England [September, 1738], with

a newly-enlisted regiment of soldiers, and the appointment, also, of military commander for Georgia and the Carolinas, with orders 'to give no offense, but to repel force by force.' Both in Spain and England the administrators of the government were anxious for peace. . . . The ferocious clamors of the merchants and the mob . . . absolutely forced Walpole into a war [see ENGLAND: 1739-1741]. Travelling 300 miles through the forests, Oglethorpe held at Coweta, on the Chatahoochee, just below the present site of Columbus, a new treaty with the Creeks, by which they confirmed their former cessions, acknowledged themselves subject to the King of Great Britain, and promised to exclude from their territories all but English settlers. After finishing the treaty, Oglethorpe returned through the woods by way of Augusta to Savannah, where he found orders from England to make an attack on Florida. He called at once on South Carolina and the Creeks for aid, and in the meantime made an expedition, in which he captured the Fort of Picolata, over against St. Augustine, thus securing the navigation of the St. John's, and cutting off the Spaniards from their forts at St. Mark's and Pensacola. South Carolina entered very eagerly into the enterprise. Money was voted; a regiment, 500 strong, was enlisted, partly in North Carolina and Virginia. This addition raised Oglethorpe's force to 1,200 men. The Indians that joined him were as many more. Having marched into Florida, he took a small fort or two, and, assisted by several ships of war, laid siege to St. Augustine. But the garrison was 1,000 strong, besides militia. The fortifications proved more formidable than had been expected. A considerable loss was experienced by a sortie from the town, falling heavily on the Highland Rangers. Presently the Indians deserted, followed by part of the Carolina regiment, and Oglethorpe was obliged to give over the enterprise. . . . From the time of this repulse, the good feeling of the Carolinians toward Oglethorpe came to an end. Many of the disappointed Georgia emigrants had removed to Charleston, and many calumnies against Oglethorpe were propagated, and embodied in a pamphlet published there. The Moravians also left Georgia, unwilling to violate their consciences by bearing arms. Most unfortunately for the new colony, the Spanish war withdrew the Highlanders and others of the best settlers from their farms to convert them into soldiers."—R. Hildreth, *History of the United States*, v. 2, ch. 25.—"After the late incursion into Florida, the General kept possession of a southern region which the Spaniards had claimed as their own; and, as they had taken encouragement from the successful defence of St. Augustine, and the well-known dissensions on the English side, it was to be expected that they would embrace the earliest opportunity of taking their revenge. . . . The storm, which had been so long anticipated, burst upon the colony in the year 1742. The Spaniards had . . . fitted out, at Havana, a fleet said to consist of 56 sail and 7,000 or 8,000 men. The force was probably not quite so great; if it was, it did not all reach its destination," being dispersed by a storm, "so that only a part of the whole number succeeded in reaching St. Augustine. The force was there placed under the command of Don Manuel de Monteano, the Governor of that place. . . . The fleet made its appearance on the coast of Georgia on the 21st of June"; but all its attempts, first to take possession of the island of Amelia, and afterwards to reduce the forts at Frederica, were defeated by the vigor and skill of General Oglethorpe. After losing heavily in a fight

called the Battle of the Bloody Marsh, the Spaniards retreated about the middle of July. The following year they prepared another attempt; but Oglethorpe anticipated it by a second demonstration on his own part against St. Augustine, which had no other result than to disconcert the plans of the enemy.—W. B. O. Peabody, *Life of Oglethorpe (Library of American biography, 2d series, v. 2, ch. 11-12)*.—"While Oglethorpe was engaged in repelling the Spaniards, the trustees of Georgia had been fiercely assailed by their discontented colonists. They sent Thomas Stevens to England with a petition containing many charges of mismanagement, extravagance, and speculation, to which the trustees put in an answer. After a thorough examination of documents and witnesses in committee of the whole, and hearing counsel, the House of Commons resolved that 'the petition of Thomas Stevens contains false, scandalous, and malicious charges'; in consequence of which Stevens, the next day, was brought to the bar, and reprimanded on his knees. . . . Oglethorpe himself had been a special mark of the malice and obloquy of the discontented settlers. . . . Presently his lieutenant colonel, a man who owed everything to Oglethorpe's favor, re-echoing the slanders of the colonists, lodged formal charges against him. Oglethorpe proceeded to England to vindicate his character, and the accuser, convicted by a court of inquiry of falsehood, was disgraced and deprived of his commission. Appointed a major general, ordered to join the army assembled to oppose the landing of the Pretender, marrying also about this time, Oglethorpe did not again return to Georgia. The former scheme of administration having given rise to innumerable complaints, the government of that colony was intrusted to a president and four counselors."—R. Hildreth, *History of the United States, v. 2, ch. 25*.

ALSO IN: C. C. Jones, *History of Georgia, v. 1, ch. 17-22*.

1743-1764.—Surrender to the crown.—Government as a royal province.—"On Oglethorpe's departure [1743], William Stephens, the secretary, was made President, and continued in office until 1751, when he was succeeded by Henry Parker. The colony, when Stephens came into office, comprised about 1,500 persons. It was almost at a stand-still. The brilliant prospects of the early days were dissipated, and immigration had ceased, thanks to the narrow policy and feeble government of the Trustees. An Indian rising, in 1749, headed by Mary Musgrove, Oglethorpe's Indian interpreter, and her husband, one Bosomworth, who laid claim to the whole country, came near causing the destruction of the colony, and was only repressed by much negotiation and lavish bribes. The colony, thus feeble and threatened, struggled on, until it was relieved from danger from the Indians and from the restrictive laws, and encouraged by the appointment of Parker, and the establishment of a representative government. This produced a turn in the affairs of Georgia. Trade revived, immigration was renewed, and everything began to wear again a more hopeful look. Just at this time, however, the original trust was on the point of expiring by limitation. There was a party in the colony who desired a renewal of the charter; but the Trustees felt that their scheme had failed in every way, except perhaps as a defence to South Carolina, and when the limit of the charter was reached, they turned the colony over to the Crown. . . . A form of government was established similar to those of the other royal provinces, and Captain John Reynolds was sent out as the first Governor." The administration of Reynolds produced

wide discontent, and in 1757 he was recalled, being "succeeded by Henry Ellis as Lieutenant-governor. The change proved fortunate, and brought rest to the colony. Ellis ruled peaceably and with general respect for more than two years, and was then promoted to the governorship of Nova Scotia. In the same year his successor arrived at Savannah, in the person of James Wright, who continued to govern the province until it was severed from England by the Revolution. The feebleness of Georgia had prevented her taking part in the union of the colonies, and she was not represented in the Congress at Albany. Georgia also escaped the ravages of the French war, partly by her distant situation, and partly by the prudence of Governor Ellis; and the conclusion of that war gave Florida to England, and relieved the colony from the continual menace of Spanish aggression. A great Congress of southern Governors and Indian chiefs followed, in which Wright, more active than his predecessor, took a prominent part. Under his energetic and firm rule, the colony began to prosper greatly, and trade increased rapidly; but the Governor gained at the same time so much influence, and was a man of so much address, that he not only held the colony down at the time of the Stamp Act, but seriously hampered its action in the years which led to revolution."—H. C. Lodge, *Short history of the English colonies in America, ch. 9*.

1760-1775.—Opening events of the Revolution. See U. S. A.: 1760-1775, to 1775.

1775-1777.—End of royal government.—Constitutional organization of the state.—"The news of the battle of Lexington reached Savannah on the night of the 10th of May, 1775, and produced intense excitement among all classes. On the night of the 11th, Noble Wimberly Jones, Joseph Habersham, Edward Telfair, and a few others, impressed with the necessity of securing all military stores, and preserving them for colonial use, took from the King's magazine, in Savannah, about 500 pounds of powder. . . . Tradition asserts that part of this powder was sent to Boston, and used by the militia at the battle of Bunker Hill. . . . The activity of the Liberty party, and its rapid increase, . . . gave Governor Wright just cause for alarm; and he wrote to General Gage, expressing his amazement 'that these southern provinces should be left in the situation they are, and the Governors and King's officers, and friends of Government, naked and exposed to the resentment of an enraged people.' . . . The assistance so earnestly solicited in these letters would have been promptly rendered, but that they never reached their destination. The Committee of Safety at Charleston withdrew them from their envelopes, as they passed through the port, and substituted others, stating that Georgia was quiet, and there existed no need either of troops or vessels." The position of Governor Wright soon became one of complete powerlessness and he begged to be recalled. In January, 1776, however, he was placed under arrest, by order of the council of Safety, and gave his parole not to leave town, nor communicate with the men-of-war which had just arrived at Tybee; notwithstanding which he made his escape to one of the King's ships on February 11. "The first effective organization of the friends of liberty in the province took place among the deputies from several parishes, who met in Savannah, on the 18th January, 1775, and formed

what has been called 'A Provincial Congress.' Guided by the action of the other colonies, a 'Council of Safety' was created, on the 22d June, 1775, to whom was confided the general direction of the measures proper to be pursued in carrying out resistance to the tyrannical designs of the King and Parliament. William Ewen was the first President of this Council of Safety, and Seth John Cuthbert was the Secretary. On the 4th July, the Provincial Congress (now properly called such, as every parish and district was represented) met in Savannah, and elected as its presiding officer Archibald Bulloch. This Congress conferred upon the 'Council of Safety,' 'full power upon every emergency during the recess of Congress.'" Soon finding the need of a more definite order of government, the Provincial Congress, on the 15th of April, 1776, adopted provisionally, for six months, a series of "Rules and Regulations," under which Archibald Bulloch was elected president and commander-in-chief of Georgia, and John Glen, chief justice. After the Declaration of Independence, steps were taken toward the settling of the government of the state on a permanent basis. On the proclamation of President Bulloch a convention was elected which met in Savannah in October, and which framed a constitution that was ratified on February 5, 1777.—W. B. Stevens, *History of Georgia*, v. 2, bk. 4, ch. 2, v. 2, bk. 5, ch. 1.—See also U. S. A.: 1776-1779.

1816-1818.—First Seminole War. See FLORIDA: 1812-1819; SEMINOLES.

1825-1838.—Removal of the Creek and Cherokee Indians from the state.—In 1825 the Creek Indians by treaty with the federal government agreed to exchange their lands in Georgia for equivalent territory beyond the Mississippi. The authority of this treaty, however, was disputed and the attempt of the state government to extend its jurisdiction to the former Indian lands led to conflict between state and federal government.

The Creeks were finally expelled in 1832. In 1835 the Cherokees ceded all of their disputed territory to the United States and in 1838 removed from the state.

1850.—Nashville convention. See U. S. A.: 1850 (June).

1860.—Occupation of Forts Pulaski and Jackson. See U. S. A.: 1860-1861 (December-February).

1860.—Resignation of Howell Cobb, secretary of the treasury.—On December 6, 1860, Howell Cobb, of Georgia, secretary of the treasury, addressed "To the People of Georgia" a statement of his views opposing the "Black Republicans" and asserting the right and necessity of secession. On December 8, he sent his resignation as secretary of the treasury to President Buchanan, who accepted it two days later.

1861.—Secession from the Union.—On January 16, 1861, a convention called by act of the state legislature met to consider the question of secession. On January 19 the convention passed the ordinance of secession by a vote of 208 to 89. Alexander Stephens was strongly opposed to it, but when secession became an accomplished fact, he gave it his support, helped to form the new government and was elected vice president of the Confederacy.—See also U. S. A.: 1861 (January-February); (February): Adoption of a constitution for "The Confederate States of America."

1865-1872.—Reconstruction in its economic, social, and political aspects.—"The industrial revolution of the reconstruction period was almost wholly confined to agriculture, which still remained the great economic interest of the state, despite the cataclysm following upon emancipation. The growth in other interests, manufacturing, trade, the expansion of railroads, except the great work of repair which the devastation of war occasioned, was merely a normal continuation of the process of development begun before 1860. Textile manufacturing, with the utilization of white labor from the mountain and Piedmont region, belongs to a later period of the industrial development of Georgia. Since the economic changes of 1865-1872 were mainly agricultural and had grown out of emancipation, these changes were most marked where there were the greatest number of slaves to be freed, and where the large plantation was the industrial unit. Central Georgia, the cotton-belt from the southwest diagonally across the state, with the fringe of coast counties, experienced a much greater degree of economic

reconstruction than North Georgia or the pine barrens of the southeast. The grain-producing area of Northwest Georgia, after it had once recovered from the blight of Sherman's army, progressed markedly in the later years of reconstruction. Having comparatively few negroes to begin with, this section was not vitally disturbed by emancipation in its agricultural production. While economic disturbance was less, social disorder was greater in the section where negroes were less numerous. It was here that jealousy and rivalry were most acute, when slavery was abolished, leaving only race as a barrier between the poor white and the poor black. The race problem, one of the greatest problems which reconstruction aroused and bequeathed to a later generation, began further back than reconstruction. It began with the landing of the first negroes brought to the Colony of Virginia, but the institution of slavery, while not settling the problem, at least provided a method of adjustment whereby the negro passed from barbarism to some measure of civilization. Emancipation itself was enough to generate race antagonism between some classes of whites and blacks. But Republican reconstruction extended and intensified this racial antagonism a hundredfold. This was the most important and enduring contribution of Congressional Reconstruction. The political results of reconstruction were, in the long run, the least important of all in the later history of Georgia. The greatest influence of Republicanism was its reaction on social relations and on economic conditions. While the Republican government for three years was both extravagant and corrupt, Georgia managed to recover rather easily from its financial abuse and mismanagement. In this respect, Georgia was decidedly less hard pressed than other Southern states in reconstruction, and it was certainly more fortunate than states where such influence as the Tweed Ring was in control. The 'undoing of reconstruction,' applies merely to politics, for the social and economic reconstruction of Georgia after the war continues to-day. Politically, the greatest work of reconstruction was to constitute the negro a voter, and to make the government Republican in party politics. In 1872, the state government was completely in control of the Democratic party. To make this political reversal possible, many negroes, by intimidation, persuasion, in some cases by their own indifference, ceased to be voters, and gradually the negro became of less and less importance in politics. Thus the greatest political achievement of Congressional Reconstruction was undone. But it was not entirely undone, for the whites, in removing the political rights from the negroes, also limited their own political freedom. The Southern white had no freedom of choice—he had to be a Democrat, whether or no. In its largest sense, Reconstruction in Georgia meant a wider democratization of society. Before the war, however, Georgia was far from being in the control of the 'slave oligarchy,' such as is frequently pictured. The yeoman of moderate means, who might own a few slaves, was not a negligible factor in anti-bellum life. Alexander H. Stephens was one of this class, and Joseph E. Brown, one of the most potent leaders ever known in Georgia, was distinctly one of the 'plain people.' The change that came by reconstruction was one of degree rather than of kind. When former leaders were set aside by the terms of Presidential and Congressional Reconstruction, the way was opened to the middle class. The weakening of the economic supremacy of the planter class also meant that other kinds of wealth than land and slaves

became the basis of social prestige. The reconstruction period was followed by shifting, not only in class dominance, but also in sectional dominance. The center of influence moved further to the uplands, with growing importance of the Piedmont region at the expense of the cotton-belt. The rocket-like rise of Atlanta in the Piedmont is in part illustrative of these new forces that reconstruction brought into action."—C. M. Thompson, *Reconstruction in Georgia*, pp. 398-401.—See also U. S. A.: 1865 (May-July) to 1868-1870: Reconstruction complete.

ALSO IN: U. B. Phillips, *Georgia and state rights*.—A. D. Candler, *Confederate records of the state of Georgia*.—E. C. Woolley, *Reconstruction in Georgia*.

1870-1872.—Democrats gained legislature and governorship.—In 1870 a Democratic legislature was elected. Shortly thereafter Governor Bullock, Republican, resigned, fearing impeachment. In 1872 a Democratic governor was elected and the Republican régime of the reconstruction period was ended.

1876-1890.—Grady and the "New South."—"When Georgia, with the rest of the Southern States, had passed safely through the reconstruction period, the people . . . found themselves facing new conditions and new possibilities. Slavery had been abolished utterly and forever; and wise men breathed freer when they saw that a great obstacle to progress and development had been abolished with it. Instinctively everybody felt that here was cause for congratulation. A few public men, bolder than the rest, looking out on the prospect, thanked God that slavery was no more. They expected to be attacked for such utterances, but they were applauded; and it was soon discovered, much to the surprise of everybody, that the best sentiment of the South was heartily glad that slavery was out of the way. Thus, with new conditions, new prospects, and new hopes,—with a new fortune, in fact,—it was natural that some lively prophet should lift up his voice and cry, 'Behold, the New South!' And it was and is the new South,—the old South made new by events; the old South with new channels, in which its Anglo-Saxon energies may display themselves; the old South with new possibilities of greatness, that would never have offered themselves while slavery lasted. After these hopes, and in pursuit of these prospects, Georgia has led the way. Hundreds of miles of new railroads have been built in her borders since the dark days of reconstruction, hundreds of new factories have been built, immense marble beds and granite quarries have been put in operation, new towns have sprung into existence, and in thousands of new directions employment has been given to labor and capital. In short, the industrial progress the State has made since 1870 is more than double that of the previous fifty years. It was natural, that, out of the new conditions, new men should arise; and, as if in response to the needs of the hour and the demands of the people, there arose a man who, with no selfish ends to serve and no selfish ambition to satisfy, was able to touch the hearts of the people of both sections, and to subdue the spirit of sectionalism that was still rampant long after the carpetbag governments in the South had been overthrown by the force of public opinion. That man was Henry Woodfin Grady [1851-1889]. He took up his public work in earnest in 1876, though he had been preparing for it since the day that he could read a school history. In that year he became one of the editors of the 'Atlanta Constitution,' and at once turned

his attention to the situation in which his State had been left by the war. . . . Whether he used his tongue or pen, the public soon found out that he had control of that mysterious power which moves men. . . . From first to last he could never be induced to use this great gift for his personal advancement, nor could he be induced to accept a political office. With a mind entirely sincere and unselfish, he addressed himself to the work of restoring unity between the North and South, and to putting an end to the sectional strife which the politicians were skillfully using to further their own schemes. He was asked to be a United States senator, and refused; he was asked to be a congressman, and refused. For the rest, he could have had any office within the gift of the people of Georgia; but he felt that he could serve the State and the South more perfectly in the way that he had himself mapped out. He felt that the time had come for some one to say a bold and manly word in behalf of the American Union in the ear of the South, and to say a bold and manly word in behalf of the South in the ear of the North. He began this work, and carried it on as a private citizen; and the result was, that, though he died before he had reached the prime of his life, he had won a name and a popularity in all parts of the country, both North and South, that no other private citizen had ever before succeeded in winning. It was Henry Grady that gave the apt name of 'The New South' to the spirit that his tireless energy and enthusiasm had called from the dark depths of reconstruction. Of this spirit, and the movement that sprang from it, he was the prophet, the pioneer, the promoter. He saw the South poor in the midst of the most abundant resources that Providence ever blessed a people with, and he turned aside from politics to point the way out. He saw the people going about in deep despair, and he gave them the cue of hope, and touched them with his own enthusiasm. He saw the mighty industrial forces lying dormant, and his touch awoke them to life. He saw great enterprises languishing, and he called the attention of capital to them. Looking farther afield, he saw the people of two great sections forgetting patriotism and duty, and reviving the prejudices and issues that had led to the war, and that had continued throughout the war, and he went about among them, speaking words of peace and union,—appealing to the spirit of patriotism which held the Northern and Southern people together when they were building the Republic, when they stood side by side amid the sufferings of Valley Forge, and when they saw the army of a mighty monarch surrender to the valor of American soldiers at Yorktown. With the enthusiasm of a missionary and the impetuous zeal of an evangelist, he went about rebuking the politicians, and preaching in behalf of peace, union, and genuine patriotism. Such was the mission of Henry W. Grady, and the work that he did will live after him. 'The New South' will cease to be new, but the people will never cease to owe him a debt of gratitude for the work that he did in urging forward the industrial progress of this region, and in making peace between the sections. He was the builder, the peacemaker."—J. A. Harris, *Stories of Georgia*, pp. 312-314.

1881-1895.—Exposition.—The International Cotton, Piedmont, and Cotton States International expositions were held in Atlanta, 1881, 1887, and 1895 respectively. The inception of the first was due to the desire to improve the cultivation and manufacture of cotton. The chief purpose of the third was the presentation of the agricultural man-

ufacturing and mineral resources of the southern states.

1889.—Lynching statistics. See LYNCH LAW: Origin.

1891.—Segregation of the races.—An act was passed requiring separate public traveling conveyances for white people and for negroes.

1909.—Railroad strike. See RACE PROBLEMS: 1905-1921.

1913. Tax Equalization Act. See DUE PROCESS OF LAW: Judicial decisions.

1914-1915.—Frank case.—Attitude of Governors Slaton and Harris.—"It devolved upon Governor Slaton, in the closing hours of his administration [June, 1915] to speak the final word in the most celebrated murder trial on record in Georgia—the trial of Leo M. Frank, a Jew, charged [in 1914] with the murder of . . . fourteen-year-old Mary Phagan. . . . Every effort to secure for Frank a new trial had been exhausted. New lawyers to plead the defendant's case on constitutional grounds before the Supreme Court of the United States had been retained; but without avail. . . . The fact that Frank was a Jew brought to his support, in an ever increasing circle, the members of his race not only in Georgia but throughout the country. . . . There was probably little anti-Semitic feeling at the time of the trial. Popular indignation vented itself rather against the crime itself, an atrocious act of brutality. . . . [However] throughout the country there was a widespread criticism of the courts of Georgia for refusing to accord Frank a new trial; and not only individuals of prominence but corporate bodies of great influence . . . [begged] for clemency, on Frank's behalf, in the name of an outraged civilization. . . . It must be said, in sheer justice to Frank, that no prisoner ever possessed such advocates. Nor can it be denied that doubt as to his guilt was entertained by every tribunal before which his case was reviewed. . . . Thus the matter stood when Governor Slaton was called upon to act as the final arbiter in this celebrated case. . . . [He] finally resolved the problem by granting a commutation of the prisoner's sentence from death to life imprisonment. . . . On the day following Frank's commutation an excited mob, threatening violence to Governor Slaton, assembled on the steps of the capitol. . . . It is only fair to the great State of Georgia to say that the mob spirit . . . was not representative of the better element of the state's population; though the governor's action in commuting Frank's sentence was criticized by thousands of good men who believed that the prisoner was guilty and that the sentence of the court should have been executed. . . . On the night of Monday, August 16, 1915, between 10 and 11 o'clock, a mob, presumably numbering twenty-five men, overpowered the officers on duty at the prison farm, near Milledgeville, made direct for the quarters in which Leo M. Frank was confined. [He was taken from the prison and lynched.] . . . Governor Harris [who had succeeded Slaton], boldly denounced the lawlessness which had brought reproach upon the fair name of Georgia, and he also published a proclamation in which he offered substantial rewards for the arrest of the guilty parties, with evidence to convict."—L. L. Knight, *Standard history of Georgia and Georgians*, v. 2, pp. 1165-1167, 1169, 1171-1180, 1189.—Thomas E. Watson, who conducted a press campaign against Frank, stated that after the commutation of the death-penalty, "the people rose and carried into effect the legal sentence." The *Marietta Journal* published a similar defense of the deed: "The people demanded that the ver-

dict of the court be carried out, and saw to it that it was. We insist they were, and are, law-abiding citizens of Georgia."

1915-1921.—Reorganization of the Ku Klux Klan. See **KU KLUX KLAN**: 1921.

1916.—Election of Governor Dorsey.—Measures passed by the legislature.—Early in the spring of 1916 opposition to Governor Harris as a candidate for reelection began to crystallize. The candidate for whom the people were calling at this time was Hugh M. Dorsey, of Atlanta, the prosecutor in the celebrated Frank case. His zeal in the handling of this case had tended to make him a popular idol. "With the approach of the state primary election on September 12th, the contest for governor became increasingly warm; but long before its results were registered at the ballot box the election of Mr. Dorsey was clearly indicated by the political wind currents. When the returns were finally tabulated, his popular vote totalled 106,680 against 70,908 for Governor Harris, 26,693 for Dr. Hardman, and 7,148 for Mr. Pottle. . . . The brilliant young solicitor-general not only swept the state but gathered more than 100 counties under his victorious banner."—L. L. Knight, *Standard history of Georgia and Georgians*, v. 2, p. 1211.—Hugh M. Dorsey served from 1917 to 1921.

"Women may now practice law in Georgia upon the same conditions as men. This is one of the few measures of importance passed by the legislature just adjourned [1916]. A compulsory-education law also was placed upon the statute books, but it is weak. [See below: 1919.] It provides that children between eight and fourteen shall attend school or be taught at home for at least four months in the year. The Highway Commission law, rushed through at the last minute, leaves it doubtful whether the State will be able to claim the \$2,000,000 which, under certain arrangements, it might receive from the Federal appropriation for good roads. The Constitutional amendment exempting college endowments from taxation was defeated; a majority of House and Senate favored it, but the necessary two-thirds could not be obtained. The capital will remain at Atlanta."—*Nation*, Aug. 31, 1916.—See also **DUE PROCESS OF LAW**.

1916-1917.—Migration of negroes.—Its suppression. See **RACE PROBLEMS**: 1905-1921.

1917.—Primary election law passed.—Primary elections for certain offices by the county unit system were provided for by an act of the legislature.

1918.—Part played in the World War.—Prohibition amendment ratified.—Budget system provided.—The state furnished 79,000 soldiers or 2.3% of the whole force. A national army camp, Camp Gordon, was located near Atlanta; National Guard camps, Hancock and Wheeler, were located at Augusta and Macon respectively; a motor transport camp at Atlanta; and a medical camp at Fort Oglethorpe. Georgia ratified the eighteenth federal (liquor prohibition) amendment on July 22, being the thirteenth state. A budget system was provided by legislative act.

1919.—Ratification of woman suffrage amendment defeated.—New school code.—The legislature defeated ratification of the nineteenth federal (woman suffrage) amendment on July 24, 1919. In this year a new school code was passed which required attendance through the seventh grade, and allowed only temporary exceptions.

1920.—Workmen's compensation. See **SOCIAL INSURANCE**: Details for various countries: United States: 1920.

1920.—Presidential vote.—Georgia's vote for

president was divided as follows: Harding (Republican), 41,089; Cox (Democratic), 107,162; Debs (Socialist), 465; Watkins (Prohibitionist), 8. Thomas W. Hardwick ran for governor and was elected.

ALSO IN: R. P. Brooks, *History of Georgia*.—L. B. Evans, *History of Georgia*.—C. C. Jones, *History of Georgia*.—H. M'Call, *History of Georgia*.—W. J. Northen, ed., *Men of mark in Georgia*.—U. B. Phillips, *Georgia's local archives*.—L. L. Knight, *Reminiscences of famous Georgians*.—A. M. Arnett, *Populist movement in Georgia*.

**GEORGIA, Republic of: Geographical position.—Area and population.**—Georgia was one of the three independent republics which came into existence after the dissolution of the Transcaucasian Diet, on May 26, 1918. The official title is "The Fraternal Soviet Republic of Georgia." It is situated in Transcaucasia, between the Black and Caspian seas, where the Georgians "and their kindred races practically occupy the entire Transcaucasian coast on the Black Sea. In the south they adjoin the Armenians. In the east their neighbors are the Tartars. The Caucasus range is north of them."—I. D. Levine, *Resurrected nations*, p. 292.—Its area is about 30,000 square miles, to which may be added some additional territory still in dispute with the neighboring republics of Erivan and Azerbaijan. The latest statistics available, 1915, give the population as 3,053,345.—See also **EUROPE**: Modern: Political map.

**Ethnology.—Language.—Culture.**—"The Georgians belong to the Aryan family. They settled in their present country thousands of years ago, arriving from the great Iranian plateau."—*Ibid*, p. 293.—"They are divided into a number of separate tribal stocks, each of which has its peculiar customs and in some cases its distinct language. The principal groups are Georgians proper, Mingrelians, Osietines, Hevsurs, Abbasians, and Emertines. Of these the Emertines constitute the largest racial group and have more energy and executive ability than the other tribes."—*Supplement to Commerce Reports*, Nov. 10, 1920.—In recent years there has been a fusion among the various Georgian tribes, resulting in the adoption of one literary language. "Their civilization is the oldest in the Caucasus, if not in the entire world. . . . [The aristocratic class is] highly educated, and even among the common people illiteracy is low. It has been said that proportionately the Georgian nation has more men of letters, journalists, poets and dramatists than any other race in the world."—I. D. Levine, *Resurrected nations*, pp. 293, 298.—See also **PHILOLOGY**: 23; **IBERIANS, EASTERN**.

**B.C. 323-A.D. 19th century.—Summary of its history.**—"The history of Georgia as an independent State goes back to biblical times. According to Georgian tradition, their kingdom was founded by a descendant of Noah. It was only during the third century B. C., however, that Georgia became identified with recorded history."—*Ibid*, p. 293.—"The Georgian kingdom lasted over two thousand years, from 323 B. C., when it was conquered by Alexander of Macedon, to 1801 A. D., when it was confiscated by Alexander of Russia. The Georgians thus have been in a subjection to Russia only a little over a century and we ought to count out of that the period 1836-1864, when they were in revolt. By the treaty of 1783 Georgia came under the 'protection' of Russia and it was stipulated that the Georgians should retain their king, that they should have self-government, that their church should be independent, that no more than 6,000 Russian troops should be quartered there, that Georgians should not be conscripted for the

Russian army and that the Georgian language should be used in schools and administration. Needless to say the Russian Government kept none of these promises. Georgia lost its king. It was ruled by the Russian bureaucracy. The Georgian church was brought under the Holy Synod of St. Petersburg and its property, amounting to \$350,000,000, was confiscated."—E. Slosson, *From Baluchistan to Baku* (Independent, August 31, 1918).

1080-1383.—Reforms of David III.—Of Queen Tamara. See CAUCASUS: 1080-1303.

15th century.—Persian domination. See CAUCASUS: 1400-1737.

1736-1799.—Rule of Irakli II.—Friendship with Persia.—Treaty with Russia. See CAUCASUS: 1736-1799.

1799.—Becomes a Russian province. See CAUCASUS: 1801-1877.

1800-1918.—Revolutionary movement.—Gurian Republic.—Declaration of Independence.—“Georgian nationalism, however, was not suppressed by the Russian policy. With the growth of a revolutionary movement throughout Russia there also developed one in Georgia. At first it took a national turn only, fostered by the aristocratic classes. . . . Toward the end of the nineteenth century Socialism began to spread in Georgia, making remarkable headway. It aimed primarily at the semi-feudal landlords, as well as the limited industrial plants which had developed in Georgia in recent years. The Socialists became a great force in Georgia, embracing in their ranks the peasants, workers and intellectuals. . . . The Socialist elements practically controlled the destinies of the country during the revolutionary year of 1905. . . . [The aristocratic class] strove for separation from Russia, advocating complete independence for Georgia. However, the Socialists stood for union with democratic Russia, some of them claiming autonomy in an all-Russian federation. All Georgians were united in their opposition to monarchism. All desired the republican form of government. It was from the midst of the Socialists that there sprang into being the so-called Gurian Republic, which attracted international attention in the year of 1905. . . . They began with refusing to pay their annual taxes to the Russian authorities; they proceeded to boycott the government officials and set up a communistic administration; they established native schools in which Socialism was taught and introduced popular tribunals in place of the corrupt Russian courts. The whole economic, political and social status of the race was modeled after the latest socialistic theories. . . . The ‘Gurian Republic’ became the target of the reactionary government. Cossacks and infantry were sent to suppress it, causing terrible bloodshed. It was finally wiped out and thousands of Georgians were jailed and exiled.”—I. D. Levine, *Resurrected nations*, pp. 208-209.—See also CAUCASUS: 1801-1917.—“For more than a century, namely, up to the beginning of the twentieth century, Georgians, as a rule, were proud to pass as Russians and be identified as members of the Russian Orthodox Church. The ideal of their landed aristocracy, which formed about six per cent. of the entire population of Georgia, and their middle classes, was to get some Russian education and then enter the State service and the Caucasian army; while the mass of their peasantry was still being kept in a condition of feudal semi-slavery. Their great poet of recent years, Agagi Tsereteli, contrasted in one of his popular songs the vanity of the average Georgian . . . with his Armenian neighbour, who was ‘push-

ing’ to acquire the larger share in the economic and political activities in Trans-Caucasia. . . . When revolution broke out in Russia in 1905 and the Caucasus was thrown into a state of anarchy, the Georgians proclaimed the independent Republic of Kutais, which a few months later, however, was smothered in blood and smoke by the Alikhanov Don Cossacks, who were sent down by the Tsar to re-establish ‘order’ in Trans-Caucasia. This bloodshed at Kutais roused the Georgian people from the depths of the torpor in which they had been sunk for more than a century. Since then their regeneration had assumed a distinctly nationalist character. Schools were founded in most villages, educational societies were formed to spread learning among their people, and claims against Russian oppression grew louder as their national self-consciousness yearly obtained fresh energy. . . .

“As a result of their geographical and ethnographical position, Georgian leaders—their Social-Democrats in particular—had been in close touch with Germany and Turkey even before the [World] War. . . . ‘While in 1915-16 the Georgian members in the State Duma were rendering lip-service to the cause of Russia,’ said, recently, the *Zaria Rossi*, the Moscow Cadet paper, ‘there is evidence that the same members, Chkhengelli, Chkheidze and others, were in secret communication with our enemies, who, since the beginning of the war, and before it, have tried their utmost to paralyze Russia and encourage by all means the centrifugal forces in our country.’ The revolution of March, 1917, gave a fresh impetus to Georgian nationality. With the coming of the revolutionary storm the aristocracy, the clergy and the State officials, who had been the mainstay of the Russian régime among Georgians, suddenly disappeared from the scene, and their place was occupied either by Nationalist leaders or by Social-Democrat Mensheviks claiming the leadership of the Georgian people. This outburst of Nationalism first took a religious shape. From the first day of the downfall of Tsarism, the Georgians insisted on the establishment of the autocephaly of their Church and on the hierarchical independence of their clergy from the jurisdiction of the Petrograd Synod. In defiance of the definite orders from Kerenski and the Synod at Petrograd, the Georgians proclaimed, in May, 1917, the spiritual independence of their Church amid scenes of great enthusiasm and ceremony. This first success made the Georgians more outspoken in regard to their political claims and national pretensions. For many months, after the Revolution, Georgian leaders were discussing the natural frontiers of Georgia, the conditions of strategic defence and the economic development of their country. The weaker Russia became under the Kerenski Government, the more violent grew the anti-Russian feeling among Georgians. In spite of the threats of Kerenski they seized the Church and school properties, with large endowments, which, after the fusion of the two Churches in 1801, had been considered as Russian. In June, 1917, the solemn consecration of Kiron II. as the supreme spiritual head of Georgia as against the Exarch of Georgia, appointed by the Synod at Petrograd, brought about almost a break-up of Russo-Georgian relations. At the same time they were developing all manifestations of their national life: in conjunction with Armenians they nationalized the State secondary schools (gymnasias), they established a Georgian University at Tiflis, and gathered funds for promoting research in their history, philology and folk-lore. In November (1917) Georgian

leaders met at a national conference to examine the attitude they should adopt in regard to the new situation . . . [consequent to the Bolshevik ascendancy in Russia]. There is reason to believe that throughout the conflict with Turkey, since November, 1917, Georgians never meant to fight, notwithstanding all the declarations of their leaders in favour of the common defence of the Caucasus. During March and April . . . [1918], when the Armenian delegates in the Trans-Caucasian Diet were urging the necessity of joining hands and defending the Caucasus against the Turks, Chkhen-gelli and Gegechkori excused themselves on the plea that the Bolshevik movement and propaganda had made havoc in Georgian troops that they could in no way rely even upon their national battalions to fight the Turk. . . . The Georgians argue that the Armenian troops were no less demoralized than their own, as had been proved in the half-hearted defence of Erzerum in the middle of last March [1918]. Between November, 1917, and June, 1918, during the various negotiations for peace or war with the Turks, the Georgian National Council maintained a correct attitude in regard to the cession of Batum and Ardahan. Various German missions had already made their appearance in Tiflis as early as last January (1918). These Germans are reported as having considerably influenced the course of Georgian politics during those critical months. Efforts made by the Georgian Socialist-Federalist Party to organize a volunteer corps for defending Batum, as well as the whole-hearted sacrifices of the peasants of Gouria, were all in vain on account of the resolve of the Georgian Council to comply with the peace terms of the Brest-Litovsk Treaty."—*Independent republic of Georgia (New Europe, Feb. 27, 1919, pp. 153-156)*.—"When, however, by the Brest-Litovsk treaty, the Bolsheviks agreed to surrender to Turkey large portions of Russian Armenia and Georgia, the Georgians, Armenians, and Tartars of the Caucasus united for their own defense. A temporary Government composed of representatives of the three races was called, with Chkhenkeli, a Georgian, as President, and in April, 1918, an independent federated republic of the Caucasus was declared. This republic did not endure. Racial enmities were too strong. . . . As a matter of fact it lasted less than five weeks. On May 26, 1918, Georgia, depending on aid from Germany, declared herself an independent republic. Two days later the Tartars declared the republic of Azerbaidjan; and the same day, May 28, 1918, Russian Armenia declared herself as an independent Armenian Republic, with Erivan as its capital."—*New York Times Current History, Jan., 1920, pp. 141-142*.—"On 26 May last [1918], two hours after the dissolution of the Trans-Caucasian Diet, the Georgian National Council at Tiflis met in the 'White Hall' of the palace which used to be the residence of the Viceroys of Caucasus and proclaimed the political independence of Georgia, amid the demonstrations of their people. Mr. Noé Jordania, the President of the Georgian Council, read the following Act of Independence:

"For centuries past Georgia had existed as a free and independent State; but towards the end of the eighteenth century, being hard pressed by enemies, Georgia merged herself into the Russian State so as to get the latter's protection against foreign enemies. . . . The present movement imperatively demands that Georgia should organize herself as a separate State in order to defend the country against the enemy and lay foundations for free development. . . . Consequently the National Council of Georgia, elected on 22 Novem-

ber 1917, at the National Conference of the Representatives of Georgia, now declares to the people that Georgia is henceforth a sovereign independent State. . . . The democratic republic of Georgia will try to maintain friendly relations with all members of the Society of Nations and particularly with certain peoples and States. It will secure all civil and political rights to everyone living within its frontiers without any distinction of religion, nationality, or social position. The democratic republic of Georgia will afford wide scope in its territory to all peoples for free development."—*New Europe, Feb., 1919, pp. 151-153*.—Noé Jordania assumed the presidency of the Provisional Government, with a Ministry responsible to the National Council. The new government disclaimed at once reactionary and Bolshevik interests.—See also CAUCASUS; 1918-1920.

1918.—*Turkish-Georgian Treaty*.—Part played by Georgia in World War.—When Turkey invaded Transcaucasia to carry out the provisions of the Brest-Litovsk Treaty, "the Georgians were compelled to seek protection in Berlin. Perhaps it was due to Germany's influence that Turkey finally consented to conclude peace with Georgia. The Turkish-Georgian treaty was a direct violation of the Brest-Litovsk pact. Turkey, in addition to the territory obtained by the latter agreement, now wrested from weak Georgia the Achalkalaki district of the Tiflis province."—I. D. Levine, *Resurrected nations, p. 302*.—South of Georgia the Turks invaded Armenia, occupied Ardahan and Kars, and encroached on Georgia. By the peace terms with the Turks, initialled at Batum on 3 June, 1918, the Georgians had to sign away the coast strip of Batum, including the town and the whole district of Akhaltsikh, except the town of Abastuman. "In regard to the alleged treaty between Georgia and Turkey said to have been found in the archives of Talaat Bey in Constantinople by the High Commission of the Allies, Constantin J. Djakelly, in denying its authenticity, demonstrates for the first time what the Georgians have done in the great war: The Georgians have fought on all Russian fronts in a greater proportion to their number than that of any other nationality save perhaps Serbia. Georgian public opinion has well understood the meaning of this war and the principles involved, and it was a Georgian leader—Tserethelli—who, after his return from Siberia during the first months of the revolution, visited the Russian western front and . . . appealed to the Russian armies to continue to fight, warning them and the revolutionaries that the conclusion of a separate peace with Germany would mean a great blow to the cause of mankind and an irreparable disaster for Russia. As to Georgia's relationship with Turkey, it was the unfortunate lot of Georgia to have to fight this restive and insatiable neighbor for many centuries from the very day they approached her frontiers until today. Besides having sent regular soldiers to fight the enemies of the Entente on different fronts, Georgia formed a legion of volunteers, not to fight on the side of the Turks, but against the Turks, and the legion fought so well that its commander . . . was made Colonel by the late Emperor Nicholas and attached to the person of the Grand Duke Nicholas. After the signature of the Brest-Litovsk Treaty, when a great majority of the Georgian regular soldiers were still scattered along the Russian western front, before they had time to return to Georgia, that country had to continue to fight the Turks, and . . . in spite of insufficient arms and ammunition, . . . prevented further penetration of the Turkish Army in Georgian terri-

tory. One of the first acts of the Georgian government was to issue a proclamation saying that Georgia had three enemies—the Bolsheviks, the Turks, and the anti-revolutionists.”—*New York Times Current History*, Apr., 1919, p. 40.—See also WORLD WAR: 1918: VI. Turkish theater: b, 3.—Although the Allies after the armistice took possession again of Batum and other Transcaucasian lands for a time, they failed to take sufficient precautions to get Turkish administrators and soldiers out of Asia Minor east of Taurus; and Pan Turanianism revived.

1919.—Refusal to take part in the proposed Prinkipo conference.—The republic declined to take part in the proposed conference at the Princes' islands (see RUSSIA: 1919), “not because it was not in sympathy with the endeavors of the Paris Peace Conference to restore law and order in Russia, but because it no longer considered itself a part of that empire, but a fully independent State conscious of its proclaimed and established rights.”—*New York Times Current History*, Apr., 1919, p. 40.

1919-1920.—Relations with Armenia and Azerbaijan.—“During 1919 the Georgian Government succeeded in maintaining friendly relations with Azerbaijan and Armenia in spite of many territorial disputes, and exercised a careful neutrality between Soviet Russia and its enemies.”—*Supplement to Commerce Reports*, Nov. 10, 1920.—There were, however, reports of boundary clashes between Georgia and the Tatar republic in 1920, which were brought to an end by an armistice on May 19.

1920.—Recognition by the Soviet government.—Batum.—By a treaty signed at Moscow on the night of May 7-8, and ratified on June 12, the Soviet government recognized the independence and sovereignty of Georgia, and renounced all interference in the internal affairs of the new republic. Batum, which falls within the national boundaries of Georgia, was turned over to the latter on July 8 by the Entente, which had occupied it. The Supreme Council, however, decided that the port of Batum should be internationalized and made a common outlet for Georgia, Armenia and Azerbaijan.

1920.—Economic conditions.—“Since her independence began Georgia has found herself in a very difficult economic and financial position; for she was, economically, undeveloped and lacked the necessary material resources. She has now enjoyed independence for over two years, but her economic condition has not improved. . . . [The state of affairs in Georgia grew steadily worse until it became necessary to summon a conference at] Tiflis to decide the guiding principles in accordance with which the economic life of the State should be regulated. . . . After hearing a number of reports the Conference made numerous proposals for the reconstruction of the economic life of the country, and expressed the wish that all the estates of the realm and the towns should take the initiative in this matter without, however, destroying private enterprise.”—*Basler Nachrichten*, Jan. 6, 1921, in *Review of the Foreign Press (Economic Review)*, Jan. 21, 1921).

1920.—Guaranteed free passage to the Black sea by Treaty of Sévres. See SÈVRES, TREATY OF: 1920: Part XI., Ports, waterways and railways.

1920.—Foreign relations.—“Georgia, however, after the Turco-Bolshevist junction, was left isolated, . . . unable to intervene actively on behalf of Armenia. The policy of Georgia was shown in a memorandum presented to the Assembly of the

League of Nations by M. Guegetchkori, the Foreign Minister, and his fellow-delegates on November 15 [1920]. In this memorandum Georgia asked for admission to the League, pointing out the important rôle which she was politically and geographically destined to play in the stabilizing of conditions in the Caucasus area, so torn by strife and beset by international problems of all kinds.”—*New York Times Current History*, Jan., 1921, p. 73.—“Georgia, which for so many months had steered a perilous course through the dangers of Transcaucasus politics, and managed, by skillful maneuvering, to maintain both its neutrality and its independence, found itself in stormy waters after the Bolshevik seizure of Armenia. . . . The hostility between Georgia and the Soviets was brought to a head by the drastic measures adopted by the Georgian Government during the first two weeks in December [1920] in tracking down and arresting a large number of Communist agitators in its territory. The Bolshevik régime, in retaliation, arrested Georgian representatives in Baku and Erivan, and cut off shipments of oil and other fuel into Georgia, thereby disorganizing the latter country's transportation system. . . . The Soviet representative in Tiflis, however, on December 20, received instructions to co-operate with the Bolshevik Government of Baku in overthrowing the Georgian Government. Meanwhile, the Tenth Bolshevik Army was concentrated on the Georgian frontier, and received orders to march into Georgia and assist the Georgian communists in carrying out their project of transforming Georgia into another Soviet dependency.”—*Red rule in the Caucasus (New York Times Current History)*, Feb., 1921, pp. 340-341).

1921.—*De jure* restoration by the Allies.—Occupied by Turkish and Bolshevik forces.—“The Georgian Foreign Minister, early in January, protested to the Soviet Government against the seizure of its oil supplies, the massing of Bolshevik troops upon its frontier, the erection of military works upon its territory, and the raiding and looting of its frontier population. It extended its protest to the whole civilized world.”—*Red rule in the Caucasus (New York Times Current History)*, Feb., 1921, pp. 340-341.—“At the reparations conference in Paris on January 29 [1921], the four principal powers—England, France, Italy and Japan—granted what the little Caucasus Republic of Georgia, struggling to stem the Bolshevik tide, most ardently longed for, viz: *de jure* recognition as an independent and sovereign State. The efforts of M. Guegetchkori, Georgian Minister of Foreign Affairs, to induce the powers to take this long-deferred step thus were crowned with success. . . . The Bolshevik invasion planned at the end of January did not occur; . . . the Georgian Government discovered the plot in time and nipped it in the bud by wholesale arrests of the communist agitators who were working to make the Russian armed invasion a triumphal march. . . . The Moscow plotters, however, continued their plans to add Georgia to their list of subjugated Caucasian territories. . . . Three divisions of the Bolshevik Eleventh Army, including the whole of the available Russo-Armenian Army and a considerable number of Azerbaijan Tartars, had fallen upon Georgia simultaneously from the north and the southeast, one army advancing from Sochi and Gagra, on the Black Sea; the other, advancing in Azerbaijan, had captured Salakllu, south of Tiflis, on Feb. 16. The Georgian troops soon gave evidence of being outnumbered. Tiflis was occupied by the Red cavalry of General Budenny, after severe street fighting, on Feb. 25. Thou-

sands of refugees fled to Kutais, where the Georgian Government set up provisionally its shattered rule. . . . The Georgian Government vainly tried to rally its demoralized forces, to mobilize new troops and to requisition supplies. The Bolsheviks were temporarily driven out of Tiflis, but reentered the city and there established themselves firmly. Soviet troops were pouring in on all railroads and highways leading to Tiflis. Meanwhile, the French destroyers cruising along the eastern coast of the Black Sea opened fire on the Bolsheviks at Gagri, inflicting severe losses. The Russo-Armenians remained in possession of Bortchalu [which had been taken possession of by the Georgians in the preceding year]. The next effort of the Bolsheviks was to gain possession of the important Black Sea port of Batum. Despite the fire of the French fleet, they captured Sukhum Kale, on the coast, and marched swiftly down toward Batum. At this juncture, however, the Nationalist Turks, fearful that the capture of this port by the Reds would make the Turkish occupation of Armenia impossible, ordered the Turkish Army under Kazio Kaarbekir, commander of the Fifteenth Army, already on the outskirts of Batum, to take the city, the capture of which was reported on March 10. . . . The Turks declared martial law in Batum and began a general disarmament of the Georgian troops and of the population. . . . Despite the fact that a Turko-Russian treaty had been concluded on March 16, under which Turkey engaged to cede Batum back to Georgia, the Russians on March 19 sent a virtual ultimatum to the Turks in Batum ordering them to evacuate within forty-eight hours. In the fighting which promptly followed, the Georgian troops made common cause with the Red soldiers, and after an artillery battle and street fighting the Turks were ousted, except from a small part of the town. A Soviet Government was promptly established in Batum, which, it was said, would probably coalesce with that already set up at Tiflis. . . . The Kemalists continued to occupy part of Batum as late as March 23, despite the Georgians' efforts to dislodge them; the town was suffering from disorder and lack of food. Finally, on March 25, it was announced that the Kemalists troops had withdrawn altogether, in accordance with an agreement arranged between them and the Georgians by the Russian Bolshevik command."—*Speedy end of the Caucasus republic (New York Times Current History, May, 1921, pp. 264-265)*.—In February the Caucasus states were taken over by Soviet Russia.

1922 (March-April).—Revolt against Bolshevik rule.—Protest against Soviet occupation at Genoa conference.—"The revolt in Georgia, the Sovietized Caucasus republic, against the Bolshevik rule in that country, which began on March 15, progressed through March and April to the point where the Soviet officials admitted it to be extremely serious. The Bolshevik forces, at the end of April were preparing for a strong offensive against the insurgents concentrated in the rocky fastnesses of Svanethia. The Soviet commander in this region sent a report to the Staff Headquarters at Tiflis on April 22, saying that the offensive had been stopped on account of the difficulties of the position, adding that the spokesmen of the Georgians had declared their struggle to be purely national and political and had demanded that Georgia be evacuated by the Russian invaders. Besides sending out a vigorous protest against the Bolshevik occupation of Georgia, addressed to all the labor elements of the world, the exiled Georgian Government sent a special delegation to

Genoa to protest *viva voce* against the present situation. The Georgian spokesmen made this protest before the Economic Commission on April 23. They denied the right of the Russian Soviet delegation to speak at Genoa for their country, and maintained that the Russians had seized Georgia only to control its vast oil resources. M. Chenkelli, a member of the former Russian Duma, stated the situation thus: Georgia was recognized *de facto* in January, 1920, and *de jure* in January, 1921, not only by the Entente, but also by the enemy States. A fortnight after the *de jure* recognition, Georgia was invaded by both the Bolsheviks and the Mussulmans, who thus established direct communication. . . . When she presented her case at the Paris Near East Conference, it had been decided to leave the Georgian question open."—*New York Times Current History, June, 1922, pp. 536-537*.

1922 (April-May).—Bolshevik rule unpopular.—Georgian aspirations to independence.—Soviet rule proved highly unsatisfactory to the Georgians, who complained, together with the people of Azerbaijan, against Russian bureaucratic tyranny and the disastrous economic policy of Bolshevism. Fear of the Turk kept Armenia silent; Russian protection compensated for Russian maladministration. A statement issued by Georgian labor leaders at the end of April appeared in a Vienna journal in May as follows: "At a time when the entire Georgian people is undergoing a fearful trial under the domination of the Red imperialistic troops and under the agents sent here by the Bolsheviks, who call themselves the Georgian Government, we are convinced through this fraternal gift that the Georgian working class has not been abandoned to its fate. It inspires us with the hope that the European proletariat—the defender of all oppressed peoples—will now raise its voice against Russian imperialism and save the workers and peasants of Georgia from physical annihilation." The "fraternal gift" mentioned in the statement referred to medicines and hospital stores donated by Austrian workers.

**GERALDINES.**—The Geraldines of Irish history were descendants of Maurice and William Fitzgerald, two of the first among the Anglo-Norman adventurers to engage in the conquest of Ireland, 1160-1170. (See also **ULSTER: 1190-1260**.) Their mother was a Welsh princess, named Nest, or Nesta, who is said to have been the mistress of Henry I of England, and afterwards to have married the Norman baron, Gerald Fitz Walter, who became the father of the Fitzgeralds. "Maurice Fitzgerald, the eldest of the brothers, became the ancestor both of the earls of Kildare and Desmond; William, the younger, obtained an immense grant of land in Kerry from the McCarthys. . . . As time went on the lordship of the Desmond Fitzgeralds grew larger and larger, until it covered nearly as much ground as many a small European kingdom. Nor was this all. The White Knight, the Knight of Glyn, and the Knight of

Kerry were all three Fitzgeralds, all descended from the same root, and all owned large tracts of country. The position of the Geraldines of Kildare was even more important, on account of their close proximity to Dublin. In later times their great keep at Maynooth dominated the whole Pale, while their followers swarmed everywhere, each man with a G. embroidered upon his breast in token of his allegiance. . . . [Their strength grew apace during the Wars of the Roses, and by] the beginning of the 16th century their power had reached to, perhaps, the highest point ever attained in . . . [the British Isles] by any subject. Whoever might be called the Viceroy in Ireland it was the Earl of Kildare who practically governed the country."—E. Lawless, *Story of Ireland*, ch. 14.—Thomas Earl of Desmond, was actual deputy of Ireland from 1463-1467 when he was superseded by the Earl of Worcester, who had both him and Kildare attainted for coyne and livery. (See IRELAND: 1413-1467.) Thereafter the Kildare branch of the family became more powerful. Garret (Gerald) the eighth earl became deputy in 1496, and on his death in 1513 was succeeded by his son Garret Oge, but the rebellion of "Silken" Thomas, the son of Garret Oge in 1535, brought about the ruin of his house. Only one of Garret's sons was left, young Gerald Fitzgerald, who was sent to the continent, and lived there until by submission to Queen Mary, he was enabled to return. He conformed to the Protestant faith under Elizabeth, and his successors became loyal upholders of the English crown. Meanwhile James Earl of Desmond carried on intrigues with France and with the emperor, which, but for his death, in 1529, might have brought him to the block. (See IRELAND: 1520-1540.) His successors were fully occupied for some time with family affairs; but Earl James practically ruled Munster from 1540 until his death in 1558 and held it quiet. After his death, renewed family disputes about the succession, and quarrels with the Butlers created strife which caused the imprisonment, in the Tower, of Earl Gerald, who had been confirmed in the title by Elizabeth, and his brother John Desmond, both of whom were held in durance from 1567 to 1673. During the absence of the earl his cousin James Fitzmaurice Fitzgerald formed the Geraldine League from which came the Geraldine rebellion, the destruction of the house of Desmond, and the confiscation of its great territories. (See IRELAND: 1559-1603.) The Viceroyship came into the Kildare family again in 1756, when the earl was made deputy. Ten years later he was created duke of Leinster. This title still remains in his family; but under the Land Purchase Act of 1883 the great estates which had been held from the period of the Anglo-Norman conquest passed into the possession of their tenants.—See also IRELAND: 1485-1509.

## GERMAN LITERATURE

**Introduction.—Points of development.**—"The fundamental conception which underlies the following account of the development of German literature is that of a continual struggle between individualistic and collective tendencies, between man and society, between personality and tradition, between liberty and unity, between cosmopolitanism and nationality,—a struggle which may be said to be the prime motive power of all human progress. The first appearance of Germanic tribes in the foreground of European history, the influx of the Northern barbarians into the decaying civilization of the Roman Empire, is marked by a dissolution of all social bonds. Severed from their native soil, thrust into a world in which their ancestral faith, customs, institutions have no authority, the Teutons of the era of the migrations experience for the first time on a grand scale the conflict between universal law and individual passion. The Germanic epic with its colossal types of heroic devotion, greed and guilt, is the poetic embodiment of this tragic conflict."—Francke, *History of German literature as determined by social forces, Introduction, p. 3*.—"Historically regarded, German literature admits of a natural division into three epochs, each of which is distinguished by special linguistic characteristics: an old High German period, in which the dialects of South Germany retained the wide range of vowel sounds to be found in all the older Germanic languages; a middle High German epoch, beginning about 1050, in which that diversity of vowel sounds and grammatical forms had in great measure disappeared; and, lastly, a New High German or Modern German period, which began about the middle of the fourteenth century. During the second of these periods, the High German dialects gained an ascendancy over those of the North and of Central Germany, while, in New High German times, German literature is practically restricted to High German."—J. G. Robertson. *History of German literature, Introduction, p. xvi*.—"These three culminating points of development [600, 1200, 1800 A.D.] imply a struggle to reach these points, an ascent followed by a descent. As far as we can judge, the tenth and sixteenth centuries were the times of deepest depression in German literature. Literary culture was then at its lowest ebb. . . . The poetry of these periods was not entirely wanting in creative genius; it had vast materials at its disposal, and even created certain moral types of great grandeur, though they were mostly the offspring of hatred or rude jest. . . . The times of deepest depression are likewise separated from each other by 600 years. The course of our history of literature may therefore be reduced to the simplest scheme: three great waves, trough and crest in regular succession. . . . Both the second and the third of the classical periods

are marked by a spirit of free criticism which triumphs over all prejudices. Respect for foreign nations increases, regardless of political differences. Men are liberal enough to feel that appreciation of foreign merits is no sin against national pride. Thus it was that the more developed sense of form, characteristic of the Romanic nations, exercised a beneficial influence on the Germans, purified their taste, incited them to imitation, yet withal developed their originality. . . . the dialectal separation between South and North German, which must have [been] begun about the year 600. Then arose the still existing difference between High- and Low-German dialects, and there was no educated language, no literary speech to bridge over the gulf. Two German languages were formed, and those who spoke them might easily have separated into two nations. . . . This separation of High German has exercised a momentous influence in German literature and German history. To it may be attributed in great measure the difficulty which the Germans have found in creating a united national literature and culture."—W. Scherer, *History of German literature, v. 1, pp. 17-18, 35-36*.

**A.D. 1st-9th centuries.—Intellectual conditions of the Germans in Roman times.—Oldest remains of poetry.—Wessobrunner Gebet.**—"In the winter of 98-99 the historian Tacitus collected all that was known about them [Teutons] in his celebrated *Germania*. . . . Tacitus appears to have had abundant material before him, drawn from immediate observation, and but slightly coloured by his own opinions. . . . The Germans were formerly a small tribe of a great race, sometimes called the Indo-Germanic race, but which we may designate by the name, probably used by themselves, of Aryan. . . . Before their dispersion the primitive Aryas had already passed out of the lowest stage of civilisation. . . . Their poetry was truthful, graphic, and full of imagery, and contained the germs of a connected view of things. . . . Personifications and allegories arose quite naturally, and explanations of remarkable phenomena or events in nature were drawn from the analogy of human experience. Peculiarities in animals were accounted for by fables, and remarkable occurrences in nature, both regular and irregular such as the alternation of day and night, the change of the seasons, or tempests, were explained in the same manner. These men saw a reflection of their own simple life in all that surrounded them, and in this naive way tried to account for whatever they could not understand. They created a rich mythology, reflecting the main incidents of a pastoral life, such as feuds caused by the capture of cattle or women, or raids upon rich owners."—W. Scherer, *History of German literature, v. 1, pp. 2-4*.

"This I heard as the greatest marvel among men, that once there was no earth, nor heaven above, the bright stars gave no light, the sun shone not, nor the moon, nor the glorious sea." With some such words as these begins a literary relic of the eighth or ninth century, ending in a prayer, the so-called 'Wessobrunner Gebet.' It is the beginning of a Saxon poem, written down in Bavaria. . . . The first line of the Bavarian Manuscript runs thus:—'Dat gafreġin ih mit firahim ġiriwiwo meġstá.' If these words are read aloud, the three f's at once strike the ear. The three similar initial letters serve to ornament and bind together the eight feet of the line. This alliteration may be regarded as an indispensable element of versification in all old German poetry. It gives to the verse not melody, but a characteristic sound; it does not beautify it, but makes it compact and strong. Such alliteration results from a tendency early found in the Germanic nature, which renders all art difficult to us—a tendency, namely, to prize originality more than beauty, substance more than form. This feature has even stamped itself on our language. . . . Apart from its alliteration and the changes which language has undergone, German poetry remains at this epoch essentially Aryan. It has the same technical means at its disposal, and is moulded in the same forms. The chorus in which the multitude takes part is still the leading type. Individuals are subordinate to the whole body of singers. . . . Choral songs played an important part on all the great occasions of private and public life. . . . Choral poetry is not the only kind of poetry at this period. The other Aryan forms of poetry also continue to exist. The maiden greets her lover thus: 'I wish thee as much joy as there is foliage in spring; I wish thee as much love, as the birds find delight and food; I wish thee as much honour as the earth bears grass and flowers.' At social gatherings riddles were set, founded on simple observation of nature. . . . But above all, it was the principles which regulated life, and underlay morality and law, that were embodied in poetic form. . . . All solemn legal proceedings were accompanied by poetry. Oaths were sworn in alliterative verse. The sentence of banishment was uttered in alliterative language. . . . Indeed, all legal formulas were full of alliteration. And some expressions uniting two terms each having the same initial letter, remain even in our time, such as house and home, spick and span, weal and woe, hand and heart, stock and stone, kith and kin, bed and board, wind and weather."—*Ibid.*, pp. 10-15.

350-9th century.—Bible of Ulfilas.—Rise and development of the German hero-legend.—Classification.—"The highest ideal known to declining Rome in the intellectual sphere was Christianity, and the possession of the Bible has the same significance in the intellectual and religious sphere that the possession of Italy and Rome has in the political. The former, Ulfilas [311-383] by one effort secured to the Visigoths. He was master of three languages: he preached in Greek, Latin, and Gothic; and he devoted this gift to the noblest purpose. [Ulfilas has been called the father of Teutonic literature.] He is reported to have translated the whole Bible, only omitting the Books of the Kings as likely to encourage the warlike propensities of his people. This translation he effected for those who were till then destitute of the first beginnings of a written literature. Nay, till he taught them, the Goths did not even know what reading meant, and Ulfilas had to translate the word by 'singing.' He created a style of writing which could be painted on parchment

for a people who till then had only scrawled single signs, or a few consecutive words on wood or stone. He formed his alphabet by supplementing the Runes from the Greek alphabet, or the Greek alphabet from the Runes. The translation is a literal reproduction in Gothic of the Greek text. . . . No German of Catholic persuasion ever attempted anything like it. Wycliffe in England, and Luther in Germany, are the first who can be compared with him. . . . What we possess in the Gothic language besides the Bible is insignificant. It consists of an interpretation of St. John's Gospel founded on Greek commentaries, a fragment of a Gothic Calendar, a few documents, attested by Gothic priests in Gothic, a Gothic toast in a Latin epigram, and a few isolated words in Latin writings."—W. Scherer, *History of German Literature*, v. 1, pp. 30-31.—"About the year 600 A.D. . . . a date, which should only be taken approximately . . . the Germanic national Epic attained its highest development. . . . About the year 1200, as we have already said, the half-forgotten stories of the hero-legends appear again, and are embodied in the well-known poems, the Nibelungenlied and Gudrun. The same period produced lyric and epic poets of the first order, whose artistic training was at least in part based on French models. Such are Wolfram von Eschenbach, Gottfried von Strassburg, and Walther von der Vogelweide. About the year 1800 . . . the old heroic songs revived again, the Nibelungen legend acquired new fame, new poets made use of the old materials, and the brothers Grimm became the leaders of a new science, which sought to recover for the present the vanished creations of the past. . . . The historical consciousness of the Germans dates from their great migration, which also gave life and substance to their heroic poetry. The rich legends which form the material of great national epics always owe their origin to gigantic national convulsions. . . . The only organ of tradition was unwritten poetry, handed down by memory. But in their poetry they follow an idealising method, and make it general and mythological. The characters and incidents receive a typical form, often far removed from reality. The poets wandered from place to place, taking the songs with them, and the story became more vague the further it was transplanted from home. . . . The traditions of German heroic poetry extend over more than 300 years, and are drawn from various German tribes. . . . These wonderful transferences of power, and this rapid founding of new empires, furnished the historical background of the German hero-legends. . . . The oldest mythical legends, dating from a period before the emigration, give us the typical hero Siegfried, frank and bold, cut off in the bloom of his youth by his wicked and perfidious enemy Hagen. The oldest historical legends, down to about the middle of the fifth century, show us nothing but repulsive characters, drawn doubtless from the life of those rough times. . . . German heroic song begins with the Goths, and ends with the nations of the Frankish kingdom. The poets who first sang the epic songs to their harps belonged to the court. Wandering minstrels spread abroad the praise of princes, and were the teachers of the community. . . . Charlemagne caused [songs of Ermanaric, Attila, and Theodoric] . . . to be written down, as Pisistratus did the Homeric epics. But the next generation had already forgotten them. In the ninth century we come again on traces of them, after which they drop quite out of sight. We must give up the collection of Charlemagne as lost for ever: this most important record of the German national

epics is destroyed, and we are reduced to guess-work. . . . We possess in Germany itself but one poor literary fragment from the whole of this first classic period of epic legend and poetry; this fragment is the song of Hildebrand. . . . The Merovingian period, which brought German popular heroic song to perfection, cannot point to a single literary document in the German language. . . . In the first half of the fifth century St. Patrick brought Christianity to the Irish from Scotland, and the Irish monasteries became a centre of civilisation and Christian missions, independent of Rome. . . . They sent forth Columbanus, . . . [who] wrote in old Greek metre, and was well versed in classical literature and mythology. . . . This Columbanus became in the seventh century the Apostle of the Alemanni. His disciple, Gallus, founded the monastery of St. Gall. They were followed by many others of their countrymen. . . . In the matter of poetic form, Germany was indebted to the *Romanic* nations; it was from them that German poetry received the ornament of rhyme. We find the first traces of rhyme in Germany in the ninth century; but then it is already used to adorn Christian hymns which were meant to supplant the popular songs. . . . As epic poetry with its stately alliterative verses gradually disappeared, rhyme came more and more into fashion. But it first found its way to Germany from outside. . . . We find it first of all on the Upper Rhine, from whence it spread over the rest of Germany. . . . This points to a distinguishing feature of the first classical period of German literature, and one which recurs again in the second and third classical periods,—it was the *Romanic* nations who shaped the æsthetic sense of the Germans.”—*Ibid.*, v. I, pp. 16-17, 19-25, 33-35.—“The authors or compilers who first put these poems into writing are unknown, and they seem to have written the poems just as they existed, without adding any of their own personality or their own judgments. Each of the German tribes or nations had its own particular cycle of these poems, all of which centered for the most part around the memory of its most renowned national hero. The most important of these hero-songs can, in a general way, be classified as follows:—1. The saga-cycle of the lower Rhine, of which SIEGFRIED of Xanten is the hero. 2. The Burgundian cycle, whose chief characters are GUNTHER, HAGEN, and KRIEMHILD. Their court and home is at Worms on the Rhine. 3. The cycle of THEODORIC or Dietrich of Bern, the founder of the East Gothic kingdom in Italy. His great vassal is HILDEBRAND. 4. The cycle of ETZEL or Attila, the powerful king of the Huns. Among his vassals, RÜDIGER is the most renowned. His home is at Etzelburg on the Danube, probably the modern Budapest. The personages appearing in these saga-cycles take a leading part in the *Nibelungenlied*, which unites these four cycles in the greatest production of the Middle Ages. 5. Another cycle, which is the background of the second important poem of this epoch, is called the *Norman-Saxon*. The location of the legends is along the coast and on the islands of the North Sea. The hero is HETEL, and his daughter, GUDRUN, is the heroine of the poem named for her. The first four of these saga-cycles are merged together in the *Nibelungenlied*, which is composed of thirty-nine cantos, arranged under two heads:—(1) Kriemhild's Love, I-XIX. (2) Kriemhild's Revenge, XX-XXXIX.”—R. W. Moore, *History of German literature*, pp. 25-26.

750-1050.—Old High German period.—Early pagan poetry.—Heroic sagas.—Coming of Chris-

tianity.—Early religious literature.—“The history of German literature, as a connected account of writings that have literary interest and are extant in the German languages, begins about the year 800. It is true that for many centuries prior to that time Germans had been producing poetry in abundance, but it is not written down, and only one late fragment of it has been preserved. A system of alphabetic writing, the so-called *runes*, may possibly have been in use among the High Germans, but if so, the letters were always cut on wood, metal, or stone, and were not employed for what would now be called literary purposes. It was not until Christianity came in, bringing the Latin alphabet and a class of men acquainted with the use of pen, ink, and parchment, that anything of literary value was written down in German.”—C. Thomas, *History of German literature*, p. 1.—“Under Charlemagne (768-814), who succeeded in uniting both politically and religiously all tribes of German origin, arose the first prose literature. The Gospel of Matthew was translated, and to this were added baptismal vows and confessions of faith. The great emperor took an active personal interest in cultivating the German language and German literature. He took great pains to have collected and written down the old songs in which the deeds and wars of the old heroes were celebrated. It was his purpose to hand them down to posterity, but they all disappeared after his death. . . . Two Messianic poems of the ninth century have been preserved. The first, *HELIAND*, was written in Low German about 830. [The poem consists of between five and six thousand alliterating verses.] Its purpose was doubtless to make the Bible known to the Saxons, whom Charlemagne had recently converted to Christianity. . . . The best portion is probably that devoted to the Sermon on the Mount, where Christ, like a German king, surrounded by his knights and vassals, gives instruction, settles controversies, and decrees justice. The poem closes with Christ's ascension. The second, Otfried's *EVANGELIENBUCH* (Gospels), appeared about 870. Its author was a learned monk of Weissenburg, the first German poet known by name. The subject is treated in five books, divided into chapters with Latin headings. It differs from the *Heliand* in that the latter is German and popular, while the former is intended to be a learned work throughout, and its purpose was to convert the barbarians to the teaching of the church. *MUSPILLI*, another poem of the same period, was probably written on the margins of a book by Louis the German. The author sets forth as well as he can the doctrines of the church, and tries to make them attractive to the nobles. . . . The *LUDWIGSLIED*, a historical poem [of fifty-nine verses], celebrates the victory of Louis III over the Normans at Saucourt in 881. . . . After the extinction of Charlemagne's line, the Saxons became the leaders in Germany. Both externally and internally the Saxon emperors raised Germany to a free and independent position. Otto the Great (936-973) really made Germany the leader of Western Christianity. With the conquering of Italy, came Southern culture; but with it came also a foreign manner and a foreign language. Although German was the official language, yet in literature, cultivated almost solely by the clergy, Latin was predominant. At the court, in the monasteries and nunneries, the old classics were studied; and the literature of the period, even if treating of native history and legend, appeared in a foreign garb. *WALTHARIUS*, a Latin poem written by Ekkehard, a monk of

St. Gall, about 930, is the most important production of this class. Scheffel has used this in his novel *Ekkehard*. . . *RUODOLP*, another Latin epic of the eleventh century, probably originated in Bavaria, but it has been preserved in fragments only."—R. W. Moore, *History of German literature*, pp. 17-20.

1050-1350.—Classical period.—Middle High German literature.—Ballads and epics.—*Nibelungenlied* and *Gudrun*.—Romantic poets and lyricists.—"From the end of the twelfth century onwards High German is the dominant literary language of the German races, and the literary renaissance of the twelfth and thirteenth centuries was especially High German. The period is marked by the Annolied, ca. 1130, which may be regarded as the beginning of the epic. In this category may also be included the *Kaiserchronik* ca. 1130-1150; *König Rother* 1100; all of these poems were the result of monastic reform. In the court epic we have *Konrad's Rolandslied*, ca. 1135; and *Eilhart's Tristrant*, ca. 1170-1173. We find the beginnings of the *Minnesang* with men like *von Kurenberg*, *Dittmar von Aist*, *Burggraf von Regensburg* and *Menloh von Sevelingen*. The traditional ballad of the German people, the materials out of which their national epic was to be formed, had, as we have seen, been kept alive through the dark ages by wandering *Spielleute*. With the awakening of more ideal interests under the influence of the Crusades in the twelfth century, the popular epic entered, however, upon a new phase of development. . . . Under the influence of the serious literary tastes of the aristocratic classes, the traditions of *Siegfried*, of *Attila* and the *Nibelungs*, of *Dietric* and *Ermanarich* [*Spielmann poetry*] were welded into epics of primeval grandeur."—J. G. Robertson, *History of German literature*, p. 59.—"Growing ever more self-conscious, more national, through the closing years of the twelfth century, German poetry greets us on the threshold of the thirteenth with the '*Nibelungenlied*,' its *Iliad*, an epic second only to that masterpiece, and soon to be followed by '*Gudrun*,' a veritable German *Odyssey*."—B. W. Wells, *Modern German literature*, p. 11.—"The *Nibelungenlied* is the representative national epic of the Germans; it is national in the sense that it mirrors not the idea of a single poet, but of a whole race. Its theme was a common possession of that race; its ideals of loyalty, of nobility, of knightly virtue, its scorn of treason and deceit and its firm faith in the implacableness of rightful vengeance,—all this is flesh and blood of the Germanic peoples.—The *Nibelungenlied* is, in such respects primitive, but it is not barbaric, nor is it . . . without lyric beauty."—J. G. Robertson, *History of German literature*, p. 71.—"The subject matter of the epic is much older than its present form, which dates from the first part of the thirteenth century. It is based on two general sources,—mythological characters and the tales belonging to very remote, prehistoric periods, and historical persons and events from the time of the Migrations, as they are described in the early hero-songs. In the *Edda* [an earlier epic] the legend appears ruder in form and more savage in character than in the *Nibelungenlied*. Into the interweaving of the historical and mythical elements, there has come the influence of Christianity and Chivalry, giving the harsh and passionate characters of the earlier legend gentler and more refined qualities. The poem was known and loved among the people until the sixteenth century. With the seventeenth it seems forgotten. About the middle of the eighteenth, Professor *Bodmer*, of

Zurich, found at *Hohenems* in Switzerland two bulky manuscripts which proved to be the *Nibelungenlied*. From that time until to-day [1906], it has been subjected to careful study; has been translated several times into modern German, and into all modern tongues. . . . The authorship of the poem is a disputed question; some maintaining that it is a loose collection of popular songs strung together, others that it is originally the work of a single poet. The truth probably lies between the two."—R. W. Moore, *History of German literature*, pp. 31-33.—See also *NIBELUNGENLIED*.—"Though the '*Nibelungenlied*' is the greatest, it is by no means the only epic formed from songs in High German. There is one that tells of the death of the great Gothic king, *Ermenrich*, of the race of the *Amalungs*, to which *Theodorich* also belonged, though many generations later. . . . Another group of High German legends gathers about the *Vandal brothers*, *Ortnit* and *Wolfdietrich*. . . . A third group shows as clearly its Low German origin. . . . In this group the place of the '*Nibelungen*' is taken by the story of '*Gudrun*.' The legend has a peculiar interest to Englishmen, for the time and the local color is that of the raids of Danes and Northmen on the coasts of England and Ireland."—B. W. Wells, *Modern German literature*, pp. 14-75.—"*Gudrunlied*, the second national epic, embodies the legends of the North Sea. Already known at the beginning of the twelfth century, it was worked over into its present form about 1210, by some now unknown poet. Probably he was from the South, and traveling northward, found these legends, which he transferred to parchment. . . . The poem is handed down in a single manuscript which, prepared at the order of Emperor *Maximilian I* (1493-1519), was found at the castle of *Ambras* in the *Tyrol*, just 300 years after *Maximilian's* death. It is now in *Vienna*. Like the *Nibelungenlied*, various editions and numerous translations of it have been published. The poem, composed of thirty-two cantos, called adventures, is divided into three sections, of which the first two serve as an introduction to the third."—R. W. Moore, *History of German literature*, pp. 33-34.—"In both parts of the '*Gudrun'saga*' magnanimity overcomes vengeance. It represents a higher moral development, a more Christian standard, than could be found in the '*Nibelungen*.' And as this would lead one to expect there is more thoughtfulness and a deeper insight into the mixed feelings of complex human nature. . . . The '*Gudrun*,' then, is truer to the culture of the thirteenth century, and shows greater psychological insight than the '*Nibelungen*,' but it was less popular in High Germany, the section which was coming more and more to have the literary pre-eminence."—B. W. Wells, *Modern German literature*, pp. 16-17.—"The first quarter of this century [thirteenth] is to give us also the philosophical epics of *Wolfram von Eschenbach*, the less thoughtful but more popular epic tales of *Hartmann von Aue*, and the exquisite songs of *Walther von der Vogelweide*, surrounded by the melodious chorus of the '*Minnesangsfrühling*,' the '*Springtime of the songs of love*,' as this period has been poetically named. The whole makes up one of the most remarkable phenomena of the intellectual life, to be compared to 'the spacious times of great Elizabeth,' and, like this, finding its cause and explanation in the political life and aspirations of the people. . . . The masterpieces of this wonderful generation fall almost wholly between 1190 and 1220. They may be divided broadly into popular and courtly epics, while the lyrics take a middle

ground."—B. W. Wells, *Modern German literature*, pp. 11-12.—"Court epics are quite different from the national epics. They are the product of chivalry, dealing not with matters of national importance, but with court etiquette and social decorum. They treat not of native popular lore, but abound in foreign traditions. . . . Heinrich von Veldeke, the 'father of court poetry,' was the first man to apply to verse strict measurement and exact rhyme, and he was the first prominent representative of the court epic. He came from a family of knights in the Netherlands, but of his early life almost nothing is known. Later we find him as a poet at the court of Cleve. Here he had written over ten thousand verses of his *Eneid* (1184), when the manuscript was stolen from him. . . . The poem is based on Virgil's *Eneid*, but the heroic deeds are treated very briefly, while the love scenes are carried out to great length. . . . Wolfram von Eschenbach, the greatest German poet of the Middle Ages, was a Bavarian, and takes his name from the town of Eschenbach, where he was born between 1170 and 1175. He was trained in all that pertained to the calling of a knight. . . . Here it was that about 1207, according to tradition, he took part in the *Sängerkrieg* (poets' contest). While here he composed many short poems, and also *Parzival*. . . . In *Parzival* two saga-cycles are united: (1) The Legend of King Arthur; (2) The Legend of the Holy Grail. . . . Besides these two elements, a third is worked into the poem,—that of the Evil Spirit, working ruin and destruction. . . . Gottfried von Strassburg, of whom very little is known, flourished at the close of the twelfth and the beginning of the thirteenth century. The material for his best work, *Tristan und Isolde*, was drawn from French sources, and it abounds in French expressions. . . . Hartmann von Aue, a Swabian by birth, and a contemporary of Gottfried, attended a cloister school in his youth, and became so well versed in Latin and French as to be able to call himself learned. Among his contemporaries he was regarded as the master of court poetry, and was noted for his moderation. His style is clear, and his verse moves along with pleasing purity. His material is drawn largely from Latin and French sources. Two of his poems, *Erec* (much resembled by Tennyson's *Eneid*) and *Iwein*, are named after Knights of the Round Table, and they, becoming popular, added much to the glory of Arthur. *Der arme Heinrich* is his best production. . . . Alongside of the few authors of court epics, there arose a number of writers of lyric poetry. To this class of writing, existing in various forms and treating of numerous subjects, the common name *Minnesong* is given. . . . Of the numerous manuscript collections of these poems that have come down to us, the most important is the Large Heidelberg Manuscript. This remarkable book, containing the songs of one hundred and forty poets from the twelfth to the fourteenth century, is a magnificent folio, bound in red leather, and adorned with the French royal coat of arms embossed in gold. It contains 429 leaves of strong parchment, upon which the songs are written in a beautiful, uniform, and legible hand. . . . By whom the manuscript was prepared, and where it was first kept, is unknown. Toward the end of the sixteenth century, it was found carefully preserved at a castle in the valley of the upper Rhine. In 1607, it was purchased for the library in Heidelberg. During the Thirty Years' War, in some unknown manner, it was taken to Paris, where for two centuries, under the title of *Paris Manuscript*, it formed one

of the treasures of the National Library. In 1888, thanks to the Emperors William I and Frederick III, it was restored to the library in Heidelberg, and is now called the *Large Heidelberg Manuscript*. Walter von der Vogelweide, the greatest of the Minnesingers, was born in the Tyrol between 1165 and 1170, and was from a family of the lower nobility. . . . Among his spiritual songs, the one addressed to the Trinity is the best."—R. W. Moore, *History of German literature*, pp. 37, 38, 40-41, 42-45.—"The chief characteristic of Middle High German literature, regarded as a whole, is its simplicity; no other period is so free from complex developments. . . . Except for the utilitarian writings of preachers and law-givers, prose virtually did not exist, and apart from ecclesiastical performances. . . . there was no drama. Thus only three main categories of verse—romance, lyric and satire—are left, and each of these falls again into two divisions, corresponding to the two literary classes, namely the *Spilleute* and the court poets. On the other hand, the *Spielmann* drew upon the popular sagas and traditions for his romances; he retold in the humorous, careless way peculiar to him, the stories of the German past. The court singer, on the other hand, preferred the romances of the Arthurian cycle, which, early in the twelfth century, had received an aristocratic stamp in France. The German national epic itself, as represented by the *Nibelungenlied* and *Gudrum*, had arisen, as we have seen, under the influence which the tastes of the higher classes exerted over the *Spilleute*."—J. G. Robertson, *History of German literature*, p. 140.

1250-1650.—Transition period.—Early New High German literature.—Changes incident to the Reformation.—Luther and the German Bible.—"Even in the thirteenth century, the decline of literature had begun, and the two following centuries completed the decadence. The emperor and the princes paid no attention to literature and art, but were fighting among themselves for their own aggrandizement. . . . Among the clergy things were no better. . . . In the fourteenth century, the poetical inheritance which for two centuries had been cherished by the knight passed into the hands of the middle class."—R. W. Moore, *History of German literature*, p. 46.—"The fate of this lyric poetry was similar to that of the epic. It suffered first from artificiality, then from vulgarization. Ulrich von Lichtenstein typifies the first stage, Neidhart von Reuenthal the second. . . . Ulrich was pathetically serious; Neidhart is a satirist. His gay dance-songs hit noble and peasant alike, but especially the latter, with a humor that is often coarse, but always delicious. And Neidhart's poetry has a social significance that should not be overlooked. Satire, to have point, must have some basis of truth. Neidhart's verses assume a prosperity among the German peasants in the thirteenth century that has never been witnessed among them since. The fundamental assumption of his wit is that the peasants have wealth without culture, and the nobles culture without corresponding wealth. The incongruousness of these conditions is his standing theme. . . . This shifting of the literary center is marked by a new name, 'Meistersänger.'"—B. W. Wells, *Modern German literature*, pp. 27-28.—"The mastersong was cultivated in societies or guilds, into which the artisans of the cities organized themselves, that they might cultivate music and poetry. Mayence is regarded as the first city in which this art was cultivated; but in most of the important cities of southern Germany, the master-

ong flourished."—R. W. Moore, *History of German literature*, p. 46.—"Nuremberg was the chief centre of this artificial literary life, which aimed to apply to poetry the commercial and economic spirit that had given the free cities their political recognition. The natural result was a stagnant lake of mediocrity, prolific only in the lowest forms of life. One might be disposed to make an exception for Hans Sachs, whose genuine poetic genius was cramped by his traditions and surroundings."—B. W. Wells, *Modern German literature*, p. 29.—The dramatic gift of Hans Sachs is at its best in the shrovetide plays, of which he wrote eighty-five. "The degeneracy of the times, especially the roughness of the nobility and the corruption in the church, had long been calling for energetic reform. This found a poetic expression in numerous didactic poems, largely satirical in nature. The most important of these [and Germany's first real contribution to world literature] is the *Narrenschiff* (1494), by Sebastian Brant (1458-1521), who lived most of his life at Strassburg."—R. W. Moore, *History of German literature*, p. 49.—Prose is represented by local chronicles, sermons, stories of Til Eulenspiegel, and the writings of the fourteenth century mystics. "Meantime legal books had appeared in German, while sermons, treatises on medicine, and summaries of popular science were soon to abound, as was to be expected when we consider that seven additional universities had been founded during the fifteenth century. . . . In general it grows clear that the Reformation was not the work of one man nor of one generation. . . . From the political and economic standpoint a reformation was a necessity, and probably this Reformation, with all its errors and bitter injustice, was the best practicable one. . . . In the midst of this literary stagnation the Reformation produced a work of crucial importance from a philological standpoint, —*Luther's translation of the Bible*. Not as though the Scriptures had not been translated and printed in German before his day. There had been eighteen earlier printed editions, and translations in manuscript had circulated freely from early times. But from a literary point of view all these had been lame efforts. Luther gave in his Bible a literary model to Germany comparable only to our own Authorized Version. Begun about Christmas, 1521, the New Testament was printed before the close of 1522, the whole Bible in 1534, and a revision in 1541, and this has remained essentially the German Bible until our own day. Men may differ in their moral judgment of the German Reformation; none can close their eyes to the vast gain to literature and culture that sprang from this book, the foundation of the new German language."—B. W. Wells, *Modern German literature*, pp. 31, 33.—"Thus in the best sense, Luther's translation of the Bible is a work of creative genius, the greatest German book produced within a period extending over at least three centuries. No other work has played so important a rôle in the history of the language as this Bible, for it gave the nation a normal language in place of the many dialects that had been in use for literary purposes during the preceding centuries."—J. G. Robertson, *History of German literature*, p. 173.—See also BIBLE, ENGLISH: 14th-16th centuries; PAPACY: 1521-1522.—"On the other hand, Luther's part in shaping the conditions out of which a new national literature was to evolve, was extremely important; . . . what he really did was to use the language of the people as he had learned it, in the course of his long sojourn at Eisenach and Erfurt. By so doing he was able

to address the people of the Midlands and the Southeast in a language which was readily intelligible. . . . Before the end of the sixteenth century the victory of Luther's German was virtually complete in all the northern regions. In the South progress was much slower. . . . Switzerland was the last to fall into line."—C. Thomas, *History of German literature*, pp. 127, 137-138.

1600-1750.—Period of Renaissance and Pseudo-classicism.—Opitz and Gottsched.—Simplicissimus.—Leibnitz and the Aufklärung.—Gellert, Klopstock, and Wieland.—The Hainbund.—"The Renaissance cannot be said to have set in before the first years of the seventeenth century, and what good effects it might have had were, in a great measure, thwarted by the thirty years' war. Thus, for the intellectual life of the German people as a whole this movement had, and could have, but little importance, and the lessons which German poetry might have learned from it had practically all to be learned over again at the beginning of the eighteenth century."—J. G. Robertson, *History of German literature*, p. 203.—"In the early years of the seventeenth century educated Germans began to feel with a degree of shame that their country's vernacular literature was in a backward state as compared with that of Holland, France and Italy. The increasing recognition of this unpleasant fact led presently to a new literary movement."—C. Thomas, *History of German literature*, p. 165.—See also HISTORY: 23.—"Two men who were the dictators of literary taste in Germany, the one during the larger part of the seventeenth, the other during the first part of the eighteenth century, may be considered as the most complete types and the most trustworthy interpreters of this school of inanity and pretension [Pseudo-classicism]. Opitz (1597-1639) and Gottsched (1700-66). Both men had undoubtedly the cause of German literature at heart. Opitz through his connections among the nobility, Gottsched through the dignity of his Leipzig professorship, helped to raise the social standing of authors as a class. Both worked to the best of their ability for a purification of the German language, for the establishment of a normal standard of literary correctness. And although Opitz, by advocating the imitation of the French writers of his time, put German poetry to the rack of the Alexandrine verse, while Gottsched, by adopting the same policy for his own time, forced the German drama into the strait-jacket of the 'three unities,' yet it is hard to see how, without the discipline afforded by the attempt to reproduce foreign models, or without the chastening influence of the refined elegance of French versification and composition, German literature could have attained even to the small degree of formal respectability which in those days had come to be considered as the supreme test of poetic genius."—K. Francke, *History of German literature*, p. 179.—"Grimmelshausen's *Simplicius Simplicissimus*"—Johann (or Hans) J. C. von Grimmelshausen (1625-1676)—is the one prose classic of the century. It is "thoroughly German and essentially original. It is the work of a virile realist who had lived much and was interested in life for its own sake; and while not free from the discursive pedantry in which the age delighted, it is at any rate, readable—the most readable prose of the century. . . . In the closing years of the seventeenth century the very name of poet fell into a certain disrepute. . . . The one poetic genius of the period was Johann Christian Gunther (1695-1723). His passionate verse, born of a genuine experience,

was worth more than volumes of satire and disquisition. But talent that falls much short of genius may sometimes render service by pointing the way to new vistas; and this was the fortune of Barthold Heinrich Brockes (1680-1747) a man greatly esteemed in his day as a poet of nature. . . . He was the first to cultivate intimacy with the works and moods of nature and describe them with great minuteness. He begat the generation of sentimental landscape poets who presently drew the fire of Lessing's Laocoön. . . . A stream of English influence was coming in by way of Switzerland. . . . In short, by the middle of the century the names of Milton, Addison, Pope, Thomson and Young were fairly well known in Germany, and the German mind had been prepared, as well as the English, for Richardson, Bishop Percy, Ossian and Sterne. But Shakespeare as yet was virtually unknown. . . . The most important of the landscape poets was Ewald von Kleist (1715-1750), author of Spring. Kleist was a Prussian soldier whose early experience predisposed him to pensive poetising."—C. Thomas, *History of German literature*, pp. 183, 191, 193-196, 199-200.—"The story of the German *Aufklärung*, or Illumination, . . . is partly outside the sphere of letters. We venture to anticipate the one and to trespass the other, in order to refer to the name of Gottfried Wilhelm Leibniz (1646-1716), mathematician and philosopher, who shared with Sir Isaac Newton (1642-1727), his contemporary, the throne of science in that age. They made so many discoveries in the region of the higher mathematics that they disputed who discovered which, and Leibniz's correspondence and intercourse with the master-minds of his day brought Germany back to modern Europe, and ushered in the new period of her culture which closed at the death of Goethe, 1832. Leibniz was a strenuous advocate of the revival of German speech and manners. In his idealism and mental grasp he is most like Plato among philosophers, and, deeply as his system of thought is in debt to the intellectual rationalism of France, England, and the Netherlands, he filled it with a Teuton consciousness and coloured it with personal optimism. Another early Illuminant was Dr. Samuel Pufendorf (1632-94), who taught international law at the University of Leipsic, where, doubtless, he knew young Leibniz, as the son of a professor in another faculty. Pufendorf's Latin writings were of immense service to the cause of the *Aufklärung*. His letters on the status of the German nation opened with the frank remark that 'Germany is an irregular body, *mouströ simile*, like a monster; and he sketched a new order of civil government, based on liberal principles of law."—L. Magnus, *General sketch of European literature in the centuries of romance*, pp. 360-361.

"The generation which grew up at the beginning of the eighteenth century; which lived through a succession of wars . . . became incapable even of moral indignation at the wretched condition of public life, and settled down to a contemptuous indifference to the whims and excesses of their rulers. What is best in German literature from the beginning of the eighteenth century to the time of Frederick the Great, is a record of the feelings of private individuals, confined to the sphere of domestic virtues, and absorbed in theoretical speculations about an ideal world. If we remember that this was the epoch which immediately preceded the beginnings of a literary revival the like of which modern civilization has not seen,—the great classic period of

German literature,—we are again led back to the main subject of this chapter: the consideration of the revolutionary forces which were at the bottom of German intellectual life during the long reign of absolutism from the days of Opitz to those of Lessing. That among these forces during the first half of the eighteenth century the influence of English poetry and fiction was one of the most important, there can be no question. . . . While Germany's best men in the seventeenth century consumed their energies in a hopeless struggle against petty surroundings, Shakspere and Milton were borne along by the majestic stream of English public opinion. When now, in the first half of the eighteenth century, Germany had sunk to the very lowest level of political misery, when her best men, instead of inveighing any longer against national abuses, turned to the quiet realm of moral and æsthetic observations, it was natural that their glance should have been attracted by the powerful literary development which meanwhile had taken place on the other side of the Channel. . . . He who reads the history of German literature in the seventeenth century with an unprejudiced eye cannot fail to be impressed with the fact that there ran through it a constant undercurrent of opposition against princely omnipotence, orthodox intolerance, and literary conventionalism. This same current, having failed to break through the solid rock of public indifference and apathy, now turned into another channel, and instead of vainly beating against hopeless social conditions, spent itself in widening, deepening, and intensifying the inner life of the individual. We are inclined nowadays to speak with a condescending smile of the weakly sentimentalism and shallow rationalism of the eighteenth century. But we must not forget that sentimentalism and rationalism were in the first half of the eighteenth century the only possible manifestations of that spirit of independence which had been kindled by the Reformation, and which more than a century of oppression had not been able to smother entirely. And if we are asked what it is that in the productions of that time appears to us as peculiarly indicative of a genuine inner life, we cannot help answering that it is just this sentimentalism, however weakly, or this rationalism, however shallow."—*Ibid.*, pp. 213-216.—"A century had passed after the close of the Thirty Years' War, and Frederick the Great, in 1740 became king of Prussia. In this shaker of kingdoms the German spirit asserted itself once more. It ceased to sleep as if the sleep of death. The fresh impulse felt was military and political, rather than literary or even intellectual; but the law of the conversion, or translation, of force works very widely, and the movement from Frederick, which began in war and in politics, went over also, transposed, into the world of the intellect and of literature. Besides, the new king was, in his way, a man of letters. True, he was, as it were, a foreign man of letters, despising the language to which he was born, and himself writing only in French. But there was at least light now where had been 'darkness visible' before; and a ray of light from the throne—much more, when the throne is that of Frederick the Great—becomes 'illustrious far and wide.' The royal example contributed at first to confirm the wretched tendency already then prevalent among Germans to imitate slavishly in literature the omnipotent French; but it also in the sequel incited some stronger, freer spirits, notably Lessing—that Luther of a literary reformation in Germany—to declare their intellectual

independence. Even those German authors themselves, of Frederick's time, whose literary mission it was, as they conceived it, to practice and to teach obedience to French canons in the art of writing, were pricked with patriotic ambition to prove to the disdainful monarch of Prussia that native German genius, uttering itself in native German speech, was not so wholly to be despised. Gottsched was the chief of such; but it is creditable to Frederick that Gellert, a quite different writer, less aggressively French, succeeded better than Gottsched in making a favorable impression on the royal arbiter. As between these two writers, the general verdict has since confirmed the preference of Frederick."—W. C. Wilkinson, *Classic German course in English*, pp. 12-13.—"It is indeed hard to realize that there should have been a time when [Christian Fürchtegott Gellert (1717-69)] . . . in whose professorial make-up there was not a fibre of creative genius, was the foremost of German authors. . . . Yet, if Frederick the Great could call Gellert 'the most sensible' of German men of letters; if Goethe could say of his writings that about the middle of the eighteenth century they were the foundation of moral culture in Germany; if his popularity embraced all classes and ages, from kings and princes who visited Leipzig in order to attend his lectures . . . there must have been something in him which made him in a peculiar manner the representative of his age. Gellert combined in himself, more than any other writer of his time, those two tendencies which, as we have seen, had come to be the chief forms of the individualistic undercurrent of German literature after it had turned away from public life: rationalism and sentimentalism. . . . More emphatically than any other writer of his time, Gellert was a private individual. . . . Gellert, by making self-reflection and self-discipline the keynote of his life as well as his literary work, did more than any other man of his generation to cultivate that spirit which was to find its highest expression in Goethe's *Wilhelm Meister*."—K. Francke, *History of German literature*, pp. 223-224, 227.—"Whether or not it was some spirit breathing in the free air of Switzerland, there arose contemporaneously [with Gellert] in the Swiss city of Zurich a German literary school, with Bodner at their head, who waged open war on the French classicism of Gottsched and his fellows. The Zurich circle, however, in refusing to be French, did not after all become truly independent and German. They were only otherwise, perhaps more judiciously, dependent, and—English. Bodner published a German translation of Milton's *Paradise Lost*. This was a literary event of prime importance for Germany. It gave her the *Messiah* of Klopstock; and, with the publication of the *Messiah* of Klopstock, the long-arrested development of German literature began fairly to go forward again. Lessing, Herder, Wieland, Goethe, Richter, Schiller, and a score of names only less than these, now follow one another in rapid succession, or jostle each other in crowded simultaneous appearance. The firmament of German literature is suddenly full. It hazes with stars and with constellations."—W. C. Wilkinson, *Chautauqua course*, 1891-02; *Classic German course in English*, p. 13.

"It was in 1748, the same year in which Frederick, in the peace of Aix-la-Chapelle, achieved his first great political triumph, that Friedrich Gottlieb Klopstock (1724-1803), in the three opening cantos of his *Messias*, sounded that morning call of joyous idealism and exalted individualism which was to be the dominant note of the best

in all modern German literature. . . . Klopstock led German literature from the narrow circle of private emotions and purposes to which the absolutism of the seventeenth century had come near confining it, into the broad realm of universal sympathy. He was the first great freeman since the days of Luther. He did not, like Heller, content himself with the sight of an independent but provincial and primitive life, as afforded by the rural communities of Switzerland. He did not, like Gellert, turn away from the oppressed and helpless condition of the German people to a weakly, exaggerated cultivation of himself. He addressed himself to the whole nation, nay, to all mankind. And by appealing to all that is grand and noble; by calling forth those passions and emotions which link the human to the divine; by awakening the poor down-trodden souls of men who thus far had known themselves only as the subjects of princes to the consciousness of their moral and spiritual citizenship, he became the prophet of that invisible republic which now for nearly a century and a half has been the ideal counterpart in German life of a stern monarchical reality. No one perhaps has better expressed the limitations of Klopstock's genius than Schiller, when in trying to define his place among modern poets he says: 'His sphere is always the realm of ideas, and he makes everything lead up to the infinite. One might say that he robs everything that he touches of its body in order to turn it into spirit whereas other poets seek to clothe the spiritual with a body.' It is undoubtedly this lack of plastic power, this inability to create living palpable beings, which prevented Klopstock from attaining the high artistic ideal which his first great effusions seemed to prophesy. . . . Yet it is easy to see that it was precisely through this exaggerated and overstrained spirituality that Klopstock achieved the greatest of his work. He would never have produced the marvellous impression upon his contemporaries which he did produce, had he attempted to represent life as it is. . . . It was Klopstock's spirituality which enabled him to assume this threefold leadership, and the immeasurable services rendered by him in this capacity to the cause of religion, fatherland, and humanity may well make us forget the artistic shortcomings by which they were accompanied. None of Klopstock's works has been so much subjected to misleading and unappreciative criticism as his greatest religious poem, the *Messias*. . . . But what do all these criticisms mean? They simply mean that it was a mistake in Klopstock's admirers to call him a German Milton, and that the *Messias* ought not to be looked upon as an epic poem at all. Not Milton, but the great German composers of church music were Klopstock's spiritual predecessors; his place is by the side of Bach and Händel as the third great master of the oratorio."—K. Francke, *History of German literature*, pp. 233-236.—"Klopstock's bold example could not fail to call forth imitation. . . . The most important and by far the most enthusiastic disciples of Klopstock are to be found in the Hainbund (grove-league), a literary society composed of several Göttingen students who were his admirers. . . . The nominal head of the league was Christian Boie, whose *Musenalmanach* practically became the organ of the league. The real head, however, was Klopstock to whom the young 'Bards of the Hain' had attached themselves from the beginning. . . . The most important member of the 'Hainbund' was Johann Heinrich Voss (1751-1826). . . . While a student at the gymnasium, he gathered around him a number of his

schoolmates for private study of the classics and of German literature; he also studied Klopstock, and began to imitate him. At Göttingen he devoted his attention to ancient and modern languages, and joined in the organization of the 'Hainbund,' although he was more independent and free from Klopstock's influence than any of the others. . . . In all his works Voss shows himself a master of language, but his imaginative faculty was weak. A didactic and often combative tone frequently appears in his odes and songs, a fact that has prevented even those works which he wrote for the people from becoming popular. . . . His best production, however, is *Luise*, a poem composed of three idyls. . . . As a translator, Voss surpassed all his predecessors, and his best work in this line is the rendering of Homer. His version is natural and straightforward, and reproduces, to a reasonable extent, the style of the original; the Homeric formulas and epithets are successfully preserved, and the whole work is one of devoted industry and careful study. . . . Christoph Martin Wieland (1733-1813) was born at Oberholzheim, near Biberach. After careful and thorough training under the instruction of his father, he entered the Institute at Klosterberg near Magdeburg. While at school here Klopstock's great work appeared, and Wieland's own words tell us of the impression it made upon him: 'When I read the *Messias*, I thought that I for the first time had gained a knowledge of myself.' . . . His literary work was enormous, filling forty-two volumes. He is one of the foremost translators Germany has had. He was the first to make Shakespeare known in Germany, having translated twenty-two plays, all in prose except *Midsummer Night's Dream*, which is in the meter of the original. He did a similar work with the satires of Horace and the letters of Cicero. Among his own works several novels are prominent. Many of them are located in Greece, with classic design but modern in thought and color. Although his novels can not be called indecent, they frequently border on an undue indulgence of the amorous foibles of both sexes. Best among these is *Die Abderiten* (1774), which will ever remain one of the classic representations of the narrow life in a little German town of the eighteenth century, with all its self-importance, its insipidity, and humor. . . . His greatest work is the romantic poem *Oberon* (1780), which was everywhere regarded as a masterpiece. . . . *Oberon* was Wieland's last great work, and during the rest of his life he did little except edit his works, and make some translations from Latin. His last twenty-five years were spent in the leisurely contemplation of the development of the glorious period of German literature, which had its center in the quartet of writers in Weimar. He himself was the first one to come to the little 'Athens,' [Weimar], and it was he who had trained the young prince who afterward became the wise and liberal patron of poetry. His works were widely read when Herder began his critical studies. He had watched the beginning, the rise, and the early end of Schiller's career, and the whole broad expanse of Goethe's gigantic mind lay demonstrated before him. He was a student when Lessing's career began, and although his life was extended more than a quarter of a century beyond Lessing's, he belongs rather to an earlier period, and he has but little to do with the reforms that Lessing brought about. His service to German literature, however, is very great, and the chief points may be summed up as follows: (1) in place of Klopstock's exaggerated pathos

and stiffness, he imparted to the language ease, grace, and smoothness, so that the higher classes turned from French to their own language; (2) he restored rhyme, which Klopstock had despised, to its proper place; (3) he brought into favor German irony, wit, and humor; (4) he introduced romance into German poetry."—R. W. Moore, *History of German literature*, pp. 76-79, 81-82, 84.

1700-1832.—New High German period.—Sturm und Drang.—Lessing, Herder, Goethe, and Schiller.—Richter and prose fiction.—"The dawn of the great era in German literature is coincident with the rise of Prussia as a military world-power. The coincidence is not accidental, though it is no doubt possible to make too much of it. Of the six most eminent writers of the century, Wieland and Schiller were Swabians, and Goethe was of the imperial city of Frankfurt. Herder and Klopstock were indeed born on Prussian soil, but they did not long remain Prussian subjects. None of the five concerned himself to any great extent with contemporary politics, and what they wrote might seemingly have been written if Friedrich the Great had never fought the Second Silesian War, or had been defeated. It was only Lessing who was greatly and directly affected by the struggle. Still, there is no room for doubt as to the fundamental rightness of Goethe's saying that it was the Seven Years' War which first brought real import into German literature."—C. Thomas, *History of German literature*, p. 206.—"Klopstock and Wieland, Lessing and Herder, opened up new fields of thought in the intellectual life of Germany. They inaugurated a movement which in the youth of the country led to a tumult, in which the young writers ran from one extreme to the other. The commotion passed throughout the cultured world; in all lands there was a revolt against the established principles of society and state, a longing to return to the natural state of mankind. The leader of the movement was without doubt the Genevese philosopher, Jean Jacques Rousseau, in whose writings the revolutionary principles are most abundant, most radical, and the most effective. . . . The height of the period was attained during the seventies and eighties of the last century. 'Originality and genius' was their watchword. In many of the writers these principles degenerated into pure license. In ridding themselves of the old laws that shackled art, they forgot those that regulated morals. . . . One of the leaders of this fantastic literature was Maximilian Klinger (1752-1831). He . . . wrote several dramas, in which he piles up horrors and regards them as everyday things. A few of them show observation and knowledge of society. The most characteristic and the best known among them is *Sturm und Drang*, the title of which soon became applied to the whole period."—R. W. Moore, *History of German literature*, pp. 107-108.—"The literary revolution demanded emancipation from rules, and was, in its political aspect, a movement of opposition to established authorities; the religious revolution was directed against the so-called enlightened school, and was in this respect conservative. Both movements apparently failed. The poets were obliged to submit themselves again to the sway of rules, and their political declamations had not the slightest direct effect; on the other hand, the Illuminati only became bolder and more radical in their advances, and won back to their side a few of their most decided opponents. Yet the chief effect of the revolution was, after all, an extraordinary increase of poetic and scientific power, and the wide extension of

literary interests throughout Germany; many of the tendencies, too, which could not assert themselves for the present, remained dormant and awoke to fresh life in Romanticism. . . . German provinces which had as yet played little part in modern literature now sent forth their representatives, and some of the violent Shakespearians, such as Lenz, Klüger, and Wagner, belonged to the circle of Goethe's acquaintance in Strassburg and Frankfurt."—W. Scherer, *History of German literature*, pp. 114-115.

"Gotthold Ephraim Lessing (1729-81) is the first German example of a man of letters in the grand style. Of the poet's peculiar gift he had, as he himself clearly perceived and frankly admitted, but a small share. . . . The earliest writings of Lessing, consisting of prose comedies, epigrams, fables, anacreontics, and other poetic trifles in the reigning Saxon manner, contain but little that foretells the coming man. . . . The first work of Lessing that is historically important is Miss Sara Sampson, written in 1755. By way of accentuating the fact that it dealt with ordinary folk and not with sceptred kings, he called it a 'bourgeois tragedy.'"—C. Thomas, *History of German literature*, pp. 226, 228-229.—"Lessing began his career as a literary critic by destroying what may be called Gottschedianism. . . . In . . . the *Briefe, die neueste Litteratur betreffend*, which, in common with Friedrich Nicolai and Moses Mendelssohn, he edited in 1759 and 1760, we have the first unmistakable indication of the way in which he was to lead modern German literature. . . . Gottsched was the first one to fall; he was followed by the whole school of Pseudo-classicism which now for more than two centuries had kept the genuinely classic out of sight. The discovery of true classic antiquity; the reconstruction of its real beauty and greatness; the reform of modern art and literature, not through a slavish imitation of its forms, but through an active assimilation and adaptation of its principles; in short, the reassertion and fuller development of the ideals for which in the beginning of the sixteenth century the Humanists had fought,—this was the second and decisive step in Lessing's critical career, marked by *Laokoon* (1766) and the *Hamburgische Dramaturgie* (1767). Goethe, in an often quoted passage of *Dichtung und Wahrheit*, has testified to the liberating influence which the *Laokoon* exercised upon his generation. 'One must be a youth,' he says, 'to realize the effect produced upon us by Lessing's *Laokoon*, which transported us from the region of petty observation into the free fields of thought. The "ut pictura poesis" so long misunderstood was at once set aside; the difference between art and poetry was made clear; the summits of both appeared separated, however near each other might be their bases. The artist was to confine himself within the limits of the beautiful; while to the poet, who cannot ignore whatever there is significant in any sense, it was given to roam into wider fields. The former labours for the external sense, which is satisfied only with the beautiful; the latter for the imagination, which may come to terms even with the ugly. As by a flash of lightning, all the consequences of this striking thought were revealed to us; all previous criticism was thrown away like a worn-out coat.' . . . While Lessing thus in the *Laokoon* brushed away the misinterpretations and arbitrary rules in which pseudo-classicism had buried the works of classic sculpture and poetry, bringing to light their true human outline and their true value for a regeneration of modern art and literature, he was at the same time preparing himself to rescue the

classic drama from a similar perversion and to bring about the final overthrow of pseudo-classicism on the German stage. . . . It would be shutting one's eyes to an apparent fact, not to see that Lessing was in equally close contact with another great movement which, . . . was intimately allied with the eighteenth-century struggle for freedom, and which was destined to become the dominant factor in the history of the nineteenth century; the movement for national consolidation. . . . Nowhere more forcibly than in his dramas has Lessing manifested this twofold quality of his work as standing both for cosmopolitan freedom and for national dignity. . . . In Klopstock we saw the poetic climax of Pietism, in Wieland the literary reflex of Rationalism; Lessing's place is above either of these movements. To put it in a word, he was in the domain of religion what Winckelmann was in the domain of art. He foreshadowed, if he did not fully develop that most powerful and most liberalizing of all modern ideas: the idea of organic growth. . . . During the last year of his life, Lessing formulated his religious views systematically in the inspiring little treatise *The Education of the Human Race* (1780). The fundamental thought of the theological polemics and of Nathan—the conviction that the value of a religion lies, not in its doctrines, but in its views of life; that in all positive religions there is something of the divine truth; that they are all stations, as it were, on the royal path toward the final ideal religion—finds here an expression still more precise and definite. Here the idea of organic growth, which was alluded to at the beginning of this discussion, is set forth, disguised, it is true, in theological language, yet clearly and unequivocally. . . . None of Lessing's works is so characteristic of his religious position, and indeed of his whole intellectual attitude, as this little essay. Lessing does not break loose from the traditional belief, he accepts its premises, he adopts its phraseology. Yet, under his very hands, the old seems to assume a new and different life; its meaning changes; and having started with the conception of an extra-mundane deity, he at last finds himself face to face with a living universe. The theist before our very eyes develops into a pantheist."—K. Francke, *Social forces in German literature*, pp. 265-266, 268-271, 274, 277-278, 287, 297, 298, 299.

"The most valuable part of what the Germans call their classical literature is unquestionably that which took the form of the drama in verse. Other genres flourished and good things were achieved in them; but just as in the Athens of Pericles, the England of Elizabeth and the France of Louis XIV, it is in the poetic drama that we find the form and pressure of the time most richly bodied forth. Lessing led the way with *Nathan the Wise* in 1779."—C. Thomas, *History of German literature*, p. 269.—See also DRAMA: 1700-1800.—At the time of Lessing, and influencing him greatly, was Johann Gottfried Herder (1744-1803). "He had imagination, learning, historical insight, intellectual acumen and prophetic vision: but he lacked literary skill of the humbler sort,—was not a good craftsman with the pen. But he was full of substance."—C. Thomas, *History of German literature*, p. 237.—"Herder was not a star, but a constellation," declared his friend Jean Paul Richter. 'He left no work behind him worthy of his genius, but he was himself one of God's masterpieces.' Though a far greater man than Wieland, he was less of a politician. . . . From the beginning to the end of his career, he

detested the iron rule of great military empires, the creation of force, and the enemies of individual self-realisation. Humanity was his religion, and he was its High Priest. . . . At the age of twenty-five Herder won the prize set by the Berlin Academy for an essay on the reciprocal influence of governments and the sciences. The best method by which the government can promote the intellectual life of a nation, he argues, is by granting liberty of thought, which he defines as 'the fresh air of heaven.' . . . He praises Republics, and states it as an axiom that 'the boldest thoughts of the human spirit are conceived and the fairest plans fulfilled in free States.' Next in merit comes legal and enlightened monarchy; and he frankly prefers the 'fixed laws of a mild monarchy to the average republic.' . . . The main occupation of the early years in Weimar, whither he was summoned at the instance of Goethe, was the 'Philosophy of History,' a panoramic study of the conditions and course of human development. The second volume of his masterpiece sharply attacked Kant's newly published essay on Universal History for its emphasis on the State. . . . He misunderstands Kant's noble conception of the State as organised freedom, and cries 'What an evil principle it is that man is an animal who needs a master and looks for his happiness to one or more of them. . . . His ultimate aim was as noble and his zeal for rational liberty as sincere as that of his old master; but he was incapable of thinking out the construction of a better political system. . . . Herder aged rapidly, and his powers began to flag when he was fifty. 'I am broken and empty,' he wrote to Gleim in 1796. . . . The gospel of the Revolution, *La Carrière ouverte aux talents*, expressed his life-long convictions. Though a man of letters, not a man of action, he realised and taught that the secret of political no less than intellectual progress lay in the ever-widening measure of ordered liberty."—G. P. Gooch, *Germany and the French Revolution*, pp. 160-162, 172-173.—"In [Herder's] work are found, along with much that is confused and erroneous, the germs of the whole literary movement that began with Goethe's *Götz von Berlichingen* and ended with the decadence of romanticism. He is the real father of the historical method. It was he who first expounded, in a large and impressive way, that idea that poetry is everywhere the evolutionary product of national conditions, and that the criteria for judging it should be sought in that fact rather than in abstract and universal canons."—C. Thomas, *History of German literature*, pp. 237-238.

"While so many men of genius were going to ruin through the 'Storm and Stress' influence, there arose a Poet-Pair who stand out alone in German literature and in world literature, in their clearness and in their influence, Goethe and Schiller."

—R. W. Moore, *History of German literature*, pp. 107-108.—Johann Wolfgang von Goethe (1749-1832) "stands in German literature as the first and by far the greatest figure, and also one of the greatest in the literature of the world. His genius was universal, enabling him to work with ease and success in all kinds of literature; he unites more than any other person in perfect harmony, nature and art, life and poetry, form and content. In him the Classical period reached its height, and if we compare him with the other men of this period, we will see that in him were united Klopstock's ability to enrich the language, Lessing's clearness of vision and bold individuality, Wieland's elegance and grace, Herder's universality, and Schiller's rhythm and rhetoric. His works and his influence will endure as long as language lasts."

—R. W. Moore, *History of German literature*, pp. 162-163.—"In fiction . . . [Goethe] produced during the *Sturm und Drang* period [*Die Leiden des jungen Werthers* (1774)]. . . . *Werther* profoundly influenced the development of the German national novel, but it is not, strictly speaking, itself a link in that development. . . . The transition in Goethe's life from *Sturm und Drang* to classicism is a chapter which still awaits exhaustive and conclusive treatment at the hands of the poet's biographers. Goethe's decisive break with the literary ideals of his youth was, in the first instance, occasioned by the change in his life: at the close of 1775 the Duke of Saxe-Weimar invited him to his Court, where before very long the poet became not only the intimate friend, but also the adviser and minister of his patron. The new conditions brought with them more varied responsibilities; they meant a less self-centred life than Goethe had led in Frankfurt; he learned to look upon his own poetic production in a more objective and critical spirit. . . . Goethe's journey to Italy in the years 1786-8 was the central event of his life; it formed the culmination of his first classical period which must be clearly discriminated from the second period of classicism—that of *Hermann und Dorothea* and *Die natürliche Tochter*. In Italy, far removed from the atmosphere in which he had grown up, Goethe acquired for the first time that wonderful power of self-judgment which henceforward distinguishes him among the great poets of the world. . . . The serene greatness of the antique was interpreted by Winckelmann and its reflexion in the Italian art of the Renaissance, became in Goethe's mind not merely the art-canon of a definite age, but an intellectual dogma of universal application. He arrived at no conscious decision—as in his later classical period—in favour of a classical as opposed to a Romantic or German art; he was only firmly convinced that a truly great art should express, above all things, tranquillity of soul. In *Torquato Tasso* (1790) we find the quintessence of Goethe's reflexions on his own life and mission as a poet; in *Wilhelm Meisters Lehrjahre* (1795-6), which had been begun in the early years at Weimar, his ripe conclusions on the great problems of life and art. This novel—and it is not often regarded under this aspect—is the immediate product, the fullest summary, of Goethe's Italian experiences; neither in form nor in substance is it a 'classic' work, but it has in common with classic literature that calm optimism which henceforth Goethe prized above all else."—J. G. Robertson, *Literature in Germany (Cambridge modern history, v. 10, pp. 387, 389-390)*.—"As a poet, an artist, and a man, he [Goethe] was to Germany a possession of inestimable value, because he created and assured for his people their position of spiritual power in the nineteenth century. The poet Goethe and the philosopher Goethe may divide between them whatever of soul-stirring tragedy and wealth of thought is contained in *Faust*; his lyric poetry remains as young, fresh, and beautiful, as on the day when it was written, and opens our eyes to a world of beauty; through *Prometheus*, *Iphigenie*, and *Hermann und Dorothea*, he made accessible to us classical antiquity; in *West-östlicher Divan* he blended two worlds into one, in the universalistic spirit of Herder; he leads us back to Spinoza, like whom he was full of religion; and leads us forward to Darwin, and, in the realms of nature and history, opens for us a view of the whole as well as of the origin and development of the parts. Above all this hovers the idea of pure humanity, like a sun, which we

must not seek pedantically in the form of a systematic philosophy of the world, but in its reflected colour splendour, which shines out of all his poetical works, and, what is more, out of his whole personality."—A. Bielschowsky, *Life of Goethe* (tr. by W. A. Cooper), v. 3, pp. 307-308.—"After all due reservations have been made it remains true that Goethe must be regarded as the most important figure in the history of literature since Shakespeare. In arriving at an estimate we must consider not only height, but also breadth of endeavour and of attainment. Other modern poets have perhaps touched points as high as were ever touched by Goethe. No other poet, no other prose-writer, raised the 'pyramid of his existence,' to use Goethe's own image, so high from a basis so extended. As a lyrical poet, he is the first of his own country. In a certain enormity of lyrical genius and a vast resonance of voice he is, no doubt, surpassed by Victor Hugo, but he is not surpassed in spontaneity, in lucidity, in perfection of workmanship. And in his dramatic work Goethe is incomparably the greater of the two. No poet so eminent has been so vital, so sure, so complete, so creative a critic. No one else equally rich in wisdom concerning human life has been so distinguished through the divinations of science. No other student of the world of nature has offered us so valuable a store of observations on the conduct of life and the formation of character."—E. Dowden, *Goethe: His genius and intellectual development* (Bookman, Feb., 1904, p. 203).

"Taking up, . . . the particular departments of literary work in which [Johann Christoph Friedrich von] Schiller [1759-1805] employed himself, we shall find a variety almost as great as that of Göthe. That he might have become a skilful writer of romances is indicated by the incomplete story of the 'Ghost-seer.' He accomplished more in history, but his labors in this field, though important, were transitory. He was full of the aspiration to set free and help upward humanity, and the historical subjects he chose always had to do with the struggle of humanity toward something higher. The first work he ever projected, before the composition of 'The Robbers,' was a history of the most remarkable rebellions and conspiracies of the middle and modern ages. The works which he did complete were the story of the 'Revolt of the Netherlands,' and the 'Thirty Years' War. . . . Schiller had gifts which might have made him a speculative philosopher instead of a poet. The philosophical and poetical tendencies were at first about equally developed in him, and he was embarrassed between them. He says himself in a letter to Göthe: 'The poet in my youth overcame me when I ought to have philosophized, and the philosophical spirit when I wanted to write poetry. Still it often happens to me that the imagination disturbs my abstractions, and the cold understanding my poetry.' . . . He was also an admirable critic, often not sparing himself. 'The fine arts have no other end than to delight,' was one of his *dicta*,—a judgment in which he combated the view that one of the fine arts, poetry, should teach and exhort, and so pronounced his own condemnation; for his own poetry was always full of lessons and exhortations. He concluded his critical writings with the treatise, the most valuable of the series, . . . 'Upon Naïve and Sentimental Poetry.' His letters are said by Göthe to belong to his best work; he was magnificent in conversation, and, had circumstances afforded him the opportunity, might have become a splendid popular orator. . . . In his lyrics the

man himself constantly shines through; they are not such transcripts of impressions, from which personality has been removed, as we find in Göthe. His first lyrics are blamed as without poetic worth, having, to be sure, enough of passion and fancy, but extravagant and untruthful. Schiller himself afterward condemned them. . . . It seems almost irreverent to touch 'The Walk,' much more the 'Song of the Bell,' with criticism. Yet if we are to judge them by rigid art rules, they are defective. It was Schiller's own dictum that the function of the fine arts, and therefore of poetry, is to give pleasure. If it is made a channel for instruction, it is a perversion, and the perfect effect is in so far hindered. The didactic purpose of these poems is unmistakable. . . . Schiller had plans for great epics, which remained unfulfilled. Descriptive pieces of a shorter kind, romances and ballads, he produced abundantly, and they are among the treasures of German literature."—J. K. Hosmer, *Short history of German literature*, pp. 420-422, 424-425.

"In modern times, . . . Schiller can best stand as the representative German poet. No other is more thoroughly noble; no other so characteristically German. . . . The very limitations of Schiller, as compared with Göthe, make it more appropriate to select him as a typical poet of his race. In so far as Göthe was greater, he lifted himself into the region of the universal, standing for the world, and not a race of men. Schiller, less cosmic, is always the German, and mirrors the German soul. Where Schiller was strongest, as a dramatist, he was, if we except 'Faust,' Göthe's peer. Carlyle, the Diogenes of criticism, jeering and flouting the world from the rugged tub of his uncouth phrase,—so honest and so crabbed,—even Carlyle would hardly have dared to write at last what he once wrote in his youth: "'Faust' is but a careless effusion compared with 'Wallenstein.'" 'It is so great that there is nothing like it in existence.' For nobility of soul Schiller is supreme, and his nobleness is of a German type. . . . In his intellectual traits Schiller is even more thoroughly German than in his character. . . . Poetry was his life task; not because, like Göthe, he sought to reach in it an artistic result, but because he wanted to use it as a medium through which he might express his great ideas of human dignity and freedom. Art with him was a secondary matter, which he often sacrificed to what he felt to be greater. As Göthe was the artist, Schiller was a teacher and preacher. In Schiller the idealistic tendency was very marked. . . . His intercourse with Göthe, and study of Göthe and Homer, corrected his too great subjectivity, while at the same time his interest in his great inspiring ideas—human dignity and freedom—never diminished. His fancy was so creative, his judgment won such certainty, that at last he could create the most vivid pictures of outward nature,—even from the contemplation of phenomena subordinate and trifling, get a perfect sight of the sublimest. . . . Though he grew as an artist constantly greater, he never reached the mark of Göthe. The latter was like the sculptor who forms his statues carefully from living models, moulding, however, the particulars derived from them to the highest expression of bodily and spiritual beauty. Schiller, on the other hand, always proceeding from general ideas, striving to reach for them a corresponding form, was like a sculptor possessed by a thought in embodying which he neglects the study of actual living forms. . . . While Göthe, . . . became blended, as it were, with the world outside of himself, the spirit of Schiller always asserted

itself. 'Even in the best of his characters,' says a critic, 'we rarely see individual beings with sharp, clear-cut features; he expresses himself and his world of ideas; he himself continually *shines through* in his creations. As it is purely impossible to meet the man Göthe in his poems, Schiller, on the other hand, meets us in his personality out of every line he has written, clear and life-warm. Hence it follows that he comes so near to us.'—*Ibid.*, pp. 413-419.—'Goethe and Schiller stand to each other in a relation both of contrast and harmony, similar to that which we found to exist between Herder and Kant. Goethe's chosen field of study was nature and the human affections, Schiller's was history and human aspirations. Goethe's prevailing attitude was one of sympathetic contemplation, Schiller's was one of energetic activity. Goethe, like Herder, looked at life as an organic whole of natural causes and effects. To live one's self out to the full extent of one's faculties, to promote in others the unhampered growth of individuality, to recognise the unity and reasonableness of the whole order of phenomena—this seemed to him the first and most necessary task of civilized man. Schiller, like Kant, looked at life as a continuous struggle for perfection. The victory of mind over matter, of the inner law over outer conditions, of the human will over the inevitableness of fate—this seemed to him the great problem of existence. Goethe strove for aesthetic universality, Schiller strove for moral freedom. But in spite of these far-reaching differences of temper and genius, the mission performed by Goethe and Schiller for modern humanity was essentially the same. On the basis of the most complete intellectual freedom, unhampered by any bias of whatever kind, religious, social, or even national, they reared a structure of poetic symbols embodying the fundamental demands of all religion and bringing out the common ideals of all society and of every race.'—K. Francke, *Social forces in German literature*, p. 335.—'Mutually antithetic as the standpoints of Goethe and Schiller were, time gradually brought about an understanding between the poets. . . . *Über naive und sentimentalische Dichtung* is the key to the friendship of the two poets. It is Schiller's justification of a type of poet directly antithetic to that represented by the Greeks, Shakespeare, and Goethe—a sentimental or modern type of which he regarded himself, and rightly, as a characteristic example. . . . The friendship of Goethe and Schiller, that is to say the eleven years from 1794 to Schiller's death in 1805, represents the summit of German literary achievement, the culminating result in the long process of eighteenth century development towards classicism. As in all classical epochs, the dominant note of the time was one of conscious achievement; 'so herrlich weit,' and they doubted . . . the possibility of the younger generation advancing beyond them. What was written by the great German poets in these years was a ripe, not a ripening, literature; the nation was no longer in the position of Goethe's Iphigenia. . . . The land of the Greeks was found; Hellas was in Weimar.'—J. G. Robertson, *Literature in Germany* (Cambridge modern history, v. 10, pp. 391-393).

'It was a long time before the work of Goethe and Schiller at Weimar took on the glamour of classicity. [See also DRAMA: 1773-1832.] . . . In prose fiction the man of the hour was Jean Paul Friedrich Richter (1763-1825). In respect of literary affinity Richter was a child of the sentimental age; he owed but little to the new romanticism which began to make a stir as a militant

doctrine just as his popularity was culminating.'—C. Thomas, *History of German literature*, pp. 307, 309.—'Jean Paul Friedrich Richter, better known under the name of Jean Paul (1763-1825), was reared under circumstances of privation. . . . In 1790 he struck his own field, the idyl, and *Das Leben des vergnügten Schulmeisterleins Wuz* (Life of the Little Contented Schoolmaster, Wuz), which is one of the most attractive of his works, appeared and founded the reputation that increased with his succeeding humorous novels. *Die Unsichtbare Loge* (The Invisible Lodge) made him at once popular, and opened the way for a life free from financial care. . . . His greatest novels, which at the time of their publication aroused much enthusiasm, are now almost forgotten. . . . Richter had a genuine gift of humor, a strong imagination, and a happy faculty of catching the poetical aspect of everything. His narrative is broad and animated, full of life and action, but his materials are seldom artistically joined together. He runs from one extreme of feeling to another, and incongruous subjects are jostled together in sentences lacking in elegance and grace. He abounds in metaphors, parentheses, and digressions. Although he did influence the humor of his time, and although his contemporaries honored him highly, and thought the twentieth century would rank him among the great men of literature, the present generation esteems him less than ever, and his work has influenced literature less than that of numerous men of inferior talent.'—R. W. Moore, *History of German literature*, pp. 163-164.

1798-1896.—Rise of the Romantic school.—Poetry of Körner and Heine.—Lyric verse.—Freitag and Heyse.—Novels and short stories.—Nietzsche the poet-philosopher.—'Romanticism—a most awkward and inadequate name for a literary, artistic, and philosophical movement of a highly composite character and most diversified ramifications—[was virtually founded by the publication of the *Athanaeum*, 1798 and] coincided, in point of time, with the deepest degradation of the German people under the Napoleonic rule, the formal dissolution of the Holy Roman Empire, the intellectual and moral regeneration of the Prussian state, the rising of the people against the foreign oppressor, the wars of liberation, Napoleon's downfall, the attempted re-establishment of a German federation on a purely dynastic basis, the political and religious reaction of the Holy Alliance, and the beginnings of the liberal struggle for constitutional government.'—K. Francke, *Social forces in German literature*, p. 401.—'Regarded as a whole, German Romanticism is reaction. Nevertheless, as an intellectual, poetico-philosophical reaction, it contains many germs of new development, unmistakable productions of that spirit of progress which, by remoulding the old, creates the new, and by altering boundaries gains territory. The older Romantics begin, without exception, as the apostles of 'enlightenment.' They introduce a new tone into German poetry, give their works a new colour, and, in addition to this, revive both the spirit and the substance of the old fairy-tale, Volkslied, and legend. They exercise at first a fertilising influence upon German science; research in the domains of history, ethnography, and jurisprudence, the study of German antiquity, Indian and Greek-Latin philology, and the systems and dreams of the *Naturphilosophie* all receive their first impulse from Romanticism. They widened the emotional range of German poetry, though the emotions to which they gave expression were more frequently morbid than healthy. As critics, they

originally, and with success, aimed at enlarging the spiritual horizon. In their social capacity they vowed undying hatred to all dead conventionality in the relations between the sexes. The best among them in their youth laboured ardently for the intensification of that spiritual life which is based upon a belief in the supernatural. In politics, when not indifferent, they generally began as very theoretical republicans; who, however, in spite of their cosmopolitanism, strove to elevate and strengthen German patriotism. Unfortunately, their pursuit of all these worthy aims ended in comparative failure. Of all that the German Romanticists produced, little will endure—some masterly translations by A. W. Schlegel [1769-1844], a few of Tieck's productions, a handful of Hardenberg's and another of Eichendorff's lyrics, some of Friedrich Schlegel's essays, a few of Arnim's and Brentano's smaller works [Arnim and Brentano were the leaders of the second or younger Romantic School], a select number of Hoffmann's tales, and some very remarkable dramas and tales from the pen of that eccentric but real genius Heinrich von Kleist. The rest of the life-work of the Romanticists has disappeared from the memory of the present generation."—G. Brandes, *Main currents in nineteenth century literature*, v. 2, pp. 4-5. —"Theodor Körner (1791-1813) will always remain one of the interesting figures in the history and in the poetry of the War of Liberation. . . . He began to write in imitation of Schiller. . . . While he was at the height of happiness, came the German call to arms. . . . While marching toward Leipzig, under Major von Lützow, he wrote his celebrated song, *Lützows wilde Jagd* (Wild Chase). His heroic career from the time he entered the army in March until he was killed in August, 1813, is made immortal in his poems and songs, which his father published under the title of *Leier und Schwert* (Lyre and Sword), in 1814. Some of his poems worthy of special mention are 'The Call,' 'Quick Up, My People! the Fire Signals are Smoking,' *Gebet während der Schlacht* (Prayer during Battle), and *Das Schwerthied* (Sword Song). . . . As a dramatist Körner is almost unknown, but his *Leier und Schwert* songs are familiar to the people. They sang them as they struggled against Napoleon in 1813, 1814, and 1815, and they sang them with the same vigor as they marched against Napoleon III in 1870 and 1871."—R. W. Moore, *History of German literature*, pp. 182-183.

The greatest poet of the era of romanticism which followed the Battle of Waterloo was Heinrich Heine (1797-1856.) "The names of Goethe and Heine must always be mentioned together in connection with German lyric poetry. Heine is one of the most fruitful among German song-writers, and among those who came after Goethe he may perhaps claim the first place as the poet who bears, as no other ever bore, a laughing tear in his scutcheon. His peculiar power lay in the blending of elegy with jest and satire, and his influence on the whole of Europe is not yet exhausted."—W. Scherer, *History of German literature*, p. 281.—"Among the other continuators of the romantic tradition in lyric verse, the most noteworthy are Morike, Storm, and Scheffel. Eduard Morike (1804-75) was a Swabian pastor who led a secluded life, taking little note of the outward turmoil and cleaving to the old poetic creed. . . . The savour of Theodor Storm (1817-88) is very like that of Morike, but with the difference that his verse is redolent of the north—of Schleswig-Holstein and the sea. . . . The prime distinction of Joseph Victor von Scheffel (1826-86) is his humour. [His Ekkehard is the most popular of Ger-

man historical novels.] . . . Gottfried Keller's (1819-90), the wizard story-teller of Zurich, books are on the whole the very best reading to be found in the whole range of nineteenth-century German-fiction. . . .

"Gustav Freytag (1816-95), in point of honours and emoluments one of the most successful German writers of the century, was a Silesian who set out in his youth to become a professional scholar, but gave up that career for letters and journalism. He had already written a number of plays, including the very successful *Journalists* (1852), when he won the memorable triumph of *Debit and Credit* (1854). . . . The great distinction of Paul Heyse (1830-1914) perhaps the most versatile German writer of his century, is to have created a new standard of style and artistic finish for the novelette. . . . His first collection of short stories was published in 1855, and contained the much praised *L'Arrabbiata*. . . . The war of 1870, which in a way realised the long cherished dream of national unity, was not followed by anything like a literary renaissance."—C. Thomas, *History of German literature*, pp. 359, 360, 364, 367, 368, 376.

"The effort to find new moral and spiritual values, . . . [is largely due to] one of the most commanding personalities of modern Europe—the great poet-philosopher Friedrich Nietzsche (1844-1900). For Nietzsche is not, in the narrower sense, a systematic thinker at all: his metaphysics are secondary both in importance and in influence. He is a seer, a proclaimer and a prophet. And the burden of his message which he has embodied in *Thus Spake Zarathustra* (1883-1891) in a form more enduring than brass, is that we recover a sense of the qualitative and save the noblest and most personal elements in human life from obliteration through the tribal instincts of an industrial democracy. . . . Nietzsche is the sworn enemy of all that is negative—mere shirking, mere conformity, mere worldly prudence in the face of valorous instincts. . . . From his despair not so much over the ways and institutions of men, as over their very minds and souls, Nietzsche proceeds, quite naturally, to his conception of the superman. He simply transfers the developmental view of modern biology from the physical to the psychical life and reaches the vision of a race that shall be strong, harmonious and capable of a constant largeness and intensity of experience. It is a popular error to suppose the superman a splendid barbarian astride the neck of his slaves. For, according to Nietzsche, all men, in that age, will be supermen. . . . Not some men but 'man is something that must be overcome—the superman is the meaning of the earth'; not some men but 'man is a rope suspended between animal and superman.' . . . *Thus Spake Zarathustra* . . . is Nietzsche's greatest work, it is the one which has had the widest influence, and also the one in which he spoke frankly as a poet and seer."—L. Lewi-son, *Spirit of modern German literature*, pp. 61-64, 66-67, 72.

18th-19th centuries.—Historical literature. See HISTORY: 23; 25; 27, to 30; 33.

1817-1871.—Drama of Grillparzer. See DRAMA: 1817-1871.

1900-1922.—Naturalism.—Hauptmann and Sudermann.—Poets: Dehmel, Rilke, George, Hofmannstahl, "Buddenbrooks," the culmination of the novel of pure naturalism.—Schnitzler.—Writers of the interpretative novel: Hesse, Böhlau, Huch.—Post-war publication.—"The influence of Nietzsche, though slow at first to gather force, spread rapidly in the early eighteen hundred and nineties. A period of social and economic re-

adjustment had produced the art of the naturalist—the art in which the creative imagination strives to identify itself wholly with the phenomenal world. In its pure form that art endures and must always endure. . . . But a counter-current set in and its swiftness grew under the new impulse which Nietzsche gave it.”—L. Lewisohn, *Spirit of modern German literature*, p. 75.—“A census taken at any time during the past decade or so to determine whom the present generation regards as the greatest living dramatist of Germany would result beyond a peradventure in the overwhelming triumph of Gerhart Hauptmann [1862- ]. . . . The specific nature of his prodigious lyric gifts, notably the lilting melody of his verse, which so often asserts itself triumphantly over the doctrinal veto, springs from a decadent predisposition. The much-abused word decadent is to be taken not at all in a sinister meaning, but to denote a state of overrefinement manifesting itself in a subtle yet sterile receptivity, brooding pensiveness. . . . With his peculiar mental and temperamental equipment he might well have become the foremost lyricist of his generation. When he leaves free rein to his poetic fancy (as here and there already in *Hannele* and throughout *Die Versunkene Glocke*) he gives being to poems of exquisite beauty, veritable asphodel blossoms, fragrant with a delicate and melancholy sweetness. More than that, there is a fine lyric quality in all of Hauptmann’s plays, a *Stimmungszauber* unmatched by any other modern dramatist; even the most crassly naturalistic among them, *Vor Sonnenaufgang*, contains one such scene of great beauty. In this power of drawing the spectator at will into the mood of the play lies Hauptmann’s real strength. It is not, however, for his lyric genius but as a dramatist pure and simple that Hauptmann is worshipped by his contemporaries.”—O. Heller, *Studies in modern German literature*, pp. 119, 123-125.—See also DRAMA: 1871-1921.—Hermann Sudermann’s (1857- ) “importance as a leader in the modern literary movement dates properly from the year 1887, when, besides a collection of short stories entitled *Im Zwielicht* (‘In the Gloaming’), he produced his first work of real significance, the novel *Frau Sorge* (‘Dame Care’), which revealed him at once as a writer of exceptional force and skill and also as a mature philosopher. . . . *Der Katzensteg* (in the English translation ‘Regina’) (1889) is a great book in nearly every sense. Among its many distinctive merits it teaches us to appreciate a profound historic sense in this true son of the modern era. . . . Sudermann’s next novel is neither romantic nor is it a ‘novel with a purpose.’ The breezy story of *Iolanthes Hochzeit* (‘The Wedding of Iolanthe’) (1892) is generally underrated, largely because narrative art is not in itself sufficiently appreciated by Germans (nor, for the matter of that, by Americans). Readers are apt to value a story wholly for the incident; and in this respect *Iolanthes Hochzeit* does not offer anything that is striking. . . . In judging of Sudermann’s next novel, *Es War* (‘Once upon a Time’) (1894), which in some respects is inferior to ‘Dame Care’ and ‘Regina,’ it ought to be remembered that it was written fully ten years before publication. It too, nevertheless, gives ample evidence of the author’s extraordinary faculties and forces, which have contributed in equal shares to its excellence. . . . His characters may fitly be divided into two classes: the active or potent, and the passive or impotent,—the driving and the drifting. To the former goes out the writer’s approval, regardless of fine moral distinctions; to the latter, his sympathy, pity, blame, or contempt. . . . The same idea is preached in

Sudermann’s plays even more emphatically and drastically than in his novels.”—*Ibid.*, pp. 14, 19, 23-25, 27-28.—See also DRAMA: 1871-1921.—The “struggle for liberation is illustrated by Richard Dehmel (b. 1803), one of the most remarkable though also one of the most unequal of modern poets. . . . In his first volume reflection predominates over passion and beauty. . . . The book was characteristically called *Redemptions* (1891). . . . In his . . . volume *The Transformations of Venus* he turned resolutely from the world of individual experience and sought to master his problem by a generalizing and symbolical representation. The attempt, despite the really magnificent *Venus Primitiva* and individual passages of high interest, is a failure. . . . Finally, however, he seems to have realized his frequent failure to render his experience concrete and objective in art and so proceeded to write *Two Souls* (1903). This is a remarkably interesting poem. It is one of the three of four existing experiments at telling a story of modern, civilized life in verse. . . . It was but natural that men of a happier temperament arose who achieved the liberation, the self-directingness, the harmony of the Nietzschean command. They had their struggle; nor were these struggles without dust and heat. But all the discordant notes have been hushed, and no cry of conflict breaks in upon the liquid grace of Rainer Maria Rilke (b. 1875) the majestic sweetness of Stefan George (b. 1868), the ample harmonies of Hugo von Hofmannsthal (b. 1874). I have named the three poets who chiefly represent the cult of pure beauty in the modern literature of the German tongue. . . . All the three poets in question have been reckoned among the symbolists. They transcend, I think, any such classification and seek their lineage among an older and larger order of poets. Beauty is to them the ultimate meaning and reality of things which they draw forth and render permanent in the forms of art, releasing the eternal from the transitory. Their renderings of nature, though often very exact, are always drenched with spirituality; from life they wring its soul of beauty. And always they deliver themselves into the power of the creative imagination, deliberately estranged from science, from formal philosophy, from all the activities of the ‘meddling intellect.’ . . . In their poems substance and form are neither divided nor divisible. Color and melody and rhythm interpenetrate their pure and serene substance and are interpenetrated by it. There is no such thing in their work as poetic ornament or decoration. . . . The poems of Rainer Maria Rilke are all quite brief. They express a mood of the poet, or of an historical or of an imaginary personality. But all, even the concretest in subject—*Songs of the Virgins*, *Charles XII of Sweden Rides Through the Ukraine*, *The Minstrel Sings to a Royal Child*—are raised into a timeless region of beauty. . . . With Stefan George we enter the region of a higher and austere art. . . . He is magnificently himself; he is indeed the leader and inspirer of this whole group. But he served his own apprenticeship under noble masters—Keats and Dante and Goethe. . . . He lends dignity and splendor to the simplest lyrical motives, and evokes in poems of astonishing brevity his personal imaginative experience of both Hellenic antiquity and the Middle Age. . . . The poems are short and written in firm, clear, serenely modulated blank-verse. Pictures and emotions are restrained and finite, seen and felt and then rendered with extraordinary precision. . . . And George’s poems are equally wrought throughout. There is no slovenly word, no weak line, no

flagging of that truly shaping imagination. . . . He has lyrics of Goethean charm and warmth, lyrics that Schumann would have chosen in his deepest and clearest moods; he has stanzas, especially in *The Fear of the Soul*, which are of a broad and rich, though always of an inviolably noble humanity. Hugo von Hofmannsthal is of a warmer, more impetuous nature than George. . . . His lyrics are few, but some of them move us more immediately, especially the matchless *Spring Passage*, a poem which renders the chill, ethereal magic of its scene as unsurpassably as the *Ode to the West Wind* renders the passionate longing and melancholy of Shelley's autumn stricken soul. Then, too, Hofmannsthal has not George's love of the untroubled. The beauty and expressiveness of human gesture and speech have delighted him more, and so he has projected his thoughts and moods in terms of movement and of action. Thus came into being those early one-act plays of his: *The Death of Titian*, *Yesterday*, *Death and the Fool*, which are not really drama at all, but project the conflicting forces, and fix in shadowy action the ideals, of the poet himself. Such methods presuppose a greater poetic copiousness, a longer breath than George's. And that is just what Hofmannsthal has. . . . The development of such a poet tended, of course, toward drama in the stricter sense. And we find him writing sparer, bolder, stormier verse when, as in *Electra* and *Œdipus and the Sphinx*, the figures of his imagination have detached themselves wholly from his personality and stepped out into the objective world. . . . It has been said that words are things. They are far more than that. They are the soul of beauty and meaning which the poet breathes into things. And that is what Rilke and George and Hofmannsthal have done."—L. Lewisohn, *Spirit of modern German literature*, pp. 76-77, 80, 86-88, 92-100.—"The culmination of the novel of pure naturalism in German literature . . . is represented by the most important book . . . *Buddenbrooks* (1901) by Thomas Mann. . . . It is a very long book, like the great novels of the older English school. . . . In its own medium and technique the book is as faultlessly built as the *Œdipus*. . . . The style is very rich and flexible, full of color and constantly just in expression. But there is no note of excess, even in beauty, for that would have been cloying in so long a book. . . . The story that Thomas Mann undertook to tell is that of the decay and extinction of a patrician family of Lübeck merchants. . . . What is new is that Thomas Mann does not seek to illustrate the interactions between men and historical and social changes. . . . We hear of the great events of the world only as they would be mirrored in the minds of this small group of men, not as the historian or the economist would see them. . . . In a word, Thomas Mann tells us the history of the souls and nerves of men from the July revolution to our own insistent and complex civilization. . . . If modern German literature had produced but this one book, it would not stand ignobly or ashamed among the modern literatures of the world. To illustrate . . . real feelings, to tell of the inexorable instincts of the inner man, veiled indeed but unimpaired by the conventions of the emotional life—this is the chief aim of the prose-writings of Arthur Schnitzler (b. 1862). . . . He has, very literally, the physician's union of ruthlessness and tenderness. . . . It is hard to select from among his stories. They differ somewhat, of course, in interest and power. They are equal in execution because that is always flawless. Perhaps the most arresting of them, the last word, too,

in psychological naturalism, is *Leutnant Gustl* (1901). In this story Schnitzler presents . . . a soul under the scientist's microscope. But Schnitzler's naturalism is neither polemic nor morbid. . . . It is difficult to formulate any final description of the rich, sad and yet so incisive art of *Mrs. Bertha Garlan*, *A Farewell*, *The Dead are Silent*, *The Stranger*, *The New Song*, *The Sage's Wife*. The style has an undertone of detachment, as though the stories were really written under the aspect of eternity. But its surface has a gentle glow, or, rather, a lovely and warm patina as on old statuary. The incidents are told and the characters drawn with the rarest insight, the keenest and most flexible intelligence, yet without a shadow of the merely clever. For Schnitzler is absorbed by the poignant beauty of life as it really is, as our true instincts bid us lead it, however we may strive and cry."—*Ibid.*, pp. 48-55.—"Among writers of the interpretative novel preëminence probably belongs to three: Hermann Hesse (b. 1877), Helene Böhlau (b. 1859), and Ricarda Huch (b. 1894). . . . I come now, however, to a book of a very different order, to a masterpiece as massive and complete in its very different way as Thomas Mann's *Buddenbrooks*. It is the high water mark of the achievement of the most gifted woman of modern Germany: *The Recollections of Ludolf Ursleu the Younger* (1893) by Ricarda Huch. . . . Ricarda Huch has a prose style of virile firmness and of the highest intellectual distinction. . . . 'Her spirit throbs continually like a fixed star: I prefer the calm and steady glow of the great planets.' And she has profound sayings which betray her participation in the light which Nietzsche shed upon the character of the moral world. 'This is the nature of genius: that it must not follow existing laws but that, through what it does, it gives laws to the world.'"—*Ibid.*, pp. 102, 104-106.—It is interesting to note that serious topics are engrossing the attention of the German people, and that a heavy historical volume such as Dr. Friedrich Spengler's "Der Untergang des Westens," has proved the most popular book of post-war publications.—See also DRAMA: 1871-1921.

## GERMANY

**Geographical description.—Location and physical features.**—Germany, or more properly speaking the German republic, lies in central Europe and forms a part of the great plain. Before the World War the German empire extended from 5° 52' to 22° 52' E. longitude and from 47° 16' to 55° 53' N. latitude, or 750 miles from east to west and 600 miles from north to south. It occupies a prominent place geographically, bounded as it is by seven countries, and holding a central position with regard to the great highways of Europe. One third of its entire frontage lies along the North and Baltic seas. In spite of this fact Germany has few good harbors and the Baltic ports are ice-bound a large portion of the year. The country falls naturally into three regions: the Alpine foreland, comprising the slopes of the true Alps and extending from lake Constance to the mouth of the Inn, the central highlands, covering the meadow region north of the Danube from the Carpathians to the middle Rhine, and the great northern plain, the lowest, flattest part of the country. Thus one third of Germany is lowland and two thirds highland. The most northerly of the mountain ranges runs east and west at right angles to the great southern range and divides middle Germany into two sections. Back of this northern range lies the Hessian upland and the Volsberg while among the outlying ranges are the famous Hartz mountains. The more southerly of these highlands include the Black Forest, the Swabian and Franconian Jura and the Bavarian forest. The great rivers of Germany flow for the most part towards the north west, and include the Rhine, the Weser, the Elbe, the Oder, and the Vistula. The temperature of the country is not so varied as might be supposed. The Rhine lands are the warmest and the Baltic territories the coldest.

**Area.—Population.—Industry.**—Germany has varied in size throughout her history. Ancient Germany may be said to have been comprised of all the German speaking peoples, which included the inhabitants of Austria, parts of Switzerland and Holland. The German empire which came into being after 1871 was a union of the Northern Confederation (1815-1866) and the southern states exclusive of Austria. It contained twenty-six states: the four kingdoms of Prussia, Bavaria, Saxony and Württemberg, six grand-duchies, five duchies, seven principalities, three free towns and the territory of Alsace-Lorraine. In 1816 the population of Germany was 24,831,306. By the census of 1910 it was estimated to be 63,051,970 and the area 208,780 square miles. The population had

increased 47 per cent since 1871. But changes arranged for by the Treaty of Versailles make considerable difference in the area and population of Germany. Until the changes have been completed no accurate estimate can be given but the probable population of the present eighteen states of the Republic is 59,857,283 and the area 250,471 English square miles. The agricultural and industrial situation of Germany in the twentieth century shows a marked contrast to that of the nineteenth century. In the early part of the last century more than sixty per cent. of the population were engaged in tilling the soil, while by 1882 industry supported almost half the population. This falling off in agricultural pursuits has made Germany a large importer of foods and raw materials. On the other hand its extensive coal and iron beds have made mining an industry of prime importance, and its increased manufacturing has placed it second only to England in Europe. Before the war it was the second largest iron producer in the world and the third largest coal producer. Its iron is centered in Alsace, Prussia, Bavaria and Saxony, and most of its coal, covering an area of 2,800 square miles, lies in the basin of the Ruhr.

**Former colonies.**—Although Germany entered the race for colonial possessions over a hundred years after most of the European colonial empires had been established, it was remarkably successful in acquiring foreign territory. During the sixteen years of colonization (1884-1900) the Germans acquired 1,028,020 square miles of colonial territory, and in 1911 France ceded to Germany over 107,000 square miles of African Congo. At the opening of the World War Germany possessed, besides this section of French Congo, the following dependencies: Togoland; Cameroons; Southwest Africa; East Africa; Kiauchau; German New Guinea; Kaiser Wilhelm's Land, Bismarck Archipelago, Caroline islands, Palau islands, Marianne islands, Solomon islands, Marshall islands, etc.; and two of the Samoan islands. However, Germany lost all of her colonial possessions as a result of the war.

**Language.** See PHILOLOGY: 9.

**National name.**—"The nations of the Germania had no common name recognised by themselves, and were content, when, ages after, they had realised their unity of tongue and descent, to speak of their language simply as the Lingua Theotisca, the language of the people (theod). . . . Whence the name 'Deutsch.' Zeuss derives it rather from the root of 'deuten,' to explain, so that 'theotisc' should mean 'significant.' But the root of 'theod' and 'deuten' is the same. . . . The general name

by which the Romans knew them [Germani] was one which they had received from their Gallic neighbours."—W. Stubbs, *Constitutional History of England*, v. 1, ch. 3, and foot-note—"In Gothic we have 'thiuda,' people; 'thiudisks,' belonging to the people. . . . The High-German, which looks upon Sanskrit 't' and Gothic 'th' as 'd,' possesses the same word, as 'diot,' people; 'diutisc,' popularis; hence Deutsch, German, and 'deuten,' to explain, literally to Germanize.—F. Max Müller, *Lectures on the science of language*, 2nd series, lect. 5.—The account which Tacitus gives of the origin of the name Germany is this: "The name Germany . . . they [the Germans] say, is modern and newly introduced, from the fact that the tribes which first crossed the Rhine and drove out the Gauls, and are now called Tungrians, were then called Germans. Thus what was the name of a tribe, and not of a race, gradually prevailed, till all called themselves by this self-invented name of Germans, which the conquerors had first employed to inspire terror."—Tacitus, *Germany* (tr. by Church and Brodrick), ch. 2.—"It is only at the mouth of the Elbe that the Germany of the really historical period begins: and this is a Germany only in the eyes of scholars, antiquarians, and generalizing ethnologists. Not one of the populations to whom the name is here extended would have attached any meaning to the word, except so far as they had been instructed by men who had studied certain Latin writers. There was no name which was, at one and the same time, native and general. There were native names, but they were limited to special populations. There was a general name, but it was one which was applied by strangers and enemies. What this name was for the northern districts, we know beforehand. It was that of Saxones and Saxonia in Latin; of Sachsen and Sachsenland in the ordinary German. Evidence, however, that any German population ever so named itself is wholly wanting, though it is not impossible that some unimportant tribe may have done so; the only one so called being the Saxons of Ptolemy, who places them, along with several others, in the small district between the Elbe and the Eyder, and on three of the islands off the coast. . . . The Franks gave it its currency and generality; for, in the eyes of a Frank, Saxony and Friesland contained all those parts of Germany which, partly from their difference of dialect, partly from their rudeness, partly from their paganism, and partly from the obstinacy of their resistance, stood in contrast to the Empire of Charlemagne and his successors. A Saxon was an enemy whom the Franks had to coerce, a heathen whom they had to convert. What more the term meant is uncertain."—R. G. Latham, *Introduction to Kemble's "Hortæ Ferales."*—See also ALEMANNI: 213; TEUTONES.

**Tribal military organization and voting.** See COMMITATUS; SUFFRAGE, MANHOOD: A.D. 1st century.

**Early migrations.** See EUROPE: Introduction to historic period; Migrations.

As known to Tacitus.—"Germany is separated from the Galli, the Rhæti, and Pannonii, by the rivers Rhine and Danube; mountain ranges, or the fear which each feels for the other, divide it from the Sarmatæ and Daci. Elsewhere ocean girds it, embracing broad peninsulas and islands of unexplored extent, where certain tribes and kingdoms are newly known to us, revealed by war. The Rhine springs from a precipitous and inaccessible height of the Rhetian Alps, bends slightly westward, and mingles with the Northern Ocean. The Danube pours down from the gradual and gently

rising slope of Mount Abnoba, and visits many nations, to force its way at last through six channels into the Pontus; a seventh mouth is lost in marshes. The Germans themselves I should regard as aboriginal, and not mixed at all with other races through immigration or intercourse. For, in former times, it was not by land but on shipboard that those who sought to emigrate would arrive; and the boundless and, so to speak, hostile ocean beyond us, is seldom entered by a sail from our world. And, besides the perils of rough and unknown seas, who would leave Asia, or Africa, or Italy for Germany, with its wild country, its inclement skies, its sullen manners and aspect, unless indeed it were his home? In their ancient songs, their only way of remembering or recording the past, they celebrate an earth-born god, Tuisco, and his son Mannus, as the origin of their race, as their founders. To Mannus they assign three sons, from whose names, they say, the coast tribes are called Ingævones; those of the interior, Herminones; all the rest, Istævones. Some, with the freedom of conjecture permitted by antiquity, assert that the god had several descendants, and the nation several appellations, as Marsi, Gambriui, Suevi, Vandilii, and that these are genuine old names. The name Germany, on the other hand, . . . is modern and newly introduced."—Tacitus, *Germany* (tr. by Church and Brodrick), ch. 1-2.

**B.C. 12-9.—Campaigns of Drusus.**—The first serious advance of the Roman arms beyond the Rhine was made in the reign of Augustus, by the emperor's step-son, Drusus. Cæsar had crossed the river, only to chastise and terrify the tribes on the right bank which threatened Gaul. Agrippa, some years later, repeated the operation, and withdrew, as Cæsar had done. But Drusus invaded Germany with intentions of conquest and occupation. His first campaign was undertaken in the spring of the year 12 B. C. He crossed the Rhine and drove the Usipetes into their strongholds; after which he embarked his legions on transport ships and moved them down the river to the ocean, thence to coast northwards to the mouth of the Ems, and so penetrate to the heart of the enemy's country. To facilitate this bold movement, he had caused a channel to be cut from the Rhine, at modern Arnheim, to the Zuyder Zee, utilizing the river Yssel. The expedition was not successful and retreated overland from the Frisian coast after considerable disaster and loss. The next year, Drusus returned to the attack, marching directly into the German country and advancing to the banks of the Weser, but retreating, again, with little to show of substantial results. He established a fortified outpost, however, on the Lippe, and named it Aliso. During the same summer, he is said to have fixed another post in the country of the Chatti. Two years then passed before Drusus was again permitted by the emperor to cross the Rhine. On his third campaign he passed the Weser and penetrated the Hercynian forest as far as the Elbe.—the Germans declining everywhere to give him battle. Erecting a trophy on the bank of the Elbe, he retraced his steps, but suffered a fall from his horse, on the homeward march, which caused his death. "If the Germans were neither reduced to subjection, nor even overthrown in any decisive engagement, as the Romans vainly pretended, yet their spirit of aggression was finally checked and from thenceforth, for many generations, they were fully occupied with the task of defending themselves."—C. Merivale, *History of the Romans*, ch. 36.

**B.C. 8-A.D. 11.—Campaigns of Tiberius.**—The work of Roman conquest in Germany, left

unfinished by Drusus, was taken up by his brother Tiberius (afterwards emperor) under the direction of Augustus. Tiberius crossed the Rhine, for the first time, 8 B. C. The frontier tribes made no resistance, but offered submission at once. Tiberius sent their chiefs to Augustus, then holding his court at Lugdunum (Lyons), to make terms with the emperor in person, and Augustus basely treated them as captives and threw them into prison. The following year found the German tribes again under arms, and Tiberius again crossed the Rhine; but it was only to ravage the country, and not to remain. Then followed a period of ten years, during which the emperor's step-son, dissatisfied with his position and on ill terms with Augustus, retired to Rhodes. In the summer of 4 A. D., he returned to the command of the legions on the Rhine. Meantime under other generals,—Domitius and Vinicius,—they had made several campaigns beyond the river; had momentarily crossed the Elbe; had constructed a road to the outposts on the Weser; had fought the Cherusci, with doubtful results, but had not settled the Roman power in Germany. Tiberius invaded the country once more, with a powerful force, and seems to have crushed all resistance in the region between the lower Rhine and the Weser. The following spring, he repeated, with more success, the movement of Drusus by land and sea, sending a flotilla around to the Elbe and up that stream, to a point where it met and co-operated with a column moved overland, through the wilderness. A single battle was fought and the Germans defeated; but, once more, when winter approached, the Romans retired and no permanent conquest was made. Two years later (6 A. D.), Tiberius turned his arms against the powerful nation of the Marcomanni, which had removed itself from the German mark, or border, into the country formerly occupied by the Boii—modern Bohemia. Here, under their able chief Marbod, or Maroboduus, they developed a formidable military organization and became threatening to the Roman frontiers on the Upper Danube. Two converging expeditions, from the Danube and from the Rhine, were at the point of crushing the Marcomanni between them, when news of the alarming revolt, in Pannonia and Dalmatia, called the "Batonian War," caused the making of a hasty peace with Maroboduus. The Batonian or Pannonian war occupied Tiberius for nearly three years. He had just brought it to a close, when intelligence reached Rome of a disaster in Germany which filled the empire with horror and dismay. The tribes in northwestern Germany, between the lower Rhine and the Elbe, supposed to be cowed and submissive, had now found a leader who could unite them and excite them to disdain the Roman yoke. This leader was Arminius, or Hermann, a young chief of the Cherusci, who had been trained in the Roman military service and admitted to Roman citizenship, but who hated the oppressors of his country with implacable bitterness. The scheme of insurrection organized by Arminius was made easy of execution by the insolent carelessness and the incapacity of the Roman commander in Germany, L. Quintilius Varus. It succeeded so well that Varus and his army,—three entire legions, horse, foot and auxiliaries,—probably 20,000 men in all,—were overwhelmed in the Teutoburger Wald, north of the Lippe, and destroyed. Only a few skulking fugitives reached the Rhine and escaped to tell the fate of the rest. This was late in the summer of 9 A. D. In the following spring Tiberius was sent again to the Rhine-frontier, with as powerful a levy of men and equipments as the empire could collect. He was

accompanied by his nephew, Germanicus, son of Drusus, destined to be his successor in the field of German conquest. But dread and fear were in the Roman heart, and the campaign of Tiberius, delayed another twelve months, until 11 A. D., was conducted too cautiously to accomplish any important result. He traversed and ravaged a considerable region of the German country, but withdrew again across the Rhine and left it, apparently, unoccupied. This was his last campaign. Returning to Rome, he waited only two years longer for the imperial sovereignty to which he succeeded on the death of Augustus, who had made him, by adoption, his son and his heir.—C. Merivale, *History of the Romans*, ch. 36-38.

ALSO IN: T. Mommsen, *History of Rome*, bk. 8, ch. 1.—E. Creasy, *Fifteen decisive battles of the world*, ch. 5.—T. Smith, *Arminius*, pt. 1, ch. 4-6.

A. D. 14-16.—Campaigns of Germanicus.—Germanicus—the son of Drusus—was given the command on the Rhine at the beginning of the year 13 A. D. The following year, Augustus died and Tiberius became emperor; whereupon Germanicus found himself no longer restrained from crossing the river and assuming the offensive against Arminius and his tribes. His first movement, that autumn, was up the valley of the Lippe, which he laid waste, far and wide. The next spring, he led one column, from Mentz, against the Chatti, as far as the upper branches of the Weser, while he sent another farther north to chastise the Cherusci and the Marsi, surprising and massacring the latter at their feast of Tanfana. Later in the same year, he penetrated, by a double expedition,—moving by sea and by land, as his father had done before,—to the country between the Ems and the Lippe, and laid waste the territory of the Bructeri, and their neighbors. He also visited the spot where the army of Varus had perished, and erected a monument to the dead. On the return from this expedition, four legions, under Cæcina, were beset in the same manner that Varus had been, and under like difficulties; but their commander was of different stuff and brought them safely through, after punishing his pursuers severely. But the army had been given up as lost, and only the resolute opposition of Agrippina, the wife of Germanicus, had prevented the Roman commander at Vetera, on the Rhine, from destroying the bridge there, and abandoning the legions to their supposed fate. In the spring of 16 A. D., Germanicus again embarked his army, 80,000 strong, at the mouth of the Rhine, on hoard transports, and moved it to the mouth of the Ems, where the fleet remained. Thence he marched up the Ems and across to the Weser, and was encountered, in the country of the Cherusci, by a general levy of the German tribes, led by Arminius and Inguomerus. Two great battles were fought, in which the Romans were victorious. But, when returning from this campaign, the fleet encountered a storm in which so much of it perished, with the troops on board, that the disaster threw a heavy cloud of gloom over the triumph of Germanicus. The young general was soon afterwards recalled, and three years later he died,—of poison, as is supposed,—at Antioch. "The central government ceased from this time to take any warm interest in the subjugation of the Germans; and the dissensions of their states and princes, which peace was not slow in developing, attracted no Roman emissaries to the barbarian camps, and rarely led the legions beyond the frontier, which was now allowed to recede finally to the Rhine."—C. Merivale, *History of the Romans*, ch. 42.

3rd century.—Beginning of the "Wandering of the Nations."—"Towards the middle of the third century, . . . a change becomes perceptible in the relations and attitude of the German peoples. Many of the nations, which have been celebrated in the annals of the classical writers, disappear silently from history; new races, new combinations and confederacies start into life, and the names which have achieved an imperishable notoriety from their connection with the long decay and the overthrow of the Roman Empire, come forward, and still survive. On the soil whereon the Sigambri, Marsi, Chauci, and Cherusci had struggled to preserve a rude independence, Franks and Saxons lived free and formidable; Alemanni were gathered along the foot of the Roman wall which connected the Danube with the Rhine, and had, hitherto, preserved inviolate the *Agri decumates* [territory north of the Danube and east of the Rhine conquered by the Romans from the Germans (See *AGRI DECUMATES*)]; while eastern Germany, allured by the hope of spoil, or impelled by external pressure, precipitated itself under the collective term of Goths upon the shrinking settlements of the Dacia and the Danube. The new appellations which appear in western Germany in the third century have not unnaturally given rise to the presumption that unknown peoples had penetrated through the land, and overpowered the ancient tribes, and national vanity has contributed to the delusion. As the Burgundians . . . were flattered by being told they were descendants of Roman colonists, so the barbarian writers of a later period busied their imaginations in the solitude of monastic life to enhance the glory of their countrymen, by the invention of what their inking of classical knowledge led them to imagine a more illustrious origin. . . . Fictions like these may be referred to as an index of the time when the young barbarian spirit, eager after fame, and incapable of balancing probabilities, first gloated over the marvels of classical literature, though its refined and delicate beauties eluded their grosser taste; but they require no critical examination; there are no grounds for believing that Franks, Saxons, or Alemanni, were other than the original inhabitants of the country, though there is a natural difficulty arising from the want of written contemporary evidence in tracing the transition, and determining the tribes of which the new confederacies were formed. At the same time, though no immigration of strangers was possible, a movement of a particular tribe was not uninfrequent. The constant internal dissensions of the Germans, combined with their spirit of warlike enterprise, led to frequent domestic wars; and the vanquished sometimes chose rather to seek an asylum far from their native soil, where they might live in freedom, than continue as bondmen or tributaries to the conqueror. Of such a nature were the wanderings of the Usipites and Teuchteri [Tenchteri] in Cæsar's time, the removal of the Ubii from Nassau to the neighbourhood of Cöln and Xanthen; and to this must be ascribed the appearance of the Burgundians, who had dwelt beyond the Oder, in the vicinity of the Main and the Necker. Another class of national emigrations, were those which implied a final abandonment of the native Germany with the object of seeking a new settlement among the possessions of the sinking empire. Those of the Goths, Vandals, Alans, Sueves, the second movement of the Burgundians, may be included in this category; the invasions of the Franks, Alemanni, and Saxons, on the contrary, cannot be

called national emigrations, for they never abandoned, with their families, their original birth-place; their outwanderings, like the emigrations of the present day, were partial; their occupation of the enemy's territory was, in character, military and progressive; and, with the exception of the Anglo-Saxon settlement in Britain, their connection with the original stock was never interrupted. In all the migrations of German peoples spoken of from Cæsar downwards, the numbers of the emigrants appear to be enormously exaggerated. The Usipites and Teuchteri are estimated by Cæsar at 430,000 souls. How could such a multitude find nourishment during a three years' wandering? If 80,000 Burgundian Wehrmen came to the Rhine to the assistance of Valentinian, as Cassiodorius, Jerome, and other chroniclers state, the numbers of the whole nation must have approached 400,000, and it is impossible to believe that such a mass could obtain support in the narrow district lying between the Alemanni, the Hermunduri, and the Chatti. In other cases, vague expressions, and still more the wonderful achievements of the Germans in the course of their emigrations, have led to the supposition of enormous numbers; but Germany could not find nourishment for the multitudes which have been ascribed to it. Corn at that period was little cultivated; it was not the food of the people, whose chief support was flesh. . . . The conquests of the barbarians may be ascribed as much to the weakness of their adversaries, to their want of energy and union, as to their own strength. There was, in fact, no enemy to meet them in the field; and their domination was at least, as acceptable to the provincial inhabitants as that of the imbecile, but rapacious ministers of the Roman government. . . . It was not the lust of wandering, but the influence of external circumstances which brought them to the vicinity of the Danube: at first the aggressions of the Romans, then the pressure of the Huns and the Slavonic tribes. The whole intercourse of Germany with Rome must be considered as one long war, which began with the invasion of Cæsar; which, long restrained by the superior power of the enemy, warmed with his growing weakness, and only ended with the extinction of the Roman name. The wars of the third, fourth, and fifth centuries, were only a continuance of the ancient hostility. There might be partial truce, or occasional intermission; some tribes might be almost extirpated by the sword; some, for a time, bought off by money; but Rome was the universal enemy, and much of the internal restlessness of the Germans was no more than the natural movement towards the hostile borders. As the invasion of northern Germany gave rise to the first great northern union, so the conquest of Dacia brought Goths from the Vistula to the south, while the erection of the giant wall naturally gathered the Suevic tribes along its limits, only waiting for the opportunity to break through. Step by step this battle of centuries was fought; from the time of Caracalla the flood turned, wave followed wave like the encroaching tide, and the ancient landmarks receded bit by bit, till Rome itself was buried beneath the waters. . . . Three great confederacies of German tribes, more or less united by birth, position, interest, or language, may be discerned, during this period, in immediate contact with the Romans—the Alemanni, the Goths, and the Franks. A fourth, the Saxons, was chiefly known from its maritime voyages off the coast of Gaul and Britain. There were also many independent peoples which cannot be enumerated among any of the political confederacies, but which acted for themselves, and pursued their individual

ends: such were the Burgundians, the Alans, the Vandals, and the Lombards."—T. Smith, *Arminius*, pt. 2, ch. 1.—See also ALEMANNI; ANGLES; BURGUNDIANS; FRANKS; GOTHIS; LOMBARDS; MARCOMANNI; NIBELUNGENLIED; QUADI; SAXONS; SUEVI; VANDALS.

277.—Invasion by Probus.—The vigorous emperor Probus, who, in the year 277, drove from Gaul the swarms of invaders that had ravaged the unhappy province with impunity for two years past, then crossed the Rhine and harried the country of the marauders, as far as the Elbe and the Neckar. "Germany, exhausted by the ill success of the last emigration, was astonished by his presence. Nine of the most considerable princes repaired to his camp and fell prostrate at his feet. Such a treaty was humbly received by the Germans as it pleased the conqueror to dictate." Probus then caused a stone wall, strengthened at intervals with towers, to be built from the Danube, near Neustadt and Ratisbon, to Wimpfen on the Neckar, and thence to the Rhine, for the protection of the settlers of the "Agri Decumates." But the wall was thrown down, a few years afterwards, by the Alemanni.—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 12.

481-768.—Supremacy of the Franks.—Acquisitions under Clovis and his sons.—Decline of the Merovingian power.—The original dominions of Clovis, or Chlodwig—with whose reign the career of the Franks as a consolidated people began—corresponded nearly to the modern kingdom of Belgium. His first conquests were from the Romans, in the neighboring parts of Gaul, and when those were finished, "the king of the Franks began to look round upon the other German nations settled upon its soil, with a view to the further extension of his power. A quarrel with the Alemanni supplied the first opportunity for the gratification of his ambition. For more than a century the Alemanni had been in undisturbed possession of Alsace, and the adjoining districts; Mainz, Worms, Speyer, Strasburg, Basel, Constanz, Brengenz, lay within their territory. . . . The Vogesen [Vosges] range was a bulwark on the side of Gaul, waste lands separated them from the Burgundians, who were settled about the Jura and in the southwest part of Helvetia, and the Moselle divided them from the Ripuarian Franks. It is unknown whether they formed a state distinct from their brethren on the right of the Rhine; probably such was the case, for the Alemanni, at all times, were divided into separate tribes, between which, however, was generally a common union; nor is it certain whether the Alsatian Alemanni were under one or several Adelings; a single king is mentioned as having fallen in the battle with Chlodwig, who may have been merely an elected military leader. Equally obscure is the cause of their war with Chlodwig, though it has been assumed, perhaps too hastily, . . . that the Frank king became involved in it as an ally of the Ripuarians. The Ripuarian Franks were settled, as the name imports, upon the banks of the Rhine, from the Moselle downwards; their chief seat was the city of Cologne. It is probable that they consisted of the remains of the ancient Ubii, strengthened by the adventurers who crossed over on the first invasion, and the name implies that they were regarded by the Romans as a kind of limanean soldiery. For, in the common parlance of the Romans of that

period, the tract of land lying along the Rhine was called Ripa, in an absolute sense, and even the river itself was not unfrequently denominated by the same title. Ripuarii are Ripa-wehren, Hreop, or Hrepa-wehren, defenders of the shore. About the close of the fifth century these Ripuarii were under the government of a king, named Sigebert, usually called 'the lance.' The story told by modern writers is, that this Sigebert, having fallen into dispute with the Alemanni, called upon Chlodwig for assistance, a call which the young king willingly listened to. The Alemanni had invaded the Ripuarian territory, and advanced within a short distance of Cologne, when Chlodwig and his Franks joined the Ripuarii; a battle took place at Zulpich, about twenty-two English miles from Cologne, which, after a fierce struggle, ended in the defeat of the Alemanni. . . . Chlodwig was following up his victory over the Alemanni, perhaps with unnecessary ferocity, when he was stopped in his course by a flattering embassy from the great Theodorich [who seized the throne of Rome from Odoacer in 493 and founded the Kingdom of the Ostrogoths in Italy]. Many of the Alemanni had submitted, after the death of their chief, on the field of battle. 'Spare us,' they cried, 'for we are now thy people!' but there were many who, abhorring the Frank yoke, fled towards the south, and threw themselves under the protection of the Ostrogothic king, who had possessed himself of the ancient Rhætia and Vindelicia."—T. Smith, *Arminius*, pt. 2, ch. 4.—The sons of Clovis pushed their conquests on the Germanic as well as on the Gallic side of the Rhine. Theodorik, or Theuderik, who reigned at Metz, with the aid of his brother Clotaire, or Chlothar, of Soissons, subjugated the Thuringians, between 515 and 528. "How he [Theuderik] acquired authority over the Alemans and the Bavarians is not known. Perhaps in the subjugation of Thuringia he had taken occasion to extend his sway over other nations; but from this time forth we find not only these, but the Saxons more to the north, regarded as the associates or tributaries of the Eastern or Ripuarian Franks. From the Elbe to the Meuse, and from the Northern Ocean to the sources of the Rhine, a region comprising a great part of ancient Germany, the ascendancy of the Franks was practically acknowledged, and a kingdom was formed [Austrasia—Oster-rike—the Eastern Kingdom] which was destined to overshadow all the other Merovingian [dynasty of Clovis] states. The various tribes which composed its Germanic accretions, remote and exempt from the influences of the Roman civilization, retained their fierce customs and their rude superstitions, and continued to be governed by their hereditary dukes; but their wild masses marched under the standards of the Franks, and conceded to those formidable conquerors a certain degree of political supremacy." When, in 558, Clotaire, by the death of his brothers, became the sole king of the Franks, his empire embraced all Roman Gaul, except Septimania, still held by the Visigoths, and Brittany, but slightly subjected; "while in ancient Germany, from the Rhine to the Weser, the powerful duchies of the Alemans, the Thuringians, the Bavarians, the Frisons, and the Saxons, were regarded not entirely as subject, and yet as tributary provinces." During the next century and a half, the feebleness of the Merovingians lost their hold upon these German tributaries. "As early as the time of Chlothar II the Langobards had recovered their freedom; under Dagobert [621-638], the Saxons; under Sigebert II [638-656], the Thuringians; and now, during the late broils [670-687], the Alemans, the Bavarians and the

Frison." But the vigorous Mayors of the Palace, Pepin Heristal and Charles Martel, applied themselves resolutely to the restoration of the Frank supremacy, in Germany as well as in Aquitaine. Pepin "found the task nearly impossible. Time and again he assailed the Frisons, the Saxons, the Bavarians, and the Alemans, but could bind them to no truce nor peace for any length of time. No less than ten times the Frisons resumed their arms, while the revolts of the others were so incessant that he was compelled to abandon all hope of recovering the southern or Roman part of Gaul, in order to direct his attention exclusively to the Germans. The aid which he received from the Christian missionaries rendered him more successful among them. Those intrepid propagandists pierced where his armies could not. . . . The Franks and the Popes of Rome had a common interest in this work of the conversion of the Germans, the Franks to restrain irruptions, and the Popes to carry their spiritual sway over Europe." Pepin left these unfinished German wars to his son Charles Martel, and Charles prosecuted them with characteristic energy during his first years of power. "Almost every month he was forced into some expedition beyond the Rhine. . . . The Alemans, the Bavarians, and the Frisons, he succeeded in subjecting to a formal confession at least of the Frankish supremacy; but the turbulent and implacable Saxons baffled his most strenuous efforts. Their wild tribes had become, within a few years, a powerful and numerous nation; they had appropriated the lands of the Thuringians and Hassi, or Catti, and joined to themselves other confederations and tribes; and, stretching from the Rhine to the Elbe, offered their marshes and forests a free asylum to all the persecuted sectaries of Odhinn, to all the lovers of native and savage independence. Six times in succession the armies of Karl penetrated the wilderness they called their home, ravaging their fields and burning their cabins, but the Saxon war was still renewed. He left it to the energetic labors of other conquerors, to Christian missionaries, . . . to break the way of civilization into those rude and darkened realms." Charles' sons Pepin the short and Carloman crushed revolts of the Alemans, or Suabians, and the Bavarians in 742, and Carloman humbled the Saxons in a great campaign (744), compelling them in large numbers to submit to Christian baptism. After that, Germany waited for its first entire master—Charlemagne.—P. Godwin, *History of France: Ancient Gaul*, ch. 12-15.—See also EUROPE: Middle Ages: Rise of Frankish kingdom; FRANKS; AUSTRASIA.

ALSO IN: W. C. Perry, *Franks*, ch. 2-6.

687-800.—Rise of the Carolingians and the empire of Charlemagne.—"Towards the close of the Merovingian period, . . . the kingdom of the Franks . . . was divided into four great districts, or kingdoms as they were called: Austrasia, or the eastern kingdom, from the river Rhine to the Meuse, with Metz as its principal city; Neustria, or the western kingdom, extending from Austrasia to the ocean on the west, and to the Loire on the south; Aquitaine, south of that river to the foot of the Pyrenees; and Burgundy, from the Rhone to the Alps, including Switzerland. These four kingdoms became, before the extinction of the Merovingian race, consolidated into two,—viz., Austrasia and Neustria, Eastern and Western Francia,—modern Germany and modern France, roughly speaking,—of which the first was to gain the pre-eminence, as it was the seat of the power of that race of Charlemagne which seized upon the kingdoms of the Merovingians. But in these kingdoms, while the family of Clovis occupied them, the

royal power became more and more feeble as time went on, a condition which is illustrated by the title given in history to these kings,—that of 'rois fainéants' ["do-nothing kings"]. . . . The most powerful officer of a Frankish king was his steward, or, as he was called, the mayor of his palace (q. v.). . . . In Austrasia the office had become hereditary in the family of Pepin of Landen (a small village near Liège), and under its guidance the degenerate children of Clovis in that kingdom fought for the supremacy with those equally degenerate in Neustria, at that time also under the real control of another mayor of the palace, called Ebroin. The result of this struggle, after much bloodshed and misery, was reached in the year 687 at the battle of Testry, in which the Austrasians completely defeated the Neustrians. . . . The Merovingian princes were still nominally kings, while all the real power was in the hands of the descendants of Pepin of Landen, mayors of the palace, and the policy of government was as fully settled by them as if they had been kings de jure as well as de facto. This family produced in its earlier days some persons who have become among the most conspicuous figures in history:—Pepin, the founder; Pepin le Gros, of Héristal; Charles, his son, commonly called Martel, or the Hammerer; Pepin le Bref, under whom the Carolingian dynasty was, by aid of the Pope, recognized as the lawful successor of the Merovingians, even before the extinction of that race; and, lastly, Charles, surnamed the Great, or Charlemagne, one of the few men of the human race who by common consent, have occupied the foremost rank in history. . . . The object of Pepin of Héristal was two-fold,—to repress the disposition of the turbulent nobles to encroach upon the royal authority, and to bring again under the yoke of the Franks those tribes in Germany who had revolted against the Frankish rule owing to the weakness of the Merovingian government. He measurably accomplished both objects. . . . He seems to have had what perhaps is the best test at all times of the claims of a man to be a real statesman: some consciousness of the true nature of his mission,—the establishment of order. . . . His son and successor, Charles Martel, was even more conspicuous for the possession of this genius of statesmanship, but he exhibited it in a somewhat different direction. He, too, strove to hold the nobles in check, and to break the power of the Frisian and the Saxon tribes; and he fought besides, fortunately for his fame, one of the . . . decisive battles in the history of the world, that of Poitiers [or Tours], in 732, by which the Saracens, who had conquered Spain, and who had strong hopes of gaining possession of the whole of Western Europe, were driven back from Northern France, never to return. . . . His son, Pepin le Bref, is equally conspicuous with the rest in history, but in a somewhat different way. He continued the never-ending wars in Germany and in Gaul with the object of securing peace by the sword, and with more or less success. But his career is noteworthy principally because he completed the actual deposition of the last of the Merovingian race, whose nominal servants but real masters he and his predecessors, mayors of the palace, had been, and because he sought and obtained the sanction of the Church for this usurpation. . . . The Pope's position at this time was one of very great embarrassment. Harassed by the Lombards, who were not only robbers, but who were also Arians, and who admitted none of the Catholic clergy to their councils,—with no succor from the Emperors at Constantinople (whose subject he nominally was) against

the Lombards, and, indeed, in open revolt against them because as bishop and patriarch of the West he had forbidden the execution of the decree against the placing of images in the churches,—for these and many such reasons he sorely needed succor, and naturally in his necessity he turned to the powerful King of the Franks. The coronation of Pepin le Bref [752], first by St. Boniface, and then by the Pope himself, was the first step in the fulfilment of the alliance on his part. Pepin was soon called upon to do his share of the work. Twice at the bidding of the Pope he descended from the Alps, and, defeating the Lombards, was rewarded by him and the people of Rome with the title of Patrician. . . . On the death of Pepin, the Lombards again took up arms and harassed the Church's territory. Charlemagne, his successor, was called upon to come to the rescue, and he swept the Lombard power in Italy out of existence, annexing its territory to the Frankish kingdom, and confirming the grant of the Exarchate and of the Pentapolis which his father had made to the Popes. This was in the year 774. . . . For twenty-five years Charlemagne ruled Rome nominally as Patrician, under the supremacy, equally nominal, of the Emperor at Constantinople. The true sovereign, recognized as such, was the Pope or Bishop of Rome, but the actual power was in the hands of the mob, who at one time towards the close of the century, in the absence of both Emperor and Patrician, assaulted the Pope while conducting a procession, and forced him to abandon the city. This Pope, Leo, with a fine instinct as to the quarter from which succor could alone come, hurried to seek Charlemagne, who was then in Germany engaged in one of his never-ending wars against the Saxons. The appeal for aid was not made in vain, and Charles descended once more from the Alps in the summer of 799, with his Frankish hosts. On Christmas day, 800, in the Church of St. Peter . . . Pope Leo, during the mass, and after the reading of the gospel, placed upon the brow of Charlemagne, who had abandoned his northern furs for the dress of a Roman patrician, the diadem of the Cæsars, and hailed him Emperor *Semper Augustus*, while the multitude shouted, 'Carolo, Augusto a Deo coronato magno et pacifico Imperatori Vita et Victoria.' In that shout and from that moment one of the most fruitful epochs of history begins."—C. J. Stillé, *Studies in medieval history*, ch. 3.—See also FRANKS: 768-814.

C. 8th-12th centuries.—Development of feudalism. See FEUDALISM: Continental growth.

768-814.—Charlemagne's system of government.—Rule of the counts and bishops.—*Missi dominici*.—Organization of the army.—"Charlemagne, the son of Pippin, was the mightiest of all the barbarian kings. At the head of his warriors he subjected all the peoples of Germany; he advanced to the east as far as the Elbe, to the west as far as the Ebro. His empire included France, Germany, and north Italy . . . (to say nothing of the Slavic peoples beyond the Elbe who paid tribute). Charlemagne did not attempt to revive the régime of the Roman empire. The great proprietors were not subjected to taxation; the emperor found the great revenues of his private domain sufficient for the maintenance of his court; his army cost him nothing. He concerned himself, therefore, solely with preserving order, with giving judgment in his tribunal, and with assembling his army whenever there was need. They were the counts who performed at once all those functions. . . . Supervision over the counts was necessary; very powerful and independent in

their district—in fact, so independent that some called themselves counts by the grace of God—they used their power to oppress the people. 'Let not the counts,' say the capitularies of Charles, 'compel free men to mow their meadows or reap their fields. . . . Let them not seize by force or by trick the goods of the poor.' To watch the counts, envoys of the king called *missi dominici*, made annual circuits. . . . Bishops and abbots were then great persons, proprietors of immense domains. . . . Each city had its count and its bishop. Charles made the bishop the equal of the count and bade them govern in common. 'We desire,' said he, 'that the bishops aid the counts and the counts aid the bishops, to the end that every man may completely fulfil his function.' The bishop was to excommunicate brigands and rebels, the count was to use constraint against those who disobeyed the bishop. In return for the power which he gave the clergy the emperor himself became the head of the church, 'the bishop of bishops.' 'It pertains to me,' he wrote the pope, 'to defend the holy church of Christ from the infidels without, and to fortify it within by announcing the true faith.' . . . Charlemagne loved letters with that naive admiration that uncultured men often have for that which is written; he loved them also because they seemed to him inseparable from the Christian religion. . . . It is the emperor who names the bishops and the abbots, and it is he who presides at councils. The Frankish kings did not have a discernment fine enough to distinguish the temporal power from the spiritual power; they confused the two and placed them in the same hand. This confusion is the most original characteristic of the Carolingian government. It was destined to have as its result a contest for several centuries between the emperor, the head of the state, and the pope, the head of the church. . . . Charlemagne was before all a war chief. During his life he made fifty-three expeditions. To provide for these incessant wars it was necessary that the people should be an army. Following the custom of the Germanic peoples, all land-owners were also warriors. When the king had determined on war, he ordered the people to assemble at a fixed place; the command coming on one day, it was required that the man be ready on the next. An enormous fine (*heerbann*) was assessed on those who failed to appear. Bishops and abbots were to come as well as the laymen. A letter addressed to the Abbot of Fulda recites, 'We command you to be at the rendezvous on the twentieth of June with your men properly armed and equipped. Repair to the place assigned so that you may be able to fight wherever we shall command you,—that is to say, with your arms, your equipment, and provisions. Each horseman shall have a shield, a lance, a sword, a dagger, a bow, and a full quiver. You shall have on your baggage carts appliances of different sorts, axes, planes, augers, hatchets, pick-axes, iron shovels, and other implements necessary to the army. You will provide food for three months, arms and clothing for six months.' . . . The ancient world came to its end with Charlemagne. He is the last sovereign who succeeded in enforcing the obedience of all peoples of the West. After him Europe was divided into kingdoms, and each kingdom into provinces where each lord governed according to his will. The Catholic clergy participated in government. The pope made alliance with the new barbarian emperor of the West and soon they came into conflict with him as to which of the two should control the other. It was the end of the absolute and universal government of antiquity,"—

GERMAN HOMESTEAD OF 1ST CENTURY

C. Seignobos, *History of medieval and of modern civilization*, pp. 53-61.

800.—Charlemagne's restoration of the Roman empire.—“Three hundred and twenty-four years had passed since the last Cæsar of the West resigned his power into the hands of the senate, and left to his Eastern brother the sole headship of the Roman world. To the latter Italy had from that time been nominally subjected; but it was only during one brief interval, between the death of Totila the last Ostrogothic king and the descent of Alboin the first Lombard, that his power had been really effective. In the further provinces, Gaul, Spain, Britain, it was only a memory. But the idea of a Roman Empire as a necessary part of the world's order had not vanished: it had been admitted by those who seemed to be destroying it; it had been cherished by the Church; was still recalled by laws and customs; was dear to the subject populations, who fondly looked back to the days when slavery was at least mitigated by peace and order. . . . Both the extinction of the Western Empire in [476] . . . and its revival in A. D. 800 have been very generally misunderstood in modern times. . . . When Odoacer compelled the abdication of Romulus Augustulus, he did not abolish the Western Empire as a separate power, but caused it to be reunited with or sink into the Eastern, so that from that time there was, as there had been before Diocletian, a single undivided Roman Empire. In A.D. 800 the very memory of the separate Western Empire, as it had stood from the death of Theodosius till Odoacer, had, so far as appears, been long since lost, and neither Leo nor Charles nor any one among their advisers dreamt of reviving it. They, too, like their predecessors, held the Roman Empire to be one and indivisible, and proposed by the coronation of the Frankish king, not to proclaim a severance of the East and West, but to reverse the act of Constantine, and make Old Rome again the civil as well as the ecclesiastical capital of the Empire that bore her name. . . . Although therefore we must in practice speak during the next seven centuries (down till A.D. 1453, when Constantinople fell before the Mohammedan) of an Eastern and a Western Empire, the phrase is in strictness incorrect, and was one which either court ought to have repudiated. The Byzantines always did repudiate it; the Latins usually; although, yielding to facts, they sometimes condescended to employ it themselves. But their theory was always the same. Charles was held to be the legitimate successor, not of Romulus Augustulus, but of Basil, Heraclius, Justinian, Arcadius, and all the Eastern line. . . . North Italy and Rome ceased for ever to own the supremacy of Byzantium; and while the Eastern princes paid a shameful tribute to the Mussulman, the Frankish Emperor—as the recognised head of Christendom—received from the patriarch of Jerusalem the keys of the Holy Sepulchre and the banner of Calvary; the gift of the Sepulchre itself, says Eginhard, from Aaron king of the Persians [the Caliph Haroun el Rashid]. . . . Four centuries later, when Papacy and Empire had been forced into the mortal struggle by which the fate of both was decided, three distinct theories regarding the coronation of Charles will be found advocated by three different parties, all of them plausible, all of them to some extent misleading. The Swabian Emperors held the crown to have been won by their great predecessor as the prize of conquest, and drew the conclusion that the citizens and bishop of Rome had no rights as against themselves. The patriotic party among the Romans, appealing to the early history

of the Empire, declared that by nothing but the voice of their senate and people could an Emperor be lawfully created, he being only their chief magistrate, the temporary depository of their authority. The Popes pointed to the indisputable fact that Leo imposed the crown, and argued that as God's earthly vicar it was then his, and must always continue to be their right to give to whomsoever they would an office which was created to be the handmaid of their own. Of these three it was the last view that eventually prevailed.”—J. Bryce, *Holy Roman empire*, ch. 4-5.—See also FRANKS: 768-814; ITALY: 843-951.

805.—Conquest of the Avars.—Creation of the Austrian March. See AVARS; AUSTRIA: 805-1246.

814-843.—Division of the empire of Charlemagne.—“There was a manifest conflict, during his later years, in the court, in the councils, in the mind of Charlemagne [who died in 814], between the King of the Franks and the Emperor of the West; between the dissociating, independent Teutonic principle, and the Roman principle of one code, one dominion, one sovereign. The Church, though Teutonic in descent, was Roman in the sentiment of unity. . . . That unity had been threatened by the proclaimed division of the realm between the sons of Charlemagne. The old Teutonic usage of equal distribution seemed doomed to prevail over the august unity of the Roman Empire. What may appear more extraordinary, the kingdom of Italy was the inferior appanage: it carried not with it the Empire, which was still to retain a certain supremacy; that was reserved for the Teutonic sovereign. It might seem as if this were but the continuation of the Lombard kingdom, which Charlemagne still held by the right of conquest. It was bestowed on Pepin; after his death entrusted to Bernhard, Pepin's illegitimate but only son. Wiser counsels prevailed. The two elder sons of Charlemagne died without issue; Louis the third son was summoned from his kingdom of Aquitaine, and solemnly crowned [813] at Aix-la-Chapelle, as successor to the whole Empire.”—H. H. Milman, *History of Latin Christianity*, v. 2, bk. 5, ch. 2.—“Instead of being preoccupied with the care of keeping the empire united, Louis divided it in the year 817 by giving kingdoms to his three sons. The eldest, Lothaire, had Italy; Louis, Bavaria; Pepin, Aquitaine. A nephew of the emperor, Bernard, imagined himself wronged by this partition, and took up arms to hold Italy. Vanquished without striking a blow, he delivered himself up to his uncle, who caused his eyes to be put out. He expired under that torture. Louis reproached himself later for that cruel death, and to expiate it, subjected himself to a public penance. In 823, there was born to him a fourth son. To make him a sharer of his inheritance, the emperor, annulling in 829 the partition of 817, gave him Germany, thus depriving his elder sons of part of the inheritance previously assigned them. This provoked the resentment of those princes; they rose in rebellion against their father, and the rest of the reign of Louis was only a succession of impious contests with his turbulent sons. In 833, he deposed Pepin, and gave his kingdom of Aquitaine to his youngest born, Charles. Twice deposed himself, and twice restored, Louis only emerged from the cloister, for which he was so well fitted, to repeat the same faults. When Louis the Good-natured died in 840, it was not his cause only which he had lost through his weakness, but that of the empire. Those intestine quarrels presaged its dis-

membership, which ere long happened. The sons of Louis, to serve their own ambition, had revived the national antipathies of the different races. Lothaire placed himself at the head of the Italians; Louis rallied the Germans round him, and Charles the Bald the Franks of Gaul, who were henceforward called Frenchmen. Those three peoples aspired to break up the union whose bond Charlemagne had imposed upon them, as the three brothers aspired to form each for himself a kingdom. The question was decided at the great battle of Fontanet, near Auxerre, in 841. Lothaire, who fought therein for the preservation of the empire and of his authority, was conquered. By the treaty of Verdun [843—see VERDUN, TREATY OF] it was decided that Louis should have Germany to the east of the Rhine; Charles, France to the west of the Scheld, the Meuse, the Saone, and the Rhone; finally, Lothaire, Italy, with the long range of country comprised between the Alps and the Cevennes, the Jura, the Saone, the Rhine, and the Meuse, which from his name was called Lotharingia. This designation is still to be traced in one of the recently French provinces. Lorraine.”—S. Miezies, *History of Europe from the decadence of the Western Empire to the Reformation*, ch. 13.—See also ALSACE-LORRAINE: 842-1477; ITALY: 843-951.

843.—Accession of Louis II.

843-962.—Treaty of Verdun.—Definite separation from France.—Kingdom of the East Franks.—The partition of the empire of Charlemagne among his three grandsons, by the Treaty of Verdun, 843 (see VERDUN, TREATY OF; FRANKS: 814-962), gave to Charles the Bald a kingdom which nearly coincided with France, as afterwards existing under that name, “before its Burgundian and German annexations. It also founded a kingdom which roughly answered to the later Germany before its great extension to the East at the expense of the Slavonic nations. And as the Western kingdom was formed by the addition of Aquitaine to the Western Francia, so the Eastern kingdom was formed by the addition of the Eastern Francia to Bavaria. Lewis of Bavaria [surnamed ‘the German’] became king of a kingdom which we are tempted to call the kingdom of Germany. Still it would as yet be premature to speak of France at all, or even to speak of Germany, except in the geographical sense. The two kingdoms are severally the kingdoms of the Eastern and of the Western Franks. . . . The Kings had no special titles, and their dominions had no special names recognized in formal use. Every king who ruled over any part of the ancient Francia was a king of the Franks. . . . The Eastern part of the Frankish dominions, the lot of Lewis the German and his successors, is thus called the Eastern Kingdom, the Teutonic Kingdom. Its king is the King of the East-Franks, sometimes simply the King of the Eastern men, sometimes the King of Germany. . . . The title of King of Germany is often found in the ninth century as a description, but it was not a formal title. The Eastern king, like other kings, for the most part simply calls himself ‘Rex,’ till the time came when his rank as King of Germany, or of the East-Franks, became simply a step towards the higher title of Emperor of the Romans. . . . This Eastern or German kingdom, as it came out of the division of 887 [after the deposition of Charles III, called Charles the Fat, who came to the throne in 881, and who had momentarily reunited all the Frankish crowns, except that of Burgundy], had, from north to south, nearly the same extent as the Germany of later times. It

stretched from the Alps to the Eider. Its southern boundaries were somewhat fluctuating. Verona and Aquileia are sometimes counted as a German march, and the boundary between Germany and Burgundy, crossing the modern Switzerland, often changed. To the north-east the kingdom hardly stretched beyond the Elbe, except in the small Saxon land between the Elbe and the Eider [called ‘Saxony beyond the Elbe’—modern Holstein]. The great extension of the German power over the Slavonic lands beyond the Elbe had hardly yet begun. To the south-east lay the two border-lands or marks; the Eastern Mark, which grew into the later duchy of Oesterreich or the modern Austria, and to the south of it the mark of Kärnthen or Carinthia. But the main part of the kingdom consisted of the great duchies of Saxony, Eastern Francia, Alemannia, and Bavaria. Of these the two names of Saxony and Bavaria must be carefully marked as having widely different meanings from those which they bear on the modern map. Ancient Saxony lies, speaking roughly, between the Eider, the Elbe, and the Rhine, though it never actually touches the last-named river. To the south of Saxony lies the Eastern Francia, the centre and kernel of the German kingdom. The Main and the Neckar both join the Rhine within its borders. To the south of Francia lie Alemannia and Bavaria. This last, it must be remembered, borders on Italy, with Bötzen for its frontier town. Alemannia is the land in which both the Rhine and the Danube take their source; it stretches on both sides of the Bodensee or Lake of Constance, with the Rätian Alps as its southern boundary. For several ages to come, there is no distinction, national or even provincial, between the lands north and south of the Bodensee.”—E. A. Freeman, *Historical geography of Europe*, ch. 6, sect. 1.—See also BELGIUM: Ancient and medieval history; FRANCE: 9th century.

911.—Election of Conrad I.

911-936.—Conrad the Franconian and Henry the Fowler.—Beginning of the Saxon line.—Hungarian invasion.—Building of towns.—In 911, on the death of Louis, surnamed the Child, the German or East-Frank branch of the dynasty of Charlemagne had become extinct. “There remained indeed Charles the Simple, acknowledged as king in some parts of France, but rejected in others, and possessing no personal claims to respect. The Germans therefore wisely determined to choose a sovereign from among themselves. They were at this time divided into five nations, each under its own duke, and distinguished by difference of laws, as well as of origin; the Franks, whose territory, comprising Franconia and the modern Palatinate, was considered as the cradle of the empire, and who seem to have arrogated some superiority over the rest, the Suabians, the Bavarians, the Saxons . . . and the Lorrainers, who occupied the left bank of the Rhine as far as its termination. The choice of these nations in their general assembly fell upon Conrad, duke of Franconia, according to some writers, or at least

a man of high rank, and descended through females from Charlemagne. Conrad dying without male issue, the crown of Germany was bestowed [919] upon Henry the Fowler, duke of Saxony, ancestor of the three Othos, who followed him in direct succession. To Henry, and to the first Otho [936-973], Germany was more indebted than to any sovereign since Charlemagne."—H. Hallam, *Middle Ages*, ch. 5.—"In 924, the Hungarians, who were as much dreaded as the angel of destruction, re-appeared. They came from the grassy plains of Hungary, mounted on small and ugly, but strong horses, and swept along the Danube like a hailstorm. Wherever they came they set fire to farms, hamlets, and towns, and killed all living creatures or carried them off. And often they bound their prisoners to the tails of their horses, and dragged them along till they died from the dreadful torture. Their very figures inspired disgust and terror, for their faces were brown, and disfigured by scars to absolute hideousness; their heads were shaven, and brutal ferocity and rapacity shone out of their deep-set eyes. And though the Germans fought bravely, these enemies always overmatched them, because they appeared now here, now there, on their fleet horses, and fell upon isolated districts before they were expected or could be stopped. . . . When on a sudden the terrible cry, 'The Hungarians are coming, the Hungarians are coming,' resounded through the land, all fled who could, as if the wild legions of hell were marching through Saxony and Thuringia. King Henry, however, would not fly, but encountered them in combat, like a true knight. Yet he lost the battle, either because he was ill, or because his soldiers were too few, and unaccustomed to the enemy's mode of fighting, which enabled them to conquer while they were fleeing. Henry was obliged to shut himself up in the royal palace of Werla, near Goslar, which he bravely defended. The Hungarians stormed it again and again, but they could not scale the walls; while Henry's men by a daring sally took a Hungarian chieftain prisoner, which so terrified the besiegers that they concluded a truce for nine years on condition that their chief should be released, and that Henry should engage to pay a yearly tribute. Henry submitted to the dishonourable sacrifice that he might husband his strength for better times. . . . How important it was to have fortified places which could not be stormed by cavalry, and therefore afforded a safe refuge to the neighbouring peasantry, Henry recognised in 920, when the Hungarians marched through Bavaria and Suabia to Lorraine, plundered the time-honoured monastery of St. Gall, and burnt the suburbs of Constance, but could not take the fortified town itself. Henry, accordingly, published an order throughout the land, that at suitable places large fortresses should be built, in which every ninth man from the neighbouring district must take garrison duty. Certainly living in towns was contrary to the customs of the North Germans, and here and there there was much resistance; but they soon recognized the wisdom of the royal order, and worked night and day with such diligence that there soon arose throughout the land towns with stately towers and strong walls, behind whose battlements the armed burghers defiantly awaited the Hungarians. Hamburg was then fortified, Itzehoe built, the walls of Magdeburg, Halle, and Erfurt extended, for these towns had stood since the time of Charlemagne. Quedlinburg, Merseburg, Meissen, Wittenberg, Goslar, Soest, Nordhausen, Duderstadt, Gronau, Pödde, were rebuilt, and many others of

which the old chroniclers say nothing. Those who dwelt in the cities were called burghers, and in order that they might not be idle they began to practise many kinds of industry, and to barter their goods with the peasants. The emperor encouraged the building of towns, and granted emancipation to every slave who repaired to a town, allowed the towns to hold fairs and markets, granted to them the right of coining money and levying taxes, and gave them many landed estates and forests. Under such encouragement town life rapidly developed, and the emperor, in his disputes with the lawless nobility, always received loyal support from his disciplined burghers. After a few centuries the towns, which had now generally become republics, under the name of 'free imperial towns,' became the seats of the perfection of European trade, science, and culture. . . . These incalculable benefits are due to Henry's order to build towns."—A. W. Grube, *Heroes of history and legend*, ch. 8.—At the expiration of the nine years' truce, the Hungarians resumed their attacks, and were defeated by Henry in two bloody battles.—See also HUNGARY: 934-955.

936-973.—Restoration of the Roman empire by Otto I, called the Great.—"Otho the Great, son and successor of Henry I., added the kingdom of Italy to the conquests of his father, and procured also the Imperial dignity for himself, and his successors in Germany. Italy had become a distinct kingdom since the revolution, which happened (888) at the death of the Emperor Charles the Fat. Ten princes in succession occupied the throne during the space of seventy-three years. Several of these princes, such as Guy, Lambert, Arnulf, Louis of Burgundy, and Berenger I., were invested with the Imperial dignity. Berenger I., having been assassinated (924), this latter dignity ceased entirely, and the city of Rome was even dismembered from the kingdom of Italy. The sovereignty of that city was seized by the famous Marozia, widow of a nobleman named Alberic. She raised her son to the pontificate by the title of John XI.; and the better to establish her dominion, she espoused Hugo King of Italy (932), who became, in consequence of this marriage, master of Rome. But Alberic, another son of Marozia, soon stirred up the people against this aspiring princess and her husband Hugo. Having driven Hugo from the throne, and shut up his mother in prison, he assumed to himself the sovereign authority, under the title of Patrician of the Romans. At his death (954) he transmitted the sovereignty to his son Octavian, who, though only nineteen years of age, caused himself to be elected pope, by the title of John XII. This epoch was one most disastrous for Italy. The weakness of the government excited factions among the nobility, gave birth to anarchy, and fresh opportunity for the depredations of the Hungarians and Arabs, who, at this period, were the scourge of Italy, which they ravaged with impunity. Pavia, the capital of the kingdom, was taken, and burnt by the Hungarians. These troubles increased on the accession of Berenger II. (950), grandson of Berenger I. That prince associated his son Adelbert with him in the royal dignity; and the public voice accused them of having caused the death of King Lothaire, son and successor of Hugo Lothaire left a young widow, named Adelaide, daughter of Rodolph II., King of Burgundy and Italy. To avoid the importunities of Berenger II., who wished to compel her to marry his son Adelbert, this princess called in the King of Germany to her aid. Otho complied with the solicitations of the distressed queen; and, on this occasion,

undertook his first expedition into Italy (951). The city of Pavia, and several other places, having fallen into his hands, he made himself be proclaimed King of Italy, and married the young queen, his protégée. Berenger and his son, being driven for shelter to their strongholds, had recourse to negotiation. They succeeded in obtaining for themselves a confirmation of the royal title of Italy, on condition of doing homage for it to the King of Germany. . . . It appears that it was not without the regret, and even contrary to the wish of Adelaide, that Otho agreed to enter into terms of accommodation with Berenger. . . . Afterwards, however, he lent a favourable ear to the complaints which Pope John XII. and some Italian noblemen had addressed to him against Berenger and his son; and took occasion, on their account, to conduct a new army into Italy (961). Berenger, too feeble to oppose him, retired a second time within his fortifications. Otho marched from Pavia to Milan, and there made himself be crowned King of Italy; from thence he passed to Rome, about the commencement of the following year. Pope John XII., who had himself invited him, and again implored his protection against Berenger, gave him, at first, a very brilliant reception; and revived the Imperial dignity in his favour, which had been dormant for thirty-eight years. It was on the 2d of February, 962, that the Pope consecrated and crowned him Emperor; but he had soon cause to repent of this proceeding. Otho, immediately after his coronation at Rome, undertook the siege of St. Leon, a fortress in Umbria, where Berenger and his queen had taken refuge. While engaged in the siege, he received frequent intimations from Rome, of the misconduct and immoralities of the Pope. The remonstrances which he thought it his duty to make on this subject, offended the young pontiff, who resolved, in consequence, to break off union with the Emperor. Hurried on by the impetuosity of his character, he entered into a negotiation with Adelbert; and even persuaded him to come to Rome, in order to concert with him measures of defence. On the first news of this event, Otho put himself at the head of a large detachment, with which he marched directly to Rome. The Pope, however, did not think it advisable to wait his approach, but fled with the King, his new ally. Otho, on arriving at the capital, exacted a solemn oath from the clergy and the people, that henceforth they would elect no pope without his counsel, and that of the Emperor and his successors. Having then assembled a council, he caused Pope John XII. to be deposed; and Leo VIII. was elected in his place. This latter Pontiff was maintained in the papacy, in spite of all the efforts which his adversary made to regain it. Berenger II., after having sustained a long siege at St. Leon, fell at length (964) into the hands of the conqueror, who sent him into exile at Bamberg, and compelled his son, Adelbert, to take refuge in the court of Constantinople. All Italy, to the extent of the ancient kingdom of the Lombards, fell under the dominion of the Germans; only a few maritime towns in Lower Italy, with the greater part of Apulia and Calabria, still remained in the power of the Greeks. This kingdom, together with the Imperial dignity, Otho transmitted to his successors on the throne of Germany. From this time the Germans held it to be an inviolable principle, that as the Imperial dignity was strictly united with the royalty of Italy, kings elected by the German nation should, at the same time, in virtue of that election, become Kings of Italy

and Emperors. The practice of this triple coronation, viz., of Germany, Italy, and Rome, continued for many centuries; and from Otho the Great, till Maximilian I. (1508), no king of Germany took the title of Emperor, until after he had been formally crowned by the Pope."—C. W. Koch, *Revolutions of Europe, period 3.*—"At the first glance it would seem as if the relation in which Otho now stood to the pope was the same as that occupied by Charlemagne; on a closer inspection, however, we find a wide difference. Charlemagne's connexion with the see of Rome was produced by mutual need; it was the result of long epochs of political combination embracing the development of various nations; their mutual understanding rested on an internal necessity, before which all opposing views and interests gave way. The sovereignty of Otho the Great, on the contrary, rested on a principle fundamentally opposed to the encroachment of spiritual influences. The alliance was momentary; the disruption of it inevitable. But when, soon after, the same pope who had invoked his aid, John XII., placed himself at the head of a rebellious faction, Otho was compelled to cause him to be formally deposed, and to crush the faction that supported him by repeated exertions of force, before he could obtain perfect obedience; he was obliged to raise to the papal chair a pope on whose co-operation he could rely. The popes have often asserted that they transferred the empire to the Germans; and if they confined this assertion to the Carolingian race, they are not entirely wrong. The coronation of Charlemagne was the result of their free determination. But if they allude to the German emperors, properly so called, the contrary of their statement is just as true; not only Carlmann and Otho the Great, but their successors, constantly had to conquer the imperial throne, and to defend it, when conquered, sword in hand. It has been said that the Germans would have done more wisely if they had not meddled with the empire; or, at least, if they had first worked out their own internal political institutions, and then, with matured minds, taken part in the general affairs of Europe. But the things of this world are not wont to develop themselves so methodically. A nation is often compelled by circumstances to increase its territorial extent, before its internal growth is completed. For was it of slight importance to its inward progress that Germany thus remained in unbroken connexion with Italy?—the depository of all that remained of ancient civilisation, the source whence all the forms of Christianity had been derived. The mind of Germany has always unfolded itself by contact with the spirit of antiquity, and of the nations of Roman origin. . . . The German imperial government revived the civilising and Christianising tendencies which had distinguished the reigns of Charles Martell and Charlemagne. Otho the Great, in following the course marked out by his illustrious predecessors, gave it a fresh national importance by planting German colonies in Slavonian countries simultaneously with the diffusion of Christianity. He Germanised as well as converted the population he had subdued. He confirmed his father's conquests on the Saale and the Elbe, by the establishment of the bishoprics of Meissen and Osterland. After having conquered the tribes on the other side the Elbe in those long and perilous campaigns where he commanded in person, he established there, too, three bishoprics, which for a time gave an extraordinary impulse to the progress of conversion. . . . And even where the project of Germanising the population was

out of the question, the supremacy of the German name was firmly and actively maintained. In Bohemia and Poland bishoprics were erected under German metropolitans; from Hamburg Christianity found its way into the north; missionaries from Passau traversed Hungary, nor is it improbable that the influence of these vast and sublime efforts extended even to Russia. The German empire was the centre of the conquering religion; as itself advanced, it extended the ecclesiastico-military State of which the Church was an integral part; it was the chief representative of the unity of western Christendom, and hence arose the necessity under which it lay of acquiring a decided ascendancy over the papacy. This secular and Germanic principle long retained the predominancy it had triumphantly acquired. . . . How magnificent was the position now occupied by the German nation, represented in the persons of the mightiest princes of Europe and united under their sceptre; at the head of an advancing civilisation, and of the whole of western Christendom; in the fullness of youthful aspiring strength! We must here however remark and confess, that Germany did not wholly understand her position, nor fulfil her mission. Above all, she did not succeed in giving complete reality to the idea of a western empire, such as appeared about to be established under Otho I. Independent and often hostile, though Christian powers arose through all the borders of Germany; in Hungary and in Poland, in the northern as well as in the southern possessions of the Normans; England and France were snatched again from German influence. Spain laughed at the German claims to a universal supremacy; her kings thought themselves emperors; even the enterprises nearest home—those across the Elbe—were for a time stationary or retrograde. If we seek for the causes of these unfavourable results, we need only turn our eyes on the internal condition of the empire, where we find an incessant and tempestuous struggle of all the forces of the nation. Unfortunately the establishment of a fixed rule of succession to the imperial crown was continually prevented by events.”—L. Ranke, *History of the Reformation in Germany, introduction*.—See also HOLY ROMAN EMPIRE: 962; ITALY: 961-1039.

955.—Great defeat and repulse of the Hungarians by Otho I. See HUNGARY: 934-955.

973-1056.—End of the Saxon line.—Election of Conrad II., duke of Franconia.—Henry III. and the reformation of the papacy.—Otho II. had a short and troubled reign, 973-983 A.D., having to repress the Slavi, the Danes, the Greeks of Lower Italy, and to defend Lorraine against the French [see LORRAINE: 911-980]. He died at Rome in his twenty-eighth year, 983 A.D. Otho III. (aged three years) succeeded under the regency of his mother, Theophania (a Greek princess), who had to contend with the rebellious nobles, the Slavi, the Poles, the Bohemians, and with France, which desired to conquer Lorraine. This able lady died 991 A.D. Otho III. made three expeditions into Italy, and in 998 A.D. put down the republic of Rome, which had been created by the patrician Crescentius. The resistance of Crescentius had been pardoned the preceding year, but on this occasion he was publicly beheaded on the battlements of Rome, in view of the army and of the people. In 999 A.D. Otho placed his tutor Gerbert in the papal chair as Sylvester II. The tutor and the emperor were in advance of their age. The former had gleaned from Saracen translations from the Greek, as well as from Latin literature, and was master of

the science of the day. It is supposed that they had planned to remove the seat of empire to Rome—a project which, had he lived, he would not have been able to carry out, for the centre of political power had long moved northward; he died at the early age of twenty-two, 1002 A.D. Henry II. (the Holy), Duke of Bavaria, was elected emperor, and had to battle, like his predecessors, with rebellious nobles, with the Poles, and Bohemians, and the Slavi. He was thrice in Italy, and died 1024 A.D. [end of the Saxon line]. ‘Perhaps, with the single exception of St. Louis IX., there was no other prince of the middle ages so uniformly swayed by justice.’ Conrad II. (the Salic) of Franconia was elected emperor in a diet in the plains between Mentz and Worms, near Oppenheim, which was attended by princes, nobles, and 50,000 people altogether. His reign was remarkable for the justice and mercy which he always kept in view. [Under him and his successor the empire is generally considered to have reached its height (1024-1056).] The kingdom of Arles and Burgundy was united to the empire, 1033 A.D. [see BURGUNDY: 1032]. He checked the Poles, the Hungarians, and the Lombards, and gave Schleswick to Denmark as a fief. In 1037 A.D. he granted to the lower vassals of the empire the hereditary succession to their offices and estates, and so extended the privileges of the great nobles, as to make them almost independent of the crown [At the same time he brought many of the stem duchies into his own hands and contrived to have his son made duke of Franconia, Swabia and Bavaria]. Henry III. succeeded, 1039 A.D., and established the imperial power with a high hand.”

—W. B. Boyce, *Introduction to the study of history*, pp. 230-231.—“Henry III. was, as sovereign, able, upright, and resolute; and his early death—for his reign was cut short by disasters that preyed upon his health—is one of the calamities of history. The cause of the Roman Court he judged with vigor and good sense. His strong hand, more than any man’s, dragged the Church out of the slough it had fallen into. . . . A few years before, in 1033, a child ten years old, son of one of the noble houses, had been put on the papal throne, under the name of Benedict IX.; and was restored to it by force of arms, five years later, when he had grown into a lewd, violent, and wilful boy of fifteen. At the age of twenty-one he was weary of the struggle, and sold out, for a large sum of money paid down, to a rich purchaser,—first plundering the papal treasury of all the funds he could lay his hands on. His successor, Gregory VI., naturally complained of his hard bargain, which was made harder by another claimant (Sylvester III.), elected by a different party; while no law that could possibly be quoted or invented would make valid the purchase and sale of the spiritual sovereignty of the world, which in theory the Papacy still was. Gregory appears to have been a respectable and even conscientious magistrate, by the standard of that evil time. But his open purchase of the dignity not only gave a shock to whatever right feeling there was left, but it made the extraordinary dilemma and scandal of three popes at once,—a knot which the German king, now Emperor, was called in to cut. . . . The worthless Benedict was dismissed, as having betrayed his charge. The impotent Sylvester was not recognized at all. The respectable Gregory was duly convinced of his deep guilt of Simony,—because he had ‘thought that the gift of God could be purchased with money,’—and was suffered as a penitent to end his days in peace. A fourth, a German ecclesiastic, who was clean of

all these intrigues, was set in the chair of Peter, where he reigned righteously for two years under the name of Clement II.—J. H. Allen, *Christian history in its three great periods: Second period*, pp. 57-58.—“With the popes of Henry’s appointment a new and most powerful force rose to the control of the papacy—a strong and earnest movement for reformation which had arisen outside the circle of papal influence during the darkest days of its degradation, indeed, and entirely independent of the empire. This had started from the monastery of Cluny, founded in 910, in eastern France, as a reformation of the monastic life, but it involved gradually ideas of a wider reformation throughout the whole church. Two great sins of the time, as it regarded them, were especially attacked, the marriage of priests and simony, or the purchase of ecclesiastical preferment for money, including also appointments to church offices by temporal rulers. . . . The earnest spirit of Henry III. was not out of sympathy with the demand for a real reformation, and with the third pope of his appointment, Leo IX., in 1048, the ideas of Cluny obtained the direction of affairs. . . . One apparently insignificant act of Leo’s had important consequences. He brought back with him to Rome the monk Hildebrand. He had been brought up in a monastery in Rome in the strictest ideas of Cluny, had been a supporter of Gregory VI., one of the three rival popes deposed by Henry, who, notwithstanding his outright purchase of the papacy, represented the new reform demand, and had gone with him into exile on his deposition. It does not appear that he exercised any decisive influence during the reign of Leo IX., but so great was his ability and such the power of his personality that very soon he became the directing spirit in the papal policy, though his influence over the papacy before his own pontificate was not so great nor so constant as it has sometimes been said to have been. So long as Henry lived the balance of power was decidedly in favor of the emperor, but in 1056 happened that disastrous event, which occurred so many times at critical points of imperial history, from Arnulf to Henry VI., the premature death of the emperor. His son, Henry IV., was only six years old at his father’s death, and a minority followed just in the crisis of time needed to enable the feudal princes of Germany to recover and strengthen their independence against the central government, and to give free hands to the papacy to carry out its plans for throwing off the imperial control. Never again did an emperor occupy, in respect either to Germany or the papacy, the vantage-ground on which Henry III. had stood.—G. B. Adams, *Civilization during the Middle Ages*, ch. 10.

1056-1122.—Chief points of the reform movement.—Investiture conflict between Henry IV and Pope Gregory VII.—Struggle continued by Henry V.—Concordat of Worms (1122).—“The triumph of the reform movement and of its ecclesiastical theory is especially connected with the name of Hildebrand, or Gregory VII., as he called himself when pope, and was very largely,

it not entirely, due to his indomitable spirit and iron will, which would yield to no persuasion or threats or actual force. He is one of the most interesting personalities of history. . . . The three chief points which the reform party attempted to gain were the independence of the church from all outside control in the election of the pope, the celibacy of the clergy, and the abolition of simony or the purchase of ecclesiastical preferment. The foundation for the first of these was laid under Nicholas II. by assigning the selection of the pope to the college of cardinals in Rome, though it was only after some considerable time that this reform was fully secured. The second point, the celibacy of the clergy, had long been demanded by the church, but the requirement had not been strictly enforced, and in many parts of Europe married clergy were the rule. . . . As interpreted by the reformers, the third of their demands, the suppression of simony, was as great a step in advance and as revolutionary as the first. Technically, simony was the sin of securing an ecclesiastical office by bribery, named from the incident recorded in the eighth chapter of the Acts concerning Simon Magus. But at this time the desire for the complete independence of the church had given to it a new and wider meaning which made it include all appointment to positions in the church by laymen, including kings and the emperor. . . . According to the conception of the public law the bishop was an officer of the state. He had, in the great majority of cases, political duties to perform as important as his ecclesiastical duties. The lands which formed the endowment of his office had always been considered as being, still more directly than any other feudal land, the property of the state. . . . It was a matter of vital importance whether officers exercising such important functions and controlling so large a part of its area—probably everywhere as much as one-third of the territory—should be selected by the state or by some foreign power beyond its reach and having its own peculiar interests to seek. But this question of lay investiture was as vitally important for the church as for the state. . . . It was as necessary to the centralization and independence of the church that it should choose these officers as that it should elect the head of all—the pope. This was not a question for Germany alone. Every northern state had to face the same difficulty. . . . The struggle was so much more bitter and obstinate with the emperor than with any other sovereign because of the close relation of the two powers one to another, and because the whole question of their relative rights was bound up with it. It was an act of rebellion on the part of the papacy against the sovereign, who had controlled it with almost absolute power for a century, and it was rising into an equal, or even superior, place beside the emperor of what was practically a new power, a rival for his imperial position. . . . It was absolutely impossible that a conflict with these new claims should be avoided as soon as Henry IV. arrived at an age to take the government into his own hands and attempted to exercise his imperial rights as he understood them.”—G. B. Adams, *Civilization during the Middle Ages*, ch. 10.—“At Gregory’s accession, he [Henry] was a young man of twenty-three. His violence had already driven a whole district into rebellion. . . . The Pope sided with the insurgents. He summoned the young king to his judgment-seat at Rome; threatened at his refusal to ‘cut him off as a rotten limb’; and passed on him the awful sentence of excommunication. The double terror of rebellion at home

and the Church's curse at length broke down the passionate pride of Henry. Humbled and helpless, he crossed the Alps in midwinter, groping among the bleak precipices and ice-fields,—the peasants passing him in a rude sledge of hide down those dreadful slopes,—and went to beg absolution of Gregory at the mountain castle of Canossa [1077]. History has few scenes more dramatic than that which shows the proud, irascible, crest-fallen young sovereign confronted with the fiery, little, indomitable old man. To quote Gregory's own words:—'Here he came with few attendants, and for three days before the gate—his royal apparel laid aside, barefoot, clad in wool, and weeping abundantly—he never ceased to implore the aid and comfort of apostolic mercy, till all there present were moved with pity and compassion; insomuch that, interceding for him with many prayers and tears they all wondered at my strange severity, and some even cried out that it was not so much the severe dignity of an apostle as the cruel wrath of a tyrant. Overcome at length by the urgency of his appeal and the entreaties of all present, I relaxed the bond of anathema, and received him to the favor of communion and the bosom of our holy Mother the Church.' It was a truce which one party did not mean nor the other hope to keep. It was policy, not real terror or conviction, that had led Henry to humble himself before the Pope. It was policy, not contrition or compassion, that had led Gregory (against his better judgment, it is said) to accept his Sovereign's penance. In the war of policy, the man of the world prevailed. Freed of the Church's curse, he quickly won back the strength he had lost. He overthrew in battle the rival whom Gregory upheld. He swept his rebellious lands with sword and flame. He carried his victorious army to Rome, and was there crowned Emperor by a rival Pope [1084]. Gregory himself was only saved by his ferocious allies, Norman and Saracen, at cost of the devastation of half the capital,—that broad belt of ruin which still covers the half mile between the Coliseum and the Lateran gate. Then, hardly rescued from the popular wrath, he went away to die, defeated and heart-broken, at Salerno, with the almost despairing words on his lips: 'I have loved righteousness and hated iniquity, and therefore I die in exile!' But 'a spirit hath not flesh or bones,' as a body hath, and so it will not stay mangled and bruised. The victory lay, after all, with the combatant who could appeal to fanaticism as well as force."—J. H. Allen, *Christian history in its three great periods: Second period*, pp. 69-72.—"Meanwhile, the Saxons had recognized Hermann of Luxemburg as their King, but in 1087 he resigned the crown; and another claimant, Eckbert, Margrave of Meissen, was murdered. The Saxons were now thoroughly weary of strife, and as years and bitter experience had softened the character of Henry, they were the more willing to return to their allegiance. Peace was therefore, for a time, restored in Germany. The Papacy did not forgive Henry. He was excommunicated several times, and in 1091 his son Conrad was excited to rebel against him. In 1104 a more serious rebellion was headed by the Emperor's second son Henry, who had been crowned King, on promising not to seize the government during his father's lifetime, in 1099. The Emperor was treated very cruelly, and had to sign his own abdication at Ingelheim in 1105. A last effort was made on his behalf by the Duke of Lotharingia; but worn out by his sorrows and struggles, Henry died in August, 1106. His body lay in a stone coffin in

an unconsecrated chapel at Speyer for five years. Not till 1111, when the sentence of excommunication was removed, was it properly buried. Henry V. was not so obedient to the Church as the Papal party had hoped. He stoutly maintained the very point which had brought so much trouble on his father. The right of investiture, he declared, had always belonged to his predecessors, and he was not to give up what they had handed on to him. In 1110 he went to Rome, accompanied by a large army. Next year Pope Paschal II. was forced to crown him Emperor; but as soon as the Germans had crossed the Alps again Paschal renewed all his old demands. The struggle soon spread to Germany. The Emperor was excommunicated; and the discontented princes, as eager as ever to break the royal power, sided with the Pope against him. Peace was not restored till 1122, when Calixtus II. was Pope. In that year, in a Diet held at Worms, both parties agreed to a compromise, called the Concordat of Worms."—J. Sime, *History of Germany*, ch. 8.—"The long-desired reconciliation was effected in the form of the following concordat. The emperor renounced the right of investiture with the ring and crosier, and conceded that all bishoprics of the empire should be filled by canonical election and free consecration; the election of the German bishops (not of the Italian and Burgundian) should be held in presence of the emperor; the bishops elect should receive investiture, but only of their fiefs and regalia, by the sceptre in Germany before, in Italy and in Burgundy after, their consecration; for these grants they should promise fidelity to the emperor; contested elections should be decided by the emperor in favour of him who should be considered by the provincial synod to possess the better right. Finally he should restore to the Roman Church all the possessions and regalia of St. Peter. This convention secured to the Church many things, and above all, the freedom of ecclesiastical elections. Hitherto, the different Churches had been compelled to give their consent to elections that had been made by the king, but now the king was pledged to consent to the elections made by the Churches; and although these elections took place in his presence, he could not refuse his consent and investiture without violating the treaty, in which he had promised that for the future elections should be according to the canons. This, and the great difference, that the king, when he gave the ring and crosier, invested the bishop elect with his chief dignity, namely, his bishopric, but now granted him by investiture with the sceptre, only the accessories, namely the regalia, was felt by Lothaire, the successor of Henry, when he required of pope Innocent II. the restoration of the right of investiture. Upon one important point, the homage which was to be sworn to the king, the concordat was silent. By not speaking of it, Calixtus seemed to tolerate it, and the Roman see therefore permitted it, although it had been prohibited by Urban and Paschal. It is certain that Calixtus was as fully convinced as his predecessors, that the condition of vassals, to which bishops and abbots were reduced by their oath of homage, could hardly be reconciled with the nature and dignity of the episcopacy, or with the freedom of the Church, but he perhaps foresaw, that by insisting too strongly upon its discontinuance, he might awaken again the unholy war, and without any hopes of benefit, inflict many evils upon the Church. Sometime later Adrian endeavoured to free the Italian bishops from the homage, instead of which, the emperor was

to be content with an oath of fidelity: but Frederick I. would not renounce the homage unless they resigned the regalia. [Although, by the Concordat, direct appointments were taken out of the emperor's hands, the power was still largely his as he could practically invalidate the election of a bishop if it displeased him by refusing to confer on him the fiefs and secular privileges.] . . . In the following year the concordat was ratified in the great council of three hundred bishops, the ninth general council of the Church, which was convened by Calixtus in Rome."—J. J. I. Döllinger, *History of the church*, v. 3, pp. 345-347.—See also PAPACY: 1056-1122; CANOSSA; ROME: Medieval city: 1081-1084; SAXONY: 1073-1075.

1125.—Election of Lothaire II, king, afterwards emperor.

1125-1272.—Rise of the college of electors.—The election of Lothaire II, in 1125, when a great assembly of nobles and church dignitaries was convened at Mentz, and when certain of the chiefs made a selection of candidates to be voted for, has been regarded by some historians—Hallam, Comyn and Dunham, for example—as indicating the origin of the German electoral college. They have held that a right of "pretaxation," or preliminary choice, was gradually acquired by certain princes, which grew into the finally settled electoral right. But this view is now looked upon as more than questionable, and is not supported by the best authorities. "At the election of Rudolph [1272 or 1273 ?] we meet for the first time the fully developed college of electors as a single electoral body; the secondary matter of a doubt regarding what individuals composed it was definitely settled before Rudolph's reign had come to an end. How did the college of electors develop itself? . . . The problem is made more difficult at the outset from the fact that in the older form of government in Germany there can be no question at all of a simple electoral right in a modern sense. The electoral right was amalgamated with a hereditary right of that family which had happened to come to the throne: it was only a right of selection from among the heirs available within this family. Inasmuch now as such selection could—as well from the whole character of German kingship as in consequence of its amalgamation with the empire—take place already during the lifetime of the ruling member of the family, it is easy to understand that in ages in which the ruling race did not die out during many generations, the right came to be at last almost a mere form. Usually the king, with the consent of those who had the right of election, would, already during his lifetime, designate as his successor one of his heirs,—if possible his oldest son. Such was the rule in the time of the Ottos and of the Salian [Franconian line] emperors. It was a rule which could not be adhered to in the first half of the 12th century after the extinction of the Salian line, when free elections, not determined beforehand by designation, took place in the years 1125, 1138 and 1152. Necessarily the element of election now predomi-

nated. But had any fixed order of procedure at elections been handed down from the past? The very principle of election having been disregarded in the natural course of events for centuries, was it any wonder that the order of procedure should also come to be half forgotten? And had not in the meantime social readjustments in the electoral body so disturbed this order of procedure, or such part of it as had been important enough to be preserved, as necessarily to make it seem entirely antiquated? With these questions the electoral assemblies of the year 1125 as well as of the year 1138 were brought face to face, and they found that practically only those precedents could be taken from what seemed to have been the former customary mode of elections which provided that the archbishop of Mainz as chancellor of the empire should first solemnly announce the name of the person elected and the electors present should do homage to the new king. This was at the end of the whole election, after the choice had to all intents and purposes been already made. For the material part of the election, on the other hand, the part that preceded this announcement, they found an apparently new expedient. A committee was to draw up an agreement as to the person to be chosen; in the two cases in question the manner of constituting this committee differed. Something essential had now been done towards establishing a mode of procedure at elections which should accord with the changed circumstances. One case however had not been provided for in these still so informal and uncertain regulations; the case, namely, that those taking part in the election could come to no agreement at all with regard to the person whose choice was to be solemnly announced by the archbishop of Mainz. And how could men have foreseen such a case in the first half of the 12th century? Up till then double elections had absolutely never taken place. Anti-kings there had been, indeed, but never two opposing kings elected at the same time. In the year 1108, however, this contingency arose; Philip of Suabia and Otto IV. were contemporaneously elected and the final unanimity of choice that in 1152 had still been counted on as a matter of course did not come about. As a consequence questions with regard to the order of procedure now came up which had hardly ever been touched upon before. First and foremost this one: can a better right of one of the elected kings be founded on a majority of the votes obtained? And in connection with it this other: who on the whole has a right to cast an electoral vote? Even though men were inclined now to answer the first question in the affirmative, the second, the presupposition for the practical application of the principle that had been laid down in the first, offered all the greater difficulties. Should one, after the elections of the years 1125 and 1152 and after the development since 1180 of a more circumscribed class of princes of the realm, accept the existence of a narrower electoral committee? Did this have a right to elect exclusively, or did it only have a simple right of priority in the matter of casting votes, or perhaps only a certain precedence when the election was being discussed? And how were the limits to be fixed for the larger circle of electors below this electoral committee? These are questions which the German electors put to themselves less soon and less clearly than did the pope, Innocent III., whom they had called upon to investigate the double election of the year 1108. . . . He speaks repeatedly of a narrower electoral body with which rests chiefly the election of the king,

HENRY V AT WORMS, 1122

and he knows only princes as the members of this body. And beyond a doubt the repeated expressions of opinion of the pope, as well as this whole matter of having two kings, at the beginning of the 13th century, gave men in Germany cause for reflection with regard to these weighty questions concerning the constitutional forms of the empire. One of the most important results of this reflection on the subject is to be found in the solution given by the *Sachsenspiegel*, which was compiled about 1230. Eike von Repgow knows in his law-book only of a precedence at elections of a smaller committee of princes, but mentions as belonging to this committee certain particular princes: the three Rhenish archbishops, the count Palatine of the Rhine, the duke of Saxony, the margrave of Brandenburg and—his right being questionable indeed—the king of Bohemia. . . . So far, at all events, did the question with regard to the limitation of the electors seem to have advanced towards its solution by the year 1230 that an especial electoral college of particular persons was looked upon as the nucleus of those electing. But side by side with this view the old theory still held its own, that certainly all princes at least had an equal right in the election. Under Emperor Frederick II. [1212-1250], for instance, it was still energetically upheld. A decision one way or the other could only be reached according to the way in which the next elections should actually be carried out. Henry Raspe was elected in the year 1246 almost exclusively by ecclesiastical princes, among them the three Rhenish archbishops. He was the first 'priest-king' (Pfaffenkönig). The second 'priest-king' was William of Holland. He was chosen by eleven princes, among whom was only one layman, the duke of Brabant. The others were bishops; among them, in full force, the archbishops of the Rhine. Present were also many counts. But William caused himself still to be subsequently elected by the duke of Saxony and the margrave of Brandenburg, while the king of Bohemia was also not behindhand in acknowledging him—that, too, with special emphasis. What transpired at the double election of Alphonse and Richard in the year 1257 has not been handed down with perfect trustworthiness. Richard claimed later to have been elected by Mainz, Cologne, the Palatinate and Bohemia; Alphonse by Treves, Saxony, Brandenburg and Bohemia. But in addition to the princes of these lands, other German princes also took part,—according to the popular view by assenting, according to their own view, in part at least, by actually electing. All the same the lesson taught by all these elections is clear enough. The general right of election of the princes disappears almost altogether; a definite electoral college, which was looked upon as possessing almost exclusively the sole right of electing, comes into prominence, and the component parts which made it up correspond in substance to the theory of the *Sachsenspiegel*. And whatever in the year 1257 is not established firmly and completely and in all directions, stands there as incontrovertible at the election of Rudolph [1273]. The electors, and they only, now elect; all share of others in the election is done away with. Although in place of Ottocar of Bohemia, who was at war with Rudolph, Bavaria seems to have been given the electoral vote, yet before Rudolph's reign is out, in the year 1290, Bohemia at last attains to the dignity which the *Sachsenspiegel*, even if with some hesitation, had assigned to it. One of the most important revolutions in the German form of government was herewith

accomplished. From among the aristocratic class of the princes an oligarchy had raised itself up, a representation of the princely provincial powers as opposed to the king. Unconsciously, as it were, had it come into being, not exactly desired by any one as a whole, nor yet the result of a fixed purpose even as regarded its separate parts. It must clearly have corresponded to a deep and elementary and gradually developing need of the time. Undoubtedly from a national point of view it denotes progress; henceforward at elections the danger of 'many heads many minds' was avoided; the era of double elections was practically at an end."—K. Lamprecht, *Deutsche Geschichte* (tr. from the German), v. 4, pp. 23-28.—In 1356 the Margraf of Brandenburg was recognized in the Golden Bull as one of the Kurfürsts,—that is as "one of the Seven who have a right . . . to choose, to 'kieren' the Romish Kaiser; and who are therefore called Kur Princes, Kurfürste, or Electors. . . . Fürst (Prince) I suppose is equivalent originally to our noun of number, 'First.' The old verb 'kieren' (participle 'erkoren' still in use, not to mention 'Val-kyr' and other instances) is essentially the same word as our 'choose,' being written 'kiesen' as well as 'kieren.' Nay, say the etymologists, it is also written 'Küssen' ('to kiss,'—to choose with such emphasis!), and is not likely to fall obsolete in that form.—The other Six Electoral Dignitaries, who grew to Eight by degrees, and may be worth noting once by the readers of this book, are: 1. Three Ecclesiastical, Mainz, Köln, Trier (Mentz, Cologne, Treves), Archbishops all. . . . 2. Three Secular, Sachsen, Pfalz, Böhmen (Saxony, Palatinate, Bohemia); of which the last, Böhmen, since it fell from being a kingdom in itself, to being a province of Austria, is not very vocal in the Diets. These Six, with Brandenburg, are the Seven Kurfürsts in old time; Septemvirs of the Country, so to speak. But now Pfalz, in the Thirty-Years War (under our Prince Rupert's Father, whom the Germans call the 'Winter-King'), got abrogated, put to the ban, so far as an indignant Kaiser could; and the vote and Kur of Pfalz was given to his Cousin of Baiern (Bavaria),—so far as an indignant Kaiser could [see below: 1621-1623]. However, at the Peace of Westphalia (1648) it was found incompetent to any Kaiser to abrogate Pfalz, or the like of Pfalz, a Kurfürst of the Empire. So, after jargon inconceivable, it was settled, that Pfalz must be reinstated, though with territories much clipped, and at the bottom of the list, not the top as formerly: and that Baiern, who could not stand to be balked after twenty-years possession, must be made Eighth Elector [see below: 1648]. The Ninth, we saw (Year 1692), was Gentleman Ernst of Hanover [see below: 1648-1705]. There never was any Tenth."—T. Carlyle, *Frederick the Great*, bk. 2, ch. 4.—"All the rules and requisites of the election were settled by Charles the Fourth in the Golden Bull [see below: 1347-1493], thenceforward a fundamental law of the Empire."—J. Bryce, *Holy Roman empire*, ch. 14.

12th-13th centuries.—Causes of the disintegration of the empire.—"The whole difference between French and German constitutional history can be summed up in a word: to the ducal power, after its fall, the crown fell heir in France; the lesser powers, which had been its own allies, in Germany. The event was the same, the results were different: in France centralization, in Germany disintegration. The fall of the power of the stem-duchies is usually traced to the subjugation of the mightiest of the dukes, Henry the

Lion [see SAXONY: 1178-1183], who refused military service to the Emperor Frederick Barbarossa just when the latter most needed him in the struggle against the Lombards. . . . The emperor not only banned the duke, he not only took away his duchy to bestow it elsewhere, but he entirely did away with this whole form of rule. The western part, Westphalia, went to the archbishops of Cologne; in the East the different margraves were completely freed from the last remnants of dependence that might have continued to exist. In the intervening space the little ecclesiastical and secular lords came to be directly under the emperor without a trace of an intermediate power and with the title of bishop or abbot, imperial count, or prince. If one of these lords, Bernard of Ascanium, received the title of Saxon duke, that title no longer betokened the head of a stem or nation but simply an honorary distinction above other counts and lords. What happened here had already begun to take place in the other duchy of the Guelphs, in Bavaria, through the detachment from it of Austria; sooner or later the same process came about in all parts of the empire. With the fall of the old stem-duchies those lesser powers which had been under their shadow or subject to them gained everywhere an increase of power; partly by this acquiring the ducal title as an honorary distinction by the ruler of a smaller district, partly by joining rights of the intermediate powers that had just been removed to their own jurisdictions and thus coming into direct dependence on the empire. . . . Such was the origin of the idea of territorial supremacy. The 'dominus terrae' comes to feel himself no longer as a person commissioned by the emperor but as lord in his own land. . . . As to the cities, behind their walls remnants of old Germanic liberty had been preserved. Especially in the residences of the bishops had artisans and merchants thriven and these classes had gradually thrown off their bondage, forming, both together, the new civic community. . . . The burghers could find no better way to show their independence of the princes than that the community itself should exercise the rights of a territorial lord over its members. Thus did the cities as well as the principalities come to form separate territories, only that the latter had a monarchical, the former a republican form of government. . . . It is a natural question to ask, on the whole, when this new formation of territories was completed. . . . The question ought really only to be put in a general way: at what period in German history is it an established fact that there are in the empire and under the empire separate territorial powers (principalities and cities)? As such a period we can designate approximately the end of the 12th and beginning of the 13th centuries. From that time on the double nature of imperial power and of territorial power is an established fact and the mutual relations of these two make up the whole internal history of later times. . . . The last ruler who had spread abroad the glory of the imperial name had been Frederick II. For a long time after him no one had worn the imperial crown at all, and of those kings who reigned during a whole quarter of a century not one succeeded in making himself generally recognized. There came a time when the duties of the state, if they were fulfilled at all, were fulfilled by the territorial powers. Those are the years which pass by the name of the interregnum. . . . Rudolph of Hapsburg and his successors, chosen from the most different houses and pursuing the most different policies, have quite the same position in two regards: on the one

hand the crown, in the weak state in which it had emerged from the interregnum, saw itself compelled to make permanent concessions to the territorial powers in order to maintain itself from one moment to another; on the other hand it finds no refuge for itself but in the constant striving to found its own power on just such privileged territories. When the kings strive to make the princes and cities more powerful by giving them numerous privileges, and at the same time by bringing together a dynastic appanage to gain for themselves an influential position: this is no policy that wavers between conceding and maintaining. . . . The crown can only keep its place above the territories by first recognizing the territorial powers and then, through just such a recognized territorial power by creating for itself the means of upholding its rights. . . . The next great step in the onward progress of the territorial power was the codification of the privileges which the chief princes had obtained. Of the law called the 'Golden Bull' only the one provision is generally known, that the seven electors shall choose the emperor; yet so completely does the document in question draw the affairs of the whole empire into the range of its provisions that for centuries it could pass for that empire's fundamental law. It is true that for the most part it did not create a new system of legislation, but only sanctioned what already existed. But for the position of all the princes it was significant enough that the seven most considerable among them were granted an independence which comprised sovereign rights, and this not by way of a privilege but as a part of the law of the land. A sharply defined goal, and herein lies the deepest significance, was thus set up at which the lesser territories could aim and which, after three centuries they were to attain. . . . This movement was greatly furthered when on the threshold of modern times the burning question of church reform, after waiting in vain to be taken up by the emperor, was taken up by the lower classes, but with revolutionary excesses. . . . The mightiest intellectual movement of German history found at last its only political mainstay in the territories. . . . This whole development, finally, found its political and legal completion through the Thirty Years War and the treaty of peace which concluded it. The new law which the Peace of Westphalia [1648] now gave to the empire proclaimed expressly that all territories should retain their rights, especially the right of making alliances among themselves and with foreigners so long as it could be done without violating the oath of allegiance to the emperor and the empire. Herewith the territories were proclaimed. . . . states under the empire."—I. Jastrow, *Geschichte des deutschen Einheitstraums und seiner Erfüllung* (tr. from the German), pp. 30-37.

1138-1197.—House of Swabia, or the Hohenstaufen.—Its struggles in Germany and Italy.—Factions of Guelphs and Ghibellines.—Frederick Barbarossa and the Lombard cities.—Henry VI and the Sicilian kingdom.—On the death of Henry V, in 1125 the male line of the house of Franconia became extinct. Frederick, duke of Swabia, and his brother Conrad, duke of the Franks, were grandchildren of Henry IV on their mother's side, and, inheriting the patrimonial estates, were plainly the heirs of the crown, if the crown was to be recognized as hereditary and dynastic. But jealousy of their house and a desire to reassert the elective dependence of the imperial office prevailed against their claims and their ambition. At an election which was de-

nounced as irregular, the choice fell upon Lothaire of Saxony. The old imperial family was not only set aside, but its bitterest enemies were raised over it. The consequences were a feud and a struggle which grew and widened into the long-lasting, far-reaching, historical conflict of Guelfs and Ghibellines (see GUELFs AND Ghibellines; SAXONY: 1178-1183). The Saxon emperor Lothaire found his strongest support in the great Wölf, Welf, or Guelf nobleman, Henry the Proud, duke of Bavaria, to whom he (Lothaire) now gave his daughter in marriage, together with the dukedom of Saxony, and whom he intended to make his successor on the imperial throne. But the scheme failed. On Lothaire's death, in

the breaking up of the old powerful duchy of Saxony. But Italy was the great historical field of the energies and the ambitions of the Hohenstaufen emperors. There, Frederick Barbarossa (Frederick Redbeard, as the Italians called him), the second of the line, and Frederick II, his adventurous grandson, fought their long, losing battle with the popes and with the city-republics of Lombardy and Tuscany.—U. Balzani, *Popes and the Hohenstaufen*.—Frederick Barbarossa, elected Emperor in 1152, passed into Italy in 1154. Milan, the most powerful city of Lombardy, had gained the hatred of all the neighboring towns by her tyrannical acts. When representatives of the Emperor appeared, to protest

CORONATION OF FREDERICK BARBAROSSA AS HOLY ROMAN EMPEROR

1138, the partisans of the Swabian family carried the election of Conrad (the Crusader—see CRUSADES: 1147-1149), and the dynasty most commonly called Hohenstaufen rose to power. It took the name of Hohenstaufen from its original family seat on the lofty hill of Staufen, in Swabia, overlooking the valley of the Rems. Its party, in the wars and factions of the time, received the name of the Waiblingen, from the birth-place of the Swabian duke Frederick—the little town of Waiblingen in Franconia. Under the tongue of the Italians, when these party names and war-cries were carried across the Alps, Waiblingen became Ghibelline and Welf became Guelf. During the first half century of the reign of the Hohenstaufen, the history of Germany is the history, for the most part, of the strife in which the Guelf dukes, Henry the Proud and Henry the Lion, are the central figures, and which ended in

against the treatment of Lodi, they were insulted and the imperial seal trampled upon. Frederick "came there on the invitation of the Pope, of the Prince of Capua, and of the towns which had been subjected to the ambition of Milan. He marched at the head of his German feudatories, a splendid and imposing array. His first object was to crush the power of Milan, and to exalt that of Pavia, the head of the rival league. Nothing could stand against him. At Viterbo he was compelled to hold the stirrup of the Pope and in return for this submission he received the crown from the Pontiff's hands in the Basilica of St. Peter. He returned northwards by the valley of the Tiber, dismissed his army at Ancona, and with difficulty escaped safely into Bavaria. His passage left little that was solid and durable behind it. He had effected nothing against the King of Naples. His friendship with the Pope was illu-

sory and short-lived. The dissensions of the North, which had been hushed for a moment by his presence, broke out again as soon as his back was turned. He had, however, received the crown of Charles the Great from the hands of the successor of St. Peter. But Frederick was not a man to brook easily the miscarriage of his designs. In 1158 he collected another army at Ulm. Brescia was quickly subdued; Lodi, which had been destroyed by the Milanese, was rebuilt, and Milan itself was reduced to terms. This peace lasted but for a short time; Milan revolted, and was placed under the ban of the Empire. The fate of Cremona taught the Milanese what they had to expect from the clemency of the Emperor. After a desultory warfare, regular siege was laid to the town. On March 1, 1162, Milan, reduced by famine, surrendered at discretion, and a fortnight later all the inhabitants were ordered to leave the town. The circuit of the walls was partitioned out among the most pitiless enemies of its former greatness, and the inhabitants of Lodi, of Cremona, of Pavia, of Novara, and of Como were encouraged to wreak their vengeance on their defeated rival. For six days the imperial army laboured to overturn the walls and public buildings, and when the emperor left for Pavia, on Palm Sunday 1162, not a fiftieth part of the city was standing. This terrible vengeance produced a violent reaction. The homeless fugitives were received by their ancient enemies, and local jealousies were merged in common hatred of the common foe. [They were further angered and alarmed by the attitude of the Emperor towards their governmental prerogatives. In 1158 at the assembly of Roneaglia, Frederick had secured a decision from those versed in the Roman law that he was feudal suzerain of the Lombard towns, unless they could show legal proof of their independence.] Frederick had already been excommunicated by Pope Alexander III as the supporter of his rival Victor. Verona undertook to be the public vindicator of discontent. Five years after the destruction of Milan the Lombard league numbered fifteen towns amongst its members. Venice, Verona, Vicenza, Treviso, Ferrara, Brescia, Bergamo, Cremona, Milan, Lodi, Piacenza, Parma, Modena, and Bologna. The confederation solemnly engaged to expel the Emperor from Italy. The towns on the frontier of Piedmont asked and obtained admission to the league, and to mark the dawn of freedom a new town was founded on the low marshy ground which is drained by the Bormida and the Tanaro, and which afterwards witnessed the victory of Marengo. It was named by its founders Alessandria, in honour of the Pope, who had vindicated their independence of the Empire. . . . The Lombard league had unfortunately a very imperfect constitution. It had no common treasure, no uniform rules for the apportionment of contributions; it existed solely for the purposes of defence against the external foe. The time was not yet come when self-sacrifice and self-abnegation could lay the foundations of a united Italy. Frederick spent six years in preparing vengeance. In 1174 he laid siege to the new Alexandria, but did not succeed in taking it. A severe struggle took place two years later. In 1176 a new army arrived from Germany, and on May 29 Frederick Barbarossa was entirely defeated at Legnano. In 1876 the seventh hundred anniversary of the battle was celebrated on the spot where it was gained, and it is still regarded as the birthday of Italian freedom."—O. Browning, *Guelphs and Ghibellines*, ch. 1.—See also ITALY: 1154-1162 to

1174-1183; PAPACY: 1122-1250.—"The end was that the Emperor had to make peace with both the Pope and the cities, and in 1183 the rights of the cities were acknowledged in a treaty or law of the Empire, passed at Constanx or Constance in Swabia. In the last years of his reign, Frederick went on the third Crusade, and died on the way [see CRUSADES: 1188-1192]. Frederick was succeeded by his son Henry the Sixth, who had already been chosen King, and who in the next year, 1191, was crowned Emperor. The chief event of his reign was the conquest of the Kingdom of Sicily, which he claimed in right of his wife Constance, the daughter of the first King William."—E. A. Freeman, *General sketch of European history*, ch. 11.—The Normans had settled in Sicily early in the eleventh century, and had gradually taken the country from the local rulers. In 1059 one of the Norman leaders (Robert Guiscard) was recognized by the Pope as his vassal. By 1140 these adventurers had seized all of southern Italy and united it to their Sicilian domains, thus raising up a powerful rival state to that of the popes. "The death of William [King of Sicily] leaving Constance as his heir, occurred just before that of Frederic I, and was the welcome excuse to Henry VI for leading an army into southern Italy and enforcing by arms his claims to a crown over which he had no other right. The imperial title which he took by the way in 1191 could add nothing to his claim in southern Italy, since the Norman kingdom had never, except in the vaguest terms, acknowledged the over-lordship of the emperor. Its constitution was a new one, borrowed from Norman ideas, and its people were as passionately attached to their dynasty as they were passionately hostile to anything like German interference. This loyalty found its expression in a determined resistance under the leadership of Tancred, an illegitimate member of the house of Hauteville. It was four years before Henry, after the most desperate struggle, was able to get possession of his crown."—E. Emerton, *Medieval Europe*, pp. 315-316.

1197-1250.—Frederick II of Hohenstaufen.—His abilities and shortcomings.—Revolts put down in Germany.—Attachment to Sicily and conflicts with the papacy.—Successful Crusade.—"He [Henry VI] died in 1197, leaving his son Frederick, a young child, who had already been chosen King in Germany, and who succeeded as hereditary King in Sicily. The Norman Kingdom of Sicily thus came to an end, except so far as it was continued through Frederick, who was descended from the Norman Kings through his mother. On the death of the Emperor Henry, the election of young Frederick seems to have been quite forgotten, and the crown was dis-

puted between his uncle Philip of Swabia and Otto of Saxony. He was son of Henry the Lion, who had been Duke of Saxony and Bavaria, but who had lost the more part of his dominions in the time of Frederick Barbarossa. [Henry the Guelf leader had refused to assist Frederick Barbarossa at the battle of Legnano, and on his return from Italy Frederick had banished him and divided the duchy of Saxony.] Otto's mother was Matilda, daughter of Henry the Second of England. . . . Both Kings were crowned, and, after the death of Philip, Otto was crowned Emperor in 1209. But presently young Frederick was again chosen, and in 1220 he was crowned Emperor, and reigned thirty years till his death in 1250. This Frederick the Second, who joined together so many crowns, was called the Wonder of the World. And he well deserved the name, for perhaps no King that ever reigned had greater natural gifts, and in thought and learning he was far above the age in which he lived. In his own kingdom of Sicily he could do pretty much as he pleased, and it flourished wonderfully in his time. But in Germany and Italy he had constantly to struggle against enemies of all kinds. In Germany he had to win the support of the Princes by granting them privileges which did much to undermine the royal power, and on the other hand he showed no favour to the rising power of the cities. In Italy he had endless strivings with one Pope after another, with Innocent the Third, Honorius the Third, Gregory the Ninth, and Innocent the Fourth; as well as with the Guelfic cities, which withstood him much as they had withstood his grandfather. He was more than once excommunicated by the Popes, and in 1245 Pope Innocent the Fourth held a Council at Lyons, in which he professed to depose the Emperor. More than one King was chosen in opposition to him in Germany, just as had been done in the time of Henry the Fourth, and there were civil wars all his time, both in Germany and in Italy, while a great part of the Kingdom of Burgundy was beginning to slip away from the Empire altogether."—E. A. Freeman, *General sketch of European history*, ch. 11.—"It is probable that there never lived a human being endowed with greater natural gifts, or whose natural gifts were, according to the means afforded him by his age, more sedulously cultivated, than the last Emperor of the House of Swabia. There seems to be no aspect of human nature which was not developed to the highest degree in his person. In versatility of gifts, in what we may call mansidedness of character, he appears as a sort of mediæval Alkibiadês, while he was undoubtedly far removed from Alkibiadês' utter lack of principle or steadiness of any kind. Warrior, statesman, lawgiver, scholar, there was nothing in the compass of the political or intellectual world of his age, which he failed to grasp. In an age of change, when, in every corner of Europe and civilized Asia, old kingdoms, nations, systems, were falling and new ones rising, Frederick was emphatically the man of change, the author of things new and unheard of—he was stupor mundi et immutator mirabilis. A suspected heretic, a suspected Mahometan, he was the subject of all kinds of absurd and self-contradictory charges; but the charges mark real features in the character of the man. He was something unlike any other Emperor or any other man. . . . Of all men, Frederick the Second might have been expected to be the founder of something, the beginner of some new era, political or intellectual. He was a man to whom some

great institution might well have looked back as its creator, to whom some large body of men, some sect or party or nation might well have looked back as their prophet or founder or deliverer. But the most gifted of the sons of men has left behind him no such memory while men whose gifts cannot bear a comparison with his are revered as founders by grateful nations, churches, political and philosophical parties. Frederick in fact founded nothing, and he sowed the seeds of the destruction of many things. His great charters to the spiritual and temporal princes of Germany dealt the death-blow to the Imperial power, while he, to say the least, looked coldly on the rising power of the cities and on those commercial Leagues which were in his time the best element of German political life. In fact, in whatever aspect we look at Frederick the Second, we find him, not the first, but the last, of every series to which he belongs. An

FREDERICK II.

Holy Roman Emperor

English writer [Capgrave], two hundred years after his time, had the penetration to see that he was really the last Emperor. He was the last Prince in whose style the Imperial titles do not seem a mockery; he was the last under whose rule the three Imperial kingdoms retained any practical connexion with one another and with the ancient capital of all. . . . He was not only the last Emperor of the whole Empire; he might almost be called the last King of its several Kingdoms. After his time Burgundy vanishes as a kingdom. . . . Italy too, after Frederick, vanishes as a kingdom; any later exercise of the royal authority in Italy was something which came and went wholly by fits and starts. . . . Germany did not utterly vanish, or utterly split in pieces, like the sister kingdoms; but after Frederick came the Great Interregnum, and after the Great Interregnum the royal power in Germany never was what it had been before. In his hereditary Kingdom of Sicily he was not absolutely the last of his dynasty, for his son Manfred ruled prosperously and gloriously for some years after his death. But it is none the less clear

that from Frederick's time the Sicilian Kingdom was doomed. . . . Still more conspicuously than all was Frederick the last Christian King of Jerusalem, the last baptized man who really ruled the Holy Land or wore a crown in the Holy City. . . . In the world of elegant letters Frederick has some claim to be looked on as the founder of that modern Italian language and literature which first assumed a distinctive shape at his Sicilian court. But in the wider field of political history Frederick appears nowhere as a creator, but rather everywhere as an involuntary destroyer. . . . Under Frederick the Empire and everything connected with it seems to crumble and decay while preserving its external splendour. As soon as its brilliant possessor is gone, it at once falls asunder. It is a significant fact that one who in mere genius, in mere accomplishments, was surely the greatest prince who ever wore a crown, a prince who held the greatest place on earth, and who was concerned during a long reign in some of the greatest transactions of one of the greatest ages, seems never, even from his own flatterers, to have received that title of Great which has been so lavishly bestowed on far smaller men. . . . Many causes combined to produce this singular result, that a man of the extraordinary genius of Frederick, and possessed of every advantage of birth, office, and opportunity, should have had so little direct effect upon the world. It is not enough to attribute his failure to the many and great faults of his moral character. Doubtless they were one cause among others. But a man who influences future ages is not necessarily a good man. . . . The weak side in the brilliant career of Frederick is one which seems to have been partly inherent in his character, and partly the result of the circumstances in which he found himself. Capable of every part, and in fact playing every part by turns, he had no single definite object, pursued honestly and steadfastly, throughout his whole life. With all his powers, with all his brilliancy, his course throughout life seems to have been in a manner determined for him by others. He was ever drifting into wars, into schemes of policy, which seem to be hardly ever of his own choosing. He was the mightiest and most dangerous adversary that the Papacy ever had. But he does not seem to have withstood the Papacy from any personal choice, or as the voluntary champion of any opposing principle. He became the enemy of the Papacy, he planned schemes which involved the utter overthrow of Papacy, yet he did so simply because he found that no Pope would ever let him alone. . . . The most really successful feature in Frederick's career, his acquisition of Jerusalem [see CRUSADES: 1216-1229], is not only a mere episode in his life, but it is something that was absolutely forced upon him against his will. . . . With other Crusaders the Holy War was, in some cases, the main business of their lives; in all cases it was something seriously undertaken as a matter either of policy or of religious duty. But the Crusade of the man who actually did recover the Holy City is simply a grotesque episode in his life. Excommunicated for not going, excommunicated again for going, excommunicated again for coming back, threatened on every side, he still went, and he succeeded. What others had failed to win by arms, he contrived to win by address, and all that came of his success was that it was made the ground of fresh accusations against him. . . . For a man to influence his age, he must in some sort belong to his age. He

should be above it, before it, but he should not be foreign to it. . . . But Frederick belongs to no age; intellectually he is above his own age, above every age; morally it can hardly be denied that he was below his age; but in nothing was he of his age."—E. A. Freeman, *Emperor Frederick the Second* (*Historical essays*, v. 1, essay 10.)—For an account of Frederick's brilliant Sicilian court, and of some of the distinguishing features of his reign in Southern Italy, as well as of the end of his family, in the tragical deaths of his son Manfred and his grandson Conradin (1268), see ITALY: 1183-1250.

13th century.—Rise of the Hanseatic League.—Growth of free towns. See HANSA TOWNS; BRUGES: 13th-15th centuries; FEDERAL GOVERNMENT: Medieval leagues in Germany; SUFFRAGE, MANHOOD: 1300-1600.

13th century.—Cause of the multiplication of petty principalities and states.—"While the duchies and counties of Germany retained their original character of offices or governments, they were of course, even though considered as hereditary, not subject to partition among children. When they acquired the nature of fiefs, it was still consonant to the principles of a feudal tenure that the eldest son should inherit according to the law of primogeniture; an inferior provision or appanage, at most, being reserved for the younger children. The law of England favoured the eldest exclusively; that of France gave him great advantages. But in Germany a different rule began to prevail about the thirteenth century. An equal partition of the inheritance, without the least regard to priority of birth, was the general law of its principalities. Sometimes this was effected by undivided possession, or tenancy in common, the brothers residing together, and reigning jointly. This tended to preserve the integrity of dominion; but as it was frequently inconvenient, a more usual practice was to divide the territory. From such partitions are derived those numerous independent principalities of the same house, many of which still subsist in Germany. In 1589 there were eight reigning princes of the Palatine family; and fourteen, in 1675, of that of Saxony. Originally these partitions were in general absolute and without reversion; but, as their effect in weakening families became evident, a practice was introduced of making compacts of reciprocal succession, by which a fief was prevented from escheating to the empire, until all the male posterity of the first feudatory should be extinct. Thus, while the German empire survived, all the princes of Hesse or of Saxony had reciprocal contingencies of succession, or what our lawyers call cross-remainders, to each other's dominions. A different system was gradually adopted. By the Golden Bull of Charles IV. the electoral territory, that is, the particular district to which the electoral suffrage was inseparably attached, became incapable of partition, and was to descend to the eldest son. In the 15th century the house of Brandenburg set the first example of establishing primogeniture by law; the principalities of Anspach and Bayreuth were dismembered from it for the benefit of younger branches; but it was declared that all the other dominions of the family should for the future belong exclusively to the reigning elector. This politic measure was

adopted in several other families; but, even in the 16th century, the prejudice was not removed, and some German princes denounced curses on their posterity, if they should introduce the impious custom of primogeniture. . . . Weakened by these subdivisions, the principalities of Germany in the 14th and 15th centuries shrink to a more and more diminutive size in the scale of nations."—H. Hallam, *Middle Ages*, v. 2, ch. 5.—See also CITIES, IMPERIAL AND FREE, OF GERMANY.

1250-1272.—Degradation of the Holy Roman empire.—Great Interregnum.—Anarchy and disorder universal.—Election of Rudolf of Hapsburg.—"With Frederick [the Second] fell the Empire. From the ruin that overwhelmed the greatest of its houses it emerged, living indeed, and destined to a long life, but so shattered, crippled, and degraded, that it could never more be to Europe and to Germany what it once had been. . . . The German kingdom broke down beneath the weight of the Roman Empire. To be universal sovereign Germany had sacrificed her own political existence. The necessity which their projects in Italy and disputes with the Pope laid the Emperors under of purchasing by concessions the support of their own princes, the ease with which in their absence the magnates could usurp, the difficulty which the monarch returning found in resuming the privileges of his crown, the temptation to revolt and set up pretenders to the throne which the Holy See held out, these were the causes whose steady action laid the foundation of that territorial independence which rose into a stable fabric at the era of the Great Interregnum. Frederick II. had by two Pragmatic Sanctions, A. D. 1220 and 1232, granted, or rather confirmed, rights already customary, such as to give the bishops and nobles legal sovereignty in their own towns and territories, except when the Emperor should be present; and thus his direct jurisdiction became restricted to his narrowed domain, and to the cities immediately dependent on the crown. With so much less to do, an Emperor became altogether a less necessary personage; and hence the seven magnates of the realm, now by law or custom sole electors, were in no haste to fill up the place of Conrad IV., whom the supporters of his father Frederick had acknowledged. William of Holland [1254] was in the field, but rejected by the Swabian party: on his death a new election was called for, and at last set on foot. The archbishop of Cologne advised his brethren to choose some one rich enough to support the dignity, not strong enough to be feared by the electors: both requisites met in the Plantagenet Richard, earl of Cornwall, brother of the English Henry III. He received three, eventually four votes, came to Germany, and was crowned at Aachen [1256]. But three of the electors, finding that his bribe to them was lower than to the others, seceded in disgust, and chose Alfonso X. of Castile, who, shrewder than his competitor, continued to watch the stars at Toledo, enjoying the splendours of his title while troubling himself about it no further than to issue now and then a proclamation. Meantime the condition of Germany was frightful. The new Didius Julianus, the

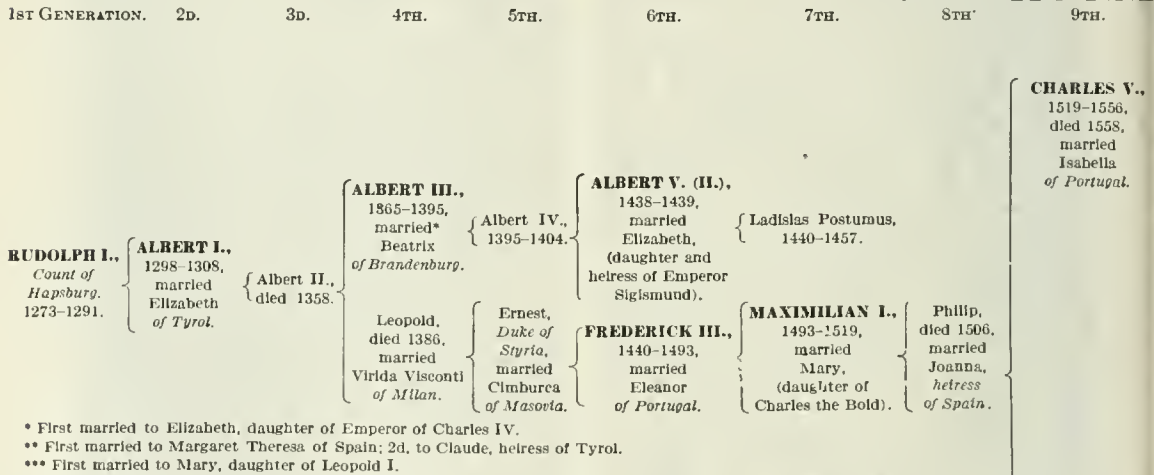

chosen of princes baser than the prætorians whom they copied, had neither the character nor the outward power and resources to make himself respected. Every floodgate of anarchy was opened: prelates and barons extended their domains by war: robber-knights infested the highways and the rivers: the misery of the weak, the tyranny and violence of the strong, were such as had not been seen for centuries. Things were even worse than under the Saxon and Franconian Emperors; for the petty nobles who had then been in some measure controlled by their dukes were now, after the extinction of the great houses, left without any feudal superior. Only in the cities was shelter or peace to be found. Those of the Rhine had already leagued themselves for mutual defence, and maintained a struggle in the interests of commerce and order against universal brigandage. At last, when Richard had been some time dead, it was felt that such things could not go on for ever: with no public law, and no courts of justice, an Emperor, the embodiment of legal government, was the only resource. The Pope himself, having now sufficiently improved the weakness of his enemy, found the disorganization of Germany beginning to tell upon his revenues, and threatened that if the electors did not appoint an Emperor, he would. Thus urged, they chose, in 1272 [1273?], Rudolf, count of Hapsburg, founder of the house of Austria. From this point there begins a new era. We have seen the Roman Empire revived in A. D. 800, by a prince whose vast dominions gave ground to his claim of universal monarchy; again erected, in A. D. 962, on the narrower but firmer basis of the German kingdom. We have seen Otto the Great and his successors during the three following centuries, a line of monarchs of unrivalled vigour and abilities, strain every nerve to make good the pretensions of their office against the rebels in Italy and the ecclesiastical power. Those efforts had now failed signally and hopelessly. Each successive Emperor had entered the strife with resources scantier than his predecessors, each had been more decisively vanquished by the Pope, the cities, and the princes. The Roman Empire might, and, so far as its practical utility was concerned, ought now to have been suffered to expire; nor could it have ended more gloriously than with the last of the Hohenstaufen. That it did not so expire, but lived on 600 years more, till it became a piece of antiquarianism hardly more venerable than ridiculous—till, as Voltaire said, all that could be said about it was that it was neither holy, nor Roman, nor an empire—was owing partly indeed to the belief, still unshaken, that it was a necessary part of the world's order, yet chiefly to its connection, which was by this time indissoluble, with the German kingdom. The Germans had confounded the two characters of their sovereign so long, and had grown so fond of the style and pretensions of a dignity whose possession appeared to exalt them above the other peoples of Europe, that it was now too late for them to separate the local from the universal monarch. If a German king was to be maintained at all, he must be Roman Emperor; and a German king there must still be. . . . That head, however, was no longer what he had been. The relative position of Germany and France was now exactly the reverse of that which they had occupied two centuries earlier. Rudolf was as conspicuously a weaker sovereign than Philip III. of France, as the Franconian Emperor Henry III. had been stronger than the Capetian Philip I. In every other state of Eu-

rope the tendency of events had been to centralise the administration and increase the power of the monarch, even in England not to diminish it: in Germany alone had political union become weaker, and the independence of the princes more confirmed."—J. Bryce, *Holy Roman empire*, ch. 13. —See also ITALY: 1250-1520; AUSTRIA: 1246-1282.

1273-1308.—First Hapsburg kings of the Romans, Rudolf and Albert.—The choice made (1273) by the German Electors of Rudolf or Rodolph of Hapsburg for King of the Romans (see AUSTRIA: 1246-1282), was duly approved and confirmed by Pope Gregory X, who silenced, by his spiritual admonitions, the rival claims of King Alfonso of Castile. But Rudolf, to secure this papal confirmation of his title, found it necessary to promise, through his ambassadors, a renewal of the Capitulation of Otto IV, respecting the temporalities of the Pope. This he repeated in person, on meeting the Pope at Lausanne, in 1275. On that occasion, "an agreement was entered into which afterwards ratified to the Church the long disputed gift of Charlemagne, comprising Ravenna, Emilia, Bobbio, Cesena, Forumpopoli, Forli, Faenza, Imola, Bologna, Ferrara, Comacchio, Adria, Rimini, Urbino, Monteferetro, and the territory of Bagno. Rodolph also bound himself to protect the privileges of the Church, and to maintain the freedom of Episcopal elections, and the right of appeal in all ecclesiastical causes; and having stipulated for receiving the imperial crown in Rome he promised to undertake an expedition to the holy land. If Rodolph were sincere in these last engagements, the disturbed state of his German dominions afforded him an apology for their present non-fulfilment: but there is good reason for believing that he never intended to visit either Rome or Palestine; and his indifference to Italy has even been the theme of panegyric with his admirers. The repeated and mortifying reverses of the two Frederics were before his eyes; there was little to excite his sympathy with the Italians; and though Lombardy seemed ready to acknowledge his supremacy, the Tuscan cities evinced aspirations after independence." During the early years of Rudolf's reign he was employed in establishing his authority, as against the contumacy of Ottocar, king of Bohemia, and the duke of Bavaria (see AUSTRIA: 1246-1282). Meantime, Gregory X and three short-lived successors in the papal office passed away, and Nicholas III had come to it (1277). That vigorous pontiff called Rudolf to account for not having yet surrendered the states of the Church in due form, and whispered a hint of excommunication and interdict. "Rodolph was too prudent to disregard this admonition: he evaded the projected crusade and journey to Rome; but he took care to send thither an emissary, who in his name surrendered to the Pope the territory already agreed on. . . . During his entire reign Rodolph maintained his indifference towards Italy." His views "were rather directed to the wilds of Hungary and Germany than to the delicious regions of the south. . . . He compelled Philip, Count of Savoy, to surrender Morat, Payerne, and Guminen, which had been usurped from the Empire. By a successful expedition across the Jura, he brought back to obedience Otho VI. Count of Burgundy; and forced him to renounce the allegiance he had proffered to Philip III. King of France. . . . He crushed an insurrection headed by an impostor, who had persuaded the infatuated multitude to believe that he was the Emperor Frederic II. And he

freed his dominions from rapine and desolation by the destruction of several castles, whose owners infested the country with their predatory incursions." Before his death, in 1291, Rudolf "grew anxious to secure to his son Albert the succession to the throne, and his nomination by the Electors ere the grave closed upon himself. . . . But all his entreaties were unavailing; he was coldly reminded that he himself was still the 'King,' and that the Empire was too poor to support two kings. Rodolph might now repent his neglect to assume the imperial crown: but the character of Albert seems to have been the real obstacle to his elevation. With many of the great qualities of his father, this prince was deficient in his milder virtues; and his personal bravery and perseverance were tainted with pride, haughtiness, and avarice." On Rudolf's death, the Electors chose for his successor Adolphus. Count of Nassau, a choice of which they soon found reason to repent. By taking pay from Edward I of England, for an alliance with the latter against the King of France, and by attempts to enforce a purchased claim upon the Landgraviate of Thuringia, Adolphus brought himself into contempt, and in 1298 he was solemnly deposed by the Electors, who now conferred the kingship upon Albert of Austria whom they had rejected six years before. "The deposed sovereign was, however, strongly supported; and he promptly collected his adherents, and marched at the head of a vast army against Albert, who was not unprepared for his reception. A great battle took place at Gelheim, near Worms; and, after a bloody contest, the troops of Adolphus were entirely defeated," and he himself was slain. But Albert, now unopposed in Germany, found his title disputed at Rome. Boniface VIII, the most arrogant of all popes, refused to acknowledge the validity of his election, and drove him into a close alliance with the Pope's implacable and finally triumphant enemy, Philip IV of France (see PAPACY: 1294-1348). He was soon at enmity, moreover, with a majority of the Electors who had given the crown to him, and they, stimulated by the Pope, were preparing to depose him, as they had deposed Adolphus. But Albert's energy broke up their plans. He humbled their leader, the Archbishop-Elector of Mainz, and the rest became submissive. The Pope now came to terms with him, and invited him to Rome to receive the imperial crown; also offering to him the crown of France, if he would take it from the head of the excommunicated Philip; but while these proposals were under discussion, Boniface suffered humiliations at the hands of the French king which caused his death. During most of his reign, Albert was busy with undertakings of ambition and rapacity which had no success. He attempted to seize the counties of Holland, Zealand, and Friesland, as fiefs reverting to the crown, on the death of John, Count of Holland, in 1299. He claimed the Bohemian crown in 1306, when Wenceslaus V, the young king, was assassinated, and invaded the country; but only to be beaten back. He was defeated at Lucka, in 1308, when attempting to grasp the inheritance of the Landgrave of Thuringia—under the very transaction which had chiefly caused his predecessor Adolphus to be deposed, and he himself invested with the Roman crown. Finally, he was in hostilities with the Swiss Forest Cantons, and was leading his forces against them, in May, 1308, when he was assassinated by several nobles, including his cousin John, whose enmity

he had incurred.—R. Comyn, *History of the Western empire*, v. 1, ch. 14-17.

1282.—Acquisition of the duchy of Austria by the House of Hapsburg. See AUSTRIA: 1246-1282.

1308-1313.—Reign of Henry of Luxemburg.—The king (subsequently crowned emperor) chosen to succeed Albert was Count Henry of Luxemburg, an able and excellent prince. The new sovereign was crowned as Henry VII. "Henry did not make the extension of his private domains his object, yet favoring fortune brought it to him in the largest measure. Since the death of Wenzel III. [1306] the succession to the throne of Bohemia had been a subject of constant struggles. A very small party was in favor of Austria; but the chief power was in the hands of Henry of Carinthia, husband of Anna, Wenzel's eldest daughter. But he was hated by the people, whose hopes turned more and more to Elizabeth, a younger daughter of Wenzel; though she was kept in close confinement by Henry, who was about to marry her, it was supposed, below her rank. She escaped, fled to the emperor, and implored his aid. He gave her in marriage to his young son John, sending him to Bohemia in charge of Peter Aichspalter, to take possession of the kingdom. He did so, and it remained for more than a century in the Luxemburg family. This King John of Bohemia was a man of mark. His life was spent in the ceaseless pursuit of adventure—from tournament to tournament, from war to war, from one enterprise to another. We meet him now in Avignon, and now in Paris; then on the Rhine, in Prussia, Poland, or Hungary, and then prosecuting large plans in Italy, but hardly ever in his own kingdom. Yet his restless activity accomplished very little, apart from some important acquisitions in Silesia. Henry then gave attention to the public peace; came to an understanding with Leopold and Frederick, the proud sons of Albert, and put under the ban Everard of Wirtemberg, long a fomentor of disturbances, sending against him a strong imperial army. . . . At the Diet of Spire, in September, 1309, it was cheerfully resolved to carry out Henry's cherished plan of reviving the traditional dignity of the Roman emperors by an expedition to the Eternal City. Henry expected thus to renew the authority of his title at home, as well as in Italy, where, in the traditional view, the imperial crown was as important and as necessary as in Germany. Every thing here had gone to confusion and ruin since the Hohenstaufens had succumbed to the bitter hostility of the popes. The contending parties still called themselves Guelphs and Ghibellines, though they retained little of the original characteristics attached to these names. A formal embassy, with Matteo Visconti [the ruling house of Milan from 1277-1450] at its head, invited Henry to Milan; and the parties every where anticipated his coming with hope. The great Florentine poet, Dante, hailed him as a saviour for distracted Italy. Thus, with the pope's approval, he crossed the Alps in the autumn of 1310, attended by a splendid escort of princes of the empire. The news of his approach excited general wonder and expectation, and his reception at Milan in December was like a triumph. He was crowned King of Lombardy without opposition. But when, in the true imperial spirit, he announced that he had come to serve the nation, and not one or another party,

and proved his sincerity by treating both parties alike, all whose selfish hopes were deceived conspired against him. Brescia endured a frightful siege for four months, showing that the national hatred of German rule still survived. At length a union of all his adversaries was formed under King Robert of Naples, the grandson of Charles of Anjou, [brother of Louis IX of France, called in by the popes to take the Sicilian throne and destroy the Hohenstaufen power which they hated] who put Conradin to death. Meanwhile Henry VII. went to Rome, May 1312, and received the crown of the Caesars from four cardinals, plenipotentiaries of the pope, in the church of St. John Lateran, south of the Tiber, St. Peter's being occupied by the Neapolitan troops. But many of his German soldiers left him, and he retired, with a small army, to Pisa, after an unsuccessful effort to take Florence. From the faithful city of Pisa he proclaimed King Robert under the ban, and, in concert with Frederick of Sicily, prepared for war by land and sea. But the pope, now a mere tool of the King of France, commanded an armistice; and when Henry, in an independent spirit, hesitated to obey, Clement V. pronounced the ban of the Church against him. It never reached the emperor, who died suddenly in the monastery of Buon-Convento: poisoned, as the German annalists assert, by a Dominican monk, in the sacramental cup, August 24, 1313. He was buried at Pisa. Meanwhile his army in Bohemia had been completely successful in establishing King John on the throne."—C. T. Lewis, *History of Germany*, bk. 3, ch. 10.

—See also ITALY: 1310-1313.

1314-1347.—Election of rival emperors, Louis (Ludovic) of Bavaria and Frederic of Austria.—Triumph of Louis at the Battle of Mühldorf.—Papal interference and excommunication of Louis.—Germany under interdict.—Unrelenting hostility of the Church.—"The death of Heinric [Henry VII] replunged Germany into horrors to which, since the extinction of the Swabian line of emperors, it had been a stranger. The Austrian princes, who had never forgiven the elevation of the Luxemburg family, espoused the interests of Frederic, their head; the Bohemians as naturally opposed them. From the accession of John, the two houses were of necessity hostile; and it was evident that there could be no peace in Germany until one of them was subjected to the other. The Bohemians, indeed, could not hope to place their king on the vacant throne, since their project would have found an insurmountable obstacle in the jealousy of the electors; but they were at least resolved to support the pretensions of a prince hostile to the Austrians. . . . The diet being convoked at Frankfort, the electors repaired thither, but with very different views; for, as their suffrages were already engaged, while the more numerous party proclaimed the duke of Bavaria as Ludovic V., another no less eagerly proclaimed Frederic. Although Ludovic was a member of the Austro-Hapsburg family—his mother being a daughter of Rodolf I.—he had always been the enemy of the Austrian princes, and in the same degree the ally of the Luxemburg faction. The two candidates being respectively crowned kings of the Romans, Ludovic at Aix-la-Chapelle, by the archbishop of Mentz—Frederic at Bonn, by the metropolitan of Cologne, a civil war was inevitable; neither had virtue enough to sacrifice his own rights to the good of the state. . . . The contest would have ended in favour of the Austrians, but for the rashness of Frederic, who, in

September 1322, without waiting for the arrival of his brother Leopold, assailed Ludowic between Mühlendorf and Ettingen in Bavaria. . . . The battle was maintained with equal valour from the rising to the setting sun; and was evidently in favour of the Austrians, when an unexpected charge in flank by a body of cavalry under the margrave of Nuremberg decided the fortune of the day. Heinric of Austria was first taken prisoner; and Frederic himself, who disdained to flee, was soon in the same condition. To his everlasting honour, Ludowic received Frederic with the highest assurances of esteem; and though the latter was conveyed to the strong fortress of Trapnitz, in the Upper Palatinate, he was treated with every indulgence consistent with his safe custody. But the contest was not yet decided; the valiant Leopold was still at the head of a separate force; and pope John XXII., the natural enemy of the Ghibelins, incensed at some succours which Ludowic sent to the party in Lombardy, excommunicated the king of the Romans, and declared him deposed from his dignity. Among the ecclesiastics of the empire this iniquitous sentence had its weight; but had not other events been disastrous to the king, he might have safely despised it. By Leopold he was signally defeated; he had the mortification to see the inconstant king of Bohemia join the party of Austria; and the still heavier misfortune to learn that the ecclesiastical and two or three secular electors were proceeding to another choice—that of Charles de Valois, whose interests were warmly supported by the pope. In this emergency, his only chance of safety was a reconciliation with his enemies; and Frederic was released on condition of his renouncing all claim to the empire. But though Frederic sincerely resolved to fulfil his share of the compact, Leopold and the other princes of his family refused; and their refusal was approved by the pope. With the magnanimity of his character, Frederic, unable to execute the engagements which he had made, voluntarily surrendered himself to his enemy. But Ludowic, who would not be outdone in generosity, received him, not as a prisoner, but a friend. 'They ate,' says a contemporary writer, 'at the same table, slept on the same couch'; and when the King left Bavaria, the administration of that duchy was confided to Frederic. Two such men could not long remain even politically hostile; and by another treaty, it was agreed that they should exercise conjointly the government of the empire. When this arrangement was condemned both by the pope and the electors, Ludowic proposed to take Italy as his seat of government, and leave Germany to Frederic. But the death [1326] of the war-like Leopold—the great support of the Austrian cause—and the continued opposition of the states to any compromise, enabled Ludowic to retain the sceptre of the kingdom; and in 1329, that of Frederic strengthened his party. But his reign was destined to be one of troubles. . . . His open warfare against the head of the church did not much improve his affairs, the . . . pope, in addition to the former sentence, placing all Germany under an interdict. . . . In 1338, the diet of Frankfort issued a declaration for ever memorable in the annals of freedom. That the imperial authority depended on God alone; that the pope had no temporal influence, direct or indirect, within the empire; . . . it concluded by empowering the emperor (Ludowic while in Italy [see ITALY: 1313-1330]) had received the imperial crown from the anti-pope whom he had created in opposition to John

XXII.) to raise, of his own authority, the interdict which, during four years, had oppressed the country. Another diet, held the following year, ratified this bold declaration. . . . But this conduct of the diet was above the comprehension of the . . . [many] who still regarded Ludowic as under the curse of God and the church. . . . Unfortunately for the national independence, Ludowic himself contradicted the tenor of his hitherto spirited conduct, by . . . applications for absolution. They were unsuccessful; and he had the mortification to see the king of Bohemia, who had always acted an unaccountable part, become his bitter enemy. . . . From this moment the fate of Ludowic was decided. In conjunction with the pope and the French king, Charles of Bohemia, who in 1346 succeeded to his father's kingdom and antipathy, commenced a civil war; and in the midst of these troubled scenes the emperor breathed his last [October 11, 1347]. Twelve months before the decease of Ludowic, Charles of Bohemia [son of John, the blind king of Bohemia, who fell, fighting for the French, at the battle of Crécy], assisted by Clement VI., was elected king of the Romans.—S. A. Dunham, *History of the Germanic empire*, v. 1, bk. 1, ch. 4.—The reign of Louis was one of the most important in the history of Germany. He labored for internal peace and stability; he befriended the cities and encouraged industry; and above all he struck a death blow to the temporal supremacy of the pope in Germany. To his dominions he added Holland, Zealand, Hainault and Friesland.

1347-1493.—Golden Bull of Charles IV.—Luxemburg line of emperors, and the reappearance of the Hapsburgs.—Holy Roman empire as it was at the end of the Middle Ages.—"John king of Bohemia did not himself wear the imperial crown; but three of his descendants possessed it, with less interruption than could have been expected. His son Charles IV. succeeded Louis of Bavaria in 1347; not indeed without opposition, for a double election and a civil war were matters of course in Germany. Charles IV. has been treated with more derision by his contemporaries, and consequently by later writers, than almost any prince in history; yet he was remarkably successful in the only objects that he seriously pursued. Deficient in personal courage, insensible of humiliation, bending without shame to the pope, to the Italians, to the electors, so poor and so little revered as to be arrested by a butcher at Worms for want of paying his demand, Charles IV. affords a proof that a certain dexterity and cold-blooded perseverance may occasionally supply, in a sovereign, the want of more respectable qualities. He has been reproached with neglecting the empire. But he never deigned to trouble himself about the empire, except for his private ends. He did not neglect the kingdom of Bohemia, to which he almost seemed to render Germany a province. Bohemia had been long considered as a fief of the empire, and indeed could pretend to an electoral vote by no other title. Charles, however, gave the states by law the right of choosing a king, on the extinction of the royal family, which seems derogatory to the imperial prerogative [see also BOHEMIA: 1310-1470]. . . . He constantly resided at Prague, where he founded a celebrated university, and embellished the city with buildings.

This kingdom, augmented also during his reign by the acquisition of Silesia, he bequeathed to his son Wenceslaus, for whom, by pliancy towards the electors and the court of Rome, he had procured, against all recent example, the imperial succession. The reign of Charles IV. is distinguished in the constitutional history of the empire by his Golden Bull [1356]; an instrument which finally ascertained the prerogatives of the electoral college [see above: 1125-1272]. The Golden Bull terminated the disputes which had arisen between different members of the same house as to their right of suffrage, which was declared inherent in certain definite territories. The number was absolutely restrained to seven. The place of legal imperial elections was fixed at Frankfort; of coronations, at Aix-la-Chapelle; and the latter ceremony was to be performed by the archbishop of Cologne. These regulations, though consonant to ancient usage, had not always been observed, and their neglect had sometimes excited questions as to the validity of elections. The dignity of elector was enhanced by the Golden Bull as highly as an imperial edict could carry it; they were declared equal to kings, and conspiracy against their persons incurred the penalty of high treason. Many other privileges are granted to render them more completely sovereign within their dominions. It seems extraordinary that Charles should have voluntarily elevated an oligarchy, from whose pretensions his predecessors had frequently suffered injury. But he had more to apprehend from the two great families of Bavaria [Wittelsbach] and Austria [Hapsburg] whom he relatively depressed by giving such a preponderance to the seven electors, than from any members of the college. By his compact with Brandenburg [see BRANDENBURG: 1168-1417] he had a fair prospect of adding a second vote to his own. . . . The next reign, nevertheless evinced the danger of investing the electors with such preponderating authority. Wenceslaus [elected in 1378], a supine and voluptuous man, less respected, and more negligent of Germany, if possible, than his father, was regularly deposed by a majority of the electoral college in 1400. . . . They chose Robert count palatine [Rupert III] instead of Wenceslaus; and though the latter did not cease to have some adherents, Robert has generally been counted among the lawful emperors. Upon his death [1410] the empire returned to the house of Luxemburg; Wenceslaus himself waiving his rights in favour of his brother Sigismund of Hungary." On the death of Sigismund, in 1437, the house of Austria regained the imperial throne, in the person of Albert, duke of Austria, (Albert II) who married Sigismund's only daughter, the queen of Hungary and Bohemia "He died in two years, leaving his wife pregnant with a son, Ladislaus Posthumus, who afterwards reigned in the two kingdoms just mentioned; and the choice of the electors fell upon [the Austrian] Frederic duke of Styria, second-cousin of the last emperor, from whose posterity it never departed, except in a single instance, upon the extinction of his male line in 1740. Frederic III. reigned 53 years [1440-1493], a longer period than any of his predecessors; and his personal character was more insignificant. . . . Frederic, always poor, and scarcely able to protect himself in Austria from the seditions of his subjects, or the inroads of the king of Hungary, was yet another founder of his family, and left their fortunes incomparably more prosperous than at his accession. The marriage of his son Maximilian with the heiress of Burgundy [see NETHERLANDS: 1477] began that

aggrandizement of the house of Austria which Frederic seems to have anticipated. The electors, who had lost a good deal of their former spirit, and were grown sensible of the necessity of choosing a powerful sovereign, made no opposition to Maximilian's becoming king of the Romans in his father's lifetime."—H. Hallam, *Middle Ages*, v. 2, ch. 5.—"It is important to remark that, for more than a century after Charles IV. had fixed his seat in Bohemia, no emperor appeared, endowed with the vigour necessary to uphold and govern the empire. The bare fact that Charles's successor, Wenceslas, was a prisoner in the hands of the Bohemians, remained for a long time unknown in Germany; a simple decree of the electors sufficed to dethrone him. Rupert the Palatine only escaped a similar fate by death. When Sigismund of Luxemburg, (who, after many disputed elections, kept possession of the field,) four years after his election, entered the territory of the empire of which he was to be crowned sovereign, he found so little sympathy that he was for a moment inclined to return to Hungary without accomplishing the object of his journey. The active part he took in the affairs of Bohemia, and of Europe generally, has given him a name; but in and for the empire, he did nothing worthy of note. Between the years 1422 and 1430 he never made his appearance beyond Vienna; from the autumn of 1431 to that of 1433 he was occupied with his coronation journey to Rome; and during the three years from 1434 to his death he never got beyond Bohemia and Moravia; nor did Albert II., who has been the subject of such lavish eulogy, ever visit the dominions of the empire. Frederic III., however, far outdid all his predecessors. During seven-and-twenty years, from 1444 to 1471, he was never seen within the boundaries of the empire. Hence it happened that the central action and the visible manifestation of sovereignty, in as far as any such existed in the empire, fell to the share of the princes, and more especially of the prince-electors. In the reign of Sigismund we find them convoking the diets, and leading the armies into the field against the Hussites; the operations against the Bohemians were attributed entirely to them. In this manner the empire became, like the papacy, a power which acted from a distance, and rested chiefly upon opinion. . . . The emperor was regarded, in the first place, as the supreme feudal lord, who conferred on property its highest and most sacred sanction. . . . Although he was regarded as the head and source of all temporal jurisdiction, yet no tribunal found more doubtful obedience than his own. The fact that royalty existed in Germany had almost been suffered to fall into oblivion; even the title had been lost. Henry VII. thought it an affront to be called King of Germany, and not, as he had a right to be called before any ceremony of coronation, King of the Romans. In the 15th century the emperor was regarded pre-eminently as the successor of the ancient Roman Cæsars, whose rights and dignities had been transferred, first to the Greeks, and then to the Germans in the persons of Charlemagne and O'ho the Great; as the true secular head of Christendom. . . . The opinion was confidently entertained in Germany that the other sovereigns of Christendom, especially those of England, Spain, and France, were legally subject to the crown of the empire: the only controversy was, whether their disobedience was venial, or ought to be regarded as sinful."—L. von Ranke, *History of the Reformation in Germany*, v. 1, pp. 52-56.—See also AUSTRIA: 1330-1364, to 1477-1495.

1417.—Electorate of Brandenburg conferred on the Hohenzollerns.—“The March of Brandenburg is one of those districts which was first peopled by the advance of the German nation towards the east during the twelfth and thirteenth centuries. It was in the beginning, like Silesia, Mecklenburg, Pomerania, Prussia, and Livonia, a German colony settled upon an almost uncultivated soil; from the very first, however, it seems to have given the greatest promise of vigour. . . . Possession was taken of the soil upon the ground of the rights of the princely Ascanian house—we know not whether these rights were founded upon inheritance, purchase, or cession. The process of occupation was so gradual that the institutions of the old German provinces, like those constituting the northern march, had time to take firm root in the newly-acquired territory; and owing to the constant necessity for unsheathing the sword, the colonists acquired warlike habits which tended to give them spirit and energy. . . . The Ascanians were a warlike but cultivated race, incessantly acquiring new possessions, but generous and openhanded; and new life followed in their footsteps. They soon took up an important political position among the German princely houses: their possessions extended over a great part of Thuringia, Moravia, Lausitz, and Silesia; the electoral dignity which they assumed gave to them and to their country a high rank in the Empire. In the Neumark and in Pomerellen the Poles retreated before them, and on the Pomeranian coasts they protected the towns founded by the Teutonic order from the invasion of the Danes. It has been asked whether this race might not have greatly extended its power; but they were not destined even to make the attempt. It is said that at the beginning of the fourteenth century nineteen members of this family were assembled on the Margrave's Hill near Rathenau. In the year 1320, of all these not one remained, or had even left an heir. . . . In Brandenburg . . . it really appeared as if the extinction of the ruling family would entail ruin upon the country. It had formed a close alliance with the imperial power—which at that moment was the subject of contention between the two great families of Wittelsbach and Luxemburg—was involved in the quarrels of those two races, injured by all their alternations of fortune, and sacrificed to their domestic and foreign policy, which was totally at variance with the interests of Brandenburg. At the very beginning of the struggle the March of Brandenburg lost its

dependencies. . . . At length the Emperor Sigismund, the last of the house of Luxemburg, found himself so fully occupied with the disturbances in the Empire and the dissensions in the Church, that he could no longer maintain his power in the March, and intrusted the task to his friend and relation, Frederick, Burgrave of Nürnberg, to whom he lay under very great obligations, and who had assisted him with money at his need.

. . . It was a great point gained, after so long a period of anarchy, to find a powerful and prudent prince ready to undertake the government of the province. He could do nothing in the open field against the revolted nobles, but he assailed and vanquished them in their hitherto impregnable strong-holds surrounded with walls fifteen feet thick, which he demolished with his clumsy but effective artillery. In a few years he had so far succeeded that he was able to proclaim a Landfriede, or public peace, according to which each and every one who was an enemy to him, or to those comprehended in the peace, was considered and treated as the enemy of all. But the effect of all this would have been but transient, had not the Emperor, who had no son, and who was won by Frederick's numerous services and by his talents for action, made the Electorate hereditary in his family. . . . The most important day in the history of the March of Brandenburg and the family of Zollern was the 18th of April, 1417, when in the market-place of Constance the Emperor Sigismund formally invested the Burgrave with the dignity of Elector, placed in his hands the flag with the arms of the March and received from him the oath of allegiance. From this moment a prospect was afforded to the territory of Brandenburg of recovering its former prosperity and increasing its importance, while to the house of Zollern a career of glory and usefulness was opened worthy of powers which were thus called into action.”—L. von Ranke, *Memoirs of the House of Brandenburg*, bk. 1, ch. 2.—See also BRANDENBURG: 1168-1417; HOHENZOLLERN, HOUSE OF.

1492-1514.—Bundschuh insurrections of the peasantry.—Several risings of the German peasantry, in the later part of the fifteenth and early part of the sixteenth century, were named from the Bundschuh, or peasants' clog, which the insurgents bore as their emblem or pictured on their banners. “While the peasants in the Rhetian Alps were gradually throwing off the yoke of the nobles and forming the ‘Graubund’ [see SWITZERLAND: 1396-1499], a struggle was going on between the neighbouring peasantry of Kempten (to the east of Lake Constance) and their feudal lord, the Abbot of Kempten. It began in 1423, and came to

an open rebellion in 1402. It was a rebellion against new demands not sanctioned by ancient custom, and though it was crushed, and ended in little good to the peasantry (many of whom fled into Switzerland), yet it is worthy of note because in it for the first time appears the banner of the Bundschuh. The next rising was in Elsass (Alsace), in 1493, the peasants finding allies in the burghers of the towns along the Rhine, who had their own grievances. The Bundschuh was again their banner, and it was to Switzerland that their anxious eyes were turned for help. The movement also was prematurely discovered and put down. Then, in 1501, other peasants, close neighbours to those of Kempten, caught the infection, and in 1502, again in Elsass, but this time further north, in the region about Speyer and the Neckar, lower down the Rhine, nearer Franconia,

schuh banner was furled, but only for a while. In 1512 and 1513, on the east side of the Rhine, in the Black Forest and the neighbouring districts of Würtemberg, the movement was again on foot on a still larger scale. It had found a leader in Joss Fritz. A soldier, with commanding presence and great natural eloquence, . . . he bided his time. . . . Again the League was betrayed . . . and Joss Fritz, with the banner under his clothes, had to fly for his life to Switzerland. . . . He returned after a while to the Black Forest, went about his secret errands, and again bided his time. In 1514 the peasantry of the Duke Ulrich of Würtemberg rose to resist the tyranny of their lord [in a combination called 'the League of Poor Conrad']. . . . The same year, in the valleys of the Austrian Alps, in Carinthia, Styria, and Crain, similar risings of the peasantry took place, all of

EMPEROR MAXIMILIAN I AND ALBERT DÜRER

the Bundschuh was raised again. It numbered on its recruit rolls many thousands of peasants from the country round, along the Neckar and the Rhine. The wild notion was to rise in arms, to make themselves free, like the Swiss, by the sword, to acknowledge no superior but the Emperor, and all Germany was to join the League. They were to pay no taxes or dues, and commons, forests, and rivers were to be free to all. Here, again, they mixed up religion with their demands, and 'Only what is just before God' was the motto on the banner of the Bundschuh. They, too, were betrayed, and in savage triumph the Emperor Maximilian ordered their property to be confiscated, their wives and children to be banished, and themselves to be quartered alive. . . . Few . . . really fell victims to this cruel order of the Emperor. The ringleaders dispersed, fleeing some into Switzerland and some into the Black Forest. For ten years now there was silence. The Bund-

them ending in the triumph of the nobles."—F. Seebohm, *Era of the Protestant Revolution*, pt. 1, ch. 4.—See also below: 1524-1525.

1493.—Maximilian I becomes emperor.

1493-1519.—Reign of Maximilian.—His personal importance and his imperial powerlessness.—Constitutional reforms in the empire.—Imperial chamber.—Circles.—Aulic Council.—"Frederic [the Third] died in 1493, after a protracted and inglorious reign of 53 years. . . . On the death of his father, Maximilian had been seven years king of the Romans; and his accession to the imperial crown encountered no opposition. . . . Scarcely had he ascended the throne, when Charles VIII., king of France, passed through the Milanese into the south of Italy, and seized on Naples without opposition [see ITALY: 1494-1496]. Maximilian endeavoured to rouse the German nation to a sense of its danger, but in vain. . . . With difficulty he was able to despatch 3,000 men

to aid the league, which Spain, the pope, the Milanese, and the Venetians had formed, to expel the ambitious intruders from Italy. To cement his alliance with Fernando [Ferdinand of Castile, Aragon, Naples, etc.] the Catholic, he married his son Philip to Juana, the daughter of the Spaniard. The confederacy triumphed; not through the efforts of Maximilian, but through the hatred of the Italians to the Gallic yoke. . . . Louis XII., who succeeded to Charles (1498), . . . forced Philip to do homage for Flanders; surrendering, indeed, three inconsiderable towns, that he might be at liberty to renew the designs of his house on Lombardy and Naples. . . . The French had little difficulty in expelling Ludovico Moro, the usurper of Milan, and in retaining possession of the country during the latter part of Maximilian's reign [see ITALY: 1499-1500]. Louis, indeed, did homage for the duchy to the Germanic head; but such homage was merely nominal: it involved no tribute, no dependence. The occupation of this fine province by the French made no impression on the Germans; they regarded it as a fief of the house of Austria, not of the empire; but even if it had stood in the latter relation, they would not have moved one man, or voted one florin, to avert its fate. That the French did not obtain similar possession of Naples, and thereby become enabled to oppose Maximilian with greater effect, was owing to the valour of the Spanish troops, who retained the crown in the house of Aragon. [After Charles of Anjou had seized Sicily and Naples from the Hohenstaufens the family gradually lost power. Sicily was joined to the kingdom of Aragon in 1282, and in 1435 upon the extinction of the house of Anjou Naples was conquered by the king of Aragon.] His disputes with the Venetians were inglorious to his arms; they defeated his armies, and encroached considerably on his Italian possessions. He was equally unsuccessful with the Swiss, whom he vainly persuaded to acknowledge the supremacy of his house. . . . For many of his failures . . . he is not to be blamed. To carry on his vast enterprises he could command only the resources of Austria; had he been able to wield those of the empire, his name would have been more formidable to his enemies; and it is no slight praise, that with means so contracted he could preserve the Netherlands against the open violence, no less than the subtle duplicity, of France. But the internal transactions of Maximilian's reign are those only to which the attention of the reader can be directed with pleasure. In 1495 we witness the entire abolition of the right of diffidation [private warfare—see LAND-FRIEDE]—a right which from time immemorial had been the curse of the empire. . . . The passing of the decree which for ever secured the public peace, by placing under the ban of the empire, and fining at 2,000 marks in gold, every city, every individual that should hereafter send or accept a defiance, was nearly unanimous. In regard to the long-proposed tribunal [to take cognizance of all violations of the public tranquillity], which was to retain the name of the Imperial chamber [*Reichskammergericht*]; Maximilian relaxed much from the pretensions of his father. . . . It was solemnly decreed that the new court should consist of one grand judge, and of 16 assessors, who were presented by the states, and nominated by the emperor. . . . Though a new tribunal was formed, its competency, its operation, its support, its constitution, the enforcement of its decisions, were left to chance; and many successive diets—even many generations—were passed before anything like an organised system could be

introduced into it. For the execution of its decrees the Swabian league was soon employed; then another new authority, the Council of Regency. . . . But these authorities were insufficient to enforce the execution of the decrees emanating from the chamber; and it was found necessary to restore the proposition of the circles [districts or divisions of Germany for the apportionment of members to the *Reichsregiment*, or administrative council], which had been agitated in the reign of Albert II. . . . Originally they comprised only—1. Bavaria, 2. Franconia, 3. Saxony, 4. the Rhine, 5. Swabia, and 6. Westphalia; thus excluding the states of Austria and the electorates. But this exclusion was the voluntary act of the electors, who were jealous of a tribunal which might encroach on their own privileges. In 1512, however, the opposition of most appears to have been removed; for four new circles were added. 7. The circle of Austria comprised the hereditary dominions of that house. 8. That of Burgundy contained the states inherited from Charles the Rash in Franche-Comté and the Netherlands. 9. That of the Lower Rhine comprehended the three ecclesiastical electorates and the Palatinate. 10. That of Upper Saxony extended over the electorate of that name and the march of Brandenburg. . . . Bohemia and Prussia . . . refused to be thus partitioned. Each of these circles had its internal organisations, the elements of which were promulgated in 1512, but which was considerably improved by succeeding diets. Each had its hereditary president, or director, and its hereditary prince convoker, both offices being frequently vested in the same individual. . . . Each circle had its military chief, elected by the local states, whose duty it was to execute the decrees of the Imperial Chamber. Generally this office was held by the prince director. . . . The establishment of the Imperial Chamber was . . . disagreeable to the emperor. To rescue from its jurisdiction such causes as he considered lay more peculiarly within the range of his prerogative, and to encroach by degrees on the jurisdiction of this odious tribunal, Maximilian, in 1501, laid the foundation of the celebrated Aulic Council. But the competency of this tribunal was soon extended; from political affairs, investitures, charters, and the numerous matters which concerned the Imperial chancery, it immediately passed to judicial crimes. . . . By an imperial edict of 1518, the Aulic Council was to consist of 18 members, all nominated by the emperor. Five only were to be chosen from the states of the empire, the rest from those of Austria. About half were legists, the other half nobles, but all dependent on their chief. . . . When he [Maximilian] laboured to make this council as arbitrary in the empire as in Austria, he met with great opposition. . . . But his purpose was that of encroachment no less than of defence; and his example was so well imitated by his successors, that in most cases the Aulic Council was at length acknowledged to have a concurrent jurisdiction with the Imperial Chamber, in many the right of prevention over its rival."—S. A. Dunham, *History of the Germanic empire*, v. 2, bk. 3, ch. 1.—"The received opinion which recognises in [Maximilian] the creative founder of the later constitution of the empire, must be abandoned. . . . He had not the power of keeping the princes of the empire together; . . . on the contrary, everything about him split into parties. It followed of necessity that abroad he rather lost than gained ground. . . . The glory which surrounds the memory of Maximilian, the high renown which he enjoyed even among his contemporaries, were therefore not won

MARTIN LUTHER BURNING THE PAPAL BULL  
At Wittenberg, Dec. 10, 1520

by the success of his enterprises, but by his personal qualities. Every good gift of nature had been lavished upon him in profusion. . . . He was a man . . . formed to excite admiration, and to inspire enthusiastic attachment; formed to be the romantic hero, the exhaustless theme of the people."—L. von Ranke, *History of the Reformation in Germany*, v. 1, pp. 379-381.—See also AUSTRIA: 1477-1495.

1517-1523.—Beginning of the movement of religious reformation.—Papal indulgences, and Luther's attack on them.—"The Reformation, like all other great social convulsions, was long in preparation [see PAPACY: 15th-16th centuries]. It was one part of that general progress, complex in its character, which marked the . . . period of transition from the Middle Ages to modern civilization. . . . But while the Reformation was one part of a change extending over the whole sphere of human knowledge and activity, it had its own specific origin and significance. These are still, to some extent, a subject of controversy. . . . One of its causes, as well as one of the sources of its great power, was the increasing discontent with the prevailing corruption and misgovernment in the Church, and with papal interference in civil affairs. . . . The misconduct of the popes in the last half of the fifteenth century was not more flagrant than that of their predecessors in the tenth century. But the fifteenth century was an age of light. What was done by the pontiffs was not done in a corner, but under the eyes of all Europe. Besides, there was now a deep-seated craving, especially in the Teutonic peoples, who had so long been under the tutelage of a legal, judaizing form of Christianity, for a more spiritual type of religion. . . . The Reformation may be viewed in two aspects. On the one hand it is a religious revolution affecting the beliefs, the rites, the ecclesiastical organization of the Church, and the form of Christian life. On the other hand, it is a great movement in which sovereigns and nations are involved; the occasion of wars and treaties; the close of an old, and the introduction of a new, period in the history of culture and civilization. Germany, including the Netherlands and Switzerland, was the stronghold of the Reformation. It was natural that such a movement should spring up and rise to its highest power among a people in whom a love of independence was mingled with a yearning for a more spiritual form of religion than was encouraged by mediæval ecclesiasticism. Hegel has dwelt with eloquence upon the fact that while the rest of the world was gone out to America or to the Indies, in quest of riches and a dominion that should encircle the

globe, a simple monk, turning away from empty forms and the things of sense, was finding him whom the disciples once sought in a sepulchre of stone. Unquestionably the hero of the Reformation was Martin Luther. . . . As an English writer has pointed out, Luther's whole nature was identified with his great work, and while other leaders, like Melanchthon and even Calvin, can be separated in thought from the Reformation, 'Luther, apart from the Reformation, would cease to be Luther.' . . . In 1517 John Tetzel, a hawker of indulgences, the proceeds of which were to help pay for the building of St. Peter's Church, appeared in the neighborhood of Wittenberg. To persuade the people to buy his 'spiritual wares, he told them, as Luther himself testifies, that as soon as their money clinked in the bottom of the chest the souls of their deceased friends forthwith went up to heaven. Luther was so struck with the enormity of this traffic that he determined to stop it. He preached against it, and on October 31, 1517, he

PHILIPPE MELANCHTHON

(Sketch by Hans Holbein the Younger)

posted on the door of the Church of All Saints, at Wittenberg, his ninety-five theses [see PAPACY: 1517], relating to the doctrine and practice of selling indulgences. Indulgences . . . were at first commutations of penance by the payment of money. The right to issue them had gradually become the exclusive prerogative of the popes. The eternal punishment of mortal sin being remitted or commuted by the absolution of the priest, it was open to the pope or his agents, by a grant of indulgences, to remove the temporal or terminable penalties, which might extend into purgatory. For the benefit of the needy he could draw upon the treasury of merit stored up by Christ and the saints. Although it was expressly declared by Pope Sixtus IV., that souls are delivered from purgatorial fires in a way analogous to the efficacy of prayer, and although contrition was theoretically required of the recipient of an indulgence, it often appeared to the people as a simple bargain, according to which, on payment of a stipulated sum, the individual obtained a full discharge from the penalties of sin, or procured the release of a soul from the flames. Luther's theses assailed the doctrines which made this bane-

ful traffic possible. . . . Unconsciously to their author, they struck a blow at the authority of Rome and of the priesthood. Luther had no thought of throwing off his allegiance to the Roman Church. Even his theses were only propositions, propounded for academic debate, according to the custom in mediæval universities. He concluded them with the solemn declaration that he affirmed nothing, but left all to the judgment of the Church. . . . The theses stirred up a commotion all over Germany. . . . A controversy arose between the new champion of reform and the defenders of indulgences. It was during this dispute that Luther began to realize that human authority was against him and to see the necessity of planting himself more distinctly on the Scriptures. His clear arguments and resolute attitude won the respect of the Elector of Saxony, who, though he often sought to restrain his vehemence, nevertheless protected him from his enemies. This the elector was able to do because of his political importance, which became still greater when, after the death of Maximilian, he was made regent of Northern Germany."—G. P. Fisher, *History of the Christian Church*, pp. 287-293.—"At first neither Luther, nor others, saw to what the contest about the indulgences would lead. The Humanists believed it to be only a scholastic disputation, and Hutten laughed to see theologians engaged in a fight with each other. It was not till the Leipzig disputation (1519), where Luther stood forward to defend his views against Eck, that the matter assumed a grave aspect, took another turn, and after the appearance of Luther's appeals 'To the Christian Nobility of the German Nation,' 'On the Babylonian Captivity,' and against Church abuses, that it assumed national importance. All the combustible materials were ready, the spark was thrown among them, and the flames broke out from every quarter. Hundreds of thousands of German hearts glowed responsive to the complaints which the Wittenberg monk flung against Papal Rome, in a language whose sonorous splendour and iron strength were now first heard in all the fulness, force, and beauty of the German idiom. That was an imperishable service rendered to his country by Luther. He wrote in German, and he wrote such German. The papal ban hurled back against him in 1520 was disregarded. He burnt it outside the gate of Wittenberg by the leper hospital, in the place where the rags and plague-stained garments of the lepers were wont to be consumed. The nobility, the burghers, the peasants, all thrilled at his call. Now the moment had come for a great emperor, a second Charlemagne, to stand forward and regenerate at once religion and the empire. There was, however, at the head of the state, only Charles V., the grandson of Maximilian, a man weak where he ought to have been strong, and strong where he ought to have been weak, a Spanish Burgundian prince, of Romance stock, who despised and disliked the German tongue, the tongue of the people whose imperial crown he bore, a prince whose policy was to combat France and humble it. It was convenient for him, at the time, to have the pope on his side, so he looked with dissatisfied eyes on the agitation in Germany. The noblest hearts among the princes bounded with hope that he would take the lead in the new movement. The lesser nobility, the cities, the peasantry, all expected of the emperor a reformation of the empire politically and religiously. . . . But all hopes were dashed. Charles V. as little saw his occasion as had Maximilian. He took up a hostile position to the new movement at once.

He was, however, brought by the influential friends of Luther, among whom first of all was the Elector of Saxony, to hear what the reformer had to say for himself, before he placed him under the ban of the empire. Luther received the imperial safe-conduct, and was summoned to the Diet of Worms, there to defend himself. He went, notwithstanding that he was warned and reminded of the fate of Huss. 'I will go to Worms,' said he, 'even were as many devils set against me as there are tiles on the roofs.' It was probably on this journey that the thoughts entered his mind which afterwards (1530) found their expression in that famous chorale, 'Eine feste Burg ist unser Gott,' which became the battle-song of Protestants. Those were memorable days, the 17th and 18th of April, 1521, in which a poor monk stood up before the emperor and all the estates of the empire, undazzled by their threatening splendour, and conducted his own case. At that moment when he closed his defence with the stirring words, 'Let me be contradicted out of Holy Scripture—till that is done I will not recant. Here stand I. I can do no other, so help me God, amen!' then he had reached the pinnacle of his greatness. The result is well known. The emperor and his papal adviser remained unmoved, and the ban was pronounced against the heretic. Luther was carried off by his protector, the Elector of Saxony, and concealed in the Wartburg, where he worked at his translation of the Bible. . . . Brandenburg, Hesse, and Saxony declared in favour of reform. In 1523 Magdeburg, Wismar, Rostock, Stettin, Danzig, Riga, expelled the monks and priests, and appointed Lutheran preachers. Nürnberg and Breslau hailed the Reformation with delight."—S. Baring-Gould, *Church in Germany*, ch. 18.—See also PAPACY: 1516-1517, to 1522-1525.

1519.—Contest for the imperial crown.—Three royal candidates in the field.—Election of Charles V, the Austro-Spanish monarch of many thrones.—In his last years, Maximilian made great efforts to secure the Imperial Crown for his grandson Charles, who had already inherited, through his mother Joanna, of Spain, the kingdoms of Castile, Aragon, and the Two Sicilies, and through his father, Philip of Austria, the duchy of Burgundy and the many lordships of the Netherlands. "In 1518 he obtained the consent of the majority of the electors to the Roman crown being bestowed on that prince. The electors of Trèves and Saxony alone opposed the project, on the ground that, as Maximilian had never received the Imperial crown [but was styled Emperor Elect] he was himself still King of the Romans, and that consequently Charles could not assume a dignity that was not vacant. To obviate this objection, Maximilian pressed Leo to send the golden crown to Vienna; but this plan was defeated by the intrigues of the French court. Francis, who intended to become a candidate for the Imperial crown, intreated the Pope not to commit himself by such an act; and while these negotiations were pending, Maximilian died at Wels, in Upper Austria, January 12th, 1519. . . . Three candidates for the Imperial crown appeared

in the field: the Kings of Spain, France, and England. Francis I [of France] was now at the height of his reputation. His enterprises had hitherto been crowned with success, the popular test of ability, and the world accordingly gave him credit for a political wisdom which he was

accommodated. But the bought votes of these venal Electors could not be depended on, some of whom sold themselves more than once to different parties.\* The infamy of Albert, Elector of Mentz, in these transactions, was particularly notorious. The chances of Henry VIII. [of England]

#### INTERCEPTION OF LUTHER

(From a painting by Count von Harach)

far from possessing. He appears to have gained three or four of the Electors by the lavish distribution of his money, which his agent, Bonnivet, was obliged to carry through Germany on the backs of horses; for the Fuggers, the rich bankers of Augsburg, were in the interest of Charles, and refused to give the French any

were throughout but slender. Henry's hopes, like those of Francis, were chiefly founded on the corruptibility of the Electors, and on the expectation that both his rivals, from the very magnitude of their power, might be deemed ineligible. Of the three candidates the claims of Charles seemed the best founded and the most deserving

of success. The House of Austria had already furnished six emperors, of whom the last three had reigned eighty years, as if by an hereditary succession. Charles's Austrian possessions made him a German prince, and from their situation constituted him the natural protector of Germany against the Turks. The previous canvass of Maximilian had been of some service to his cause, and all these advantages he seconded, like his competitors, by the free use of bribery. . . . Leo X., the weight of whose authority was sought both by Charles and Francis, though he seemed to favour each, desired the success of neither. He secretly advised the Electors to choose an emperor from among their own body; and as this seemed an easy solution of the difficulty, they unanimously offered the crown to Frederick the Wise, Elector

House of Austria was continued through him; while Charles himself became the founder of a new branch of the House—the Spanish.—See also AUSTRIA: 1406-1526; SPAIN: 1518-1522.

1520-1521.—Capitulation of Charles V.—His first diet, at Worms, and its political measures.—The election of Charles V “was accompanied with a new and essential alteration in the constitution of the empire. Hitherto a general and verbal promise to confirm the Germanic privileges had been deemed a sufficient security; but as the enormous power and vast possessions of the new

CHARLES V AND FUGGER

During the Diet of Augsburg, the Emperor Charles V was guest of Anton Fugger at his house in the Weinmarkt, where, it is said, Fugger lit a fire of cinnamon with bonds for money due him by the emperor.

of Saxony. But Frederick magnanimously refused it, and succeeded in uniting the suffrages of the Electors in favour of Charles; principally on the ground that he was the sovereign best qualified to meet the great danger impending from the Turk. . . . The new Emperor, now in his 20th year, assumed the title of Charles V. . . . He was proclaimed as 'Emperor Elect,' the title borne by his grandfather, which he subsequently altered to that of 'Emperor Elect of the Romans,' a designation adopted by his successors, with the omission of the word 'elect,' down to the dissolution of the empire."—T. H. Dyer, *History of modern Europe*, v. 1, bk. 2, ch. 2.—On his election to the Imperial throne, Charles ceded to his younger brother, Ferdinand, all the German possessions of the family. The latter, therefore, became Archduke of Austria, and the German branch of the

emperor rendered him the object of greater jealousy and alarm than his predecessors, the electors digested into a formal deed or capitulation all their laws, customs, and privileges, which the ambassadors of Charles signed before his election, and which he himself ratified before his coronation; and this example has been followed by his successors. It consisted of 30 articles, partly relating to the Germanic body in general, and partly to the electors and states in particular. Of those relating to the Germanic body in general, the most prominent were, not to confer the escheated fiefs, but to re-unite and consolidate them, for the benefit of the emperor and empire; not to intrust the charges of the empire to any but Germans; not to grant dispensations of the common law; to use the German language in the proceedings of the chancery; and to put no one

arbitrarily to the ban, who had not been previously condemned by the diet or imperial chamber. He was to maintain the Germanic body in the exercise of its legislative powers, in its right of declaring war and making peace, of passing laws on commerce and coinage, of regulating the contingents, imposing and directing the perception of ordinary contributions, of establishing and superintending the superior tribunals, and of judging the personal causes of the states. Finally, he promised not to cite the members of the Germanic body before any tribunal except those of the empire, and to maintain them in their legitimate privileges of territorial sovereignty. The articles which regarded the electors were of the utmost importance, because they confirmed the rights which had been long contested with the emperors. . . . Besides these concessions, he promised not to make any attempt to render the imperial crown hereditary in his family, and to re-establish the council of regency, in conformity with the advice of the electors and great princes of the empire. On the 6th of January, 1521, Charles assembled his first diet at Worms, where he presided in person. At his proposition the states passed regulations to terminate the troubles which had already arisen during the short interval of the interregnum, and to prevent the revival of similar disorders. . . . The imperial chamber was re-established in all its authority, and the public peace again promulgated, and enforced by new penalties. In order to direct the affairs of the empire during the absence of Charles, a council of regency was established. . . . It was to consist of a lieutenant-general, appointed by the emperor, and 22 assessors, of whom 18 were nominated by the states, and four by Charles, as possessor of the circles of Burgundy and Austria. . . . At the same time an aid of 20,000 foot and 4,000 horse was granted, to accompany the emperor in his expedition to Rome; but the diet endeavoured to prevent him from interfering, as Maximilian had done, in the affairs of Italy, by stipulating that these troops were only to be employed as an escort, and not for the purpose of aggression."—W. Coxe, *History of the House of Austria*, v. 1, ch. 26.

1522-1525.—Systematic organization and adoption in northern Germany of the Lutheran Reformation.—Diets at Nuremberg.—Catholic League of Ratisbon. See PAPACY: 1522-1525.

1524-1525.—Peasants' War.—"A political ferment, very different from that produced by the Gospel, had long been troubling the empire. The people, weighed down under civil and ecclesiastical oppression, attached in many places to the lands belonging to the lords, and sold with them, threatened to rise, and furiously burst their chains. In Holland, at the end of the preceding century, the peasants had mustered around standards inscribed with the words 'bread' and 'cheese,' to them the two necessaries of life. In 1503 the 'Cobblers' League' ['Bundschuh'—see above: 1492-1514] had burst forth in the neighbourhood of Spire. In 1513 this was renewed in Brisgau, and encouraged by the priests. In 1514 Wurtemberg had witnessed 'the League of poor Conrad,' the object of which was to uphold 'the justice of God' by revolt. In 1515 terrible commotions had taken place in Carinthia and Hungary. These insurrections were stifled by torrents of blood, but no relief had been given to the peoples. A political reform was as much wanted as a religious one. The people had a right to it, but they were not ripe to enjoy it. Since the commencement of the

Reformation—these popular agitations had been suspended, the minds of men being absorbed with other thoughts. . . . But everything showed that peace would not last long. . . . The main dykes which had hitherto kept the torrent back were broken, and nothing could restrain its fury. Perhaps it must be admitted that the movement communicated to the people by the Reform gave new force to the discontent which was fermenting in the nation. . . . Erasmus did not hesitate to say to Luther: 'We are now reaping the fruits of the seed you have sown.' . . . The evil was augmented by the pretensions of certain fanatical men, who laid claim to celestial inspirations. . . . The most distinguished of these enthusiasts was Thomas Münzer. . . . His first appearance was at Zwickau. He left Wittenberg after Luther's return [from his concealment at Wartburg, 1522], dissatisfied with the inferior part he had played, and he became pastor of the little town of Alstadt in Thuringia. There he could not long be at rest, and he accused the reformers of founding a new papacy by their attachment to the letter, and of forming churches which were not pure and holy. He regarded himself as called of God to bear a remedy for so great an evil. . . . He maintained that to obey princes, 'destitute of reason,' was to serve God and Belial at the same time. Then, marching at the head of his parishioners, to a chapel which was visited by pilgrims from all quarters, he pulled it to the ground. After this exploit he was obliged to quit the country, wandered over Germany, and came to Switzerland, spreading as he went, wherever people would hear him, his plan for a universal revolution. In every place he found elements ready for his purpose. He threw his powder upon the burning coals, and a violent explosion soon followed. . . . The revolt commenced in those regions of the Black Forest, and the sources of the Danube, which were so often the scene of popular disturbances. On the 19th of July, 1524, the Thurgovian peasantry rose against the Abbot of Reichenau, who would not grant them an evangelical preacher. Thousands soon gathered around the little town of Tengen, to liberate an ecclesiastic who was imprisoned there. The revolt spread, with inconceivable rapidity, from Suabia to the Rhine countries, to Franconia, to Thuringia, and to Saxony. In January, 1525, the whole of these countries were in insurrection. Towards the end of that month the peasants published a declaration in twelve articles, asking the liberty to choose their own pastors, the abolition of petty tithes, serfdom, the duties on inheritance, and liberty to hunt, fish, cut wood, &c., and each demand was supported by a passage of Scripture."—J. H. Merle d'Aubigné, *Story of the Reformation*, pt. 3, ch. 8 (*History of the Reformation*, bk. 10, ch. 10-11).—"Had the feudal lords granted proper and fair reforms long ago, they would never have heard of these twelve articles. But they had refused reform, and they now had to meet revolution. And they knew of but one way of meeting it, namely, by the sword. The lords of the Swabian League sent their army of foot and horsemen, under their captain, George Truchsess. The poor peasants could not hold out against trained soldiers and cavalry. Two battles on the Danube, in which thousands of peasants were slain, or drowned in the river, and a third equally bloody one in Algau, near the Boden See, crushed this rebellion in Swabia, as former rebellions had so often been crushed before. This was early in April 1525. But in the meantime the revolution had spread further north. In the valley of the Neckar a body of 6,000 peasants had come together, enraged by the news of the slaughter

of their fellow peasants in the south of Swabia." They stormed the castle of the young Count von Helfenstein, who had recently cut the throats of some peasants who met him on the road, and put the Count to death, with 60 of his companions. "A yell of horror was raised through Germany at the news of the peasants' revenge. No yell had risen when the Count cut peasants' throats, or the Swabian lords slew thousands of peasant rebels. Europe had not yet learned to mete out the same measure of justice to noble and common blood. . . . The revolution spread, and the reign of terror spread with it. North and east of the valley of the Neckar, among the little towns of Franconia, and in the valleys of the Maine, other hands of peasants, mustering by thousands, destroyed alike cloisters and castles. Two hundred of these lighted the night with their flames during the few weeks of their temporary triumph. And here another feature of the revolution became prominent. The little towns were already . . . passing through an internal revolution. The artisans were rising against the wealthier burghers, overturning the town councils, and electing committees of artisans in their place, making sudden changes in religion, putting down the Mass, unfrocking priests and monks, and in fact, in the interests of what they thought to be the gospel, turning all things upside down. . . . It was during the Franconian rebellion that the peasants chose the robber knight Goetz von Berlichingen as their leader. It did them no good. More than a robber chief was needed to cope with soldiers used to war. . . . While all this was going on in the valleys of the Maine, the revolution had crossed the Rhine into Elsass and Lothringen, and the Palatinate about Spire and Worms, and in the month of May had been crushed in blood, as in Swabia and Franconia. South and east, in Bavaria, in the Tyrol, and in Carinthia also, castles and monasteries went up in flames, and then, when the tide of victory turned, the burning houses and farms of the peasants lit up the night and their blood flowed freely. Meanwhile Münzer, who had done so much to stir up the peasantry in the south to rebel, had gone north into Thuringia, and headed a revolution in the town of Mühlhausen, and became a sort of Savonarola of a madder kind. . . . But the end was coming. The princes, with their disciplined troops, came nearer and nearer. What could Münzer do with his 8,000 peasants? He pointed to a rainbow and expected a miracle, but no miracle came. The battle, of course, was lost; 5,000 peasants lay dead upon the field near the little town of Frankenhausen, where it was fought. Münzer fled and concealed himself in a bed, but was found and taken before the princes, thrust into a dungeon, and afterwards beheaded. So ended the wild career of this misguided, fanatical, self-deceived, but yet, as we must think, earnest and in many ways heroic spirit. . . . The princes and nobles now everywhere prevailed over the insurgent peasants. Luther, writing on June 21, 1525, says:—"It is a certain fact, that in Franconia 11,000 peasants have been slain. Markgraf Casimir is cruelly severe upon his peasants, who have twice broken faith with him. In the Duchy of Wurtemberg, 6,000 have been killed; in different places in Swabia, 10,000. It is said that in Alsace the Duke of Lorraine has slain 20,000. Thus everywhere the wretched peasants are cut down.' . . . Before the Peasants' War was ended at least 100,000 perished, or twenty times as many as were put to death in Paris during the Reign of Terror in 1793. . . . Luther, throughout the Peasants' War, sided with the ruling powers. . . .

The reform he sought was by means of the civil power; and in order to clear himself and his cause from all participation in the wild doings of the peasantry, he publicly exhorted the princes to crush their rebellion."—F. Seebohm, *Era of the Protestant revolution*, pt. 2, ch. 5.—The terrors inspired by the peasants' revolt and the rapid growth of the political ideas of the Reformation caused the Roman Catholic nobility in 1525 to form a defensive alliance known as the League of Dessau. The Protestant princes and many of the strong towns united in 1526 in the League of Torgau.

1530-1532.—Augsburg Decree.—Alarm of the Protestants.—Their League of Schmalkalden and alliance with the king of France.—Pacification of Nuremberg with the emperor.—Expulsion of the Turks from Hungary.—The decree issued by the Diet at Augsburg was condemnatory of most of the tenets peculiar to the Protestants, "forbidding any person to protect or tolerate such as taught them, enjoining a strict observance of the established rites, and prohibiting any farther innovation, under severe penalties. All orders of men were required to assist with their persons and fortunes in carrying this decree into execution; and such as refused to obey it were declared incapable of acting as judges, or of appearing as parties in the imperial chamber, the supreme court of judicature in the empire. To all which was subjoined a promise, that an application should be made to the pope, requiring him to call a general council within six months, in order to terminate all controversies by its sovereign decisions. The severity of this decree, which was considered as a prelude to the most violent persecution, alarmed the protestants, and convinced them that the emperor was resolved on their destruction." Under these circumstances, the Protestant princes met at Schmalkalden, December 22, 1530, and there "concluded a league of mutual defence against all aggressors, by which they formed the protestant states of the empire into one regular body, and, beginning already to consider themselves as such, they resolved to apply to the kings of France and England, and to implore them to patronise and assist their new confederacy. An affair not connected with religion furnished them with a pretence for courting the aid of foreign princes." This was the election of the emperor's brother, Ferdinand, to be King of the Romans, against which they had protested vigorously. "When the protestants, who were assembled a second time at Smalkalde [February, 1531], received an account of this

transaction, and heard, at the same time, that prosecutions were commenced in the imperial chamber against some of their number, on account of their religious principles, they thought it necessary, not only to renew their former confederacy, but immediately to despatch their ambassadors into France and England." The king of France "listened with the utmost eagerness to the complaints of the protestant princes; and, without seeming to countenance their religious opinions, determined secretly to cherish those sparks of political discord which might be afterwards kindled into a flame. For this purpose he sent William de Bellay, one of the ablest negotiators in France, into Germany, who, visiting the courts of the malcontent princes, and heightening their ill-humour by various arts, concluded an alliance between them and his master, which, though concealed at that time, and productive of no immediate effects, laid the foundation of a union fatal on many occasions to Charles's ambitious projects. . . . The king of England [Henry VIII], highly incensed against Charles, in compliance to whom, the pope had long retarded, and now openly opposed, his divorce [from Catharine of Aragon], was no less disposed than Francis to strengthen a league which might be rendered so formidable to the emperor. But his favourite project of the divorce led him into such a labyrinth of schemes and negotiations, and he was, at the same time, so intent on abolishing the papal jurisdiction in England, that he had no leisure for foreign affairs. This obliged him to rest satisfied with giving general promises, together with a small supply in money, to the confederates of Smalkalde. Meanwhile, many circumstances convinced Charles that this was not a juncture" in which he could afford to let his zeal for the church push him to extremities with the Protestants. "Negotiations were, accordingly, carried on by his direction with the elector of Saxony and his associates; after many delays . . . terms of pacification were agreed upon at Nuremberg [July 23], and ratified solemnly in the diet at Ratisbon [August 3]. In this treaty it was stipulated: that universal peace be established in Germany, until the meeting of a general council, the convocation of which within six months the emperor shall endeavour to procure; that no person shall be molested on account of religion; that a stop shall be put to all processes begun by the imperial chamber against protestants, and the sentences already passed to their detriment shall be declared void. On their part, the protestants engaged to assist the emperor with all their forces in resisting the invasion of the Turks. . . . The protestants of Germany, who had hitherto been viewed only as a religious sect, came henceforth to be considered as a political body of no small consequence. The intelligence which Charles received of Solymán's [sultan of Turkey] having entered Hungary, at the head of 300,000 men, brought the deliberations of the diet at Ratisbon to a period. . . . The protestants, as a testimony of their gratitude to the emperor, exerted themselves with extraordinary zeal, and brought into the field forces which exceeded in number the quota imposed on them; and the catholics imitating their example, one of the greatest and best-appointed armies that had ever been levied in Germany, assembled near Vienna. . . . It amounted in all to 00,000 disciplined foot, and 30,000 horse, besides a prodigious swarm of irregulars. Of this vast army . . . the emperor took the command in person; and mankind waited in suspense the issue of a decisive battle between the two greatest monarchs in the world. But each of them dreading the other's power and good fortune, they both

conducted their operations with such excessive caution, that a campaign for which such immense preparations had been made ended without any memorable event. Solymán, finding it impossible to gain ground upon an enemy always attentive and on his guard, marched back to Constantinople towards the end of autumn. . . . About the beginning of this campaign, the elector of Saxony died, and was succeeded by his son John Frederick. . . . Immediately after the retreat of the Turks, Charles, impatient to revisit Spain, set out, on his way thither, for Italy."—W. Robertson, *History of the reign of Charles V*, bk. 5.

1533-1546.—Mercenary aspects of the Reformation.—Protestant intolerance.—Union with the Swiss reformers.—Catholic Holy League.—Preparations for war.—"During the next few years [after the peace concluded at Nuremberg] there was no open hostility between the two religious parties. . . . But there was dissension enough. In the first place there was much dispute as to the meaning of the articles concluded at Nuremberg. The catholic princes, under the pretext that, if no man was to be disturbed for his faith, or for things depending on faith, he was still amenable for certain offences against the church, which were purely of a civil nature, were eager that the imperial chamber should take cognisance of future cases, at least, where protestants should seek to invade the temporalities of the church. . . . But nothing was effected; the tribunal was too powerless to enforce its decrees. In 1534, the protestants, in a public assembly, renounced all obedience to the chamber; yet they did not cease to appropriate to themselves the property of such monasteries and churches as, by the conversion of catholics to their faith—and that faith was continually progressive—lay within their jurisdiction. We need scarcely observe, that the prospect of spoliation was often the most powerful inducement with the princes and nobles to change their religion. When they, or the magistracy of any particular city, renounced the faith hitherto established, the people were expected to follow the example: the moment Lutheranism was established in its place, the ancient faith was abolished; nobody was allowed to profess it; and, with one common accord, all who had any prospect of benefiting by the change threw themselves on the domains of the expelled clergy. That the latter should complain before the only tribunal where justice could be expected, was natural; nor can we be surprised that the plunderers should soon deny, in religious affairs, the jurisdiction of that tribunal. From the departure of the emperor to the year 1538, some hundreds of domains were thus seized, and some hundreds of complaints addressed to him by parties who resolved to interpret the articles of Nuremberg in their own way. The protestants declared, in a letter to him, that their consciences would not allow them to tolerate any papist in their states. . . . By espousing the cause of the exiled duke of Wittemberg, they procured a powerful ally. . . . But a greater advantage was the union of the sacramentarians [the Swiss reformers, who accepted the doctrine of Zwingli respecting the purely symbolical significance of the commemoration of the Lord's Supper—see SWITZERLAND: 1528-1531] with the Lutherans. Of such a result, at the diet of Augsburg,

there was not the least hope; but Bucer, being deputed by the imperial cities to ascertain whether a union might not be effected, laboured so zealously at the task that it was effected. He consented to modify some of his former opinions; or at least to wrap them in language so equivocal that they might mean anything or nothing at the pleasure of the holder. The Swiss, indeed, especially those of Zurich, refused to sanction the articles on which Luther and Bucer had agreed. Still, by the union of all protestant Germany under the same banners, much was gained. . . . In the meantime, the dissensions between the two great parties augmented from day to day. To pacify them, Charles sent fruitless embassies. Roused by the apparent danger, in 1538, the catholic princes formed, at Nuremberg, a counter league to that of Smalcald [calling it the Holy League]. . . . The death of Luther's old enemy, George, duke of Saxony [1539], transferred the dominion of that prince's states into the hands of [his brother Henry] a Lutheran. Henry, duke of Brunswick, was now the only great secular prince in the north of Germany who adhered to the Roman catholic faith. . . . A truce was concluded at Frankfort, in 1539; but it could not remove the existing animosity, which was daily augmented. Both parties were in the wrong. . . . At the close of 1540, Worms was the scene of a conference very different from that where, 20 years before, Luther had been proscribed. There was an interminable theological disputation. . . . As little good resulted, Charles, who was hastening from the Low Countries, to his German dominions, evoked the affair before a diet at Ratisbon, in April, 1541. . . . The diet of Ratisbon was well attended; and never did prince exert himself more zealously than Charles to make peace between his angry subjects. But . . . all that could be obtained was, that things should be suffered to remain in their present state until a future diet or a general council. The reduction of Buda, however, by the Turks, rendered king Ferdinand, his brother, and the whole of Germany, eager for an immediate settlement of the dispute. . . . Hence the diet of Spire in 1542. If, in regard to religion, nothing definite was arranged, except the selection of Trent as the place most suitable for a general council, one good end was secured—supplies for the war with the Turks. The campaign, however, which passed without an action, was inglorious to the Germans, who appear to have been in a lamentable state of discipline. Nor was the public satisfaction much increased by the disputes of the Smalcald league with Henry of Brunswick. The duke was angry with his subjects of Brunswick and Breslau, who adhered to the protestant league; and though he had reason enough to be dissatisfied with both, nothing could be more vexatious than his conduct towards them. In revenge, the league of Smalcald sent 19,000 men into the field,—a formidable display of protestant power!—and Henry was expelled from his hereditary states, which were seized by the victors. He invoked the aid of the imperial chamber, which cited the chiefs of the league; but as, in 1538, the competency of that tribunal had been denied in religious, so now it was denied in civil matters. . . . The following years exhibit on both sides the same jealousy, the same duplicity, often the same violence where the mask was no longer required, with as many ineffectual attempts to procure a union between them. . . . The progress of events continued to favour the reformers. They had already two votes in the electoral college,—those of Saxony and Brandenburg; they were now to have the preponderance; for the elector palatine and Herman archbishop of Cologne abjured

their religion, thus placing at the command of the reformed party four votes against three. But this numerical superiority did not long remain. . . . The pope excommunicated the archbishop, deposed him from his dignity, and ordered the chapter to proceed to a new election; and when Herman refused to obey, Charles sent troops to expel him, and to install the archbishop elect, Count Adolf of Nassau. Herman retired to his patrimonial estates, where he died in the profession of the reformed religion. These events mortified the members of the Smalcald league; but they were soon partially consoled by the capture of Henry duke of Brunswick [1546], who had the temerity to collect troops and invade his patrimonial dominions. Their success gave umbrage to the emperor. . . . He knew that the confederates had already 20,000 men under arms, and that they were actively, however secretly, augmenting their forces. His first care was to cause troops to be as secretly collected in his hereditary states; his second, to seduce, if possible, some leaders of the protestants. With Maurice duke of Saxony he was soon successful; and eventually with the two margraves of Brandenburg, who agreed to make preparations for a campaign and join him at the proper moment. . . . His convocation of the diet at Ratisbon [1546], which after a vain parade ended in nothing, was only to hide his real designs. As he began to throw off the mask, the reformed theologians precipitately withdrew; and both parties took the field, but not until they had each published a manifesto to justify this extreme proceeding. In each there was much truth, and more falsehood."—S. A. Dunham, *History of the Germanic empire*, v. 3, bk. 3, ch. 2.

1546-1552.—War of Charles against the Protestants.—Treachery of Maurice of Saxony.—Battle of Mühlberg.—Emperor's proposed "Interim" and its failure.—His reverse of fortune.—Protestantism triumphant.—Treaty of Passau.—"Luther's death [which occurred in 1546] made no change in the resolution which Charles had at last taken to crush the Reformation in his German dominions by force of arms; on the contrary, he was more than ever stimulated to carry out his purpose by two occurrences: the adoption of the new religion by one who was not only an Elector of the Empire, but one of the chief prelates of the Church, the Prince-Archbishop of Cologne. . . . The other event that influenced him was the refusal of the Protestants to accept as binding the decrees of the Council of Trent, which was composed of scarcely any members but a few Italian and Spanish prelates, and from which they appealed to either a free general Council or a national Council of the Empire; offering, at the same time, if Charles should prefer it, to submit the whole question of religion to a joint Commission, composed of divines of each party. These remonstrances, however, the Emperor treated with contempt. He had been for some time secretly raising troops in different quarters; and, early in 1546, he made a fresh treaty with the Pope, by which he bound himself instantly to commence warlike operations, and which, though it had been negotiated as a secret treaty, Paul instantly published, to prevent any retraction or delay on his part. War therefore now began, though Charles professed to enter upon it, not for the purpose of

A LIVING ROOM OF THE 16TH CENTURY, GERMANY

enforcing a particular religious belief on the recusants, but for that of re-establishing the Imperial authority, which, as he affirmed, many of the confederate princes had disowned. Such a pretext he expected to sow disunion in the body, some members of which were far from desirous to weaken the great confederacy of the Empire: and, in effect, it did produce a hesitation in their early steps that had the most important consequences on the first campaign; for, in spite of the length of time during which he had secretly been preparing for war, when it came they were more ready than he. They at once took the field with an army of 90,000 men and 120 guns, while he, for the first few weeks after the declaration of war, had hardly 10,000 men with him in Ratisbon. . . . But the advantage of a single over a divided command was perhaps never more clearly exemplified than in the first operations of the two armies. He, as the weaker party, took up a defensive position near Ingolstadt; but, though they advanced within sight of his lines, they could not agree on the mode of attack, or even on the prudence of attacking him at all. . . . At last, the confederates actually drew off, and Charles, advancing, made himself master of many important towns, which their irresolution alone had enabled him to approach." Meanwhile the emperor had won an important ally. This was Duke Maurice, of the Albertine line of the House of Saxony (see SAXONY: 1180-1553), to whom several opportune deaths had given the ducal seat unexpectedly, in 1541, and whose ambition now hungered for the Electorate, which was held by the other (the Ernestine) branch of the family. He conceived the idea of profiting by the troubles of the time to win possession of it. "With this view, though he also was a Protestant, he tendered his services to the Emperor, who, in spite of his youth, discerned in him a promise of very superior capacity, gladly accepted his aid, and promised to reward him with the territories which he coveted. The advantages which Protestantism eventually derived from Maurice's success has blinded some historians to the infamy of the conduct by which he achieved it. . . . The Elector [John Frederick] was his [second] cousin; the Landgrave of Hesse was his father-in-law. Pleading an unwillingness while so young (he was barely 21) to engage in the war, he volunteered to undertake the protection of his cousin's dominions during his absence in the field. His offer was thankfully accepted; but he was no sooner installed in his charge than he began to negotiate with the enemy to invade the territories which he had bound himself to protect. And on receiving from Charles a copy of a decree, called the Ban of the Empire, which had just been issued against both the Elector and the Landgrave, he at once raised a force of his own, with which he overran one portion of [the Elector's] dominions, while a division of the Imperial army attacked the rest; and he would probably have succeeded at once in subduing the whole Electorate, had the main body of the Protestants been able to maintain the war on the Danube." But Charles's successes there brought about a suspension of hostilities which enabled the Elector to return and "chastise Maurice for his treachery; to drive him not only from the towns and districts which he had seized, but to strip him also of the greater part of the territory which belonged to him by inheritance." Charles was unable, at first, to give any assistance to his ally. The Elector, however, who was the worst of generals, so scattered his forces that when, "on the 23d of April [1547], Charles reached the Elbe and

prepared to attack him, he had no advantage over his assailant but that of position. That indeed was very strong. He lay at Mühlberg, on the right bank of the river, which at that point is 300 yards wide and more than four feet deep, with a stream so rapid as to render the passage, even for horsemen, a task of great difficulty and danger." Against the remonstrances of his ablest general, the duke of Alva, Charles, favored by a heavy fog, led his army across the river and boldly attacked. The Elector attempted to retreat, but his retreat became a rout. Many fell, but many more were taken prisoners, including the Elector and the Landgrave of Hesse. The victory was decisive for the time, and Charles used it without moderation or generosity. He declared a forfeiture of the whole Electorate of Saxony by John Frederick, and conferred it upon the treacherous Maurice; and, "though Maurice was son-in-law of the Landgrave of Hesse, he stripped that prince of his territories, and, by a device scarcely removed from the tricks of a kidnapper, threw him also into prison." Charles seemed now to be completely master of the situation in Germany, and there was little opposition to his will in a diet which he convened at Augsburg.—C. D. Yonge, *Three centuries of modern history*, ch. 4.—"He opened the Diet of Augsburg (September 1, 1547), in the hope of finally bringing about the union so long desired and so frequently attempted, but which he despaired of effecting through a council which the Protestants had rejected in advance. . . . By the famous 'Interim' of Augsburg—the joint production of Julius von Pflug, Bishop of Naumberg; Michael Helding, coadjutor of Mentz; and the wily and subtle John Agricola, preacher to the Elector of Brandenburg—Protestants were permitted to receive the Holy Eucharist under both kinds; the Protestant clergy already married to retain their wives; and a tacit approval given to the retention of property already taken from the Church. This instrument was, from beginning to end, a masterpiece of duplicity, and as such satisfied no party. The Catholics of Germany, the Protestants, and the Court of Rome, each took exception to it. . . . Maurice, the new Elector of Saxony, unwilling to give the Interim an unconditional approval, consulted with a number of Protestant theologians, headed by Melancthon, as to how far he might accept its provisions with a safe conscience. In reply they drew up what is known as the Leipzig Interim (1548), in which they stated that questions of ritual and ceremony, and others of minor importance, which they designated by the generic word *adiaphora*, might be wholly overlooked; and even in points of a strictly doctrinal character, they expressed themselves favourable to concession and compromise. . . . Such Lutheran preachers as professed to be faithful followers of their master, made a determined opposition to the 'Interim,' and began a vigorous assault upon its *adiaphoristic* clauses. The *Anti-adiaphorists*, as they were called, were headed by Flacius Illyricus, who being an ardent disciple of Luther's, and possessing somewhat of his courage and energy, repaired to Magdeburg, whose bold citizens were as defiant of imperial power as they were contemptuous of papal authority. But in spite of this spirited opposition, the Interim was gradually accepted by several Protestant countries and cities—a fact which encouraged the emperor at the Diet of Augsburg, in 1550, to make a final effort to have the Protestants attend the sessions of the Council of Trent, again opened by Pope Julius III. . . . After a short delay, deputies from Brandenburg, Würtemberg, and Saxony began to ap-

pear at Trent; and even the Wittenberg theologians, headed by Melancthon, were already on their way to the Council, when Maurice of Saxony, having secured all the advantages he hoped to obtain by an alliance with the Catholic party, and regardless of the obligations by which he was bound, proceeded to betray both the emperor and his country. Having received a commission to carry into effect the ban of the empire passed upon Magdeburg, he was in a position to assemble a large body of troops in Germany without exciting suspicion, or revealing his ulterior purposes. Besides uniting to himself as confederates in his plot, John Albert, Duke of Mecklenburg; Albert, Margrave of Brandenburg; and William, Landgrave of Hesse, eldest son of Philip of Hesse, he entered into a secret treaty (Oct. 5, 1551) with Henry II., King of France, who, as was pretended, coming into Germany as the saviour of the country, seized the cities of Metz, Toul, and Verdun [see also FRANCE: 1547-1559]. Maurice also held out to Henry the prospect of securing the imperial crown. Everything being in readiness for action, Maurice advancing through Thuringia, seized the city of Augsburg, and suddenly made his appearance before Innspruck, whence the emperor, who lay sick of a severe attack of the gout, was hastily conveyed on a litter, through the passes of the mountains, to Villach, in Carinthia. While Maurice was thus making himself master of Innspruck, the King of the French was carrying out his part of the programme by actively prosecuting the war in Lorraine. Charles V., now destitute of the material resources necessary to carry on a successful campaign against the combined armies of the French king and the German princes, and despairing of putting an end to the obstinate conflict by his personal endeavors, resolved to re-establish, if possible, his waning power by peaceful negotiations. To this end, he commissioned his brother Ferdinand to conclude the Treaty of Passau (July 30, 1552), which provided that Philip of Hesse should be set at liberty, and gave pledges for the speedy settlement of all religious and political differences by a Diet, to be summoned at an early day. It further provided that neither the emperor nor the Protestant princes should put any restraint upon freedom of conscience, and that all questions arising in the interval between the two parties should be referred for settlement to an Imperial Commission, composed of an equal number of Catholics and Protestants. In consequence of the war then being carried on by the empire against France for the recovery of the three bishoprics of Lorraine of which the French had taken possession, the Diet did not convene until February 5, 1555."—J. Alzog, *Manual of Universal Church history*, v. 3, pp. 276-279.

1547.—Pragmatic Sanction of Charles V, changing the relations of the Netherland provinces to the empire. See NETHERLANDS: 1547.

1552-1561.—Battle of Sievershausen and death of Maurice.—Religious Peace of Augsburg.—Abdication of Charles V.—Succession of Ferdinand I.—Halting of the Reformation and the rally of Catholic resistance.—By the Treaty of Passau, Maurice of Saxony bound himself to de-

fend the empire against the French and the Turks. "He accordingly took the field against the latter, but with little success, the imperial commander, Castaldo contravening all his efforts by plundering Hungary and drawing upon himself the hatred of the people. Charles, meanwhile, marched against the French, and, without hesitation, again deposed the corporative governments reinstated by Maurice, on his way through Augsburg, Ulm, Esslingen, etc. Metz, valiantly defended by the Duke de Guise, was vainly besieged for some months, and the Emperor was at length forced to retreat. The French were, nevertheless, driven out of Italy. The aged emperor now sighed for peace. Ferdinand, averse to open warfare, placed his hopes on the imperceptible effect of a consistently pursued system of suppression and Jesuitical obscurantism. Maurice was answerable for the continuance of the peace, the terms of which he had prescribed. . . . Albert the Wild [of Brandenburg] was the only one among the princes who was still desirous of war. Indifferent to aught else, he marched at the head of some thousand followers through central Germany, murdering and plundering as he passed along, with the intent of once more laying the Franconian and Saxon bishoprics waste in the name of the gospel. The princes at length formed the Heidelberg confederacy against this monster and the emperor put him under the ban of the empire, which Maurice undertook to execute, although he had been his old friend and companion in arms. Albert was engaged in plundering the archbishopric of Magdeburg, when Maurice came up with him at Sievershausen. A murderous engagement took place (A. D. 1553). Three of the princes of Brunswick were slain. Albert was severely wounded, and Maurice fell at the moment when victory declared in his favour, in the 33d year of his age, in the midst of his promising career. . . . Every obstacle was now removed, and a peace, known as the religious peace of Augsburg, was concluded by the diet held in that city, A. D. 1555. This peace was naturally a mere political agreement provisionally entered into by the princes for the benefit, not of religion, but of themselves. Popular opinion was dumb, knights, burgesses, and peasants bending in lowly submission to the mandate of their sovereigns. By this treaty, branded in history as the most lawless ever concerted in Germany, the principle 'cujus regio, ejus religio,' the faith of the prince must be that of the people, was laid down. By it not only all the Reformed subjects of a Catholic prince were exposed to the utmost cruelty and tyranny, but the religion of each separate country was rendered dependent on the caprice of the reigning prince; of this the Pfalz offered a sad example, the religion of the people being thus four times arbitrarily changed. . . . Freedom of belief, confined to the immediate subjects of the empire, for instance, to the reigning princes, the free nobility, and the city councillors, was monopolized by at most 20,000 privileged persons. . . . [The Peace of Augsburg had two other serious defects, namely: that no Protestant sect was tolerated except the Lutheran, and that the provision that those princes who became Protestant must surrender their domains could not be enforced. Consequently it not only failed to establish peace but was the source of discontent.] The false peace concluded at Augsburg was immediately followed by Charles V's abdication of his numerous crowns [see NETHERLANDS: 1555]. He would willingly have resigned that of the empire to his son Philip, had not the Spanish education of that prince, his gloomy and bigoted character, inspired

the Germans with an aversion as unconquerable as that with which he beheld them. Ferdinand had, moreover, gained the favour of the German princes. Charles, nevertheless, influenced by affection towards his son, bestowed upon him one of the finest of the German provinces, the Netherlands, besides Spain, Milan, Naples, and the West Indies (America). Ferdinand received the rest of the German hereditary possessions of his house, besides Bohemia and Hungary. . . . Ferdinand I, opposed in his hereditary provinces by a predominating Protestant party, which he was compelled to tolerate, was politically overbalanced by his nephew, Philip II, in Spain and Italy, where Catholicism flourished. The preponderance of the Spanish over the Austrian branch of the house of Habsburg exercised the most pernicious influence on the whole of Germany, by securing to the Catholics a support which rendered reconciliation impossible. . . . The religious disputes and petty egotism of the several estates of the empire had utterly stifled every sentiment of patriotism, and not a dissentient voice was raised against the will of Charles V, which bestowed the whole of the Netherlands, one of the finest of the provinces of Germany, upon Spain, the division and consequent weakening of the powerful house of Habsburg being regarded by the princes with delight. At the same time that the power of the Protestant party was shaken by the peace of Augsburg, Cardinal Caraffa mounted the pontifical throne as Paul IV, the first pope who, following the plan of the Jesuits, abandoned the system of defence for that of attack. The Reformation no sooner ceased to progress, than a preventive movement began [see PAPACY: 1537-1563]. . . . Ferdinand I was in a difficult position. Paul IV refused to acknowledge him on account of the peace concluded between him and the Protestants, whom he was unable to oppose, and whose tenets he refused to embrace, notwithstanding the expressed wish of the majority of his subjects. Like his brother, he intrigued and diplomatized until his Jesuitical confessor, Bobadilla, and the new pope, Pius IV, again placed him on good terms with Rome, A. D. 1550. . . . Augustus, elector of Saxony, the brother of Maurice, alarmed at the fresh alliance between the emperor and pope, convoked a meeting of the Protestant leaders at Naumberg. His fears were, however, allayed by the peaceful proposals of the emperor (A. D. 1561). . . . A last attempt to save the unity of the German church, in the event of its separation from that of Rome, was made by Ferdinand, who convoked the spiritual electoral princes, the archbishops and bishops, for that purpose to Vienna, but the consideration with which he was compelled to treat the pope rendered his efforts weak and ineffectual. . . . The Protestants, blind to the unity and strength resulting from the policy of the Catholics, weakened themselves more and more by division."—W. Menzel, *History of Germany*, v. 2, sect. 197-198.

1556-1609.—Violations of the Peace of Augsburg.—Tolerant reigns of Ferdinand I and Maximilian II.—Renewed persecution under Rudolf II.—"The two great principles laid down at the peace of Augsburg for a compromise between the two religious parties were, first, that called the Ecclesiastical Reservation, intended to restrain the Protestants from any further appropriation of the

property of the Church, and secondly, the Imperial Declaration of Toleration, which was intended to preserve to the Protestants the toleration of their religious freedom. It cannot be said that either party honestly or sincerely accepted the compromise. But the guilt of breaking it first belongs to the Protestant princes, who were unchecked by any scruple in their attempts to appropriate the abbey and bishoprics, at a moment when the Catholic party was far too much humiliated to attempt open persecution. During the reigns of Ferdinand [1558-1564] and Maximilian [1564-1576] the imperial power was but little exerted to compel the parties to keep the compromise: bishops renounced Popery and retained their sees in spite of the Ecclesiastical Reservation; and, by means of indults from the Empire, Protestant princes were elected to, and retained all their lives, the government of ecclesiastical states without taking orders. On the other hand, the Catholic party, as it revived from the severe shock it had experienced, stirred up by the Jesuits and by the restored life and discipline that flowed from the Council of Trent, began largely to proselytise, more largely to repress religious freedom, and, where there was room, to persecute. [See also PAPACY: 1570-1597.] The later years of Maximilian II., during which he fell more completely under the influence of Philip II., saw him less and less inclined to oppose the restoration of Popery. The Catholic reaction set in strongly both in Germany and France; and very considerable portions of Central Germany, which had been regarded as lost to the Church, were effectually and permanently reclaimed: Franconia especially, under the influence of the bishops of Bamberg and Würzburg, returned in large proportion to the faith."—W. Stubbs, *Lectures on European history* (A. Hassall, ed.), pp. 282-283.—See also HUNGARY: 1526-1567.—"The princes unanimously elected the son of Maximilian as King of the Romans, and Max received another gratification: he was elected king by the gallant nation of the Poles. Thus the house of Austria was again powerfully strengthened. Hungary, Poland, Bohemia, and Germany, united under one ruler, formed a power which could meet Turkey and Russia. The Turks and the Russians were pressing forward. The Turkish wars, more than anything else, prevented Max from carrying out his long-cherished plan and giving a constitution to the empire and church of the Germans. . . . But in the midst of his great projects, Maximilian II. died, in his 49th year, on the 12th of October, 1576."—W. Zimmerman, *Popular history of Germany*, v. 4, bk. 5, ch. 2.—"The Emperor Rudolf, who succeeded Maximilian, went in far more completely than his father had done for the reaction. Maximilian had simply allowed both parties to take their own course, but Rudolf and several others of the imperial family determined to give a firm support to orthodoxy. And the field for their action in this respect was principally their own immediate states: Bohemia, which had long before Luther been leavened by Huss with tenets opposed to the doctrine of Rome, and Austria, where the whole of the nobles and large portions of the country population had embraced Protestantism. The character of the policy of repression which was adopted in the Austrian states was not the same as that which had been exercised so cruelly and so unsuccessfully in France and the Netherlands. The Protestants were not burned, but their teachers were forbidden to hold services for more than a limited number of worshippers; they were next imprisoned and banished; then the professors of Protestantism were compelled to emigrate, and

their places were filled by strangers, who both religiously and politically were bound to be faithful to their patrons. . . . The great start of the reaction in the Austrian states dates from 1597, when Ferdinand of Styria, the archduke who ultimately became Ferdinand II., set his shoulder to the wheel and rapidly succeeded in turning back the tide of the Reformation in that country. The zeal of Ferdinand revived the zeal of Rudolf, who also began to proscribe and banish Protestants in Austria; and, wherever the imperial jurisdiction gave him any power, to throw his weight into the Catholic scale. The able man of the party was, however, Maximilian of Bavaria, whose long reign covers a great part of the Catholic counter-reformation and the Thirty Years' War also . . . [see also PAPACY: 1570-1597]. The success of the reaction at last awoke the fears of the Protestant princes. As early as 1594 at Heilbronn, several of them had formed a confederation for mutual defence, and resistance to the imperial claims. In 1597 they renewed this league at Frankfurt, with additional provisos bearing on religious points: thus united they had concluded at Heidelberg in 1603 an alliance with Henry IV. of France, the object of which was the destruction of the house of Hapsburg and the remodelling of the state system of Europe."—W. Stubbs, *Lectures on European history* (A. Hassall, ed.), pp. 283-284.—In the meantime the ardor of Rudolf's determination to rid his dominions of heretics increased, "but in Hungary the nation rose in defence of its liberty and faith. The receipt of the intelligence that the Hungarian malcontents were progressing victoriously produced—what there had been symptoms of before—insanity. The members of the house of Austria assembled, and declared 'The Emperor Rudolf can be no longer head of the house, because unfortunately it is too plain that this Roman Imperial Majesty . . . was not competent or fit to govern the kingdoms.' The Archduke Matthias [eldest brother of Rudolf] was elected head of the Austrian house [1606]. He collected an army of 20,000 men, and made known that he would depose the emperor from the government of his hereditary domains. Rudolf's Jesuitical flatterers had named him the 'Bohemian Solomon.' He now, in terror, without drawing sword, ceded Hungary and Austria to Matthias, and gave him also the government of Moravia. Matthias guaranteed religious liberty to the Austrians. Rudolf did the same to the Bohemians and Silesians by the 'Letters of Majesty' [July 5, 1609]."—W. Zimmerman, *Popular history of Germany*, v. 4, bk. 5, ch. 2.—See also HUNGARY: 1567-1604.

1608-1618.—Protestant Union and the Catholic League.—Jülich-Cleve contest.—Negotiations with Henry IV of France.—Ferdinand in Bohemia.—The concessions granted by Matthias "were offensive to the two princes, the archduke Ferdinand of Styria, and Duke Maximilian of Bavaria, who had taken the lead already in a vigorous movement of Catholic reaction. Some proceedings on the part of Maximilian, which the emperor sanctioned, against the Protestant free city of Donauwörth, had caused certain Protestant princes and cities [members of the League of Frankfurt

(1597)], in 1608, to form a defensive union [Evangelical Union]. But the elector palatine, who attached himself to the Reformed or Calvinist church, was at the head of this union, and the bigoted Lutherans, especially the elector of Saxony, looked coldly upon it. On the other hand, the Catholic states formed a counter organization a 'holy league' [Catholic League]—which was more compact. The two parties being thus in array, there arose suddenly between them a political question of the most disturbing kind. It related to the right of succession to an important duchy, that of Juliers, Clèves, and Berg. There were several powerful claimants, and, as usual, the political question took possession of the religious issue and used it for its own ends. . . . Henry [IV of France] began active preparations for campaigns in both Germany and Italy, with serious intent to humble and diminish the Austrian power. The Dutch came into the alliance, and there were promises of English aid. The combination was formidable, and might have changed the course of events that awaited unhappy Germany, if the whole plan had not been frustrated by the assassination of Henry IV, in 1610. All the parties to the alliance drew back after that event. In 1611, Rudolph was deposed in Bohemia, and in the following year he died. Matthias, already King of Hungary, succeeded Rudolph in Bohemia, and in the empire. [See HUNGARY: 1606-1660]. But Matthias was scarcely stronger in mind or body than his brother, and the same family pressure which had pushed Rudolph aside now forced Matthias to accept a coadjutor, in the person of the vigorous Ferdinand, archduke of Styria. For the remainder of his reign Matthias was a cipher, and all power in the government was exercised by Ferdinand. His bitter opposition to the tolerant policy which had prevailed for half a century was well understood. Hence, his rise to supremacy in the empire gave notice that the days of religious peace were ended. The outbreak of civil war was not long in coming."—J. N. Larned, *Seventy centuries*, v. 2, pp. 126-127.

1618.—Religious and political conditions at the beginning of the Thirty Years' War.—"What was the Germany of the Thirty Years' War? In it what was there besides the Empire and the imperial house? What were the grounds of the differences between the North and the South, between the princes, the prelates, the people, and the nominal sovereign? Germany at the beginning of the imperial history was an aggregate of four nations, the Franks, the Bavarians, the Alemannians, and the Saxons; of whom the Franks and Alemannians or Swabians soon lose their distinctive national identities, but the Saxons and Bavarians retain both strong identity and strong antagonism. In all the early struggles of the Empire, North and South are opposed. Whilst the imperial dynasty is Saxon, Bavaria and Swabia are anti-imperial; when the imperial dynasty is Swabian or Bavarian, North Germany is in opposition to the Empire. As the imperial dignity settled down permanently into the South German houses, the Bavarian, Austrian, and Luxemburg lines, Saxony, that is North Germany, became the seat of constant dis-

affection. Against the Hohenstaufen it was the great bulwark of Papal interests; against the Luxemburgers and earlier Hapsburgs it was in armed independence. So long as the struggle between the Empire and the Papacy lasted, North Germany was enthusiastically Papal. As soon as Austria and the Papacy reconciled their differences and became, as for the most part of modern history has been the case, firm allies, North Germany took up with ardour the doctrines of the Reformation; her antipathy to a Southern Cæsar was great enough to overcome her ancient and as yet unshaken constancy to the Chair of St. Peter. Of course this was not the only ground for the characteristic position and attitude of the two divisions. Early Saxony was faithfully Catholic not merely because it hated the Emperor and his antipopes, but because it had been brought to Christianity and civilization under men and principles according to which Roman Papalism was an integral portion of religion; and modern Saxony was not enthusiastically Protestant only because the Empire was Catholic and Southern, but because Luther and his friends the Saxon electors were natives of the land and spoke directly to the hearts of the people, and quite as much because the prelates who had grown wealthy on the old Papal support offered a rich booty to men to whom the change of religion was the relaxing of all ties of honour, duty, and regard for right of property, and who saw in the downfall of the old system the readiest way to aggrandise themselves. The three influences, the Empire, the faith, and the plunder, all affected the North Germans in the same way. And so the South: whilst the Papacy was politically strong, the imperial influence, mainly South German, was in opposition. . . . With the great schism of the West, and the termination of the Babylonish exile, begins the drawing together of the Empire and Papacy. When the Reformation begins, the North accepts it and the South rejects it. But here with a great difference. In the North, princes and people alike reject the Papal authority in religion. In the South the princes are faithful, but the people become Protestant; and this adds a distinct complication to the many other complications that we are obliged to consider as leading to the great crisis of the Thirty Years' War. . . . In the North the princes and the people went together, in the South they went different ways. In Austria, Bavaria, Swabia, and Franconia, the people became Protestant, the princes continuing Catholic. At one time the middle nobles in South Germany were also Protestant, but that was not long; strong repressive measures soon brought them back or disabled them, and chiefly they were discouraged by finding that Protestantism and plunder would not be allowed to go on together as they were doing in the North. But although German Protestantism quickly took in the South, it was distinctly a Northern product, distinctly Northern in affinities; that is, Lutheranism presented itself to the rulers of South Germany as the political programme of their enemies and rivals in the North. Scarcely less hateful was the aspect of Calvinism. Calvinism was not only uncatholic, but it was French, it was Dutch, it was republican. Bavaria and Austria saw not merely doctrinal but political and dynastic principles arrayed against them under the name of Protestantism; and their struggle against it was a struggle on the part of the dynasties for existence. . . . How was it that Protestantism failed in South Germany when it was backed up by the North, and had so little real strength set against it? The answer to this question should be supplied

by the study of the period of sixty years that intervened between the death of Charles V. and the outbreak of the Thirty Years' War. It was caused, first, by the divisions of the Protestants themselves, the disputes between the Lutherans and the Calvinists, between the Saxon and Palatine Electors, and between the two branches of the house of Saxony; secondly by the enormous exertions of the Jesuits, who by every means in their power or in the power of man, by preaching, by educating, by intriguing, by persecution, by persuasion, by bribing, by taxing, by force and fraud, threw their great and intricate organization against the advancing tide of Protestantism and effectually stayed it; thirdly, by the material power and assistance which the German Hapsburgs and other Catholic princes could invariably look for from Spain under Philip II.—a power which the Jesuits directly or indirectly could bring to bear where and when they pleased. By these three causes the victory of Protestantism was cut short, the interests of the Bavarian and Austrian dynasties thoroughly consolidated with those of the Papacy, and the South enabled to present a strong, united, and in the main a victorious opposition to the North. Among the secondary causes were the retention of the imperial power by the house of Hapsburg, and the constantly available implement which was thus put in their hands for interfering with the chronic quarrels and jealousies of their rivals. So long as the machinery of the Empire, election and jurisdiction, was kept up, so long as the three ecclesiastical electorates continued Catholic, and the King of Bohemia's vote gave the Austrians a majority in the electoral college, so long it was in the power of the Austrian house to play off their opponents at their discretion. This had been early apparent when Charles V. broke the power of the Smalkaldic league, by setting up Maurice as competitor to his cousin in the Saxon Electorate; and as long as the Empire lasted this weapon remained effective. It was unquestionably a great fulcrum, by which Austria stopped the progress of Protestantism; Protestantism which it hated no doubt for its own sake sufficiently, but scarcely less because in the political programme of the Protestant North the first article was its own humiliation."—W. Stubbs, *Lectures on European history* (A. Hassall, ed.), pp. 279-282.

1618-1620.—**Thirty Years' War: Hostilities in Bohemia precipitated by Ferdinand.—His election to the imperial throne and his deposition in Bohemia.—Acceptance of the Bohemian crown by Frederick, the Palatine elector.—His unsupported situation.—Treaty of Ulm.—The destructive conflict known as the "Thirty Years' War" began in Bohemia. A violation of the Protestant rights guaranteed by the "letter of majesty" provoked a rising under Count Thurn. Two of the King's councilors, with their secretary, were flung from a high window of the royal castle, May 23, 1618; a provisional government of thirty directors was set up, and the King's authority set aside. "The emperor was not a little disconcerted when he received the news of what was passing [in Bohemia]. For whence could he receive the aid necessary to put down these revolutionary acts and restore order in Bohemia? Discontent, indeed, was scarcely less formidably expressed even in his Austrian territories, whilst in Hungary its demonstration was equally as serious. Conciliation appeared to be the only means of preserving to the house of Austria that important country, and even the confessor and usual counsellor of the emperor, Cardinal Klesel, the most zealous opponent of the**

Protestants, advised that course. But such considerations were most strenuously opposed by young Ferdinand. . . . At his instigation, and that of the other archdukes, backed by the pope, the pacific Cardinal Klesel was unexpectedly arrested, and charged with a variety of crimes. The intention was to remove him from the presence of the old and weak emperor, who was now without support, and obliged to resign all to the archdukes. From this moment the impotency of the emperor was complete, and all hopes of an amicable pacification of Bohemia lost. The Bohemians, likewise, took to arms, and possessed themselves of every city in their country as far as Budweis and Pilsen, which were still occupied by the imperial troops. They obtained assistance, quite unlooked for, in the person of one who may be regarded as one of the most remarkable heroes of that day. . . . Count Ernest of Mansfeld, a warrior from his youth, was of a bold and enterprising spirit; he had already encountered many dangers, and had just been raising some troops for the Duke of Savoy against the Spaniards. The duke, who now no longer required them, gave him permission to serve in the cause of the Evangelical Union in Germany; and by that body he was despatched with 3,000 men to Bohemia, as having apparently received his appointment from that country. He appeared there quite unexpectedly, and immediately took from the imperial army the important city of Pilsen [November 21, 1618]. . . . The Emperor Matthias died on the 10th of March, 1619, . . . and the Bohemians, who acknowledged his sovereignty while living, now resolved to renounce his successor Ferdinand, whose hostile intentions were already too clearly expressed. Ferdinand [II] attained the throne under circumstances the most perplexing. Bohemia in arms, and threatening Vienna itself with invasion; Silesia and Moravia in alliance with them; Austria much disposed to unite with them; Hungary by no means firmly attached, and externally menaced by the Turks; besides which, encountering in every direction the hatred of the Protestants, against whom his zeal was undisguised. . . . Count Thurn advanced upon Vienna with a Bohemian army. . . . He came before Vienna, and his men fired, even upon the imperial castle itself, where Ferdinand, surrounded by open and secret foes, had taken up his quarters. He dared not leave his capital, for by so doing Austria, and with it the preservation of the empire itself, must have been sacrificed. But his enemies looked upon him as lost; and they already spoke of confining him in a convent, and educating his children in the Protestant faith. . . . Count Thurn was obliged soon to return to Bohemia, as Prague was menaced by the armies of Austria, and Ferdinand availed himself of this moment in order to undertake another hazardous and daring project. . . . He . . . resolved to proceed to Frankfort to attend the election of emperor. The spiritual electors had been gained over; Saxony also adhered closely to the house of Austria; Brandenburg was not unfriendly; hence the opposition of the palatinate alone against him could accomplish nothing; accordingly Ferdinand was unanimously chosen emperor on the 28th of August, 1619." Just two days previously, on the 26th of August, the Bohemians, at a general assembly of the states, had formally deposed Ferdinand from the kingship of their nation, and proceeded to elect another king (Frederick V, elector of the Rhenish palatinate) in his place. "The Catholics proposed the Duke of Savoy and Maximilian of Bavaria, whilst, in the Protestant interest, the Elector John George of Saxony, and Frederick V., of the palatinate,

were put forward. The latter obtained the election, being a son-in-law of King James I, of England, from whom they expected assistance, and who personally was regarded as resolute, magnanimous, and generous. The incorporated provinces of Moravia, Silesia and Lusatia supported the election, and even the Catholic states of Bohemia pledged their fidelity and obedience. Frederick was warned against accepting so dangerous a crown by Saxony, Bavaria, and even by his father-in-law; but his chaplain, Scultetus, and his own consort, Elizabeth, who as the daughter of a king aspired to a royal crown, persuaded him with all their influence to accept it. Frederick was accordingly ruled by them, received the regal dignity in Bohemia, and was crowned at Prague with great pomp on the 25th of October, 1619. . . . Ferdinand in returning from Frankfort passed on to Munich, and there concluded with the Duke of Bavaria that important treaty which secured to him the possession of Bohemia. These two princes had been companions in youth, and the Evangelical Union had by several incautious proceedings irritated the duke. Maximilian undertook the chief command in the cause of the Catholic party, and stipulated with the house of Austria that he should be indemnified for every outlay and loss incurred, to the extent even, if necessary, of the surrender of the territories of Austria itself into his hands. With Spain, also, the emperor succeeded in forming an alliance, and the Spanish general, Spinola, received orders to invade the countries of the palatinate from the Netherlands. Subsequently the Elector of Mentz arranged a convention at Mülhausen with the Elector John George of Saxony, the Elector of Cologne, and the Landgrave Lewis of Darmstadt, wherein it was determined to render all possible assistance to the emperor for the maintenance of his kingdom and the imperial dignity. Frederick, the new Bohemian king, was now left with no other auxiliary but the Evangelical Union; for the Transylvanian prince, Bethlen Gabor, was, notwithstanding all his promises, a very dubious and uncertain ally, whilst the troops he sent into Moravia and Bohemia were not unlike a horde of savage banditti. Meanwhile the union commenced its preparations for war, as well as the league. The whole of Germany resembled a grand depot for recruiting. Every eye was directed to the Swabian district, where the two armies were to meet; there, however, at Ulm, on the 3rd of July, 1620, they unexpectedly entered into a compact in which the forces of the union engaged to lay down their arms, and both parties pledged each other to preserve peace and tranquillity. The unionists felt themselves too weak to maintain the contest, since Saxony was now likewise against them, and Spinola threatened them from the Netherlands. It was, however, a great advantage for the emperor, that Bohemia was excluded from this treaty, for now the forces of the league were at liberty to aid him in subjugating his royal adversary. Maximilian of Bavaria therefore immediately took his departure, and on his way reduced the states of Upper Austria to the obedience due to Ferdinand, joined the imperial army, and made a spirited attack upon Bohemia. On the other side, the Elector of Saxony took possession of Lusatia in the name of the emperor."—F. Kohlrausch, *History of Germany*, ch. 22.

1618-1700.—Rise of Prussia. See PRUSSIA: 1618-1700.

1620.—Thirty Years' War: Disappointment of the Bohemians in their elected king.—Frederick's offensive Calvinism.—Defeat of his army before Prague.—Loss of Bohemian liberties.—Prostration of Protestantism.—“The defection of the Union accelerated the downfall of Frederick; but its cordial support could scarcely have hindered it. For the Bohemians had been disappointed in their king, disappointed in the strength they had expected from him through his connexions, equally disappointed in the man, and in the hopes of protection and sympathy which they had expected from him in the exercise of their religion. Within a month of his coronation the metropolitan church was spoiled of its images, the crucifix cut in pieces, the statues of the saints cast out, broken, and burnt, the ornaments used in divine service, and venerable in the eyes of Catholics and Lutherans alike, scattered here and there, and turned upside down with contempt and execration. These proceedings, which were presumed, not without reason, to have the king's authority—for during their enactment the court chaplain addressed the people in praise of this purgation of the temple—called forth loud complaints and increased the disaffection which, more than any external force brought against Frederick, produced his ruin. Early in November Maximilian appeared before Prague, and found the Bohemians, under Christian van Anhalt, skilfully and strongly posted on the Weissenberg [White Mountain] to offer battle. [Maximilian's colleagues in the leadership of the imperial army were Tilly and Bucquoi.] The cautious Bucquoi would have declined the offer, and attacked the city from another point; but an enthusiastic friar who broke in upon the conference of the leaders, and, exhibiting a mutilated image of the Virgin, reproached them with their hesitation, put to flight all timid counsels. The battle began at twelve o'clock. It was a Sunday, the octave of the festival of All Saints [November 8, 1620]. . . . In the Catholic army Bucquoi was at the head of the Imperial division. Tilly commanded in chief, and led the front to the battle. He was received with a heavy fire; and for half an hour the victory trembled in the balance; then the Hungarians, who had been defeated by the Croats the day before, fled, and all the efforts of the Duke of Saxe Weimar to rally them proved fruitless. Soon the whole Bohemian army, Germans, English, horse and foot, fled in disorder. One gallant little band of Moravians only, under the Count of Thurn and the young Count of Sehlick, maintained their position, and, with the exception of their leaders, fell almost to a man. The battle lasted only an hour; but the victory was not the less complete. A hundred banners, ten guns, and a rich spoil fell into the hands of the victors. Four thousand of the Bohemian army, but scarcely as many hundreds of their opponents (if we may believe their account), lay dead upon the field. . . . Frederick had returned from the army the day before, with the intelligence that the Bavarians were only eight (English) miles distant; but relying on the 28,000 men which he had to cover his capital, he felt that night no uneasiness. . . . He had invited the English ambassadors to dine; and he remained to entertain them. After dinner he mounted his horse to ride to the Star Park; but before he could get out of the city gate, he was met with the news of the total overthrow of his army. His negotiations with Maximilian failing, or receiving no answer, the next morning he prepared for flight. . . . Accompanied

by his queen, Van Anhalt, the Prince of Hohenlohe, and the Count of Thurn, he made a precipitate retreat from Prague, leaving behind him the insignia of that monarchy which he had not the wisdom to firmly establish, nor resolution to defend to the last. It must be confessed, however, that his position, after the defeat at Prague, was not altogether so promising, and consequently his abandonment of his capital not altogether so pusillanimous, as some have represented.”—B. Chapman, *History of Gustavus Adolphus*, ch. 5.—See also BOHEMIA: 1621-1648.

1621-1623—Thirty Years' War: Elector Palatine placed under the ban.—Dissolution of the Evangelical Union.—Invasion and conquest of the Palatinate.—Transfer of the electoral dignity to the duke of Bavaria.—“Never, probably, in European history had been a reverse so sudden and so entire as that of Frederick of Bohemia; the victory of the Weissenberg made him in a moment a beggar and an exile. But it did not follow immediately that Ferdinand's position became correspondingly strong, or strong enough to enable him to be merciful. He determined to hold no terms with either the usurper or his supporters, and he was not the man at any time to temporise or to make any secret of his intentions. . . . Outside of Germany, the world had enough to do to mind its own business just now. James I. was deep in the plans of the Spanish marriage. France was just beginning a religious war waged by the Court against the Protestants under Bohan and Soubise. The truce of twelve years, made between the United Provinces and Spain, was on the point of expiring (April 10, 1621), and, as soon as hostilities should recommence, Spinola would have to be recalled from the Palatinate. In Spain Philip III. was approaching the end of his reign, and although he was well disposed, as he had shown, towards the Austrian branch of his house, any attempt at common action was viewed with the greatest jealousy by both France and the Italian powers; it was at this moment proved by the resistance opposed by France and Venice to the attempt made by the Spanish and Austrian armies to seize the Valtelline and so establish a communication between Milan and the Tyrol. Ferdinand, in view of these complications, seeing that any moment might so alter the state of affairs as to throw the forces that were now keeping one another in suspension into energetic action, determined that on his part no time should be lost. He could not afford to be merciful; he might as well push his severities to the point of vindictiveness. The [Protestant] Union had had in November a meeting at Heilbronn at which nothing was done. The imperial policy was to strike such terror into it that it should fall to pieces. On January 22, 1621, Ferdinand took a first and most decided step. He published from Vienna the ban of the Empire against Frederick the Count Palatine, John George of Brandenburg-Jägerndorf, the Count of Hohenlohe, and Christian of Anhalt: the execution of the ban in the Upper Palatinate was entrusted to Maximilian of Bavaria, and in the Lower to the Archduke Albert, sovereign of the Netherlands. At the same time the Emperor prepared to take savage revenge on the Bohemians; forty of the leaders of the insurgents were arrested, and after four months' imprisonment twenty-three of them were put to death: Count Thurn and twenty-seven others who had fled were proscribed and their estates forfeited: a proclama-

tion was issued directing all landholders who had been implicated in the rebellion to sue for pardon, or to suffer entire confiscation in case of subsequent information. Over seven hundred nobles submitted and had their lives spared, but their estates were seized, and their families beggared. The whole fabric of society in Bohemia was subverted. . . . These proceedings of Ferdinand are in themselves indefensible. They were impolitic as well as unjust. It may be true that the Bohemians had no constitutional standing-ground, for they had prosecuted internecine war against their king and could have no claim to the mercies of a constitution which they not less than their oppressor had set at nought, but the ruthless, relentless character of the revenge was more likely to inspire the remaining enemies of Austria with a desperate spirit of resistance than to frighten them into hopeless submission. And the proceedings against Frederick were carried out in defiance of the constitution of the Empire, without the consent, against the wish, of the electoral body, and in breach of the capitulation made at the election of a new Emperor. All this Ferdinand overlooked in his anxiety to make an end of Frederick and out of his estates to find means for repaying the services of Bavaria and Saxony, getting his own dominions out of pawn. At the moment these severities were successful. A meeting of the Catholic League in February alarmed the Union into the expectation of a general attack; and on April 12, at Mentz, peace between the League and the Union was concluded. Peace was made also between Spinola [commanding the Spanish auxiliaries from the Netherlands] and the Union, who could not wait even for the week that intervened before the truce between Spain and Holland expired; and almost immediately after the Evangelical Union broke up, having done no work except the production of the Thirty Years' War, in which on every occasion it shirked fighting. The Palatinate was thus left in the hands of Spinola, save the three towns that held out for Frederick, and these were besieged in execution of the ban. Now, however, there is again a turn in the tide. The King of Spain died on March 31, 1621; the truce between Holland and Spain expired on April 21; and on July 13 the Archduke Albert died at Brussels. Spinola was recalled from the Palatinate, the forces being placed under Gonzalvo de Cordova; and at the other side of the Empire, the force of Bethlen Gabor [prince of Transylvania, a famous member of an old Hungarian family] was increased by the arrival of the Bohemian refugees, with whose aid he defeated Boucquoi at Neuhausel, the imperial commander falling in the battle [see also HUNGARY: 1606-1660]. Just now for the first time we find Christian of Denmark beginning to move, calling together the estates of Lower Saxony and giving signs of the action that he took two years later. But all interest now centres in Mansfeld, whom we left at Pilsen in November, and who still kept the standard of Frederick hoisted in Bohemia. Tilly was the general pitted against him by Ferdinand, and they were well matched; both were brilliant generals, strong religious partisans, and unscrupulous men. Mansfeld is known chiefly as a plunderer and ravager, Tilly as a sacker of cities; both of them have had their admirers, Mansfeld among the Puritans, Tilly among the Jesuits. Both of them may have had redeeming points; but they do not come out in history. For many months they watched one another with very inferior forces. Mansfeld had about 8,000 men, Tilly had not many more; the

imperial army in Hungary had sunk to 8,000 men too. At length the Elector of Saxony came into the field with 5,000 men, and Tilly got some other reinforcements. Mansfeld had exhausted the resources of the country and the patience of the people. Pilsen was surrendered by his men against his will, and he was compelled to leave Bohemia; by a forced march of singular daring he struck across the Upper Palatinate, what is now the north-eastern part of Bavaria, and encamped at Bosskopf, near Nuremberg. Tilly was hot in pursuit, and Mansfeld made proposals to surrender. Whilst these were in consideration, on October 4, he broke out of his entrenchments in the night and marched at full speed into the Lower Palatinate, where he was joined by the English contingent, making up an army of 20,000 men. With these he expelled Gonzalvo and the Spaniards, relieved Mannheim, Heidelberg, and Frankenthal, and revived the hopes of Frederick. Tilly failed to prevent the union of the forces, and as the winter approached hostilities, as usual, ceased. Mansfeld took his army to Alsace, where they could find subsistence by exactions from the Emperor's subjects, and there he was joined by Frederick. The Margrave of Baden put his army in preparation; the Duke of Würtemberg also moved, and Christian of Brunswick set to work on the Protestants of Lower Saxony—in pursuance of the line taken by the King of Denmark early in the year. But before these successful proceedings of Mansfeld and his allies gained anything like completeness, the luck of Ferdinand on the Hungarian and Silesian frontiers had put him in a condition to make Western Germany the chief seat of the war. Silesia had made complete submission in October. In January 1622, by the peace of Niklasburg, Bethlen Gabor reconciled himself with Ferdinand, resigned the title of King and surrendered the regalia, receiving from Ferdinand in return large endowments in lands, titles, and treasure. . . . The interest of the year 1622 depends on the military movements of Tilly against Mansfeld, the Margrave George Frederick of Baden Durlach, and Christian of Brunswick. The margrave was an unlucky man; he had been one of the supporters of Frederick's election to Bohemia, and by his consent to let the Austrian troops cross from Alsace through his territories towards Bohemia had acted, unfortunately and against his own will, in a manner fatal to the elector's interest. Now he determined to devote himself entirely to the cause; going so far as to divest himself of his dominions in favour of his son lest the house should suffer, by his incurring the imperial ban. Christian of Brunswick was a different sort of man, much more of the selfish adventurer: he was a young man, a violent and cruel persecutor. As Bishop of Halberstadt he had a stake in the Protestant cause which made him an irreconcilable foe to the Catholics; his atrocities on the priests were such that it was said they believed him to be Antichrist in person. He, however, was a much more able general than the margrave. These three armies, then, supported the Palatine or Protestant cause against Tilly, and together they would have been too much for him. At Mingolsheim, on April 29, 1622, he was beaten by Mansfeld and the margrave; and took care not to meet them together again. The separation between the two, caused by an attempt of the margrave to penetrate into Bavaria, gave him his opportunity: he met and defeated the army of Baden at Wimpfen on the Neckar on May 6; left Mansfeld to tire himself at the siege of Ladenburg, and marched to meet

Christian. Him he met at Höchst on the Main on June 20, and beat him, pursued him until he joined Mansfeld, and then drove them both into Alsace. They were still far from discouraged; the Protestant feeling of Germany was but half roused, when all at once Frederick let them down and left them without a legal standing-ground. [He was persuaded by his father-in-law James I. of England to trust his cause to negotiations in which the latter was being duped by the emperor.] . . . Christian and Mansfeld, finding themselves forsaken, looked out for an escape. Mansfeld even entered into negotiations for taking service with the Emperor, whose most dangerous enemy he had been so long. At length, however, they determined to join Maurice in the Netherlands. They pushed accordingly from Alsace, through to Verdun; there they parted, Mansfeld passing through Champagne, to the terror of the French, and Christian through Bouillon and Luxemburg. They met again at Breda, and there strengthened Maurice so thoroughly that he was able to raise the siege of Bergen-op-Zoom. At Fleury in Hainault Mansfeld met Cordova on August 29, and a severe engagement followed, but he succeeded in making his way to Breda. The Margrave of Baden submitted to the Emperor and disbanded his forces. Tilly was now free to repossess himself of the Palatinate, and to anticipate the claims which the Spaniards by whose armies it had been overrun might make upon it. This was speedily done. On September 6, Heidelberg was taken by assault; Mannheim capitulated; and with the exception of Frankenthal, Frederick had no longer a spot of ground that acknowledged him. Ferdinand was contemplating a measure that would seal his deprivation; the transfer of the electoral dignity to the other branch of the Wittelsbachs, in the person of Maximilian of Bavaria, whose claims on Upper Austria he intended to buy off by a gift of the Upper Palatinate. His preparations for this severe act were completed in the winter; and a Diet . . . met at Ratisbon on November 24, 1622. . . . Ferdinand managed, by playing off the smaller princes against one another, as their family disputes very generally enabled him to do, to get his own way at last. The question was considered from January 7 to February 25, 1623, and on the latter day the Emperor formally declared the electoral vote transferred from the elder to the younger branch of the Wittelsbachs, as Charles V. had transferred that of Saxony from the Ernestine to the Albertine line of Wettin. The new elector was recognised by all his fellows, Brandenburg alone objecting; and by the ambassadors of France. The Elector of Saxony was put in possession of Lusatia; Lewis of Darmstadt was reconciled by the investiture of Marburg; Christian of Anhalt was admitted to favour; John George of Hohenzollern was made a Prince of the Empire. But although the Diet had been thus easily managed, Mansfeld and Christian were far too active and determined to allow this to be a settlement of all claims. Mansfeld during the winter had led his forces into East Friesland, the Count of which country was friendly to the Emperor, and had there, as usual, maintained them by pillage. Christian had again stirred up the princes of Lower Saxony; they had formed a league, of which the King of Denmark, the Elector of Brandenburg, the Dukes of Brunswick, Holstein, and Mecklenburg were members: which avowed as its object the defence of the country against Tilly on one side and Mansfeld on the other, but which Christian intended to use for the recovery of the Palatinate.

Before the Diet of Ratisbon separated, which was in March, the Emperor found it necessary to send Tilly to break up this combination. The princes urged Christian to make his submission to Ferdinand; and he found it necessary to evacuate Westphalia. On his way to join Mansfeld in East Friesland, Tilly overtook him at Stadtholm on August 6, and thoroughly routed him. After some months manœuvring they found themselves helpless and the country they were occupying exhausted; and in January 1624 these two renowned adventurers broke up their forces."—W. Stubbs, *Lectures on European history* (A. Hassall, ed.), pp. 298-305.

1624-1626.—Thirty Years' War: Alliance of England, Holland, and Denmark to support Protestant cause.—Creation of the imperial army of Wallenstein, and its first campaigns.—"Had the Emperor been as wise as he was resolute, it is probable that, victorious in every direction, he might have been able to conclude a permanent peace with the Protestant Party. But the bigotry which was a very part of his nature was spurred on by his easy triumphs to refuse to sheathe the sword until heresy had been rooted out from the land. In vain did the Protestant princes, who had maintained a selfish and foolish neutrality, remonstrate against the continuance of hostilities after the avowed object for which those hostilities were undertaken had been gained. In the opinion of Ferdinand II. the real object still remained to be accomplished. Under these critical circumstances the emigrants, now grown numerous [see BOHEMIA: 1621-1648], and the awakened Protestant princes, earnestly besought the aid of a foreign power. It was their representations which at length induced three nations of the reformed faith—England, Holland, and Denmark—to ally themselves to assist their oppressed brethren [see also FRANCE: 1624-1626]. England agreed to send subsidies, Holland to supply troops. The command of the delivering army was confided to Christian IV., King of Denmark (1625) [as duke of Holstein he was a prince of the empire]. He was to be supported in Germany by the partisan Mansfeldt, by Prince Christian of Brunswick, and by the Protestants of Lower Saxony, who had armed themselves to resist the exactions of the Emperor. Ferdinand II., after vainly endeavouring to ward off hostilities by negotiations, despatched Tilly to the Weser to meet the enemy. Tilly followed the course of that river as far as Minden, causing to be occupied, as he marched, the places which commanded its passage. Pursuing his course northwards, he crossed the river at Neuburg (midway between Minden and Bremen), and occupied the principality of Kalenberg. The King of Denmark was near at hand, in the Duchy of Brunswick, anxious, for the moment, to avoid a battle. Tilly, superior to him in numbers, was as anxious to fight one. As though the position of the King of Denmark were not already sufficiently embarrassing, the Emperor proceeded at this period to make it almost unendurable by launching upon him likewise an imperial army. . . . Up to the period of the complete overthrow and expulsion from the Palatinate of Frederick V., ex-King of Bohemia, Ferdinand had been indebted for all his successes to Maximilian of Ba-

varia. It was Maximilian who, as head of the Holy League, had reconquered Bohemia for the Emperor: it was Maximilian's general, Tilly, who had driven the Protestant armies from the Palatinate; and it was the same general who was now opposing the Protestants of the north in the lands watered by the Weser. Maximilian had been rewarded by the cession to him of the Palatinate, but it was not advisable that so near a neighbour of Austria should be made too strong. It was this feeling, this jealousy of Maximilian, which now prompted Ferdinand to raise, for the first time in this war, an imperial army, and to send it to the north. This army was raised by and at the expense of Albert Wenzel Eusebius of Waldstein, known in history as Wallenstein. A Czech by nationality, born in 1583 of noble parents, who belonged to one of the most advanced sects of the reformers but who died whilst their son was yet young, Wallenstein had, when yet a child, been committed to the care of his uncle, Albert Slavata, an adherent of the Jesuits, and by him educated at

latter, and, though his troops were fewer in number, took up a position at Dessau in full view of the imperial camp, and there entrenched himself. Here Wallenstein attacked (25th April 1626) and completely defeated him. Not discouraged by this overthrow, and still bearing in mind the main object of the campaign, Mansfeldt fell back into Brandenburg, recruited there his army, called to himself the Duke of Saxe-Weimar and then suddenly dashed, by forced marches, towards Silesia and Moravia, with the intention of reaching Hungary, where Bethlen Gabor had promised to meet him." Wallenstein followed and "pressed him so hard that, though Mansfeldt did effect a junction with Bethlen Gabor, it was with but the skeleton of his army. Despairing of success against numbers vastly superior, Bethlen Gabor withdrew from his new colleague, and Mansfeldt, reduced to despair, disbanded his remaining soldiers, and sold his camp-equipage to supply himself with the means of flight (September). He died soon after (30th November). . . . Wallenstein then retraced his steps

TILLY

WALLENSTEIN

Olmütz in the strictest Catholic faith." By marrying, first, a rich widow, who soon died, and then an heiress, daughter of Count Harrach, and by purchasing with the fortune thus acquired many confiscated estates, he had become possessed of enormous wealth. He had already won distinction as a soldier. "For his faithful services, Ferdinand in 1623 nominated Wallenstein to be Prince, a title changed, the year following, into that of Duke of Friedland. At this time the yearly income he derived from his various estates, all economically managed, was calculated to be 30,000,000 florins—little short of £2,500,000." Wallenstein now, in 1625, "divining his master's wishes, and animated by the ambition born of natural ability, offered to raise and maintain, at his own cost, an army of 50,000 men, and to lead it against the enemy. Ferdinand eagerly accepted the offer. Named Generalissimo and Field Marshal in July of the same year, Wallenstein marched at the head of 30,000 men, a number which increased almost daily, first to the Weser, thence, after noticing the positions of Tilly and of King Christian, to the banks of the Elbe, where he wintered. . . . In the spring . . . Mansfeldt, with the view to prevent a junction between Tilly and Wallenstein, marched against the

to the north. Meanwhile Tilly, left to deal with Christian IV, had followed that prince into Lower Saxony, had caught, attacked, and completely defeated him at Lutter (am Barenberge), the 27th July 1626. This victory gave him complete possession of that disaffected province, and despite a vigorous attempt made by the Margrave George Frederic of Baden to wrest it from him, he held it till the return of Wallenstein from the pursuit of Mansfeldt. As two stars of so great a magnitude could not shine in the same hemisphere, it was then decided that Tilly should carry the war into Holland, whilst to Wallenstein should be left the honour of dealing with the King of Denmark and the Protestant princes of the north."—G. B. Malleon, *Battle-fields of Germany*, ch. 1.—See also HUNGARY: 1606-1660.

1627-1629.—Thirty Years' War: Wallenstein's campaign against the Danes.—His power and his oppression in Germany.—Country devoured by his army.—Unsuccessful siege of Stralsund.—First succor from the king of Sweden.—Peace of Lübeck.—Edict of Restitution.—"Wallenstein opened the campaign of 1627 at the head of a re-

freshed and well-equipped army of 40,000 men. His first effort was directed against Silesia; and the Danish troops, few in number, and ill commanded, gave way at his approach. To prevent the fugitives from infringing on the neutrality of Brandenburg, he occupied the whole electorate. Mecklenburg and Pomerania soon shared the same fate. Remonstrances and assurances of perfect neutrality were treated with absolute scorn; and Wallenstein declared, in his usual haughty style, that 'the time had arrived for dispensing altogether with electors; and that Germany ought to be governed like France and Spain, by a single and absolute sovereign.' In his rapid march towards the frontiers of Holstein, he acted fully up to the principle he had laid down, and naturally exercised despotic power, as the representative of the absolute monarch of whom he spoke. . . . He . . . followed up the Danes, defeated their armies in a series of actions near Heiligenhausen, overran the whole peninsula of Jutland before the end of the campaign, and forced the unhappy king to seek shelter, with the wrecks of his army, in the islands beyond the Belt. . . . Brilliant as the campaign of 1627 proved in its general result, few very striking feats of arms were performed during its progress. . . . Now it was that the princes and states of Lower Germany began to feel the consequences of their pusillanimous conduct; and the very provinces which had just before refused to raise troops for their own protection, were obliged to submit, without a murmur, to every species of insult and exaction. Wallenstein's army, augmented to 100,000 men, occupied the whole country; and the lordly leader following, on a far greater scale, the principle on which Mansfeld had acted, made the war maintain the war, and trampled alike on the rights of sovereigns and of subjects. And terrible was the penalty now paid for the short-sighted policy which avarice and cowardice had suggested, and which cunning had vainly tried to disguise beneath affected philanthropy, and a generous love of peace. Provided with imperial authority, and at the head of a force that could no longer be resisted, Wallenstein made the empire serve as a vast storehouse, and wealthy treasury for the benefit of the imperial army. He forbade even sovereigns and electors to raise supplies in their own countries, and was justly termed 'the princes' scourge and soldiers' idol.' The system of living by contributions had completely demoralised the troops. Honour and discipline were entirely gone; and it was only beneath the eye of the stern and unrelenting commander, that anything like order continued to be observed. Dissipation and profligacy, reigned in all ranks: bands of dissolute persons accompanied every regiment, and helped to extinguish the last sparks of morality in the breast of the soldier. The generals levied arbitrary taxes; the inferior officers followed the example of their superiors; and the privates, soon ceasing to obey those whom they ceased to respect, plundered in every direction; while blows, insults, or death awaited all who dared to resist. . . . The sums extorted, in this manner, prove that Germany must have been a wealthy country in the 17th century. . . . Complaints against the author of such evils were, of course, not wanting; but the man complained of had rendered the Emperor all-powerful in Germany: from the Adriatic to the Baltic, Ferdinand reigned absolute, as no monarch had reigned since the days of the Othos. This supremacy was due to Wallenstein alone; and what could the voice of the humble and oppressed effect against such an offender? Or when did the voice of suffering nations, arrest the progress of power and ambi-

tion? During the winter that followed on the campaign of 1627, Wallenstein repaired to Prague, to claim [and to receive] from the Emperor, who was residing in the Bohemian capital, additional rewards for the important services so lately rendered. The boon solicited was nothing less than the Duchy of Mecklenburg, which was to be taken from its legitimate princes, on the ground of their having joined the King of Denmark, and bestowed on the successful general. . . . Hitherto the ocean had alone arrested the progress of Wallenstein: a fleet was now to be formed, which should enable him to give laws beyond the Belts, and perhaps beyond the Baltic also. Every seaport in Mecklenburg and Pomerania is ordered to be taken possession of and fortified. . . . The siege of Stralsund, which was resolved upon early in 1628, constitutes one of the most memorable operations of the war. Not merely because it furnishes an additional proof of what may be effected by skill, courage and resolution, against vastly superior forces, but because its result influenced, in an eminent degree, some of the most important events that followed. When Wallenstein ordered the seaports along the coast of Pomerania to be occupied, Stralsund, claiming its privilege as an imperial and Hanseatic free town, refused to admit his troops. . . . After a good deal of negotiation, which only cost the people of Stralsund some large sums of money, paid away in presents to the imperial officers, Arnheim [Hans Georg von Arnim-Boytzenburg, Wallenstein's field marshal] invested the place on the 7th of May with 8,000 men. . . . The town, . . . unable to obtain assistance from the Duke of Pomerania, the lord superior of the province, who, however willing, had no means of furnishing relief, placed itself under the protection of Sweden: and Gustavus Adolphus, fully sensible of the importance of the place, immediately dispatched the celebrated David Leslie, at the head of 600 men, to aid in its defence. Count Brahe, with 1,000 more, soon followed; so that when Wallenstein reached the army on the 27th of June, he found himself opposed by a garrison of experienced soldiers, who had already retaken all the outworks which Arnheim had captured in the first instance. . . . Rain began to fall in such torrents that the trenches were entirely filled, and the flat moor ground, on which the army was encamped, became completely inundated and untenable. The proud spirit of Friedland, unused to yield, still persevered; but sickness attacked the troops, and the Danes having landed at Jasmund, he was obliged to march against them with the best part of his forces; and in fact to raise the siege. . . . The Danes having effected their object, in causing the siege of Stralsund to be raised, withdrew their troops from Jasmund, and landed them again at Wolgast. Here, however, Wallenstein surprised, and defeated them with great loss. . . . There being on all sides a willingness to bring the war to an end, peace was . . . concluded at Lübeck in January 1629. By this treaty the Danes recovered, without reserve or indemnity, all their former possessions; only pledging themselves not again to interfere in the affairs of the Empire. . . . The peace of Lübeck left Wallenstein absolute master in Germany, and without an equal in greatness: his spirit seemed to hover like a storm-charged cloud over the land, crushing to the earth every hope of liberty and successful resistance. Mansfeld and Christian of Brunswick had disappeared from the scene; Frederick V. had retired into obscurity. Tilly and Pappenheim, his former rivals, now condescended to receive favours, and to solicit pensions and rewards through the medium of his intercession.

Even Maximilian of Bavaria was second in greatness to the all-dreaded Duke of Friedland: Europe held no uncrowned head that was his equal in fame, and no crowned head that surpassed him in power. . . . Ferdinand, elated with success, had neglected the opportunity, again afforded him by the peace of Lubbeck, for restoring tranquillity to the empire. . . . Instead of a general peace, Ferdinand signed the fatal Edict of Restitution, by which the Protestants were called upon to restore all the Catholic Church property they had sequestered since the religious pacification of 1555 [Peace of Augsburg]: such sequestration being, according to the Emperor's interpretation, contrary to the spirit of the treaty of Passau. The right of long-established possession was here entirely overlooked; and Ferdinand forgot, in his zeal for the

books, bibles and catechisms were seized; and gibbets were erected to terrify those who might be disposed to resist. All Protestants who refused to change their religion were expelled from Augsburg: summary proceedings of the same kind were resorted to in other places. Armed with absolute power, the commissioners soon proceeded from reclaiming the property of the church to seize that of individuals. The estates of all persons who had served under Mansfeld, Baden, Christian of Brunswick; of all who had aided Frederick V., or rendered themselves obnoxious to the Emperor, were seized and confiscated. . . . The Duke of Friedland, who now ruled with dictatorial sway over Germany, had been ordered to carry the Edict of Restitution into effect, in all the countries occupied by his troops. The task, if we believe historians, was

TERRITORY IN WHICH THE THIRTY YEARS' WAR WAS FOUGHT

church, that he was actually setting himself up as a judge, in a case in which he was a party also. It was farther added, that, according to the same treaty, freedom of departure from Catholic countries, was the only privilege which Protestants had a right to claim from Catholic princes. This decree came like a thunderburst over Protestant Germany. Two archbishopricks, 12 bishopricks, and a countless number of convents and clerical domains, which the Protestants had confiscated, and applied to their own purposes, were now to be surrendered. Imperial commissioners were appointed to carry the mandate into effect, and, to secure immediate obedience, troops were placed at the disposal of the new officials. Wherever these functionaries appeared, the Protestant service was instantly suspended; the churches deprived of their bells; altars and pulpits pulled down; all Protestant

executed with unbending rigour."—J. Mitchell, *Life of Wallenstein*, ch. 2-3.

1627-1631.—War of the emperor and Spain with France over the succession to the duchy of Mantua. See ITALY: 1627-1631.

1630.—Thirty Years' War: Universal hostility to Wallenstein.—His dismissal by the emperor.—Rising of a new champion of protestantism in Sweden.—"Wallenstein had ever shown great toleration in his own domains; but it is not to be denied that . . . he aided to carry out the edict [Restitution] in the most barbarous and relentless manner. It would be as tedious as painful to dwell upon all the cruelties which were committed, and the oppression that was exercised, by the imperial commissioners; but a spirit of resist-

ance was aroused in the hearts of the German people, which only waited for opportunity to display itself. Nor was it alone against the emperor that wrath and indignation were excited. Wallenstein drew down upon his head even more dangerous enmity than that which sprung up against Ferdinand. He ruled in Germany with almost despotic sway; for the emperor himself seemed at this time little more than a tool in his hands. His manners were unpopular, stern, reserved, and gloomy. . . . Princes were kept waiting in his antechamber; and all petitions and remonstrances against his stern decrees were treated with the mortifying scorn which adds insult to injury. The magnificence of his train, the splendor of his household, the luxury and profusion that spread everywhere around him, afforded continual sources of envy and jealous hate to the ancient nobility of the empire. The Protestants throughout the land were his avowed and implacable enemies; and the Roman Catholic princes viewed him with fear and suspicion. Maximilian of Bavaria, whose star had waned under the growing luster of Wallenstein's renown, who had lost that authority in the empire which he knew to be due to his services and his genius, solely by the rise and influence of Wallenstein, and whose ambitious designs of ruling Germany through an emperor dependent upon him for power, had been frustrated entirely by the genius which placed the imperial throne upon a firm and independent basis, took no pains to conceal his hostility to the Duke of Friedland. . . . Though the soldiery still generally loved him, their officers hated the hand that put a limit to the oppression by which they thrived, and would fain have resisted its power. . . . While these feelings were gathering strength in Germany; while Wallenstein, with no friends, though many supporters, saw himself an object of jealousy or hatred to the leaders of every party throughout the empire; and while the suppressed but cherished indignation of all Protestant Germany was preparing for the emperor a dreadful day of reckoning, events were taking place in other countries which hurried on rapidly the dangers that Wallenstein had foreseen. In France, a weak king, and a powerful, politic, and relentless minister, appeared in undissembled hostility to the house of Austria; and the famous Cardinal de Richelieu busied himself, successfully, to raise up enemies to the German branch of that family. . . . In Poland, Sigismund [III, who claimed the Swedish crown], after vainly contending with Gustavus Adolphus [king of Sweden. See SWEDEN: 1611-1620], and receiving an inefficient aid from Germany, was anxious to conclude the disastrous war with Sweden. Richelieu interfered; Oxenstiern [Count Axel Gustafsson Oxenstjerna (1583-1654), chancellor of Sweden] negotiated on the part of Gustavus; and a truce of six years was concluded in August, 1629, by which the veteran and victorious Swedish troops were set free to act in any other direction. A great part of Livonia was virtually ceded to Gustavus, together with the towns and territories of Memel, Braunsberg and Elbingen, and the strong fortress of Pillau. At the same time, Richelieu impressed upon the mind of Gustavus the honor, the advantage, and the necessity of reducing the immense power of the emperor, and delivering the Protestant states of Germany from the oppression under which they groaned. . . . Confident in his own powers of mind and warlike skill, supported by the love and admiration of his people, relying on the valor and discipline of his troops, and foreseeing all the mighty combinations which were certain to take place in his favor, Gustavus hesitated but little. He consulted with his ministers, indeed

heard and answered every objection that could be raised; and then applied to the Senate at Stockholm to insure that his plans were approved, and that his efforts would be seconded by his people. His enterprise met with the most enthusiastic approbation; and then succeeded all the bustle of active preparation. . . . While this storm was gathering in the North, while the towns of Sweden were bristling with arms, and her ports filled with ships, Ferdinand was driven or persuaded to an act the most fatal to himself, and the most favorable to the King of Sweden. A Diet was summoned to meet at Ratisbon early in the year 1630; and the chief object of the emperor in taking a step so dangerous to the power he had really acquired, and to the projects so boldly put forth in his name, seems to have been to cause his son to be elected King of the Romans. . . . The name of the archduke, King of Hungary, is proposed to the Diet for election as King of the Romans, and a scene of indescribable confusion and murmuring takes place. A voice demands that, before any such election is considered, the complaints of the people of Germany against the imperial armies shall be heard; and then a perfect storm of accusations pours down. Every sort of tyranny and oppression, every sort of cruelty and exaction, every sort of licentiousness and vice is attributed to the emperor's troops; but the hatred and the charges all concentrate themselves upon the head of the great commander of the imperial forces; and there is a shout for his instant dismissal. . . . Ferdinand hesitated, and affected much surprise at the charges brought against his general and his armies. He yielded in the end, however; and it is said, upon very good authority, that his ruinous decision was brought about by the arts of the same skillful politician who had conjured up the storm which now menaced the empire from the north. Richelieu had sent an ambassador to Ratisbon. . . . In the train of the ambassador came the well-known intriguing friar, Father Joseph, the most unscrupulous and cunning of the cardinal's emissaries; and he, we are assured, found means to persuade the emperor that, by yielding to the demand of the electors and removing Wallenstein for a time, he might obtain the election of the King of Hungary, and then reinstate the Duke of Friedland in his command as soon as popular anger had subsided. However that might be, Ferdinand, as I have said, yielded, openly expressing his regret at the step he was about to take, and the apprehensions which he entertained for the consequences. Count Questenberg and another nobleman, who had been long on intimate terms with Wallenstein, were sent to the camp to notify him of his removal from command, and to soften the disgrace by assuring him of the emperor's gratitude and affection."—G. P. R. James, *Dark scenes of history: Wallenstein, ch. 3-4.*

1630-1631.—Thirty Years' War: Coming of Gustavus Adolphus.—His occupation of Pomerania and Brandenburg.—Horrible fate of Magdeburg at the hands of Tilly's ruffians.—"On June 24, 1630, one hundred years, to a day, after the Augsburg Confession was promulgated, Gustavus Adolphus landed on the coast of Pomerania, near the mouth of the river Peene, with 13,000 men, veteran troops, whose rigid discipline was sustained by their piety, and who were simple-minded, noble, and glowing with the spirit of the battle. He had reasons enough for declaring war against Ferdinand, even if 10,000 of Wallenstein's troops had not been sent to aid Sigismund against him. But the

controlling motive, in his own mind, was to succor the imperiled cause of religious freedom in Germany. Coming as the protector of the evangelical Church, he expected to be joined by the Protestant princes. But he was disappointed. Only the trampled and tortured people of North Germany, who in their despair were ready for revolts and conspiracies of their own, welcomed him as their deliverer from the bandits of Wallenstein and the League. Gustavus Adolphus appeared before Stettin, and by threats compelled the old duke, Bogislaw XIV. [of Pomerania], to open to him his capital city. He then took measures to secure possession of Pomerania. His army grew rapidly, while that of the emperor was widely dispersed, so that he now advanced into Brandenburg. George William, the elector, was a weak prince, though a Protestant, and a brother of the Queen of Sweden; he was guided by his Catholic chancellor, Schwarzenberg, and had painfully striven to keep neutral throughout the war, neither side, however, respecting his neutrality. In dread of the plans of Gustavus Adolphus concerning Pomerania and Prussia, he held aloof from him. Meanwhile Tilly, general-in-chief of the troops of the emperor and the League, drew near, but suddenly turned aside to New Brandenburg, in the Mecklenburg territory, now occupied by the Swedes, captured it after three assaults, and put the garrison to the sword (1631). He then laid siege to Magdeburg. Gustavus Adolphus took Frankfurt-on-the-Oder, where there was an imperial garrison, and treated it, in retaliation, with the same severity. Thence, in the spring of 1631, he set out for Berlin. . . . In Potsdam he heard of the fall of Magdeburg. He then marched with flying banners into Berlin, and compelled the elector to become his ally. Magdeburg was the strong refuge of Protestantism, and the most important trading centre in North Germany. It had resisted the Augsburg Interim of 1548, and now resisted the Edict of Restitution, rejected the newly appointed prince bishop, Leopold William, son of the emperor himself, and refused to receive the emperor's garrison. The city was therefore banned by the emperor, and was besieged for many weeks by Pappenheim, a general of the League, who was then reinforced by Tilly himself with his army. Gustavus Adolphus was unable to make an advance, in view of the equivocal attitude of the two great Protestant electors, without exposing his rear to garrisoned fortresses. From Brandenburg as well as Saxony he asked in vain for help to save the Protestant city. Thus Magdeburg fell, May 10, 1631. The citizens were deceived by a pretended withdrawal of the enemy. But suddenly, at early dawn, the badly guarded fortifications were stormed."—C. T. Lewis, *History of Germany*, ch. 18, sect. 3-4.—Two gates of the city having been opened by the storming party, "Tilly marched in with part of his infantry. Immediately occupying the principal streets, he drove the citizens with pointed cannon into their dwellings, there to await their destiny. They were not long held in suspense; a word from Tilly decided the fate of Magdeburg. Even a more humane general would in vain have recommended mercy to such soldiers; but Tilly never made the attempt. Left by their general's silence masters of the lives of all the citizens, the soldiery broke into the houses to satiate their most brutal appetites. The prayers of innocence excited some compassion in the hearts of the Germans, but none in the rude breasts of Pappenheim's Walloons. Scarcely had the savage cruelty commenced, when the other gates were thrown open, and the cavalry, with the fearful hordes of the Croats, poured in upon the devoted

inhabitants. Here commenced a scene of horrors for which history has no language—poetry no pencil. Neither innocent childhood, nor helpless old age; neither youth, sex, rank, nor beauty, could disarm the fury of the conquerors. Wives were abused in the arms of their husbands, daughters at the feet of their parents; and the defenceless sex exposed to the double sacrifice of virtue and life. No situation, however obscure, or however sacred, escaped the rapacity of the enemy. In a single church fifty-three women were found beheaded. The Croats amused themselves with throwing children into the flames; Pappenheim's Walloons with stabbing infants at the mother's breast. Some officers of the League, horror-struck at this dreadful scene, ventured to remind Tilly that he had it in his power to stop the carnage. 'Return in an hour,' was his answer; 'I will see what I can do; the soldier must have some reward for his danger and toils.' These horrors lasted with unabated fury, till at last the smoke and flames proved a check to the plunderers. To augment the confusion and to divert the resistance of the inhabitants, the Imperialists had, in the commencement of the assault, fired the town in several places. The wind rising rapidly, spread the flames, till the blaze became universal. Fearful, indeed, was the tumult amid clouds of smoke, heaps of dead bodies, the clash of swords, the crash of falling ruins, and streams of blood. The atmosphere glowed; and the intolerable heat forced at last even the murderers to take refuge in their camp. In less than twelve hours, this strong, populous, and flourishing city, one of the finest in Germany, was reduced to ashes, with the exception of two churches and a few houses. . . . The avarice of the officers had saved 400 of the richest citizens, in the hope of extorting from them an exorbitant ransom. But this humanity was confined to the officers of the League, whom the ruthless barbarity of the Imperialists caused to be regarded as guardian angels. Scarcely had the fury of the flames abated, when the Imperialists returned to renew the pillage amid the ruins and ashes of the town. Many were suffocated by the smoke; many found rich booty in the cellars, where the citizens had concealed their more valuable effects. On the 13th of May, Tilly himself appeared in the town, after the streets had been cleared of ashes and dead bodies. Horrible and revolting to humanity was the scene that presented itself. The living crawling from under the dead, children wandering about with heart-rending cries, calling for their parents; and infants still sucking the breasts of their lifeless mothers. More than 6,000 bodies were thrown into the Elbe to clear the streets; a much greater number had been consumed by the flames. The whole number of the slain was reckoned at not less than 30,000. The entrance of the general, which took place on the 14th, put a stop to the plunder, and saved the few who had hitherto contrived to escape. About a thousand people were taken out of the cathedral, where they had remained three days and two nights, without food, and in momentary fear of death."—F. Schiller, *History of the Thirty Years' War*, bk. 2.

1631 (January).—Thirty Years' War: Treaty of Bärwalde between Gustavus Adolphus and the king of France.—"On the 13th of January, 1631, the Treaty of Bärwalde was concluded between France and Sweden. Hard cash had been the principal subject of the negotiation, and Louis XIII. had agreed to pay Gustavus a lump sum of \$120,000 in consideration of his recent expenditure,

—a further sum of \$400,000 a year for six years to come. Until that time, or until a general peace, if such should supervene earlier, Sweden was to keep in the field an army of 30,000 foot and 6,000 horse. The object of the alliance was declared to be 'the protection of their common friends, the security of the Baltic, the freedom of commerce, the restitution of the oppressed members of the Empire, the destruction of the newly erected fortresses in the Baltic, the North Sea, and in the Grisons territory, so that all should be left in the state in which it was before the German war had begun.' Sweden was not to 'violate the Imperial constitution' where she conquered; she was to leave the Catholic religion undisturbed in all districts where she found it existing. She was to observe towards Bavaria and the League—the spoilt darlings of Richelieu's anti-Austrian policy—friendship or neutrality, so far as they would observe it towards her. If, at the end of six years, the objects were not accomplished, the treaty was to be renewed."—C. R. L. Fletcher, *Gustavus Adolphus and the struggle of Protestantism for existence*, ch. 9.

1631.—Thirty Years' War: Elector of Brandenburg brought to terms by the king of Sweden.—Elector of Saxony frightened into line.—Defeat of Tilly at Leipzig (Breitenfeld).—Effects of the great victory.—"Loud were the cries against Gustavus for not having relieved Magdeburg. To answer them he felt himself bound to publish a careful apology. In this document he declared, among other things, that if he could have obtained from the Elector of Brandenburg the passage of Küstrin he might not only have raised the siege of Magdeburg but have destroyed the whole of the Imperial army. The passage, however, had been denied him; and though the preservation of Magdeburg so much concerned the Elector of Saxony [John George], he could obtain from him a passage toward it neither by Wittemberg, nor the Bridge of Dessau, nor such assistance in provision and shipping as was necessary for the success of the enterprise. . . . Something more than mere persuasion had induced the Elector of Brandenburg, after the capture of Francfort, to grant Gustavus possession of Spandau for a month. The month expired on the 8th of June; and the elector demanded back his stronghold. The king, fettered by his promise, surrendered it; but the next day, having marched to Berlin and pointed his guns against the palace, the ladies came forth as mediators, and the elector consented both to surrender Spandau again and to pay, for the maintenance of the Swedish troops, a monthly subsidy of 30,000 rix-dollars. At the end of May Tilly removed from Magdeburg and the Elbe to Aschersleben. This enabled the king to take Werben, on the confluence of the Elbe and Havel, where, after the reduction of Tangermünde and Havelberg, he established his celebrated camp." In the latter part of July, Tilly made two attacks on the king's camp at Werben, and was repulsed on both occasions with heavy loss. "In the middle of August, Gustavus broke up his camp. His force at that time, according to the muster-rolls, amounted to 13,000 foot, and 8,850 cavalry. He drew towards Leipzig, then threatened by Tilly, who, having been joined at Eisleben by 15,000 men under Fürstenburg, now possessed an army 40,000 strong to enforce the emperor's ban against the Leipzig decrees [or resolutions of a congress of Protestant princes which had assembled at Leipzig in February, 1631, moved to some organized common action by the Edict of Restitution] within the limits of the electorate. The Elector of Saxony was almost frightened out of his wits by the impending danger. . . . His grief

and rage at the fall of Magdeburg had been so great that, for two days after receiving the news, he would admit no one into his presence. But that dire event only added to his perplexity; he could resolve neither upon submission, nor upon vengeance. In May, indeed, terrified by the threats of Ferdinand, he discontinued his levies, and disbanded a part of his troops already enlisted; but in June he sent Armin [Wallenstein's general was now commander of the Saxon troops] to Gustavus with such overtures that the king drank his health, and seemed to have grown sanguine in the hope of his alliance. In July, his courage still rising, he permitted Gustavus to recruit in his dominions. In August, his courage falling again at the approach of Fürstenburg, he gave him and his troops a free passage through Thuringia." But now, later in the same month, he sent word to Gustavus Adolphus "that not only Wittemberg but the whole electorate was open to him; that not only his son, but himself, would serve under the king; that he would advance one month's payment for the Swedish troops immediately, and give security for two monthly payments more. . . . Gustavus rejoiced to find the Duke of Saxony in this temper, and, in pursuance of a league now entered into with him, and the Elector of Brandenburg, crossed the Elbe at Wittemberg on the 4th of September. The Saxons, from 16,000 to 20,000 strong, moving simultaneously from Torgau, the confederated armies met at Düben on the Mulda, three leagues from Leipzig. At a conference held there, it was debated whether it would be better to protract the war or to hazard a battle. The king took the former side, but yielded to the strong representations of the Duke of Saxony. . . . On the 6th of September the allies came within six or eight miles of the enemy, where they halted for the night. . . . Breitenfeld, the place at which Tilly, urged by the importunity of Pappenheim, had chosen to offer battle, was an extensive plain, in part recently ploughed, about a mile from Leipzig and near the cemetery of that city. Leipzig had surrendered to Tilly two days before. The Imperial army, estimated at 44,000 men, occupied a rising ground on the plain. . . . The army was drawn up in one line of great depth, having the infantry in the centre, the cavalry on the wings, according to the Spanish order of battle. The king subdivided his army, about 20,000 strong, into centre and wings, each of which consisted of two lines and a reserve. . . . To this disposition is attributed, in a great degree, the success of the day. . . . The files being so comparatively shallow, artillery made less havoc among them. Then, again, the division of the army into small maniples, with considerable intervals between each, gave space for evolutions, and the power of throwing the troops with rapidity wherever their services or support might be found requisite. . . . The battle began at 12 o'clock." It only ended with the setting of the sun; but long before that time the great army of Tilly was substantially destroyed. It had scattered the Saxons easily enough, and sent them flying, with their worthless elector; but Gustavus and his disciplined, brave, powerfully handled Swedes had broken and ruined the stout but clumsy imperial lines. "It is scarcely possible to exaggerate the importance of this success." On the event of that day, as Gustavus himself said, the whole (Protestant) cause, 'summa rei,' depended. The success was great in itself. The numbers engaged on either side had been nearly equal. Not so their loss. The Imperial loss in killed and wounded, according to Swedish computation, was from 8,000 to 10,000; according to the enemy's own account, between 6,000 and

7,000; while all seem to agree that the loss on the side of the allies was only 2,700, of which 2,000 were Saxon, 700 Swedes. Besides, Gustavus won the whole of the enemy's artillery, and more than 100 standards. Then the army of Tilly being annihilated left him free to choose his next point of attack, almost his next victory."—B. Chapman, *History of Gustavus Adolphus*, ch. 8.—"The battle of Breitenfeld was an epoch in war, and it was an epoch in history. It was an epoch in war, because first in it was displayed on a great scale the superiority of mobility over weight. It was an epoch in history, because it broke the force upon which the revived Catholicism had relied for the extension of its empire over Europe. . . . 'Germany might tear herself and be torn to pieces for yet another half-generation, but the actual result of the Thirty-Years' War was as good as achieved.'"—C. R. L. Fletcher, *Gustavus Adolphus and the struggle of Protestantism for existence*, ch. 11.

1631-1632.—Thirty Years' War: Movements and plans of the Swedish king in southern Germany.—Temporary recovery of the Palatinate.—Occupation of Bavaria.—Saxons in Bohemia.—Battle of the Lech.—Death of Tilly.—Wallenstein's recall.—Siege and relief of Nuremberg.—Battle of Lützen, and death of Gustavus Adolphus.—The battle, "sometimes called Breitenwald [Breitenfeld], sometimes the First Battle of Leipsic, . . . was the first victory on the Protestant side that had been achieved. It was Tilly's first defeat after thirty battles. It filled with joy those who had hitherto been depressed and hopeless. Cities which had dreaded to declare themselves for fear of the fate of Magdeburg began to lift up their heads, and vacillating princes to think that they could safely take the part which they preferred. Gustavus knew, however, that he must let the Germans do as much as possible for themselves, or he should arouse their national jealousy of him as a foreign conqueror. So he sent the Elector of Saxony to awaken the old spirit in Bohemia. As for himself, his great counsellor, Oxenstiern, wanted him to march straight on Vienna, but this was not his object. He wanted primarily to deliver the northern states, and to encourage the merchant cities, Ulm, Augsburg, Nuremberg, which had all along been Protestant, and to deliver the Palatinate from its oppressors. And, out of mortification, a strange ally offered himself, namely, Wallenstein, who wanted revenge on the Catholic League which had insisted on his dismissal, and the Emperor who had yielded to them. . . . He said that if Gustavus would trust him, he would soon get his old army together again, and chase Ferdinand and the Jesuits beyond the Alps. But Gustavus did not trust him, though he sat quiet at Prague while the Saxons were in possession of the city, plundering everywhere, and the Elector sending off to Dresden fifty waggon-loads filled with the treasures of the Emperor Rudolf's museum. . . . Many exiles returned, and there was a general resumption of the Hussite form of worship. Gustavus had marched to Erfurt, and then turned towards the Maine, where there was a long row of those prince bishops established on the frontier by the policy of Charlemagne—Württemberg, Bamberg, Fulda, Köln, Trier, Mentz, Wurms, Spiers. These had never been secularised and were popularly called the Priests' Lane. They had given all their forces to the Catholic League, and Gustavus meant to repay himself upon them. He permitted no cruelties, no persecutions; but he levied heavy contributions,

and his troops made merry with the good Rhenish wine when he kept his Christmas at Mentz. He invited the dispossessed Elector Palatine to join him, and Frederick started for the camp, after the christening of his thirteenth child. . . . The suite was numerous enough to fill forty coaches, escorted by seventy horse—pretty well for an exiled prince dependent on the bounty of Holland and England. . . . There was the utmost enthusiasm for the Swede in England, and the Marquess of Hamilton obtained permission to raise a body of volunteers to join the Swedish standards, and in the August of 1631 brought 6,000 English and Scots in four small regiments; but they proved of little use, . . . many dying. . . . So far as the King's plans can be understood, he meant to have formed a number of Protestant principalities, and united them in what he called 'Corpus Evangelicorum' around the Baltic and the Elbe, as a balance to the Austrian Roman Catholic power in southern Germany. Frederick wanted to raise an army of his own people and take the command, but to this Gustavus would not consent, having probably no great confidence in his capacity. All the Palatinate was free from the enemy except the three fortresses of Heidelberg, Frankenthal, and Kreuznach, and the last of these was immediately besieged. . . . In the midst of the exultation Frederick was grieved to learn that his beautiful home at Heidelberg had been ravaged by fire, probably by the Spanish garrison in expectation of having to abandon it. But as Tilly was collecting his forces again, Gustavus would not wait to master that place or Frankenthal, and recrossed the Rhine. Sir Harry Vane had been sent as ambassador from Charles I. to arrange for the restoration of the Palatinate, the King offering £10,000 a month for the expense of the war, and proposing that if, as was only too probable, he should be prevented from performing this promise, some of the fortresses should be left as guarantees in the hands of the Swedes. Frederick took great and petulant offence at this stipulation, and complained, with tears in his eyes, to Vane and the Marquess of Hamilton. . . . He persuaded them to suppress this article, though they warned him that if the treaty failed it would be by his own fault. It did in fact fail for, as usual, the English money was not forthcoming, and even if it had been, Gustavus declared that he would be no man's servant for a few thousand pounds. Frederick also refused the King's own stipulation, that Lutherans should enjoy equal rights with Calvinists. Moreover, the Swedish success had been considerably more than was desired by his French allies. . . . Louis XIII., was distressed, but Richelieu silenced him, only attempting to make a treaty with the Swedes by which the Elector of Bavaria and the Catholic League should be neutral on condition of the restoration of the bishops. To this, however, Gustavus could not fully consent, and imposed conditions which the Catholics could not accept. Tilly was collecting his forces and threatening Nuremberg, but the Swedes advanced, and he was forced to retreat, so that it was as a deliverer that, on the 31st March [1632], Gustavus was received in beautiful old Nuremberg with a rapture of welcome. . . . Tilly had taken post on the Lech, and Maximilian was collecting an army in Bavaria. The object of Gustavus was now to beat one or other of them before they could join together: so he marched forward, took Donauwörth, and tried to take Ingolstadt, but found it would occupy too much time, and, though all the generals were of a contrary opinion, resolved to attack Tilly and force the passage of the Lech. The Imperialists had fortified it to the utmost, but in their very teeth the Swedes succeeded in taking

GUSTAVUS ADOLPHUS BEFORE THE BATTLE OF LUTZEN, 1632

advantage of a bend in the river to play on them with their formidable artillery, construct a pontoon bridge, and, after a desperate struggle, effect a passage. Tilly was struck by a cannon-shot in the knee," and died soon afterwards. "On went Gustavus to Augsburg . . . where the Emperor had expelled the Lutheran pastors and cleared the municipal council of Protestant burgomasters. In restoring the former state of things, Gustavus took a fresh step, making the magistrates not only swear fidelity to him as an ally till the end of the war, but as a sovereign. This made the Germans begin to wonder what were his ulterior views. Then he marched on upon Bavaria, intending to bridge the Danube and take Ratisbon, but two strong forts prevented this. . . . He, however, made his way into the country between the Inn and the Lech, Maximilian retreating before him. . . . At Munich the inhabitants brought him their keys. As they knelt he said, 'Rise, worship God, not man.' . . . To compensate the soldiers for not plundering the city, the King gave them each a crown on the day of their entrance. . . . Catholic Germany was in despair. There was only one general in whom there was any hope, and that was the discarded Wallenstein. . . . He made himself be courted. He would not come to Vienna, only to Znaim in Moravia, where he made his terms like an independent prince. . . . At last he undertook to collect an army, but refused to take the command for more than three months. His name was enough to bring his Friedlanders flocking to his standard. Not only Catholics, but Protestants came, viewing Gustavus as a foreign invader. . . . Wallenstein received subsidies not only from the Emperor, but from the Pope and the King of Spain, towards levying and equipping them, and by the end of the three months he had the full 40,000 all in full order for the march. Then he resigned the command. . . . He affected to be bent only on going back to his tower and his stars at Prague [the study of astrology being his favorite occupation], and to yield slowly to the proposals made him. He was to be Generalissimo, neither Emperor nor Archduke was ever to enter his camp; he was to name all his officers, and have absolute control. . . . Moreover, he might levy contributions as he chose, and dispose as he pleased of lands and property taken from the enemy; Mecklenburg was to be secured to him, together with further rewards yet unspecified; and when Bohemia was freed from the enemy, the Emperor was to live there, no doubt under his control. . . . There was no help for it, and Wallenstein thus became the chief power in the Empire, in fact a dictator. The power was conferred on him in April. The first thing he did was to turn the Saxons out of Bohemia, which was an easy matter." At Eger, Wallenstein was joined by the Elector of Bavaria, which raised the Catholic force to 60,000. "The whole army marched upon Nuremberg, and Gustavus, with only 20,000 men, dashed back to its defence. Wallenstein had entrenched himself on an eminence called Fürth." As Nuremberg was terribly distressed, his own army suffering, and being infected with the lawless habits of German warfare, Gustavus found it necessary to attempt (August 24) the storming of the Imperialists' camp. He was repulsed, after losing 3,000 of his Swedes and thrice as many Germans. He then returned to Bavaria, while Wallenstein, abandoning his hope of taking Nuremberg, moved into Saxony and began ravaging the country. The Swedish king followed him so quickly that he had no time to establish the fortified camp he had intended, but was forced to take up an intrenched position at Lützen. There he was attacked on the

6th of November, 1632, and defeated in a desperate battle, which became one of the memorable conflicts in history because it brought to an end the great and splendid career of Gustavus Adolphus, the Swede. The king fell as he was leading a charge, and the fierce fight went on over his body until the enemy had been driven from the field.—C. M. Yonge, *Cameos from English history*, 6th series, ch. 10.

1631-1641.—Thirty Years' War: War in Lorraine.—Possession of the duchy taken by the French. See LORRAINE: 1624-1663.

1632-1634.—Thirty Years' War: Retirement of Wallenstein to Bohemia.—Oxenstiern in the leadership of the Protestant cause.—Union of Heilbronn.—Inaction and suspicious conduct of Wallenstein.—Ban pronounced against him.—His assassination.—"The account of the battle [of Lützen] transmitted by Wallenstein to the Imperial Court, led Ferdinand to think that he had gained the day. . . . But . . . the reputed conqueror was glad to shelter himself behind the mountains of the Bohemian frontier. After the battle, Wallenstein found it necessary to evacuate Saxony in all haste; and, leaving garrisons at Leipsic, Plauen, Zwickau, Chemnitz, Freiburg, Meissen, and Frauenstein, he reached Bohemia without further loss, and put his army into winter-quarters. After his arrival at Prague, he caused many of his officers to be executed for their conduct at Lützen, among whom were several who belonged to families of distinction, nor would he allow them to plead the Emperor's pardon. A few he rewarded. The harshness of his proceedings increased the hatred already felt for him by many of his officers, and especially the Italian portion of them. . . . Axel Oxenstiern, the Swedish Chancellor, succeeded, on the death of Gustavus Adolphus, to the supreme direction of the affairs of Sweden in Germany, and was invested by the Council at Stockholm with full powers both to direct the army and to negotiate with the German courts. Duke Bernhard of Saxe-Weimar retained the military command of the Swedish-German army, divisions of which were cantoned from the Baltic to the Danube. After driving the Imperialists from Saxony, Bernhard had hastened into Franconia, the bishoprics of which, according to a promise of Gustavus, were to be erected in his favour into a duchy; but, after taking Bamberg, his assistance was invoked by General Horn [Swedish general who fought under Gustavus at Breitenfeld], on the Upper Danube. One of the first cares of Oxenstiern was to consolidate the German alliance; and, in March 1633, he summoned a meeting at Heilbronn of the States of the four Circles of the Upper and Lower Rhine, Franconia, and Suabia, as well as deputies from Nuremberg, Strasburg, Frankfort, Ulm, Augsburg, and other cities of the empire. The assembly was also attended by ambassadors from France, England, and Holland; and on April 6th was effected the Union of Heilbronn. Brandenburg and Saxony stood aloof; nor was France, though she renewed the alliance with Sweden, included in the Union. The French minister at Heilbronn assisted, however, in the formation of the Union, although he endeavoured to limit the power of Oxenstiern, to whom the conduct of the war was intrusted. At the same time, the Swedes also concluded a treaty with the Palatinate, now governed, or rather claimed to be governed, by Louis Philip brother of the Elector Frederick V., as guardian

and regent for the latter's youthful son Charles Louis. The unfortunate Frederick had expired at Mentz in his 37th year, not many days after the death of Gustavus Adolphus. . . . Swedish garrisons were to be maintained in Frankenthal, Bacharach, Kaub, and other places; Mannheim was to be at the disposal of the Swedes so long as the war should last. . . . After the junction of Duke Bernhard with Horn, the Swedish army,—for so we shall continue to call it, though composed in great part of Germans,—endeavoured to penetrate into Bavaria; but the Imperial General Altringer [or Aldringer], aided by John von Werth, a commander of distinction, succeeded in covering Munich, and enabled Maximilian to return to his capital. The Swedish generals were also embarrassed by a mutiny of their mercenaries, as well as by their own misunderstandings and quarrels; and all that Duke Bernhard was able to accomplish in the campaign of 1633, besides some forays into Bavaria, was the capture of Ratisbon in November."—T. H. Dyer, *History of modern Europe*, v. 2, bk. 4, ch. 6.—Wallenstein, meantime, had been doing little. "After a long period of inaction in Bohemia, he marched, during the summer of 1633, with imperial pomp and splendor, into Silesia. There he found a mixed army of Swedes, Saxons, and Brandenburgers, with Matthias Thurn, who began the war, among them. Wallenstein finally shut in this army [at Steinau] so that he might have captured it; but he let it go, and went back to Bohemia, where he began to negotiate with Saxony for peace. Meanwhile the alliance formed at Heilbronn had brought Maximilian of Bavaria into great distress. Regensburg [Ratisbon], hitherto occupied by him, and regarded as an outwork of Bavaria and Austria, had been taken by Bernard of Weimar. But Wallenstein, whom the emperor sent to the rescue, only went into the Upper Palatinate, and then returned to Bohemia. He seemed to look upon that country as a strong and commanding position from which he could dictate peace. He carried on secret negotiations with France, Sweden, and all the emperor's enemies. He had, indeed, the power to do this under his commission; but his attitude toward his master became constantly more equivocal. The emperor was anxious to be rid of him without making him an enemy, and wished to give to his own son, the young King of Hungary, the command in chief. But the danger of losing his place drove Wallenstein to bolder schemes. At his camp at Pilsen, all his principal officers were induced by him to unite in a written request that he should in no case desert them—a step which seemed much like a conspiracy. But some of the generals, as Gallas, Aldringer, and Piccolomini, soon abandoned Wallenstein, and gave warning to the emperor. He secretly signed a patent deposing Wallenstein, and placed it in the hands of Piccolomini and Gallas, January 24, 1634, but acted with the profoundest dissimulation until he had made sure of most of the commanders who served under him. Then, suddenly, on February 18, Wallenstein, his brother-in-law Tertzski, How, Neumann, and Kinsky were put under the ban, and the general's possessions were confiscated. Now, at length, Wallenstein openly revolted, and began to treat with the Swedes for desertion to them; but they did not fully trust him. Attended only by five Slavonic regiments, who remained faithful to him, he went to Eger, where he was to meet troops of Bernard of Weimar; but before he could join them, he and the friends named above were assassinated, February 25, by traiters who had remained in his intimate companionship, and whom he trusted,

under the command of Colonel Butler, an Irishman, employed by Piccolomini."—C. T. Lewis, *History of Germany*, ch. 18, sect. 10.

1634-1639.—Thirty Years' War: Successes of the imperialists.—Their victory at Nördlingen.—Richelieu and France become active in the war.—Duke Bernhard's conquest of Alsace.—Richelieu's appropriation of the conquest for France.—"Want of union among the Protestants prevented them from deriving all the benefit which they had at first anticipated from Wallenstein's death. The King of Hungary assumed the command of the army, and by the aid of money, which was plentifully distributed, the soldiers were, without difficulty, kept in obedience; not the slightest attempt was anywhere made to resist the Emperor's orders. On the other hand, Bernhard of Weimar and Field-Marshal Horn were masters of Bavaria. In July 1634, they gained a complete victory at Landshut, over General Altringer, who was slain in the action. . . . The Swedes, who had so long been victorious, were, in their turn, destined to taste the bitterness of defeat. 15,000 Spaniards, under the Cardinal Infant, son of Philip III., entered Germany [see NETHERLANDS: 1625-1647], and in conjunction with the imperial army, under the King of Hungary, laid siege to Nördlingen. Field-Marshal Horn, and Bernhard of Weimar, hurried to the relief of the place. Owing to the superiority of the enemy, who was besides strongly intrenched, the Swedish commanders had no intention to hazard a battle, before the arrival of the Rhin-graff Count Otho, with another division of the army, which was already close at hand; but the impetuosity of the Duke of Weimar lost everything. Horn had succeeded in carrying a hill, called the Amsberg, a strong point, which placed him in communication with the town, and almost secured the victory. Bernhard, thinking that so favourable an opening should not be neglected, hurried on to the attack of another post. It was taken and retaken; both armies were gradually, and without method, drawn into the combat, which, after eight hours' duration, ended in the complete defeat of the Swedes. Horn was made prisoner; and Bernhard escaped on a borrowed horse. . . . The defeat of Nördlingen almost ruined the Swedish cause in Germany; the spell of invincibility was gone, and the effects of the panic far surpassed those which the sword had produced. Strong fortresses were abandoned before the enemy came in sight; provinces were evacuated, and armies, that had been deemed almost unconquerable, deserted their chiefs, and broke into bands of lawless robbers, who pillaged their way in every direction. Bavaria, Suabia and Franconia were lost; and it was only behind the Rhine that the scattered fugitives could again be brought into something like order. . . . The Emperor refused to grant the Swedes any other terms of peace than permission to retire from the empire. The Elector of Saxony, forgetful of what was due to his religion, and forgetful of all that Sweden had done for his country, concluded, at Prague, a separate peace with the Emperor; and soon afterwards joined the Imperialists against his former allies. The fortunes of the Protestants would have sunk beneath this additional blow, had not France come to their aid. Richelieu had before only nourished the war by means of subsidies, and had, at one time, become nearly as jealous of the Swedes as of the

Austrians; but no sooner was their power broken, than the crafty priest took an active share in the contest."—J. Mitchell, *Life of Wallenstein*, ch. 10.—"Richelieu entered resolutely into the contest, and in 1635 displayed enormous diplomatic activity. He wished not only to reduce Austria, but, at the same time, Spain. Spanish soldiers, Spanish treasure, and Spanish generals made in great part the strength of the imperial armies, and Spain besides never ceased to ferment internal troubles in France. Richelieu signed the treaty of Compiègne with the Swedes against Ferdinand II. By its conditions he granted them considerable subsidies in order that they should continue the war in Germany. He made the treaty of St. Germain-en-Laye with Bernard of Saxe Weimar, to whom he promised an annual allowance of money as well as Alsace, provided that he should remain in arms to wrest Franche-Comté from Philip IV. He made the treaty of Paris with the Dutch, who were to help the King of France to conquer Flanders, which was to be divided between France and the United Provinces. He made the treaty of Rivoli with the dukes of Savoy, of Parma, and of Mantua, who were to undertake in concert with France the invasion of the territories of Milan and to receive a portion of the spoils of Spain. At the same time he declared war against the Spanish Government, which had arrested and imprisoned the Elector of Trèves, the ally of France, and refused to surrender him when demanded. Hostilities immediately began on five different theatres of war—in the Low Countries, on the Rhine, in Eastern Germany, in Italy, and in Spain. The army of the Rhine, commanded by Cardinal de la Valette, was to operate in conjunction with the corps of Bernard of Saxe Weimar against the Imperialists, commanded by Count Gallas. To this army Turenne was attached. It consisted of 20,000 infantry, 5,000 cavalry, and 14 guns. This was the army upon which Richelieu mainly relied. . . . Valette was to annoy the enemy without exposing himself, and was not to approach the Rhine; but induced by Bernard, who had a dashing spirit and wished to reconquer all he had lost, encouraged by the terror of the Imperialists who raised the siege of Mayence, he determined to pass the river. He was not long in repenting of that step. He established his troops round Mayence and revictualled this place, which was occupied by a Swedish garrison, throwing in all the supplies of which the town had need. The Imperialists, who had calculated on this imprudence, immediately took to cutting off his supplies, so that soon everything was wanting in the French camp. . . . The scourge of famine threatened the French: it was necessary to retreat, to recross the Rhine, to pass the Sarre, and seek a refuge at Metz. Few retreats have been so difficult and so sad. The army was in such a pitiable condition that round Mayence the men had to be fed with roots and green grapes, and the horses with branches of trees. . . . The sick and the weary were abandoned, the guns were buried, villages were burnt to stay the pursuit of the enemy, and to prevent the wretched soldiers who would fall out of the ranks from taking refuge in them."—H. M. Hozier, *Turenne*, ch. 2.—"Meanwhile, Saxony had concluded with the Emperor at Pirna, at the close of 1634, a convention which ripened into a treaty of alliance, to which almost all the princes of Northern Germany subscribed, at Prague, in the month of May following. The Electors of Saxony and Brandenburg were thus changed into enemies of Sweden. The Swedish General, Banner

[or Banér], who, at the period of the battle of Nördlingen, had been encamped side by side with the Saxon army on the White Hill near Prague, had, on the first indication of wavering on the part of its Elector, managed skilfully to withdraw his troops from the dangerous proximity. On the 22nd October 1635, he defeated the Saxon army, at Dömitz on the Elbe, then invaded Brandenburg, took Havelberg, and even threatened Berlin. Compelled by the approach of a Saxon and Imperialist army to quit his prey, he turned and beat the combined army at Wittstock (24th September 1636). After that battle, he drew the reinforced Imperialists, commanded by Gallas, after him into Pomerania; there he caused them great losses by cutting off their supplies, then forced them back into Saxony, and, following them up closely, attacked and beat them badly at Chemnitz (4th April, 1639)." In the south, Duke Bernhard had gained meantime some solid successes. After his retreat from Mainz, in 1635, he had concluded his secret treaty with Richelieu, placing himself wholly at the service of France, and receiving the promise of 4,000,000 francs yearly, for the support of his army, and the ultimate sovereignty of Alsace for himself. "Having concerted measures with La Valette [1636], . . . he invaded Lorraine, drove the enemy thence, taking Saarburg and Pfalzburg, and then, entering Alsace, took Saverne. His career of conquest in Alsace was checked by the invasion of Burgundy by Gallas, with an army of 40,000 men. Duke Bernhard marched with all haste to Dijon, and forced Gallas to fall back, with great loss, beyond the Saone (November 1636). Pursuing his advantages, early the following year he forced the passage of the Saone at Gray, despite the vivid resistance of Prince Charles of Lorraine (June 1637), and pursued that commander as far as Besançon. Reinforced during the autumn, he marched towards the Upper Rhine, and, undertaking a winter campaign, captured Lauffenburg, after a skirmish with John of Werth; then Säckingen and Waldshut, and laid siege to Rheinfelden. The Imperialist army, led by John of Werth, succeeded, indeed, after a very hot encounter, in relieving that place; but three days later Duke Bernhard attacked and completely defeated it (21st February 1638), taking prisoners not only John of Werth himself, but the generals, Savelli, Enkefort, and Sperreuter. The consequences of this victory were the fall of Rheinfelden, Rötteln, Neuenberg, and Freiburg. Duke Bernhard then laid siege to Breisach (July 1638). . . . The Imperial general, Götz, advanced at the head of a force considerably outnumbering that of Duke Bernhard. Leaving a portion of his army before the place, Duke Bernhard then drew to himself Turenne, who was lying in the vicinity with 3,000 men, fell upon the Imperialists at Wittenweiber (30th July), completely defeated them, and captured their whole convoy. Another Imperialist army, led by the Duke of Lorraine in person, shared a similar fate at Thann, in the Sundgau, on the 4th October following. Götz, who was hastening with a strengthened army to support the Duke of Lorraine, attacked Duke Bernhard ten days later, but was repulsed with great loss. Breisach capitulated on the 7th December. Duke Bernhard took possession of it in his own name, and foiled all the efforts of Richelieu to secure it for France, by garrisoning it with German soldiers. To compensate the French Cardinal Minister for Breisach, Duke Bernhard undertook a winter campaign to drive the Imperialists from Franche-Comté. Entering that

province at the end of December, he speedily made himself master of its richest part. He then returned to Alsace with the resolution to cross the Rhine and carry the war once again into Bavaria," and then, in junction with Baner, to Vienna. "He had made all the necessary preparations for this enterprise, had actually sent his army across the Rhine, when he died very suddenly, not without suspicion of poison, at Neuberg am Rhein (8th July, 1639). The lands he had conquered he bequeathed to his brother. . . . But Richelieu paid no attention to the wishes of the dead general. Before any of the family could interfere, he had secured all the fortresses in Alsace, even Breisach, which was its key, for France."—G. B. Malleson, *Battle-fields of Germany*, ch. 5.—"During [1639] Piccolomini, at the head of the Imperialist and Spanish troops, gave battle to the French at Diedenhofen. The battle took place on the 7th of June, and the French were beaten and suffered great losses."—A. Gindely, *History of the Thirty Years' War*, ch. 8.

1636-1637.—Diet at Ratisbon.—Attempted negotiations of peace.—Death of the Emperor Ferdinand II.—"An electoral diet was assembled at Ratisbon, by the emperor in person, on the 15th of September, 1636, for the ostensible purpose of restoring peace, for which some vague negotiations had been opened under the mediation of the pope and the king of Denmark, and congresses appointed at Hamburg and Cologne; but with the real view of procuring the election of his son Ferdinand as king of the Romans. . . . Ferdinand was elected with only the fruitless protest of the Palatine family, and the dissenting voice of the elector of Trèves. . . . The emperor did not long survive this happy event. He died on the 15th of February, 1637. . . . Ferdinand . . . seems to have been the first who formally established the right of primogeniture in all his hereditary territories. By his testament, dated May 10th, 1621, he ordered that all his Austrian dominions should devolve on his eldest male descendant, and fixed the majority at 18 years."—W. Coxe, *History of the House of Austria*, v. 2, ch. 56.

1637.—Election of the Emperor Ferdinand III.

1640-1645.—Thirty Years' War: Campaigns of Baner and Torstensson.—Second Breitenfeld.—Jankowitz.—Mergentheim.—Allerheim.—War in Denmark.—Swedish army in Austria.—Saxony forced to neutrality.—"The war still went on for eight years, but the only influence that it exerted upon the subsequent Peace was that it overcame the last doubts of the Imperial court as to the indispensable principles of the Peace. . . . The first event of importance on the theatre of war after Bernhard's death was Baner's attempt to join the army of Weimar in central Germany. Not in a condition to pass the winter in Bohemia, and threatened in Saxony and Silesia, he . . . commenced [March, 1640] a retreat amidst fearful devastations, crossed the Elbe at Leitmeritz, and arrived April 3rd at Zwickau. He succeeded in joining with the mercenaries of Weimar and the troops of Lüneburg and Hesse at Saalfeld"; but no joint action was found possible. "Until December, the war on both sides consisted of marches hither and thither, accompanied with horrible devastation; but nothing decisive occurred. In

September the Diet met at Ratisbon. While wearisome attempts were being made to bend the obstinacy of Austria, Baner resolved to compel her to yield by a bold stroke, to invade the Upper Palatinate, to surprise Ratisbon, and to put an end to the Diet and Emperor together. . . . Not without difficulty Guébriant [commanding the French in Alsace] was induced to follow, and to join Baner at Erfurt. . . . But the surprise of Ratisbon was a failure. . . . The armies now separated again. Baner exhausted his powers of persuasion in vain to induce Guébriant to go with him. The French went westward. Hard pressed himself, Baner proceeded by forced marches towards Bohemia, and by the end of March reached Zwickau, where he met Guébriant again, and they had a sharp conflict with the Imperialists on the Saal. There Baner died, on the 21st of May, 1641, leaving his army in a most critical condition. The warfare of the Swedish-French arms was come to a standstill. Both armies were near dissolution, when, in November, Torstensson, the last of the Gustavus Adolphus school of generals, and the one who most nearly equalled the master, appeared with the Swedish army, and by a few vigorous strokes, which followed each other with unexampled rapidity, restored the supremacy of its arms. . . . After three months of rest, which he mainly devoted to the reorganization and payment of his army, by the middle of January [1642] he had advanced towards the Elbe and the Altmark; and as the Imperial forces were weakened by sending troops to the Rhine, he formed the great project of proceeding through Silesia to the Austrian hereditary dominions. On April 3rd he crossed the Elbe at Werben, between the Imperial troops, increased his army to 20,000 men, stormed Glogau on May 4th, stood before Schweidnitz on the 30th, and defeated Francis Albert of Lauenburg; Schweidnitz, Neisse, and Oppeln fell into his hands. Meanwhile Guébriant, after subduing the defiant and mutinous spirit of his troops by means of money and promises, had, on January 17th, defeated the Imperialists near Kempen, not far from Crefeld [at Hulst], for which he was honoured with the dignity of marshal. But this was a short-lived gleam of light, and was soon followed by dark days, occasioned by want of money and discontent in the camp. . . . He had turned eastward from the Rhine to seek quarters for his murmuring troops in nether Germany, when Torstensson effected a decision in Saxony. After relieving Glogau, and having in vain tried to enter Bohemia, he had joined the detachments of Königsmark and Wrangel [Swedish generals], and on October 30th he appeared before Leipzig. On November 2nd there was a battle near Breitenfeld, which ended in a disastrous defeat of the Imperialists and Leipzig surrendered to Torstensson three weeks afterwards. In spite of all the advantages which Torstensson gained for himself, it never came to a united action with the French; and the first victory won by the French in the Netherlands, in May, 1643, did not alter this state of things. Torstensson . . . was suddenly called to a remote scene of war in the north. King Christian IV. of Denmark had been persuaded, by means of the old Danish jealousy of Sweden, to take up arms for the Emperor. He declared war just as Torstensson was proceeding to Austria. Vienna was now saved; but so much the worse for Denmark. In forced marches, which were justly admired, Torstensson set out from Silesia towards Denmark at the end of October, conducted a masterly campaign against the Danes, beat them wherever he met with them,

conquered Holstein and Schleswig, pushed on to Jutland, then, while Wrangel and Horn carried on the war (till the peace of Brömsebro, August, 1645), he returned and again took up the war against the Imperialists, everywhere an unvanquished general. The Imperialists under the incompetent Gallas intended to give Denmark breathing-time by creating a diversion; but it did not save Denmark, and brought another defeat upon themselves. Gallas did not bring back more than 2,000 men from Magdeburg to Bohemia, and they were in a very disorganized state. He was pursued by Torstenson, while Ragozy threatened Hungary. The Emperor [Ferdinand III] hastily collected what forces he could command and resolved to give battle. Torstenson had advanced as far as Glattau in February, and on March 6th, 1645, a battle was fought near Jankowitz, three miles from Tabor. It was the most brilliant victory ever gained by the Swedes. The Imperial army was cut to pieces; several of its leaders imprisoned or killed. In a few weeks Torstenson conquered Moravia and Austria as far as the Danube. Not far from the capital itself he took possession of the Wolfsbrücke. As in 1618, Vienna was in great danger." But the ill-success of the French "always counterbalanced the Swedes' advantages. Either they were beaten just as the Swedes were victorious, or could not turn a victory to account. So it was during this year [1645]. The west frontier of the empire was guarded on the imperial side by [Count Franz von] Mercy, together with John of Werth, after he was liberated from prison. On 26th March, Turenne crossed the Rhine, and advanced towards Franconia. There he encamped near Mergentheim and Rosenberg. On 5th May, a battle near Mergentheim ended with the entire defeat of the French, and Turenne escaped with the greatest difficulty by way of Rammelburg, towards Fulda. The victors pushed on to the Rhine. To avenge this defeat, Enghien was sent from Paris, and, at the beginning of July, arrived at Spire, with 12,000 men. His forces, together with Königsmark's, the remnant of Turenne's and the Hessians, amounted to 30,000 men. At first Mercy dexterously avoided a battle under unfavourable circumstances, but on August 3d the contest was inevitable. A bloody battle was fought between Nördlingen and Donauwörth, near Allerheim [called the battle of Nördlingen, by the French], which was long doubtful, but, after tremendous losses, resulted in the victory of the French. Mercy's fall, Werth's imprudent advance, and a final brave assault of the Hessians, decided the day. But the victors were so weakened that they could not fully take advantage of it. Condé was ill; and in the autumn Turenne was compelled not without perceptible damage to the cause, to retreat with his army to the Neckar and the Rhine. Neither had Torstenson been able to maintain his position in Austria. He had been obliged to raise the siege of Brünn, and learnt at the same time that Rakoczy had just made peace with the Emperor. Obligated to retire to Bohemia, he found his forces considerably diminished. Meanwhile, Königsmark had won an important advantage. While Torstenson was in Austria he gained a firm footing in Saxony. Then came the news of Allerheim, and of the peace of Brömsebro. Except Dresden and Königstein, all the important points were in the hands of the Swedes; so, on the 6th of September [1645], the Elector John George concluded a treaty of neutrality for six months. Besides money and supplies, the Swedes received Leipzig, Torgau, and the right of

passage through the country. Meanwhile, Torstenson had retreated into the north-east of Bohemia, and severe physical sufferings compelled him to give up the command. He was succeeded by Charles Gustavus Wrangel."—L. Häusser, *Period of the Reformation*, ch. 39.

1642-1643.—Thirty Years' War: Condé's victory at Rocroi and campaign on the Moselle. See FRANCE: 1642-1643; 1643.

1643-1644.—Thirty Years' War: Campaigns of Turenne and Condé against Mercy, on the upper Rhine.—Dütlingen.—Freiburg.—Philipsburg.—"After the death of Bernard of Saxe Weimar, Marshal Guébriant had been placed in command of the troops of Weimar. He had besieged and taken Rottweil in Suabia, but had there been killed. Rantzau, who succeeded him in command of the Weimar army, marched (24-25 Nov., 1643) upon Dütlingen [or Tuttlingen], on the Upper Rhine, was there beaten by Mercy and made prisoner, with the loss of many officers and 7,000 soldiers. This was a great triumph for the Bavarians; a terrible disaster for France. The whole of the German infantry in the French service was dispersed or taken, the cavalry retreated as they best could upon the Rhine. . . . Circumstances required active measures. Plenipotentiaries had just assembled at Münster to begin the negotiations which ended with the peace of Westphalia. It was desired that the French Government should support the French diplomatist by quick successes. . . . Turenne was sent to the Rhine with reinforcements. . . . He re-established discipline, and breathed into [the army] a new spirit. . . . At the same time, by negotiations, the prisoners who had been taken at Dütlingen were restored to France, the gaps in the ranks were filled up, and in the spring of 1644 Turenne found himself at the head of 9,000 men, of whom 5,000 were cavalry, and was in a position to take the field." He "pushed through the Black Forest, and near the source of the Danube gained a success over a Bavarian detachment. For some reason which is not clear he threw a garrison into Freiburg, and retired across the Rhine. Had he remained near the town he would have prevented Mercy from investing it. So soon as Turenne was over the river, Mercy besieged Freiburg, and although Turenne advanced to relieve the place, a stupid error of some of his infantry made him fail, and Freiburg capitulated to Mercy."—H. M. Hozier, *Turenne*, ch. 3 and 5.—"Affairs being in so bad a state about the Black Forest, the Great Condé, at that time Duc d'Enghien, was brought up with 10,000 men; thus raising the French to a number above the enemy's. He came crowned with the immortal laurels of Rocroi; and in virtue of his birth, as a prince of the blood-royal, took precedence of the highest officers in the service. Merci, a capable and daring general, aware of his inferiority, now posted himself a short distance from Freyburg, in a position almost inaccessible. He garnished it with felled trees and intrenchments, mountains, woods, and marshes, which of themselves defied attack." Turenne advocated a flank movement, instead of a direct assault upon Mercy's position; but Condé, reckless of his soldiers' lives, persisted in leading them against the enemy's works. "A terrible action ensued (August 3, 1644). Turenne made a long detour through a defile; Condé, awaiting his arrival on the ground, postponed the assault till three hours before sunset, and then ascended the steep. Merci had the worse, and retreated to a fresh position on the Black

Mountain, where he successfully repulsed for one day Condé's columns (August 5). . . . Condé now adopted the flank movement, which, originally recommended by Turenne, would have saved much bloodshed; and Merzi, hard pressed, escaped by a rapid retreat, leaving behind him his artillery and baggage (August 9). These are the 'three days of Freyburg.' To retake the captured Freyburg after their victory . . . was the natural suggestion first heard." But Turenne persuaded Condé that the reduction of Philipsburg was more important. "Philipsburg was taken after a short siege; and its fall was accompanied by the submission of the adjacent towns of Germersheim, Speier, Worms, Mentz, Oppenheim and Landau. Condé at this conjuncture left the Upper Rhine, and took away his regiments with him."—T. O. Cockayne, *Life of Turenne*, pp. 20-22.

1646-1648.—Thirty Years' War: Final campaigns.—Sufferings of Bavaria.—Truce and peace negotiations initiated by the Elector Maximilian.—Ending of the war at Prague.—"The retreat of the French [after the battle of Allerheim] enabled the enemy to turn his whole force upon the Swedes in Bohemia. Gustavus Wrangel, no unworthy successor of Banner and Torstensohn, had, in 1646, been appointed Commander-in-chief of the Swedish army. . . . The Archduke, after reinforcing his army . . . moved against Wrangel, in the hope of being able to overwhelm him by his superior force before Koenigsmark could join him, or the French effect a diversion in his favour. Wrangel, however, did not await him." He moved through Upper Saxony and Hesse, to Weimar, where he was joined by the flying corps of Königsmark. Finally, after much delay, he was joined likewise by Turenne and the French. "The junction took place at Giessen, and they now felt themselves strong enough to meet the enemy. The latter had followed the Swedes into Hesse, in order to intercept their commissariat, and to prevent their union with Turenne. In both designs they had been unsuccessful; and the Imperialists now saw themselves cut off from the Maine, and exposed to great scarcity and want from the loss of their magazines. Wrangel took advantage of their weakness to execute a plan by which he hoped to give a new turn to the war. . . . He determined to follow the course of the Danube, and to break into the Austrian territories through the midst of Bavaria. . . . He moved hastily, . . . defeated a Bavarian corps near Donauwerth, and passed that river, as well as the Lech, unopposed. But by wasting his time in the unsuccessful siege of Augsburg, he gave opportunity to the Imperialists, not only to relieve that city, but also to repulse him as far as Lauingen. No sooner, however, had they turned towards Suabia, with a view to remove the war from Bavaria, than, seizing the opportunity, he repassed the Lech, and guarded the passage of it against the Imperialists themselves. Bavaria now lay open and defenceless before him; the French and Swedes quickly overran it; and the soldiery indemnified themselves for all dangers by frightful outrages, robberies, and extortions. The arrival of the Imperial troops, who at last succeeded in passing the Lech at Thierhaupten, only increased the misery of this country, which friend and foe indiscriminately plundered. And now, for the first time during the whole course of this war, the courage of Maximilian, which for eight-and-twenty years had stood unshaken amidst fearful dangers,

began to waver. Ferdinand II., his school-companion at Ingolstadt, and the friend of his youth, was no more; and, with the death of his friend and benefactor, the strong tie was dissolved which had linked the Elector to the House of Austria. . . . Accordingly, the motives which the artifices of France now put in operation, in order to detach him from the Austrian alliance, and to induce him to lay down his arms, were drawn entirely from political considerations. . . . The Elector of Bavaria was unfortunately led to believe that the Spaniards alone were disinclined to peace, and that nothing but Spanish influence had induced the Emperor so long to resist a cessation of hostilities. Maximilian detested the Spaniards, and could never forgive their having opposed his application for the Palatine Electorate. . . . All doubts disappeared; and, convinced of the necessity of this step, he thought he should sufficiently discharge his obligations to the Emperor if he invited him also to share in the benefit of the truce. The deputies of the three crowns, and of Bavaria, met at Ulm, to adjust the conditions. But it was soon evident, from the instructions of the Austrian ambassador, that it was not the intention of the Emperor to second the conclusion of a truce, but if possible to prevent it. . . . The good intentions of the Elector of Bavaria, to include the Emperor in the benefit of the truce, having been thus rendered unavailing, he felt himself justified in providing for his own safety. . . . He agreed to the Swedes extending their quarters in Suabia and Franconia, and to his own being restricted to Bavaria and the Palatinate. The conquests which he had made in Suabia were ceded to the allies, who, on their part, restored to him what they had taken from Bavaria. Cologne and Hesse Cassel were also included in the truce. After the conclusion of this treaty, upon the 14th March, 1647, the French and Swedes left Bavaria. . . . Turenne, according to agreement, marched into Wurtemberg, where he forced the Landgrave of Darmstadt and the Elector of Mentz to imitate the example of Bavaria, and to embrace the neutrality. And now, at last, France seemed to have attained the great object of its policy, that of depriving the Emperor of the support of the League, and of his Protestant allies. . . . But . . . after a brief crisis, the fallen power of Austria rose again to a formidable strength. The jealousy which France entertained of Sweden, prevented it from permitting the total ruin of the Emperor, or allowing the Swedes to obtain such a preponderance in Germany, which might have been destructive to France herself. Accordingly, the French minister declined to take advantage of the distresses of Austria; and the army of Turenne, separating from that of Wrangel, retired to the frontiers of the Netherlands. Wrangel, indeed, after moving from Suabia into Franconia, taking Schweinfurt, . . . attempted to make his way into Bohemia, and laid siege to Egra [Eger], the key of that kingdom. To relieve this fortress, the Emperor put his last army in motion, and placed himself at its head. But . . . on his arrival Egra was already taken." Meantime the Emperor had engaged in intrigues with the Bavarian officers and had nearly seduced the whole army of the Elector. The latter discovered this conspiracy in time to thwart it; but he now suddenly, on his own behalf, struck hands with the Emperor again, and threw over his late agreements with the Swedes and French. "He had not derived from the truce the advantages he expected. Far from tending to accelerate a general peace, it had a pernicious influence upon the negotiations at

Münster and Osnabrück, and had made the allies bolder in their demands." Maximilian, therefore, renounced the truce and began hostilities anew. "This resolution, and the assistance which he immediately despatched to the Emperor in Bohemia, threatened materially to injure the Swedes, and Wrangel was compelled in haste to evacuate that kingdom. He retired through Thuringia into Westphalia and Lünenburg, in the hope of forming a junction with the French army under Turenne, while the Imperial and Bavarian army followed him to the Weser, under Melander and Gronsfeld. His ruin was inevitable if the enemy should overtake him before his junction with Turenne; but the same consideration which had just saved the Emperor now proved the salvation of the Swedes. . . . The Elector of Bavaria could not allow the Emperor to obtain so decisive a preponderance as, by the sudden alteration of affairs, might delay the chances of a general peace. . . . Now that the power of the Emperor threatened once more to attain a dangerous superiority, Maximilian at once ceased to pursue the Swedes. . . . Melander, prevented by the Bavarians from further pursuing Wrangel, crossed by Jena and Erfurt into Hesse. . . . In this exhausted country, his army was oppressed by want, while Wrangel was recruiting his strength, and remounting his cavalry in Lunenburg. Too weak to maintain his wretched quarters against the Swedish general, when he opened the campaign in the winter of 1648, and marched against Hesse, he was obliged to retire with disgrace, and take refuge on the banks of the Danube. . . . Turenne received permission to join the Swedes; and the last campaign of this eventful war was now opened by the united armies. Driving Melander before them along the Danube, they threw supplies into Egra, which was besieged by the Imperialists, and defeated the Imperial and Bavarian armies on the Danube, which ventured to oppose them at Zusmarshausen, where Melander was mortally wounded." They then forced a passage of the Lech, at the point where Gustavus Adolphus formerly overcame Tilly, and ravaged Bavaria once more; while nothing but a prolonged rain-storm, which flooded the Inn, saved Austria from a similar devastation. Königsmark, with his flying corps, entered Bohemia, penetrated to Prague and surprised and captured the lesser side of the city (the Kleinsite), thus acquiring the reputation of "closing the Thirty Years' War by the last brilliant achievement. This decisive stroke, which vanquished the Emperor's irresolution, cost the Swedes only the loss of a single man. But the old town, the larger half of Prague, which is divided into two parts by the Moldau, by its vigorous resistance wearied out the efforts of the Palatine, Charles Gustavus, the successor of Christina on the throne, who had arrived from Sweden with fresh troops. . . . The approach of winter at last drove the besiegers into their quarters, and in the meantime the intelligence arrived that a peace had been signed at Münster, on the 24th October,"—the "solemn and ever memorable and sacred treaty which is known by the name of the Peace of Westphalia."—F. Schiller, *History of the Thirty Years' War*, bk. 5.

1648.—Thirty Years' War: Destructiveness.—State of the country at its close.—Decrease in population.—Oppression of the peasantry.—Creation of large estates out of vacated holdings.—Ending of the corporate activity of the Hanseatic League.—Decay of industry and universities.—Political aspects.—Low ebb of re-

ligious life.—"Among the effects which this War [Thirty Years' War] left behind it, . . . the very first, . . . is the numerical effect upon the population of the Empire. The German economists and political philosophers of the generation which followed upon that of the Thirty Years' War were remarkably alive, as well they might be, to the primary importance for the welfare of a state of a numerous population living under conditions suitable for its due support; but the science of statistics was still unborn, and estimates of the advance or decline of population even in quiet times can often only be accepted with the aid of a good deal of faith. . . . The estimated loss [tradition has it twelve millions out of a population of eighteen or twenty millions in Germany] of population in the course of the Thirty Years' War covers . . . together with an actual decrease, the failure of the ordinary increase of population, even if this be taken at a very low rate indeed. It covers, as a matter of course, the loss of female as well as of male population, or rather it makes no distinction between them. . . . The attempt, . . . was made even at the time to arrive at results which at least seemed accurate; and, while one daring—but, at the same time, temperate—statistician in 1631 reckoned the Emperor's military losses during the first nine years of the war at 51,011 men, he stated those of the chief leaders on the Protestant side (exclusive it would seem of the Bohemians in the first phase of the war) during the same period to have reached 57,686. . . . A broadside, printed in the last year of the War, extending the number of those who were killed during its course as 'at least' 325,000—a number not much out of proportion to earlier calculation. . . . A large number of statements as to actual loss of population from divers causes are at the same time so overpowering in their magnitude, and so reasonably well authenticated, proceeding as they do from actually official sources—administrative statistics, ecclesiastical registers, municipal records and the like—that it is futile either to seek to discredit them one and all, or to treat them as mere isolated phenomena from which no general conclusions are to be drawn. Such, for instance, are many of the detailed items supporting the total figures which are given as to the decrease in the population of the sorely-tryed Palatinate—a decrease from something like half a million to less than a tith of that number; or in that of electoral Saxony, where, in the critical years 1631 and 1632, when it was successively occupied by the Imperial and Liguistic forces, more than 900,000 lives are said to have succumbed to the sword or sickness; . . . or of Franconia, Gustavus's own chosen prize, where the population sank so low that monastic vows before the age of 60 had to be prohibited, the marriage of clerics was stopped, and laymen were allowed to take two wives each. . . . Many men, women and children, too, must have been absorbed into that floating element of population, which, after being unhoused and unsettled by the tide of the War, followed the endless marches of the armies as an untold and untellable contingent of beggars and brigands. When peace returned, this vagabond part of the population was not extinguished, but waited to be revived in later days of warfare. . . . Few economic historians of the present day and few statisticians seem prepared to quarrel, that during the Thirty Years' War the population of Germany had sunk to one-half its previous total, or perhaps between one-half and two-thirds. This is the conclusion of Schmoller, the results of whose investigations, especially for north-eastern and eastern Germany are authoritative; and I do not think that any hazard

will be run in accepting it. It was the peasantry, in which of course lay the real strength of the greater portion of the Empire, that beyond all doubt suffered most heavily from the effects of the War. . . . With the peasant there was no question of buying off the inroads of the soldiery by power or by payment; it is we who have to pay for everything 'with the skin off our own bones.' Among the agricultural districts of Germany, we have precise governmental information as to part of the rustic population of the Mark Bradenburg; a year or two after the close of the War, their settlements were in number less than half of what they had been at its commencement, and there was at least one county which had lost all its villages but four. . . . Even in those districts favoured by nature like the Palatinate or Wurtemberg, or blessed with a capable ruler like the Elector Charles Lewis, whose heart was set upon recalling both landlords and peasants to the land whither he had himself returned with the Peace, labour was almost impossible to obtain, agricultural wages having risen to four or five times their former height; and the peasant had long to manage as he could without labourers—in other words, to limit his production to what was necessary for the bare subsistence of himself and his family. During this cruel war, the peasant, even if he remained in his cottage on the soil, instead of being hounded out of it or burnt down with it, had not merely to toil at the desperate task of making a livelihood out of his imperilled land. Besides the taxes and dues imposed upon him by native or foreign governments, he was subjected to personal services (*Fronen*) which so far from being extinguished by the War, frequently rose to an unprecedented height during its course, in some places to such a height as to convert the position of the free peasant into that of serfdom, while elsewhere they became so intolerable as to empty the land of its peasantry. [See also SERFDOM: 14th-19th centuries.] Moreover, in times of unrestrained violence and licensed illegality, the instances were numerous of the actual expulsion of peasants from the lands which they held by the landlords, in order that these might possess themselves directly of the vacated holdings. This is the notorious practice of *Bauernlegen*—a rough and ready way of creating large estates which was to exercise a lasting influence in parts of Germany, notably in Mecklenburg. . . . In the general bankruptcy which prevailed after the War, when the armies had to be disbanded, and the payments and compensations of various sorts settled—though signs of financial collapse were perceptible both during the War and even before its outbreak—it was therefore not astonishing that the peasant should be the worst sufferer. And this, to whatever section of his class he belonged: whether to that bound to the domains of the several princes, or to the estates of the nobility, or to the free peasants in their own holdings. The peasants' holdings were largely mortgaged like the lands of the nobles themselves, the mortgages being for the most part the capitalists, large or small, in the towns; and now there was a general stoppage of payment and fear of foreclosing, because of the profitless condition of husbandry. . . . Hence, a general state of hopeless indebtedness, in which the peasant, unable any longer to obtain the slightest advance of either money or materials, was the earliest and most certain to go under. Within half-a-dozen years from the Peace of Westphalia the problem had assumed such dimensions that it was brought, as a matter of imperial interest, before the Diet of Ratisbon. A sort of *tabula novæ* was proclaimed, a promise being

held out to creditors who had made loans to agriculturists of various classes of repayment of their capital within ten years, and in return the debtors were relieved of three-quarters of the interest due from them since the troubles of the War began, while for the payment of the remaining quarter they were to be allowed a ten years' respite. But, like many another decree of the Diet, this decree, which does not seem to have stood on any firm footing, when it was not either anticipated or superseded by the action of particular governments, remained ineffectual. Although, then, it may be conceded that the intolerable burden of debt placed upon the land was not wholly due to the War, but began to weigh down the cultivators even before the outbreak of hostilities, yet it was enormously increased by the conflict, which thus crippled, and in many parts of the Empire paralysed, its most important and widespread industry, and with it the vitality of the greater part of its population. Let us turn from the country to the towns. Here, again, it would be futile not to allow that some of the causes which contributed to the all but general downfall of the commercial prosperity, and hence of the political influence, of the German towns were in operation already before the outbreak of the War. For many a decade it was only by holding together at home against the encroachments of the territorial sovereigns that the fifty-one free towns of the Empire had preserved their autonomy behind their ancient walls; and their prosperity had been sapped at its base ever since the change in the great trade routes of the world had set in in the 15th century, and since in the 16th the nations who followed the Spaniards and Portuguese as the leaders of Oceanic intercourse—the French, the Dutch, and the English—had begun to distance German maritime trade. [The Thirty Years' War brought an end to the corporate activity of the Hanseatic League (See HANSA TOWNS.)] . . . The decay of industry, as already observed, is even more striking than that of trade, though the prosperity of both was of course inseparably bound together. The former was not due to any falling off in the aptitude of the Germans as technical workmen, or to a more than ordinary unwillingness, fostered by the continued endurance of the guild-system, to make use of new inventions or improvements, especially in the direction of machinery; but it was intensified by the continuous competition of other countries not similarly hampered by a growing deficiency of labour. For the cloth looms of Westphalia and the potteries of Hesse could no more than the vineyards and orchards of the Palatinate be worked without labourers; in Bavaria too, where the cloth and linen manufactures had attained to considerable prosperity, a complete and lasting stagnation had set in throughout these widespread industries. In Saxony the recovery seems to have been quicker—hastened, no doubt, by qualities which have always distinguished her population—intelligence and frugality. [Among the most disastrous effects of the Thirty Years' War was the decay of the Universities. (See UNIVERSITIES AND COLLEGES: 1348-1826.)] . . . The political effects proper of the War . . . had destroyed most of what before its outbreak had remained to recall the earlier and more vigorous life, or substituted for it new and alien formation. So with its military organization, which had been rent in twain. So with its constitutional life, for the Ratisbon Diet, abandoning all thoughts of reconstruction, merely kept giving the machinery without which the Empire would have lacked even the semblance of unity. The Emperor was driven back upon the family policy,

which—unless it were in the warding off of the Eastern peril—could no longer even appeal for a common endeavour for national ends. The princes came to him for his alliance—though a vague prestige and the right of conferring favours of rank of place still attached to it—much as they came to any other power; or even resisted him in combination with other powers, whose alliance they had formally been justified in seeking. [See also AUSTRIA: 1618-1648.] . . . The religious life of Germany could not but suffer from the War more than any other side of the national existence. The gain secured by the Peace which concluded it to the cause of religious liberty was, as has been seen, marred by uncertainties and exceptions; while as to the establishment of the several forms of faith it was the *fiat* of the territorial prince, not the choice of his subjects, which, with certain limitations as to foundations that were to be left untouched as from a certain date, was pronounced to be the determining authority. But the religious life which underlay, or lay beyond, divergent confessions of faith or articles of belief could not be established or disestablished, settled or unmoored, by treaties and pacifications, and this life the War had constantly spoiled, broken and outraged. Except, in a measure, in the Bohemian or earliest stage of the War, and perhaps in the first siege of Magdeburg, and on some similar occasions in Silesia, the Palatinate and elsewhere, the War had even in its earliest stages not presented itself to the populations in the light of a religious war so much as in that of an endless series of invasions, occupations, devastations, bringing with it all the blankness as well as all the horrors belonging to a struggle carried on for ends to which those who suffered from it were more or less indifferent, or, worst of all, in that of a war carried on for its own sake. Thus religion, with all the emotions that nourish the religious sense, had been largely thrust out of the issues of the conflict, and by some of its agents frankly ignored. . . . Yet the voice of religion made heard its whisper—here and there its clear admonition—after the storms, and in the intervals allowed by darkness and riot; and out of the spiritual anarchy were born not mere passing murmurings or protests, but what were to prove the beginnings of new and far-reaching spiritual movements in the land. . . . The age of the Thirty Years' War is that in which the spiritual and intellectual life of Germany reached its lowest depths. The superstitious notions and misbelief which the Protestant Reformation had not only been unsuccessful in overcoming, but which it had allowed to continue their advance—at times almost under its protection—the belief in magic and witchcraft, and in the grotesque extravagances of astrology and alchemy—had corrupted all classes, from the highest to the lowest; had invaded the province of science— . . . and Kepler taught that each of the heavenly bodies possessed a soul of its own; had permeated the art and the practice of medicine; and, in the case of the peasantry, had congealed themselves into a mass of tenets which might almost be said to constitute a distinct religion. . . . Pietism has been held to have first taken its origin in a period partly coinciding with that of the War, it was nevertheless in the Lutheran body and on German soil that it attained to its first continuous growth.”—A. W. Ward, *Effects of the Thirty Years' War (Institution of Great Britain, Proceedings, v. 20, Mar. 8, 1012, pp. 372-377, 380, 303-305, 397).*

1648.—Peace of Westphalia.—Cession of Alsace to France.—Separation of Switzerland from the empire.—Loosening of the constitu-

tional bonds of the empire.—“The opening of the peace negotiations between the Emperor and his enemies was . . . fixed for the 25th of March, 1642, and the cities of Münster and Osnabrück as the places of the sitting; but neither in this year nor in the next did it take place. It was not until the year 1644 that in the former of the cities” were assembled the following: The Papal Nuncio and the envoy of the Republic of Venice, acting as mediators, two imperial ambassadors, two representatives of France, three of Spain, and the Catholic Electors; later came also the Catholic Princes. To Osnabrück, Sweden sent two ambassadors and France three, while the Electors, the German Princes and the imperial cities were represented. Questions of etiquette, which demanded prior settlement, occupied months, and serious matters when reached were dealt with slowly and jealously, with many interruptions. It was not until the 24th of October, 1648, that the articles of peace forming the two treaties of Münster and Osnabrück, and known together as the Peace of Westphalia, were signed by all the negotiators at Münster. The more important of the provisions of the two instruments were the following: “To France was secured the perpetual possession of the Bishoprics of Metz, Toul, and Verdun, as also Moyenvic and Pignerol, with the right to keep a garrison in Philipsburg, and finally Breisach, Alsace, with its ten imperial cities, and the Sundgau. The Emperor bound himself to gain the assent of the Archduke Ferdinand, of Tyrol and Spain, to this last-named cession. France made good to the Archduke this loss by the payment of 3,000,000 francs. Although it was not expressly provided that the connection with the Empire of the German provinces ceded to France should be dissolved, yet the separation became, as a matter of fact, a complete one. The Emperor did not summon the Kings of France to the Diets of the Empire, and the latter made no demand for such summons. . . . In relation to Italy, the French treaty provided that the peace concluded in 1631 [see ITALY: 1627-1631] should remain in force, except the part relating to Pignerol.” [“Pinerolo was definitely put under the French overlordship.”—G. W. Kitchen, *History of France, v. 3, p. 98*]. Switzerland was made independent of the German Empire; but the Circle of Burgundy [the Spanish Netherlands and Franche-Comté] was still to form a part of the Empire, and after the close of the war between France and Spain, in which the Emperor and the Empire were to take no part, was to be included in the peace. No aid was to be rendered to the Duke of Lorraine against France, although the Emperor and the Empire were left free to mediate for him a peace. Sweden received Hither Pomerania, including the Island of Rügen, from Further Pomerania the Island of Wollin and several cities, with their surroundings, among which were Stettin, as also the expectancy of Further Pomerania in case of the extinction of the house of Brandenburg. Furthermore, it received the city of Wismar, in Mecklenburg, and the Bishoprics of Bremen [secularized and made a Grand Duchy] and Verden, with reservation of the rights and immunities of the city of Bremen. Sweden was to hold all the ceded territory as feudal tenures of the Empire, and be represented for them in the Imperial Diet. . . . Brandenburg received for its loss of Pomerania the Bishoprics of Halberstadt, Minden, and Camin, and the expectancy of that of Magdeburg as soon as this should become vacant by the death of its Administrator, the Saxon Prince, although the four bailiwicks separated from it were to remain with Saxony as provided in the Peace of Prague. . . .

The house of Brunswick-Lüneberg was to renounce its right to the coadjutorship of Magdeburg, Bremen, Halberstadt, and Ratzeburg, and, in return for this renunciation, was to alternate with a Catholic prelate in the possession of the Bishopric of Osnabrück. . . . To Duke Maximilian of Bavaria was conveyed the Electorate, together with the Upper Palatinate, to be hereditary in his family of the line of William, for which he, on the other hand, was to surrender to the Emperor the account of the 13,000,000 florins which he had made for the execution of the sentence against the Palsgrave Frederic. To the Palsgrave, Charles Lewis, son of the proscribed Elector [Frederic, who had died in 1632], was given back the Lower Palatinate, while a new Electorate, the eighth, was created for him. . . . There were numerous provisions relating to the restoration of the Dukes of Würtemberg, the Margraves of Baden, and the Counts of Nassau and those of Hanau to several parts of the territories which either belonged to them or were contested. A general amnesty was indeed provided, and every one was to be restored to the possession of the lands which he had held before the war. This general article was, however, limited by various special provisions, as that in relation to the Palsgrave, and was not to be applied to Austria at all. . . . Specially important are the sections which relate to the settlement of religious grievances. The treaty of Passau and the Augsburg religious peace were confirmed; the 1st of January, 1624, was fixed as the time which was to govern mutual reclamations between the Catholics and Protestants; both parties were secured the right to all ecclesiastical foundations, whether in mediate or immediate connection with the Empire, which they severally held in possession on the first day of January, 1624; if any such had been taken from them after this date, restoration was to be made, unless otherwise specially provided. The ecclesiastical Reservation was acknowledged by the Protestants, and Protestant holders of ecclesiastical property were freely admitted to the Imperial Diets. The right of reformation was conceded to the Estates, and permission to emigrate to the subject; while it was at the same time provided that, if in 1624 Protestant subjects of Catholic Princes, or the reverse, enjoyed freedom of religion, this right should not in the future be diminished. It was specially granted for Silesia that all the concessions which had been made before the war to the Dukes of Liegnitz, Münsterburg, and Oels, and to the city of Breslau, relating to the free exercise of the Augsburg Confession, should remain in force. . . . Finally, the Reformed—that is, the adherents of Calvinism—were placed upon the same ground with those of the Augsburg Confession; and it was provided that if a Lutheran Estate of the Empire should become a Calvinist, or the reverse, his subjects should not be forced to change with their Prince.”—A. Gindely, *History of the Thirty Years' War*, v. 2, ch. 10.—“The emperor, in his own name and in behalf of his family and the empire, ceded the full sovereignty of Upper and Lower Alsace, with the prefecture of Haguenau, or the ten towns [Haguenau, Schelestadt, Weisseburgh, Colmar, Landau, Obereenheim, Rosheim, Munster in the Val de St. Gregoire, Kaiserberg, and Turingheim], and their dependencies. But by one of those contradictions, which are common in treaties, when both parties wish to preserve their respective claims, another article was introduced, binding the king of France to leave the ecclesiastics and immediate nobility of those provinces in the immediacy which they had hitherto possessed with regard to the Roman empire, and not to pretend to any sov-

ereignty over them, but to remain content with such rights as belonged to the house of Austria. Yet this was again contradicted by a declaration, that this exception should not derogate from the supreme sovereignty before yielded to the king of France.”—W. Coxe, *History of the House of Austria*, v. 2, ch. 50.—“Respecting the rights of sovereignty due to the princes and the relations of the states of the empire with the emperor, the Peace of Westphalia contained such regulations as must in the course of time produce a still greater relaxation of those ties, already partially loosened, which held together the empire in one entirety. . . . At the Peace of Westphalia the independence of the princes was made completely legal. They received the entire right of sovereignty over their territory, together with the power of making war, concluding peace, and forming alliances among themselves, as well as with foreign powers, provided such alliances were not to the injury of the empire. But what a feeble obstacle must this clause have presented? For henceforward, if a prince of the empire, having formed an alliance with a foreign power, became hostile to the emperor, he could immediately avail himself of the pretext that it was for the benefit of the empire, the maintenance of his rights, and the liberty of Germany. And in order that the said pretext might, with some appearance of right, be made available on every occasion, foreigners established themselves as the guardians of the empire; and accordingly France and Sweden took upon themselves the responsibility of legislating as guaranties not only for the Germanic constitution, but for everything else that was concluded in the Peace of Westphalia at Münster and Osnabrück. Added to this, in reference to the imperial cities, whose rights had hitherto never been definitively fixed, it was now declared that they should always be included under the head of the other states, and that they should command a decisive voice in the diets; thenceforth, therefore, their votes and those of the other states—the electoral and other princes—should be of equal validity.”—F. Kohlrausch, *History of Germany*, ch. 26.—See also WESTPHALIA, PEACE OF.—Peace between Spain and the United Provinces was embodied in a separate treaty, but negotiated at Münster, and concluded and signed a few months earlier in the same year. The war between Spain and France went on. See NETHERLANDS: 1648.

1648.—Effects of the Peace of Westphalia on the empire.—It becomes a loose confederacy and purely German.—“It may . . . be said of this famous peace, as of the other so-called ‘fundamental law of the Empire,’ the Golden Bull, that it did no more than legalize a condition of things already in existence, but which by being legalized acquired new importance. . . . While the political situation, to use a current phrase, had changed within the last two hundred years, the eyes with which men regarded it had changed still more. Never by their fiercest enemies in earlier times, not once by the Popes or Lombard republicans in the heat of their strife with the Franconian and Swabian Cæsars, had the Emperors been reproached as mere German kings, or their claim to be the lawful heirs of Rome denied. The Protestant jurists of the 16th or rather of the 17th century were the first persons who ventured to scoff at the pretended lordship of the world, and declare their Empire to be nothing more than a German monarchy, in dealing with which no superstitious reverence need prevent its subjects from making the best terms they could for themselves, and controlling a sovereign whose religious predilections made him the friend of their enemies. . . . It was by

these views . . . that the states, or rather France and Sweden acting on their behalf, were guided in the negotiations of Osnabrück and Münster. By extorting a full recognition of the sovereignty of all the princes, Catholics and Protestants alike, in their respective territories, they bound the Emperor from any direct interference with the administration, either in particular districts or throughout the Empire. All affairs of public importance, including the rights of making war or peace, of levying contributions, raising troops, building fortresses, passing or interpreting laws, were henceforth to be left entirely in the hands of the Diet. . . . Both Lutherans and Calvinists were declared free from all jurisdiction of the Pope or any Catholic prelate. Thus the last link which bound Germany to Rome was snapped, the last of the principles by virtue of which the Empire had existed was abandoned. For the Empire now contained and recognized as its members persons who formed a visible body at open war with the Holy Roman Church; and its constitution admitted schismatics to a full share in all those civil rights which, according to the doctrines of the early Middle Age, could be enjoyed by no one who was out of the communion of the Catholic Church. The Peace of Westphalia was therefore an abrogation of the sovereignty of Rome, and of the theory of Church and State with which the name of Rome was associated. And in this light was it regarded by Pope Innocent X., who commanded his legate to protest against it, and subsequently declared it void by the bull 'Zelo domus Dei.' . . . The Peace of Westphalia is an era in imperial history not less clearly marked than the coronation of Otto the Great, or the death of Frederick II. As from the days of Maximilian it had borne a mixed or transitional character, well expressed by the name Romano-Germanic, so henceforth it is in everything but title purely and solely a German Empire. Properly, indeed, it was no longer an empire at all, but a Confederation, and that of the loosest sort. For it had no common treasury, no efficient common tribunals, no means of coercing a refractory member; its states were of different religions, were governed according to different forms, were administered judicially and financially without any regard to each other. . . . There were 300 petty principalities between the Alps and the Baltic, each with its own laws, its own courts, . . . its little armies, its separate coinage, its tolls and custom-houses on the frontier, its crowd of meddlesome and pedantic officials. . . . This vicious system, which paralyzed the trade, the literature, and the political thought of Germany, had been forming itself for some time, but did not become fully established until the Peace of Westphalia, by emancipating the princes from imperial control, had made them despots in their own territories."—J. Bryce, *Holy Roman empire*, ch. 19.

1648-1705.—After the Peace of Westphalia.—French influence in the empire.—Creation of the ninth elector.—After the Peace of Westphalia, the remainder of the reign of Ferdinand III "passed in tranquillity. . . . He caused his son to be elected king of the Romans, under the title of Ferdinand IV.; but the young prince, already king of Bohemia and Hungary, preceded him to the tomb, and left the question of the succession to be decided by a diet. Ferdinand III. died in 1657. . . . The interregnum, and, indeed, the century which followed the death of Ferdinand, showed the alarming preponderance of the influence gained by France in the affairs of the empire, and the consequent criminality of the princes who had first invoked the assistance of that power. Her recent victories,

her character as joint guarantee of the treaty of Westphalia, and the contiguity of her possessions to the states of the empire, encouraged her ministers to demand the imperial crown for the youthful Louis XIV. Still more extraordinary is the fact that four of the electors were gained, by that monarch's gold, to espouse his views. . . . Fortunately for Germany and for Europe, the electors of Treves, Brandenburg, and Saxony were too patriotic to sanction this infatuated proposal; they threatened to elect a native prince of their own authority,—a menace which caused the rest to co-operate with them; so that, after some fruitless negotiations, Leopold, son of the late emperor, king of Bohemia and of Hungary, was raised to the vacant dignity. His reign was one of great humiliation to his house and to the empire. Without talents for government, without generosity, feeble, bigoted, and pusillanimous, he was little qualified to augment the glory of the country. . . . Throughout his long reign [1657-1705], he had the mortification to witness, on the part of Louis XIV., a series of the most unprovoked, wanton, and unprincipled usurpations ever recorded in history. . . . Internally, the reign of Leopold affords some interesting particulars. . . . Not the least is the establishment of a ninth electoral dignity in favour of Ernest Augustus, Duke of Brunswick Lunenburg, who then became (1692) the first elector of Hanover. This was the act of Leopold, in return for important aid in money and troops from two princes of that house; but it could not be effected without the concurrence of the electoral body, who long resisted it. . . . The establishment of a permanent diet, attended, not by the electors in person, but by their representatives, is one of the most striking peculiarities of Leopold's reign."—S. A. Dunham, *History of the Germanic empire*, v. 3, bk. 3, ch. 3.—See also DIET, GERMANIC.

1648-1715.—Relations of Austria, Germany and France after the Thirty Years' War.—"The whole shamefulness of this disintegration of Germany, showed itself in the defenceless state of the empire. . . . Right under the greedy hands of France lay the weakest, the most unguarded members of the empire. All along that priest-avenue the Rhine, from Münster and Osnabrück up to Constance, stretched a confused mass of tiny states, incapable of in any way seriously arming themselves, compelled to betray their country through the feeling of their own utter weakness. Almost all the Rhenish courts held pensions from Versailles. . . . Fully one-third of Germany served in the wars of the empire as a dead burden. . . . The weakness of Germany was to blame for the new growth of power in Austria and France; . . . the foreigners laughed at the 'querelles allemandes' and the 'misère allemande'; the Frenchman Bonhours mockingly asked the question if it was possible that a German could have intellect. . . . As the born antagonist of the old order of things in Europe, the basis of which was Germany's weakness, Prussia stood in a world of enemies whose mutual jealousies formed her only safeguard. She was without any natural ally, for the German nation had not yet come to understand this budding power. . . . Just as the House of Savoy was able to tread its way through the superiority of the Hapsburgs on the one hand and of the Bourbons on the other, so did Prussia, although immeasurably harder pressed, have to find a path for herself between Austria and France, between Sweden and Poland, between the maritime powers and the inert mass of the German empire. She had to use every means of remorseless egoism, always ready to change front, always with two strings to her

bow. The electorate of Brandenburg felt to the very marrow of its being how deeply foreign ideas had eaten into Germany. All the disorganized forces . . . which opposed the strong lead of the new monarchy placed their faith in foreign help. Dutch garrisons were stationed on the Lower Rhine and favored the struggle of the Cleve estates against their German lords. The diets of Magdeburg and of the electoral Mark counted on Austria. . . . Frederick William broke down the barriers of the Netherlanders in the German Northwest; he drove their troops from Cleve and from East Friesland. . . . Then he called out to the deaf nation his warning words, 'Remember that you are Germans,' and sought to drive the Swedes from the soil of the empire. Twice did the ill-will of France and Austria succeed in robbing the Brandenburg prince of the reward of his victories, of the rule in Pomerania: the fame of the day at Fehrbellin [see BRANDENBURG: 1640-1688] they could not take from him. . . . When the republic of the Netherlands threatened to fall before the attack of Louis XIV, Brandenburg caught the raised arm of the conqueror [see NETHERLANDS: 1674-1678]. Frederick William carried on the only serious war that the empire ventured on for the recovery of Alsace [see AUSTRIA: 1672-1714]. . . . With the rise of Prussia began the long bloody work of freeing Germany from foreign rule. . . . In this one state there awoke again, still half unconscious as if drunken with long sleep, the old hearty pride in the fatherland. . . . The House of Hapsburgh recognized earlier than the Hohenzollerns did themselves how hostile this modern North German state was to the old constitution of the Holy Empire. In Silesia, in Pomerania, in the Jülich-Cleve war of succession—everywhere Austria stood and looked with distrust on its dangerous rival. . . . Equally dangerous to Hapsburgh and to the German empire were the French and the Turks; how natural was it for Hapsburgh to seek support from Germany, to involve the empire in its wars, to use it as a bulwark towards the west or for diversions against France in case the Turks threatened the walls of Vienna. [See HUNGARY: 1668-1683.] . . . Only it cannot be denied that in this common action the Austrian policy, under a more centralized guidance and backed by a firmer tradition, looked out for its own advantage better than did the German empire—loose, heavy, and without consistent leadership. When the might of Louis XIV began to oppress Germany the policy of the Hapsburghs was to remain for a long time lukewarm and inactive. This policy led Austria indeed even to make a league with France and, when she did at last decide to help the great elector of Brandenburg against the enemy of the empire, this happened so charily and equivocally as to give rise to the doubt whether the Austrian army was not placed there to keep watch over the Brandenburg forces or even to positively hinder their advance. An Austrian writer himself assures us that Montecuculi was in secret commanded only to make a show of using his weapons against the French. For a long time Austria stood by inactive while the Reannexations [see FRANCE: 1670-1681] were going on. . . . The whole war as conducted by Austria on the Rhine and in the West [see AUSTRIA: 1672-1714] was languid and sleepy; the empire and individual warlike princes were left to protect themselves. What an entirely different display of power did Austria make when it was a question of fighting for its own dynastic interests!"—H. von Treitschke, *Deutsche Geschichte im 10ten Jahrhundert* (tr. from the German), v. 1, pp. 21-23.—"As in the wars so in the diplomatic negotiations the sep-

aration of the Austrian dynastic interests from the advantage and needs of the German empire often enough came to light. It is only necessary to revert to the attitude which the emperor's diplomacy took at Nimeguen and Ryswick [see NIMEGUEN, PEACE OF; FRANCE: 1697]. . . . When in the conferences at Gertruidenburg (1710) Louis XIV was reduced to being willing not only to give up the 'Reannexations' and Strassburg but even to restore Alsace and the fortress of Valenciennes, it was also not the interests of the empire but solely those of the House of Hapsburgh which led to the rejection of these offers and to the continuance of a war by which, as it turned out eventually, not one of these demands was gained."—L. Häusser, *Deutsche Geschichte* (tr. from the German), v. 1, p. 23.—"Louis XIV regarded himself not exactly as enemy of the German empire and of the imperial power of the House of Hapsburgh, but rather as a pretendant to the throne. As he explains it in the political directions meant for his son, the empire of the West, the heritage of Charles the Great, belongs not of right to the Germans but to the kings who are crowned at Rheims."—*Ibid.*, v. 1, p. 509.

1648-1780.—Austrian incubus.—Growth of Austrian territory at the expense of a united empire.—Germany retarded by the medievalism of its ruling state.—"Before the Thirty Years' War the territories of the German Hapsburghs were not very considerable. The greatest part of Hungary was in the hands of the Turks; the Tyrol belonged to a collateral line, and, in the other provinces, the independence of the Nobility was much stronger than the sovereignty of the Archdukes. The Nobles were all zealous protestants, so that a monarchical power could only be created after a victory of the Catholic faith. For the first time since 1621, the crown was seen in these regions to assume a really dominant position. Efforts in this direction had been zealously carried on since 1648; the Tyrolese Estates now lost their most important privileges; and, above all, the Emperor succeeded, by the help of Polish and German troops, in driving out the Turks from Hungary, and at the same time crushing the national freedom of the Magyars with frightful bloodshed. By these victories the Monarchy gained, in the first place, a large increase of territory—which placed it nearly on a level with France. In the second place it acquired at home the power of raising as many taxes and soldiers as were necessary to increase the army to the extent of its wishes; and of distributing its officials and troops—without distinction of nation—as imperial servants, throughout its dominions. And thus it secured submission at home and disposable strength for its operations abroad. Here it stopped short. As it had no national, and, consequently, no warm and natural relation to any of its provinces—which were merely used as passive tools to promote the lofty aims of the Hapsburgh family—the Government had no intention of using its power at home for the furtherance of the public good, or the building up of a generally useful Administration. The Nobility had no longer the strength to resist the demands of the Crown for men and money, but it still retained exemption from taxes, the jurisdiction and police among its own peasants, and a multitude of feudal rights, which, often enough, degraded the peasant to the condition of a serf, and everywhere bound down agriculture in the most galling bonds. Of manufactures there were little or none; trade was carried on on the system of guilds. The State officials exercised but little influence over the internal affairs of the Communes, or Provinces; and the privileged orders had full liberty to prosecute their own in-

terests among their inferiors with inconsiderate selfishness. In this aristocracy, the Church, from its wealth and its close internal unity, assumed the first place; and its superior importance was still farther enhanced by the fact of its being the chief bond of unity between the otherwise so loosely compacted portions of the Empire. . . . The Church attached the Nobility to the Government; for we must not forget that a very considerable portion of the estates of the Nobles had passed into the hands of new possessors who had received them as a reward for being good Catholics. The Church, too, taught all the youth of the Empire—in all its different languages—obedience to the House of Hapsburgh, and received from the Crown, in return, exclusive control of the national education. It formed, in spite of the resistance of nationalities, a sort of public opinion in favour of the unity of the Empire; and the Crown, in return, excluded all non-Catholic opinions from the schools, from literature and religion. Austria, therefore, continued to be Catholic, even after 1648; and by this we mean, not only that its Princes were personally devout—or that the Catholic clergy were supported in the performance of their spiritual functions—or that the institutions of the Church were liberally supported—but also that the State directed its policy according to ecclesiastical views, made use of the Church for political purposes, and crushed every movement hostile to it in all other spheres of the national life. In Austria, therefore, it was not merely a question of theological differences, but of the deepest and most comprehensive points of distinction between the mediæval and the modern world. Austria was still, in its whole nature, a Mediæval State or Confederacy of States. The consequences of this condition were most strikingly seen in its relation to Germany. In the first place, there was a complete separation, in regard to all mental and spiritual matters, between the great body of the Empire, and its powerful Eastern member. This was the period in which Germany was awaking to a new intellectual life in modern Europe, and laying the foundation of its modern science in every branch—in History and Statistics, Chemistry and Geology, Jurisprudence and Philosophy—and assuming by its Literature, an equal rank with other nations in national refinement and civilization. By the works of genius which this period produced Austria remained entirely uninfluenced; and it has been said, that Werther had only been made known to the Viennese in the form of fireworks in the Prater. The literary policy allowed no seed of modern culture to enter the Empire; and the Jesuit schools had rendered the soil unfit for its reception. All the progress of German civilization, at this period, was based on the principle of the independence of the mind in art and science. The education of the Jesuits, on the contrary, though unsurpassed where the object is to prepare men for a special purpose, commences by disowning individual peculiarities, and the right of a man to choose his own career. There was, at this time, no other characteristic of an Austrian than an entire estrangement from the progress of the German mind. . . . The progress of the people in science and art, in politics and military strength, was only seen in the larger secular territories, which, after 1648, enjoyed their own sovereignty; and even these were checked in their movements at every step by the remnants of the Imperial Constitution. The Members of the Empire alone, in whom the decaying remains of Mediæval existence still lingered on—the Ecclesiastical Princes—the small Counts—the Imperial Knights and the Imperial Towns,—clung to the Emperor

and the Imperial Diet. In these, partly from their small extent of territory, partly from the inefficiency of their institutions, neither active industry, nor public spirit, nor national pride, were to be found. In all which tended to elevate the nation, and raise its hopes for the future, they took, at this period, as little part as Austria herself. . . . The Imperial constitution, therefore, was inwardly decayed, and stood in no relation to the internal growth of the nation. . . . There was the same divergence between Austria and Germany with respect to their foreign interests, as we have observed in their internal relations. After the Turks had been driven from Hungary, and the Swedes from the half of Pomerania, Germany had only two neighbours whom it was a matter of vital importance to watch,—the Poles and the French. In the South, on the contrary, it had no interests in opposition to Italy, except the protection of its frontier by the possession or the neutrality of the Alpine passes. And yet it was just towards Italy that the eyes of the House of Hapsburg had been uninterruptedly directed for centuries past. The favourite traditions of the family, and their political and ecclesiastical interest in securing the support of the Pope, and thereby that of the Clergy, constantly impelled them to consolidate and extend their dominion in that country. All other considerations yielded to this; and this is intelligible enough from an Austrian point of view; but it was not on that account less injurious to the German Empire. How strikingly was this opposition of interests displayed at the end of the glorious war of the Spanish succession, when the Emperor rejected a peace which would have restored Strasburg and Alsace to the Empire, because only Naples, and not Sicily also, was offered to Austria! How sharply defined to the same relations present themselves to our view, in the last years of the Hapsburg dynasty, at the peace of Vienna in 1738!—on which occasion the Emperor—in order at least to gain Tuscany, as a compensation for the loss of Naples,—gave up Lorraine to the French, without even consulting the Empire, which he had dragged into the war. Austria thus maintained a predominant influence in Italy; but the Empire, during the whole century after the Peace of Westphalia, did not obtain a single noteworthy advantage over France. How much more was this the case with respect to Poland, which during the whole period of the religious wars had been the most zealous ally of Spain and the Hapsburgs, and which subsequently seemed to threaten no danger to Austrian interests.”—H. von Sybel, *History of the French Revolution*, v. 1, bk. 2, ch. 1.

1686.—League of Augsburg against Louis XIV.—“The Duke of Orléans, the French King’s brother, had married the sister of the Elector Palatine, the last of the House of Simmern, who died in May 1685, when his next relative, the Count Palatine Philip William, Duke of Neuberg, took possession of the Electorate. The Duchess of Orléans had by her marriage contract renounced all her feudal rights to the Palatinate, but not her claims to the allodial property and the moveables of her family.” These latter claims, taken in hand by Louis XIV on behalf of his sister-in-law, were made so formidable that the new Elector appealed to the Empire for protection, “and thus redoubled the uneasiness felt in Germany, and indeed throughout the greater part of Europe, respecting the schemes of Louis. The Prince of Orange availed himself of these suspicions to forward his plans against Louis. He artfully inflamed the general alarm, and at length succeeded in inducing the Emperor Leopold, the Kings of Spain and Sweden, as princes of the Empire, the Electors of Saxony and Bavaria, the circles of Suabia, Franconia, Upper Saxony, and Bavaria, to enter into the celebrated League of Augsburg (July 9th 1686). The object of this league was to maintain the Treaties of Münster and Nimeguen and the Truce of Ratisbon. If any of the members of it were attacked he was to be assisted by the whole confederacy; 60,000 men were to be raised, who were to be frequently drilled, and to form a camp during some weeks of every year, and a common fund for their support was to be established at Frankfort. The League was to be in force only for three years, but might be prolonged at the expiration of that term should the public safety require it. The Elector Palatine, who was in fact the party most directly interested, acceded to the League early in September, as well as the Duke of Holstein Gottorp.”—T. H. Dyer, *History of modern Europe*, v. 3, bk. 5, ch. 5.—“To Madame’s great anger France set up a claim to the Palatinate on her behalf, Louvois persuading the King and the royal family that with a few vigorous measures the Palatinate would be abandoned by the Neubourgs and annexed to France as part of Madame’s dowry. This led to the devastation of the states, to which Madame [Charlotte Elizabeth, the Duchess of Orleans] so often and so bitterly alludes during the next ten years. Obligated by Louis XIV’s policy to represent herself as desirous to recover her rights over her father’s and brother’s succession, in many documents which she was never even shown, Madame protested in all her private letters against France’s action in the matter, and made every one at court thoroughly aware of her grief and disapproval of what the king was doing on her behalf.”—*Life and letters of Charlotte Elizabeth, Princess Palatine*, ch. 2.

1701-1740.—First king of Prussia (Frederick I) and his bad administration.—Second king (Frederick William I) and his autocratic but able rule.—Up-bringing of Frederick the Great.—“During the forty-eight years of [Frederick William, the Great Elector’s] wise, energetic, but ruthless, reign, the territory of Brandenburg, Prussia was increased by nearly 50 per cent. Its population rose from 1,000,000 to 1,500,000, notwithstanding wars, famine, and pestilence. The success of the civil administration of a country can be gauged largely by the revenue returns. During the rule of the Great Elector the State revenue of Brandenburg-Prussia increased, incredible as it may seem, nearly five-fold, from 500,000 to 2,500,000 thalers. He had found a poor, devastated country without order and without an army. He left a greatly enlarged State, a comparatively wealthy and much larger population, and a large and excellent army to his successor. In 1688 the Great Elector died. His place was taken by Frederick the Third, who in 1701 assumed the royal crown and the title of King Frederick the First. Frederick was a vain and worthless monarch. Under his rule the country declined and decayed. Maladministration became general. However, he maintained and even increased the Prussian army. That was his only merit. Under the inept rule of this Frederick, who tried to ape Louis the Fourteenth, and who wasted the national resources in vain ostentation, luxury, and debauchery, the lifework of the Great Elector was largely destroyed. The unification, concentration, and organisation of the Prussian administration and of the whole national life which that great ruler had effected and the efficiency which he had created were temporarily lost.”—J. E. Barker, *Foundations of Germany*, p. 7.—“The ‘seed of ambition’ bore no fruit in the time of the first king, Frederick I., a man of somewhat feeble character, was satisfied with giving a lustre to his crown by the splendour of his ceremonials. His son and successor was of a totally different stamp. A coarse, uncultivated boor, with a passionate temper and a touch of insanity, Frederick William had nevertheless considerable merits as a sovereign.”—F. W. Longman, *Frederick the Great and the Seven Years’ War*, p. 16.—“Frederick William was neither brilliant, nor had he winning ways. He was the organiser, the disciplinarian, the school-master, the true maker of modern Germany. History which has named his son ‘the Great’ should call Frederick William the First ‘the Thorough.’ . . . King Frederick William had seen the advantage of conscientious one-man rule in the case of the Great Elector. He resolved to administer Prussia autocratically, treating the whole country like a huge private estate, and to improve it in every direction to the utmost of his ability. He wrote on one of the first days of his government, according to Droysen, that he would be his own field-marshal and his own minister of finance. He might have added that he would be his own minister of war, agriculture, commerce, education, justice, religion, and home affairs as well. He ordered the affairs of the Church, and prescribed the nature of the services and of the sermons. In every sermon the duties of the subject, and especially the duty of paying the taxes punctually, had to be mentioned. Other creeds were not to be attacked by the clergy. Sermons were to be short. If a sermon lasted longer than an hour the clergyman was to be fined two thalers. Frederick William despised those citizens who lived without productive work,

especially lawyers, artists, scientists, actors, dancing-masters, and money-lenders, and he prosecuted usurers with the greatest energy. . . . He thought newspapers superfluous and wholly mischievous. He prosecuted them, and in 1713 and 1714 he prohibited their appearance in Berlin altogether."—J. E. Barker, *Foundations of Germany*, pp. 9-10.—"Frugal and simple in his own life, he could not endure that the wealth of the nation should be squandered on empty show, and he promptly curtailed the expenditure of the Court, which had been very lavish in his father's time, and introduced economy into every branch of the public expenditure. The resources thus obtained provided the means for adding regiment after regiment to the army, until from the 38,000 which it had numbered at the accession of Frederick William it rose by degrees to nearly 84,000. To give it a national character and to insure its being kept at the required strength, the whole country was divided into circles, and each regiment was assigned to a particular district, from which two-thirds of its members were recruited—by forcible enlistment if necessary. . . . Army organization was the one business of Frederick William's life. He took a delight in even the minutest details of the service, and though his mania for tall recruits and the prices he paid for them must provoke a smile, he still deserves great credit for the perseverance with which he went on perfecting the machine until in drill and discipline his army stood far in advance of any in Europe."—F. W. Longman, *Frederick the Great and the Seven Years' War*, pp. 16-17.—Frederick the Great made the following comment on his father's army: "My father had a passion for tall men: he adored the captains who got most of them: it was enough for a soldier to be six feet two or three inches for him to be allowed to do anything, and a captain who had twenty of this height was sure to enjoy the good graces of the King. From this sprang a lax and very variable discipline, and a service of parade."—H. von Treitschke, *The Confessions of Frederick the Great and The Life of Frederick the Great*, p. 76.—"Frederick the Great himself acknowledged in his writings that he owed his wonderful victories to the excellence of the army which his father had created by twenty-seven years of unceasing labour."—J. E. Barker, *Foundations of Germany*, p. 10.—See also MILITARY ORGANIZATION: 27.

ALSO IN: H. von Sybel, *Founding of the German empire by William I*, v. 1, bk. 1, ch. 2.

"Frederick William purposed to bring up his eldest son as an exact copy of himself. . . . Endowed by nature with an acute and refined mind, it is not surprising that Frederick revolted from the narrow groove into which his father attempted to force him. He soon became disgusted with the incessant round of drills and reviews to which he was subjected, and he took no pleasure in the great hunting-parties which were the king's favourite recreation. . . . On the other hand he developed at an early age a taste for literature and music, which was only intensified by the violent efforts made to suppress it. . . . The prince's character had been formed and hardened by his sufferings. He had grown from a boy into a man, proud, reserved, and capable of deep dissimulation. He saw the necessity for conforming, outwardly at least, to the will of the king, whose favour he gained by applying himself diligently to the affairs entrusted to his management. Gradually, too, he came to perceive the good qualities which lay underneath the rugged exterior of his father, who, in his turn, recognized with pleasure the abilities of his son."—F. W. Longman, *Frederick the Great and*

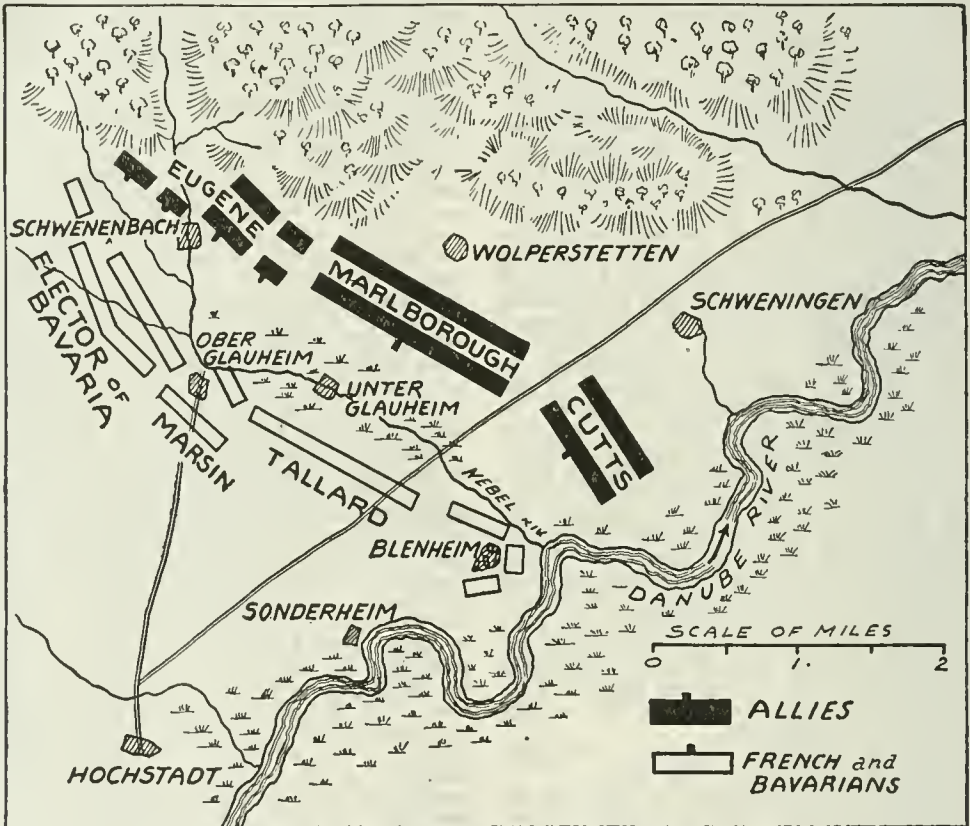

*the Seven Years' War*, pp. 25-27.—"The great Frederick was born with humanistic ideas uppermost; he took up military studies to escape some of the awful bullying inflicted on him by his father, who hated him so that he tried to persecute the unhappy child into his grave. Only the creator of 'Oliver Twist' could adequately describe the boyhood of Frederick the Great. Frederick had to do so many things to deceive his father that everyone thought that his interest and apparent progress in military studies were only clever pieces of acting. 'I have just drilled, I drill, I shall drill,' he wrote. So cruel was the father, that the son at the age of eighteen attempted to flee from Prussia with his 'chum' and confidant, the youthful Katte. They were arrested and flung into prison, and charged with high treason as military officers who had deserted. Katte, in spite of his acquittal by the courtmartial appointed to try him, was executed—a refinement of cruelty—before his eyes. Frederick, who had begged to die in Katte's place, fainted with anguish, and would have shared his fate but for the remonstrances of the Emperor. The ambassadors of other sovereigns joined in the protest, but probably weighed nothing in comparison. Frederick William only listened to the Emperor as his technical lord, from whom he lacked the military courage to declare himself free. He pursued his revenge in various ways. When he was tired of treating his son as a convict, he made him marry a woman he did not like, the same woman who was giving a party at Schönhausen while Frederick was dying."—D. Sladen, *Historical introduction* (H. von Treitschke, *Confessions of Frederick the Great and The Life of Frederick the Great*, pp. 7-8).—Frederick William died in 1740, and his son Frederick became king of Prussia when he had just completed his twenty-eighth year.

1702.—War of the Spanish Succession: Siege of Landau.—Battle of Friedlingen.—On the part of the Imperialists, the War of the Spanish Succession was opened on the Rhine frontier in June, 1702, by a movement of the army commanded by the Margrave Louis of Baden, which "came over the Rhine and laid siege to the important fortress of Landau,—the bulwark of Alsace as it was then regarded. The Margrave was subsequently joined by the Emperor's eldest son [Joseph], the young King of the Romans, who desired to share in the glory, though not in the toils of the expected conquest. . . . The Maréchal de Catinat, one of the soldiers of whom France has most reason to be proud,—the virtuous Catinat as Rousseau terms him—held command at this period in Alsace. So inferior were his numbers that he could make no attempt to relieve Landau. But after its reduction an opportunity appeared in which by detaching a portion of his army he might retrieve the fortunes of France in another quarter. The Elector of Bavaria, after much irresolution, had openly espoused the cause of Louis. He seized upon the city of Ulm and issued a proclamation in favor of his new ally. To support his movements an enterprising and ambitious officer, the Marquis de Villars, was sent across the Rhine with part of the army of Alsace. The declaration of the Elector of Bavaria and the advance of Villars into Germany disquieted in no slight degree the Prince Louis of Baden. Leaving a sufficient garrison in Landau, he also passed the Rhine. The two armies met at Friedlingen on the 14th of October. Louis of Baden, a ponderous tactician bred in the wars against the Turks, might out-manœuvre some Grand Vizier, but was no match for the quick-witted Frenchman. He was signally defeated with the loss of 3,000 men; soon after which, the season

being now far advanced, Villars led back his army to winter quarters in France. His victory of Friedlingen gained for him at Versailles the rank of *Maréchal de France*."—Lord Mahon, *History of England: Reign of Queen Anne*, ch. 2.—See also NETHERLANDS: 1702-1704; SPAIN: 1702.

1703.—War of the Spanish Succession: Campaigns on the Upper Rhine and in Bavaria.—"Early in June [1703], Marshal Tallard assumed the command of the French forces in Alsace, . . . took Prissac on the 7th of September, and invested Landau on the 16th of October. The allies, under the Prince of Hesse, attempted to raise the siege, but were defeated with considerable loss; and, soon after, Landau surrendered, thus terminating with

from the heart of Germany, by pouring down the valley of the Danube. The advanced post held there by the Elector of Bavaria in front, forming a salient angle, penetrating, as it were, into the Imperial dominions, the menacing aspect of the Hungarian insurrection in the rear, promised the most successful issue to this decisive operation. For this purpose, Marshal Tallard, with the French army on the Upper Rhine, received orders to cross the Black Forest and advance into Swabia, and unite with the Elector of Bavaria, which he accordingly did at Donawerth, in the beginning of July. Marshal Villeroy, with forty battalions and thirty-nine squadrons, was to break off from the army in Flanders and support the advance by a

PLAN OF THE BATTLE OF BLENHEIM, FOUGHT AUGUST 13, 1704

Fought on the left bank of the River Danube

disaster the campaign on the Upper Rhine. Still more considerable were the losses sustained in Bavaria. Marshal Villars commanded there, and, at the head of the French and Bavarians, defeated General Stirum, who headed the Imperialists, on the 20th of September. In December, Marshal Marsin, who had succeeded Villars in the command, made himself master of the important city of Augsburg, and in January, 1704, the Bavarians got possession of Passau. Meanwhile, a formidable insurrection had broken out in Hungary, which so distracted the cabinet of Vienna that the capital seemed to be threatened by the combined forces of the French and Bavarians after the fall of Passau. . . . Instead of confining the war to one of posts and sieges in Flanders and Italy, it was resolved [by the French] to throw the bulk of their forces at once into Bavaria, and operate against Austria

movement on the Moselle, so as to be in a condition to join the main army on the Danube, of which it would form as it were, the left wing; while Vendôme, with the army of Italy, was to penetrate into the Tyrol, and advance by Innsbruck on Salzburg. The united armies, which it was calculated, after deducting all the losses of the campaign, would muster 80,000 combatants, was then to move direct by Lintz and the valley of the Danube on Vienna, while a large detachment penetrated into Hungary to lend a hand to the already formidable insurrection in that kingdom. The plan was grandly conceived. . . . Marlborough, [England, Holland and the empire had united against Louis XIV], by means of the secret information which he obtained from the French headquarters, had got full intelligence of it, and its dangers to the allies, if it succeeded, struck him as

much as the chances of great advantage to them if ably thwarted. His line was instantly taken."—A. Alison, *Military life of Marlborough*, ch. 2, sect. 30-33.—For measures taken by Marlborough to defeat the plans of the French in this campaign, see NETHERLANDS: 1702-1704.

1704.—War of the Spanish Succession: Marlborough and Prince Eugene on the Danube.—Battle of Blenheim.—"Marlborough, with his motley army of English, Dutch, Danes and Germans, concealing his main purpose, was marching south along the Rhine, with a design to strike his critical blow, by attacking the French armies that were forming for the campaign of the Danube, and thus protect the Emperor and Vienna, and punish the Elector of Bavaria, whose territories would be then exposed. On the route, Marlborough was joined by Prince Eugene [of Savoy] and the Margrave of Baden; but as a new French force was approaching, Prince Eugene was sent to keep it in check. Marlborough and the Prince of Baden, with united forces of about 60,000 men, then advanced, in rapid marches, and took, by gallant assault, the fortifications of the Schellenberg in Bavaria, and the old town of Donauworth, a critical and commanding position on the Danube. The allies were now masters of the main passages of the Danube—and had a strong place as a basis of action. The allied leaders thereupon sent troops into the heart of Bavaria, and devastated the country even to the vicinity of Munich—burning and destroying as they marched, and taking several minor fortresses. Marlborough's forces and those of Prince Eugene were distant from each other some forty miles, when came the news of the march of a French army of 25,000 men under Tallard, to form a junction with the others, to succor the Elector, and take revenge for the defeat of the Schellenberg. Two French Marshals, Tallard and Marsin, were now in command: their design was to attack Marlborough and Eugene's armies in detail. By rapid marches, Marlborough crossed the Danube and joined Prince Eugene near Donauworth, and thereupon occurred one of the most important and decisive contests of modern times, fought between the old town of Hochstadt and the village of Blenheim, about fifteen miles south of Donauworth. The skilful tactics of the allied generals precipitated the battle. The allied French and Bavarians numbered 60,000 [56,000; Malleson] men—the English, Dutch and Germans and other allies, about 53,000 [52,000; Malleson]. The allies were allowed to cross an intervening brook without opposition, and form their lines. A great charge, in full force, of the allies was then made; they broke the enemy's extended line; and an ensuing charge of cavalry scattered his forces right and left, and drove many into the Danube. More than 14,000 French and Bavarians, who had not struck a blow, except to defend their position, entrenched and shut up in the village of Blenheim, waiting for orders to move, were then surrounded by the victorious allies, and compelled to surrender as prisoners of war. The scattered remnants of the French and Bavarian army either disbanded, or were driven over the Rhine. The garrison at Ulm capitulated, and the Elector fled into France."—J. W. Gerard, *Peace of Utrecht*, ch. 16.—"The armies of Marchand and of Max Emanuel [of Bavaria] had been defeated; that of Tallard had been annihilated. Whilst the loss of the victors in killed and wounded reached 12,000 men, that of the French and Bavarians exceeded 14,000. In addition, the latter lost 13,000 men taken prisoners, 47 pieces of canon, 25 standards, and 90 colours. Such was the battle of Blenheim. It was one of the decisive battles of history, and it

changed the character of the war. Up to that moment, the action of France against Germany had been aggressive; thence forward it became purely defensive. Blenheim, in fact, dashed to the ground the hopes of Louis XIV. and Max Emanuel of Bavaria. It saved the house of Habsburg in Germany, and helped it greatly in Hungary. It showed likewise that it was possible to inflict a crushing defeat on the armies of Louis XIV."—G. B. Malleson, *Prince Eugene of Savoy*, ch. 6.—"Marlborough [after the battle], having detached part of his force to besiege Ulm, drew near with the bulk of his army to the Rhine, which he passed near Philipsburg on the 6th of September, and soon after commenced the siege of Landau, on the French side; Prince Louis, with 20,000 men, forming the besieging force, and Eugene and Marlborough, with 30,000, the covering army. Villeroi, with the French army, abandoned an entrenched camp which he had constructed to cover the town. Marlborough followed, and made every effort to bring the French marshal to battle, but in vain. . . . Ulm surrendered on the 16th of September, . . . which gave the allies a solid foundation on the Danube, and effectually crushed the power of the Elector of Bavaria, who, isolated now in the midst of his enemies, had no alternative but to abandon his dominions and seek refuge in Brussels, where he arrived in the end of September. . . . The Electress of Bavaria, who had been left regent of that state in the absence of the Elector in Flanders, had now no resource left but submission; and a treaty was accordingly concluded in the beginning of November, by which she agreed to disband all her troops. Trèves and Traebach were taken in the end of December; the Hungarian insurrection was suppressed; Landau capitulated in the beginning of the same month; a diversion which the enemy attempted toward Trèves was defeated by Marlborough's activity and vigilance, and that city put in a sufficient posture of defense; and, the campaign being now finished, that accomplished commander returned to the Hague and London."—A. Alison, *The military life of Marlborough*, ch. 2.

1705.—Election of the Emperor Joseph I.

1705.—War of the Spanish Succession: Dissolution of Bavaria.—"The campaign of 1705 was destitute of any important events on the side of Germany. . . . In Bavaria, the peasants, irritated by the oppressions of the Austrian government, rose in a body in the autumn, and, could they have been supported by France, would have placed the Emperor in great danger; but without that aid the insurrection only proved fatal to themselves. The insurgents were beaten in detail, and the Emperor now resolved on the complete dissolution of Bavaria as a state. The four elder sons of Maximilian were carried to Klagenfurt in Carinthia, to be there educated under the strictest inspection as Counts of Wittelsbach, while the younger sons were consigned to the care of a court lady at Munich, and the daughters sent to a convent. The Electress, who had been on a visit to Venice, was not permitted to return to her dominions, and the Elector Maximilian, as well as the Elector of Cologne, was, by a decree of the Electoral College, placed under the ban of the Empire. The Upper Palatinate was restored to the Elector Palatine. . . . The remaining Bavarian territories were confiscated, and divided among various princes."—T. H. Dyer, *History of modern Europe*, v. 3, bk. 5, ch. 6.—W. Coxe, *History of the House of Austria*, v. 3, ch. 72.—The campaign of 1705 in the Netherlands was unimportant; but in Spain it had brilliant results. See SPAIN: 1705; NETHERLANDS: 1705.

1706-1711.—War of the Spanish Succession:

Successes of the French.—During 1706, little was attempted on either side by the forces which watched each other along the Rhine. In 1707 Villars, the French commander, obtained liberty to act. "The Emperor, greatly preoccupied with Hungary, had furnished but indifferent resources to the new general of the army of the Rhine, Brandenbourg-Baireuth; the German army was ill paid and in bad condition in its immense lines on the right bank, which extended along the Rhine from Philippsburg as far as Stolhofen, then, in a square, from Stolhofen to the Black Mountains by Bühl. May 22, the lines were attacked simultaneously at four points. . . . The success was complete; the enemy fled into the mountains, abandoning artillery, baggage, and munitions, and did not stop till beyond the Neckar. The lines were razed; Swabia and a part of Franconia were put under contribution. Villars marched on Stuttgart, crossed the Neckar, and subjected the whole country to ransom as far as the Danube. The enemies in vain rallied and reinforced themselves with tardy contingents of the Empire; they could not prevent Villars from laying under contribution the Lower Neckar, then the country between the Danube and Lake Constance, and from maintaining himself beyond the Rhine till he went into winter-quarters. French parties scoured the country as conquerors as far as the fatal field of Hochstadt." At the beginning of the campaign of 1708, it was the plan of the allies to make their chief attack on France "by the way of the Rhine and the Moselle, with two armies of 60,000 men each, under the command of the Elector of Hanover and Eugene, whilst Marlborough occupied the great French army in Flanders." But this plan was changed. "Eugene left the Elector of Hanover in the north of Swabia, behind the lines of Etlingen, which the allies had raised during the winter to replace the lines of Bühl at Stolhofen, and, with 24,000 soldiers collected on the Moselle, he marched by the way of Coblenz towards Belgium (June 30). The French forces of the Rhine and the Moselle followed this movement." The campaign then ensuing in the Netherlands was that which was signalled by Marlborough and Eugene's victory at Oudenarde and the siege of Lille. In 1709, "the attention of Europe, as in 1708, was chiefly directed to Flanders; but it was not only on that side that France was menaced. France was to be encroached upon at once on the north and the east. Whilst the great allied army penetrated into Artois, the army of the Rhine and the army of the Alps were to penetrate, the latter into Bresse by the way of Savoy, the former into Franche-Comté by the way of Alsace, and to combine their operations. . . . The Germans had not taken the offensive in Alsace till in the month of August. Marshal Harcourt, with over 20,000 men, had covered himself with the lines of the Lauter; the Elector of Hanover, who had crossed the Rhine at Philippsburg with superior forces, did not attack Harcourt, and strove to amuse him whilst 8,000 or 9,000 Germans, left in Swabia with General Merci, moved rapidly on Neuberg. . . . and established there a tête-du-pont in order to enter Upper Alsace." By swiftly sending a sufficient force to attack and defeat Merci at Neuberg, Aug. 26, Harcourt completely frustrated these plans. "The Elector of Hanover recrossed the river and retired behind the lines of Etlingen." During the two following years the French and German forces on the side of the Rhine did little more than observe one another.—H. Martin, *History of France: Age of Louis XIV*, v. 2, ch. 5-6.—Meantime, Ramillies, Oudenarde and Malplaquet had been fought in the Netherlands; Prince

Eugene had won his victory at Turin, and the contest had been practically decided in Spain, at Almanza. See NETHERLANDS: 1706-1707; 1708-1709; 1710-1712; ITALY: 1701-1713; SPAIN: 1706; 1707; 1709-1710; ENGLAND: 1710-1712.

1740-1756.—Early years of Frederick the Great's reign.—Home policy.—Foreign policy.—War of the Austrian Succession.—The reign of Frederick II, who succeeded his father in 1740, "was expected to be an effeminate one; but when at the age of twenty-nine he became king, he forgot his pleasures, thought of nothing but glory, and no longer employed himself but in attention to his finances, his army, his policy, and his laws."—L. P. Ségur, the elder, *History of the principal events of the reign of Frederick William II, king of Prussia*, v. 1, p. 2.—"In the first year of his reign Frederick had created a fifth department of the General Directory. To it he entrusted first the trade and manufactures of the whole kingdom and later the posts and the settlement of immigrants from other lands. In 1746 he established in like manner a sixth department, that of Military Affairs. These changes merely developed the system of Frederick William a little further. By a new departure, however, the Government of Silesia was made independent of the General Directory. For reasons which the King never stated, Münchow became the only minister for the province, and he was responsible to Frederick alone. With this addition the whole framework of government was stereotyped by an ordinance of 1748. The years 1746-1756 are notable for Frederick's use of his machine rather than for the changes which he made in it. He now displayed in action the principles of domestic policy which were the fruit of his early training and the guide of his later years. His ideal is as simple to understand as it was difficult to realise in practice. He allowed his subjects to think as they pleased on condition that they acted as he pleased. Neither in home nor in foreign policy did the King recognise any bounds to the assistance that he might demand from the dwellers within his dominions. The main object of his foreign policy was to extend the borders of Prussia to the utmost limit consistent with the safety of the State. His home policy was to bring within those borders the greatest possible number of men, to prevent them from falling below a certain moderate level of righteousness, comfort, and knowledge, to organise a huge army, to collect a vast revenue, and to enable Prussia as far as possible to supply all the needs of every one of her people. Other states were useful to

BATTLE OF BLENHEIM, AUGUST 13, 1704

(From a painting by Jean Huchtenburg, at The Hague)

Showing the left bank of the Danube, between Blenheim and Hochstodt, looking down from the heights of Lutzingen. On the extreme left of the picture, on the Danube, is Blenheim, burning, attacked by Marlborough's troops. Further along the river are the French in flight toward Sonderheim, where Tallard was taken prisoner. In the right foreground is Prince Eugene directing the attack on Ober Glaubeim.

her because they supplied recruits to her army, teachers for her artisans, and gold and silver in exchange for her surplus manufactures. The gold and silver were drawn into the treasury by taxation and used to build villages, to establish new manufactures, to hire more soldiers, and to fill Frederick's war-chest. Then, by war or a display of force which made war superfluous, a new province would be joined to Prussia and the routine of development, taxation, armament, and acquisition could begin anew. It does not appear that Frederick regarded any single part of this programme as weightier than the rest. In spite of all his economies and accumulations he was no miser, cherishing money for its own sake. He hoarded treasure so that his army might be sure of pay in time of war and his subjects sure of help in case of devastating calamity. On the same principle he maintained and added to the huge Government granaries, which bought in years of plenty and sold, at high but not exorbitant prices, in years of dearth. Frederick did not refuse to make some profit from

FREDERICK THE GREAT

the institution, but his main object was to confer upon the State the inestimable boon of freedom from famine. The establishment of public warehouses for wool, silk, and cotton was similarly designed to guard against glut and shortage. It was merely a new adaptation of the policy of the Staple, which England had discarded at the end of the Middle Ages. But it secured a market to the Prussian producer and an unfailing source of supply to the Prussian manufacturer and placed the whole traffic in raw materials under the supervision and control of the State. Frederick is as little open to the charge of megalomania as to that of avarice. He was singularly free from foibles. He frankly admits that the adventure of 1740 was partly inspired by the desire to make himself a name. But before the Peace of Dresden his lust of mere conquest seems to have been extinguished. Thenceforward his armaments and acquisitions were strictly regulated by reasons of State, and in his conception of statecraft domestic policy stood on a par with foreign. He likened the Finances, Foreign Policy, and the Army to three steeds harnessed abreast to the car of State, and himself to the charioteer who directed them and

urged them on."—W. F. Reddaway, *Frederick the Great*, pp. 182-185.—"His provinces were scattered, his resources weak, his power precarious; his army of seventy thousand soldiers was more remarkable for handsomeness of the men, and the elegance of their appearance, than for their discipline. He augmented it, instructed it, exercised it, and fortune began to open the field of glory to him at the moment he was fully prepared to enjoy her favours. Charles XII. [of Sweden] was dead, and his station filled by a king without authority. Russia, deprived of Peter the Great, who had only rough-hewn her civilization, languished under the feeble government of the Empress Anne, and of a cruel and ignorant minister. Augustus III., King of Poland and Elector of Saxony, a Prince devoid of character, could not inspire him with any dread. Louis XV., a weak and peaceable king, was governed by Cardinal Fleuri, who loved peace, but always by his weakness suffered himself to be drawn into war. He presented to Frederick rather a support than an obstacle. The court of France had espoused the cause of Charles VII. [duke of Bavaria, who had himself elected to the imperial throne when Charles VI died without male heirs] against Francis I. [son-in-law of Charles VI]. Maria Theresa, wife of Francis, and Queen of Hungary, saw herself threatened by England, Holland, and France; and whilst she had but little reason to hope the preservation of her hereditary dominions, that arrogant princess wished to place her husband on the Imperial Throne. This quarrel kindled the flames of war in Europe; the genius of Frederick saw by a single glance that the moment was arrived for elevating Prussia to the second order of powers; he made an offer to Maria Theresa to defend her, if she would cede Silesia to him, and threatened her with war in case of refusal. The Empress, whose firmness nothing could shake, impolitically refused that proposition; war was declared, and Frederick entered Silesia at the head of eighty thousand men. This first war lasted eighteen months [see AUSTRIA: 1740 to 1741]. Frederick, by gaining five battles, shewed that Europe would recognize one great man more in her bloody annals. . . . Four years after in [1744], Frederick again took up arms [see AUSTRIA: 1743-1744 to 1744-1745]. He invaded Bohemia, Upper Silesia, and Moravia. Vienna thought him at her gates; but the defection of the Bavarians, the retreat of the French, and the return of Prince Charles into Bohemia, rapidly changed the face of affairs. The position of Frederick became as dangerous as it had been menacing; he was on the point of being lost, and he saw himself compelled to retire with as much precipitation, as he had advanced with boldness. The gaining the battle of Hohen-Friedberg saved him. That retreat and that victory fixed the seal to his reputation. . . . He displayed the same genius and the same activity in the campaign of 1745, and once more abandoned France in making his separate peace at Dresden. By this treaty Francis was peaceably assured of the empire, and the cession of Silesia was confirmed to Frederick. France during this war committed some wrongs, which might palliate the abandonment of Prussia. The French did not keep Prince Charles within bounds, they made no diversion into Germany, and fought no where but in Flanders. . . . In 1756, Europe was again in a flame. France and England declared war against each other, and both sought alliances; Frederick ranged himself on the side of England, and by that became the object of the unreflecting vengeance of the French, and of the alliance of that power with

Austria; Austria also formed an alliance with the Court of Petersburg by means of a Saxon secretary; Frederic discovered the project of the Courts of Petersburg, Dresden, and Vienna, to invade the Prussian dominions. He was beforehand with them, and began the war by some conquests."—L. P. Ségur, the elder, *History of the principal events of the reign of Frederic William II, king of Prussia*, v. 1, pp. 2-6.—See also AUSTRIA: 1742 (January-May), to 1744-1745.

1755-1756.—Seven Years' War: Its causes and provocations.—"The great national quarrel between England and the powers which restrained her free movements on the sea and her extension of colonies, had never ceased. . . . After much bickering, blows began in 1754, and at the beginning of 1755 England despatched the ill-fated Braddock [to North America] with a small force, which was destroyed in July. . . . As yet, however, the quarrel was only colonial. England embittered it by seizing French ships without any declaration of war. But why did Frederick [of Prussia] strike in, if indeed he desired peace?"—C. B. Brackenbury, *Frederick the Great*, ch. 9.—The foreign policy of George II since the Peace of Aix-la-Chapelle had consisted chiefly in subsidizing German electors to vote with Hanover in all affairs of the empire and to fight for her if required. When hostilities broke out between French and English colonists he sought an alliance with Frederick of Prussia in order to strengthen Hanover against attack from the French. This broke the long-standing anti-French alliance of England with Austria, an alliance on which for three-quarters of a century the balance of power had rested. The determination of Marie Theresa to repossess herself of Silesia was the cardinal point to which her whole policy after the Peace of Aix-la-Chapelle was directed. As a means to this end Austria joined fortune with her Bourbon enemy. The combination on the French side eventually consisted of France, Austria, Russia, Sweden, Poland, Saxony, and the Palatinate, and its secret agreements were to break Prussia and partition her territories. Frederick the Great, however, learned of these agreements, and shaped his actions accordingly. "As early as 1752-53 his secret agents had discovered that Austria, Russia and Saxony were hatching a plot for the destruction of Prussia, and such a partition as afterwards befell unhappy Poland. In 1753 a Saxon official, Mentzel by name, began to supply the Prussian agents with copies of secret documents from the archives at Dresden, which proved that, during the whole of the peace, negotiations had been proceeding for a simultaneous attack on Frederick, though the astute Brühl [Saxon minister], mindful of former defeats, objected to playing the part of jackal to the neighbouring lions. In short, by the end of 1755 the king knew that preparations were already on foot in Austria and Russia, and that he would probably be attacked next year certainly, or, at latest, the year after. A great war was coming between England and France, in which the continental power would attack Hanover, and tread closely on the skirts of Prussia. The situation was dangerous, and became terribly menacing when England bargained with Russia to subsidise a Mus-

covite army of 55,000 men for defence of Hanover. Russia consented with alacrity. Money was all that the czarina needed for her preparations against Frederick, and in the autumn of 1755 she assembled, not 55,000, but 70,000 men on the Prussian frontier, nominally for the use of England. But throughout the winter all the talk at St. Petersburg was of Frederick's destruction in the coming spring. It was time for him to stir. His first move was one of policy. He offered England a 'neutrality convention' by which the two powers jointly should guarantee the German Reich against all foreign intervention during the coming war. On the 16th of January, 1756, the convention was signed in London, and the Russian agreement thrown over, as it could well be, since it had not been ratified. Europe was now ranking herself for the struggle. In preceding years, the Austrian diplomatist, Kaunitz, had so managed the French court, especially through the medium of Madame de Pompadour, that Louis XV. was now on the side of Maria Theresa, who had bowed her neck so far as to write to the French king's mistress as 'Ma Cousine,' while Frederick forgot policy, and spoke of the Pompadour in slighting terms. 'Je ne la connais pas,' said he once, and was never forgiven. . . . The agreement with Russia to partition Prussia had already been made, and Frederick's sharp tongue had betrayed him into calling the czarina that 'Infame catin du nord.' Saxony waited for the appearance of her stronger neighbours in order to join them. England alone was Frederick's ally."—C. B. Brackenbury, *Frederick the Great*, ch. 9.—"The secret sources of the Third Silesian War, since called 'Seven-Years War,' go back to 1745; nay, we may say, to the First Invasion of Silesia in 1740. For it was in Maria Theresa's incurable sorrow at loss of Silesia, and her inextinguishable hope to conquer it, that this and all Friedrich's others Wars had their origin. . . . Traitor Menzel the Saxon Kanzellist . . . has been busy for Prussia ever since 'the end of 1752.' Got admittance to the Presses; sent his first Excerpt 'about the time of Easter-Fair 1753,'—time of Voltaire's taking wing. And has been at work ever since. Copying Despatches from the most secret Saxon Repositories; ready always on Excellency Maltzahn's indicating the Piece wanted [Maltzahn being the Prussian minister at Dresden]. . . . Menzel . . . lasted in free activity till 1757; and was then put under lock and key. Was not hanged; sat prisoner for twenty-seven years after; over-grown with hair, legs and arms chained together, heavy iron-bar uniting both ankles; diet bread-and-water;—for the rest, healthy; and died, not very miserable it is said, in 1784."—T. Carlyle, *History of Friedrich II*, v. 7, bk. 17, ch. 1.—See also ENGLAND: 1754-1755.

ALSO IN: Duc de Broglie, *King's secret*, v. 1, ch. 1-2.—Frederick II, *History of the Seven Years' War (Posthumous works)*, v. 2, ch. 3.—H. Tuttle, *History of Prussia, 1745-1756*, v. 3, ch. 6-9.—F. von Raumer, *Contributions to modern history: Frederick II and his times*, ch. 24-28.

1756.—Seven Years' War: Frederick strikes the first blow.—Saxony subdued.—"Finding that the storm was wholly inevitable, and must burst on him next year, he [Frederick], with bold sagacity, determined to forestall it. First, then, in August, 1756, his ambassador at Vienna had orders to demand of the Empress Queen a statement of her intentions, to announce war as the alternative, and to declare that he would accept no answer 'in the style of an oracle.' The answer, as he expected, was evasive. Without further delay an army of 60,000 Prussians, headed by Frederick in person, poured into Saxony. The Queen of Poland was

taken in Dresden: the King of Poland [Augustus III, elector of Saxony, and, by election, king of Poland] and his troops were blockaded in Pirna. Thus did Frederick commence that mighty struggle which is known to Germans by the name of the Seven Years' War. The first object of the Prussian monarch at Dresden was to obtain possession of the original documents of the coalition against him, whose existence he knew by means of the traitor Menzel. The Queen of Poland, no less aware than Frederick of the importance of these papers, had carried them to her own bed-chamber. She sat down on the trunk which contained the most material ones, and declared to the Prussian officer sent to seize them that nothing but force should move her from the spot. [The official account of this occurrence which Carlyle produces represents the queen as "standing before the door" of the "archive apartment" in which the compromising documents were locked up, she having previously sealed the door.] This officer was of Scottish blood, General Keith, the Earl Marischal's brother. 'All Europe,' said the Queen, 'would exclaim against this outrage; and then, sir, you will be the victim; depend upon it, your King is a man to sacrifice you to his own honour!' Keith, who knew Frederick's character, was startled, and sent for further orders; but on receiving a reiteration of the first he did his duty. The papers were then made public, appended to a manifesto in vindication of Frederick's conduct; and they convinced the world that, although the apparent aggressor in his invasion of Saxony, he had only acted on the principles of self-defence. Meanwhile, the Prussian army closely blockaded the Saxon in Pirna, but the Austrian, under Marshal Brown, an officer of British extraction, was advancing to its relief through the mountain passes of Bohemia. Frederick left a sufficient force to maintain the blockade, marched against Brown with the remainder, and gave him battle at Lowositz [or Lobositz] on the 1st of October. It proved a hard-fought day; the King no longer found, as he says in one of his letters, the old Austrians he remembered; and his loss in killed and wounded was greater than theirs [3,308 against 2,984]; but victory declared on his side. Then retracing his steps towards Pirna he compelled, by the pressure of famine, the whole Saxon army, 17,000 strong, to an unconditional surrender. The officers were sent home on parole, but the soldiers were induced, partly by force and partly by persuasion, to enlist in the Prussian ranks, and swear fidelity to Frederick. Their former sovereign, King Augustus, remained securely perched on his castle-rock of Königstein, but, becoming weary of confinement, solicited, and was most readily granted, passports to Warsaw. During the whole winter Frederick fixed his head-quarters at Dresden, treating Saxony in all respects as a conquered province, or as one of his own. Troops and taxes were levied throughout that rich and populous land with unsparing rigour, and were directed against the very cause which the sovereign of that land had embraced."—Lord Mahon, *History of England*, 1713-1783, v. 4, ch. 33.

1756-1757.—Seven Years' War: Frederick under the ban of the empire.—Coalition against Frederick.—"All through the winter Austria strained every nerve to consolidate her alliances, and she did not scruple to use her position at the head of the Empire, in order to drag that body into the quarrel that had arisen between two of its members. On his own responsibility, without con-

sulting the electors, princes, and cities, the Emperor passed sentence on Frederick, and condemned him, unheard, as a disturber of the peace. Many of the great cities altogether refused to publish the Emperor's decree, and even among the states generally subservient to Austria there were some that were alarmed at so flagrant a disregard of law and precedent. It may have seemed a sign of what was to be expected should Prussia be annihilated, and no state remain in Germany that dared to lift up its voice against Austria. Nevertheless, in spite of this feeling, and in spite of the opposition of nearly all the Protestant states, Austria succeeded in inducing the Empire to espouse her cause. In all three colleges of electors, princes, and cities she obtained a majority, and at a diet, held on Jan. 17, 1757, it was resolved that an army of the Empire should be set on foot for the purpose of making war on Prussia. Some months later Frederick was put to the ban of the Empire. But the use of this antiquated weapon served rather to throw ridicule on those who employed it than to injure him against whom it was launched. . . . It has been calculated that the population of the States arrayed against Frederick the Great amounted to 90,000,000, and that they put 430,000 men into the field in the year 1757. The population of Prussia was 4,500,000, her army 200,000 strong; but, after deducting the garrisons of the fortresses, there remained little over 150,000 men available for service in the field. The odds against Frederick were great, but they were not absolutely overwhelming. His territories were scattered and difficult of defence, the extremities hardly defensible at all; but he occupied a central position from which he might, by rapidity of movement, be able to take his assailants in detail, unless their plans were distinguished by a harmony unusual in the efforts of a coalition."—F. W. Longman, *Frederick the Great and the Seven Years' War*, ch. 8, sect. 3.

1756-1758.—War of Prussia with Sweden in Pomerania. See SWEDEN: 1720-1792.

1757 (April-June).—Seven Years' War: Frederick's invasion of Bohemia.—Victory at Prague and defeat at Kolin.—"The year 1757 was the most brilliant of Frederick's life. . . . In no other year did the king gain such great victories, in no other did he experience so sharply the vicissitudes of fortune. The campaign opened for him with the brightest prospects. Entering Bohemia at the head of a vast army, he won a great battle which seemed to lay Austria prostrate at his feet, yet six weeks later he met with a disaster so crushing, as to appear the certain forerunner of his ruin. He was compelled to evacuate Bohemia, while his enemies, encouraged by the defeat of the hitherto restless conqueror, closed in upon him from every side. Austrians, French, Russians, Swedes, and Imperialists, all fell upon him at once. His position seemed desperate, when suddenly rising like a lion from his lair, he scattered his foes by two great victories, each of which resulted in the total rout of the beaten army. Unable to provide adequate means of defence at all points where attack was threatened, Frederick resolved to concentrate his forces against his principal antagonist, and to strike a severe blow at Austria as early in the year as possible. As soon as the snow was melted, and the roads had become practicable, an immense Prussian army poured into Bohemia through the passes of the Metal and Giant Mountains. As in 1744, it marched in three columns converging on Prague; two came from Saxony led by the king and the Duke of Brunswick-Bevern, the third from Silesia, under the command of Marshal Schwerin, who, at the advanced age of sev-

enty-two, retained the vigour and energy of youth. The Austrians never divined Frederick's design until it was almost ripe for execution. Affecting great trepidation, he had masked his real intentions, and lulled the suspicions of the enemy to rest, by putting Dresden in a state of defence; . . . the Austrians on their side made preparations for an invasion of the electorate later on in the year when their allies had taken the field. The news of the Prussian advance came on them like a thunderclap. Their troops, scattered through Bohemia, had to fall back on Prague in such haste that they were unable to carry off or destroy their magazines. . . . The partiality of Maria Theresa for her brother-in-law had placed the incompetent Prince Charles at its head, and Browne, who was really a great commander, was subordinated to the court favourite. Meanwhile the Prussian columns were rapidly closing in on Prague. . . . Schwerin was a day behind the time, and, on uniting his column with a portion of the king's early on the morning of the 6th, begged that his soldiers might be allowed a day's rest, as they had been on foot since midnight, and had made forced marches for three days. Frederick, however, refused to be diverted from his intention of attacking that very day, influenced, there is little doubt, not only by the knowledge that a second Austrian army, under Count Leopold Daun, was hovering in the neighbourhood, and might at any time effect a junction with Prince Charles, but perhaps still more by an obstinate determination to carry out his programme to the letter. . . . The battle began at 10 A.M., and for three hours raged with the utmost fury round Sterbohol, a farmstead on the lower slopes of the Ziscaberg. The Prussian infantry pressed impetuously forward, toiling through the marshy ground, and mowed down by the well-served Austrian artillery. Again and again they charged, and were as often repulsed. . . . The king himself brought up the second line, and, after strenuous efforts, Sterbohol was carried. At the same time the Austrian centre was pierced by a bold attack of General Mannstein. . . . The battle was lost to the Austrians, and, though the fresh troops of the left wing still made a gallant resistance, they were gradually forced back into Prague. . . . The Prussians had purchased their victory dearly, with the loss of at least 12,500 of their finest troops, besides old Schwerin, who, as Frederick said, alone was worth above 10,000. The Austrians lost 13,000, including prisoners. . . . The beaten army made good its retreat into the city, with the exception of 13,000, who escaped southwards, and eventually joined Daun. . . . The immediate result of the battle was the investment of Prague, where 46,000 Austrian troops were cooped up with little hope of escape unless relieved by Daun. Prague was not a strong fortress, but the presence of so large a force within its walls made a regular siege almost impossible, and compelled Frederick to have recourse to the slower mode of reduction by famine. . . . All over Europe the blockade was watched with intense interest; events seemed to pause in expectation of the result, on which it was everywhere felt that the issue of the war depended. Frederick at first had little doubt that Prague would speedily fall, and intended as soon as it was captured to detach 30,000 troops to march through Germany [and] disperse the army of the Empire. . . . Except Daun's army there was nothing between him and Vienna. The actual course of events was very different. Week after week Prague held out, giving Daun time to march to its relief. . . . On June 18 was fought the battle which wrecked the plans of Frederick the Great,

and first taught him that he was not invincible. The Austrians, 54,000 strong, were drawn up in a well-choſen position on a low range of hills to the west of the little town of Kollin [or Kolin], and a mile or so south of the great Prague and Vienna high-road, along which the Prussians were advancing. . . . The battle at first went entirely in favour of the Prussians. . . . By some strange mistake, which, notwithstanding all that has been written about it, has never been explained, Prince Maurice, who commanded the Prussian left wing, had directed its attack upon the wrong point. . . . Nor was this all. Frederick had given the most distinct orders that the right wing should not engage at all, but remain on the high roads as a reserve to be called up in case of need. But when the need came it was not to be had; the impetuosity of General Mannstein, who commanded a brigade in it, had involved it in a general engagement with the Austrian left, and it could not be recalled. These two mistakes lost the day. . . . The loss of the battle carried with it the loss of the campaign. Frederick was obliged to raise the blockade of Prague immediately, and to retreat from Bohemia. The retreat was attended with fresh losses from desertion, and from the unskilful tactics of his brother, the Prince of Prussia, to whom the command of a corps was entrusted; and when the king got back to Saxony, shortly before the end of July, barely 70,000 remained under his banner out of 117,000 who had entered Bohemia three months before."—F. W. Longman, *Frederick the Great and the Seven Years' War*, pp. 112-120.

1757 (July-December).—Seven Years' War: Darkening and brightening of Frederick's career.—Closter-Seven.—Rossbach.—Leuthen.—The enemies of the king of Prussia "were now closing upon him from every side. The provinces beyond the Vistula became the prey of Russian hordes, to which only one division of Prussians under Marshal Lehwald was opposed. In the result, however, their own devastations, and the consequent want of supplies, proved a check to their further progress during this campaign. In Westphalia above 80,000 effective French soldiers were advancing, commanded by the Mareschal d'Estrées, a grandson of the famous minister Louvois. The Duke of Cumberland, who had undertaken to defend his father's electorate against them, was at the head of a motley army of scarce 50,000 men. . . . His military talents were not such as to supply his want of numbers or of combination; he allowed the French to pass the deep and rapid Weser unopposed; he gave them no disturbance when laying waste great part of the Electorate; he only fell back from position to position until at length the enemy came up with him at the village of Hastenback near Hameln. There, on the 26th of July, an action was fought, and the Duke was worsted with the loss of several hundred men. The only resource of His Royal Highness was a retreat across the wide Lüneberg moors, to cover the town of Stade towards the mouth of the Elbe, where the archives and other valuable effects from Hanover had been already deposited for safety." Intrigue at Versailles having recalled D'Estrées and sent the Duke de Richelieu into his place, the latter pressed the duke of Cumberland so closely, hemming him in and cutting off his communications, that he was soon glad to make terms. On September 8th the English duke signed, at Closter-Seven, a conven-

tion under which the auxiliary troops in his army were sent home, the Hanoverians dispersed, and only a garrison left at Stade. "After the battle of Kolin and the Convention of Closter-Seven, the position of Frederick,—hemmed in on almost every side by victorious enemies,—was not only most dangerous but wellnigh desperate. To his own eyes it seemed so. He resolved in his thoughts, and discussed with his friends, the voluntary death of Otho as a worthy example to follow. Fully resolved never to fall alive into the hands of his enemies, nor yet to survive any decisive overthrow, he carried about his person a sure poison in a small glass phial. Yet . . . he could still, with indomitable skill and energy, make every preparation for encountering the Prince de Soubise. He marched against the French commander at the head of only 22,000 men; but these were veterans, trained in the strictest discipline, and full of confidence in their chief. Soubise, on the other hand, owed his appointment in part to his illustrious lineage, as head of the House of Rohan, and still more to Court-favour, as the minion of Madame de Pompadour, but in no degree to his own experience or abilities. He had under his orders nearly 40,000 of his countrymen, and nearly 20,000 troops of the Empire; for the Germanic diet also had been induced to join the league against Frederick. On the 5th of November the two armies came to a battle at Rosbach [or Rossbach], close to the plain of Lützen, where in the preceding century Gustavus Adolphus conquered and fell. By the skilful manœuvres of Frederick the French were brought to believe that the Prussians intended nothing but retreat, and they advanced in high spirits as if only to pursue the fugitives. Of a sudden they found themselves attacked with all the compactness of discipline, and all the courage of despair. The troops of the Empire, a motley crew, fled at the first fire. . . . So rapid was the victory that the right wing of the Prussians, under Prince Ferdinand of Brunswick, was never engaged at all. Great numbers of the French were cut down in their flight by the Prussian cavalry, not a few perished in the waters of the Saale, and full 7,000 were made prisoners, with a large amount of baggage, artillery and standards. . . . The battle of Rosbach was not more remarkable for its military results than for its moral influence. It was hailed throughout Germany as a triumph of the Teutonic over the Gallic race. . . . So precarious was now Frederick's position that the battle of Rosbach, as he said himself, gained him nothing but leisure to fight another battle elsewhere. During his absence on the Saale, the Austrian armies had poured over the mountains into Silesia; they had defeated the Prussians under the Duke of Bevern; they had taken the main fortress, Schweidnitz, and the capital, Breslau; nearly the whole province was already theirs. A flying detachment of 4,000 cavalry, under General Haddick, had even pushed into Brandenburg, and levied a contribution from the city of Berlin [entering one of the suburbs of the Prussian capital and holding it for twelve hours]. The advancing season seemed to require winter quarters, but Frederick never dreamed of rest until Silesia was recovered. He hastened by forced marches from the Saale to the Oder, gathering reinforcements while he went along. As he drew near Breslau, the Imperial commander, Prince Charles of Lorraine, flushed with recent victory and confident in superior numbers, disregarded the prudent advice of Marshal Daun, and descended from an almost inaccessible position to give the King of Prussia battle on the open plain. . . . On the 5th of December, one month from the battle of Ros-

bach, the two armies met at Leuthen, a small village near Breslau, Frederick with 40,000, Prince Charles of Lorraine with between 60,000 and 70,000 men. For several hours did the conflict rage doubtfully and fiercely. It was decided mainly by the skill and the spirit of the Prussian monarch. 'The battle of Leuthen,' says Napoleon, 'was a master-piece. Did it even stand alone it would of itself entitle Frederick to immortal fame.' In killed, wounded and taken, the Austrians lost no less than 27,000 men; above 50 standards, above 100 canon, above 4,000 waggons, became the spoil of the victors; Breslau was taken; Schweidnitz blockaded, Silesia recovered; the remnant of the Imperial forces fled back across the mountains; and Frederick, after one of the longest and most glorious campaigns that History records, at length allowed himself and his soldiers some repose."—Lord Mahon, *History of England, 1713-1783*, v. 4, ch. 34.

1758.—Seven Years' War: Campaign in Hanover.—Siege of Olmütz.—Russian defeat at Zorndorf.—Prussian defeat at Hochkirch.—"Before the end of 1757, England began to take a more active part on the Continent. Lord Chatham brought about the rejection of the Convention of Closter-Seven by Parliament, and the recall of Cumberland by the king. The efficient Prince Ferdinand of Brunswick was proposed by Frederick and made commander of the English and Hanoverian forces. He opened the campaign of 1758 in the winter. The French, under Clermont, being without discipline or control, he drove them in headlong flight out of their winter-quarters in Hanover and Westphalia, to the Rhine and across it; and on June 23 defeated them at the battle of Crefeld. A French army under Soubise afterward crossed the Rhine higher up, and Ferdinand retreated, but succeeded in protecting the west as far as the Weser against General Contades. Frederick first retook Schweidnitz, April 16. He then, in order to prevent the junction of the Russians and Austrians, ventured to attack Austria, and invaded Moravia. His brother, Prince Henry, had but a small force in Saxony, and Frederick thought that he could best cover that country by an attack on Austria. But the siege of Olmütz detained him from May until July, and his prospects grew more doubtful. The Austrians captured a convoy of 300 wagons of military stores, which Ziethen was to have escorted to him. [Instead of 300, the convoy comprised 3,000 to 4,000 wagons, of which only 200 reached the Prussian camp, and its destruction by General Loudon completely frustrated Frederick's plan of campaign.] Frederick raised the siege, and, by an admirable retreat, brought his army through Bohemia by way of Königgrätz to Landsbut. Here he received bad news. The Russians, under Fermor, were again in Prussia, occupying the eastern province, but treating it mildly as a conquered country, where the empress already received the homage of the people. They then advanced, with frightful ravages, through Pomerania and Neumark to the Oder, and were now near Küstrin, which they laid in ashes. Frederick made haste to meet them. He was so indignant at the desolation of the country and the suffering of his people that he forbade quarter to be given. The report of this fact also embittered the Russians. At Zorndorf, Frederick met the enemy, 50,000 strong, August 25, 1758. They were drawn up in a great square or phalanx, in the an-

cient, half-barbarous manner. A frightfully bloody fight followed, since the Russians would not yield, and were cut down in heaps. Seidlitz, the victor of Rossbach, by a timely charge of his cavalry, captured the Russian artillery, and crushed their right wing. On the second day the Russians were driven back, but not without inflicting heavy loss on the Prussians, who, though they suffered much less than their enemies, left more than one third of their force on the field. The Russians were compelled to withdraw from Prussia. Frederick then hastened to Saxony, where his brother Henry was sorely pressed by Daun and the imperial army. He could not even wait to relieve Silesia, where Neisse, his principal fortress, was threatened. Daun, hearing of his approach, took up a position in his way, between Bautzen and Görlitz. But Frederick, whose contempt for this prudent and slow general was excessive, occupied a camp in a weak and exposed position, at Hochkirch, under Daun's very eyes, against the protest of his own generals. He remained there three days unmolested; but on October 14, the day fixed for advancing, the Austrians attacked him with twice his numbers. A desperate fight took place in the burning village; the Prussians were driven out, and lost many guns. Frederick himself was in imminent danger, and his friends Keith and Duke Francis of Brunswick fell at his side. Yet the army did not lose its spirit or its discipline. Within eleven days Frederick, who had been joined by his brother Henry, was in Silesia, and relieved Neisse and Kosel. Thus the campaign of 1758 ended favorably to Frederick. The pope sent Daun a consecrated hat and sword, as a testimonial for his victory at Hochkirch."—C. T. Lewis, *History of Germany*, bk. 5, ch. 23, sect. 7-9.

ALSO IN: G. B. Malleson, *Military life of Loudon*, ch. 7-8.—F. Kugler, *Pictorial history of Germany during the reign of Frederick the Great*, ch. 29-31.—Frederick II, *History of the Seven Years' War (Posthumous works)*, v. 2, ch. 8.

1759 (April-August).—Seven Years' War: Prince Ferdinand's Hanoverian campaign.—Defeat at Bergen and victory at Minden.—In the Hanoverian field of war, where Prince Ferdinand of Brunswick held command, the campaign of 1759 was important, and prosperous in the end for the allies of Prussia. "Besides the Hanoverians and Hessians in British pay, he [Prince Ferdinand] had under his direction 10,000 or 12,000 British soldiers, amongst whom, since the death of the Duke of Marlborough, Lord George Sackville was the senior officer. The French, on their part, were making great exertions, under the new administration of the Duke de Choiseul; large reinforcements were sent into Germany, and early in the year they surprised by stratagem the free city of Frankfort and made it the place of arms for their southern army. No object could be of greater moment to Ferdinand than to dislodge them from this important post." Marching quickly, with 30,000 of his army, he attacked the French, under the Duke de Broglie, at Bergen, on the Nidda, in front of Frankfort, April 13, and was repulsed, after heavy fighting, with a loss of 2,000 men. "This reverse would, it was supposed, reduce Prince Ferdinand to the defensive during the remainder of the campaign. Both De Broglie and Contades eagerly pushed forward, their opponents giving way before them. Combining their forces, they reduced Cassel, Münster, and Minden, and they felt assured that the whole Electorate must soon again be theirs. Already had the archives and the most valuable property been sent off from Hanover to Stade. Already did a new Hastenbeck—a new

Closter-Seven—rise in view. But it was under such difficulties that the genius of Ferdinand shone forth. With a far inferior army (for thus much is acknowledged, although I do not find the French numbers clearly or precisely stated), he still maintained his ground on the left of the Weser, and supplied every defect by his superiority of tactics. He left a detachment of 5,000 men exposed, and seemingly unguarded, as a bait to lure De Contades from his strong position at Minden. The French Mareschal was deceived by the feint, and directed the Duke de Broglie to march forward and profit by the blunder, as he deemed it to be. On the 1st of August, accordingly, De Broglie advanced into the plain, his force divided in eight columns." Instead of the small corps expected, he found the whole army of the allies in front of him. De Contades hurried to his assistance, and the French, forced to accept battle in an unfavorable position, were overcome. At the decisive moment of their retreat, "the Prince sent his orders to Lord George Sackville, who commanded the whole English and some German cavalry on the right wing of the Allies, and who had hitherto been kept back as a reserve. The orders were to charge and overwhelm the French in their retreat, before they could reach any clear ground to rally. Had these orders been duly fulfilled, it is acknowledged by French writers that their army must have been utterly destroyed; but Lord George either could not or would not understand what was enjoined on him. . . . Under such circumstances the victory of Minden would not have been signal or complete but for a previous and most high-spirited precaution of Prince Ferdinand. He had sent round to the rear of the French a body of 10,000 men under his nephew—and also the King of Prussia—the Hereditary Prince of Brunswick. . . . Thus Ferdinand became master of the passes, and the French were constrained to continue their retreat in disorder. Upon the whole, their loss was 8,000 men killed, wounded, or taken, 30 pieces of artillery, and 17 standards. . . . Great was the rejoicing in England at the victory of Minden"; but loud the outcry against Lord George Sackville, who was recalled and dismissed from all his employments.—Lord Mahon, *History of England, 1713-1783*, v. 4, ch. 36.

ALSO IN: E. Cust, *Annals of the wars of the eighteenth century*, v. 2, pp. 327-333.

1759 (July-November).—Seven Years' War: Disasters of Frederick.—Kunersdorf.—Dresden.—Maxen.—"Three years of the war were gone and the ardour of Frederick's enemies showed no signs of abating. The war was unpopular in the Russian army, but the Czarina thought no sacrifice too great for the gratification of her hatred. France was sick of it too, and tottering on the verge of national bankruptcy, but Louis was kept true to his engagements by domestic influences and by the unbending determination of Maria Theresa never to lay down arms until Prussia was thoroughly humbled. . . . Already Frederick was at his wits' end for men and money. Of the splendid infantry which had stormed the heights at Prague, and stemmed the rout of Kollin, very little now remained. . . . Moreover, Austria, relying on her vastly larger population, had ceased to exchange prisoners, and after the end of 1750 Russia followed her example. . . . Frederick's pecuniary difficulties were even greater still. But for the English subsidy he could hardly have subsisted at all. . . . The summer was half gone before there was any serious fighting. Frederick had got together 125,000 men of some sort, besides garrison troops, but he no longer felt strong

enough to take the initiative, and the Austrians were equally indisposed to attack, without the co-operation of their allies. Towards the middle of July the Russians, under Count Soltikoff, issued from Posen, advanced to the Oder, and, after defeating a weak Prussian corps near Kay, took possession of Frankfort. It now became necessary for the king to march in person against them, the more especially as Laudon [or Loudon] with 18,000 Austrians was on his way to join Soltikoff. Before he could reach Frankfort, Laudon, eluding with much dexterity the vigilance of his enemies, effected his junction, and Frederick, with 48,000 men, found himself confronted by an army 78,000 strong. The Russians were encamped on the heights of Kunersdorf, east of Frankfort." Frederick attacked them, Aug. 12, with brilliant success at first, routing their left wing and taking 70 guns, with several thousand prisoners. "The Prussian generals then besought the king to rest content with the advantage he had gained. The day was intensely hot; his soldiers had been on foot for twelve hours, and were suffering severely from thirst and exhaustion; moreover, if the Russians were let alone, they would probably go off quietly in the night, as they had done after Zorndorf. Unhappily Frederick refused to take counsel. He wanted to destroy the Russian army, not merely to defeat it; he had seized the Frankfort bridge and cut off its retreat." He persisted in his attack and was beaten off. "The Prussians were in full retreat when Laudon swept down upon them with eighteen fresh squadrons. The retreat became a rout more disorderly than in any battle of the war except Rossbach. The king, stupefied with his disaster, could hardly be induced to quit the field, and was heard to mutter, 'Is there then no cursed bullet that can reach me?' The defeat was overwhelming. Had it been properly followed up, it must have put an end to the war, and Kunersdorf would have ranked among the decisive battles of the world. Berlin lay open to the enemy; the royal family fled to Magdeburg. For the first (and last) time in his life Frederick gave way utterly to despair. 'I have no resources left,' he wrote to the minister Finckenstein the evening after the battle, 'and to tell the truth I hold all for lost. I shall not survive the ruin of my country. Farewell for ever.' The same night he resigned the command of the army to General Finck. Eighteen thousand, five hundred of his soldiers were killed, wounded or prisoners, and the rest were so scattered that no more than 3,000 remained under his command. All the artillery was lost, and most of his best generals were killed or wounded. . . . By degrees, however, the prospect brightened. The fugitives kept coming in, and the enemy neglected to give the finishing stroke. Frederick shook off his despair, and resumed the command of his army. Artillery was ordered up from Berlin, and the troops serving against the Swedes were recalled from Pomerania. Within a week of Kunersdorf he was at the head of 33,000 men, and in a position to send relief to Dresden, which was besieged by an Austrian and Imperialist army. The relief, as it happened, arrived just too late." Dresden was surrendered by its commandant, Schmettau, on Sept. 4th, to the great wrath of Frederick. By a wonderful march of fifty-eight miles in fifty hours, Prince Henry, the brother of Frederick, prevented the Austrians from gaining the whole electorate of Saxony. The Russians and the Austrians quarrelled, the former complaining that they were left to do all the fighting, and presently they withdrew into Poland. "With the departure of the

Russians, the campaign would probably have ended, had not Frederick's desire to close it with a victory led him into a fresh disaster, hardly less serious and far more disgraceful than that of Kunersdorf. . . . With the view of hastening the retreat of the Austrians, and of driving them, if possible, into the difficult Pirna country, he ordered General Finck to take post with his corps at Maxem, to bar their direct line of communications with Bohemia." As the result, Finck, and his whole corps of 12,000, were overwhelmed and taken prisoners. "The capitulation of Maxem was no less destructive of Frederick's plans than galling to his pride. The Austrians now retained Dresden, a place of great strategical importance, though the king, in the hope of dislodging them, exposed the wrecks of his army to the ruinous hardships of a winter campaign in weather of unusual severity, and borrowed 12,000 men of Ferdinand of Brunswick to cover his flank while so engaged. The new year had commenced before he allowed his harassed troops to go into winter-quarters."—F. W. Longman, *Frederick the Great and the Seven Years' War*, ch. 10, sect. 2.

ALSO IN: T. Carlyle, *History of Friedrich II*, bk. 19, ch. 4-7.—Frederick II, *History of the Seven Years' War (Posthumous works)*, v. 3, ch. 10.

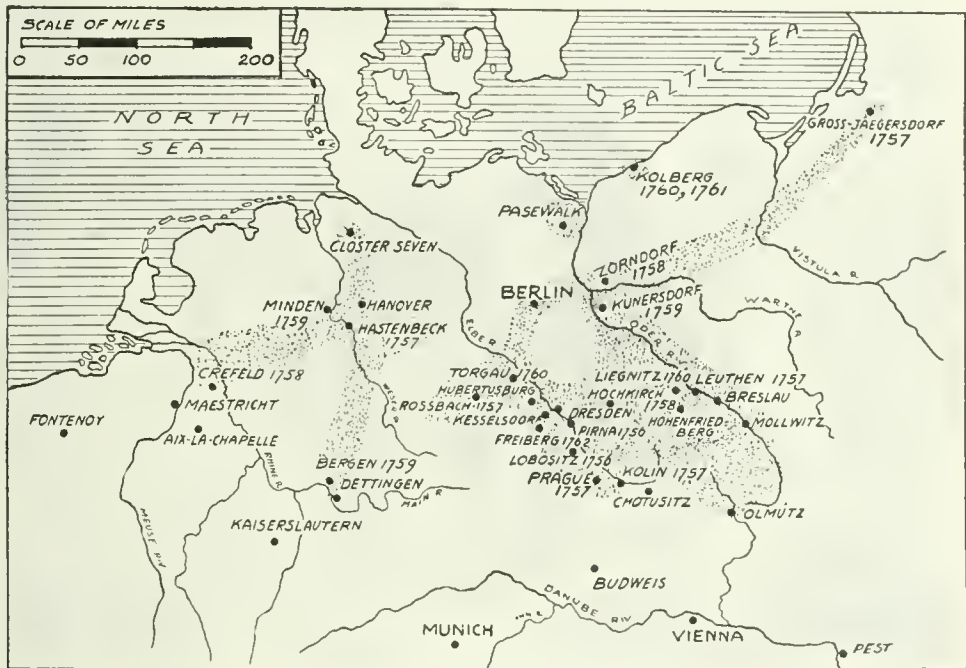

1760.—Seven Years' War: Saxony reconquered by Frederick.—Dresden bombarded.—Battles of Liegnitz, Torgau and Warburg.—"The campaign of 1759 had extended far into the winter, and Frederick conceived the bold idea of renewing it while the vigilance of his enemies was relaxed in winter quarters, and of making another effort to drive the Austrians from Saxony. His head-quarters were at Freyberg. Having received reinforcements from Prince Ferdinand, and been joined by 12,000 men under the hereditary prince, he left the latter to keep guard behind the Mulde, and in January 1760, at a time when the snow lay deep upon the ground, he made a fierce spring upon the Austrians, who were posted at Dippoldiswalde; but General Maguire, who commanded there, baffled him by the vigilance and skill with which he guarded every pass, and compelled him to retrace his steps to Freyberg. When the winter had passed and the regular campaign had opened, Laudohn [Loudon], one of the most active of the Austrian generals—the same who had borne a great part in the victories of Hochkirchen and Kunersdorf—entered Silesia, surprised with a greatly superior force the Prussian General Fouqué, compelled him, with some thousands of soldiers, to surrender [at Landshut, June 22], and a few days later reduced the important fortress of Glatz [July 26]. Frederick, at the first news of the danger of Fouqué, marched rapidly towards Silesia, Daun slowly following, while an Austrian corps, under General Lacy, impeded his march by incessant skirmishes. On learning the surrender of Fouqué, Frederick at once turned and hastened towards Dresden. It was July, and the heat was so intense that on a single day more than a hundred of his soldiers dropped dead upon the march. He hoped to gain some days upon Daun, who was still pursuing, and to become master of Dresden before succours arrived. As he expected, he soon outstripped the Austrian general, and the materials for the siege were collected with astonishing rapidity, but General Maguire, who commanded at Dresden, defended it with complete success till the approach of the Austrian army obliged Frederick to retire. Baffled in his design, he took a characteristic vengeance by bombarding that beautiful city with red-hot balls, slaugh-

tering multitudes of its peaceable inhabitants, and reducing whole quarters to ashes; and he then darted again upon Silesia, still followed by the Austrian general. Laudohn had just met with his first reverse, having failed in the siege of Breslau [an attempted surprise and a brief bombardment]; on August 15, when Daun was still far off, Frederick fell upon him and beat him in the battle of Liegnitz. [The statement that "Daun was still far off" appears to be erroneous. Loudon and Daun had formed a junction four days before, and had planned a concerted attack on Frederick's camp; Loudon was struck and defeated while making the movement agreed upon, and Daun was only a few miles away at the time.] Soon after, however, this success was counterbalanced by Lacy and Totleben, who, at the head of some Austrians and Russians, had marched upon Berlin, which, after a brave resistance, was once more captured

which was still held by Maguire. The English and German army, under Prince Ferdinand, succeeded in the meantime in keeping at bay a very superior French army, under Marshal Broglie; and several slight skirmishes took place, with various results. The battle of Warburg, which was the most important, was won chiefly by the British cavalry, but Prince Ferdinand failed in his attempts to take Wesel and Göttingen; and at the close of the year the French took up their quarters at Cassel."—W. E. H. Lecky, *History of England, 18th century, v. 2, ch. 8.*

1761-1762.—Seven Years' War: Closing campaigns.—"All Frederick's exertions produced him only 96,000 men for defence of Silesia and Sax-

BATTLEFIELDS OF THE SEVEN YEARS' WAR

and ruthlessly plundered; but on the approach of Frederick the enemy speedily retreated. Frederick then turned again towards Saxony, which was again occupied by Daun, and on November 3 he attacked his old enemy in his strong entrenchments at Torgau. Daun, in addition to the advantage of position, had the advantage of great numerical superiority, for his army was reckoned at 65,000, while that of Frederick was not more than 44,000. But the generalship of Frederick gained the victory. General Ziethen succeeded in attacking the Austrians in the rear, gaining the height, and throwing them into confusion. Daun was wounded and disabled, and General O'Donnell, who was next in command, was unable to restore the Austrian line. The day was conspicuous for its carnage, even among the bloody battles of the Seven Years' War; 20,000 Austrians were killed, wounded, or prisoners, while 14,000 Prussians were left on the field. The battle closed the campaign for the year, leaving all Saxony in the possession of the Prussians, with the exception of Dresden,

only this year [1761]. Prince Henry had to face Daun in Saxony; the king himself stood in Silesia against Loudon and the Russians under Butterlin. Loudon opened the campaign by advancing against Goltz, near Schweidnitz, in April. Goltz had only 12,000 to his adversary's 30,000, but posted himself so well that Loudon could not attack him. Reinforcements came gradually to Loudon, raising his army to 72,000, but orders from Vienna obliged him to remain inactive till he could be joined near Neisse by the Russians with 60,000. Goltz, manœuvring against the Russians, was taken prisoner. The king himself delayed the junction of his enemies for some time, but could not now offer battle. The junction took place the 18th of August. He then struck at Loudon's communications, but the thrust was well parried, and on the 20th of August, Frederick, for the first time, was reduced to an attitude of pure defence. He formed an intrenched camp at Bunzelwitz, and lay there, blocking the way to Schweidnitz. Loudon's entreaties could not persuade the Russians

to join him in full force to attack the position, and on the 9th of September Butterlin's army fell back across the Oder, leaving 20,000 of his men to act under Loudon. Frederick remained a fortnight longer in the camp of Bunzelwitz, but was then forced to go, as his army was eating up the magazines of Schweidnitz. Again he moved against Loudon's magazines, but the Austrian general boldly marched for Schweidnitz, and captured the place by assault on the night of the 30th September-1st October. No fight took place between Loudon and the king. They both went into winter quarters in December—Prussians at Strehlen, Austrians at Kunzendorf, and Russians about Glatz. . . . In the western theatre Ferdinand defeated Broglie and Soubise at Vellinghausen [or Wellinghausen, or Kirch-Denkern, as the battle, fought July 15, is differently called], the English contin-

kept up his 60,000, but doubled their number. In the spring he had 70,000 for his Silesian army, 40,000 for Prince Henry in Saxony, and 10,000 for the Swedes or other purposes. Best news of all, the czarina died on the 5th of January, 1762, and Peter, who succeeded her—only for a short time, poor boy—was an ardent admirer of the great king. Frederick at once released and sent home his Russian prisoners, an act which brought back his Prussians from Russia. On the 23rd February Peter declared his intention to be at peace and amity with Frederick, concluded peace on the 5th of May, and a treaty of alliance a month later. The Swedes, following suit, declared peace on the 22nd of May, and Frederick could now give his sole attention to the Austrians." For a few weeks, only, the Prussian king had a Russian contingent of 20,000 in alliance with him, but

FREDERICK THE GREAT AND GENERAL ZIETHEN AFTER THE BATTLE OF TORGAU

gent again behaving gloriously. . . . Prince Henry and Daun manœvered skilfully throughout the campaign, but never came to serious blows. Frederick is described as being very gloomy in mind this winter. The end of the year left him with but 60,000 men in Saxony, Silesia, and the north. Eugene of Würtemberg had 5,000 to hold back the Swedes, Prince Henry 25,000 in Saxony, the king himself 30,000. But the agony of France was increasing; Maria Theresa had to discharge 20,000 men from want of money, and Frederick's bitter enemy, 'cette infame Catin du Nord' [the Czarina Elizabeth], was failing fast in health. A worse blow to the king than the loss of a battle had been the fall of Pitt, in October, and with him all hope of English subsidies. Still, the enemies of Prussia were almost exhausted. One more year of brave and stubborn resistance, and Prussia must be left in peace. By extraordinary exertions, and a power of administrative organisation which was one of his greatest qualities, Frederick not only

could make no use of it. It was recalled in July, by the revolution of St. Petersburg, which deposed the young czar, Peter, in favour of his ambitious consort, Catherine. Frederick succeeded in concealing the fact long enough to frighten Daun by a show of preparations for attacking him, with the Russian troops included in his army, and the Austrian general retired to Glatz and Bohemia. Frederick then took Schweidnitz, and marched on Dresden. "Daun followed heavily. Like a prize-fighter knocked out of time, he had no more fight in him. Prince Henry had two affairs with the Reich's army and its Austrian contingent. Forced to retire from Freyburg on the 15th, he afterwards attacked them on the 20th of October and defeated them by a turning movement. They had 40,000, he 30,000. The Austrian contingent suffered most. In the western theatre Ferdinand held his own and had his usual successes. His part in the war was to defend only, and he never failed to show high qualities as a general. Thus,

nowhere had Frederick's enemies succeeded in crushing his defences. For seven years the little kingdom of Prussia had held her ground against the three great military powers, France, Austria, and Russia. All were now equally exhausted. The constancy, courage, and ability of Frederick were rewarded at last; on the 15th of February, 1763, the treaty of Hubertsburg [Hubertusburg] was signed, by which Austria once more agreed to the cession of Silesia. Prussia was now a Great Power like the rest, her greatness resting on no shams, as she had proved."—C. B. Brackenbury, *Frederick the Great*, ch. 18.

1761-1779.—Attitude of Frederick the Great toward England and its bearing on the American Revolution.—Attempt of the colonies to establish commercial relations with him.—“In attempting to arrive at a conclusion upon the much-debated subject of the attitude of Frederick the Great toward the American Revolution, the reader should constantly bear in mind two important facts about which there is no room for dispute. One of these facts is that Frederick entertained an intense hatred for England, and was consequently glad to see her humiliated; the other, that his interests were such that he was unwilling openly to become her enemy. His hatred dated from the year 1761. Up to that time the English government, under the leadership of Pitt, whose policy was to ‘conquer America in Germany,’ had for some years supported him in his unequal contest against his allied enemies by undertaking the defense of his western frontier against the French and by furnishing him an annual subsidy of about £900,000. But in 1761 the Great Commoner was driven out of office; the Tory party, led by the Scotch favorite, the Earl of Bute, seized the reins of power, and at once proceeded in a most treacherous manner to desert their hard-pressed ally by making terms with France. This was an action that Frederick never forgave, and thereafter he entertained toward England, and particularly toward the party in power, the most bitter resentment. Nor was this feeling lessened in intensity when about a decade later, at the time of the first partition of Poland, the British intrigued to prevent him from acquiring Danzig. . . . ‘This,’ wrote he [in his ‘Memoirs after the Peace’] regarding his refusal to allow the passage across his dominions of German troops hired by England, ‘was taking but a feeble revenge for the evil proceedings relative to the port of Danzig; neither did the king desire to come to extremities. Long experience had taught him that a multitude of enemies are found in the world, and that we ought not in sport to raise up foes.’ In view of Frederick’s hatred of England, it was but natural that he should be interested in her troubles with the colonies. As early as June 27, 1774, we find him writing to de Maltzan to pay attention to the quarrel in order to keep him well-informed. Later he said that the colonies were evidently firmly resolved to sustain their liberties and that he disapproved of the English policy. Still later he expressed the opinion that it was a hundred to one that regulars would be able to beat militia, but that the colonies would doubtless be able to make British commerce and manufactures suffer greatly, and that Parliament might one day regret having pushed things so far. . . . The first suggestion made to Frederick that he should form a connection with

the Americans appears to have come from de Maltzan, who had been approached by an American agent in London. De Maltzan proposed that the king should open commercial relations with the Americans; but Frederick replied: ‘What you add concerning the establishment of a direct commerce appears to me, considering the actual relations between my state and America, still very problematical. Of all the merchandise in exchange, Virginia tobacco would be the principal article. But without a navy how do you expect me to protect such a commerce or make it respected?’ A month later he expressed himself again in much the same terms. In the following November a more direct overture was made to the Prussian monarch. In that month William Carmichael was sent by Silas Deane, then agent of the colonies in Paris, to Berlin to make proposals of a commercial nature. Carmichael accomplished nothing of importance. He explained the character of American products to the Prussian authorities, but found Frederick unwilling to undertake a direct commerce, though he expressed himself willing to exchange commodities through the ports of France. The next attempt at an understanding was made by the three American commissioners, Deane, Franklin, and Lee, who, in pursuance of the so-called ‘militia’ diplomatic policy, on February 14, 1777, transmitted to the Prussian court copies of the Declaration of Independence and of the Articles of Confederation, and in a letter expressed a desire to obtain Frederick’s friendship and to lay before him a plan for commercial intercourse. Concerning the proposals made in this letter Frederick wrote from Potsdam to Baron Schulenburg, his minister of state, expressing to him the opinion that since Prussia was without a navy to protect such a commerce, it would be necessary to make use of a foreign flag. But he added: ‘However, in spite of these considerations, I do not wish to disoblige nor to offend the colonies by a complete refusal of the propositions of their plenipotentiary commissioners at Paris, and it appears to me to be more expedient for you by a civil answer to attempt to keep them in the friendly disposition they appear to entertain towards us. . . . In this way the above-mentioned colonies will not be offended, and we shall have the means of entering into negotiations with them should circumstances become more favorable. Then our Silesian linens, our woolens, and other manufactured articles can find a new market. . . . Explain your position toward their offer as favorably as possible, so that the moment events become more propitious there we may be able to take advantage of it.’ . . . Although he was quite willing to see England humiliated, his interests dictated that he should not become embroiled in a war with her. . . . Lee’s next request was for information concerning the probability that the English would in the following year [1778] be able to draw more recruits from Germany, Russia, or Denmark. Schulenburg referred Lee’s request to Frederick, and upon Schulenburg’s letter the king wrote, ‘none from Russia, none from Denmark, but some men from Anspach, and from the prince of Hesse.’ In consenting that Schulenburg should give this information Frederick showed himself in perhaps the most friendly attitude toward the colonies in which he had yet appeared. About the same time Frederick refused to allow the passage of the mercenary troops from Baireuth, Anspach, and Cassel across his dominions, and some writers have seen in this action another evidence of his friendship for America. . . . A passage already quoted from his *Memoirs*

after the Peace shows that the refusal gave him some pleasure because it disobliged England. In the same work he states that he refused because he did not like to see Germany denuded of troops. . . . On November 17, 1777, Arthur Lee wrote to Schulenburg stating that Congress had appointed his brother, William Lee, commissioner to the Prussian court with powers to negotiate a treaty of amity and commerce, and requesting to be informed as to whether it was the king's pleasure that his brother should come to Berlin. But Schulenburg replied that the king 'cannot possibly conjecture, as circumstances have not changed, what propositions Mr. Lee can make more acceptable to His Majesty, nor consequently what can be the object of his mission.' On the fourth of the following month Arthur Lee wrote to Schulenburg confirming the glorious news of the surrender of Burgoyne. Schulenburg transmitted the letter to Frederick at Potsdam, and the king received the news with great satisfaction. Upon the letter he wrote: 'This is very good, but it is necessary to tell him that I expect (*j'attends*) to recognize the independence of the Americans when France shall have set the example.' . . . [Six weeks later Schulenburg wrote to Lee] that the Americans were at liberty to purchase arms in Prussia and that the 'bankers Splittgerber, contractors for the manufacture of arms, have received directions to deliver such as you may demand.' . . . Prussia was far from being advantageous to the Americans. Frederick's motives for expressing his intention of recognizing the Americans when France should have set the example will probably never be determined. He may have thought that Fortune had at last declared herself against England and that the end of the war was close at hand. Perhaps, with Machiavellian craftiness, he expected that the contents of his letter to Lee would be communicated to the French ministry and would influence them to declare for the Americans and thus become embroiled with England. Whatever his motives may have been, it is unlikely, in view of the obstinate determination of the English to continue the war, that he would have hazarded following France. . . . From this time [1779] onward the relations of the two powers [United States and Germany] continued without material change until the close of the Revolution. The independence of the colonies was not recognized by Frederick until after it had been recognized by England herself, and it was not until June of 1783 that Baron Goltz at Paris made overtures to Franklin for a commercial agreement between the two countries."—P. L. Haworth, *Frederick the Great and the American Revolution* (reprinted from the *American Historical Review*, v. 9, no. 3, Apr., 1904, pp. 460-464, 468-470, 470-471, 473).

1763.—End, results and costs of the Seven Years' War.—Peace of Hubertusburg and Peace of Paris. See SEVEN YEARS' WAR: Treaties which ended the war.

1763-1790.—Period of peace and progress.—Intellectual cultivation.—Accession of the Emperor Joseph II.—His character and reforms.—Accession of Leopold II.—"The lasting significance of the Seven Years' War lies in its profound effect on German national consciousness, on the German sense of unity. Before the war the disintegrating character of the Empire had loosened all but officially any close relations between different states. For many years no strong leader had appeared in Austria or elsewhere; men felt themselves not German, but Bavarian, or Saxon, or Prussian, as the case might be. But Frederick's

victories were not only Prussian; they were also German. He had beaten soundly France and Russia as well as Austria. He had established the claim of an ignored German province to rank with great powers. The full fighting force of all his enemies was never concentrated against Frederick, but with a population of 5,000,000 and but little aid from abroad he had maintained all of his possessions against attacks of states and nations whose total population approximated 90,000,000. The people of different states might be jealous of this brilliant success and rise of Prussia, but they were enthusiastic admirers of Frederick. He was a German national hero. Pride in his achievements united countless Germans in spirit and gave new impulse to a sense of German national life. It also created desire and resolution to emulate Frederick's triumphs in war in other fields of activity. . . . As soon as the Peace of Hubertusburg was signed, Frederick plunged again, as if refreshed from a long holiday, into the work for the internal development of Prussia which the war had nullified or held in check. In the decade of peace before the Seven Years' War Frederick had begun to drain outlying swampy districts and bring them closer to the heart of his kingdom by arteries of canals; this work he now continued, and to these fertile districts, which were no longer too remote, he attracted many thousand new settlers. Besides remitting the taxes for a time in some of his provinces, he distributed cavalry horses and large quantities of seed among the peasants, thus restoring and advancing agriculture. New industries were established and, together with those already existing, were developed with great rapidity; the cloth mills in Silesia, silk factories, glassworks, foundries, and other industries engaged a considerable portion of Frederick's thought and care for many years. The prohibitive duty which Frederick put on foreign imports protected and fostered home industries and caused a rapid improvement in home products, though the system which he employed in collecting taxes galled his people by its unnecessary vigilance. Through miserly frugality in government as in his private life—he spent only one sixth of his income—Frederick was able to give large sums to needy communities, to increase his standing army to 186,000 men, and to leave a well-filled treasury at his death. Morally and intellectually the most bracing reforms of Frederick's reign were his revised administration of justice and his proclamations of religious tolerance and freedom of speech. At his behest the courts no longer regarded class distinctions but rendered decisions to noble and peasant alike; Frederick thus strengthened immeasurably his people's faith in the rewards of honest, upright living. 'Every man,' he said in his picturesque idiom, 'is to go to heaven in his own way,' and 'newspapers, if they are to be interesting, must not be interfered with.' By unshackling spiritual and intellectual life Frederick gave play to forces which ultimately established the moral and intellectual standards of Prussia and Germany. During Frederick's reign the population of Prussia increased from three and a half to five and a half millions, and the area by more than two thirds, so that in 1786 Prussia comprised nearly sixty-five thousand square miles, about the area of New England. By applying his methods of administration and his reforms with but few alterations to all his provinces Frederick welded Prussia into a unified and fairly homogeneous realm. . . . The emperor Francis I died in 1765 and was succeeded both in Austria and as head of the Holy Roman Empire by his

son Joseph II (1765-1790). The change of ruler caused hardly more than a ripple anywhere, for Maria Theresa was still enjoying the advantage of her beauty and her personality, and until her death in 1780 she continued to have the last word in Austrian politics. Joseph II moreover shared the controlling ambition of his mother's life, to unify the widely divergent nationalities subject to the rule of the Hapsburgs. Each hoped that after thus restoring and enhancing Austria's prestige they might reunify the Holy Roman Empire, but their labors began and ended in their own hereditary possessions. Maria Theresa believed with all her heart in the theory of absolute monarchy; she therefore granted political and social reforms—in education, trade, religious toleration, and the condition of the peasants—only in so far as they might not weaken the authority of the central government. Cautious even to the point of appearing semi-medieval in an age of enlightenment, she was yet spurred on by a profound sense of duty to the welfare of her people. This conflict within herself, between ambition and caution, hampered Maria Theresa throughout her reign and robbed her of much of the achievement and the glory which nature, it seems, had put within her reach. Joseph II inherited his mother's ambition for Austria and he was eager to rival the example of Frederick of Prussia, whom he admired greatly. But he was afflicted by a hasty judgment and by feverish energy, 'generally taking the second step before he had taken the first.' He was consequently checkmated again and again in his dealings with other German states and with foreign powers. In his own realm he alienated many of his people and expended much of his energy in attempting to retrieve past mistakes. When he abolished serfdom in his dominions and secured civil rights and freedom of worship to all Austrian Protestants, he set up the two greatest memorialis of his reign. . . . In the last ten years of his reign Joseph II allowed his ambition for Austria to lead him more and more into projects for Austrian aggrandizement at the expense of other German states and into seeking the aid of Russia and France. The stability of the Holy Roman Empire was thus threatened on three sides. At this point Prussia became the leader of a group of German states for the first time in history. In July, 1785 Frederick the Great formed with the electors of Saxony and Hanover the 'League of German Princes,' or *Deutscher Fürstenbund*. The league merely agreed to defend and preserve, in word, and if necessary in deed, all the states of the Empire as they then existed. The league was thus intended not to reform but to safeguard conservatively the old existing order. Many German rulers in the north and the south, Catholic and Protestant, gladly joined the league. It soon forced Joseph to abandon his projects, it curbed the influence of Russia and France, and it assured the continued existence of the Holy Roman Empire."—G. M. Priest, *Germany since 1740*, pp. 21-24, 26-27, 33-34.—Leopold II succeeded his brother Joseph II in 1790.

1772-1773.—First partition of Poland. See POLAND: 1763-1790.

1777-1779.—Claims to Bavaria. See BAVARIA: 1777-1779.

1785.—Establishment of the *Fürstenbund*.—The "League of Princes (*der Fürstenbund*) [was] modeled to some extent on the Smalkaldic League of the sixteenth century, but differing from it in that it comprised Catholics and Protestants indiscriminately. The treaty of union was in the first instance signed only by the three great secular

states of the north, Brandenburg, Hanover, and Saxony; other states joined afterwards on the invitation of the contracting parties. Foremost amongst these was the Elector of Mainz, whose adhesion gave the League a majority in the Electoral college, since by the Bavarian vote being merged in the Palatine the number of electors were reduced to eight, and the Elector of Mainz, as Arch-Chancellor of Germany, possessed a casting vote when the votes were equal. The immediate object of the *Fürstenbund* was resistance to Austrian encroachments and the preservation of the *status quo* in Germany, but it is probable that larger ideas were vaguely present to the minds of its founders. The mere fact that states were invited to join it whose smallness made them from a military point of view a source of weakness rather than strength shows that something more than a defensive alliance was intended; and indeed there is good reason for believing that a complete reorganization of Germany was contemplated, involving perhaps even the abolition of the Imperial throne or its transfer from Vienna to Berlin. Great ideas certainly—but requiring a Frederick for their realization, if even he could have accomplished it, and when the time came a Frederick was not found."—F. W. Longman, *Frederick the Great and the Seven Years' War*, pp. 251-252.—"The establishment of the *Fürstenbund* . . . illustrates conveniently and aptly the great net result of Frederick's life and reign. It revealed Prussia as no longer a third-rate power but as the successful rival of Austria in German affairs and as the peer of any nation in Europe. The goal of Frederick's whole activity was reached. The path which led to it had been long and devious. In the aggrandizement of Prussia Frederick had repudiated ethical considerations with shocking easiness. He had ruled his people with benevolent but often stifling despotism. He had foregone the sunshine of declining years, the affection and sympathy of life-long friendships, and had become the lonely 'hermit of Sans Souci.' But he had forged a state which could survive the blows of the nineteenth century. He had given to Prussians and Germans an ideal of statehood which afforded initial inspiration to the state and national life of the German Empire of the most recent decades."—G. M. Priest, *Germany since 1740*, pp. 23-24.

1789.—Political conditions in Germany preceding the French Revolution.—"During the years immediately preceding the French Revolution Germany presented a curious spectacle of political decrepitude and intellectual rejuvenescence. The Holy Roman Empire, in regard to which Voltaire caustically inquired in what respect it was holy or Roman or an Empire, was afflicted with creeping paralysis. Its wheels continued to revolve; but the machinery was rusty and the output was small. . . . 'Germany,' cried Friedrich Karl Moser in the bitterness of his heart, 'is a great but despised people.' Every nation, he added, had a governing principle. In England it was liberty in Holland trade, in France the honour of the King, while in Germany it was obedience. Many a pamphleteer lamented the anæmia of the Fatherland; but not one of them could produce a restorative. . . . The

Empire, in fact, was not even German. The King of England was a member as Elector of Hanover, the King of Denmark as Duke of Holstein, the King of Sweden as Lord of Pomerania, while Belgium participated as an appanage of the House of Hapsburg. In theory the Imperial crown was elective; but in practice it was found impossible to override the traditional claims of the Hapsburgs, as Charles VII. of Bavaria and his champions learned to their cost in the war of the Austrian Succession. The Empire appeared to revive for a moment in the coronation pageantry at Frankfurt, when the Emperor received the homage of the Estates on bended knee and the herald brandished his sword towards the four quarters of heaven in token that all Christendom was subject to his sway; but in the eighteenth century it was nothing but a picturesque survival. The Emperor was still the fount of honour; but, except for the grant of titles, his prerogatives had disappeared. As a German jurist aptly remarked: to prevent him from doing harm, he was prevented from doing anything. Such powers as he possessed he owed not to the crown of Charlemagne and Barbarossa, but to the territories and resources of the House of Hapsburg. The Golden Bull of Charles IV. limited the Electors to seven, three of whom were the Archbishops of Mainz, Cologne, and Trier [Trevs]. The secular princes were the rulers of the Palatinate, Bohemia, Saxony, and Brandenburg, to which Bavaria and Hanover were added in the seventeenth century. The first in rank was the Elector of Mainz, the Arch-Chancellor of the Empire, who crowned the Emperor at Frankfurt. The legislative power was exercised by the Diet at Regensburg, to which ambassadors were accredited and from which the army of the Empire took its orders. Since 1663 it sat in permanence; but this change decreased instead of increasing its importance, as it was only attended by delegates—and most members of the Empire never troubled to be represented. It consisted of three colleges, the Electors, the Princes (ecclesiastical and secular), and the Free Cities sitting separately. If two colleges agreed, and their wishes were sanctioned by the Emperor the resolution became an Imperial law, but its execution depended on the separate decision of each separate unit, large or small, of which the Empire was composed. It was only at Regensburg that 'Germany' could be found; but the significance of the Diet had waned with the strength of the Empire, and its time was largely wasted in solemn trifling and hoary pedantries. While the emperor resided at Vienna and the Diet sat at Regensburg, the Supreme Court of the Empire was moved in 1693 from Speyer to Wetzlar. . . . The Court had earned an enviable reputation for venality and procrastination; and if a few petty tyrants were thwarted or punished by its decrees, it was too weak to strike at powerful offenders. . . . In addition to the Emperor, the Diet, and the Court of Appeal, the machinery of the Empire included ten Circles, or administrative districts, created to counteract the dangers of excessive particularism by the formation of large groups. Each Circle possessed a Diet and a Director, who commanded the troops, controlled the police, and provided for the execution of the Imperial laws. In the course of the centuries, however, great changes had occurred. The circle of Burgundy had been swallowed up in France. Holland was free. Many territories, again, had become subject to members of the Empire—such as Hungary and the Polish provinces annexed by Austria and Prussia, which were not incorporated in the Empire. On the

eve of the French Revolution there were nine circles: Upper and Lower Saxony, Austria, Bohemia, Bavaria, Westphalia, The Upper Rhine, Swabia, Franconia. Differing widely in size and importance, they were alike in their invertebrate character. Prussia formed part of three Circles, while Swabia and Franconia presented a bewildering mosaic of petty principalities, ecclesiastical and secular. It was in these circles of the lower and middle Rhine that the hundreds of Imperial Knights, who recognised no superior but the Emperor, exercised unfeathered sway over their Lilliputian territories. Western Germany was the classic land of duodecimo States, which afforded no foundation for healthy political life and offered a tempting prey to the sleepless ambitions of France."—G. P. Goetze, *Germany and the French Revolution*, pp. 1-4.

1790.—Alliance of Prussia and Poland. See POLAND: 1763-1790.

1791.—Forming of the coalition against French democracy. See FRANCE: 1790-1791: First movements toward European coalition; 1791 (July-September).

1791-1792.—Question of war with France, and the question of the partition of Poland.—Motives and action of Prussia and Austria.—"After the acceptance of the Constitution by Louis XVI. [September—see FRANCE: 1791 (July-September)], the Emperor indulged for a time a confident hope, that the French question was solved, and that he was relieved from all fear of trouble from that quarter. He had cares enough upon him to make him heartily congratulate himself on this result. . . . In foreign affairs, the Polish question—the next in importance to the French—was still unsettled, and daily presented fresh difficulties. . . . The fact that Russia began to show the greatest favour to the Emigrés, and to preach at Berlin and Vienna a crusade against the wicked Jacobins, only served to confirm the Emperor in his peaceful sentiments. He rightly concluded that Catharine wished to entangle the German Powers in a struggle with France, that she might have her own way in Poland; and he was not at all inclined to be the dupe of so shallow an artifice. . . . At the same time he set about bringing his alliance with Prussia to a definite conclusion, in order to secure to himself a firm support for every emergency. On the 17th of November—a week after the enactment of the first edict against the Emigrés—Prince Reuss made a communication on this subject to the Prussian Ministry, and on this occasion declared himself empowered to commence at any moment the formal draft of an alliance. . . . 'We are now convinced,' wrote the Ministers to their ambassador at Vienna, 'that Austria will undertake nothing against France.' This persuasion was soon afterwards fully confirmed by Kaunitz, who descanted in the severest terms on the intrigues of the Emigrés on the Rhine, which it was not in the interest of any Power to support. It was ridiculous, he said, in the French Princes, and in Russia and Spain, to declare the acceptance of the constitution by the King compulsory, and therefore void; and still more so to dispute the right of Louis XVI. to alter the constitution at all. He said that they would vainly endeavour to goad Austria into a war, which could only have the very worst consequences for Louis and the present predominance of the moderate party in France. . . . Here, again, we see that without the machinations of the Girondists, the revolutionary war would never have been commenced. It is true, indeed, that at this time a very perceptible change took place in the opinions

of the second German potentate—the King of Prussia. Immediately after the Congress of Pillnitz, great numbers of French Emigrés, who had been driven from Vienna by the coldness of Leopold, had betaken themselves to Berlin. At the Prussian Court they met with a hospitable reception, and aroused in the King, by their graphic descriptions, a warm interest for the victims of the Revolution. . . . He loaded the Emigrés with marks of favour of every kind, and thereby excited in them the most exaggerated hopes. Yet the King was far from intending to risk any important interest of the State for the sake of his protégés; he had no idea of pursuing an aggressive policy towards France; and the only point in which he differed from Leopold was in the feeling with which he regarded the development of the warlike tendencies of the French. His Ministers, moreover, were, without exception, possessed by the same idea as Prince Kaunitz; that a French war would be a misfortune to all Europe." As the year 1791 drew towards its close, "unfavourable news arrived from Paris. The attempts of the Feuillants [Parisian political party in the assembly during the Revolution] had failed; Lafayette had separated himself from them and from the Court; and the zeal and confidence of victory among the Democrats were greater than ever. The Emigrés in Berlin were jubilant; they had always declared that no impression was to be made upon the Jacobins except by the edge of the sword, and that all hopes founded on the stability of a moderate middle party were futile. The King of Prussia agreed with them, and determined to begin the unavoidable struggle as quickly as possible. He told his Ministers that war was certain, and that Bischoffswerder ought to go once more to the Emperor. . . . Bischoffswerder, having received instructions from the King himself, left Berlin, and arrived in Vienna, after a speedy journey, on the 28th of February. But he was not destined again to discuss the fate of Europe with his Imperial patron; for on the 29th the smallpox showed itself, of which Leopold died after three days sickness. The greatest consternation and confusion reigned in Vienna. . . . No one knew to whom the young King Francis—he was as yet only king of Hungary and Bohemia—would give his confidence, or what course he would take; nay, his weakly and nervous constitution rendered it doubtful whether he could bear—even for a short period—the burdens of his office. For the present he confirmed the Ministers in their places, and expressed to them his wish to adhere to the political system of his father. . . . He . . . ordered one of his most experienced Generals, Prince Hohenlohe-Kirchberg, to be summoned to Vienna, that he might take council with Bischoffswerder respecting the warlike measures to be adopted by both Powers, in case of a French attack. At the same time, however, the Polish question was, if possible, to be brought to a decision, and Leopold's plan in all its details was to be categorically recommended for adoption, both in Berlin and Petersburg. . . . The Austrian Minister, Spielmann, had prepared the memorial on Poland, which Prince Reuss presented at Berlin, on the 10th of March. It represented that Austria and Prussia had the same interest in stopping a source of eternal embarrassment and discussion, by strengthening the cause of peace and order in Poland. That herein lay an especially powerful motive to make the crown of that country hereditary; that for both Powers the Elector of Saxony would be the most acceptable wearer of that crown. . . . The important point, the memorial went on to say, was this, that Poland should no longer be

dependent on the predominant influence of any one neighbouring Power. . . . When the King had read this memorial, in which the Saxon-Polish union was brought forward, not as an idea of the feeble Elector, but as a proposal of powerful Austria, he cried out, 'We must never give our consent to this.' He agreed with his Ministers in the conclusion that nothing would be more dangerous to Prussia, than the formation of such a Power as would result from the proposed lasting union of Poland and Saxony—a Power, which, in alliance with Austria, could immediately overrun Silesia, and in alliance with Russia, might be fatal to East Prussia. . . . In the midst of this angry and anxious excitement, which for a moment alienated his heart from Austria, the King received a fresh and no less important despatch from Petersburg. Count Golz announced the first direct communication of Russia respecting Poland. 'Should Poland' [wrote the Russian vice chancellor] 'be firmly and lastingly united to Saxony, a Power of the first rank will arise, and one which will be able to exercise the most sensible pressure upon each of its neighbours. We are greatly concerned in this, in consequence of the extension of our Polish frontier; and Prussia is no less so, from the inevitable increase which would ensue of Saxon influence in the German Empire. We therefore suggest, that Prussia, Austria, and Russia, should come to an intimate understanding with one another on this most important subject.' . . . This communication sounded differently in the ears of the King from that which he had received from Austria. The fears which agitated his own mind and those of the Russian chancellor were identical. While Austria called upon him to commit a political suicide, Russia offered her aid in averting the most harassing danger, and even opened a prospect of a considerable territorial increase. The King had no doubt to which of the two Powers he ought to incline. He would have come to terms with Russia on the spot, had not an insurmountable obstacle existed in the new path which was opened to the aggrandizement of Prussia,—viz., the Polish treaty of 1790; in which Prussia had expressly bound herself to protect the independence and integrity of Poland. . . . He decided that there was no middle course between the Russian and Austrian plans. On the one side was his Polish treaty of 1790, the immediate consequence of which would be a new breach, and perhaps a war, with Russia, and the final result such a strengthening of Poland, as would throw back the Prussian State into that subordinate position, both in Germany and Europe, which it had occupied in the seventeenth century. On the other side there was, indeed, a manifest breach of faith, but also the salvation of Prussia from a perilous dilemma, and perhaps the extension of her boundaries by a goodly Polish Providence. If he wavered at all in this conflict of feeling, the Parisian complications soon put an end to his doubts. In quick succession came the announcements that Delessart's peaceful Ministry had fallen; that King Louis had suffered the deepest humiliation; and that the helm of the State had passed into the hands of the Girondist war party. A declaration of war on the part of France against Francis II. might be daily expected, and the Russian-Polish contest would then only form the less important moiety of the European catastrophe. Austria would now be occupied for a long time in the West; there could be no more question of the formation of a Polish-Saxon State; and Austria could no longer be reckoned upon to protect the constitution of 1791, or even to repel a Rus-

sian invasion of Poland. Prussia was bound to aid the Austrians against France, and for many months the King had cherished no more ardent wish than to fulfil this obligation with all his power. Simultaneously to oppose the Empress Catharine, was out of the question. . . . The King wrote on the 12th of March to his Ministers as follows: . . . 'Russia is not far removed from thoughts of a new partition; and this would indeed be the most effectual means of limiting the power of a Polish King, whether hereditary or elective. I doubt, however, whether in this case a suitable compensation could be found for Austria; and whether, after such a curtailment of the power of Poland, the Elector of Saxony would accept the crown. Yet if Austria could be compensated, the Russian plan would be the most advantageous for Prussia,—always provided that Prussia received the whole left bank of the Vistula, by the acquisition of which that distant frontier—so hard to be defended—would be well rounded off. This is my judgment respecting Polish affairs.' This was Poland's sentence of death. It was not, as we have seen, the result of a long-existing greed, but a suddenly seized expedient, which seemed to be accompanied with the least evil, in the midst of an unexampled European crisis. . . . On the 20th of April the French National Assembly proclaimed war against the King of Hungary and Bohemia. A fortnight later the Prince of Hohenlohe-Kirchberg appeared in Berlin to settle some common plan for the campaign; and at the same time Kaunitz directed Prince Reuss to enter into negotiations on the political question of expenditure and compensation. Count Schulenburg . . . immediately sent a reply to the Prince, to the effect that Prussia—as it had uniformly declared since the previous summer—could only engage in the war on condition of receiving an adequate compensation. . . . Both statesmen well knew with what secret mistrust each of these Powers contemplated the aggrandizement of the other; their deliberations were therefore conducted with slow and anxious caution, and months passed by before their respective demands were reduced to any definite shape."—H. von Sybel, *History of the French Revolution*, v. 2, bk. 4, ch. 1.

1801-1803.—Treaty of Lunéville.—Territorial cessions and changes.—Settlement of indemnities in the empire.—Absorption of free cities.—Changes in the Holy Roman empire.—"The Treaty of Lunéville, February 9, 1801, 'was nothing else than the Peace of Campo-Formio [see FRANCE: 1797 (May-October)], a little aggravated for Austria, and leaving the Empire no illusions.' It gave France Belgium, Frankenstein, and the Frickthal. It recognized the Cisalpine Republic. It ceded, both in the name of the Emperor and in that of the Empire, the German territories of the left bank to the French Republic, a concession no longer, as in 1797, embodied in a secret article, but openly set forth in the seventh clause of the treaty. The Treaty of Lunéville has been called the 'First Revolution' of Germany. By it a territory of 150,000 square miles, peopled by 3,500,000 inhabitants, and amounting to about a seventh part of the population and territory of the whole Empire, was definitely transferred to foreign non-German powers. To indemnify the dispossessed princes the principle of secularization was admitted, which was tantamount to undermining the foundations of the old Imperial Constitution. But if the German Empire were doomed to die, its end need not have been indecorous. The Diet of Ratisbon summoned by the Emperor to consider the situation agreed, on the motion of Brandenburg, to ratify the treaty on condition that it should co-operate in arranging the transfers to territory which the treaty necessitated. If there had been at that time any feeling for the good name and internal independence of Germany as a whole, this business of the compensations would have been arranged as a domestic matter by the Colleges of the Diet. But Germany was incapable of common action. In the Diet itself there were three parties—those who wanted no secularization at all, those who wished for a restricted secularization, and those who would have a complete and absolute secularization of all ecclesiastical property. The violent ecclesiastics—the Elector of

Trèves, the Bishops of Spire and Worms—belonged to the first party; Austria, Saxony, and Mainz to the second; Prussia and the Protestant powers to the third. Nor was there any agreement as to the mode in which the Empire should proceed. . . . The jealousies of Austria and Prussia, each of which wished to secure the largest slice, added to the difficulty of arriving at an agreement. When, in September-October 1801, Austria caused an Archduke of Austria to be elected to the Electorate of Cologne and the Bishopric of Münster (the territory of all others which Prussia was coveting), the rupture between the two powers became complete, and it was clear that the question of German indemnities must be submitted to a foreign arbitration. Even before this incident the Diet had declared its bankruptcy. After futile discussions, lasting from February to October, it determined (October 2) to appoint a commission 'to discuss with the French government the questions reserved for a particular understanding by the Treaty of Lunéville.' But as the two leading powers represented in the commission were hopelessly at variance, this issue was likewise closed. The divisions of Germany were the opportunity of Bonaparte. He determined to intervene in conjunction with Alexander of Russia, and to settle for Germany the affairs she was unable to settle for herself. 'The right of France to intervene,' says a French writer, 'resulted not only from the interest which she had in the definitive organization of Germany, but from the treaties of Westphalia, from the special treaties which she had concluded with most of the German States, Prussia, Baden, Hesse, Würtemberg, and Bavaria, and lastly from the text of the Treaty of Lunéville. The right of Russia to intervene was more contestable. It proceeded from her participation in the Treaty of Teschen (1779), which had confirmed former treaties, and from the desire of the First Consul to share his responsibility with a great power.' But in truth it is misleading to speak of technical rights. Franco-Russian mediation was acceptable to the German powers because they could not agree among themselves, and it was offered by Napoleon because it served his interest. The obtuse and dilatory diplomacy of Vienna gave to the First Consul an opportunity which he was quick to improve. When Austria proposed to the Court of Munich that Bavaria should cede certain territories to the Hapsburgs on her eastern border in exchange for compensations, Bonaparte explained to the Elector with masterly clearness that such a step would be fatal to the interests of his house. It is no wonder that the princes spontaneously appealed to him, for an eye so clear, a hand so firm, a judgement so prompt, were not to be found in Germany. With serene self-confidence the French Foreign Office was prepared for the emergency, and had drawn up a plan of compensation immediately after the signature of the Treaty of Lunéville. In the Franco-Russian note presented to the Diet the two mediating powers explained their position. They had been compelled to act by the delays and divisions of Germany; they were 'perfectly disinterested'; they would proceed with 'rigorous impartiality.' Their joint object was so to arrange the compensations as to 'establish the equilibrium which existed before the war between the principal houses of Germany.' . . . The secular princes, eager for the spoils of the Church, sent their envoys to Paris to treat with Talleyrand, the French Minister of Foreign Affairs, who handled the map of Germany with a freedom little short of being complete. The base obsequiousness of the German envoys was only equalled by the timorous

greed of their impatient masters, and the favours of the First Consul were supplicated in terms that would not have been exceeded for abjectness in Byzantium. The house of Talleyrand became the mart in which so many square miles, peopled by so many souls, could be acquired for so many snuffboxes, and so many francs, and so many attentions to Madame Talleyrand's poodle. Princes and dukes, princesses and duchesses, paid huge sums to be comprehended in the indemnities. Some of the money was intercepted by swindling agents: much found its way into the long purse of Talleyrand, whose enormous fortune was largely built out of the complimentary gifts which he received for his services upon this occasion. The First Consul wisely kept himself aloof from the open traffic, but behind the scenes he was scheming restlessly. . . . To isolate Austria; to satisfy Prussia so far as possible and to attach her to France, without permitting her to extend over the centre of Germany or in the direction of the French frontier; to make separate treaties with the small princes; to build up the secondary States of Germany, such as Bavaria, Würtemberg, and Baden, into a buffer against the House of Hapsburg; and in all this to make such concessions to Russia as might flatter her pride without in the least impairing the interests of France,—these were the main ideas of his policy. Everything did not fall out exactly as Bonaparte would have wished. He would have given Mecklenburg to Prussia, and transplanted the two Houses of Schwerin and Strelitz to Franconia. By such an arrangement the Hohenzollerns would have been prevented from obtaining their compensations either in the centre or in the west of Germany. They would be thrown northward and burdened with a large tract of barren and backward plain, their weight in European affairs would not be increased, and their political interest would shift from the Main and the Rhine to the Baltic. The two dukes, however, proud of their ancient Slavonic descent, refused to move, and even had they consented, Russia would probably have opposed the exchange. But the main objects of the First Consul's policy were attained. Prussian compensations lay partly in the west—Westphalian abbeys and bishoprics—and partly in the centre, Erfurt and Eichsfeld. The coveted Baireuth and Würzburg went, not to Prussia (as she had hoped), but to Bavaria. Separate treaties were signed with Baden, Würtemberg, and Hesse-Cassel, promising each territorial gains and the Electoral dignity. Osnabrück was to go to Hanover, the old Duchy of Westphalia to Darmstadt; a new ecclesiastical Electorate at Aschaffenburg was designed for Dalberg, Coadjutor of Mainz: the number of free towns was to be reduced from fifty-two to eight. All this was done by a series of separate treaties and conventions between France on the one hand, and the German princes or towns on the other. These treaties and conventions made up the French plan, which, having received Russia's assent, was presented to the Diet, accompanied by the insulting but necessary provision that it must be accepted in two months. Still further to emphasize the nullity of that ancient body, France authorized her clients to occupy provisionally the territories assigned to them. The speed with which this authorization was acted on was the reverse of edifying, and gave rise to much legitimate outcry. Meanwhile the peace Deputation of the Diet pursued its examination of the Franco-Russian plan amidst a storm of recriminations from all who believed themselves injured. The Deputation, to save its own dignity, wished to approve the acceptance of the act of

indemnity *en bloc*, while reserving to itself the power to make necessary amendments. But Bonaparte refused to accept a resolution that might have opened the way to insidious changes, and, so long as the Peace of Amiens lasted, he held out against any modification of his plan. But the outbreak of the war with England, and a coolness with Russia, made him disposed to be more accommodating to Austria, who had the most powerful reasons for being discontented with the Franco-Russian plan. Concessions were made to Francis, who withdrew his opposition, and on February 25, 1803, the Diet began to discuss the amended plan. Their decree ratifying the territorial changes proposed by France and Russia changed the face and the structure of Germany. The number of German States was reduced by about one-half by the absorption of the ecclesiastical principalities, in itself a great and salutary simplification. The old organization of the Circles was completely broken up. Of the fifty-two free towns six finally remained: Hamburg, Bremen, Lübeck, Frankfort, Augsburg, Nuremberg. Of the three ecclesiastical Electors, one only survived, and he was transplanted from Mainz to Ratisbon, and endowed with an artificially constructed state and revenue composed of the Bishopric and Principality of Ratisbon, the town and county of Wetzlar, the Principality of Aschaffenburg, and a charge of 600,000 florins on the Rhenish octroi. The Grand Masters of the Teutonic Order and of the Order of St. John represented all that was left of the thirty-four ecclesiastical votes in the Diet. In the College of Princes the majority passed from the Catholics to the Protestants, from the south to the north, from the party of Austria to the party of Prussia. In the distribution of territory the claims of the small princes and knights—the Austrian garrison in the west—were either wholly or partially disregarded. All the distinctive features of the Holy Roman Empire were in fact either modified or completely obliterated. The Emperor, whose prestige had been already shattered by the French victories, was forced to look on while Bonaparte and his Russian ally arranged the map of Germany to suit their convenience. While the ascendancy of the Hapsburg House received a fatal blow by the weakening of the Catholic element of the Diet, by the destruction of the ecclesiastical principalities, by the surrender of the interests of the knights and smaller princes, but above all by the strengthening of Prussia and the intermediate powers, Bavaria, Baden, Würtemberg, the disappearance of most of the free towns, and of all the ecclesiastical principalities save one, showed that Germany was at last nearing the end of her mediæval constitution. The whole internal balance of power was in fact overturned. Prussia, which had only lost Cleves, Meurs, Guelders, some cantons in Frisia, and some customs on the Meuse and the Rhine, received territories which in population and area were three times and in revenue four times as considerable as those which she had been compelled to relinquish. She was awarded the Westphalian Bishoprics of Hildesheim and Paderborn, the town and part of the Bishopric of Münster (one of the richest sees in Germany), six Westphalian abbeys, Erfurt and the Thuringian territories which had belonged to the See of Mainz, and the free towns of Mülhausen, Nordhausen, and Goslar. Nor was this all. A small State, containing a population of one hundred and twenty-six thousand souls, was created for the Stadtholder of Holland out of the Bishoprics of Fulda and Corvey, the imperial town of Dortmund and three scattered abbeys, and destined to revert

to the Prussian crown in the event of the extinction of the Orange line. Bavaria obtained even greater favours. While she had lost in the Duchy of Deux-Ponts and other scattered principalities and possessions on the left bank 580,000 inhabitants and 4,000,000 florins, she was now presented with 854,000 inhabitants and a revenue of 6,607,000 florins. But these figures only inadequately represent the value of her new possessions. She acquired the better part of the Bishopric of Würzburg, and the whole of the Bishopric of Bamberg, two of the richest and most civilized territories in Germany. She obtained the Bishoprics of Freising and Augsburg, part of the Bishopric of Passau, the Priory of Kempten, twelve abbeys, and seventeen free towns. Instead of being scattered in widely dispersed fragments and studded with municipal and ecclesiastical *enclaves*, Bavaria was not a compact and continuous State, nor was it a slight advantage that her territory with its poor and backward population should be united to others which had long felt the stimulus of energetic and enlightened rule. Baden, which had lost about 25,000 inhabitants and 240,000 florins on the left bank, received benefits on a similar scale from France. She gained the Bishopric of Constance, together with the territories on the right bank which were formerly attached to the Sees of Spire, Strasburg, and Basle, the towns of Heidelberg and Mannheim, ten abbeys, seven free towns, and other possessions, in all 237,000 inhabitants and 1,500,000 florins, or about ten times as much as she had lost. In addition to this the Grand Duke of Baden received the Electoral hat. The Duke of Würtemberg and the Landgrave of Hesse-Cassel were likewise made Electors and obtained large territorial acquisitions. Hesse-Darmstadt, for the loss of 40,000 subjects, was recompensed by the gain of three times as many. Hanover received the Bishopric of Osnabrück; Mecklenburg a claim on the octroi of the Rhine. The recipients of these favours were under no delusions as to the source from which they were derived. They had bargained for them in Paris, and it was well understood that the consent of the Reich was a pure formality. For the two years during which the compensations were being discussed, the influence of Bonaparte was predominant in Germany, veiled though it was under diplomatic fictions. The princes who sent their ambassadors to Paris, and their back-sheesh to Talleyrand, were in reality doing their first acts of obedience to the new Charlemagne. Silently but surely the bases of a new Germanic Confederation were being laid, a confederation which looked not to Austria but to France for leadership, protection, and (we must add) for plunder. The externals of the Empire indeed still existed—the Diet at Ratisbon, the Court of Wetzlar, the Electoral hats. But no one respected them, no one cared when they were to go or how soon, except a handful of interested or disinterested pedants. The German Revolution had not been accomplished without exciting passions, but they were the passions of envy and greed. It had helped to consolidate and to unify Germany, to make its structure more reasonable and more modern. But it had not excited enthusiasm, it had not kindled a spark of patriotism, it had not even fired the imagination of intellectual men as something tending to higher things. The people of Germany had no part in this revolution. The guns of Marengo and Austerlitz gave the signal for it; Russia and France presided over its course: the fruits of the change were enjoyed not by the people but by the despots who ruled them. Its

first result was to enslave Germany to France."—H. A. L. Fisher, *Studies in Napoleonic statesmanship: Germany*, pp. 38-46.

1805-1806.—Peace of Pressburg.—Territorial losses of Austria.—Aggrandizement of Bavaria and Würtemberg, which become kingdoms, and Baden a grand duchy.—Confederation of the Rhine.—End of the Holy Roman empire.—Prussian renaissance.—"On the 6th of December, hostilities ceased, and the Russians retired by way of Galicia, but in accordance with the terms of the armistice, the French troops continued to occupy all the lands they had invaded, Austria, Tyrol, Venetia, Carniola, Carinthia, and Styria; within Bohemia they were to have the circle of Tabor, together with Brno [Brünn] and Znoymo [Znaim] in Moravia and Pozsony (Pressburg) in Hungary. The Morava (March) and the Hungarian frontier formed the line of demarcation between the two armies. A definitive peace was signed at Pressburg on the 26th of December, 1805. Austria recognized the conquests of France in Holland and Switzerland and the annexation of Genoa, and ceded to the kingdom of Italy Friuli, Istria, Dalmatia with its islands, and the Bocche di Cattaro. A little later, by the explanatory Act of Fontainebleau, she lost the last of her possessions to the west of the Isonzo, when she exchanged those portions of the counties of Gorico and Gradisca which are situated on the right bank of that river for the county of Montefalcone in Istria. The new kingdoms of Bavaria and Würtemberg [brought into existence by this treaty, through the recognition of them by the Emperor Francis] were aggrandized at the expense of Austria. Bavaria obtained Vorarlberg, the county of Hohenems, the town of Lindau, and the whole of Tyrol, with Brixen and Trent. Austrian Swabia was given to Würtemberg, while Breisgau and the Ortenau were bestowed on the new grand-duke of Baden. One compensation alone, the duchy of Salzburg, fell to Austria for all her sacrifices, and this has remained in her possession ever since. The old bishopric of Würzburg was created an electorate and granted to Ferdinand III. of Tuscany and Salzburg. Altogether the monarchy lost about 25,400 square miles and nearly 3,000,000 of inhabitants. She lost Tyrol with its brave and loyal inhabitants and the Vorländer which had assured Austrian influence in Germany; every possession on the Rhine, in the Black Forest, and on the Lower Danube; she no longer touched either Switzerland or Italy, and she ceased to be a maritime power. Besides all this, she had to pay forty millions for the expenses of the war, while she was exhausted by contributions and requisitions. Vienna had suffered much, and the French army had carried off the 2,000 cannons and the 100,000 guns which had been contained in her arsenals. On the 16th of January, 1806, the emperor Francis returned to his capital. He was enthusiastically received, and the Viennese returned to the luxurious and easy way of life which has always characterized them. . . . Austria seemed no longer to have any part to play in German politics. Bavaria, Würtemberg and Baden had been formed into a separate league—the Confederation

of the Rhine—under French protection. On the 1st of August, 1806, these states announced to the Reichstag at Ratisbon that they looked upon the empire as at an end, and on the 6th, Francis II. formally resigned the empire altogether, and released all the imperial officials from their engagements to him. Thus the sceptre of Charlemagne fell from the hands of the dynasty which had held it without interruption from 1438."—L. Leger, *History of Austro-Hungary*, ch. 25.—"Every bond of union was dissolved with the diet of the empire and with the imperial chamber. The barons and counts of the empire and the petty princes were mediatised; the princes of Hohenlohe, Oettingen, Schwarzenberg, Thurn and Taxis, the Truchsess von Waldburg, Fürstenberg, Fugger, Leiningen, Löwenstein, Solms, Hesse-Homburg, Wied-Runkel, and Orange-Fulda, became subject to the neighbouring Rhenish confederated princes. Of the remaining six imperial free cities, Augsburg and Nüremberg fell to Bavaria; Frankfurt, under the title of grand-duchy, to the ancient elector of Mayence, who was again transferred thither from Ratisbon. The ancient Hansetowns, Hamburg, Lübeck, and Bremen, alone retained their freedom."—W. Menzel, *History of Germany*, v. 3, ch. 253.—"A swift succession of triumphs had left only one thing still preventing the full recognition of the Corsican warrior as sovereign of Western Europe, and that one was the existence of the old Romano-Germanic Empire. Napoleon had not long assumed his new title when he began to mark a distinction between 'la France' and 'l'Empire Française.' France had, since 1792, advanced to the Rhine, and, by the annexation of Piedmont, had overstepped the Alps; the French Empire included, besides the kingdom of Italy, a mass of dependent states, Naples, Holland, Switzerland, and many German principalities, the allies of France in the same sense in which the 'socii populi Romani' were allies of Rome. When the last of Pitt's coalitions had been destroyed at Austerlitz, and Austria had made her submission by the peace of Pressburg, the conqueror felt that his hour was come. He had now overcome two Emperors, those of Austria and Russia, claiming to represent the old and new Rome respectively, and had in eighteen months created more kings than the occupants of the Germanic throne in as many centuries. It was time, he thought, to sweep away obsolete pretensions, and claim the sole inheritance of that Western Empire, of which the titles and ceremonies of his court presented a grotesque imitation. The task was an easy one after what had been already accomplished. Previous wars and treaties had so redistributed the territories and changed the constitution of the Germanic Empire that it could hardly be said to exist in anything but name. . . . The Emperor Francis, partly foreboding the events that were at hand, partly in order to meet Napoleon's assumption of the imperial name by depriving that name of its peculiar meaning, began in A.D. 1805 to style himself 'Hereditary Emperor of Austria,' while retaining at the same time his former title. The next act of the drama was one in which we may more readily pardon the ambition of a foreign conqueror than the traitorous selfishness of the German princes, who broke every tie of ancient friendship and duty to grovel at his throne. By the Act of the Confederation of the Rhine, signed at Paris, July 12th, 1806, Bavaria, Würtemberg, Baden, and several other states, sixteen in all, withdrew from the body and repudiated the laws of the Empire, while on August 1st the French envoy at Regensburg an-

nounced to the Diet that his master, who had consented to become Protector of the Confederate princes, no longer recognized the existence of the Empire. Francis II. resolved at once to anticipate this new Odoacer, and by a declaration, dated August 6th, 1806, resigned the imperial dignity. His deed states that finding it impossible, in the altered state of things, to fulfil the obligations imposed by his capitulation, he considers as dissolved the bonds which attached him to the Germanic body, releases from their allegiance the states who formed it, and retires to the government of his hereditary dominions under the title of 'Emperor of Austria.' Throughout, the term 'German Empire' (Deutsches Reich) is employed. But it was the crown of Augustus, of Constantine, of Charles, of Maximilian, that Francis of Hapsburg laid down, and a new era in the world's history was marked by the fall of its most venerable institution. One thousand and six years after Leo the Pope had crowned the Frankish king, eighteen hundred and fifty-eight years after Cæsar had conquered at Pharsalia, the Holy Roman Empire came to its end."—J. Bryce, *Holy Roman empire*, ch. 20.—"The combined influence of the ideas of 1798 and of the Great War which followed their proclamation produced two concrete results in Germany of incalculable importance—the one of a negative, the other of a positive character. The first was the destruction of the political framework of the country. The proved weakness of the Empire in the war, and the desertion of Prussia and the north at the height of the struggle, and the collapse of the Ecclesiastical Electorates, left no attentive observer in doubt that the old firm was in liquidation. No ambitious and aggressive State could have wished for a neighbour less fitted by its traditions and institutions to parry the thrust of its conquering sword. Well might Napoleon write to the Directory from Rastadt: 'If the Germanic Body did not exist, we should have to create it expressly for our own convenience.' When the left bank of the Rhine was annexed to the French Republic; Görres wrote his celebrated Obituary. 'On December 30, 1797, at three in the afternoon, The Holy Roman Empire, supported by the Sacraments, passed away peacefully at Regensburg at the age of 955, in consequence of senile debility and an apoplectic stroke. The deceased was born at Verdun in the year 842, and educated at the court of Charles the Simple and his successors. The young prince was taught piety by the Popes who canonised him in his life time. But his tendency to a sedentary life, combined with zeal for religion, undermined his health. His head became visibly weaker, till at last he went mad in the Crusades. Frequent bleedings and careful diet restored him; but, reduced to a shadow, the invalid tottered through the centuries till violent hemorrhage occurred in the Thirty Years' War. Hardly had he recovered when the French arrived, and a stroke put an end to his sufferings. He kept himself unstained by the Aufklarung, and bequeathed the left bank of the Rhine to the French Republic.' Görres was right. The Empire was not buried till 1805, but it was slain by the Revolution. It perished unwept, unhonored, unsung, and its ghost had to be laid before Germany could be reborn. . . . The second great concrete result of the Revolution, was the renaissance of Prussia; but it was not until the débâcle of 1806 that her rulers began to realize that they must learn lessons from their terrible neighbour. . . . Among the counsellors of Frederick William II and his successor were men like Mencken and Lombard, who desired the ap-

plication of French principles in diluted form; and young Custine pronounced Struensee as much a partisan of French Revolution as a Russian Minister could be. But they were not statesmen of the first rank, and they never seriously attempted to carry out the changes which they knew to be necessary. The hour of reform arrived when the logic of the stricken field had revealed the need of building from the depths, and when men of ability and resolution received the reluctant permission of the monarch to carry out some of the most essential tasks. France had shown how to develop and apply the latent strength and capacity of a nation; and the grandeur of her achievement impressed even those who staggered under her blows."—G. P. Gooche, *Germany and the French Revolution*, pp. 515-516, 518, 534.—See also AUSTRIA: 1798-1806.

1806 (January-August).—Confederation of the Rhine.—Cession of Hanover to Prussia.—Double dealing and weakness of the latter.—Her submission to Napoleon's insults and wrongs.—Final goading of the nation to war.—"The object at which all French politicians had aimed since the outbreak of the Revolutionary War, the exclusion of both Austria and Prussia from influence in Western Germany, was now completely attained. The triumph of French statesmanship, the consummation of two centuries of German discord, was seen in the Act of Federation subscribed by the Western German Sovereigns in the summer of 1806. By this Act the Kings of Bavaria and Würtemberg, the Elector of Baden, and 13 minor princes, united themselves, in the League known as the Rhenish Confederacy, under the protection of the French Emperor, and undertook to furnish contingents, amounting to 63,000 men, in all wars in which the French Empire should engage. Their connection with the ancient Germanic Body was completely severed; the very town in which the Diet of the Empire had held its meetings was annexed by one of the members of the Confederacy. The Confederacy itself, with a population of 8,000,000, became for all purposes of war and foreign policy a part of France. Its armies were organised by French officers; its frontiers were fortified by French engineers; its treaties were made for it at Paris. In the domestic changes which took place within these States the work of consolidation begun in 1801 was carried forward with increased vigour. Scores of tiny principalities which had escaped dissolution in the earlier movement were now absorbed by their stronger neighbours. . . . With the establishment of the Rhenish Confederacy and the conquest of Naples, Napoleon's empire reached, but did not overpass, the limits within which the sovereignty of France might probably have been long maintained. . . . If we may judge from the feeling with which Napoleon was regarded in Germany down to the middle of the year 1806, and in Italy down to a much later date, the Empire then founded might have been permanently upheld, if Napoleon had abstained from attacking other States." During the winter of 1806, Count Haugwitz, the Prussian minister, had visited Paris "for the purpose of obtaining some modification in the treaty which he had signed [at the palace of Schönbrunn, near Vienna] on behalf of Prussia after the battle of Austerlitz. The principal feature in that treaty had been the grant of Hanover to Prussia by the French Emperor in return for its alliance. This was the point which above all others excited King Frederick William's fears and scruples. He desired to acquire Hanover, but he also desired to derive

his title rather from its English owner [King George III, who was also elector of Hanover] than from its French invader. It was the object of Haugwitz' visit to Paris to obtain an alteration in the terms of the treaty which should make the Prussian occupation of Hanover appear to be merely provisional, and reserve to the King of England at least a nominal voice in its ultimate transfer. In full confidence that Napoleon would agree to such a change, the King of Prussia, on taking possession of Hanover in January, 1806, concealed the fact of its cession to himself by Napoleon, and published an untruthful proclamation. . . . The bitter truth that the treaty between France and Prussia contained no single word reserving the rights of the Elector, and that the very idea of qualifying the absolute cession of Hanover was an afterthought, lay hidden in the conscience of the Prussian Government. Never had a Government more completely placed itself at the mercy of a pitiless enemy. Count Haugwitz, on reaching Paris, was received by Napoleon with a storm of indignation and contempt. Napoleon declared that the ill-faith of Prussia had made an end even of that miserable pact which had been extorted after Austerlitz, and insisted that Prussia should openly defy Great Britain by closing the ports of Northern Germany to British vessels, and by declaring itself endowed by Napoleon with Hanover in virtue of Napoleon's own right of conquest. Haugwitz signed a second and more humiliating treaty [February 15] embodying these conditions; and the Prussian Government, now brought into the depths of contempt, but unready for immediate war, executed the orders of its master. . . . A decree was published excluding the ships of England from the ports of Prussia and from those of Hanover itself (March 28, 1806). It was promptly followed by the seizure of 400 Prussian vessels in British harbours, and by the total extinction of Prussian maritime commerce by British privateers. Scarcely was Prussia committed to this ruinous conflict with Great Britain when Napoleon opened negotiations for peace with Mr. Fox's Government. The first condition required by Great Britain was the restitution of Hanover to King George III. It was unhesitatingly granted by Napoleon. Thus was Prussia to be mocked of its prey, after it had been robbed of all its honour. . . . There was scarcely a courtier in Berlin who did not feel that the yoke of the French had become past endurance; even Haugwitz himself now considered war as a question of time. The patriotic party in the capital and the younger officers of the army bitterly denounced the dishonoured Government, and urged the King to strike for the credit of his country. . . . Brunswick was summoned to the King's council to form plans of a campaign; and appeals for help were sent to Vienna, to St. Petersburg, and even to the hostile Court of London. The condition of Prussia at this critical moment was one which filled with the deepest alarm those few patriotic statesmen who were not blinded by national vanity or by a slavery to routine. . . . Early in the year 1806 a paper was drawn up by Stein, exposing, in language seldom used by a statesman, the character of the men by whom Frederick William was surrounded, and declaring that nothing but a speedy change of system could save the Prussian State from utter downfall and ruin. Two measures of immediate necessity were specified by Stein, the establishment of a responsible council of Ministers, and the removal of Haugwitz and all his friends from power. . . . The army of Prussia . . . was nothing but the army of

Frederick the Great grown twenty years older. . . . All Southern Germany was still in Napoleon's hands. The appearance of a Russian force in Dalmatia, after that country had been ceded by Austria to the French Emperor, had given Napoleon an excuse for maintaining his troops in their positions beyond the Rhine. As the probability of a war with Prussia became greater and greater, Napoleon tightened his grasp upon the Confederate States. Publications originating among the patriotic circles of Austria were beginning to appeal to the German people to unite against a foreign oppressor. An anonymous pamphlet, entitled 'Germany in its Deep Humiliation,' was sold by various booksellers in Bavaria, among others by Palm, a citizen of Nuremberg. There is no evidence that Palm was even acquainted with the contents of the pamphlet; but . . . Napoleon . . . required a victim to terrify those who, among the German people, might be inclined to listen to the call of patriotism. Palm was not too obscure for the new Charlemagne. The innocent and unoffending man, innocent even of the honourable crime of attempting to save his country, was dragged before a tribunal of French soldiers, and executed within twenty-four hours of his trial, in pursuance of the imperative orders of Napoleon (August 26). . . . Several years later, . . . the story of Palm's death was one of those that kindled the bitterest sense of wrong; at the time, it exercised no influence upon the course of political events. Prussia had already resolved upon war."—C. A. Fyffe, *History of modern Europe*, v. 1, ch. 6-7.

1806 (October).—Napoleon's sudden invasion of Prussia.—Decisive battle of Jena.—Prostration of the Prussian kingdom.—"The Emperor of Russia . . . visited Berlin, when the feelings of Prussia, and indeed of all the neighbouring states, were in this fever of excitement. He again urged Frederick William to take up arms in the common cause, and offered to back him with all the forces of his own great empire. The English government, taking advantage of the same crisis, sent Lord Morpeth to Berlin, with offers of pecuniary supplies—about the acceptance of which, however, the anxiety of Prussia on the subject of Hanover created some difficulty. Lastly, Buonaparte, well informed of what was passing in Berlin, and desirous, since war must be, to hurry Frederick into the field ere the armies of the Czar could be joined with his, now poured out in the 'Moniteur' such abuse on the persons and characters of the Queen, Prince Louis, and every illustrious patriot throughout Prussia, that the general wrath could no longer be held in check. Warlike preparations of every kind filled the kingdom during August and September. On the 1st of October the Prussian minister at Paris presented a note to Talleyrand, demanding, among other things, that the formation of a confederacy in the north of Germany should no longer be thwarted by French interference, and that the French troops within the territories of the Rhenish League should recross the Rhine into France, by the 8th of the same month of October. But Napoleon was already in person on the German side of the Rhine; and his answer to the Prussian note was a general order to his own troops, in which he called on them to observe in what manner a German sovereign still dared to insult the soldiers of Austerlitz. The conduct of Prussia, in thus rushing into hostilities without waiting for

the advance of the Russians, was as rash as her holding back from Austria during the campaign of Austerlitz had been cowardly. As if determined to profit by no lesson, the Prussian council also directed their army to advance towards the French, instead of lying on their own frontier—a repetition of the great leading blunder of the Austrians in the preceding year. The Prussian army accordingly invaded the Saxon provinces, and the Elector . . . was compelled to accept the alliance which the cabinet of Berlin urged on him, and to join his troops with those of the power by which he had been thus insulted and wronged. No sooner did Napoleon know that the Prussians had advanced into the heart of Saxony, than he formed the plan of his campaign; and they, persisting in their advance, and taking up their position finally on the Saale, afforded him, as if studiously, the means of repeating, at their expense, the very manœuvres which had ruined the Austrians in the preceding campaign." The flank of the Prussian position was turned,—the bridge across the Saale, at Saalfeld, having been secured, after a hot engagement with the corps of Prince Louis of Prussia who fell in the fight,—“the French army passed entirely round them; Napoleon seized Naumburg and blew up the magazines there,—announcing, for the first time, by this explosion, to the King of Prussia and his generalissimo the Duke of Brunswick, that he was in their rear. From this moment the Prussians were isolated, and cut off from all their resources, as completely as the army of Mack was at Ulm, when the French had passed the Danube and overrun Suabia. The Duke of Brunswick hastily endeavoured to concentrate his forces for the purpose of cutting his way back again to the frontier which he had so rashly abandoned. Napoleon, meantime, had posted his divisions so as to watch the chief passages of the Saale, and expected, in confidence, the assault of his outwitted opponent. It was now that he found leisure to answer the manifesto of Frederick William. . . . His letter, dated at Gera, is written in the most elaborate style of insult. . . . The Prussian King understood well, on learning the fall of Naumburg, the imminent danger of his position; and his army was forthwith set in motion, in two great masses; the former, where he was in person present, advancing towards Naumburg; the latter attempting, in like manner, to force their passage through the French line in the neighbourhood of Jena. The King's march was arrested at Auerstädt by Davoust [Davout], who, after a severely contested action, at length repelled the assailant. Napoleon himself, meanwhile, was engaged with the other great body of the Prussians. Arriving on the evening of the 13th October at Jena, he perceived that the enemy were ready to attempt the advance next morning, while his own heavy train was still six-and-thirty hours' march in his rear. Not discouraged with this adverse circumstance, the Emperor laboured all night in directing and encouraging his soldiery to cut a road through the rocks, and draw up by that means such light guns as he had at command to a position on a lofty plateau in front of Jena, where no man could have expected beforehand that any artillery whatever should be planted. . . . Lannes commanded the centre, Augereau the right, Soult the left, and Murat the reserve and cavalry. Soult had to sustain the first assault of the Prussians, which was violent—and sudden; for the mist lay so thick on the field that the armies were within half-gunshot of each other ere the sun and wind rose and discovered them, and on that instant Mollendorf charged. The battle was contested well

for some time on this point; but at length Ney appeared in the rear of the Emperor with a fresh division; and then the French centre advanced to a general charge, before which the Prussians were forced to retire. They moved for some space in good order; but Murat now poured his masses of cavalry on them, storm after storm, with such rapidity and vehemence that their rout became inevitable. It ended in the complete breaking up of the army—horse and foot all flying together, in the confusion of panic, upon the road to Weimar. At that point the fugitives met and mingled with their brethren flying, as confusedly as themselves, from Auerstadt. In the course of this disastrous day 20,000 Prussians were killed or taken, 300 guns, 20 generals, and 60 standards. The Commander-in-Chief, the Duke of Brunswick, being wounded in the face with a grape-shot, was carried early off the field, never to recover. . . . The various routed divisions roamed about the country, seeking separately the means of escape: they were in consequence destined to fall an easy prey. . . . The Prince of Hohenlohe at length drew together not less than 50,000 of these wandering soldiers, and retreated towards the Oder; but was forced, in the end, to lay down his arms at Prentzlow. “His rear, consisting of about 10,000, under the command of the celebrated General Blücher, was so far behind as to render it possible for them to attempt escape. Their heroic leader traversed the country with them for some time unbroken, and sustained a variety of assaults, from far superior numbers, with the most obstinate resolution. By degrees, however, the French, under Soult, hemmed him in on one side, Murat on the other, and Bernadotte appeared close behind him. He was thus forced to throw himself into Lübeck, where a severe action was fought in the streets of the town, on the 6th of November. The Prussian, in this battle, lost 4,000 prisoners, besides the slain and wounded: he retreated to Schwerta, and there, it being impossible for him to go farther without violating the neutrality of Denmark, on the morning of the 7th, Blücher at length laid down his arms. . . . The strong fortresses of the Prussian monarchy made as ineffectual resistance as the armies in the field. . . . Buonaparte, in person, entered Berlin on the 25th of October; and before the end of November, except Königsberg—where the King himself had found refuge, and gathered round him a few thousand troops— . . . and a few less important fortresses, the whole of the German possessions of the house of Brandenburg were in the hands of the conqueror. Louis Buonaparte, King of Holland, meanwhile had advanced into Westphalia and occupied that territory also, with great part of Hanover, East Friesland, Emden, and the dominions of Hesse-Cassel.”—J. G. Lockhart, *Life of Napoleon*, ch. 20.

1806 (October-December).—Napoleon's ungenerous use of his victory.—His insults to the queen of Prussia.—Kingdom governed as conquered territory.—French advance into Poland, to meet the Russians.—Saxony made a kingdom.—“Napoleon made a severe and ungenerous use of his victory. The old Duke of Brunswick, respectable from his age, his achievements under the Great Frederick, and the honourable wounds he had recently received on the field of battle,

and who had written a letter to Napoleon, after the battle of Jena, recommending his subjects to his generosity, was in an especial manner the object of invective. His states were overrun, and the official bulletins disgraced by a puerile tirade against a general who had done nothing but discharge his duty to his sovereign. For this he was punished by the total confiscation of his dominions. So virulent was the language employed, and such the apprehensions in consequence inspired, that the wounded general was compelled, with great personal suffering, to take refuge in Altona, where he soon after died. The Queen, whose spirit in prosperous and constancy in adverse fortune had justly endeared her to her subjects, and rendered her the admiration of all Europe, was pursued in successive bulletins with unmanly sarcasms; and a heroic princess, whose only fault, if fault it was, had been an excess of patriotic ardour, was compared to Helen, whose faithless vices had involved her country in the calamities consequent on the siege of Troy. The whole dominions of the Elector of Hesse Cassel were next seized; and that prince, who had not even combated at Jena, but merely permitted, when he could not prevent, the entry of the Prussians into his dominions, was dethroned and deprived of all his possessions. . . . The Prince of Orange, brother-in-law to the King of Prussia, . . . shared the same fate: while to the nobles of Berlin he used publicly the cruel expression, more withering to his own reputation than theirs,—'I will render that noblesse so poor that they shall be obliged to beg their bread.' . . . Meanwhile the French armies, without any further resistance, took possession of the whole country between the Rhine and the Oder; and in the rear of the victorious bands appeared, in severity unprecedented even in the revolutionary armies, the dismal scourge of contributions. Resolved to maintain the war exclusively on the provinces which were to be its theatre, Napoleon had taken only 24,000 francs in specie across the Rhine in the military chest of the army. It soon appeared from whom the deficiency was to be supplied. On the day after the battle of Jena appeared a proclamation, directing the levy of an extraordinary war contribution of 159,000,000 francs (£6,300,000) on the countries at war with France, of which 100,000,000 was to be borne by the Prussian states to the west of the Vistula, 25,000,000 by the Elector of Saxony [who had already detached himself from his alliance with Prussia], and the remainder by the lesser states in the Prussian confederacy. This enormous burden . . . was levied with unrelenting severity. . . . Nor was this all. The whole civil authorities who remained in the abandoned provinces were compelled to take an oath of fidelity to the French Emperor,—an unprecedented step, which clearly indicated the intention of annexing the Prussian dominions to the great nation. . . . Early in November there appeared an elaborate ordinance, which provided for the complete civil organisation and military occupation of the whole country from the Rhine to the Vistula. By this decree the conquered states were divided into four departments; those of Berlin, of Magdeburg, of Stettin, and of Custrin [Küstrin]; the military and civil government of the whole conquered territory was intrusted to a governor-general at Berlin, having under him eight commanders of provinces into which it was divided. . . . The same system of government was extended to the duchy of Brunswick, the states of Hesse and Hanover, the duchy of Mecklenburg, and the Hanse towns, including

Hamburg, which was speedily oppressed by grievous contributions. . . . The Emperor openly announced his determination to retain possession of all these states till England consented to his demands on the subject of the liberty of the seas. . . . Meanwhile the negotiations for the conclusion of a separate peace between France and Prussia were resumed. . . . The severity of the terms demanded, as well as . . . express assurances that no concessions, how great soever, could lead to a separate accommodation, as Napoleon was resolved to retain all his conquests until a general peace, led, as might have been expected, to the rupture of the negotiations. Desperate as the fortunes of Prussia were, . . . the King . . . declared his resolution to stand or fall with the Emperor of Russia [who was vigorously preparing to fulfil his promise of help to the stricken nation]. This refusal was anticipated by Napoleon. It reached him at Posen, whither he had advanced on his road to the Vistula; and nothing remained but to enter vigorously on the prosecution of the war in Poland. To this period of the war belongs the famous Berlin decree [see FRANCE: 1806-1810] of the 21st November against the commerce of Great Britain. . . . Napoleon . . . at Posen, in Prussian Poland, gave audience to the deputies of that unhappy kingdom, who came to implore his support to the remains of its once mighty dominion. His words were calculated to excite hopes which his subsequent conduct never realised. . . . While the main body of the French army was advancing by rapid strides from the Oder to the Vistula, Napoleon, ever anxious to secure his communications, and clear his rear of hostile bodies, caused two different armies to advance to support the flanks of the invading force. . . . The whole of the north of Germany was overrun by French troops, while 100,000 were assembling to meet the formidable legions of Russia in the heart of Poland. Vast as the forces of Napoleon were, such prodigious efforts, over so great an extent of surface, rendered fresh supplies indispensable. The senate at Paris was ready to furnish them; and on the requisition of the Emperor 80,000 were voted from the youth who were to arrive at the military age in 1807. . . . A treaty, offensive and defensive, between Saxony and France, was the natural result of these successes. This convention, arranged by Talleyrand, was signed at Posen, on the 12th December. It stipulated that the Elector of Saxony should be elevated to the dignity of king; he was admitted into the Confederation of the Rhine, and his contingent fixed at 20,000 men. By a separate article, it was provided that the passage of foreign troops across the kingdom of Saxony should take place without the consent of the sovereign: a provision which sufficiently pointed it out as a military outpost of the great nation—while, by a subsidiary treaty, signed at Posen three days afterwards, the whole minor princes of the House of Saxony were also admitted into the Confederacy."—A. Alison, *History of Europe, 1789-1815*, v. 10, ch. 43, sect. 87-99.

1806-1807.—Opening of Napoleon's campaign against the Russians.—Deluding of the Poles.—Indecisive battle of Eylau.—The campaign against the Russians "opened early in the winter. The 1st of November, the Russians and French marched towards the Vistula, the former from the Memel, the latter from the Oder. Fifty thousand Russians pressed forward under General Benning-

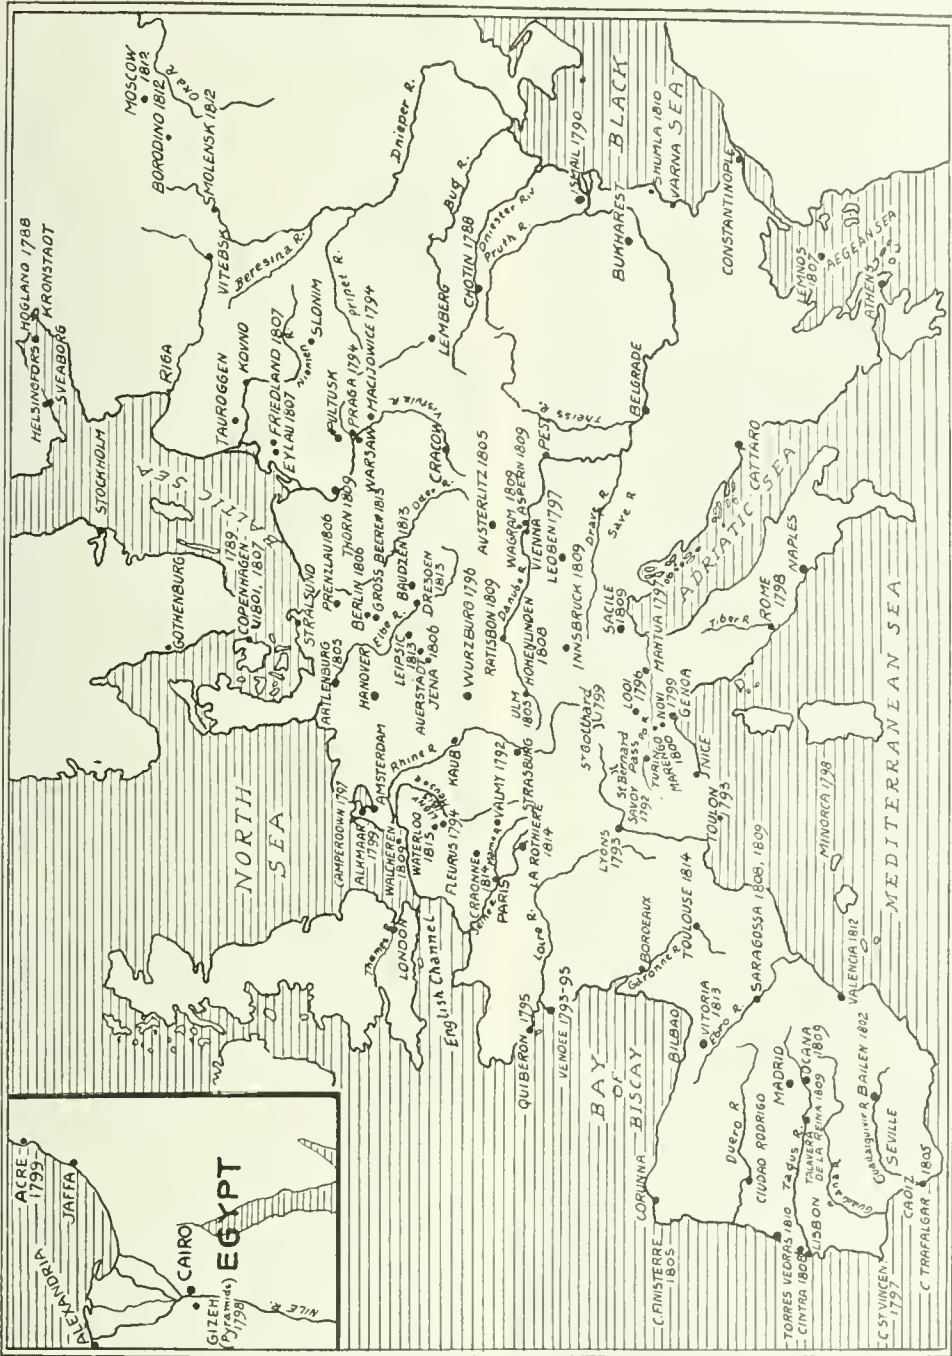

sen; a second and equal army followed at a distance with a reserve force. Some of the Russian forces on the Turkish frontier were recalled, but were still remote. The first two Russian armies, with the remaining Prussians, numbered about 120,000. England made many promises and kept few of them, thinking more of conquering Spanish and Dutch colonies than of helping her allies. Her aid was limited to a small reinforcement of the Swedes guarding Swedish Pomerania, the only portion of Northern Germany not yet in French power. Gustavus II., the young King of Sweden, weak and impulsive, rushed headlong, without a motive, into the . . . alliance [against Napoleon], destined to be so fatal to Sweden. . . . Eighty thousand men under Murat crossed the Oder and entered Prussian Poland, and an equal number stood ready to sustain them. November 9, Davout's division entered Posen, the principal town of the Polish provinces still preserving the national sentiment, and whose people detested Prussian rule and resented the treachery with which Prussia dismembered Poland after swearing alliance with her. All along the road, the peasants hastened to meet the French; and at Posen, Davout was hailed with an enthusiasm which moved even him, cold and severe as he was, and he urged Napoleon to justify the hopes of Poland, who looked to him as her savior. The Russian vanguard reached Warsaw before the French, but made no effort to remain there, and recrossed the Vistula. November 28, Davout and Murat entered the town, and public delight knew no bounds. It would be a mere illusion to fancy that sentiments of right and justice had any share in Napoleon's resolve, and that he was stirred by a desire to repair great wrongs. His only question was whether the resurrection of Poland would increase his greatness or not; and if he told the Sultan that he meant to restore Poland, it was because he thought Turkey would assist him the more willingly against Russia. He also offered part of Silesia to Austria, if she would aid him in the restoration of Poland by the cession of her Polish provinces; but it was not a sufficient offer, and therefore not serious. The truth was that he wanted promises from the Poles before he made any to them. . . . Thousands of Poles enlisted under the French flag and joined the Polish legions left from the Italian war. Napoleon established a provisional government of well-known Poles in Warsaw, and required nothing but volunteers of the country. He had seized without a blow that line of the Vistula which the Prussian king would not barter for a truce, and might have gone into winter-quarters there; but the Russians were close at hand on the opposite shore, in two great divisions 100,000 strong, in a wooded and marshy country forming a sort of triangle, whose point touches the union of the Narew and Ukra rivers with the Vistula, a few leagues below Warsaw. The Russians communicated with the sea by a Prussian corps stationed between them and Dantzic. Napoleon would not permit them to hold this post, and resolved to strike a blow, before going into winter-quarters, which should cut them off from the sea and drive them back towards the Memel and Lithuania. He crossed the Vistula, December 23, and attacked the Russians between the Narew and the Ukra. A series of bloody battles followed [the most important being at Pultusk and Golymin, December 26] in the dense forests and deep bogs of the thawing land. Napoleon said that he had discovered a fifth element in Poland,—mud. Men and horses stuck in the swamp and the cannons could not be extricated. Luckily the Russians were in

the incompetent hands of General Kamenski, and both parties fought in the dark, the labyrinth of swamps and woods preventing either army from guessing the other's movements. The Russians were finally driven, with great loss, beyond the Narew towards the forests of Belostok, and a Prussian corps striving to assist them was driven back to the sea. . . . The grand army did not long enjoy the rest it so much needed; for the Russians, whose losses were more than made up by the arrival of their reserves, suddenly resumed the offensive. General Benningsen, who gave a fearful proof of his sinister energy by the murder of Paul I., had been put in command in Kamenski's place. Marching round the forests and traversing the line of lakes which divide the basin of the Narew from those watercourses flowing directly to the sea, he reached the maritime part of old Prussia, intending to cross the Vistula and drive the French from their position in Poland. He had hoped to surprise the French left wing, lying between the Passarge and Lower Vistula, but arrived too late. Ney and Bernadotte rapidly concentrated their forces and fought with a bravery which arrested the Russians (January 25 and 27). Napoleon came to the rescue, and having once driven the enemy into the woods and marshes of the interior, now strove to turn those who meant to turn him, by an inverse action forcing them to the sea-coast. . . . Benningsen then halted beyond Eylau, and massed his forces to receive battle next day [February 8]. He had about 70,000 men, twice the artillery of Napoleon (400 guns against 200), and hoped to be joined betimes by a Prussian corps. Napoleon could only dispose of 60,000 out of his 300,000 men,—Ney being some leagues away and Bernadotte out of reach. . . . The battlefield was a fearful sight next day. Twelve thousand Russians and 10,000 French lay dying and dead on the vast fields of snow reddened with blood. The Russians, besides, carried off 15,000 wounded. 'What an ineffectual massacre!' cried Ney, as he traversed the scene of carnage. This was too true; for although Napoleon drove the Russians to the sea, it was not in the way he desired. Benningsen succeeded in reaching Königsberg, where he could rest and reinforce his army, and Napoleon was not strong enough to drive him from this last shelter."—H. Martin, *Popular history of France from 1789*, v. 2, ch. 11.

1807 (February-June).—Closer alliance of Prussia and Russia.—Treaty of Bartenstein.—Napoleon's victory at Friedland.—End of the campaign.—The effect produced in Europe by the doubtful battle of Eylau "was unlucky for France; in Paris the Funds fell. Benningsen boldly ordered the Te Deum to be sung. In order to confirm his victory, re-organise his army, reassure France, re-establish the opinion of Europe, encourage the Polish insurrection, and to curb the ill-will of Germany and Austria, Napoleon remained a week at Eylau. He negotiated: on one side he caused Talleyrand to write to Zastrow, the Prussian foreign minister, to propose peace and his alliance; he sent Bertrand to Memel to offer to re-establish the King of Prussia, on the condition of no foreign intervention. He also tried to negotiate with Ben-

NAPOLEONIC WARS

nigsen; to which the latter made answer, 'that his master had charged him to fight, and not negotiate.' After some hesitation, Prussia ended by joining her fortunes to those of Russia. By the convention of Bartenstein (25th April, 1807) the two sovereigns came to terms on the following points:—1. The re-establishment of Prussia within the limits of 1805. 2. The dissolution of the Confederation of the Rhine. 3. The restitution to Austria of the Tyrol and Venice. 4. The accession of England to the coalition, and the aggrandisement of Hanover. 5. The co-operation of Sweden. 6. The restoration of the house of Orange, and indemnities to the kings of Naples and Sardinia. This document is important; it nearly reproduces the conditions offered to Napoleon at the Congress of Prague, in 1813. Russia and Prussia proposed then to make a more pressing appeal to Austria, Sweden, and England; but the Emperor Francis was naturally undecided, and the Archduke Charles, alleging the state of the finances and the army, strongly advised him against any new intervention. Sweden was too weak; and notwithstanding his fury against Napoleon, Gustavus III. had just been forced to treat with Mortier. The English minister showed a remarkable inability to conceive the situation; he refused to guarantee the new Russian loan of a hundred and fifty millions, and would lend himself to no maritime diversion. Napoleon showed the greatest diplomatic activity. The Sultan Selim III. declared war against Russia; General Sebastiani, the envoy at Constantinople, put the Bosphorus in a state of defence, and repulsed the English fleet [see TURKEY: 1806-1807]; General Gardane left for Ispahan, with a mission to cause a Persian outbreak in the Caucasus. Dantzic had capitulated [May 24, after a long siege], and Lefebvre's 40,000 men were therefore ready for service. Masséna took 36,000 of them into Italy. In the spring, Bennigsen, who had been reinforced by 10,000 regular troops, 6,000 Cossacks, and the Imperial Guard, being now at the head of 100,000 men, took the offensive; Gortchakof commanding the right and Bagration the left. He tried, as in the preceding year, to seize Ney's division; but the latter fought, as he retired, two bloody fights, at Gutstadt and Ankendorff. Bennigsen, again in danger of being surrounded, retired on Heilsberg. He defended himself bravely (June 10); but the French, extending their line on his right, marched on Eylau, so as to cut him off from Königsberg. The Russian generalissimo retreated; but being pressed, he had to draw up at Friedland, on the Alle, with the steep bed of the river at their backs, which in case of misfortune left them only one means of retreat, over the three bridges of Friedland. . . . 'Where are the Russians concealed?' asked Napoleon when he came up. When he had noted their situation, he exclaimed, 'It is not every day that one surprises the enemy in such a fault.' He put Lannes and Victor in reserve, ordered Mortier to oppose Gortchakof on the left and to remain still, as the movement which 'would be made by the right would pivot on the left.' As to Ney, he was to cope on the right with Bagration, who was shut in by the angle of the river; he was to meet them 'with his head down,' without taking any care of his own safety. Ney led the charge with irresistible fury; the Russians were riddled by his artillery at 150 paces: he successively crushed the chasseurs of the Russian Guard, the Ismailovski, and the Horse Guards, burnt Friedland by shells, and cannonaded

the bridges which were the only means of retreat. . . . The Russian left wing was almost thrown into the river; Bagration, with the Semenovski and other troops, was hardly able to cover the defeat. On the Russian right, Gortchakof, who had advanced to attack the immovable Mortier, had only time to ford the Alle. Count Lambert retired with 29 guns by the left bank; the rest fled by the right bank, closely pursued by the cavalry. Meanwhile Murat, Davoust, and Soult, who had taken no part in the battle, arrived before Königsberg. Lestocq, with 25,000 men, tried to defend it, but on learning the disaster of Friedland he hastily evacuated it. Only one fortress now remained to Frederick William—the little town of Memel. The Russians had lost at Friedland from 15,000 to 20,000 men, besides 80 guns (June 14, 1807). . . . Alexander had no longer an army. Only one man, Barclay de Tolly, proposed to continue the war; but in order to do this it would be necessary to re-enter Russia, to penetrate into the very heart of the empire, to burn everything on the way, and only present a desert to the enemy. Alexander hoped to get off more cheaply. He wrote a severe letter to Bennigsen and gave him powers to treat." —A. Rambaud, *History of Russia*, v. 2, ch. 12.

1807 (June-July).—Treaty of Tilsit.—Its known and its unknown agreements.—"Alexander I. now determined to negotiate in person with the rival emperor, and on the 25th of June the two sovereigns met at Tilsit, on a raft which was moored in the middle of the Niemen. The details of the conference are a secret, as Napoleon's subsequent account of it is untrustworthy, and no witnesses were present. All that is certain is that Alexander I., whose character was a curious mixture of nobility and weakness, was completely won over by his conqueror. . . . Napoleon, . . . instead of attempting to impose extreme terms upon a country which it was impossible to conquer, . . . offered to share with Russia the supremacy in Europe which had been won by French arms. The only conditions were the abandonment of the cause of the old monarchies, which seemed hopeless, and an alliance with France against England. Alexander had several grievances against the English government, especially the lukewarm support that had been given in recent operations, and made no objection to resume the policy of his predecessors in this respect. Two interviews sufficed to arrange the basis of an agreement. Both sovereigns abandoned their allies without scruple. Alexander gave up Prussia and Sweden, while Napoleon deserted the cause of the Poles, who had trusted to his zeal for their independence, and of the Turks, whom his envoy had recently induced to make war upon Russia. The Treaty of Tilsit was speedily drawn up; on the 7th of July peace was signed between France and Russia, on the 9th between France and Prussia. Frederick William III. had to resign the whole of his kingdom west of the Elbe, together with all the acquisitions which Prussia had made in the second and third partitions of Poland. The provinces that were left, amounting to barely half of what he had inherited, were burthened with the payment of an enormous sum as compensation to France. The district west of the Elbe was united with Hesse-Cassel, Brunswick, and ultimately with Hanover, to form the kingdom of Westphalia, which was given to Napoleon's youngest brother, Jerome. Of Polish Prussia, one province, Bialystock, was added to Russia, and the rest was made into the grand duchy of War-

saw, and transferred to Saxony. Danzig, with the surrounding territory, was declared a free state under Prussian and Saxon protection, but it was really subject to France, and remained a centre of French power on the Baltic. All trade between Prussia and England was cut off. Alexander I., on his side, recognised all Napoleon's new creations in Europe—the Confederation of the Rhine, the kingdoms of Italy, Naples, Holland, and Westphalia, and undertook to mediate between France and England. But the really important agreement between France and Russia was to be found, not in the formal treaties, but in the secret conventions which were arranged by the two emperors. The exact text of these has never been made public, and it is probable that some of the terms rested upon verbal rather than on written understandings, but the general drift of them is unquestionable. The bribe offered to Alexander was the aggrandisement of Russia in the East. To make him an accomplice in the acts of Napoleon, he was to be allowed to annex Finland from Sweden, and Moldavia and Wallachia from Turkey. With regard to England, Russia undertook to adopt Napoleon's blockade-system, and to obtain the adhesion of those states which still remained open to English trade—Sweden, Denmark, and Portugal.”—R. Lodge, *History of modern Europe*, ch. 24, sect. 25.—“‘I thought,’ said Napoleon at St. Helena, ‘it would benefit the world to drive these brutes, the Turks, out of Europe. But when I reflected what power it would give to Russia, from the number of Greeks in the Turkish dominions who may be considered Russians, I refused to consent to it, especially as Alexander wanted Constantinople, which would have destroyed the equilibrium of power in Europe. France would gain Egypt, Syria, and the islands; but those were nothing to what Russia would have obtained.’ This coincides with Savary's [duke de Rovigo's] statement, that Alexander told him Napoleon said he was under no engagements to the new Sultan, and that changes in the world inevitably changed the relations of states to one another; and again, Alexander said that, in their conversations at Tilsit, Napoleon often told him he did not require the evacuation of Moldavia and Wallachia; he would place things in a train to dispense with it, and it was not possible to suffer longer the presence of the Turks in Europe. ‘He even left me,’ said Alexander, ‘to entertain the project of driving them back into Asia. It is only since that he has returned to the idea of leaving Constantinople to them, and some surrounding provinces.’ One day, when Napoleon was talking to Alexander, he asked his secretary, M. Meneval, for the map of Turkey, opened it, then renewed the conversation; and placing his finger on Constantinople said several times to the secretary, though not loud enough to be heard by Alexander, ‘Constantinople, Constantinople, never. It is the capital of the world.’ . . . It is very evident in their conversations that Napoleon agreed to his [Alexander's] possessing himself of the Turkish Empire up to the Balkan, if not beyond; though Bignon denies that any plan for the actual partition of Turkey was embodied in the treaty of Tilsit. Hardenberg, not always well informed, asserts that it was. Savary says he could not believe that Napoleon would have abandoned the Turks without a compensation in some other quarter; and he felt certain Alexander had agreed in return to Napoleon's project for the conquest of Spain, ‘which the Emperor had very much at heart.’”—C. Joyneville, *Life and times of Alexander I*, v. 1, ch. 8.

1807 (July).—Collapse of Prussia and its causes.—“For the five years that followed, Prussia is to be conceived, in addition to all her other humiliations, as in the hands of a remorseless creditor whose claims are decided by himself without appeal, and who wants more than all he can get. She is to be thought of as supporting for more than a year after the conclusion of the Treaty a French army of more than 150,000 men, then as supporting a French garrison in three principal fortresses, and finally, just before the period ends, as having to support the huge Russian expedition in its passage through the country. . . . It was not in fact from the Treaty of Tilsit, but from the systematic breach of it, that the sufferings of Prussia between 1807 and 1813 arose. It is indeed hardly too much to say that the advantage of the Treaty was received only by France, and that the only object Napoleon can have had in signing it was to inflict more harm on Prussia than he could inflict by simply continuing the war. Such was the downfall of Prussia. The tremendousness of the catastrophe strikes us less because we know that it was soon retrieved, and that Prussia rose again and became greater than ever. But could this recovery be anticipated? A great nation, we say, cannot be dissolved by a few disasters; patriotism and energy will retrieve everything. But precisely these seemed wanting. The State seemed to have fallen in pieces because it had no principle of cohesion, and was only held together by an artificial bureaucracy. It had been created by the energy of its government and the efficiency of its soldiers, and now it appeared to come to an end because its government had ceased to be energetic and its soldiers to be efficient. The catastrophe could not but seem as irremediable as it was sudden and complete.” There may be discerned “three distinct causes for it. First, the undecided and pusillanimous policy pursued by the Prussian government since 1803 had an evident influence upon the result by making the great Powers, particularly England and Austria, slow to render it assistance, and also by making the commanders, especially Brunswick, irresolute in action because they could not, even at the last moment, believe the war to be serious. This indecision we have observed to have been connected with a mal-organisation of the Foreign Department. Secondly, the corruption of the military system, which led to the surrender of the fortresses. Thirdly, a misfortune for which Prussia was not responsible, its desertion by Russia at a critical moment, and the formation of a close alliance between Russia and France.”—J. R. Seeley, *Life and times of Stein*, v. 1, pt. 2, ch. 5.

1807-1808.—Great revolutionary reforms of Hardenberg, Stein and Scharnhorst.—Edict of emancipation.—Military reorganization.—Beginning of local self-government.—Seeds of a new national life.—“The work of those who resisted Napoleon—even if no one of them should ever be placed in the highest class of the benefactors of mankind—has in some cases proved enduring, and nowhere so much as in Germany. They began two great works—the reorganisation of Prussia and the revival of the German nationality, and time has deliberately ratified their views. Without retrogression, without mistake, except the mistake which in such matters is the most venial

that can be committed, that, namely, of over-caution, of excessive hesitation, the edifice which was then founded has been raised higher and higher till it is near completion. . . . Because Frederick-William III. remains quietly seated on the throne through the whole period, we remain totally unaware that a Prussian revolution took place then—a revolution so comprehensive that the old reign and glories of Frederick may fairly be said to belong to another world—to an 'ancien régime' that has utterly passed away. It was a revolution which, though it did not touch the actual framework of government in such a way as to substitute one of Aristotle's forms of government for another, yet went so far beyond government, and made such a transformation both in industry and culture, that it deserves the name of revolution far more, for instance, than our English Revolution

SCHARNHORST

of the 17th century. . . . In Prussia few of the most distinguished statesmen, few even of those who took the lead in her liberation from Napoleon, were Prussians. Blücher himself began life in the service of Sweden, Scharnhorst was a Hanoverian, so was Hardenberg, and Stein came from Nassau. Niebuhr was enticed to Berlin from the Bank of Copenhagen. Hardenberg served George III. and afterwards the Duke of Brunswick before he entered the service of Frederick-William II.; and when Stein was dismissed by Frederick-William III. in the midst of the war of 1800, though he was a man of property and rank, he took measures to ascertain whether they were in want of a Finance Minister at St. Petersburg. . . . We misapprehend the nature of what took place when we say, as we usually do, that some important and useful reforms were introduced by Stein, Hardenberg, and Scharnhorst. In the first place, such a word as reform is not properly applied to changes so vast, and in the second place, the changes then made or at least commenced, went far beyond legislation. We want some word stronger than reform which shall convey that one of the greatest events of modern history now took place in Prussia. Revolution would convey this, but unfortunately we appropriate that word to changes in the form of government, or even mere changes of dynasty, provided they are violent, though such changes are commonly quite insignificant com-

pared to what now took place in Prussia. . . . The form of government indeed was not changed. Not merely did the king continue to reign, but no Parliament was created even with powers ever so restricted. Another generation had to pass away before this innovation, which to us seems the beginning of political life, took place. But a nation must be made before it can be made free, and, as we have said, in Prussia there was an administration (in great disorder) and an army, but no nation. When Stein was placed at the head of affairs in the autumn of 1807, he seems, at first, hardly to have been aware that anything was called for beyond the reform of the administration, and the removal of some abuses in the army. Accordingly he did reform the administration from the top to the bottom, remodelling the whole machinery both of central and local government which had come down from the father of Frederick the Great. But the other work also was forced upon him, and he began to create the nation by emancipating the peasantry, while Scharnhorst and Gneisenau were brooding over the ideas which, five years later, took shape in the Landwehr of East Prussia [see MILITARY ORGANIZATION: 28]. Besides emancipating the peasant he emancipated industry,—everywhere abolishing that strange caste system which divided the population rigidly into nobles, citizens, and peasants, and even stamped every acre of land in the country with its own unalterable rank as noble, or citizen, or peasant land. Emancipation, so to speak, had to be given before enfranchisement. The peasant must have something to live for; freewill must be awakened in the citizen; and he must be taught to fight for something before he could receive political liberty. Of such liberty Stein only provided one modest germ. By his Städteordnung he introduced popular election into the towns. Thus Prussia and France set out towards political liberty by different roads. Prussia began modestly with local liberties, but did not for a long time attempt a Parliament. France with her charte, and in imitation of France many of the small German States, had grand popular Parliaments, but no local liberties. And so for a long time Prussia was regarded as a backward State. . . . It was only by accident that Stein stopped short at municipal liberties and created no Parliament [see also MUNICIPAL GOVERNMENT: Development of the city as a local business unit]. He would have gone further, and in the last years of the wartime Hardenberg did summon deliberative assemblies, which, however, fell into disuse again after the peace. . . . In spite however of all reaction, the change irrevocably made by the legislation of that time was similar to that made in France by the Revolution, and caused the age before Jena to be regarded as an 'ancien régime.' But in addition to this, a change had been made in men's minds and thoughts by the shocks of the time, which prepared the way for legislative changes which have taken place since. How unprecedented in Prussia, for instance, was the dictatorial authority wielded by Hardenberg early in 1807, by Stein in the latter part of that year and in 1808, and by Hardenberg again from 1810 onwards! Before that time in the history of Prussia we find no subject eclipsing or even approaching the King in importance. Prussia had been made what she was almost entirely by her electors and kings. In war and organisation alike all had been done by the Great Elector or Frederick-William I., or Frederick the Great. But now this is suddenly changed. Everything now turns on the minister. Weak min-

isters are expelled by pressure put upon the king, strong ones are forced upon him. He is compelled to create a new ministerial power much greater than that of an English Prime Minister, and more like that of a Grand Vizier, and by these dictators the most comprehensive innovations are made. The loyalty of the people was not impaired by this; on the contrary, Stein and Hardenberg saved the Monarchy; but it evidently transferred the Monarchy, though safely, to a lower pedestal."—J. R. Seeley, *Prussian history (Macmillan's Magazine, v. 36, pp. 342-351)*.

Also in: J. R. Seeley, *Life and times of Stein, v. 1-2, pt. 3-5*.—R. B. D. Morier, *Agrarian legislation of Prussia (Systems of land tenure: Cobden club essays, ch. 5)*.

1807-1810.—Stein's emancipation reforms restricted by the 'servants' ordinance.'—"But the large manorial proprietors viewed with apprehension the prospect of their labourers being free to go and do as they wished, and they besought the King to sanction the issue of a code of regulations for servants, or 'Servants' Ordinance' (*Gesindeordnung*), by which the liberty of the labourer would be restricted and he would still, for practical purposes, be bound to the soil. In spite of the opposition of . . . Stein, the King agreed, and several days before the emancipatory edict of 1807 came into operation in November, 1810, the 'Servants' Ordinance for all the provinces of the Prussian Monarchy of November 8, 1810,' was promulgated. The object of this 'Ordinance' was said to be the removal of uncertainty on the subject of rights and duties as between employers and servants, and it superseded most of the existing provincial 'Ordinances' of the kind. But it did more. The old 'Ordinances' were intended to apply to domestic servants. The new and uniform 'Ordinance,' by the mere introduction of a phrase, drew into its net the entire class of agricultural servants living with their masters."—W. H. Dawson, *Evolution of modern Germany, p. 280*.

1808.—Awakening of the national spirit.—Effects of the Spanish rising, and of Fichte's addresses.—The beginnings of the great rising in Spain against Napoleon (see SPAIN: 1808 [May-September], and after) "were watched by Stein from Berlin while he was engaged in negotiating with [Count] Daru; we can imagine with what feelings! His cause had been, since his ministry began, substantially the same as that of Spain; but he had perhaps understood it himself but dimly, at any rate hoped but faintly to see it prosper. But now he ripens at once into a great nationality statesman; the reforms of Prussia begin at once to take a more military stamp, and to point more decisively to a great uprising of the German race against the foreign oppressor. The change of feeling which took place in Prussia after the beginning of the Spanish troubles is very clearly marked in Stein's autobiography. After describing the negotiations at Paris and Berlin, . . . he begins a new paragraph thus: 'The popular war which had broken out in Spain and was attended with good success, had heightened the irritation of the inhabitants of the Prussian State caused by the humiliation they had suffered. All thirsted for revenge; plans of insurrection, which aimed at exterminating the French scattered about the country, were arranged; among others, one was to be carried out at Berlin, and I had the greatest trouble to keep the leaders, who confided their intentions to me, from a premature outbreak. We all watched the progress of the Spanish war and the commencement of the Austrian, for the preparations of that Power had not remained

a secret; expectation was strained to the highest point; pains were necessary to moderate the excited eagerness for resistance in order to profit by it in more favourable circumstances. . . . Fichte's Addresses to the Germans, delivered during the French occupation of Berlin and printed under the censorship of M. Bignon, the Intendant, had a great effect upon the feelings of the cultivated class.' . . . That in the midst of such weighty matters he should remember to mention Fichte's Addresses is a remarkable testimony to the effect produced by them on the public mind, and at the same time it leads us to conjecture that they must have strongly influenced his own. They had been delivered in the winter at Berlin and of course could not be heard by Stein, who was then with the King, but they were not published till April. As affecting public opinion therefore, and also as known to Stein, the book was almost exactly of the same date as the Spanish Rebellion, and it is not unnatural that he should mention the two influences together. . . . When the lectures were delivered at Berlin a rising in Spain was not dreamed of, and even when they were published it had not taken place, nor could clearly be foreseen. And yet they teach the same lesson. That doctrine of nationality which was taught affirmatively by Spain had been suggested to Fichte's mind by the *reductio ad absurdum* which events had given to the negation of it in Germany. Nothing could be more convincing than the concurrence of the two methods of proof at the same moment, and the prophetic elevation of these discourses (which may have furnished a model to Carlyle) was well fitted to drive the lesson home, particularly to a mind like Stein's, which was quite capable of being impressed by large principles. . . . Fichte's Addresses do not profess to have in the first instance nationality for this subject. They profess to inquire whether there exists any grand comprehensive remedy for the evils with which Germany is afflicted. They find such a remedy where Turgot long before had looked for deliverance from the selfishness to which he traced all the abuses of the old régime, that is, in a grand system of national education. Fichte reiterates the favourite doctrine of modern Liberalism, that education as hitherto conducted by the Church has aimed only at securing for men happiness in another life, and that this is not enough, inasmuch as they need also to be taught how to bear themselves in the present life so as to do their duty to the state, to others and themselves. He is as sure as Turgot that a system of national education will work so powerfully upon the nation that in a few years they will not be recognisable, and he explains at great length what should be the nature of this system, dwelling principally upon the importance of instilling a love of duty for its own sake rather than for reward. The method to be adopted is that of Pestalozzi. Out of fourteen lectures the first three are entirely occupied with this. But then the subject is changed, and we find ourselves plunged into a long discussion of the peculiar characteristics which distinguish Germany from other nations and particularly other nations of German origin. At the present day this discussion, which occupies four lectures, seems hardly satisfactory; but it is a striking deviation from the fashion of that age. . . . But up to this point we perceive only that the subject of German nationality occupies Fichte's mind very much, and that there was more significance than we first remarked in the title, Addresses to the German Nation; otherwise we have met with nothing likely to seem of great im-

portance to a statesman. But the eighth Lecture propounds the question, What is a Nation in the higher signification of the word, and what is patriotism? It is here that he delivers what might seem a commentary on the Spanish Revolution, which had not yet taken place. . . . Fichte proclaims the Nation not only to be different from the State, but to be something far higher and greater. . . . Applied to Germany this doctrine would lead to the practical conclusion that a united German State ought to be set up in which the separate German States should be absorbed. . . . In the lecture before us he contents himself with advising that patriotism as distinguished from loyalty to the State should be carefully inculcated in the new education, and should influence the individual German Governments. It would not indeed have been safe for Fichte to propose a political reform, but it rather appears that he thought it an advantage rather than a disadvantage that the Nation and the State should be

STEIN

distinct. . . . I should not have lingered so long over this book if it did not strike me as the prophetic or canonical book which announces and explains a great transition in modern Europe, and the prophecies of which began to be fulfilled immediately after its publication by the rising in Spain. . . . It is this Spanish Revolution which when it has extended to the other countries we call the Anti-Napoleonic Revolution of Europe. It gave Europe years of unparalleled bloodshed, but at the same time years over which there broods a light of poetry; for no conception can be more profoundly poetical than that which now woke up in every part of Europe, the conception of the Nation. Those years also led the way to the great movements which have filled so much of the nineteenth century, and have rearranged the whole central part of the map of Europe on a more natural system."—J. R. Seeley, *Life and times of Stein*, v. 2, pt. 4, ch. 1.

1808 (January).—Kehl, Cassel and Wesel annexed to France. See FRANCE: 1807-1808 (November-February).

1808 (April-December).—Tugendbund, and Stein's relations to it.—'English people think of Stein almost exclusively in connexion with land laws. But the second and more warlike period of his Ministry has also left a faint impression in the minds of many among us, who are in the habit of regarding him as the founder of the Tugendbund [Society of Virtue]. In August and September [1808], the very months in which Stein was taking up his new position, this society was attracting general attention, and accordingly this is the place to consider Stein's relation to it. That he was secretly animating and urging it on must have seemed at the time more than probable, almost self-evident. It aimed at the very objects which he had at heart, it spoke of him with warm admiration, and in general it used language which seemed an echo of his own. . . . Whatever his connexion with the Tugendbund may have been, it cannot have commenced till April, 1808, for it was in that month that the Tugendbund began its existence, and therefore nothing can be more absurd than to represent Stein as beginning to revolutionise the country with the help of the Tugendbund, for his revolutionary edict had been promulgated in the October before. . . . In his autobiography . . . Stein [says]: 'An effect and not the cause of this passionate national indignation at the despotism of Napoleon was the Tugendbund, of which I was no more the founder than I was a member, as I can assert on my honour and as is well known to its originators. About July, 1808, there was formed at Königsberg a society consisting of several officers, for example, Col. Gneisenau, Grolmann, &c., and learned men, such as Professor Krug, in order to combat selfishness and to rouse the nobler moral feelings; and according to the requirements of the existing laws they communicated their statutes and the list of their members to the King's Majesty, who sanctioned the former without any action on my part, it being my belief in general that there was no need of any other institute but to put new life into the spirit of Christian patriotism; the germ of which lay already in the existing institutions of State and Church. The new Society held its meetings, but of the proceedings I knew nothing, and when later it proposed to exert an indirect influence upon educational and military institutions I rejected the proposal as encroaching on the department of the civil and ecclesiastical governing bodies. As I was driven soon afterwards out of the public service, I know nothing of the further operations of this Society.' . . . He certainly seems to intend his readers to understand that he had not even any indirect or underhand connexion with it, but from first to last stood entirely aloof, except in one case when he interfered to restrain its action. It is even possible that by telling us that he had nothing to do with the step taken by the King when he sanctioned the statutes of the society he means to hint that, had his advice been taken, the society would not have been even allowed to exist. . . . The principal fact affirmed by Stein is indeed now beyond controversy; Stein was certainly not either the founder or a member of the Tugendbund. The society commonly known by that name, which however designated itself as the Moral and Scientific Union, was founded by a number of persons, of whom many were Freemasons, at Königsberg in the month of April. Professor Krug, mentioned by Stein, was one of them; Gneisenau and Grolmann, whom he also

mentions, were not among the first members, and Gneisenau, it seems, was never a member. The statutes were drawn by Krug, Bardeleben and Baersch, and if any one person can be called the Founder of the Tugendbund, the second of these, Bardeleben, seems best to deserve the title. The Order of Cabinet by which the society was licensed is dated Königsberg, June 30th, and runs as follows: 'The revival of morality, religion, serious taste and public spirit, is assuredly most commendable; and, so far as the society now being formed under the name of a Virtue Union (Tugendverein) is occupied with this within the limits of the laws of the country and without any interference in politics or public administration, His Majesty the King of Prussia approves the object and constitution of the society.' . . . From Königsberg missionaries went forth who established branch associations, called Chambers, in other towns, first those of the Province of Prussia, Braunsberg, Elbing, Graudenz, Eylau, Hohenstein, Memel, Stallupöhnen; then in August and September Bardeleben spread the movement with great success through Silesia. The spirit which animated the new society could not but be approved by every patriot. They had been deeply struck with the decay of the nation, as shown in the occurrences of the war, and their views of the way in which it might be revived were much the same as those of Stein and Fichte. The only question was whether they were wise in organising a society in order to promulgate these views, whether such a society was likely to do much good, and also whether it might not by possibility do much harm. Stein's view, as he has given it, was that it was not likely to do much good, and that such an organisation was unnecessary. . . . It did not follow because he desired Estates or Parliaments that he was prepared to sanction a political club. . . . It may well have seemed to him that to suffer a political club to come into existence was to allow the guidance of the Revolution which he had begun to pass out of his hands. There appears, then, when we consider it closely, nothing unnatural in the course which Stein declares himself to have taken."—J. R. Seeley, *Life and times of Stein*, v. 2, pt. 4, ch. 3.—The Tugendbund was dissolved in 1809, but continued to operate in secret for many years.

1809 (January-June).—Outburst of Austrian feeling against France.—Reopening of war.—Napoleon's advance to Vienna.—His defeat at Aspern and perilous situation.—Austrian reverses in Italy and Hungary.—"The one man of all the Austrians who felt the least amount of hatred against France, was, perhaps, the Emperor. All his family and all his people—nobles and priests, the middle classes and the peasantry—evinced a feeling full of anger against the nation which had upset Europe. . . . By reason of the French, the disturbers and spoilers, the enemies of the human race, despisers of morality and religion alike, Princes were suffering in their palaces, workmen in their shops, business men in their offices, priests in their churches, soldiers in their camps, peasants in their huts. The movement of exasperation was irresistible. Every one said that it was a mistake to have laid down their arms; that they ought against France to have fought on to the bitter end, and to have sacrificed the last man and the last florin; that they had been wrong

in not having gone to the assistance of Prussia after the Jena Campaign; and that the moment had arrived for all the Powers to coalesce against the common enemy and crush him. . . . All Europe had arrived at a paroxysm of indignation. What was she waiting for before rising? A signal. That signal Austria was about to give. And this time with what chances of success! The motto was to be 'victory or death.' But they were sure of victory. The French army, scattered from the Oder to the Tagus, from the mountains of Bohemia to the Sierra Morena, would not be able to resist the onslaught of so many nations eager to break their bonds. . . . Vienna, in 1809, indulged in the same language, and felt the same passions, that Berlin did in 1806. . . . The Landwehr, then only organized a few months, were impatiently awaiting the hour when they should measure themselves against the Veterans of the

ARCHDUKE CHARLES  
OF AUSTRIA

French army. Volunteers flocked in crowds to the colours. Patriotic subscriptions flowed in. . . . Boys wanted to leave school to fight. All classes of society vied with each other in zeal, courage, and a spirit of sacrifice. When the news was made public that the Archduke Charles had, on the 20th of February, 1809, been appointed Generalissimo, there was an outburst of joy and confidence from one end of the Empire to the other."—I. de Saint-Amand, *Memoirs of the Empress Marie Louise*, pt. 1, ch. 2.—"On receiving decisive intelligence of these hostile preparations, Napoleon returned with extraordinary expedition from Spain to Paris, in January, 1809, and gave orders to concentrate his forces in Germany, and call out the full contingents of the Confederation of the Rhine. Some further time was consumed by the preparations on either side. At last, on the 8th of April, the Austrian troops crossed the frontiers at once on the Inn, in Bohemia, in the Tyrol and in Italy. The whole burthen of the war rested on Austria alone, for Prussia remained neutral, and Russia, now allied to France, was even bound

to make a show at least, though it were no more, of hostility to Austria. On the same day on which the Austrian forces crossed the frontiers, the Tyrol rose in insurrection [see below: 1809-1810 (April-February)], and was swept clear of the enemy in four days, with the exception of a Bavarian garrison, that still held out in Kufstein. The French army was at this time dispersed over a line of forty leagues in extent, with numerous undefended apertures between the corps; so that the fairest possible opportunity presented itself to the Austrians for cutting to pieces the scattered forces of the French, and marching in triumph to the Rhine. As usual, however, the archduke's early movements were subjected to most impolitic delays by the Aulic Council; and time was allowed Napoleon to arrive on the theatre of war (April 17), and repair the faults committed by his adjutant-general, Berthier. He instantly extricated his army from its perilous position—almost cut in two by the advance of the Austrians—and, beginning on the 19th, he beat the latter in five battles on five successive days, at Thaur, Abensberg, Landshut, Eckmühl, and Ratisbon. The Archduke Charles retired into Bohemia to collect reinforcements, but General Hiller was, in consequence of the delay in repairing the fortifications of Lintz, unable to maintain that place, the possession of which was important, on account of its forming a connecting point between Bohemia and the Austrian Oberland. Hiller, however, at least saved his honour by pushing forward to the Traun, and in a fearfully bloody encounter at Ebersberg, captured three French eagles, one of his colours alone falling into the enemy's hands. He was, nevertheless, compelled to retire before the superior forces of the French, and crossing over at Krems to the left bank of the Danube, he formed a junction with the Archduke Charles. The way was now clear to Vienna, which, after a slight show of defence, capitulated to Napoleon on the 12th of May. The Archduke Charles had hoped to reach the capital before the French, and to give battle to them beneath its walls; but as he had to make a circuit whilst the French pushed forward in a direct line, his plan was frustrated, and he arrived, when too late, from Bohemia. Both armies, separated by the Danube, stood opposed to one another in the vicinity of the imperial city. Both commanders were desirous of coming to a decisive engagement. The French had secured the island of Lobau, to serve as a mustering place, and point of transit across the Danube. The archduke allowed them to establish a bridge of boats, being resolved to await them on the Marchfeld. There it was that Rudolph of Habsburg, in the battle against Ottakar, had laid the foundation of the greatness of the house of Austria; and there the political existence of that house and the fate of the monarchy were now to be decided. Having crossed the river, Napoleon was received on the opposite bank, near Aspern and Esslingen, by his opponent, and, after a dreadful battle [in which Marshal Lannes was killed], that was carried on with unwearied animosity for two days, May 21st and 22nd, 1809, he was completely beaten, and compelled to fly for refuge to the island of Lobau. The rising stream had, meanwhile, carried away the bridge, Napoleon's sole chance of escape to the opposite bank. For two days he remained on the island with his defeated troops, without provisions, and in hourly expectation of being cut to pieces; the Austrians, however, neglected to turn the opportunity to advantage, and allowed the French leisure to rebuild the bridge, a work of extreme difficulty. During

six weeks afterwards, the two armies continued to occupy their former positions under the walls of Vienna, on the right and left banks of the Danube, narrowly watching each other's movements, and preparing for a final struggle. Whilst these events were in progress, the Archduke John had successfully penetrated into Italy, where he had totally defeated the Viceroy Eugene at Salice, on the 16th of April. Favoured by the simultaneous revolt of the Tyrolese, he might have obtained the most decisive results from this victory, but the extraordinary progress of Napoleon down the valley of the Danube rendered necessary the concentration of the whole forces of the monarchy for the defence of the capital. Having begun a retreat, he was pursued by Eugene, and defeated on the Piave, with great loss, on the 8th of May. Escaping thence, without further molestation, to Villach, in Carinthia, he received intelligence of the fall of Vienna, together with a letter from the Archduke Charles, of the 15th of May, directing him to move with all his forces upon Lintz, to act on the rear and communications of Napoleon. Instead of obeying these orders, he thought proper to march into Hungary, abandoning the Tyrol and the whole projected operations on the Upper Danube to their fate. His disobedience was disastrous to the fortunes of his house, for it caused the fruits of the victory at Aspern to be lost. He might have arrived, with 50,000 men, on the 24th or 25th, at Lintz, where no one remained but Bernadotte and the Saxons, who were incapable of offering any serious resistance. Such a force, concentrated on the direct line of Napoleon's communications, immediately after his defeat at Aspern, on the 22nd, would have deprived him of all means of extricating himself from the most perilous situation in which he had yet been placed since ascending the consular throne. After totally defeating Jellachich in the valley of the Muhr, Eugene desisted from his pursuit of the army of Italy, and joined Napoleon at Vienna. The Archduke John united his forces at Raab with those of the Hungarian insurrection, under his brother, the Palatine. The viceroy again marched against him, and defeated him at Raab on the 14th of June. The Palatine remained with the Hungarian insurrection in Komorn; Archduke John moved on to Presburg. In the north, the Archduke Ferdinand, who had advanced as far as Warsaw, had been driven back by the Poles under Poniatowsky, and by a Russian force sent by the Emperor Alexander to their aid, which, on this success, invaded Galicia."—W. K. Kelly, *History of the House of Austria*, ch. 4.

1809 (April-July).—**Risings against the French in the north.**—"A general revolt against the French had nearly taken place in Saxony and Westphalia, where the enormous burdens imposed on the people, and the insolence of the French troops had kindled a deadly spirit of hostility against the oppressors. Everywhere the Tugendbund were in activity; and the advance of the Austrians towards Franconia and Saxony, at the beginning of the war, blew up the flame. The two first attempts at insurrection, headed respectively by Katt, a Prussian officer (April 3), and Dornberg, a Westphalian colonel (April 23), proved abortive; but the enterprise of the celebrated Schill was of a more formidable character. This enthusiastic patriot, then a colonel in the Prussian army,

had been compromised in the revolt of Dornberg; and finding himself discovered, he boldly raised the standard (April 29) at the head of 600 soldiers. His force speedily received accessions, but failing in his attempts on Wittenberg and Magdeburg, he moved towards the Baltic, in hope of succour from the British cruisers, and at last threw himself into Stralsund. Here he was speedily invested; the place was stormed (May 31), and the gallant Schill slain in the assault, a few hours only before the appearance of the British vessels—the timely arrival of which might have secured the place, and spread the rising over all Northern Germany. The Duke of Brunswick-Oels, with his 'black band' of volunteers, had at the same time invaded Saxony from Bohemia; and though then obliged to re-

trian fortifications erected to defend the former bridge were turned, the villages occupied by their army taken, and the Archduke Charles was menaced both in flank and rear, the French line of battle appuyed on Enzersdorf being at a right angle to his left wing. Under these circumstances the Archduke, retiring his left, attempted to outflank the French right, while Napoleon bore down upon his centre at Wagram. This village became the scene of a sanguinary struggle, and one house only remained standing when night closed in. The Archduke sent courier after courier to hasten the advance of his brother, between whom and himself was Napoleon, whose line on the right of the 5th extended from Loibersdorf on the right to some two miles beyond Wagram on the left. Na-

NAPOLEON AT THE BATTLE OF WAGRAM, JULY 5, 1809

(Painting by H. Vernet)

trat, he made a second incursion in June, occupied Dresden and Leipsic, and drove the King of Westphalia into France. After the battle of Wagram he made his way across all Northern Germany, and was eventually conveyed, with his gallant followers, still 2,000 strong, to England."—*Epitome of Alison's history of Europe, sect. 525-526.*

1809 (July-September).—Napoleon's victory at Wagram.—Peace of Schönbrunn.—Immense surrender of Austrian territory.—"The operation of establishing the bridges between the French camp and the left bank of the Danube commenced on the night of the 30th of June; and during the night of the 4th of July the whole French army, passing between the villages of Enzersdorf and Muhlleuten, debouched on the Marchfeld, wheeling to their left. Napoleon was on horseback in the midst of them by daylight; all the Aus-

oleon passed the night in massing his centre, still determining to manœuvre by his left in order to throw back the Archduke Charles on that side before the Archduke John could come up on the other. At six o'clock on the morning of the 6th of July he commanded the attack in person. Disregarding all risk, he appeared throughout the day in the hottest of the fire, mounted on a snow-white charger, Euphrates, a present from the Shah of Persia. The Archduke Charles as usual committed the error which Napoleon's enemies had not even yet learned was invariably fatal to them: extending his line too greatly he weakened his centre, at the same time opening tremendous assaults on the French wings, which suffered dreadfully. Napoleon ordered Lauriston to advance upon the Austrian centre with a hundred guns, supported by two whole divisions of infantry in column. The artillery, when within half cannon-

shot, opened a terrific fire: nothing could withstand such a shock. The infantry, led by Macdonald, charged; the Austrian line was broken and the centre driven back in confusion. The right, in a panic, retrograded; the French cavalry then bore down upon them and decided the battle, the Archduke still fighting to secure his retreat, which he at length effected in tolerably good order. By noon the whole Austrian army was abandoning the contest. Their defeat so demoralized them that the Archduke John, who came up on Napoleon's right before the battle was over, was glad to retire with the rest, unnoticed by the enemy. That evening the Marchfeld and Wagram were in possession of the French. The population of Vienna had watched the battle from the roofs and ramparts of the city, and saw the retreat of their army with fear and gloom. Between 300,000 and 400,000 men were engaged, and the loss on both sides was nearly equal. About 20,000 dead and 30,000 wounded strewed the ground; the latter were conveyed to the hospitals of Vienna. . . . Twenty thousand Austrians were taken prisoners, but the number would have been greater had the French cavalry acted with their usual spirit. Bernadotte, issuing a bulletin, almost assuming to himself the sole merit of the victory, was removed from his command. Macdonald was created a marshal of the empire on the morning after the battle. . . . The battle of Wagram was won more by good fortune than skill. Napoleon's strategy was at fault, and had the Austrians fought as stoutly as they did at Aspern, Napoleon would have been signally defeated. Had the Archduke John acted promptly and vigorously, he might have united with his brother's left—which was intact—and overwhelmed the French. . . . The defeated army retired to Znaim, followed by the French; but further resistance was abandoned by the Emperor of Austria. The Archduke Charles solicited an armistice on the 9th; hostilities ceased, and Napoleon returned to the palace of Schönbrunn while the plenipotentiaries settled the terms of peace. . . . English Ministers displayed another instance of their customary spirit of procrastination. Exactly eight days after the armistice of Znaim, which assured them that Austria was no longer in a position to profit by or co-operate with their proceedings, they sent more than 80,000 fighting men, under the command of Lord Chatham, to besiege Antwerp [see ENGLAND: 1809 (July-December)]. . . . Operations against Naples proved equally abortive. . . . In Spain alone English arms were successful. Sir Arthur Wellesley won the battle of Talavera on the 28th of July [see SPAIN: 1809 (February-July)]. . . . A treaty of peace between France and Austria was signed on the 14th of October at Vienna [sometimes called the Treaty of Vienna, but more commonly the Peace of Schönbrunn]. The Emperor of Austria ceded Salzburg and a part of Upper Austria to the Confederation of the Rhine; part of Bohemia, Cracow, and Western Galicia to the King of Saxony as Grand Duke of Warsaw; part of Eastern Galicia to the Emperor of Russia; and Trieste, Carniola, Friuli, Villach, and some part of Croatia and Dalmatia to France: thus connecting the kingdom of Italy with Napoleon's Illyrian possessions, making him master of the entire coast of the Adriatic, and depriving Austria of its last seaport. It was computed that the Emperor Francis gave up territory to the amount of 45,000 square miles, with a population of nearly 4,000,000. He also paid a large contribution in money.—R. H. Horne, *Life of Napoleon*, ch. 32.—“The cessions made directly to Napoleon were the county of Görz, or Goricia, and

that of Montefalcone, forming the Austrian Friuli; the town and government of Trieste, Carniola, the circle of Villach in Carinthia, part of Croatia and Dalmatia, and the lordship of Râzuns in the Grison territory. All these provinces, with the exception of Râzuns, were incorporated by a decree of Napoleon, with Dalmatia and its islands, into a single state with the name of the Illyrian Provinces. They were never united with France, but always governed by Napoleon as an independent state. A few districts before possessed by Napoleon were also incorporated with them: as Venetian Istria and Dalmatia with the Bocca di Cattaro, Ragusa, and part of the Tyrol. . . . The only other articles of the treaty of much importance are the recognition by Austria of any changes made, or to be made, in Spain, Portugal, and Italy; the adherence of the Emperor to the prohibitive system adopted by France and Russia, and his engaging to cease all correspondence and relationship with Great Britain. By a decree made at Ratisbon, April 24th 1809, Napoleon had suppressed the Teutonic Order in all the States belonging to the Rhenish Confederation, reannexed its possessions to the domains of the prince in which they were situated, and incorporated Mergentheim, with the rights, domains, and revenues attached to the Grand Mastership of the Order, with the Kingdom of Würtemberg. These dispositions were confirmed by the Treaty of Schönbrunn. The effect aimed at by the Treaty of Schönbrunn was to surround Austria with powerful states, and thus to paralyse all her military efforts. . . . The Emperor of Russia . . . was very ill satisfied with the small portion of the spoils assigned to him, and the augmentation awarded to the duchy of Warsaw. Hence the first occasion of coldness between him and Napoleon, whom he suspected of a design to re-establish the Kingdom of Poland.”—T. H. Dyer, *History of modern Europe*, v. 4, bk. 7, ch. 14.

1809-1810 (April-February).—Revolt in the Tyrol.—Heroic struggle of Andreas Hofer and his countrymen.—“The Tyrol, for centuries a possession of Austria, was ceded to Bavaria by the Peace of Presburg in 1805. The Bavarians made many innovations, in the French style, some good and some bad; but the mountaineers, clinging to their ancient ways, resisted them all alike. They hated the Bavarians as foreign masters forced upon them; and especially detested the military conscription, to which Austria had never subjected them. The priests had an almost unlimited influence over these faithful Catholics, and the Bavarians, who treated them rudely, were regarded as innovators and allies of revolutionary France. Thus the country submitted restlessly to the yoke of the Rhine League until the spring of 1809. A secret understanding was maintained with Austria and the Archduke John, and the people never abandoned the hope of returning to their Austrian allegiance. When the great war of 1809 began, the Emperor Francis summoned all his people to arms. The Tyrolese answered the call. . . . They are a people trained in early life to the use of arms, and to activity, courage, and ready devices in hunting, and in traveling on their mountain paths. Austria could be sure of the faithfulness of the Tyrol, and made haste to occupy the country. When the first troops were seen entering the passes, the people arose and drove away the Bavarian garrisons. The alarm was soon sounded through the

deepest ravines of the land. Never was there a more united people, and each troop or company chose its own officers, in the ancient German style, from among their strongest and best men. Their commanders were hunters, shepherds, priests: the former gamekeeper, Speckbacher; the innkeeper, Martin Teimer; the fiery Capuchin monk, Haspinger, whose sole weapon in the field was a huge ebony crucifix, and many more of like peaceful occupations. At the head of the whole army was a man who, like Saul, towered by a head above all others, while his handsome black beard fell to his girdle—Andrew Hofer, formerly an innkeeper at Passeyr—a man of humble piety and simple faithfulness, who fairly represented the people he led. He regarded the war as dutiful service to his religion, his emperor, and his country. The whole land soon swarmed with little bands of men, making their way to Innsprück (April, 1809), whence the Bavarian garrison fled. Meanwhile a small French corps came from Italy to relieve them. Though fired upon by the peasants from every ravine and hill, they passed the Brenner, and reached the Iselberg, near Innsprück. But here they were surrounded on every side, and forced to surrender. The first Austrian soldiers, under General Chasteler, then reached the capital, and their welcome was a popular festival. The liberators, as the Tyrolese soldiers regarded themselves, committed no cruelties, but carried on their enterprise in the spirit of a national jubilee. The tidings of the disasters at Regensburg [Ratisbon] now came upon them like a thunderbolt. The withdrawal of the Austrian army then left the Tyrol without protection. Napoleon treated the war as a mutiny, and set a price upon Chasteler's head. Neither Chasteler nor any of the Austrian officers with him understood the warfare of the peasantry. The Tyrolese were left almost wholly to themselves, but they resolved to defend their mountains. On May 11 the Bavarians under Wrede again set out from Salzburg, captured the pass of the Strub after a bloody fight, and then climbed into the valley of the Inn. They practiced frightful cruelties in their way. A fierce struggle took place at the little village of Schwatz; the Bavarians burned the place, and marched to Innsprück. Chasteler withdrew, and the Bavarians and French, under Wrede and Lefevre, entered the capital. The country again appeared to be subdued. But cruelty had embittered the people. Wrede was recalled, with his corps, by Napoleon; and now Hofer, with his South Tyrolese, recrossed the Brenner Pass. Again the general alarm was given, the leaders called to arms, and again every pass, every wall of rock, every narrow road was seized. The struggle took place at the Iselberg. The Bavarians, 7,000 in number, were defeated with heavy loss. The Tyrol now remained for several months undisturbed, during the campaign around Vienna. After the battle of Aspern, an imperial proclamation formally assured the Tyrolese that they should never be severed from the Austrian Empire; and that no peace should be signed unless their indissoluble union with the monarchy were recognized. The Tyrolese quietly trusted the emperor's promise, until the armistice of Znaim. But in this the Tyrol was not mentioned, and the French and their allies prepared to chastise the loyal and abandoned country."—C. T. Lewis, *History of Germany*, ch. 28.—"In the month of July, an army of 40,000 French and Bavarians attacked the Tyrol from the German side; while from Italy, General Rusca, with 18,000 men, entered from Klagenfurth, on the southern side of the Tyrolese Alps. Undismayed by this

double and formidable invasion, they assailed the invaders as they penetrated into their fastnesses, defeated and destroyed them. The fate of a division of 10,000 men, belonging to the French and Bavarian army, which entered the Upper Innthal, or Valley of the Inn, will explain in part the means by which these victories were obtained. The invading troops advanced in a long column up a road bordered on the one side by the river Inn, there a deep and rapid torrent, where cliffs of immense height overhang both road and river. The vanguard was permitted to advance unopposed as far as Prutz, the object of their expedition. The rest of the army were therefore induced to trust themselves still deeper in this tremendous pass, where the precipices, becoming more and more narrow as they advanced, seemed about to close above their heads. No sound but of the screaming of the eagles disturbed from their eyries, and the roar of the river, reached the ears of the soldier, and on the precipices, partly enveloped in a hazy mist, no human forms showed themselves. At length the voice of a man was heard calling across the ravine, 'Shall we begin?'—'No,' was returned in an authoritative tone of voice, by one who, like the first speaker, seemed the inhabitant of some upper region. The Bavarian detachment halted, and sent to the general for orders; when presently was heard the terrible signal, 'In the name of the Holy Trinity, cut all loose!' Huge rocks, and trunks of trees, long prepared and laid in heaps for the purpose, began now to descend rapidly in every direction, while the deadly fire of the Tyrolese, who never throw away a shot, opened from every bush, crag, or corner of rock, which would afford the shooter cover. As this dreadful attack was made on the whole line at once, two-thirds of the enemy were instantly destroyed; while the Tyrolese, rushing from their shelter, with swords, spears, axes, scythes, clubs and all other rustic instruments which could be converted into weapons, beat down and routed the shattered remainder. As the vanguard, which had reached Prutz, was obliged to surrender, very few of the 10,000 invaders are computed to have extricated themselves from the fatal pass. But not all the courage of the Tyrolese, not all the strength of their country, could possibly enable them to defend themselves, when the peace with Austria had permitted Buonaparte to engage his whole immense means for the acquisition of these mountains. Austria too—Austria herself, in whose cause they had incurred all the dangers of war, instead of securing their indemnity by some stipulations in the treaty, sent them a cold exhortation to lay down their arms. Resistance, therefore, was abandoned as fruitless; Hofer, chief commander of the Tyrolese, resigned his command, and the Bavarians regained the possession of a country which they could never have won back by their own efforts. Hofer, and about thirty chiefs of these valiant defenders of their country, were put to death [February, 1810], in poor revenge for the loss their bravery had occasioned. But their fame, as their immortal spirit, was beyond the power of the judge alike and executioner; and the place where their blood was shed, becomes sacred to the thoughts of freedom, as the precincts of a temple to those of religion."—W. Scott, *Life of Napoleon*, v. 2, ch. 7.

1812-1813.—Teutonic uprising against Napoleon.—Beginning of the War of Liberation.—Alliance of Prussia and Russia.—“During Napoleon’s march on Moscow and his fatal return, Macdonald remained on the Lower Dwina, before Riga, with an observation corps of Prussians and Poles, nor had he ever received an order to retreat from Napoleon. Learning of the misfortunes of the grand army, he went from the Dwina towards the Niemen. As he passed through Courland, General York, commander of the Prussian troops, allowed him to lead the way with the Poles, and then signed an agreement of neutrality with the Russians (December 30, 1812). The Prussian troops, from a military spirit of honor, had fought the Russians bravely; they retained some scruples relative to the worthy marshal under whom they served, and forsook without betraying him, that is, they left him time to escape. This was a most important event and the beginning of the inevitable defection of Germany. The attitude of Czar Alexander decided General York; the former was completely dazzled by his triumphs, and aspired to nothing less than to destroy Napoleon and liberate Europe, even France! With mingled enthusiasm and calculation, he promised all things to all men; on returning to Wilna, he granted an amnesty for all acts committed in Poland against Russian authority. On the one hand, he circulated a rumor that he was about to make himself King of Poland, and, on the other hand, he announced to the Prussians that he was ready to restore the Polish provinces taken from them by Napoleon. He authorized ex-Minister Stein to take possession, as we may say, of Old Prussia, just evacuated by the French, and to promise the speedy enfranchisement of Germany, protesting, at the same time, that he would not dispute ‘the legitimate greatness’ of France. The French army, on hearing of York’s defection, left Königsberg with ten or twelve thousand sick men and eight or ten thousand armed troops, withdrawing to the Vistula and thence to Warta and Posen. General Rapp had succeeded in gathering at Dantzic, the great French depot of stores and reserves, 25,000 men, few of whom had gone through the Russian campaign, and a division of almost equal numbers occupied Berlin. The French had in all barely 80,000 men, from Dantzic to the Rhine, not including their Austrian and Saxon allies, who had fallen back on Warsaw and seemed disposed to fight no more. Murat, to whom Napoleon confided the remains of the grand army, followed the Emperor’s example and set out to defend his Neapolitan kingdom, leaving the chief command to Prince Eugene. Great agitation prevailed around the feeble French forces still occupying Germany. The Russians themselves, worn out, did not press the French very hotly; but York and Stein, masters of Königsberg, organized and armed Old Prussia without awaiting authorization from the king, who was not considered as a free agent, being under foreign rule. Pamphlets, proclamations, and popular

songs were circulated everywhere, provoking the people to rebellion. The idea of German union ran like wildfire from the Niemen to the Rhine; federal union, not unity in a single body or state, which was not thought of then.”—H. Martin, *Popular history of France from 1789, v. 2, ch. 16.*—“The king of Prussia had suddenly abandoned Berlin [January, 1813], which was still in the hands of the French, for Breslau, whence he declared war against France. A conference also took place between him and the emperor Alexander at Calisch [Kalisch], and, on the 28th of February, 1813, an offensive and defensive alliance was concluded between them. The hour for vengeance had at length arrived. The whole Prussian nation, eager to throw off the hated yoke of the foreigner, to obliterate their disgrace in 1806, to regain their ancient name, cheerfully hastened to place their lives and property at the service of the impoverished government. The whole of the able-bodied population was put under arms. The standing army was increased: to each regiment were appended troops of volunteers, Jaegers, composed of young men belonging to the higher classes, who furnished their own equipments: a numerous Landwehr, a sort of militia, was, as in Austria, raised besides the standing army, and measures were even taken to call out, in case of necessity, the heads of families and elderly men remaining at home, under the name of the Landsturm. The enthusiastic people, besides furnishing the customary supplies and paying the taxes, contributed to the full extent of their means towards defraying the immense expense of this general arming. Every heart throbbed high with pride and hope. . . . More loudly than even in 1809 in Austria was the German cause now discussed, the great name of the German empire now invoked in Prussia for in that name alone could all the races of Germany be united against their hereditary foe. The celebrated proclamation, promising external and internal liberty to Germany, was, with this view, published at Calisch by Prussia and Russia. Nor was the appeal vain. It found an echo in every German heart, and such plain demonstrations of the state of the popular feeling on this side the Rhine were made, that Davoust [Davout] sent serious warning to Napoleon, who contemptuously replied, ‘Pah! Germans never can become Spaniards!’ With his customary rapidity he levied in France a fresh army 300,000 strong, with which he so completely awed the Rhenish confederation as to compel it once more to take the field with thousands of Germans against their brother Germans. The troops, however, reluctantly obeyed, and even the traitors were but lukewarm, for they doubted of success. Mecklenburg alone sided with Prussia. Austria remained neutral. A Russian corps under General Tettgenhorn had preceded the rest of the troops and reached the coasts of the Baltic. As early as the 24th of March, 1813, it appeared in Hamburg and expelled the French authorities from the city. The heavily oppressed people of Hamburg, whose commerce had been totally annihilated by the continental system, gave way to the utmost demonstrations of delight, received their deliverers with open arms, revived their ancient rights, and immediately raised a Hanseatic corps destined to take the field against Napoleon. Dörnberg, the ancient foe to France, with another flying squadron took the French division under Morand prisoner, and the Prussian, Major Hellwig (the same who, in 1806, liberated the garrison of Erfurt), dispersed, with merely 120 hussars, a Bavarian regiment 1,300 strong and captured five pieces of artillery. In January, the peasantry of the upper

country had already revolted against the conscription, and, in February, patriotic proclamations had been disseminated throughout Westphalia under the signature of the Baron von Stein. In this month, also, Captain Maas and two other patriots, who had attempted to raise a rebellion, were executed. As the army advanced, Stein was nominated chief of the provisional government of the still unconquered provinces of Western Germany. The first Russian army, 17,000 strong, under Wittgenstein, pushed forward to Magdeburg, and, at Mökern, repulsed 40,000 French who were advancing upon Berlin. The Prussians, under their veteran general, Blücher, entered Saxony and garrisoned Dresden, on the 27th of March, 1813, after an arch of the fine bridge across the Elbe [had] been uselessly blown up by the French. Blücher, whose gallantry in the former wars had gained for him the general esteem and whose kind and generous disposition had won the affection of the soldiery, was nominated generalissimo of the Prussian forces, but subordinate in command to Wittgenstein, who replaced Kutusow as generalissimo of the united forces of Russia and Prussia. The Emperor of Russia and the King of Prussia accompanied the army and were received with loud acclamations by the people of Dresden and Leipzig.—W. Menzel, *History of Germany*, v. 3, ch. 260.—Bernadotte, the adopted crown prince and expectant king of Sweden, had been finally thrown into the arms of the new coalition against Napoleon, by the refusal of the latter to take Norway from Denmark and give it to Sweden. "The disastrous retreat of the French from Moscow . . . led to the signature of the Treaty of Stockholm on the 2d of March, 1813, by which England acceded to the union of Norway to Sweden, and a Swedish force was sent to Pomerania under General Sandels. On the 18th of May, 1813, Bernadotte landed at Stralsund."—Lady Bloomfield, *Biographical sketch of Bernadotte (Memoir of Lord Bloomfield)*, v. 1, p. 31.

1813 (April-May).—Battle of Lützen.—Humiliation of the king of Saxony.—"On the 14th April, Napoleon left Paris to assume the command of the army. Previous to his departure, with a view, perhaps, of paying a compliment to the Emperor of Austria, the Empress Marie Louise was appointed regent in his absence; but Prince Schwarzenberg, who had arrived on a special mission from Vienna, was treated only as the commander of an auxiliary corps, to which orders would immediately be transmitted. On the 16th he reached Mayence, where, for the last time, vassal princes assembled courtier-like around him; and on the 20th he was already at Erfurt, in the midst of his newly-raised army. The roads were everywhere crowded with troops and artillery, closing in towards the banks of the Saale. From Italy, Marshal Bertrand joined with 40,000 men, old trained soldiers; the Viceroy brought an equal number from the vicinity of Magdeburg; and Marshal Macdonald having, on the 20th, taken Merseburg by assault, the whole army, which Bade, the ablest and most accurate of the authors who have written on this campaign, estimates at 140,000 men, was assembled for action. With this mighty force Napoleon determined to seek out the enemy, and bring them quickly to battle. The Russian and Prussian armies were no sooner united, after the alliance concluded between the sovereigns, than they crossed the Elbe, occupied Dresden, which the King of Saxony had abandoned, and advanced

to the banks of the Saale. General Blücher commanded the Prussians, and Count Wittgenstein the Russian corps; and, death having closed the career of old Marshal Kutusof, . . . the command of both armies devolved upon the last mentioned officer. Informed of the rapid advance of the French, the allied monarchs joined their forces, which were drawn together in the plains between the Saale and the Elbe; their numerous cavalry giving them perfect command of this wide and open country. Napoleon, always anxious for battle, determined to press on towards Leipzig, behind which he expected to find the Allied army, who, as it proved, were much nearer than he anticipated. At the passage of the Rippach, a small stream that borders the wide plain of Lützen, he already encountered a body of Russian cavalry and artillery under Count Winzingerode; and as the French were weak in horse, they had to bring the whole of Marshal Ney's corps into action before they could oblige the Russians to retire. Marshal Bessières, the commander of the Imperial Guard, was killed. . . . On the evening of the 1st of May, Napoleon established his quarters in the small town of Lützen. The Allies, conscious of the vast numerical superiority of the French, did not intend to risk a general action on the left bank of the Elbe; but the length of the hostile column of march, which extended from beyond Naumburg almost to the gates of Leipzig, induced Scharnhorst to propose an advance from the direction of Borna and Pegau against the right flank of the enemy, and a sudden attack on the centre of their line in the plain of Lützen. It was expected that a decisive blow might be struck against this centre, and the hostile army broken before the distant wings could close up and take an effective part in the battle. The open nature of the country, well adapted to the action of cavalry, which formed the principal strength of the Allies, spoke in favour of the plan. . . . The bold attempt was immediately resolved upon, and the onset fixed for the following morning. The annals of war can hardly offer a plan of battle more skilfully conceived than the one of which we have here spoken; but unfortunately the execution fell far short of the admirable conception. Napoleon, with his Guards and the corps of Lauriston, was already at the gates of Leipzig, preparing for an attack on the city, when about one o'clock [May 2] the roar of artillery burst suddenly on the ear, and gathering thicker and thicker as it rolled along, proclaimed that a general action was engaged in the plain of Lützen,—proclaimed that the army was taken completely at fault, and placed in the most imminent peril. . . . The Allies, who, by means of their numerous cavalry, could easily mask their movement, had advanced unobserved into the plain of Lützen," and the action was begun by a brigade of Blücher's corps attacking the French in the village of Great-Görschen (Gross-Görscher). "Reinforcements . . . poured in from both sides, and the narrow and intersected ground between the villages became the scene of a most murderous and closely-contested combat of infantry. . . . But no attempt was made to employ the numerous and splendid cavalry, that stood idly exposed, on open plain, to the shot of the French artillery. . . . When night put an end to the combat, Great-Görschen was the sole trophy of the murderous fight that remained in the hands of the Allies. . . . On the side of the Allies, 2,000 Russians and 8,000 Prussians had been killed or wounded; among the slain was Prince Leopold of Hesse-Homburg; among the wounded was the admirable Scharnhorst, who died a few weeks after-

wards. . . . The loss sustained by the French is not exactly known; but . . . Jomini tells us that the 3d corps, to which he was attached as chief of the staff, had alone 500 officers and 12,000 men 'hors de combat.' Both parties laid claim to the victory: the French, because the Allies retired on the day after the action; the Allies, because they remained masters of part of the captured battlefield, had taken two pieces of artillery, and 800 prisoners. . . . The Allies alleged, or pretended perhaps, that it was their intention to renew the action on the following morning: in the Prussian army every man, from the king to the humblest soldier, was anxious indeed to continue the fray; and the wrath of Blücher, who deemed victory certain, was altogether boundless when he found the retreat determined upon. But . . . opinion has, by degrees, justified Count Wittgenstein's resolution to recross the Elbe and fall back on the reinforcements advancing to join the army. . . . On the 8th of May, Napoleon held his triumphal entrance into Dresden. . . . On the advance of the Allies, the Saxon monarch had retired to Ratisbon, and from thence to Prague, intending, as he informed Napoleon, to join his efforts to the mediation of Austria. Orders had, at the same time, been given to General Thielman, commanding the Saxon troops at Torgau, to maintain the most perfect neutrality, and to admit neither of the contending parties within the walls of the fortress. Exasperated by this show of independence, Napoleon caused the following demands to be submitted to the King, allowing him only six hours to determine on their acceptance or refusal:—1. 'General Thielman and the Saxon troops instantly evacuate Torgau, and form the 7th corps under General Régnier; and all the resources of the country to be at the disposal of the Emperor, in conformity with the principles of the Confederation of the Rhine.' 2. 'The Saxon Cavalry—some regiments had accompanied the King—return immediately to Dresden.' 3. 'The King declares, in a letter to the Emperor, that he is still a member of the Confederation of the Rhine, and ready to fulfil all the obligations which it imposes upon him.' 'If these conditions are not immediately complied with,' says Napoleon in the instructions to his messenger, 'you will cause his Majesty to be informed that he is guilty of felony, has forfeited the Imperial protection, and has ceased to reign.' . . . Frederick Augustus, finding himself threatened with the loss of his crown by an overbearing conqueror already in possession of his capital, . . . yielded in an evil hour to those imperious demands, and returned to Dresden. . . . Fortune appeared again to smile upon her spoiled and favoured child; and he resolved, on his part, to leave no expedient untried to make the most of her returning aid. The mediation of Austria, which from the first had been galling to his pride, became more hateful every day, as it gradually assumed the appearance of an armed interference, ready to enforce its demands by military means. . . . Tidings having arrived that the allied army, instead of continuing their retreat, had halted and taken post at Bautzen, he immediately resolved to strike a decisive blow in the field, as the best means of thwarting the pacific efforts of his father-in-law."—J. Mitchell, *Fall of Napoleon*, v. 2, bk. 2, ch. 1.

1813 (May-August).—Battle of Bautzen.—Armistice of Pleswitz.—Accession of Austria

and Great Britain to the coalition against Napoleon.—"While the Emperor paused at Dresden, Ney made various demonstrations in the direction of Berlin, with the view of inducing the Allies to quit Bautzen; but it soon became manifest that they had resolved to sacrifice the Prussian capital, if it were necessary, rather than forego their position. . . . Having replaced by wood-work some arches of the magnificent bridge over the Elbe at Dresden, which the Allies had blown up on their retreat, Napoleon now moved towards Bautzen, and came in sight of the position on the morning of the 21st of May. Its strength was obviously great. In their front was the river Spree: wooded hills supported their right, and eminences well fortified their left. The action began with an attempt to turn their right, but Barclay de Tolly anticipated this movement, and repelled it with such vigour that a whole column of 7,000 dispersed and fled into the hills of Bohemia for safety. The Emperor then determined to pass the Spree in front of the enemy, and they permitted him to do so, rather than come down from their position. He took up his quarters in the town of Bautzen, and his whole army bivouacked in presence of the Allies. The battle was resumed at day-break on the 22d; when Ney on the right, and Oudinot on the left, attempted simultaneously to turn the flanks of the position; while Soult and Napoleon himself directed charge after charge on the centre. During four hours the struggle was maintained with unflinching obstinacy; the wooded heights, where Blücher commanded, had been taken and retaken several times—the bloodshed on either side had been terrible—ere . . . the Allies perceived the necessity either of retiring, or of continuing the fight against superior numbers on disadvantageous ground. They withdrew accordingly; but still with all the deliberate coolness of a parade, halting at every favourable spot and renewing their cannonade. 'What,' exclaimed Napoleon, 'no results! not a gun! not a prisoner!—these people will not leave me so much as a nail.' During the whole day he urged the pursuit with impetuous rage, reproaching even his chosen generals as 'creeping scoundrels,' and exposing his own person in the very hottest of the fire." His closest friend, Duroc, Grand Master of the Palace, was mortally wounded by his side, before he gave up the pursuit. "The Allies, being strongly posted during most of the day, had suffered less than the French; the latter had lost 15,000, the former 10,000 men. They continued their retreat into Upper Silesia; and Buonaparte advanced to Breslau, and released the garrison of Glogau. Meanwhile the Austrian, having watched these indecisive though bloody fields, once more renewed his offers of mediation. The sovereigns of Russia and Prussia expressed great willingness to accept it; and Napoleon also appears to have been sincerely desirous for the moment of bringing his disputes to a peaceful termination. He agreed to an armistice [of six weeks] and in arranging its conditions agreed to fall back out of Silesia; thus enabling the allied princes to reopen communications with Berlin. The lines of country to be occupied by the armies, respectively, during the truce, were at length settled, and it was signed on the 1st of June [at Pleswitz]. The French Emperor then returned to Dresden, and a general congress of diplomatists prepared to meet at Prague. England alone refused to send any representative to Prague, alleging that Buonaparte had as yet signified no disposition to recede from his pretensions on Spain, and that he had consented to the armistice with the sole view of gaining time for political intrigue and further military prepara-

tion. It may be doubted whether any of the allied powers who took part in the Congress did so with much hope that the disputes with Napoleon could find a peaceful end. . . . But it was of the utmost importance to gain time for the advance of Bernadotte; for the arrival of new reinforcements from Russia; for the completion of the Prussian organization; and, above all, for determining the policy of Vienna. Metternich, the Austrian minister, repaired in person to Dresden, and while inferior diplomatists wasted time in endless discussions at Prague, one interview between him and Napoleon brought the whole question to a definite issue. The Emperor . . . assumed at once that Austria had no wish but to drive a good bargain for herself, and asked broadly, 'What is your price? Will Illyria satisfy you? I only wish you to be neutral—I can deal with these Russians and Prussians single-handed.' Metternich stated plainly that the time in which Austria could be neutral was past; that the situation of Europe at large must be considered; . . . that events had proved the impossibility of a steadfast peace unless the sovereigns of the Continent were restored to the rank of independence; in a word, that the Rhenish Confederacy must be broken up; that France must be contented with the boundary of the Rhine, and pretend no longer to maintain her usurped and unnatural influence in Germany. Napoleon replied by a gross personal insult: 'Come, Metternich,' said he, 'tell me honestly how much the English have given you to take their part against me.' The Austrian court at length sent a formal document, containing its ultimatum, the tenor of which Metternich had sufficiently indicated in this conversation. Talleyrand and Fouché, who had now arrived from Paris, urged the Emperor to accede to the proffered terms. They represented to him the madness of rousing all Europe to conspire for his destruction, and insinuated that the progress of discontent was rapid in France itself. Their arguments were backed by intelligence of the most disastrous character from Spain [see SPAIN: 1812-1814]. . . . Napoleon was urged by his military as well as political advisers, to appreciate duly the crisis which his affairs had reached. . . . He proceeded to insult both ministers and generals . . . and ended by announcing that he did not wish for any plans of theirs, but their service in the execution of his. Thus blinded by arrogance and self-confidence, and incapable of weighing any other considerations against what he considered as the essence of his personal glory, Napoleon refused to abate one iota of his pretensions—until it was too late. Then, indeed, . . . he did show some symptoms of concession. A courier arrived at Prague with a note, in which he signified his willingness to accede to a considerable number of the Austrian stipulations. But this was on the 11th of August. The day preceding was that on which, by the agreement, the armistice was to end. On that day Austria had to sign an alliance, offensive and defensive, with Russia and Prussia. On the night between the 10th and 11th, rockets answering rockets, from height to height along the frontiers of Bohemia and Silesia, had announced to all the armies of the Allies this accession of strength, and the immediate recommencement of hostilities."—J. G. Lockhart, *Life of Napoleon Buonaparte*, ch. 32-33.—"On the 14th of June Great Britain had become a party to the treaty concluded between Russia and Prussia. She had promised assistance in this great struggle: but no aid could have been more effectual than that which she was rendering in the Peninsula."—C. Knight, *Popular history of England*, v. 7, ch. 32.

1813 (August-October).—Strength of Napoleon's army.—Opposing forces.—Provisional agreement between Francis I and the prince royal of Sweden.—Napoleon's proposed plan of operation.—Battle of Dresden.—Vandamme at Königstein.—French defeats at Katzbach, Gross-Beeren, and Kulm.—French reverses at Dennewitz.—Napoleon's march on Leipzig.—"During the armistice [Pleswitz] Napoleon had made the best possible use of his time. The army with which he now confronted the enemy is estimated at 440,000 men. Of cavalry, the lack of which he had lamented so bitterly a few weeks before, he now had a superabundance; nor was there any longer a deficiency of artillery. And although his forces were made up of the youngest of the youth of France and the states of the Rhenish Confederation available for service, yet we have seen these striplings at Lützen and Bautzen fight like veterans. . . . But money for the men's pay was scarce, and the corruption was incredible; so that the young warriors suffered excessively from hunger, which sent many thousands to the hospitals. Moreover, there was still a great scarcity of officers and subalterns; the latter doubtless because the Emperor took the best material for his Guard, which had now grown to 58,000 (normal strength 80,000) and was cared for with the same solicitude as before. It almost looked as if the Emperor, who was free from national ties, meant to make a personal army of this host within a host. Besides this body there were fourteen army corps. One corps of the division under Davout, on the lower Elbe, had been detached and sent to Dresden under Vandamme. A second was brought from Franconia and put under Saint-Cyr. Poniatowski had brought 12,000 unarmed Poles through Austria, and in addition there were five reserve corps of cavalry under Murat, the Emperor manifestly intending in this way to bring this general out of his political vacillation and bind him to himself. The entire force was stationed for the most part between Dresden and Liegnitz; only three corps under Oudinot were north of Kottbus and Kalau, facing Bülow, who was to cover Berlin. The allies, too, had been making mighty preparations during the last few months. Alexander I. had organized the recruiting system, so that troops could arrive from all parts of the Russian empire, to say nothing of the great reserves in Poland. Prussia, thanks to the warlike enthusiasm of her people, had done wonders. 'We now have an army,' wrote Gneisenau as early as on July 11th to Stein, 'such as Prussia never had before, even in her most glorious days.' Austria, likewise, had made all conceivable exertions. As to the plans for the proper utilizing of these forces (reckoned at 480,000) against the dreaded Cæsar, a provisional agreement had been reached even in June at Gitschin, when Francis I. first suggested the possibility of his co-operation with the other powers. The plans were further discussed and settled at Trachenberg, in concert with the Prince Royal of Sweden. There were to be three armies in the field. The main army was to occupy Bohemia, out of regard for Austria, which had been so courted and now feared a new invasion from the north and the occupation of Vienna by the enemy; re-enforcements from Silesia raised it to the desired

size, and at the end of the armistice it numbered 230,000 men. Then a northern army under Bernadotte (156,000, over 40,000 of which, however, were detached); and finally a Silesian army under Blücher (of 95,000). The fundamental plan of strategy adopted for the campaign was, that if the enemy threw himself with his main body on any one of these armies, it should fall back while the other two advanced to the attack. Napoleon had received no information of such a plan. He became aware of it quite late from the march of Russian troops toward Bohemia. He himself had never formed the purpose of marching on Vienna which was ascribed to him in the enemies' camp. His plan was quite different; he wanted Davout from Hamburg and Oudinot from the south to co-operate in an offensive movement on Berlin, which he thought would be successful, for he far underestimated the northern army and judged that to be the weakest point in the enemies' lines. To form a connecting link between those two generals a division under Girard was to proceed east from Magdeburg. After the Prussian capital had been occupied, Küstrin and Stettin were to be relieved at once and so the left wing of the entire French line would be pushed towards the east. In the meantime the Emperor meant to cover this movement by a vigorous defence against the other two armies, leaving the enemy to take the offensive. From what point the attack would be made he was not certain. To prepare for any emergency he took a temporary position at Görlitz with the Guard, supposing that the united forces of the Russians and Prussians might advance from Bohemia by way of Zittau. He tried to secure Dresden from being surprised by means of earthworks and palisades, and entrusted the defence to Saint-Cyr, though he himself could take part in it within a few days. But the expected offensive movement of the enemy at Zittau did not take place. On the contrary, Blücher had already commenced hostilities on the 16th of August and had driven four French corps under Ney, which were immediately in front of him at Leignitz, over the Bober. Napoleon wanted to retrieve the loss and strike Blücher a fatal blow. But the latter at once became aware of his presence by the very behaviour of the French troops, if not by the resounding cry of 'Vive l'Empereur!' and discerning the purpose of a decisive movement, he did what had been agreed upon, and retired fighting beyond the Katzbach. The Emperor failed to see that this retreat was intentional, and so pushed on eagerly after him, until a call for help from Saint-Cyr unexpectedly overtook him: Dresden was most seriously threatened by the advance of a hostile army from the Erzgebirge. So the issue was to be determined in quite a different quarter from what Napoleon had supposed. He left Macdonald [commander at Katzbach] with three corps in front of Blücher and set out with the remainder to the west on the 23d of August. After extraordinary forced marches for three days the troops arrived in the vicinity of Dresden. The Emperor now conceived the daring plan of crossing the Elbe below the enemy, who was already near the city, so as to bring the hostile army between himself and Saint-Cyr, and thus cut off its line of retreat. But he was obliged to drop the brilliant conception at once; Saint-Cyr was too weak to make any lasting resistance, and the defensive works were still incomplete, so he had to choose the safer way and advance upon the enemy from Dresden. All he did was to send Vandamme [commander at Kulm] with 40,000 men to Pirna and Königstein, while he himself entered the city on the forenoon of the 26th of August with the

Guard, which had marched from Löwenberg in three days, over eighty-five miles. The corps of Marmont and Victor were still on the way. It was fortunate for him that at the enemy's headquarters, where Schwarzenberg was commander-in-chief, though with constant interference on the part of the three monarchs and their advisers, the favourable moment for attack the next morning was allowed on trifling grounds to slip by, and the assault on the city was postponed until the afternoon. Not until about four o'clock did the allies advance in a semicircle broken by the declivities near Plauen. But being without means for storming, and without re-enforcements on account of the scattered state of their forces, they were unable to spite of desperate valour to gain any lasting success, but just threw away their lives in the futile attempt to get possession of the suburbs. In the evening Napoleon himself issued from the gates to the attack and drove the Russians back on the left far beyond Striesen, the Austrians on the right to Löbtaw and Cotta, and the Austrians and Prussians in the centre to the heights of Räcknitz. The battle was won without the corps of Marmont and Victor, which arrived during the night and greatly strengthened the French army. On the next day the Emperor at once assumed the offensive. He engaged the enemy's right wing and centre, while Murat with his corps of cavalry pushed through between the centre and the left wing, which he cut off, surrounded, and routed, taking an Austrian division prisoners. The enemy's mistake in leaving his cavalry inactive in the centre greatly aided the victory of the French. Meantime Vandamme also had crossed the Elbe and engaged a weak corps of the enemy at Königston. Threatened in their rear, and with their left wing severely crippled, the allies retired. In those two days they had lost nearly a third of their forces in dead, wounded, and prisoners, while the enemy, being well protected by their position, had much smaller losses to report and could boast of another proud victory. If Napoleon had followed it up with the same skill with which he won it, the main army of the allies would have been overtaken by catastrophe that no successes of the other two armies could have retrieved. He did not do so. Primarily because, although he was certain of victory, he did not feel sure that the enemy, whose main forces in the centre and left wing had been but little engaged, would not renew the battle the next day. The commands he issued that evening leave no doubt that he expected yet a third day of fighting. And in fact the plan of retiring with the whole army to the heights of Dippoldiswalde and renewing the battle there was discussed at the headquarters of the allies far into the night. Finally, Schwarzenberg urged that the Austrians were poorly armed, and so ordered a retreat. Not until the next morning did Napoleon, riding forward to the line of battle of the preceding day, learn this decision when he saw the enemy's columns disappearing in the valleys on the road to Dippoldiswalde and Maxen. As Vandamme with 40,000 men held the Pirna highroad that led by Peterswalde to Teplitz, it was the Emperor's conviction that the allies would seek to reach Teplitz by shorter though less convenient roads. He ordered Saint-Cyr and Marmont to follow them on the road past Sayda Victor, while Murat was to march to Freyberg and Frauenstein and threaten their flank and rear. On the 28th he wrote to Vandamme, whose position near Pirna was not taken by Mortier, that the enemy seemed to have started in the direction of Altenberg, and that he prevent their making connections with Teplitz and especially do great dam-

age to their baggage-train. He himself by no means deemed the enemy conquered, having just expected him to renew the battle, and evidently regarded it as a great success that he had victoriously repulsed the assault of the main army. If he had any inkling of the dejection in the other camp, the ill-feeling of the Austrians, the poor order on the retreat, the confused marching of the columns so that 40,000 Prussians under Kleist had to turn aside and climb the hills to make any progress at all, he would not have wavered for a moment, but completed his victory by a crushing blow. But there was another circumstance. During the last few days the Emperor had been notified of a calamity that had befallen the army of Oudinot: it had been defeated at Gross-Beeren on the 23d of August by Bülow and forced to retreat to Wittenberg. And as if there were not enough, just now, as he was about joining the pursuing corps, the news arrived of a brilliant victory by Blücher on the 26th at Wahlstatt on the Katzbach over Macdonald, whereby the eastern army of the French lost 20,000 men and was driven back into the Lausitz. Under these circumstances could he still afford to go into Bohemia? He weighed this question and answered it in a series of notes in the negative. For it had been his main plan originally to remain on the defensive in the south and make an offensive movement only in the north. Hence the Dresden affair he regarded as merely a defensive victory, at a time when his scheme of an attack on Berlin and the Oder, where the garrisons could hold out no longer than October according to his reckoning, was on the point of miscarrying. That, therefore, must be the direction of his next movement with stronger forces and in person, whereas Dresden he merely put into a better defensive position. And now it was the politician in him that joined the strategist and led him astray; 'I can succeed thereby in separating the Russians from the Austrians, for I can bring to bear upon Austria my regard for her in not having carried the war into Bohemia.' It was his plan within the next two weeks to take Berlin,—supposing Macdonald to check Bülow,—provision Stettin, destroy the Prussian defences, and disorganize the landwehr. The pursuit into Bohemia was given up. It must be left to military experts to criticize the strategic aspect of this plan. Hitherto they have condemned it. And as if the very events themselves were to put the Emperor in the wrong, Vandamme in his advanced and isolated position met in front on the 29th of August resistance from a superior force of Russians and Austrians at Kuhn [Kulm], and finally, on the 30th, was attacked in the rear, as well, by Kleist, who had got behind him on the Peterswalde road. His corps was annihilated with the exception of a small remnant, which sought safety in flight over the mountains. Nor was the enterprise against Berlin destined to be carried out. The commands for it had indeed already been issued early in September, when a gloomy report came from Macdonald summoning the Emperor to Bautzen with the auxiliary corps. He repaired thither, intending to reinforce the threatened army with the corps of Marmont and a corps of cavalry, thus to defeat the impetuously advancing Blücher, and then move 'in great haste' on Berlin. An excellent plan. But suppose no battle ensued? Suppose Blücher, whose vehement energy was guided and held in check by the superior intellect of his chief-of-staff, Gneisenau, learns again, as once before, in August, of the Emperor's presence and retires, luring his foe after him into the wasted country? That was just what took place. Blücher fell back from

Hochkirch to Görlitz, fighting constantly. This time, however, Napoleon discerned his aim and stopped the pursuit. He was now obliged to move against Bernadotte without having defeated, as he had hoped, the Silesian army. He gave orders to that effect, when news comes from Dresden of a new offensive movement of the Bohemian army. In any case, he would have been too late in the north for the present; for the impetuous energy of Bülow and the valour of the Prussian landwehr, for which Napoleon's contempt knew no bounds, had inflicted such a decisive defeat on Ney (now in Oudinot's place) at Dennewitz on the 6th of September that he had to take flight far beyond Torgau. 'Your left flank is exposed,' wrote the defeated marshal to the Emperor on the next day, 'take care. I think it is time to leave the Elbe and retire to the Saale.' Before receiving this letter Napoleon had already arrived at Dresden, and in a reconnaissance beheld the heights of the mountain roads to Bohemia occupied by the enemy. For the allies, thoroughly elated by their own victory at Kuhn and the successes of the other two armies, as soon as they learned of Napoleon's advance against Blücher, undertook a double diversion in favour of the latter. A division of 60,000 Austrians was to cross the Elbe and fall on the flank of the advancing enemy at Rumburg, while the remainder of the main army held in check the forces left at Dresden. Napoleon was aware of the intended diversion at Rumburg. He sought to seize the moment to drive the enemy back to Peterswalde and there venture an advance into Bohemia if circumstances favoured. He succeeded in doing the first, but the nature of the country frustrated the latter intention, and on the 12th of September the Emperor was again in Dresden. When the allies, who had recalled all but one division of the Austrian corps at the first news of his presence, soon afterwards advanced anew over the mountains to mask Schwarzenberg's march north-west in the direction of Leipzig, Napoleon thwarted the scheme by making another sally as far as Kuhn [Kulm]. The enemy's position seemed to him still too strong for a successful attack, as he himself was obliged by the difficulty of procuring supplies to send two corps to the north to protect convoys on the Elbe. He had to content himself with a 'system of hither and thither' with Schwarzenberg. Here again he longed earnestly to be attacked, but in vain. The enemy evades the commander-in-chief and defeats his generals. But he cannot afford to remain idle long, as the circle of the hostile forces keeps drawing closer around him and he can provide for the masses of his troops in the restricted space only with daily-increasing difficulty. Ney, who had crossed again to the left bank of the Elbe, reported that the army of Bernadotte and Bülow were planning to cross that river and were making preparations for it in the vicinity of Dessau, and that one division of Blücher's army was approaching from the south-east. In the face of this danger of having his flank turned, Napoleon ordered a retreat to the left bank of the Elbe and abandoned the right. Ever since he had neglected the decisive moment after the battle of Dresden, his will-power seemed broken, and he himself to have become but a plaything of his enemies, tossed back and forth,—the people, on account of his repeated trips to Bautzen, jocularly called him the 'Bautzen Messenger,'—until at last his advance position was wholly untenable. Besides, the army was in a most uncomfortable condition, on every hand were discontent and bitterness, especially among the higher officers. Even strangers could not help taking

notice. The Würtemberg General Trancquemont wrote to his king on the 10th of September: 'The French generals and officers seem to me disgusted with the war, and only the presence of the Emperor can animate the soldiers.' In fact, when his eye was not resting on them, they threw aside their duty like a heavy burden, frequently got rid of their weapons and left the columns or stole away among the slightly wounded by maiming themselves. Hardly a month had passed since hostilities reopened, and already over 60,000 men and nearly 300 cannon had fallen into the hands of the enemy, while companies of hundreds, nay, thousands, of unarmed men were bound for the west. What drove these from the ranks was the terrible distress that set in when the harried lands of Silesia and Saxony had given up their last potatoes, and the convoys from the Elbe found it almost impossible to get through, now that Ney had retired. 'M. le Comte de Daru,' wrote Napoleon himself on the 23d of September to the director of the commissariat, 'the army is no longer being fed. It would be an illusion to take any other view of it.' But he could not help matters, and he was far from knowing all the wretchedness which eye-service, forgetful of duty, carefully tried to conceal just as it knew how to deceive him as to the truth of unpleasant facts. (It may have been Bertrand's accounts of the battle of Gross-Beeren that led Napoleon to withhold reinforcements from the northern army, thus facilitating its second defeat by the Prussians.) Under such circumstances it is hardly to be wondered at that of the 400,000 men at the Emperor's disposal at the middle of August, scarcely 250,000 answered the roll-call at the end of September. These were ill supplied with clothing and shoes, and soon ammunition began to fail as the transports from the west were captured by hostile bands with increasing frequency. While the allies were reinforced by a corps of 50,000 Russian and Polish reserves under command of Bennigsen, Augereau brought only 16,000 French troops to Leipzig. To be sure, orders were issued at Paris on the 27th of September for 160,000 conscripts of 1815 and 120,000 men of the last seven age classes; but although the Senate at once enacted the proper decree, the new recruits would be of no use in the immediate future, evidently so critical."—A. Fournier, *Napoleon the First* (tr. by E. G. Bourne), pp. 622-631.—"Napoleon now resolved to march against the Bohemian army at Leipzig. On October 14, on approaching the city from the north, he heard cannon-shots on the opposite side. It was the advanced guard of the main army, which was descending from the Erz-Gebirge range, after a sharp but indecisive cavalry battle with Murat at the village of Liebertwolkwitz, south of Dresden. In the broad, thickly settled plains around Leipzig, the armies of Europe now assembled for the final and decisive conflict. Napoleon's command included Portuguese, Spaniards, Neapolitans, and large contingents of Germans from the Rhine League, as well as the flower of the French youth; while the allies brought against him Cossacks and Calmucks, Swedes and Magyars, besides all the resources of Prussian patriotism and Austrian discipline. Never since the awful struggle at Chalons, which saved Western civilization from Attila, had there been a strife so well deserving the name of 'the battle of the nations.' West of the city of Leipzig runs the Pleisse, and flows into the Elster on the northwest side. Above their junction, the two streams run for some distance near one another, inclosing a sharp angle of swampy land. The great highway to Lindenau from Leipzig crosses the Elster, and then runs southwesterly to

Lützen and Weissenfels. South of the city and east of the Pleisse lie a number of villages, of which Wachau, Liebertwolkwitz, and Probstheida, nearer the city, were important points during the battle. The little river Partha approaches the city on the east, and then runs north, reaching the Elster at Gohlis. Napoleon occupied the villages north, east and south of the city, in a small circle around it."—C. T. Lewis, *History of Germany*, ch. 30, sect. 7-11.

1813 (October).—"Battle of the nations."—"The town of Leipzig has four sides and four gates. . . . On the south is the rising ground called the Swedish Camp, and another called the Sheep-walk, bordering on the banks of the Pleisse. To this quarter the Grand Army of the Allies was seen advancing on the 15th of October. Buona-parto made his arrangements accordingly. Bertrand and Poniatowski defended Lindenau and the east side of the city, by which the French must retreat. Augereau was posted farther to the left, on the elevated plain of Wachau, and on the south, Victor, Lauriston, and Macdonald confronted the advance of the Allies with the Imperial Guards placed as a reserve. On the north, Marmont was placed between Mæckern and Euterist, to make head against Blücher, should he arrive in time to take part in the battle. On the opposite quarter, the sentinels of the two armies were within musket-shot of each other, when evening fell. . . . The number of men who engaged the next morning was estimated at 136,000 French, and 230,000 on the part of the Allies. . . . Napoleon remained all night in the rear of his own Guards, behind the central position, facing a village called Gossa, occupied by the Austrians. At daybreak on the 16th of October the battle began. The French position was assailed along all the southern front with the greatest fury. . . . The Allies having made six desperate attempts, . . . all of them unsuccessful, Napoleon in turn assumed the offensive. . . . This was about noon. The village of Gossa was carried by the bayonet. Macdonald made himself master of the Swedish Camp; and the eminence called the Sheep-walk was near being taken in the same manner. The impetuosity of the French had fairly broken through the centre of the Allies, and Napoleon sent the tidings of his success to the King of Saxony, who ordered all the bells in the city to be rung. . . . The King of Naples, with Latour-Maubourg and Kellermann, poured through the gap in the enemy's centre at the head of the whole body of cavalry, and thundered forward as far as Magdeburg, a village in the rear of the Allies, bearing down General Rayefskoi with the Grenadiers of the Russian reserve. At this moment, while the French were disordered by their own success, Alexander, who was present, ordered forward the Cossacks of his Guard, who, with their long lances, bore back the dense body of cavalry that had so nearly carried the day. Meantime, as had been apprehended, Blücher arrived before the city, and suddenly came into action with Marmont, being three times his numbers. He in consequence obtained great and decided advantages; and before night-fall had taken the village of Mæckern, together with 20 pieces of artillery and 2,000 prisoners. But on the south side the contest continued doubtful. Gossa was still disputed. . . . General Mehrfeldt fell into the hands of the French. The battle raged till night-fall, when it ceased by mutual consent. . . . The armies slept on the ground they had occupied

during the day. The French on the southern side had not relinquished one foot of their original position, though attacked by such superior numbers. Marmont had indeed been forced back by Blücher, and compelled to crowd his line of defence nearer the walls of Leipsic. Thus pressed on all sides with doubtful issues, Buonaparte availed himself of the capture of General Mehrfeldt to demand an armistice and to signify his acceptance of the terms proposed by the Allies, but which were now found to be too moderate. . . . Napoleon received no answer till his troops had recrossed the Rhine; and the reason assigned is, that the Allies had pledged themselves solemnly to each other to enter into no treaty with him 'while a single individual of the French army remained in Germany.' . . . The 17th was spent in preparations on both sides, without any actual hostilities. At eight o'clock on the morning of the 18th they were renewed with tenfold fury. Napoleon had considerably contracted his circuit of defence, and the French were posted on an inner line, nearer to Leipsic, of which Probstheyda was the central point. . . . Barclay, Wittgenstein, and Kleist advanced on Probstheyda, where they were opposed by Murat, Victor, Augereau, and Lauriston, under the eye of Napoleon himself. On the left Macdonald had drawn back his division to a village called Stoetteritz. Along this whole line the contest was maintained furiously on both sides; nor could the terrified spectators, from the walls and steeples of Leipsic, perceive that it either receded or advanced. About two o'clock the Allies forced their way . . . into Probstheyda; the camp-followers began to fly; the tumult was excessive. Napoleon . . . placed the reserve of the Old Guard in order, led them in person to recover the village, and saw them force their entrance ere he withdrew to the eminence from whence he watched the battle. . . . The Allies, at length, felt themselves obliged to desist from the murderous attacks on the villages which cost them so dear; and, withdrawing their troops, kept up a dreadful fire with their artillery. The French replied with equal spirit, though they had fewer guns; and, besides, their ammunition was falling short. Still, however, Napoleon completely maintained the day on the south of Leipsic, where he commanded in person. On the northern side, the yet greater superiority of numbers placed Ney in a precarious situation; and, pressed hard both by Blücher and the Crown-Prince, he was compelled to draw nearer the town, and had made a stand on an eminence called Heiterblick, when on a sudden the Saxons, who were stationed in that part of the field, deserted from the French and went over to the enemy. In consequence of this unexpected disaster, Ney was unable any longer to defend himself. It was in vain that Buonaparte dispatched his reserves of cavalry to fill up the chasm that had been made; and Ney drew up the remainder of his forces close under the walls of Leipsic. The battle once more ceased at all points. . . . Although the French army had thus kept its ground up to the last moment on these two days, yet there was no prospect of their being able to hold out much longer at Leipsic. . . . All things counselled a retreat, which was destined (like the rest of late) to be unfortunate. . . . The retreat was commenced in the night-time; and Napoleon spent a third harassing night in giving the necessary orders for the march. He appointed Macdonald and Poniatowski . . . to defend the rear. . . . A temporary bridge which had been erected had given way, and the old bridge on the road to Lindenau was the only one that remained

for the passage of the whole French army. But the defence of the suburbs had been so gallant and obstinate that time was allowed for this purpose. At length the rear-guard itself was about to retreat, when, as they approached the banks of the river, the bridge blew up by the mistake of a sergeant of a company of sappers who . . . set fire to the mine of which he had charge before the proper moment. This catastrophe effectually barred the escape of all those who still remained on the Leipsic side of the river, except a few who succeeded in swimming across, among whom was Marshal Macdonald. Poniatowski . . . was drowned in making the same attempt. In him, it might be said, perished the last of the Poles. About 25,000 French were made prisoners of war, with a great quantity of artillery and baggage."—W. Hazlitt, *Life of Napoleon*, v. 3, ch. 50.—"The battle of Leipsic was over. Already had the allied sovereigns entered the town, and forcing, not without difficulty, their way through the crowd, passed on to the market-place. Here, the house in which the King of Saxony had lodged was at once made known to them by the appearance of the Saxon troops whom Napoleon had left to guard their master. . . . Moreover, the King himself . . . stood bare-headed on the steps of the stairs. But the Emperor of Russia, who appears at once to have assumed the chief direction of affairs, took no notice of the suppliants. . . . The battle of Leipsic constitutes one of those great hinges on which the fortunes of the world may be said from time to time to turn. The importance of its political consequence cannot be overestimated."—G. R. Gleig, *Leipsic campaign*, ch. 41.—"No more here than at Moscow must we seek in the failure of the leader's talents the cause of such deplorable results,—for he was never more fruitful in resource, more bold, more resolute, nor more a soldier,—but in the illusions of pride, in the wish to regain at a blow an immense fortune which he had lost, in the difficulty of acknowledging to himself his defeat in time, in a word, in all those errors which we may discern in miniature and caricature in an ordinary gambler, who madly risks riches acquired by folly; errors which are found on a large and terrible scale in this gigantic gambler, who plays with human blood as others play with money. As gamblers lose their fortunes twice,—once from not knowing where to stop, and a second time from wishing to restore it at a single cast,—so Napoleon endangered his at Moscow by wishing to make it exorbitantly large, and in the Dresden campaign by seeking to restore it in its full extent. The cause was always the same, the alteration not in the genius, but in the character, by the deteriorating influence of unlimited power and success."—A. Thiers, *History of the consulate and the empire*, v. 4, bk. 50.

1813 (October-December).—Retreat of Napoleon beyond the Rhine.—Battle of Hanau.—Liberation achieved.—Fall of the kingdom of Westphalia.—Surrender of French garrisons and forces.—"Notwithstanding the sluggish pursuit of the beaten army, the battle of Leipzig brought freedom to all the German lands as far as the Rhine. To the Austrians also the victory which had been gained seemed almost too great as soon as its import was fully grasped. The inevitable annihilation of the Napoleonic power was in prospect, but it was averted by the fault of the great headquarters-staff. Bennigsen's army withdrew to the Elbe; the Bohemian army advanced slowly westward through Franconia and Thuringia; the

northern army returned towards Hanover and Westphalia. But Blicher, upon the Frankfort road, followed close upon the heels of the enemy, until, when only a day's march from the Emperor's headquarters, he suddenly received orders to turn aside from the direct road, towards Wetterau and the valley of the Lahn, because Emperor Francis with his Austrians wished to enter the old coronation town. Consequently with his rear unmenaced Napoleon conducted his troops through the difficult and narrow passes of the Rhöngelbirge. Thousands had deserted, to live as marauders, and many had been slaughtered by the infuriated peasants, but the nucleus of the army held together, successfully reached the plain of the Main at Hanau, and there, breaking forth from the forest of Lamboy, defeated the Bavarian-Austrian army under General Wrede, who endeavoured to bar its passage (October 30th and 31st). The Bavarian leader, the most outrageous boaster among the mercenaries of the Confederation of the Rhine, had expected by a brilliant victory to secure for his state the favour of the allied powers, but he had wasted valuable days before the walls of Würzburg, and did not attain at the favourable moment the advantageous position on the Kinzig passes, where the French retreat could have been easily cut off. He had supposed that the allies would be closely pursuing the enemy, and when he at length perceived his error, he did not decline battle, because Bavaria had to earn the confidence of her new friends. Consequently the Emperor had the satisfaction of closing his German campaigns with the humiliation of an unfaithful vassal. A force of 70,000 men gained the left bank of the Rhine. Here, however, the last energies of the unfortunate men collapsed; their ranks were thinned by terrible outbreaks of illness, and for some weeks France was without an army, defenceless against any attack. The 100,000 men who were still dispersed through the fortresses of North Germany and Poland were given up for lost by Napoleon. He offered to evacuate the lines of the Oder and the Vistula, on condition that the garrisons should be allowed to withdraw unmolested, but the allies saw through his design and refused to present the desperate man with a new army. Bülow's corps had the delight of reoccupying the lost western provinces. As soon as the news of the battle of Leipzig arrived, the Westphalian director of taxes, von Motz, immediately brought out his old uniform, and made his appearance in Mülhausen as royal Prussian Landrat; the people obeyed his orders as a matter of course. Everywhere the liberators were received with open arms, and nowhere with more loudly expressed delight than in East Frisia, the favorite country of the great king. . . . The same moving manifestations of self-sacrificing upheaval which in the spring had been witnessed in the eastern provinces, were now seen in the west. . . . In most circles of Cleves and of the County Mark, a formal levying of troops was unnecessary, for the supply of volunteers greatly exceeded the demand. Even the East Frisians, whom King Frederick had exempted from cantonal duty, overcame the hostility of seamen to military service, and offered themselves in great numbers. The result was that a large proportion of the troops that were formed in such haste were able to be utilised advantageously for investing the French fortresses. . . . [On the other hand] when in December the allies entered Alsace, they were everywhere encountered with a gloomy and fanatical hatred. The people had been completely intoxicated by the warlike renown of the Napoleonic eagles, and the peasants believed, even more firmly

than in the nineties, that the victory of the coalition would revive for them the vexations of the tithes and of the corvée. . . . Among all the princes of the north-west, it was only the minor mediatised lords who showed any zeal for the German cause, and this was because they hoped to regain their crowns by their valour in war. . . . General Bülow issued a threat that he would have all the petty princes of Westphalia arrested if they ventured to give themselves out as ruling princes. The Hansa towns were more fortunate than these mediatised lords. As early as November 5th, the ancient senate of Bremen assembled upon its own responsibility; the re-establishment of the republic was formally proclaimed, and Smidt was sent to the headquarters at Frankfort. The adroit diplomat immediately urged the citizens of Hamburg and of Lübeck to send representatives to the monarch, and able to influence the Austrian statesmen so cleverly that they overcame their mistrust of anything republican. . . . The three towns received assent to their re-establishment, and by the fault of Stein, yet a fourth republic was introduced into the new monarchical Germany, the old coronation town of Frankfort. . . . These Rhenish confederates, now that the issue was decided, all thronged busily round the allies. As had formerly happened at Rastatt, in Paris, and in Posen, the high nobility of Germany sued for the grace of the conqueror, and this time it was not necessary to come with hands full of money. When Emperor Francis entered Frankfort, he was greeted by the shouting people as the ruler of Germany; the same 'our emperor' once more exercised its powerful charm upon German hearts. . . . As early as the beginning of November, Metternich, in opposition to the letter and to the spirit of the treaty of Teplitz, had entered into separate negotiations with the captured French diplomat St. Aignan, and had assured him that no one contemplated the dethronement of Napoleon. If the Emperor would recognise the independence of Spain, Italy, and Holland, France could maintain her old position of power within her natural frontiers between the Rhine, the Alps, and the Pyrenees, and, without any formal suzerainty, could exercise over the petty German states that influence which every great nation necessarily possesses over its less powerful neighbours. . . . Meanwhile Stein, whom the Austrian statesmen had hitherto retained in Leipzig, came to Frankfort, and immediately threw himself with ardent zeal into the cause of the continuation of the war. He proved successful in winning over the czar, and subsequently the king as well. Napoleon's pride could not brook giving an immediate assent to the unduly favourable proposals of Austria. When he at length declared himself ready to undertake negotiations for peace, with the proviso that the petty states of Germany and Italy must in some way or other be subjected to his suzerainty, at the headquarters the decision had already been made, not indeed to break off the negotiations, but simultaneously to carry on the war. Thus Stein had won the game, for every new success of the allied armies must unavoidably render the peace conditions more onerous. . . . The manifesto of December 1st, which announced to the French the intended attack, seemed precisely calculated to increase to the utmost that French arrogance, which during the past two decades the world had never allowed to slumber. In flattering terms, such as had never before been employed in a declaration of war, the allies excused their undertaking. . . . The Austrian war authorities had discovered upon the map the plateau of Langres, that modest elevation on the frontiers of the Burgun-

dian highlands which constitutes the watershed of three river basins, leading to as many seas. They assumed that Napoleon in his campaigns would also allow himself to be guided by the considerations of geographical learning, and were prepared to demonstrate that 'a winter campaign against this remarkable plateau would force the Emperor to make peace.' In December, the great army slowly set itself in motion in order to make a wide detour, through Baden, Alsace, and Switzerland, to Langres. In pursuing this plan, the Hofburg was at the same time working with accessory political aims in view, intending to restore in Switzerland the old aristocratic régime, and to force the enemy to evacuate the Italian theatre of war, which was far more important to Austria than to France. The Austrian strategists justified the unnatural artificiality of this plan of campaign, which arbitrarily diverted the principal power of the allies

this was the only great siege in this war so full of battles. Far more important was the conquest of Holland. Since Bernadotte had in November proceeded from Hanover to Denmark, in order to secure his Norwegian booty, Bülow was freed from the detested commander-in-chief; he advanced from Westphalia into the Netherlands, and the world immediately learned once more what the northern army was capable of effecting, when it was allowed to act freely. General Oppen stormed the fortress of Doesborgh; the Kolberg regiment and the queen's dragoons, the old Ansbach-Bayreuths, added a new leaf to their laurels. Next Arnheim was taken by storm, the passage was forced across the Rhine and the Meuse, Herzogenbusch had to open its gates, and from now onwards, as in the days of the great elector, the predominant position of France in the Netherlands had been overthrown by the might of Prussian arms."—H. G. von Treit-

BLÜCHER CROSSING THE RHINE AT CAAB IN JANUARY, 1814

(Painting by Huttenroth)

from the direct and safe road to victory, by the extraordinary contention that in this way they would gain the support of Wellington's army, which was in the extreme southwest of France, near the Pyrenees. The leaders of the Silesian army wished to keep Langeron occupied in the investment of Mainz, far from the theatre of war. It was only after a long and violent struggle that Blücher secured permission to cross the French frontier on the Middle Rhine. Thence, by the territories of the Saar and Lorraine, he also was to gain the wonderful plateau. Thus did the incapacity of an antediluvian policy and strategy give the Emperor another chance of rescue, furnishing him with three months' respite in which to create a new army. . . . Meanwhile some of the fortresses of the north-east, which were defended by the French with commendable tenacity, at length fell into the hands of the allies, and among these Danzig and Torgau. On January 13th, Wittenberg was taken by storm by Tautentzien's troops, after a fierce artillery attack which was ably directed by young Bardeleben;

1814-1820.—Reconstruction of Germany.—Germanic confederation and its constitution.—“Germany was now utterly disintegrated. The Holy Roman Empire had ceased to exist; the Confederation of the Rhine had followed it; and from the Black Forest to the Russian frontier there was nothing but angry ambitions, vengeance, and fears. If there was ever to be peace again in all these wide regions, it was clearly necessary to create something new. What was to be created was a far more difficult question; but already, on the 30th of May 1814, the powers had come to some sort of understanding, if not with regard to the means to be pursued, at least with regard to the end to be attained. In the Treaty of Paris we find these words: ‘Les états de l’Allemagne seront indépendants et unis par un lien fédératif.’ But how was this to be effected? There were some who wished the Holy Roman Empire to be restored. . . . Of course neither Prussia, Bavaria, nor Wurtemberg, could look kindly upon a plan so obviously unfavourable to them; but not even Austria really wished it, and indeed it had few powerful friends. Then there was a project of a North and South Germany, with the Maine for boundary; but this was very much the reverse of acceptable to the minor princes, who had no idea of being grouped like so many satellites, some around Austria and some around Prussia. Next came a plan of reconstruction by circles, the effect of which would have been to have thrown all the power of Germany into the hands of a few of the larger states. To this all the smaller independent states were bitterly opposed, and it broke down, although supported by the great authority of Stein, as well as by Gagern. If Germany had been in a later phase of political development, public opinion would perhaps have forced the sovereigns to consent to the formation of a really united Fatherland with a powerful executive and a national parliament—but the time for that had not arrived. What was the opposition of a few hundred clear-sighted men with their few thousand followers, that it should prevail over the masters of so many legions? What these potentates cared most about were their sovereign rights, and the dream of German unity was very readily sacrificed to the determination of each of them to be, as far as he possibly could, absolute master in his own dominions. Therefore it was that it soon became evident that the results of the deliberation on the future of Germany would be, not a federative state, but a confederation of states—a Staaten-Bund, not a Bundes-Staat. There is no doubt, however, that much mischief might have been avoided if all the stronger powers had worked conscientiously together to give this Staaten-Bund as national a character as possible. . . . Prussia was really honestly desirous to effect something of this kind, and Stein, Hardenberg, William von Humboldt, Count Münster, and other statesmen, laboured hard to bring it about. Austria, on the other hand, aided by Bavaria, Wurtemberg, and Baden, did all she could to oppose such projects. Things would perhaps have been settled better than they ultimately were, if the return of Napoleon from Elba had not frightened all Europe from its propriety, and turned the attention of the sovereigns towards warlike preparations. . . . The document by which the Germanic Confederation is created is of so much importance that we may say a word about the various stages through which it passed. First, then, it appears as a paper drawn up by Stein in March 1814, and submitted to Hardenberg, Count Münster, and the Emperor Alexander. Next, in the month of September, it took the form of an

official plan, handed by Hardenberg to Metternich, and consisting of forty-one articles. This plan contemplated the creation of a confederation which should have the character rather of a Bundes-Staat than of a Staaten-Bund; but it went to pieces in consequence of the difficulties which we have noticed above, and out of it, and of ten other official proposals, twelve articles were sublimated by the rival chemistry of Hardenberg and Metternich. Upon these twelve articles the representatives of Austria, Prussia, Hanover, and Wurtemberg, deliberated. Their sittings were cut short partly by the ominous appearance which was presented in the autumn of 1814 by the Saxon and Polish questions, and partly by the difficulties from the side of Bavaria and Wurtemberg, which we have already noticed. The spring brought a project of the Austrian statesman Wessenberg, who proposed a Staaten-Bund rather than a Bundes-Staat; and out of this and a new Prussian project drawn up by W. von Humboldt, grew the last sketch, which was submitted on the 23d of May 1815 to the general conference of the plenipotentiaries of all Germany. They made short work of it at the last, and the Federal-Act (Bundes-Acte) bears date June 8th, 1815. This is the document which is incorporated in the principal act of the Congress of Vienna, and placed under the guarantee of eight European powers, including France and England. Wurtemberg, Baden, and Hesse-Homburg, did not form part of the Confederation for some little time—the latter not till 1817; but after they were added to the powers at first consenting, the number of the sovereign states in the Confederation was altogether thirty-nine. . . . The following are the chief stipulations of the Federal Act. The object of the Confederation is the external and internal security of Germany, and the independence and inviolability of the confederate states. A diète fédérative (Bundes-Versammlung) is to be created, and its attributions are sketched. The Diet is, as soon as possible, to draw up the fundamental laws of the Confederation. No state is to make war with another on any pretence. All federal territories are mutually guaranteed. There is to be in each state a ‘Landständische Verfassung’—‘il y aura des assemblées d’états dans tous les pays de la Confédération.’ Art. 14 reserves many rights to the mediatised princes. Equal civil and political rights are guaranteed to all Christians in all German States, and stipulations are made in favour of the Jews. The Diet did not actually assemble before the 5th of November 1816. Its first measures, and, above all, its first words, were not unpopular. The Holy Allies, however, pressed with each succeeding month more heavily upon Germany, and got at last the control of the Confederation entirely into their hands. The chief epochs in this sad history were the Congress of Carlsbad, 1819—the resolutions of which against the freedom of the press were pronounced by Gentz to be a victory more glorious than Leipzig; the ministerial conferences which immediately succeeded it at Vienna; and the adoption by the Diet of the Final Act (Schluss Acte) of the Confederation on the 8th of June 1820. The following are the chief stipulations of the Final Act:—The Confederation is indissoluble. No new member can be admitted without the unanimous consent of all the states, and no federal territory can be ceded to a foreign power without their permission. The regulations for the conduct of business by the Diet are amplified and more carefully defined. All quarrels between members of the Confederation are to be stopped before recourse is had to violence. The Diet may interfere to keep order in a state where

the government of that state is notoriously incapable of doing so. Federal execution is provided for in case any government resists the authority of the Diet. Other articles declare the right of the Confederation to make war and peace as a body, to guard the rights of each separate state from injury, to take into consideration the differences between its members and foreign nations, to mediate between them, to maintain the neutrality of its territory, to make war when a state belonging to the Confederation is attacked in its non-federal territory if the attack seems likely to endanger Germany."—M. 1817-1820.—Burschenschaft.—Assassination of Kotzebue.—Karlsbad conference.—"In 1817, the students of several Universities assembled at the Wartburg in order to celebrate the tercentenary of the Reformation. In the evening, a small number of them, the majority having already left, were carried away by enthusiastic zeal, and, in imitation of Luther, burnt a number of writings recently published against German freedom, together with other emblems of what was considered hateful in the institutions of some of the German States. These youthful excesses were viewed by the Governments as symptoms of grave peril. At the same time, a large number of students united to form one great German Burschenschaft [association of students], whose aim was the cultivation of a love of country, a love of freedom, and the moral sense. Thereupon increased anxiety on the part of the Governments, followed by vexatious police interference. Matters grew worse in consequence of the rash act of a fanatical student, named Sand. It became known that the Russian Government was using all its powerful influence to have liberal ideas suppressed in Germany, and that the playwright Kotzebue had secretly sent to Russia slanderous and libellous reports on German patriots. Sand travelled to Mannheim and thrust a dagger into Kotzebue's heart. The consequences were most disastrous to the cause of freedom in Germany. The distrust of the Governments reached its height: it was held that this bloody deed must needs be the result of a wide-spread conspiracy; the authorities suspected demagogues everywhere. Ministers, of course at the instigation of Metternich, met at Karlsbad, and determined on repressive measures. These were afterwards adopted by the Federal Diet at Frankfort, which henceforth became an instrument in the hands of the Emperor Francis and his Minister for guiding the internal policy of the German States. Accordingly, the cession of state-constitutions was opposed, and prosecutions were instituted throughout Germany against all who identified themselves with the popular movement; many young men were thrown into prison; gymnastic and other societies were arbitrarily suppressed; a rigid censorship of the press was established, and the freedom of the Universities restrained; various professors, among them

Arndt, whose songs had helped to fire the enthusiasm of the *Freiheitskämpfer*—the soldiers of Freedom—in the recent war, were deprived of their offices; the Burschenschaft was dissolved, and the wearing of their colours, the future colours of the German Empire, black, red, and gold, was forbidden. . . . The Universities continued to uphold the national idea; the Burschenschaft soon secretly revived as a private association, and as early as 1820 there again existed at most German Universities, Burschenschaften, which, though their aims were not sharply defined, bore a political colouring and placed the demand for German Unity in the foreground."—G. Krause, *Growth of German unity*, ch. 8.

1817-1840.—Tendencies towards Germanic union and Prussian leadership.—Zollverein.—"In Austria, in the decades succeeding the wars of liberation, there reigned the most immovable quiet. The much-praised system of government consisted in unthinking inactivity. The Emperor Francis, a man with the nature of a subaltern official, hated anything that approached to a constitution, and a saying of his was often quoted: 'Totus mundus stultizat et vult habere constitutiones novas.' Metternich's power rested on the 'dead motionlessness' of affairs. As far as his German policy was concerned his aim was to hold fast to the preponderating influence of Austria over the German states, but not to undertake any responsibilities towards them. . . . As for Prussia, in spite of the great sacrifices which she had made, she emerged from the diplomatic negotiations and intrigues of the Vienna Congress with the most unfavorable disposition of territory imaginable. To the five million inhabitants that had remained to her five and a half millions were added in districts that had belonged to more than a hundred different territories and had stood under the most varied laws. There began now for this state a time well filled with quiet work, the aim and object being to create a whole out of the various parts."—Bruno-Gebhardt, *Lehrbuch der deutschen Geschichte* (tr. from the German), v. 2, pp. 501-504.—"The German confederation was, on the whole, provisional in its character; this fact comes out more and more plainly with each thorough analysis and illustration of its constitution and of its institutions. . . . Technically the emperor of Austria had the honorary direction of the confederation; practically he possessed as emperor of Germany little or no power. . . . In reality the strongest member of the German confederation was the kingdom of Prussia. . . . Only gradually, in the various heads, did the opinion begin to form of the historical vocation of Prussia to take her place at the head of the German confederation or, possibly, of a new German empire. Gradually this opinion ripened into a firmer and firmer conviction and gained more and more supporters. The more evidently impossible an actual guidance of Germany by Austria became, the more conscious did men grow of the danger of the whole situation should the dualism be allowed to continue. In consequence of this the idea of the Prussian hegemony began to be viewed with constantly increasing favor. A great step forward in this direction was taken by the Prussian government when it called into being the Zollverein [or customs-union]. The Zollverein laid iron bands around the separate parts of the German nation. It was utterly impossible to think of forming a customs-union with Austria, for all economic interests were as widely different as possible; on purely material grounds the division between Austria and Prussia showed itself to be a necessity. On the other hand the economic bonds between

Prussia and the rest of the German lands grew stronger from day to day. This material union was the prelude to the political one: the Zollverein was the best and most effectual preparation for the German federal state or for the German empire of later days."—W. Maurenbrecher, *Gründung des deutschen Reichs*, pp. 4, 5.—"Paul Pfizer wrote in 1831 his 'correspondence of two Germans,' the first writing in the German language in which liberation from Austria and union with Prussia was put down as the solution of the German question, and in which faith in Prussia was made a part of such love to the German fatherland as should be no longer a mere dream. . . . 'So little as the dead shall rise again this side the grave, so little will Austria, which once held the heritage of German fame and German glory, ever again become for Germany what she has once been.'"—W. Oncken, *Das Zeitalter des Kaisers Wilhelm* (tr. from the German), v. 1, pp. 69, 70.—The formation of the Zollverein "was the most important occurrence since the wars of liberation: a deed of peace of more far-reaching consequences and productive of more lasting results than many a battle won. The economic blessings of the Zollverein soon began to show themselves in the increasing sum total of the amount of commerce and in the regularly growing customs revenues of the individual states. These revenues, for example, increased between 1834 and 1842 from 12 to 21 million thalers. Foreign countries began to look with respect and in part also with envy on this commercial unity of Germany and on the results which could not fail to come. . . . A second event happened in Germany in 1834, less marked in its beginnings and yet scarcely less important in its results than the Zollverein. Between Leipzig and Dresden the first large railroad in Germany was started, the first mesh in that network of roads that was soon to branch out in all directions and spread itself over all Germany. . . . A direct political occurrence, independent of the Zollverein and the railroads, was, in the course of the thirties, to assist in awakening and strengthening the idea of unity in the German people by making evident and plain the lack of such unity and its disastrous consequences. This was the Hanoverian 'coup d'état' of the year 1837. . . . In that year William IV. of England died without direct successors. . . . Hanover came into the hands of the Duke of Cumberland, Ernest Augustus. . . . The new king, soon after his inauguration, refused to recognize the constitution that had been given to Hanover in 1833, on the ground that his ratification as next heir to the throne had not been asked at that time. . . . By persistent efforts Ernest Augustus . . . in 1840 brought about a constitution that suited him. Still more than this constitutional struggle itself did a single incident connected with it occupy and excite public opinion far and wide. Seven professors of the Göttingen university protested against the abrogation of the constitution of 1833. . . . Without more ado they were dismissed from their positions. . . . The brave deed of the Göttingen professors and the new act of violence committed against them caused intense excitement throughout all Germany. . . . In the course of the forties the idea of nationality penetrated more and more all the pores of German opinion and gave to it more and more, by pressure from all sides, the direction of a great and common goal. At first there were only isolated attempts at reform . . . but soon the national needs outgrew such single expressions of good will. . . . A tendency began to show itself in the public opinion of Germany to accept the plan of a Prussian leadership of all un-Austrian Germany."—K. Bieder-

1819-1847.—Arbitrary rulers and discontented subjects.—Ferment before revolution.—Formation of the Zollverein.—"The history of Germany during the thirty years of peace which followed [the Congress of Carlsbad] is marked by very few events of importance. It was a season of gradual reaction on the part of the rulers, and of increasing impatience and emity on the part of the people. Instead of becoming loving families, as the Holy Alliance designed, the states (except some of the little principalities) were divided into two hostile classes. There was material growth everywhere; the wounds left by war and foreign occupation were gradually healed; there was order, security for all who abstained from politics, and a comfortable repose for such as were indifferent to the future. But it was a sad and disheartening period for the men who were able to see clearly how Germany, with all the elements of a freer and stronger life existing in her people, was falling behind the political development of other countries. The three days' Revolution of 1830, which placed Louis Philippe on the throne of France, was followed by popular uprisings in some parts of Germany. Prussia and Austria were too strong, and their people too well held in check, to be affected; but in Brunswick the despotic Duke Karl was deposed, Saxony and Hesse-Cassel were obliged to accept co-rulers (out of their reigning families) and the English Duke, Ernest Augustus, was made viceroy of Hannover. These four States also adopted a constitutional form of government. The German Diet, as a matter of course, used what power it possessed to counteract these movements, but its influence was limited by its own laws of action. The hopes and aspirations of the people were kept alive, in spite of the system of repression, and some of the smaller States took advantage of their independence to introduce various measures of reform. As industry, commerce and travel increased, the existence of so many boundaries, with their custom-houses, taxes and other hindrances, became an unendurable burden. Bavaria and Würtemberg formed a customs union in 1828, Prussia followed, and by 1836 all of Germany except Austria was united in the Zollverein (Tariff Union) [see TARIFF: 1833], which was not only a great material advantage, but helped to inculcate the idea of a closer political union. On the other hand, however, the monarchical reaction against liberal government was stronger than ever. Ernest Augustus of Hannover arbitrarily overthrew the constitution he had accepted, and Ludwig I. of Bavaria, renouncing all his former professions, made his land a very nest of absolutism and Jesuitism. In Prussia, such men as Stein, Gneisenau, and Wilhelm von Humboldt had long lost their influence, while others of less personal renown, but of similar political sentiments, were subjected to contemptible forms of persecution. In March, 1835, Francis II. of Austria died, and was succeeded by his son, Ferdinand I., a man of such weak intellect that he was in some respects idiotic. On June 1840, Frederick William III. of Prussia died, and was also succeeded by his son, Frederick William IV., a man of great wit and intelligence, who had made himself popular as Crown-prince, and whose accession the people hailed with joy, in the enthusiastic belief that better days were coming. The two dead

monarchs, each of whom had reigned 43 years, left behind them a better memory among their people than they actually deserved. They were both weak, unstable and narrow-minded; had they not been controlled by others, they would have ruined Germany; but they were alike of excellent personal character, amiable, and very kindly disposed towards their subjects so long as the latter were perfectly obedient and reverential. There was no change in the condition of Austria, for Mettenich remained the real ruler, as before. In Prussia a few unimportant concessions were made, an amnesty for political offenses was declared, Alexander von Humboldt became the king's chosen associate and much was done for science and art; but in their main hope of a liberal reorganization of the government, the people were bitterly deceived. Frederick William IV. took no steps towards the adoption of a Constitution; he made the censorship and the supervision of the police more severe; he interfered in the most arbitrary and bigoted manner in the system of religious instruction in the schools [he suppressed Calvinism and Lutheranism in 1839 and established a new Evangelical church with constitution and liturgy of his own drawing up]; and all his acts showed that his policy was to strengthen his throne by the support of the nobility and the civil service, without regard to the just claims of the people. Thus, in spite of the external quiet and order, the political atmosphere gradually became more sultry and disturbed. . . . There were signs of impatience in all quarters; various local outbreaks occurred, and the aspects were so threatening that in February, 1847, Frederick William IV. endeavored to silence the growing opposition by ordering the formation of a Legislative Assembly. But the provinces were represented, not the people, and the measure only emboldened the latter to clamor for a direct representation. Thereupon, the king closed the Assembly, after a short session. . . . In most of the other German States, the situation was very similar; everywhere there were elements of opposition, all the more violent and dangerous, because they had been kept down with a strong hand for so many years."—B. 1848.—Conditions contributing to political unrest.—Reform outbreak.—Overthrow of Metternich's authority.—The reform outbreak "in France

[1848] spread far and wide through Europe, where . . . the seeds of revolt had been widely sown. Outbreaks occurred in Italy, Poland, Switzerland and Ireland, and in Germany the revolutionary fever burned hot. Baden was the first state to yield to the demands of the people for freedom of the press, a parliament and other reforms, and went so far as to abolish the imposts still remaining from feudal times. The other minor states followed its example. In Saxony, Würtemberg and other states class abuses were abolished, liberals given prominent positions under government, the suffrage and the legislature reformed, and men of liberal sentiment summoned to discuss the formation of new constitutions. But it was in the great despotic states of Germany—Prussia and Austria—that the liberals gained the most complete and important victory, and went farthest in overthrowing autocratic rule and establishing constitutional government. The notable Austrian statesman who had been a leader in the Congress of Vienna and who had suppressed liberalism in Italy, Prince Metternich, was still, after more than thirty years, at the head of affairs in Vienna. He controlled the policy of Austria; his word was law in much of Germany; time had cemented his authority, and he had done more than any other man in Europe in maintaining despotism and building a dam against the rising flood of liberal sentiment. But the hour of the man who had destroyed the work of Napoleon was at hand. . . . An incitement was needed, and it came in the news of the Paris revolution. . . . The old system was evidently at an end. The policy of Metternich could restrain the people no longer."—C. Morris, *Nations of Europe*, pp. 190-200.—See also AUSTRIA: 1848-1849; EUROPE: Modern: Political revolution of 1848.

1848.—Expulsion of Jesuits. See JESUITS: 1760-1871.

1848 (March).—Revolutionary outbreaks in Prussia.—Reforms granted by king of Prussia.—Riot in Berlin.—"The Rhenish provinces of Prussia, whose near neighbourhood and former connexion with France made them more peculiarly combustible, broke out with a cry for the most extensive reforms; that is to say, for representative institutions, the passion for which had spread over the whole of Germany. . . . The reform fever which had attacked the Rhenish provinces quickly spread to the rest of the body politic. The urban populace—a class in all countries rarely incited to agitation—took the lead. They were headed by the students. Breslau, Königsberg and Berlin, were in violent commotion. In the month of March, a great open air meeting was held at Berlin: it ended in a riot. . . . A deputation from the Rhenish provinces arrived at Berlin on the 18th, bearing a petition from Cologne to the king for reform. He promised to grant it. . . . Finding he could not keep the movement in check, he resolved to put himself at the head of it. It was probably the only course open to him, if he would preserve his crown. . . . The king must have previously had the questions which were agitating Germany under careful consideration; for he at once published a proclamation embodying the whole of them: the unity of Germany, by forming it into a federal state, with a federal representation; representative institutions for the separate states; a general military system for all Germany, under one federal banner; a German fleet; a tribunal for settling disputes between the states, and a right for all Germans to settle and trade in any part of Germany they thought fit; the whole of Germany formed into one customs union, and included in the Zollverein; one system of money, weights, and

measures; and the freedom of the press. These were the subjects touched upon. . . . The popularity of the proclamation with the mob-leaders was unbounded, and the mob shouted. . . . A crowd got together at the palace to express their gratitude; the king came out of a window, and was loudly cheered. Two regiments of dragoons unluckily mistook the cheering for an attack, and began pushing them back by forcing their horses forward. . . . Unfortunately, as the conflict (if conflict it could be called, which was only a bout of which could push hardest) was going forward, two musket-shots were fired by a regiment of infantry. It appears that the muskets went off accidentally. No one was injured by them. It is not clear they were not blank cartridges; but the people took fright. They imagined that there was a design to slaughter them. At once they rushed to arms; barricades were thrown up in every street. . . . The fight raged for fifteen hours. Either the king lost his head when it began, or the troops, having their blood up, would not stop. . . . The firing began at two o'clock on the 18th of March and the authorities succeeded in withdrawing the troops and stopping it the next morning at five o'clock, they having been during that time successful at all points. . . . The king put out a manifesto at seven o'clock, declaring that the whole business arose from an unlucky misunderstanding between the troops and the people, as it unquestionably did, and the people appear to have been aware of the fact and ashamed of themselves. . . . A general amnesty was proclaimed for all parties concerned, and orders were given to form at once a burgher guard to supply the place of the military, who were to be withdrawn. A new ministry was appointed, of a liberal character. . . . The troops were marched out of the town, and were cheered by the people. . . . It is estimated that, of the populace, about 200 were killed; 187 received a public funeral. . . . The king's object was to divert popular enthusiasm into another channel; he therefore assumed the lead in the regeneration of Germany. On the 21st he issued a proclamation, enlarging on these views, and rode through the streets with the proscribed German tricolor on his helmet, and was vociferously cheered as he passed along. Prussia was not the first of the German states where the old order of things was overturned. During the whole of the month of March, Germany underwent the process of revolution. . . . On the 3d of March . . . the new order of things . . . began at Würtemberg. The Duke of Hesse-Darmstadt abdicated. In Bavaria, things took a more practical turn. The people insisted on the dismissal of the king's mistress, Lola Montez: she was sent away, but, trusting to the king's dotage, she came back, police or no police—was received by the king—he created her Countess of Lansfeldt. This was a climax to which the people were not prepared to submit. . . . The king was compelled to expel her, to annul her patent of naturalization, and resume the grant he had made of property in her favour. This was more than he could stand, and he shortly after abdicated in favour of his heir. In Saxony the king gave way, after his troops had refused to act, and the freedom of the press was established, and other popular demands granted."—E. S. Cayley, *European revolutions of 1848*, v. 2: *Germany*, ch. 2.

1848 (March-September). — Election and meeting of the national assembly at Frankfort. — Resignation of the diet. — Election of Archduke John to be administrator of Germany.—

Powerlessness of the new government.—Troubles rising from the Schleswig-Holstein question.—Outbreak at Frankfort.—Setting in of reaction.—“In south-western Germany the liberal party set itself at the head of the movement. . . . The Heidelberg assembly of March 5th, consisting of the former opposition leaders in the various Chambers, issued a call to the German nation, and chose a commission of seven men, who were to make propositions with regard to a permanent parliament and to summon a preliminary parliament at Frankfort. This preliminary parliament assembled in St. Paul's church, March 31st. . . . The majority, consisting of constitutional monarchists, resolved that an assembly chosen by direct vote of the people . . . should meet in the month of May, with full and sovereign power to frame a constitution for all Germany. . . . These measures did not satisfy the radical party, whose leaders were Hecker and Struve. As their proposition to set up a sovereign assembly and republicanize Germany, was rejected, they left Frankfort, and held in the highlands of Baden popular meetings at which they demanded the proclamation of the republic. A Hesse-Darmstadt corps under Frederic von Gagern . . . was sent to disperse them. An engagement took place at Kandern, in which Gagern was shot, but Hecker and his followers were put to flight. . . . The disturbances in Odenwald, and in the Main and Tauber districts, once the home of the peasant war, were of a different description. There the country people rose against the landed proprietors, destroyed the archives, with the odious tithe and rental books, and demolished a few castles. The Diet, which in the meantime continued its illusory existence, thought to extricate itself from the present difficulties by a few concessions. It . . . invited the governments to send confidential delegates to undertake, along with its members, a revision of the constitution of the confederation. . . . These confidential delegates, among them the poet Uhland from Würtemberg, began their work on the 30th of March. The elections for the National Assembly stirred to their innermost fibers the German people, dreaming of the restoration of their former greatness. May 18, about 320 delegates assembled in the Imperial Hall, in the Römer (the Rathaus), at Frankfort.—W. Müller, *Political history of recent times*, sect. 17.—“Rarely has any public body contained so many men of profound thought and high ideals; rarely has any public body contained so few members of practical experience; never was there a more discouraging failure. The assembly had begun well; . . . but soon came disappointment. With wars threatening on all sides; with the mob spirit seething in every city; with desperate efforts, open or secret, by the old governments to regain their power; with attempts throughout the nation, sometimes contemptible, sometimes ferocious, to abolish absolutism; and with the whole German people, indeed the whole world, longing for practical measures, the assembly became simply a debating club. Professors and jurists discussed, day after day and week after week, their theories of the state, of the origin of sovereignty, of the nature of popular rights,—everything save practical measures necessary to secure national liberty and unity. Soon sophists, satirists, and caricaturists were at work, many of them doubtless well paid by the supporters of absolutism. Popular confidence waned.”—A. D. White, *Seven great statesmen*, p. 397.—“It was decided . . . that a provisional central executive should be created in the place of the Diet, and created, not by the National Assembly in concert

with the princes, but by the National Assembly alone. June 27, following out the bold conception of its president, the assembly decided to appoint an irresponsible administrator, with a responsible ministry; and June 29, Archduke John of Austria was chosen Administrator of Germany by 436 votes out of 546. He made his entry into Frankfurt July 11, and entered upon his office on the following day [see also AUSTRIA: 1848]. The hour of the Diet had struck, apparently for the last time. It resigned its authority into the hands of the Administrator, and, after an existence of 32 years, left the stage unmourned. Archduke John was a popular prince, who found more pleasure in the mountain air of Tyrol and Styria than in the perfumed atmosphere of the Vienna court. But, as a novice 66 years of age, he was not equal to the task of governing, and as a thorough Austrian he lacked a heart for all Germany. The main question for him and for the National Assembly was, what force they could apply in case the individual governments refused obedience to the decrees issued in the name of the National Assembly. This was the Achilles's heel of the German revolution. . . . Orders were issued by the federal minister of war that all the troops of the Confederation should swear allegiance to the federal administrator on the 6th of August, but Prussia and Austria, with the exception of the Vienna garrison, paid no attention to these orders; Ernest Augustus, in Hanover, successfully set his hard head against them, and only the lesser states obeyed. . . . There certainly was no other way out of the difficulty than by the formation of a parliamentary army. . . . One humiliation was submitted to after another, while the Assembly, busying itself for months with a theoretical question, as if it were a juristic faculty, entered into a detailed consideration of the fundamental rights of the German people. The Schleswig-Holstein question, which had just entered upon a new phase of its existence, was the first matter of any importance to manifest the disagreement between the central administration and the separate governments; and it opened, as well, a dangerous gulf in the Assembly itself. The question at issue was one of succession [see DENMARK: 1848-1862]. . . . The Estates of the duchies [Schleswig and Holstein] established a provisional government, applied at Frankfurt for the admission of Schleswig into the German confederation, and besought armed assistance both there and at Berlin. The preliminary parliament [this having occurred in April, before the meeting of the National Assembly] approved the application of Schleswig for admission, and commissioned Prussia, in conjunction with the 10th army corps of the Confederation, to occupy Schleswig and Holstein. On the 21st of April, 1848, General Wrangel crossed the Eider as commander of the forces of the Confederation; and on the 23d, in conjunction with the Schleswig-Holstein troops, he drove the Danes out of the Danewerk. On the following day the Danes were defeated at Oeversee by the 10th army corps, and all Schleswig-Holstein was free. Wrangel entered Jutland and imposed a war tax of 3,000,000 thalers (about \$2,250,000). He meant to occupy this province until the Danes—who, owing to the inexcusable smallness of the Prussian navy, were in a position unhindered to injure the commerce of the Baltic—had indemnified Prussia for her losses; but Prussia, touched to the quick by the destruction of her commerce, and intimidated by the threatening attitude of Russia, Sweden and England, recalled her troops, and concluded an armistice at Malmö, in Sweden, on the 26th of August. All measures of the provisional government

were pronounced invalid; a common government for the duchies was to be appointed, one half by Denmark, and the other by the German confederation; the Schleswig troops were to be separated from those of Holstein; and the war was not to be renewed before the 1st of April, 1849—i. e., not in the winter, a time unfavorable for the Danes. This treaty was unquestionably no masterpiece on the part of the Prussians. All the advantage was on the side of the conquered Danes. . . . It was not merely the radicals who urged, if not the final rejection, at least a provisional cessation of the armistice, and the countermanding of the order to retreat. . . . A bill to that effect, demanded by the honor of Germany, had scarcely been passed by the majority, on the 5th of September, when the moderate party reflected that such action, involving a breach with Prussia, must lead to civil war and revolution, and call into play the wildest passions of the already excited people. In consequence of this the previous vote was rescinded, and the armistice of Malmö accepted by the Assembly, after the most excited debates, September 16th. This gave the radicals a welcome opportunity to appeal to the fists of the lower classes, and imitate the June outbreak of the social democrats in Paris. . . . A collision ensued [September 18]; barricades were erected, but were carried by the troops without much bloodshed. . . . General Auerswald and Prince Lichnowsky, riding on horseback near the city, were followed by a mob. They took refuge in a gardener's house on the Bornheimer-heide, but were dragged out and murdered with the most disgraceful atrocities. Thereupon the city was declared in a state of siege, all societies were forbidden, and strong measures were taken for the maintenance of order. The March revolution had passed its season, and reaction was again beginning to bloom. . . . Reaction drew moderate men to its side, and then used them as stepping-stones to immoderation."—W. Müller, *Political history of recent times*, sect. 17.

1848-1850.—Prussian national assembly, and its dissolution.—Work and the failure of the national assembly of Frankfurt.—Refusal of the imperial crown by king of Prussia.—End of the movement for Germanic unity.—“The elections for the new Prussian Constituent Assembly . . . were to take place May 1. The Prussian National Assembly was to meet May 22. The Prussian people, under the new election law, if left to themselves, would have quietly chosen a body of competent representatives; but the revolutionary party thought nothing could be done without the ax and the musket. . . . The people of Berlin, from March to October, were . . . really in the hands of the mob. . . . The newly-elected Prussian National Assembly was opened by the king, May 21. . . . One of the first resolutions proceeded from Behrend of the Extreme Left. ‘The Assembly recognizes the revolution, and declares that the combatants who fought at the barricades, on March 18 and 19, merit the thanks of the country.’ . . . The motion was rejected. On issuing from the building into the street, after the sitting, the mem-

bers who had voted against it, were received by the mob with threats and insults. . . . In the evening of the same day, in consequence of the rejection of the Behrend resolution, the arsenal was attacked by a large body of laborers. The burgher-guard were not prepared, and made a feeble defense. There was a great riot. The building was stormed and partially plundered. . . . The sketch of a constitution proposed by the king was now laid before the Assembly. It provided two Chambers—a House of Lords, and a House of Commons. The last to be elected by the democratic electoral law; the first to consist of all the princes of the royal house in their own right, and, in addition, 60 members from the wealthiest of the kingdom to be selected by the king, their office hereditary. This constitution was immediately rejected. On the rejection of the constitution the ministry Camphausen resigned. . . . The Assembly, elected exclusively to frame a constitution, instead of performing its duty . . . attempted to legislate, with despotic power, on subjects over which it had no jurisdiction. As the drama drew nearer its close, the Assembly became more open in its intention to overthrow the monarchy. On October 12 discussions began upon a resolution to strike from the king's title the words, 'By the grace of God,' and to abolish all titles of nobility and distinctions of rank. The Assembly building, during the sitting, was generally surrounded by threatening crowds. . . . Of course, during this period business was suspended, and want, beggary, and drunkenness, as well as lawless disorder, increased. . . . Berlin was now thoroughly tired of street tumults and the horn of the burgher-guard. . . . The Prussian troops which had been engaged in the Schleswig-Holstein war, were now placed under General Wrangel. . . . He proceeded without delay to encircle the city with the 25,000 troops. At the same time, a cabinet order of the king (September 21) named a new ministry. . . . At this moment, the revolution over all Europe was nearly exhausted. Cavaignac had put down the June insurrection. The Prussian flag waved above the flag of Germany. . . . On November 2, Count Brandenburg stated to the Assembly that the king had requested him to form a new ministry. . . . On the same day, Count Brandenburg, with his colleagues, appeared in the hall of the Prussian National Assembly, and announced his desire to read a message from his Majesty the King. . . . 'As the debates are no longer free in Berlin, the Assembly is hereby adjourned to November 27. It will then meet, and thereafter hold its meetings, not in Berlin, but in Brandenburg' (fifty miles from Berlin). After reading the message, Count Brandenburg, his colleagues, and all the members of the Right retired. . . . The Assembly . . . adjourned, and met again in the evening. . . . On November 10, the Assembly met again. Their debates were interrupted by General Wrangel, who had entered Berlin by the Brandenburg gate, at the head of 25,000 troops. . . . An officer from General Wrangel entered the hall and politely announced that he had received orders to disperse the Assembly. The members submitted, and left the hall. . . . An order was now issued dissolving the burgher-guard. On the 12th, Berlin was declared in a state of siege. . . . During the state of siege, the Assembly met again under the presidency of Mr. von Unruh. A body of troops entered the hall, and commanded the persons present to leave it. President von Unruh declared he could not consistently obey the order. There was, he said, no power higher than the Assembly. The soldiers did not fire on him, or cut him down with their sabers; but good-naturedly lifted his chair with him in it,

and gently deposited both in the street. . . . On November 27, Count Brandenburg went to Brandenburg to open the Assembly; but he could not find any. It had split into two parts. . . . There was no longer a quorum. Thus the Prussian National Assembly disappeared. On December 5, appeared a royal decree, dissolving the National Assembly. . . . Then appeared a provisional octroyirte electoral law, for the election of two Chambers. . . . The new Chambers met February 26, 1849. . . . Prussia had thus closed the revolution of 1848, as far as she was concerned. Bismarck was elected member of the Second Chamber." Meantime, in the Frankfort Parliament, "the great question, Austria's position with regard to the new Germany, came up in the early part of November, 1848. Among many propositions, we mention three: I. Austria should abandon her German provinces. . . . II. Austria should remain as a separate whole, with all her provinces. . . . III. The Austrian plan. All the German States, and all the Austrian provinces (German and non-German), should be united into one gigantic empire . . . with Austria at the head. . . . Meanwhile, the debates went on upon the questions: What shall be the form, and who shall be the chief of what may be called the Prussian-Germany? Among the various propositions (all rejected) were the following: I. A Directory consisting of Austria, Prussia, Bavaria, Würtemberg, and Saxony. II. The King of Prussia and Emperor of Austria to alternate in succession every six years, as emperor. III. A chief magistracy, to which every German citizen might aspire. IV. Revival of the old Bundestag, with certain improvements. On January 23, 1849, the resolution that one of the reigning German princes should be elected, with the title of Emperor of Germany, was adopted (258 against 211). As it was plain the throne could be offered to no one but Prussia, this was a breach between the Parliament and Austria. . . . The first reading of the constitution was completed, February 3, 1849. The middle and smaller German States declared themselves ready to accept it, but the kingdoms remained silent. . . . The real question before the Parliament was, whether Prussia or Austria should be leader of Germany. . . . On March 27, the hereditary passed by a majority of four. On March 28, the constitution, with the democratic electoral law, universal suffrage, the ballot, and the suspensive veto, was voted and accepted. . . . President Simson then called the name of each member to vote upon the question of the Emperor."—T. S. Fay, *Three Germanys*, ch. 26.—"The Assembly chose King Frederick William of Prussia to be German Emperor, and a delegation of the foremost men of the Parliament went to Berlin and solemnly offered him the crown. The gift was utterly refused, and soon the world was informed that the King could not take it from the people, that it must come from their rulers. To the national parliament this was a killing blow."—A. D. White, *Seven great statesmen*, p. 398.—"Frederick William still dallied for a while with the national assembly, and summoned all the governments to send plenipotentiaries to Frankfort to discuss the matter—a summons which not one of them obeyed. Austria, meanwhile, had withdrawn her delegates; declaring that never would she bow to foreign legislation, never would her emperor subordinate himself to another prince. 'For us, the national assembly no longer exists,'—so wrote her ministers in an official note to Berlin. At this very time, the Prussian lower house voted to accept the constitution. Saxony and Würtemberg seemed wavering; while the national assembly sent out its demand for recognition almost in the form

of an ultimatum. Frederick William came forward now with a categorical refusal of the imperial dignity. . . . He summoned a conference to Berlin of such governments as might care, in view of the mistaken steps that the national assembly had taken, and seemed inclined still to take, to deliberate concerning the needs of the nation. 'The Prussian government,' so ran the circular note, 'cannot conceal the scantiness of the hope, that the national assembly will lend its hand to altering the constitution on which it has determined. . . . Not unnaturally, the political agitation spread to the constituents of the members of Parliament. . . . In Dresden, where the dissolution of the chambers and a ministerial crisis had brought excitement to the highest pitch, the government, on the third of May, forbade a projected parade in honor of the national constitution. . . . In the Palatinate, and in Baden also, the existing governments were displaced. . . . Prussia withdrew her delegates [from the Assembly], after a vote had been passed that her interference in Saxony had been an unwarrantable breach of the peace. The conduct of affairs came more and more into the hands of the radicals. The feeling gained ground, among the more moderate elements, that they had no longer any positive policy to defend. On the 20th of May, 1849, sixty-five members, including in their number almost all whose names had given brilliancy to the assembly, seceded in a body—declaring their unwillingness to sunder the last legal ties between the governments and peoples of Germany, and to foster civil war. Among them, was old Ernst Moritz Arndt, who, for nearly half a century, had sung of a united Germany which he was never to see. Bereft of its sanest members, the Parliament ran riot with its revolutionary ideas. The number necessary for a quorum was reduced from one hundred and fifty to a hundred. The place of meeting was moved from Frankfort to Stuttgart, for no other apparent purpose than to be nearer to the disaffected district. . . . It was given its quietus [by the government of Württemberg] by being forced to disperse by soldiers with drawn swords [June 18, 1849]. Thirteen months had the Parliament as a whole been in session, and its immediate results were absolutely nil; though it is safe to say that its deliberations, and even its mistakes, made it easier for the next generation to realize the dream of national unity.'—E. F. Henderson, *Short history of Germany*, v. 2, pp. 365-369.—By the Fall of 1850 the revolution had been everywhere beaten down.—See also AUSTRIA: 1848-1850.

1850.—Triumph of absolutism.—Bismarck's earlier career.—His reactionary tendencies.—'Everywhere absolutism seemed triumphant. During this long, dreary period many of the noblest Germans yielded to discouragement and departed for other countries,—especially for America; and, among these, Francis Lieber, Carl Follen, and Carl Schurz,—all of them destined to render high service to the United States. In Germany there seemed no hope. In every part of the country men of

the purest character were in prison or in hiding; the old tyranny loomed up more threatening than ever; and it was at this time, at the very worst, when constitutional liberty and national unity seemed at the last gasp, that there appeared,—apparently to make a complete end of them,—a young apostle of reaction, absolutism, and disunion, Otto von Bismarck-Schönhausen. His qualities came from far. The family name and history show that his ancestors were frontiersmen,—living in the lower Elbe region of Germany, perhaps on the 'mark,' or border, of the bishops trying to maintain their footing there, or, as sundry antiquarians insist, on the local border marked by the little river Biese:—hence the name, Bischoff's mark, or perhaps Biesemark, which became in popular speech Bismarck. . . . In his 'Reflections and Reminiscences,' dictated late in life, he declares that he became in his school days a pantheist and a republican; but a moderating influence upon him appears to have been now exerted by a small knot of New England students, the foremost of these being John Lothrop Motley. . . . Gradually there came a new evolution in his religious and political theories. Cynical and caustic as he frequently was, there can be no doubt that this was an honest change. The political change was entirely natural: it was the reaction which came over so many sound, strong minds as they reflected upon the follies, the crimes, the cruelties, the idiocy, and the nauseous cant of the Revolution in France and of the various attempts at mob rule in Germany. . . . Thereby all his original tendencies to reaction were strengthened; the history of Prussia, including especially the work of the Great Elector and of Frederick the Great, whom he had always revered, took on yet deeper meanings for him, and he became known among his friends as a desperate reactionary. To end this period came a series of events which opened to him a new career. . . . There had been created eight provincial Diets in Prussia, petty assemblies where local affairs might be discussed by the squirearchy, not in a legislative, but in an advisory way; and in 1847 Frederick William IV, yielding to the pressure for some sort of central deliberative assembly, had called a United Diet at Berlin, made up of representatives from these local assemblies. To this came Bismarck. Nothing could be more unpromising than this entrance of his into politics. He had not been elected to this legislature, but, the person chosen being ill, the young squire went as a substitute; nothing was expected of him: he tells us that at his first election speech he was pelted with stones, and the only recorded parliamentary speech of his at that period was a protest in a little provincial assembly 'against the excessive consumption of tallow in an almshouse.' Yet it should be noted that, although widely considered a mere noisy declaimer, he had already shown himself something better. He had seen the necessity of improving the procedure in certain courts and had drawn up a project of reforms which showed patriotic purpose and constructive power. But nothing of this better side of his activity was known beyond a very limited circle; and during the first part of the session he seemed to make no impression. Not until larger politics were discussed, did he begin making known his views to better purpose; then his fellow-members, and, indeed, the world outside, began listening to him. His oratory was wretched, but his perseverance was invincible. Never was there a more defiant reactionary. He held fast to the divine origin of kingly right; on constitutionalism he poured contempt; Prussia, in his view, had become powerful under men like

the Great Elector and Frederick the Great,—rulers with a rod of iron,—and it could only remain powerful under absolutism. . . . In the Prussian Diet, Bismarck, even while merely a substitute deputy, won speedy recognition as a leader. On the claims of the people to be represented, on the ballot box as a means of choosing legislators, on the decision of state questions by majorities, on establishing periodical sessions, he poured contempt constantly and loudly; Frederick the Great was still his ideal: not the Parliament, but the Army, was to uplift the country. It was not a case of bark worse than bite. Worse than his talk was his action. Never was intriguer more persistent. Night and day, when not stirring up resistance to constitutionalism in the Diet, he was rallying his friends on the lower Elbe, or at Potsdam, or at Berlin, against all efforts for constitutional liberty, whether rational or irrational. . . . In palaces and in barracks, he urged, with shrewd plans and bitter taunts, the most desperate measures, and, at last, seemed successful; for, with the king's permission, Marshal Wrangel, a tough swaggering old soldier, turned the Prussian Diet out of doors. Even this did not satisfy Bismarck; he showed disappointment that there had been no bloodshed; his wish was that a lesson should be written in blood which would last for a generation, and his favorite plan was to stir the mob to madness and then to crush it with the army. There was no need of bloodshed. The people at large were tired of talk and sick with uncertainty;—and, beside that, the king had won them over by again swallowing his feudal formulas, granting a fairly good constitution, and calling a new election. To the new Prussian Diet thus called His Majesty's loyal subjects gratefully sent a reactionary majority, and in the midst of it—at last as a full member—came Bismarck. . . . The old federation having evaporated into thin air during the Revolution of 1848 and the national parliament then established having, as we have seen, gone to pieces at Frankfort and Stuttgart, chaos came again."—A. D. White, *Seven great statesmen*, pp. 399, 404, 409, 411, 413-415.—See also AUSTRIA: 1849-1850.

1850-1851. — Three Kings' Alliance. — Breakdown of the Prussian union.—Gradual domination of Austria over Prussia.—Quarrel over the problem of Hesse-Cassel.—Humiliation of Olmütz.—Dresden conference.—Frederick William now aimed at creating a German confederation with Prussia taking the leadership. He was seconded in his efforts by Saxony and Hanover with whom he formed, on May 26, 1849, the Dreikönigsbundniss or "alliance of three kings." Many of the lesser states joined this union but the hostile attitude of Austria and the refusal of Bavaria and Würtemberg to become members finally caused its destruction. When the growing strength of Austria became apparent the kings withdrew from the Prussian union "The breakdown of the 'Three Kings' Alliance,' in default of which the 'Union' practically shrank to a league between Prussia and the petty States, encouraged Schwarzenberg [Prince Felix Schwarzenberg, Austrian foreign minister], whose hands were now comparatively free, to press his own notions of federal reconstruction. For, while treating the Germanic Confederation as still in existence, he proposed changes in its scheme not less drastic than those which Radowitz [Prussian statesman] had in view. [On February 27, 1850, Bavaria, Würtemberg, Saxony and Hanover also devised a scheme of confederation, the "Four Kings' Alliance."] . . . Austria's presidency over the new directory was not mentioned either in Schwarzenberg's proposals, or in the Four Kings'

Draft; but it was understood to be as much a matter of course as the inclusion of the whole Austrian monarchy in the reconstructed Confederation. . . . It may be noted that at the Customs Conference held at Cassel, July-November, 1850, Austria succeeded in preventing an understanding between Prussia and the south-western States, and that in the following year the first step in Bruck's great plan of commercial policy was taken by the establishment of a Customs Union, referred to above, between Austria and Hungary. . . . Notwithstanding . . . the renewed lukewarmness of King Frederick William IV towards the 'Union' scheme and the exceptions taken to it by some of the Prussian Conservatives, such as their parliamentary protagonist Stahl, and Bismarck—Radowitz persisted. On March 20, 1850, the Erfurt Parliament opened. . . . But now Frederick William IV made it clear that he lacked the courage, and lost the desire, to pit himself against Austria and the four royal Governments, with no support but that of the petty States. . . . Schwarzenberg, with heightened self-confidence, now quite openly pursued his plan of reestablishing the old Confederation and its Diet. . . . Though these manœuvres were resented by Frederick William IV, his desire to remain on friendly terms with the Emperor of Austria induced him to arrange a personal interview between them at Teplitz (September 8) and to receive acquiescently a letter from the Tsar urging him to adhere to the Austrian alliance. . . . Thus matters stood, when a constitutional quarrel arose in the very heart of Germany, which seemed precisely calculated to bring the political conflict between the two Great Powers to an issue: since on this occasion the territorial sovereign [Elector Frederick William of Hesse-Cassel] and his Minister [Hassenpflug], supported by Austria, stood opposed to the representatives of the people, to the civil and military servants of the State, and to the whole of the population, who were warm adherents of Prussia and her German policy. . . . The Elector's subjects regarded the appointment of this avowed reactionary [Hassenpflug] as an open defiance of their rights and aspirations. . . . The machinery of government in the electorate speedily came to a deadlock; the Elector quitted his capital, and none of the state officials would obey the hated Minister when he attempted to carry on the Government. . . . After a fruitless struggle to obtain supplies, Hassenpflug accordingly appealed to the so-called Exceptional Law passed by the Diet in 1832, but revoked by it in March, 1848, and, after proclaiming martial law in the electorate, and being in return indicted by the Committee of the Estates on a charge of high treason, appeared with the Elector at Frankfort to present his case. The Diet at once took preliminary measures towards a Federal execution, which led to the resignation of the large majority of the officers in the electoral army (September). On the other hand, the pride of the King of Prussia shrank from entering the old Confederation at such a moment in order to defeat the action of Austria at the Diet; and he had probably no desire to pose there as defender of the Hesse-Cassel Constitution. There accordingly remained only the alternative of meeting any action on the part of the Diet, which was still legally incompetent, by force. This was the course advocated by Radowitz, who was at this very time (September 29, 1850) appointed Minister of Foreign Affairs. If he could persuade his master to stand firm, the destinies of Prussia and Germany seemed to lie in his hands. But such was not to be the case, even though the eleventh

hour seemed to have passed; for on October 11 at Bregenz the sovereigns of Austria, Bavaria, and Würtemberg agreed on putting an army of 200,000 men into the field, and on both sides troops were moving towards the Hessian frontier. Meanwhile, King Frederick William IV was still hesitating; and on October 15 Count Brandenburg, still at the head of the Prussian Ministry, was sent to discuss the situation with the Tsar at Warsaw, whither he was speedily followed by Prince Schwarzenberg. From Brandenburg's reports it is clear that the Tsar, though mainly interested in settling the Danish Succession question, and generally desirous of promoting a good understanding between the German Great Powers, insisted on the continuance of the Germanic Confederation, which would of course be entitled to send troops into Hesse-Cassel on the requisition of the Elector. Brandenburg waived the proposal of a German popular representation, and agreed to the admission of the whole Austrian monarchy into the Confederation—in other words, to the abandonment of the policy of the Union. But, on his return to Berlin (October 31), he found the capital and the country aflame with indignation at the insolence of the Confederation, the arrogance of Austria, the impudence of Bavaria (of whose troops the army of execution in Hesse was mainly to consist), and the audacious obstinacy of the Elector and Hassenpflug. King Frederick William's pride was touched; he was determined not to allow the Federal Execution in Hesse, and on the arrival of news that 6000 Bavarian troops had occupied Hanau, Prussian troops were ordered to occupy both Fulda and Cassel."—A. W. Ward, *Revolution and reaction in Germany and Austria* (Cambridge modern history, v. 11, *Growth of nationalities*, pp. 222-224, 227-229).—"Meanwhile, popular opinion in Berlin and the country, wholly in the dark as to the ministerial discussions, awaited some vigorous action on the part of the Government. . . . On November 4 an Austrian despatch arrived demanding the withdrawal of the Prussian troops from the electorate, and an intimation from St. Petersburg that the Tsar would regard a refusal of this demand as a *casus belli*. On the evening of November 5, Manteuffel [Prussian foreign minister succeeding Radowitz], believing war to be now inevitable, whether the Prussian Government wished it or not, with some difficulty persuaded the King to issue, after all, orders for the mobilisation of the army, though accompanied by a declaration that the measure was defensive only. Much enthusiasm marked the carrying out of this measure, which was published on November 6, while diplomatic negotiations with Austria were still in progress. Still, every effort was made on the Prussian side to avoid an actual collision. . . . On November 9, . . . the King approved a despatch in which his Government gave way as to the Union (it was practically dissolved on November 15,) [1850], and with regard to the Federal occupation of Hesse-Cassel merely demanded a joint undertaking as to its object and duration on the part of Austria and her allies, and the acceptance of the occupation of the Prussian military routes in the electorate by Prussian troops. Even to this last concession, evidently designed to save Prussia's honour, Schwarzenberg demurred; and once more a crisis seemed at hand. . . . At the last moment, King Frederick William persuaded the Emperor Francis Joseph to approve a personal interview between Schwarzenberg and Manteuffel for the settlement of all questions at issue. . . . On the evening of November 28 Schwarzenberg and Manteuffel met at Olmütz, and on the following

day they agreed upon a 'punctuation,' of which the substance may be very briefly stated. As is remarked by Sybel, on whose masterly account of these transactions any attempt to put the substance of them into a small compass must base itself, Manteuffel, who had long opposed the Union and who detested the Hessian rebellion, besides being perfectly content to let the King of Denmark deal as he would with Holstein and the Succession, might have asked Schwarzenberg, 'what is there really in dispute between us?' Since it was certainly not Manteuffel's fault that Prussia had drifted into her present plight, and since his conviction that war at the present juncture would be disastrous to Prussia was soon shared even by spirits as fiery as Bismarck (although Bismarck like the Prince of Prussia objected to premature disarmament), the obloquy heaped on his head was unjust. It was Prussia, not her Minister, who was in a false position. She was proposing to negotiate on equal terms with Austria, though the attempt of Radowitz to make good, in at least some measure, his master's failure to accept for her the leadership of a reorganised Germany had broken down all along the line. . . . Schwarzenberg adhered to the conditions accepted by Prussia at Warsaw, including the continuance of the old Confederation; while he absolutely rejected the principle of a dual headship, shared by Austria and Prussia, in its Diet. The settlement in Holstein, to be made by an Austro-Prussian Commission, would present no difficulty. Finally, as to the burning Hessian question, it was settled at Olmütz that the Federal Execution should put an end to the opposition maintained against the Elector by his subjects, and then withdraw. . . . The final settlement of the constitutional trouble was to be left to an Austro-Prussian Commission, to be appointed by the above-mentioned free conferences [to be held at Dresden]. . . . In Prussia the feeling of humiliation was general. . . . Meanwhile the Dresden Conferences, which were to wind up the constitutional conflict, opened on December 23, 1850. . . . In the discussions of the Commissions appointed by the Conference it seemed as if the Austrian programme would be carried without substantial resistance; in which case, though the composition of the proposed Federal executive was modified by allowing a representation of the petty States, Austria would still have commanded a working majority in a body of 11. The admission of the entire Austrian monarchy into the Confederation had also been accepted, though the proposal of a Customs Union between all the federated States was deferred; and the principle of a popular representation was rejected by Austria and her friends. . . . Manteuffel announced that the admission of the whole Austrian monarchy into the Confederation (to which he cannot but have known that the Western Powers were strongly opposed) would be conditional upon the concession of parity in its presidency. If this were rejected, he proposed a return to the Confederation on its former lines. The latter alternative was accepted by Schwarzenberg; and, when after a long holiday the members of the Conference reassembled, it simply resolved that the Federal Diet should be reestablished at Frankfort in the form settled by the Acts of 1815 and 1820, and then separated. On the same day (May 16, 1851) a secret alliance was signed between Austria and Prussia, which bound each Power to assist the other in case of an attack upon any of its possessions, whether or not within the Germanic Confederation. The history of the Dresden Conference was thus by no means a mere repetition of the Olmütz surren-

der. But to Germany and Europe it seemed as if the overthrow of the policy of Prussia were completed by the restoration of the old Confederation, and in his exile Metternich rejoiced. Holstein submitted. The Elector of Hesse-Cassel returned to his capital before the year was out, and in March, 1852, the Diet declared the Hessian Constitution and Electoral Law invalid, so that in the following month Hassenpflug could recommence operations. But though the old Confederation and Austria's position in it had been propped up for another day, her relations with Prussia in German affairs had been fundamentally changed both by the political conflict between the two Powers and by its closing incident. As for Prussia, not without reluctance and not without ignominy, she had been brought to the conclusion that she must wait."—A. W. Ward, *Revolution and reaction in Germany and Austria* (Cambridge modern history, v. 11, ch. 7, pp. 230-233).

1861-1866.—Advent of King William I and Prince Bismarck in Prussia.—"Blood and Iron Speech."—Reopening of the Schleswig-Holstein question.—Conquest of the duchies by Prussia and Austria.—Convention of Gastein.—Consequent quarrel.—Dissolution of the German confederation.—Outbreak of war with Austria.—King Frederick William IV. of Prussia, never a man of strong head, had for years been growing weaker and more eccentric. In 1857, symptoms of softening of the brain began to show themselves. That disorder so developed itself that in October, 1857, he gave a delegation to the prince of Prussia, his brother, to act as regent; but the first commission was only for three months. The prince's commission was renewed from time to time; but it soon became apparent that Frederick William's case was hopeless, and his brother was formally installed as Regent in October, 1858. Ultimately the king died in January, 1861, and his brother succeeded to the throne as William I. In September, 1862, Otto von Bismarck became the new king's chief minister, with General Roon for minister of war, appointed to carry out a reorganization of the Prussian army which King William had determined to effect. "To his [Bismarck's] mind the goal of Prussian policy was to drive Austria out of Germany, and then to bring about a subordination of the other German states to Prussia. . . . Nor did he make the least stress of his warlike attitude towards Austria." When an Austrian arch-duke, who was passing through, once asked him maliciously whether all the many decorations which he wore on his breast had been won by bravery in battle: 'All gained before the enemy, all gained here in Frankfurt,' was the ready answer. In the year 1850 came the complications between Austria and Italy, the latter being joined by France. This Italian war between Austria and France thoroughly roused the German nation. . . . Many wanted to protect Austria, others showed a disinclination to enter the lists for Austria's rule over Italy. . . . Bismarck's advice at this time was that Prussia should side against Austria, and should join Italy. In the

spring of 1850, however, he was transferred from Frankfurt on the Main to St. Petersburg: 'put on ice on the Neva,' as he said himself, 'like champagne for future use.' . . . In June, 1850 in view of the Italian war, it had been decreed in Prussia that the army should be mobilized and kept in readiness to fight. . . . When, later, in the summer of this year, the probability of war had gone by, the Landwehr was not dismissed but, on the contrary, a beginning was made with a new formation of regiments which had already been planned and talked over. . . . On February 10, 1860, the question of the military reorganization was laid before the diet, where doubts and objections were raised against it. . . . On the 4th of May, at the same time when the law about civil marriages was rejected, the land-tax, by which the cost of the army-reorganization was to have been covered, was refused by the Upper House. The liberals were disappointed and angered. The ministry was soon in a bad dilemma: should it give way to the liberal opposition and dissolve the newly formed regiments? The expedient that was thought of seemed clever enough but it led in reality to a blind alley and was productive of the most baneful consequences. The ministry moved a single grant of 9,000,000 thalers for the purpose of completing the army and maintaining its efficiency on the former footing. The motion was carried on May 15, 1860, by a vote of 315 against 2. . . . The new elections for the house of deputies in December, 1861, produced a diet of an entirely different stamp from that of 1858. . . . The moderate majority was now to atone for the sin of not having come to any real arrangement with the ministry on the army question; for the new majority came to Berlin with the full intention of crushing the army-reform. . . . The chief task of the newly formed ministry of 1862 was to solve the military question, for the longer it had remained in abeyance the more complicated had the matter become. The newly-elected diet had been in session since the 10th of May. . . . The battle cry of the majority of the diet was that all further demands of the government for the military reform were to be refused. . . . By September, 1862, the belligerent and uncompromising attitude of the liberal majority had induced King William to lay aside his earlier distrust of Bismarck. He allowed him to be summoned and placed him at the head of the ministry. Most stirring was the first audience which Bismarck had with his king in the Park of Babelsberg on September 23. The king first of all laid before Bismarck the declaration of his abdication. Very much startled, Bismarck said: 'To that it should never be allowed to come!' The king replied that he had tried everything and knew no other alternative. His convictions, contrary to which he could not act, contrary to which he could not reign, forbade him to relinquish the army-reorganization. Thereupon Bismarck explained to the king his own different view of the matter and closed with the request that his Majesty might abandon all thoughts of abdication. The king then asked the minister if he would undertake to carry on the government without a majority and without a budget. Bismarck answered both questions in the affirmative and with the utmost decision. . . . The alliance between the king and his minister was closed and cemented on that 23rd of September in Babelsberg to endure for all time."—W. Maurenbrecher, *Gründung des deutschen Reichs* (tr. from the German), p. 13.—A week later, Bismarck made his famous "Blood and Iron" speech in the Prussian Diet, when he said: "It is a fact,

the great self-assertion of individuality among us makes constitutional government very hard in Prussia. . . . We are perhaps too 'cultured' to tolerate a constitution; we are too critical; the ability to pass judgment on measures of the government or acts of the legislature is too universal; there is a large number of 'Cutilinarian Characters' [existences in the original] in the land whose chief interest is in revolutions. All this may sound paradoxical; yet it proves how hard constitutional life is in Prussia. The people are too sensitive about the faults of the government; as if the whole did not suffer when this or that individual minister blunders. Public opinion is changeable, the press is not public opinion; every one knows how the press originates; the representatives have the higher task of directing opinion, of being above it. To return once more to our people: our blood is too hot, we are fond of bearing an armor too large for our small body; now let us utilize it. Germany does not look at Prussia's liberalism but at its power. Let Bavaria, Württemberg, Baden indulge in liberalism, yet no one will assign to them the rôle of Prussia; Prussia must consolidate its might and hold it together for the favorable moment, which has been allowed to pass unheeded several times. Prussia's boundaries, as determined by the Congress of Vienna, are not conducive to its wholesome existence as a sovereign state. Not by speeches and resolutions of majorities the mighty problems of the age are solved—that was the mistake of 1848 and 1849—but by Blood and Iron."—*Die Politischen Reden des Fürsten Bismarck* (tr. from the German) v. 2. pp. 20, 28-30.—"Toward the end of 1863, the death of the Danish King, Frederick VII, brought on, in acute form, a danger which had long been brooded over in cabinets, fought over on battlefields, and wrangled over among the German people at large—what was known as the Schleswig-Holstein question. Of the myriad subjects which had tormented German statesmen and diplomatists during the middle years of the nineteenth century, this had been the most vexatious. . . . There were rights to sovereignty under Danish Law and estoppels under Salic Law; rights under German Law and extinguishments by treaty or purchase; claims to the Schleswig duchy as adjoining Denmark and containing a considerable admixture of Danish blood; claims to the Holstein duchy as adjoining Germany and thoroughly of German blood; rights of each duchy, which implied their separation; rights of both duchies, which implied their union. There had been a settlement under the Treaty of Vienna, in 1815. There had been another under the Treaty of London, in 1852. There had been interferences from Prussia, from Austria, from Russia, from Sweden, and from Great Britain, and bloody battles between Germans and Danes, sometimes one being uppermost, sometimes the other. Throughout Denmark it was held fanatically that the control of the duchies should be Danish; throughout Germany it was no less passionately asserted that it should be German. . . . The King of Denmark, asserting his claims, was confronted by the German Prince of Augustenburg, asserting his claims no less stoutly."—A. D. White, *Seven great statesmen*, pp. 431-432.—"The main line of the ruling dynasty was dying out; and the succession to the Danish throne was certain to pass, sooner or later, to the Glücksburg branch of the family. But this branch derived title through the female line, and the succession in Schleswig-Holstein was governed by the Salic law. Schleswig-Holstein accordingly would pass,

not to the Glücksburg, but to the younger Augustenburg line. The London conference undertook to change all this. It decreed that Schleswig-Holstein should be permanently associated with Denmark, and that the succession, both in Denmark and in the duchies, should be vested in the Glücksburg heirs. This treaty or protocol of May 8, 1852, was signed by Prussia and Austria as European powers; but it was not ratified by the German confederation nor in any way accepted by the Schleswig-Holsteiners. And the Prussian and Austrian ambassadors signed the London protocol only after, and in consideration of, a previous treaty with Denmark, by which that kingdom bound itself to respect the autonomy of the Schleswig-Holsteiners and not to incorporate Schleswig. Such was the position of affairs when King Frederick VII of Denmark issued a decree (the patent of March 30, 1863) which separated Schleswig from Holstein and practically incorporated the former in the kingdom of Denmark. The German powers at once protested; and the Federal Diet, in October, ordered an 'execution' in Holstein, *i. e.* voted to send troops there."—M. Smith, *Bismarck and German unity*, pp. 26-27.—"Germany, acting through the Federal Council at Frankfort, sent Hanoverian and Saxon troops, which seemed to clear the way for 'The Augustenburger' as the rightful sovereign. But this only made anarchy more virulent; Holstein was still dissatisfied and Schleswig in more hopeless confusion than ever. The region concerned, including the two main divisions of Holstein and Schleswig and the little duchy of Lauenburg, was valuable: there was a territory of over seven thousand square miles, and a population exceeding a million—a population hardy, sturdy, brave, God-fearing; and the importance of people and territory was enormously increased by their great harbor of Kiel. The claims of this region to cast in its lot with its neighbors having the same traditions and language were now recognized by a statesman who could do something; now came one of Bismarck's masterpieces. Though Austria and Prussia had long been quarreling at Frankfort and were especially jealous of each other regarding this region, and though he had been a main agent in provoking these quarrels, he suddenly, as by witchcraft, induced Austria to join Prussia in putting an end to all this anarchy and folly. Most skillfully he played on the two dominant characteristics of Austrian statesmen at that period: first, on their fear that, if the two great powers did not intervene, Germany might rise in revolution and seize the duchies; next, on their dread that Prussia might lead alone in the contest and thus increase her territory and prestige. Thus it came, to the amazement of all Europe, that these two powers, which had so long seemed ready to fly at each other's throats, took the whole question into their joined hands, marched side by side into the Danish peninsula, conquered the Danes, and occupied the whole Schleswig-Holstein region. But not without a fearful struggle. The Danes fought with desperation, and military history shows few pages as heroic as those which record their resistance against vastly superior forces at Düppel and Alsen; but as a result came the Treaty of Vienna, in 1864, and by this Denmark gave up the territory so long disputed into the hands of Austria and Prussia. But what to do with it? Their booty was embarrassing; the sweet reasonableness which had led them into partnership now evaporated. Austria became suspicious and Bismarck surly. Whatever either suggested, the other

opposed. Austria proposed that the Prince of Augustenburg should be installed as Duke; a majority of the Schleswig-Holstein people longed for him; Germany was almost unanimously propitious to him; even Prussia was largely inclined to him as the legitimate sovereign—the royal family generally favoring him, the Crown Prince supporting him, and even King William thinking well of him. Outside of the two powers immediately concerned, the same sentiment prevailed: England, France, and Russia looking on the Augustenburger as the true prince. But against all these stood Bismarck. He had tried the Augustenburg pretender and found him incapable of recognizing the real issue,—wanting in fealty to a united Germany. One more princeling in the Bund, nominally independent but really a puppet of Austria, he would not have. As to the Augustenburger's 'rights,' Bismarck trumped up others, apparently quite as good—notably sundry claims of Oldenburg—and at his behest court lawyers ground out various weighty opinions, the most cogent being that all the old rights and claims had been superseded by the recent victories. The majority of the German states, acting through the Federal Council at Frankfurt, tried to settle the matter; but Bismarck promptly reminded them that the German Confederation had no longer any right to meddle,—that Prussia and Austria now held the disputed territory by right of conquest. France and Great Britain also sought to interfere; but he informed them in diplomatic language, more or less civil, that the matter was none of theirs. . . . He was determined that the duchies should not form one more satrapy of Austria; that Austria, being at so great a distance, had virtually no interest in them; that Prussia, adjoining them, had a direct practical interest—in their territory as adjacent to her own, in the harbor of Kiel as necessary to her proper naval development, in the right to dig a canal connecting her dominions on the North Sea with those on the Baltic, and in the extension of her railway system northward; and he therefore proposed that Austria give up to Prussia virtually all rights in the newly acquired territory. This proposal Austria, after first refusing and then shuffling, expressed a willingness to consider, but insisted on compensation: there must be restored to her a portion of those Silesian territories torn away from her a hundred years before by Frederick the Great. To this Bismarck would not listen; he refused to yield an inch of German territory and the Great Frederick's conquest he held to be especially sacred. War between the two great German powers seemed likely to come at any moment."—A. D. White, *Seven great statesmen*, pp. 432-435.—"It was postponed, not so much by Bismarck's will as by the king's, and a temporary adjustment was reached in the convention of Gastein. By this treaty Prussia bought out Austria's rights in Lauenburg, and the administration of government in the two other duchies was divided, Prussia assuming control of Schleswig and Austria of Holstein. But the truce was a short one. Prussia accused Austria of encouraging the Augustenburg agitation, and when, on June 1, 1866, Austria submitted the Schleswig-Holstein question to the Federal Diet, Prussia declared the treaty of Gastein broken and the joint administration of the duchies reestablished. Prussian troops were accordingly sent into Holstein. Austria pronounced this a breach of the peace; and on June 11 the Austrian representative in the Federal Diet proposed the mobilization against Prussia of the contingents of all the other German states. This motion was carried, June 14, by a three-fifths vote. The Prussian representative de-

clared, in the name of his government, that this attempt to levy federal war upon a member of the confederation was a breach of the fundamental pact of union, and that the confederation was thereby dissolved. He added that it was the purpose of his government to find for the unity of the German people a form better suited to the conditions of the age. For nearly three months, in accordance with a plan foreshadowed in his earlier letters Bismarck had been pushing the German question to the front. He had been agitating, by circulars to all the German governments, the question of federal reform, and on April 9 he had caused a proposal to be introduced in the Federal Diet for the establishment of a German parliament on the basis of manhood suffrage. Immediately after the vote of June 14, Prussia called upon the governments of Saxony, Hanover and Hesse-Cassel to join in the establishment of a new federal union. Upon their refusal Prussian troops invaded these territories, and the war for the control of Germany began on June 16, 1866. Neither Austria nor Prussia stood alone. Austria was supported by all the South German states, viz. Bavaria, Württemberg, Baden and Hesse-Darmstadt, and by the more important states of North Germany, viz. Hanover, Saxony, Hesse-Cassel and Nassau. Prussia had secured the alliance of Italy by a secret treaty (April 8). In case of victory Italy was to receive Venice."—M. 1866.—Seven Weeks' War: Defeat of Austria.—Victory and supremacy of Prussia.—Her absorption of Hanover, Hesse, Nassau, Frankfurt and Schleswig-Holstein.—Formation of North German Confederation.—Exclusion of Austria from Germanic organization.—"In four or five days Prussia had disarmed all North Germany, and broken all resistance from the North Sea to the Main. On the 18th of June the Prussian general Bayer entered Cassel; the Elector was surprised at Wilhelmshöhe. As he still refused all terms he was arrested by the direct order of the king of Prussia and sent as a prisoner to Stettin. On the 17th, General Vogel von Falkenstein entered Hanover. King George with his army of 18,000 men sought to escape to South Germany. After a gallant struggle at Langensalza on the 27th, his brave troops were surrounded. The king capitulated on the 29th. His army was disbanded, he himself allowed to go to Vienna. On the 18th the Prussians were in Dresden; on the 19th in Leipzig; by the 20th, all Saxony except the fortress of Königstein was in their hands. The king and army of Saxony, on the approach of the Prussians, had left the country by the railroads to Bohemia to form a junction with the Austrians. The Saxon army consisted of 23,000 men and 60 cannon. Every one had expected Austria to occupy a county of such strategic value as Saxony before the Prussians could touch it. The Austrian army consisted of seven corps, 180,000 infantry,

24,000 cavalry, 762 guns. The popular opinion had forced the emperor to make Benedek the commander-in-chief in Bohemia. Everything there was new to him. The Prussians were divided into three armies: the army of the Elbe, 40,000 men, under Herwarth von Bittenfeld; the first army, 100,000 men, under Prince Frederick Charles; the second or Silesian army under the Crown Prince, 110,000 strong. The reserve consisted of 24,000 Landwehr. The whole force in this quarter numbered 280,000 men and 800 guns. . . . The Prussians knew what they were fighting for. To the Austrians the idea of this war was something strange. At Vienna, Benedek had spoken against war; after the first Prussian successes, he had in confidence advised the emperor to make peace as soon as possible. As he was unable from want of means to attack, he concentrated his army between Josephstadt and the country of Glatz. He thought only of defence. . . . On the 23rd of June the great Prussian army commenced contemporaneously its march to Bohemia from the Riesengebirge, from Lusatia, from Dresden. It advanced from four points to Josephstadt-Königgrätz, where the junction was to take place. Bismarck had ordered, from financial as well as political reasons, that the war must be short. The Prussian armies had at all points debouched from the passes and entered Bohemia before a single Austrian corps had come near these passes. . . . In a couple of days, Benedek lost in a series of fights against the three Prussian advancing armies nearly 35,000 men; five of his seven corps had been beaten. He concentrated these seven corps at Königgrätz in the ground before this fortress; he determined to accept battle between the Elbe and the Bistritz. He had, however, previously reported to the emperor that his army after its losses was not in a condition for a pitched battle. He wished to retire to Moravia and avoid a battle till he had received reinforcements. This telegram of Benedek arrived in the middle of the exultation which filled the court of Vienna after hearing of the victory over the Italians at Custoza [see ITALY: 1862-1866]. The emperor replied by ordering him briefly to give battle immediately. Benedek, on the 1st of July, again sent word to the emperor, 'Your majesty must conclude peace.' Yet on these repeated warnings came the order to fight at once. Benedek had provided for such an answer by his arrangements for July 2nd. He had placed his 500 guns in the most favorable positions, and occupied the country between the Elbe and the little river Bistritz for the extent of a league. As soon as the Prussians heard of this movement they resolved to attack the Austrians on the 3d. On the 2d the king, accompanied by Count Bismarck, Von Roon and Von Moltke, had joined the army. He assumed command of the three armies. The Crown Prince and Herwarth were ordered to advance against Königgrätz. Part of the Crown Prince's army were still five German miles from the intended battle ground. Prince Frederick Charles and Herwarth had alone sustained the whole force of Austria in the struggle around Sadowa, which began at 8 o'clock in the morning. Frederick Charles attacked in the centre over against Sadowa; Herwarth on the right at Nechanitz; the Crown Prince was to advance on the left from Königinhof. The Crown Prince received orders at four o'clock in the morning; he could not in all probability reach the field before one or two o'clock after noon. All depended on his arrival in good time. Prince Frederick Charles forced the passage of the Bistritz and took Sadowa and other places, but could not take the heights. His troops

suffered terribly from the awful fire of the Austrian batteries. The King himself and his staff came under fire, from which the earnest entreaties of Bismarck induced him to retire. About one o'clock the danger in the Prussian center was great. After five hours of fighting they could not advance, and began to talk of retreat. On the right, things were better. Herwarth had defeated the Saxons, and threatened the Austrian left. Yet, if the army of the Crown Prince did not arrive, the battle was lost, for the Prussian center was broken. But the Crown Prince brought the expected succor. About two o'clock came the news that a part of the Crown Prince's army had been engaged since one o'clock. The Austrians, attacked on their right flank and rear, had to give way in front. Under loud shouts of 'Forward,' Prince Frederick Charles took the Wood of Sadowa at three, and the heights of Lipa at four o'clock. At this very time, four o'clock, Benedek had already given orders to retreat. . . . From the . . . first the Prussians were superior to the Austrians in ammunition, provisions and supplies. They had a better organization, better preparation, and the needle-gun, which proved very destructive to the Austrians. The Austrian troops fought with thorough gallantry. . . . Respecting this campaign, an Austrian writes: 'Given in Vienna a powerful coterie which reserves to itself all the high commands and regards the army as its private estate for its own private benefit, and defeat is inevitable.' [See also MILITARY ORGANIZATION: 20]. The Austrians lost at Sadowa, according to the official accounts at Vienna, 174 cannon, 18,000 prisoners, 11 colors, 4,190 killed, 11,900 wounded, 21,400 missing, including the prisoners. The Prussians acknowledged a loss of only 10,000 men. The result of the battle was heavier for Austria than the loss in the action and the retreat. The armistice which Benedek asked for on the 4th of July was refused by the Prussians: a second request on the 10th was also rejected. On the 5th of July the emperor of Austria sought the mediation of France to restore peace. . . . All further movements were put a stop to by the five days' armistice, which began on the 22d of July at noon, and was followed by an armistice for four weeks. . . . Hostilities were at an end on Austrian territory when the war began on the Main against the allies of Austria. The Bavarian army, under the aged Prince Charles, distinguished itself by being driven by the less numerous forces of Prussia under General Falkenstein across the Saale and the Main. . . . The eighth federal army corps of 50,000 men, composed of contingents from Baden, Würtemberg, Electoral Hesse, Hesse-Darmstadt, Nassau, and 12,000 Austrians under Prince Alexander of Hesse, was so mismanaged that the Würtemberg contingent believed itself sold and betrayed. . . . On the 16th of July, in the evening, Falkenstein entered Frankfurt, and in the name of the king of Prussia took possession of this Free City, of Upper Hesse and Nassau. Frankfurt, on account of its Austrian sympathies, had to pay a contribution of six millions of gulden to Falkenstein, and on the 19th of July a further sum of nineteen millions to Manteuffel, the successor of Falkenstein. The latter sum was remitted when the hitherto Free City became a Prussian city. Manteuffel, in several actions from the 23d to the 26th of July, drove the federal army back to Würzburg; Göben defeated the army of Baden at Werbach, and that of Würtemberg at Tauberbischofsheim; before this the eighth federal army corps joined the Bavarian army, and on the 25th and 26th of July the united forces were defeated at Gerschheim and Ross-

brunn, and on the 27th, the citadel of Würzburg was invested. The court of Vienna had abandoned its South German allies when it concluded the armistice; it had not included its allies either in the armistice or the truce. . . . On the 29th of July, the Baden troops marched off homewards in the night, the Austrians marched to Bohemia, the Bavarians purchased an armistice by surrendering Würzburg to the Prussians. Thus of the eighth army corps, the Würtembergers and Hessians alone kept the field. On the 2d of August these remains of the eighth army corps were included in the armistice of Nicholsburg."—W. Zimmermann, *Popular history*, v. 4, bk. 6, ch. 3.—"After Sadowa, Prussia was in a position to dictate the terms of peace. . . . Preliminaries of peace were signed at Nicolsburg, July 26, and the final treaty at Prague, August 23. Italy received Venice; Austria conveyed to Prussia its interests in Schleswig-Holstein and recognized the dissolution of the old German confederation and the creation of a new North German confederation, to be composed of the states north of the Main. North of the Main, also, Prussia was to annex such territories

B. Malleon, *Refounding of the German empire*, ch. 6-10.

1866-1867.—Foreshadowings of the new empire.—"We may make the statement that in the autumn of 1866 the German Empire was founded. . . . The Southern States were not yet members of the Confederation, but were already, to use an old expression, relatives of the Confederation (Bundesverwandte) in virtue of the offensive and defensive alliances with Prussia and of the new organization of the Tariff-Union. . . . The natural and inevitable course of events must here irresistibly break its way, unless some circumstance not to be foreseen should throw down the barriers beforehand. How soon such a crisis might take place no one could at that time estimate. But in regard to the certainty of the final result there was in Germany no longer any doubt. . . . Three-fourths of the territory of this Empire was dominated by a Government that was in the first place efficient in military organization, guided by the firm hand of King William, counselled by the representatives of the North German Sovereigns, and recognized by all the Powers of Europe. The

Bismarck

Emperor William I

Von Moltke

## FOUNDERS OF THE GERMAN EMPIRE

as it saw fit, promising to spare Saxony. The South German states were to be permitted to form an independent confederation of their own. Austria was for ever excluded from Germany. . . . Prussia annexed Schleswig-Holstein, Hanover, Hesse-Cassel, Nassau and the free city of Frankfurt, adding four and a half millions to its population and increasing its territory by a fourth. The annexation of Hanover was especially advantageous; it rounded out what Motley had described as 'Prussia's wasp-waist.' . . . In the light of these splendid achievements, the public judgment of Bismarck underwent an immediate and complete reversal. . . . The revulsion of feeling which followed the Austrian war, and the sudden popularity of its author, were not due solely, nor even chiefly, to the vulgar admiration of success. Bismarck had realized the deepest desire of the German people. He had made Germany a nation, with a legislature resting on the broadest and most popular basis. He also made peace with the Prussian Chamber of Deputies."—M. Smith, *Bismarck and German unity*, pp. 38-39, 40-42.—See also AUSTRIA: 1862-1866; WORLD WAR: Causes: Indirect: a. 1.

opening of that Parliament was near at hand, that should in common with this Government determine the limitations to be placed upon the powers of the Confederation in its relation to the individual states and also the functions of the new Reichstag in the legislation and in the control of the finances of the Confederation. . . . It was, in the first place, certain that the functions of the future supreme Confederate authority would be in general the same as those specified in the Imperial Constitution of 1849. . . . The most radical difference between 1849 and 1866 consisted in the form of the Confederate Government. The former period aimed at the appointment of a Constitutional and hereditary emperor, with responsible ministers, to the utter exclusion of the German sovereigns; whereas now the plan included all of these sovereigns in a Confederate Council (Bundesrath) organized after the fashion of the old Confederate Diet, with committees for the various branches of the administration, and under the presidency of the King of Prussia, who should occupy a superior position in virtue of the conduct, placed in his hands once for all, of the foreign policy, the army and the navy, but who otherwise in the Confederate Council, in spite of the increase of his votes, could be outvoted like every other prince by a de-

cree of the majority. . . . Before the time of the peace-conferences, when all definite arrangements of Germany's future seemed suspended in the balance and undecided, the Crown Prince Frederick William, who in general had in mind for the supreme head of the Confederation a higher rank and position of power than did the King, maintained that his father should bear the title of King of Germany. Bismarck reminded him that there were other Kings in Germany: the Kings of Hanover, of Saxony, etc. 'These,' was the reply, 'will then take the title of Dukes.' 'But they will not agree to that.' 'They will have to!' cried His Royal Highness. After the further course of events, the Crown Prince indeed gave up his project; but in the early part of 1867 he asserted that the King should assume the title of German Emperor, arguing that the people would connect no tangible idea with the title of President of the Confederation, whereas the renewal of the imperial dignity would represent to them the actual incorporation of the unity finally attained, and the remembrance of the old glory and power of the Empire would kindle all hearts. This idea, as we have experienced and continue to experience its realization, was in itself perfectly correct. But it was evidently at that time premature: a North German empire would have aroused no enthusiasm in the north, and would have seriously hindered the accomplishment of the national aim in the south. King William rejected this proposition very decidedly: in his own simple way he wished to be nothing more than Confederate Commander-in-chief and the first among his peers."—H. von Sybel, *Founding of the German empire by William I*, v. 5, bk. 20, ch. 4.

1866-1870.—Territorial concessions demanded by France.—Rapid progress of German unification.—Zollparlament.—Luxemburg question.—French determination for war.—"The conditions of peace . . . left it open to the Southern States to choose what relationship they would form with the Northern Confederation. This was a compromise between Bismarck and Napoleon, the latter fearing a United Germany, the former preferring to restrict himself to what was attainable at the time, and taking care not to humiliate or seriously to injure Austria, whose friendship he foresaw that Germany would need. Meanwhile Napoleon's interference continued. Scarcely had Benedetti, who had followed Bismarck to the battlefields, returned to Berlin, when he received orders from his Government to demand not less than the left bank of the Rhine as a compensation for Prussia's increase of territory. For this purpose he submitted the draft of a treaty by which Prussia was even to bind herself to end an active support to the cession of the Bavarian and Hessian possessions west of the Rhine! . . . Bismarck would listen to no mention of ceding German territory. 'Si vous refusez,' said the conceited Corsican, 'c'est la guerre.'—'Eh bien, la guerre,' replied Bismarck calmly. Just as little success had Benedetti with King William. 'Not a clod of German soil; not a chimney of a German village,' was William's kingly reply. Napoleon was not disposed at the time to carry out his threat. He disavowed Benedetti's action, declaring that the instructions had been obtained from him during his illness and that he wished to live in peace and friendship with Prussia. Napoleon's covetousness had at least one good effect: it furthered the work of German

union. Bavaria and Würtemberg, who during the war had sided with Austria, had at first appealed to Napoleon to mediate between them and Prussia. But when the Ministers of the four South German States appeared at Berlin to negotiate with Bismarck, and Benedetti's draft-treaty was communicated to them, there was a complete change of disposition. They then wished to go much further than the Prussian Statesman was prepared to go: they asked, in order to be protected from French encroachments, to be admitted into the North German Confederation. But Bismarck would not depart from the stipulations of the Treaty of Nikolsburg. The most important result of the negotiations was that secret treaties were concluded by which the Southern States bound themselves to an alliance with the Northern Confederation for the defence of Germany, and engaged to place their troops under the supreme command of the Prussian King in the event of any attack by a foreign Power. In a military sense Klein-Deutschland was now one, though not yet politically. . . . That Prussia was the truly representative German State had been obvious to the thoughtful long before: the fact now stood out in clear light to all who would open their eyes to see. Progress had meanwhile been made with the construction of the North German Confederation, which embraced all the States to the north of the river Main. Its affairs were to be regulated by a Reichstag elected by universal suffrage and by a Federal Council formed of the representatives of the North German Governments. In a military sense it was a Single State, politically a Confederate State, with the King of Prussia as President. This arrangement was not of course regarded as final; and in his speech from the throne to the North German Reichstag, King William emphasized the declaration that Germany, so long torn, so long powerless, so long the theater of war for foreign nations, would henceforth strive to recover the greatness of her past. . . . A first step towards 'bridging over the Main,' i.e., causing South and North to join hands again, was taken by the creation of a Zollparlament, or Customs Parliament, which was elected by the whole of Klein-Deutschland, and met at Berlin, henceforth the capital of Germany. It was also a step in advance that Baden and Hesse-Darmstadt signed conventions, by which their military system was put on the same footing as that of the North German Confederation. Baden indeed would willingly have entered into political union with the North, had the same disposition prevailed at the time in the other South German States. The National Liberals however had to contend with strong opposition from the Democrats in Würtemberg, and from the Ultramontanes in Bavaria. The latter were hostile to Prussia on account of her Protestantism, the former on account of the stern principles and severe discipline that pervaded her administration. . . . In the work of German unification the Bonapartes have an important share. . . . By outraging the principle of nationality, Napoleon I. had re-awakened the feeling of nationality among Germans: Napoleon III., by attempting to prevent the unification of Germany, actually hastened it on. . . . When King William had replied that he would not yield up an inch of German soil, 'patriotic pang' at Prussian successes and the thirst for 'compensation' continued to disturb the sleep of the French Emperor, and as he was unwilling to appear baffled in his purpose, he returned to the charge. On the 16th of August, 1866, through his Ambassador Benedetti, he demanded the cession of Landau, Saarbrücken, Saarlouis, and Luxemburg, together with Prussia's con-

sent to the annexation of Belgium by France. If that could not be obtained, he would be satisfied with Luxemburg and Belgium; he would even exclude Antwerp from the territory claimed that it might be created a free town. Thus he hoped to spare the susceptibilities of England. As a gracious return he offered the alliance of France. After his first interview Benedetti gave up his demand for the three German towns, and submitted a new scheme, according to which Germany should induce the King of the Netherlands to a cession of Luxemburg, and should support France in the conquest of Belgium; whilst, on his part, Napoleon would permit the formation of a federal union between the Northern Confederation and the South German States, and would enter into a defensive and offensive alliance with Germany. Count Bismarck treated these propositions, as he himself has stated, 'in a dilatory manner,' that is to say, he did not reject them, but he took good care not to make any definite promises. When the Prussian Prime Minister returned from his furlough to Berlin, towards the end of 1866, Benedetti resumed his negotiations, but now only with regard to Luxemburg, still garrisoned by Prussian troops as at the time of the old Germanic Confederation. Though the Grand-Duchy of Luxemburg did not belong to the new North German Confederation, Bismarck was not willing to allow it to be annexed by France. Moltke moreover declared that the fortress could only be evacuated by the Prussian troops if the fortifications were razed. But without its fortifications Napoleon would not have it. And when, with regard to the Emperor's intentions upon Belgium, Prussia offered no active support, but only promised observance of neutrality, France renounced the idea of an alliance with Prussia, and entered into direct negotiations with the King of Holland, as Grand Duke of Luxemburg. Great excitement was thereby caused in Germany, and, as a timely warning to France, Bismarck surprised the world with the publication of the secret treaties between Prussia and the South German States. But when it became known that the King of Holland was actually consenting to the sale of his rights in Luxemburg to Napoleon, there was so loud a cry of indignation in all parts of Germany, there was so powerful a protest in the North German Parliament against any sale of German territory by the King of Holland, that Count Bismarck, himself surprised at the vigor of the patriotic outburst, declared to the Government of the Hague that the cession of Luxemburg would be considered a *casus belli*. This peremptory declaration had the desired effect: the cession did not take place. This was the first success in European politics of a united Germany, united not yet politically, but in spirit. That was satisfactory. A Conference of the Great Powers then met in London [May, 1867]: by its decision, Luxemburg was separated from Germany, and,—to give some kind of satisfaction to the Emperor of the French,—was formed into a neutral State. From a national point of view, that was unsatisfactory. . . . The danger of an outbreak of war between France and Germany had only been warded off for a time by the international settlement of the Luxemburg question. . . . In the early part of July, 1870, Prince Leopold of Hohenzollern-Sigmaringen, at the request of the Spanish government, became a candidate for the Spanish throne."—G. Krause, *Growth of German unity*, ch. 13-14.

1870 (September-December).—Germanic confederation completed.—Federative treaties with the states of South Germany.—Suggestion of the empire.—"Having decided on taking Strasburg and Metz from France" Prussia "could only justify that conquest by considerations of the safety of South Germany, and she could only defend these interests by effecting the union of North and South. She found it necessary to realize this union at any price, even by some concessions in favor of the autonomy of those States, and especially of Bavaria. Such was the spirit in which negotiations were opened, in the middle of September, 1870, between Bavaria and Prussia, with the participation of Baden, Würtemberg and Hesse-Darmstadt. . . . Prussia asked at first for entire and unreserved adherence to the Northern Confederation, a solution acceptable to Baden, Würtemberg and Hesse-Darmstadt, but not to Bavaria, who demanded for herself the preservation of certain rights, and for her King a privileged position in the future Confederation next to the King of Prussia. The negotiations with Baden and Hesse-Darmstadt came to a conclusion on the 15th of November, and on the 25th, Würtemberg accepted the same arrangement. These three States agreed to the constitution, slightly modified, of the Northern Confederation; the new treaties were completed by military conventions, establishing the fusion of the respective Corps d'Armée with the Federal Army of the North, under the command of the King of Prussia. The Treaty with Bavaria was signed at Versailles on the 23rd of November. The concessions obtained by the Cabinet of Munich were reduced to mere trifles. . . . The King of Bavaria was allowed the command of his army in time of peace. He was granted the administration of the Post-Office and partial autonomy of indirect contributions. A committee was conceded, in the Federal Council, for Foreign Affairs, under the Presidency of Bavaria. The right of the King of Prussia, as President of this Council, to declare war, was made conditional on its consent. Such were the Treaties submitted on the 24th of November to the sanction of the Parliament of the North, assembled in an Extraordinary Session. They met with intense opposition from the National Liberal and from the Progressive Party," but "the Parliament sanctioned the treaties on the 10th of December. According to the Treaties, the new association received the title of Germanic Confederation, and the King of Prussia that of its President. These titles were soon to undergo an important alteration. The King of Bavaria, satisfied with the concessions, more apparent than real, made by the Prussian Cabinet to his rights of sovereignty, consented to defer to the wishes of King William. On the 4th of December, King Louis addressed him [King William] a letter informing him that he had invited the Confederate sovereigns to revive the German Empire and confer the title of Emperor on the President of the

(After painting by Von Werner)

Confederation. . . . The sovereigns immediately gave their consent, so that the Imperial titles could be introduced into the new Constitution before the final vote of the Parliament of the North. . . . To tell the truth, King William attached slight importance to the votes of the various chambers. He was not desirous of receiving his new dignity from the hands of a Parliament; the assent of the sovereigns was in his eyes far more essential."—E. Simon, *Emperor William and his reign*, v. 2, ch. 13.

1871 (January).—Assumption of the imperial dignity by William at Versailles.—“Early in December the proposition came from King Ludwig of Bavaria to King William, that the possession of the presidential rights of the Confederacy vested in the Prussian monarch should be coupled with the imperial title. The King of Saxony spoke to the same purport; and in one day a measure providing for the amendment of the Constitution by the substitution of the words ‘Emperor’ and ‘Empire’ for ‘President’ and ‘Confederation’ was passed through the North German Parliament, which voted also an address to his Majesty, from which the following is an extract: ‘The North German Parliament, in unison with the Princes of Germany, approaches with the prayer that your Majesty will deign to consecrate the work of unification by accepting the Imperial Crown of Germany. The Teutonic Crown on the head of your Majesty will inaugurate, for the re-established Empire of the German nation, an era of power, of peace, of well-being, and of liberty secured under the protection of the laws.’ The address of the German Parliament was presented to the King at Versailles on Sunday, the 18th of December, by its speaker, Herr Simson, who, as speaker of the Frankfort Parliament in 1848, had made the identical proffer to William’s brother and predecessor [see above: 1848-1850]. . . . The formal ratification of assent to the Prussian King’s assumption of the imperial dignity had yet to be received from the minor German States; but this was a foregone conclusion, and the unification of Germany really dates from that 18th of December, and from the solemn ceremonial in the prefecture of Versailles.”—A. Forbes, *William of Germany*, ch. 12.—King William’s formal assumption of the Imperial dignity took place on the 18th of January, 1871. “The Crown Prince was entrusted with all the preparations for the ceremony. Every regiment in the army of investment was instructed to send its colors in charge of an officer and two non-commissioned officers to Versailles, and all the higher officers who could be spared from duty were ordered to attend, for the army was to represent the German nation at this memorable scene. The Crown Prince escorted his father from the Prefecture to the palace of Versailles, where all the German Princes or their representatives were as-

sembled in the Galerie des Glaces. A special service was read by the military chaplains, and then the Emperor, mounting on the dais, announced his assumption of Imperial authority, and instructed his Chancellor to read the Proclamation issued to the whole German nation. Then the Crown Prince as the first subject of the Empire, came forward and performed the solemn act of homage, kneeling down before his Imperial Father. The Emperor raised him and clasped to his arms the son who had toiled and fought and borne so great a share in achieving what many generations had desired in vain.”—R. Rodd, *Frederick, Crown prince and emperor*, ch. 5.

1871-1879.—Organization of government of Alsace-Lorraine as an imperial province.—“How to garner the territorial harvest of the war—Alsace-Lorraine—was a question which greatly vexed the parliamentary mind. Several possible solutions had presented themselves. The conquered provinces might be made neutral territory; which, with Belgium on one side, and Switzerland on the other, would thus interpose a continuous barrier against French aggression from the mouth of the Rhine to its source. But one fatal objection, among several others, to the adoption of this course was the utter lack, in the Alsace-Lorrainers, of the primary condition of the existence of all neutral States—a determination on the part of the neutralized people themselves to be and remain neutral. And none knew better than Bismarck that it would take years of the most careful nursing to reconcile the kidnapped children of France to their adoptive parent. For him, the only serious question was whether Alsace-Lorraine should be annexed to Prussia, or be made an immediate Reichsland (Imperial Province). ‘From the very first,’ he said, ‘I was most decidedly for the latter alternative, first—because there is no reason why dynastic questions should be mixed up with political ones; and, secondly—because I think it will be easier for the Alsations to take to the name of “German” than to that of “Prussian,” the latter being detested in France in comparison with the other.’ In its first session, accordingly, the Diet was asked to pass a law incorporating Alsace-Lorraine with the Empire, and placing the annexed provinces under a provisional dictatorship till the 1st of January, 1874, when they would enter into the enjoyment of constitutional rights in common with the rest of the nation. But the latter clause provoked much controversy. . . . A compromise was ultimately effected by which the duration of the dictatorship, or period within which the Imperial Government alone was to have the right of making laws for Alsace-Lorraine, was shortened till 1st January, 1873; while the Diet, on the other hand, was only to have the supervision of such loans or guarantees as affected the Empire. In the following year, however, the Diet came to the

conclusion that, after all, the original term fixed for the dictatorship was the more advisable of the two, and prolonged it accordingly. For the next three years, therefore, the Reichsland was governed from the Wilhelmstrasse, as India is ruled from Downing Street. . . . In the beginning of 1874 . . . fifteen deputies from Alsace-Lorraine—now thus far admitted within the pale of the Constitution—took their seats in the second German Parliament. Of these fifteen deputies, five were out-and-out French Protesters, and the rest Clericals—seven of the latter being clergymen, including the Bishops of Metz and Strasburg. They entered the Diet in a body, with much theatrical pomp, the clergy wearing their robes; and one of the French Protesters—bearing the unfortunate name of Teutsch—immediately tabled a motion that the inhabitants of Alsace-Lorraine, having been annexed to Germany without being themselves consulted, should now be granted an opportunity of expressing their opinion on the subject by a plébiscite. . . . The motion of French M. Teutsch, who spoke fluent German, was of course rejected; whereupon he and several of his compatriots straightway returned home, and left the Diet to deal with the interests of their constituents as it liked. Those of his colleagues who remained behind only did so to complain of the 'intolerable tyranny' under which the provinces were groaning, and to move for the repeal of the law (of December, 1871) which invested the local Government with dictatorial powers. . . . Believing home-rule to be one of the best guarantees of federal cohesion, Bismarck determined to try the effect of this cementing agency on the newest part of the Imperial edifice; and, in the autumn of 1874, he advised the Emperor to grant the Alsace-Lorrainers (not by law, but by ordinance, which could easily be revoked) a previous voice on all bills to be submitted to the Reichstag on the domestic and fiscal affairs of the provinces. . . . In the following summer (June, 1875), therefore, there met at Strasburg the first Landesausschuss, or Provincial Committee, composed of delegates, thirty in number, from the administrative District Councils. . . . So well, indeed, on the whole, did this arrangement work, that within two years of its creation the Landesausschuss was invested with much broader powers. . . . Thus it came about that, while the Reichsland continued to be governed from Berlin, the making of its laws was more and more confined to Strasburg. . . . The party of the Irreconcilables had been gradually giving way to the Autonomists, or those who subordinated the question of nationality to that of home-rule. Rapidly gaining in strength, this latter party at last (in the spring of 1870) petitioned the Reichstag for an independent Government, with its seat in Strasburg, for the representation of the Reichsland in the Federal Council, and for an enlargement of the functions of the Provincial Committee. Nothing could have been more gratifying to Bismarck than this request, amounting, as it did, to a reluctant recognition of the Treaty of Frankfurt on the part of the Alsace-Lorrainers. He therefore replied that he was quite willing to confer on the provinces 'the highest degree of independence compatible with the military security of the Empire.' The Diet, without distinction of party, applauded his words; and not only that, but it hastened to pass a bill embodying ideas at which the Chancellor himself had hinted in the previous year. By this bill, the government of Alsace-Lorraine was to center in a Statthalter, or Imperial Viceroy, living at Strasburg, instead of, as heretofore, in the chancellor. . . . Without being a Sovereign, this Statthalter

was to exercise all but sovereign rights. . . . For this high office the Emperor selected the brilliant soldier-statesman, Marshal Manteuffel. . . . Certainly, His Majesty could not possibly have chosen a better man for the responsible office, which the Marshal assumed on the 1st October, 1879. Henceforth, the conquered provinces entered an entirely new phase of their existence."—C. Lowe, *Prince Bismarck*, v. 2, ch. 14.

1873-1887.—Kulturkampf.—"May Laws" and their repeal.—"The German Kulturkampf, or civilization-fight, as its illustrious chief promoter is said to have named it, may equally well be styled the religion combat, or education strife. [Prussia, which with Hesse-Darmstadt, was the center of this struggle, had, roughly speaking, a population of 27 millions, 9 millions of which were Catholics.] . . . It was on the 9th of January, 1873, that Dr. Falk, Minister of Public Worship, first introduced into the Prussian Diet the bills, which were afterwards to be known as the May Laws [so called because they were generally passed in the month of May, although in different years, but also called the Falk Laws, from the Minister who framed them]. These laws, which, for the future, were to regulate the relations of Church and State, purported to apply to the Evangelical or united Protestant State Church of Prussia . . . as well as to the Catholic Church. Their professed main objects were: first, to insure greater liberty to individual lay members of those churches; secondly, to secure a German and national, rather than an 'Ultramontane' and non-national, training for the clergy; and, thirdly, to protect the inferior clergy against the tyranny of their superiors—which simply meant, as proved in the sequel, the withdrawal of priests and people, in matters spiritual, from the jurisdiction of the bishops, and the separation of Catholic Prussia from the Centre of Unity; thus substituting a local or national Church, bound hand and foot, under State regulation, for a flourishing branch of the Universal Church. To promote these objects, it was provided that all Ecclesiastical seminaries should be placed under State control; and that all candidates for the priesthood should pass a State examination in the usual subjects of a liberal education; and it was further provided, that the State should have the right to confirm or to reject all appointments of clergy. These bills were readily passed: and all the religious orders and congregations were suppressed, with the provisional exception of those which devoted themselves to the care of the sick; and all Catholic seminaries were closed. . . . The Bishops refused to obey the new laws, which in conscience they could not accept; and they subscribed a collective declaration to this effect, on the 26th of May 1873. On the 7th of August following, Pope Pius IX addressed a strong letter of remonstrance to the Emperor William; but entirely without effect, as may be seen in the Imperial reply of the 5th of September. In punishment of their opposition, several of the Bishops and great numbers of their clergy were fined, imprisoned, exiled, and deprived of their salaries. Especially notable among the victims of persecution, were the venerable Archbishop of Cologne, Primate of Russia, the Bishop of Munster, the Prince Bishop of Breslau, the Bishop of Paderborn, and Cardinal Ledochowski, Archbishop of Gnesen and Posen, on whom, then in

prison, a Cardinal's hat was conferred by the Pope, in March 1875, as a mark of sympathy, encouragement, and approval. . . . The fifteen Catholic dioceses of Prussia comprised, in January 1873, a Catholic aggregate of 8,711,535 souls. They were administered by 4,627 parish-priests, and 3,812 coadjutor-priests, or curates, being a total of 8,439 clergy. Eight years later, owing to the operation of the May Laws, there were exiled or dead, without being replaced, 1,770 of these clergy. . . . Besides these 1,770 secular priests, dead or exiled, and not replaced, there were the regular clergy (the members of religious orders), all of whom had been expelled."—J. N. Murphy, *Chair of Peter*, ch. 20.—"Why was the Kulturkampf undertaken? This is a question often asked, and answered in different ways. That Ultramontanism is a danger to the Empire is the usual explanation; but proof is not producible. . . . Ultramontanism, as it is understood in France and Belgium, has never taken root in Germany. It was represented by the Jesuits, and when they were got rid of, Catholicism remained as a religion, but not as a political factor. . . . The real purpose of the Kulturkampf has been, I conceive, centralisation. . . . A military government cannot tolerate any sort of double allegiance in its subjects. Education and religion, medicine and jurisprudence, telegraphs and post-office, must be under the jurisdiction of the State. . . . From the point of view of a military despotism, the May laws are reasonable and necessary."—S. Baring-Gould, *Germany, present and past*, v. 2, ch. 13.—"The Kulturkampf represented the duel between the Empire and the Curia. On the question of the scope and significance of the Kulturkampf there exists a great difference of opinion on the part of historians. Some of them depict Bismarck as having been surprised by the clerical aggression, which he had not foreseen, and which he did not wish to believe. Driven by his too exclusively realistic nature into imagining that he would make an end of the clerical opposition by having recourse to police measures, he gradually learnt to realise the futility of his brutal policy. He therefore beat a retreat, in spite of his vow that he would 'not go to Canossa,' . . . and allowed the May Laws one after another to fall into desuetude. And finally he found himself obliged to purchase, by means of concessions, the support of the Centre Party, which became the arbiter of the political destinies of Germany and the pivot of the Government majority. Others represent the religious policy of the great chancellor in a less primitive and more favourable light. They insist on the impossibility for Bismarck to come to any understanding by means of diplomatic negotiations, and through the instrumentality of a concordat with a Power which declared itself infallible and aspired to dominate every civil authority. They approve of Bismarck's policy of having, under the circumstances, preferred to regulate the relations between Church and State in an authoritative way, by means of legislation, so as subsequently to be in a position to negotiate secretly with the Head of the Church, and gradually to modify the law in such a manner as to make it acceptable to both sides alike. And they praise the chancellor for having carried out this delicate policy with marvellous skill, for having fought with a warlike spirit and a vigorous resolution the battle against clerical demagoguery, and for having afterwards, in his negotiations with the Curia and the diplomats of Rome, shown a very keen insight into political necessities and possibilities of the moment. And they give him credit for having in the end succeeded in organizing the relationship between Church and State in such

a way as to provide sufficient safeguard for the rights of the State, and at the same time with enough liberality to give satisfaction to the Church with the New Empire. In short, it is quite open to question who was the real victor in this conflict between the spiritual and temporal powers. It required time for both sides to realise that a system of mutual tolerance and even of profitable co-operation was possible. But an agreement was eventually reached between them. The State learnt that it could with advantage give up the hostile legislation and severe measures passed at the beginning of the conflict, and little by little it laid down its arms. In 1879 Falk, who had directed the war against clericalism resigned his ministry."—H. Lichtenberger, *Germany and its evolution in modern times*, pp. 243-244.—In 1880 and 1881 the 'May Laws' were suspended, and, after negotiation with Leo XIII., they were to a large extent repealed. By this change, completed in April, 1887, the obligations of civil marriage and the vesting of Catholic property in the hands of lay trustees were retained, but the legislative interference with the administration of the Church, including the education required for the priesthood, was wholly abandoned. The Prussian Government had entirely miscalculated its power with the Church."—S. Baring-Gould, *Church in Germany*, ch. 21.—See also PACACY: 1870-1874.

1881-1913.—"Universal policy."—Idea of the extent of the German empire.—Emigration tentacles.—Material interests.—Peaceful penetration.—Outside investment of capital.—Diffusion of German culture.—Universal suffrage and expansion.—"The ambition of Germany no longer aims entirely at asserting her power, in the midst of Europe in arms, by the superiority of her military organisation and the solidity of her alliances. She has no longer an exclusively European policy—she has also a universal one. The idea of German imperialism underwent, during the last stage of the national evolution, a fresh extension, which we must now describe in all its bearings. In the first place, the present [1913] German Empire does not consist of Germany. It is—and German historians are quite willing to acknowledge it—an incomplete and doubtless provisional solution of the German

question. 'Germany' extends to every region in which the German language is supreme and German culture flourishes. On every side she overflows the boundaries of the Empire. Cis-Leithanian Austria contained in 1900 a sum-total of 9,171,000 Germans—that is to say, 36 per cent. of the whole population—who energetically preserve their nationality, their language, their culture, and their dominating influence, and are engaged in a bitter struggle for territory—especially in Bohemia—with the Slav majority among whom they live, and endeavour by every possible means to establish their superiority. Trans-Leithanian Austria, in spite of the desperate struggle of the Magyars against the Teutonic element, still contains 2,135,000 Germans—that is to say, 33.3 per cent. of the whole population—who keep their footing with tenacity, or even gain ground, as in Croatia and Slavonia, where the German population has more than quadrupled during the last fifty years. To the east 'Greater Germany' claims the 250,000 Germans who constitute the rich cultured minority in the Baltic provinces of Russia. To the south she embraces German Switzerland, though here apparently the Teutonic element has undergone a slight decrease in comparison with the *Welsche* population. On the west she includes Holland and Flemish Belgium, with their large German colonies (32,000 in Holland, 68,000 in Belgium and Luxemburg). In these two countries of Teutonic extraction, whose commercial relations with Germany grow more active every day, an independent culture has sprung up in opposition to the French culture, which must necessarily renew the traditional bonds which once bound them to Teutonic civilisation. Then, in addition to the countries in which the Teutonic element has flourished for a long time, and in more or less compact masses ideal Germany also contains all Germans who have left their native land either with or without the intention of returning; soldiers who offered their services to foreign masters, Catholic and Protestant missionaries, Asiatic and African explorers, and above all emigrants who, driven out by poverty or by a spirit of adventure, go to seek their fortunes across the seas. All these Germans, whom destiny has planted in every corner of the globe, form a very appreciable element in the power of Germany. The increase in emigration, especially since 1830, is well known. It is estimated that at least 5 million Germans left the mother country during the nineteenth century, and that chiefly during the ten years from 1881 to 1890 (1.3 millions). Thus large numbers of German colonies have come into existence, the most important of which is that in the United States. According to statistics, there are 25 million Americans of German extraction, and 10 to 12 million whose German origin is more clearly marked, either by the fact that they have German parents or that they have preserved, in their customs and their culture, some tie with the mother country. And this imposing colony—there are almost as many Germans in the United States as in Austria—would be an asset of the highest importance for Teutonic power were it not that the German element allows itself to be assimilated with such facility, and loses its racial characteristics in the second and third and sometimes even in the first generation. In South America the emigrants, who are far less numerous than in the United States—their numbers have not quite reached half a million—have on the contrary preserved their national character better. Important establishments are to be found in Chili, in Bolivia, in Buenos Ayres, and above all in Brazil, where, in the state of Rio Grande do Sul especially, a flourishing colony of almost 200,000 people has sprung up—that is to

say, about half the entire German population of Brazil. In Australia the German colonies seem destined, as in the United States, to become rapidly absorbed by the Anglo-Saxon element. On the other hand, the German colonies which have emigrated eastwards in the direction of Turkish and Russian possessions, or which have penetrated as far as the Caucasus, Turkestan, and Siberia on the one side, and Palestine on the other, seem to have preserved their racial characteristics better and are likely to develop and prosper. The same may be said of the other German centres in Asia (especially in the Dutch colonies, and in Africa, where—above all in the Cape—the German element is exceedingly strong, and may one day be called upon to play a very important part in spite of the recent defeat of the Boers. Lastly, in order to complete this enumeration of the forces of Teutonism, we must include the crowds of Germans scattered throughout the countries of Europe, especially in France (87,000), in England (53,000), in Italy (11,000), in Denmark (35,000), in Scandinavia, Servia, Bulgaria, Roumania, Turkey, etc. At the end of the nineteenth century the sum-total of Germans resident in Europe was estimated at 76½ millions, to which must be added 12 million Germans settled in other parts of the world—that is to say, over 10 million in the United States, 400,000 in North America, 18,000 in Central America, a few less than 500,000 in South America, 623,000 in Africa, 110,000 in Australasia, and 88,000 in Asia. . . . Germany does not confine herself to sending forth her people all over the world; her capital also seeks for good investments abroad. In proportion as she has become an exporting country and has increased her industry and developed her maritime trade, her material interests abroad have grown to considerable proportions. In Central Europe Italy is the chief country to see her industry being developed, thanks to German capital. In the East the influence of Germany makes itself felt principally in Turkey. The relations between these two countries, which have been very cordial ever since the Russo-Turkish War, were still more firmly cemented in 1882 when the military mission under Von der Goltz and Rüstow-Pacha undertook the reform of the Ottoman army. Soon Turkey became a regular happy hunting-ground for German merchants, bankers, and engineers. German finance gradually became mistress of the chief railways of the Ottoman Empire. And by a bold policy a peaceful penetration, based upon the construction of great railways, German finance is endeavoring to open up Asia Minor and then Mesopotamia, and thus by a great trans-continental railway connect Constantinople with the Persian Gulf. The commercial relations of Germany with the Far East have also become exceedingly active since the *Nord-deutscher Lloyd* organised in 1886 a regular service between the German ports and the principal ports of Asia and Australia, and above all from the moment when Germany obtained in 1896 the concession of Tientsin and Han-kow, and in the following year occupied Kiao-chou. . . . In 1890 statistics gave 7,000 or 7,500 millions of marks as the sum-total of German capital invested in concerns abroad, and 12,500 to 13,000 millions of marks as the aggregate of German capital invested in foreign securities. The growth of German industry and the necessity of protecting her interests abroad was inevitably destined to lead the Empire to the gradual formation of a colonial territory. . . . For a long time her [Germany's] policy had been above all national. Taking as her basis the German State, she had had as her aim the power and prosperity of this state. She had therefore been above all a

European nation, chiefly if not exclusively concerned with the European interests of Germany and her position in that continent. Then gradually her policy began to grow *universal* and *imperialistic*. She founded it no longer solely upon the real and concrete German Empire, but on Germans and German interests throughout the world. And she tended to favour German expansion in every shape and form in the four quarters of the globe. Imperialistic 'Germany' is not confined within the limits of the Empire—she embraces the whole domain of Teutonic interests; she can be extended to the same limits as those interests, and she is capable of a peaceful development in proportion as the rays of German activity spread not only in German territory, but also abroad. In her conception states are no longer territories with rigidly barricaded frontiers, but rather spheres of influence with ever-varying limits, which become every day more inextricably involved in each other, which penetrate each other mutually, and are constantly being modified according to the development of the activity and industry of a certain race. In other words, the struggle for power no longer takes place only between organised states, and is not only embodied in wars and the conquest of fresh territory. It is incessantly going on between German, American, English, and French 'enterprises.' It is a never ending war—no longer a military contest, but an industrial, commercial, and scientific one, whose seat is the whole world, and every spot in which rival interests find themselves face to face. German imperialism, therefore, does not stop at claiming a dominant position among the Powers of Europe. It aims at developing German might everywhere and in every shape. It works hard to tighten the bonds of solidarity between the Germans of the Empire and their brethren abroad, and to develop all the German communities and all the emigrant colonies in foreign lands. It encourages the outside investment of German capital and takes an interest in the diffusion of German culture in the world by means of schools, science, and books. Imperialism is, in short, the programme of the system of enterprise applied to politics. . . . The imperial policy has been the object of violent attacks both by the Agrarian Party and by the representatives of industry, as well as the Liberals. The latter have recently shown themselves exceedingly discontented. Without disputing the economic development of modern Germany, without even denying that the year 1906 was particularly prosperous, and that the national industry was continuing to increase in the most brilliant manner, they yet refuse to admit that the Government has had anything to do with this progress. It was to be laid entirely at the door of the felicitous initiative on the part of capitalists and business men. The Government, according to them, has done nothing to facilitate their task. On the contrary, it has handicapped them by a commercial policy which sacrifices the interests of German labour to those of the agricultural party, and by a too personal foreign policy, which through its ambitious designs and its capricious and blustering behaviour has sown unrest and suspicion everywhere, and has ended by isolating Germany in Europe. But if the parties of the Left have clearly but little sympathy for a Government which 'combines a universal and imperialistic policy with that of the Prussian country squire,' their discontent is apparently not shared by the mass of the people. Universal suffrage [see SUFFRAGE, MANHOOD: Germany: 1867-1917] has just given its verdict in favour of the policy of national expansion favoured by the Government, and has thus

proved the Emperor right, in distinction to the 'pessimists' (*Schwartzseher*), who decry the 'new system.' Under these circumstances one is tempted to admit that the imperial will has hitherto succeeded fairly well in unravelling the multifarious tendencies which have come to light in the country, and that the imperialism of contemporary Germany has its roots not only in the ambitious dreams of a single monarch, but in the soaring will to power of the nation itself.—H. Lichtenberger, *Germany and its evolution in modern times*, pp. 149-154, 158-159, 164-165.—See also EUROPE: Modern: Conflicting currents before World War.

1883-1900.—Practical operation of state system of workmen's insurance.—Enlargement of its provisions.—By a series of laws enacted in 1883, 1884 and 1889, a system of compulsory state insurance of workmen was established in Germany, applying in the first instance to sickness, then to accidents, and finally becoming a pensioning insurance for old age and permanent invalidity. These laws establish a compulsion to be insured, but leave freedom of choice as to the associations in which the insurance shall be maintained, all such associations being under the surveillance of the state. In a report from U. S. consul J. C. Monaghan, Chemnitz, made July, 1898, the practical working of the system to that time is thus described:

"The object of the system is to alleviate the sufferings of workmen and their families: (1) in cases of sickness (sick insurance); (2) in cases of accidents incurred at work (accident insurance); (3) in cases of feebleness, wasting diseases, decreased capacity to work, and old age (invalid and old-age insurance). In cases coming under No. 1 there is given free medical treatment; sick money—that is, money during period of sickness with which to obtain medicine, nourishment, etc.—or, if desired, free treatment in a hospital and support for the family; and money, in case of death, is supplied the family. The fund is furnished by employers and employed—the former paying one-third, the latter two-thirds. In cases of accident insurance the parties receive support during convalescence, from the fourteenth week after the accident happens. Money is given the wounded person from the fifth week. Rents are paid from the first day of the fourteenth week after the accident. The rents amount to two-thirds, and in some cases to three-fifths, of the workman's yearly salary. The fund for burial expenses is furnished by the employers. In cases coming under invalid and old-age insurance, the parties receive rents from the time they are unable to work, without regard to age; old-age rents, from the seventieth year, even if they can work and do not draw invalid rent; and assistance against disease so as to prevent incapacity. In case of his death or marriage, the full sum paid by the party is returned.

Besides this system, there are others by which workmen are aided. There are State and private insurance and pension systems. Whether a system which makes so much for paternalism is one to commend, I can not say. Its effects here have been anything but bad. Poverty, in spite of poor wages, is practically unknown.—*United States consular reports*, Sept., 1898, p. 51.—A revision of the accident insurance law in 1900

extended the compulsory insurance to laborers in breweries and in the shops of blacksmiths, locksmiths and butchers, and to window cleaners. It raised the amount of assistance provided for the injured in many cases, making it in some instances of permanent disability equal to the wages previously earned. It also fixed more sharply the responsibility for carelessness on the part of an employer.

1885.—Organization of German empire.—“The idea of the unity of the empire in its purest and most unadulterated form is most clearly typified by the German diet [Reichstag]. This assembly, resulting from general elections of the whole people, shows all the clefts and schisms which partisanship and the spirit of faction have simultaneously brought about among the different classes of the people and among their representatives. But there . . . never has been a single case where in taking a vote north Germans have come forward in a body against south Germans or vice versa, or where small and medium states have been pitted against the one large state. . . . How indispensable a parliamentary organ which actually represents the unity of the people is to every state in a confederation is best shown by the energy with which the Prussian government again and again demanded a German parliament at the very time when it fairly despaired about coming to an understanding with its own body of representatives. In the middle between the head of the empire and such a diet as we have described is the place occupied by the Federal Council (Bundesrath): not until we have made this clear to ourselves can we fully understand the nature of this latter institution. Each of its members is the plenipotentiary of his sovereign just as were the old Regensburg and Frankfurt envoys. It is a duty for instance, for Bavaria's representative to investigate each measure proposed and to see whether it is advantageous or not for the land of Bavaria. The federal Council is and is meant to be the speaking-tube by which the voice of the separate interests shall reach the ear of the legislator. But all the same, held together as it is by the firm stability of the seventeen votes which it holds itself and by the balancing power of the emperor and of the diet, it is the place where daily habit educates the representatives of the individual states to see that by furthering the welfare of the common fatherland they take the best means of furthering their own local interests. Taken each by himself the plenipotentiaries represent their own individual states; taken as a whole the assembly represents a conglomeration of all the German states. It is the upholder of the sovereignty of the empire. If, then, the federal council already represents the whole empire, still more is this true of the general body of officials, constituted through appointment by the emperor, although with a considerable amount of co-operation on the part of the federal council. The imperial chancellor is

the responsible minister of the emperor for the whole of the empire. At his side is the imperial chancery, a body of officials who, in turn, have to do in each department with the affairs of the whole empire. The imperial court, too, in spite of all its limitations, is none the less a court for the whole empire. Not less clearly is the territorial unity expressed in the unity of legislation. In the circumstances in which we left the old empire there could scarcely be any question any longer of real imperial legislation. Under the confederation beginnings were made, nor were they unsuccessful; but once again it was primarily the struggle against the strivings for unity that chiefly impelled the princes to united action. The ‘Carlsbad Decrees’ placed limits to separate territorial legislation to an extent that even the imperial legislation of to-day would not venture upon in many ways. The empire of the year 1848 at once took up the idea of imperial legislation; a ‘Reichsgesetzblatt’ [imperial legislative gazette] was issued. In this the imperial ministry, after first passing them in the form of a decree, published among other things a set of rules regulating exchange. The plan was broached of drawing up a code of commercial law for all Germany for the benefit of that class of the population to which a uniform regulation of its legal relationships was an actual question of life and death. So firmly rooted was such legislations in the national needs that even the reaction of the fifties did not venture to undo what had been done. Indeed, the idea of a universal code of commercial law was carried on by most of the governments with the best will in the world. A number of conferences were called, and by the end of the decade a plan had been drawn up, thoroughly worked out and adopted. It has remained up to this very day the legal basis for commercial intercourse. It is true it was not the general decrees of these conferences that gave legal authority to this code, but rather its subsequent acceptance by the governments of the individual states. But the practical result nevertheless was that, in one important branch of law, the same code was in use in all German states. Never before, so long as Germany had had a history, had a codification of private law been introduced by means of legislation into the German states in common; for the first time princes and subjects learned by its fruits the blessing of united legislation. But a few years later they were ready enough to give over to the newly established empire an actual power of legislation: only, indeed, for such matters as were adapted for common regulation, but, so far as these were concerned, so fully and freely that no local territorial law can in any way interfere. What the lawgiver of the German empire announces as his will must be accepted from the foot of the Alps to the waves of the German Ocean. Thus after long national striving the view had made a way for itself that, without threatening the existence of the individual states, the soil of the empire nevertheless formed a united territorial whole. But not only the soil, its inhabitants also had to be welded together into one organization. The old empire had lost all touch with its subjects—a very much graver evil than the disintegration of its territory. So formidable an array of intermediate powers had thrust itself in between the emperor and his subjects that at last the citizen and the peasant never by any chance any more heard the voice of their imperial master. . . . In three ways the German emperor now found the way to his subjects. Already as king of Prussia the emperor of the future had been obeyed by 19 millions of the whole

German population as his immediate subjects. By the entrance of a further 8 millions into the same relationship on the resignation of their own territorial lords by far the majority of all Germans became immediate subjects of the emperor. The German empire, secondly, in those branches of the administration which it created anew or at least reorganized, made it a rule to preserve from the very beginning the most immediate contact with its subjects: so in the army, so in the department of foreign affairs. The empire, finally, even where it left the administration to the individual states, exercised the wholesome pressure of a supreme national authoritative organization by setting up certain general rules to be observed. The empire, for instance, will not allow any distinctions to be made among its subjects which would interfere with national unity. If the Swabian comes to Hesse, the Hessian to Bavaria, the Bavarian to Oldenburg, his inborn right of citizenship gives him a claim to all the privileges of one born within those limits. For all Germany there is a common right of citizenship; and this common bond receives its true significance through numerous actual migrations from one state to another, the right of choosing a domicile being guaranteed. . . . It belongs in the nature of a federative state that it should not claim for itself all state-duties but should content itself with exercising only such functions as demand a centralized organization. In consequence we see the individual states unfolding great activity in the field of internal administration, in the furtherance of education, art and science, in the care of the poor: matters with which the empire as a whole has practically nothing to do. All those affairs of the states, on the other hand, which by their nature demand a centralized administration have been taken in hand by the empire, and the unity of public interests to which the activity of the empire gives utterance is shown in the most different ways. There are certain affairs administered by the empire which it has brought as much under a central organization as ever the Prussian state did the affairs of the amalgamated territories within its limits. With regard to others the empire has preserved for itself nothing more than the chief superintendence; with regard to others still it is content to set up principles which are to be generally followed and to exercise a right of supervision. It would be wrong, however, to imagine that the two last-mentioned prerogatives are only of secondary importance. The superintendence which the German emperor exercises over the affairs of the army, the chief part of which, indeed, is under his direction as king of Prussia, is sufficient in its workings to make the land-army, in time of war, as much of a unit as is the consolidated navy. . . . Customs matters form a third category, with regard to which the empire possesses only the beginnings of an administrative apparatus; all the same we have seen in the last years how the right of general supervision was sufficient in this field to bring about a change in the direction of centralization, the importance of which is recognizable from the loud expressions of approval of its supporters and also in equal measure from the loud opposition of its antagonists. . . . In the field of finance the empire has advanced with caution and consideration and at the same time with vigor. In general the separate states have retained their systems of direct and indirect taxation. Only that amount of consolidation without which the unity of the empire as a whole would have been illusory was firmly decreed: 'Germany forms one customs and commercial unit bounded by common customs limits.' The internal

inter-state customs were abolished. The finances that remained continued to belong to the individual states—the direct taxes in their entirety, the indirect to a great extent. The administration of the customs on the borders even remained in the hands of the local customs-officials, only that when collected they were placed to the general account. But the unconditional right of the empire to lay down the principles of customs legislation gave it more and more of an opportunity to create finances of its own and to become more and more independent of the scheduled contributions from the separate states. . . . Judicial matters are the affair of the individual state. With his complaints and with his accusations the citizen whose rights have been infringed turns to the court established by his territorial lord. But already it has been found possible to organize a common mode of procedure for this court throughout the whole empire; the rules of court, the forms for criminal as well as civil suits are everywhere the same. . . . The general German commercial code and the exchange regulations, which almost all the states had proclaimed law on the ground of the conferences under the confederation, were proclaimed again in the name of the empire and were supplemented in certain particulars. As to criminal law a general German criminal code has unified the more important matters, and with regard to those of less importance, has legally fixed the limits to be observed by the individual states. Work is constantly going on at a civil code which is to be drawn up much on the same lines. The German nation is busily engaged in creating a German legal system according to which the Prussian as well as the Bavarian, Saxon or Swabian judge is to render his decisions. Furthermore, a century-long development in our civilized states has brought it about that a supervision, itself in the form of legal decisions, should be exercised over the legality of judicial sentences. Here again it was in commercial matters that the jurisdiction of a supreme court first showed itself to be an unavoidable necessity. Then it was, however, that after a slumber of seventy years the old imperial court rose again from the dead, not entirely without limitations, but absolutely without the power to make exceptions. The imperial court at Leipzig is a court for the whole empire and for one and all of its subjects. If we turn to the internal administration it is chiefly matters concerning traffic and intercommunication which call by their very nature for regulation under one system. Although the management of local and to some extent also of provincial postal affairs is left as far as possible to the individual states themselves, the German post is nevertheless imperial, all the higher officials are appointed by the emperor, the imperial post office passes its rules and regulations and sees that they are carried out with reference to the whole empire. . . . What is true of the post is true also of the telegraph, which has come again to be one with it. . . . The railroads stand under the direction or supervisory administration of the individual states, but unity with regard to time-tables, connections, fares, and forwarding has been in so far preserved that differences which might interrupt traffic are avoided as far as possible. The governments of the confederated states are under obligations 'to allow the German railroads, in the interests of general communication, to be administered as one unbroken network.' A separate Imperial railroad bureau watches over the fulfillment of this agreement. Nothing, however, has given clearer expression to a unified system of intercommunication in Germany than the equalization of the coinage. . . . Still worse than with regard to coined money

. . . did the want of unity show itself in the matter of paper money. Not only did the various states have different principles on which they issued it, and a different system of securities in funding it, but one and the same state would continue to use its old paper money even when issuing new on another principle. . . . Founded thus on a system of firm finances, on the uniform administration of justice in all lands, on an internal administration which, however varied, nevertheless fulfills the necessary demands of unity, the German empire shows a measure of consolidation, the best outward expression to which is given by its army. Among the two million men of Teutonic blood on land and on sea who are ready to protect the fatherland's boundaries there is not one who has not sworn fidelity to his imperial master."—I. Jastrow, *Geschichte des deutschen Einheitstraumes und seiner Erfüllung* (tr. from the German), pp. 285-303.

1887.—Final secret treaty between Germany and Russia, commonly known as the "Re-insurance Treaty."—Until 1919, the text of this treaty was known only to the signatories. "Bismarck's disclosure of the existence of this treaty was made in the *Hamburger Nachrichten* of October 24, 1896, and further articles bearing on the subject appeared in issues of that Journal for October 31st and November 12th. The substance of the revelations was published in *The Times* of October 26th, and supplementary statements from Berlin, Vienna and other Continental capitals appeared in many succeeding issues of that Journal."—W. H. Dawson, *German empire, 1867-1914*, p. 504.—The text of this secret treaty taken from A. F. Pribram's *Secret treaties of Austria-Hungary* is as follows:

#### The "Reinsurance Treaty" of 1887

(a)

*Treaty between Germany and Russia, Berlin, June 18, 1887.*

The Imperial Courts of Germany and of Russia, animated by an equal desire to strengthen the general peace by an understanding destined to assure the defensive position of their respective States, have resolved to confirm the agreement established between them by a special arrangement, in view of the expiration on June 15-27, 1887, of the validity of the secret Treaty and Protocol, signed in 1881 and renewed in 1884 by the three Courts of Germany, Russia, and Austria-Hungary.

To this end the two Courts have named as Plenipotentiaries:

His Majesty the Emperor of Germany, King of Prussia, the Sieur Herbert Count of Bismarck-Schoenhausen, His Secretary of State in the Department of Foreign Affairs;

His Majesty the Emperor of All the Russias, the Sieur Paul Count Schouvaloff, His Ambassador Extraordinary and Plenipotentiary to his Majesty the Emperor of Germany, King of Prussia, who, being furnished with full powers, which have been found in good and due form, have agreed upon the following articles:

#### Article I

In case one of the High Contracting Parties should find itself at war with a third great Power, the other would maintain a benevolent neutrality towards it, and would devote its efforts to the

localization of the conflict. This provision would not apply to a war against Austria or France in case this war should result from an attack directed against one of these two latter Powers by one of the High Contracting Parties.

#### Article II

Germany recognizes the rights historically acquired by Russia in the Balkan Peninsula, and particularly the legitimacy of her preponderant and decisive influence in Bulgaria and in Eastern Rumania. The two Courts engage to admit no modification of the territorial status quo of the said peninsula without a previous agreement between them, and to oppose, as occasion arises, every attempt to disturb this status quo or to modify it without their consent.

#### Article III

The two Courts recognize the European and mutually obligatory character of the principle of the closing of the Straits of the Bosphorus and of the Dardanelles, founded on international law, confirmed by treaties, and summed up in the declaration of the second Plenipotentiary of Russia at the session of July 12 of the Congress of Berlin (Protocol 19).

They will take care in common that Turkey shall make no exception to this rule in favor of the interests of any Government whatsoever, by lending to warlike operations of a belligerent power the portion of its Empire constituted by the Straits. In case of infringement, or to prevent it if such infringement should be in prospect, the two Courts will inform Turkey that they would regard her, in that event, as putting herself in a state of war towards the injured Party, and as depriving herself thenceforth of the benefits of the security assured to her territorial status quo by the Treaty of Berlin.

#### Article IV

The present Treaty shall remain in force for the space of three years, dating from the day of the exchange of ratifications.

#### Article V

The High Contracting Parties mutually promise secrecy as to the contents and the existence of the present Treaty and of the Protocol annexed thereto.

#### Article VI

The present Treaty shall be ratified and ratifications shall be exchanged at Berlin within a period of a fortnight, or sooner if may be.

In witness whereof the respective Plenipotentiaries have signed the present Treaty and have affixed thereto the seal of their arms.

Done at Berlin, the eighteenth day of the month of June, one thousand eight hundred and eighty-seven.

(L.S.)

COUNT BISMARCK.

(L.S.)

COUNT PAUL SCHOUVALOFF.

(b)

*Additional Protocol. Berlin, June 18, 1887.*

Additional and very secret Protocol.

In order to complete the stipulations of Articles II and III of the secret Treaty concluded on this same date, the two Courts have come to an agreement upon the following points:

## 1

Germany, as in the past, will lend her assistance to Russia in order to reestablish a regular and legal government in Bulgaria. She promises in no case to give her consent to the restoration to the Prince [Alexander] of Battenberg.

## 2

In case His Majesty the Emperor of Russia should find himself under the necessity of assuming the task of defending the entrance of the Black Sea in order to safeguard the interests of Russia, Germany engages to accord her benevolent neutrality and her moral and diplomatic support to the measures which His Majesty may deem it necessary to take to guard the key of His Empire.

## 3

The present Protocol forms an integral part of the secret Treaty signed on this day at Berlin, and shall have the same force and validity.

In witness whereof the respective Plenipotentiaries have signed it and have affixed thereto the seal of their arms.

Done at Berlin, the eighteenth day of the month of June, one thousand eight hundred and eighty-seven.

COUNT BISMARCK.  
COUNT PAUL SCHOUVALOFF.

1887.—Triple Alliance with Italy and Austria-Hungary renewed.—Opposition to France. See TRIPLE ALLIANCE: Content of the treaties.

1887-1893.—Principal political parties of the empire.—Peculiarities of German party government.—Socialist party and its election fluctuations.—Government's attitude toward labor.—Expiration of Socialist law.—Party gain.—“How difficult it is to rule in our country [Germany] is made clear by the facts that one cannot rule in Prussia for any length of time without the support of the Conservatives, nor in the Empire without that of the Liberals. . . . If Conservatism is rooted in the administrative talent of the old Prussians, Liberalism is rooted in the intellectual peculiarities of the German nation. . . . It was the Liberals who first expressed the idea of German Unity, and spread it through the people. They carried out the indispensable preliminary work. . . . Liberalism, in spite of its change of attitude in national questions, has to this day not recovered from the catastrophic defeat which Prince Bismarck inflicted nearly half a century ago [1881] on the party of progress which still clung to the ideas and principles of 1848. . . . The connection between industrial life and political life often causes the representatives of like interests to hold like political opinions. . . . It may also be admitted that the two concrete, historical views of State and Society—the Conservative and the Liberals—and the two abstract, dogmatic views—the Ultramontane and the Social-Democratic—embrace a large number of the facts of political life. The respective party programmes can therefore go into detail accordingly. But here, too, there is a limit. A large number of events in public life cannot be included even in these comparatively comprehensive programmes. . . . On the whole, there is a preponderance of such legislative problems as deal with questions of pure utility, which must be solved by political common sense, and cannot be weighed in the scales of general party views. But such disregard of party programmes is rarely conceded. . . . If party differences really went so deep,

and permeated so completely every detail of political life as is represented in party quarrels, then, considering the number of our parties, none of which has hitherto obtained an absolute majority, it would be impossible to accomplish any legislative work. But, as a matter of fact, much valuable work of different kinds has been done in almost every department of home politics during the last decades. One after the other, the parties have placed themselves at each other's disposal, and have often, with astounding suddenness, overcome the differences they emphasized so strongly before. . . . Bismarck is usually cited as having taken his majorities where he could get them. But in this, as in most references to the time of Bismarck, the point is missing—Bismarck himself at the head of the Government. He held the reins of Government with such an iron grip that he never ran any risk of letting the least scrap of power slip into the hands of Parliament through the influence he conceded to a majority, when he happened to find one at his disposal. . . . Considering the peculiarities of our Government, the parliamentary system would not be a suitable form of Constitution for us. Where this system proves of value, and that is by no means everywhere . . . there . . . parties formed the Constitution in the course of their own foundation and development as in England, as also in a certain sense in Republican France. In Germany the monarchical Governments are the supporters and creators of the Constitution. . . . In States not governed by Parliament the parties feel that their primary vocation is to criticise. They feel no obligation worth mentioning, to moderate their demands, or any great responsibility for the conduct of public affairs. . . . The Center [Ultramontane party] is the strong bastion built by the Roman Catholic section of the people to protect itself from interference on the part of the Protestant majority. The previous history of the Center may be traced back to the times when in the old Empire [Holy Roman] the *Corpus Evangelicorum* was opposed by the *Corpus Catholicorum*. But where as in the old Empire Catholicism and Protestantism were more or less evenly balanced, in the new Empire the Catholics are in the minority; the old Catholic empire has been succeeded by the new Protestant one. It must, however, be admitted that the Catholic minority has a great advantage over the Protestant majority in its unity and solidarity.”—B. von Bülow, *Imperial Germany*, pp. 170, 148, 154-157, 174-175, 140-151, 183-184.—The decade preceding 1887 was marked by growing foreign complications which Bismarck used with consummate skill not only to entrench himself into a dominant position abroad but also to control the various parties in parliament. Boulangist agitation in France (see FRANCE: 1875-1889) was causing considerable anxiety in Germany, and in the fall of 1886 the Reichstag was asked to increase the peace strength of the army. Bismarck objected to the compromise offered by the Reichstag to this request, and in the exciting elections that followed he managed to effect a coalition (cartel) between the Conservatives and National Liberals which carried the day. “In 1887 the Socialist party had suffered a temporary reverse at the polls, for a war scare had seized hold upon the nation, with the result that the Conservative and National Liberal parties gained heavily at the expense of the parties of the Left. The Socialist deputies were reduced from twenty-four to eleven, in spite of a large increase in votes. Before the next elections took place, in February, 1890, the decisions to abandon the Socialist Law [in 1878 an attack on the life of the emperor gave Bismarck an excuse to frame

a law against the Socialists, forbidding meetings and the dissemination of their ideas through the press] and to convene the Labour Conference had been taken, and the complete change in the Government's attitude towards labour thus indicated was represented by the Socialists as a vindication of their position and an endorsement of their claims. In these elections the party won its first great victory. Not only did it return to the Diet thirty-five strong, but the votes recorded for its candidates increased from three-quarters of a million to nearly a million and a half. The Socialist Law expired on September 30, 1890, amid the jubilation of the working classes, who celebrated the restoration of unfettered thought and speech by demonstrations in every part of the country. With the disappearance of coercion a flood of pent-up political energy was let loose and a powerful impetus given to agitation. The first congress of the party after its recovered freedom was held at Halle in October under the influence of this new elation, and there a triumphant story of progress could be told. At the Erfurt Congress of the following year the programme of the party was revised, its organization further strengthened, and its machinery of propagandism perfected. The result was that at the appeal to the country in June, 1893, the party again won a signal triumph. Having gained in three years over a third of a million votes, it was now a party of one and three-quarter millions, and its forty-four seats made it the fourth strongest group in the Diet."—W. H. Dawson, *German empire, 1867-1914*, v. 2, pp. 268-269.

1888.—Death of Emperor William I.—Accession and death of Frederick III.—Accession of William II.—“In 1888 the throne of Imperial Germany was held by three occupants, of whom two passed away within the short space of a hundred days. The first Emperor had reached the ripe age of ninety-one years, thus exceeding by twenty-five and twenty-one years the age at which his immediate predecessors on the throne of Prussia, his brother and father, had died. . . . His tranquil end on March 9th was a fitting close to a life which, in its private aspects, had been one of singular harmony and placidity. . . . With him the last genuine representative of absolutism in Germany and thus in Western Europe may be said to have passed away. For if his first public interest was the army, his strongest instincts were centred on the preservation of every right retained by the Prussian Crown after the grant of the constitution of 1850. Sir Robert Morier regarded it as a weakness of the first Emperor that in politics he had no firm grasp of first principles. In regard to constitutional questions, the truth rather is that he grasped the wrong principles and grasped them too firmly. . . . For him the constitutional arrangements accepted by the nation under duress in the middle of the century were final, and he resolutely resisted all attempts at the further liberalizing of either the Prussian or the imperial system of government. Hence it was that he left the constitutional life both of the monarchy and the Empire just where he found it, for it had neither gone forward nor backward. . . . Because the first Emperor was overshadowed as a statesman by his great Chancellor, the idea is commonly held that he was a man of small intellectual power, of little sagacity, and even only moderately intelligent. No estimate of his character could be wider of the truth. His comprehension of domestic politics may have been limited, because warped by political ideas and prejudices which made it impossible for

him to enter into the mind and spirit of the modern world. His judgment of foreign affairs and relations, on the other hand, showed a clear comprehension of fundamental issues, an unerring instinct for the line of honour, and a sure perception of the true conditions of confidence between Sovereigns, Governments, and States. . . . Never did he give his signature or assent to a document of State without first weighing it anxiously from all sides, and his correspondence with his chief Minister tells again and again of ‘sleepless nights’ passed because of the too-ready endorsement of draft despatches which on further reflection he deemed to be indiscreetly worded and wished to recall. Such a man may have been lacking in resolution, but he certainly had a mind of his own and more than once on large issues—as in the case of the wars of 1864 and 1866—he resisted to the twelfth hour the importunate pressure of his overbearing Minister. The Hohenzollern throne has been filled by greater and stronger men than William I, but by none more conscientious, more honourable, or more devoted to the welfare of his State and people, as he understood it. . . . A double sorrow rested on the land in those days. Germany had lost the old Sovereign, and knew that she must soon lose the new one. For almost a year the Crown Prince [Emperor Frederick III] . . . had been suffering from a throat malady, the malignant nature of which had been suspected but not definitely determined. . . . He was still wintering in the Riviera with his wife when the deathbed summons came to him from Berlin. . . . Seldom have a new ruler and a new reign given rise to more speculation, to wilder hopes on the one hand or wilder apprehensions on the other. He was now fifty-seven years old, yet owing to Bismarck's jealousy of any influence with the Emperor save his own, he had been excluded from participation in public affairs except when acting as regent during his father's incapacity. . . . Not only the German people but the old Emperor himself had been anxious as to the direction which events might take under the new reign. Bismarck, however, was never in doubt that though there might be changes the force of tradition and of his surroundings would prevent the Crown Prince from venturing upon any radical departure. . . . To the surprise of most people and the chagrin of many matters went on just as before. The Emperor made a few changes in the Ministry and the administrative service, but the wholesale displacement of his father's counsellors which had been predicted did not take place. Above all, Bismarck continued at his post as if nothing bad happened. . . . The Emperor's illness threw a shadow upon the new reign and gloom upon the nation, . . . and before three months had passed (June 15th) the hopeless struggle with death came to an end. During this short period affairs were more than ever in Bismarck's hands. He was at once Imperial Chancellor, President of the Federal Council, Foreign Minister, and Prussian Minister President, while his son Count Herbert worked in the Foreign Office under him as officer next in command. Happily few events of moment occurred either at home or abroad to trouble the stricken Sovereign. When the Imperial Diet and Federal Council adopted a bill prolonging the legislative period from three to five years he wished at first to withhold assent on the ground that it was a retrograde step. Bismarck had to remind him that in Imperial legislation the Emperor had neither veto nor voice, and the law was promptly promulgated. The same change was introduced simultaneously in relation to the Prussian Diet. The most notable domestic event of the short reign was the rigorous

suppression of the system of election—manœuvring. . . . The Crown Prince Frederick had long watched with disapproval this trifling with the constitutional rights of Germans to exercise free choice in the election of their deputies, and though helpless to alter it he had condemned it unsparingly in letters to Bismarck. In assenting to quinquennial parliaments for Prussia he told the Minister of the Interior, Herr von Puttkamer, that the odious system of pressure of which he was the impersonation must cease, and that in general public opinion must henceforth be allowed freer expression. Puttkamer, however, was acting under the instructions of another master, and refused to take the warning. . . . In foreign relations no change occurred. Bismarck was as insistent as ever upon the necessity for a good understanding with Russia. . . . If there was no mystery about Emperor Frederick's political opinions and inclinations, his son and successor William II was as a book sealed with seven seals. Born on January 27, 1859, he had had the all-round education of a Prussian Prince. From his seventh to his fourteenth year he was set on the pathway to knowledge by one of the discreetest of tutors, Dr. Hinzpeter. Then he passed several years at the gymnasium of Cassel, and for several terms he studied at Bonn. In February, 1881, he married Princess Augusta Victoria of Schleswig-Holstein-Sonderburg-Augustenburg, a union which was one of policy as well as of sympathy, for it closed forever the personal feud between the Hohenzollerns and the claimants to the Elbe Duchies. . . . All that was known about his political opinions down to June, 1888, was that he oftener disagreed than agreed with his parents, that a sort of atavism had showed itself in his character, in which were already detected traces of the Great Elector and Frederick the Great, and that he was a devoted admirer of Bismarck. Ingenious attempts have been made to show that there never was any sympathy between Prince William and the Chancellor. . . . A fact not to be doubted is that when he came to the throne he was as devoted and apt a pupil of the Chancellor as any statesman jealous of his reputation and power could have desired. Toasting Bismarck on April 6th, just a month after the death of his grandfather, Prince William said, in an outburst of generous warmth: 'The Empire is like an army corps that has lost its commander-in-chief in the field, while the officer who stands next in rank lies severely wounded. The standard-bearer, however, is our illustrious Prince, our great Chancellor. Let him lead us; we will follow him!' For the rest, the only public interests which he seemed at that time to share were a socio-religious movement which had been started in Berlin several years before by Court Chaplain Stöcker, and above all the army. It was regarded as significant that his first proclamations on the day of his accession were not to the nation, but to the army and the navy: 'so we belong together, born for each other, and so we will ceaselessly hold together, come peace or storm.' The proclamation to 'my people' was issued only three days later. Nevertheless, even in the army he had revealed no such spirit of *camaraderie* as had made his father equally popular amongst officers and men. The son's reign, like the father's began well, for the tragedy of the situation for a time imposed upon parties an unaccustomed restraint, and, on all hands a desire was shown to speed the young ruler auspiciously on his way. In his proclamation to the nation he had promised 'to be a just and clement Prince, to cultivate piety and the fear of God, to advance the welfare of the country, and to be to

the army and navy a helper and a faithful guardian of justice.' In opening the Imperial Diet on June 25th he endorsed the Social Reform Message of his grandfather, and promised to take into his care 'the weak and crushed in the struggle for existence.' 'In foreign policy,' he said, 'I am determined to live in peace with every man so far as in me lies. My love to the army and my position towards it will never lead me into the temptation to deprive the country of the blessings of peace unless war becomes a necessity owing to the Empire or its allies being attacked.' This was all in the spirit of Bismarck, and a reassuring intimation to the nation that the old statesman was to remain. Bismarck, convinced that he was needed, moved by the pathos of the situation, had thrown himself enthusiastically into the service of a third Emperor, and William II for his part seems to have fulfilled for a time the Chancellor's highest expectations. Discussing him with members of the Prussian House of Lords in June, he is reported to have 'spoken with great enthusiasm and with tears in his eyes' of the young Emperor's earnestness and devotion to his new duties."—W. H. Dawson, *German empire, 1867-1914*, v. 2, pp. 215-225.

ALSO IN: R. Rodd, *Frederick, crown prince and emperor*.—G. Freitag, *Crown prince*.

1888.—End of the Free Cities.—"The last two cities to uphold the name and traditions of the Hanseatic League, Hamburg and Bremen, have been incorporated into the German Zoll Verein, thus finally surrendering their old historical privileges as free ports. Lübeck took this step some twenty-two years ago [1866], Hamburg and Bremen not till October, 1888—so long had they resisted Prince Bismarck's more or less gentle suasions to enter his Protecton League. . . . They, and Hamburg in particular, held out nobly, jealous, and rightly jealous, of the curtailment of those privileges which distinguished them from the other cities of the German Empire. It was after the foundation of this empire that the claim of the two cities to remain free ports was conceded and ratified in the Imperial Constitution of April, 1871, though the privilege, in the case of Hamburg, was restricted to the city and port, and withdrawn from the rest of the State, which extends to the mouth of the Elbe and embraces about 160 square miles, while the free-port territory was reduced to 28 square miles. This was the first serious interference with the city's liberty, and others followed, perhaps rather of a petty, annoying, than of a seriously aggressive, character, but enough to show the direction in which the wind was blowing. It was in 1880 that the proposal to include Hamburg in the Customs Union was first politically discussed. . . . In May, 1881, . . . was drafted a proposal to the effect that the whole of the city and port of Hamburg should be included in the Zoll Verein." After long and earnest discussion the proposition was adopted by the Senate and the House of Burgesses. "The details for carrying into effect this conclusion have occupied seven years, and the event was finally celebrated with great pomp, the Emperor William II coming in person to enhance the solemnity of the sacrifice brought by the burghers of the erst free city for the common weal of the German Fatherland. . . . The last and only privilege the three once powerful Hanseatic cities retain is that of being entitled, like the greatest States in the empire, to send their own representatives to the Bundesrath and to the Reichstag."—H. Zimmern, *Hansa towns, period 3, ch. 8, note*.

1889-1890.—Rupture between Emperor William II and Chancellor Bismarck.—Comments on it by German statesmen.—“The accession of the Emperor William II. on June 16, 1888—the year of the Three Emperors—opened up a wholly new situation. The new sovereign was in his twenty-ninth year, and teeming with energy, ideas, and masterfulness. . . . Germany was instructed to believe that the new sovereign would be in all things as obedient to Bismarck’s advice and ripe experience as had been William I. Bismarck himself believed it. A year later, in the autumn of 1889, when the Tsar was in Berlin and Bismarck emphasised his earnest desire that German policy should maintain a close co-operation with Russia, the Tsar pointedly asked, ‘Are you sure of remaining in office?’ ‘Certainly, your Majesty,’ Bismarck replied, ‘I am absolutely sure of remaining in office all my life.’ That was on October 11. Five months later he had ceased to be Chancellor, and if any date must be selected for the commencement of the serious collision between Chancellor and Emperor it would be October 13, two days after Bismarck’s confident utterance, when a serious difference on foreign policy revealed itself. . . . Bismarck was, indeed, as sane as was Napoleon I. in his later years, but with both men uncontrolled power and overweening confidence in their genius brought out all the latent despotism that from the very first was embedded in their political principles and their interpretation of life; and with both resentment concentrated in a personal hatred of the individual who symbolised the opposition. . . . The plain truth was that after June 1888 the conditions which had made the Bismarckian system workable and possible were suddenly reversed. Bismarck and Germany had grown accustomed to the rule of an emperor never fitted by his gifts to be a great master either of administration or of policy, who in 1871 was in his seventy-fourth year, and with every year was obliged to surrender more and more of power and control to the adviser whose genius, amazing capacity for work, and complete accord with his sovereign in the general principles of government inspired a deep confidence. Bismarck had thus syndicated in himself both the formidable powers of the Imperial Chancellorship and the still more formidable powers of the Emperor and Prussian King. The new Emperor was young, versatile, and fired by a devouring activity. Had he been a constitutional sovereign he would not have been prepared to step on to the shelf during the best years of his life. But he was not a constitutional sovereign. William II. had been born and bred in the militarist atmosphere of the Hohenzollern Court, and he had been trained in the theory, sedulously enforced since 1847 by no one more than by Bismarck himself, that the Prussian monarch personally governed, and that the Prussian Crown was not the idle ornament of a constitutional building, but the living and operative force in the mechanism of the State. . . . There were, in fact, practically no limits to what the Emperor, with the help of the Prussian Crown, could do, if he chose to exercise to its full all the latent power in the prerogative, prestige, and influence of the Imperial and Prussian Monarchy. William II. took some months to discover what an unexplored and inexhaustible heritage had fallen to him—a heritage enriched by Bismarck’s efforts for a quarter of a century. Therein lay the irony of the

situation. Had Bismarck been the Parliament-made minister of a constitutional sovereign, whose ministerial position rested on a national mandate expressed through a representative assembly to which he was responsible, it would have been William II. not Bismarck who must have given way. Bismarck had indeed the confidence of the nation. A plebiscite in 1890 would have retained him in office till death came. But the nation could not save him in 1890, nor could it bring him back. Once he had lost the support of the Crown he was powerless. He could not appeal to the Reichstag nor to the Federal Council, still less to the nation by a general election. He must either resign or be dismissed. He could not even advise his Imperial Majesty whom the Crown should invite to be its chief adviser in his place. And it is in the record that the man who all his life had fought against the conception of an electro-plated royalism, and against a kingship emasculated by English Liberalism, should later denounce this subservience to a personal monarchy as ‘Byzantinism and Cæsar worship.’ . . . A new epoch had arrived in Germany which knew and revered Bismarck, but Bismarck neither knew nor revered it. William II. was a child of the new epoch. Bismarck had taught Germany to be strong and how to be strong. He had placed the Empire on the pinnacle of Continental power, and new worlds had swum into its ken. The young Imperial Germany of 1888 desired to prove that it was as strong, as great, as ambitious, and as saturated with the realism of life as the Germany that had overthrown Vienna and the Babylon of France. It was grateful for Bismarck’s achievements; Bismarck summed up for it all that was mighty in Germanism; the ends that Bismarck defined must pass with Bismarck himself; but Bismarckian methods and the Bismarckian gospel were imperishable and could not be superseded. The profoundest homage that could be paid to the master was to apply the principles and methods of Bismarckian statecraft to the problems of the future. The Bismarckian Empire that was the State, incarnating Continental Power, must be transformed into the World-Empire that incarnated World-Power. Nothing must happen in the world within or without Europe in which Germany had not the deciding voice. Bismarckianism not Bismarck was the model. . . . Thus by the autumn of 1889 the whole Bismarckian system was being challenged—and by the Emperor.”—C. G. Robertson, *Bismarck*, pp. 459, 461-464.—The immediate cause of his resignation was an order from the new sovereign which repealed an arrangement established by the latter’s grandfather, in 1852, whereby a responsible ministry was created in Prussia, through the giving of responsible authority to a prime minister at its head. Bismarck had asked William that, in virtue of this cabinet arrangement, his colleagues should be compelled to submit beforehand to him any proposals of political importance before bringing them to the attention of the emperor. Directly after this, Bismarck had a conversation with Windthorst the nature of which he refused to disclose to William on the grounds that he could not allow his intercourse with his deputies to be controlled. “Nearly every writer has a different theory of the motive of young William in forcing him [Bismarck] to retire. The Grand Duke of Baden says: ‘The breach occurred over the question of power. All other differences of opinion, on social legislation and other matters were secondary. The chief cause was the Cabinet order of 1852. Even the conversation with Windthorst would not have led to a breach. One might add the Emperor’s distrust of the prince’s foreign policy. The Emperor sus-

pected that Bismarck conducted his policy according to plans concealed from himself (the Emperor), and had an idea of abandoning Austria and the Triple Alliance and coming to an understanding with Russia, whereas the Emperor will not have this, and adheres to the Alliance.' General von Heuduck says: 'The Emperor informed the Generals in command why Bismarck had gone. The question of the Cabinet order and the intemperate way in which he opposed the Emperor made it impossible for him to work any longer with the prince. Russia wanted a military occupation of Bulgaria and the neutrality of Germany. Bismarck wished to abandon Austria. The Emperor was determined to adhere to Austria, even at the risk of war with Russia and France.' Caprivi said: 'Bismarck had concluded a treaty with Russia by which we guaranteed Russia a free hand in Bulgaria and Constantinople, and Russia bound itself to neutrality in case of war with France. I have not renewed this treaty [see above 1887: Secret treaty between Germany and Russia], because if it had become known it would have ruined the Triple Alliance.' Herr von Holstein says: 'Bismarck's plan of abandoning Austria would have brought on us such contempt that we would have been isolated and dependent on Russia.' The Emperor says: 'Bismarck wanted to submit again to the Reichstag the Socialist law, with a threat of dissolving it if the law were not passed, and then, if there were riots, to proceed vigorously. I opposed him. If my grandfather had been compelled, after a long and illustrious reign, to proceed against insurgents, no one would have taken it amiss. But I should have been accused of opening my reign with shooting my subjects. The bitterness was increased by the Cabinet order of 1852. The visit of Windthorst to the prince also gave rise to unpleasant talk, but was not decisive. It was a quarrelsome time, and the real question was whether the Bismarck dynasty or the Hohenzollern dynasty should rule. In foreign politics Bismarck went his own way, and concealed from me a good deal of what he did. I recently asked Herrfurth, who was present at every sitting of the Cabinet, whether during the whole time I did anything that might hurt Bismarck and give him cause to go against me. He replied that, on the contrary, all the ministers were surprised at the patience with which I tolerated the rudeness of Bismarck.'—M. Harden, *Monarchs and men*, pp. 128-129.—" 'The Emperor,' . . . [Bismarck] told more than one confidant, 'now wishes to reign alone—to be his own Chancellor and Minister-President.' It was impossible that Bismarck could accept after twenty-seven years of power a position that was a personal humiliation, a reversal of his policy, and a reduction to impotence. 'I cannot serve,' he said, 'on my knees' (*Ich kann nicht mit Proskynesis dienen*). . . . Repeatedly pressed, Bismarck at last submitted his resignation. On March 20 the official Gazette announced that the Emperor had been graciously pleased to accept with profound regret the Chancellor's request to be relieved of his offices, and in return for his 'imperishable services' conferred upon him the title of Duke of Lauenburg [which Bismarck refused] and Colonel-General, with the rank of Field-Marshal in the army. *Punch*, in one of the most famous of its famous cartoons which, curiously enough, delighted both Bismarck and William II., summed up the event with unerring felicity. 'The Pilot' who had steered the ship through so many storms and so many shoals, 'was dropped.' The Emperor henceforward intended to be Captain and Pilot

in one."—C. G. Robertson, *Bismarck*, pp. 473-474.

1889-1892.—William II and the social movement.—The Catholic international labor conference.—"Rerum Novarum" of Pope Leo XIII. —Enactment of the Old Age and Invalidity law.—Amendments for the industrial code.—Creation of a labor department.—"Seldom has a Prussian ruler thrown himself so completely upon the confidence of his people as William II appeared to do while still on the threshold of his reign. In his endeavours to improve social conditions he appealed for 'the intelligent and joyous co-operation of all classes of the population, and especially of the working classes, whose interests are concerned, and of the employers who are prepared to make the necessary sacrifices.' He tried to lift the social movement out of the atmosphere of party controversy: 'all are heartily welcome,' he said, 'whoever they may be.' In order to encourage his people in well-doing he established a new Order, called after his grandfather, in recognition of conspicuous social service. Under these manifold impulses a new spirit seemed to come over the nation in relation to the many-sided problem of the condition of the people, and the social reform movement now took root in a way it had never done during the first reign. German writers on this subject often speak of contemporary Germany as distinctively the Social Empire. The foundation of the social legislation by which this title must be justified, if justified at all, had been laid before William II came to the throne, but it is certainly the merit of that ruler that for a time he gave greater definiteness and a clearer purpose to the vague humanitarian sentiment which had already become active and carried social policy forward on intelligent and sympathetic lines. From the first he found a valuable ally in the Clerical party, which, joining hands with the patriarchal Conservatives, now began to take a decided stand on social questions, so reviving a dormant tradition established many years before by earnest reformers of their faith like Bishop Ketteler, Canon Moufang and Father Kolping. In convening the Labour Conference, the Emperor had invited the Pope to allow Prince Bishop Kopp, of Breslau, to take part, and the Roman Catholic Church had not been slow to reciprocate the compliment thus paid to it. Henceforth both the religious and the political leaders of Catholicism closely identified themselves with social reform, and all later measures for the amelioration of the people owed at least as much to Catholic as to Protestant support. In September, 1890, the Roman Catholics held an international labour conference of their own at Louvain, and in May of the following year Leo XIII published his memorable Encyclical on the labour question, *Rerum Novarum*, which for Roman Catholics everywhere became a rule of public conduct and policy. The missing link in the system of social insurance had been added in 1889 by the enactment of the Old Age and Invalidity Insurance Law providing for the pensioning of the veterans and wreckages of the industrial army. Now the Labour Conference began to bear fruit. Laws for the amendment of the Industrial Code in the spirit of the resolutions adopted by the Conference and for the creation of Industrial Courts for the settlement of monetary disputes arising between workpeople and their employers were passed in 1890. Before this time the

only imperial legislation relating to the hours of labour were provisions forbidding the employment of juveniles (i.e., youths under sixteen years) on Sundays and legal holidays and forbidding the employment on these days of workers generally against their will. In the absence of an express prohibition something had been done to encourage Sunday observance by police and administrative orders, but such measures were sporadic and partial, and in practice work on this day was still common in most parts of Germany. . . . In 1892 a labour department was formed in the Imperial Statistical Office as a means of bringing the whole province of labour under more complete survey, and this example was soon followed in Great Britain and other countries. A weak attempt was made simultaneously to make severer the penalties for any abuse of the right of coalition, but the Diet, in its new enthusiasm for social reform, was unwilling to dilute conciliation by coercion in the old ungracious way, and it rejected this reactionary proposal, leaving the amendment of the Industrial Code a straightforward and sympathetic attempt to give to labour greater protection. All these measures marked an important advance in social legislation, yet to a large extent Germany was only bringing up to date arrears of work which had long been allowed to accumulate, and assimilating her laws to those of countries with an older industrial and a more advanced political system."—W. H. Dawson, *German empire, 1867-1914*, pp. 264-266.

1890-1891.—Caprivi made chancellor.—Renewal of Reinsurance Treaty rejected.—Cession of Witu and acquisition of Heligoland.—Caprivi's attitude on colonial expansion.—Milder treatment of Polish provinces and the result.—Prince Hohenzollern and Alsace-Lorraine.—Self-confidence of William II.—The appointment of Count Georg Leo von Caprivi, distinguished soldier in the Franco-Prussian War, former chief of admiralty, as the chancellor of the empire and minister-president of Prussia was as much in the nature of a surprise as "dismissing the pilot," Bismarck. He was not connected with any political party, and soon had many enemies, notably Bismarck himself. "The treaty which Bismarck wanted to conclude with Russia in 1890 has never been published; any man who told its provisions would incur a suspicion of endangering the interests of the Empire. . . . [This treaty was published after the fall of the empire, 1919 (see above: 1887).] Until March 20, 1890, only four persons at the Foreign Office were acquainted with the outline of it; the Prince and Herbert, the Under-Secretary of State, Count Berchem, and the envoy von Schweinitz. Even Herr von Holstein was not admitted to the deliberations, as he was regarded as prejudiced in Russian affairs; but, as the chief worker and best official in the political department, he knew what was agreed upon and must have read the secret documents. The statements of Chlodwig, which are based on the remarks of William, Frederick, Caprivi, and Holstein, betray a complete misunderstanding of Bismarck's policy, its deepest motives and ultimate aims. . . . On the first day of his Chancellorship, Caprivi called for the draft of the secret treaty, which the Russians were prepared to sign, took it to the palace, and returned with the verdict: It is rejected. Schuvalov called him *un trop honnête homme*; in plain German he

could not be characterised so politely. . . . The treaty which Caprivi found so complicated was really simple enough. It said plainly to the Russians: We shall have to help the Austrians if you attack them, but not if they attack you, and for that we expect you to be neutral in case we are attacked by France. It might say to the Austrians: You have known for a long time that we are not willing to sacrifice German blood for your ambitions in the Balkans; attack the Russians, therefore, if you are strong enough single-handed, or if you expect help from any other quarter; if they attack you we shall be on the spot; for you also the *casus fœderis* is also set up if we are attacked, not if we attack; our accounts agree therefore. Both treaties were intended and calculated to protect each of the three Empires from the nearest, and therefore most dangerous coalition: Russia from the German-Austrian, Austria from the Russo-German, Germany from the Russo-Austrian and (especially) the Franco-Russian. And the author of these assurances might, in view of his experience and his knowledge of monarchs and statesmen, say to himself: Russia will not attack Austria, nor Austria Russia; our fears are phantoms, and the contingencies which seem worst for us exist only on paper (as has happened); and therefore we secure a notable profit with very little outlay. Many a nation would have raised an altar or a throne to the man who devised this and allayed the distrust of Alexander. In Germany he was dismissed and reviled. Why? Because some one whispered in the ears of the German Emperor: 'The real aim of this treaty is to secure power for life to the Chancellor, even in opposition to your exalted will. For no one but he can work with this awkward tool; he alone can, with that inalienable confidence of which he boasts so much, play the last card at St. Peterburg or Vienna, as need may be. If he is troublesome to you, or too old, you may, in virtue of your royal prerogative, dismiss him, but he will then find some means to betray the secret of the treaty and, between the anger of Austria and the blame of Russia, we shall find ourselves in such a position that the nation will unanimously and irresistibly call upon him to save us. That is his clever plan. Wilt thou help him to realise it, or wilt thou be Emperor, King, and Master?' . . . In 1890 he thought that such conduct was possible to the man whom, in 1888, he had been ready to follow as standard-bearer. To that pitch they had brought him. Not a single man stood up and said: 'Consider the life of this man and the work he has done for thy house.' Not a single one. Chlodwig, who had three times—the last time being December 15, 1880—written at Bismarck's dictation: 'If the frame of the Austrian monarchy is imperilled, we are bound to take action,' now wears his smart frock-coat, closes his lips, and industriously notes: 'He wanted to abandon Austria.' The aged General Pope alone gave vent to his fine soldierly feeling and exclaimed: 'The people who are about Your Majesty are sheer traitors.'"—M. Harden, *Monarchs and men*, pp. 142, 149-152.—"The position of the Minister who followed Prince Bismarck would have been difficult in the most favourable circumstances; the accidents of the first Chancellor's retirement made it also in a special degree unenviable. . . . General von Caprivi had not wished for a distinction which, though a proud, was a painful one, and when in accepting it he asserted that he did so from a feeling of 'imperious patriotic duty,' his words were not those of empty convention. He succeeded at once in disarming his critics, however, when at his first official appearance in the Prussian

Diet he confessed with creditable candour that he had hitherto been 'strange to political affairs,' yet promised that he would do his best. He had a high reputation as a capable administrator both in the army and the navy, for though a soldier he had once been head of the Admiralty, and all who knew him praised him as a man of perfect honour. Such qualities, added to soldierly simplicity and straightforwardness, more than counterbalanced for absence of brilliancy, and promised him success in the task of tiding over a critical transition. Nevertheless, one of his first measures brought down upon him much shortsighted and undeserved censure. This was the conclusion in July, 1890, of the African convention whereby Germany ceded to Great Britain her rights in Witu and agreed to recognize a British protectorate over the dominions of the Sultan of Zanzibar, while she received in return the island of Heligoland and certain advantageous frontier rectifications in East Africa (giving access to the lakes), West Africa, and South-west Africa [see also AFRICA: Modern European occu-

VON CAPRIVI

pation: 1884-1899]. The acquisition of the Elbe island realized a long-cherished German dream, but all political parties, and the colonial party in particular, contended that the price paid for it was excessive, since the renunciation of all claims in respect to Zanzibar and Witu made a great Central African empire impossible. For Great Britain the agreement had the advantage that there was henceforth no danger of British East Africa being hemmed in by German territory. On the other hand the cession of Heligoland was severely criticized, though the fact that it was made by a Conservative Ministry kept the military imperialists under restraint. To Germans in general the possession of Heligoland appealed at that time only on the ground of sentiment. The naval authorities, looking further, already recognized its importance for the completion of their plans and were prepared to buy it on any terms. Nothing was said in the agreement about the harbour of refuge for the benefit of British shipping which Bismarck had dangled before Lord Granville's eyes when at Caprivi's suggestion he first proposed the cession of

Heligoland six years before, and it was understood that the only shipping which the island, when duly fortified, would protect would be the imperial navy. By this transaction Caprivi at once forfeited the confidence of the colonial party. He had never been a colonial enthusiast, however, and he plainly said so, maintaining that Germany had as many colonies as were good for her and that it was now her interest to consolidate rather than expand her oversea dominion. 'The worst thing that could happen to us,' he said a little later (November 27, 1891), 'would be for some one to give us the whole of Africa, for we have quite enough as it is.' He saw in the colonies a potential source of friction with other countries, and he refused to multiply the existing risks. The early years of Caprivi's Chancellorship were for Germany a time of relaxation and liberation in many directions. Great as was the work which Bismarck had done for the Empire, and incalculable as was the nation's indebtedness to him, his disappearance from the chief seat of political influence unquestionably removed from official life an oppressive incubus, of which the full weight was only understood when the pressure was relaxed. The relief was felt particularly in the circles of the higher bureaucracy, but most of all in the Ministries. For the first time the colleagues of the Chancellor breathed freely, knowing that they had no longer to do with an arbitrary chief as of old, and the new consciousness of independence was naturally strongest just where the iron hand of restraint and discipline had rested most heavily. . . . Each department of State began to develop a self-consciousness of its own, and in the hierarchy of the Empire Secretaries of State, though constitutionally subordinate to the Chancellor, deported themselves like members of the Prussian Ministry, in which all were equal. Hitherto one man only had wielded authority in the State; now minor men took courage, and looking no more with awe upon the tree of power began to nibble freely at its long-forbidden fruit. Most free of all was the Sovereign himself, and more than any other he was in a position to appreciate the change. After sharing its authority with a despotic Minister for nearly thirty years the Prussian Crown was again independent; for the first time a German Emperor could claim to be his own master. Now the personality of the ruler began to make itself felt, to a degree unknown before, both in legislation and in the direction of public policy. In a speech made in April, 1890, immediately after Bismarck's resignation, the Emperor, in appealing for the nation's loyal co-operation, spoke suggestively of the 'new course' which Germany was to follow under his guidance. . . . Milder measures were tried at this time in the treatment of the alien races in the East and West. So long as Bismarck remained in office the policy of hardness continued in the Polish provinces. The appointment of Caprivi was the signal for one of those fitful attempts to reconcile the Poles which for over a century have alternated with prolonged periods of rigorous government. The policy of land purchase and settlement was for a time suspended, but as there was no idea of its definite abandonment that half-measure proved unfortunate from the financial standpoint, for prices were exceptionally low in the early 'nineties, and the opportunities of buying on favourable terms which existed then never returned. For a time the Emperor-King went out of his way to win the goodwill of his Polish subjects. Poles were admitted to positions of favour and eminence. . . . This apparent favouring of the Poles created a violent outburst of indignation amongst the Germans of the

Eastern Marks, and as Friedrichsruh then served as a Cave of Adullam to which the malcontents of all parties resorted a deputation promptly made pilgrimage to the ex-Chancellor and laid their grievances before him. As a result of this conference an organization, known as the Eastern Marches Association, was at once formed for the defence of Germanism in the Polish provinces. It was not long before this association changed its defensive for an aggressive character, and became a potent agency for fomenting ill-feeling between the two nationalities. . . . The Government's experience in Alsace-Lorraine was even more discouraging. There Prince Hohenlohe continued to be the Stadholder, and he had become wedded to the idea that only resolute government could avail. Hohenlohe appears to have allowed the Ministers in Berlin a wider latitude than was needful, in view of the large powers secured to him by the constitution of the provinces, and Berlin, being convinced that the resistance of the Alsations to German rule in the Prussian spirit was mere perversity, was but little disposed to pay further heed to the susceptibilities of the conquered population. Hohenlohe in March, 1891, relates a conversation with the Secretary of State Marschall [von Bieberstein] who had 'spoken very contemptuously of Alsace-Lorraine, and said it was a matter of total indifference in Berlin whether the inhabitants were satisfied or not, and that in the event of war Alsace-Lorraine would become the principal battlefield.' Even Caprivi seemed to regard the prospect of conciliation as hopeless. Convinced that the Alsations could not be Germanized, he said that the only alternative was to 'deepen the ditch' that divided them from France [see also ALSACE-LORRAINE: 1879-1894]. . . . The Emperor's first great disappointment came when he discovered that in spite of his efforts for their good the working classes refused to turn their backs upon Socialism. Probably no modern sovereign was so confident of his own capacity in public affairs, or so ready to face responsibility with so little justification, as Emperor William II in the early years of his reign. No one could doubt his gifts or the earnestness of his desire to 'exercise his office for the welfare of the fatherland,' according to the promise of his first proclamation to the nation. Like many other men impatient for action, however, he failed to recognize that the art of statecraft has to be learned like other arts, and more laboriously than most, and exalting intuition in the place of experience, he committed many impatient and impetuous acts at which grave men shuddered. . . . Fulsome adulation was showered upon him by professional courtiers and self-seeking worldings without rebuke, and upon a man of his temperament its effect was fatal. All these incidents of his character and position conspired to encourage in him a disposition to judge events from a false perspective, and caused him to lose the right measure both for realities and abstractions.\* It was obvious that the full significance of these influences and tendencies would be seen only in later years, but already there was much anxious foreboding, and his impatience of either opposition or criticism strengthened the doubts even of those whose loyalty to his person was beyond question."—W. H. Dawson, *German empire, 1867-1914*, v. 2, pp. 261-263, 267-268, 271-272.

1890-1894.—Agrarian League.—"In the early nineties, when many thousands of Germans were deserting the farms for the cities in order to take part in the new industrial progress and prosperity, it was freely prophesied in Germany that the Empire would soon become wholly industrial; it was

said that agriculture must soon limit itself to cattle raising and to the cultivation of a few select varieties of grain. But German agrarians resolved to make agriculture more productive and profitable than ever. In the first place, therefore, they formed (1893) the Agrarian League and, through their Conservative and other representatives in the Reichstag, forced the imposition of high import duties on agricultural products."—G. M. Priest, *Germany since 1740*, pp. 146-147.—"The year from which the first of the Caprivi commercial treaties dated (1892) witnessed the beginnings of a powerful organization of the agricultural interests of the country and of a new political movement destined to acquire a sinister influence and fame. The organization was the Farmers' League (*Bund der Landwirte*), and the movement for which it stood was agrarianism. Essentially representative of the large proprietors, and inspired and led by the corn-growers of Eastern Prussia, the Farmers' League captured the agricultural classes in all parts of the country, though in the North to a greater extent than in the South. It was Caprivi's declaration, in a speech in which he commented the commercial treaty policy to the Diet, that 'Germany is no longer an agricultural but an industrial country,' that for the first time opened the eyes of the agrarians to the economic revolution which had passed over the country. No sooner had the treaties been ratified than they began a vehement agitation against them in the rural constituencies. 'We must tear up the treaties with Austria and Italy,' said the time-honoured champion of law and order in the Press, the *Kreuz-Zeitung*, and later, when the treaty with Russia came into existence amid the Sovereign's felicitations, it asserted that 'the German farmer will now be inclined to regard the Emperor as his political enemy.' From that time the agrarians closed their ranks for the strenuous defence of their threatened privileges, and the course of later domestic politics has been greatly influenced by their action. From the first the Agrarian League, as the Farmer's League is usually called out of Germany, was a signal success as a propagandist organization. The German Peasants' League uniting with it, a membership of 200,000 was soon gained, and having at command abundant funds, it was able to engage a large staff of lecturers, who perambulated the country, organizing the agricultural classes, enlightening them upon their grievances, and helping them to apply to the Government effective and continuous pressure, so supporting the hands of the party which existed to protect their special interests in Parliament. From the beginning the organization was Conservative both in aims and in composition, and one immediate result was to create in the Conservative parliamentary party an unaccustomed spirit of independence. Hitherto the party had worked hand in hand with the Government in virtue of an alliance based on reciprocity of interest. So long as the reciprocity lasted, so long also did the alliance. When, however, both the Emperor and the Government showed a disposition to shrink from the agrarians' extreme demands, the traditional devotion of the Conservative party to throne, altar, and fatherland stood revealed in its true light as a very human yet very unamiable piece of egoism. Thereupon were developed a discrimination of judgment and a freedom of action which had never been seen before in the same quarter. For now the agrarians, too, chose to follow a new course, and by persevering in it they gained in the end all the preference lost in 1892, with much that they had never possessed or dared to hope for in the

past."—W. H. Dawson, *German empire, 1867-1914*, v. 2, pp. 277-278.

1890-1908.—Industrial courts established.—Their growth.—Their organization. See ARBITRATION AND CONCILIATION, INDUSTRIAL: Germany: 1890-1908.

1890-1914.—Alteration of foreign policy after the passing of Bismarck.—Change towards Russia and England.—Drang nach Osten.—Turkey as a vassal of Germany.—Construction of the Bagdad railway.—“With the passing of Bismarck began the second stage in the development of the new German nation. Between 1864 and 1888 the Empire had been created and made the greatest of the European states. From about 1890 on to 1914 it went forward to greater things; its leaders made it a mighty world power and strove at last to make it beyond all doubt the greatest power in the world. The outlook of German leaders became wilder, their ambition vaster and grander; they played for great stakes higher and more boldly, until in the end, as it seemed to one of them, they sought ‘World Dominion or Downfall.’ In what followed, at first, the young emperor took the lead. Some believed that he was rash and might easily plunge into a war, for he spoke with stern pride of the power of his army. But for more than a quarter of a century in his reign there was no great conflict in Europe, and often he boasted that he had striven to keep the peace. Doubtless he did. But always this desire for peace seems to have been on condition that Germany hold her superior position in Europe, and that her policy should not be thwarted. When there rose up against the alliance headed by Germany another great group of powers, and it was no longer so easy for Germany’s word to be law as it had been in Bismarck’s time, then German statesmen and the emperor strove so hard to maintain the German hegemony that one great crisis followed another in Europe for the space of ten years. At the end of that time the nations were plunged into the greatest of all their wars. When in 1890 William II took control of the government and its foreign policy there followed at once a great altering of political relations. Bismarck had always kept France nearly isolated and alone. In three years after this time she was closely joined in an understanding with Russia. He had tried by all means to retain Russia’s friendship, and he had succeeded nearly all of the time. But Russia was allowed to draw away now, and almost immediately she sought the friendship and became the ally of France. Bismarck had desired not to antagonize Great Britain, and during his time no dangerous misunderstanding had arisen; but in less than ten years Germany entered upon a policy which profoundly alarmed Great Britain, and shortly caused her to take her place together with Russia and France [see also WORLD WAR: Causes: Indirect: f]. The secret agreement between Russia and Germany in 1887 had been made for three years. Before it expired, in 1890, the tsar tried to have it renewed, but Germany would not consent. . . . It has been conjectured that one of the important causes of disagreement between Bismarck and William II was concerning relations with Russia; that Bismarck would have had other plans which ran counter to continuing this friendship. It has been thought also that this was the time when the government of Germany began to cherish ambitions in the Balkans and Turkey. If this were the case, then most probably it would soon be as impossible for Germany to remain in close friendship with Russia as for Austria-Hungary since 1876. ‘My foreign policy remains and will re-

main the same as it was in the time of my grandfather,’ was the message William sent to the tsar. But the Russian ambassador believed that Germany in the future would have greater regard for the alliance with Austria-Hungary. And so it was, for that alliance now became stronger with every year, until at last it was the closest in Europe. [See also AUSTRIA: 1893-1900.] It also seemed to the Russian ambassador, who wrote of these changes, that Germany now counted on getting the friendship of Great Britain to replace that of Russia, and even that Great Britain might be added to the Triple Alliance. It might, indeed, have seemed to him that there was some chance of bringing this about. Friendly relations with England were a tradition. The mother of the German emperor was a daughter of Queen Victoria, whose husband, Albert, had been a German. . . . Lord Salisbury, prime minister at this time, believed strongly in best possible relations with the German Empire. Good relations with Britain were, accordingly, easy to maintain and improve for the present, though she would most probably not have entered into any alliance, and it is not certainly known that Germany desired her to do so. The new German policy attracted less attention than might have seemed possible. The close relations between Germany and Russia had been largely a secret. The attention of men was still fastened mostly on the older issues, the feeling between France and Germany, and the rivalry between England and France, and England and Russia. But a very significant event occurred the year before Bismarck retired. In 1889 William II went to Constantinople and visited Abdul Hamid, the sultan of Turkey. As men afterward saw this event, it seemed the beginning of an epoch in the politics of Europe. In the Middle Ages the German people had fought against the Slavs to the east, subduing or pressing them back, and extending eastward their German dominion. In this manner had the old Prussia been acquired, in this way Austria’s empire built up. In the course of this movement to the east and the south some Germans had pushed beyond the mass of their fellows and made isolated settlements, which in the nineteenth century were still flourishing in Hungary, and in Poland, in the western and southern parts of Russia, and even far off in the Balkans. For a long while some Germans had dreamed of a day when these detached groups, and the aliens surrounding, might be incorporated in a greater German Empire. Heinrich Heine prophesied that Germans would some day possess lands as distant as the Ukraine. In the earlier half of the nineteenth century other Germans advised colonization in the valley of the Danube and beyond, saying that here was the best of fields for German expansion. After the Franco-German War, colonization of Asia Minor and Mesopotamia was suggested in the dominions of the sultan of Turkey. About 1880 a certain one urged his fellows not to emigrate to America, as they were doing: ‘We must create a central Europe by conquering for German colonization large spaces to the east of our frontiers.’ Now in the new generation which followed that of Bismarck such thoughts constantly gained greater importance, until gradually the idea of *Drang nach Osten*, or advance by Germans to the east, came to be the underlying motive in German foreign affairs, and at last principal among the causes leading to the great European War. William II sought the friendship of the sultan of Turkey. England had previously been friend and protector of the Turks, but events like the British occupation of Egypt had caused her influence to wane. In 1898, about the time when

England and France were embroiled in the Fashoda dispute concerning the upper Sudan, about the time when Germany began her great naval expansion, William went to Constantinople again, and, going on to Jerusalem and Damascus, proclaimed himself the protector of Turkey and announced that he was the friend of Mohammedans all over the world. Year after year German representatives established the influence of their country more strongly. Most people had no conception how far they were succeeding, but in 1914 it was suddenly found that Turkey was more closely bound to Germany and Austria than was Italy, a member of the Triple Alliance; that she was actually a vassal of Germany, at whose behest she could be pushed into a war where her very existence must be staked. In controlling Turkey and developing her resources the most important thing done by Germans was the construction of the Bagdad Railway."—E. R. Turner, *Europe since 1870*, pp. 190-194.—See also BAGDAD RAILWAY; BOSPORUS: 1878-1914; SLAVS: 1830-1914; WORLD WAR: Causes: Indirect: f; Diplomatic background: 71, xvi.

1890-1914.—Growth of the army.—Army strength, 1914.—Annual expenditure.—Growth of the navy.—Naval strength, 1914.—Arguments for increased armaments.—"Four years before the expiration of the Septennate of 1887, that is, in 1890, the army was increased by nearly 20,000 men, to 486,983, including under-officers. Caprivi, the imperial chancellor at that time, was not satisfied, however, so in 1893 he proposed general compulsory service, excluding only the absolutely unfit; by this scheme the numbers in the army were to increase automatically with the growth of the population and not be set periodically by the Reichstag. To ensure the passage of this proposal, Caprivi offered to reduce the period of service from three to two years. Eventually, however, the number was fixed at 479,229, excluding under-officers, for five and a half years—the quinquennate principle thus replaced the septennate—and the two-year provision was granted. As before and after, the Reichstag set the numbers in the army. The German army has therefore never been based strictly on universal service; many able-bodied Germans have been excused because the allotted number could be made up of men of greater military fitness. In 1899, in view of the growth of population, the army was further enlarged to include 495,500. By a bill passed in 1905 the increase was so arranged that by 1910 the army should number 505,839. In 1911 it was agreed that by 1916 the army should number 515,321, but in the very next year it was decided that this number should be enrolled by October 1, 1913, was to include 661,478 privates; these together with the officers and under-officers were to form a standing army in time of peace of over 800,000 men. On August 1, 1914 Germany could muster about 7,000,000 men, of whom 3,000,000 were untrained and 4,000,000 were the most thoroughly drilled soldiers in the world. In 1912 the army cost the nation \$212,000,000. By the bill passed in 1913 the annual expenditure for the army was increased by \$45,000,000, and a 'contribution for national defense,' a tax to be levied only once on incomes and property, was to be collected, netting \$225,000,000 [see also MILITARY ORGANIZATION: 27; 29]. Compared with the army and its origins, which may be traced back to the seventeenth century, the German navy is a growth of yesterday. The first important step toward its creation was taken in 1880 when the army office surrendered its control of naval affairs and an imperial admiralty was established.

Even then nine years elapsed before the first navy bill was passed (1898) by the Reichstag. This bill provided for a fleet of 19 battleships and 42 cruisers. Only two years later, however, this program seemed inadequate. It was therefore enlarged to 38 battleships, 14 first-class cruisers, 38 smaller cruisers, and 96 torpedo boats and destroyers. In 1908 a submarine flotilla was added, and the torpedo fleet was increased to 144. When war was declared in 1914, Germany was said to have 37 battleships, 48 cruisers, and a torpedo flotilla of 189 destroyers and torpedo boats and 27 submarines; this display of naval strength was second only to that of England. The Empire expended \$118,000,000 on the navy in 1912. The increase of German armaments has been facilitated by Prussian-German tradition, which favors a large armed force, and by reiteration in German books and public speeches that many events which German history cherishes would never have come to pass without military might. It is true that for a decade and more after 1871 many parties in the Reichstag favored a reduction in the numbers of the army; but in 1913 only the representatives of the Social-Democrats, the Poles, and Alsace-Lorraine voted against the hugest army bill ever known. A majority of the German people, as they are represented in the Reichstag, supports therefore the increase of armaments. Germany has justified its armaments chiefly by the argument that they are a defensive necessity, for it has felt its territorial integrity threatened constantly, on the west by France with its desire of retribution for 1870 and 1871, on the east by Russia. Germany has also believed its commercial progress to be menaced by the jealousy of France and especially of England. At least in part for these reasons the Empire has prepared, in case of war, to protect its borders and industries at home and its colonies and commerce in far-away lands and on the seas. It is not unreasonable, however, that Germany should have multiplied its armaments with offensive as well as defensive intent. It has been very sensitive to the restrictions of its limited area in Europe and to the imperfections of its colonies for purposes of settlement. A nation growing with extraordinary speed and vigor, it has desired naturally and most earnestly a larger area. It has been jealous of those nations, France and England particularly, which secured enormous colonial possessions in favorable climates before Germany had been unified and could claim a share of the new worlds opened by the explorations of the nineteenth century. Germany's desire for as much territory as other European powers possess has never been concealed. Its ambition to even up the difference has been declared in the last decade more and more frankly. Territorial as well as commercial equality is what Germany has meant when it has reiterated its desire and ambition to enjoy 'a place in the sun.' A great armament seemed to be the logical instrument whereby to ensure participation in any territorial profit-sharing which might arise from new international situations."—G. M. Priest, *Germany since 1740*, pp. 151-154.—See also MILITARY ORGANIZATION: 20; 21; 27; 29.

1890-1914.—Expanding industrialism.—Progress of industrial and commercial life.—Value of the productions.—Foreign commerce.—Opposition to import duties.—"The history of Germany from 1800 to the outbreak of war in 1914 is the story of the evolution of a European nation into a world power. In 1800 Germany's interests were often not at all involved in questions arising outside of Europe; in the spring of 1914 a conference of 'the powers' without participation

of Germany was hardly imaginable. In other words, under William II and his imperial chancellors—Caprivi (1890-1894), Hohenlohe (1894-1900), Bülow (1900-1909), and Bethmann-Hollweg . . . [1909-1917]—the German Empire continued to fortify its national strength and unity; it expanded its industrial life, seeking and finding markets all over the world for the products of its industries; it acquired new colonial possessions. In virtue of this national growth and strength, Germany exercised profound influence in the decision of questions arising far beyond the borders of Europe. This evolution of Germany, or its progression from state and national strength to international power, marks the lines which may be followed fittingly in an account of the chief events in German history since 1890. . . . Germany's industrial and commercial progress from 1890 to 1914 forms the proudest chapter in recent German history. German sense of order and system produced enormous organizations of capital and employees; the Krupp steel-casting company had in 1913 a capital of \$60,000,000 and employed nearly fifty thousand men. [See also CAPITALISM:

of other industries. Not long ago (1912) the gross value of Germany's industrial productions within a year was reckoned at \$2,900,000,000; in this respect Germany yielded precedence only to England (\$4,100,000,000) and to the United States (\$7,000,000,000). An interesting corollary of this activity is found in the records of banks. At the end of the seventies German savings banks listed deposit accounts amounting to \$500,000,000, in 1911 \$4,000,000,000. The annual increase of wealth of the nation was estimated in 1913 at between \$1,000,000,000 and \$1,500,000,000, the wealth itself at well over \$300,000,000,000. In order to transport at least a part of the vast cargoes which went to and fro, Germany trebled its commercial fleet between 1893 and 1913; in 1900 it constructed only about two-thirds as much tonnage in seagoing vessels as the United States, but in 1911 it constructed nearly twice as much. Germany's commercial fleet was then second only to England's. The same ranking obtained in the most significant, the most comprehensive item of all, in foreign commerce. Between 1890 and 1914 the annual value of Germany's foreign commerce, con-

#### IMPERIAL CHANCELLORS

19th-20th centuries.] German adjustability to foreign conditions led to the production of articles carefully suited to the needs and tastes of buyers all over the world; in 1912 the German salesman found in Argentina, for example, a market for products valued at \$170,000,000, in Australia for \$90,000,000 worth. The Germans were also extraordinarily alert in utilizing new industrial opportunities; they exported in 1912 electrical machinery and appliances valued at nearly \$60,000,000, products that were unknown a generation ago. The progress of German industrial and commercial life was halted at two or three stages—notably in the winter of 1901-1902 and in that of 1907-1908—when chiefly overproduction brought on a stagnation of business and the failure of many firms; but with these exceptions the rise of industry and commerce was constant and amazing. To specify the progress of only a few of the most important industries: Germany produced in 1910 seven times as much coal as in 1870, nine times as much pig iron, twenty-four times as much steel; potash-salt mining, which did not become a conspicuous industry until the eighties, advanced within twenty years (1886-1906) from a yearly output of less than one million to over fifty million tons. Statistics such as these might be given

sisting chiefly of imports of raw materials and unfinished products and exports of finished manufactures, rose from \$1,900,000,000 to \$5,000,000,000, or 250 per cent; Germany exported more goods to England in 1912 (about \$400,000,000 worth). Between 1890 and 1914 Germany displaced both France and the United States in the comparative value of its foreign commerce and thus rose from fourth to second place among the nations. England still had a considerable advantage—its foreign commerce was valued in 1911 at \$6,250,000,000—but England's rate of increase, about 50 per cent for the decade from 1901 to 1911, was lower than that of Germany. [See also COMMERCE: Commercial Age: 1800-1900.] The surpassing growth and success of German industrialism have raised up one of the leading problems of modern Germany, the conflict between agriculture and industrialism. Attracted by the larger opportunities and returns of industrial employment, the balance of population has shifted from the country to the city. In 1830 eighty per cent of the German people lived in towns of five thousand inhabitants or less; in 1907 only 32.7 per cent. But in spite of the great preponderance of urban over rural population, agriculture has been much more encouraged and favored by leg-

isolation than industrialism. This appears especially in the high import duties which have been imposed on foreign foodstuffs and which have enabled agriculturists to sell their products at a high figure. These duties have been secured and maintained by appeals to German patriotism; agriculture must be furthered, it has been said, so that Germany, in case of war, may be able to feed itself. Industrialists have opposed these duties bitterly, because foreign nations have retaliated with high import duties on German manufacturers, and because the majority of the people has been forced to pay higher prices for food in order to benefit a diminishing minority. Many economists inside and outside of Germany believe that the victory in this struggle lies with the industrialists, if for no other reason, on account of the limited area of Germany. Only 9.3 per cent of the soil is now unproductive—as compared with 14.3 per cent of French soil and 18.2 per cent of that in Great Britain and Ireland—and a large increase of the population must force the Empire into dependence on other countries for a sufficiency of food. In that case the high import duties on foodstuffs will naturally fall, and Germany will become industrial according to prophecy. German industrialism, besides transforming a rural people into residents of cities, has wrought other impressive changes in German life and character. It has increased very largely and generally the wealth and contentment of the Empire.”—G. M. Priest, *Germany since 1740*, pp. 146-150.—See also COMMERCE: Commercial Age: 1800-1900.

1891.—Triple Alliance renewed. See TRIPLE ALLIANCE: Content of the treaties.

1892.—Reactionary Education Bill.—Its chief provisions.—Agitation against clericalism.—Resignation of Baron Zedlitz.—Caprivi retires from the presidency of the Prussian ministry.—“Early in [1892] . . . the fears of the Liberals seemed to be justified by the introduction in the Prussian Diet of an Education Bill so reactionary in character that it threw the whole country into consternation. The blow was as bold as it was unexpected. Two years before, the Minister of Education, Dr. von Gossler, had produced a measure which, while retaining the old confessional principle, proposed to place the control over secular and religious instruction more definitely in the hands of the State. The bill was rejected, and its author in consequence resigned, his place being taken by Baron Zedlitz, a typical representative of the Conservative-feudalist party. To Baron Zedlitz and his friends the opportunity for a bold counter-stroke seemed too precious to be lost. The Conservatives and Clericals between them dominated the Diet, and a bargain between the two parties, which had so much in common in educational ideals, would make success certain. The Centre was, in fact, the predominant party in the Ministerial coalition. Through persecution and discredit it had at last come to triumph and repute, it had worn down the attack upon the Church and compelled Bismarck to own defeat; now it had secured a Government to its liking, and it exercised a decisive voice in parliamentary affairs. The bargain having been concluded, Baron Zedlitz introduced early in 1892 an amended bill which would have deliberately handed over the elementary schools to the Churches as the legitimate spoils of party warfare, to be divided amongst them at leisure by friendly arrangement. Not only was the confessional basis of the schools recognized as before, but obstacles were placed in the way of any future deviation from it; dogmatic

religious instruction was to be forced upon all children, regardless of parental scruples; clerical influence, both in the work of inspection and of general administration, was increased; the clergy were to be allowed to certify whether teachers were competent or not to give religious instruction, and virtually to withhold the right to teach from any one objectionable to them. In short, the Church, Catholic and Protestant, was to be given complete control over the only part of public education in which it took serious interest. The bill proved too much for the habitual complacency of the Prussian nation, which for once threw off its political apathy. The old leader of National Liberalism, Bennigsen, now emerged from retirement, raised again the flag of progress, and called upon all that had life and breath in the Liberalism of the monarchy to fight the measure to the death. The universities, so often silent in the past when violence had been done to intellectual interests of which they were the natural custodians, rained protests upon the Government. Lay Protestants everywhere, in public meeting and written petition, roundly condemned the bill as a complete capitulation to Clericalism and another and a more humiliating journey to Canossa. Even Bismarck accused his old party friends of having sold themselves into the service of their country's enemy. It was in vain that the Minister-President, Caprivi, who still knew less about politics than about the army, pleaded that the nation was engaged in a struggle between Christianity and atheism. The retort of the opponents of the bill, that if it was right now to place so much power in the hands of the Roman Church and clergy all the agitation against Clericalism in the last decade was either an imposture or a piece of intolerant persecution, was unanswerable. It was obvious that Caprivi had allowed the bill to slip through his fingers unguardedly, and that he now defended it only out of loyalty to an unpopular colleague and regard for the unity of the Cabinet. Other Ministers were not so scrupulous, and as soon as it became evident that the bill was detested they hastened to disown it. When the storm had raged until March the Emperor intervened and called upon his Ministers to surrender. Reproached by his Sovereign for having shown so little regard for national sentiment, Baron Zedlitz could only resign, whereupon the bill was withdrawn. Caprivi likewise felt seriously compromised, and chivalrously offered to accompany the unlucky Minister of Education into retirement, but the crisis demanded no such sacrifice. He retired from the presidency of the Prussian Ministry, however, and Count Botha zu Eulenburg took his place.”—W. H. Dawson, *German empire, 1867-1914*, v. 2, pp. 272-274.—Count Caprivi retained the chancellorship, however, until 1894.

1892-1894.—Failure of revised tariff law as a weapon of offense.—Caprivi's commercial treaties of 1892-1894.—“When William II came to the throne [1888] the agricultural duties had just been increased, for the second time since 1870, by the customs tariff law of 1887. The revised tariff had been introduced by Bismarck in part by way of retaliation upon Austria and Russia for having increased their duties upon manufactured goods. As a weapon of offence it failed, for these countries now raised their tariffs still further. At that time some of the leading Continental States had adopted conventional tariffs on the principle of reciprocal concessions in every individual case. Germany had hitherto had a general tariff and had concluded commercial treaties only on the most-favoured-nation basis. These

treaties all expired in the year 1892. Faced now by hostile tendencies in other countries, Caprivi had to choose between the alternatives of a retaliatory increase of the German duties according to need, leading almost inevitably to a series of tariff wars, or the acceptance and possible extension of the conventional tariff system, which meant some mitigation of the existing duties. He chose the latter course, and in doing so carried the Emperor with him. . . . On the industrial side also the tariff had proved no less irksome and unsatisfactory. Foreign trade had greatly increased, yet the retaliatory duties adopted by other countries had done much injury. Russia and America had virtually barred their doors to the outside world. The growth of the Colonial Federation movement in England had also given rise in German minds to the apprehension that almost the only remaining free markets might soon be closed. The uncertainty of international trade, the perpetual unrest, and indefinite fears as to the future conspired to make the Government, conscious of encouragement from the commercial classes, willing to bargain with any country which was prepared to meet concession with concession. It was the merit of Caprivi that he was the earliest of leading German statesmen to recognize that Germany had ceased to be a purely agricultural State, and that her future prosperity and welfare were bound up with the development of her industrial resources. He was no political economist, but it was a true economic instinct that led him to the conclusion, 'With our increasing population we must export either goods or men.' Germany was, in fact, exporting men at that time to the extent of 100,000 a year. Yet Caprivi was not hostile to agriculture, but regarded its maintenance in an efficient and prosperous condition as a paramount national interest, and hence he favoured the continuance of moderate protection. One of his forecasts received such a remarkable confirmation many years later that it deserves to be recalled. 'It is my unshakable conviction,' he told the Diet in December, 1891, 'that in a future war the feeding of the army and the country may play an absolutely decisive part. I am convinced that we need to cultivate corn to such an extent that it will, in case of need, be sufficient to feed the increasing population, even if it be with restrictions, in the event of war.' Nevertheless, he held that the existing duties were a needless hindrance to industrial expansion, an oppressive burden on the working classes, and a menace to social harmony. The discovery that industry and labour had a right to consideration equally with agriculture was the origin of the commercial treaties of 1892-4. Germany had had commercial treaties for a generation, but the treaties of the Caprivi régime marked a novel departure from past custom. The old treaties were based on fixed, invariable, autonomous tariffs, and most of them included the most-favoured-nation clause; the new ones, while containing this clause, were based on 'conventional' tariffs, concluded as the result of special bargaining with the States concerned. He began negotiations with Austria, Italy, Switzerland, and Belgium. In regard to the first of these countries political consideration as well as economic influenced him, for Austria was an ally whose friendship it was desirable to strengthen. By the agreement concluded Germany was to reduce her agricultural duties and Austria her duties on industrial products. All these four treaties contained the most-favoured-nation clause, and by special tariffs fixed the duties on both sides until the end of 1903; that is, for a period of twelve years. . . .

The Treaty with Russia, which ended a tariff war between the two countries, was carried against the vehement opposition of the Conservatives and Anti-Semites, joined by most of the Imperialists, a minority of the Clericals, and a handful of National Liberals. It was an irony of Caprivi's position that though a Conservative by conviction and instincts, he was, in the episode of the commercial treaties, thrown almost entirely upon the support of his political antagonists."—W. H. Dawson, *German empire, 1867-1914*, v. 2, pp. 274-277.—Caprivi's commercial treaties were violently opposed by the agricultural interests of Germany.—See above 1890-1894; also **TARIEF**: 1870-1900.

1893.—**Tax reform.** See **TAXATION**: Prussia, France and Great Britain.

1894 (October).—**Dismissal of Caprivi.**—In 1894, the emperor suddenly dismissed Caprivi, who was succeeded by Prince Chlodwig von Hohenlobe-Schillingsfürst.

1894-1899.—**Emperor's claim to "Kingship by Divine Right."**—A great sensation was produced in Germany by a speech addressed on September 6, 1894, by the German Emperor to the chief dignitaries and nobles of East Prussia in the Royal Palace at Königsberg. The following are the principal passages of this speech: "Agriculture has been in a seriously depressed state during the last four years, and it appears to me as though, under this influence, doubts have arisen with regard to the fulfilment of my promises. Nay, it has even been brought home to me, to my profound regret, that my best intentions have been misunderstood and in part disputed by members of the nobility with whom I am in close personal relation. Even the word 'opposition' has reached my ears. Gentlemen, an Opposition of Prussian noblemen, directed against their king, is a monstrosity. Such an Opposition would be justifiable only when the king was known to be at its head. The history of our House teaches us that lesson. How often have my predecessors had to oppose misguided members of a single class on behalf of the whole community! The successor of him who became Sovereign Duke in Prussia in his own right will follow the same path as his great ancestor. The first King of Prussia once said, 'Ex me mea nata corona,' and his great son 'set up his authority as a rocher de bronze.' I, in my turn, like my imperial grandfather, hold my kingship as by the grace of God. . . . We witnessed an inspiring ceremony the day before yesterday. Before us stands the statue of the Emperor William, the imperial sword uplifted in his right hand, the symbol of law and order. It exhorts us all to other duties, to the serious combating of designs directed against the very basis of our political and social fabric. To you, gentlemen, I address my summons to the fight for religion, morality, and order against the parties of revolution. Even as the ivy winds round the gnarled oak, and, while adorning it with its leaves, protects it when storms are raging through its topmost branches, so does the nobility of Prussia close round my house. May it, and with it the whole nobility of the German nation, become a brilliant example to those sections of the people who still hesitate. Let us enter into this struggle together. Forward with God, and dishonor to him who deserts his king."

Speaking at Hamburg, October 10, 1899, on the necessity of strengthening the naval forces of the empire, in order to afford protection to trade over the sea, the German emperor said: "The feeling for these things is only slowly gaining ground in the German fatherland, which, unfortunately,

has spent its strength only too much in fruitless factional strife. Germans are only slowly beginning to understand the questions which are important to the whole world. The face of the world has changed greatly during the last few years. What formerly required centuries is now accomplished in a few months. The task of Kaiser and government has consequently grown beyond measure, and a solution will only be possible when the German people renounce party divisions. Standing in serried ranks behind the Kaiser, proud of their great fatherland, and conscious of their real worth, the Germans must watch the development of foreign states. They must make sacrifices for their position as a world power, and, abandoning party spirit, they must stand united behind their prince and emperor." Commenting on this utterance, a recent writer has said: "This ideal of a docile nation led by a triumphant emperor whose intelligence embraces everything throws considerable light on the relations of imperialism to party government and parliamentary institutions. . . . There are many other expressions of the emperor which indicate an almost medieval conception of his office, a revival of the theory of divine right. The emperor believes that his grandfather, had he lived in the Middle Ages, would have been canonized, and that his tomb would have become a cynosure of pilgrimages from all parts of the world. . . . In a speech delivered at Coblenz on August 31, 1897, he speaks of the 'kingship by the grace of God, with its grave duties, its tremendous responsibility to the Creator alone, from which no man, no minister, no parliament can release the monarch.'"

1895 (June).—Opening of the Kaiser Wilhelm ship canal.—The opening of the new ship canal (named the Kaiser Wilhelm canal) between the Baltic and the North sea was made the occasion of a great celebration, on the 21st of June, in which the navies of Great Britain, Russia, France, Austria and Italy took part, steaming in procession with the German squadron through the canal. It was also made the occasion for an exhibition of the newly-formed alliance between Russia and France, the Russian and French fleets entering the harbor of Kiel together. (See FRANCE: 1895.) The canal had been eight years in building, the first spadeful of earth in the excavation having been turned by Emperor William I at Holtenau, near Kiel, on June 3, 1887. The canal is thus described: It is "98.6 kilometers (61.27 miles) in length. It begins at Holtenau, on the Bay of Kiel, and terminates near Brunsbüttel, at the mouth of the River Elbe, thus running clear through the province of Schleswig-Holstein from northeast to southwest. Both openings are provided with huge locks. Near Rendsburg, there is a third lock connecting the canal with the old Eider Canal. The medium water level of the canal will be about equal to the medium water level of Kiel harbor. At the lowest tide the profile of the canal has, in a depth of 6.17 meters (20 feet 6 inches) below the surface of the water, a navigable width of 36 meters (118.11 feet), so as to allow the largest Baltic steamers to pass each other. For the navy, 22 meters (72.18 feet) of canal bottom are provided, at least 58 meters (190.29 feet) of water surface, and 8½ meters (27 feet 9 inches) depth of water. The greatest depth for merchant vessels was calculated at 6.5 meters (21 feet 3 inches). The estimated cost was \$37,128,000. Two-thirds of the cost is defrayed by Germany; the remaining one-third by Russia. The time saved by a steamship sailing from Kiel to Hamburg via the canal, instead of

through the Skaw (the strait between Jutland and Sweden), is estimated at 2½ days. The time of passage through the canal, including stoppages and delays, will be about thirteen hours. In time of peace, the canal is to be open to men-of-war, as well as merchant vessels of every nation, but in time of war, its use will be restricted to vessels of the Germany navy. Many vessels have been wrecked and many lives lost on the Danish and Swedish coasts, in waters which need not be navigated after the canal is opened to traffic. Its strategic importance to Germany will also be great, as it will place that country's two naval ports, Kiel on the Baltic, and Wilhelmshafen on the North Sea, within easy access of each other."—*United States consular report, no. 175, p. 603.*

1895-1898.—Agrarian protectionists and their demands.—"The depression of agriculture in Germany was the subject which most occupied German politicians throughout the year [1895]. The policy favoured by the Agrarian League was that advocated by Count Kanitz, of which the following were the chief points: (1) That the State should buy and sell the foreign grain, flour, and meal destined for consumption in Germany; (2) that the average selling price in Germany from 1850 to 1800 should be fixed as the selling price of grain, and that the price of flour and meal should be determined by the proportion they bear to the unground grain and the said selling price, provided that the buying price is covered thereby; while in the case of higher buying prices, the selling prices must be proportionately raised; (3) that the profit obtained be spent, so that a part at least equal to the amount of the present grain duty flows into the Imperial Treasury; (4) that steps should be taken for the accumulation of stocks to be used in extraordinary time of need, as, for instance, in the event of war; and (5) that a reserve should be formed when prices are higher at home and abroad, to secure the payment of the above-mentioned annual amount to the Treasury. The Emperor, however, repeatedly expressed his disapproval of this policy, and Prince Bismarck is said to have remarked that if he were a deputy he would vote for it, but as Chancellor he would reject it. . . . The Agrarians now started an agitation all over the country in favour of Count Kanitz's proposal, and even threatened to refuse the supplies required for the navy if the Government should not accept it. In March, the Emperor referred the question to the committee of the Federal State Council, which passed a resolution declaring the proposals of Count Kanitz for establishing a State monopoly in cereals to be incompatible with the correct interpretation of the present position of the State in regard to industry and international trade, and irreconcilable with Germany's commercial treaties."—*Annual Register, 1895, pp. 256-257.*

"The agrarian protectionists control the Conservative party in Parliament completely; they are strongly represented in the Center, or Catholic, party, and are not without a considerable following among the National Liberals. The Anti-semitic party, the Poles, and other small parties are all infected with the agrarian protectionist ideas. The only decided opponents, as well as the only decided free-traders, are to be found among the three Liberal sections and the social democrats. The agrarian protectionists not only wish to annul the commercial treaties, because these hinder them from raising the protective duties on agricultural imports (these duties are by no means low

—for instance, 35 marks per ton on rye or wheat), but the extreme members of the party advocate the abolition of the gold standard and the adoption of a so-called bimetallic—in reality a silver—standard. The most rabid among them oppose the cutting of canals, because foreign produce would thus enter Germany on cheaper terms. In short, the agrarian protectionists oppose the natural evolution of all economic progress. . . .

"The old Prussian feudal aristocracy (Junkerthum), forming the pith and marrow of the agrarian movement, has never been well off; but for the last twenty years they have suffered from the competition with the whole world, which is felt so keenly in all old countries, in the reduction of the rent of land. They have sunk deeper and deeper into debt, while the standard of material comfort has risen throughout all classes in Germany. The 'Junker' has long since given up the hope of making both ends meet by his own industry, and while endeavoring to raise the rent of land by various kinds of protective measures, he is really at the same time struggling for bread-and-butter and upholding a tradition of political supremacy.

"No government can really satisfy these claims, and hence each in turn is compelled, sooner or later, to oppose the agrarian movement. However, considering the strong influence the Prussian 'Junker' exerts in the army, in the ranks of government officials, and at court, practical statesmen deem it advisable to avoid any open rupture with the pack of famished wolves."—T. Barth, *Political Germany (American Review of Reviews, Apr., 1898)*.

1896 (January).—Emperor William's congratulations to the president of the South African republic on the defeat of the Jameson raid. See SOUTH AFRICA, UNION OF: 1896 (January).

1896-1899.—Results of the emperor's telegram to Kruger.—Attitude towards Boer War.—"No act could have been more unfortunate from an international standpoint, unless Germany really meant to go to war in defense of the Boer states. In England the publication of the telegram was greeted with amazed resentment; in Germany it was the match which exploded the whole mine of bitter dislike, the pent-up sense of restraint before England's power, the hatred of the older commercial rival who claimed to play the rôle of dictator in every corner of the world overseas. And when in 1899 the inevitable war between England and the South African republics finally broke out, it found the Germans as one man on the side of the Boers. . . . The motives of a nation's actions are as mixed as those of an individual, and tribute must be paid to the noble feeling which inspired many Germans in their enthusiasm for the under dog. Nevertheless it cannot be doubted that well-informed German editors were under no illusion regarding the barbarity and selfishness of the Boers: the very immaturity of public expression in Germany betrayed the fact that the greater part of the nation cared nothing for Boer success but everything for the humiliation of England. 'They are fighting our battles down there on the kopjes of South Africa,' was heard again and again, and there is no doubt that many Germans, nursed on the legend of England's decadence, already saw the Union Jack fading before the black-white-red banner as the ruling standard of the colonial world. . . . The Germans saw their great rival, who had preceded them into the field of 'imperial' politics by four generations, enfeebled

almost to the point of exhaustion, and yet so weak was the German fleet that the empire was unable to take advantage of the favorable conjuncture in any way, or even, if need arose, to protect its own merchant marine from arbitrary search or seizure by British cruisers scouting for contraband. No object lesson could have been driven home upon any people with more telling force. If Germany were ever to play a more important rôle than that of an important and agitated spectator in overseas affairs, the mailed fist must also be able to make itself felt on blue water."—R. H. Fife, *German empire between two wars, pp. 57, 59-60.*

1897 (July).—Defeat in Prussia of a bill to restrict the right of political association and meeting.—In July, the government in Prussia suffered a significant defeat in the Prussian Landtag on an attempt to give the police new powers for interference with political meetings and associations. The bill was especially aimed at the Social Democrats, enacting in its first clause that "agents of the police authorities have power to dissolve meetings in which anarchist or Social Democratic movements are manifest, having for their object the overthrow of the existing order of state or of society, and finding an expression in a manner which endangers public security, and in particular the security of the state." It passed the upper house overwhelmingly, but was rejected in the lower by 209 votes to 205.

1897 (September-December).—Demand for indemnity enforced against Haiti. See HAITI, REPUBLIC OF: 1897.

1897 (November-December).—Seizure and acquisition of Kiao-chau bay.—Naval expedition to China.—Speeches of the emperor and Prince Henry.—The murder of two German missionaries in Shantung province, China, gave the German government a pretext, in November, 1897, for the seizure of the port of Kiao-chau, on demands for indemnity which were not satisfied until the Chinese government had consented to lease that port, with adjacent territory, to Germany, for ninety-nine years, with extensive rights and privileges in the whole rich province of Shantung. (See CHINA: 1897 [November].) To support this opening of an "imperial policy" in the East, a German naval expedition was despatched to China, in December, under the command of the emperor's brother, Prince Henry, and its departure was made the occasion for speeches by the emperor and Prince Henry, at a royal banquet, at Kiel, which caused much remark, in Europe and America. Said the emperor, addressing his brother: "As a sign of imperial and of naval power, the squadron, strengthened by your division, will now have to act in close intercourse and good friendship with all the comrades of the foreign fleets. . . . May it be clear to every European out there, to the German merchant, and above all, to the foreigner whose soil we may be on, and with whom we shall have to deal, that the German Michael has planted his shield, adorned with the eagle of the empire, firmly on that soil, in order, once for all, to afford protection to those who apply to him for it. . . . Should, however, any one attempt to affront us, or to infringe our good rights, then strike out with mailed fist."

The prince replying said: "We have reached a great epoch, an important epoch for the nation—an important epoch for your Majesty and the Navy. . . . I can assure your Majesty of this—I am not allured by hopes of winning glory or laurels, I am only animated by one desire—to pro-

claim and preach abroad to all who will hear, as well as to those who will not, the gospel of your Majesty's anointed person; . . . to impress the person of the Emperor on their minds, and to let the cry resound far out into the world—our most Serene, Mighty, Beloved Emperor, King and Master, for ever and ever. Hurrah, hurrah, hurrah!"

1898 (July).—Death of Bismarck.—Prince Otto von Bismarck, whose importance in German history is comparable only with that of Charlemagne, Luther, and Frederick the Great, died on July 31st, at the age of 83. Immediately upon his death in 1898 his confidential secretary, Dr. Moritz Busch, made public the full text of the letter of resignation which Bismarck addressed to the emperor, William II, when he withdrew—practically dismissed—from the public service, in 1890.

1898-1914.—New naval policy.—Establishment of the *Flottenverein* (Navy League).—Preamble of the law of 1900.—Naval program.—Refusal to limit armaments.—Benevolent neutrality proposal.—Anglo-German agreement.—"In the later years of his power Bismarck had seen increasing need of a strong navy to guard the Empire's growing commercial and colonial interests, but the great change came after he had been dismissed, with the rise of the new school of statesmen, who looked beyond Europe and would make Germany the greatest of the great. The German army was incomparably the strongest in the world, but they were conscious of a surplus of strength in their country, not needed for the army, and they began to cherish the plan of making Germany a great naval power and a seeker for colonies also. It was probably foreseen that this would inevitably bring very different relations with England. Hitherto Britain had been on her guard against France and Russia, both of them strong naval powers and active rivals in Africa and Asia. For some years it had been her purpose to maintain the 'two-power standard,' to keep her fleet stronger than the two next greatest navies combined. In 1889 Great Britain had undertaken a comprehensive scheme of naval increase, and by 1898, when a crisis developed with France, the French had yielded completely, so overwhelming was British strength on the sea. Britain had no large army, and so could not defend herself against the great standing armies of European states if ever they reached her shores. Her sole reliance was on command of the sea, and it was justly felt that if this were lost, then all would be gone and the British Empire destroyed beyond hope. The British people accordingly were resolved at all costs to maintain their superiority on the ocean, and would probably come to regard with much

dread any nation who challenged this position. Suddenly and in dramatic way the German Government did do this. Germans were building up a great commerce. . . . In this new era of great German ambitions the leaders felt that the German Empire was incomplete so long as it had no strong navy. The lead was taken by Admiral von Tirpitz and the emperor himself. There was opposition among the older school of thinkers in Germany, but after much effort a bill was passed by the *Reichstag* in 1898 providing for a great naval increase. The law provided for expending, during a course of years, 1,000,000,000 marks, and was considered to be the most ambitious naval programme undertaken by any state in the memory of man. That same year the *Flottenverein* (Navy League) was established, to interest the people in naval expansion. It had 600,000 members in two years, and shortly after, a million. A vast amount of educational work and propaganda was done by this organization, and it was most successful in arousing the people. Much greater development soon followed. In 1900 a vaster sum was appropriated, and plans made for a navy twice as powerful as that provided two years before. Such startling naval increase affected other powers at once and profoundly. . . . Moreover, the very preamble of the law of 1900 seemed directed against England. 'Germany must have a battle fleet so strong that even for an adversary with the greatest sea power a war against it would involve such dangers as to imperil his own position in the world.' 'The ocean is indispensable to the greatness of Germany,' said the emperor about the same time. 'As my grandfather reorganized the army, so I shall reorganize my navy.' And in 1901: 'Our future lies upon the water.' . . . Each year the leaders and statesmen of Britain saw greater peril across the North Sea. Everywhere they settled all their outstanding differences, not only with France and with Russia, but with Italy and the United States, and they had already made alliance with Japan. British naval forces, once scattered all over the world, were silently drawn in and concentrated in the waters about Britain and Ireland. But the uneasiness was felt rather for the future than the immediate present, since it was believed that England had such great superiority on the sea that it would be a long while before Germany's utmost efforts could really challenge the British navy. A great change presently occurred. It was in 1904-5, during the Russo-Japanese War, that modern warships were really tested for the first time; and many lessons were learned then. [See WARSHIPS: 1893-1914.] . . . In 1907 the British launched the *Dreadnaught*, a battleship which was the largest, the swiftest, and most heavily armored warship that had ever been put afloat. . . . Germany, with her new naval programme, was building the greatest number of new ships, and immediately she altered the plans and began making new vessels of the *Dreadnaught* type. She was building swiftly and with such secrecy that it was difficult to know how swift her progress was. It was evident to the thinking that all unexpectedly she had a chance to overcome England's naval preponderance and threaten her command of the seas. Even though it was evident that relations between the two countries were steadily growing worse, most of the English people could not quickly understand the large changes occurring, or the altered position of affairs. . . . Many people in both countries declared that there was no reason for conflict, and sincerely deplored the growing suspicion and ill will, but uneasiness and anger increased. In both countries

great newspapers and periodicals did not cease to point out how the foe threatened vital interests, and that preparations must be hastened so as to be ready for inevitable conflict. . . . Year by year the Germans were told more and more that England had joined their enemies in an *Einkreisung*, an effort to encircle and crush them. Year by year it came to be better understood that Englishmen must not make again the mistake of 1870, not again allow France to be crushed, for then afterward most probably they would have to fight alone against Germany with very small chance of success. It is evident that before 1914 the policy of Bismarck had been discarded, and that some of the things he had achieved had been completely lost. Some of Germany's old friends had drawn off from her, and joined France to make a great combination, the *Triplic Entente*. The alienation of Russia had been followed by increasing distrust on the part of Great Britain, and it was not improbable, in case of war, that Britain would be found with Germany's foes. Before the last evil days there was some effort to clear away the hostility and suspicion. . . . In 1907, at the Second Hague Conference, England had proposed limitation of armaments, but Germany had absolutely refused to consider it. Indeed, Germans boasted that they could keep up the race, in which England must soon fall behind. English leaders announced that their naval construction would be regulated by what Germany did. They were most anxious to come to some understanding by which both powers would cease the construction of so many warships, but a decisive supremacy over the German Empire they were firmly resolved to maintain. Germans were not willing to grant a 'naval holiday,' but in 1913, at a time when great changes in the Balkans caused them to desire increase of the army above all things, there appeared to be some slackening in their building of warships, and peaceful men in both countries hoped that better things would result. One particular effort was made to bring about better relations. In 1912 Lord Haldane, lord chancellor, went to Berlin on the emperor's invitation, to try to bring about an understanding. [See also ENGLAND: 1912-1913.] . . . The negotiations failed, . . . but it seemed to smooth the way for a settlement of the differences between the two. Indeed, in the earlier part of 1914 an Anglo-German agreement was drawn up, by which all the principal differences between England and Germany, with respect to the Bagdad Railway and Asiatic Turkey, were satisfactorily arranged, and it almost seemed that Sir Edward Grey had at last done with Germany what [Lord Lansdowne] . . . had accomplished with France in 1904. This treaty, it is said, was to have been signed in the autumn, but before that time the Great War had begun and Germany and the British Empire were locked in a mortal struggle."—E. R. Turner, *Europe since 1870*, pp. 199-201, 202-203, 204-207.—See also ENGLAND: 1912-1913.

1899 (June).—State of German colonies.—The following report on German colonies for the year ending June 30, 1899, was made to the British

Foreign Office by one of the secretaries of the Embassy at Berlin: "The number of Europeans resident in the German African Protectorates, viz., Togoland, Cameroons, South-West Africa, and East Africa, at the time of the issue of the latest colonial reports in the course of 1899 is given as 4,522 men, women, and children, of whom 3,228 were Germans. The expense to the home government of the African colonies, together with Kiaochao in the Far East, the Caroline and Samoa Islands in the South Sea, and German New Guinea and its dependencies, is estimated at close upon £1,500,000 for 1900, the Imperial Treasury being asked to grant in subsidies a sum nearly double that required last year. Kiaochao is included for the first time in the Colonial Estimates, and Samoa is a new item. The Imperial subsidy has been increased for each separate Protectorate, with the single exception of the Caroline Islands, which are to be granted £5,000 less than last year. East Africa receives about £33,000 more; the Cameroons, £10,000; South-West Africa, £14,000; Togoland, £800; New Guinea, £10,000; and the new items are: £480,000 for Kiaochao (formerly included in the Naval Estimates), and £2,500 for Samoa. A Supplementary Vote of £43,265 for the Protectorate troops in the Cameroons is also now before the Budget Committee. . . . Great efforts have been made to encourage German trade with the African colonies, and it is shown that considerable success has been attained in South-West Africa, where the total value of goods imported from Germany amounted to £244,187, as against £181,961 in the previous year, with an appreciable falling-off in the value of imports from other countries. In East Africa the greater part of the import trade still comes from India and Zanzibar—about £450,000 worth of goods out of the gross total of £592,630, having been imported thence. The export trade is also largely carried on through Zanzibar."—*Great Britain, parliamentary publications (Papers by command: Miscellaneous series, no. 528, 1900, pp. 3-5)*.—See also AFRICA: Modern European occupation: Later 19th century: West Africa.

1900 (May).—Lex Heinze.—The Socialists won a notable triumph in May, when they forced the Reichstag to adopt their views in the shaping of a measure known as the Lex Heinze. This bill, as introduced by the government, gave the police increased powers in dealing with immorality. The Clericals and the Conservatives sought to extend its scope by amendments which were denounced by the Radicals and Socialists as placing restrictions upon the "liberty of art and literature." After a prolonged struggle, in which the socialists resorted to the use of obstruction, the most obnoxious amendments were withdrawn.

1900 (June).—Opening of the Elbe and Trave canal.—"The new Elbe and Trave canal, which has been building five years and has been completed at a cost of 24,500,000 marks (\$5,831,000)—of which Prussia contributed 7,500,000 marks (\$1,785,000) and the old Hansa town of Lübeck, which is now reviving, 17,000,000 marks (\$4,046,000)—was formally opened by the German Emperor on the 16th [of June]. The length of the new canal—which is the second to join the North Sea and the Baltic, following the Kaiser Wilhelm Ship Canal, or Kiel Canal, which was finished five years ago at a cost of 156,000,000 marks (\$37,128,000)—is about 41 miles. The available breadth of the new canal is 72 feet; breadth of the lock gates, 46 feet; length of the locks, 87 yards; depth of the locks, 8 feet 2 inches. The canal is crossed by twenty-nine bridges, erected at a cost of \$1,000,000. The span of the bridges is in all cases not less than 30 yards and their height above water level about 15 feet. There are seven locks, five being between Lübeck and the Möllner See—the highest point of the canal—and two between Möllner See and Lauenburg-on-the-Elbe."—*United States consular reports, Sept. 1900, p. 8.*

A memorandum by the British chargé d'affaires in Berlin on the Elbe-Trave canal says that the opening of the Kaiser Wilhelm canal injuriously affected the trade of Lübeck. This was foreseen, and in 1894 a plan was sanctioned for the widening of the existing canal, which only allowed of the passage of vessels of about thirty tons. The direction of the old canal was followed only to some extent, as it had immense curves, while the new bed was fairly straight from Lübeck to Lauenburg, on the Elbe above Hamburg. The memorandum states that the undertaking is of great importance to the states along the Elbe, as well as to Sweden, Norway, Denmark and Russia. It will to some extent divert traffic from Hamburg, and possibly reduce somewhat the revenue of the Kaiser Wilhelm canal.

1900 (September).—Government loan placed in America.—Great excitement and indignation was caused in September by the action of the imperial government in placing a loan of 80,000,000 marks (about \$20,000,000) in the American money market. On the meeting of the Reichstag, the finance minister, von Miquel, replying to attacks upon this measure, explained that in September the state of the German market was such that if they had raised the 80,000,000 marks at home the bank discount rate would have risen above the rate of 5 per cent. before the end of the year. It

was urgently desirable to attract gold from abroad, and there was no country where money was so easy at the time as in the United States. This was due to the extraordinarily favorable balance of American trade and the remarkable increase in exports out of all proportion to the development of imports. Another reason was the American currency law, which enabled the national banks to issue as much as 100 per cent. of their capital in loans, whereas they formerly issued only 90 per cent.

1900 (Oct. 9).—Lèse-majesté in criticism of the emperor's speech to soldiers departing for China, enjoining no quarter and commending the Huns as a military example.—On October 9th, a newspaper correspondent wrote from Berlin: "The Berlin newspapers of yesterday and to-day chronicle no fewer than five trials for 'lèse-majesté.' The most important case was that of Herr

MAXIMILIAN HARDEN

Maximilian Harden, the editor of the weekly magazine *Zukunft*. Herr Harden, who enjoyed the confidence of the late Prince Bismarck, wields a very satirical pen, and has been designated 'The Junius of modern Germany.' In 1898 Herr Harden was convicted of lèse-majesté and was sentenced to six months' incarceration in a fortress. In the present instance he was accused of having committed lèse-majesté in an article, 'The Fight with the Dragon,' published in the *Zukunft* of August 11. The article dealt with the speech delivered by the Emperor at Bremerhaven on July 27, 'the telegraphic transmission of which, as was asserted at the time, had been forbidden by Count von Bülow.' The article noted as a fact that the Emperor had commanded the troops who were leaving for China to give no quarter and to make no prisoners, but, imitating the example of Attila and the Huns, to excite a terror in East Asia which would last for a thousand years. The Emperor had added, 'May the blessing of God attend your flags and may this war have the blessed result that Christianity shall make its way into

China.' Herr Harden in his comments on this speech had critically examined the deeds of the historic Attila and had contrasted him with the Attila of popular story in order to demonstrate that he was not a proper model to set up for the imitation of German soldiers. The article in the *Zukunft* had also maintained that it was not the mission of the German Empire to spread Christianity in China, and, finally, had described a war of revenge as a mistake." No publicity was allowed to be given to the proceedings of the trial. "Herr Harden was found guilty not only of having been wanting in the respect due to the Emperor but of having actually attacked his Majesty in a way that constituted *lèse-majesté*. The Court sentenced him to six months' incarceration in a fortress and at the same time directed that the incriminated number of the *Zukunft* should be destroyed.

1900 (October 18).—Change in the imperial chancellorship.—On October 18, the emperor acceded to the request of the imperial chancellor, Prince Hohenlohe-Schillingsfürst, to be relieved of his offices, and appointed Count von Bülow, minister of state and secretary of state to the foreign office, to be imperial chancellor and minister for foreign affairs. Count von Bülow was the third of the successors of Prince Bismarck in the high office of the imperial chancellor. Prince Hohenlohe had nearly reached the age of 82 when he asked leave to retire from public life.

1900-1909.—Von Bülow as chancellor.—Domination of the Centre.—The bloc.—Revision of the bourse law.—Forcible acquisition of Polish estates.—Defection of the Conservatives.—Resignation of von Bülow.—"Bülow, the next chancellor, continued the policy of his predecessor [Hohenlohe]; he further conciliated the Centre by a measure of 1904 repealing a clause of the anti-Jesuit law which forbade the settlement of individual Jesuits in Germany. The Centre responded by securing a reform of imperial finances, the adoption of new commercial treaties, and a further enlargement of the navy. But Bülow wearied of the Centre's domination and the concessions to the Catholics which it forced from him. In 1906, when the Centre blocked the passage of a bill involving increased colonial subsidies, the Reichstag was immediately dissolved with the hope that the power of the Centre might be destroyed. But the Centre emerged from the elections of January 1907 as strong as ever. . . . The chief result of the elections and the agitations which preceded them lay in the new allegiance which the Free-thinking parties now owed to the measures of the Government. Bülow could oppose the Centre and the Social-Democrats and secure the passage of measures by a combination of parties from the Right and Left, the so-called *bloc*."—G. M. Priest, *Germany since 1740*, pp. 159-160.—"Although many members of the Bloc thought its enemies justified in predicting that it would speedily break down, the combination did hold together. . . . It passed at least two good laws. It revised the Bourse Law in a manner fairly satisfactory to the financial community, so that swindling speculators will henceforth find it less easy to get the sanction of the courts for repudiating debts incurred in stock operations. Another law regulates for the first time on a national basis the right of assembly and association, which had hitherto been in the hands of the individual states. It is interesting to note that this is another important step in the centralizing tendency in Germany."—W. C. Dreher, *Year in Germany (Atlantic Monthly, Jan., 1909)*.—"It was in 1886 that the

Iron Chancellor started the fight against the Poles by the expulsion of more than 50,000 Polish labourers, natives of Austria and Russia. This measure not only hit the poor people who were driven away, it also and principally was directed against the Polish owners of large landed estates in the Eastern provinces, who thereafter experienced great difficulty in obtaining the necessary number of farm-hands. This artificial scarcity of labour, together with the great decrease in price of agricultural products which had just taken place, entirely ruined many owners of large estates, and there were therefore a great number who wanted to sell. Bismarck then appointed a Committee of Colonisation to buy Polish estates and parcel them out to German peasant farmers. The necessary funds were provided for by a sum of 100,000,000 marks (equal to £5,000,000) which was placed at the disposal of the committee.

"At the first moment the Poles were paralyzed. What were they to do to ward off such an attack aimed at the poorest among them? But they kept up a good heart and did the only reasonable thing: some wealthy Polish noblemen furnished a sum of 3,000,000 marks (equal to £150,000) whereby to fight the mighty Prussian Government, with its Committee of Colonization and well-nigh inexhaustible financial resources. With this capital of 3,000,000 marks a Polish land bank was started for the purpose of buying estates and reselling them in small holdings to Polish colonists. . . .

"It may be guessed from what is already stated that the Poles have not only been able to maintain their former hold on the land, but actually as peaceable conquerors are marching triumphantly westwards. This is also the case, but we need not restrict ourselves to a guess, the '*Statistisches Jahrbuch für den Preussischen Staat*' for 1903 containing ample corroboration of it. According to this official handbook there were parcelled out in the years 1806 to 1901, in the Provinces of Posen and West Prussia, 7,828 estates by German activity, containing 617,200 hectares, and 9,079 estates by Polish activity, containing 213,700 hectares. Although the Germans have parcelled out a very considerably larger area, the Poles have bought and parcelled out a far greater number of properties. The advantage thus obtained is put into an even stronger light when we learn that during the same period by this parcelling out there have been created only 15,041 German farms, with an area of 155,200 hectares, as against 22,289 Polish farms, with an area of 95,800 hectares, for these figures show that during these six years more than 6,000 Polish homes have been established over and above the number of German homes planted on old Polish soil. Moreover the advantage thus gained by the Poles has been increased during the last two years."—E. Givskov, *Germany and her subjected races (Contemporary Review, June, 1905)*.—See also POLAND: 1872-1910.—"The measure . . . for the forcible acquisition of Polish estates was duly laid before the Diet and passed Feb. 27, 1908]. The discussion of the bill brought out intense antagonisms, and the line of cleavage between the parties was not along Bloc lines. The Radicals joined with the 'Centrum' in opposing the dispossession of the Poles. As finally passed, the bill gives the Government the right to acquire, under the law of eminent domain, a maximum of 174,000 acres in the provinces of Posen and West Prussia, and to borrow \$65,000,000 for this purpose and for further prosecuting settlement work."—W. C. Dreher, *Year in Germany (Atlantic Monthly, Jan., 1909)*.

In his advocacy of this measure Prince Bülow

proclaimed the reasons for it without reserve. "Can we," he asked, "do without the two Polish provinces, one of which begins within 75 miles of Berlin. That is the crucial point of the situation; there is no doubt about it. Our eastern provinces constitute the point of least resistance in the public body. We dare not wait until the grave disease, with its probable irreparable consequences, sets in." An English view of the measure is presented in the following:

"Prince Bülow is only developing the policy of Bismarck, who perceived, as Frederick the Great did before him, that the possession of Posen was vital to the Prussian State, and who held that the surest way to secure that province was to plant German settlers on Polish land. The strategical importance of Posen has been a cardinal article in the political and military creed of all Prussian statesmen and soldiers for generations. Posen is of far more importance to Prussia than is Ireland to Great Britain, and the true motives which have induced Prussian statesmen to make the agrarian proposals embodied in Prince Bülow's bill are to be found not in their comparatively trifling difficulties with liberals, radicals, and revolutionists at home, but in the foreign policy of the court. . . .

"That portion of Poland which was given to Prussia by the Congress of Vienna has been administered by that Power in accordance with the spirit of Frederick the Great. The object of Frederick was to develop the intellectual and material resources of his Polish possessions, making them an integral part of the Prussian monarchy, and gradually eliminating all recollections on the part of the Poles of their having once been an independent nation. This policy to be successful should be carried out by officials with intellects as clear, if not as powerful, as that possessed by Frederick himself. The Prussian officials, however, who have administered Posen since 1815, have not always risen to the height of their mission. Edward Henry v. Flottwell, who was charged with the government of the province from 1830 to 1840, alone understood the conditions of success. He knew that in politics it is as mischievous as it is futile to endeavour to reconcile the irreconcilable. The efforts made in that direction after 1815 strengthened the revolutionary spirit in Posen. On the retirement of Flottwell, Frederick William IV. tried again to propitiate Polish national feeling, with the result that the irreconcilable forces grew in strength, and in March, 1848, the Poles were the driving-power of the Revolutionary movement in Berlin. . . .

"As far as international life is concerned the true significance of the Polish question is in the relations it has created between the three great Northern powers. Those between Prussia and Russia have in consequence become extremely intimate. At the present moment that intimacy is as great, if not greater, than at any previous time. Besides the German ambassador at St. Petersburg [Petrograd] and the Russian Ambassador at Berlin, there is a German military officer at St. Petersburg, and a Russian military officer at Berlin, who are especially charged to convey intimate communications between the Czar and the Kaiser. In spite of the alliance between Russia and France, which was concluded by the former Power mainly for financial reasons, and which has never much disturbed the equanimity of Berlin, it is quite certain that in no conceivable circumstances will there be a real breach between Prussia and Russia. The Government of the Kaiser must and will make every possible conces-

sion to Russia rather than provoke a serious breach. This is the true inwardness of the policy as regards Poland. As long as Posen continues Polish Germany will be largely dependent on Russia."—R. Blennerhasset, *Significance of the Polish question (Fortnightly Review, Mar., 1908)*.

Dr. Dillon, who reviews European politics regularly for the *Contemporary Review*, says with positiveness that the Polish expropriation bill was passed "against the better judgment of press, bar, gentry, political parties and people." He cites it as an illustration of the absolute domination under which the Prussian legislature is held, and maintains that national feeling and opinion have, practically, no influence over Prussian policy and no weight in the conduct of Prussian affairs. Concerning motives behind the Polish expropriation, this well-informed writer reports it to be a prevalent belief in Austrian and other political circles that the bill was driven through as a military measure, in anticipation of some future hostile alliance between Russia and Great Britain. It seems to be the belief that the Kaiser, if not his ministers, is haunted with the expectation of a war to be fought with those powers in combination, and is determined that, if a British fleet in the Baltic is ever coöperating with a Russian army, there shall be a population of patriotic Germans instead of disaffected Prussian Poles between them and Berlin. "Through various and in numerous compromises the *bloc* remained intact until 1909, but in that year the Conservatives voted against an inheritance tax, and with the aid of the Centre they passed a financial reform bill which was very different from the one which Bülow had proposed. The *bloc*, was blasted by this defection of the Conservatives; the Centre again became powerful; and Bülow, rather than henceforth seek the support of the Centre for his majorities, resigned his chancellorship (July 1909)." —G. M. Priest, *Germany since 1740, p. 160*.

1900-1912.—Imperial legislation.—Adoption of the new civil code.—Inadequate revenues and matricular contributions.—Tax on unearned increment.—National debt, 1912.—"The general tendency and effect of the most important legislation since 1890 has been toward further consolidation of the Empire. The completion and adoption of a new Civil Code, which went into effect January 1, 1900, added more strength to German national unity than any other measure adopted since 1871. This new code put an end to the bewildering diversity of laws in the different states and established a body of law which regulates nearly all legal matters; for example, indebtedness, movable property, and family and inheritance rights. Financial legislation has presented a much more difficult problem. Until the turn of the century the revenues of Bismarck's protective tariff more than covered the expenses of the Imperial Government. But in the meantime commercial treaties with other countries, entailing reductions in German import duties, had diminished imperial revenues, and the expansion of the army and the creation of the navy had caused huge outlays, for which provision had not been made. The Government was again financially dependent upon the matricular contributions from the states of the Empire just as it had been in the seventies. It was therefore agreed (1904 and 1906) that the states should pay fixed matricula, which, it was thought, would make up the deficits. But the matricula and other revenues were still insufficient, and meanwhile the national debt was increasing enormously; between 1900 and 1907 it rose from

\$600,000,000 to \$1,000,000,000. The financial legislation of 1900 was far more effective than that which preceded it. By the law of 1900 the matricula were doubled; a higher tax was laid on tobacco, liquor, coffee, and tea; and new taxes were put, chiefly, on checks, bills of exchange, dividends and interest, matches and means of illumination. The annual imperial revenues thus increased by \$125,000,000. The addition in 1911 of a tax on unearned increment enlarged the revenues still further. But the army bills passed in recent years have alone swallowed up a very large part of the increase. The national debt in 1912 was \$1,200,000,000, involving the payment of interest to the amount of \$45,000,000. The railways of the Empire were brought into closer cooperation in 1909, but the union of all the railways in an imperial system is still incomplete."—G. M. Priest, *Germany since 1740*, pp. 155-156.—See also CODES: 1876-1911.

1900-1915.—Naval expenditures. See WAR, PREPARATION FOR: 1900-1915.

1901 (January).—Promised increase of protective duties.—Prussian canal scheme enlarged.—In the Reichstag—the Parliament of the empire—on January 26, the agrarians brought in a resolution demanding that the Prussian government should use its influence to secure a "considerable increase" in the protective duties on agricultural produce at the approaching revision of German commercial policy, and should take steps to get the new Tariff bill laid before the Reichstag as promptly as possible. In response, the imperial chancellor, Count von Bülow, made the following declaration of the policy of the government, for which all parties had been anxiously waiting: "Fully recognizing the difficult situation in which agriculture is placed, and inspired by the desire effectively to improve that situation, the Prussian Government is resolved to exert its influence in order to obtain adequate protection for agricultural produce by means of the Customs duties, which must be raised to an extent calculated to attain that object." The canal scheme which suffered defeat in the Prussian diet in 1890 (see above), and the rejection of which roused the wrath of the emperor, was again brought forward, at the opening of the session of the Landtag, in January, 1901, with a great enlargement of its scope and cost, and with an emphatic expression of the expectation of his majesty that the bill providing for it should be passed. The bill covered no less than seven different projects, of which the total cost to the state was estimated at about 380,010,700 marks, or nearly \$100,000,000. These include the Rhine-Elbe canal, which is calculated to cost 260,784,700 marks; a ship canal between Berlin and Stettin, to cost 41,500,000 marks; a waterway connecting the Oder and the Vistula, of which the cost, together with that of a channel rendering the Warthe navigable for ships from Posen to the junction of the Netze, is estimated at 22,631,000 marks, and a canal connecting the province of Silesia with the canal joining the Oder to the Spree. The bill further proposed that the State should participate in the work of improving the flow of water in the lower Oder and the upper Havel to the extent of 40,980,000 marks and 9,670,000 marks respectively, and should contribute the sum of 9,336,000 marks towards the canalization of the Spree.

1904.—End of the Kulturkampf.—"In 1904 one of the last vestiges of the Kulturkampf, the clause shutting out the Jesuits from German territory, disappeared. The Centre, for their part, realised that if they did not wish to condemn their party to an implacable and in the long run barren opposition, they must recognise the accomplished fact, frankly accept the new Empire and rally round a national policy. They consequently succeeded very cleverly in moderating their particularistic tendencies, on the one hand, in such a way as not to lay themselves open to the suspicion of separatist ambitions; and on the other hand so tempered their ultramontanism as no longer to give any grounds for the reproach which had been made against them of being an unpatriotic association."—H. Lichtenberger, *Germany and its evolution in modern times*, p. 245.

1907-1908.—Trial of Maximilian Harden for his attack on Prince Eulenburg and Count von Moltke.—Maximilian Harden, editor of the *Zukunft*, made attacks on the character of Prince Eulenburg and Count Kuno von Moltke, in 1907, on account of which the latter brought a libel suit against him. "The charges not only affected the character of the persons accused, but affirmed that they had constituted a kind of kitchen cabinet, or 'Camarilla,' and had again and again given the Emperor misleading information and had exerted a very unfortunate influence over him. The case aroused intense interest throughout Germany, and indeed throughout Europe; and in spite of the unseizable nature of the charges, the testimony was widely reprinted. . . . Harden was acquitted, and the plaintiff was sentenced to pay the cost of the suit. Taking into account the exalted political position of the accused, and the great respect in which the Imperial court is held in Germany, this action of a German judge was regarded as sustaining the high character of the German courts for independence. A criminal suit was then brought by the public prosecutor, at the instigation of Count von Moltke and his associates, on the charge that Harden had committed an offense against public morals. On this trial the same witnesses appeared as on the former trial, but a great change had taken place in their memory of the transactions to which they had testified on the first trial. They either contradicted or repudiated their former statements to such a degree that their evidence was discredited and Harden's defense was broken down. Harden was found guilty and sentenced to four months' imprisonment. What changed the attitude of the witnesses is a matter of guesswork. It has been charged that their change of front was due to very powerful influences brought to bear upon them."—*Outlook*, Jan. 18, 1908.

An appeal was taken by Harden to a higher court. Official investigations which followed the trials resulted in the court-martialing of Count Lynar and General Hohenau, the former of whom was sentenced to fifteen months' imprisonment, while the latter was acquitted. In May, 1908, Prince Eulenburg was arrested on charges of immorality, but appears to have been so shattered in health that he could not be brought to trial. Substantially, Harden was vindicated.

1907-1909.—Friction with France after the Casablanca incident.—Commercial activities. See MOROCCO: 1907-1909; 1909; FRANCE: 1906-1909; Presidency of Armand Fallières.

1907-1914.—Strength of the Social-Democrats.—Attitude of William II.—Elections of 1907

and 1912.—Attitude of the Social-Democratic party towards the World War.—"In the autumn of the same year [1800] the Social-Democrats held with great enthusiasm the first of their annual general meetings of delegates. Disruptive influences have appeared in all these meetings; but the party has lost only individuals, it has never broken into groups. No other party, except the Centre, holds so closely together. Since 1881 the party has lost seats in the Reichstag in two elections, but the number of votes it has polled has increased without break. . . . The conciliatory policy which the Government adopted by allowing the Law of Exceptions to expire [1890] had no visible effect on the temper and solidarity of the party. The Government therefore soon returned to repressive measures, particularly in keeping a close watch on Social-Democratic gatherings and in haling speakers before the courts on charge of seditious utterances. The emperor William II has declared repeatedly that he considers a Social-Democrat a personal enemy of himself and of the Empire. . . . The Government and the parties of the Right oppose the Social-Democrats so vigorously because they fear the complete overthrow of existing institutions. The German workingman, . . . has profited by the prosperity of the last decades; he alone has enjoyed the gain of the socialistic legislation. The Social-Democrat is therefore less sweeping in his condemnation of the existing order. . . . What the Social-Democrat most desires for the immediate future is more, if not complete, coöperation in government on the part of every adult German."—G. M. Priest, *Germany since 1740*, pp. 161-162.—"The way the 4,216 local societies [of the Social Democrats] submit to the forty-eight country and district associations, and these again to the Central Association; the way enormous subscriptions are paid as if they were lawful taxes; the way the huge demonstrations are arranged, as if they were military operations; all this is not the result only of enthusiasm for a political party, it is also due to the sense of discipline which the German has in his blood. No nation in the world possesses or has ever possessed a like or even a similar party organization. The clubs of the Jacobins, which were spread like a network over France, were only a pale prototype. . . . The struggle of the labouring classes for better conditions of life, which originated at the time of the inception of the Social Democratic movement, has grown at times in Germany to a fanatical hatred of property and culture, birth and position. The excellent arrangements to raise the status of the workmen have not had much effect on this envy. . . . The German Social Democrats cling most lovingly, and with tenacious obstinacy, to the ultimate goal of Socialism, the destruction of differences in wealth by the suppression of private property and the nationalization of the means of production."—B. von Bülow, *Imperial Germany*, pp. 220, 224-225.—"The elections of 1907 inflicted the severest loss that the Social Democrats had experienced since the founding of the Reichstag; the elections of 1912 brought them the greatest gain. The parties of the Right fell from the hundred and thirteen seats that they had won in 1907 to sixty-nine in 1912. That is the smallest number of members of the Right since the year 1874. The number of Liberals in the Reichstag after the elections of 1912 was lower than ever before. At the elections of 1907, for the first time, Conservatives and Liberals of all shades of opinion were united for one cause. The elections of 1912 saw a close coalition of all the parties of the Left. In 1907 the Right emerged from the elections as the strongest group, numbering a hun-

dred and thirteen members as against a hundred and six Liberals, a hundred and five representatives of the Centre, and forty-three Socialists. In the year 1912 the Social Democrats were the strongest party in the Reichstag, with a hundred and ten members. . . . Since the year 1884, the number of votes recorded in favour of the Social Democrats has steadily increased. In round numbers the votes recorded . . . and the number of seats they obtained in the Reichstag are:

	votes	seats
1884.....	550,000	24
1887.....	763,000	11
1890.....	1,427,000	35
1893.....	1,787,000	44
1898.....	2,107,000	56
1903.....	3,011,000	81
1907.....	3,539,000	43
1912.....	4,250,000	110."

—Idem, *Imperial Germany*, pp. 174-175, 203.—"The party has [1914] the support of three-fourths of Germany's labor unionists. It owns 86 daily papers and controls many thousands of subsidiary organizations of various kinds. The actual or potential influence of such a party upon public opinion, if not directly upon the government, is evident. . . . Its position was clearly defined by its anti-war proclamations of July 25th and 31st, by the editorials of *Vorwaerts* and *Die Neue Zeit*, the official party organs, and by the resolutions of the Berlin mass meetings of July 29th, and the revolutionary resolutions of the Wurtemberg Socialist Convention, then in session. In all of these documents it will be noted that there is the strongest possible opposition to the war and that every conceivable argument is used against it. Even the most opportunistic Socialist newspapers, now very warlike, offered no exceptions. We close . . . with the official declaration of the party in the Reichstag, on August 4th, in favor of supporting the war.

"A most serious hour is upon us, an hour in which a matter of life and death confronts us. The results of the imperialistic policy which furnishes cause for the entire world to take up arms and permits the horrors of war to engulf us, the results of this policy, I say, have broken forth like a storm flood. The responsibility for this calamity falls upon supporters of this policy. We, ourselves, are not responsible. . . . The Social Democratic Party has always combated this policy to the utmost, and even to this hour we have agitated for the maintenance of peace by great demonstrations in all countries, and, above all, by our co-operation with our French brothers. Our exertions have been in vain. And now we are only too surely confronted by the fact that war is upon us and that we are menaced by the terror of foreign invasion. The problem before us now is not the relative advisability of war or peace, but a consideration of just what steps must be taken for the protection of our country. At this moment let us think of the millions of our compatriotic comrades, who, through no fault of their own, will be involved in this calamity; it is they who will suffer most acutely from the devastation that war inevitably brings in its train. Our best wishes accompany those of our brothers who have been summoned to arms, no matter what their party. . . . We think also of the mothers who must be separated from their sons, and of the wives and children who are being robbed of their bread-winners and who in consequence dwell in constant torment and fear as to the fate of their loved ones, threatened themselves, meanwhile, by the terrible sword of hunger. Tens of thousands will be wounded or will return as invalids. Let us regard it as our duty to assist

these unfortunates, to mitigate their sufferings, and to minister to their indescribable need. But as far as concerns our people and its independence, much, if not everything, would be endangered by a triumph of Russian despotism, already weltering in the blood of her own noblest sons. It devolves upon us, therefore, to avert this danger, to shelter the civilization and independence of our native land. Therefore, we must to-day justify what we have always said. In its hour of danger Germany may ever rely upon us. We take our stand upon the doctrine basic to the international labor movement, which at all times has recognized the right of every people to national independence and national defense, and at the same time we condemn all war for conquest. We hope that as soon as our opponents are ready for negotiations, an end will be made to the war and a state of peace induced which will make possible friendly relations with our neighbors. We do not regard this in the light of a contradiction to our duty in connection with international solidarity to which we are just as firmly bound as to Germany itself. We hope that this fatal strife will prove a lesson to the millions who will come after us, a lesson which will fill them with lasting abhorrence for all warfare. May they be converted by this to the ideal of Social Democracy and international peace. And now, bearing these thoughts in mind, we give our sanction to the voting of those moneys demanded. . . . Those Reichstag Socialists who were present at the session, in obedience to the decision of the party caucus, voted unanimously in favor of the war loan."—W. E. Walling, *Socialists and the war*, pp. 129-130, 143-145.

1908.—Present at maritime conference in London. See LONDON, DECLARATION OF.

1908.—Treaty with Denmark, England, France, the Netherlands, and Sweden, for maintenance of the *status quo* on the North sea. See NORTH SEA: 1908.

1908 (April).—Passage of law defining for the empire at large the rights of association and public meeting.—The rights of association and public meeting were determined for the empire at large for the first time by an enactment of the Reichstag in April, 1908. Hitherto each State had regulated these fundamental matters of political freedom by legislation of its own, some with considerable latitude, and others, especially in the north German states, with a narrow restraint, subject, in an intolerable degree, to the discretion or will of the police. The national law now brought into force, superseding the local legislation, enlarged greatly the liberty of citizens to associate themselves for legitimate purposes and to hold public meetings. An attempt to forbid the use of any foreign language at public meetings was defeated; but public speaking in other languages was sanctioned only in districts where sixty per cent. of the population use the foreign tongue. This does not apply, however, to international congresses in Germany, or to meetings of electors for the election of legislative representatives, federal or state; and the states have some privilege of modifying the rule.

1908 (November).—Excitement in Europe over a published interview with the emperor.—What may fairly be called a "row" in the European world, and of the greatest liveliness in Germany itself, arose, early in November, 1908. "The 'storm' arose from the publication, in the London *Daily Telegraph* of October 28, 1908, of an interview coming, as the editor said in introducing it, 'from a source of such unimpeachable authority that we can without hesitation commend the ob-

vious message, which it conveys to the attention of the public.' As to the origin and composition of the interview a good deal of mystery still exists. All that has become known is that some one, whose identity has hitherto successfully been concealed, with the object of demonstrating the sentiments of warm friendship with which the Emperor regarded England, put together, in England or in Germany, a number of statements made by the Emperor and sanctioned by him for publication. Whether the Emperor read the interview previous to publication or not, no official statement has been made; it is, however, quite certain that he did. . . . [The kaiser spoke of his friendship for England:] 'I have referred,' he said, 'to the speeches in which I have done all that a sovereign can to proclaim my goodwill. But, as actions speak louder than words, let me also refer to my acts. It is commonly believed in England that throughout the South African War Germany was hostile to her. German opinion undoubtedly was hostile—bitterly hostile. The Press was hostile; private opinion was hostile. But what of official Germany? Let my critics ask themselves what brought to a sudden stop, and, indeed, to absolute collapse, the European tour of the Boer delegates who were striving to obtain European intervention? They were fêted in Holland; France gave them a rapturous welcome. They wished to come to Berlin, where the German people would have crowned them with flowers. But when they asked me to receive them—I refused. The agitation immediately died away, and the delegation returned empty-handed. Was that, I ask, the action of a secret enemy? Again, when the struggle was at its height, the German Government was invited by the Governments of France and Russia to join with them in calling upon England to put an end to the war. The moment had come, they said, not only to save the Boer Republics, but also to humiliate England to the dust. What was my reply? I said that so far from Germany joining in any concerted European action to put pressure upon England and bring about her downfall, Germany would always keep aloof from politics that could bring her into complications with a Sea Power like England. Posterity will one day read the exact terms of the telegram—now in the archives of Windsor Castle—in which I informed the Sovereign of England of the answer I had returned to the Powers which then sought to compass her fall. Englishmen who now insult me by doubting my word should know what were my actions in the hour of their adversity.' . . . There are more indiscretions than one in the interview. . . . Such a revelation coming from the Emperor ought, one would suppose, to have caused serious trouble between Great Britain and her Entente friends. That it did not is at once testimony to the cynicism of Governments and the reality and strength of the Entente engagement. . . . The excitement in Germany caused by the publication of the interview soon took the shape of a determination on the part of the Chancellor and the Federal Council, for once fully identifying themselves with the feelings of Parliament, Press, and people, that 'something must be done,' and it was decided that the Chancellor should go to Potsdam, see the Emperor, and try to obtain from him a promise to be more cautious in his utterances on political topics for the future. . . . What passed at Potsdam between the Emperor and his Chancellor has not transpired. . . . It should not be difficult to imagine the mental attitudes of the two men on the occasion, and especially not difficult to imagine the sensations of the Emperor,

a Prussian King, on being impeached by a people—his people—for whom, his feeling would be, he had done so much, and in whose best interests he felt convinced he had acted; but whatever occurred, it ended in the Emperor bowing before the storm and giving the assurances required. . . . The text of these assurances, which was published in the *Official Gazette* the same evening, was as follows: 'His Majesty, while unaffected by public criticism which he regards as exaggerated, considers his most honourable imperial task to consist in securing the stability of the policy of the Empire while adhering to the principle of constitutional

KAISER WILLIAM II

responsibility. The Kaiser accordingly endorses the statements of the Imperial Chancellor in Parliament, and assures Prince von Bülow of his continued confidence.' After returning to Berlin, Prince von Bülow gave in the Reichstag his impatiently awaited account of the result of his mission, and made what defence he could of his imperial master's action in allowing the famous interview to be published. . . . [The speech in part is as follows:] 'For the fault which occurred in dealing with the manuscript I accept, as I have caused to be said in the *Norddeutsche Allgemeine Zeitung*, entire responsibility. It also goes against my personal feelings that officials who have done their duty all their lives should be stamped as transgressors because, in a single case, they relied too much on the fact that I usually read and

finally decide everything myself. . . . When the article in the *Daily Telegraph* appeared, its fateful effect could not for a moment be doubtful to me, and I handed in my resignation. This decision was unavoidable, and was not difficult to come to. The most serious and most difficult decision which I ever took in my political life was, in obedience to the Kaiser's wish, to remain in office. I brought myself to this decision only because I saw in it a command of my political duty, precisely in the time of trouble, to continue to serve his Majesty the Kaiser and the country. . . . How long that will be possible for me, I cannot say."—S. Shaw, *William of Germany*, pp. 303-304, 306-310, 314-315.—Von Bülow resigned in the following year, but for different reasons. See above: 1900-1909.

1909 (July).—Von Bethmann-Hollweg appointed imperial chancellor.—Upon the resignation of von Bülow, the emperor appointed von Bethmann-Hollweg imperial chancellor, president of the Prussian ministry, and minister for foreign affairs.

1909 (September).—Speech of the emperor on the pride of his subjects in "the Game of War." See WAR, PREPARATION FOR: 1909-1913: Anticipation, etc.

1909 (December).—Mannesmann mining concession. See MOROCCO: 1909.

1909-1914.—Commercial relations with various countries. See TARIFF: 1909-1914.

1910.—Electoral reform in Prussia postponed.—The Prussian Electoral Reform Bill of 1910 was a great disappointment to the people, particularly to the Social-Democrats who favored a secret ballot and universal suffrage. Their demonstrations met with unusually rigid police activity, but the government withdrew the measure, and the old system continued. On August 25 Wilhelm II uttered at Königsberg the celebrated words, "Looking on myself as God's instrument, I shall go my way without regard to the ideas and opinion of the time," a position which the chancellor, Bethmann-Hollweg defended in the Reichstag. But for various reasons, the Conservative-Centrist bloc was shaken and the opposing national liberal party became united, while the Social-Democrats increased in strength and activity in mass meetings voicing the popular discontent.

1911.—Relations with Liberia.—Desire for control. See LIBERIA: 1911-1913.

1911.—Acquisition of part of the French Congo.—"The latest of Germany's colonial possessions came to her in 1911, and its acquisition was part of the final Morocco settlement. In that year Germany agreed to recognize the paramount influence of France in the Sultanate, while France ceded to Germany by way of compensation, about 100,000 square miles of her Congo empire; and agreed in the event of the disruption of the Congo Free State, to waive her right of pre-emption regarding it in favor of the international regulation of the question, i.e., regulation by the Powers which were parties of the Congo Act of 1885. . . . By the acquisition of part of the French Congo [New Kamerun] the Cameroon colony was extended to the Congo and Ubanghi rivers."—British Foreign Office, *German colonization (Handbook, no. 42, p. 89)*.

1911-1913.—Guarantees Belgian neutrality. See WORLD WAR: Diplomatic background: 36.

1911-1918.—Alsace-Lorraine constitution.—A bill to organize Alsace-Lorraine as a constituent province of the empire, at first provided it with a representation in the federal council without any voting power. The Social-Democrats held protest meetings in all parts of Alsace-Lorraine, and in the Reichstag were supported by Centrists and Liberals to secure for the province three votes in the federal council. On May 26, 1911, the bill was passed by a vote of 211 to 93. The German emperor exercising sovereign power appointed a *Statthalter* who stood at the head of the government at Strassburg, the capital. Local laws were made with the consent of two chambers and of the emperor. The first chamber was composed of nominated members while the second was elective by secret ballot on the basis of universal suffrage. It may be added that Alsace-Lorraine representatives in the federal council had no right to vote on constitutional changes. When France took over the provinces on November 26, 1918, universal suf-

frage was granted.—See also ALSACE-LORRAINE: 1011.

1912.—Balkan and Asia Minor interests.—“If Germany was to carry her Mesopotamian and Turkish policy to success, another aspect of the Near Eastern Question concerned her very closely, namely, the position of the independent Balkan States. Should those nations become powerful and diplomatically autonomous the security of the path from Germany to Constantinople would be threatened. They must, therefore, be subjected to the domination of Germany, or better still, to that of Germany's ally, Austria; for Austria has always had greater success than Germany in dealing with the Slavs. In no event could the Slavs be allowed to control the Balkans, lest Germany's communications with Asia Minor be cut. [See BAGDAD RAILWAY: Plan.] Thus a regenerated Turkey must guard the Straits while Austria dominated the Balkans. With her ally, Austria, supreme on the Danube, and her friend, Turkey, in control of the Dardanelles, Germany might reasonably hope to be master of a sweep of territory extending from the North Sea to the Persian Gulf. She would cut Russia from her Mediterranean trade, hold the shortest route to the East, and threaten the position of the British in Egypt and India.”—C. Seymour, *Diplomatic background of the war*, pp. 208-209.—See also above: 1800-1914: Alteration of foreign policy; BALKAN STATES: 1913; WORLD WAR: Diplomatic background: 71, iv.

1912.—Growth of the Agrarian League.—Increase in agricultural products.—“They [the Agrarian League] formed societies—there were over twenty-six thousand of these in 1912—which aid small farmers in various ways, as purchasers of raw materials and selling agencies, and as savings and credit banks; they established schools of instruction in scientific farming, listing two hundred and twelve schools and nearly ten thousand pupils in 1911. Above all, German farmers employed every bit of technical science that could be applied to agriculture; it is said that no other country farms so scientifically or produces so much per acre. Between 1890 and 1912 the amount of rye produced in Germany within a year rose from 6.8 to 11 million tons, potatoes from 29.7 to 44.2 million tons; in the same period cattle increased from about 17 to 20.1 million head, pigs from 12 to 21.8 millions. On the other hand, more land was drawn into cultivation; indeed the cultivation of crops on land which was formerly used for grazing entailed a reduction in head of sheep from about 14 to 5.7 millions. At the same time the imports of wheat, oats, barley, and meat for immediate consumption exceeded the exports of the same articles in 1890 by 1.6 million tons and in 1912 by 5.2 million tons.”—G. M. Priest, *Germany since 1740*, p. 146.—“‘We have now seen,’ declared the German foreign secretary, Jagow, on February 7, 1913, ‘that we have not only points of contact with England of a sentimental nature, but that similar interests also exist. I am not a prophet; but I entertain the hope that on the ground of common interests, which in politics is the most fertile ground, we can continue to work with England and perhaps to reap the fruits of our labours.’ Thus co-operation in practical work had at last appeared to accomplish what the search for abstract formulas failed to achieve. Taking advantage of the new-born atmosphere of confidence and goodwill, the two Governments in the winter of 1913-14 proceeded to discuss two problems to which Germany attached the greatest importance. An adjustment of interests was at last reached in regard to the Bagdad railway, the joint exploitation of the

petroleum springs in the Mosul vilayet, and the navigation of the Tigris. The future of the Portuguese colonies was again debated. Baron Beyens, who was Belgian minister at Berlin at the time, states that Angola was earmarked as a German, and Mozambique as a British sphere of influence, Rohrbach declares that Germany was to have pre-emption whenever Portugal desired to sell Angola, contenting herself meanwhile with economic facilities. Whatever the exact details, an agreement highly gratifying to Germany was reached and initialled shortly before the outbreak of the war.”—G. B. Gooch and J. H. B. Masterman, *Century of British foreign policy*, pp. 105-106.—See also ENGLAND: 1912; 1912-1913; CAMEROONS: Exploration of the interior; WORLD WAR: Diplomatic background: 71, xii; 71, xiv.

1912-1913.—Foreign politics.—Appointment of Herr von Jagow as foreign secretary.—Anglo-German relations.—“In foreign politics the greatest achievement of Germany this year was the prevention of a European war, which would in all probability have broken out if the emperor William had not plainly declared, on the one hand to Austria-Hungary that he would not support her should she be involved in a war with Russia as the consequence of an attack by her upon Serbia, and on the other to Russia that if she attacked Austria-Hungary, notwithstanding her abstinence from active intervention in the Balkans, he would fight by the side of his Austrian ally. His speeches on the occasion of the celebration of the centenary of the War of Liberation in 1813, while proclaiming the past glories of the Prussian army, again affirmed his desire for peace and his conviction that a strong German army and navy are the most effectual means of maintaining it. Herr von Jagow, German ambassador in Rome, was appointed on January 14 to succeed the late Herr von Kiderlen-Waechter as foreign secretary. He has had little foreign experience, but obtained great credit both in Germany and in Italy for his success in renewing the Triple Alliance.”—*Annual Register*, 1913, pp. 321-322.

1913.—Zabern incident.—“The crassest of the outward, non-political manifestations of militarism in recent years was the Zabern affair [in Alsace]. A young lieutenant had sabered a crippled shoemaker for a real or fancied offense against military rules. The townspeople made a demonstration against the officer, and the colonel commanding the

regiment stationed at Zabern locked a number of the civilians in the cellar of the barracks and kept them there all night. This was too much even for a docile German Reichstag, and an excited debate was followed by the passing of a vote of censure on a government which, through the mouths of its Chancellor and War Minister, had justified the colonel's actions. The colonel and the lieutenant were convicted upon trial and adequate sentences were imposed upon them, but the convictions were significantly set aside upon appeal and both escaped punishment."—S. 1914.—Eve of the World War.—Attitude of press and people.—Anti-British sentiment.—"It is not for the historian to anathematize the uncompromising tone assumed by Germany in the crisis of 1914. . . . Without question the extraordinary growth of German population and the resulting development of German industry forced a natural expansion of commerce and led to the demand for a protecting navy. It was inevitable, given the German mentality, which has been dominated by Prussia in recent years, that there should follow a demand for political influence in the world at large, proportionate to the commercial influence exercised by Germany. . . . It was because political primacy on the Continent seemed the essential basis of Germany's world empire that she was determined to give the law to Europe in 1914, either by diplomacy or by war."—C. Seymour, *Diplomatic background of the War*, pp. 286-287.—During the critical days immediately preceding the outbreak of war public opinion in Germany was sharply divided. The people undoubtedly dreaded the possibility of war as strongly as the military party allegedly desired it. At the end of July the *Militärische Rundschau* declared: "If we do not decide for war, that war in which we shall have to engage at the latest in two or three years will be begun in far less propitious circumstances. At this moment the initiative rests with us. Russia is not ready, moral factors and right are on our side, as well as might. Since we shall have to accept the contest some day, let us provoke it at once. Our prestige, our position as a great Power, our honor, are in question; and yet more, for it would seem that our very existence is concerned." The other point of view was presented by the *Rheinisch-Westphälische Zeitung*, on July 24: "The Austro-Hungarian ultimatum is nothing but a pretext for war, and this time a dangerous one. As it seems, we are on the brink of an Austro-Serbian war. . . . It is a shame if the Imperial [German] Government had not required that demands of this kind should

be submitted to it beforehand. Our one duty now is to declare that we are not under any obligation to launch into a war to further the aggressive policy of the Hapsburgs." When the storm had broken loose, however, by Germany's declaration of war against Russia and France, the German people presented an almost united front. Even the Social Democrats, by a vast majority, supported the government. Their newspaper, *Vorwärts*, thus echoed the party's sentiments: "We were always open enemies of the monarchic form of government, and we always shall be. . . . But we have to acknowledge to-day that William II has shown himself the friend of universal peace."

"The *Berliner Nachrichten* took its own view and setting aside all question of alliance came out on July 25 with the following philosophic observation: 'If we must have a European war it is better for us that it should be this year and not 1917. By that date, Russia would have terminated her military reform and France would have filled the gaps pointed out by Senator Humbert.' This is a reference to the criticisms made by the French senator on the deficient military organization of his country; but the Prussian newspaper forgot that when he made them, the whole German press would not admit the gaps but alleged that it was merely a pretext to augment war preparations. More dangerous for the people were the semi-official communications proceeding now from some high military personage, now from some high civil employee; and more exciting for them was the financial news. Influenced by one and the other the crowds filled the streets singing that hymn which embodies all their hopes—*Deutschland über Alles*."—O. Ferrara, *Causes and pretexts of the World War*, p. 112.—When the British declaration of war against Germany became public, there were violent anti-British demonstrations in Berlin.—See also WORLD WAR: Causes: Indirect: k; Diplomatic background: 9; 12; 33; 34; 38; 40; 44; 64; 71, xxii; 71, xxiv; 71, xxix; 73, v; 76; 77.

1914-1915.—Food conservation.—Industrial and financial depression.—“Although the German Government was confident that the war would last but a few months, its first food-conservation order followed on the heels of the mobilization. The government took over all supplies of bread-stuffs and established a weekly ration of four metric pounds per person (about seventy ounces). Other similar measures followed fast. Meat was rationed, the weekly allowance varying from six to nine ounces in different parts of the Empire.” S. M. Bouton, *And the Kaiser abdicates*, pp. 64-65.—“On January 25, 1915, the government issued decrees regulating minutely the use of grain and flour. All available grain was seized for the War Grain Association, and for communal associations which undertook to keep the people from want. On New Year's Day, 1915, all Germany knew that the twelve months ahead would bring trials more fiery than any that the country had suffered since the overthrow of Napoleon I. And the German people, still labouring under the delusion that the war had been provoked by their enemies, were prepared to face those trials with the same determination and self-sacrifice which their ancestors had shown in the days of Stein. . . . Owing to the favorable strategic situations which the German armies had won for themselves, it was not the purely military side of the war which was the chief preoccupation of German statesmen or the main anxiety of the civilian population. The financial strain and the industrial depression were regarded with greater uneasiness, especially in Ham-

burg, which had become almost a ‘dead city.’ . . . The food supply caused the Germans considerable anxiety during the first few months of the year . . . but as the harvest approached, it was seen that though the country might suffer from scarcity there was no danger of actual famine.”—*Annual Register*, 1915, pp. 212-214.—See also **FOOD REGULATION: 1914-1918: Rationing in Germany; German food policy.**

1915-1916.—Conservation of national vitality.—“Quite early in the war a very influential committee was formed in Berlin to study how best to work for ‘the conservation and increment of the vitality of the nation.’ A conference was called in Berlin in 1915; when a large number of the best-known doctors, economists and sociologists in Germany spoke on the birth-rate and allied question. The provision of small holdings for soldiers was taken up very warmly; and the housing problem received much attention. Steps were taken to make detailed surveys of these matters and to prepare practical reports. Another body called the *Gesellschaft für Bevölkerungspolitik* (Society for ‘Population-politics’) was started in Berlin, also in 1915, under the presidency of Professor J. Wolf, of Breslau, the famous economist. Its objects were stated to be: (1) To promote the growth and vitality of the German race. (2) To assist in every way the education and feeding of large families. (3) To encourage the domestic training of women. (4) To work for better housing conditions and for the opening up of land for small cultivators. (5) To combat all diseases diminishing fertility and all attempts to employ women upon unsuitable work. (6) To protect the motherhood and young life of the nation. In South Germany, a further body was organised by Pastor D. Weber, called ‘The Committee for the Encouragement of Population,’ the aims of which were to approach the whole matter more from the religious standpoint and to counteract any dangerous tendencies associated with a materialistic view of the population problem. A Congress was held at Darmstadt, in November, 1916, under the presidency of von Gruber. The following points were especially emphasized: (1) Christian marriage must be strictly maintained; and early marriage should be encouraged. (2) Houses and small holdings specially suitable for family life must be arranged for.

(3) It should be necessary that people about to marry should produce medical certificates. There should also be a compulsory notification of sexual diseases. (4) Temperance is to be promoted [see LIQUOR PROBLEM: Germany: 1915-1918]. (5) Importance should be attached to the domestic education of women.”—M. Booth, *Social reconstruction in Germany*, pp. 23-24.

1916.—Formation of the Independent Socialist party.—While the majority of the German Social Democratic Party supported the government from the beginning of the war, an influential minority strongly opposed the war, its conduct, and the various war loans. These dissensions led to the formation of the Independent Socialist Party, originated by twenty socialists, including Bernstein, Liebknecht, Ledebour and Hugo Haase. The pro-government party was headed by Scheidemann and Ebert. Liebknecht was arrested, charged with high treason and sentenced to four years’ imprisonment.—See also SOCIALISM: 1912-1918; 1918-1919: German revolution; and below: 1922 (September-November).

1916.—Changes in government and army personnel.—Fall of von Tirpitz.—Among the important political and military changes during the year were the resignations of Dr. Delbrück, Minister of the Interior, and of the foreign secretary von Jagow. They were succeeded, respectively, by Dr. Helfferich and Herr Zimmermann. When Rumania had declared war on Germany, the emperor dismissed General von Falkenhayn from office as chief of the general staff and appointed Marshal von Hindenburg in his stead. The most sensational event, however, was the resignation, in March, of Grand-Admiral von Tirpitz, who, it was well known, was a powerful advocate of ruthless submarine warfare against Great Britain, without regard for the safety of subjects of neutral states or enemy non-combatants. More moderate counsels apparently prevailed, as von Bethmann-Hollweg and von Jagow were unwilling to risk complications with the United States. Tirpitz was succeeded by Admiral von Capelle as Minister of Marine.

1916.—War time measures.—Preventive arrest.—Auxiliary Service Bill.—“The anti-war movement, whatever may have been its actual dimensions, led to an extraordinary growth of police tyranny and to the institution of a system of what

was called 'preventive arrest.' Anybody who was suspected of holding revolutionary opinions or of taking the smallest part in any extreme pacifist agitation was liable to be suddenly arrested, in order to 'prevent' further 'mischievous' propaganda by the unfortunate person concerned. . . . This system of preventive arrest was at work all over Germany except in the kingdom of Bavaria, which, . . . was largely independent of the king of Prussia, even in war-time."—*Annual Register*, 1916, p. 241.—"The Government introduced in the Reichstag at the end of November a remarkable Bill to confer upon the State power to mobilize labour compulsorily for war-work. The Bill was called the 'Patriotic Auxiliary Service' Bill."—*Ibid.*, p. 243.

1916.—Daylight saving movement passed as an emergency war measure.—Results. See DAYLIGHT SAVING MOVEMENT: 1916.

1916.—Ministry of food supplies.—Food problem.—Peace proposal.—"A Ministry of Food Supplies was instituted, owing to the difficulties caused by the British naval blockade, and the official appointed to control this new department, who was generally known as the 'Food Dictator,' was Herr von Batocki, who had previously been President of the province of East Prussia, one of the most important agrarian districts in Germany. [See also WORLD WAR: 1916: XII. Political conditions: b.] . . . During the autumn the problem of food supplies became more serious than formerly. The shortage of meat was so great that the Food Dictator only allowed each adult of the population  $\frac{1}{2}$  lb. per week, and children received less. The potato crop had been very poor. . . . Although the harvest, in respect of cereals, had been superior to that of 1915, the position was on the whole considerably worse than it had been in the previous winter. The supplies secured by the conquest of Rumania were not large, as the Rumanians in their retreat had destroyed great stocks of grain."—*Annual Register*, 1916, pp. 238, 241.—"Great though the strength of the German nation was, that strength was severely strained after seventeen months of the European War. The blockade of the German coasts by the British fleet . . . had caused a very disagreeable insufficiency of certain kinds of food. . . . These trials, the horrible loss of life, the waste of wealth, the arduous, unpleasant, and unfruitful labor, had produced in the German people a deep yearning for peace."—*Ibid.*, pp. 220-230.—"The year . . . closed . . . with a definite and official offer on the part of Germany and her allies to enter into immediate peace negotiations. This offer was categorically rejected by the Entente Governments."—*Ibid.*, 1917, p. 209.—See also BELGIUM: 1916-1917; RUSSIA: 1916; Opposition of Duma; U. S. A.: 1916-1917; WORLD WAR: 1916: XI. 1916-1918.—Economic stringency.—Raw material and food substitutes.—"Much nonsense has been disseminated on the success of the Germans, Austrians, and Hungarians in inventing substitutes for the things that were hard to get during the war. . . . That much was done in that field is true enough. . . . The first thing the German scientists did at the outbreak of the war was to perfect the system of a Norwegian chemist who had succeeded two years before in condensing the nitrogen of the air into the highly tangible form of

crystals. . . . The British blockade had made the importation of niter from overseas impossible. There is no telling what would have happened except for the fact that the practically inexhaustible store of nitrogen in the air could be drawn upon. It kept the Central Powers group of belligerents in powder, so long as there was vegetable fiber and coal-tar enough to be nitrated. Incidentally, some of the by-products of the nitrogen process served in good stead as fertilizer. The quantity won was not great, however. . . . Science multiplied by three the store of textiles held in the Central states at the outbreak of the war. . . . [It was known] . . . that birch pulp and willow pulp made most excellent substitutes for cotton, if the process, or 'operation,' as the thing is known technically, is suitably modified. . . . The nettle, now looked upon as a noxious weed fit only for goose fodder, was brought into its place. Very soon it was in the market as a textile, which often aspired to as imposing a name as 'natural silk,' a name the plant and its fiber well deserve. . . . The paucity of textiles, however, gave rise to the paper-cloth industry. It was realized that for many purposes for which textiles were being used the paper cloth was well suited. . . . For instance, it will make splendid sweater coats for ladies and children. It will also take the place of felt for hats. The endeavor to find a substitute for sole leather was not so successful, even when finally it was decided that leather soles could be made only of animal tissue. . . . A very interesting solution was found in the use of wooden soles [which however was not very successful]. . . . It was the department of food substitution that was really the most interesting. For decades food in tabloid form has interested the men in the chemical laboratories. Some of them have asserted that man could be fed chemically. Theoretically that may be done; in practice it is impossible. . . . The very wise pure-food laws of the Central states were thrown on the rubbish-heap by the governments when stretching the food-supply became necessary. . . . How to substitute flour was indeed a great and urgent problem. . . . The first war-bread baked was a superior sort of rye bread, containing in proportions 55, 25, 20, rye flour, wheat flour, and potato meal or flakes, sugar, and fat. . . . Oats, Indian corn, barley, beans, peas, and buckwheat meal had to be added as time went on. . . . Imports of coffee had become impossible in 1916. . . . [The first substitute was made mostly of roasted barley and oats. The next sort of artificial coffee was made of roasted acorns and beechnuts, with just enough roasted barley to build up a coffee flavor. The principal ingredients of the third substitute were carrots and yellow turnips.] To find substitutes for tea was not difficult. The bloom of the linden-tree, mixed with beech buds, makes an excellent beverage. . . . [An example of a meat substitute may be found in the rice "lamb" chop.] The rice was boiled and then formed into lumps resembling a chop. Into the lump a skewer of wood was stuck to serve as a bone, and to make the illusion more complete a little paper rosette was used to top off the 'bone.' All of it was very *comme il faut*. Then the things were fried in real mutton tallow, and when they came on the table their looks and aroma, now reinforced by green peas and a sprig of watercress, would satisfy the most exacting. . . . The crux of the situation was to fill the public stomach as well as conditions permitted, and the consumption of fats could have no place in that scheme under the circumstances. It was decided, therefore, to have the human stomach do what heretofore had largely been attended to by

the animal industries. An entire series of frictional waste could in that manner be eliminated, as indeed it was. The same policy led to a reduction in the supply of eggs. To keep the human stomach occupied had become as much a necessity as furnishing nutriment to the body. I doubt whether without this happy idea the Central states would have been able to carry on the war."—G. A. Schreiner, *Iron ration*, pp. 145-158.

1917.—Financial and economic conditions.—War loans.—"The German Empire, after twenty-nine months of war, was battered and bleeding from many wounds, but still held a position of great strength. . . . In a military sense the course of the war had remained favorable to the Hohenzollern Empire; every army which had approached Germany or her chief ally, Austria-Hungary—the Russians, the French, the British, the Italians, the Rumanians—had still remained outside her frontiers. [Russia was in the throes of revolution.] . . . But the ruthless submarine warfare, initiated at that time, brought about the break with the United States. The food problem became still more serious. . . . During the spring and early summer the population suffered from scarcity of food more severely than at any previous period of the war. . . . In particular, the shortage of bread was more serious even than it had been in the spring of 1916, and in April the bread-ration in Prussia was reduced from 4 lbs. to 3 lbs. per week. [See also FOOD REGULATION: 1914-1918; 1916-1918.] [The Imperial Economic Office was set up October 21, 1917, with Freiherr von Stein as minister to handle social, economic and commercial questions.] The financial position of the Empire constituted a problem which gave constant anxiety to both statesmen and people of Germany. . . . The total subscriptions to [the first] five loans amounted to nearly £2,360,000,000. The funds actually subscribed towards the cost of the war . . . fell short of the expenditure by a sum of £800,000,000. In March a sixth War-loan was issued. . . . The loan was a greater success than either the fourth or the fifth War-loan, and the subscription reached the huge total of nearly £660,000,000."—*Annual Register*, 1917, pp. 208, 216.—See also WORLD WAR: 1917: XII. 1917 (July-October).—Clericals and radicals support Socialist peace demands.—Resignation of Bethmann-Hollweg.—Michaelis appointed chancellor.—Constitutional reform movement.—Resignation of Michaelis.—The Reichstag reassembled on July 6 and immediately violent attacks developed against the government's conduct of the war, the onslaught naturally being directed upon the chancellor. Discontent and disappointment marked the public spirit. Not only had the expectations of speedy success from the "ruthless" submarine campaign failed to materialize, but the United States had also joined the ranks of Germany's enemies. The Majority Socialists clamored for a "reasonable peace"; similar aspirations emanated from Austria and struck responsive chords among German Catholics and radicals. Deputy Erzberger demanded peace "without annexations and indemnities," a plea that was repudiated by ministers and Conservatives. Unable to weather the storm of criticism, Bethmann-Hollweg resigned on July 14, after holding office for exactly eight years. He was succeeded by Dr. Georg Michaelis, Food Controller for Prussia, who now combined within himself the offices of imperial chancellor and Prussian premier. "The adoption of constitutional reforms which would secure a relationship of responsible subordination on the part of the government to the people's representatives had long been agitated in Germany by the Social Democratic and Radical parties."—W. J. Shepard, *Internal political situation in Germany (American Political Science Review, Nov., 1917)*.—"The Reichstag . . . set up a special committee to consider electoral and other constitutional changes. . . . The emperor had publicly admitted the necessity of reform, but had insisted upon delay until after the war. The Center party, led by Erzberger, had joined the Radicals and the Social Democrats on a program of 'peace without annexations,' coupled with democratic constitutional reform. Confronted by this hostile bloc, the government had agreed to carry out a reform of the Prussian electoral system before the next elections. And when this concession proved unavailing, Chancellor von Bethmann-Hollweg . . . [fell] the scapegoat of a government which was trying to stem the tide of public disapproval without actually departing from its policies."—F. A. Ogg, *Political developments in Germany (American Political Science Review, Feb., 1919)*.—See also WORLD WAR: 1917: XI. Efforts toward peace: e.

The military authorities had predicted that England would be reduced to submission by ruthless submarine warfare in six months. That prophecy had failed and, in addition, the United States had joined the enemies of Germany. Notwithstanding

the apparent removal of danger from Russia by the "fraternizing" tactics of the Germans among the demoralized Russian armies and revolutionary circles, the discussion of war aims and demands for peace became increasingly clamorous in Germany. The situation in the Reichstag grew beyond control. Erzbergers' "no annexations, no indemnity" speech of July 9 voiced the steadily growing realization that a final, decisive victory resulting in territorial acquisitions lay beyond the range of probability. Five days after the fall of Bethmann-Hollweg, the new chancellor, Michaelis, found himself obliged to accept the following Reichstag resolution, which was carried on July 10 by a majority of about 100 votes: "On the threshold of the fourth year of the war the Reichstag declares: As on August 14, 1914, the truth of the motto remains: 'No desire for conquest actuates us.' Germany took up arms for the defence of her freedom and independence, and to secure the integrity of her territory. Declining all thoughts of the forcible acquisition of territory, the Reichstag strives for a Peace by Agreement, and a permanent reconciliation of the nations. With such a peace, political, economic, and financial oppression are incompatible. The Reichstag also rejects all plans which aim at economic exclusion and enmity between peoples after the war. Only an economic peace, with freedom of the seas, will, after the termination of the war, prepare the ground for permanently friendly relations between the nations. Actuated by these considerations and aims, the Reichstag will vigorously support the institution of international organizations for the strengthening of international law. So long, however, as the hostile governments reject such a peace and threaten Germany and her Allies with schemes for conquest and oppression, the German people are determined unshakably to stand together and to endure, for the defense of their own and their Allies' right to live and to develop. The German people know that united in defense they are invincible." The chancellor declared his adherence to this resolution "as he understood it," upon which the Reichstag passed a war credit of 15,000,000,000 marks and adjourned until October. Meanwhile, Richard von Kühlmann became foreign minister, August 5, 1917. The militarists and industrialists were only temporarily vanquished; they rallied their forces and fostered—or were accused of fostering—an extravagantly reactionary form of patriotism and expressing a contemptuous opinion of the inefficiency and futility of any pacific tendencies among the civil authorities. Disorders and insubordination occurred in the navy; these were ruthlessly suppressed, but the general discontent brought on parliamentary interpellations in October and Michaelis resigned at the end of the month.—See also *WORLD WAR: 1917: XI. 1917 (November-December).—Hertling ap-

pointed chancellor.—Count von Hertling (1843-1919), an aged ultramontane, former president of the Bavarian council, was now appointed chancellor, accepting only after several days of conferences with various party leaders. When the peace note from the Pope came under discussion, he said the time had not yet come to make known the intentions of Germany in regard to Belgium, but that Germany must have guarantees political and economic that would remove any danger of Belgian hostility. As for Alsace-Lorraine, it was proposed to annex Alsace to Bavaria, Lorraine to Prussia, a scheme hotly denounced by the socialists and those who were now willing to return those lands to France. A relaxation of political censorship and the state of siege was promised, and indeed a furious war of words followed in all quarters on affairs foreign and domestic, socialistic, even Bolshevistic on the one hand as well as monarchical and imperialistic on the other in their diverse tendencies. A prominent feature was the mutual hostility of Prussia and Bavaria, arising largely from von Hertling's appointment.

1918.—*Prussian reform repudiated.*—Von Kühlmann dismissed.—"During the winter of 1917-18 strikes were organized in Prussia as protest against the dilatory tactics of the government in dealing with electoral reform; but the only reply was a series of arrests of prominent Socialists. In the spring of 1918, indeed, the reform movement seemed to lose ground. . . . Prussian reactionaries repudiated the emperor's pledges and carried, in the lower branch of the Landtag, by a vote of 235 to 183, a bill substituting an absurd six-class electoral system for the promised plan of equal suffrage. Another straw which showed which way the wind was blowing was the dismissal, in July, of foreign secretary von Kühlmann as a punishment for saying publicly Germany could no longer hope for a military victory."—F. A. Ogg, *Political developments in Ger-*

many (*American Political Science Review*, Feb., 1919).

1918.—Financial and economic conditions.—“The financial position of the German Empire at the opening of the year was such as to cause . . . thinking Germans almost to despair. . . . The War Credits voted by Parliament up to the end of 1917 reached the total of £5,450,000,000. This sum was, however, by no means covered by the subscriptions to the seven great War Loans which the Imperial Government had issued. The total subscriptions to these seven loans amounted to about £3,650,000,000. . . . In March subscriptions were opened for the Eighth German War Loan. . . . [But] the mind of Germany was largely concentrated upon the urgent question of food. The country was still very under-nourished, and protests were constantly made against the maintenance of the Blockade by the Allies. Moreover, the conviction that the defeat of the German army was imminent had become widespread. At the beginning of November, therefore, there was a sudden outbreak of a republican movement occurring spontaneously in many parts of the country—a sudden revival of the old spirit of 1848. . . . Outbreaks occurred in the Fleet and at the ports.”—*Annual Register*, 1918, pp. 196, 206.—“Meanwhile the German military and diplomatic collapse was impending. The armies were everywhere being forced back; the invasion of German soil seemed only a question of time; power of resistance was fast ebbing; schemes to divide and weaken the Allies had failed; at home—even on the floor of the Reichstag—the socialists were clamoring for a republic. The end came with unexpected swiftness.”—F. A. Ogg, *Political developments in Germany* (*American Political Science Review*, Feb., 1919).

1918 (March-November).—Mutiny in the navy.—“In March, 1918, a fugitive German sailor came running into Geneva to knock at the door of the quiet little British Consulate in the Rue Levrier. He brought strange news which he wished to have transmitted post-haste to Whitehall. He told how the German sailors of the High Sea Fleet, sick of the War, sick of the semistarvation, and of the submarine compulsion, but sick most of all of the selfishness, the arrogance, the browbeating and profiteering of their officers, and convinced, moreover, that Germany was not only bound to lose but deserved to lose the War, had determined to seize the High Sea Fleet and take it, hull, gun and hawser, across the North Sea, there to deliver it into the hands of the British admirals. The plot had, at the last moment, failed, and the ringleaders of the mutiny had been shot. . . . Since the Revolution the fact has leaked out that during the War the Independent Socialist Party, in Berlin and other centres, very carefully and methodically registered every grievance soldiers and sailors from time to time laid before them. In both Army and Navy a widespread and cleverly organised campaign was

carried on, in which Junkerdom and the Monarchy were denounced as solely responsible for the outbreak of the War and for the horrible manner in which it was being prolonged. . . . In the last half-year of the War, practically the whole Army became Socialist, while out of 123,000 factory workers, 75,000 were for the Revolution. The knowledge that the Fleet was ready at a given moment to support a rising of the workmen gave to the Revolutionary Party in Berlin just the guarantee it needed to encourage and stimulate it to attempt extreme action. . . . All efforts on the part of the Admiralty to improve the discipline on the High Sea Fleet were in vain. Things went from bad to worse, and on the 2nd of November, 1918, the date on which General Keim wrote in the *Deutsche Tageszeitung* that ‘every hour added new strength to the German front, which was fast approaching technical perfection,’ this insubordination culminated in a mutiny which was destined to give the *coup de grâce* to the German Army. . . . The mutiny spread like wildfire from ship to ship. Although the sailors were kept on board the vessels at anchor and no intercourse permitted with the shore, they managed to exchange Morse messages by means of lights shown from the signal deck and from the portholes, and thus to arrange a concerted plan of action. In some mysterious manner, too, ‘defeatist’ pamphlets were distributed on board the ships, the officers being powerless to prevent their circulation. When on the 30th of October orders were finally given to weigh anchor, it was found, said Captain von Förstner, that on each ship the mutineers had put the capstan apparatus out of gear, and the fleet could not budge. Nor could the crews be pacified except by the countermanding of the order to sail. . . . By the 5th of November almost all the ships, both at Kiel and at Wilhelmshaven, were flying the red flag of the coming Socialist Republic. On the 6th of November, as a last appeal to the men's patriotism, orders were once more given to put to sea, on the ground that British ships were off the German coast. In response only two small cruisers, the *Königsberg* and the *Köln*, and half a torpedo-boat flotilla under Captain Harder obeyed; needless to say they returned without having got into touch with the enemy. ‘From this moment the German Navy ceased to be.’ . . . Of the 80,000 naval ratings and marines that according to Noske's computation were then in Kiel, the majority were already in open rebellion while the remainder were at best passive. Not an officer dared show his nose in street or barrack. To try to quell the mutiny in such circumstances by force of arms would have been sheer folly. A whole army corps, at the very least, would have been needed for the task. . . . The German Government had imagined that Germans were immune from *défaïtisme*. The famous sealed train in which Germany sent Lenin and his comrades across the Vistula into Russia will stand in history as a modern parallel to the story of the Trojan Horse. With grim humour, after Brest-Litovsk, Russia answered with a similar device, sending . . . Joffe to Berlin with millions of roubles in his purse with which in its turn to debauch the proletariat of the State that had debauched Russia. Germany's General Staff, blind till it was too late, permitted the trick. . . . The extreme Left wing of the Independents, known as Spartacists, turned for their inspiration to Russian sources. The term Spartacist, first used in 1916, was specially applied to the disciples of Spartacus, the anonymous author of the typewritten and secretly distributed political letters, the first of which was issued on the Em-

peror's birthday in 1916. By the August of that year it was known that Spartacus was none other than Karl Liebknecht. The letters were afterwards surreptitiously published in pamphlet form, and used for propaganda purposes. They contained very sharp attacks on the Majority Socialists, whom they accused of being the willing tools of the Imperial Government."—F. S. Delmer, *History of the German revolution (Nineteenth Century and After, Mar., 1920)*.

1918 (October-November).—Prince Maximilian, last imperial chancellor.—"Efforts to force the government's hand . . . led to the chancellor's [von Hertling's] retirement. The successor was another south German, Prince Maximilian, heir to the grand-ducal throne of Baden, who . . . entered office with a reputation for liberal views. In the new ministry were included three socialists, one of them, Philipp Scheidemann, without portfolio."—F. A. Ogg, *Political developments in Germany (American Political Science Review, Feb., 1910)*.

1918 (November).—Revolution.—Abdication of William II.—Provisional government.—Armistice with Allies signed.—Controversy between Council of Commissars and Executive Committee.—Social Democrats eliminate Independents.—Councils or Soviet system rejected.—Council of Commissars strengthened.—"During that week [Nov. 4-9] in Germany the mutterings of the storm of revolution were growing louder. Some issued heated appeals for a patriotic closing up of ranks in a last stand against the coming disaster; others attempted to make a scapegoat of the unhappy Ludendorff; but everywhere was apparent a rising anger against the Emperor and the Imperial House. He had fled to the army, but the army was in no case to protect him. The Social Democrats in the Government, led by Scheidemann, were clamoring for his instant abdication, and they had the support of the great mass of the people. Everywhere there reigned a frantic fear of invasion, especially in Bavaria, where the collapse of Austria made the populace expect to see at any moment the victorious Italians in their streets; and invasion was no cheerful prospect to Germany when she remembered her own method of conducting it, and reflected that for four years she had been devastating the lands and torturing the peoples of the Powers now marching to her borders. Strange things, too, were happening within her own confines. In the first days of November the stage had been set for a great sea battle. Her High Seas Fleet was ordered out, but it would not move. The dry-rot, which had been growing during the four years' inaction, had crumbled all its discipline. 'Der Tag' had come, but not that joyous day which her naval officers had toasted. She had broken the unwritten laws of the deep sea, and she was now to have her reward. On 4th November the red flag was hoisted on the battleship *Kaiser*. The mutiny spread to the Kiel shipyards and workshops, where there had always been a strong Socialist element; a Council of soldiers, sailors, and workmen was formed; and the mutineers captured the barracks, and took possession of the town. The trouble

spread like wildfire to Hamburg, Bremen, Lubeck, and adjacent ports, and it was significant that in every case the soldiers and sailors took the lead. Deputations of Social Democrats were sent down post-haste by the Government, and succeeded in temporarily restoring order, but the terms on which peace was made were the ruin of the old régime. In Cologne, in Essen, and in other industrial centers there were grave disturbances, and everywhere the chief outcry was against the Emperor and the Hohenzollerns. He who had been worshipped as a god, because he was the embodiment of a greater Germany, was now reviled by a nation disillusioned of dreams of greatness. At the same time the Empire was dissolving in its periphery. The Polish deputies from Posen and Silesia seceded from the Reichstag and Schleswig demanded liberation. It was hard to tell where in Germany the seat of power now lay. On the 5th the Army Command invited to Headquarters representatives of the majority parties in the Reichstag to discuss the next step, and search was made for military officers who might be least unacceptable to the Allies. On that day the Government at Washington transmitted to Germany, through Switzerland, the last word on the matter of negotiations. This Note gave the reply of America's Allies to the correspondence which had been formally submitted to them. They had accepted the President's Fourteen Points as a basis of peace with two provisos: first, they reserved their own liberty of action on the question of the freedom of the seas, since that phrase was open to so many interpretations; second, by the word 'restoration' in the case of invaded territories, they declared that they understood 'compensation by Germany for all damage done to the civilian population of the Allies, and to their property by the aggression of Germany by land, by sea, and from the air.' President Wilson signified his assent to these provisos, and announced that Marshal Foch had been authorized by all the Allies to receive properly accredited representatives of the German Government, and to communicate to them the terms of an armistice."—J. Buchan, *Nelson's history of the war, v. 24, pp. 64-66*.—See also U. S. A.: 1918 (September-November); WORLD WAR: 1918: X. Statement of war aims: t; XI. End of the war: a; a, 6; a, 7; a, 9; Miscellaneous auxiliary services: I. Armistices: f.—"The revolution was actually accomplished through a general strike of factory workers. The truth seems to be that the majority party (and probably many of the leading minority or independent socialists) were, even as late as November 6, opposed to any revolutionary action, but as the military situation became more desperate, they attempted to compromise by insisting upon such drastic steps as the abdication of the kaiser. On November 4 and 6, the Majority paper *Vorwärts* was urgently appealing to the workers and warning them against agitators, flyspecks, Bolshevism, and 'Russian conditions,' or, in one word, revolution. Then, suddenly, the socialist papers began to demand the kaiser's abdication. Even on the morning of Friday, November 8, the Socialist ministers, Ebert and Scheidemann, seem to have thought it possible that the revolution might be staved off by the kaiser's resignation, and they issued . . . [an ultimatum to Prince Max's government, demanding among other requirements the kaiser's abdication]. This ultimatum was to expire on Friday mid-day; as a matter of fact, the time was extended until Friday midnight. But in the interval events moved with great rapidity; and when, in the 'early hour' of Saturday morning, the kaiser at last consented to retire into Holland, it

was no longer merely a question of the resignation of socialist ministers, but of revolution. On Saturday morning many workers struck work spontaneously. . . . *Vorwärts* issued a flysheet calling a general strike. A few hours were sufficient for accomplishing the 'bloodless revolution.' . . . Prince Max handed over the chancellorship to the socialist Friedrich Ebert and announced the abdication of the kaiser. But the kaiser, himself waited for nineteen days in Holland before signing his formal act of abdication [on November 28]—*Documentary history of the German revolution (International Conciliation, Apr., 1919)*.—See also SOCIALISM: 1912-1918; 1918-1919: German revolution.—In every state uprisings occurred at once and the reigning princes either abdicated or were deposed. "While the Empire was collapsing there arose quickly on the ruins of the old edifice a new structure. In place of the Empire, the government of a bourgeois and military oligarchy, came the dictatorship of the proletarian masses at one blow, the republic of the working class. Everywhere Councils of Workers and Soldiers were formed, which, taking political power in their hands, appeared to be thereafter the only and real holders of sovereignty. But the Councils lacked the needed agreement in aim and action. Two diametrically opposed tendencies divided the new powers in control. On the one hand the members of the Social Democratic party within the Councils pursued a purely political goal—the creation of a German republic on a democratic basis to be effected by a Constituent Assembly to be convoked as soon as possible. On the other hand the Independent Socialists, the Communists, the Spartacists and other left wing elements set up as the principal aim an economic change—the quick and complete socialization of all means of production. But they also had in view a political objective, the establishment of a dictatorship of the proletariat on the model of the Russian Soviet Republic, by the complete organization of the system of Councils of Workers and Soldiers. The particular question on which the antagonism between these two groups broke out was whether or not there should be called a new constituent assembly. The revolution was undoubtedly the work of the Independents. Their leader, Ernest Daumig, had been to Moscow to study the Bolshevik movement, and Russia had come back with him in the persons of Joffe and his agents of propaganda. Already during the strikes of January, 1918, which had been organized by them, there had appeared for the first time in Germany Workers' Councils; and in the days preceding the insurrection of November, 1918, Councils of Workers and Soldiers had been secretly organized at Kiel as well as in Berlin. The Social Democrats, on the other hand, to the last moment warned the people against the consequences of an ill-considered insurrection. But when the success of the revolts seemed assured it was seen that many who had condemned it were now joining it. Thanks to Maximilian of Baden it was the Social Democrats, Ebert and Scheidemann and the trade unions that were installed in power on the 9th of November, 1918. The history of the German revolution is the story of a revolution made by one political group and its fruits garnered by another. At first the two Socialist parties divided power equally. But after several weeks of collaboration the Social Democrats eliminated the Independents and remained in sole control of the government. . . . On the 9th of November early in the afternoon Ebert had received from the former Imperial cabinet his functions of Chancellor of the Empire. He considered himself

such at the time. His intention was to nominate Scheidemann and Landsberg as secretaries of state, but to keep in the cabinet the old state secretaries; in addition to which the Independent Socialists were to enter the government. He proclaimed immediately several decrees signed, Chancellor of the Empire, Ebert.' . . . The Independents submitted as the condition of their entry into the government the following twofold demand: The cabinet was to consist only of socialists, and it was to recognize officially that political sovereignty resided in the hands of the Workers' and Soldiers' Councils. The next day the Social Democrats accepted these conditions—for the Independents were still the actual power in control and 'the street belonged to them'—and a government of six chiefs was constituted. It comprised three Socialist Democrats, Ebert, Scheidemann and Landsberg, and three Independents, Haase, Dittmann and Barth. In the evening [of Nov. 9] there was held at the Busch Circus a plenary session of the Workers and Soldiers Councils of Berlin. This assembly passed a resolution which declared among other things the following: 'Old Germany is no more. The dynasties are gone forever. The holders of thrones are stripped of their power. Germany is now a Republic, a Socialist Republic. The Workers and Soldiers Councils are now the holders of political power.' Then the assembly nominated an executive committee (Vollzugsrat) of twenty-four members, six Social Democrats, six Independents, and twelve Soldiers, and they proclaimed as the men in control of the government the six named above. Following this meeting the cabinet was constituted. It formed a 'college' of which all the members had equal rights and which took the name of 'Council of Commissars of the People' (Rat der Volksbeauftragten); Ebert and Haase were nominated chairmen. All the decrees of the government would have to be promulgated by these two in accord and signed jointly by them. It was, so to speak, a Chancellorship of two. The Council of Commissars of the People thus found itself invested with political power by the General Assembly of the Councils of Workers and Soldiers of Berlin. Making immediate use of its power the Council of Commissars issued on November 12, 1918, a proclamation which constituted a declaration of rights of the new régime."—R. Brunet, *New German constitution*, pp. 16-19.—The proclamation is as follows: "(1) The state of siege is abolished. (2) The right of association and meeting is subject to no limitations, not even for officials and state workers. (3) The censorship ceases to exist. The censorship of plays is abolished. (4) Expression of opinion, whether by word of mouth or in writing, is free. (5) Freedom of religious practice is guaranteed. No one shall be compelled to perform any religious act. (6) An amnesty is granted for all political punishments. Trials now proceeding for such crimes are quashed. (7) The Law of (compulsory) National Auxiliary Service is abolished with the exception of the provisions referring to the settlement of disputes. (8) The Domestic Services Decrees become null and void; also the Exceptional Laws against rural workers. (9) The laws protecting Labor, which were abandoned at the beginning of the war, are herewith restored. . . . On January 1, 1919, at latest, the Eight-Hour Day will come into force. The Government will do all that is possible to secure sufficient opportunities of work. . . . In the sphere of sickness insurance the insurance obligation will be increased beyond the present limit of 2,500 Marks. [See SOCIAL INSURANCE: Recent: 1919-1921: Later health insurance.] The housing difficulty will be

dealt with by the building of houses. Efforts will be made to secure regular feeding of the people. The Government will maintain orderly production, will protect property against private interference, as well as the freedom and security of individuals. All elections to public bodies are immediately to be carried out according to the equal, secret, direct, and universal franchise on the basis of proportional representation for all male and female persons of not less than 20 years of age; this franchise also holds for the Constituent Assembly, concerning which more detailed orders will follow."—*Documentary history of the German revolution (International Conciliation, Apr., 1919)*.—But "the first act of the provisional government was to accept the conditions of the armistice, November 11. Its next tasks, according to announcement, would be to negotiate peace and inaugurate economic reconstruction. Meanwhile it proposed also to arrange for a constitutional convention to work out for the former empire, as soon as conditions permitted, a permanent and democratic system of government."—F. A. Ogg, *Political developments in Germany (American Political Science Review, Feb., 1919)*.

"Difficulties arose soon between The Council of Commissars of the People and the Executive Committee of the Workers' and Soldiers' Councils of Berlin. Each of these two bodies considered itself the chief holder of sovereignty and launched proclamations issuing orders. It became absolutely necessary to put precise limits to their respective powers. That was the object of an agreement reached by these two bodies November 22, 1918. According to the terms of this agreement sovereignty belonged wholly to the Executive Committee. The Council of Commissars was to exercise executive power under the permanent control of the Executive Committee. The latter had the power to nominate or recall members of the Council of Commissars. In reality the situation was somewhat different; for the Council of Commissars exercised to some extent legislative powers according to which it claimed the right to issue decrees that had the force of laws. For a month the two bodies worked in this accord. Collisions occurred, of course. The functionaries of the old régime endured impatiently the supervision of the Councils of Workers and Soldiers. Inflaming rumours circulated of the extravagance with which these Councils managed the public finances. Worst of all was the increasing opposition that developed all over the country to the Executive Committee of Workers' and Soldiers' Councils, which, consisting exclusively of Berlin members, claimed to represent the Councils of all Germany and which acted in effect as though it were delegated by the Councils of the whole country. The fact that on November 23 this Executive Committee had added to itself a certain number of delegates of Workers' and Soldiers' Councils of states other than Prussia, delegates who had authority to deliberate in matters that concerned all of Germany, did not strengthen the position of the Executive Committee. Meanwhile, however, its machinery appeared to be functioning. In the struggle that ensued among socialists, the Social Democrats brought to their side the support first of individual states, then that of a general Congress of Workers' and Soldiers' Councils. From November 10 Ebert and his party showed an increasing determination to call a constituent assembly. However, they did not attempt to act upon it at once, being restrained by the strength that still lay in the hands of the Councils. But on November 25 under the name of 'the conference of German Federated States'

there was held at Berlin a meeting of representatives of the revolutionary governments of several states. It was presided over by the Commissar of the People, Ebert. Speaking of the forthcoming constitution, Ebert declared, 'The system of collaboration between the government of the Reich and the Federated States, which should be very definitely specified, must be established by a National Assembly. The government has firmly resolved to call this National Assembly with the least delay. Till then nothing but a provisional agreement can be effected between the Reich and the States.' In the course of the discussion the most conflicting opinions possible were expressed; but finally the immense majority of the delegates present adopted the following two-fold resolution: 'It is to a National Assembly that the power of establishing the constitution of the Reich should be entrusted. Till such a time, however, the Workers' and Soldiers' Councils are the representatives of the will of the people.' Strengthened by this decision the Council of the Commissars of the People promulgated on November 30 a decree for the election of a National Assembly. It was the general congress of Workers' and Soldiers' Councils at its meetings in Berlin from December 16 to 20, more than any other factor, that gave the Social Democrats the opportunity they had been seeking to disembarass themselves of the Executive Committee of the Workers' and Soldiers' Councils of Berlin; and by this means to deliver a decisive blow at the system of Councils as a whole. The Social Democrats had an overwhelming majority in this congress and the delegates, well disciplined and little familiar with parliamentary debate, carried out punctiliously the instructions which had been given them by the official spokesmen. The congress passed a number of important resolutions. . . . On December 19 by a vote of 334 against 98 the congress rejected the motion made by Däumig that 'under all circumstances the Councils system shall be adhered to as the basis of the Socialist Republic in the sense that the Councils shall possess supreme legislative, executive and judiciary powers.' . . . The congress, which declared itself invested with complete political power, delegated legislative and executive power to the Council of Commissars of the People up to the time the National Assembly convened. Further, it nominated a central committee (Zentralrat) of the Workers' and Soldiers' Councils of Germany, consisting of twenty-seven members which was to exercise parliamentary control over the German and Prussian cabinets; that is to say, according to the official explanation of Commissar of the People Haase, all projects of law must be submitted by the Council of the Commissars of the People to the Central Committee and discussed by them. The Central Committee had the right to appoint and recall Commissars of the People for Prussia and for the Reich. Finally the Council of the Commissars of the People was to appoint to each Secretary of State two delegates, a Social Democrat and an Independent, who would be charged with the conduct of affairs within the ministries. As for the Executive Committee of the Workers' and Soldiers' Councils of Berlin it was limited by the congress to authority only in matters pertaining to the Berlin group."—R. Brunet, *New German constitution, pp. 19-23*.—See also SOCIALISM: 1018-1019.

1918 (November-December).—Collapse of the German army.—Armistice.—Return of troops.—“Red” and “Citizen” armies.—“Green Guard.”—Appointment of Brockdorff-Rantzau.—“As soon as the Armistice was signed many of the German troops started a mad scramble to reach their homes. Even the hastily elected Soldiers’ Council could not restrain them. Pitiably sights were to be seen at the stations as the trainloads of soldiers arrived from the fronts. Hundreds of those who had climbed on to the roofs of the trains, all other space being occupied, were swept off and mutilated in the tunnels. And what a home-coming for those who did get back! They had been sent away by cheering crowds, with music, with fine ladies throwing flowers to them. They returned in disgrace. There was no pretence of a reception; except for a few relatives, who waited hour after hour at the stations, Berlin ostentatiously ostracised her soldiers. Several days passed before the Provisional Government realised its mistake in discouraging civic welcomes for the returning troops. Then it was too late. This negligence and lack of understanding of the peculiar mood of the men from the front were great factors in the cause of the attempted real revolution. The only people alive to the possibilities of the occasion were the Spartacists. As the soldiers crawled from the trains, hungry and ill from nights of exposure, they were met by agents, and, unless they joined the Red Army, in most cases sold their arms for a few marks and a square meal. . . . In this way thousands of rifles and machine-guns were obtained and stored away by the Spartacists. Some of the older men, on reading the appeal from the Russian Bolsheviks to retain their weapons, did so and went home to wait events. A week after the signing of the Armistice there were seventy thousand armed troops in Berlin, men bitterly resentful of the treatment accorded them. Members of the Bourgeoisie, thinking that all danger was passed, went out of their way to show their scorn for the groups of miserable, unkempt soldiers. The awakening came with the news of the rapid formation of a ‘Red Army.’ The movement was well afoot before the attention of the Provisional Government could be diverted from its petty squabbles for places to the serious turn the situation had taken. The measures adopted to meet the emergency were momentarily successful. Large white placards were posted about the town calling for recruits for a ‘Citizen Army.’ Pay and conditions were, for that period, exceedingly generous. I watched hundreds of young soldiers, anxious to obtain the colossal sum of eleven marks and various valuable privileges, surge through the gates at the War Office to enrol in the ‘White Army.’ Those who were refused walked over to the Reds, who were recruiting in the Französischestrasse. This ‘Citizen Army’ was really the nucleus of Noske’s notorious ‘Green Guard,’ and was mainly composed of unscrupulous mercenaries. Although the temptations to join the new force were great, the organisers of the Red Guard still continued to get recruits—even though they did not raise the pay, two marks a day with uncertain ration allowances. The Government took further precautions against disorder. . . . The next troops to arrive at the station were surprised to find a grand reception awaiting them! There was little food, but at least there was a welcome which dispelled much of the bitterness which had caused many of their comrades to become Red Guards. At the station they made an earnest attempt to brighten up their worn-out uniforms and battered equipment. They responded to the well-dressed crowds, who, over-night, had

decided to cheer them. By the time they passed the Reichstag and under the Victory horses, headed by a really wonderful band which repeated ‘Deutschland über Alles’ many times, they were transformed from the serious disappointed men of whom revolutionaries are made to their old docile selves. To disarm them and send them to their homes was now a comparatively simple matter. . . . After the ‘Revolution’ had been accepted by all classes in Berlin the city became almost barren of important incident. It was amusing to read accounts in German newspapers of how the Revolution had ‘blazed through the land withering up all opposition in its path.’”—P. Brown, *Germany in dissolution*, pp. 57-60.—The question of public order was naturally bound up with that of maintaining discipline in the army. The lesson of the Russian revolution was not lost upon the new German government, which issued the following telegram to the High Command: “If single troops stream back at their own pleasure, they place themselves, their comrades, and their homes in the greatest danger. The consequences would necessarily be chaos, famine, and want. The People’s Government expects of you the strictest self-discipline in order to avoid immeasurable calamity. We desire the High Command to inform the army in the field of this declaration of the People’s Government, and to issue the following orders: (1) The relations between officer and rank and file are to be built up on mutual confidence. Prerequisites to this are willing submission of the ranks to the officer, and comradely treatment by the officer of the ranks. (2) The officer’s superiority in rank remains. Unqualified obedience in service is of prime importance for the success of the return home to Germany. Military discipline and army order must therefore be maintained under all circumstances. (3) The Soldiers’ Councils have an advisory voice in maintaining confidence between officer and rank and file in questions of food, leave, the infliction of disciplinary punishments. Their highest duty is to try to prevent disorder and mutiny. (4) The same food for officers, officials, and rank and file. (5) The same bonuses to be added to the pay, and the same allowances for service in the field for officers and rank and file. (6) Arms are to be used against members of our own people only in case of self-defence and to prevent robberies.” By the middle of December the foreign minister, Dr. Solf, resigned and was succeeded by Count Brockdorff-Rantzau, who had previously been German minister at Copenhagen.

1918 (December).—Cost of the war.—Property loss.—Casualties. See WORLD WAR: Miscellaneous auxiliary services: XIV. Cost of war: a; b, 3; b, 4.

1918 (December).—Return of Allied property taken in war.—A Reuter’s dispatch of December 5 stated that “the Germans, in conformity with the Armistice Treaty, have begun the restitutions demanded by the Allies. The sum of 300,000,000 francs exacted from the Russian Treasury has already been handed over by the German military authorities to the Allied governments, who will take care of it until the conclusion of peace. The Germans are every day restoring works of art stolen in the invaded territories. Those taken in the occupied regions which the Germans have already returned are valued at 2,000 million francs.”

1918-1919 (December-January). — Workers’ revolution. — Government crisis. — Spartacist movement.—“No sooner had the political revolu-

tion been accomplished than a movement began to crown it by a social and industrial revolution. This movement takes two important forms: a demand for control of industry by workers, and a demand for the introduction of the Russian Soviet system in some form and the recognition of the Workers' Councils as part of the constitutional machinery of the country."—*Conditions in Germany (International Review, Aug., 1919)*.—"Christmas week of 1918 in Berlin was a bloody one. A detachment of marines which had installed itself in the royal castle and had refused to leave it in spite of the orders of the government of Prussia had tried to capture Commissars of the People, Ebert and Landsberg, to keep them as hostages against the non-payment of wages due them. Their attempt failed and troops were summoned by the government to force the sailors to leave the castle. Bloody fights ensued in Berlin which lasted till Christmas. These events produced a crisis in the government. On December 29 the Independents, Haase, Dittmann, and Barth, resigned from the Council of the Commissars of the People; whereupon the remaining three Commissars immediately handed their resignations to the Central Committee. The latter reappointed the three Social Democrats and completed the Government by adding to them three new Commissars, all Social Democrats, Noske, Wissel, Löbe. Löbe declined and his post remained vacant; but Noske and Wissel entered the Government. Scheidemann replaced Haase as co-president with Ebert. The Independents and the Communists made another attempt. On January 3, the Independents who had entered the Government of Prussia handed in their resignations. But Eichhorn, since the revolution president of the Berlin police, refused to resign his powers and, being recalled, refused to relinquish his post. That was the signal for a veritable insurrection which had been called, not without reason, 'the second revolution.' Troops of Spartacists met in bloody encounters in the streets with the troops of Noske."—R. Brunet, *New German constitution*, pp. 23-24.

1918-1920.—Politico-geographical re-arrangement.—"Almost immediately after the revolution the two small states of Reuss (elder and younger lines) united; and a movement was started for creating a state of 'Great Thuringia' to embrace eight of the small states of central Germany and an important segment of Prussian territory with the Prussian city of Erfurt as capital. Both Prussia and Erfurt interposed violent opposition, and the project as a whole was abandoned. The state of Thuringia was nevertheless formed by the union of seven states—Saxe-Weimar, Saxe-Altenburg, Reuss (the two branches having previously united), Saxe-Gotha (not including Coburg), Schwarzburg-Rudolstadt, Schwarzburg-Sonderhausen, and Saxe-Meiningen. The consolidation of these states was effected by a 'treaty.' Their consent having thus been given the state of Thuringia was recognized by an 'ordinary law' of the Reich of April 30, 1920. Shortly after the war Coburg detached itself from the Duchy of Saxe-Coburg-Gotha without any legal sanction. On October 30, 1919, the question of whether this 'irregular'

state should unite with Bavaria or with the new state of Thuringia, then in the making, was overwhelmingly decided by the voters of Coburg in favor of union with Bavaria. On March 11, 1920, the Bavarian government consented, and the union was legalized by an ordinary law of the Reich of April 30, 1920. The former German Empire consisted of twenty-five units exclusive of the Imperial Territory of Alsace-Lorraine. The Reich now consists of eighteen units; for counting Reuss as two states, seven of the old states merged into the new state of Thuringia, while an eighth state (Saxe-Coburg-Gotha) disappeared partly into Thuringia and partly into Bavaria. In net result, therefore, the constitutional provisions for the alteration of state boundaries and entities have, for the present at least, left the huge territory of Prussia unaffected."—H. L. McBain and L. Rogers, *New constitutions of Europe*, p. 67.

1919 (January).—Revolution.—Spartacists.—Liebknecht and Rosa Luxemburg.—"We come now to the Revolution of January. Who prepared it? At whose command was it unleashed? Who directed it? The Sparticides say that the impulse to it came from *agents provocateurs*. The Government needed riots in order to get rid of Liebknecht, Rosa Luxemburg, Eichorn, Ledebour, and all the others who were embarrassing it. Ebert and Scheidemann demanded the dismissal of Eichorn. This move was made to provoke the working people, who all wanted to have him kept in office as Prefect of Police. Big demonstrations took place on Sunday, January 5th. The general strike was proclaimed the following day. The manifestations continued. Most of those taking part in them were former soldiers who had retained their arms. The bourgeois newspapers, accused of misleading public opinion in order to sustain the Majority Government, or even the ancient régime, had exasperated the people. Suddenly their wrath was turned against these newspapers. The offices of the latter were seized and barricaded. It was decided that they should hereafter appear under the auspices of the people. It was hoped that no blood would flow. Large placards bore the words: 'Brothers, don't fire!' But the *agents provocateurs* interfered. Shots were heard; men fell. The situation remained confused during the first half of the week. But Noske entered the Government. Troops flowed in. Machine guns, mine throwers, and cannon were put in position. On Sunday, the 12th, the Sparticides realized that further resistance was hopeless. Those of them in the *Vorwaerts* building sent six unarmed envoys to treat with the besiegers. These envoys were assassinated and the massacres continued. Liebknecht was always opposed to brute force. But once carried away by the crowd, he had resolved to make one supreme effort to disarm German militarism. That militarism strangled the popular uprising. Liebknecht and Rosa Luxemburg then took refuge in a friendly house in Wilmersdorf, in the western

section of Berlin. They continued to see some loyal friends there and to publish *Die Rothe Fahne*. On the 15th, about five o'clock in the afternoon, the house was surrounded by the bourgeois guard of Wilmersdorf and the two revolutionaries were arrested. Liebknecht was taken to a school-house in the suburb, whence his captors asked for instructions from the Hotel Eden. This hotel was the headquarters of the Cavalry Corps of the Guard, which had taken a very prominent part in suppressing the Sparticide revolt. At nine o'clock some officers of the bourgeois guard of Wilmersdorf took Liebknecht in an auto to the Hotel Eden. Rosa Luxemburg followed him half an hour later. The two famous revolutionaries were never to see each other again. [Both were killed by soldiers the same day.]—M. Berger, *Germany after the armistice*, pp. 244-

FRIEDRICH EBERT

First President of the German Republic

246.—Again, in Berlin, the general strike of March was directed towards a realization of these Spartacist aims. It culminated in an agreement between the government and the strikers by which the government recognized the soviet system by undertaking that the workers' councils should be an integral part of, or incorporated in, the constitution. "As yet, the scheme agreed upon between the Scheidemann Cabinet and a Delegation from the Berlin Soviet (in which at that time the 'Majority' socialists were leading) exists only in outline. It is a promise that the constitution shall recognize, or set up (1) Works' Committees representing all workers and employes in every factory, mine, &c.; (2) Industrial Councils in every trade of the 'Whitley' type, to regulate the general conditions of production, representing both employers and workers. (3) Chambers of Work, representing employers, the professions, and the workers of all trades in definite territorial districts; and (4) Chamber of Work for the whole

German Realm, with a right of suggestion and consultation on all industrial and social-political legislation."—H. N. Brailsford, *Soviet idea in Germany* (*New Republic*, Aug. 6, 1919).—"Another serious crisis confronted Ebert when the moderate Bavarian Government under Herr Hoffmann was suddenly ousted. Hoffmann and his colleagues had been running Bavaria as a semi-independent entity, but they showed their belief in a centralized Germany by appealing to Ebert for help against the Reds who had ousted them. Gustav Noske, Ebert's Minister of Defense, who had suppressed the Spartacan uprising in Berlin by the most drastic methods, took a hand in the Bavarian trouble and acted with such energy that the Bavarian Reds were soon crushed and Hoffmann back in Munich."—*New York Times*, May 18, 1919.—See also SOCIALISM: 1912-1918; 1918-1919: German revolution; LABOR ORGANIZATION: 1918-1921.

1919 (January-June).—Election for national assembly.—Prussian constituent assembly.—Seat of new parliament at Weimar.—Election of Friedrich Ebert as president.—"For a moment it seemed that Germany was about to split into pieces and sink down into the chaos of ruin and disorder into which Russia had just gone before her. But the strong and solid qualities of the German people reasserted themselves; the disorders were suppressed; the separatist movements were checked; and in place of the German Empire there presently appeared a federation of republics much like the United States of America, except that constitution and organization were socialized, less, indeed, than in Russia, but more thoroughly than anywhere else in the world. [See also FEDERAL GOVERNMENT: Modern.] In the midst of national disorganization and disaster, liable for an indemnity of vast and indefinite amount, this government maintained itself with increasing difficulty. It probably had the support of most of the German people for the time, but it was constantly threatened on the one side by reactionaries and *Junkers*, who hoped to see the older forms soon restored, and on the other by radicals and 'Spartacides,' or extreme communists, who wanted a complete revolution, more like the one in Russia."—E. R. Turner, *Europe*, pp. 503-504.—A general election for the new National Assembly was held on January 19, with the following results:

German National People's Party (Conservative) .....	42
German People's Party (National Liberal) .....	21
Christian People's Party (Centrist) .....	88
German Democratic Party (Bourgeois) .....	75
Majority Social Democratic Party .....	163
Independent Social Democratic Party .....	21
Others (mostly Spartacist) .....	11

421

The elections for the Prussian Constituent Assembly were held on January 26, with results closely resembling those for the National Assembly. "It was arranged that the new German Parliament should sit in Weimar, not in Berlin. It was thought that public sentiment would be averse from constituting Berlin as the legislative capital of the new republic, since that city was all too reminiscent of the disastrous Hohenzollern régime. The session was opened on February 6, and the sitting was held in the well-known National Theatre, this building being, however, very imperfectly adapted for a legislature. . . . On February 11, Friedrich Ebert, Socialist [a saddler by trade], was elected President of Germany by the National

Assembly [by a vote of 277 out of 397].—*Annual Register*, 1919, p. 203.—A cabinet of fourteen members was formed at the same time, with Philip Scheidemann, socialist, as premier and Count von Brockdorff-Rantzau as foreign minister. To this government fell the onerous task of extricating Germany from the dire consequences of defeat.

1919 (January-December).—Paris Conference. See PARIS, CONFERENCE OF: Outline of work.

1919 (May).—Thuringia republic formed by merging of two Reuss principalities. See REUSS.

1919 (May 7).—Peace terms of Allied and Associated Powers presented to the German delegates at the Trianon Palace Hotel, Versailles. See PARIS, CONFERENCE OF; VERSAILLES, TREATY OF.

1919 (June 28).—Treaty of Versailles signed.—Conditions imposed on Germany by treaty. See VERSAILLES, TREATY OF.

1919 (June).—Scuttling of German warships at Scapa Flow. See WORLD WAR: Miscellaneous auxiliary services: XI. Devastation: d.

1919 (June-July).—German attitude toward peace terms.—Fall of Scheidemann cabinet.—New ministry under Bauer.—When the terms of peace dictated by the Allies became known to the German people a wave of consternation swept over the country. The heavy losses in colonial and national territory, plus the vast sums claimed as reparations for damage committed during the war, were regarded as an excessive and vindictive penalty and totally at variance with the promises held out by President Wilson's Fourteen Points. The following statements by representative Germans reflect the public attitude: "Prince Lichnowsky: 'I am from Upper Silesia, and I assure you that we are very much disturbed over the question of detaching us from Germany. The population there is Polish in part; but all the cities, all the estates, and all the intellectuals are German. We have been separated from Poland since 1163, and we would be ruined if we should now be cut off from the German market. I have proposed a compromise—that the Allies renounce the Pan-Polish program and that we abandon the Pan-German program. There are no political, economic, or geographical reasons which would justify our union with German Austria. We have no need of aggrandizement. I was against annexations during the war; I am still more against them now.' Count Brockdorff-Rantzau then minister of foreign affairs: 'Peace will depend on the terms which are offered to us. Germany seeks a peace of justice. At this moment she has no idea of revenge, or if such an idea exists, it exists only in the minds of a very small minority. But if the Entente—and particularly France—pursues the policy to which it is committing itself more and more, the idea of revenge will be born again and will never die.' Karl Helfferich, former minister of finance and vice-chancellor: 'The Diet formulated in July, 1917, a proposal for peace without annexations or indemnities. . . . Our enemies don't show the same moderation. France is going to annex Alsace-Lorraine. I don't believe that that separation will be final. A French Alsace, with ninety-five per cent of its population not understanding French, is nonsense. . . . In any case, I don't believe in either the extermination or the enslavement of the German people. We must always be taken into account.'—M. Berger, *Germany after the armistice*, pp. 19, 28, 112-114.—Chancellor Bauer: "The attitude of the German people and the Government is that they are determined to keep the treaty of Versailles, however hard it may be. They desire no policy of revenge, they wish to work. They

will endeavor to fulfill the Treaty paragraph by paragraph with the most conscientious loyalty. But they expect that the Entente will deal fairly with them and make abatements in the Treaty as soon as it becomes evident that it cannot be carried out in its present form. For it must be made clear that, if Germany is to fulfill the Treaty strictly in accordance with the letter, in the manner the conditions of the armistice were applied, it will mean not the commencement of a state of peace, but the continuation of war by political means."—*Political review in Review of the Foreign Press (Economic Review, Jan. 30, 1920)*.—When it was clear that the Allies would insist that the Germans sign the treaty with very little change, the entire Scheidemann cabinet fell and Count Brockdorff-Rantzau resigned. President Ebert called upon Bauer, a well-known majority Socialist, to form a new ministry which he succeeded in doing on June 21. In this as in the preceding cabinet Gustav Noske was minister of defense. "On July 9 the government introduced into the National assembly a bill to ratify the peace treaty, and it was passed through all stages with great rapidity. . . . The treaty of peace having been disposed of, the National assembly turned to the more congenial task of drawing up a permanent constitution for Germany."—*Annual Register*, 1919, pp. 202, 209.

1919 (July).—Education, civil service reform and the high court of justice under the Republican constitution. See EDUCATION: Modern developments: 20th century: General: Germany: Under the republic; CIVIL SERVICE REFORM: Germany; COURTS: Germany: Under the Republican constitution.

1919 (July-August).—Constitution adopted.—Dissolution of the constituent assembly.—"After months of debate the new German Constitution, largely the work of Professor Hugo Preuss, [minister of home affairs in Scheidemann's cabinet] was finally adopted on July 31 and became effective by executive order on August 11, 1919, without being submitted to popular referendum. . . . On August 21, President Ebert was formally sworn into office under the new Constitution, and the Constituent Assembly as such dissolved."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*.—See also GERMANY, CONSTITUTION OF THE REPUBLIC.

1919 (August-November).—Political problems.—Disturbances by radicals and monarchists.—Financial legislation.—New taxation laws.—"Throughout the year the government has been confronted by serious political and economic problems. During the autumn a remarkable industrial revival swept over the nation; longer working hours were agreed to, either voluntarily or otherwise, and thus production was greatly increased despite the severe handicap caused by shortage of coal and raw material. To relieve the coal situation all railway passenger transportation was officially suspended from November 4 to 15. Considerable anxiety was manifested by the government on the approach of the anniversary of the revolution, November 9, when radical outbreaks were feared. Due to the drastic precautionary measures taken by Herr Noske, Minister of Defence, a general strike, which had been proclaimed in Berlin, failed to accomplish its purpose; cold weather, a heavy snowfall and the temporary suspension of railway passenger service also helped to paralyze the plans of the extremists. The government was equally annoyed by the monarchists; at a general meeting of the Pan-German League, a reactionary organization, held in Berlin on August 31, a return to monarchy was strongly advocated. The

visit of General von Hindenburg to Berlin during the first part of November was made the occasion for monarchist demonstrations, and the parties of the Left were sufficiently alarmed to issue warning that the commonwealth was in danger. In this connection the Ministry of Education began an investigation of the Nationalists Youth League, the organizers of which were alleged to be monarchists who were poisoning the minds of the boys of Germany with monarchist propaganda for a war of revenge. In financial matters the government successfully secured the passage of important legislation. The parallel forms of taxation which prevailed under the old régime were replaced by a single national income tax and a single property tax; out of the money thus raised the whole expenditure of the commonwealth, federal, state and municipal, will be defrayed. The new regulation defines the amount to be contributed by each individual. Under the old system incomes above 500 marks were taxed without regard to the number of persons in the taxpayer's family; under the new arrangement incomes below 1,000 marks are free from taxation, and an exemption of 500 marks is allowed for the first dependent and 300 marks for each additional dependent thereafter. The measure was vehemently attacked by the Nationalists."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, p. 116.

1919 (September).—United States Senate rejects treaty and adopts "Lodge reservations." See U. S. A.: 1919 (September-November).

1919 (December).—Congress of Independent Socialists.—Communist party formed.—"An important Congress of the Independent Socialists, held at Leipsig during the first week in December, attracted wide attention. The proposal for union of the two socialist parties, which had been agitated for some time by Herr Scheidemann, was rejected by the Independents."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*.—"The Spartacides, about the end of December, [had] held a congress, in the course of which, in order to distinguish themselves from the Independent Socialist, they organized the Communist Party."—M. Berger, *Germany after the armistice*, p. 243.—See also below: 1922 (September-November).

1919-1920.—Question of socialization of industries.—"The controversy over the socialization of industry in Germany began at the very outset of the revolution, and shows no signs as yet of being settled. . . . A memorandum on socialization by Herr Wissell, ex-minister for economics, is 'interesting as indicating the tendencies of thought with regard to the future economic system in Germany. . . . The advanced policy of expropriation proposed in Section VII . . . is the type of socialization now popular in Germany, and consists in the buying up of the financial interests, but not of the management of industrial concerns'."—*Germany: State control of industry (International Review, Sept., 1919, p. 118)*.—The proposal was, however, rejected by the government. "About the end of March the report of the Government Commission on Socialisation was issued . . . with recommendations against the direct state ownership of industry, and in favor of governmentally controlled but internally self-governing syndicates. . . . [Its] recommendations with respect to the coal industry are of peculiar interest. . . . The government has not yet put the plan into practice; but has gone some distance in this direction by taking over control of the coal industry, fixing prices, and giving representation to workers and consumers on the managerial

committee."—M. Booth, *Social reconstruction in Germany*, p. 35.—The tendency towards combination and concentration of capital had become very pronounced. As long ago as 1904 "two . . . immense combinations had been formed in the dye-stuff industry, each including three of the largest six houses. . . . In 1916 the two pre-existing cartels were combined with . . . various smaller companies is one gigantic cartel representing a nationalization of the entire German dye and pharmaceutical industry."—*Report of the alien property custodian on the chemical industry (Journal of Industrial and Engineering Chemistry, Apr., 1919)*.

—See also TRUSTS: Germany: 1920.—"The war, as would naturally be expected, greatly accelerated the already prevailing tendency towards collectivism in Germany. According to the latest report of the Secretary of State, A. Müller, issued in January 1919, 'many of the most comprehensive steps taken in the direction of collectivist organization have proved so useful that their abandonment is not contemplated.'"—M. Booth, *Social reconstruction in Germany*, p. 7.—"As indicative of the community co-operative movement which has developed in late years in Germany, the German press calls attention to the organization of a society among thirty-five towns in Thuringia for the purchase and development of peat beds lying in the Weser basin, south of Bremen. These peat beds will be developed as a source of fuel supply for the towns in the association."—*Commerce Reports, Apr. 17, 1920*.—"One of the results of the war in Germany was to open up an immense field for social experiment. . . . There was often a very close co-operation between municipalities and the various local bodies, such as trades-unions, churches, chambers of commerce, building societies, credit banks, etc. In this way the importance of the municipality as a focus of social effort and organization received a very powerful impetus. . . . The principle throughout was to call forth local effort by means of a policy of decentralization. This applied to the whole sphere of relief work and social organization for 'welfare' purposes. The various cities and districts elaborated quite different methods for dealing, for example, with unemployment, housing, credit and the provision of coal and clothing. . . . Even before the war, as is well-known, Germany had made long strides in the direction of the collectivist type of social life; and the real significance of these developments is that they constitute another and most decisive stage in the same movement."—M. Booth, *Social reconstruction in Germany*, pp. 7-9.

ALSO IN: W. H. Dawson, *What is wrong with Germany?*—Idem, *Municipal life and government in Germany*.

1919-1920.—Economic difficulties.—Reduction of productivity.—Unemployment.—Underfeeding.—Population question.—Financial situation.—Germany suffered severely financially, industrially, and economically from the war and its aftermath. The nation's phenomenal growth industrially had been inextricably bound up with her expanding commercialism abroad, and was dependent on her production of iron and coal. The ores from Lorraine and the Saar basin, the Silesian coalfields with their related industries, and a large share of the rolling stock of the country, were taken from Germany as a result of the Treaty of Versailles. The deprivation of her colonies closed many of her commercial establishments abroad and rendered the progress of foreign trade difficult. Depreciation in the value of fixed capital in the form of plants, rolling stock, buildings, and docks,

was consequently very great. The same post war depression was seen in agricultural sections where only one-third of the live stock was left, and lack of labor and fertilizers had reduced the productivity of the soil by a quarter. "The labour situation is desperate. The number of unemployed in Berlin is between 220,000 and 270,000. . . . On the other hand, many factories are retaining full staffs although they have not employment for them. Industry is on the verge of collapse. Capital reserves are being rapidly absorbed by the payment of the greatly increased wages for which the output offers a diminished return."—M. Booth, *Social reconstruction in Germany*, p. 32-33.—"The energy and efficiency of the German working classes [were said to] . . . have been terribly undermined by underfeeding. This underfeeding . . . cannot be remedied so long as Germany, by virtue of the Peace Treaty, is compelled to supply goods and perform services gratis or at prices far below those obtaining in the world's markets, while she has to pay high prices for indispensable necessities, foodstuffs and raw materials from abroad."—*Underfeeding in Germany (Economic Review, Nov. 12, 1920)*.—According to reports by British officers sent on special missions of investigation to Germany in 1919, the general impression conveyed is that the food situation is very serious; that the establishment of stable conditions of government depends upon an immediate supply of food and raw materials and that the Bolshevik danger is by no means imaginary. "Underfeeding is by no means confined to the working classes, but is even worse among the middle classes, who send their children to the middle schools, and is nearly as marked in the high schools. The terrible depreciation of money and the increased price of necessities have caused distress to be specially rife among the classes dependent on a moderate income from investments. Among these classes, especially among widows and elderly persons, there has been an enormous increase of mortality due to underfeeding, and its consequent reduction of capacity to resist disease."—*Ibid.*—According to a report of the Copenhagen Society for investigation of social effects of the war, issued in March, 1919, "The German people suffered by diminution in births and increase of mortality a total loss of approximately 5,600,000 souls. The number of inhabitants has sunk from 67,800,000 [in 1914] to about 65,100,000; of these 33,900,000 are females and only 31,200,000 males. . . . [In 1919, the population, exclusive of Alsace-Lorraine, was 32,000,000 females and 31,075,000 males.] The health conditions of the population have deteriorated immensely through want of food and over-work. The poorer hard-working sections of the people have suffered the most."—*War and population of Germany (Living Age, Aug. 23, 1919)*.

ALSO IN: W. H. Dawson, *Industrialism in Germany*.—Idem, *Germany and the Germans*.

According to a report in the *Frankfurter Zeitung* of July 2, Dr. Wirth, finance minister, pictured Germany's past and present financial situation as follows: "A close observation shows that our financial system has passed through three stages of development. At the beginning of the war we had reached the zenith of our economic development, stocks of goods and raw materials, in fact a wealth of substantive values, were at our disposal. At that time it was possible to transform an extraordinary amount of actual capital into paper war loan capital. That was the period when our loan policy from the standpoint of political economy stood upon the broadest basis and when we had not overtaxed ourselves either

financially or economically. . . . With the year 1917 began the second phase of our financial embarrassment. It was then that the physical, material and financial resources of the nation began to be sapped. The war became more expensive, and prices, already high, increased. Economic impoverishment set in and increased month to month. In the development of the national finances this over-straining of our strength was manifested by the discrepancy between current revenue and current expenditure. . . . And then came the collapse, both military and political. With it the critical position of our finances entered upon its third stage. The disquieting increase of the floating debts commenced; it was unavoidable, for on the one hand the Commonwealth lacked rich sources of taxation and lacked the basis of taking up firm loans, and on the other hand it was faced with vast expenditure as the aftermath and consequence of the war. The liquidation of the war cost month by month milliards of marks and will also absorb still larger sums. In addition, there is the expenditure for a terribly hard peace. We must also add the sums required for cheapening foodstuffs and for other social and economic objects. The collapse of our currency has aided, in a manner absolutely un-annoying, in increasing our expenditure."—*Germany's position (Economic Review, July 9, 1920)*.

1920 (January).—A dismembered empire.—Recurrence of Spartacist outbreaks.—The German Republic at the beginning of 1920 presented an eloquent object lesson illustrating the bitter consequences of defeat in war. The quondam powerful, united empire had been shorn of valuable territories which had been originally annexed by war and now detached again through the same medium. Alsace-Lorraine had reverted to France; large districts in West Prussia, Posen and Silesia had been awarded to Poland at the dictation of the Allies; the port of Danzig was now an independent state; the fate of Memel, once the extreme eastern outpost, awaited the decision of the conquerors, who awarded it to Lithuania in 1923; a part of Silesia was promised to the new state of Czecho-Slovakia; the rich valley of the Saar was provisionally taken away with the proviso of a referendum to be taken fifteen years later to determine its allegiance. Other regions were left to decide by plebiscite whether the inhabitants preferred to remain German or cast in their lot with other states. "The second week in January saw a serious Communist upheaval in Berlin. The Government was not unprepared, and had repeatedly warned the public through the Press that it would not shrink from meeting violence with violence. On January 13, the day when Parliament reassembled to discuss the Works' Councils Bill, there were nevertheless revolutionary demonstra-

tions in Berlin in response to the call of the *Freiheit* and the *Rote Fahne*. Large crowds assembled in front of the Reichstag, and the more rowdy elements among them tried to storm the Reichstag building. The Civic Guards when it was almost too late opened fire on them with machine-guns and rifles, and there were some 150 casualties before the Königsplatz was cleared. Martial law was proclaimed in Berlin and Northern Germany. The Government, as will be seen from the statements of the Chancellor and Herr Heine, the Prussian Minister of Home Affairs, both of them Socialists, took a very grave view of the danger they had been in.—*Review of the Foreign Press (Economic Review, Jan. 30, 1920)*.

1920 (March-April).—Counter revolution.—Kapp's coup d'état.—Fall of the Bauer ministry.—Uprisings in the Ruhr district.—French occupation of Frankfurt.—German protest.—“A counter-revolutionary movement, under the leadership of Dr. Wolfgang von Kapp and apparently backed by all monarchist sympathizers, including the powerful Pomeranian Land League, took the government by surprise when on March 13, troops under General von Lüttwitz marched into Berlin, took possession of all the public buildings and chief strategic points of the city and caused President Ebert and the government to flee, first to Dresden and later to Stuttgart. Throughout North Germany the government troops refused to fight against the rebels; South and West Germany, however, together with the Hanseatic towns, declared themselves hostile to the movement. Dr. Kapp proclaimed himself ‘Imperial Chancellor’ and appointed Baron von Lüttwitz as commander-in-chief of the army. Unable to deal with the passive resistance of a general strike called by the Socialists, the revolutionists in numerous soothing proclamations sought to gain the confidence of the people. Their protestations made little impression, and by March 15 the *coup* had failed. In its wake came a political upheaval, for when the Bauer ministry returned to Berlin it found its prestige gone, and attempts of the extremists to browbeat the country into Sovietism, coupled with armed resistance of workmen in the Ruhr district, brought about its fall. Contributing to its overthrow was its inability to meet the terms of an ultimatum of the trade unions, demanding, among other things, selection by them of members of the cabinet, a decisive voice in drafting all new legislation, disarmament and punishment of all persons implicated in the *coup d'état*. After vainly striving to remodel his cabinet to suit the importunities of those arrayed against him, Herr Bauer resigned, and upon the invitation of President Ebert, Hermann Müller, Socialist, became the third chancellor of the Republic [with Herr Gessler as minister of defence]. The first serious problem which the new government faced was the suppression of Communist uprisings in the Ruhr district, where a Red army had been organized. After methods of persuasion had failed, troops [under General von Watter at Münster] were despatched into the valley, which lies within the neutral zone fixed by the treaty; this action caused grave concern in Paris, and on April 6, General Dongoulette [at the head of French troops] marched into Frankfurt and Darmstadt; Homburg, Hanau and Dieburg also were occupied. [These places are not in the Ruhr valley and there was no encounter with the Germans.] By the middle of April law and order had been restored, although unrest continued.”—E. D. Graper and H. J. Carman, *Political Science Quarterly, 1920, Supplement, pp.*

117-118.—The German government protested against the action of the French army in the following note: “It cannot possibly have been the intention of the Treaty of Versailles to prevent Germany from restoring order as quickly as possible in the part of its territory most seriously disturbed by bands of robbers. The movement in the Ruhr region, if it had not been quickly opposed, would have shaken the republic to its foundations, both politically and economically. The German Government would have acted inexcusably if it had waited longer in the optimistic hope that the insurgent movement in the Ruhr district would end without military intervention, and events so far have shown that it was right. Everywhere that the troops arrived the movement quickly collapsed, and the fears expressed by the Allies that the very entry of the troops would make the disturbances worse and lead to the destruction of most important industrial works has up to the present not proved justified. The note points out that alleged violations of the treaty must, under the terms of that instrument, be redressed by all the signatories on the allied side, and not by a single one, acting independently. The idea that the dispatch of troops to the region could in any way involve a menace to France is so absurd that it does not require to be refuted,” the note continues, “and it may therefore be maintained with the fullest conviction on Germany's part that there is here no intentional violation of the Peace Treaty which could make the German Government responsible in the meaning of the Peace Treaty. Even if such a violation had been committed, the military act of violence now committed by the French Government would not be justified.”

1920 (June).—General election result.—Konstantine Fehrenbach appointed chancellor.—“General elections, postponement of which undoubtedly had hastened the Kapp revolt, were held on June 6. . . . At the elections, which were conducted on the basis of proportional representation and in accordance with the new franchise bill providing for one member for every 60,000 votes polled, more than 25,000,000 votes were cast and 460 Reichstag members were chosen. . . . On June 8, the government of Herr Müller tendered its resignation, but President Ebert requested it to remain in office provisionally. A few days later Konstantine Fehrenbach, former president of the Reichstag, was called to the chancellorship. After having selected a cabinet which did not meet with the approval of the Majority socialists, he finally succeeded in forming a ministry chosen from representatives of the Catholic, Democratic and People's parties.”—E. D. Graper and H. J. Carman, *Political Science Quarterly, 1920, Supplement, pp. 118-119*.—Dr. Walter Simons became foreign minister, Dr. Wirth, minister of finance, and Gessler remained as minister of defence. The outstanding problem before the new government was the settling of the reparations question in accordance with the Treaty of Versailles and as modified in conferences at Spa and London with the Allied Supreme Council.

1921 (April).—Appeals to United States for mediation on reparations.—Replies. See U. S. A.: 1921 (April-May): German appeal.

1921 (April).—Death of ex-empress in exile.—“The ex-Empress Augusta Victoria died at the Castle of Doorn [in Holland] at 6.15 this morning [April 11]. . . . The ex-Empress had lived at Doorn for about a year. Only very rarely did she enter the village for a short walk and since her illness she never left the Castle grounds. . . . The *Nieuwe Rotterdamsche Courant* remarks:—“The Republican form of government has not so far taken root in Germany that a great part of the German people should not mourn for its last Empress who was, at the height of her power, revered as an example of the German housewife who only minded the three K's—Kirche, Kinder, Küche' (Church, Children, Kitchen). The *Vaterland* says:—“She was a pious woman, the centre of the Orthodox Protestant Church life.—Augusta Victoria Frederica Feodora Jenny, Princess of Schleswig-Holstein, was born on October 22, 1858, and married the crown prince of Prussia [William II] on February 27, 1881, seven years before he became Emperor. The Emperor was particularly concerned to exhibit his wife in the character of *Landesmutter*. . . . She bore her husband six sons and one daughter, all of whom she lived to see married, and at the time of her death she had nearly a score of grandchildren.”—*The Times* (London), Apr. 12, 1921.

1921 (May).—Trade agreement with Russia. See RUSSIA: 1920-1921: Difficulties of establishing peace, etc.

1921 (May-June).—Acceptance by Germany of Allied reparations demand.—Summary of obligations.—First payment.—Trade unionists oppose German labor in devastated areas.—Restriction of German export trade.—Dilatory procedure with war offenders.—In reply to an Allied ultimatum presented on May 6, accompanied by threats of French military action, Germany agreed on May 11 to pay a total of \$33,000,000,000 for damages committed by German troops during the war. This concession was made by the new chancellor, Wirth, who had succeeded Fehrenbach. The Allied premiers drew up the terms in London and presented them in the form of an ultimatum, with the proviso attached that if they were not unreservedly accepted by May 12 the French, supported by Allied troops, would occupy the Ruhr district and hold the same as a guarantee for the fulfilment of Germany's reparation debt. French troops were moved into the Rhine district and concentrated upon Ruhrort. At the last moment Germany yielded. “The unconditional acceptance by Germany of the Allied demands as set forth in the ultimatum . . . entails the discharge of the following obligations:—

“June 1.—Payment of one milliard gold marks [£50,000,000].

“June 30.—Disarmament.

“July 1.—Delivery to the Reparations Commission of bonds for 12 milliards gold marks [£600,000,000].

“July 15.—First quarterly payment of the annual sum of two milliard gold marks [£100,000,000].

“August 15.—First quarterly payment of the twenty-six per cent. of the value of German exports,

“October 15.—Second quarterly payment of the annual sum of two milliard gold marks.

“November 1.—Delivery to the Reparations Commission of bonds for thirty-eight milliards gold marks [£1,900,000,000]. Also bonds without coupons attached for eighty-two milliards gold marks [£4,100,000,000].

“November 15.—Second quarterly payment of the twenty-six per cent. of the value of German exports.”—*The Statist*, May 14, 1921.—“The German Government, through the agency of four New York banks, . . . transferred . . . \$45,733,000 to the New York Federal Reserve Bank in respect of the first instalment of its liability to the Allies under the Reparations agreement. This payment . . . was not made in gold. . . . The sum mentioned forms only a small part of the total amount for which Germany was liable to the Reparations Commission before June 1. Under the agreement this was to be one milliard gold marks, which would be equivalent to £47,850,000 (gold), or 232,800,000 United States dollars.”—*Ibid.*, June 4, 1921.—“The Allied reparations bill against Germany totals £6,750 million. How to receive this without injury to ourselves [Great Britain] is a big problem for us, and the United States is in an equally awkward dilemma as regards her foreign creditors. It will be remembered that after the War it was proposed to employ German labour on a large scale to reconstruct the devastated areas in France and Belgium, but the scheme fell through because unemployment and strong trade-union opposition were feared. The Treaty provided an alternative means of ensuring reparation by giving the Allies an option on German machinery and reconstruction materials of every kind for approximately two years. This clause was for various reasons not availed of. Again, in the case of ships, neither our own nor the French markets were able to absorb all the surrendered vessels, and the consequent depression in price enabled very cheap purchases of tonnage to be made. . . . The use of German labour outside Germany has been rejected by the Allies, as well as the products of German labour working within the country.”—*Ibid.*, June 18, 1921.—All the Allies “are busy in devising various means of stifling the German export trade in order to protect their own industries. Similarly, the United States desires an attempt to be made by debtor nations of Europe to meet the obligations contracted by them during and since the War, while at the same time proposing to raise its already high tariff on imports. The two policies are at variance, but a judicious reconciliation is possible without injuring the internal condition of the recipient countries or permanently crippling the productive capacity of the paying countries. . . . On the subject of war criminals Germany's action has been even more lax. In response to urgent representations the Allies consented to the trial of war offenders before the High Court of Leipzig, but three of the seven persons whom they demanded should be brought to justice have been allowed to leave the country, while the other four have not yet been tried.”—*Ibid.*, May 7, 1921.

1921 (May-December).—Negotiations with Denmark. — Agreement as regards water courses, fisheries, etc. See DENMARK: 1921.

1921 (July).—Agreement with China.—Post war reparations. See CHINA: 1921 (July).

1921 (November-December). — Reparations problem.—Completion of disarmament.—Finan-

cial status.—“During November and December, Hugo Stinnes, the leading financier and industrialist of Germany, and Dr. Walter Rathenau, former Minister of Reconstruction in the German Cabinet, were in consultation at London with the British member of the Reparation Commission and other British authorities, to discuss some new adjustment for Germany's reparation payments. . . . The Berlin correspondent of *The New York Times* cabled on Dec. 11 that after visiting every part of Germany and studying all the information derived from official investigations, he could report that Germany's disarmament, under the military terms of the Versailles Treaty, was 97 per cent. complete as regards artillery, and 93 per cent. complete as regards machine guns and rifles. Factories

WALTER RATHENAU

Foreign minister of the German Republic, assassinated in 1922

known to have been engaged in manufacturing war materials were industrially disarmed at that date to a degree of 90 per cent. Dr. Wirth, the German Chancellor, in a public statement made Dec. 10, categorically denied the charges made in France that Germany had not disarmed.”—*New York Times Current History*, Jan., 1922, pp. 670-671.—“The total estimated deficit for the year, including railroad and post subsidies, was 46,800,000,000 marks. . . . The industries are active and the number of unemployed at the close of the year was estimated around 1 per cent. All the factories were in operation. . . . Herr Stinnes obtained the consent of the Government to denationalize the railroads. His plan assigns to the Government 51 per cent. of the new railroad stock, 25 per cent. to the capitalists and apportioned 24 per cent. to the railroad employes. . . . Between 250,000 and 300,000 Russian immigrants now live in Germany.

The colony consists mainly of ex-officers, lawyers and merchants. . . . The Krupp Works has increased its capital 250,000,000 marks, changing from war production to peace production. The gross profits during the year were 250,000,000 marks, the net 98,000,000. The new stock is to be profit sharing with the employes. . . . The Allied Disarmament Commission reconsidered its order to destroy the Deutsche Werke, a group of plants used during the war for manufacturing German armaments, and will instead convert them into workshops for the manufacture of industrial machinery, which will call for the employment of 20,000 workers.”—*Ibid.*, Feb., 1922.—See also EUROPE: Modern: Far-reaching effects of the World War.

1922.—Agitation for an eight hour day. See LABOR LEGISLATION: 1920-1922.

1922 (January-February).—Railroad strike.—Appointment of United States ambassador to Germany.—Reparations problem.—“There was a complete tie-up of Germany's railroads on Feb. 2 because the Government refused to give an immediate answer to the demand of the men for an increase of 50 to 70 per cent. in pay. An increase of 15 to 20 per cent. had already been granted on Oct. 1, 1921. An acute economic crisis resulted from the strike, which received sympathetic support from public utility workers in some of the larger cities, though the General Federation of Labor Unions strongly condemned it. The Government made firm efforts to resist, but the food situation grew so desperate that it was forced to capitulate by practically granting the demands. The strike lasted six days. [See also LABOR STRIKES AND BOYCOTTS: 1922: Germany.] . . . Congressman A. B. Houghton of Corning, N. Y., was nominated by the President as Ambassador to Germany on Jan. 18 and was promptly confirmed by the Senate. . . . The German note to the Reparation Commission, in explaining the failure to meet reparation obligations in January and February, requests that Germany be relieved of all cash payments in 1922. The note points out the steps taken to increase revenues; it also asks for a reduction in cash payments and an increase in payments in kind. With the schedule of increased taxes, the note states, there will be a surplus of some 16,000,000,000 marks available for reparation payments.”—*New York Times Current History*, Mar., 1922, pp. 1054-1055.

1922 (June-July).—Assassination of Rathenau and consequent crisis.—Defense of the Republic Bill.—Elections in Saar valley.—“The German Republic has just passed through one of the most critical months of its existence. When Dr. Walter Rathenau, the German Foreign Minister, was riding in an automobile to his office on the morning of June 24, he was suddenly fired upon by assassins in another automobile and was instantly killed. . . . The murdered statesman was not only the foremost member of Chancellor Wirth's government, but was the most forceful personality working in Germany for the fulfillment of treaty obligations and the financial rehabilitation of the republic. Everything indicated that

his assassins were members of a reactionary group of Royalists and anti-Semites banded together to fight reparation payments and foment revolution. It was felt throughout Germany that the blow had been aimed not only at Rathenau but at the heart of the republic itself."—*New York Times Current History*, Aug., 1922.—"President Ebert was working energetically to prevent a break in his Cabinet, and to hold his Government firm after the excitement caused by the assassination of Dr. Rathenau. The murderers of the German Foreign Minister, Hermann Fischer and Edwin Kern, after being encircled and hunted down for more than ten days in Central Germany, were finally located in an unoccupied castle, where they committed suicide under dramatic circumstances just as the police were about to arrest them. The Defense of the Republic bill, which was a direct outcome of the assassination, passed its third reading in the Reichstag on July 18. (At the same session the bill for a compulsory loan of 70,000,000,000 marks also passed its third reading.) . . . Despite repeated protests by representatives of the inhabitants of the Sarre Basin to the Council of the League of Nations against the new semi-legislative body to be known as the Advisory Council, the main body of the inhabitants turned out at the elections on June 25 and elected the representatives, with the result that the Centrists won 16 seats, the Socialists bulking second. This new Council is to be called into session every three months by the Chairman of the Governing Commission, and its decisions will be accepted by that commission unless they are obviously contrary to the régime created by the Treaty of Versailles. Under the treaty, the League of Nations is to administer the territory until 1935, when a plebiscite will decide whether it shall belong to Germany or France. A Study Committee is to cooperate with the Council."—*Ibid.*, Sept., 1922, p. 1074.

1922 (July-August). — Reparations crisis. — Agreement with the United States regarding claims.—Labor conditions.—"The French and British Premiers met in London on Aug. 7 for a conference on the allied policy to be adopted in view of Germany's insistence that she could no longer meet her reparations and other financial obligations. The situation which they were called upon to face was incontestably serious. In the first week of July the floating debt had been increased by more than 3,500,000,000 marks, and the exchange value of the mark was dropping lower and lower. The next monthly reparation payment of 32,000,000 marks, due July 15, and already representing a reduction of 18,000,000 marks from the 50,000,000 due under the fixed schedule laid down some months ago by the Reparation Commission, loomed so large to the German Government that a special envoy was sent to Paris to ask a two-year moratorium for this and the following payments. The Reparation Commission took the request under advisement, but insisted that the July instalment would have to be met, and Germany paid it [on the 17th]. . . . [Germany gave] notification that it would be impossible for her to keep up coal deliveries of 1,900,000 tons monthly, and her request to be allowed to reduce the amount by one-third. This pessimism was further increased by a new German demand which came on July 15 that Germany be relieved for three years from making payments in cash for the liquidation of claims of French nationals against German nationals, represented in Clearing House balances. The balance due France on this account amounts to some \$100,000,000, and Ger-

many agreed in the London conference of June 10, 1921, to pay \$10,000,000 monthly to liquidate. What she now asked was that this monthly payment be reduced to \$2,500,000. This roused a new French storm, and the determination of France to apply the 'sanctions' or penalties, unless Germany changed her attitude, became correspondingly stiffened. Plans were drawn up by Premier Poincaré to obtain satisfaction through other channels. . . . Germany's reply to the French ultimatum demanding the payment of \$10,000,000 was received by Aug. 5, within the time limit. Germany declared anew that the compensation payments formed a part of the general reparations, again denied France's right to adopt punitive measures before Aug. 15, and, after pointing out the disastrous fall of the German mark, urged France to hold decision over until after the London meeting of the Premiers. M. Poincaré wasted no time in showing that his plans of coercion brooked no delay. Three hours later the French Foreign Office issued a decree declaring that all payment or recognition of German nationals' credits in France was suspended, that all payments to Germans of awards of the Mixed Arbitral Tribunal were suspended; that all proceeds of the liquidation of German property in France were sequestered until further notice, and that liquidation in Alsace-Lorraine was suspended. The Fifth Article, saying, 'Conservatory measures will be immediately taken in Alsace-Lorraine,' obviously referred to the French plan to sequester German property in the redeemed provinces, and to expel a certain number of prominent Germans from this territory. By Aug. 11 the expulsion of 500 Alsatian Germans was already under way. . . . The first step toward settling the claims of the United States against Germany was taken on Aug. 10 with the signing in Berlin by representatives of the two nations of an agreement for the determination of the American claims. The agreement provided for a mixed claims commission to be composed of one German and one American delegate, with an umpire to settle matters in dispute. On the day of agreement was signed, President Harding named William R. Day, Associate Justice of the United States Supreme Court, to act as the commissioner for America. The commission is to pass upon (1) claims of American citizens arising since the outbreak of the war for damage of property or interests within German territory; (2) other claims for loss or damage arising from the war, and (3) debts owed American citizens by the German Government or by German nationals. Though Germany's currency was further inflated by the issue of more billions of paper marks, and though the mark continued to fall till it reached nearly 900 to the dollar by the 10th of August, accompanied by the raging of speculation and violent rise of prices, comparatively few men remained unemployed, and only some 20,000 were receiving State aid."—*New York Times Current History*, Sept., 1922.—See also FRANCE: 1922 (August-October).—On August 3, the Council of Ambassadors notified Bolivia to dispense with all German army advisers in compliance with Article 170 of the Treaty of Versailles, to which Bolivia was a signatory. The Reparation Commission decided on August 30, that Germany need not pay any cash installments for a period of six months a moratorium as such being refused; 270,000,000 gold marks were to be paid in notes to Belgium with some form of bank endorsement.

1922 (September-November).—Restoration of French liberated regions.—Belgian demand refused.—Socialists amalgamate.—British repara-

tions proposals.—Kiel canal controversy.—Resignation of the chancellor.—On Sept. 5 Hugo Stinnes, German industrial magnate, concluded a contract with the Federation of Co-operative Societies of the French Liberated Regions to furnish building material under a scientific plan of restoration; the material to be made up in Germany and to cost 13,000,000,000 francs, to be charged to indemnity account. On the 14th the German government refused to provide the \$100,000,000 in gold marks demanded by Belgium as guarantee of a note issue on account of reparations, and also declared her inability to pay £1,500,000 demanded by September 15 by the Allies on account of private pre-war debts. After six years of bitter political differences the German Independent Socialists and the Majority Socialists united to form the German Social Democracy, Sept. 24; the drafting of a new party programme was entrusted to Karl Kautsky. A proposal, put forward by Great Britain, to relieve Germany for five years of all cash reparation payments, with immediate control of German government finances by the Allies, was rejected by France on Oct. 13. On the 26th the Council of Ambassadors decided to refer the question of free passage of the Kiel canal to the International Court of Justice, in order to settle the dispute between Germany and the Allies arising from refusal of passage to Allied ships during the Russian war with Poland in 1920. On Nov. 15 the chancellor, Julius Wirth, resigned with his cabinet; he was succeeded by Wilhelm Cuno.

1922 (October).—McKenna's statement of the practical economic problem involved in German reparations. See DEBTS, PUBLIC: Problem of paying, etc.

1922 (December).—London conference on reparations.—Allied disagreement.—French demand occupation of Ruhr towns.—French case for action.—Statement in Senate by Premier Poincaré.—Germany declared in default.—The British, French, Italian and Belgian premiers met in London on Dec. 9 to confer on German reparations. A proposal emanated from the British side to cancel certain war debts, to cease the employment of forcible measures against Germany, to grant a moratorium to that country to permit her to re-establish her finances, and to make a substantial reduction in the reparations terms. M. Poincaré agreed to a two years' moratorium on condition of satisfactory guarantees being offered. Belgium proposed an annual international loan to Germany of 5,000,000,000 gold marks for seven years—making a total of 35,000,000,000, to represent the entire reparations indemnity. The conference broke up in failure on the 11th, with France insisting on the occupation of Essen and Bochum. The next meeting was arranged to be held in Paris on Jan. 2, 1923. To a full attendance of members in the French Senate on Dec. 21, Premier Poincaré said it was natural that in the face of the German insolvency they should turn to seek a new solution, but he hoped that this might never be interpreted as a partial or total abandonment of the French claims. Germany had persisted in her ways, he said; her great industrial magnates had grown richer and richer at the expense of the German people. What, he asked, was the quickest and surest way to get satisfaction of the French claims? Germany was not carrying out her engagements and the Schedule of Payments of May, 1921, was a dead letter. As to reparations in kind, the Weisbaden agreement had been ratified by the Reparations Commission; the Allies had even recognized the right of France to make other conventions which promised a surer and more rapid fulfilment.

These agreements had come into force on July 20, 1922, but nothing had been accomplished under them except with great difficulty. An order for 35,000 cubic metres of wood had been passed for completion in the last quarter of this year, but the execution of the order had been negligible. The French government had also considered a large programme of works to be carried out in France by the Germans. The Reparations Commission had approved the proposed system in principle and the government had put themselves in touch with the German government in regard to the matter. Here was an excellent opportunity for the German government to prove their good intentions; but it was only in October that the Wilhelmstrasse (the Foreign Office in Berlin) declared its readiness to appoint experts, and even then made a condition about payment. The French government had accepted this, but they were still waiting for the German representatives with whom they were to discuss the matter. Germany said that as a result of depreciation of her currency she could only with difficulty pay in Germany itself for the goods which France wanted from her, but among these supplies were some which came from the national domains. In reality the Reich was seeking means of delaying all reparations, those in kind as much as others. "Is this the moment," asked Poincaré, "to grant Germany a new moratorium, without something in return? New German proposals are announced to us. These have to do doubtless with an elastic moratorium, that is to say, a moratorium over a period which may be extended. But will Germany profit by it to clear up her finances? The past makes us suspicious about that. Germany must, therefore, be subject to effective control."—Based on *The Times* (London) *Paris report*, Dec. 22, 1922.—At a suddenly summoned meeting of the Reparations Commission in Paris on December 26, the French delegates obtained a majority of three to one in favor of a declaration that Germany was in voluntary default in deliveries of timber. Great Britain alone opposed the declaration. The French claim on Germany was in respect of 55,000 cubic metres (72,000 cubic yards) of sawn wood and 200,000 telegraph poles. The declaration of default was made solely on the French claim, which the French delegates justified by the fact that only 36,000 cubic metres of sawn timber and 65,000 telegraph poles had been delivered. The default in actual value was estimated at 2,000,000 gold marks (about \$500,000). The sawn timber in question was not originally in the French contract, but had been transferred by the British to the French. The question arose whether there was in reality a breach which brought Germany under the general penalties of the Treaty of Versailles. In the contracts there was laid down the right of imposing specific penalties, and in the case of telegraph poles those penalties were clearly defined. They were to the effect that if Germany did not deliver the quantities agreed upon then the price credited to her under the heading of reparations should be reduced even in respect of the deliveries she had effected. The whole Reparations Commission was of opinion that the expression "default" in paragraph 17 of the section of the Treaty dealing with reparations meant voluntary default, as stated explicitly in paragraph 18. The whole matter of reparations in kind was undoubtedly much complicated by the disturbed state of German finance and a good case could be made out that, as the Reparation Commission had asked the Allied governments to consider Germany's capacity to pay, her past failures might properly be merged in the larger question. There had also been a shortage in the coal deliv-

eries. Germany had already been declared in default on two former occasions. The first was in respect of coal deliveries before the Spa Conference. But in the sequel the Allies actually allowed credits to Germany to enable her to make deliveries and considerably reduced the quantities demanded. The second occasion arose in connection with the completion of the payments of twenty milliards of gold marks (\$5,000,000,000) before May, 1922, and again in the sequel the Allies did not insist on more than one milliard (\$250,000,000) in gold being paid, and allowed the rest of the sum to be incorporated in the Schedule of Payments then drawn up, which meant that a deficit of twelve milliards (\$3,000,000,000) was represented by "A" bonds.—*Ibid.*, Dec. 27, 1922.—On Dec. 31 the German chancellor Cuno announced to the Reichstag that a Franco-German non-war proposal offered by Germany through the mediation of the United States had been rejected by Premier Poincaré on the ground that France was effectually covenanted against war by Article XI of the League of Nations Covenant.

1923 (January).—Failure of Paris reparations conference. — German default confirmed. — French troops enter Ruhr valley.—Extension of occupation.—A further session of the Reparations Commission met in Paris on Jan. 2, at which all the delegates agreed on reducing the German indemnity to 50,000,000,000 gold marks. The French and British, however, were opposed on the question of penalties, the latter proposing that occupation should be carried out only on future default, and then with unanimous Allied consent. On the 9th the Commission voted, three to one, holding Germany in wilful default on 1922 coal deliveries, Belgium and Italy being ranged on the side of France. On the following day France notified Berlin that, as a result of this default, "the French government had decided to dispatch to the Ruhr a mission of control composed of engineers invested with the necessary powers to supervise the acts of the Kohlsyndikat (Coal Syndicate) . . . [to assure] strict application of the schedules fixed by the Reparations Commission and to take all necessary measures for the payment of reparations." French armies crossed the Rhine and entered the German coal and iron region of the Ruhr Valley. Under command of General Degoutte, Essen and Düsseldorf were occupied. The German government recalled their ambassador from France and their minister from Belgium, at the same time denouncing the concordat with Italy under which Germany had contracted to pay 800,000,000 marks for the redemption of German property in Italy. On the 11th the German government protested to the United States government and to Great Britain against the French invasion, alleging that coercive military measures were being "directed against a defenceless and peaceful nation," and that Germany would "meet violence with violence." On the 12th the Reparations Commission postponed for fifteen days the German indemnity payment of 500,000,000 gold marks due on Jan. 15. In reply to the German government's order that no coal should be delivered to France or Belgium under any circumstances, the French extended their occupation to Lünen and Dortmund, with a threat that the mines might be requisitioned unless a settlement were reached within three days. On the 16th the Reparations Commission again voted Germany in wilful default in respect of deliveries in kind for 1923. On the 15th and 16th disturbances broke out in Bochum and Essen, the French troops fired on the crowd and several were wounded. A passive resistance strike was organized among the civilians and kept

up for some days when the French authorities declared that they were willing to pay the German mine owners a sufficient amount to enable them to carry on the coal deliveries to France, but no more than was necessary to pay wages and keep the mines in working order. The German magnates were ordered to send representatives to appear before the French Control Commission on the 17th. They failed to appear, sending word that they had decided to obey the instructions of Berlin instead of the French coal delivery orders. General Simon told some of the operators that they had not been summoned for a discussion, but to receive the orders of the French government. "If you do not see fit to obey them," he said, "you will be prosecuted before a court-martial, condemned and imprisoned." Several coal operators were subsequently arrested, but released again. On the 26th the Reparations Commission made three important decisions. They declared that the request made for a moratorium by Germany on Nov. 14, 1922, null and void because of the letter of Jan. 13, which stated that all reparations deliveries to the powers responsible for the Ruhr occupation would be suspended while the occupation lasted. The second decision was to declare Germany in general default of all reparations obligations to France and Belgium, as provided for under Paragraph 17, Annex 2, Part 8, of the Treaty of Versailles. This decision was voted by a majority of three, supported by France, Italy and Belgium, with Great Britain abstaining. All the Allied governments were to be notified of the decision. Finally, a letter was drafted by common accord informing Germany that the Schedule of Payments of May, 1921, would again be put into force on expiration of the delay granted to Jan. 31, when the payment of 500,000,000 gold marks postponed from Jan. 15 would become due.

#### GERMANY, Constitution of the empire.

13th-17th centuries.—Old (Holy Roman) empire.—Golden Bull. See GERMANY: 1347-1493; DIET, GERMANIC.

1815.—Confederation. See GERMANY: 1814-1820.

1871.—New Empire.—On January 18, 1871, at Versailles, King William of Prussia assumed the title of German emperor. On April 16th following, the emperor issued a proclamation, by and with the consent of the council of the German confederation, and of the Imperial diet, decreeing the adoption of a constitution for the Empire. (See GERMANY: 1871 [January] and [April].) The following is a translation of the text of the constitution:

His Majesty the king of Prussia, in the name of the North German Union, His Majesty the king of Bavaria, His Majesty the king of Würtemberg, His Royal Highness the grand duke of Baden, and His Royal Highness the grand duke of Hesse, and by Rhine for those parts of the Grand Duchy of Hesse which are situated south of the Main, con-

clude an eternal alliance for the protection of the territory of the confederation, and of the laws of the same, as well as for the promotion of the welfare of the German people. This confederation shall bear the name of the German Empire, and shall have the following constitution.

#### I.—Territory

Article 1. The territory of the confederation shall consist of the states of Prussia, with Lauenburg, Bavaria, Saxony, Würtemberg, Baden, Hesse, Mecklenburg-Schwerin, Saxe-Weimar, Mecklenburg-Strelitz, Oldenburg, Brunswick, Saxe-Meiningen, Saxe-Altenburg, Saxe-Coburg-Gotha, Anhalt, Schwarzburg-Rudolstadt, Schwarzburg-Sondershausen, Waldeck, Reuss of the elder branch, Reuss of the younger branch, Schaumburg-Lippe, Lippe, Lubeck, Bremen, and Hamburg.

#### II.—Legislation of the empire

Art. 2. Within this territory the empire shall have the right of legislation according to the provisions of this constitution, and the laws of the empire shall take precedence of those of each individual state. The laws of the empire shall be rendered binding by imperial proclamation, such proclamation to be published in a journal devoted to the publication of the laws of the empire, (Reichsgesetzblatt.) If no other period shall be designated in the published law for it to take effect, it shall take effect on the fourteenth day after the day of its publication in the law-journal at Berlin.

Art. 3. There is one citizenship for all Germany, and the citizens or subjects of each state of the federation shall be treated in every other state thereof as natives, and shall have the right of becoming permanent residents, of carrying on business, of filling public offices, and may acquire all civil rights on the same conditions as those born in the state, and shall also have the same usage as regards civil prosecutions and the protection of the laws. No German shall be limited, in the exercise of this privilege, by the authorities of his native state, or by the authorities of any other state of the confederation. The regulations governing the care of paupers, and their admission into the various parishes, are not affected by the principle enunciated in the first paragraph. In like manner those treaties shall remain in force which have been concluded between the various states of the federation in relation to the custody of persons who are to be banished, the care of sick, and the burial of deceased citizens. With regard to the rendering of military service to the various states, the necessary laws will be passed hereafter. All Germans in foreign countries shall have equal claims upon the protection of the empire.

Art. 4. The following matters shall be under the supervision of the empire and its legislature: 1. The privilege of carrying on trade in more than one place; domestic affairs and matters relating to the settlement of natives of one state in the territory of another; the right of citizenship; the issuing and examination of passports; surveillance of foreigners and of manufactures, together with insurance business, so far as these matters are not already provided for by article 3 of this constitution, (in Bavaria, however, exclusive of domestic affairs and matters relating to the settlement of natives of one state in the territory of another;) and likewise matters relating to colonization and emigration to foreign countries. 2. Legislation concerning customs duties and commerce, and such imposts as are

to be applied to the uses of the Empire. 3. Regulation of weights and measures of the coinage, together with the emission of funded and unfunded paper money. 4. Banking regulations in general. 5. Patents for inventions. 6. The protection of literary property. 7. The organization of a general system of protection for German trade in foreign countries; of German navigation, and of the German flag on the high seas; likewise the organization of a general consular representation of the empire. 8. Railway matters, (subject in Bavaria to the provisions of article 46,) and the construction of means of communication by land and water for the purposes of home defense and of general commerce. 9. Rafting and navigation upon those waters which are common to several states, and the condition of such waters, as likewise river and other water dues. 10. Postal and telegraphic affairs; but in Bavaria and Württemberg these shall be subject to the provisions of article 52. 11. Regulations concerning the execution of judicial sentences in civil matters, and the fulfillment of requisitions in general. 12. The authentication of public documents. 13. General legislation regarding the whole domain of civil and criminal law; likewise judicial proceedings. 14. The imperial army and navy. 15. The surveillance of the medical and veterinary professions. 16. The press, trades' unions, &c.

Art. 5. The legislative power of the empire shall be exercised by the federal council and the diet. A majority of the votes of both houses shall be necessary and sufficient for the passage of a law. When a law is proposed in relation to the army or navy, or to the imposts specified in article 35, the vote of the *präsidium* [i.e., Prussia] shall decide, in case of a difference of opinion in the federal council, if said vote shall be in favor of the retention of the existing arrangements.

### III.—Federal council

Art. 6. The federal council shall consist of the representatives of the states of the confederation, among whom the votes shall be divided in such a manner that Prussia, including the former votes of Hanover, the electorate of Hesse, Holstein, Nassau, and Frankfort shall have 17 votes; Bavaria, 6 votes; Saxony, 4 votes; Württemberg, 4 votes; Baden, 3 votes; Hesse, 3 votes; Mecklenburg-Schwerin, 2 votes; Saxe-Weimar, 1 vote; Mecklenburg-Strelitz, 1 vote; Oldenburg, 1 vote; Brunswick, 2 votes; Saxe-Meiningen, 1 vote; Saxe-Altenburg, 1 vote; Saxe-Coburg-Gotha, 1 vote; Anhalt, 1 vote; Schwarzburg-Rudolstadt, 1 vote; Schwarzburg-Sondershausen, 1 vote; Waldeck, 1 vote; Reuss, elder branch, 1 vote; Reuss, younger branch, 1 vote; Schaumburg-Lippe, 1 vote; Lippe, 1 vote; Lubeck, 1 vote; Bremen, 1 vote; Hamburg, 1 vote; total 58 votes. Each member of the confederation shall appoint as many delegates to the federal council as it has votes; the total of the votes of each state shall, however, be cast by only one delegate.

Art. 7. The federal council shall take action upon—1. The measures to be proposed to the diet and the resolutions passed by the same. 2. The general provisions and regulations necessary for the execution of the laws of the empire, so far as no other provision is made by said laws. 3. The defects which may be discovered in the execution of the laws of the empire, or of the provisions and regulations heretofore mentioned. Each member of the confederation shall have the right to introduce motions, and it shall be the duty of the presiding officer to submit them for deliberation. Legislative action shall take place by simple majority, with the

exceptions of the provisions in articles 5, 37, and 78. Votes not represented or instructed shall not be counted. In the case of a tie, the vote of the presiding officer shall decide. When legislative action upon a subject which does not affect, according to the provisions of this constitution, the whole empire is taken, the votes of only those states of the confederation shall be counted which shall be interested in the matter in question.

Art. 8. The federal council shall appoint from its own members permanent committees—1. On the army and the fortifications. 2. On naval affairs. 3. On duties and taxes. 4. On commerce and trade. 5. On railroads, post offices, and telegraphs. 6. On the judiciary. 7. On accounts. In each of these committees there shall be representatives of at least four states of the confederation, beside the presiding officer, and each state shall be entitled to only one vote in the same. In the committee on the army and fortifications Bavaria shall have a permanent seat; the remaining members of it, as well as the members of the committee on naval affairs, shall be appointed by the emperor; the members of the other committees shall be elected by the federal council. These committees shall be newly formed at each session of the federal council, *i.e.*, each year, when the retiring members shall again be eligible. Besides, there shall be appointed in the federal council a committee on foreign affairs, over which Bavaria shall preside, to be composed of the plenipotentiaries of the kingdoms of Bavaria, Saxony, and Württemberg, and of two plenipotentiaries of the other states of the empire, who shall be elected annually by the federal council. Clerks shall be placed at the disposal of the committees to perform the necessary work appertaining thereto.

Art. 9. Each member of the federal council shall have the right to appear in the diet, and shall be heard there at any time when he shall so request, to represent the views of his government, even when the same shall not have been adopted by the majority of the council. Nobody shall be at the same time a member of the federal council and of the diet.

Art. 10. The emperor shall afford the customary diplomatic protection to the members of the federal council.

### IV.—Presidium

Art. 11. The king of Prussia shall be the president of the confederation, and shall have the title of German Emperor. The emperor shall represent the empire among nations, declare war, and conclude peace in the name of the same, enter into alliances and other conventions with foreign countries, accredit ambassadors, and receive them. For a declaration of war in the name of the empire, the consent of the federal council shall be required, except in case of an attack upon the territory of the confederation or its coasts. So far as treaties with foreign countries refer to matters which, according to article 4, are to be regulated by the legislature of the empire, the consent of the federal council shall be required for their ratification, and the approval of the diet shall be necessary to render them valid.

Art. 12. The emperor shall have the right to convene the federal council and the diet, and to open, adjourn, and close them.

Art. 13. The convocation of the federal council and the diet shall take place annually, and the federal council may be called together for the preparation of business without the diet; the latter, however, shall not be convoked without the federal council.

Art. 14. The convocation of the federal council

shall take place as soon as demanded by one-third of its members.

Art. 15. The chancellor of the empire, who shall be appointed by the emperor, shall preside in the federal council, and supervise the conduct of its business. The chancellor of the empire shall have the right to delegate the power to represent him to any member of the federal council.

Art. 16. The necessary bills shall be laid before the diet in the name of the emperor, in accordance with the resolutions of the federal council, and they shall be represented in the diet by members of the federal council or by special commissioners appointed by said council.

Art. 17. To the emperor shall belong the right to prepare and publish the laws of the empire. The laws and regulations of the emperor shall be published in the name of the empire, and require for their validity the signature of the chancellor of the empire, who thereby becomes responsible for their execution.

Art. 18. The emperor shall appoint the officers of the empire, require them to take the oath of allegiance, and dismiss them when necessary. Officials appointed to an office of the empire from one of the states of the confederation shall enjoy the same rights to which they were entitled in their native states by their official position, provided no other legislative provision shall have been made previously to their entrance into the service of the empire.

Art. 19. If states of the confederation shall not fulfill their constitutional duties, proceedings may be instituted against them by military execution. This execution shall be ordered by the federal council, and enforced by the emperor.

#### V.—Diet

Art. 20. The members of the diet shall be elected by universal suffrage, and by direct secret ballot. Until regulated by law, which is reserved by section 5 of the election law of May 31, 1869 (*Bundesgesetzblatt*, 1869, section 145.) 48 delegates shall be elected in Bavaria, 17 in Würtemberg, 14 in Baden, 6 in Hesse, south of the river Main, and the total number of delegates shall be 382.<sup>1</sup>

Art. 21. Officials shall not require a leave of absence in order to enter the diet. When a member of the diet accepts a salaried office of the empire, or a salaried office in one of the states of the confederation, or accepts any office of the empire, or of a state, with which a high rank or salary is connected, he shall forfeit his seat and vote in the diet, but may recover his place in the same by a new election.

Art. 22. The proceedings of the diet shall be public. Truthful reports of the proceedings of the public sessions of the diet shall subject those making them to no responsibility.

Art. 23. The diet shall have the right to propose laws within the jurisdiction of the empire, and to refer petitions addressed to it to the federal council or the chancellor of the empire.

Art. 24. Each legislative period of the diet shall last three years.<sup>2</sup> The diet may be dissolved by a resolution of the federal council, with the consent of the emperor.

Art. 25. In the case of a dissolution of the diet, new elections shall take place within a period of sixty days, and the diet shall reassemble within a period of ninety days after the dissolution.

Art. 26. Unless by consent of the diet, an ad-

jourment of that body shall not exceed the period of thirty days, and shall not be repeated during the same session, without such consent.

Art. 27. The diet shall examine into the legality of the election of its members and decide thereon. It shall regulate the mode of transacting business, and its own discipline, by establishing rules therefor, and elect its president, vice-presidents, and secretaries.

Art. 28. The diet shall pass laws by absolute majority. To render the passage of laws valid, the presence of the majority of the legal number of members shall be required. [When passing laws which do not affect the whole empire, according to the provisions of this constitution, the votes of only those members shall be counted who shall have been elected in those states of the confederation which the laws to be passed shall affect.]<sup>1</sup>

Art. 29. The members of the diet shall be the representatives of the entire people, and shall not be subject to orders and instructions from their constituents.

Art. 30. No member of the diet shall at any time suffer legal prosecution on account of his vote, or on account of utterances made while in the performance of his functions, or be held responsible outside of the diet for his actions.

Art. 31. Without the consent of the diet, none of its members shall be tried or punished, during the session, for any offense committed, except when arrested in the act of committing the offense, or in the course of the following day. The same rule shall apply in the case of arrests for debt. At the request of the diet, all legal proceedings instituted against one of its members, and likewise imprisonment, shall be suspended during its session.

Art. 32. The members of the diet shall not be allowed to draw any salary [or be compensated] as such.<sup>2</sup>

#### VI.—Customs and commerce

Art. 33. Germany shall form a customs and commercial union, having a common frontier for the collection of duties. Such territories as cannot, by reason of their situation, be suitably embraced within the said frontier, shall be excluded. It shall be lawful to introduce all articles of commerce of a state of the confederation into any other state of the confederation, without paying any duty thereon, except so far as such articles are subject to taxation therein.

Art. 34. The Hanseatic towns, Bremen and Hamburg, shall remain free ports outside of the common boundary of the customs union, retaining for that purpose a district of their own, or of the surrounding territory, until they shall request to be admitted into the said union.

Art. 35. The empire shall have the exclusive power to legislate concerning everything relating to the customs, the taxation of salt and tobacco manufactured or raised in the territory of the confederation; concerning the taxation of manufactured brandy and beer, and of sugar and sirup prepared from beets or other domestic productions. It shall have exclusive power to legislate concerning the mutual protection of taxes upon articles of consumption levied in the several states of the empire; against embezzlement; as well as concerning the measures which are required, in granting exemption from the payment of duties, for the security

<sup>1</sup> Clause in brackets repealed, Feb. 24, 1873.

<sup>2</sup> Changed May 21, 1906, the law adding, "They shall receive an indemnification as provided by law."—To wit, 3000 marks and free railroad transportation during sessions of Reichstag and each eight days before and after its session.

<sup>1</sup> By law of June 25, 1873, fifteen additional members are elected from Alsace-Lorraine.

<sup>2</sup> Changed to five years, March 19, 1888.

of the common customs frontier. In Bavaria, Württemberg, and Baden, the matter of imposing duties on domestic brandy and beer is reserved for the legislature of each country. The states of the confederation shall, however, endeavor to bring about uniform legislation regarding the taxation of these articles.

Art. 36. The imposing of duties and excises on articles of consumption, and the collection of the same (article 35), is left to each state of the confederation within its own territory, so far as this has been done by each state heretofore. The emperor shall have the supervision of the institution of legal proceedings by officials of the empire, whom he shall designate as adjuncts to the custom or excise offices, and boards of directors of the several states, after hearing the committee of the confederate council on customs and revenues. Notices given by these officials as to defects in the execution of the laws of the empire (article 35) shall be submitted to the confederate council for action.

Art. 37. In taking action upon the rules and regulations for the execution of the laws of the empire, (article 35,) the vote of the presiding officer shall decide, whenever he shall pronounce for upholding the existing rule or regulation.

Art. 38. The amounts accruing from customs and other revenues designated in article 35 of the latter, so far as they are subject to legislation by the diet, shall go to the treasury of the empire. This amount is made up of the total receipts from the customs and other revenues, after deducting therefrom—1. Tax compensations and reductions in conformity with existing laws or regulations. 2. Reimbursements for taxes unduly imposed. 3. The costs for collection and administration, viz.: a. In the department of customs, the costs which are required for the protection and collection of customs on the frontiers and in the frontier districts. b. In the department of the duty on salt, the costs which are used for the pay of the officers charged with collecting and controlling these duties in the salt mines. c. In the department of duties on beet-sugar and tobacco, the compensation which is to be allowed, according to the resolutions of the confederate council, to the several state governments for the costs of the collection of these duties. d. Fifteen per cent. of the total receipts in the departments of the other duties. The territories situated outside of the common customs frontier shall contribute to the expenses of the empire by paying an 'aversum,' (a sum of acquittance). [Bavaria, Württemberg, and Baden shall not share in the revenues from duties on liquors and beer, which go into the treasury of the empire, nor in the corresponding portion of the aforesaid 'aversum.']<sup>1</sup>

Art. 39. The quarterly statements to be regularly made by the revenue officers of the federal states at the end of every quarter, and the final settlements (to be made at the end of the year, and after the closing of the account-books) of the receipts from customs, which have become due in the course of the quarter, or during the fiscal year, and the revenues of the treasury of the empire, according to article 38, shall be arranged by the boards of directors of the federal states after a previous examination, in general summaries in which every duty is to be shown separately; these summaries shall be transmitted to the federal committee on accounts. The latter provisionally fixes, every three months, taking as a basis these summaries, the amount due to the treasury of the empire from the treasury of each state, and it shall inform the federal council and the federal states of this act;

furthermore, it shall submit to the federal council, annually, the final statement of these amounts, with its remarks. The federal council shall act upon the fixing of these amounts.

Art. 40. The terms of the customs-union treaty of July 8, 1867, remain in force, so far as they have not been altered by the provisions of this constitution, and as long as they are not altered in the manner designated in articles 7 and 78.

## VII.—Railways

Art. 41. Railways, which are considered necessary for the defense of Germany or for purposes of general commerce, may be built for the account of the empire by a law of the empire, even in opposition to the will of those members of the confederation through whose territory the railroads run, without detracting from the rights of the sovereign of that country; or private persons may be charged with their construction and receive rights of expropriation. Every existing railway company is bound to permit new railroad lines to be connected with it, at the expense of these latter. All laws granting existing railway companies the right of injunction against the building of parallel or competition lines are hereby abolished throughout the empire, without detriment to rights already acquired. Such right of injunction can henceforth not be granted in concessions to be given hereafter.

Art. 42. The governments of the federal states bind themselves, in the interest of general commerce, to have the German railways managed as a uniform net-work, and for this purpose to have the lines constructed and equipped according to a uniform system.

Art. 43. Accordingly, as soon as possible, uniform arrangements as to management, shall be made, and especially shall uniform regulations be instituted for the police of the railroads. The empire shall take care that the administrative officers of the railways lines keep the roads always in such a condition as is required for public security, and that they be equipped with the necessary rolling stock.

Art. 44. Railway companies are bound to establish such passenger trains of suitable velocity as may be required for ordinary travel, and for the establishment of harmonizing schedules of travel; also, to make provision for such freight trains as may be necessary for commercial purposes, and to establish, without extra remuneration, offices for the direct forwarding of passengers and freight trains, to be transferred, when necessary, from one road to another.

Art. 45. The empire shall have control over the tariff of fares. The same shall endeavor to cause—1. Uniform regulations to be speedily introduced on all German railway lines. 2. The tariff to be reduced and made uniform as far as possible, and particularly to cause a reduction of the tariff for the transport of coal, coke, wood, minerals, stone, salt, crude iron, manure, and similar articles, for long distances, as demanded by the interests of agriculture and industry, and to introduce a one-penny tariff as soon as practicable.

Art. 46. In case of distress, especially in case of an extraordinary rise in the price of provisions, it shall be the duty of the railway companies to adopt temporarily a low special tariff, to be fixed by the emperor, on motion of the competent committee, for the forwarding of grain, flour, vegetables, and potatoes. This tariff shall, however, not be less than the lowest rate for raw produce existing on the said line. The foregoing provisions, and those

<sup>1</sup> Partially repealed in June, 1906.

of articles 42 to 45, shall not apply to Bavaria. The imperial government has, however, the power, also with regard to Bavaria, to establish, by way of legislation, uniform rules for the construction and equipment of such railways as may be of importance for the defense of the country.

Art. 47. The managers of all railways shall be required to obey, without hesitation, requisitions made by the authorities of the empire for the use of their roads for the defense of Germany. Particularly shall the military and all material of war be forwarded at uniform reduced rates.

#### VIII.—Mails and telegraphs

Art. 48. The mails and telegraphs shall be organized and managed as state institutions throughout the German empire. The legislation of the empire in regard to postal and telegraphic affairs, provided for in article 4, does not extend to those matters whose regulation is left to the managerial arrangement, according to the principles which have controlled the North German administration of mails and telegraphs.

Art. 49. The receipts of mails and telegraphs are a joint affair throughout the empire. The expenses shall be paid from the general receipts. The surplus goes into the treasury of the empire. (Section 12.)

Art. 50. The emperor has the supreme supervision of the administration of mails and telegraphs. The authorities appointed by him are in duty bound and authorized to see that uniformity be established and maintained in the organization of the administration and in the transaction of business, as also in regard to the qualifications of employes. The emperor shall have the power to make general administrative regulations, and also exclusively to regulate the relations which are to exist between the post and telegraph offices of Germany and those of other countries. It shall be the duty of all officers of the post-office and telegraph department to obey imperial orders. This obligation shall be included in their oath of office. The appointment of superior officers (such as directors, counselors, and superintendents,) as they shall be required for the administration of the mails and telegraphs, in the various districts; also the appointment of officers of the posts and telegraphs (such as inspectors of comptrollers,) acting for the aforesaid authorities in the several districts, in the capacity of supervisors, shall be made by the emperor for the whole territory of the German empire, and these officers shall take the oath of fealty to him as a part of their oath of office. The governments of the several states shall be informed in due time, by means of imperial confirmation and official publication, of the aforementioned appointments, so far as they may relate to their territories. Other officers required by the department of mails and telegraphs, as also all officers to be employed at the various stations, and for technical purposes, and hence officiating at the actual centers of communication, &c., shall be appointed by the respective governments of the states. Where there is no independent administration of inland mails or telegraphs, the terms of the various treaties are to be enforced.

Art. 51. In assigning the surplus of the post-office department to the treasury of the empire for general purposes, (article 49,) the following proceeding is to be observed in consideration of the difference which has heretofore existed in the clear receipts of the post-office departments of the several territories, for the purpose of securing a suitable equalization during the period of transition

below named. Of the post-office surplus, which accumulated in the several mail districts during the five years from 1861 to 1865, an average yearly surplus shall be computed, and the share which every separate mail district has had in the surplus resulting therefrom for the whole territory of the empire shall be fixed upon by a percentage. In accordance with the proportion thus made, the several states shall be credited on the account of their other contributions to the expenses of the empire with their quota accruing from the postal surplus in the empire, for a period of eight years subsequent to their entrance into the post-office department of the empire. At the end of the said eight years this distinction shall cease, and any surplus in the post-office department shall go, without division, into the treasury of the empire, according to the principle enunciated in article 49. Of the quota of the post-office department surplus resulting during the aforementioned period of eight years in favor of the Hanseatic towns, one-half shall every year be placed at the disposal of the emperor, for the purpose of providing for the establishment of uniform post-offices in the Hanseatic towns.

Art. 52. The stipulations of the foregoing articles 48 to 51 do not apply to Bavaria and Würtemberg. In their stead the following stipulation shall be valid for these two states of the confederation. The empire alone is authorized to legislate upon the privileges of the post-office and telegraph departments, on the legal position of both institutions toward the public, upon the franking privilege and rates of postage, and upon the establishment of rates for telegraphic correspondence into Hanseatic towns. Exclusive, however, of managerial arrangements, and the fixing of tariffs for internal communication within Bavaria and Würtemberg. In the same manner the empire shall regulate postal and telegraphic communication with foreign countries, excepting the immediate communication of Bavaria and Würtemberg with their neighboring states, not belonging to the empire, in regard to which regulation the stipulations in article 49 of the postal treaty of November 23, 1867, remains in force. Bavaria and Würtemberg shall not share in the postal and telegraphic receipts which belong to the treasury of the empire.

#### IX.—Marine and navigation

Art. 53. The navy of the empire is a united one, under the supreme command of the emperor. The emperor is charged with its organization and arrangement, and he shall appoint the officers and officials of the navy, and in his name these and the seamen are to be sworn in. The harbor of Kiel and the harbor of the Jade are imperial war harbors. The expenditures required for the establishment and maintenance of the navy and the institutions connected therewith shall be defrayed from the treasury of the empire. All sea-faring men of the empire, including machinists and hands employed in ship-building, are exempt from service in the army, but obliged to serve in the imperial navy. [The apportionment of men to supply the wants of the navy shall be made according to the actual sea-faring population, and the quota furnished in accordance herewith by each state shall be credited to the army account.]

Art. 54. The merchant vessels of all states of the confederation shall form a united commercial marine. The empire shall determine the process for ascertaining the tonnage of sea-going vessels, shall regulate the issuing of tonnage-certificates and sea-letters, and shall fix the conditions to which a per-

mit for commanding a sea-going vessel shall be subject. The merchant vessels of all the states of the confederation shall be admitted on an equal footing to the harbors, and to all natural and artificial water-courses of the several states of the confederation, and shall receive the same usage therein. The duties which shall be collected from sea-going vessels, or levied upon their freights, for the use of naval institutions in the harbors, shall not exceed the amount required for the maintenance and ordinary repair of these institutions. On all natural water-courses, duties are only to be levied for the use of special establishments, which serve for facilitating commercial intercourse. These duties, as well as the duties for navigating such artificial channels, which are property of the state, are not to exceed the amount required for the maintenance and ordinary repair of the institutions and establishments. These rules apply to rafting, so far as it is carried on on navigable water-courses. The levying of other or higher duties upon foreign vessels or their freights than those which are paid by the vessels of the federal states or their freights does not belong to the various states, but to the empire.

Art. 55. The flag of the war and merchant navy shall be black, white, and red.

#### X.—Consular affairs

Art. 56. The emperor shall have the supervision of all consular affairs of the German empire, and he shall appoint consuls, after hearing the committee of the federal council on commerce and traffic. No new state consulates are to be established within the jurisdiction of the German consuls. German consuls shall perform the functions of state consuls for the states of the confederation not represented in their district. All the now existing state consulates shall be abolished, as soon as the organization of the German consulates shall be completed, in such a manner that the representation of the separate interests of all the federal states shall be recognized by the federal council as secured by the German consulates.

#### XI.—Military affairs of the empire

Art. 57. Every German is subject to military duty, and in the discharge of this duty no substitute can be accepted.

Art. 58. The costs and the burden of all the military system of the empire are to be borne equally by all the federal states and their subjects, and no privileges or molestations to the several states or classes are admissible. Where an equal distribution of the burdens cannot be effected 'in natura' without prejudice to the public welfare, affairs shall be equalized by legislation in accordance with the principles of justice.

Art. 59. Every German capable of bearing arms shall serve for seven years in the standing army, ordinarily from the end of his twentieth to the beginning of his twenty-eighth year; [the first three years in the army of the field, the last four years in the reserve; during the next five years he shall belong to the militia. In those states of the confederation in which heretofore a longer term of service than twelve years was required by law, the gradual reduction of the required time of service shall take place in such a manner as is compatible with the interests and the war-footing of the army of the empire.]<sup>1</sup> As regards the emigration of men

belonging to the reserve, only those provisions shall be in force which apply to the emigration of members of the militia.

Art. 60. The strength of the German army in time of peace shall be, until December 31, 1871, one per cent. of the population of 1867, and shall be furnished by the several federal states in proportion to their population. In future the strength of the army in time of peace shall be fixed by legislation.

Art. 61. After the publication of this constitution the full Prussian military system of legislation shall be introduced without delay throughout the empire, as well the statutes themselves as the regulations, instructions, and ordinances issued for their execution, explanation, or completion; thus, in particular, the military penal code of April 3, 1845; the military orders of the penal court of April 3, 1845; the ordinance concerning the courts of honor of July 20, 1843; the regulations with respect to recruiting, time of service, matters relating to the service and subsistence, to the quartering of troops, claims for damages, mobilizing, &c., for times of peace and war. Orders for the attendance of the military upon religious services is, however, excluded. When a uniform organization of the German army shall have been established, a comprehensive military law for the empire shall be submitted to the diet and the federal council for their action in accordance with the constitution.

Art. 62. For the purpose of defraying the expenses of the whole German army, and the institutions connected therewith, the sum of 225 (two hundred and twenty-five) thalers shall be placed at the disposal of the emperor until December 31, 1871, for each man in the army on the peace-footing, according to article 60. (See section 12.) After December 31, 1871, the payment of these contributions of the several states to the imperial treasury must be continued. The strength of the army in time of peace, which has been temporarily fixed in article 60, shall be taken as a basis for calculating these amounts until it shall be altered by a law of the empire. The expenditure of this sum for the whole army of the empire and its establishments shall be determined by a budget law. In determining the budget of military expenditures, the lawfully established organization of the imperial army, in accordance with this constitution, shall be taken as a basis.

Art. 63. The total land force of the empire shall form one army, which, in war and in peace, shall be under the command of the emperor. The regiments, &c., throughout the whole German army shall bear continuous numbers. The principal colors and the cut of the garments of the Royal Prussian army shall serve as a pattern for the rest of the army. It is left to commanders of contingent forces to choose the external badges, cockades, &c. It shall be the duty and the right of the emperor to take care that, throughout the German army, all divisions be kept full and well equipped, and that unity be established and maintained in regard to organization and formation, equipment, and command in the training of the men, as well as in the qualification of the officers. For this purpose the emperor shall be authorized to satisfy himself at any time of the condition of the several contingents, and to provide remedies for existing he shall belong to the national guard (*Landwehr*) of first summons, and then to the national guard of second summons until the thirty-first day of March of the year in which he reaches the age of thirty-nine years. During the period of service in the standing army the members of the cavalry and of the mounted field artillery are required to serve the first three years in unbroken active service; all other forces are required to give the first two years in active service.

<sup>1</sup> Altered by law of Feb. 11, 1888; again by law of April 15, 1905, whereby the portion in brackets was replaced by the following: During the next five years

defects. The emperor shall determine the strength, composition, and division of the contingents of the imperial army, and also the organization of the militia, and he shall have the right to designate garrisons within the territory of the confederation, as also to call any portion of the army into active service. In order to maintain the necessary unity in the care, arming, and equipment of all troops of the German army, all orders hereafter to be issued for the Prussian army shall be communicated in due form to the commanders of the remaining contingents by the committee on the army and fortifications, provided for in article 8, No. 1.

Art. 64. All German troops are bound implicitly to obey the orders of the emperor. This obligation shall be included in the oath of allegiance. The commander-in-chief of a contingent, as well as all officers commanding troops of more than one contingent, and all commanders of fortresses, shall be appointed by the emperor. The officers appointed by the emperor shall take the oath of fealty to him. The appointment of generals, or of officers performing the duties of generals, in a contingent force, shall be in each case subject to the approval of the emperor. The emperor has the right with regard to the transfer of officers, with or without promotion, to positions which are to be filled in the service of the empire, be it in the Prussian army or in other contingents, to select from the officers of all the contingents of the army of the empire.

Art. 65. The right to build fortresses within the territory of the empire shall belong to the emperor, who, according to section 12, shall ask for the appropriation of the necessary means required for that purpose, if not already included in the regular appropriation.

Art. 66. If not otherwise stipulated, the princes of the empire and the senates shall appoint the officers of their respective contingents, subject to the restriction of article 64. They are the chiefs of all the troops belonging to their respective territories, and are entitled to the honors connected therewith. They shall have especially the right to hold inspections at any time, and receive, besides the regular reports and announcements of changes for publication, timely information of all promotions and appointments concerning their respective contingents. They shall also have the right to employ, for police purposes, not only their own troops but all other contingents of the army of the empire who are stationed in their respective territories.

Art. 67. The unexpended portion of the military appropriation shall, under no circumstances, fall to the share of a single government, but at all times to the treasury of the empire.

Art. 68. The emperor shall have the power, if the public security of the empire demands it, to declare martial law in any part thereof; until the publication of a law regulating the grounds, the form of announcement, and the effects of such a declaration, the provisions of the Prussian law of June 4, 1851, shall be substituted therefor. (Laws of 1851, page 451.)

#### Addition to section XI

The provisions contained in this section shall go into effect in Bavaria as provided for in the treaty of alliance of November 23, 1870, (Bundesgesetzblatt, 1871, section 9,) under III, section 5, in Württemberg, as provided for in the military convention of November 21-25, 1870, (Bundesgesetzblatt, 1870, section 658.)

## XII.—Finances of the empire

Art. 69. All receipts and expenditures of the empire shall be estimated yearly, and included in the financial estimate. The latter shall be fixed by law before the beginning of the fiscal year, according to the following principles:

Art. 70. [The surplus of the previous year, as well as the customs duties, the common excise duties, and the revenues derived from the postal and telegraph service, shall be applied to the defrayal of all general expenditure. In so far as these expenditures are not covered by the receipts, they shall be raised, as long as no taxes of the empire shall have been established, by assessing the several states of the empire according to their population, the amount of the assessment to be fixed by the chancellor of the empire in accordance with the budget agreed upon.]<sup>1</sup>

Art. 71. The general expenditure shall be, as a rule, granted for one year; they may, however, in special cases, be granted for a longer period. During the period of transition fixed in article 60, the financial estimate, properly classified, of the expenditures of the army shall be laid before the federal council and the diet for their information.

Art. 72. An annual report of the expenditure of all the receipts of the empire shall be rendered to the federal council and the diet, through the chancellor of the empire.

Art. 73. In cases of extraordinary requirements, a loan may be contracted in accordance with the laws of the empire, such loan to be granted by the empire.

#### Addition to section XII

Articles 69 and 71 apply to the expenditures for the Bavarian army only according to the provisions of the addition to section XI of the treaty of November 23, 1870; and article 72 only so far as is required to inform the federal council and the diet of the assignment to Bavaria of the required sum for the Bavarian army.

## XIII.—Settlement of disputes and modes of punishment

Art. 74. Every attempt against the existence, the integrity, the security, or the constitution of the German empire; finally, any offense committed against the federal council, the diet, a member of the federal council, or of the diet, a magistrate or public official of the empire, while in the execution of his duty, or with reference to his official position, by word, writing, printing, signs, or caricatures, shall be judicially investigated, and upon conviction punished in the several states of the empire, according to the laws therein existing, or which shall hereafter exist in the same, according to which laws a similar offense against any one of the states of the empire, its constitution, legislature,

<sup>1</sup> Article 70, as amended May 14, 1904.—For the defrayal of all common expenses there shall serve first of all the joint revenues derived from customs duties, from common taxes, from the railway, postal, and telegraph systems, and from the other branches of the administration. In so far as the expenditures are not covered by such receipts, they shall be met by contributions from the several states of the confederation in proportion to their population, such contributions to be fixed by the Imperial Chancellor, with reference to the total amount established by the budget. In so far as these contributions are not used, they shall be repaid to the states at the end of the year, in proportion as the other regular receipts of the empire exceed its needs. Any surpluses from preceding years shall be used, so far as the imperial budgetary law does not otherwise provide, for defraying the joint extraordinary expenses.

members of its legislature, authorities or officials is to be judged.

Art. 75. For those offences, specified in article 74, against the German empire, which, if committed against one of the states of the empire, would be deemed high treason, the superior court of appeals of the three free Hanseatic towns at Lubeck shall be the competent deciding tribunal in the first and last resort. More definite provisions as to the competency and the proceedings of the superior court of appeals shall be adopted by the legislature of the empire. Until the passage of a law of the empire, the existing competency of the courts in the respective states of the empire, and the provisions relative to the proceedings of those courts, shall remain in force.

Art. 76. Disputes between the different states of the confederation, so far as they are not of a private nature, and therefore to be decided by the competent authorities, shall be settled by the federal council, at the request of one of the parties. Disputes relating to constitutional matters in those of the states of the confederation whose constitution contains no provision for the settlement of such differences, shall be adjusted by the federal council, at the request of one of the parties, or, if this cannot be done, they shall be settled by the legislative power of the confederation.

Art. 77. If in one of the states of the confederation justice shall be denied, and no sufficient relief can be procured by legal measures, it shall be the duty of the federal council to receive substantiated complaints concerning denial or restriction of justice, which are to be judged according to the constitution and the existing laws of the respective states of the confederation, and thereupon to obtain judicial relief from the confederate government in the matter which shall have given rise to the complaint.

#### XIV.—General provision

Art. 78. Amendments of the constitution shall be made by legislative enactment. They shall be considered as rejected when fourteen votes are cast against them in the federal council. The provisions of the constitution of the empire, by which fixed rights of individual states of the confederation are established in their relation to the whole, shall only be modified with the consent of that state of the confederation which is immediately concerned.

GERMANY, Constitution of the republic.—On Jan. 19, 1919, a National Constituent Assembly was elected, which adopted a new constitution on July 31, to take effect on Aug. 13, 1919 (See GERMANY: 1919): "The document, containing a preamble and 181 articles, is divided into three parts: 'Structure and Functions of the Commonwealth,' 'Fundamental Rights and Duties of Germans' and 'Transitory and Final Regulations.' Part I consists of seven sections and Part II of five. Section I of the first part declares the German commonwealth (*Reich*) to be a republic, all public authority being derived from the people. It describes the territorial limits of the republic, designates the national colors and states that the generally recognized rules of international law are binding on the commonwealth. Then follows a long list of legislative rights reserved to the national government, within which individual states possess only subordinate powers or no powers at all. Section II treats of the National Assembly (*Reichstag*), composed of representatives of the people 'elected by universal, equal, direct and secret suffrage by all men and women over twenty years of age, in accordance with the principles of proportional representation' for a term of four years. The Assembly

is to meet each year and may be dissolved by the president of the commonwealth. Unless otherwise provided for, the Assembly acts by majority vote, and all proceedings are public. This section further provides that the Assembly and its committees may require the presence of the chancellor (*Reichskanzler*) and any minister at its meetings; on the other hand the chancellor, ministers and commissioners designated by them have the right to be present at sittings of the Assembly and of its committees. The individual states are entitled to send plenipotentiaries to submit the views of their cabinets (*Landesregierung*) on matters under consideration. Representatives of the national cabinet (*Reichsregierung*) shall be heard even outside the regular order of business. The section contains a number of articles dealing with the organization and function of assembly committees and concludes with a statement of the privileges and immunities, individual and collective; enjoyed by members. Section III is concerned with the national president (*Reichspräsident*) and the national cabinet. Any German thirty-five years of age is eligible for the election to the presidency. While elected directly by the people for a seven-year term and reeligible, the president is subject to popular recall on the initiative of the Assembly; such a resolution by the Assembly suspends him, but failure of the recall automatically dissolves the Assembly, thus necessitating a new election. The president is commander-in-chief of all the armed forces of the commonwealth, but war cannot be declared or peace concluded except by legislative act; alliances and treaties with foreign states require the consent of the National Assembly only if they relate to subjects covered by national laws. All orders and direction of the president, including those concerning the armed forces, require for their validity the counter-signature of the chancellor or appropriate ministers; it is explicitly stated that by such countersigning the responsibility is assumed. The president has the power to pardon, but general amnesties require national legislation. The chancellor and the ministers compose the cabinet or government; the president names the chancellor and upon his recommendation appoints and dismisses the ministers. The chancellor or appropriate ministers; it is exclusively responsible to the Assembly and must resign if the Assembly by formal resolution withdraw its confidence. The president, chancellor and ministers may be impeached by the Assembly in accordance with a detailed procedure. In Section IV the old Federal Council (*Bundesrat*) emerges as the National Council (*Reichsrat*); in it each state has at least one vote; in the case of the larger states one vote is accorded for every million inhabitants or fraction thereof equal to the population of the smallest state, but no state shall be accredited with more than two-fifths of all votes. No state shall have more than one vote in any committee and the chairmanship of the Council, as well as of all committees, is to be filled by a member of the national cabinet. The plenary meetings of the Council are public. Section V, on national legislation, outlines the methods of enacting national laws; all bills are initiated by the cabinet or the Assembly. Introduction of bills by the cabinet requires the concurrence of the Council, although the former may present measures notwithstanding the non-consent of the latter. Popular referendum on any law may be had provided the president so orders within a month after its passage. A law the promulgation of which is deferred at the demand of at least one-third of the Assembly, shall be submitted to the people

if one-twentieth of the qualified voters so petition; a popular vote shall be resorted to on a measure initiated by the people if one-tenth of the qualified voters so demand. The Council has only a suspensive veto over legislation; if it refuses to concur, the Assembly may yield or renew its action either by a simple majority or a two-thirds vote; in the latter case the president must order a referendum. [See below: Article 74.] Provision is made in this section for constitutional amendment. [See below: Article 76.] 'The National Administration' is the title of Section VI; it deals with foreign relations, defence, communications (posts, telegraphs, telephone, navigation, roads, railroads and waterways), colonial policy, merchant marine, fiscal affairs, including tariff, and budgetary procedure. Section VII deals with the administration of justice. Judges are independent and subject only to law; extraordinary courts are illegal. Provision is made for administrative courts (*Reichsverwaltungsgericht*) for the protection of the individual against orders and decrees of administrative authorities. Section I of Part II enumerates the fundamental rights and duties of the individual. All Germans are equal before the law; men and women have the same civic rights and duties. The section provides for national citizenship, one state being forbidden to discriminate against a citizen of another state. Right of freedom of travel, of sojourn, of settlement, the acquisition of property, the pursuit of every legitimate means of livelihood, and personal liberty, as well as freedom of speech and press, are guaranteed. Section II, relating to community life, directs that legislation shall be enacted for the compensation of families with numerous children, protection of motherhood, proper physical, mental and social development of children, illegitimate as well as legitimate, protection of youth against exploitation, freedom of assembly and of association, liberty and secrecy of the suffrage, right of petition and right of communal self-government. In this section provision is also made for the civil service. The question of religion and religious societies is treated in Section III; all inhabitants are to enjoy complete freedom of worship and of conscience. While there is no established church, freedom of organization for religious purposes is guaranteed, and such organizations as are recognized by law as corporate bodies are entitled to raise taxes subject to regulations by the state. Sundays and legal holidays are protected as days of rest and spiritual edification. The subject of education and schools is dealt with in Section IV; the entire school system is under the supervision of the state. Eight years' compulsory attendance at school is made a minimum requirement, and arrangement is made for continuation schools for instruction up to eighteen years of age. Provision is made for different types of schools and for the training of teachers for the same. Perhaps the most striking feature of the entire Constitution is the introduction in Section V of clauses relating to the socialization of business enterprise and the economic organization of the community. All natural resources are under control of the state. Subject to certain limitations, the right of private property and inheritance is guaranteed. But all private economic enterprises which are adapted to the purpose may be socialized. Labor is placed under the special protection of the commonwealth, and the right of combination for the protection and promotion of industrial conditions is guaranteed to everybody. Guild Socialism is fostered by a system of workers' and employers' councils, which share with the political organization in the

control of industry. Part III is relatively unimportant.—On September 2, 1919, the government was informed by the Supreme Council that that part of the Constitution providing for the representation of Austria (Article 61) conflicted with the Peace Treaty and was, therefore, unallowable. This ruling was bitterly denounced in many parts of the country."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, pp. 113-116.—See also GERMANY: 1918 (November).

The text of the constitution follows:

### Preamble

The German people, united in all its branches and with the determination to build up and strengthen its domain in liberty and justice, to preserve peace, both at home and abroad, and to foster social progress, has adopted the following Constitution:

### Composition and functions of the government

Article 1.—The German National State is a Republic. The power of the State is derived from the people.

Art. 2.—The territory of the nation consists of the territories of the German States. Other territories may be taken into the Government by national law, when their inhabitants, by a vote of self-determination, express such a desire.

Art. 3.—The national colors are black-red-gold. The trade flag is black-white-red, with the national colors on the upper inside corner.

Art. 4.—The universally recognized principles of the laws of nations are accepted as binding elements of the laws of the German Nation.

Art. 5.—The power of the National State shall be exercised through the agencies of the Government on the basis of the Constitution in all matters affecting the nation, and in all matters affecting the respective States through the agencies of such States on the basis of their respective Constitutions.

Art. 6.—The Government has the exclusive right of legislation over:

1. Foreign relations.
2. Colonial matters.
3. State property, right of changing residence, immigration and emigration, and extradition.
4. Military organization.
5. Coinage.
6. Customs, including the unification of customs and trade districts and the free circulation of wares.
7. Posts, telegraphs, and telephones.

Art. 7.—The Government has right of legislation over:

1. Civil law.
2. Criminal law.
3. Judicial proceedings, including the execution of penalties and co-operation between departments.
4. Passports and police for aliens.
5. Poor laws and vagrancy.
6. Press, associations, and assemblies.
7. Population policy; provisions affecting maternity, nurslings, young children and adolescent.
8. National health, veterinaries, protection of plants from disease and pests.
9. Labor law, insurance, and protection of workmen and employes and employment agencies.
10. The organization of trade representation in the nation.
11. Provision for war veterans and their survivors.

12. The right of alienation of property.

13. The socialization of natural treasures and economic undertakings, as well as the production, organization, distribution, and evaluation of economic goods for the community.

14. Trade, weights and measures, issue of paper money, banks and stock exchanges.

15. Traffic in food articles and luxuries, as well as objects of daily need.

16. Industrial pursuits and mining.

17. Insurance.

18. Navigation, fishing on the high sea and along the coasts.

19. Railways, internal navigation, communication by vehicles propelled by power on land, on sea, and in the air, construction of highways, in so far as general communications and national defense are concerned.

20. Theatres and cinematographs.

Art. 8.—The Government further possesses legislative power over taxes and other sources of income, in so far as they may be claimed in whole or in part for its purposes. In the event that the Government claims taxes or other forms of income which formerly belonged to its confederated States, it will be bound to consider the maintenance of such States' vital means of support.

Art. 9.—Whenever a need for centralized control occurs the Government has a right of legislation over:

1. Community welfare.

2. Protection of public order and security.

Art. 10.—The Government in respect to legislation may lay down principles for:

1. The rights and duties of religious associations.

2. Schools, high schools, and scientific publications.

3. The official rights of all public bodies.

4. Land rights, land divisions, settlements and homesteads, title or landed property, habitations, and distribution of inhabitants.

5. Interments.

Art. 11.—The Government in respect to legislation may lay down principles for the permissibility and mode of collection of taxes, in order to prevent:

1. Injury to income or to trade relations of the nation.

2. Double taxation.

3. Excessive and burdensome taxes on the use of public ways of communication which hinder traffic, and of tollways.

4. Tax disadvantages of imported wares as compared with domestic products in trade between the various States and State districts, or,

5. To exclude or to conserve important communal interests.

Art. 12.—So long and in so far as the Government makes no use of its right of legislation, the confederated States possess the right of legislation. This does not apply to the exclusive legislation of the Government.

The Government has the right, wherever the welfare of the community is involved, to veto law of confederated States related to the objects of article 7, Section 13.

Art. 13.—Government law transcends States' law. In case there should arise doubt or difference of opinion as to whether State legislation is in harmony with Government legislation, the proper officials of the Government or the central State officials, according to the specific prescription of a Government law, may resort to the decision of a highest national court.

Art. 14.—The laws of the Government will be

exercised through the State officials, unless the national laws provide otherwise.

Art. 15.—The Government administration exercises supervision in matters over which the nation has the right of legislation.

In so far as the laws of the Government are to be exercised by State officials, the Government Administration may issue general directions. It has the power to send commissioners to the central State authorities, and, with their approval, also to subordinate officials, to supervise the fulfillment of the Government laws.

The State Administrations are charged, at the request of the Government Administration, to eliminate defects in the execution of the national laws. In case of differences of opinion, the Government Administration, as well as the State Administration, may resort to the decision of the Supreme Court, in case another court is not prescribed by Government law.

Art. 16.—Those officials charged with the direct administration of Government in the different States shall, as a rule, be appointed from citizens of the given State. The officials, employes, and workmen of the Government Administration will, when desired, be employed in their home districts as far as proves possible, and whenever consideration of their training or of the demands of the service present no objection.

Art. 17.—Every State must have a republican Constitution. The people's representatives must be chosen in universal, equal, direct and secret vote cast by all German men and women citizens on the basis of proportional representation. The State Administration shall require the confidence of the people's representatives.

The election basis for popular representation applies also for the community elections. Through State law, however, the right to vote may be made to depend on the length of residence in the community to the extent of one year.

Art. 18.—The division of the Government into States shall serve the highest economic and cultural interests of the people after most thorough consideration of the will of the population involved. Changes in State boundaries and the reconstruction of States within the nation may occur on the passing of a national law changing the Constitution.

If the States directly involved agree, a simple Government law will suffice.

A simple Government law will be sufficient, further, if one of the States involved does not agree but the territorial change or reconstruction is demanded by the will of the population and a predominating national interest requires it.

The will of the population is to be determined by referendum. The National Administration will sanction such a vote when a third of the inhabitants qualified to vote for the Reichstag, and who belong to the territory whose separation is opposed, demand it.

To determine a territorial change or reconstruction three-fifths of the votes cast, or at least a majority of votes cast by qualified voters, shall be required. Even when a separation of only a part of a Prussian administrative district, a Bavarian circle, or, in other States, a corresponding administrative district, is involved, the will of the population of the whole district under consideration must be determined. If a considerable dependence of the district to be separated on the whole region does not exist, the will of the population of the district to be separated may be pronounced sufficient on the basis of a special Government law.

After the consent of the population has been manifested by vote, the Government Administration must lay before the Reichstag a corresponding law for enactment.

In case dispute arises over financial or property details when such union or separation is accomplished, the Supreme Court of Germany, if charged therewith by one of the parties may give a decision.

Art. 19.—In the case of constitutional disputes within a State in which no court exists that may resolve them, as well as in the case of disputes of a non-private nature between different States or between the Government and a State, the National Supreme Court, at the request of one of the parties in dispute, shall decide, in case another court of the Government does not have jurisdiction.

The National President executes the decision of the Supreme Court.

### The Reichstag

Art. 20.—The Reichstag shall consist of the deputies of the German people.

Art. 21.—The delegates are representatives of the whole people. They are subject only to their own conscience and shall not be bound by any orders.

Art. 22.—The delegates shall be chosen on the basis of universal, equal, direct and secret vote by all men and women over the age of 20, in accordance with the principles of proportional representation. The day for elections must be a Sunday or a public day of rest.

Other details will be determined by the Government election law.

Art. 23.—The Reichstag will be elected for four years. New elections must occur at latest after the expiration of sixty days following its expiration.

The Reichstag will convene at latest on the thirtieth day after election.

Art. 24.—The Reichstag will meet each year on the first Wednesday in November at the seat of the National Government. The President of the Reichstag must call it earlier, if the President of the Republic, or at least a third of the members of the Reichstag demand it.

The Reichstag shall determine the close of session and the day of reconvention.

Art. 25.—The President of the Republic may dissolve the Reichstag, but only once for the same cause.

New elections shall occur at latest on the sixtieth day after such dissolution.

Art. 26.—The Reichstag shall choose its President, as well as his representative, and its secretary. It shall determine its own order of business.

Art. 27.—Between two adjournments or election periods the President and his representative of the last session shall continue all necessary business.

Art. 28.—The President shall exercise the power of law and police duty in the Reichstag building. The management of the House is subject to him; he shall have power over the incomes and disbursements of the House, in accordance with the standard of Government economy, and shall represent the Government in all legal business and litigation arising in his administration.

Art. 29.—The Reichstag's proceedings will be public. At the request of fifty members the public may be excluded on a two-thirds majority vote.

Art. 30.—Truthful reports of the proceedings in open sessions of the Reichstag, of a Provincial

Parliament or of their committees shall carry no responsibility.

Art. 31.—A Court of Election Control shall be formed in the Reichstag. This court shall decide the question whether a delegate shall lose membership or not.

This Court of Election Control shall consist of members of the Reichstag, which the latter chooses for the election period, and of members of the Government Court of Administration, to be appointed by the President of the Republic at the suggestion of the President of this court.

This Court of Election Control shall form its decisions on the basis of public oral discussions conducted by three members of the Reichstag and two judicial members.

Besides the proceedings of the Court of Election Control, other proceedings will be instituted by a Government Commissioner appointed by the President of the Republic. These proceedings, however, shall be regulated by the Court of Election Control.

Art. 32.—To make any decision of the Reichstag valid, a simple majority vote shall be required, in so far as the Constitution does not prescribe a different ratio of voting. For elections to be undertaken by the Reichstag the Committee on Rules may admit exceptions.

The determination of a decision will be regulated by the Committee on Rules.

Art. 33.—The Reichstag and its committee may demand the presence of the National Chancellor and of any other Government Minister.

The Chancellor, the Government Ministers, and their duly appointed representatives shall have access to the sessions of the Reichstag and of its committees. The confederated States shall possess the right to send their plenipotentiaries to these sessions to interpret the views of their State Governments regarding the object of discussion.

At their request the representatives of the State Government must receive a hearing during the discussion, and the representatives of the National Government must be heard also outside the order of the day.

They shall, however, be subject to the control of the Chairman in matters of order.

Art. 34.—The Reichstag has the right and, at the request of one-fifth of its members, the duty of appointing committees of investigation. These committees in open session shall bring to light the evidence which they, or the members proffering the request, shall consider required. Publicity may be excluded by the committee of investigation by a two-thirds majority vote. The Committee on Rules shall regulate the proceedings of the committee and determine the number of its members.

The judicial and administrative officials shall comply with requests made by these committees for information evidence, and the records of these officials shall on request be laid before them. The prescriptions of the penal code shall have application to the investigations of these committees and of the officials by them petitioned, but the secrecy of letter and parcel post, telegraph, and telephone services shall be undisturbed.

Art. 35.—The Reichstag shall appoint a standing committee for outside matters, whose activity shall exist also outside the session and after the close of the election period until the reconvention of the new Reichstag. The sittings of this committee shall not be public, unless the committee by a two-thirds majority vote decides for publicity.

The Reichstag further shall appoint a standing committee to maintain the rights of the popular representatives as against the Government Admin-

istration outside of session and after the close of the election period.

These committees shall have the rights of investigating committees.

Art. 36.—No member of the Reichstag or of a Provincial Parliament shall at any time, because of his vote or because of any opinions expressed in the fulfillment of his duty, be judicially or officially prosecuted or in any way be held for responsibility outside the Assembly.

Art. 37.—No member of the Reichstag or of a Provincial Parliament shall, without approval of the house to which the delegate belongs, be subjected to investigation or arrest during the session on account of any action involving penalty, unless the member is arrested in the act, or, at latest, on the following day.

The same approval is required in the case of every other limitation of personal freedom which hinders the fulfillment of the delegate's legislative duties.

Every criminal proceeding against a member of the Reichstag or of a Provincial Parliament and every arrest or other limitation of his personal freedom shall, at the demand of the house to which the delegate belongs, be revoked for the period of the session.

Art. 38.—The members of the Reichstag and the Provincial Parliaments are empowered to refuse evidence concerning persons who have given them information in their capacity as delegates, or to whom, in the fulfillment of their duties as delegates, they have given such information, as well as to testify concerning such information. In regard also to the seizure of documents their position shall be the same as that of all persons who by law are given the right of refusal of evidence.

A search or seizure may be undertaken in the precincts of the Reichstag or of a Provincial Parliament only with the consent of the President.

Art. 39.—Officials and members of the army need no leave to fulfill their office as members of the Reichstag or of a Provincial Parliament.

If they become candidates for a seat in these bodies the necessary leave shall be granted them to prepare for their election.

Art. 40.—The members of the Reichstag shall have the right of free transport over all German railway lines, and also compensation as prescribed by a national law.

### The National President and the government

Art. 41.—The President of the Republic shall be chosen by the whole German people. Every German who has completed his thirty-fifth year is qualified for election. Further details are determined by a national law [see also ELECTIONS, PRESIDENTIAL: Germany].

Art. 42.—The National President, on assuming his office before the Reichstag, shall take the following oath:

I swear to consecrate all my energy to the welfare of the German people, to increase its advantages, to avert its injury, to preserve the Constitution and the laws of the nation, to fulfill my duties conscientiously, and to deal justly with all.

The addition of a religious declaration shall be permissible.

Art. 43.—The duration of the President's tenure of office shall be seven years. Re-election shall be permissible.

Before the expiration of his term the President may be deposed by a referendum, at the request

of the Reichstag. The decision of the Reichstag shall require a two-thirds majority vote. Through such decision the President shall be prohibited from further exercise of his office. Rejection of his deposition by a referendum shall count as a new election and entail the dissolution of the Reichstag.

The National President shall not be subject to prosecution without the sanction of the Reichstag.

Art. 44.—The President may not at the same time be a member of the Reichstag.

Art. 45.—The President shall represent the nation in matters of international law. He shall in the nation's name conclude alliances and other treaties with foreign powers. He shall accredit and receive Ambassadors.

Declaration of war and conclusion of peace shall be subject to national law.

Alliances and treaties with foreign States, related to subjects covered by national law, shall require the approval of the Reichstag.

Art. 46.—The President shall appoint and dismiss Government officials and military officers, if not otherwise provided by law. He can exercise this right of appointment or dismissal through other officials.

Art. 47.—The President has supreme command over all the military forces of the nation.

Art. 48.—If any State shall not fulfill the duties prescribed for it by the Constitution or by Government laws the President of the Republic may hold it to such fulfillment with the aid of armed power.

The President, in the event that public security and order in the German Nation should be considerably disturbed or endangered, may take all necessary measures to re-establish such public security and order, and, if required, to intervene with the aid of armed power. To this end he may provisionally abrogate, in whole or in part, the fundamental laws established in Articles 114, 115, 117, 118, 123, 124, and 153.

The President must immediately inform the Reichstag of all measures provided for by Paragraphs 1 or 2 of this article. These measures may be revoked at the demand of the Reichstag.

In case of danger from delay the Provincial Government may take provisional measures of the kind mentioned in Paragraph 2 for its own territory. These measures may be revoked at the demand of the President of the republic or of the Reichstag. Details are provided by a Government law.

Art. 49.—The President of the Republic shall exercise for the Government the right of pardon. Government amnesties require a national law.

Art. 50.—All arrangements and dispositions of the President of the Republic, including those concerning the army, to become valid must be countersigned by the Prime Minister or by duly qualified Government Ministers. Responsibility shall ensue upon this countersigning.

Art. 51.—The President of the Republic, in case he is incapacitated, shall be represented by the National Chancellor. If such incapacity last for any considerable time, this representation shall be regulated by a Government law. The same provision shall apply in case of a premature vacancy of the Presidency until the new elections are completed.

Art. 52.—The administration of the Government shall consist of the National Chancellor and the Government Ministers.

Art. 53.—The Chancellor, and at his suggestion the Ministers of the Government, shall be appointed and dismissed by the President of the republic.

Art. 54.—The Chancellor and the Government Ministers shall require the confidence of the Reichstag for the fulfillment of their office. Any of them must withdraw in the event that the Reichstag by explicit resolution withholds its confidence.

Art. 55.—The Chancellor shall preside in the Government Administration and shall conduct its affairs in accordance with an order of business, which shall be determined by the Administration and approved by the President of the Republic.

Art. 56.—The Prime Minister shall determine the line of policy and shall assume responsibility therefor to the Reichstag. Within this line each and every Government Minister shall conduct independently the field of activity allotted to him, assuming his own responsibility to the Reichstag.

Art. 57.—The Ministers of Government are charged to lay before the Government Administration for discussion and decision all drafts of law, all matters so prescribed by Constitution or law, and all differences of opinion over various questions which concern the functions of several Government Ministers.

Art. 58.—The Government Administration shall ratify its decisions on the basis of majority vote. In case of a tie the vote of the presiding officer shall be decisive.

Art. 59.—The Reichstag is empowered to enter a complaint before the Supreme Court of the German Nation against the President of the Republic, the Prime Minister and the Government Ministers, on the ground of their having violated the Constitution or a Government law. The proposal to initiate this complaint must be signed by at least 100 members of the Reichstag and requires the approval of the majority prescribed for alteration of the Constitution. Other details will be regulated by the Government law applying to the National Supreme Court.

### The National Council

Art. 60.—A National Council [Reichsrat] shall be formed for representation of the German States in national legislation and administration.

Art. 61.—In the National Council every State shall have at least one vote. In the case of the larger States one vote will be accorded to every million inhabitants. Any excess equal at least to the population of the smallest State will be estimated as equal to a full million. No State shall be represented by more than two-fifths of all votes.

German-Austria, after its union with the German Nation, shall receive the right of participation in the National Council with the number of votes corresponding to its population. Until that time the representatives of German-Austria shall have a deliberative voice. [The Allied Supreme Council demanded a revision of the clause referring to German-Austria.]

The number of votes shall be newly determined through the National Council after every general census.

Art. 62.—In committees formed by the National Council from its own members, no State shall have more than one voice.

Art. 63.—The States shall be represented in the National Council through members of their respective Governments. But half of the Prussian votes will be disposed of according to a State law, by the Prussian Provincial Administrations.

The States shall have the right to send as many representatives to the National Council as they have votes.

Art. 64.—The Government Administration shall

be bound to summon the National Council at the demand of one-third of its members.

Art. 65.—The Presidency of the National Council and of its committees shall be filled by a member of the Government Administration. The members of the Government Administration shall have the right, and, on demand, the duty, to participate in the dealings of the National Council and its committees. During its sittings they shall, if they so desire, be given a hearing at any time.

Art. 66.—The Government Administration, as well as every member of the State Council, are authorized to make proposals in the National Council. The National Council shall regulate the conduct of its proceedings through an order of business. The plenary sessions of the National Council shall be public. According to the order of business, the public may be excluded for special objects of discussion. A simple majority of the voters shall be decisive in voting.

Art. 67.—The National Council shall be kept informed by the National Ministries of the conduct of national business. The proper committees of the National Council shall be summoned by the National Ministries for deliberations over important subjects.

### National legislation

Art. 68.—Projects of legislation shall be introduced by the Government or from the body of the Reichstag. The laws of the nation shall be determined by the Reichstag.

Art. 69.—The introduction of legislative projects by the Government Administration shall require the assent of the National Council. In the event that the Government Administration and the National Council shall not agree, the Government Administration may nevertheless introduce the project, but shall be bound to record the dissent of the National Council.

In case the National Council approve a project of legislation and the Government Administration disapprove it, the latter shall introduce the project in the Reichstag with an exposition of its own standpoint.

Art. 70.—The National President shall make a compilation of all laws created according to the Constitution and within one month publish it in the Government Legislative Record.

Art. 71.—All Government laws shall come into force, unless otherwise specified, on the fourteenth day following the date of the issue of the Government Legislative Record in the nation's capital.

Art. 72.—The publication of a Government law may be deferred for two months, if so demanded by one-third of the Reichstag. Laws which the Reichstag and the National Council declare as urgent may be published by the President of the Republic without regard to such demand.

Art. 73.—A law approved by the Reichstag must be referred to the people before its publication if the President of the Republic so decrees within a month. A law whose publication is deferred at the demand of at least one-third of the Reichstag must be laid before the people for decision, if one-twentieth of qualified voters make such proposal.

A referendum shall further be resorted to if one-tenth of qualified voters express the desire that a project of law shall be proposed. A fully elaborated project of law must be the basis of such desire. The Government must lay this project of law before the Reichstag and explain its own stand regarding it. The referendum shall not occur if the desired project of law is accepted by the Reichstag without alteration. Only the President

of the Republic may call a referendum for matters concerning the budget, tax laws, and salary payments. A national law shall regulate the procedure to be followed in a referendum or a project of law desired by the people.

Art. 74.—The National Council shall have the right of veto against laws approved by the Reichstag. This veto must be entered before the Reichstag by the Government within two weeks after ratification, and within two further weeks at the latest must be circumstantiated.

In the event of such veto the law shall be laid before the Reichstag for a second decision. If the Reichstag and the National Council do not agree, the President of the Republic may within three months refer the subject of dispute to a referendum. In case the President does not avail himself of this right, the law will be considered not to have been passed. If the Reichstag rejects the protest of the National Council on the basis of a two-thirds majority vote, the President shall publish the law in the form accepted by the Reichstag within three months, or else decree a referendum.

Art. 75.—Through a referendum a Reichstag decision may be nullified only when a majority of the qualified voters participate in the voting.

Art. 76.—In respect to legislation the Constitution may be altered. But decisions of the Reichstag on alteration of the Constitution shall be valid only when two-thirds of the lawful membership are present, and at least two-thirds of those present give their assent. Decisions of the National Council on alteration shall also require a two-thirds majority of all votes cast. In case a change of Constitution is determined by popular desire through a referendum, the assent of a majority of qualified voters shall be required.

In the event that the Reichstag determine on an alteration of the Constitution against the protest of the National Council the President of the Republic need not publish this law, if the National Council demand a referendum within two weeks.

Art. 77.—The Government shall issue the general administrative decrees required for the execution of the national laws where no other provision is made by law. The assent of the National Council is necessary when the execution of the laws is incumbent on State officials.

### National administration

Art. 78.—Relations with foreign States concern the nation exclusively.

In matters regulated by provincial law the confederated States may conclude treaties with foreign States. These treaties require the consent of the nation.

Agreements with foreign States regarding change of national boundaries may be concluded by the nation on consent of the State involved. Alterations of the boundaries may occur only on the basis of a Government law, except in cases where mere correction of the boundaries of uninhabited districts is in question.

To assure the representation of interests arising for special States through their special economic relations or their proximity to foreign countries, the Government shall decide on the measures and arrangements required in concert with the States involved.

Art. 79.—The defense of the nation concerns the nation. The military organization of the German people shall be placed under unified control by a Government law in which the special provincial institutions shall be given due consideration.

Art. 80.—Colonial administration concerns the nation exclusively.

Art. 81.—All German merchant ships shall constitute a unified trade fleet.

Art. 82.—Germany forms a customs and trade territory surrounded by a common customs boundary. This customs boundary shall be identical with the frontier boundary. On the coast the shore line of the mainland and of the islands belonging to the national territory constitute the customs boundary. Exceptions may be determined for the customs line running along the seacoast and other waters. Foreign territories or parts of territories may be annexed to the customs territory by national treaties or agreements.

Parts of the customs territory may be excluded on special request. In the case of free ports this exclusion may occur only through a law altering the Constitution. Customs districts excluded may be annexed to a foreign customs district through national treaties or agreements.

All natural products, as well as arts and crafts products, may in the free intercourse of the nation be transported into, out of, or across the boundaries of the various States and communities. Exceptions may be permitted by a Government law.

Art. 83.—Customs and excise of articles of consumption shall be administered through Government officials. Measures shall be provided for the administration of Government taxes through Government officials which shall enable the confederated States to maintain special State interests in the spheres of agriculture, trade, crafts, and industry.

Art. 84.—The Government shall provide by law for:

1. The organization of the administration of taxes in the different States so far as shall be required for the unified and regular fulfillment of the national tax laws.

2. The organization and functions of the officials charged with supervision of the execution of the national tax laws.

3. Balance accounts with the confederated States.

4. The reimbursement of the costs of administration in the execution of the national tax laws.

Art. 85.—All revenues and disbursements of the nation must be computed for every fiscal year and entered in the budget. The budget shall be confirmed before the beginning of the fiscal year by law. The expenses shall regularly be appropriated for one year; in special cases they may be approved for a longer period. In other cases provision in the budget law extending beyond the fiscal year or not relating to the revenues and expenses of the nation or its administration shall be prohibited.

The Reichstag, in the drawing up of the budget, may not increase or add new expenses without the consent of the National Council. The consent of the National Council may be replaced according to the provisions of Article 74.

Art. 86.—For the employment of all national revenue the Minister of Finance shall in the following fiscal year, to cover the responsibility of the administration, submit an account of reckoning to the National Council and to the Reichstag. The auditing of this account shall be regulated by national law.

Art. 87.—In the matter of credit, moneys shall be procured only in case of extraordinary need and regularly only for expenses connected with promotion. Such procuring of moneys, as well as the assumption by the Government of a security obli-

gation, may occur on the strength of a Government law.

Art. 88.—The post and telegraph services, together with the telephone service, concern the nation exclusively. The postage stamp symbols shall be the same for the whole nation.

The Government Administration shall, with the consent of the National Council, issue decrees laying down principles and duties in the use of means of communication. With the consent of the National Council it may extend this authority to the Postmaster General.

The Government Administration, with the consent of the State Council, shall appoint a supplementary council for advisory co-operation in postal, telegraph, telephone communications, and the regulation of prices.

Only the Government shall conclude treaties dealing with communications with foreign countries.

Art. 89.—It is the nation's duty to take over railroads serving general traffic, with all their property, and to manage them as a unified system of communication.

Art. 90.—With the taking over of the railroads the Government shall also take over the right of property alienation and the supreme State rights relating to railway organization. The National Supreme Court shall decide the scope of such rights in case of disputes.

Art. 91.—The Government Administration, with the consent of the State Council, shall issue decrees regulating the construction, the management, and the traffic of railways. With the consent of the National Council it may extend this authority to the proper Government Minister.

Art. 92.—The Government railways, irrespective of their budget and their accounts in the general budget and general accounts of the nation, shall be administered as an independent economic undertaking, which shall defray its own expenses, including interest and cancellation of the railway debt, and shall set aside a railway sinking fund. The amount of the cancellation and of the sinking fund, as well as the objects for which money shall be applied, shall be regulated by special laws.

Art. 93.—Acting for the Government railways, with the consent of the National Council, the Government Administration shall appoint supplementary councils for advisory co-operation in matters of railway traffic and transportation charges.

Art. 94.—In the event that the Government has taken over into its administration the railways of a certain district which serve general transport needs, within that district new railways serving such general transportation needs may be built only by the Government or by its consent. In case such construction of new railways, or alterations of existing railway organizations, concern the sphere of authority of the State police, the Railway Administration, before decision, must grant a hearing to the State officials.

In case the Government has not yet taken over the railways, it may administer on its own account railways considered essential for general transportation, or for national defense, by virtue of Government laws and despite the opposition of the States which they traverse, yet without infringing sovereign State rights, or it may give over construction rights to another, if necessary, also according right of alienation.

Every Railway Administration must consent to connection with other railway lines at the latter's expense.

Art. 95.—Railways for general traffic not admin-

istered by the Government are subject to the supervision of the Government.

The railways thus subjected to Government supervision are to be controlled and equipped according to the same principles, to be determined by the Government. They shall be maintained in safe condition and to be extended as necessity demands. Transportation of persons and goods shall, as need arises, be provided for and equipment furnished.

In the supervision of the cost of transportation, the supervisors shall work toward a uniform and a low railway rate.

Art. 96.—All railways, including those not serving general traffic needs, must comply with the demands of the Government for use of the railways for the purpose of national defense.

Art. 97.—It is the duty of the Government to take over for administration all waterways serving general communications. After such taking over, such waterways serving general communications may be applied or extended only by the Government or with its consent. In administering, extending, or reconstructing such waterways the needs of agriculture and irrigation shall be preserved in co-operation with the States affected. The claims of the latter shall also be regarded.

Every administration of waterways must agree to amalgamation with other inner waterways at the cost of the undertakers. The same obligation exists for the construction of a connecting way between inner waterways and railways.

In taking over the waterways the Government shall assume the right of alienation and authority over transportation cost and the policing of waters and navigation.

The task of bunding water communications in connection with the extension of natural waterways in the Rhine, Weser, and Elbe regions is to be undertaken by the Government.

Art. 98.—Supplementary councils shall be formed with the consent of the National Council by specific decree of the Government Administration for co-operation in matters affecting waterways and national waterways.

Art. 99.—Expenses on natural waterways shall be incurred only for such works, establishments, and other institutions as are destined to facilitate communication. In the case of State and community institutions they must not exceed the expenses required for repair and maintenance. The costs of repair and maintenance for institutions not intended exclusively to facilitate communication, but also to further other purposes, may be increased by navigation expenses only to a relative degree. Sums paid for interest and debt cancellation shall be included in costs for maintenance.

The provisions of the preceding clause apply to the disbursements incurred for artificial waterways as well as for constructions on such and in harbors.

The total costs of a waterway, a river district, or a system of waterways may be reckoned as fundamental in matters of inner navigation for the estimation of navigation expenses.

These provisions apply also to timber floating on navigable waterways.

Only the Government may impose other or higher taxes on foreign ships and their cargoes than on German ships and their cargoes.

For the procuring of means for the maintenance and equipment of the German system of waterways the Government may call on the participators in navigation for contributions in other ways.

Art. 100.—To cover the cost of maintenance and construction of inner navigation routes any person who in any other way than through navigation

derives profit from the construction of dams that shut off valleys may also be called upon for contribution, whenever several States are involved, or the Government bears the cost of the outlay.

Art. 101.—It is the duty of the Government to take over as its own property and into its own administration all sea signals, especially lighthouses, lightships, buoys, floats, and beacons. After such taking over sea signals may be repaired or improved only by the Government or with its consent.

#### Administration of justice

Art. 102.—Judges shall be independent and subject only to the law.

Art. 103.—Regular justice shall be administered through the national courts and through the State courts.

Art. 104.—Judges administering regular justice shall be appointed for life. They may be permanently or temporarily removed from office, or transferred to another office, or retired against their will, only by virtue of judicial decision and for the grounds and in the forms provided by law. The law code may fix age limitations, on reaching which Judges may be retired. The temporary relief from office consequent on law is not affected by this article.

In case of a change in the organization of the courts or their jurisdiction districts the administration of justice in the provinces may decree transfer against desire to another court or removals from office, but only under allowances of full salary.

These provisions have no application to commercial Judges, rural Justices, and jurymen.

Art. 105.—Extraordinary courts are illegal. No one shall be removed from the jurisdiction of his legal Judge. Provisions made by law for martial courts and military courts are not affected hereby. Military courts of honor are suspended.

Art. 106.—Military justice is to be suspended, except in time of war or on board warships. Further details are regulated by national law.

Art. 107.—Administrative courts both of the nation and the States must, according to law, protect the individual against dispositions and provisions of administrative officials.

Art. 108.—According to national law a National Supreme Court is established for the German Nation.

#### Fundamental rights and duties of the Germans—The individual

Art. 109.—All Germans are equal before the law. Men and women have fundamentally the same civil rights and duties. Public advantages or disadvantages of birth or rank are to be suspended. Titles of nobility shall be accepted only as part of a name and may not be conferred any longer. Titles may be conferred only when they designate an office or a profession; academic degrees are not affected by this provision. Orders and insignias of orders may not be conferred by the State. No German may accept a title or order from a foreign Government.

Art. 110.—Citizenship in the nation and the States may be acquired or lost, according to the provisions of national law. Every citizen of a State is at the same time a citizen of the nation. Every German in every State of the nation has the same rights and duties as the citizens of the State itself.

Art. 111.—All Germans enjoy the right of free travel throughout the whole nation. Every one

has the right of sojourn and settlement in any place within the nation, the right to acquire real estate and to pursue every means of livelihood. Limitations require the issuance of a Government decree.

Art. 112.—Every German has the right to emigrate to countries outside Germany. Emigration may be limited only by national law. All citizens of the nation have right of protection by the Government both within and without the national boundaries as against foreign countries. No German may be delivered over to a foreign Government for prosecution or punishment.

Art. 113.—Those elements of the nation speaking a foreign language may not be impaired judicially or administratively in their free and popular development, especially in the use of their mother tongue for instruction, or in matters of internal administration and the administration of justice.

Art. 114.—Freedom of the person cannot be impaired. An impairment or withdrawal of personal liberty through public power is admissible only as prescribed by law. Persons, whose freedom is taken from them, are to be informed at latest on the following day by what official and on what grounds their liberty was taken from them, and they shall immediately receive an opportunity to present objections against this loss of freedom.

Art. 115.—The home of every German is his place of refuge and cannot be violated. Exceptions are admissible only as prescribed by law.

Art. 116.—No action can be penalized, if penalty is provided by law, before the action has been committed.

Art. 117.—Secrecy of letters and of postal, telegraph and telephone services cannot be impaired. Exceptions may be admissible only as prescribed by national law.

Art. 118.—Every German has the right within the limits of the general laws to express his opinion by word, in writing, printing, by picture, or in any other way. No connection with his labor or employment shall hinder him in the exercise of this right, and no one may injure him if he makes use of this right.

No censorship exists, though different provisions may be passed by law in the case of moving pictures. Legal measures are also permissible for combating obscene and indecent literature, as well as for the protection of youth at public plays and spectacles.

#### The social life

Art. 119.—Marriage, as the foundation of family life and of the maintenance and increasing of the nation, is under the particular protection of the Constitution. It is based upon the equal rights of both sexes. The maintaining of the purity, the health, and the social advancement of the family is the task of the State and the communities. Families with numerous children have a claim for compensating care. Motherhood has a claim upon the protection and care of the State.

Art. 120.—The education of offspring to physical, mental, and social efficiency is the highest duty and natural right of parents, whose activities are watched over by the political community.

Art. 121.—Illegitimate children are to be provided by legislation with the same conditions for their physical, mental, and social development as those of legitimate children.

Art. 122.—Youth is to be protected against exploitation, as well as against a lack of moral, mental, or physical guarantees. The State and the communities are to take the necessary steps to

this end. Compulsory measures for welfare can be ordered only on the basis of the law.

Art. 123.—All Germans have the right to gather in meetings peaceably and unarmed without announcement or particular permission. Meetings in the open may be made liable to previous announcement by a national law and, in the presence of immediate danger to the public order, may be forbidden.

Art. 124.—All Germans have the right to form societies or associations for purposes not contrary to the penal law. This right cannot be limited through preventive measures. The same provisions apply to religious societies and unions.

Every association has the right to acquire legal character in accordance with the civil law. No society may be refused this right because it pursues a political, social-political, or religious object.

Art. 125.—Liberty of the suffrage and its secrecy are guaranteed. Details will be laid down by the election laws.

Art. 126.—Every German has the right to appeal to the competent authorities or to the representatives of the people with written requests or grievances. This right may be exercised by individuals as well as by several persons together.

Art. 127.—Communities and community associations have the right of self-administration within the limits of the law.

Art. 128.—All citizens of the State, without distinction, are to be admitted to public office according to the provisions of the law and their abilities. All exceptional regulations against female officials and employes are set aside. The principles of official relations are to be regulated by a national law.

Art. 129.—The employment of State officials is for life, in so far as it is not provided differently by law. Pension-salaries and pensions for relatives and dependents are regulated by law. The legally acquired rights of the officials are inviolable. The legal way is open to officials for their property claims. The officials can be suspended, either temporarily or definitely, or transferred to another position with smaller salary, only under legal provisions.

Against every demand for punishment in the service a form of appeal and the possibility for a reopening of the trial are to be provided. In the investigation of the person of an official, facts against the official are to be recorded only when the official has had the opportunity to express himself as to the complaint. The official is to be permitted to inspect the complaint.

The inviolability of the acquired rights and the maintenance of the legal way for property complaints are especially assured to the professional soldier. For the rest, their position is regulated by national law.

Art. 130.—The officials are servants of the whole community, not of a party. To all officials freedom of their political beliefs and right of association is assured. The officials receive, according to special provisions in the national law, special representation as officials.

Art. 131.—In case an official during the exercise of his public duties violates the duties which he owes to a third person, the responsibility comes upon the State or the authority in whose services the official is. The right to take counteraction against the official is reserved by the State. The regular lawful way shall not be excluded. The detail regulation comes under the apportioning legislation.

Art. 132.—Every German, according to the pro-

vision of the law, has the duty to accept honorary offices.

Art. 133.—All citizens are obliged, according to law, to perform personal service for the State and the community. The duty of military service is regulated according to the National Army law. This determines also how far certain fundamental provisions are to be restricted for the members of the army in order that they may fulfill their duties and that military discipline may be preserved.

Art. 134.—All citizens, without any distinction, shall contribute according to their means to carrying all public burdens, according to the provisions of the law.

#### Religion and religious societies

Art. 135.—All inhabitants of the nation shall enjoy complete liberty of worship and conscience. Undisturbed enjoyment of religious liberties is assured by the Constitution and is under national protection. This provision leaves the general national laws untouched.

Art. 136.—Civic rights, State rights and duties are neither conditioned nor limited by the enjoyment of religious liberties. The enjoyment of civic and State rights as well as admission to public office are independent of religious beliefs. No one is bound to reveal his religious belief. The authorities have the right to ask for the affiliation to a religious society in so far as rights and duties depend thereon, or in case a lawfully organized census demands such information.

No one is to be forced to participate in church duties or church festivities, or to take part in religious exercises, or be compelled to give a religious oath.

Art. 137.—No State Church is recognized. Freedom of organization for religious purposes is assured. The union of religious societies within the nation is not restricted. Every religious society regulates and administers its affairs independently within the limits of the law. It appoints its officers without the co-operation of the State or the municipality. Religious societies acquire legality according to the prescriptions of the civic laws. The religious societies remain organizations of public law, in so far as they were such before. To other religious societies at their request the same rights are to be accorded, if by their constitution and the number of their members they give the guarantee of permanency. An amalgamation into a federation of a number of such public religious societies makes of such federation a public corporation.

Religious societies, which are recognized public corporations, are entitled, on the basis of the civic tax lists, to raise taxes according to the provisions of the respective State laws.

Societies which have as their aim the cultivation of a world conception of life are put on an equal footing with religious societies.

In so far as the carrying out of this provision requires a further regulation, it comes under the respective State laws.

Art. 138.—State contributions to religious societies based on public law, contract or special legal titles are abrogated by State legislation. The fundamental laws pertaining to this come under national laws.

The right of property and other rights of public religious societies and religious assemblies in connection with institutions devoted to purposes of worship, teaching and charity purpose, as well as

religious foundations and other forms of property, are guaranteed.

Art. 139.—Sunday and national holidays remain lawfully protected as days of rest and spiritual elevation.

Art. 140.—To the members of the army is given the necessary time for the fulfilling of their religious duties.

Art. 141.—In so far as the need of worship and spiritual advice exists in hospitals, Houses of Correction, or other public institutions, religious societies are permitted to hold religious meetings. No compulsion shall obtain.

### Education and schools

Art. 142.—Art, science, and their teachings are free. The State accords them protection and takes part in their promotion.

Art. 143.—The education of the young is to be provided for through public institutions. In their establishment the nation, States, and communities work together.

The instruction of teachers is to be regulated on a uniform basis for the nation according to the generally recognized principles of higher education.

The teachers in the public schools have the rights and duties of State officials.

Art. 144.—The entire school system is under the supervision of the State; it can accord participation therein to the communities. The school supervision will be exercised by technically trained central officials.

Art. 145.—There shall be general compulsory attendance at school. This duty will be principally attended to by the popular school with at least eight years of instruction, and the following continuation schools up to the completion of the eighteenth year. Instruction books and other apparatus in the popular and continuation schools are free.

Art. 146.—The public school system is to be organically constructed. Upon a basic school for every one is erected the intermediate and high school system. For this superstructure the rule for guidance is the multiplicity of life's callings, and the acceptance of a child in a particular school depends upon his qualifications and inclinations, not upon the economic and social position or the religion of his parents.

Nevertheless, within the communities, upon the proposal of those entitled to instruction, there shall be erected popular schools of their faith or view of the universe, in so far as this does not interfere with a regulated conduct of the schools in the sense of Paragraph 1. Details will be laid down in the State legislation, according to the principles of a national law.

For the attendance of those in poor circumstances at the intermediate and higher schools, public means are to be supplied by the nation, States, and communities, with especial assistance to the parents of children regarded as adapted for education in the intermediate and higher schools, until the instruction period is ended.

Art. 147.—Private schools as a substitute for public schools require the approval of the State and are subject to the provincial laws. Approval is to be given if the private schools are not inferior to the public schools in their objects, their equipment, and the scientific competency of their teaching staffs; and when a division of the pupils according to the amount of property possessed by their parents is not demanded. Approval is

to be withheld when the economic and legal status of the teachers is not sufficiently guaranteed.

Private popular schools are to be allowed only when, for a minority entitled to instruction, whose desires must be considered according to Article 146, Paragraph 2, there exists in a community no public school of a given faith or world conception; or when the educational administration recognizes a particular pedagogical interest. Private preparatory schools are to be abolished. The existing law for private schools that do not serve as substitutes for the public schools remains in force.

Art. 148.—Moral education, civic sentiment, and personal and professional ability in the spirit of popular Germanism and of international reconciliation are to be striven for in all the schools. In giving instruction in public schools care must be taken not to hurt the feelings of those who think differently. Civics and labor instruction are branches of instruction in the schools. Every pupil will receive a copy of the Constitution upon completing his school duties. The system of popular education, inclusive of the popular high schools, is to be promoted by nation, States, and communities.

Art. 149.—Religious instruction is a regular branch of school instruction, except in the case of schools acknowledging no creed, or worldly schools. The imparting of religious instruction will be regulated by school legislation. It will be given in accord with the principles of the religious societies concerned, without prejudice to the State's right of supervision.

The imparting of religious instruction and the using of church forms are left to the desire of the teachers, and the participation of the pupils in religious studies and in church solemnities and acts is left to those who have the right of determining the child's religious education.

The theological Faculties of the colleges are maintained.

Art. 150.—The monuments of art, history, and nature, as well as the landscape, enjoy the protection and care of the State. It is the affair of the nation to prevent the removal of German art possessions to foreign lands.

### Economic life

Art. 151.—The regulation of economic life must correspond to the principles of justice, with the object of assuring to all a life worth living. Within these bounds the economic liberty of the individual is to be assured.

Legal compulsion is admissible only for the safeguarding of threatened rights or in the service of predominant demands of the public good.

The freedom of trade and industry is safeguarded according to the national laws.

Art. 152.—There is freedom of contract in economic relations within the limits of the law. Usury is forbidden. Legal arrangements that are in conflict with decent customs are null and void.

Art. 153.—Property is safeguarded by the Constitution. Its composition and limits are defined by the laws.

Confiscation can be carried out only for the benefit of the community as a whole and with due process of law. There will be appropriate compensation, as far as a national law may not otherwise prescribe. In the case of dispute as to the amount of the compensation the ordinary courts may be appealed to in so far as national laws do not provide otherwise. Confiscation by the nation from States, communities, and societies organized for the public welfare may be effected only

with compensation. Property implies a duty. Its use should at the same time be a service to the general welfare.

Art. 154.—The right of inheritance is safeguarded according to the civil law.

The State's part in the inheritance will be provided for by law.

Art. 155.—The division and use of the land will be watched over by the State in such a way as to prevent its misuse and to promote the object of insuring to every German a healthful dwelling and to all German families, especially those with numerous children, a dwelling and economic homestead corresponding to their needs. War veterans are to be specially considered in the homestead law to be created.

Real estate, the acquisition of which is necessary to meet housing needs, to encourage settling and bringing of land under cultivation, or to promote agriculture, may be expropriated. Entailments are to be dissolved.

The working and exploitation of the land is a duty of the land owner toward the community. An increase of value of land arising without the applying of labor or capital to the property is to be made to serve the community as a whole.

All mineral treasures and all economically useful forces of nature are under the control of the State. Private rights are to be turned over to the State through legislation.

Art. 156.—The nation may through law, without detriment to compensation, and with a proper application of the regulations covering expropriation, transfer to public ownership private economic enterprises adapted for socialization. The nation may itself take part in the administration of economic undertakings and societies, or transfer such right to States or communities, or insure itself a dominating influence in some other way.

Furthermore, the nation, in case of pressing necessity for the purpose of public business, may combine through law economic enterprises and societies on the basis of self-administration, with the object of insuring the co-operation of all the working sections of the people, of allowing employers and employees to participate in the administration, and of regulating the production, preparation, distribution, use and prices, as well as the import and export of economic goods, according to general economic principles.

The co-operatives of industry and husbandry and their associations, upon their request and with consideration for their composition and peculiarities, may be embodied in the common system of economics.

Art. 157.—Labor power is under the special protection of the nation. The nation will create uniform labor laws.

Art. 158.—Intellectual labor, the rights of the discoverer, the inventor and the artist, enjoy the protection and care of the nation.

The creations of German science, art and technique are to be protected and promoted abroad through international agreement.

Art. 159.—The right of combination for the defense and promotion of labor and economic conditions is guaranteed to everybody and to all professions. All agreements and measures which attempt to limit or impede this liberty are illegal.

Art. 160.—Any one employed as an office employe or a worker has the right to the time off necessary to exercise his civic rights and, so far as it does not materially injure the business, to fill public honorary offices conferred upon him. The law will define how far he may demand compensation,

Art. 161.—For the purpose of conserving health and the ability to work, of protecting motherhood and of guarding against the economic effects of age, debilities and the vicissitudes of life, the nation will create a comprehensive system of insurance, with the authoritative co-operation of the insured.

Art. 162.—The nation favors an international regulation of the legal status of the workers that strives for a general minimum measure of social rights for the whole working class of the world.

Art. 163.—It is the moral duty of every German, without prejudice to his personal liberty, so to use his intellectual and physical powers as is demanded by the welfare of the community.

Every German shall receive the possibility of earning his living through economic labor. In so far as the appropriate opportunity to work cannot be given to him his necessary maintenance will be looked after. Details will be arranged through special national laws.

Art. 164.—The independent middle class in agriculture, industry, and trade is to be favored in legislation and administration, and is to be protected against being overburdened and made victims of extortion.

Art. 165.—The workers and office employes are qualified to take part with equal rights and in co-operation with the employers in the regulation of wage and labor conditions, as well as in the entire economic development of the productive forces. The organizations on both sides and their unions are recognized.

The workers and office employes receive legal representation in the Factory Workers' Councils, as well as in the District Workers' Councils grouped according to economic districts, and in a National Workers' Council, for the purpose of looking after their social and economic interests.

The District Workers' Councils and the National Workers' Council meet together with the representatives of the employers and of other interested circles of people in District Economic Councils and a National Economic Council for the purpose of carrying out the joint economic tasks and for co-operating in the putting into effect of the laws of socialization. The District Economic Councils and the National Economic Council are to be formed so as to provide for the proper representation therein of all the important trade groups according to their economic and social importance.

Social political and economic political drafts of laws of fundamental importance are to be submitted by the National Government to the National Economic Council for its opinion before presentation. The National Economic Council has the right itself to propose such plans of laws. If the National Government does not agree with it, it has the right, nevertheless, to present the proposal to the Reichstag with an exposition of its standpoint. The National Economic Council may have its proposal represented by one of its members before the Reichstag.

The Workers' and Economic Councils may have conferred upon them the powers of control and administration in the fields turned over to them.

The building up of the Workers' and Economic Councils and the defining of their duties, as well as their relations to other social self-administrative bodies, are exclusively matters of the nation

#### Transitory and final regulations

Art. 166.—Until the establishment of the National Administrative Court the National Court will take its place in forming the Court for Examining Elections.

Art. 167.—The regulations of Article 18, Paragraphs 3 to 6, become effective two years after the announcement that the Constitution has gone into force.

Art. 168.—Until the promulgation of the State law provided for in Article 63, but at the most for only one year, all the Prussian votes in the National Council may be cast by members of the Government.

Art. 169.—The National Government will determine when the regulation laid down in Article 83, Paragraph 1, is to become effective.

Art. 170.—The Postal and Telegraph Administrations of Bavaria and Württemberg will be taken over by the nation not later than April 1, 1921.

If no understanding has been reached over the terms of their taking over by Oct. 1, 1920, the matter will be decided by the Supreme Court.

The former rights and duties of Bavaria and Württemberg remain in force until the act of taking over. Nevertheless, the postal and telegraph traffic with neighboring foreign countries will be regulated exclusively by the nation.

Art. 171.—The State railroads, waterways, and ocean signal systems are to be taken over by the nation not later than April 1, 1921.

If no understanding has been reached over the terms of their taking over by Oct. 1, 1920, the matter will be decided by the Supreme Court.

Art. 172.—Until the national law regarding the Supreme Court becomes effective its powers will be exercised by a Senate of seven members, four of whom are to be elected from among its members by the Reichstag and three by the National High Court. This Senate will arrange its own methods of procedure.

Art. 173.—Until the enactment of a national law according to Article 138, the existing State contributions to the religious societies based upon law, agreement, or special legal titles will continue.

Art. 174.—Until the enactment of the national law provided for in Article 146, Paragraph 2, the legal status existing will continue. The law will pay special attention to districts of the nation where a system of schools not separated according to faiths legally exists.

Art. 175.—The regulations of Article 100 do not apply to orders and decorations conferred for services in the war years of 1914-1919.

Art. 176.—All public officials and members of the army are to be sworn upon this Constitution. The details will be fixed by an order of the national President.

Art. 177.—Where in the existing laws it is provided that the oath be taken in connection with a religious form, the taking of the oath can be made legal by having the swearer say, leaving out the religious form, "I swear." For the rest the contents of the oath provided for in the laws remains undisturbed.

Art. 178.—The Constitution of the German Empire of April 16, 1871, and the law covering the temporary exercise of the national authority of Feb. 10, 1919, are annulled.

The other laws and regulations of the nation remain in force, in so far as they are not in contradiction with this Constitution. The arrangements contained in the Peace Treaty signed on June 28, 1919, at Versailles, are not affected by the Constitution.

Ordinances of the authorities legally issued on the strength of previously existing laws retain their power until annulled through other ordinances or legislation.

Art. 179.—In so far as reference is made in laws or ordinances to regulations and institutions which

are abolished by this Constitution their places will be taken by the corresponding regulations and institutions of this Constitution. In particular the place of the National Assembly will be taken by the Reichstag, that of the Committee of States by the National Council, and the place of national President elected on the strength of the law covering the temporary exercise of the national authority, by the national President elected under the authority of this Constitution.

The power to issue ordinances conferred upon the Committee of States through the former provisions is transferred to the national Government; the Government in issuing ordinances requires the approval of the National Council as laid down in this Constitution.

Art. 180.—Until the convening of the first Reichstag the National Assembly will function as the Reichstag. Until the installing of the first national President his office will be filled by the national President elected on the strength of the law covering the temporary exercise of the national authority.

Art. 181.—The German people have adopted and decreed this Constitution through its National Assembly. It goes into effect upon the day of its publication.

Weimar, July 31, 1919.

GERONTOCRACY, name applied to the system of the Boyerists of Haiti. See HAITI, REPUBLIC OF: 1804-1880.

GEROUSIA, or Gerusia.—"There is the strongest reason to believe that among the Dorians, as in all the heroic states, there was, from time immemorial, a council of elders. Not only is it utterly incredible that the Spartan council (called the gerusia, or senate) was first instituted by Lycurgus, it is not even clear that he introduced any important alteration in its constitution or functions. It was composed of thirty members, corresponding to the number of the 'obes,' a division as ancient as that of the tribes. . . . The mode of election breathes a spirit of primitive simplicity: the candidates, who were required to have reached the age of sixty, presented themselves in succession to the assembly, and were received with applause proportioned to the esteem in which they were held by their fellow-citizens. These manifestations of popular feeling were noted by persons appointed for the purpose, who were shut up in an adjacent room, where they could hear the shouts, but could not see the competitors. He who in their judgment had been greeted with the loudest plaudits, won the prize—the highest dignity in the

commonwealth next to the throne."—C. Thirlwall, *History of Greece*, v. 1, ch. 8.—See also MILITARY ORGANIZATION: 7; EPHORS; GREECE: B.C. 8th-5th centuries; SPARTA: Constitution ascribed to Lycurgus.

**GERRY**, Elbridge (1744-1814), American statesman. Member of Continental Congress, 1776-1780 and 1783-1785; at Constitutional convention, 1787; Congressman from Massachusetts, 1789-1793; sent on a mission to France with Marshall and Pinckney which resulted in what became known as the "X Y Z" affair; governor of Massachusetts, 1810-1812; vice president of the United States, 1813-1814. See GERRYMANDER; CONGRESS OF THE UNITED STATES: House: Gerrymander; U. S. A.: 1776 (July): Text of Declaration of Independence; 1787; 1797-1799.

**GERRYMANDER**.—"The word gerrymander was coined in Massachusetts in the spring of 1812. The apportionment which divided the state into districts that suggested the name was enacted February 11th of that year. Some of the districts were formed into fantastic shapes. Towns were separated and single towns were isolated from their proper counties. . . . Governor Gerry's name was used, since he had allowed the bill to become a law. . . . The word was immediately picked up by the Federalist press and widely used . . . for campaign purposes. But the Democratic newspapers were loath to apply their governor's name, thus modified to a partisan division of the state into districts."—E. C. Griffith, *Rise and development of the gerrymander*, pp. 16-19.—"The aim of gerrymandering is to so lay out the [electoral] districts as to secure in the greatest possible number of them a majority for the party which conducts the operation. This is done sometimes by throwing the greatest possible number of votes into a district which is anyhow certain to be hostile, sometimes by adding to a district where parties are equally divided some place in which the majority of friendly voters is sufficient to turn the scale."—J. Bryce, *American commonwealth*, pt. i, p. 165.—J. R. Commons states in "Proportional Representation" that "the gerrymander is an inevitable result of the district system," and that "the inequalities of the district system are not confined to the United States. They appear in all parliamentary countries." "The gerrymander came to be so successful a factor in the politics of the United States that it was exported and adopted by foreign countries. By 1871 the gerrymander was generally practiced in Switzerland and France."—E. C. Griffith, *Rise and development of the gerrymander*, p. 10.—The evil of the gerrymander in England is well illustrated in the following quotation: "If we draw a line across England from Lincolnshire to Devonshire, there were in 1880, on the south-east side, 99 county seats. In many of these the Conservatives had no contest, but the majority of the seats were fought, and the Liberals polled 96,000 votes against 116,000 given to the Tories. On this basis therefore the Liberals ought to have had, say, 40 seats and the Conservatives 59. As a matter of fact, however, they only secured 15 against 84. Moreover of this 15, five were minority seats; so that, but for the introduction of the principle of proportional representation, limited though it was, they would have only had 10 seats in the whole district, though fairly entitled to 40. Out of 60 members from Scotland and 28 from Wales, only 9 and 2 respectively are Conservatives."—J. Lubbock, *Representation*, pp. 17-18.—See also CONGRESS OF THE UNITED STATES: House: Gerrymander; INDIANA:

1382-1384.—Resistance to the duke of Burgundy. See FLANDERS: 1382.

1451-1453.—Revolt against the taxes of Philip of Burgundy.—In 1450, Philip, duke of Burgundy, having exhausted his usual revenues, rich as they were, by the unbounded extravagance of his court, laid a heavy tax on salt in Flanders. The sturdy men of Ghent were little disposed to submit to an imposition so hateful as the French "gabelle"; still less when, the next year, a new duty on grain was demanded from them. They rose in revolt, put on their white hoods, and prepared for war. It was an unfortunate contest for them. They were defeated in nearly every engagement; each encounter was a massacre, with no quarter given on either side; the surrounding country was laid waste and depopulated. A final battle, fought at Gavre, or Gaveren, July 22, 1453, went against them so murderously that they submitted and went on their knees to the duke—not metaphorically, but actually. "The citizens were deprived of the banners of their guilds; and the duke was henceforward to have an equal voice with them in the appointment of their magistrates, whose judicial authority was considerably abridged; the inhabitants likewise bound themselves to liquidate the expenses of the war, and to pay the gabelle for the future." The Hollanders and Zealanders lent their assistance to the duke against Ghent, and were rewarded by some important concessions.—C. M. Davies, *History of Holland*, v. 1, pt. 2, ch. 1.—"The city lost her jurisdiction, her dominion over the surrounding country. She had no longer any subjects, was reduced to a commune, and a commune, too, in which two gates, walled up forever, were to remind her of this grave change of state. The sovereign banner of Ghent, and the trades' banners, were handed over to Toison d'Or, who unceremoniously thrust them into a sack and carried them off."—J. Michelet, *History of France*, v. 2, bk. 12, ch. 1.

1482-1488.—Trouble with the Austrian ducal guardian. See NETHERLANDS: 1482-1493.

1539-1540.—Unsuccessful revolt and submission to Charles V.—Status of city.—Price of insurrection.—Once more, in 1539, Ghent became the scene of a memorable rising of the people against the oppressive exactions of their foreign masters. "The origin of the present dispute between the Ghensters and the court was the subsidy of 1,200,000 guilders, demanded by the governess [sister of the emperor Charles V] in 1536, which . . . it was found impossible to levy by a general tax throughout the provinces. It was therefore divided in proportional shares to each; that of Flanders being fixed at 400,000 guilders, or one-third of the whole. . . . The citizens of Ghent . . . persisted in refusing the demand, offering, instead, to serve the emperor as of old time, with their own troops assembled under the great standard of the town. . . . The other cities

of Flanders showed themselves unwilling to espouse the cause of the Ghensters, who, finding they had no hope of support from them, or of redress from the emperor, took up arms, possessed themselves of the forts in the vicinity of Ghent, and despatched an embassy to Paris to offer the sovereignty of their city to the king." The French king, Francis I., not only gave them no encouragement, but permitted the emperor, then in Spain, to pass through France, in order to reach the scene of disturbance more promptly. (See FRANCE: 1532-1547.) In the winter of 1540, the latter presented himself before Ghent, at the head of a German army, and the unhappy city could do nothing but yield itself to him.—C. M. Davies, *History of Holland*, v. 1, pt. 2, ch. 5.—At the time of this unsuccessful revolt and the submission of the city to Charles V, "Ghent was, in all respects, one of the most important cities in Europe. Erasmus, who, as a Hollander and a courtier, was not likely to be partial to the turbulent Flemings, asserted that there was no town in all Christendom to be compared to it for size, power, political constitution, or the culture of its inhabitants. It was, said one of its inhabitants at the epoch of the insurrection, rather a country than a city. . . . Its streets and squares were spacious and elegant, its churches and other public buildings numerous and splendid. The sumptuous church of Saint John or Saint Bavon, where Charles V had been baptized, the ancient castle whither Baldwin Bras de Fer had brought the daughter of Charles the Bald [see FLANDERS: 863], the city hall with its graceful Moorish front, the well-known belfry, where for three centuries had perched the dragon sent by the Emperor Baldwin of Flanders from Constantinople, and where swung the famous Roland, whose iron tongue had called the citizens, generation after generation, to arms, whether to win battles over foreign kings at the head of their chivalry, or to plunge their swords in each others' breasts, were all conspicuous in the city and celebrated in the land. Especially the great bell was the object of the burghers' affection, and, generally, of the sovereign's hatred; while to all it seemed, as it were, a living historical personage, endowed with the human powers and passions which it had so long directed and inflamed. . . . Charles allowed a month of awful suspense to intervene between his arrival and his vengeance. Despair and hope alternated during the interval. On the 17th of March, the spell was broken by the execution of 19 persons, who were beheaded as ringleaders. On the 29th of April, he pronounced sentence upon the city. . . . It annulled all the charters, privileges, and laws of Ghent. It confiscated all its public property, rents, revenues, houses, artillery, munitions of war, and in general everything which the corporation, or the traders, each and all, possessed in common. In particular, the great bell Roland was condemned and sentenced to immediate removal. It was decreed that the 400,000 florins, which had caused the revolt, should forthwith be paid, together with an additional fine by Ghent of 150,000, besides 6,000 a year, forever after."—J. L. Motley, *Rise of the Dutch republic*, introduction, sect. 11.

GHENT, University of, university in Belgium founded in 1816 by King William I of Holland. "In an effort to divide public opinion in Belgium by setting the Flemish part against the Walloon (French), the German governor general, von Bissing, decreed that the University of Ghent should (1915) become a Flemish institution, offering great favors to those who would retain their professorships after such a change and punishing those who resisted coercion, notably the distinguished scholars Paul Fredericq and Henri Pirenne, who were sent to prison and then exiled to Germany. The experiment has met with little success."—*War cyclopaedia*, p. 122.—"Close voting marked the end of the debate on the question [of making the university a Flemish institution], the bill being adopted by 85 votes to 83. After the Chamber voted to make the University Flemish it voted on a proposal that the institution should be bilingual, using the French and Flemish languages, but this was rejected."—*New York Times*, Dec. 20, 1922.

GHULAT, or Ghulut, group of Babi's sects. See BAHAIISM: Progress of Bahai cause.

GIACOMETTI, Paolo (1816-1882), Italian dramatist. See ITALIAN LITERATURE: 1710-1800.

GIACOSA, Giuseppe (1847-1906), Italian dramatist. See ITALIAN LITERATURE: 1860-1920.

GIAFFERI, Luigi, leader of a revolt in Corsica, 1729. See CORSICA: 1729-1769.

GIA-LONG, Chinese member of the Nguyen family, acquired control over the whole of Annam, Tongking and Cochin, China, at the end of the 18th century. See INDO-CHINA: B. C. 218-A. D. 1886.

GIAO-SHI, or Giao-kii, ancient tribe of southern China, the ancestors of the Annamese. See INDO-CHINA: Geography.

GIARDINO, General (1865- ), Italian commander in World War. His army took part in the final Italian offensive against the Austrians, 1918. See WORLD WAR: 1918: IV. Austro-Italian theater: c, 2.

GIBBON, Edward (1737-1794), English historian. His fame rests on his history, "The History of the Decline and Fall of the Roman Empire" which was published in three parts, 1776, 1781, 1788. See HISTORY: 25.

GIBBON, John (1827-1896), American general. Fought in the battles of Antietam, 1862, Gettysburg, 1863, Wilderness, Cold Harbor, and others; commanded an expedition against Sitting Bull, 1876. See U. S. A.: 1863 (June-July: Pennsylvania); 1866-1876.

GIBBONS, James (1834-1921), American Roman Catholic cardinal and archbishop. Ordained bishop of North Carolina, 1868; became archbishop of Baltimore, 1877; presided over Third Plenary Council in Baltimore, 1884; became first chancellor of the newly established Catholic University at Washington; created cardinal, 1886; author of "Faith of our Fathers," 1871, "Our Christian Heritage," 1889, and "The Ambassador of Christ," 1896.

GIBBONS VS. OGDEN (1824).—The decision in this case was rendered by Chief Justice Marshall and Justice Story. "In this decision the power of Congress over interstate commerce was declared to be full and complete, extending not only to the commodities exchanged and to the agencies of transportation but to the movements of persons as well."—S. E. Forman, *Advanced American history*, p. 296.—See also U. S. A.: 1801: Appointment of John Marshall; SUPREME COURT: 1789-1835.

GIBBORIM, King David's chosen band of six hundred, his heroes, his "mighty men," his standing army.

GIBEON, Battle of. See BETH-HORON.

GIBEONITES.—The Gibeonites were a "remnant of the Amorites, and the children of Israel had sworn unto them" (ii Samuel, 21: 2). Saul violated the pledged faith of his nation to these people and "sought to slay them." After Saul's death there came a famine which was attributed to his crime against the Gibeonites; whereupon David sought to make atonement to them. They would accept nothing but the execution of vengeance upon seven of Saul's family, and David gave up to them two sons of Saul's concubine, Rizpah, and five sons of Michal, the daughter of Saul, whom they hanged.—H. Ewald, *History of Israel*, bk. 3.

**GIBLITES**, aboriginal race from Lebanon. See SYRIA: B. C. 64-63.

**GIBRALTAR**, British island fortress and crown colony, at the western entrance to the Mediterranean; an important naval base. See BRITISH EMPIRE: Extent.

Origin of name. See SPAIN: 711-713.

1309-1460.—Taken by the Christians, recovered by the Moors, and finally wrested from them, after several sieges. See SPAIN: 1273-1460.

1704.—Capture by the English. See SPAIN: 1703-1704.

1713.—Ceded by Spain to England. See UTRECHT: 1712-1714.

1727.—Abortive siege by the Spaniards.—Construction of the lines of San Roque. See SPAIN: 1726-1731.

1780-1783.—Unsuccessful siege by the Spaniards and French. See ENGLAND: 1780-1782; SPAIN: 1779-1783.

1900-1920.—Military and naval improvements.—During the first part of the twentieth century numerous improvements were made in the military defences of Gibraltar; guns of the most modern description were set up, particularly on the higher parts of the Rock, and an elaborate system of range finding was installed. New dockyard works were also completed. Three moles make a harbor which covers 440 acres.

**GIBRALTAR OF THE EAST**. See HONG KONG.

**GIBSON**, Fort, established April, 1824. See OKLAHOMA: 1806-1824.

**GIBSON**, Hugh (1883- ), American diplomat. Secretary to American legation in Brussels, 1914-1916; issued a report of the Cavell murder (see CAVELL, EDITH); appointed first envoy extraordinary and minister plenipotentiary to Poland, April 16, 1919.

**GIBSON**, Wilfrid Wilson (1878- ), English poet. See ENGLISH LITERATURE: 1880-1920.

**GIDDINGS**, Franklin Henry (1855- ), American sociologist and economist. See HISTORY: 33.

**GIDDINGS**, Joshua Reed (1705-1864), American statesman. Served in the War of 1812; member of Ohio legislature, 1826-1828; member of national House of Representatives, 1838-1850; consul-general in Canada, 1861-1864. See U. S. A.: 1855-1856.

**GIDEON**, or Jerubbaal, (c. 13th century B.C.), Hebrew liberator and religious reformer. Judge in Israel for forty years. See JEWS: Israel under the Judges.

**GIESEBRECHT**, Friedrich Wilhelm Benjamin von (1814-1889), German historian. See HISTORY: 26.

**GIESL**, Baron von, Austrian minister to Serbia in 1914. See WORLD WAR: Diplomatic background: 25; 32.

**GIFTS AND BEQUESTS**.—In all ages, and in many countries, numbers of men and women have given largely of their wealth, to be expended for the public good by religious bodies, educational foundations, charitable institutions or otherwise. The United States and Canada have been so especially favored in this respect during the nineteenth and twentieth centuries, that it is impossible to indicate more than a small proportion of the sums devoted in this manner, but a few of the notable gifts and bequests in which great interest

is taken by reason of their large amount or because of their special nature, are here set out.

**Altman, Benjamin**.—Gift of a collection of art treasures, whose estimated value is \$15,150,000 to the Metropolitan Museum of Art, New York; willed to Academy of Design, \$100,000 and to employees, \$30,000,000.

**Anderson, Mrs. A. A.**—Gift of \$1,200,000 to Barnard College, Columbia University. Mrs. Anderson also cooperated with her brother, Joseph Milbank, in making other large gifts.

**Armour, J. Ogden**.—Gift to Armour Institute, \$6,000,000.

**Armour, Philip D.**—Endowed Armour Institute of Technology, Chicago.

**Astor, John Jacob**.—Gave \$4,000,000 to found and endow Astor library. See LIBRARIES: Modern: United States: New York Public library.

**Astor, John Jacob, Jr.**—Gave \$850,000 to found and endow Astor library. See LIBRARIES: Modern: United States: New York Public library.

**Astor, William B.**—Gave \$550,000 to found and endow Astor library. See LIBRARIES: Modern: United States: New York Public library.

**Avery, Samuel P.**—With his wife and son gave \$480,000 to build and equip an architectural library for Columbia University in memory of Henry Ogden Avery, whose choice collection of books on art and architecture was presented to form the nucleus of the library. This library has become an important factor in the education of architects in the United States.

**Barbour, Levi H.**—\$2,000,000 to the University of Michigan for the endowment fund for the education of women of the Far East.

**Bourne, Commodore Frederick G.**—Gift of \$700,000 to the Cathedral of St. John the Divine, New York.

**Brooking, R. S.** See below: Cupples, S.

**Bussey, Benjamin**.—Bequeathed to Harvard University about \$413,000, one-half of which was to be devoted to the law and divinity school, and the other half to the formation of Bussey Institute, a school of agriculture and horticulture.

**Carnegie, Andrew**.—The total of his gifts and endowments during his life amounted to about \$620,439,000, besides his residuary estate which amounted to about five million dollars. They were distributed among the following:

Building for Bureau of American Republics. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1906-1908.

Court house and library for permanent court of arbitration at The Hague.

Dumfermline, Scotland. See RECREATION: 1014.

Foundation for the improvement of teaching. See FOUNDATIONS: Carnegie foundations.

Hero funds. See CARNEGIE HERO FUNDS: U. S. A.: 1909 (May 25).

Institute at Pittsburgh. See CARNEGIE INSTITUTE, PITTSBURGH.

Institution of Washington. See CARNEGIE INSTITUTION, WASHINGTON.

Libraries. See LIBRARIES: Modern: Carnegie library gifts.

Peace fund. See PEACE MOVEMENT: Peace organizations.

ALSO IN: *Manual of public benefactions of Andrew Carnegie*.

**Coles, Elizabeth U.**—Gift of twelve priceless seventeenth century tapestries, known as the Barberini tapestries, to the Cathedral of St. John the Divine, New York.

**Cooper, Peter**.—Gift of ground and the buildings valued at \$930,000 for the establishment of Cooper Union, New York (1857-1859).

**Corcoran, William Wilson.**—Gift of \$900,000 for the endowment of Corcoran Gallery, Washington, with his art collection. He also founded the Louise Home for Impoverished Gentlewomen, and Oak Hill Cemetery at Georgetown.

**Cornell, Ezra.**—Gave \$500,000 towards the endowment of Cornell University. He bought up all unsold New York State land scrip, which had been assigned by the legislature to the university (1862), and also deeded to it 500,000 acres of Wisconsin forest lands (1866), which ultimately realized millions of dollars.

**Crerar, John.**—Gift of \$2,500,000 to found John Crerar library, Chicago. He also contributed \$1,000,000 to various religious and charitable organizations; and \$100,000 for a statue of Abraham Lincoln.

**Crocker, George.**—Gave \$3,500,000 for cancer research.

**Cupples, S.**—With R. S. Brooking, transferred to Washington University, St. Louis, a property known as Cupples Station, thus enabling the university to be rebuilt on a new site of 100 acres.

**Doe, C. F.**—Bequeathed \$6,000,000 to the library of the University of California.

**Drexel, Anthony J.**—Founded Drexel Institute of Art, Science and Industry in Philadelphia and endowed it with \$2,000,000. The main building was also given by him.

**Durant, Henry F.**—Founded Wellesley College, to which he gave between one and two million dollars.

**Egleston, William C.**—Gave \$100,000 to endow free beds in St. Luke's Hospital, New York; \$100,000 to Yale for library; \$25,000 to Metropolitan Museum of Art, and numerous bequests to other institutions.

**Frick, Henry Clay.**—Gave to the public of the city of New York, subject to the life interest of his wife, private art gallery in New York, including land and building valued at \$50,000,000, with an endowment of \$15,000,000. To the city of Pittsburgh, a site for a park, \$2,000,000. He gave approximately \$17,400,000 to be divided as follows: \$2,000,000 to Harvard University; \$2,000,000 to Massachusetts Institute of Technology, Boston; \$6,000,000 to Princeton University; \$2,000,000 to the Educational Fund Commission, Pittsburgh; \$1,600,000 to Children's Hospital, Allegheny General Hospital, Home for the Friendless, Kingsley House Association, Free Dispensary, Newsboys' Home, Western Pennsylvania Hospital, Y. W. C. A., all in Pittsburgh; \$2,000,000 to Mercy Hospital, Pittsburgh; \$200,000 each to Uniontown Hospital, Cottage State Hospital, Westmoreland Hospital, Mount Pleasant-Memorial Hospital, Braddock General Hospital, Homestead Hospital, all in Pennsylvania; also \$600,000 to Lying-in-Hospital, New York; \$100,000 towards founding an American Academy of Fine Arts in Rome, Italy.

**Ginn, Edward.**—Gifts and bequest for international peace aggregating \$1,110,000.

**Ginn, Edwin.**—Bequest to world's peace fund, \$2,000,000.

**Girard, Stephen.**—Gave \$616,000 to Philadelphia charities and improvements; \$300,000 to Pennsylvania for improvements; residue of his estate valued at \$5,260,000 to Philadelphia for the foundation of Girard College.

**Gurney, Professor and wife.**—Gave \$170,000 to Harvard University.

**Hand, Daniel C.**—Gave \$1,000,804 to "Daniel C. Hand Education Fund for Colored People."

**Harkness, Mrs. Stephen V.**—Gift to Yale, \$3,000,000. Endowed Commonwealth Fund. See COMMONWEALTH FUND.

**Harriman, Mrs. E. H.**—Gift of land for a state park on the Hudson, New York. Gifts to Yale, Barnard College and other educational institutions aggregating \$330,000.

**Harvard, John.**—Bequest of about £400 in 1638, and his library of 260 volumes to Harvard University.

**Hopkins, Johns.**—Gift of \$7,000,000 to found Johns Hopkins Hospital and Johns Hopkins University.

**Huntington, Archer Milton.**—To the Hispanic Society of America, in New York, of which he was the founder, he gave a home, an endowment and rich collections. See LIBRARIES: Modern: United States: New York Public Library.

**Huntington, Collis Potter.**—Bequest of collection of paintings valued at \$3,000,000 to the Metropolitan Museum of Art, New York.

**Jeanes, Anna T.**—Gave \$1,000,000 for elementary education of negroes in the South. See JEANES FOUNDATION.

**Kennedy, John Stewart.**—Bequest of nearly \$30,000,000 to various educational, charitable and religious institutions.

**Lenox, James.**—Gave to the city of New York, the Lenox library and the building in which it was contained. See LIBRARIES: Modern: United States: New York Public Library.

**Lewisohn, Adolph.**—Numerous gifts to charitable and educational institutions, including \$300,000 to Columbia University for a School of Mines building; \$100,000 to Yale University; a German library and stadium to the College of the City of New York.

**Low, Seth.**—Gave \$1,100,000 to the great central library of Columbia University, in memory of his father.

**Lowell, John Jr.**—Gave \$250,000 to found the Lowell Institute.

**Ludlow, Mrs. Mary E.**—Gave \$178,000 to endow the department of music in Columbia University in memory of her son.

**Macdonald, Sir William Christopher.**—Besides the gift and endowment of manual-training and domestic science schools for the Ontario Agricultural College, he gave to McGill University, \$5,400,000; to Macdonald Agricultural College and Normal school at Ste. Anne de Bellevue, P. Q., \$5,000,000. See EDUCATION: Modern developments: 20th century: General education: Canada.

**McGill, James.**—Gift of property and £10,000 to found a university in Montreal.

**Macy, Caroline L.**—Gave \$252,225 to Teachers College, Columbia University, in memory of her husband; also \$175,000 to endow Teachers College. In her memory, her son built Horace Mann School at a cost of \$450,000.

**Magee, C. L.**—Gave \$4,000,000 to found a hospital in memory of his mother Elizabeth Steele Magee.

**Mayo, William J. and Charles H.**—Gave the sum of \$1,650,344.79 to the University of Minnesota to found the "Mayo Foundation for Medical Education and Research," and agreed to support the foundation pending the raising of the fund to \$2,000,000; further gifts of \$6,250,344.

**Milbank, Joseph.**—Gift of about \$257,000 to Teachers College, Columbia University; to the Milbank Baths, New York City, \$150,000; to a clubhouse in Jersey City, called Jersey City People's Palace, \$200,000; with his sister, Mrs. A. A. Anderson, to found a social welfare bureau in New York, \$650,000; and to the Children's Aid Society, \$500,000.

**Morgan, John Pierpont.**—Gave to the Harvard Medical School approximately \$1,000,000; to the

Lying-in-Hospital, New York, about \$1,500,000; to the Cathedral of St. John the Divine \$100,000; St. George's Church and the Metropolitan Museum of Art, and to his native city of Hartford, various very large sums, and gifts of land, buildings and valuable objects of art.

Morton, Levi P.—Gave \$600,000 to the Cathedral of St. John the Divine, New York. Gift of sanitarium to West Virginia, \$150,000.

Newberry, Walter L.—Bequeathed to Newberry Library Fund \$2,500,000.

Peabody, George.—Gave \$200,000 to the state of Maryland; \$200,000 to the Peabody Institute and Library at Peabody; \$50,000 to the Danvers Institute; \$1,200,000 to the Peabody Institute, Baltimore; \$2,500,000 to be used for lodging houses for the poor of London, England; \$150,000 to Harvard University; \$150,000 to Yale University; \$3,500,000 to the Peabody Education Fund to promote education in the southern states; \$750,000 to the Peabody Museum, Salem, Massachusetts; and \$365,000 to other institutions and charities.—See also PEABODY EDUCATIONAL FUND.

Pearsons, D. K.—Devoted a fortune made in real estate to aiding the smaller colleges throughout the West. He made gifts varying from \$50,000 to \$300,000 on condition, in nearly all cases, that a larger sum should be raised by other friends of the institution to which a donation was made. In this way he was instrumental in obtaining material assistance to forty different colleges at a cost to himself of approximately \$4,000,000.

Phipps, Henry.—Gave \$1,500,000 to Johns Hopkins University; \$150,000 for research in agriculture in India; \$15,000,000 for radium institute; \$15,000,000 to various other institutions.

Pratt, Charles.—Founded Pratt Institute, Brooklyn.

Pratt, Enoch.—Gave \$1,108,000 to found Pratt Free Library in Baltimore, with branch buildings.

Pulitzer, Joseph.—Contributed \$1,000,000 to establish the School of Journalism, Columbia University; willed to Columbia University \$2,250,000; to Barnard College, \$1,000,000 and other bequests.

Rice, William Marsh.—Bequeathed his property valued at \$10,000,000 to found Rice Institute in Houston, Texas.

Rockefeller, John D.—Gave \$43,000,000 to General Education Board (see GENERAL EDUCATION BOARD); \$32,000,000 to the University of Chicago; \$15,000,000 to the Rockefeller Institute for Medical Research; \$125,000,000 to the Rockefeller Foundations; \$142,000,000 for the investigation of the hookworm disease; \$223,000 for the conservation of bird life and the purchase of bird refuge in Louisiana.

Sage, Henry W.—Gave to Cornell University \$1,175,000.

Sage, Mrs. Russell.—Gifts during her life estimated at \$40,000,000 of which \$10,000,000 went to the Russell Sage Foundation; \$175,000 for Constitution island given to the United States government; bequeathed to Russell Sage Foundation, Colleges, Museums, Hospitals, charitable institutions, Bible societies and missions about \$36,000,000.—See also RUSSELL SAGE FOUNDATION.

Schenley, Mrs. Mary E.—Gave 382 acres of land for a park in Pittsburgh, and also a Newsboys Home.

Schiff, Jacob Henry.—Bequeathed \$1,350,000 to educational and charitable institutions to most of which he had contributed largely during his life.—See also JEWS: United States: 1908-1918.

Slater, John F.—Contributed \$1,000,000 for the purpose of "uplifting the lately emancipated population of the Southern States, and their posterity,

by conferring on them the blessings of Christian education." See SLATER FUND.

Sloane, W. and wife.—Gave \$1,200,000 to found the Sloane Maternity hospital in New York.

Smith, Donald Alexander, Lord Strathcona and Mount Royal.—Gave \$1,500,000 to the Royal Victoria Hospital at Montreal; built and endowed the Royal Victoria College for women; and gave over \$1,000,000 to McGill University.

Smith, Sophia.—Bequeathed the larger part of her estate valued at \$450,000 to found Smith College for women. She also founded Smith Academy in Andover, Massachusetts.

Smithson, James.—After his nephew's death, his estate valued at \$508,318.45 was handed over to the United States. See SMITHSONIAN INSTITUTION.

Stanford, Leland and wife.—Founded and endowed Leland Stanford, Jr., University.

Stephen, George, Lord Mount Stephen.—Gave \$500,000 to build and equip the Royal Victoria Hospital in Montreal.

Sterling, John W.—Bequest to Yale, \$20,000,000.

Tilden, Samuel Jones.—Bequeathed to New York City his valuable private library and practically his whole fortune, to establish a circulation library. Litigation reduced the library fund known as the Tilden Foundation to approximately \$2,500,000. See LIBRARIES: Modern: United States: New York Public Library.

Vanderbilt, Cornelius.—Contributed \$1,000,000 to found Vanderbilt University, Nashville, Tennessee.

Vassar, Matthew.—Contributed \$788,000 and 200 acres of land to found Vassar College.

Vassar, Matthew.—Nephew of the founder of Vassar College gave to Vassar College \$150,000 and to other public institutions of Poughkeepsie about \$350,000.

Williamson, I. V.—Gave, to found and endow the Williamson Free School of Mechanical Trades, Pennsylvania, \$2,500,000.

Wyman, William.—Gave 60 acres of ground for a site for new buildings for Johns Hopkins University.

GILBERT, Sir Humphrey (c. 1539-1583), English soldier and navigator; Sighted the northern shores of Newfoundland, July 30, 1583, and on August 5th planted the first English colony in America. See AMERICA: 1583.

GILBERT, or Gylberde, William (1540-1603), English physician, known as the father of electric and magnetic science. See ELECTRICAL DISCOVERY: Early experiments.

GILBERT, Sir William Schwenk (1836-1911), English playwright, famous for his comic operas. He worked with Sir Arthur Sullivan, a composer. See DRAMA: 1843-1805.

GILBERT ISLANDS, group of islands in Micronesia, Pacific ocean. See MICRONESIA; BRITISH EMPIRE: Extent.

GILBERT'S ACT (1782), English poor law. See CHARITIES: England: 1782-1834.

GILDO, or Gildon (d. 398), Moorish chieftain. Appointed count of province of Africa, 386; transferred his allegiance to Eastern empire, 397; captured in his flight after he had been defeated by the Roman army. See ROME: Empire: 396-398.

GILDS. See GUILDS.

GILEAD, mountainous region of Palestine, east of the Jordan, lying between the Dead sea and the Sea of Galilee. See JEWS: Israel under the Judges.

GILENOS, tribe of North American aborigines. See APACHE GROUP.

**GILES, or GILLIS, LAND**, situated in the Arctic regions, northeast of Spitsbergen and west of Franz Josef Land. It was discovered in 1707 by the Dutch captain, Cornelis Gillis. See **SPITSBERGEN**: 1827-1808.

**GILES, William Branch** (1762-1830), American governor. Congressman from Virginia, 1790-1799 and 1801-1803; United States senator, 1804-1815; governor of Virginia, 1827-1830. See **U. S. A.**: 1804-1805.

**GILLETTE, William Hooker** (1855- ), American actor and playwright. See **DRAMA**: 1865-1913.

**GILLMORE, Quincy Adams** (1825-1888), American soldier. Chief engineer of Port Royal Expeditionary Corps, 1861-1862; president of Mississippi River Commission, 1870-1882; colonel of engineers, 1883. See **U. S. A.**: 1862 (February-April: Georgia-Florida); 1863 (July: South Carolina); (August-December: South Carolina); 1864 (January-February: Florida); (May: Virginia): Coöperative movement of Army of the James; 1865 (February: South Carolina).

**GILMAN, Charlotte Perkins** (1860- ), American lecturer. Ardent advocate of woman's rights. See **WOMAN'S RIGHTS**: 1867-1921.

**GILMORE, James Roberts** (pseudonym Edmund Kirke) (1822-1903), American writer and editor. Acting as unofficial agent of President Lincoln he served on a peace mission to the Confederate government in 1864. See **U. S. A.**: 1864 (July).

**GILOLO, or Halmahera**, one of the Moluccas or Spice islands. See **MOLUCCAS**.

**GINCHY**, village about six miles south of Bapaume, northeast France. It was captured from the Germans by Irish troops, September 9, 1916, in the battle of the Somme. See **WORLD WAR**: 1916: II Western front: d, 10.

**GINGILOVO, or Ginginhlovo**, Battle of (1879). See **SOUTH AFRICA, UNION OF**: 1877-1879.

**GINKEL, Godart Van**, 1st Earl of Athlone (1630-1703), Dutch general in the English army. See **NETHERLANDS**: 1702-1704.

**GIOBERTI, Vincenzo** (1801-1852), Italian philosopher, statesman and politician. See **ITALIAN LITERATURE**: 1827-1872; **GENOA**: 1848.

**GIOLITTI, Giovanni** (1842- ), Italian statesman. Became minister of treasury, 1889; minister of finance, 1890; president of the ministry, 1892-1893; minister of interior, 1901-1903; premier of Italy, 1903-1905; 1906-1909; 1911-1914; 1920-1921. See **ITALY**: 1905-1906; 1909-1911; 1914; 1915: Giolitti's policy; 1920; 1921 (January-March); 1921-1922 (June-February); **SUFFRAGE, MANHOOD**: Italy: 1908-1912; **WORLD WAR**: 1915: IV. Italy: a.

**GIORGIO BARBARELLI**. See **GIORGIONE DA CASTELFRANCO**.

**GIORGIONE DA CASTELFRANCO** (Giorgio Barbarelli) (c. 1477-1510), Venetian painter. Was a pupil of Bellini; one of the chief artists of the High Renaissance. See **PAINTING**: Italian: High Renaissance.

**GIOTTO DI BONDONE** (c. 1267-1337), Florentine painter. Attributed works uncertain but known to have executed two or three series of the frescoes in the church of St. Francis at Assisi, and the entire decorations of the Arena Chapel, Padua; designed the campanile and the west-front of the cathedral of Florence; greatest master before the Renaissance. See **PAINTING**: Italian: Early Renaissance; **ART**: Relation of art and history.

**GIPPS, Sir George** (1791-1847), English colo-

nial governor of New South Wales, 1838-1846. See **NEW SOUTH WALES**: 1831-1855.

**GIPPSLAND**, region in southeastern Victoria, Australia.

**GIPSIES**. See **GYPSIES**.

**GIRALDUS CAMBRENSIS**, or Gerald de Barri (c. 1146-1220), British chronicler and ecclesiastic. See **HISTORY**: 19.

**GIRARD, Stephen** (1750-1831), American financier and founder of Girard College, Philadelphia. See **GIFTS AND BEQUESTS**.

**GIRL GUIDES**.—"When Sir Robert [Baden-Powell] organized the Boy Scouts, he found among those seeking membership no less than six thousand girls. To organize them he called on his sister, Miss Agnes Baden-Powell, who formed them into troops after the same general plan as the Boy Scouts, and called them Girl Guides."—Mrs. T. H. Price, *Girl Scouts* (*Outlook*, Mar. 6, 1918).—A charter of incorporation was obtained in 1915. Rules of affiliation provide for coöperation with other kindred societies. The movement is, however non-political and inter-denominational. Excellent service was rendered during the World War in making bandages, providing clothes for refugees, helping at hospitals, scrubbing and washing up in canteen kitchens, etc.

"The Girl Guides' is an organization for character training. . . . Its aim is to get girls to learn how to be women—self-helpful, happy, prosperous, and capable of keeping good homes and of bringing up good children. *The Method* of training is to give the girls pursuits which appeal to them, such as games and recreative exercises, which lead them on to learn for themselves many useful crafts. Already this training has been found attractive to all classes, but more especially to those by whom it is so vitally needed—the girls of the factories and of the alleys of our great cities, who, after they leave school, get no kind of restraining influence, and who, nevertheless, may be the mothers, and should be the character trainers of the future men of our nation. The success which has . . . attended the Girl Guides movement and its wide extension, not only to most parts of the British Empire but to many foreign countries as well, speaks for the need of it."—A. Baden-Powell, *Handbook for Girl Guides*, p. vii.—See also **Y. W. C. A.**: 1918: Work for younger girls; **Boy Scouts**.

**GIRL SCOUTS**.—"This organization is an outgrowth of the Girl Guides (q. v.) of England." The founder, Mrs. Juliette Low, had assisted Miss Baden-Powell for some time in her work; and "when in 1912 Mrs. Low returned to her native city of Savannah she was urged by Miss Baden-Powell and Sir Robert [Baden-Powell] to organize Girl Guides in this country. She did so, forming the first troops in Savannah. But the girls, secure in the knowledge of the origin of the movement and reflecting the spirit of America, insisted upon being known as Girl Scouts and thus they were incorporated in Washington in 1915. Girl Scouts are now organized in 510 cities and towns in the United States in coöperation with schools and parishes and as lone troops. Only four states are without troops. The growth of the movement has been as sound as it has been rapid. Its principles and methods have the indorsement and coöperation of leaders in education and hyman affairs all over the country. . . . The pride the widely separated units feel in the recognition Girl Scouts have received from the Department of Education, the Food Administration, the Department of Agriculture, the America First Committee, and the Women's Liberty Loan Committee has

had an immediate and definite reaction on the troops and on the girls. Their purposes have steadied, their outlook has widened—they see beyond themselves and their communities.”—A. P. Leland, *Scouting education for girls* (*National Educational Association of the United States, Proceedings*, 1918, pp. 579, 582-583).

**GIRONDINS, GIRONDISTS.**—“During the first period [from September, 1792 until July, 1793] of the history of the Democratic Republic [in France]—namely, until the defeat of Federalism—the National Convention was seen to be divided into two parties, the *Gironde* and the *Mountain*; the former more numerous and more influential than the latter, and drawing in its train, as a general thing, an indefinite mass of deputies known as the *Plain*, the *Stomach*, or the *Marsh*. The leaders of the *Gironde* were expelled from the Convention by the popular insurrection of June 2, 1793. Some were imprisoned in Paris. Others repaired to the provinces, and provoked a movement which culminated in civil war against the Convention, which they declared was reduced to a state of slavery; this movement being known as Federalism. The *Mountain* eventually triumphed, with its principal leader, Robespierre. . . . Historians, rather than contemporaries, gave the collective name of the *Gironde* to the friends and followers of Brissot, Vergniaud, Mme. Roland, and Buzot. In the Legislative Assembly those deputies who sat on the left, below Chabot and Basire, called themselves the *Jacobin Patriots*; and their opponents called them derisively *Brissotins*, *Bordelais*, or the *Gaudet-Brissot gang*. In the Convention they were still *Brissotins*, but *Rolandists*, *Buzotins* as well. Marat ironically called them the *Statesmen*. By *Girondists* we understand more particularly Vergniaud, Guadet, Gensonné, Grangeneuve, Ducos, Boyer-Fonfrède, Bergoing, and Lacaze: all deputies of the department of the *Gironde*. Even at their trial the distinction was maintained between the *Brissotins* and the *Girondists*. . . . The forces of this party were not concentrated in a definite and particular district. In May, 1793, there were *Girondists* in almost all quarters. They were least numerous in the north-east, and in the ancient *Ile de France*. They were most numerous in Provence, Guyenne, Limousin, Brittany, Normandy, and Picardy—in the south and the north-west. But in none of these regions (in so far as they were represented by certain groups of departments) did they form the majority of the national representation. They were even in the minority in all the departments save eight; the *Gironde*, *Somme*, *Seine-Inférieure*, *Aisne*, *Haute-Vienne*, *Ardèche*, *Finistère*, and the *Jura*. Nowhere, not even in the *Gironde*, did they number all the representatives; this latter department sent to the Convention, together with eight ‘*Girondists*,’ two *Montagnards*—*Garrau* and *Jay* (of *Saint-Foy*); and two of indefinite colour—*Duplantier* and *Deleyre*. . . . It was at the outset that the *Girondists* passed as *Federalists*; it was afterwards that they continually declared themselves partisans of the unitarian Republic. And this is the essential difference, or rather the only real difference, between the *Montagnards* and the *Girondists*: the former wished to see Paris provisionally, during the war, at the head of the united Republic, as the ruling capital; the latter, on the contrary, did not wish Paris to exert any supremacy over the departments, even in wartime. This was the actual cause of the quarrel. . . . Not obtaining this ‘reduction of Paris,’ the *Girondists* wished to *federate* the departments against Paris, and later they attempted civil war

with this object in view. . . . To make war upon Paris; to deprive her of her character of ruling capital; this was the real policy of the *Gironde*, and this is where the *Gironde* differed from the *Mountain*.”—A. Aulard, *French Revolution*, v. 3, pp. 31-32, 42, 54-56.—On October 31, 1793, twenty-one of the *Girondist* leaders, including Brissot, were executed. Others, like Roland and Buzot, who had fled, met their fate in the provinces.—See also FRANCE: 1791 (October), to 1793 (September-December).

**GLAISHER, James** (1809-1903), British aviator and meteorologist, founder of the Meteorological Society. See AVIATION: Development of balloons and dirigibles: 1870-1913.

**GLAMORGAN TREATY.** See ENGLAND: 1645 (June-December).

**GLASER, Eduard** (1855-1908), Austrian explorer. See ARABIA: Sabæans.

**GLASGOW**, largest city of Scotland, situated on the north side of the Clyde. Its origin is traced back to the church built on the banks of the Molendinar about 560 by the apostle of the Scots, St. Kentigern. The see of Glasgow was re-

established in 1116 by David, Prince of Cumbria, who also had the church rebuilt. It was made a burgh between 1175 and 1178; a regality in 1450; gained the right of election of magistrates in 1611; and finally became a free royal burgh in 1636. The splendid harbor and position in a rich coal and iron district are responsible for the city's industrial preëminence. It is considered the chief shipbuilding centre in the world. It has owned the gas works since 1889, and receives a large revenue from the by-products of coal. In 1894 municipality owned sludge works were commenced for the purification of the Clyde. During the same year the street railways were taken over by the city (see MUNICIPAL GOVERNMENT: European municipal ownership, etc.). The principal exports are machinery, cotton, linen and woolen goods, paper, coal, and whiskey; while imports consist largely of raw materials, *viz.*, metal, wheat, wool, corn, sugar, petroleum, tobacco and timber. The total net tonnage for 1910 was 4,271,000 tons. In 1921 the population of the city aggregated 1,034,069 inhabitants. (See SCOTLAND: 1750-1921.) Among her institutions must be mentioned the University founded in 1451 and the fine old cathedral, begun in 1197 and finished in the middle of the fifteenth century. The city is governed by a corporation of 77 members.—See also SCOTLAND: Land; Y. M. C. A.: 1625-1844; 1844-1851.

**Water supply.** See MUNICIPAL GOVERNMENT: Early development, etc.

**Libraries.** See LIBRARIES: Modern: England, etc.; Scotland.

**GLASGOW**, British cruiser. It was in the battles of Coronel and Falkland islands, 1914. See WORLD WAR: 1914: IX. Naval operations: e.

**GLASGOW MUSEUM.**—"The city's art collection was begun by the purchase in 1856 of the notable galleries of pictures brought together by Bailie M'Lellan, and for a generation the pictures remained in their original home in Sauchiehall Street. By the articles of association of the International Exhibition held in Glasgow in 1888, it was provided that any surplus should be transferred to the Town Council, to be applied in erecting and maintaining a gallery or museum of science and art, or otherwise in promoting art in the city. There was a surplus, and this, augmented by private subscription, was sufficient to enable the building of new Art Galleries in Kelvin-grove Park to be partially proceeded with. The work was continued by the Town Council under the authority of an Act of Parliament, and the buildings, having been completed, now contain the various art, science, and industrial collections, which are the finest in the country out of London."—J. Lindsay. *Municipal history and activities* (*Scottish Geographical Magazine*, v. 37, 1921, p. 32).

**GLASS**, Carter (1858- ), American senator. Member of Virginia Senate, 1899-1903; member of national House of Representatives, 1902-1918; secretary of the treasury under President Wilson, 1918-1919; United States senator, 1919. See U. S. A.: 1808 (June); 1919-1920.

**GLASS INDUSTRY.** See INVENTIONS: Ancient and medieval: Early industrial processes; 16th-17th centuries: Industry; 19th century: Industry; 20th century: Industry.

**GLATZ**, fortified town of Germany situated about fifty miles southwest of Breslau. It was besieged during the Thirty Years' War and the Seven Years' War, and was ceded to Prussia in 1748. See AIX-LA-CHAPELLE: Congresses: 2; AUSTRIA: 1742 (January-May); (June); GERMANY: 1760.

**GLAZED POTTERY.** See INVENTIONS: Ancient and medieval: Early industrial processes.

**GLAZUNOV**, Alexander (1865- ), Russian composer. Studied with Rimsky-Korsakov; with Liadov and Rimsky-Korsakov conducted the Russian symphony concerts. St. Petersburg, 1896-1897; became professor of instrumentation at the St. Petersburg Conservatory, 1899; director, 1909-1912; his ballets "Raymonda," and "The Seasons" are among his most successful works.

**GLEEMAN**, or Gleoman, itinerant minstrel or musician. See MUSIC: Folk music and nationalism: England.

**GLENCOE**, valley in Argyllshire, Scotland, northeast of Oban. It was the scene of a frightful massacre of Macdonalds by royal troops in 1602. See SCOTLAND: 1602.

**GLENDALE**, Battle of. See U. S. A.: 1862 (June-July: Virginia).

**GLENDOWER**, Owen (Owain ab Gruffydd, Lord of Glyndyrdwy) (c. 1359-1415), Welsh rebel leader. See WALES: 1402-1413.

**GLENMALURE**, Battle of (1580). See IRELAND: 1559-1603.

**GLEVUM** was a large colonial city of the Romans in Britain, represented by the modern city of Gloucester. It "was a town of great importance, as standing not only on the Severn, near the place where it opened out into the Bristol Channel, but also as being close to the great Roman iron district of the Forest of Dean."—T. Wright, *Celt, Roman and Saxon*, ch. 5.

**GLIDING MACHINES.** See AVIATION: Development of airplanes and air service: 1889-1900.

**GLINKA**, Mikhail Ivanovitch (1804-1857), first great Russian composer and the real forefather of Russian nationalism in music. Was choir master of Imperial Chapel, 1836-1830. His operas are, "Life for the Czar," and "Russlan and Ludmilla." See MUSIC: Folk music and nationalism: Russia.

**GLOGAU**, Storming of (1642). See GERMANY: 1640-1645.

**GLOSSATORS**, jurists in the school of law at Bologna. See BOLOGNA: 11th century.

**GLOUCESTER**, Sir Humphrey, Duke of (1391-1447), youngest son of Henry IV of England. Under Henry V was regent of England; lord protector until the coronation of Henry VI, 1429; married Jacqueline, heiress of Holland. See ENGLAND: 1422-1455; NETHERLANDS: 1417-1430.

**GLOUCESTER**, city, county borough, county town and port of Gloucestershire, England, situated northeast of Bristol. It was incorporated in 1483 by Richard III. In 1643 the town resisted the royal army under Charles I. Among its manufactures are engines, railway cars, agricultural implements and cutlery. It also has foundries, boat and ship building yards, flour and saw mills, match, rope, chemical, slate and marble works. Its ship canal is 17 miles long. The city carries on considerable commerce with foreign ports. The population in 1921 was 51,330.—See also GLEVUM; ENGLAND: 1643 (August-September).

**GLUCK**, Christoph Willibald (1714-1787), German composer and operatic reformer. Studied with Czernohorsky, Prague, and later with San Martini, Milan; produced his epoch making opera "Orfeo et Euridice" in Vienna, 1762; riveted attention with "Iphigénie en Aulide," Paris, 1774; challenged the Italian school and routed his opponents with "Iphigénie en Tauride," Paris, 1779. Gluck's reform of opera was his greatest service to music.—See also MUSIC: Modern: 1700-1827; 1730-1816: French.

**GLYCERIUS**, Roman emperor (Western), 473-474.

**GNEISENAU**, August Wilhelm Anton, Count Neithardt von (1760-1831), Prussian field marshal. As an officer in a mercenary regiment in English service he went to America in 1782; in the last phase of the Napoleonic Wars he served with distinction as Blücher's chief-of-staff and took a leading part at Waterloo. See **MILITARY ORGANIZATION**: 28.

**GNEISENAU**, German cruiser. Was in the battle of Coronel, 1914; sunk a month later by the British off the Falkland islands.

**GNILA LIPA**, river in Galicia, a northern tributary of the Dniester. See **WORLD WAR**: 1915: III, Eastern front: g, 3.

**GNOSTICS, GNOSTICISM**. — "Gnosticism was a philosophy of religion; but in what sense was it this? The name of Gnosticism—Gnosis—does not belong exclusively to the group of phenomena with whose historical explanation we are here concerned. Gnosis is a general idea; it is only as defined in one particular manner that it signifies Christian Gnosticism in a special sense: Gnosis is higher Knowledge, Knowledge that has a clear perception of the foundations on which it rests, and the manner in which its structure has been built up; a Knowledge that is completely, that which, as Knowledge, it is called to be. In this sense it forms the natural antithesis to Pistic, Faith [whence Pistics, believing Christians]; if it is desired to denote Knowledge in its specific difference from faith, no word will mark the distinction more significantly than Gnosis. But we find that, even in this general sense, the Knowledge termed Gnosis is a religious Knowledge rather than any other; for it is not speculative Knowledge in general, but only such as is concerned with religion. . . . In its form and contents Christian Gnosticism is the expansion and development of Alexandrian religious philosophy; which was itself an offshoot of Greek philosophy. . . . The fundamental character of Gnosticism in all its forms is dualistic. It is its sharply-defined, all-pervading dualism that, more than anything else, marks it directly for an offspring of paganism. . . . In Gnosticism the two principles, spirit and matter, form the great and general antithesis, within the bounds of which the systems move with all that they contain. . . . A further leading Gnostic conception is the Demiurgus. The two highest principles being spirit and matter, and the true conception of a creation of the world being thus excluded, it follows in the Gnostic systems, and is a characteristic feature of them, that they separate the creator of the world from the supreme God, and give him a position subordinate to the latter. He is therefore rather the artificer than the creator of the world. . . . The oldest Gnostic sects are without doubt those whose name is not derived from a special founder, but only stand for the general notion of Gnosticism. Such a name is that of the Ophites or Naassenes. The Gnostics are called Ophites, brethren of the Serpent, not after the serpent with which the fathers compared Gnosticism, meaning to indicate the dangerous poison of its doctrine, and to suggest that it was the hydra, which as soon as it lost one head at once put forth another; but because the serpent was the accepted symbol of their lofty Knowledge. . . . The first priests and supporters of the dogma were, according to the author of the *Philosophoumena*, the so-called Naassenes—a name derived from the Hebrew name of the serpent. They afterwards called themselves Gnostics, because they asserted that they alone knew the things that are deepest. From

this root the one heresy divided into various branches; for though these heretics all taught a like doctrine, their dogmas were various."—F. C. Baur, *Church history of the first three centuries*, v. 1, pp. 187-202.—"Bigotry has destroyed [the Gnostics'] writings so thoroughly, that we know little of them except from hostile sources. They called themselves Christians, but cared little for the authority of bishops or apostles, and borrowed freely from cabalists, Parsees, astrologers, and Greek philosophers, in building up their fantastic systems. . . . Much as we may fear that the Gnostic literature was more remarkable for boldness in speculation than for clearness of reasoning or respect for facts, it is a great pity that it should have been almost entirely destroyed by ecclesiastical bigotry."—F. M. Holland, *Rise of intellectual liberty*, ch. 3, sect. 6.—See also **AGNOSTICISM**; **ALBIGENSES**; **CERDONIANS**; **CERINTHIAN**s; **CHRISTIANITY**: 100-300: **Church in Alexandria**; **DOCE-TISM**; **ENERGITES**.

**GOA**, former capital of the Portuguese colony of the same name on the west coast of India. It is now inhabited by a handful of persons, and the mere ruin of an ancient city once distinguished by its magnificence.—See also **INDIA**: 1498-1580; **Map of India**; **COMMERCE**: Era of geographic expansion: 15th-17th centuries: **Leadership of the Portuguese**; **JESUITS**: 1542-1649; **PORTUGUESE INDIA**.

**GOBAT (Charles) Albert** (1843-1914), Swiss parliamentarian. Member of Federal Council of States, 1884 and of the National Council, 1890. With Ducommun, in 1902, received the Nobel prize for international peace.

**GOBEL**, Jean Baptiste (1727-1794), French bishop. See **FRANCE**: 1793 (November).

**GO-DAIGO**, emperor of Japan. See **JAPAN**: 1199-1333; 1334-1574.

**GODEGISEL**, Burgundian king. He ruled with his brothers Hilperick and Gundobald or Gundobad. See **BURGUNDY**: 500.

**GODERICH**, Frederick John Robinson, Viscount. See **RIPON**, EARL OF.

**GODFRED** (d. 810), Danish king. He invaded Frisia in 810. See **SCANDINAVIAN STATES**: 8th-9th centuries.

**GODFREY**, Hollis (1874- ), American educator and engineer. He was one of the Advisory Commission of the Council of National Defence, organized, 1916. See **NATIONAL DEFENCE, COUNCIL OF**.

**GODFREY**, Michael (d. 1695), English merchant. Appointed deputy-governor of Bank of England when it was established, 1694. See **MONEY AND BANKING**: Modern: 17th-18th centuries: **Banking in Great Britain**.

**GODFREY**, Thomas (1736-1763), American writer. See **DRAMA**: 1767-1878.

**GODFREY OF BOUILLON** (c. 1060-1100), one of the leaders in the first Crusade. Made duke of lower Lotharingia, 1088; a leader in the first Crusade for the recovery of the Holy Sepulchre, 1096; elected Defender and Baron of Holy Sepulchre, 1099; defeated the Sultan of Egypt at Ascalon in the same year. See **CRUSADES**: 1096-1099; **Map of Mediterranean lands in 1097**; **JERUSALEM**: 1099-1131.

**GODIN**, Jean Baptiste André (1817-1888), French socialist, disciple of Fourier, founder of the

socialistic industrial union or familistère at Guise. See SOCIALISM: 1842-1913.

**GODOLLO, Battle of** (1849). See AUSTRIA: 1848-1849.

**GODOLPHIN, Sidney, 1st Earl of** (c. 1645-1712), English statesman. First lord of the treasury, 1690-1697; 1700-1701; head of the home government and lord high treasurer, 1702; dismissed from office, 1710. See ENGLAND: 1710-1712.

**GODOY, Alvarez de Faria, Rios Sanchez y Zarzosa, Manuel de, Duke of El Alcudia** (1767-1851), Spanish statesman. He is best known by the title of Prince of the Peace because of the part he played in the negotiation of the Treaty of Basel, concluding peace with France in 1795. A favorite of Charles IV and his wife, Maria Luisa, who showered favors on him until the whole power of the Spanish monarchy was concentrated in his hands; premier from 1792 to 1798; returned to office 1801-1807; imprisoned because of outbreak against him in 1808; sent to France by Napoleon's orders and remained with Spanish king and queen until the former's death, 1819; died in Paris, 1851. See SPAIN: 1788-1808.

**GODUNOV, Boris Fedorovitch.** See BORIS FEDOROVITCH GODUNOV.

**GODWIN, or Godwine** (d. 1053), West Saxon earl. See ENGLAND: 1042-1066.

**GODWIN, William** (1756-1836), English political and miscellaneous writer. His best known works are "The Inquiry concerning Political Justice," and the novel "Caleb William." See ANARCHISM: 1793.

**GODYN, Samuel, Dutch colonist.** See DELAWARE: 1629-1631.

**GOEBEL, William** (1856-1900), American politician. Member of Kentucky state Senate, 1887-1900; governor of Kentucky, January 31, to February 3, 1900. See KENTUCKY: 1895-1900.

**GOEBEN, German battle cruiser** which with the *Breslau* took refuge in the Dardanelles at the outbreak of the World War. Later it bombarded Russian Black sea ports, on the strength of which Russia declared war on Turkey.—See also BRESLAU.

**GOETHALS, George Washington** (1858- ), American army engineer. Appointed member of Isthmian Canal Commission, 1907; first civil governor of canal zone, 1914-1916; made major-general, 1915; state engineer of New Jersey in 1917 from which he was released to serve as manager of Emergency Fleet Corporation but resigned after three months; appointed acting quartermaster-general of the United States army, 1917; appointed chief of division of purchase, 1918; relieved from active service at his own request, March, 1919.—See also PANAMA CANAL: 1904-1905; 1907-1914; 1913-1914; U. S. A.: 1914 (August); Opening of Panama canal.

**GOETHE, Johann Wolfgang von** (1749-1832), Germany's greatest poet. Among his most important works are: "Faust"; his lyrics, "Götz von Berlichingen," "Egmont," "Die Leiden des jungen Werthers," "Wilhelm Meisters Lehrjahre," "Iphigenie," "Tasso," "Die Metamorphose der Pflanzen" (a scientific work), and his autobiography, "Dichtung und Wahrheit." See DRAMA: 1773-1832; GERMAN LITERATURE: 1700-1832.

**GOGOL, Nikolai Vasilievich** (1809-1852), Russian novelist. See RUSSIAN LITERATURE: 1820-1848.

**GOIDEL, branch of the Celtic family.** See CELTS.

**GOLCONDA, ruined city and fortress in India.** Its name has become famous because of the immense number of diamonds found in the out-

lying territory in earlier times, and brought to the city to be cut and polished.

**GOLD COAST, section of the African coast on the Gulf of Guinea.** It was acquired by England, partly from the Danes, 1850, and partly from the Dutch, 1871. See AFRICA: Modern European occupation; Later 19th century; ASIANT: 1895-1900; BRITISH EMPIRE: Extent.

**GOLDEN BOOK, contains a list of the nobility of ancient Venice.** See VENICE: 1032-1310.

**GOLDEN BOUGH.** See ARICIAN GROVE.

**GOLDEN BULL, Byzantine, document to which the emperor attached his golden seal was called by the Byzantines, for that reason, a chryso-bulum, or golden bull.** The term was adopted in the Western or Holy Roman Empire.

**GOLDEN BULL OF CHARLES IV** (1356). See GERMANY: 12th-13th centuries; 13th century; 1347-1493.

**GOLDEN BULL OF HUNGARY** (1222). See HUNGARY: 1116-1301.

**GOLDEN CHERSONESE: Origin of term.** See CHRYSE.

**GOLDEN CIRCLE, Knights of.** See KNIGHTS OF THE GOLDEN CIRCLE; AMERICAN FEDERATION OF LABOR: 1881-1886.

**GOLDEN FLEECE.** See ARGONAUTIC EXPEDITION.

**GOLDEN FLEECE, Knights of the Order of the.**—"It was on the occasion of his marriage [1430] that Philip [Philip the Good, Duke of Burgundy, Count of Flanders, etc.], desirous of instituting a national order of knighthood, chose for its insignia a 'golden fleece,' with the motto, 'Pretium non vile laborum,'—not to be condemned is the reward of labour. . . . For the first time labour was given heraldic honours. The pride of the country had become laden with industrial recollections, its hope full of industrial triumphs; if feudalism would keep its hold, it must adopt or affect the national feeling. No longer despised was the recompense of toil; upon the honour of knighthood it should so be sworn; nay knighthood would henceforth wear appended to its collar of gold no other emblem than its earliest and most valued object—a golden fleece."—W. T. McCullagh, *Industrial history of free nations*, v. 2, ch. 10.—"This order of fraternity, of equality between nobles, in which the duke was admonished, 'chapered,' just the same as any other, this council, to which he pretended to communicate his affairs, was at bottom a tribunal where the haughtiest found the duke their judge; he could honour or dishonour them by a sentence of the order. Their scutcheon answered for them; hung up in St. Jean's, Ghent, it could either be erased or blackened. . . . The great easily consoled them-

selves for degradation at Paris by lawyers, when they were glorified by the duke of Burgundy in a court of chivalry in which kings took their seat."—J. Michelet, *History of France*, bk. 12, ch. 4.—"The number of the members was originally fixed at 31, including the sovereign, as the head and chief of the institution. They were to be: 'Gentilshommes de nom et d'armes sans reproche.' In 1516, Pope Leo X. consented to increase the number to 52, including the head. After the accession of Charles V., in 1556, the Austro-Spanish, or, rather, the Spanish-Dutch line of the house of Austria, remained in possession of the Order. In 1700, the Emperor Charles VI. and King Philip of Spain both laid claim to it. . . . [It] passes by the respective names of the Spanish or 'Austrian 'Order of the Golden Fleece,' according to the country where it is issued."—B. Burke, *Book of orders of knighthood*, p. 6.

ALSO IN: J. F. Kirk, *History of Charles the Bold*, bk. 1, ch. 2.

**GOLDEN GATE.**—"The Bay of San Francisco is separated from the sea by low mountain ranges. Looking from the peaks of the Sierra Nevada, the coast mountains present an apparently continuous line, with only a single gap, resembling a mountain pass. This is the entrance to the great bay. . . . On the south, the bordering mountains come down in a narrow ridge of broken hills, terminating in a precipitous point, against which the sea breaks heavily. On the northern side, the mountain presents a bold promontory, rising in a few miles to a height of two or three thousand feet. Between these points is the strait—about one mile broad in the narrowest part, and five miles long from the sea to the bay. To this Gate I gave the name of Chrysopylae, or Golden Gate; for the same reasons that the harbor of Byzantium (Constantinople afterwards), was called Chrysoceras, or Golden Horn. Passing through this gate, the bay opens to the right and left, extending in each direction about 35 miles, making a total length of more than 70, and a coast of about 275 miles."—J. C. Fremont, *Memoirs of my life*, v. 1, p. 512.

**GOLDEN HIND**, vessel in which Drake circumnavigated the globe. See AMERICA: 1572-1580.

**GOLDEN HORDE**, body of Tatars who overran Europe in the thirteenth century and founded the khanate or empire of Kipchaks in Russia. See MONGOLS: 1238-1301; MONGOLIA: 1206-1500; 1238-1301; Map of Mongolian empires; RUSSIA: 15th century.

**GOLDEN HORN**, narrow inlet of the Bosphorus, forming the harbor of Constantinople. See BYZANTINE EMPIRE: 1203-1204; BYZANTIUM; CONSTANTINOPLE: Map of Dardanelles, etc.

**GOLDEN HORSESHOE**, Knights of the. See VIRGINIA: 1710-1716.

**GOLDEN HOUSE.**—The imperial palace at Rome, as restored by Nero after the great fire, was called the Golden House. It was destroyed by Vespasian.—C. Merivale, *History of the Romans under the empire*, ch. 53 and 90.

**GOLDEN, or BORROMEAN, LEAGUE.** See SWITZERLAND: 1579-1630.

**GOLDEN SPUR**, Order of the, order of knighthood instituted in 1550 by Pope Paul III.

**GOLDEN STOOL**, King Prempeh's. See ASHANTI: 1895-1900.

**GOLDFADEN**, Abraham B. Hayyim Lippe (1840-1908), Hebrew and Yiddish poet. Founder of the Yiddish drama. See JEWS: Drama and theatre.

**GOLDMAN**, Emma (1869- ), Russian an-

archist. Emigrated to the United States in 1886; editor of the publication *Mother Earth*; deported to Russia on the *Buford* or "Soviet Ark" on December 22, 1919. See ANARCHISM: 1910; U. S. A.: 1919 (September-December).

**GOLDONI**, Carlo (1707-1793), Italian dramatist. See ITALIAN LITERATURE: 1710-1890.

**GOLDSBORO**, city of North Carolina, situated about fifty miles southeast of Raleigh. It was occupied by the Federal army under Sherman in 1865. See U. S. A.: 1865 (February-March: The Carolinas).

**GOLDSMITH**, Oliver (1728-1774), English novelist, poet, dramatist and miscellaneous writer, born in Ireland. See ENGLISH LITERATURE: 1660-1780.

**GOLEK BOGHAZ**, or Cilician Gates, famous pass of Armenia. See ARMENIA: Physical features.

**GOLETTA**, or La Goulette, seaport of Tunis, south of the ruins of Carthage. See TURKEY: 1572-1573.

**GOLGI**, Camillo (1844-1919), Italian histologist and neurologist. With Cajal he received the Nobel prize for medicine in 1906.

**GOLGOTHA**, site on which Christ was crucified. See JESUS CHRIST: Antagonism roused against Jesus; CHRISTIANITY: Map of Jerusalem.

**GOLIATH**, Philistine giant, slain, according to the Bible, by David.

**GOLIATH**, British battleship. Part of the fleet in the Aegean sea which had been cooperating with the land forces in the attack on Gallipoli; sunk by a Turkish torpedo boat, May 15, 1915.

**GOLITZIN**, or Galitzin, Dmitry Mikhailovich (1665-1737), Russian statesman. Governor of Byelgorod, 1711-1718; appointed president of the *Kammer Kollegium*, 1718; head of Conservative party after the death of Peter the Great; as president of Supreme Privy Council attempted to limit the authority of the autocracy; forced Anne of Courland, newly elected Russian empress, to sign a constitution which he drew up; arrested on a pretext of being involved in the conspiracy of his son-in-law, Prince Constantine Cantimir, and sentenced to death; the sentence was commuted to lifelong imprisonment. See RUSSIA: 1725-1739; Attempt at a constitution.

**GLOWSTSCHIN**, Battle of (1708). See SWEDEN: 1707-1718.

**GOLTZ**, Kolmar, Baron von der (1843-1916), Prussian general and military writer. Served in the Austro-Prussian War of 1866 and in the Franco-German War in 1870-1871; entered Turkish service in 1883 and spent twelve years reorganizing the Turkish army; appointed governor-general of Belgium, 1914; chief in command of the 1st Turkish Army in Mesopotamia, 1915. See WORLD WAR: 1916; X. German rule in northern France and Belgium; b, 1.

**GOLUCHOWSKI**, Count Agenor (1840-1921), Austrian statesman. As minister for foreign affairs, 1895-1906, he cultivated friendly relations with other powers; supported Germany at Algeiras, 1906; Hungarian enmity forced him to resign, October, 1906. See WORLD WAR: Diplomatic background: 8.

**GOLYMIN**, Battle of (1806). See GERMANY: 1806-1807.

**GOMEL**, or Homel, town in Russia, situated on the Soje river, in the province of Mohilev. See JEWS: Russia; Ukraine.

**GOMER**, or Omer, measure equaling one-tenth of the ephah. See EPIAH.

**GOMERISTS**. See NETHERLANDS: 1603-1619.

**GOMEZ**, José Miguel (1858-1921), Cuban leader of the Miguelista faction of the Liberal

party. President of Cuba, 1909-1913. See CUBA: 1906-1909.

**GOMEZ, Juan Vicente** (1859- ), Venezuelan politician. As vice president of Venezuela assumed charge of government during General Castro's absence, 1908; elected president, 1910. See VENEZUELA: 1907-1909; 1910-1911.

**GOMEZ Y BAEZ, Maximo** (1831-1905), Cuban soldier. Joined Cuban insurrection, 1868; influential in bringing about insurrection of 1895-1898; cooperated with the United States when that country intervened; governor of the presidency of Estrada Palma. See CUBA: 1895-1898.

**GOMMECOURT**, village in northern France, southwest of Arras. See WORLD WAR: 1916: II. Western front: d, 4; d, 5; e, 6.

**GOMPERS, Samuel** (1850- ), American labor leader. Came to America from England in 1863; became first president of Cigar Makers' International Union, 1864; one of the founders of the American Federation of Labor, 1881 and its president since 1882 (except in 1894); member of advisory committee of Council of National Defence, 1917; representative of American Federation of Labor at the Peace Conference in Paris, 1918-1919; chairman of International Committee on Labor Legislation at Peace Congress, 1919; the same year chairman of labor delegates at the convention of the International Federation of Trades Unions at Amsterdam.—See also AMERICAN FEDERATION OF LABOR: 1917-1919; 1919; LABOR PARTIES: 1918-1920.

**GOMPHI**, city on the border of Thessaly, which shut its gates against Cæsar, shortly before the battle of Pharsalia. He halted one day in his march, stormed the town and gave it up to his soldiers to be sacked.—G. Long, *Decline of the Roman republic*, v. 5, ch. 15.

**GONÇALVES, André**, Portuguese navigator, said to have discovered the Bay of Rio de Janeiro, January 1, 1502. See RIO DE JANEIRO.

**GONCHAROV, Ivan Alexandrovitch** (1812-1891), Russian novelist. See RUSSIAN LITERATURE: 1855-1880.

**GONCOURT, Edmond Louis Antoine Huot de** (1822-1896), French novelist. In accordance with his will the Goncourt Academy was founded January 19, 1903, and a prize of 5,000 francs was to be awarded annually to a work of fiction, in prose. See FRENCH LITERATURE: 1800-1921: Realistic school.

**GONCOURT, Jules Alfred Huot de** (1830-1870), French novelist. See FRENCH LITERATURE: 1800-1921: Realistic school.

**GONDRA, Manuel** (1872- ), elected president of Paraguay for the term, August 15, 1920, to August 14, 1924. See PARAGUAY: 1920 (June).

**GONDS**, aborigines of central India and the Deccan. See INDIA: People.

**GONFALONIERE**, standard-bearer. See CARROCCIO.

**GONNELIEU**, village in northern France southwest of Cambrai. See WORLD WAR: 1917: II. Western front: g, 12; g, 15.

**GONTRAM**, or Günther of Schwartzburg, Holy Roman emperor, 1347. Was a rival of Charles IV.

**GONZAGA, Giovan Francesco II**, Duke of Mantua (d. 1444), Italian general and patron of education. Obtained possession of Mantua as fief from the emperor, Sigismund, in 1432.—See also EDUCATION: Modern: 15th-16th centuries: Italy the center, etc.

**GONZAGA, House of**.—"The house of Gonzaga held sovereign power at Mantua, first as captains, then as marquesses, then as dukes, for

nearly 400 years [1328-1708]."—E. A. Freeman, *Historical geography of Europe*, v. 1, p. 243.

**GONZALEZ, Alfredo**, elected president of Costa Rica, 1914. See COSTA RICA: 1914-1917; Presidency of Gonzalez.

**GONZALEZ, Ignacio Maria**, several times president of Santo Domingo during the years 1874-1879. See SANTO DOMINGO: 1873-1879.

**GONZALEZ, Manuel** (1833-1893), Mexican general. Was a follower of Diaz in several revolts; president of Mexico, 1880-1884. See MEXICO: 1867-1892.

**GONZALEZ, Pablo** (1876- ), one of the leaders of the Mexican constitutionalist army. See MEXICO: 1914-1915; 1920 (July).

**GONZALO DE BERCEO** (c. 1198-1264), earliest known Castilian poet. See SPANISH LITERATURE: 1200-1500.

**GOOD, John Mason** (1704-1827), English physician and author. See JUNIUS LETTERS.

**GOOD CONDUCT MEDAL: Naval and marine**. See WORLD WAR: Miscellaneous auxiliary services: VIII. War medals: a.

**GOOD HOPE**, British cruiser. Was sunk in battle with Admiral von Spee's squadron off Coronel, November 1, 1914. See WORLD WAR: 1914: IX. Naval operations: e.

**GOOD HOPE, Cape of**. See CAPE OF GOOD HOPE.

**GOOD PARLIAMENT**. See PARLIAMENT, ENGLISH: 1376.

**GOODWIN, John Noble** (b. 1824), first territorial governor of Arizona. Served, 1863-1865; delegate to Congress, 1865-1867. See ARIZONA: 1864 (November).

**GOODYEAR, Charles** (1800-1860), American inventor. Made numerous experiments to remedy the defects of India rubber. See INVENTIONS: 19th century: Industry; CONNECTICUT: 1845.

**GOORKAS, or Ghorkas**. See GURKHAS.

**GOOSE RIDGE (Côte de l'Oie)**, position west of the Meuse near Verdun, France. It was taken by the Germans during the great battle, and later retaken by the French in 1916.

**GOOSE-STEP (German Paradeschritt)**, peculiar, exaggerated military step used in the German army. It is spectacular but exhausting, and is maintained for only a few paces, as when passing a reviewing officer.

**GOOSS, Roderich**, Austrian journalist. Edited the actual Austrian diplomatic World War documents, 1919. See WORLD WAR: Diplomatic background: 3.

**G. O. P.**, expression applied to the Republican party in the United States. Republican campaign orators about 1880 spoke of the Grand Old Party, whereupon the Democrats in derision called it the G. O. P.

**GORBAI, Alexander**, Hungarian statesman. President of the ministry formed by the Budapest Workmen's Council, March, 1919. See HUNGARY: 1919 (March).

**GORCHAKOV, or Gortchakoff, Alexander Ivanovich** (1760-1825), Russian general. Served under Suvarov in the Turkish Wars, and in the war against Napoleon in Poland, 1806-1807. See GERMANY: 1807 (February-June).

**GORCHAKOV, Alexander Mikhailovich** (1798-1883), Russian statesman. Plenipotentiary at Stuttgart, 1841; ambassador to Vienna, 1854-1856; minister of foreign affairs, 1856; vice-chancellor, 1862; chancellor, 1863. See POLAND: 1863-1869.

**GORDIAN, or Gordianus I, Marcus Antonius Gordianus Sempronianus Romanus Africanus**

(159-238), Roman emperor. See **ROME: Empire: 192-284**.

**Gordian II, Marcus Antonius** (192-238), Roman emperor. He ruled jointly with his father. See **ROME: Empire: 192-284**.

**Gordian III, Marcus Antonius Pius** (224-244), Roman emperor. See **ROME: Empire: 192-284**.

**GORDIAN KNOT**.—"It was about February or March 333 B.C., when Alexander reached Gordium; where he appears to have halted for some time, giving to the troops which had been with him in Pisidia a repose doubtless needful. While at Gordium, he performed the memorable exploit familiarly known as the cutting of the Gordian knot. There was preserved in the citadel an ancient waggon of rude structure, said by the legend to have once belonged to the peasant Gordius and his son Midas—the primitive rustic kings of Phrygia, designated as such by the Gods and chosen by the people. The cord (composed of fibres from the bark of the cornel tree), attaching the yoke of this waggon to the pole, was so twisted and entangled as to form a knot of singular complexity, which no one had ever been able to untie. An oracle had pronounced, that to the person who should untie it the empire of Asia was destined. . . . Alexander, on inspecting the knot, was as much perplexed as others had been before him, until at length, in a fit of impatience, he drew his sword and severed the cord in two. By everyone this was accepted as a solution of the problem."—G. Grote, *History of Greece, pt. 2, ch. 93*.

**GORDIN, Jacob M.** (1853-1900), Jewish playwright. See **JEWS: Drama and theater**.

**GORDON, Charles George** (1833-1885), British soldier. He is commonly known as "Chinese Gordon," on account of his distinguished services in the suppression of the Taiping rebellion in China, 1863; later performed notable services in Egypt, and was killed at the fall of Khartum.—See also **CHINA: 1850-1864; EGYPT: 1870-1883; 1884-1885; GREECE: 1830-1862; SLAVERY: 1860-1893**.

**GORDON MEMORIAL COLLEGE: At Khartum. See KHARTUM, AFRICA.**

**GORDON RIOTS** (1780). See **ENGLAND: 1778-1780**.

**GORDYENE, Cordyene, or Corduene**.—The tribes of the Carduchi which anciently occupied the region of northern Mesopotamia, east of the Tigris, have given their name permanently to the country, but in variously modified forms. In the Greek and Roman period it was known as Gordyene, Cordyene, Corduene; at the present day it is Kurdistan. Under the Parthian domination in Asia, Gordyene was a tributary kingdom. In the early part of the last century B.C. it was conquered by Tigranes, king of Armenia, who chose a site within it for building his vast new capital, Tigranocerta, to populate which twelve Greek cities were stripped of inhabitants. It was included among the conquests of Trajan for the Romans, but relinquished by Hadrian.—G. Rawlinson, *Sixth great oriental monarchy, ch. 10*.—See also **CARDUCHI**.

**GOREMYKIN, Ivan Logginovitch** (1830- ), Russian statesman. Minister of the interior, 1895-1899; premier, May to July, 1906 and again in 1914. See **RUSSIA: 1809**.

**GORGAS, William Crawford** (1854-1920), American army surgeon. Successful in combating yellow fever in Havana and Central America; appointed chief sanitary officer of Panama Canal, 1904; and member of Isthmian Canal Commission, 1907; retired by the government, 1918; director of

yellow fever work of the International Health Board of the Rockefeller Foundation; undertook to carry out sanitary program in Peru, 1919. See **PANAMA CANAL: 1904-1905; U.S.A.: 1914 (August); Opening of Panama canal**.

**GORGEI, or Gorgey, Arthur** (1818-1910), Hungarian general in the revolution of 1848-1849. See **AUSTRIA: 1848-1849; HUNGARY: 1847-1849**.

**GORGES, Sir Ferdinand** (c. 1566-1647), English colonial pioneer; founder of Maine. See **MAINE: 1639; NEW ENGLAND: 1621-1631; U.S.A.: 1607-1752**.

**GORHAM AND PHELPS PURCHASE**, tract of land in New York. See **NEW YORK: 1786-1799**.

**GORIZIA, or Görz**, town now belonging to Italy, on the Isonzo, thirty-five miles northwest of Trieste. It is the seat of a cathedral and an ancient castle; noted as a winter resort; was included in Italy's demands upon the Central Powers for "compensation", December, 1914; promised to Italy in case of Allies' victory by treaty of London, April 26, 1915; attacked by the Italians in the summer of 1915; taken August 1916; again occupied by Austrians, October, 1917; finally held by Italy in 1918; included in the part of Austria allotted to Italy by the Paris conference and incorporated in the St. Germain Treaty.—See also **LONDON, TREATY OF PACT OF; ADRIATIC QUESTION: Treaty of London; WORLD WAR: 1915: IV. Italy: d; 1916: I. Military situation: d, 2; IV. Austro-Italian front: b, 1; c; 1917: IV. Austro-Italian front: d; ITALY: Geographic description**.

**GORKY, Maxim** (Alexei Maximovitch Peshkov) (1868- ), Russian writer. See **RUSSIAN LITERATURE: 1883-1905**.

**GORLICE**, town in Galicia now a part of Poland, twenty miles northeast of Neu-Sandec. Was on the battle line between the Russians and the Austro-Germans during the World War; destroyed by fire and taken May, 1915, by the Germans. See **WORLD WAR: 1915: III. Eastern front: f**.

**GORM** (fl. c. 860-935), first king of united Denmark.

**GORMOGONS, Order of. See MASONIC SOCIETIES: Anti-Masonic agitations.**

**GORRELL, James**, British lieutenant. Founder of the first English-speaking colony in Wisconsin. As his name does not appear in the British army register for 1780 it would seem that he had died prior to that date. See **WISCONSIN: 1755-1765**.

**GORRES, Johann Joseph von** (1776-1848), German scholar and publicist. See **GERMANY: 1805-1806**.

**GORRINGE, Sir George Frederick** (1868- ), British major-general. Served in the Sudan, India and South Africa; in the World War in 1915-1916 commanded in Mesopotamia; led attempt to relieve Kut el Amara. See **WORLD WAR: 1915: VI. Turkey: c, 2; 1916: VI. Turkish theater: a, 1, iii**.

**GORST, Sir John Eldon** (1835-1916), English statesman. Civil commissioner of Upper Waikato, New Zealand, 1861-1863; Conservative member of Parliament, 1866-1868; 1875-1892; 1892-1906; appointed solicitor-general, 1885; under-secretary for India, 1886-1891; financial secretary to the treasury, 1891-1892; vice president of the committee of the Council on Education, 1895-1902. See **EGYPT: 1907-1911**.

**GORST, Sir J. Eldon** (1861-1911), British politician. Financial advisor to Egyptian government, 1898-1904; British agent and consul-general in Egypt, 1907-1911. See **SUDAN: 1914**.

**GORT-NA-TUBBRID**, or Springfield, Battle of (1579). See IRELAND: 1559-1603.

**GORTON**, Samuel (1592-1677), religious agitator and one of the founders of Rhode Island. See RHODE ISLAND: 1641-1647.

**GORTYN**, or Gortyna, ancient city of Crete. See CRETE: Government and social organization.

**GÖRZ**. See GORIZIA.

**GOSCHEN**, George Joachim, 1st Viscount Goschen (1831-1907), English financier and statesman. Prominent member of the Liberal Unionist party, 1886-1895; became director of Bank of England, 1856; first elected to Parliament, 1863; privy councillor and vice president of Board of Trade, 1865; president of Poor Law Board, 1868-1871; First Lord of the Admiralty, 1871, 1895-1900; special ambassador to the Porte, 1880-1881; chancellor of the exchequer, 1886-1892.—See also EGYPT: 1875-1882.

**GOSCHEN**, Sir William Edward (1847- ), British diplomat. Held important posts in various countries; ambassador to Austria-Hungary, 1905-1908; ambassador to Germany, 1908-1914; in 1914 had famous interview with Bethmann-Hollweg, who declared that Great Britain was making war "just for a scrap of paper." See WORLD WAR: Diplomatic background: 62.

**GOSHEN**, region of lower Egypt, east of the Delta and west of modern Suez canal. See JEWS: Early Hebrew history; Children of Israel in Egypt; CHRISTIANITY: Map of Sinaitic peninsula.

**GOSIUTES**, American aboriginal tribe. See SHOSHONEAN FAMILY.

**GOSLAR**, imperial city of Germany until 1882. Situated south of Brunswick, in the province of Hanover. It was ceded to Prussia by the Treaty of Lunéville, 1803. See GERMANY: 1801-1803.

**GOSNOLD**, Bartholomew (d. 1607), English navigator. Was one of the earliest explorers of the New England coast. See AMERICA: 1602-1605; U. S. A.: 1607-1752.

**GOSSA**, village which figured in the battle of Leipzig. See GERMANY: 1813 (October).

**GOSSEC**, François-Joseph (1734-1829), French composer born in Belgium. See MUSIC: Folk music and nationalism: France.

**GOTAMA**, or Gautama, family name of Buddha. See BUDDHA; INDIA: B. C. 600-327; RELIGION: B. C. 600.

**GÖTEBORG LIBRARY**, Sweden. See LIBRARIES: Modern: Scandinavian states: Sweden.

**GOTHA**, name of one of the seven states of the Thuringian republic, Germany, and of the principal city of the state. See SAXONY: 1180-1553.

**GOTHALONIA**, ancient name for Catalonia. See CATALONIA.

**GOTHENBURG SYSTEM**, Dispensary laws. See SOUTH CAROLINA: 1892-1899; NORTH CAROLINA: 1897-1899; SOUTH DAKOTA: 1899; ALABAMA: 1890.

**GOTHIA**, Gothic empire of central Europe. See GOTHS: 376.

**GOTHIA**, or Septimania, strip of land along the Mediterranean between the Pyrenees and the Rhone, the last possession of the Goths in Gaul.—E. A. Freeman, *Historical geography of Europe*, ch. 5, sect. 5.—See also GOTHS: 419-451.

**GOTHIC ARCHITECTURE**. See ARCHITECTURE: Medieval: Gothic; ART: Relation of art and history.

**GOTHIC CYCLE**. See CHRONOLOGY: Solar chronological scheme of the Egyptians.

**GOTHIC LANGUAGE**: Survivals. See PHILOLOGY: 11.

**GOTHIC SCULPTURE**. See SCULPTURE: Gothic.

**GOTHINI**, or Gotini, people of ancient Germany who "are probably to be placed in Silesia, about Breslau." "The Gotini and Osi [who held a part of modern Galicia, under the Carpathian mountains] are proved by their respective Gallic and Pannonian tongues, as well as by the fact of their enduring tribute, not to be Germans. . . . The Gotini, to complete their degradation, actually work iron mines."—Tacitus, *Minor works: Germany, with geographical notes* (ed. by Church and Brodrigg).

**GOTHLAND IN SWEDEN**. See GOTHS: Origin.

**GOTHONES**, tribe in ancient Germany, mentioned by Tacitus. They "probably dwelt on either side of the Vistula, the Baltic being their northern boundary. Consequently, their settlements would coincide with portions of Pomerania and Prussia. Dr. Latham thinks they were identical with the *Æstii*."—Tacitus, *Minor works: Germany, with geographical notes* (ed. by Church and Brodrigg).—See also GOTHS: Origin.

**GOTHS: Origin**.—"The Scandinavian origin of the Goths has given rise to much discussion, and has been denied by several eminent modern scholars. The only reasons in favor of their Scandinavian origin are the testimony of Jornandes and the existence of the name of Gothland in Sweden; but the testimony of Jornandes contains at the best only the tradition of the people respecting their origin, which is never of much value; and the mere fact of the existence of the name of Gothland in Sweden is not sufficient to prove that this country was the original abode of the people. When the Romans first saw the Goths, in the reign of Caracalla, they dwelt in the land of the Getæ [on the northern side of the lower Danube]. Hence Jornandes, Procopius, and many other writers, both ancient and modern, supposed the Goths to be the same as the Getæ of the earlier historians. But the latter writers always regarded the Getæ as Thracians; and if their opinion was correct, they could have had no connection with the Goths. Still, it is a startling fact that a nation called Gothi should have emigrated from Germany, and settled accidentally in the country of a people with a name so like their own as that of Getæ. This may have happened by accident, but certainly all the probabilities are against it. Two hypotheses have been brought forward in modern times to meet this difficulty. One is that of Grimm; in his *History of the German Language*, who supposes that there was no migration of the Goths at all, that they were on the Lower Danube from the beginning, and that they were known to the earlier Greek and Latin writers as Getæ: but the great objection to this opinion is the general belief of the earlier writers that the Getæ were Thracians, and the latter were certainly not Germans. The other is that of Latham, who supposes, with much ingenuity, that the name of Get, or Goth, was the general name given by the Slavonic nations to the Lithuanians. According to this theory, the Goth-ones, or Guth-ones, at the mouth of the Vistula, mentioned by Tacitus and Ptolemy, are Lithuanians, and the Get-æ, on the Danube, belong to the same nation. Latham also believes that the Goths of a later period were Germans who migrated to the Danube, but that they did not bear the name of Goths till they settled in the country of the Getæ. See Latham, *The Germania of Tacitus*, Epil., p. xxxviii., seq."—W. Smith (E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 10, note).—"The first

clear utterance of tradition among the Goths points to Sweden as their home. It is true that this theory of the Swedish origin of the Goths has of late been strenuously combated, but until it is actually disproved (if that be possible) it seems better to accept it as a "working hypothesis," and, at the very least, a legend which influenced the thoughts and feelings of the nation itself. Condensing the narrative of Jormandes . . . we get some such results as these: 'The island of Scanzia [peninsula of Norway and Sweden] lies in the Northern Ocean, opposite the mouths of the Vistula, in shape like a cedar-leaf. In this island, a warehouse of nations ("officina gentium"), dwell the Goths, with many other tribes,' whose uncouth names are for the most part forgotten, though the Swedes, the Finns, the Heruli, are familiar to us. 'From this island the Goths, under their king Berig, set forth in search of new homes. They had but three ships, and as one of these during their passage always lagged behind, they called her "Gepanta," "the torpid one," and her crew, who ever after showed themselves more sluggish and clumsy than their companions when they became a nation, bore a name derived from this circumstance, Gepidae, the Loiterers.'" Settling, first, near the mouth of the Vistula, these Gothic wanderers increased in numbers until they were forced once more to migrate southward and eastward, seeking a larger and more satisfactory home. In time, they reached the shores of the Euxine. "The date of this migration of the Goths is uncertain; but, as far as we can judge from the indications afforded by contemporary Roman events, it was somewhere between 100 and 200 A. D. At any rate, by the middle of the third century, we find them firmly planted in the South of Russia. They are now divided into three nations, the Ostrogoths on the East, the Visigoths on the West, the lazy Gepidae a little to the rear—that is, to the North of both. . . . It is important for us to remember that these men are Teutons of the Teutons. . . . Moreover, the evidence of language shows that among the Teutonic races they belonged to the Low German family of peoples; more nearly allied, that is to say, to the Dutch, the Frieslanders, and to our own Saxon forefathers, all of whom dwell by the flat shores of the German Ocean or the Baltic Sea, than to the Suabians and other High German tribes who dwell among the hills.'"—T. Hodgkin, *Italy and her invaders*, v. 1, introduction, ch. 3.—See also VANDALS: Origin.

**Acquisition of Bosphorus.**—"The little kingdom of Bosphorus, whose capital was situated on the straits through which the Mæotis communicates itself to the Euxine, was composed of degenerate Greeks and half-civilized barbarians. It subsisted as an independent state from the time of the Peloponnesian war, was at last swallowed up by the ambition of Mithridates, and, with the rest of his dominions, sunk under the weight of the Roman arms. From the reign of Augustus the kings of Bosphorus were the humble but not useless allies of the empire. By presents, by arms, and by a slight fortification drawn across the isthmus, they effectually guarded, against the roving plunderers of Sarmatia, the access of a country which, from its peculiar situation and convenient harbours, commanded the Euxine Sea and Asia Minor. As long as the sceptre was possessed by a lineal succession of kings, they acquitted themselves of their important charge with vigilance and success. Domestic factions, and the fears or private interest of obscure usurpers who seized on the vacant

throne, admitted the Goths [already, in the third century, in possession of the neighboring region about the mouth of the Dnieper] into the heart of Bosphorus. With the acquisition of a superfluous waste of fertile soil, the conquerors obtained the command of a naval force sufficient to transport their armies to the coast of Asia."—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 10.

**244-251.**—First invasions of the Roman empire.—As early as the reign of Alexander Severus (222-235) the Goths, then inhabiting the Ukraine, had troubled Dacia with incursions; but it was not until the time of the Emperor Philip, called the Arabian (244-249), that they invaded the Empire in force, passing through Dacia and crossing the Danube into Mœsia (Bulgaria). They had been bribed by a subsidy to refrain from pillaging Roman territory, but complained that their "stipendia" had not been paid. They made their way without opposition to the city of Marcianopolis, which Trajan had founded in honor of his sister, and which was the capital of one of the two provinces into which Mœsia had been divided. The inhabitants ransomed themselves by the payment of a large sum of money, and the barbarians retired. But their expedition had been successful enough to tempt a speedy repetition of it, and the year 250 found them, again, in Mœsia, ravaging the country with little hindrance. The following year they crossed the Hæmus or Balkan mountains and laid siege to the important city of Philippopolis—capital of Thrace, founded by Philip of Macedonia. Now, however, a capable and vigorous emperor, Decius, was briefly wearing the Roman purple. He met the Goths and fought them so valiantly that 30,000 are said to have been slain; yet the victory remained with the barbarians, and Philippopolis was not saved. They took it by storm, put 100,000 of its inhabitants to the sword and left nothing in the ruins of the city worth carrying away. Meantime the enterprising Roman emperor had reanimated and recruited his troops and had secured positions which cut off the retreat of the Gothic host. The peril of the barbarians seemed so great, in fact, that they offered to surrender their whole booty and their captives, if they might, on so doing, march out of the country undisturbed. Decius sternly rejected the proposition, and so provoked his dangerous enemies to a despair which was fatal to him. In a terrible battle that was fought before the close of the year 251, at a place in Mœsia called Forum Trebonii, the Roman emperor perished, with the greater part of his army. The successor of Decius, Gallus, made haste to arrange a payment of annual peace-money to the Goths, which persuaded them to retire across the Danube.—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 10.—"No Roman emperor had ever been slain before in battle with the barbarians; no Roman host of such strength had suffered defeat since the day of Cannæ. It seemed for a moment as if the empire was fated to be cut in twain, or even as if some earlier Alaric were about to present himself before the gates of Rome."—C. Oman, *History of the art of war*, p. 6.—See also BARBARIAN INVASIONS: 3rd century.

**258-267.**—Naval expeditions in the East.—Having acquired command of a port and a navy by their conquest of or alliance with the little kingdom of Bosphorus in the Chersonesus Taurica (modern Crimea), the Goths launched forth boldly upon a series of naval marauding expeditions,

which spread terror and destruction along the coasts of the Euxine, the Ægean and the straits between. The first city to suffer was Pityus, on the Euxine, which they totally destroyed, 258. The next was Trebizond, which fell a victim to the negligence with which its strong walls were guarded. The Goths loaded their ships with the enormous booty that they took from Trebizond, and left it almost a ruined city of the dead. Another expedition reached Bithynia, where the rich and splendid cities of Chalcedon, Nicea, Nicomedia, Prusa, Apamæa, and others were pillaged and more or less wantonly destroyed. "In the year 267, another fleet, consisting of 500 vessels, manned chiefly by the Goths and Heruli [or Herulii], passed the Bosphorus and the Hellespont. They seized Byzantium and Chrysopolis, and advanced, plundering the islands and coasts of the Ægean Sea, and laying waste many of the principal cities of the Peloponnesus. Cyzicus, Lemnos, Skyros, Corinth, Sparta, and Argos are named as having suffered by their ravages. From the time of Sylla's conquest of Athens, a period of nearly 350 years had elapsed, during which Attica had escaped the evils of war; yet when the Athenians were called upon to defend their homes against the Goths, they displayed a spirit worthy of their ancient fame. An officer, named Cleodamus, had been sent by the government from Byzantium to Athens, in order to repair the fortifications, but a division of these Goths landed at the Piræus and succeeded in carrying Athens by storm, before any means were taken for its defence. Dexippus, an Athenian of rank in the Roman service, soon contrived to reassemble the garrison of the Acropolis; and by joining to it such of the citizens as possessed some knowledge of military discipline, or some spirit for warlike enterprise, he formed a little army of 2,000 men. Choosing a strong position in the Olive Grove, he circumscribed the movements of the Goths, and so harassed them by a close blockade that they were soon compelled to abandon Athens. Cleodamus, who was not at Athens when it was surprised, had in the meantime assembled a fleet and gained a naval victory over a division of the barbarian fleet. These reverses were a prelude to the ruin of the Goths. A Roman fleet entered the Archipelago, and a Roman army, under the emperor Gallienus, marched into Illyricum; the separate divisions of the Gothic expedition were everywhere overtaken by these forces, and destroyed in detail. During this invasion of the empire, one of the divisions of the Gothic army crossed the Hellespont into Asia, and succeeded in plundering the cities of the Troad, and in destroying the celebrated temple of Diana of Ephesus. . . . The celebrity of Athens, and the presence of the historian Dexippus, have given to this incursion of the barbarians a prominent place in history; but many expeditions are casually mentioned which must have inflicted greater losses on the Greeks, and spread devastation more widely over the country."—G. Finlay, *Greece under the Romans*, ch. 1, sect. 14.

268-270.—Defeat by *Claudius*.—"Claudius II. and his successor Aurelian, notwithstanding the shortness of their reigns, effectually dissipated the mosquito-swarms of barbarian invaders and provincial usurpers who were ruining the unhappy dominions of Gallienus. The two campaigns (of 268 and 269) in which the Emperor Claudius vanquished the barbarians are related with great brevity, and in such a shape that it is not easy to harmonise even the scanty details which are preserved
